¹⁹⁷⁹ NOPR, 179 FERC ¶ 61,104 at P 179 (citing May Joint Task Force Tr. 67:6–8 (Dan Scripps) (“Specifically, there may be an opportunity to create a general framework that would be consistent across RTO seams.”); *id.* 68:12–18 (Ted Thomas) (agreeing with Chair Scripps that “the most effective place that FERC can operate is in the area where you have two RTOs and the real issue is getting them on the same page”)).

¹⁹⁸⁰ *Id.* (citing May Joint Task Force Tr. 67:14–17 (Dan Scripps) (“[W]e expect the affected systems study process to become increasingly critical as more renewable resources come online in renewable rich areas and transmission capacity becomes ever more scarce.”)).

¹⁹⁸¹ *Id.* P 180 (referencing May Joint Task Force Tr. 64:18–24 (Dan Scripps) (stating that “FERC may have a larger role to play in issues that cross RTO boundaries, particularly, around cross-RTO affected system studies where individual RTOs have limited control” and certainty “around the timing of affected systems studies”)).

¹⁹⁸² *Id.* P 181.

¹⁹⁸³ *Id.* P 182.

study process, and, as a result, interconnection customers are open to significant impacts and unreasonable timelines.¹⁹⁹¹ OMS highlights the limited control that RTOs/ISOs have regarding the timing of affected system studies.¹⁹⁹² NYISO and Ameren assert that more specific requirements regarding roles and responsibilities of parties in the affected system study process are needed.¹⁹⁹³ According to Invenenergy, the Commission has until now declined to impose any organized structure around the affected system study process because affected system network upgrades and associated costs were thought to be a relatively rare occurrence.¹⁹⁹⁴ Invenenergy contends that this has resulted in transmission providers conducting studies using variable study assumptions and standards and assigning significant system upgrade costs at any time, even after an interconnecting generating facility is already in operation.

1031. On the other hand, several commenters doubt whether standardization of affected system study processes is warranted and argue that adopting the NOPR proposal will cause timeline problems and delays.¹⁹⁹⁵ SDG&E contends that, based on its experience, affected system studies infrequently trigger the need for construction of new network upgrades, and thus it does not find the current process deficient.¹⁹⁹⁶ AECI states that its current coordination process is not in need of reform because it effectively coordinates with several affected systems and recognizes the unique situations presented at different seams.¹⁹⁹⁷

iii. Commission Determination

1032. We affirm the Commission's preliminary findings in the NOPR that there is a compelling need for affected system study process reforms. The record demonstrates that, absent reforms, affected system studies will likely remain ad hoc, continuing to create and increase delays in the interconnection process, which leads to increased costs for both interconnection customers and consumers, thereby

failing to ensure just and reasonable rates. As discussed by commenters, the existing affected system study processes lack certainty and transparency, which, in turn, create interconnection queue delays, interconnection customer withdrawals, and cost increases.¹⁹⁹⁸ Affected system study delays continue to be a major reason for interconnection queue delays.¹⁹⁹⁹ We concur with commenters that better coordination and more specific requirements concerning the role and responsibilities of affected system transmission providers are required to address the lack of certainty and transparency.²⁰⁰⁰ Additionally, we agree with commenters that affected system study process reforms will ensure that interconnection customers are able to connect in a reliable, efficient, transparent, and timely manner.²⁰⁰¹ We are unpersuaded by comments that standardizing the affected system study process will result in timeline problems and delays;²⁰⁰² we find such claims to be speculative and contrary to the Commission's experience with standardizing host transmission provider study processes via the *pro forma* LGIP.²⁰⁰³ We discuss specific aspects of the affected system-related NOPR proposals and final rule determinations below.

1033. In this final rule, an affected system transmission provider refers to a public utility transmission provider as the Commission does not have jurisdiction over the rates, terms, or conditions of service of non-public utility transmission providers. Thus, the requirements adopted in this final rule pertaining to affected system transmission providers are limited to public utility transmission providers.

b. Affected System Study Process

i. NOPR Proposal

1034. In the NOPR, the Commission proposed to revise the *pro forma* LGIP to include an affected system study process.²⁰⁰⁴ The proposed process includes an initial notification, an

affected system scoping meeting, a study process, the establishment of interconnection queue priority for the purposes of network upgrade cost allocation, the presentation of study results and an assessment of those results, and imposition of penalties if an affected system transmission provider fails to meet a study deadline. The Commission also proposed to add several definitions to the *pro forma* LGIP, including "affected system interconnection customer," "affected system network upgrade," "affected system scoping meeting," and "affected system study."

1035. The Commission proposed to require that the host transmission provider notify the affected system operator of a potential affected system impact caused by an interconnection request within 10 business days after the close of the first event giving rise to the identification of an affected system impact.²⁰⁰⁵ The Commission explained that, for host transmission providers using a cluster study process, this event could be (1) the cluster request window, (2) the customer engagement window, (3) the cluster study, or (4) the cluster restudy as part of the first-ready, first-served cluster study process. At the same time that the host transmission provider notifies the affected system operator, the Commission proposed to require the host transmission provider to provide the interconnection customer with a list of potential affected systems, along with relevant contact information. The Commission also proposed to require the host transmission provider to provide the affected system operator with data on a monthly basis, or more frequently as needed, about its transmission system and generation in its interconnection queue for the duration of the affected system study process.

1036. The Commission proposed several requirements on transmission providers acting as an affected system operator, whose transmission systems may be impacted by the proposed interconnection of a generating facility to a transmission system other than the transmission provider's transmission system.²⁰⁰⁶ The Commission proposed to require the affected system transmission provider, within 15 business days of receiving notification from the host transmission provider of an impact on its transmission system, to respond in writing indicating whether it intends to perform an affected system study.

²⁰⁰⁶ *Id.* P 185.

1037. The Commission proposed to require that the affected system transmission provider schedule an affected system scoping meeting within seven business days after providing written notification that it intends to conduct an affected system study.²⁰⁰⁷ The Commission also proposed to require that the affected system scoping meeting be held within seven business days after it is scheduled. The Commission further proposed to require that the affected system transmission provider include the affected system interconnection customer in the scoping meeting and use best efforts to include the transmission provider with whom interconnection has been requested. The Commission proposed to require the affected system transmission provider to share the schedule to complete the affected system study with all scoping meeting attendees within 15 business days after the close of the scoping meeting.

1038. The Commission proposed to require that the affected system transmission provider tender an affected system study agreement to the affected system interconnection customer within five business days of sharing the schedule for the affected system study.²⁰⁰⁸ The Commission also proposed to require the affected system interconnection customer to return the executed affected system study agreement within 10 business days of receipt.

1039. The Commission proposed to require the affected system transmission provider to use what it referred to as a “first-ready, first-served interconnection queue priority approach,” which would also determine how affected system network upgrade costs will be allocated by that transmission provider amongst interconnection customers in separate transmission systems.²⁰⁰⁹ Specifically, the Commission explained, in some situations, both affected system interconnection customers and interconnection customers on the transmission system of the affected system transmission provider cause the need for affected system network upgrades; in this case, each interconnection customer’s relative interconnection queue priority must be determined. The NOPR’s proposed first-ready, first-served interconnection queue priority approach would require the affected system transmission provider to assign the affected system interconnection customer a queue position in its interconnection queue

according to when the affected system interconnection customer executes an affected system study agreement, rather than when the affected system interconnection customer entered its host transmission provider’s interconnection queue. The Commission explained that such a position would be equivalent to that of a transmission provider’s own interconnection customer that had just received its cluster study report. The Commission also proposed to require the affected system transmission provider to allocate network upgrade costs among equally queued interconnection customers using a proportional impact method.

1040. The Commission proposed that the affected system transmission provider must provide the affected system interconnection customer with affected system study results within 90 calendar days after the receipt of the executed affected system study agreement.²⁰¹⁰ The Commission proposed to require that the affected system transmission provider include in the study results both the estimated costs for any network upgrades identified in the study and the timing for the construction of those network upgrades.

1041. The Commission proposed to require that the affected system transmission provider provide the affected system interconnection customer with an affected system facilities construction agreement within 30 calendar days after providing the affected system study results.²⁰¹¹ The Commission proposed that the affected system interconnection customer would then be required to notify the affected system transmission provider within five business days of executing the generator interconnection agreement with its host transmission provider whether it would like to execute the affected system facilities construction agreement or request that it be filed unexecuted with the Commission. The Commission proposed that the affected system transmission provider would then be required to execute, or file unexecuted, the affected system facilities construction agreement within five business days after receiving such direction from the affected system interconnection customer.

1042. The Commission proposed to impose financial penalties on affected system transmission providers that fail to timely complete affected system studies.²⁰¹² The Commission explained that a host transmission provider would

not be penalized for a late affected system study and did not require a host transmission provider to wait on the results of an affected system study to conduct its cluster study, so that any affected system study delay would not delay such a cluster study. The Commission clarified that the affected system transmission provider was the only entity that would be penalized for failure to timely complete an affected system study.

ii. Comments

(a) Comments in Support

1043. Multiple commenters support the NOPR proposal to create a standardized affected system study process in the *pro forma* LGIP.²⁰¹³ Consumers Energy asserts that standardization and better synchronization of timelines and processes between transmission providers will improve the interconnection process,²⁰¹⁴ and in ACORE’s opinion, will help to prevent the use of potentially unjust, unreasonable, and unduly discriminatory or preferential ad hoc approaches.²⁰¹⁵

1044. Multiple commenters support most or all of the proposed reforms.²⁰¹⁶ Pine Gate strongly supports the NOPR proposal’s definitive deadlines for affected system study completion and associated incentives, arguing that consistent, published criteria will help determine whether an affected system study is needed and will provide interconnection customers with the opportunity to conduct their own engineering analyses applying the criteria in order to better determine suitable locations for prospective

generating facilities.²⁰¹⁷ AEP supports the deadlines related to initiating the affected system study process, stating that deadlines would help to provide transparency and ensure that the process is initiated in a timely fashion.²⁰¹⁸ Interwest, National Grid, and Invenery support the proposal to standardize the affected system study engagement and participation process, asserting that the reforms are a significant improvement over the status quo.²⁰¹⁹

(b) Comments in Opposition

1045. Multiple commenters oppose the NOPR's affected system study process proposal.²⁰²⁰ Some commenters assert that the proposed process will impose arbitrary and strict deadlines and will be unworkable.²⁰²¹ Dominion and SDG&E assert that timing for affected system studies should not be standardized because the necessary study assumptions depend on timing of studies in the cluster study process.²⁰²² Dominion contends that, if an affected system study is performed too early, modeling assumptions may not yield meaningful results, resulting in incorrect cost estimates likely to cause restudies and late-stage withdrawals.²⁰²³ PJM argues that studying affected system interconnection requests before all studies have been completed, or studying them for ERIS, could cause operational problems, require curtailment, or lead to late-stage withdrawals after the full scope of necessary network upgrades is known.²⁰²⁴ Similarly, SPP states that, because the NOPR proposal does not prescribe any particular level of precision for the cost and timing estimates associated with affected system upgrades, the results received by the interconnection customer could lack

sufficient detail and lead to higher-than-anticipated costs.²⁰²⁵

1046. Several commenters argue that certain elements of the NOPR proposal do not achieve the goal of increased efficiency.²⁰²⁶ Recognizing that affected system studies require separate case preparations and a greater level of coordination between parties, SDG&E agrees with CAISO that the proposal has the potential to increase the number of affected system studies, with limited benefit.²⁰²⁷ National Grid cautions that standardizing the affected system study process will necessitate host and affected system transmission providers to devote more resources to that process, which could cause delays.²⁰²⁸ PJM contends that, although the NOPR proposal provides that transmission providers conducting cluster studies are not required to delay those studies by waiting for the results of affected system studies, such delays will be inevitable under the proposed process due to the additional steps and coordination required and the overlap in personnel and deadlines.²⁰²⁹ PJM and National Grid both express concerns regarding the justness and reasonableness of the NOPR's penalty regime given the potential for additional delays in affected system studies.²⁰³⁰

1047. Other commenters argue that the NOPR proposal does not go far enough to improve efficiency in the affected system study process. North Carolina Commission and Staff call for more comprehensive reforms, recognizing the need for coordination between transmission providers to avoid unnecessary expense and system disruption.²⁰³¹ WAPA recommends that the Commission consider an alternative strategy in which the host transmission provider includes contingencies and sensitivity scenarios involving potentially affected systems in its own studies.²⁰³² PJM suggests that, rather than the NOPR's "overly prescriptive" approach, the Commission should require a stated affected system coordination structure with defined steps and checkpoints, similar to the process PJM has been working to implement with neighboring systems

through its joint operating agreements.²⁰³³

(c) Comments on Specific Proposal

(1) Definitions

1048. PPL argues that the proposed term "affected system interconnection customer" is confusing and recommends that the Commission either remove "interconnection" or consider the term "direct connect system customer," asserting that the affected system interconnection customers are not interconnection customers working their way through the affected system transmission provider's interconnection process.²⁰³⁴ PPL states that some transmission providers combine interconnection and transmission and argues that removing the word "interconnection" better accommodates such a combined group.

1049. Several commenters ask for clarification or modification of the terms "affected system" or "affected system operator." National Grid asserts that the Commission should clarify whether an affected system solely includes transmission owners in each region or also includes neighboring RTOs/ISOs or transmission providers in neighboring regions.²⁰³⁵ NRECA requests that the Commission clarify the scope of several definitions so that transmission providers will not overlook a proposed interconnection request's impact on an electric cooperative's affected system.²⁰³⁶

(2) Notification of Affected System Impacts

1050. Regarding the proposed triggering event at the close of (1) the cluster request window, (2) the customer engagement window, (3) the cluster study, or (4) the cluster restudy for a host transmission provider to notify an affected system operator, PacifiCorp argues that the 10-business day notification obligation begins with an ill-defined standard in the NOPR—the "close of first event giving rise to the identification of an affected system

²⁰³³ PJM Initial Comments at 64.

²⁰³⁴ PPL Initial Comments at 19–20.

²⁰³⁵ National Grid Initial Comments at 35.

²⁰³⁶ NRECA Initial Comments at 9, 36–39. More specifically, NRECA contends that because some transmission providers interpret the definition of "Affected System" to mean a Commission-jurisdictional transmission system and refuse to recognize that other electric systems may be affected systems, under the *pro forma* LGIP and *pro forma* LGIA, the Commission should provide that an "Affected System" means any affected "electric system," not just an affected "Transmission System," and that an "Affected System Operator" means any "entity that operates an Affected System," not just a transmission owner or transmission provider. *Id.* at 36–37, 39.

impact.”²⁰³⁷ PacifiCorp requests that the Commission clarify this standard and further clarify that transmission providers will not be penalized if affected system issues are not discovered until later in the interconnection process, as such impacts may not always be readily apparent.

1051. Some commenters oppose the proposed requirement in section 3.6.1 of the *pro forma* LGIP that a host transmission provider, within 10 business days of the triggering event that identifies a potential affected system impact, notify an affected system operator of such potential impact.²⁰³⁸ WAPA states that the initial notification requirement could unnecessarily increase costs because the notification could be received before the system impact study on the host transmission provider’s transmission system is complete and thus before any potential network upgrades are identified. Duke Southeast Utilities assert that the notification time frame should be 15 business days because: (1) the host transmission provider may need additional time to notify multiple affected system operators of a potential impact within the same prescribed time frame; and (2) the host transmission provider may need additional time to gather all necessary information and compile adequate notification packages, due to the need to include a technical basis for the affected system impact.²⁰³⁹ CAISO states that the Commission should require transmission providers to begin the notification process shortly after interconnection customers receive their initial study results and face higher financial requirements to proceed in the interconnection queue.²⁰⁴⁰ CAISO explains that this is when the majority of interconnection customers withdraw their interconnection requests because they do not wish to put more money at risk. CAISO argues that using this smaller pool of interconnection requests will enable faster affected system studies due to decreased volume and more realistic study assumptions.

1052. A few commenters provide suggestions on the content of the notice that the host transmission provider sends to the affected system operator. Specifically, APPA–LPPC propose that *pro forma* LGIP section 3.6.1 be revised

to include the following: “Along with notification to Interconnection Customer of the list of potential Affected Systems, Transmission Provider will notify Interconnection Customer and such Affected Systems whether a single set of studies (Feasibility, System Impact and Facilities Studies) may be sufficient to manage all related impacts. A single set of studies may be undertaken upon agreement of all parties.”²⁰⁴¹ Duke Southeast Utilities suggest that, in addition to such notification, the host transmission provider should provide evidence of the potential impact, which they assert will assist the affected system operator in: (1) understanding the host transmission provider’s engineering analysis and assumptions that led it to identify the potential impact; and (2) determining whether to conduct an affected system study.²⁰⁴²

1053. Regarding to whom the host transmission provider should send the notification, NRECA argues that the notification requirement should extend to all potential affected systems and any affected system operators to allow electric cooperative affected system transmission providers to coordinate with the transmission provider and interconnection customer to timely address any affected system impacts.²⁰⁴³ Tri-State states that *pro forma* LGIP section 3.6.1 needs clarification as to whom the notice is to be directed.²⁰⁴⁴

1054. Other commenters oppose the proposed requirement in sections 3.6.2 and 9 of the *pro forma* LGIP that affected system transmission providers must respond to the notification of affected system impacts within 15 business days.²⁰⁴⁵ Bonneville advocates that the response time be flexible and allow for reasonable extensions.²⁰⁴⁶ Bonneville argues that, if affected system transmission providers only have 15 business days to respond, they will need to err on the side of caution, which could lead to more affected system studies than necessary, resulting in study delays. Duke Southeast Utilities assert that the response time frame should be 20 business days, as the affected system transmission provider may need additional time if: (1) it has received multiple notifications within the same time frame; (2) it needs to request additional data to determine if

it intends to perform a study; (3) its own staff is limited because of deadlines within its own interconnection process; or (4) it wishes to perform a more detailed review to ensure that performing a study does not become the default approach.²⁰⁴⁷ Dominion asserts that a 15-business day requirement could be reasonable if all affected system notifications were provided at the same time.²⁰⁴⁸ Dominion contends that piecemeal notifications make it difficult for an affected system transmission provider to know if an affected system study is needed until all requests are received.

1055. Additionally, a few commenters contend that the NOPR proposal was unclear what would happen if an affected system operator fails to respond within 15 business days. Enel and ENGIE contend that it is unclear what the consequence is for an affected system transmission provider’s failure to meet the response deadline.²⁰⁴⁹ Enel encourages the Commission to add language to the *pro forma* LGIP to provide that the affected system transmission provider will forfeit its right to perform an affected system study if it fails to meet the response deadline, as a lack of incentive (and relevant penalty) to respond could result in delayed study results.²⁰⁵⁰ ENGIE suggests that the affected system transmission provider bear any financial consequences.²⁰⁵¹ Pacific Northwest Utilities note that the non-jurisdictional affected system operator is not required to respond to the requirements under proposed *pro forma* LGIP section 3.6.1 and may not have the mechanisms in place to respond within 15 business days.²⁰⁵²

(3) Timing of Affected System Studies

1056. Several commenters argue that beginning affected system studies too early may yield unreliable results that could lead to restudies and late-stage withdrawals, among other problems.²⁰⁵³ NextEra asserts that it is unlikely that the host transmission provider could provide useful information to the

²⁰⁴⁷ Duke Southeast Utilities Initial Comments at 13 (noting that PJM often sends notice of multiple potential impacts from a single cluster).

²⁰⁴⁶ Bonneville Initial Comments at 18.

affected system transmission provider at an earlier stage.²⁰⁵⁴ CAISO and Idaho Power argue that the proposal to begin the affected system study process as soon as potential impacts are identified will slow affected system studies or result in unnecessary work for the affected system transmission provider because the impacts will be assessed based on transmission providers' entire interconnection queues, even though many interconnection customers will withdraw early in the interconnection process.²⁰⁵⁵

1057. CAISO takes issue with the proposed deadlines for completing affected system studies and claims that the size of modern interconnection queues makes such quick deadlines impossible. According to CAISO, such deadlines would result in all affected system transmission providers exercising their rights to study every interconnection customer because they have no time to determine whether studies are necessary.²⁰⁵⁶

1058. Invenergy argues that affected system transmission providers should be subject to a deadline for participation in the process.²⁰⁵⁷

1059. Invenergy asserts that, although the NOPR clearly provides that a host transmission provider is not required to pause its interconnection process if an affected system transmission provider does not timely complete its study, the reality is that this could leave interconnection customers in the same position they are in now—being forced under the host transmission provider's timeline to move forward in the study process and to execute an LGIA (and put money at risk) without the benefit of affected system study results. Invenergy contends that the solution is to establish a clear deadline (e.g., LGIA execution) by which time the affected system transmission provider must have completed its studies and identified affected system network upgrades; otherwise, it loses any right to assign affected system network upgrades to an interconnection request in the future. Invenergy states that, if the Commission does not impose such a deadline, it should at least permit interconnection customers that have been forced under host transmission provider's rules to execute LGIAs in the absence of affected system study information to: (1) delay posting security and funding network upgrades under that LGIA until the affected system study results are

received; and (2) have the opportunity to withdraw without penalty after receiving affected system study results if the interconnection customer's assigned costs increased by more than 25% compared to costs allocated by the host transmission provider.²⁰⁵⁸

1060. Several commenters argue that an affected system study timeline should be consistent with the cluster study process on the host transmission provider's transmission system because it can impact the host transmission provider's study.²⁰⁵⁹ APS requests additional clarification on how the proposed affected system study process correlates to the host system studies and aligns with the host system's requirements.²⁰⁶⁰ Enel acknowledges that the 90-calendar day affected system study deadline may be problematic for transmission providers that have 150 calendar days to run the same scope of studies for their own interconnection requests.²⁰⁶¹ AEP stresses the need for coordination between these studies, which it argues would provide the interconnection customer with a more meaningful cost estimate, with coordination resulting in affected system and host system study results being presented around the same time.²⁰⁶² Enel contends that the affected system transmission provider should be required to complete any affected system impact studies no later than the host transmission provider's deadline to complete the cluster restudy.²⁰⁶³ Enel asserts that this initial affected system study should be completed before the interconnection customer must satisfy requirements to enter the facilities study, at which point the interconnection customer faces a higher withdrawal penalty. Enel contends that the NOPR proposal could result in an affected system transmission provider being notified that an affected system study is needed after final results of the cluster restudy are complete, meaning that an affected system study may not be completed until or even after the execution of an LGIA. Enel argues that, after affected system studies are complete, an interconnection customer could have its costs double just before (or even after) an LGIA is executed, and penalty-free withdrawal under proposed *pro forma* LGIP section 3.7.1 would

only apply if assigned interconnection costs increase by more than 100%.

1061. Several commenters argue that the timing of affected system studies should be structured to reduce potential burdens. Idaho Power suggests that affected system studies be performed after the initial cluster study to minimize unnecessary work and ensure that only interconnection requests moving into the cluster restudy have their affected system impacts studied.²⁰⁶⁴ Dominion notes that PJM recently sought to address timing issues by incorporating affected system studies into later phases of its cluster studies.²⁰⁶⁵

(4) Affected System Scoping Meeting

1062. Several commenters express concern about the proposed requirement in section 3.6.2 of the *pro forma* LGIP that the affected system transmission provider (1) schedule an affected system scoping meeting within seven business days after providing written notification that it intends to conduct an affected system study and (2) hold that meeting within seven business days after it is scheduled.²⁰⁶⁶ Bonneville and Dominion assert that holding the scoping meeting within this time frame might not be realistic because these meetings are contingent upon the availability of multiple attendees.²⁰⁶⁷ CAISO contends that the proposal to schedule affected system scoping meetings within seven business days is impossible and that affected system transmission providers would simply hold scoping meetings to comply, having had no time to prepare anything meaningful for the meeting.²⁰⁶⁸ MISO argues that the Commission should allow each pair of transmission providers to develop their own schedule for the scoping process rather than mandating a one-size-fits-all schedule.²⁰⁶⁹ MISO asserts that this is particularly true for RTOs/ISOs with joint operating and/or planning agreements, which MISO claims should

be able to justify their existing procedures on compliance via the independent entity variation standard. Bonneville emphasizes flexibility and proposes that the phrase “unless otherwise agreed to” be added to this requirement.²⁰⁷⁰

1063. Pacific Northwest Utilities state that, provided that regulated utilities properly invite the non-jurisdictional affected system transmission provider to the affected system scoping meeting, the Commission should clarify that such steps are sufficient to demonstrate that the regulated transmission provider has met its requirements under this section.²⁰⁷¹ Further, Pacific Northwest Utilities note that the non-jurisdictional affected system transmission provider is not required to respond to the requirements under section 3.6.2 of the *pro forma* LGIP and may not be prepared to attend the affected system scoping meeting.

(5) Affected System Study Process

1064. Multiple commenters advocate for changes to the proposed requirement in section 3.6.3 of the *pro forma* LGIP that the transmission provider provide data monthly, or more frequently as needed, regarding the amount and location of generation in the transmission provider’s interconnection queue, as well as updated information about the transmission provider’s transmission system. NRECA states that the proposed information sharing requirement is essential but should not be limited to notifying or providing data to a transmission provider acting as an affected system operator but should extend to all potential affected systems and any affected system operators to allow electric cooperative affected system operators to perform studies and coordinate with the transmission provider and interconnection customer to timely address any affected system impact.²⁰⁷² MISO argues that the Commission should not impose an arbitrary time frame for data reports and suggests that such information should be provided only at times when it changes.²⁰⁷³ MISO asserts that updates are not likely to be helpful to interconnection customers until the next study stage has been completed. NV Energy requests that the Commission move to quarterly reporting because monthly updates would not be helpful and may provide dramatic swings in study results, which could

trigger the need for an affected system study to start over.²⁰⁷⁴ NV Energy also requests that assumptions for studies be coordinated between the host transmission provider and affected system operator and that updates become quarterly after the study has been issued.

1065. LADWP requests clarification as to what specific data “updated information about the transmission provider’s transmission system” refers.²⁰⁷⁵

1066. Bonneville and Dominion argue that the proposed information sharing requirement is duplicative or unnecessary. Bonneville posits that the requirement is duplicative of information that is already available on OASIS.²⁰⁷⁶ Dominion argues that this requirement is overly cumbersome given transmission providers’ limited resources and numerous obligations and may produce data that the affected system may not even want or use.²⁰⁷⁷ Dominion asserts that it would be more efficient to require the host transmission provider to provide such information upon request.

(6) Affected System Queue Position

1067. Several commenters support the NOPR proposal’s first-ready, first-served interconnection queue priority approach in proposed section 9.2 of the *pro forma* LGIP.²⁰⁷⁸ OMS and MISO argue that MISO and SPP’s recently approved changes to their joint operating agreement to modify the queue priority and coordination rules for affected system studies conform to the NOPR’s proposed approach and are an equitable means for sharing costs for network upgrades amongst interconnection customers in different regions and encourages timely processing of affected system impacts.²⁰⁷⁹

1068. However, Bonneville and NextEra assert that the NOPR does not adequately address the important issue of queue priority coordination.²⁰⁸⁰ NextEra argues that the notion of interconnection customers racing to be the first (or perhaps the last) to sign an affected system study agreement as a

way of setting queue priority will result in conflict.²⁰⁸¹ NextEra contends that, instead, the goal should be to ensure that transmission providers acting as affected systems perform affected system studies on a timeline that is consistent with the host transmission system’s stated schedule so that results are delivered in a timely manner and interconnection customers can be well-informed in their decision making. NextEra recommends that each pair of transmission providers whose interconnection customers affect each other’s system enter into agreements, to be filed with the Commission, specifying how they will ensure appropriate queue priority in affected system studies.

1069. Bonneville argues that the queue priority for affected system interconnection requests should be determined by giving priority to an interconnection request in an affected system study over any interconnection request that has not yet started the cluster study on the host transmission system.²⁰⁸² Bonneville contends that if an affected system interconnection request receives higher queue priority relative to any interconnection requests for which the host transmission provider has started the cluster study but has not yet provided cluster study reports, then such a queue priority framework would introduce uncertainty into the cluster study process, as an affected system notification could be received during the cluster study process and trigger a restudy, delays, and increased costs to the participants of the cluster study.

1070. Other commenters argue for different approaches to affected system queue priority or allocation of affected system network upgrade costs. ENGIE argues that, although assigning an affected system queue position appears beneficial for assigning network upgrade costs, it could also create delays for the interconnection customer because it would be beholden to two separate interconnection queues.²⁰⁸³ ENGIE recommends that the Commission allocate network upgrade costs outside of the interconnection queue on an *ex post* basis to avoid the double-queue situation.

1071. Enel asserts that the NOPR’s proposed queue priority determination method will result in additional uncertainty about timing of affected system studies, incomplete and inaccurate cluster study results, and the

²⁰⁸³ ENGIE Initial Comments at 9.

need for restudies.²⁰⁸⁴ Although Enel agrees that establishing queue priority between host and affected system interconnection requests is essential, Enel disagrees with the NOPR proposal to establish the affected system interconnection request's queue priority according to when the affected system interconnection customer executes an "affected system study."²⁰⁸⁵ Enel states that this must be a typo that should say "affected system study agreement." Enel also notes that proposed *pro forma* LGIP section 9.2 does not clearly state which event establishes the date by which an affected system interconnection request receives its queue priority relative to host system interconnection requests and requests clarification on this point.²⁰⁸⁶ Enel further states that, if affected system queue priority is established based on an individual date, transmission providers would need to process affected system interconnection requests serially rather than by cluster and recommends that the Commission adopt a queue priority framework in which affected system interconnection requests would be studied in the same cluster grouping that the host transmission provider uses.²⁰⁸⁷ Enel also recommends that queue priority be assigned based on the deadline for entry into the host transmission provider's interconnection queue.

1072. Several commenters request or propose specific clarifications regarding proposed *pro forma* LGIP section 9.2, including how the proposed first-ready, first-served interconnection queue priority approach interacts with cluster studies.²⁰⁸⁸ EDF Renewables recommends that, to better synchronize the host and affected system study processes, the affected system operator should establish queue priority between the host and affected system based on the interconnection request achieving a certain stage in the host system's study process, rather than the date the interconnection request was submitted.²⁰⁸⁹ APPA-LPPC ask that the Commission clarify proposed *pro forma* LGIP section 9.2 and the related obligations under *pro forma* LGIP sections 9.8 and 4.2.3.²⁰⁹⁰ APPA-LPPC state that, as drafted, proposed *pro forma* LGIP section 9.2 suggests a queue position for an interconnection customer independent of ongoing and

pending cluster studies while *pro forma* LGIP section 9.8 and cross-referenced *pro forma* LGIP section 4.2.3 contemplate the allocation of associated costs incurred by affected systems in the context of a cluster study.

1073. Additionally, MISO recommends that the final rule clarify an enforcement mechanism, such as loss of relative queue priority used under the MISO-SPP joint operating agreement, for the proposed first-ready, first-served interconnection queue priority approach.²⁰⁹¹

(7) Affected System Study Agreement

1074. Dominion and Duke Southeast Utilities suggest doubling the amount of time that transmission providers would have under proposed *pro forma* LGIP section 9.3 to tender an affected system study agreement after sharing the schedule for the affected system study.²⁰⁹² Duke Southeast Utilities assert that it usually takes more than five business days to receive all needed interconnection request information to draft an affected system study agreement (an often iterative process).²⁰⁹³ Duke Southeast Utilities state that more time will help affected system transmission providers that may need to draft numerous affected system study agreements within the same time frame.

1075. Bonneville requests clarification as to whether the failure to execute the affected system study agreement, execute the affected system facilities construction agreement, or provide the affected system study deposit would be grounds for removal from the host transmission provider's interconnection queue.²⁰⁹⁴

(8) Affected System Study Scope and Timeline

1076. Many commenters, including transmission providers, argue that the Commission should clarify the scope of required affected system studies by addressing whether an affected system facilities study will be required under section 9 of the *pro forma* LGIP.²⁰⁹⁵ For example, Duke Southeast Utilities state that the NOPR proposal is unclear on whether "affected system study results" is intended to reflect the results of a

system impact study, a facilities study, or a combination thereof.²⁰⁹⁶

1077. Several commenters request that the Commission explicitly include a facilities study in the affected system study process.²⁰⁹⁷ Duke Southeast Utilities, Enel, NV Energy, and SPP assert that explicitly including a facilities study in the affected system study process would provide both affected system transmission provider and affected system interconnection customer with more refined estimated costs and construction timelines.²⁰⁹⁸ Pattern Energy argues that a facilities study is a useful tool for scoping and pricing network upgrades and other facilities necessary to mitigate transmission-related contingencies,²⁰⁹⁹ and LADWP argues that a facilities study would improve the efficiency of the overall process by minimizing discrepancies discovered after execution of a construction agreement.²¹⁰⁰ APPA-LPPC request that the Commission confirm that it does not intend to foreclose the possibility of affected system facilities studies being conducted, as a facilities study is needed to ascertain the precise nature of any network upgrades that an interconnection customer may cause.²¹⁰¹

1078. Shell argues for including further information regarding local transmission planning from neighboring transmission providers in affected system study results because early identification of all transmission-related mitigation will ensure that interconnection customers can anticipate affected system network upgrades as early as possible.²¹⁰²

1079. Several commenters, including transmission providers, argue that the 90-calendar day time frame for completion of the affected system study, from the date an affected system transmission provider receives an executed affected system study agreement from the affected system interconnection customer to the date the affected system transmission provider presents the affected system study report to the affected system

interconnection customer, as proposed in *pro forma* LGIP section 9.6, does not provide affected system transmission providers sufficient time to complete the study.²¹⁰³ Bonneville requests that the Commission clarify whether the schedule to complete the affected system study could include a due date that is in excess of the 90-calendar day timeline.²¹⁰⁴ Tri-State requests the addition of “and deposit” to proposed *pro forma* LGIP section 9.6, such that the 90-calendar day period would begin after the receipt of the executed affected system study agreement and deposit.²¹⁰⁵ MISO requests that the Commission clarify that the study clock would commence only after all necessary data has been received.²¹⁰⁶

1080. Other commenters support the NOPR proposal or argue that affected system interconnection customers should be given the results of affected system studies as early as possible. Interwest states that it agrees with commenters that the proposed 90-calendar day time limit, combined with monetary penalties, will help instill discipline and support investments needed to meet the timelines.²¹⁰⁷ Shell asserts that affected system study results must be provided before or in conjunction with system impact study results on the host transmission system, or at the latest, before interconnection customers are required to proceed to the facilities study on the host transmission system, as interconnection customers typically pursue financing after receiving system impact study results and before advancing to the facilities study and doing so will avoid last minute network upgrade costs that undermine project viability and cause interconnection queue withdrawals.²¹⁰⁸ Shell supports an option for interconnection customers to pause the interconnection study process on the host transmission system for an affected system study to “catch-up” if such an option lowers the risk of receiving late affected system study results. Similarly, Interwest asserts that affected system interconnection customers should be permitted to delay posting security and funding network upgrades, if there are delays in affected system studies, which Interwest contends is a reasonable accommodation that allows such

affected system interconnection customers to reduce risks.²¹⁰⁹

1081. Additionally, WAPA expresses concern about its ability to tender an affected system facilities construction agreement to an interconnection customer within 30 calendar days of providing the affected system study report, as proposed in *pro forma* LGIP section 9.9.²¹¹⁰

1082. Several commenters oppose, ask for clarification, or propose alternatives regarding the scope and applicability of the financial penalties that would apply if a transmission provider does not meet the study completion deadlines set forth in proposed *pro forma* LGIP section 9.6. AEI asserts that, so long as affected system transmission providers are using good utility practice and appropriate due diligence to complete affected system studies, there is no benefit of imposing additional penalties on affected system transmission providers.²¹¹¹ ENGIE states that it is unclear who bears the financial penalties for late affected system studies.²¹¹²

1083. MISO, in contrast, interprets the NOPR proposal as applying penalties only to the affected system transmission provider, and recommends that the Commission recognize that some delays may be beyond the control of the affected system transmission provider and not penalize affected system transmission providers for third-party delays.²¹¹³ Similarly, Duke Southeast Utilities express concern that penalties could be levied against affected system transmission providers for delays beyond their control, and further argue that the Commission should consider imposing multilateral penalties on all entities in accordance with their individual obligations set forth in the proposed process.²¹¹⁴

1084. Several commenters state that the cost estimates provided in affected system study results should be non-binding, or that certain types of cost

increases related to affected system study results should allow interconnection customers to withdraw their interconnection requests without penalty.²¹¹⁵ Similarly, Shell asserts that the Commission should allow penalty-free withdrawals in the event of late affected system network upgrade costs that surpass a certain threshold, arguing that such circumstances are beyond the interconnection customer’s control.²¹¹⁶ PacifiCorp states that any cost estimates identified by affected system operators should be non-binding, given that they could be subject to change.²¹¹⁷

1085. Pattern Energy believes that the Commission should provide incentives for transmission providers to provide more reasonable and accurate cost estimates for network upgrades and related facilities, even for affected system studies.²¹¹⁸ Pattern Energy claims that the Commission should not adopt “good faith” to be the standard on which cost estimates are provided in affected system studies, asserting that reasonable cost estimates based on defined metrics should be the standard.

(9) Affected System Network Upgrade Cost Allocation

1086. SEIA supports the NOPR proposal to allocate affected system network upgrade costs using a proportional impact method, arguing that this method should help to reduce individual interconnection customer network upgrade costs by allowing interconnection customers to share the cost and, in doing so, reduce the likelihood of cascading withdrawals.²¹¹⁹

1087. Other commenters stress the importance of certainty and fairness in cost allocation rules. For example, National Grid contends that cost allocation rules should provide certainty to interconnection customers at a reasonable point in the interconnection process, while also having appropriate rules to allocate changes in cost allocations that arise after the date that network upgrade costs are finalized.²¹²⁰ National Grid suggests that this could be achieved by finalizing network upgrade cost allocations at the facilities study phase of the host transmission provider’s interconnection study process, subject to risk sharing cost allocation rules, whereby later changes due to the identification of additional required facilities could be

²¹⁰⁹ Interwest Reply Comments at 18.

²¹¹⁰ WAPA Initial Comments at 13.

²¹¹¹ AEI Initial Comments at 7.

²¹¹² ENGIE Initial Comments at 9. Additionally, ENGIE states that transmission owners typically have responsibilities for affected system studies and, therefore, argues that the Commission should consider language that distributes financial risk and penalties to both transmission owners and transmission providers, including an ability for transmission providers to recover costs from transmission owners. *Id.*

²¹¹³ MISO Initial Comments at 92. WAPA also is generally concerned about the imposition of monetary penalties for failure to meet deadlines and questions whether Federal agencies like WAPA should, or even can be, subject to monetary penalties. *See* WAPA Initial Comments at 10, 14.

²¹⁰⁸ Shell Initial Comments at 30–31.

shared between the interconnection customer and load in a transmission provider's footprint based on the principle of beneficiary pays, through various particular methodologies, including those used for transmission planning upgrades or those based on geography.²¹²¹

1088. Finally, several commenters raise other issues regarding affected system cost allocation. Enel seeks clarity regarding whether shared network upgrades would apply between host system interconnection requests and affected system interconnection requests.²¹²² NV Energy asserts that, since the affected system interconnection request is queued, if the affected system interconnection customer is allocated affected system network upgrade costs based on the proportional impact method and subsequently withdraws, then a restudy could potentially be required for a lower-queued cluster, which would result in a misalignment with the timeline and withdrawal penalties in the transmission provider's cluster study for native interconnection requests.²¹²³ ACE–NY argues that no project should be assigned affected system network upgrade costs after it executes its LGIA and/or after the interconnection customer has accepted its cost allocation in the class year process in NYISO.²¹²⁴

(10) Tender of Affected System Facilities Construction Agreement

1089. Several commenters argue that the proposed time frame for the affected system transmission provider to tender an affected system facilities construction agreement to the affected system interconnection customer—within 30 calendar days of providing the affected system study results to the interconnection customer, as proposed in section 9.9 of the *pro forma* LGIP—should be extended or modified. Duke Southeast Utilities argue that this deadline should be 60 calendar days for various administrative reasons.²¹²⁵ Idaho Power suggests that the affected system transmission provider tender the affected system facilities construction agreement either within 60 calendar days after the interconnection customers

executes a facilities construction agreement with the host transmission provider or within 30 calendar days after providing the affected system study results to the affected system interconnection customer, if the affected system study is performed during the interconnection facilities study.²¹²⁶ Idaho Power explains that information required in the facilities construction agreement is comparable to the information provided by the host transmission provider in the interconnection facilities study report, which, according to Idaho Power, provides a reasonably accurate timing and cost estimate and requires considerable coordination to develop. WAPA highlights other constraints, stating that it contracts out many of its facilities study tasks, which can take significant time, that it must work within the budgetary constraints of its annual appropriation, and that it is impractical to have a construction agreement ready for any interconnection customer within 30 calendar days.²¹²⁷

1090. MISO cautions that providing detailed affected system network upgrade cost estimates and construction timelines within 30 calendar days of providing the affected system study results may not be feasible given that MISO currently only gives high-level cost estimates after its affected system study and construction timelines and detailed cost estimates are provided in the affected system network upgrade facilities study, which is performed by transmission owners.²¹²⁸ MISO further argues that it should not be responsible for actions that are beyond its control, such as the transmission owner-prepared affected system network upgrade facilities study, which it claims would not be feasible to include in each affected system study report if it is attempting to meet the 90-calendar day study timeline, and thus the affected system study and the affected system facilities study should be kept separate. MISO further argues that it is unlikely that transmission owners could provide cost/schedule detail with +/– 20% accuracy within 30 calendar days of determination of affected system network upgrade obligations, with 90 calendar days being a more reasonable time frame.²¹²⁹

(11) Restudy

1091. Bonneville expresses concern with the restudy timeline proposed in *pro forma* LGIP section 9.10, which

would require that a restudy of the affected system study take no longer than 60 calendar days from the date of notice. Bonneville argues that flexibility is warranted due to the complexity of restudies.²¹³⁰

(d) Requests for Alternatives

(1) Clustering of Affected System Studies

1092. Several commenters argue that transmission providers should process affected system studies using a clustering approach.²¹³¹ Several commenters argue that mandating use of serial studies for all variously situated transmission providers would adversely impact the efficiency of the study process and place a significant administrative burden on transmission providers that is disproportionate to the contemplated benefits.²¹³² NextEra urges the Commission to not mandate serial affected system study processing when cluster studies of affected system impacts will be more expeditious and efficient, contending that this would particularly be the case when interconnection requests in large cluster studies impact an adjacent system.²¹³³ North Carolina Commission and Staff claim that serial studies come with substantial costs in the form of network upgrades that may not be sufficient to meet future demand.²¹³⁴

1093. Indicated PJM TOs argue that, for efficiency and consistency, affected system studies should be integrated into the cluster study process.²¹³⁵ Indicated PJM TOs argue that PJM's proposed approach, whereby an affected system study identified by one region would be integrated into the cluster study of another region, would be more efficient

²¹³⁰ Bonneville Initial Comments at 22.

²¹²⁷ WAPA Initial Comments at 13.

²¹²⁸ MISO Initial Comments at 90–91.

²¹²⁹ *Id.* at 91–92.

and less disruptive than the approach identified in the NOPR.²¹³⁶

1094. Some commenters also call for flexibility. AECI argues that the Commission should not limit the flexibility yielded by its existing process of studying each yearly cluster to determine impacts and potential affected system network upgrades, when it is acting as the affected system operator coordinating studies with a neighboring RTO/ISO.²¹³⁷ PPL argues that affected system transmission providers should have the option to enter into a study agreement with either an individual affected system interconnection customer, a group of affected system interconnection customers from the same cluster (that share cost and other responsibilities), or the “direct connect system.”²¹³⁸

(2) Coordination Between Host Transmission Provider and Affected System Transmission Provider

1095. NextEra contends that the NOPR proposal gives too little attention to complex issues, such as potential interconnection queue coordination issues between transmission providers that could arise after implementation of the proposed reforms.²¹³⁹ Several commenters argue that, for efficiency reasons, host transmission providers—and not individual affected system interconnection customers—should be required to coordinate affected system study activities with the affected system transmission providers.²¹⁴⁰ Some commenters recommend that the Commission adopt the coordination approach used by MISO and certain of its neighboring systems, whereby the host transmission provider coordinates all technical data, study deposits, and studies with the affected system transmission provider rather than the proposed direct communication and coordination between interconnection customer and affected system transmission provider.²¹⁴¹ Enel asserts

that this would reduce administrative burden, ensure timely compliance with the tariff, reduce interconnection costs, and increase accountability. Enel also argues that using the host transmission provider’s study agreement to require the interconnection customer to comply with the affected system transmission provider’s study process ensures that the interconnection customer must meet tariff deadlines and cannot delay the affected system transmission provider’s studies. In addition, Shell states that that the Commission should develop guidance for situations in which neighboring transmission providers disagree on the scope and/or timing of an affected system study.²¹⁴²

1096. Several commenters argue that the NOPR proposal should be reevaluated or modified regarding whether and when transmission providers conducting cluster studies would be required to delay those studies to wait for the results of affected system studies. Pattern Energy contends that the Commission should consider an approach in which host transmission providers are not required to wait for affected system studies to be completed, if such delayed action would result in a study milestone being missed.²¹⁴³ Pattern Energy seeks to avoid an unintentional “delay loop,” whereby the affected system is not diligently processing an affected system study because the host transmission provider is waiting for it.²¹⁴⁴

1097. In contrast, PacifiCorp requests that the Commission clarify that, although host transmission providers performing cluster studies are not required to delay those studies by waiting for the results of affected system studies, transmission providers will not be prohibited from delaying the cluster study process to account for affected system study issues if the host transmission provider determines that the cluster study cannot progress without the results of the affected system studies.²¹⁴⁵ MISO raises similar concerns about a transmission provider proceeding with its cluster studies without affected system data, which it asserts is critical information for an

deposits, subject to total study cost true-up, and that host transmission providers should be required to share the interconnection customer’s technical data as needed. Enel reasons that through direct connections, host and affected system transmission providers would be better able to compare constraints and proposed upgrades to coordinate where a single upgrade may address constraints on both transmission systems. *Id.*

²¹⁴³ Pattern Energy Initial Comments at 25.

²¹⁴⁴ *Id.* at 25–26.

²¹⁴⁵ PacifiCorp Initial Comments at 36–37.

interconnection customer.²¹⁴⁶ MISO further asserts that the NOPR proposal will not provide useful information to the interconnection customer sooner and will increase uncertainty, opportunities for late-stage withdrawals, cost shifts, and unscheduled restudies and cascading withdrawals.²¹⁴⁷

1098. Xcel strongly supports improving affected system study interactions, arguing that with common models and processes, in many instances, host transmission provider study results can be used to identify affected system network upgrades, leaving the affected system transmission provider to only identify mitigation solutions.²¹⁴⁸ Noting that many RTO/ISO regions have operating agreements that address interface capacity rights and processes to relieve congestion near and across seams, Xcel argues that host and affected system transmission providers should take those operating agreements into account when considering any interconnection-related requirements from the affected system transmission provider.

1099. APPA–LPPC request that transmission providers be able to forego a formal affected system study when studies by the host transmission provider may be sufficient.²¹⁴⁹ APPA–LPPC ask the Commission to recognize in the *pro forma* LGIP that there may be instances in which separate affected system studies may not be necessary or useful because, in their members’ experience, particularly in the Western Interconnection, feasibility, system impact, and facilities studies undertaken by a directly interconnecting transmission provider may be adequate in scope to encompass impacts on and any necessary upgrades to an affected system.²¹⁵⁰ In such a case, APPA–LPPC state, a unitary study would be less expensive for all parties and avoid a complex administrative task of sequencing and integrating separate system studies.²¹⁵¹

1100. Another alternative proposed by WAPA and Enel is the use of an affected system screening process to identify instances where affected system studies will be needed.²¹⁵² WAPA suggests that this screening process could be a feasibility-level study, completed for an entire cluster, to narrow down which interconnection requests within the cluster potentially have impacts on an

²¹³⁶ Indicated PJM TOs Initial Comments at 47 (noting that the 2022 PJM filing provides that PJM will determine the need for an affected system analysis in phase 1 of a study cycle, and when PJM is identified by another region as needing to complete an affected system analysis, it will place the affected system interconnection request in phase 2 of an ongoing study cycle) (referencing PJM, Filing, Docket No. ER22–2110–000, Sims Aff. ¶ 10 (filed June 14, 2022)).

affected system.²¹⁵³ WAPA contends that, without a screening process, transmission providers under the NOPR proposal will require affected system studies by default. Enel suggests that the affected system transmission provider should conduct the screening process during the host transmission provider's cluster study so that the affected system transmission provider is prepared to perform its affected system study during the host transmission provider's initial cluster restudy.

(3) Interregional Transmission Planning

1101. A few commenters urge the Commission to address affected system impacts as a systematic phenomenon and a matter of interregional transmission planning, rather than one-off events to be handled serially.²¹⁵⁴ EDF Renewables argues that better interregional transmission planning should reduce the frequency and severity of affected system impacts, asserting that a system-wide approach is more efficient than a piecemeal one.²¹⁵⁵ NextEra cautions that one issue absent from the affected system proposals in the NOPR is that the costs for alleviating an existing system condition should not rest with a new generating facility interconnecting on an adjacent system that did not create the problem.²¹⁵⁶ NextEra argues that preexisting reliability issues should instead be identified and solved through the transmission planning processes.

(e) Requests for Clarification and Flexibility

1102. Idaho Power requests clarification regarding whether the affected system study process would be required for entities that already use the first-ready, first served cluster study process.²¹⁵⁷

1103. Regarding timing, Invenergy argues that although many of the NOPR's proposed requirements should apply prospectively to new interconnection requests, immediate action from the Commission is needed to resolve affected system issues. Invenergy requests that the Commission clarify that the proposed reforms should apply to all pending interconnection requests and active studies.²¹⁵⁸

1104. Several commenters request clarification regarding how the proposed affected system reforms would

affect RTO/ISO transmission providers and transmission owners in their regions.²¹⁵⁹ Eversource requests that the Commission clarify that the proposed affected system reforms are not applicable to intra-RTO/ISO system upgrades.²¹⁶⁰ Similarly, NYTOs request that the Commission clarify that the proposed affected system reforms would not apply to neighboring transmission owners within a single RTO/ISO, or at least allow such transmission owners to demonstrate on compliance that their existing processes already address such intra-RTO/ISO issues.²¹⁶¹ AEP requests that the Commission address what it terms the four primary types of affected system scenarios: neighboring transmission owner systems within one RTO/ISO; neighboring transmission owner systems in two separate RTOs/ISOs; a transmission owner system in an RTO/ISO neighboring a non-RTO/ISO transmission provider; and neighboring transmission providers both outside of an RTO/ISO.²¹⁶² AEP contends that the Commission appears to conflate all possible affected system scenarios in the NOPR, even though the nature of any affected system study can be impacted by the type of scenario.²¹⁶³

1105. CREA and NewSun seek clarification on whether the proposed affected system reforms apply where QF interconnections under PURPA are subject to state jurisdiction.²¹⁶⁴ CREA and NewSun explain that, under existing precedent, the Commission has allowed states to retain their historic interconnection jurisdiction under PURPA where the QF sells its entire net output to the interconnecting utility.²¹⁶⁵ CREA and NewSun argue, though, that where affected system issues are involved, the state's jurisdiction over the sale of the QF's energy to a utility regulated by that state would not extend to affected system issues with a third-party transmission provider that is not purchasing the QF's net output.²¹⁶⁶ CREA and NewSun urge the Commission to clarify that a QF interconnection customer has the option to opt into use of the Commission's interconnection procedures, in cases

where the interconnection requires studies or network upgrades on an affected system without loss of queue position. CREA and NewSun also argue that the QF should retain the right to elect to proceed through the state process in case the QF concludes that it would be less disruptive to do so.

1106. Several commenters request clarification on whether the proposed affected system reforms apply to non-Commission-jurisdictional transmission providers.²¹⁶⁷ Invenergy and Interwest state that, if an affected system is not a Commission-jurisdictional utility, the Commission would be unable to enforce the process or any penalties proposed in the NOPR, which would leave the interconnection customer in the same bind that currently exists.²¹⁶⁸ Invenergy, Interwest, Xcel, and EEI assert that the Commission should prevent non-jurisdictional entities from interfering with completion of jurisdictional transmission providers' interconnection processes.²¹⁶⁹

1107. Several commenters call for the Commission to explain how jurisdictional transmission providers should respond to potential delays or inaction by non-jurisdictional transmission providers not subject to the affected system study process reforms.²¹⁷⁰

1108. Other commenters argue that the Commission should hold jurisdictional transmission providers harmless for delays induced by or notifications not sent by non-jurisdictional affected system transmission providers.²¹⁷¹ Pacific Northwest Utilities and Puget Sound ask the Commission to clarify that transmission providers have met their obligations in dealing with non-jurisdictional entities if the host transmission provider notifies a non-jurisdictional affected system transmission provider within 10 business days of identifying a potential impact to the transmission system of the non-jurisdictional entity, pursuant to *pro forma* LGIP section 3.6.1, and invites the non-jurisdictional entity to an affected system scoping meeting,

pursuant to *pro forma* LGIP section 3.6.2.²¹⁷²

1109. Many commenters emphasize the importance of flexibility for transmission providers and argue in favor of granting transmission providers compliance flexibility in implementing affected system study process reforms.²¹⁷³ Some commenters contend that the Commission should allow transmission providers to demonstrate that their existing affected system study processes or planned revisions to those processes are adequate to address the Commission's concerns.²¹⁷⁴

iii. Commission Determination

1110. We adopt, with modifications, the NOPR proposal to establish an affected system study process in, and add several related definitions to, the *pro forma* LGIP. As explained in the NOPR, a detailed affected system study process in the *pro forma* LGIP will prevent the use of ad hoc approaches that may give rise to interconnection customers being treated in an unjust, unreasonable, and unduly discriminatory or preferential manner. We agree with commenters that it will also provide interconnection customers greater certainty regarding expectations throughout the interconnection process, including greater cost certainty, which will lead to fewer late-stage withdrawals and fewer delays. The firm affected system study deadlines will also ensure that the affected system study process moves along expediently, providing clarity, cost certainty, and increased transparency throughout the study process, which will minimize opportunities for undue discrimination. For these reasons, we find that the affected system study process reforms adopted herein are just, reasonable, and not unduly discriminatory or preferential and that they remedy the unjust, unreasonable, and unduly discriminatory or preferential rates resulting from the status quo with regard to affected systems. We further find that such reforms will ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

²¹⁷² Puget Sound Initial Comments at 8; Pacific Northwest Utilities Initial Comments at 17.

²¹⁷³ AEP Initial Comments at 5; Dominion Initial Comments at 39; National Grid Initial Comments at 37–38; NYISO Initial Comments at 44; PacifiCorp Initial Comments at 36; PJM Reply Comments at 10.

²¹⁷⁴ AEP Initial Comments at 32; Alliant Energy Initial Comments at 7; MISO Initial Comments at 7, 12–13, 83–85, 95; NYISO Initial Comments at 44; Omaha Public Power Initial Comments at 12; OMS Initial Comments at 17; SPP Initial Comments at 16–18.

1111. We disagree with commenters' concerns that a broadly applied, prescriptive affected system study process may not be helpful or may be unworkable.²¹⁷⁵ Instead, we agree with National Grid that the current status quo is not working and will likely worsen absent intervention.²¹⁷⁶ Although some transmission providers may already have working affected system study processes in place, many do not, creating uncertainty and unreasonable delay in the interconnection process. Further, as discussed below with regard to specific reforms, we adopt several revisions to the NOPR proposal in response to comments to ensure the affected system study process deadlines are reasonable and support efficient processing of interconnection requests. We disagree with commenters who argue that the NOPR proposal does not increase efficiency and note that certain modifications will further increase efficiency.²¹⁷⁷ While certain required steps in the affected system study process may increase the need for communication and coordination between affected system transmission providers, affected system interconnection customers, and/or host transmission providers, we find that the potential burden of such discrete efforts are outweighed by the efficiencies of a standardized and more predictable affected system study process. We further find that defining an affected system study process in the *pro forma* LGIP is necessary to ensure that affected system interconnection customers are not being treated in an unjust, unreasonable, and unduly discriminatory or preferential manner, and to ensure that they can evaluate their costs and make decisions regarding the viability of their generation facilities in a timely manner during the interconnection study process.

(a) Definitions and Applicability (Pro Forma LGIP Sections 1 and 9.1)

1112. We adopt the NOPR proposal, with modification, to include several definitions in section 1 of the *pro forma* LGIP related to the affected system reforms, specifically, “affected system facilities construction agreement,” “affected system interconnection customer,” “affected system network upgrades,” “affected system study,” “affected system study agreement,” and

²¹⁷⁵ Dominion Initial Comments at 37; Pacific Northwest Utilities Initial Comments at 15; PJM Initial Comments at 63; SDG&E Reply Comments at 3.

²¹⁷⁷ Dominion Initial Comments at 36–37; SDG&E Reply Comments at 3; SPP Initial Comments at 17; WAPA Initial Comments at 10.

“affected system study report.” We find these terms to be necessary to enumerate the affected system transmission provider's responsibilities in the affected system study process.²¹⁷⁸ We also add the terms “multiparty affected system study agreement” and “multiparty affected system facilities construction agreement” to section 1 of the *pro forma* LGIP in light of our adoption of such agreements as part of this final rule, as discussed below. We also add the term “affected system queue position” to the *pro forma* LGIP because we find it helpful to distinguish between an interconnection customer's queue position on the host system versus its queue position on an affected system.

1113. We adopt, with modification, the NOPR proposal to add section 9.1 to the *pro forma* LGIP, titled “Applicability.” We find that *pro forma* LGIP section 9.1 clarifies that the transmission provider's obligations in section 9 apply when it is acting as an affected system transmission provider, and we have added clarifying language to resolve ambiguity therein.²¹⁷⁹

1114. In response to PPL's argument that the term “affected system interconnection customer” is confusing and that either another term should be used or “interconnection” should be deleted from the term, we reiterate that the *pro forma* LGIP is written to apply to all transmission providers on a generic basis, meaning transmission providers studying proposed interconnections to their transmission systems (host transmission providers) as well as transmission providers studying the impacts on their own transmission system of proposed interconnections to other transmission providers' transmission systems (affected system transmission providers). In other words, when a transmission provider's transmission system is an affected system, the interconnection customer creating the affected system impact is different from that particular affected system transmission provider's own interconnection customers (*i.e.*, those

²¹⁷⁸ We note that, in the affected system context, there are certain instances in which we intentionally use lowercase versions of defined terms to deviate from their definitions in section 1 of the *pro forma* LGIP. For example, “generating facility” is, in *pro forma* LGIP section 1, part of the definition of “affected system interconnection customer.” In the affected system context, we are referring to a generating facility governed by another transmission provider's LGIP rather than the affected system transmission provider's generating facility as defined in its own LGIP.

²¹⁷⁹ We note that former *pro forma* LGIP section 9, titled “Engineering and Procurement (E&P) Agreement,” is now *pro forma* LGIP section 13.7 to accommodate the new affected system study process section.

that propose to interconnect directly to the transmission provider's transmission system) and must be distinguished accordingly in the *pro forma* LGIP. The term "affected system interconnection customer" achieves this goal by distinguishing between the interconnection customer's dual roles in the host transmission provider's study process and the affected system transmission provider's study process.

1115. Further, we disagree with PPL's assertion that some transmission providers combine interconnection and transmission processes, making "interconnection" an unnecessary distinction.²¹⁸⁰ This proceeding involves generic generator interconnection procedures, pursuant to which transmission service request studies are performed independently from interconnection studies.²¹⁸¹ However, we modify the definition of "affected system interconnection customer" and use other defined terms in the *pro forma* LGIP for additional clarity and consistency.

1116. As explained below, we do not adopt the NOPR proposal to require an affected system scoping meeting and therefore also do not adopt the proposed term "affected system scoping meeting" in section 1 of the *pro forma* LGIP.

1117. We clarify that the terms "affected system" and "affected system operator" retain their existing definitions in *pro forma* LGIP section 1.²¹⁸²

1118. In response to NRECA's request for clarification, we reiterate that the final rule applies to transmission providers and, in the affected system context, to transmission providers that are acting as affected systems per the *pro forma* LGIP definition. Therefore, we decline to expand the scope of several affected systems-related definitions as requested by NRECA because we find NRECA's request to be outside the scope of this proceeding.²¹⁸³ In response to National Grid's request for clarification regarding whether an affected system solely includes transmission owners in each region or also includes neighboring RTOs/ISOs or

transmission providers in neighboring regions, we reiterate that an affected system is defined in section 1 of the *pro forma* LGIP as an electric system other than the transmission provider's transmission system that may be affected by the proposed interconnection.

(b) Identification and Notification of Affected Systems (Pro Forma LGIP Sections 3.6.1, 9.2, and 11.2.1)

1119. We adopt, with modification, proposed section 3.6.1 of the *pro forma* LGIP, which sets forth the trigger events for identification of an affected system impact to begin the affected system study process. We modify that section to retain as trigger events the completion of the cluster study and cluster restudy but eliminate the earlier trigger events—the close of the cluster request window and the close of the customer engagement window. While we would expect identification of potential affected system impacts to occur upon the completion of the cluster study, we recognize that an affected system impact may not be identified until a restudy occurs, and we adopt language in *pro forma* LGIP section 3.6.1 to account for such a scenario. Thus, as adopted in *pro forma* LGIP section 3.6.1, we require the transmission provider to notify the affected system operator at the first instance of an identified potential affected system impact, which may occur at the completion of the (1) cluster study or (2) cluster restudy. We also move the affected system transmission provider's obligations to respond to the initial notification under proposed *pro forma* LGIP section 3.6.1 to a new *pro forma* LGIP section 9.2. We find this bifurcation of duties with respect to initial affected system notification for the transmission provider, when acting as host transmission provider and affected system transmission provider, appropriately sets forth the responsibilities of the transmission provider in the sections describing the conditions for each action.

1120. We also adopt the provision proposed in *pro forma* LGIP section 3.6.1 that provides for the transmission provider to notify an affected system operator of a potential affected system impact caused by the interconnection request within 10 business days of the first trigger event giving rise to the identification of the affected system impact. We modify the provision in proposed *pro forma* LGIP section 3.6.1 for the affected system transmission provider to respond to such notification in writing within 15 business days indicating whether it intends to conduct an affected system study to 20 business

days, which we move to *pro forma* LGIP section 9.2, as noted above. We further move to *pro forma* LGIP section 9.2 the requirement that, within 15 business days of the affected system transmission provider's affirmative response of its intent to conduct an affected system study, the affected system transmission provider must share a non-binding good faith estimate of the cost and schedule to complete the affected system study.

1121. As adopted, the identification and notification process is tied to the completion of the cluster study or the cluster restudy. At that point, the host transmission provider will have a stronger basis for deciding whether an interconnection request will potentially impact an affected system. Further, the initiation of the affected system study process after the initial study costs are received should lead to affected system study results that provide greater cost certainty, as the largest number of interconnection request withdrawals will most likely occur after receipt of the initial cluster study results, a point noted by commenters.²¹⁸⁴ After receipt of the initial cluster study results, those interconnection requests remaining in the host system's interconnection queue are more likely to complete the interconnection study process. We agree with CAISO that this smaller pool of affected system interconnection customers will enable faster affected system studies due to a decreased volume of affected system interconnection customers and more realistic study assumptions.²¹⁸⁵

Accordingly, we find that beginning the affected system study process after the adopted trigger events provides greater certainty to interconnection customers regarding affected system network upgrade costs while ensuring a faster affected system study process. This is because the affected system transmission provider will be using more realistic study assumptions and studying a more realistic number of affected system interconnection customers, reducing the need for restudy.

1122. We find that notification to an affected system operator of a potential impact prior to receipt of cluster study results would be administratively burdensome and inefficient and could potentially slow the interconnection process because such notification would include numerous interconnection

²¹⁸⁰ PPL Initial Comments at 19–20.

²¹⁸¹ See *Tenn. Power Co.*, 90 FERC ¶ at 61,761 (finding that interconnection is an element of transmission service but that the interconnection component of transmission service may be requested separately from the delivery component (*i.e.*, interconnection is distinct from transmission service)).

²¹⁸² An affected system is an electric system other than the transmission provider's transmission system that may be affected by the proposed interconnection. An affected system operator is the entity that operates an affected system. *Pro forma* LGIP section 1.

²¹⁸³ See NRECA Initial Comments at 9, 36–39.

²¹⁸⁴ CAISO Initial Comments at 28; Idaho Power Initial Comments at 11; NextEra Initial Comments at 32.

²¹⁸⁵ CAISO Initial Comments at 29.

requests that ultimately do not reach commercial operation.²¹⁸⁶

1123. In eliminating the first two notification triggers, we recognize that the affected system study process will start later and, as a result, the interconnection customer could be required to execute, or request to be filed unexecuted, its LGIA before it has received its affected system study results and cost estimates for any affected system network upgrades. To avoid this result and in response to commenters' requests that transmission providers should be given the option to wait for affected system study results when conducting cluster studies,²¹⁸⁷ we modify the NOPR proposal and add a new section 11.2.1 to the *pro forma* LGIP. Under this section, if the interconnection customer does not receive its affected system study results pursuant to *pro forma* LGIP section 9.7, discussed below, before the deadline for LGIA execution, or the deadline to request that the LGIA be filed unexecuted, in its host system, the host transmission provider must, at the interconnection customer's request, delay the deadline for the interconnection customer to finalize its LGIA.²¹⁸⁸ The interconnection customer will have 30 calendar days after receipt of the affected system study report to execute the LGIA, or request that the LGIA be filed unexecuted.

1124. As noted above, we find that by adopting *pro forma* LGIP section 11.2.1, we ensure that interconnection customers have adequate time to evaluate their costs prior to committing to the cost estimates contained in an LGIA. Additionally, if the interconnection customer prefers to proceed to the execution of its LGIA, or request that the LGIA be filed unexecuted, before it has received its affected system study results, it may notify the host transmission provider of its intent to proceed with the execution of the LGIA, or request that the LGIA be filed unexecuted. If the host transmission provider determines that further delay to the LGIA execution date would cause a material impact on the cost or timing of an equal- or lower-queued interconnection customer, the transmission provider must notify the interconnection customer whose

deadline to execute the LGIA, or request that the LGIA be filed unexecuted, is delayed of such impact and establish that the new deadline is 30 calendar days after such notice is provided.

1125. In response to ACE-NY's argument that no interconnection customer should be assigned affected system network upgrade costs after it executes its LGIA and/or after the interconnection customer has accepted its cost allocation in the class year process in NYISO,²¹⁸⁹ we decline to rule on specific transmission provider processes in this final rule. We note, however, that, under new *pro forma* LGIP section 11.2.1, interconnection customers may negotiate LGIA execution to await an affected system study report for greater certainty at the time of LGIA execution, or requesting the LGIA to be filed unexecuted, if that further delay to the LGIA execution date would not cause a material impact on the cost or timing of an equal- or lower-queued interconnection customer.

1126. We decline to require the affected system transmission provider to provide affected system study results before the facilities study phase, as asserted by Enel and Shell,²¹⁹⁰ because such a requirement would necessitate that the affected system transmission provider would have to begin such studies before any interconnection customers withdraw from the interconnection queue and would therefore involve the study of numerous interconnection requests that do not eventually proceed to commercial operation, resulting in additional restudies and delays.

1127. In response to Tri-State's argument that proposed *pro forma* LGIP section 3.6.1 needs to clarify to whom notice is to be directed,²¹⁹¹ we note the language in *pro forma* LGIP section 3.6.1 beginning with "Transmission Provider must notify Affected System Operator of a potential Affected System impact." If Tri-State is asking to whom the affected system transmission provider should respond in writing regarding whether it intends to conduct an affected system study, it should respond to the transmission provider who notified the affected system operator of a potential affected system impact.

1128. We adopt Pacific Northwest Utilities' requested clarification and agree with Puget Sound that, provided that transmission providers properly notify a non-public utility affected

system operator within 10 business days under proposed *pro forma* LGIP section 3.6.1, such steps are sufficient to demonstrate that the transmission provider has met its obligations under that section.²¹⁹²

1129. We agree with Interwest and Invenergy that the interconnection customer should be permitted to delay posting security and funding for network upgrades under its LGIA until affected system study results are received in certain situations.²¹⁹³ Specifically, an interconnection customer is not required to post security for and fund network upgrades pursuant to an LGIA if the deadline for LGIA execution, or to request that the LGIA be filed unexecuted, is delayed under *pro forma* LGIP section 11.2.1. We agree with Interwest that this would reduce an affected system interconnection customer's risk of incurring affected system network upgrade costs after LGIA execution. However, if the interconnection customer chooses to proceed to execute an LGIA, or request that the LGIA be filed unexecuted, it will be responsible for posting security and funding network upgrades as per the schedule in its LGIA, regardless of whether it has received affected system study results.

1130. We disagree with commenters that a transmission provider's obligation to notify a potential affected system operator of an impact in 10 business days is unrealistic or problematic.²¹⁹⁴ As we are eliminating two trigger events, the host transmission provider now has the obligation to notify the affected system operator of a potential impact to the affected system following the completion of the cluster study or restudy, which we find provides a clear timeline contrary to PacifiCorp's claims. Furthermore, we do not find any convincing evidence that a host transmission provider will be unable to provide a notification to an affected system operator of potential impacts within 10 business days and note that this timeline is supported by commenters.²¹⁹⁵

1131. However, regarding comments that the affected system operator's obligation to respond in 15 business days is insufficient,²¹⁹⁶ particularly

²¹⁸⁶ *Id.* at 28–29; Enel Initial Comments at 59; Idaho Power Initial Comments at 11; NextEra Initial Comments at 32.

²¹⁸⁷ PacifiCorp Initial Comments at 36–37; Pattern Energy Initial Comments at 25; Shell Initial Comments at 30–31.

²¹⁸⁸ Any interconnection customer that is not awaiting the results of an affected system study must proceed under the timelines set forth in *pro forma* LGIP section 11.1.

²¹⁸⁹ ACE-NY Initial Comments at 9.

²¹⁹⁰ See Enel Initial Comments at 58; Shell Initial Comments at 30–31.

²¹⁹⁶ Bonneville Initial Comments at 18; CAISO Initial Comments at 27; Duke Southeast Utilities

when numerous potential affected system impacts are identified in a single cluster study, as stated above, we extend the affected system operator's response obligation time period from 15 business days to 20 business days to provide the affected system operator with additional time to consider whether to study these potential affected system impacts on its transmission system, consistent with Duke Southeast Utilities' suggestion.²¹⁹⁷ We find these timelines necessary to ensure timely processing of the affected system study process and to provide certainty to the interconnection customer regarding the processing of the affected system study.

(c) Affected System Scoping Meeting (Pro Forma LGIP Section 3.6.2) and Affected System Study Procedures (Pro Forma LGIP Section 9.7)

1132. We decline to adopt the proposed requirement in *pro forma* LGIP section 3.6.2 that affected system transmission providers must hold an affected system scoping meeting within seven business days after providing written notification that it intends to conduct an affected system study. We agree with commenters' concerns that the difficulties associated with holding an affected system scoping meeting within the proposed time frame outweigh its potential benefits.²¹⁹⁸ We also agree with WAPA that a meeting after the affected system study is completed would be more beneficial than an affected system scoping meeting.

1133. We adopt, with modifications, the proposed affected system study procedures set forth in *pro forma* LGIP section 9.6, now section 9.7. In particular, we modify the NOPR proposal to explicitly require clustering of affected system interconnection customers for study purposes where multiple interconnection requests that are part of a single cluster in the host system's cluster study process cause the need for an affected system study. We find that clustered affected system studies will, consistent with the requirement to use a first-ready, first-served cluster study process, improve administrative efficiency in the affected system study process and reduce administrative burden on the affected system transmission provider, thereby promoting overall efficiency in the

interconnection process. We agree with commenters that serial affected system studies would place an additional burden on transmission providers to study affected system impacts and would further slow the interconnection process.²¹⁹⁹ We, therefore, believe that mandating clustering of affected system studies will not place an additional unnecessary burden on transmission providers, no matter their size; rather, it should reduce such burdens as compared to multiple serial studies and restudies.

1134. We further modify proposed *pro forma* LGIP section 9.7, to require the affected system transmission provider to complete the affected system study and provide the affected system interconnection customer with affected system study results within 150 calendar days after receipt of the affected system study agreement, rather than the proposed 90 calendar days. We agree with commenters that explain that 90 calendar days may not be adequate time to complete an affected system study,²²⁰⁰ aligning with our discussion of the potential for affected system transmission providers to conduct a facilities study under proposed *pro forma* LGIP section 9.6 below. In recognition of that, we extend the proposed maximum time frame to complete an affected system study from the NOPR's proposed 90 calendar days to 150 calendar days. This extension addresses Bonneville's concern that the proposed schedule to complete an affected system study may have included a due date in excess of the 90-calendar day timeline.

1135. We also modify *pro forma* LGIP section 9.7, which, as proposed, required the affected system transmission provider to notify the affected system interconnection customer that an affected system study will be late, to add a requirement for the affected system transmission provider to notify the host transmission provider that the affected system transmission provider will be unable to timely complete the affected system study.

1136. We adopt Tri-State's request to add the phrase "and deposit" to *pro forma* LGIP section 9.7, such that the affected system transmission provider must provide the affected system study report to the affected system interconnection customer within 150 calendar days after the receipt of the

affected system study agreement and deposit. We find this addition is needed to clarify the affected system interconnection customer's obligation to provide an affected system study deposit, especially if an affected system interconnection customer loses its affected system queue position, discussed below, for failure to provide the required deposit under *pro forma* LGIP section 9.5. We also add to *pro forma* LGIP section 9.7 a requirement for the affected system transmission provider to provide the affected system study report to the host transmission provider at the same time it provides the report to the affected system interconnection customer. We find that this will enhance transparency in the interconnection study process.

1137. In response to MISO's request for clarification that the affected system study clock commences only after all necessary data has been provided, we clarify that, because an affected system interconnection customer has already submitted all required data to the host transmission provider, and the host transmission provider has verified that the data submitted is adequate and has conducted at least one interconnection study, it is highly unlikely that there will be any instances of requiring clarification or further data from interconnection customers. Thus, under the modified affected system study procedures, the data regarding interconnection requests given to the affected system transmission provider should be complete, requiring no delay or requests for further data. Nevertheless, we note that the affected system interconnection customer is required, under *pro forma* LGIP section 9.5, to provide all required technical data when it delivers the affected system study agreement. As discussed below, the clock for the affected system transmission provider to complete its affected system study begins after the receipt of the executed affected system study agreement and study deposit, which would include the receipt of all required technical data from the affected system interconnection customer.

(d) Affected System Queue Position (Pro Forma LGIP Section 9.3)

1138. We adopt, with modification, the NOPR proposal to add section 9.2, now section 9.3, titled "Affected System Queue Position," to the *pro forma* LGIP. Specifically, we adopt the first-ready, first-served concept, as proposed in the NOPR,²²⁰¹ along with the affected

Initial Comments at 12; PG&E Reply Comments at 5; WAPA Initial Comments at 11–12.

²¹⁹⁷ See Duke Southeast Utilities Initial Comments at 12.

²¹⁹⁸ Bonneville Initial Comments at 18–19; CAISO Initial Comments at 28; Dominion Initial Comments at 38; MISO Initial Comments at 86; WAPA Initial Comments at 12.

²¹⁹⁹ AECI Initial Comments at 6–7; Indicated PJM TOs Initial Comments at 47; NextEra Reply Comments at 4; North Carolina Commission and Staff Initial Comments at 24–25 (citing Gajda Aff. ¶¶ 21–22, 27); SPP Initial Comments at 15–16.

²²⁰⁰ AEP Initial Comments at 31; Enel Initial Comments at 65; WAPA Initial Comments at 13.

²²⁰¹ We note that several commenters support the proposed first-ready, first-served concept under

system relative queue priority proposal. Consequently, the interconnection requests of affected system interconnection customers that have executed an affected system study agreement will be higher-queued than the interconnection requests of those host system interconnection customers that have not yet received their cluster study results, and lower-queued than those interconnection customers that have already received their cluster study results. We also add clarifying language to *pro forma* LGIP section 9.3 to explain that, although queue position is determined based on the date of affected system study agreement execution, all affected system interconnection requests studied within the same affected system cluster will be equally queued.

1139. The affected system interconnection customer's affected system queue position is for identification of affected system network upgrades along with the affected system transmission provider's own interconnection customers. Specifically, the affected system queue position determines the order in which the affected system transmission provider will study the affected system interconnection customers and its own interconnection customers and thus impacts which network upgrades may be identified as necessary and assigned to interconnection customers, whether its own or affected system interconnection customers.

1140. As an example, if a transmission provider has two cluster studies of its own interconnection customers—cluster study 1 for which the transmission provider is conducting the facilities studies and cluster study 2 for which the transmission provider is conducting the cluster study—cluster study 1 would be higher-queued than cluster study 2. If that transmission provider receives notice from a neighboring transmission provider of interconnection requests that may impact its transmission system (*i.e.*, affected system interconnection customers), the transmission provider may decide to study those affected system interconnection customers to determine if any network upgrades are required to mitigate constraints caused by those affected system interconnection customers. Once those affected system interconnection customers have executed their affected system study agreements, the transmission provider must assign them

an affected system queue position, which will be higher than any cluster study of its own interconnection customers that have not received their cluster study results. In this example, the cluster study 1 interconnection customers would be higher-queued than the cluster of affected system interconnection customers because the cluster study 1 interconnection customers would have already received their cluster study results and decided to proceed with their interconnection requests, and cluster study 2 interconnection customers would be lower-queued than the cluster of affected system interconnection customers because they would not have received their cluster study results and thus are more likely to withdraw.

1141. We find that establishing the affected system queue position based on the execution of the affected system study agreement is appropriate because, at that point, the affected system interconnection customer has demonstrated its intent to proceed with its interconnection request by executing the agreement and providing a study deposit to the affected system transmission provider as well as receiving its cluster study report on its host system and deciding to proceed with its interconnection request. Furthermore, allowing these affected system interconnection customers to be higher-queued than any of its own interconnection customers that have not received their cluster study results is appropriate because those interconnection customers have not yet received any network upgrade estimates. Thus, its own interconnection customers have not yet demonstrated their intention to proceed to the facilities study.

1142. We agree with commenters that establishing queue priority in an affected system transmission provider's interconnection queue based on when an interconnection request is received by the host transmission provider is problematic.²²⁰² In part for this reason, we are adopting the host system's cluster study results and execution of the affected system study agreement as reference points for queue priority²²⁰³ because these points occur after the interconnection customer has made demonstrations to indicate intent to progress through the interconnection process.

1143. We disagree with NextEra that the NOPR proposal's affected system queue priority construct, which we

adopt herein, will lead to a race among interconnection customers to be first or last to sign an affected system study agreement. NextEra's concern may occur under a serial affected system study process, but, as explained above, we require clustering of affected system studies. Studying affected system interconnection requests in clusters mitigates the risk of a race to execute affected system study agreements, as affected system interconnection customers in the same affected system cluster will be equally queued regardless of when they execute their affected system study agreement, if it is within the appropriate window for affected system study agreement execution. We find this to be a just and reasonable queue priority construct for affected system studies.

1144. We decline to adopt EDF Renewables' suggestion that the affected system transmission provider be required to establish queue priority between the host and affected systems based on the interconnection customer having achieved a certain stage in the host system's study process, rather than the date the interconnection customer submits an interconnection request. We clarify that we neither propose to, nor do we adopt a proposal to, base relative affected system queue priority on the date an interconnection customer submits its interconnection request.²²⁰⁴

1145. We clarify, in response to Idaho Power's request, that the affected system study process adopted in this final rule is required for all transmission providers, regardless of preexisting use of the first-ready, first-served cluster study process.

1146. We clarify, in response to APPA-LPPC, that establishing the affected system queue priority is for identifying the affected system network upgrades needed to mitigate constraints on the affected system.²²⁰⁵ This process will proceed in parallel with the host transmission provider's study process and should not result in delays to the interconnection customer. As discussed above, we allow interconnection customers to delay execution of their LGIAs, or request that the LGIA be filed unexecuted, if they have not received their affected system study results; however, based on the reforms we adopt

proposed *pro forma* LGIP section 9.2. See Alliant Energy Initial Comments at 7; MISO Initial Comments at 11–12; NextEra Initial Comments at 33; OMS Initial Comments at 17.

²²⁰² EDF Renewables Initial Comments at 11; MISO Initial Comments at 11, 87.

²²⁰³ See NOPR, 179 FERC ¶ 61,194 at P 189.

²²⁰⁴ See NOPR, 179 FERC ¶ 61,194 at P 189 (providing that the affected system transmission provider would assign the affected system interconnection customer a queue position in its queue according to when the affected system interconnection customer executes an affected system study agreement rather than when the affected system interconnection customer entered its host transmission provider's queue).

²²⁰⁵ APPA-LPPC Initial Comments at 26.

in this final rule, that should be the exception and not the rule. Thus, we find that the affected system queue position is merely intended to ensure that affected system interconnection customers are assigned the appropriate network upgrade costs according to the Commission's interconnection pricing policy, and not as an indicator that interconnection customers become part of two separate interconnection queues.

1147. With respect to requests for clarification regarding proposed *pro forma* LGIP section 9.2 and how the first-ready, first-served queue priority approach interacts with cluster studies,²²⁰⁶ we clarify that all affected system interconnection customers in the same cluster on the affected system will have equal queue priority in the affected system transmission provider's interconnection queue, which is consistent with how the first-ready, first-served approach interacts with cluster studies for interconnection customers on the transmission provider's transmission system when it is acting as a host system. This means that the affected system interconnection customers within a cluster have equal queue priority and that queue priority will be relative to the affected system transmission provider's own interconnection customers. The affected system transmission provider's own interconnection customers that already received their cluster study results when an affected system interconnection customer or cluster of affected system interconnection customers execute an affected system study agreement will be higher-queued than that affected system interconnection customer. Any of the affected system transmission provider's own interconnection customers that receive their cluster study results after the affected system interconnection customer or cluster of affected system interconnection customers execute their affected system study agreement will be lower-queued than that affected system interconnection customer or cluster of affected system interconnection customers. We clarify in response to APPA-LPPC that a transmission provider will assign the costs of network upgrades required on its transmission system to interconnection customers in its host cluster study process and affected system interconnection customers, also studied in their own cluster, based on their relative queue priority and in accordance with the proportional impact method as described in *pro forma* LGIP section

4.2.3, and as discussed further in the next section.²²⁰⁷

1148. With respect to Bonneville's request for clarification, we clarify that an affected system interconnection customer will lose its affected system queue position if the affected system interconnection customer fails to: (1) execute the affected system study agreement or request it be filed unexecuted; (2) execute the affected system facilities construction agreement or request it be filed unexecuted; (3) provide the affected system study deposit; or (4) pay undisputed affected system study true-up costs in a timely manner.

(e) Affected System Cost Allocation (Pro Forma LGIP Section 9.9)

1149. We also adopt the NOPR proposal in *pro forma* LGIP section 9.8, now *pro forma* LGIP section 9.9, titled "Affected System Cost Allocation," to allocate affected system network upgrade costs using a proportional impact method, in accordance with *pro forma* LGIP section 4.2.1(1)(b).

1150. We agree with SEIA that using a proportional impact method will reduce individual affected system network upgrade costs and reduce the likelihood of cascading withdrawals, consistent with our discussion above on the use of the proportional impact method for the allocation of network upgrade costs in a cluster on the host system.

1151. We disagree with commenters that argue that the Commission should provide for penalty-free withdrawal from the host system's interconnection queue if affected system study results increase an interconnection customer's costs by more than 25% or some other threshold compared to costs allocated by the host transmission provider.²²⁰⁸ First, we find that the final rule's requirement that affected system transmission providers use ERIIS modeling standard to conduct affected system studies should reduce the number and total cost of affected system network upgrades assigned to affected system interconnection customers, which will reduce instances of "sticker shock" from affected system network upgrades.²²⁰⁹ Second, as discussed above, any interconnection customers in a cluster that are not waiting for affected system study results must proceed with the finalization of their LGIAs, pursuant to *pro forma* LGIP section 11.1. Thus, we find that it would create sufficient

uncertainty to allow an interconnection customer to withdraw penalty-free when it receives its affected system study results if there is a 25% increase in costs, which may occur after other interconnection customers in the same cluster have finalized their LGIAs. We note that interconnection customers inherently assume some risk.

Accordingly, we decline to explicitly extend penalty-free withdrawal to include increases in affected system network upgrade costs beyond a certain threshold.

1152. In response to NV Energy's assertion that use of the proportional impact method may lead to restudies when a higher-queued affected system interconnection customer withdraws its interconnection request, we note that potential outcomes of withdrawal are restudy and the reallocation of costs, regardless of the cost allocation methodology used.²²¹⁰ We also note that, as described above, transmission providers may not need to perform a study if, in their engineering judgment, the network upgrades assigned to the withdrawing interconnection customer either are not needed or are easily reassigned to a remaining interconnection customer. Thus, restudies under the new interconnection process due to interconnection request withdrawals should be relatively less frequent than under existing processes.

(f) Information Sharing Among Transmission Providers (Pro Forma LGIP Section 3.6.3)

1153. We decline to adopt proposed section 3.6.3 of the *pro forma* LGIP, which would have required a transmission provider to provide data on a monthly basis, or more frequently as needed, to any affected system operators regarding the amount and location of proposed generation in the transmission provider's interconnection queue, as well as updated information about the transmission provider's transmission system.²²¹¹ We agree with commenters' arguments that the information sharing requirement is duplicative of what is available on OASIS and recognize that such a requirement may be overly burdensome.²²¹² The OASIS postings provide transparency regarding the host transmission provider's interconnection queue information. Further, transmission providers are required to notify neighboring transmission

²²⁰⁶ Id.; Idaho Power Initial Comments at 11; NextEra Initial Comments at 33.

providers of potential impacts on their systems per section 3.6.1 of the *pro forma* LGIP, as described above.

(g) Affected System Study Agreement (Pro Forma LGIP Section 9.4) and Execution Thereof (Pro Forma LGIP Section 9.5)

1154. With regard to tendering of the affected system study agreement to the affected system interconnection customer, we modify proposed *pro forma* LGIP section 9.3, now *pro forma* LGIP section 9.4, to require that the transmission provider provide the affected system study agreement within 10 business days of sharing the schedule for the study with the affected system interconnection customer(s), per *pro forma* LGIP section 9.2, rather than within five business days, as proposed. We agree with commenters that five business days is not enough time to prepare what could be numerous affected system study agreements in the event a number of interconnection customers in a large cluster on a neighboring transmission system impact the affected system transmission provider's transmission system.

1155. Consistent with our decision—discussed above—to not adopt the proposal to require affected system transmission providers to convene a scoping meeting with affected system interconnection customers, we remove references to such a meeting in *pro forma* LGIP section 9.4. Accordingly, we modify the NOPR proposal requiring the affected system operator to provide a non-binding good faith estimate of the cost and time frame for completing an affected system study from 15 business days after the affected system scoping meeting to 20 business days from the date that the affected system operator responded in writing to the host transmission provider that it intends to conduct an affected system study, pursuant to section 3.6.1 of the *pro forma* LGIP, and we also move this requirement to section 9.2 of the *pro forma* LGIP. The time taken to tender an affected system study agreement will also be measured from that date. We believe these changes will align the study timeline to the lack of an affected system scoping meeting.

1156. Accordingly, we modify proposed *pro forma* LGIP section 9.4 so that, after the affected system transmission provider responds with its intent to conduct an affected system study, the affected system transmission provider has 10 business days to tender an affected system study agreement from the date of the affected system transmission provider sharing the schedule for the study. Again, these

changes align the affected system study process timeline with the modification to remove the affected system scoping meeting.

1157. We further modify proposed *pro forma* LGIP section 9.4 to include a true-up of the affected system study deposit and actual cost of the affected system study. The difference between these amounts must be detailed in an invoice and paid by or refunded to the affected system interconnection customer within 30 calendar days of the receipt of such invoice. An affected system interconnection customer's failure to pay the difference between these amounts will result in loss of that affected system interconnection customer's affected system queue position. We find these modifications necessary to effectuate actual payment of affected system study costs and to outline the consequences for failure to do so.

1158. With regard to execution of the affected system study agreement, we adopt, with modification, the NOPR proposal to add section 9.5 to the *pro forma* LGIP regarding the timing of the execution of the affected system study agreement. As adopted, *pro forma* LGIP section 9.5 states that the affected system interconnection customer has 10 business days from the date of receipt of the affected system study agreement to execute and deliver it to the affected system transmission provider. *Pro forma* LGIP section 9.5 also provides that, if the affected system interconnection customer does not provide all required technical data when it delivers the affected system study agreement, the affected system transmission provider shall notify the affected system interconnection customer of the deficiency within five business days of the receipt of the affected system study agreement, and the affected system interconnection customer has 10 business days to cure the deficiency after receipt of such notice, provided that the deficiency does not include failure to deliver the executed affected system study agreement or deposit.

1159. In the same vein, we modify proposed section 9.4 of the *pro forma* LGIP to require the affected system transmission provider to notify the host transmission provider of the affected system interconnection customer's breach of its obligations under this section, should such breach occur. We find that, absent such notification, the host transmission provider may be unaware of such a breach.

(h) Scope of Affected System Study (Pro Forma LGIP Section 9.6)

1160. We adopt, with modification, the NOPR proposal in *pro forma* LGIP section 9.5, now *pro forma* LGIP section 9.6, regarding the scope of the affected system study. The affected system study will consider the base case as well as all higher-queued generating facilities on the affected system transmission provider's transmission system and will consist of a power flow, stability, and short circuit analysis. The affected system study will provide a list of affected system network upgrades that are required because of the affected system interconnection customer's proposed interconnection, a non-binding good faith estimate of cost responsibility, and a non-binding good faith estimated time to construct. We find that these requirements will ensure that the affected system study will identify affected system network upgrades that are necessary to mitigate the impacts of the affected system interconnection customer's proposed generating facility on the affected system while providing the affected system interconnection customer with estimated costs and a timeline to construct necessary network upgrades.

1161. In response to APPA–LPPC, Duke Southeast Utilities, Enel, and Pattern Energy, we modify the NOPR proposal and clarify that *pro forma* LGIP section 9.6 does not preclude affected system transmission providers from conducting facilities studies or other relevant studies when conducting affected system studies. The affected system study may consist of a system impact study, a facilities study, or a combination of a system impact and facilities study.

1162. To address commenters' criticism that the NOPR proposal was ambiguous with respect to whether a facilities study is specifically contemplated as part of the affected system study process,²²¹³ we clarify that it is. We agree with commenters that an affected system facilities study could provide more refined cost estimates and construction timelines to better apprise the affected system interconnection customer of expected affected system network upgrade costs and timing, thereby improving interconnection process efficiency.²²¹⁴ We note that the study requirements for the affected system study under *pro forma* LGIP section 9.6 that we proposed in the

²²¹³ APPA–LPPC Initial Comments at 26; Duke Southeast Utilities Initial Comments at 15.

²²¹⁴ Enel Initial Comments at 65; LADWP Initial Comments at 4; NV Energy Initial Comments at 11; Pattern Energy Initial Comments at 24–25.

NOPR, and adopt in this final rule, require the affected system transmission provider to produce the same information that a facilities study would produce; specifically, the affected system transmission provider must provide a list of facilities that are required as a result of an affected system interconnection customer's proposed interconnection, a non-binding good faith estimate of cost responsibility, and a non-binding good faith estimated time to construct. Nevertheless, for further clarity, we modify proposed *pro forma* LGIP section 9.6 to indicate that the affected system study may consist of a system impact study, a facilities study, or some combination thereof. We note that we have modified the proposal to provide more time to the transmission provider to conduct such studies that they deem necessary, as discussed above.

1163. In response to Duke Southeast Utilities' request for clarification that affected system transmission providers conduct a series of two affected system studies, we reiterate that nothing precludes an affected system transmission provider from conducting an affected system facilities study following an affected system impact study, just as nothing precludes affected system transmission providers from conducting a combined version of such studies, and we believe we have provided adequate time for transmission providers to do so.

1164. We find out of scope Shell's request for inclusion of further information on local transmission planning from neighboring public utility transmission providers in the affected system study results.

(i) Meeting With Transmission Provider (Pro Forma LGIP Section 9.8) and Affected System Facilities Construction Agreement (Pro Forma LGIP Section 9.10)

1165. We adopt proposed section 9.9, now section 9.10, of the *pro forma* LGIP, with modifications. Specifically, we adopt the requirement for an affected system transmission provider to tender to the affected system interconnection customer an affected system facilities construction agreement within 30 calendar days of providing the affected system study report. We modify this section to require the affected system transmission provider to provide 10 business days—rather than five business days, as proposed—after receipt of the affected system facilities construction agreement for the affected system interconnection customer to execute the agreement or have the affected system transmission provider file it unexecuted

with the Commission. While no comments were filed in opposition to the five business days to notify the affected system transmission provider of the affected system interconnection customer's intent to execute the agreement or request it to be filed unexecuted, as proposed in the NOPR, we believe that 10 business days gives the affected system interconnection customer a more appropriate length of time to review the facilities construction agreement and the timelines and costs contained therein to make a reasoned decision as to whether to execute the agreement or request that it be filed unexecuted with the Commission.

1166. Further, we find that it is appropriate to allow the interconnection customer to request that the affected system facilities construction agreement be filed unexecuted at the Commission. Similar to an interconnection customer's ability pursuant to *pro forma* LGIP section 11.3 to request the unexecuted filing of its LGIA, the ability to request the affected system facilities construction agreement be filed unexecuted allows an affected system interconnection customer to dispute provisions of the affected system facilities construction agreement before the Commission.²²¹⁵ Because (1) the existing *pro forma* LGIP section 11.3 permits the interconnection customer to request the transmission provider to file the LGIA unexecuted, (2) we base the affected system facilities construction agreement on the *pro forma* LGIA, and (3) the affected system facilities construction agreement is like a service agreement,²²¹⁶ it is appropriate to include a similar provision. We further find that an affected system interconnection customer may be in a disadvantageous position to negotiate the terms of an affected system facilities construction agreement, as this agreement is between the affected

system interconnection customer and a transmission provider with which it does not directly connect. Accordingly, to encourage good faith and fair dealings between the parties and to avoid the addition of potentially discriminatory terms or conditions to an affected system facilities construction agreement, we allow an affected system interconnection customer to request that an affected system facilities construction agreement be filed unexecuted before the Commission.

1167. We disagree with commenters' assertions that 30 calendar days may be an inadequate length of time to tender an affected system facilities construction agreement or that considerable time is needed to draft such an agreement.²²¹⁷ This is the same period of time by which the transmission provider must tender a draft LGIA to the interconnection customer, the timeline of which is set forth in the existing *pro forma* LGIP.²²¹⁸ We believe these timelines should be consistent because these agreements include similar provisions and similar requirements and the record does not persuade us otherwise.

1168. We disagree with Idaho Power's suggestion that the affected system transmission provider should tender an affected system facilities construction agreement within 60 calendar days of the interconnection customer executing a facilities study agreement with the host transmission provider because, as the host system and affected system study processes are separate, though overlapping and interrelated, it is more administratively feasible to tie affected system study process deadlines to affected system study process events. In response to Idaho Power's suggestion that the affected system transmission provider should tender an affected system facilities construction agreement within 30 calendar days of providing the affected system study results to the affected system interconnection customer if the affected system study is performed during the facilities study on the host transmission provider's system,²²¹⁹ we note that, as proposed in the NOPR, the affected system facilities construction agreement tender deadline is within 30 calendar days of the tendering of the affected system study report without any additional caveats or conditions. This tender timeline is,

²²¹⁵ See Order No. 2003, 104 FERC ¶ 61,103 at P 233 (stating that, if agreement negotiations are at an impasse, the interconnection customer could either request termination of negotiations and request submission of the unexecuted agreement to the Commission or initiate dispute resolution procedures).

²²¹⁶ See *Revised Publ. Util. Filing Requirements*, Order No. 2001, 99 FERC ¶ 61,107, at PP 196, 200, *reh'g denied*, Order No. 2001–A, 100 FERC ¶ 61,074, *reh'g denied*, Order No. 2001–B, 100 FERC ¶ 61,342, *order directing filing*, Order No. 2001–C, 101 FERC ¶ 61,314 (2002), *order directing filing*, Order No. 2001–D, 102 FERC ¶ 61,334, *order refining filing requirements*, Order No. 2001–E, 105 FERC ¶ 61,352 (2003), *order on clarification*, Order No. 2001–F, 106 FERC ¶ 61,060 (2004), *order revising filing requirements*, Order No. 2001–G, 120 FERC ¶ 61,270, *order on reh'g and clarification*, Order No. 2001–H, 121 FERC ¶ 61,289 (2007), *order revising filing requirements*, Order No. 2001–I, 125 FERC ¶ 61,103 (2008); see also Order No. 2003, 104 FERC ¶ 61,103 at PP 913–915.

²²¹⁷ See Duke Southeast Utilities Initial Comments at 15–16; Idaho Power Initial Comments at 11; MISO Initial Comments at 91–92; WAPA Initial Comments at 13.

²²¹⁸ *Pro forma* LGIP section 11.1.

²²¹⁹ Idaho Power Initial Comments at 11.

however, not directly linked to the host transmission provider's study process.

1169. We also adopt the NOPR proposal to add section 9.7, now section 9.8, to the *pro forma* LGIP. Section 9.8 of the *pro forma* LGIP, titled "Meeting with Transmission Provider," requires the affected system transmission provider and the affected system interconnection customer to meet within 10 business days of the affected system transmission provider tendering the affected system study report to the affected system interconnection customer. We find that such a meeting between the affected system transmission provider and affected system interconnection customer will facilitate transparency and meaningful communication in the affected system study process. We note that WAPA stated that a meeting after the affected system study report is tendered would be more beneficial than an affected system scoping meeting. We agree with WAPA and find that no changes to this section are necessary.

(j) Restudy Period (Pro Forma LGIP Section 9.11)

1170. We adopt the NOPR proposal in section 9.10, now section 9.11, of the *pro forma* LGIP to include a maximum 60-calendar day restudy period for any affected system restudies. We find that 60 calendar days are adequate to complete an affected system restudy. We disagree that affected system restudies are as complex as host system restudies, as affected system studies will likely involve fewer interconnection requests than cluster studies on the host system. Additionally, as discussed further below, we find that standardization of affected system study assumptions through ERIIS modeling criteria will further simplify both affected system studies and restudies. Thus, we find it just and reasonable to adopt a 60-calendar day affected system restudy period.

1171. In addition to the 60-calendar day restudy period, we adopt a 30-calendar day notification requirement for the affected system transmission provider to notify the affected system interconnection customer of the need for affected system restudy upon discovery of such need in *pro forma* LGIP section 9.11. We find such a notification requirement to be consistent with restudy notification on the host system, and we find such notification necessary to continue a timely affected system study process. Accordingly, we find such a notification period to be just and reasonable.

(k) Coordination Between Host Transmission Provider and Affected System Transmission Provider

1172. In response to multiple commenters' assertions that, for efficiency reasons, host transmission providers should be required to coordinate affected system study activities with affected system transmission providers rather than individual interconnection customers,²²²⁰ or that flexibility should be afforded in terms of the parties to the affected system study agreement and the affected system facilities construction agreement,²²²¹ the Commission is not persuaded that any potential efficiencies of such coordination outweigh the burdens that may be placed on host transmission providers, and we decline to require it in this final rule. We note that, in many cases, the affected system operator may be a non-public utility transmission provider, which would limit the usefulness of such a requirement. However, we encourage any such voluntary coordination between transmission providers who share transmission system seams and whose interconnection customers frequently impact each other's systems. We also note that, as NextEra suggests, such transmission providers may file seams agreements under FPA section 205.²²²²

1173. In response to Indicated PJM TOs' argument that affected system studies should be integrated into the cluster study process, we do not have a record to support such a requirement in the final rule. Integrating affected system interconnection customers into a cluster that is already proceeding through the study process could meaningfully change network upgrade cost estimates which could, in turn, create new interconnection request withdrawals, leading to restudies and delays. Maintaining the clusters as-is and placing the affected system interconnection customers in a lower queue position than any interconnection customers that have received cost estimates will ensure this situation does not happen.

1174. In response to APS' request for clarification on how the proposed affected system study process correlates to the host system's studies and aligns with the host system's requirements,²²²³ we explain that the affected system study is predicated on the completion of a cluster study in the host transmission

provider's interconnection queue. Relative queue position for the affected system study is also determined based on an interconnection customer's completion of the host system cluster study. While the host transmission provider will likely complete its facilities study prior to an affected system transmission provider's completion of an affected system study, we add a requirement for host transmission providers with interconnection customers that have not yet received their affected system study results to delay the LGIA execution (or unexecuted filing) deadline for those interconnection customers. An interconnection customer's failure to satisfy its obligations under the *pro forma* LGIP, including coordination with the affected system transmission provider, where applicable, will result in the loss of the interconnection customer's affected system queue position.

(l) Non-Public Utility Requests

1175. We reject requests to impose firm deadlines and requirements that prevent non-public utility transmission providers from interfering with jurisdictional interconnection agreements because we do not have the jurisdiction to do so.²²²⁴

1176. In response to concerns regarding a transmission provider's liability for delays or inaction by non-public utility transmission providers,²²²⁵ we clarify that transmission providers will not face consequences for the inaction of a non-public utility transmission provider, as long as the transmission providers fulfill their obligations as outlined in their LGIPs. For example, under the *pro forma* LGIP affected system process, a transmission provider would satisfy its obligation to a non-public utility affected system operator by timely notifying it of an affected system impact per *pro forma* LGIP section 3.6.1.

(m) Miscellaneous

1177. We do not address the comments of North Carolina Commission and Staff and EDF Renewables that interregional transmission planning is a way to address affected system impacts because these comments are beyond the scope of this proceeding, which is limited to generator interconnection.

²²²⁰ Enel Initial Comments at 60–61; Shell Initial Comments at 30.

²²²¹ PPL Initial Comments at 20.

²²²² NextEra Reply Comments at 5.

1178. In response to Eversource's and NYTOs' requests for clarification that affected system study process reforms would not apply to intra-RTO/ISO system upgrades or would not apply to neighboring transmission owners within a single RTO/ISO,²²²⁶ we clarify that, in RTO/ISO regions, the RTO/ISO serves as the transmission provider for affected system study purposes, and the RTO/ISO footprint as the affected system, and thus intra-RTO/ISO considerations do not apply in this context and are beyond the scope of this final rule.

1179. We disagree with Invenenergy's argument that affected system study process reforms should apply to all pending interconnection requests and active studies.²²²⁷ While we adopt a transition approach for serial and cluster study processes in the final rule, as explained above, we did not propose a similar transition approach with respect to affected system studies in the NOPR. Without consistency between transition processes as they pertain to neighboring transmission providers and implicate the affected system study process, it would be practically infeasible to apply the affected system study process reforms to all pending interconnection requests and active studies as Invenenergy suggests. Accordingly, we decline to apply the affected system study process reforms adopted in this final rule to any pending interconnection requests and active studies.

1180. In response to CREA and NewSun's request for clarification that a QF interconnection customer has the option to opt into use of the Commission's interconnection procedures in cases where the interconnection requires studies or network upgrades on affected systems,²²²⁸ we decline to implement a jurisdictional toggle option for an interconnection customer. Longstanding Commission precedent indicates when a QF's interconnection is subject to state jurisdiction or Commission jurisdiction.²²²⁹ Nothing in this final

rule is intended to revise the Commission's approach under PURPA. Requiring affected system studies does not change the sale of a QF's output, which is the foundation of the Commission's interconnection analysis under PURPA.²²³⁰ To the extent that affected system studies are required due to a QF interconnection, the Commission will address such filings upon their receipt.

c. Affected System Pro Forma Agreements

i. Need for Reform

(a) NOPR Proposal

1181. In the NOPR, the Commission expressed concern that the lack of *pro forma* agreements for affected system studies and the construction of network upgrades on affected systems was hindering the efficiency of the generator interconnection process through increased litigation over such agreements and allowed for potential unduly discriminatory behavior against interconnection customers whose interconnection requests necessitate affected system network upgrades.²²³¹ Noting a recent increase in affected system-related disputes, the Commission preliminarily found it unjust and unreasonable to leave affected system agreements wholly up to individual negotiations and proposed standardized *pro forma* affected system agreements that minimize the likelihood for such disputes by (1) stipulating how to study the impact of interconnecting generating facilities on an affected system to identify network upgrades needed to accommodate the interconnection request and (2) standardizing the affected system facilities construction agreement to set the terms and conditions for the construction of those network upgrades.²²³²

(b) Comments

1182. Many commenters generally support the proposal to develop standardized *pro forma* affected system agreements.²²³³ Commenters state that

standardization and better synchronization of timelines and processes for affected system studies between host and affected system transmission providers will improve the efficiency of the interconnection process and reduce opportunities for undue discrimination.²²³⁴ ELCON suggests that standardization of affected system study agreements, modeling, and assumptions furthers certainty and accountability, resulting in a more transparent, efficient, and cost-effective interconnection process.²²³⁵

(c) Commission Determination

1183. We find that the lack of affected system *pro forma* study and facilities construction agreements hinders the efficiency of the generator interconnection process through increased litigation over such agreements and allows for potential unduly discriminatory behavior against interconnection customers whose interconnection requests necessitate affected system network upgrades. Our establishment of *pro forma* affected system agreements is supported by the record.²²³⁶ We agree with commenters that this standardization of timelines and processes will improve the efficiency of the interconnection process and reduce opportunities for undue discrimination.²²³⁷ For example, in establishing such standardized agreements, affected system transmission providers and affected system interconnection customers will no longer need to negotiate individual non-standard agreements. Also, in requiring affected system transmission providers to adhere to a set of *pro forma* procedures in their tariffs common to all jurisdictional transmission providers, we minimize the opportunities for undue discrimination.²²³⁸ The

standardization of affected system agreements also furthers certainty and accountability, resulting in a more transparent, efficient, and cost-effective interconnection process by ensuring affected system interconnection customers know the standard scope and terms of agreements for the affected system interconnection process prior to entering the interconnection queue.²²³⁹

ii. Pro Forma Affected System Study Agreement

(a) NOPR Proposal

1184. In the NOPR, the Commission proposed to establish a *pro forma* affected system study agreement to improve the efficiency and transparency of the interconnection customer's interaction with the affected system transmission provider.²²⁴⁰ The Commission proposed to model the *pro forma* affected system study agreement on the form of the existing *pro forma* system impact study agreement, with necessary minor revisions to the party names.²²⁴¹ Specifically, the affected system interconnection customer and affected system transmission provider would be parties to the agreement.

1185. In articles 1, 2, 3, and 4, respectively, of the proposed *pro forma* affected system study agreement, the agreement specifies (1) the capitalization of defined terms in the *pro forma* LGIP, (2) that coordination with the host transmission provider shall occur pursuant to *pro forma* LGIP section 9, (3) that study assumptions shall be set forth in attachment A to the agreement, and (4) that studies shall be based on technical information provided by the affected system interconnection customer. In article 5, with regard to the information the affected system transmission provider will provide to the affected system interconnection customer in a study report upon completion of the affected system study, the Commission proposed to require the following: identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection; identification of any thermal overload or voltage limit violations resulting from the interconnection; identification of any instability or inadequately damped response to system disturbances resulting from the interconnection; a non-binding, good faith estimate of the cost of facilities on the affected system required to accommodate the

interconnection of the affected system interconnection customer's project to the host transmission system; and a description of how such facilities will address the identified short circuit, instability, and power flow issues identified in the affected system study.²²⁴² The Commission sought comment on whether the information required for the study report would provide adequate information to the affected system interconnection customer to understand the results of the affected system study. Finally, in articles 6 and 7, the Commission specified the provision of an affected system study deposit and that standard miscellaneous terms would be used consistent with industry best practice and with the *pro forma* LGIP and *pro forma* LGIA.

(b) Comments

1186. Some commenters generally support the NOPR proposal to develop a *pro forma* affected system study agreement.²²⁴³ Others generally support the establishment of a *pro forma* affected system study agreement but suggest general changes to the approach proposed in the NOPR. For example, MISO states that the requirement to execute an agreement with each affected system interconnection customer would create a significant amount of work for transmission providers that is likely to divert resources from performing studies and coordinating with other transmission providers without any greater benefit than provided by existing joint operating agreements and other seams agreements with neighboring systems.²²⁴⁴ SPP adds that requiring individualized invoicing for all affected system study requests from another transmission provider's cluster study would present a significant administrative burden for both transmission providers and interconnection customers, which would be required to deal with multiple transmission providers, instead of just the host transmission provider.²²⁴⁵ SPP notes that, in its joint operating agreement with MISO, the transmission providers coordinate affected system studies following each transmission provider's system impact studies on their own systems, and rather than invoicing each interconnection customer individually, the transmission

providers invoice each other for study costs, which allows the host transmission provider to use existing study deposits when available, and otherwise collect from its interconnection customers as needed.²²⁴⁶

1187. Other commenters suggest specific changes to the language proposed in the NOPR. For instance, Tri-State proposes adding language to article 9.4 of the *pro forma* LGIP specifying a protocol if deficiencies are not cured, such as, "shall be deemed withdrawn pursuant to Section 3.7 of this LGIP."²²⁴⁷ PPL argues that the *pro forma* affected system study agreement should: (1) have article 7 replaced entirely with actual contractual terms; (2) contain a clear requirement for affected system interconnection customers to provide data in a timely manner; (3) include data ownership and confidentiality provisions; and (4) address restudies.²²⁴⁸

1188. Additionally, Tri-State includes an appendix containing a redline version of the *pro forma* affected system study agreement that specifies its requested revisions to the agreement. Of note, Tri-State proposes changes to article 6, which would require the affected system transmission provider to specify the affected system study deposit value.²²⁴⁹

1189. In response to whether the information required in the affected system study report would provide adequate information to the affected system interconnection customer to understand the results of the affected system study, Xcel states that the proposed information is adequate.²²⁵⁰ Duke Southeast Utilities support the information required by article 5 of the proposed agreement but suggest that any other identified impacts outside of the prescribed information should also be included.²²⁵¹ LADWP believes that the study report should also include whether modifications to remedial action schemes or other special protection systems may be required.²²⁵²

1190. Enel seeks clarification on whether the affected system study scope must include all of "a short circuit analysis, thermal overload or voltage limit identification, and stability analysis, and a power flow analysis," as proposed in *pro forma* LGIP section 9.5,

standard procedures and agreements, in part to minimize opportunities for undue discrimination).

and requests that transmission providers be allowed to waive portions of the study scope if deemed unnecessary.²²⁵³

1191. Several entities ask the Commission to allow regional variations to avoid conflict with existing affected system coordination processes.²²⁵⁴

(c) Commission Determination

1192. We adopt, with modifications, the proposed *pro forma* affected system study agreement set forth in Appendix 9 of the *pro forma* LGIP.²²⁵⁵ As discussed below, we make two modifications. First, consistent with comments,²²⁵⁶ we establish a multiparty *pro forma* affected system study agreement set forth in Appendix 10 of the *pro forma* LGIP. Second, we modify article 6 of the proposed *pro forma* affected system study agreement to make the language therein consistent with similar language elsewhere in the *pro forma* LGIP.²²⁵⁷

1193. Starting with the multiparty *pro forma* affected system study agreement, as described above, we require affected system transmission providers to study affected system interconnection requests in clusters. To facilitate this change, we modify the NOPR proposal and establish a *pro forma* multiparty affected system study agreement that closely tracks the proposed two-party agreement. Such a *pro forma* multiparty agreement will allow affected system transmission providers to enter into the same affected system study agreement with each of the affected system interconnection customers that it must study in a cluster. We find that a *pro forma* multiparty affected system study agreement will facilitate interactions with the affected system transmission provider, making them more efficient and transparent. We agree with SPP and MISO that a requirement for an affected system transmission provider to sign affected system study agreements with each affected system interconnection customer would be burdensome.²²⁵⁸ In creating a *pro forma* multiparty affected system study agreement, we reduce the administrative burden on transmission providers that no longer need to manage

several individual affected system study agreements.

1194. In response to SPP and MISO's suggestion to make the parties to the *pro forma* affected system study agreement the affected system transmission provider and the host transmission provider, we decline this request. We believe that the interconnection customer, as the one responsible for providing necessary information about the proposed generating facility as well as funding the affected system study, is the appropriate counterparty to the affected system study agreement. We note, however, that any transmission providers may propose alternative arrangements through joint operating agreements or otherwise pursuant to FPA section 205.

1195. In response to comments from Tri-State and PPL's request regarding affected system interconnection customers that fail to provide required information,²²⁵⁹ we find that sufficient requirements for data sharing exist in both the current and newly adopted *pro forma* LGIP requirements. Specifically, as discussed above and consistent with comments from Tri-State, we modify *pro forma* LGIP section 9.5 to explicitly state that any affected system interconnection customer failing to submit required information and failing to cure that deficiency shall lose its affected system queue position. We also add to *pro forma* LGIP section 9.5 a requirement that the affected system transmission provider notify the host transmission provider in a timely manner of such failure by the affected system interconnection customer.

1196. In response to Tri-State's requested revisions to article 6 of the *pro forma* affected system study agreement, we modify the *pro forma* affected system study agreement to add additional language to explicitly require affected system interconnection customers to provide a study deposit. The deposit will provide for the cost of the affected system interconnection study. Moreover, we find that such revisions will align the *pro forma* affected system study agreement with Appendix 2 (cluster study agreement), Appendix 3 (interconnection facilities study agreement), and Appendix 4 (optional interconnection study agreement) of the *pro forma* LGIP.

1197. In response to PPL's request that article 7, regarding standard miscellaneous terms, should be replaced with actual contractual terms, we decline to adopt PPL's proposed revisions. We adopt article 7 of the *pro*

forma affected system study agreement, with modification to eliminate the reference to the LGIA. We note that this article 7 is consistent with the existing *pro forma* interconnection system impact study agreement (which the Commission is replacing with new cluster study-based agreements adopted in this final rule), interconnection facilities study agreement, and optional interconnection study agreement, which also provide for standard miscellaneous terms. In response to PPL's requests that the *pro forma* affected system study agreement should address data ownership and confidentiality requirements as well as restudies, we find such revisions to the proposed *pro forma* affected system study agreement unnecessary, as they would be duplicative of existing *pro forma* LGIP provisions regarding confidentiality (section 13.1) and restudies (former section 6.4, now contained in sections 7.5, 8.5, and 9.10). Regarding the removal of the reference to the LGIA, we find that the removal is appropriate as the parties to an interconnection customer's LGIA would not be the same parties to an affected system study agreement.

1198. In response to comments on the scope of the *pro forma* affected system study, we agree with Xcel that the scope of the affected system study is adequate.²²⁶⁰ Consequently, we decline to modify the scope of the affected system study contained in article 5 of the proposed *pro forma* affected system study agreement. We note that the scope of the affected system studies identified in article 5 is consistent with the scope of host system interconnection studies.²²⁶¹ In response to comments from Duke Southeast Utilities that entities should be able to include other, identified impacts in the affected system study report, we clarify that the scope of affected system studies must be consistent with the scope listed in article 5 of the *pro forma* affected system study agreement. Affording affected system transmission providers flexibility to expand the scope of affected system studies on an ad hoc or individual basis creates the potential for undue discrimination and a barrier to entry. With respect to LADWP's request to include impacts to remedial action schemes and other special protection systems within the scope of the affected system studies,²²⁶² we clarify that such impacts are already contemplated in

article 5 of the *pro forma* affected system study agreement.

iii. Pro Forma Affected System Facilities Construction Agreement

(a) NOPR Proposal

1199. In the NOPR, the Commission proposed to revise the *pro forma* LGIP to add a *pro forma* affected system facilities construction agreement.²²⁶³ The proposed *pro forma* affected system facilities construction agreement includes provisions on the following: terms of the agreement; construction of network upgrades; taxes; *force majeure*; information reporting; security, billing, and payments; assignment; indemnity; breach, cure, and default; termination; contractors; confidentiality; information access and audit rights; dispute resolution; and notices.²²⁶⁴ Proposed Appendix A to the agreement provides for details on identified network upgrades, cost estimates and responsibility, the construction schedule for network upgrades, and a payment schedule; proposed Appendix B addresses notification of completed construction; and proposed Appendix C provides for a transmission provider site map, a site plan, a plan and profile for network upgrades, and the estimated cost of the network upgrades.

1200. The Commission proposed that the *pro forma* affected system facilities construction agreement would be entered into by the affected system transmission provider and the affected system interconnection customer.²²⁶⁵ Under the NOPR proposal, the affected system transmission provider would be responsible for the design, procurement, construction, and installation of all network upgrades identified in Appendix A using reasonable efforts to complete construction consistent with the schedule identified in Appendix A. The affected system interconnection customer would initially fund the cost of any assigned network upgrades and be reimbursed by the affected system transmission provider.²²⁶⁶ Rather, the Commission proposed to require that, consistent with Order No. 2003, the affected system interconnection customer must enter into an agreement with the affected system transmission provider that must specify the terms governing payments to be made by the affected system interconnection customer as well as payment of refunds by the affected system transmission

provider for the full cost of network upgrades, plus interest.²²⁶⁷

1201. The Commission clarified that the term to be mutually agreed upon for payment of refunds to affected system interconnection customer funded network upgrades is not to exceed 20 years.²²⁶⁸ This term mirrors the repayment term in the *pro forma* LGIA but allows for flexibility for the parties to come to another arrangement if they prefer. Under the NOPR proposal, within six months of completion of construction of any required network upgrades, the affected system transmission provider would invoice the affected system interconnection customer for the final construction costs, including a true-up of estimated and actual costs. The *pro forma* affected system facilities construction agreement would terminate upon the affected system transmission provider's final repayment to the affected system interconnection customer. Alternatively, the affected system interconnection customer could also terminate the affected system facilities construction agreement with 60 calendar days' written notice to the affected system transmission provider.

1202. The Commission sought comment on the network upgrade funding and repayment provisions in the proposed *pro forma* affected system facilities construction agreement, specifically whether the repayment time frame and the similarity of the proposal to the repayment terms in the *pro forma* LGIA were appropriate.²²⁶⁹ The Commission also sought comment on whether any articles or provisions should be added to the proposed *pro forma* affected system facilities construction agreement or whether the proposed provisions were sufficient.²²⁷⁰

(b) Comments

1203. Some commenters generally support the proposed *pro forma* affected system facilities construction agreement because it will offer uniformity across the country and increase administrative efficiency.²²⁷¹ Others argue that the agreement should be structured as either an individual network upgrade agreement or a multiparty network upgrade agreement.²²⁷²

²²⁶⁷ *Id.* P 739.

²²⁶⁸ *Id.*; see also Order No. 2003–B, 109 FERC ¶ 61,287 at PP 32–36 (extending the required repayment period from five years to 20 years).

²²⁷⁰ *Id.* P 204.

²²⁷¹ Ameren Initial Comments at 23; Duke Southeast Utilities Initial Comments at 18; SPP Initial Comments at 19–20.

²²⁷² PPL Initial Comments at 20; SPP Initial Comments at 20.

1204. Some commenters request that the Commission allow for regional variations to avoid conflict with existing *pro forma* facilities construction agreements.²²⁷³

(1) Comments on Specific Provisions and Related Proposals

1205. As a global change, Xcel recommends that the defined term “affected system operator” be used instead of “transmission provider” when referencing the affected system transmission provider, arguing that the use of the terms “transmission provider” and “transmission provider acting as affected system” are confusing and may conflict with usage of those terms in the LGIP.²²⁷⁴

1206. With regard to article 2 (Term of Agreement), Tri-State proposes the following addition: “No Transmission Delivery Service. The execution of this LGIA does not constitute a request for, nor the provision of, any transmission delivery service under Transmission Provider's Tariff, and does not convey any right to deliver electricity to any specific customer or Point of Delivery.”²²⁷⁵ Additionally, Tri-State opposes the option in proposed article 2.2.1 that would allow the affected system interconnection customer to terminate the affected system facilities construction agreement with 60 calendar days' written notice. Tri-State contends that allowing such termination could trigger restudies for the affected system transmission provider.²²⁷⁶

1207. Southern states that the Commission should either reconsider or clarify proposed article 2.2.2 (Termination Upon Default) and proposed article 5.2 (Notice of Breach, Cure, and Default), which it states appears to provide that if a default does not pose a threat to the reliability of the affected system transmission provider's transmission system, the affected system transmission provider may not terminate the agreement if the affected system interconnection customer has begun to cure and compensate the transmission provider for any damage.²²⁷⁷ Southern argues that such provisions should be consistent with *pro forma* LGIA provisions and that, if an affected system interconnection customer defaults under the LGIA, the affected system operator should not be required to build affected system network upgrades. Southern argues that,

²²⁷³ Ameren Initial Comments at 23; MISO Initial Comments at 97; NYISO Initial Comments at 45; PPL Initial Comments at 22.

²²⁷⁴ Xcel Initial Comments at 40.

²²⁷⁵ Tri-State Initial Comments at 32.

²²⁷⁷ Southern Initial Comments at 18.

²²⁶³ NOPR, 179 FERC ¶ 61,194 at P 200.

²²⁶⁴ *Id.* P 201.

²²⁶⁵ *Id.* P 202.

²²⁶⁶ Order No. 2003, 104 FERC ¶ 61,103 at P 738.

if the provisions are not consistent with the *pro forma* LGIA, affected system transmission providers will build affected system network upgrades that are not needed, and there will be different default and termination rights applicable to these improvements. Similarly, Tri-State submits suggested edits to proposed article 2.2.2, which remove the provisions Southern comments on, explaining that a default should only occur after a breach and failure to cure.²²⁷⁸

1208. Invenergy opposes proposed article 2.2.3, which provides that, upon termination of the affected system facilities construction agreement, the affected system interconnection customer would be responsible for costs incurred by another affected system interconnection customer due to the termination of: (1) its affected system facilities construction agreement; (2) that interconnection customer's LGIA; or (3) any of that interconnection customer's other affected system facilities construction agreements.²²⁷⁹ Some commenters argue that this requirement is unreasonable and must be revised.²²⁸⁰ They claim that there is no basis for imposing on the affected system interconnection customer broad and potentially exorbitant liability for any potential impacts on any other interconnection customer within the affected system, which they argue exceeds potential liability imposed under the *pro forma* LGIA for the host transmission provider's transmission system.²²⁸¹ Invenergy states that the provision appears to be based on a provision in MISO's *pro forma* facilities construction agreement, which it argues does not make sense for a generically applicable *pro forma* agreement.

1209. As for proposed article 3 (Construction of Network Upgrades), some commenters object to limiting the right to suspend for *force majeure* events, contained in proposed article 3.1.2.1.²²⁸² Southern states that proposed article 3.1.2.1 appears to provide that the affected system interconnection customer may only suspend its interconnection request if there is a *force majeure* event and that no such limitation on suspension rights exists under the *pro forma* LGIA, meaning that an affected system

interconnection customer could suspend its interconnection request under the *pro forma* LGIA but still be required to move forward with construction of affected system network upgrades, if the reason for suspension under the *pro forma* LGIA is not a *force majeure* event.²²⁸³ Enel asserts that the Commission has not provided justification for limiting the affected system interconnection customer's suspension rights to just *force majeure* events.²²⁸⁴ Enel, Invenergy, and Southern argue that suspension rights under the *pro forma* affected system facilities construction agreement should be consistent with the suspension rights under the *pro forma* LGIA, with Invenergy highlighting that the *pro forma* LGIA permits suspension for up to three years.²²⁸⁵ Conversely, Tri-State argues that the same *force majeure* language used in proposed article 3.1.2.1 should be added to both the *pro forma* LGIA and *pro forma* LGIP.²²⁸⁶

1210. MISO suggests that there should be a provision in the *pro forma* affected system facilities construction agreement on cross-defaults between the affected system facilities construction agreement and the interconnection customer's LGIA.²²⁸⁷ MISO asserts that, as proposed, if the affected system interconnection customer refuses to make payments under an affected system facilities construction agreement, it is unclear how it would affect the affected system interconnection customer's LGIA.

1211. In response to proposed article 3.2.2.1, which would require affected system transmission providers to reimburse affected system interconnection customers for their affected system network upgrade costs, many commenters support the proposal,²²⁸⁸ while many others oppose it.²²⁸⁹ In support, commenters contend that the reimbursement policy is consistent with long-established Commission precedent and cost

causation, as it ensures that affected system network upgrade cost reimbursement is rate-based, such that the transmission customers that ultimately benefit from the network upgrades pay for those upgrades.²²⁹⁰ In contrast, according to these commenters, allowing transmission customers of the affected system to receive the benefits of an affected system network upgrade, without paying for it, would create a "free-rider" problem that is inconsistent with the "beneficiary pays" principle.²²⁹¹

1212. Other commenters do not fully oppose the proposal but suggest changes to proposed article 3.2.2.1. For instance, MISO and Southern contend that the repayment provisions for affected system interconnection customers should be consistent with how the transmission provider repays its internal interconnection customers.²²⁹² MISO asserts that this will ensure comparability and non-discriminatory treatment between affected system interconnection customers and "native" interconnection customers interconnected to the affected system.²²⁹³ APPA-LPPC argue that the NOPR proposal is missing an express, contractual commitment ensuring that an interconnection customer will fund network upgrades identified by the affected system as a condition of interconnection.²²⁹⁴ APPA-LPPC state that they believe this to be implicit in the proposal and that the provision should specify that the identified affected system transmission provider is an intended third-party beneficiary of the LGIA. APPA-LPPC contend that the absence of such a contractual obligation on the part of the interconnection customer is a particular concern for non-public utilities, which have no standing under the FPA to seek funding for network upgrades under Commission-jurisdictional tariffs. However, according to Southern, in Order No. 2003, the Commission declined to make a generic finding on the possibility of network upgrade costs being passed onto native load and transmission customers and instead allowed transmission providers to make a filing if such entities were not being held harmless.²²⁹⁵ Southern states that

the Commission should clarify that a transmission provider can make such a filing, if warranted, in which it could propose that affected system interconnection customers bear the cost responsibility of identified affected system network upgrades.²²⁹⁶

1213. Among issues raised by commenters that oppose the proposal, one common concern is that the proposal would force affected system transmission providers to subsidize interconnection to neighboring transmission systems, despite potentially not receiving any energy from such interconnection customers, causing increased costs to the affected system due to the requirement to mitigate negative thermal, voltage, and stability impacts without a corresponding increase in benefits.²²⁹⁷ North Carolina Commission and Staff also contend that the Commission has not provided evidence on this matter that would allow the Commission to meet its burden under FPA section 206.²²⁹⁸ Some commenters assert that the affected system interconnection customer should be responsible for the costs of affected system network upgrades in exchange for use of the affected system (*i.e.*, via transmission service).²²⁹⁹ Xcel notes that, for loop flow impacts, the affected system interconnection customer may not formally take transmission service but may be granted the right to the transmission capacity associated with the loop flows they cause, and some transmission providers have charged unreserved use for such impacts or otherwise required neighbors to pay for the transmission use.²³⁰⁰

1214. North Carolina Commission and Staff observe that, if the Commission were to implement the NOPR proposal and allow RTOs/ISOs to obtain independent entity variations from the proposed affected system pricing scheme implementing a participant funding model, then North Carolina retail and wholesale customers of Duke Energy Carolinas and Duke Energy Progress would be paying for affected

system network upgrade costs when a generating facility interconnects with the PJM-controlled transmission system in addition to paying for network upgrade costs for native interconnection customers when generating facilities interconnect with Duke Energy Progress or Duke Energy Carolinas-owned transmission facilities, which they argue would be patently unjust, unfair, and unduly preferential.²³⁰¹

1215. Several commenters argue that the NOPR proposal is contrary to important objectives articulated in Order No. 2003.²³⁰² For instance, Duke Southeast Utilities contend that, if transmission providers are required to reimburse affected system interconnection customers for costs advanced for affected system network upgrades, such transmission providers will seek to obtain rate recovery of their reimbursement cost from existing wholesale and retail transmission customers, meaning those classes of customers will not be protected from adverse rate implications because they will have to absorb all affected system network upgrade costs.²³⁰³ According to Duke Southeast Utilities, this is contrary to an important objective articulated in Order No. 2003–B of the interconnection pricing policy protecting existing transmission customers from adverse rate implications associated with interconnection facilities and network upgrades required to interconnect a new generating facility.²³⁰⁴

1216. According to PPL, the pricing policy established in Order No. 2003 was meant to promote competition in markets “still dominated by non-independent transmission providers.”²³⁰⁵ PPL argues that non-RTO/ISO transmission providers no longer dominate, and therefore this policy is no longer necessary.²³⁰⁶ PPL asserts that, contrary to the time of Order No. 2003’s issuance, and as a result of the size and nature of generating facilities being developed in RTO/ISO regions, non-RTOs/ISOs might be required to build costly affected system network upgrades to accommodate the interconnection of generating facilities in adjacent markets. PPL contends that affected system

network upgrade costs can overwhelm the total network upgrade costs identified for reliability or other planning purposes. PPL claims, however, that the affected system network upgrade reimbursement proposal in the NOPR is directly contrary to the Commission’s interconnection pricing policy meant to protect existing customers from the rate impacts of interconnection-related network upgrades,²³⁰⁷ and allows affected system interconnection customers to benefit from network upgrades without paying for them.²³⁰⁸ Thus, PPL asserts that the Commission should allow affected system transmission providers the flexibility to directly assign affected system network upgrade costs. Duke Southeast Utilities concur, asserting that there is ample precedent of the Commission accepting, without modification, an affected system operating agreement between affected system transmission providers and affected system interconnection customers that directly assign network upgrade costs to such interconnection customers without reimbursement.²³⁰⁹

1217. Invenenergy asserts that the Commission should reject arguments challenging the Commission’s interconnection pricing policy established in Order No. 2003.²³¹⁰ Invenenergy contends that this interconnection pricing policy was fully litigated in the Order No. 2003 rulemaking proceeding and that issues relating to cost causation were fully and carefully considered at that time.²³¹¹ Invenenergy also argues that Duke Southeast Utilities’ reference to Order No. 2003–B is misplaced, as the Commission, in Order No. 2003–B, found that the interconnection pricing policy fully protected native load customers and that transmission providers could make and justify alternative proposals on compliance.²³¹²

1218. Duke Southeast Utilities and North Carolina Commission and Staff assert that the affected system network upgrade reimbursement proposal will stifle renewable generating facility

development.²³¹³ For instance, Duke Southeast Utilities argue that mandatory reimbursement has the likelihood of chilling development of new, mainly renewable, generating facilities in states that consider such costs as part of overall development costs when considering whether to issue a certificate of public convenience and necessity to permit these generating facilities.²³¹⁴

1219. Moreover, Duke Southeast Utilities argue that the mandatory reimbursement by affected system transmission providers of affected system network upgrade costs fails to encourage efficient siting decisions by affected system interconnection customers.²³¹⁵ Duke Southeast Utilities assert that, if affected system interconnection customers are reimbursed for 100% of the costs of network upgrades on the affected system plus interest at the Commission-prescribed rate, they actually profit financially from such reimbursement.²³¹⁶

1220. Invenergy argues that the possibility of certain states considering affected system network upgrade costs in permitting proceedings does not call the Commission's existing pricing policy into question.²³¹⁷ In response to arguments that the NOPR proposal could foster inefficient siting, Invenergy asserts that this argument was considered and settled in the Order No. 2003 rulemaking proceeding.²³¹⁸ Invenergy contends that such comments are speculative and ignore other facts, such as that identification of affected system network upgrades typically occurs after most siting decisions are made.

1221. North Carolina Commission and Staff argue that affected system costs are no longer incidental or rare and have been escalating over time.²³¹⁹ North Carolina Commission and Staff allege that the proposed crediting policy will force North Carolina wholesale and retail ratepayers to subsidize the policy choices of other states and the corporate goals of businesses located in other states.

1222. Public Interest Organizations urge the Commission to disregard North Carolina Commission and Staff's assertions on this matter, arguing that the NOPR proposal is unrelated to state and corporate policies.²³²⁰ Public Interest Organizations assert that the proposal is meant to address existing gaps in the *pro forma* LGIP that apply to all interconnection customers regardless of fuel type and motivation for generating facility development.

1223. WAPA expresses significant concerns with the NOPR proposal, emphasizing that it requires the affected system transmission provider to reimburse the affected system interconnection customer cash plus interest over 20 years for the cost of affected system network upgrades.²³²¹ WAPA states that, as a Federal agency, it cannot provide a cash payment with interest to an interconnection customer that does not take transmission service from WAPA.²³²² According to WAPA, per its tariff, it only provides network credits, not cash payments, for such customers, and it would need to work with the host transmission provider to ensure a mechanism is developed to properly credit the affected system interconnection customer.²³²³

1224. Also on proposed article 3 of the *pro forma* affected system facilities construction agreement, Tri-State notes that proposed article 3.2.2.1 (Repayment) does not contain a reference to determine if affected system network upgrades are unnecessary.²³²⁴ Separately, Tri-State also suggests revisions to state that the repayment period should end no later than 20 years from the completion of the construction of the affected system interconnection customer's generating facility, rather than completion of the construction of the affected system network upgrades.²³²⁵

1225. With regard to proposed article 4 (Security, Billing, and Payments), PacifiCorp offers suggested revisions to proposed article 4.1, which PacifiCorp asserts are intended to, among other

things, clarify that additional security will be required from the affected system interconnection customer if the affected system transmission provider determines that the costs of facilities may exceed the initial estimate provided to the affected system interconnection customer.²³²⁶ PPL also states that affected system interconnection customers should be required to meet credit and security requirements.²³²⁷

1226. As for proposed article 6 (Termination of Agreement), Tri-State suggests consolidating proposed article 6.3.3 (Pre-construction of Installation) with proposed article 2.2.3 and proposes removing some language in proposed article 6.4 (Survival Rights) that it argues is duplicative of proposed article 2.4.²³²⁸

1227. Commenters also respond to the proposed confidentiality provisions. Southern asserts that proposed article 8.1 in the *pro forma* affected system facilities construction agreement, section 13.1 in the *pro forma* LGIP, and article 22 in the *pro forma* LGIA should be revised to reflect the use of backup servers and the obligations of transmission providers to share information under NERC Reliability Standards.²³²⁹ Southern asserts that it is administratively difficult to meet the requirements in these provisions that specify that confidential information be destroyed or returned, arguing that this provision should allow information to be stored on backup servers. Southern also notes that, under NERC Reliability Standards, which were developed after the effective date of Order No. 2003, transmission providers must disclose confidential information to neighboring transmission providers, and therefore, this language should be updated to reflect that the transmission provider must share this confidential information.

1228. Moving to proposed Appendix A, MISO contends that there is no need for a commercial operation date to be listed for affected system network upgrades in proposed Appendix A.²³³⁰ MISO argues that commercial operation is something that occurs in the LGIA context, where the affected system interconnection customer's injection of energy onto the host transmission provider is memorialized.

²³²⁰ Public Interest Organizations Reply Comments at 18–19.

(2) Requests for Clarification

1229. Southern explains that the *pro forma* LGIA and Commission policy require that interconnection customers pay for the cost of system protection facilities, and Southern requests that the Commission clarify that it is not changing this policy.²³³¹

(3) Miscellaneous

1230. Eversource states that the concerns of interconnection customers and transmission providers with regard to ISO-NE's related facilities agreement (RFA)²³³² are not addressed by the NOPR proposal, which address coordination between different tariffs and system operators, and requests that the Commission clarify this difference.²³³³

(c) Commission Determination

1231. We adopt, with modifications, the NOPR proposal to establish a *pro forma* affected system facilities construction agreement in Appendix 11 of the *pro forma* LGIP.²³³⁴ The *pro forma* affected system facilities construction agreement, as adopted herein, closely tracks the NOPR proposal: the affected system transmission provider and the affected system interconnection customer(s) will enter into the agreement; and the agreement will set forth the terms and conditions by which the affected system transmission provider will be responsible for the design, procurement, construction, and installation of all network upgrades and terms and conditions by which the affected system interconnection customer will initially fund, and be reimbursed for, the cost of any assigned affected system network upgrades. As described below, we modify the following proposed articles in the *pro forma* affected system facilities construction agreement: (1) article 2.2.2 (Termination Upon Default); (2) article 2.2.3 (Consequences of Termination); (3) article 3.1.1 (Transmission Provider Obligations); (4) article 3.1.2.1 (Right to Suspend); (5) article 3.1.2.3 (Right to Suspend Due to Default); (6) article 5.1 (Events of Breach); (7) article 5.2 (Notice of Breach, Cure and Default); (8) article 5.2.1; and (9) article 5.2.2.²³³⁵ Additionally, we

establish a *pro forma* multiparty affected system facilities construction agreement set forth in Appendix 12 of the *pro forma* LGIP.

1232. We find that a *pro forma* affected system facilities construction agreement will improve the efficiency of the interconnection process by reducing delays through improved coordination among relevant parties, consistent with the Commission's preliminary findings in the NOPR and with record support.²³³⁶ As Duke Southeast Utilities explains, the adoption of a *pro forma* affected system facilities construction agreement will offer uniformity of these types of agreements to be tendered by affected system transmission providers across the country.²³³⁷ Such uniformity will help reduce the potential for undue discrimination. As the Commission found in Order No. 2003, a standard set of procedures as part of the tariff for all jurisdictional transmission facilities will minimize opportunities for undue discrimination.²³³⁸

1233. We also adopt a *pro forma* multiparty affected system facilities construction agreement.²³³⁹ Similar to adopting the *pro forma* multiparty affected system study agreement, as discussed earlier, we find that the adoption of the *pro forma* multiparty affected system facilities construction agreement will further improve coordination and further minimize opportunities for undue discrimination, even relative to a two-party agreement. Also, similar to the adoption of the *pro forma* affected system study agreement, the establishment of the *pro forma* multiparty affected system facilities construction agreement aligns with the requirement to study affected system interconnection requests in clusters. Specifically, such a multiparty agreement will allow for a common agreement for the affected system transmission provider to enter into with all affected system interconnection customers for the construction of affected system network upgrades identified by the cluster study that are assigned to more than one affected system interconnection customer. Below, in discussing relevant article-

to provide a definition of "breaching party," which changes the numbering for proposed article 5.2 (Notice of Breach, Cure, and Default) to article 5.3 and proposed article 5.3 (Rights in the Event of Default) to article 5.4.

²³³⁶ NOPR, 179 FERC ¶ 61,194 at P 200; *see also* Ameren Initial Comments at 23; Duke Southeast Utilities Initial Comments at 18; Pine Gate Initial Comments at 42; SPP Initial Comments at 19–20.

²³³⁷ Duke Southeast Utilities Initial Comments at 18.

²³³⁸ Order No. 2003, 104 FERC ¶ 61,103 at P 11.

²³³⁹ PPL Initial Comments at 20; SPP Initial Comments at 19–20.

specific comments, we discuss noteworthy, additional changes needed to convert the *pro forma* affected system facilities construction agreement from a two-party agreement to a multiparty agreement.

1234. As with the *pro forma* multiparty affected system study agreement, discussed above, the *pro forma* multiparty affected system facilities construction agreement that we adopt in this final rule closely follows the two-party agreement, with changes needed to convert to a multiparty agreement. In article 2.2.2 (Termination Upon Default), we establish that the default by one affected system interconnection customer does not allow the non-defaulting affected system interconnection customer(s) the right to terminate the agreement and that, instead, the defaulting party may be removed from the agreement by the affected system transmission provider. In article 3.1.2.1 (Right to Suspend), we maintain the affected system interconnection customer's right to suspend but only upon the mutual agreement of all affected system interconnection customers that are party to the multiparty agreement. In article 5.3 (Notice of Breach, Cure, and Default), we establish multiparty cure procedures whereby the non-breaching parties may cure the other affected system interconnection customer's breach.

1235. We decline to make changes to the proposed *pro forma* affected system facilities construction agreement and conforming changes to the *pro forma* LGIP, aligning with Xcel's suggestion that the "affected system transmission provider" should be renamed an "affected system operator." Instead, we clarify that the *pro forma* LGIP is written for a specific transmission provider. When a transmission provider is fulfilling its obligations as a host transmission provider, the *pro forma* LGIP refers to the host transmission provider's interaction with the "affected system operator." However, when the *pro forma* LGIP references a transmission provider and its obligations as the operator of an affected system, we use the term "transmission provider," as the *pro forma* LGIP is setting the requirements of the transmission provider, whether acting as the host or affected system transmission provider, and that is a different perspective from a host transmission provider's interaction with a separate "affected system operator."

1236. In response to Tri-State's suggestion to revise proposed article 2 of the *pro forma* affected system facilities construction agreement to

²³³¹ Southern Initial Comments at 17; Southern Reply Comments at 8 (citing *pro forma* LGIA art. 9.7.4.1; Order No. 845, 163 FERC ¶ 61,043 at P 371).

²³³² ISO-NE's RFA is an intra-RTO/ISO agreement with a specific transmission owner.

²³³³ Eversource Initial Comments at 32.

²³³⁴ NOPR, 179 FERC ¶ 61,194 at P 197.

²³³⁵ We further note that we streamline article 6.2 (Termination and Removal) of the *pro forma* affected system facilities construction agreement with ministerial revisions, as well as add article 5.2

clarify that the execution of an LGIA does not convey transmission service, we decline to adopt this request, as it is unnecessary.²³⁴⁰ However, we accept Tri-State's suggested revisions to article 3.1.1 of the *pro forma* affected system facilities construction agreement to clarify that the affected system transmission provider shall not undertake any actions inconsistent with its safety practices, material and equipment specifications, design criteria and construction procedures, labor agreements, or any applicable laws and regulations.

1237. We modify proposed articles 2.2.2 and 5.2 (now articles 2.2.2 and 5.3) of the *pro forma* affected system facilities construction agreement in response to comments from Southern and Tri-State regarding termination and cure. Proposed article 2.2.2 establishes that a non-breaching party has the right to terminate the *pro forma* affected system facilities construction agreement, provided that termination does not pose a reliability threat and that the breaching party has not undertaken efforts to cure the breach, pursuant to article 5.3 (Notice of Breach, Cure and Default). However, consistent with comments from Southern,²³⁴¹ we agree that termination and default rights in the *pro forma* affected system facilities construction agreement should be consistent with the *pro forma* LGIA. Accordingly, as adopted, we modify articles 2.2.2 and 5.2 (now articles 2.2.2 and 5.3) of the *pro forma* affected system facilities construction agreement to make them consistent with the existing default provisions in article 17 of the *pro forma* LGIA (Default), which also establishes default and cure provisions in the event of a breach.

1238. We also modify proposed article 2.2.3 (Consequences of Termination) of the *pro forma* affected system facilities construction agreement in response to comments from Tri-State and Invenery suggesting that it would require affected system interconnection customers to be responsible for the costs of additional facilities that are caused by another interconnection customer terminating

its affected system facilities construction agreement or that interconnection customer's LGIA.²³⁴² Specifically, we remove the final sentence from proposed article 2.2.3 that an "affected system interconnection customer is responsible for the cost of additional facilities that is caused to another interconnection customer due to the termination of this Agreement, affected system interconnection customer's LGIA, or any affected system interconnection customer's other Affected System Facilities Construction Agreement(s)." We find that deletion of this sentence is needed because the affected system interconnection customer should not be responsible for any additional facilities that are assigned to another interconnection customer under these circumstances. As written, the provision implies that an affected system interconnection customer could be responsible for any network upgrade identified as a result of the agreement's termination, even if the newly assigned network upgrade is on a different transmission provider's transmission system than the transmission provider that is a signatory to the terminated agreement. Additionally, we note that the *pro forma* LGIA contains no similar requirement that upon termination of an LGIA that the interconnection customer is responsible for any additional costs assigned to another interconnection customer as a result of the LGIA's termination and based on the comments received, the record does not support including the provision.

1239. MISO requests a cross-default provision between the *pro forma* affected system facilities construction agreement and the *pro forma* LGIA because MISO asserts that, if an affected system interconnection customer does not meet its obligations under its affected system facilities construction agreement, it is unclear how that would affect that interconnection customer's LGIA on its host transmission system.²³⁴³ In response, we clarify that a breach under the *pro forma* affected system facilities construction agreement does not constitute a breach under the *pro forma* LGIA. We are unpersuaded that cross-default provisions between the *pro forma* affected system facilities construction agreement and the *pro forma* LGIA are necessary because both the *pro forma* affected system facilities construction agreement and the *pro*

forma LGIA individually already contain default provisions.

1240. In addition, we are concerned that a cross-default provision, which could result in the termination of an interconnection customer's interconnection service based on actions under a separate agreement, could raise contractual complications because the host transmission provider will not be a party to the affected system facilities construction agreement. We note, however, that any affected system interconnection customer that defaults on its obligations under the *pro forma* affected system facilities construction agreement may face consequences, including, for example, curtailment. Additionally, we find that article 4.1 of the *pro forma* affected system facilities construction agreement already contains sufficient security provisions to protect a transmission provider in the situation that the affected system interconnection customer defaults on the agreement and which discourages non-payment by the interconnection customer.

1241. We modify proposed article 3.1.2.1 (Right to Suspend for *Force Majeure* Event) of the *pro forma* affected system facilities construction agreement in response to comments that the proposed suspension provision is too restrictive and inconsistent with the suspension provision in the *pro forma* LGIA.²³⁴⁴ Specifically, we revise article 3.1.2.1 to remove the limitation on the right to suspend to *force majeure* events and modify the suspension provision to allow an affected system interconnection customer to suspend work required under the affected system facilities construction agreement for up to three years.²³⁴⁵ We also modify article 3.1.2.1 to remove the requirement for the affected system interconnection customer, prior to suspension, to provide security to the affected system transmission provider of the higher of \$5 million or the total cost of all affected system network upgrades listed in Appendix A of the agreement. We find the requirement unnecessary because, under article 4.1 (Provision of Security) of the *pro forma* affected system facilities construction agreement, the affected system interconnection customer would have already been required to provide security for the applicable portion of the affected system network upgrades. With these changes to article 3.1.2.1, the suspension provision in the *pro forma* affected

²³⁴⁰ See Order No. 2003, 104 FERC ¶ 61,103 at P 118 (stating that "[t]he Commission continues to treat interconnection and delivery as separate aspects of transmission service, and an Interconnection Customer may request Interconnection Service separately from transmission service (delivery of the Generating Facility's power output)"); Order No. 2003-A, 106 FERC ¶ 61,220 at P 113 ("reiterat[ing] that Interconnection Service is separate from the delivery component of Transmission Service and that the mere interconnection of the Generating Facility is unlikely to harm reliability on Affected Systems").

²³⁴¹ Southern Initial Comments at 18.

²³⁴² Invenery Initial Comments at 45; Tri-State Initial Comments at 20.

²³⁴³ MISO Initial Comments at 97.

²³⁴⁴ *Pro forma* LGIA art. 5.16.

²³⁴⁵ We also make various conforming revisions throughout proposed article 3.1.2.1 of the *pro forma* affected system facilities construction agreement, consistent with this modification to the suspension provision.

system facilities construction agreement will mirror the suspension provision in the *pro forma* LGIA.²³⁴⁶

1242. Additionally, we revise proposed article 3.1.2.3 (Right to Suspend Due to Default) of the *pro forma* affected system facilities construction agreement, which provides for the right to suspend due to default. The revisions we adopt to this provision clarify that if an affected system interconnection customer defaults, the affected system interconnection customer will be responsible for any additional expenses incurred by the affected system transmission provider associated with the construction and installation of the affected system network upgrades, as set forth in article 2.2.3 (Consequences of Termination). We find that the revisions will align the language in the *pro forma* affected system facilities construction agreement with similar language in the *pro forma* LGIP, as suggested by PacifiCorp.²³⁴⁷ However, we reject the proposed revisions suggested by Tri-State to article 3.1.2.3 because they would alter the right to suspend to allow an affected system transmission provider the right to suspend in the event of a breach, rather than in the event of a default. Tri-State's suggested changes to article 3.1.2.3 would contradict other provisions in the *pro forma* LGIA and the *pro forma* affected system facilities construction agreement, which allow for the breaching party to cure a breach as is appropriate.

1243. We adopt article 3.2.2.1 (Repayment) of the *pro forma* affected system facilities construction agreement as proposed, which is consistent with existing Commission precedent.²³⁴⁸

1244. Some commenters are concerned that affected systems repayment could force affected system transmission providers to subsidize interconnection to neighboring systems, stifle renewable generating facility development, or facilitate inefficient siting.²³⁴⁹ However, in the NOPR, the

Commission did not propose to change the Commission's affected system repayment policy; instead, the Commission simply proposed to memorialize the Commission's existing policy in a *pro forma* agreement for affected systems.²³⁵⁰ As a result, we decline to address arguments on the merits of the Commission's affected systems repayment policy in this final rule.

1245. With respect to the concerns raised by WAPA that it is unable to repay affected system interconnection customers due to limitations based on its Federal status, we decline to rule on the specifics of individual transmission provider circumstances and instead find that such concerns are better raised in a compliance proceeding, including such a proceeding with a reciprocity tariff filing, if WAPA chooses to file one.

1246. In response to requests for clarification from Southern, we clarify that, consistent with the Commission's findings in Order No. 2003, we are not changing our policy requiring the interconnection customer, at its expense, to install, operate, and maintain system protection facilities as a part of its generating facility or its interconnection facilities.²³⁵¹ Also in response to Southern and consistent with the Commission's findings in Order No. 2003, transmission providers may make a filing to the Commission proposing an incremental rate to the affected system interconnection customer, as more fully described in Order Nos. 2003–A and 2003–B,²³⁵² if native load and existing transmission customers are not being held harmless, though we reiterate that the transmission provider bears the full burden of showing that any such proposal is just, reasonable, and not unduly discriminatory or preferential and is appropriate under the circumstances.²³⁵³

1247. We adopt Tri-State's suggested revisions to proposed article 3.2.2.1 of the *pro forma* affected system facilities construction agreement regarding the terms for repayment of affected system network upgrades. Consistent with existing *pro forma* LGIA provisions,²³⁵⁴ the parties may mutually agree to a

repayment schedule for all applicable costs associated with affected system network upgrades, with complete repayment not to exceed 20 years from the commercial operation date of the affected system interconnection customer's generating facility.

1248. We decline to adopt additions to proposed article 4.1 (Provision of Security) of the *pro forma* affected system facilities construction agreement suggested by PacifiCorp that would add additional security posting requirements, to the extent that costs to construct affected system network upgrades increase.²³⁵⁵ Proposed article 4.1 is consistent with security provisions outlined in *pro forma* LGIA article 11.5 (Provision of Security), and we find that such provisions should be consistent across both the *pro forma* affected system facilities construction agreement and the *pro forma* LGIA. We also find that the security provision requirements are already sufficiently clear in article 4.1 of the *pro forma* affected system facilities construction agreement. Specifically, article 4.1 of the *pro forma* affected system facilities construction agreement provides that “security for payment shall be in an amount sufficient to cover the costs for constructing, procuring and installing the applicable portion of Affected System Network Upgrades.”

1249. In response to comments from PPL asserting that affected system interconnection customers should be responsible for meeting the affected system transmission provider's creditworthiness requirements,²³⁵⁶ because the *pro forma* affected system facilities construction agreement is an agreement between the affected system transmission provider and the affected system interconnection customer, we clarify that affected system interconnection customers are obligated to meet the affected system transmission provider's creditworthiness and security requirements. We note that this is consistent with the parallel requirement for interconnection customers to meet the creditworthiness and security requirements of the host transmission provider outlined in *pro forma* LGIA article 11.5.1.

1250. We revise proposed article 5.1(b) of the *pro forma* affected system facilities construction agreement, consistent with PacifiCorp's suggestion, to remove the requirement that a party will be in breach for failure to comply with a material term or condition of the agreement due to an inaccuracy in a representation, warranty, or covenant

²³⁴⁶ *Pro forma* LGIA art. 5.16.

²³⁵⁵ PacifiCorp Initial Comments at 37.

²³⁵⁶ PPL Initial Comments at 20.

made in the agreement resulting in a breach under the agreement. We find that there is no reason why an inaccuracy should lead to a potential breach, or even a default, under the agreement. We note that the *pro forma* LGIA contains no similar provision.

1251. We revise proposed article 5.2.1, now article 5.3.1, of the *pro forma* affected system facilities construction agreement to extend the cure period for a breach from 30 calendar days to 60 calendar days and proposed article 5.2.2, now article 5.3.2, of the *pro forma* affected system facilities construction agreement to remove the additional cure period if the breach remains despite the occurrence of good faith steps. We find that the revision will simplify the cure requirements while providing breaching party with an extra 30 calendar days at the onset to cure its breach. We also revise article 5.3.2 to include a reference that if the breaching party defaults, then the non-defaulting party may terminate the agreement in accordance with article 6.2 (Termination) of the agreement. We further clarify article 5 of both the *pro forma* affected system facilities construction agreement and the *pro forma* multiparty affected system facilities construction agreement that a failure to cure a breach of either agreement will also constitute a default.

1252. We decline to delete proposed article 6.4 (Survival of Rights) of the *pro forma* affected system facilities construction agreement, as suggested by Tri-State. Although Tri-State asserts that proposed article 6.4 should be deleted because it is duplicative of proposed article 2.4 (Survival),²³⁵⁷ we find that the contents are sufficiently different to merit their separate inclusion. Specifically, article 2.4 provides for the survival of the *pro forma* affected system facilities construction agreement until all liabilities incurred prior to termination are fulfilled, whereas article 6.4 clarifies the scope of the rights of parties following termination to provide for final billing, enforcement of liabilities and confidentiality obligations, and for potential judicial or administrative action.

1253. In response to comments from Southern regarding updates to the confidentiality provisions contained in proposed article 8 (Confidentiality) of the *pro forma* affected system facilities construction agreement,²³⁵⁸ we find that, because we are not proposing to revise the confidentiality provision set forth in the *pro forma* LGIA—instead, we are merely adopting it into the *pro forma* affected system facilities

construction agreement—article 8, as adopted, is just and reasonable. Contrary to Southern's comments, the confidentiality provisions in article 8.1.7 of the *pro forma* affected system facilities construction agreement allow for confidential information to be destroyed, erased, deleted or, as applicable, returned, not for such information to exclusively be “destroyed or returned.”²³⁵⁹ Thus, such language reflects the fact that most electronic information is stored in backup servers. Moreover, in response to Southern's concern that deleting information stored on backup servers is administratively difficult, we find that Southern has not provided any evidence or explained why this might be so.

1254. In response to MISO's contention that there is no need to list a commercial operation date for affected system network upgrades in Appendix A of the *pro forma* affected system facilities construction agreement,²³⁶⁰ we agree and modify Appendix A, now Attachment A, to remove the commercial operation date from tables 1 and 3. However, we note that parties may find it useful to memorialize the commercial operation date for the affected system interconnection customer's generating facility because, under article 2.2.1 of the *pro forma* affected system facilities construction agreement, the parties to the agreement may alter the affected system facilities construction agreement by mutual consent if the in-service state date for the affected system network upgrades or the commercial operation date for the generating facility changes. To the extent MISO is concerned that there could be different commercial operation dates listed for affected system network upgrades in the LGIA and the affected system facilities construction agreement, the host transmission provider must update the commercial operation date for affected system network upgrades in the affected system interconnection customer's LGIA with the host system, to avoid discrepancies between the affected system facilities construction agreement and the LGIA.

1255. Finally, in response to comments from Eversource and ISO-NE,²³⁶¹ we clarify that these *pro forma* affected system agreements are distinct from intra-RTO/ISO agreements, like ISO-NE's RFA, which RTOs/ISOs may use to coordinate the construction of necessary network upgrades within

multiple transmission owner service territories within the same RTO/ISO.²³⁶²

d. Affected System Modeling and Study Assumptions

i. NOPR Proposal

1256. As the Commission explained in the NOPR, when an interconnection customer submits an interconnection request, they must choose to be studied as ERIS or NRIS, depending on the level of deliverability they seek for the output of their generating facility. For interconnection customers seeking to deliver their generating facility's electric output using the existing firm or non-firm capacity of the transmission provider's system on an as-available basis, the interconnection customer will choose an ERIS study. An interconnection customer will choose an NRIS study when seeking to integrate their generating facility with the transmission provider's system (1) in a manner comparable to that in which the transmission provider integrates its generating facilities to serve native load customers or (2) in an RTO/ISO with market-based congestion management, in the same manner as network resources.²³⁶³ An NRIS study goes beyond the prerequisite ERIS study and uses stricter modeling standards²³⁶⁴ to assess an interconnection request to ensure that the interconnection customer's electric output is deliverable to load in aggregate on the host

²³⁶² Eversource Initial Comments at 31–32.

²³⁶³ “Network Resource shall mean any designated generating resource owned, purchased, or leased by a Network Customer under the Network Integration Transmission Service Tariff. Network Resources do not include any resource, or any portion thereof, that is committed for sale to third parties or otherwise cannot be called upon to meet the Network Customer's Network Load on a non-interruptible basis.” *Pro forma* LGIP section 1; *pro forma* LGIA art. 1.

²³⁶⁴ NOPR, 179 FERC ¶ 61,194 at P 210. The term “modeling standard” refers to the distribution factor threshold on a transmission element used by transmission providers, such that beyond this threshold an interconnection request will require network upgrades. For example, in SPP, if a transmission element is found to be overloaded in an interconnection study, and an NRIS interconnection request has over a 3% distribution factor on that element (3% being SPP's distribution factor threshold for NRIS requests), the requesting entity will be assigned network upgrades. SPP uses a 19.5% distribution factor threshold for ERIS requests. See *EDF Renewable Energy, Inc. v. Midcontinent Indep. Sys. Operator, Inc.*, 168 FERC ¶ 61,173 at P 17. A lower threshold indicates a stricter modeling standard because a smaller impact triggers network upgrades. Additionally, when conducting an affected system analysis, although some RTOs/ISOs (PJM and SPP, for example) use a modeling standard associated with the same level of service as requested on the host transmission provider's transmission system, the output of proposed generating facilities is always sunk into the host transmission provider's transmission system by reducing the output of other generating facilities on that system. *Id.* P 85.

²³⁵⁷ Tri-State Initial Comments at 34.

²³⁵⁸ Southern Initial Comments at 19.

transmission provider's system.²³⁶⁵ Such a deliverability analysis varies regionally but can analyze anything from various stressed dispatch scenarios to an additional set of contingencies. As such, an NRIS study will likely identify more network upgrades to accommodate the interconnection of a generating facility than an ERIS study because NRIS provides a higher level of interconnection service than ERIS.

1257. As the Commission also explained in the NOPR, when a host transmission provider notifies an affected system operator of a possible impact on its system from an interconnection request in the host's queue, it must specify whether the interconnection customer requested ERIS or NRIS. Currently, there is no requirement for affected system transmission providers to apply either ERIS or NRIS modeling standards to study interconnection requests made on neighboring systems. For example, MISO uses ERIS studies for all affected system interconnection requests, while PJM and SPP use the modeling standard associated with the level of service requested on the host system. (They study ERIS requests as ERIS and NRIS requests as NRIS.)²³⁶⁶

1258. In the NOPR, the Commission preliminarily found that it was unjust and unreasonable for an affected system transmission provider to study interconnection requests on other transmission systems using NRIS modeling standards, regardless of the level of service requested on the host transmission system. The Commission noted that, unlike the host transmission provider with which the affected system interconnection customer will directly interconnect, an affected system transmission provider does not have a continuing obligation to operate its system so that NRIS resources will remain deliverable on the host system. Without such an obligation, the Commission stated that an affected system interconnection customer may be required to construct significant network upgrades on the transmission provider's affected system, but not be fully deliverable due to curtailment or congestion on the affected system. The

Commission was concerned that this could result in unjust and unreasonable rates by increasing the costs for the interconnection customer without a commensurate increase in service.

1259. The Commission proposed to require, under new *pro forma* LGIP section 9.6,²³⁶⁷ the affected system transmission provider to study interconnection requests using ERIS modeling standards, regardless of the requested level of service on the host transmission provider's transmission system.²³⁶⁸

1260. The Commission also explained that if an affected system transmission provider believed that it was necessary to study an interconnection request that is requesting NRIS-level service using NRIS modeling standards, such a transmission provider could make a filing under FPA section 205. The Commission explained that it would evaluate such case-by-case FPA section 205 filings to determine whether they were just, reasonable, and not unduly discriminatory or preferential.²³⁶⁹ The Commission noted that an affected system transmission provider making this type of filing should provide evidence indicating that using NRIS modeling standards in such a scenario would not treat similarly situated customers differently or afford similar treatment to dissimilar customers. In addition, this FPA section 205 filing could contain, for example, such supporting documentation as a reference to a NERC Reliability Standard violation, an operational concern such as over-duty breakers, fault current violations, impacts on transmission stability, increased loop flows, or other concerns that implicate any other critical reliability parameters.

1261. The Commission stated that a modeling standard would create consistency in the modeling standards used across all transmission regions.²³⁷⁰ The Commission also stated that ERIS modeling standards generally reduce the number and cost of network upgrades identified and, by using ERIS modeling standards, interconnection customers would be subject to fewer late-stage cost increases, which would reduce the number of potential restudies and withdrawals thereby addressing the

concerns that the Commission has preliminarily found to result in unjust, unreasonable, and unduly discriminatory or preferential Commission-jurisdictional rates. The Commission acknowledged that using a less stringent modeling standard may result in more frequent redispatch or curtailment by not fully capturing all the potential impacts of the interconnection generating facility(ies) on an affected system.²³⁷¹ Nevertheless, the Commission stated that it believed that these risks were limited in nature and any significant impact would be captured by an ERIS study, which would ensure that a proposed generating facility can safely connect the affected system under the expectation it will deliver its electric output using the existing firm or non-firm capacity of the affected system transmission provider's system on an as-available basis.

1262. The Commission sought comment on: (1) how to align the possibility for such case-by-case FPA section 205 filings with the required timeline for the affected system study and other deadlines proposed in the NOPR; (2) whether the proposed reform will adversely affect reliability for the affected system transmission provider or the host transmission provider; (3) the potential impact of requiring affected system transmission providers to use ERIS modeling standards when an interconnection customer seeks NRIS on the host transmission provider's system; and (4) whether there are modifications to this proposal that would reduce the likelihood of curtailment or redispatch on the affected system transmission provider's system without requiring the affected system interconnection customer to pay network upgrade costs that are not commensurate with the level of service it receives.²³⁷²

ii. Comments

(a) Comments in Support

1263. Numerous commenters support the NOPR proposal.²³⁷³ ELCON suggests that standardization of affected system modeling and assumptions furthers certainty and accountability, resulting

²³⁷¹ *Id.* P 213.

²³⁷² *Id.* PP 211, 213, 215.

²³⁶⁵ See Order No. 2003, 104 FERC ¶ 61,103 at P 768; Order No. 2003–A, 106 FERC ¶ 61,220 at P 500. Specifically, a transmission provider studying generating facility for NRIS would study the transmission system at peak load, under a variety of severely stressed conditions to determine whether, with the generating facility operating at full output, the aggregate of generation in the local area can be delivered to the aggregate of load, consistent with reliability criteria and procedures.

²³⁶⁶ *EDF Renewable Energy, Inc. v. Midcontinent Indep. Sys. Operator, Inc.*, 168 FERC ¶ 61,173 at PP 75–76.

²³⁶⁷ We note that under the NOPR proposal, this reform was in *pro forma* LGIP section 9.6; however, under the final rule, the reform is in *pro forma* LGIP section 9.7.

²³⁶⁸ NOPR, 179 FERC ¶ 61,194 at P 211.

²³⁶⁹ 16 U.S.C. 824d.

²³⁷⁰ The Commission noted that, while this proposal would standardize the use of ERIS for affected system studies, individual transmission providers use different specific thresholds for ERIS studies. NOPR, 179 FERC ¶ 61,194 at P 212 n.292.

in a more transparent, efficient, and cost-effective interconnection process.²³⁷⁴ Some commenters argue that the NOPR proposal will reduce the identification and assignment of unnecessary affected system network upgrades under NRIS studies.²³⁷⁵ MISO and Shell contend that ERIIS modeling will adequately cover reliability for affected systems and that they have no significant concerns regarding unnecessary curtailment or redispatch on affected systems associated with ERIIS modeling.²³⁷⁶ Additionally, commenters contend that there is no need to use NRIS modeling standards when the affected system interconnection customer requests NRIS-level service on the host system because the generating facility's output will not be delivered to the affected system, and the NRIS standard serves the exclusive purpose of allowing interconnection customers to be designated as a network resource on the host system.²³⁷⁷ Some commenters claim that the NOPR proposal will reduce the time required to conduct affected system study and construction processes, as well as the likelihood of withdrawals once the affected system necessary upgrades are identified.²³⁷⁸

(b) Comments in Opposition

1264. Some commenters oppose the NOPR proposal.²³⁷⁹ AECI claims that, without increasing the granularity of the redispatch and curtailment process in real time to better understand the actual impact an affected system interconnection customer has on the affected system from a distribution factor standpoint, the NOPR proposal would produce disproportionate burdens by reducing otherwise economical and reliable generating facilities to accommodate resources that are outside an affected system transmission provider's control.²³⁸⁰ Idaho Power asserts that the NOPR proposal may not sufficiently capture

network upgrades that are jointly owned by multiple entities.²³⁸¹ Specifically, Idaho Power states that the host transmission provider "may not be the entity responsible for designing and constructing network upgrades and interconnection facilities; therefore, the affected party ERIIS study may not provide sufficient details to be meaningful."²³⁸²

1265. Several commenters claim that the ERIIS modeling requirement for affected systems will negatively impact reliability.²³⁸³ AECI argues that incentivizing ERIIS-only studies would fundamentally affect reliability by failing to address systemic *de minimis* issues that become material in the aggregate.²³⁸⁴ Some commenters contend that, under the NOPR proposal, reliability issues will not arise until the operational time horizon, which could, as an example, result in an increase in transmission loading relief events and redispatch of network resources and native load.²³⁸⁵ LADWP asserts that the dispatching assumptions of an interconnection request can make a significant difference to flow patterns in the host system, and parallel paths will inherently absorb the unscheduled flow intended for the host system.²³⁸⁶ LADWP contends that, as the number of interconnection requests continues to grow, these unscheduled flows will continue to increase and begin to affect systems downstream of the affected system, rather than just the local transmission system that the ERIIS modeling standard is designed to evaluate. LADWP claims that the NOPR proposal would result in approval of generating facilities without identification of sufficient network upgrades to accommodate requested interconnection service, and affected system transmission providers would be responsible for maintaining reliability by developing operating procedures, capital projects, or performing curtailments from the additional stress of energy that is not being delivered to the affected system.

1266. AEP, SPP, and Xcel express concern that the proposed ERIIS modeling standard may harm firm transmission service on the affected

system.²³⁸⁷ AEP, NRECA, and Xcel argue that affected system transmission providers should be able to use NRIS in affected system studies if the affected system interconnection customer is requesting NRIS-level service on the host transmission system to ensure the required level of deliverability.²³⁸⁸ AEP states that, in the case that the interconnection customer is requesting to interconnect to a different RTO/ISO or is in a non-RTO/ISO, then an ERIIS-only modeling standard could result in the failure to construct affected system network upgrades to mitigate congestion and/or loop flow once the new generating facility commences operation, impacting loads that secured and paid for firm transmission service and/or NRIS.²³⁸⁹

1267. SPP is concerned that, if an affected system interconnection customer requests NRIS-level service on the host transmission system that grants deliverability rights without additional study procedures, an affected system may be exposed to impacts that it has not had an opportunity to evaluate under an ERIIS modeling standard.²³⁹⁰ As an example, SPP explains that SPP and MISO treat what constitutes firm transmission service differently, but SPP's current ability to conduct affected system studies under NRIS when the interconnection customer has requested NRIS on the host system allows for that difference. In response to SPP's concerns, NextEra argues that this issue appears to be a problem of SPP's own making based on how SPP implemented ERIIS and NRIS on its own system and ignores that affected system interconnection customers are not seeking deliverability or to be deemed firm on SPP's transmission system through any sort of transmission service from SPP.²³⁹¹

1268. Some commenters note that the proposal may not work in all scenarios.²³⁹² For instance, Clean Energy Associations state that this proposal may not be appropriate for non-RTO/ISO regions, if these impacts are not addressed through a coordinated transmission service study.²³⁹³ Xcel believes that the use of ERIIS modeling standards for affected system studies

may be appropriate under a joint operating agreement or in areas where the impact may be evaluated and mitigated in the transmission service study process, but in other areas, if the impact will not be evaluated in the transmission service study process, it is appropriate for an affected system transmission provider to model the neighbor's NRIS requests based on the expected delivery point.²³⁹⁴

(c) Comments on Specific Proposal

1269. Some commenters ask the Commission to make changes to the NOPR proposal to mitigate the negative impacts they discuss in their comments. For example, some commenters recommend that, in addition to the ERIS modeling standard, the Commission should establish (or allow affected system transmission providers to establish) a distribution factor or impact threshold for affected system studies to ensure that affected system interconnection customers are not assigned unnecessary affected system network upgrades.²³⁹⁵ NextEra recommends that the use of ERIS be included in the *pro forma* affected system study agreement to require any affected system transmission provider proposing to use NRIS rather than ERIS to file such agreement with the Commission on a non-conforming basis.²³⁹⁶

1270. Enel states that a critical interconnection issue not addressed in the NOPR is the lack of clarification of ERIS and NRIS-level service and how the different assumptions used by transmission providers significantly alter results.²³⁹⁷ Enel explains that the wide variety of views on what rights interconnection service grants to an interconnection customer leads to confusion in the development of study practices and requirements, as well as the services and products a generating facility can provide. Enel requests that, in a final rule or a supplemental notice, the Commission should provide concrete direction regarding how these service types should be studied and what outcome an interconnection customer should receive for making the necessary transmission system improvements to obtain that interconnection service. NV Energy requests that affected system transmission providers and host transmission providers coordinate

assumptions for affected system studies and update those assumptions quarterly after the affected system study has been issued to provide meaningful changes.²³⁹⁸

1271. Some commenters note that a final rule should provide host transmission providers with flexibility to work with their neighboring regions to address modeling inconsistencies in transmission system representations across regions.²³⁹⁹

1272. Some commenters specifically support allowing transmission providers to use NRIS modeling standards for affected system studies pursuant to separate FPA section 205 filings, as proposed in the NOPR.²⁴⁰⁰ Duke Southeast Utilities assert that the Commission should remove any negative repercussions, including any financial penalties or liability for breaching deadlines of the study process, for affected system transmission providers that seek to make such FPA section 205 filings.²⁴⁰¹

1273. Several commenters argue that affected system transmission providers should be able to use NRIS when conducting affected system studies without requiring the NOPR's proposed FPA section 205 filing.²⁴⁰² A few commenters argue that the requirement to make an FPA section 205 filing to use NRIS modeling standards will create delays and is overly burdensome on affected system transmission providers.²⁴⁰³ SPP claims that, as proposed in the NOPR, an FPA section 205 filing to use NRIS modeling assumptions would require supporting documentation amounting to evidence that the affected system transmission provider could only obtain if it conducted a study using the standards of the heightened level of service, which it could not do absent the Commission's grant of a waiver to require such a study.²⁴⁰⁴ Invenery argues that the

option for an FPA section 205 request to conduct an affected system study using NRIS criteria invites case-by-case disputes over modeling criteria, potentially delaying the affected system study process. Therefore, Invenery argues that the Commission should clarify that any such filing must be limited to only the facts of an individual interconnection request.²⁴⁰⁵

1274. Xcel states that the Commission should: (1) remove the ERIS option in RTO/ISO markets and require all generating facilities in such markets to be deliverable; (2) curtail generating facilities that did not pay for long-term firm transmission service; or (3) convene a technical conference on this topic in this docket.²⁴⁰⁶ Xcel explains that ERIS-only generating facilities in RTO/ISO markets may place a bid to sell into the market, and the ERIS-only generating facilities will be dispatched to the extent a bid clears, while in other areas, the ERIS-only generating facilities must acquire transmission service to be delivered.²⁴⁰⁷ Xcel concludes that ERIS service in RTO/ISO markets results in unjust and unreasonable rates and discriminatory treatment because ERIS-level generating facilities do not bear the costs necessary to ensure that they are deliverable to load. Xcel claims that: (1) the affected system transmission provider should not have to assume it will redispatch its own network resources to accommodate an affected system interconnection customer taking NRIS-level service; (2) the affected system's network resources paid for and expect to receive firm transmission service; and (3) there is no process for a host transmission provider to require an affected system transmission provider to redispatch its transmission system to accommodate a generating facility on the host system under the *pro forma* tariff.²⁴⁰⁸

1275. NRECA asserts that the final rule should allow a "transmission customer" to propose a different standard through an FPA section 206 complaint.²⁴⁰⁹ NextEra and MISO suggest that, to avoid delays in the interconnection process, any affected system transmission provider submitting an FPA section 205 filing to use NRIS modeling in an affected system study should proceed with the affected system study, using both the ERIS and NRIS standards, and then the appropriate results could be used based on the outcome of the FPA section 205

proceeding.²⁴¹⁰ MISO also encourages the Commission to recognize that this FPA section 205 filing process will add length and delay to the affected system study process, which further compounds and demonstrates the problems with the Commission's automatic penalty proposal.²⁴¹¹

iii. Commission Determination

1276. We adopt the NOPR proposal, with modification, to add section 9.7 to the *pro forma* LGIP to require affected system transmission providers to study all affected system interconnection requests using ERIS modeling standards.²⁴¹² We decline to adopt the NOPR proposal to expressly acknowledge in *pro forma* LGIP section 9.7 that an affected system transmission provider may submit an FPA section 205 filing to request to study an affected system interconnection customer using NRIS on a case-by-case basis.

1277. We find that the use of ERIS in affected system studies is just and reasonable, given that the affected system transmission provider has no obligation to continually ensure deliverability for an affected system interconnection customer that has obtained NRIS on its host system. An NRIS study goes beyond the prerequisite ERIS study and uses stricter modeling standards to assess an interconnection request to ensure that the interconnection customer's electric output is deliverable to load in aggregate on the host transmission provider's transmission system.²⁴¹³ We find that the use of ERIS for affected system studies is consistent with Order No. 2003 because interconnection is separate from the deliverability component of transmission service.²⁴¹⁴

1278. We also find that this requirement is likely to prevent an

affected system interconnection customer from being required to construct significant network upgrades on the transmission provider's affected system, but not being deliverable due to curtailment or congestion on the affected system. Without this reform, rates would continue to be unjust and unreasonable because an affected system interconnection customer would face increased costs without a commensurate increase in service, as explained in the NOPR. This mismatch between costs and services received would occur because the affected system transmission provider has no obligation to ensure that the output from the affected system interconnection customer's generating facility is deliverable on the affected system and could lead to curtailment of the generating facility, or there could be congestion on the affected system preventing deliverability of the generating facility's output.

1279. We also find that, if the affected system transmission provider were able to study affected system interconnection customers under an NRIS standard, it could require affected system interconnection customers to pay significant upfront costs in order to construct the required affected system network upgrades, which could lead to late-stage interconnection request withdrawals as interconnection customers will not receive affected system study results until late in the interconnection process. An ERIS standard ensures that the assigned affected system network upgrade costs will likely be lower and that affected system interconnection customers assigned affected system network upgrades will be less likely to withdraw at a late stage. This standard will help prevent the cascading restudies that commenters have observed²⁴¹⁵ and will ensure that the interconnection process operates more efficiently.

1280. We also find that the use of ERIS in affected system study processes across all transmission provider regions will create consistency and provide transparency for affected system interconnection customers. Currently, similarly situated interconnection customers requesting NRIS on their host transmission systems could have disparate impacts on affected systems that use different modeling standards, and these interconnection customers could be assigned dramatically different affected system network upgrade costs due to those varying modeling standards, without any factual or service

differences to justify the discriminatory treatment. Thus, the consistent application of ERIS in affected system studies across all transmission providers' study processes will ensure that all affected system interconnection customers are studied similarly.²⁴¹⁶ As such, we agree with commenters that the use of ERIS on all affected system interconnection requests will increase certainty and transparency.²⁴¹⁷

1281. We find outside the scope of this final rule Xcel's request that the Commission require all generating facilities in RTO/ISO markets to be deliverable and its claim that ERIS-level generating facilities do not bear the costs necessary to ensure that they are deliverable to load.²⁴¹⁸ We are not proposing in this final rule to alter how an interconnection customer in an RTO/ISO requests its type of interconnection service on the host system (*i.e.*, ERIS or NRIS); rather, we are standardizing how an affected system transmission provider studies an affected system interconnection request.

1282. Regarding AECI's claim that the NOPR proposal would produce disproportionate burdens by necessitating curtailment from economical and reliable generating facilities to accommodate generating facilities on a different transmission system unless overall granularity of the redispatch and curtailment process is increased in real time, we find no evidence of this concern, from AECI or otherwise.²⁴¹⁹ Rather, AECI appears concerned that generating facilities on its transmission system may be redispatched and curtailed, which we have acknowledged may occur.²⁴²⁰ Additionally, we note the transmission loading relief procedures set the priority for curtailing generating facilities as necessary, and this final rule is not revising those procedures. Finally, to the extent that the costs associated with increasing the overall granularity of real-time models is less than any hypothetical increase in curtailment and redispatch costs, a transmission provider may increase the real-time granularity of its model.

1283. Further, we find that Idaho Power has not adequately explained how this reform will result in

²⁴¹⁰ MISO Initial Comments at 98; NextEra Initial Comments at 34.

²⁴¹¹ MISO Initial Comments at 98.

²⁴¹² In relevant part, *pro forma* LGIP section 9.7 states: "Transmission Provider must study an Affected System Interconnection Customer using the Energy Resource Interconnection Service modeling standard used for Interconnection Requests on its own Transmission System, regardless of the level of interconnection service that Affected System Interconnection Customer is seeking from the host transmission provider with whom it seeks to interconnect."

²⁴¹³ See Order No. 2003, 104 FERC ¶ 61,103 at P 768; Order No. 2003-A, 106 FERC ¶ 61,220 at P 500. Specifically, a transmission provider studying a generating facility for NRIS would study the transmission system at peak load, under a variety of severely stressed conditions to determine whether, with the generating facility operating at full output, the aggregate of generation in the local area can be delivered to the aggregate of load, consistent with reliability criteria and procedures.

²⁴¹⁴ Order No. 2003, 104 FERC ¶ 61,103 at P 118; Order No. 2003-A, 106 FERC ¶ 61,220 at P 113.

²⁴¹⁵ OMS Initial Comments at 17; Pine Gate Initial Comments at 42.

²⁴¹⁶ Order No. 2003, 104 FERC ¶ 61,103 at P 11 (stating that a standard set of interconnection procedures will, among other things, expedite the development of new generation, while protecting reliability and ensuring that rates are just and reasonable).

²⁴¹⁹ AECI Initial Comments at 7.

²⁴²⁰ NOPR, 179 FERC ¶ 61,194 at P 213.

insufficiently identifying network upgrades that are jointly owned by multiple entities.²⁴²¹ Moreover, even if this were a valid concern, we find that this concern would be equally present regardless of the modeling standard (*i.e.*, ERIS or NRIS) used to conduct the affected system study.

1284. As discussed in the NOPR proposal, using a less stringent modeling standard may result in more frequent redispatch or curtailment by not fully capturing all the potential impacts of the affected system interconnection customer's generating facility(ies) on an affected system. Based on the record, we continue to find that these risks are limited in nature, particularly in non-RTO/ISO regions where interconnection service does not, by itself, allow a generating facility's power to flow. In non-RTO/ISO regions, power can only flow from a generating facility once transmission service has been requested and granted. For example, once point-to-point transmission service has been requested to enable a particular generating facility's power to flow, either by the generating facility itself or its power sale customer, *pro forma* open access transmission tariff section 21 (Provisions Relating to Transmission Construction and Services on the Systems of Other Utilities) provides a process similar to the affected system process in the *pro forma* LGIP. In summary, *pro forma* open access transmission tariff section 21 makes the transmission customer responsible for obtaining any necessary engineering, permitting, and construction of transmission or distribution facilities on the system(s) of utilities other than the directly connected transmission provider, but requires that transmission provider to undertake reasonable efforts to assist in that effort. This means that affected systems will have another opportunity to study the impact of the interconnection customer's generating facility in the context of this transmission service request, whether a new point-to-point transmission service request or designation as a new network resource under an existing transmission customer's network integration transmission service, before any power can flow from the generating facility.

1285. Moreover, we find that any significant impact would generally be captured by an ERIS study, which would ensure that any reliability impacts on the affected system are mitigated to accommodate the interconnection of the affected system interconnection customer's proposed

generating facility to the host system. That ERIS adequately studies an affected system interconnection customer's interconnection request for its reliability impacts on the affected system is evidenced by MISO's use of only ERIS in affected system studies without adverse reliability impacts.²⁴²²

1286. Regarding AECI's claim that using only ERIS in affected system studies may result in increased *de minimis* impacts,²⁴²³ we are not setting the implementation of the ERIS standard. Rather, each transmission provider determines its own implementation of that standard, which could include a *de minimis* threshold that is best for its region. The Commission has found that, if consistently applied, it is reasonable for interconnection customers to not bear cost responsibility for *de minimis* impacts on transmission facilities based on a threshold.²⁴²⁴ Additionally, we expect that any overloads in the models due to the accumulation of *de minimis* impacts will ultimately be assigned, pursuant to the transmission provider's tariff, when an interconnection customer triggers the need for a network upgrade or when the transmission provider's reliability transmission planning process identifies the need for mitigation.

1287. We disagree with LADWP that the use of ERIS by an affected system transmission provider will result in approval of generating facilities with insufficient network upgrades identified.²⁴²⁵ As discussed above, we find that, in general, the use of ERIS is sufficient for affected system studies to prevent reliability issues from occurring on the affected system. Moreover, as noted earlier, in non-RTO/ISO regions, power can only flow from a generating facility once transmission service has been requested and granted, meaning that affected systems will have another opportunity to study the impact of the interconnection customer's generating facility in the context of the associated transmission service request before any power can flow from that generating facility as explained above.

1288. Similarly, we find that commenters' concerns about harm to firm transmission service and cost shifting when using ERIS in affected system studies are misplaced because those concerns do not arise until the interconnection customer seeks to deliver power from its generating

facility to a customer, which outside of RTO/ISO regions can only happen once transmission service is separately secured.²⁴²⁶ In Order No. 2003, the Commission found that interconnection service is separate from the delivery component of transmission service, and, in the majority of circumstances, interconnection alone is unlikely to affect the reliability of an affected system transmission provider's transmission system.²⁴²⁷ Additionally, the Commission found that holding new interconnection customers responsible for network upgrades to all interconnected systems, including not only the transmission system to which the generating facility interconnects, but other, more distant transmission systems as well would create an unreasonable obstacle to the construction of new generation.²⁴²⁸ As such, if an affected system interconnection customer subsequently seeks deliverability on either the host system or an affected system and submits a transmission service request to either the host transmission provider or the affected system transmission provider, the affected system transmission provider will have the opportunity to study the request and potentially require the construction of additional network upgrades on the affected system to accommodate deliverability. Therefore, we find that being assigned significant affected system network upgrades under an NRIS study without the obligation for the affected system transmission provider to ensure that the output from an affected system interconnection customer's generating facility is integrated on the affected system similar to generating facilities that serve the affected system transmission provider's native load customers or network resources results in unjust and unreasonable rates by increasing the cost for affected system interconnection customers without a commensurate increase in service.²⁴²⁹

²⁴²⁵ LADWP Initial Comments at 5.

²⁴²¹ Idaho Power Initial Comments at 12.

1289. Regarding claims that affected system transmission providers would need to develop operating procedures or capital projects or perform curtailments due to the additional stress on affected systems caused by affected system interconnection requests being studied under the ERIIS modeling standard,²⁴³⁰ we find these claims to be speculative and that affected system studies are designed to ensure that an affected system interconnection customer's proposed generating facility can reliably connect to the host system without adversely impacting an affected system and are not meant to ensure deliverability on either the host or affected system. As mentioned above, an affected system transmission provider has no obligation to ensure that an affected system interconnection request is fully deliverable.

1290. We are unpersuaded by arguments that the NOPR proposal may not work in all scenarios²⁴³¹ and note that commenters did not provide specific examples of how the proposal would not work under the Commission's *pro forma* LGIP process. Several commenters raise concerns that, although the use of ERIIS may work in regions with joint operating agreements or coordinated transmission service studies, the use of ERIIS for all affected system studies may not be appropriate if an affected system transmission provider's transmission service studies do not identify all impacts. Once again, in adopting the ERIIS requirement for affected system transmission providers, we find that ERIIS is sufficient to capture reliability impacts of affected system interconnection requests on the affected system. We do not address whether individual transmission providers have adequate transmission service studies. If a transmission provider believes that changes are needed to better consider the deliverability of transmission service on its transmission system or with its neighboring transmission systems, nothing in this final rule prevents transmission providers from addressing those concerns.

1291. We decline requests for the Commission to set modeling standards, to require transmission providers to include their modeling standards in their tariffs, or to provide direction on how ERIIS and NRIS should be studied and what service the interconnection customer should receive, and to require neighboring transmission providers to coordinate assumptions and update

those assumptions quarterly.²⁴³² We find these requests to be outside the scope of the final rule.

1292. Although some commenters request flexibility on whether to use ERIIS or NRIS in conducting an affected system study,²⁴³³ we find such a request is essentially a request to maintain the status quo, which, as discussed above, results in Commission-jurisdictional rates that are unjust, unreasonable, and unduly discriminatory or preferential and prevents interconnection customers from interconnecting in a reliable, efficient, transparent, and timely manner.

1293. We decline to adopt the proposal stating that an affected system transmission provider may make an FPA section 205 filing to request use of an NRIS modeling standard in affected system studies. We find that there is no need to expressly provide for the availability of an FPA section 205 filing in *pro forma* LGIP section 9.7 because transmission providers always have the right to submit an FPA section 205 filing.

3. Optional Resource Solicitation Study a. NOPR Proposal

1294. In the NOPR, the Commission explained that resource solicitation processes inspire a number of interconnection requests, but in most cases, state agencies and LSEs implementing state mandates do not have the opportunity to request dedicated studies themselves.²⁴³⁴

1295. The Commission proposed to revise the *pro forma* LGIP to require transmission providers to allow resource planning entities, *i.e.*, any entity required to develop a resource plan or conduct a resource solicitation process, including a state entity or LSE, to initiate an optional resource solicitation study.²⁴³⁵

1296. Under the NOPR proposal, the resource planning entity would identify the valid interconnection requests associated with its qualifying resource solicitation process or qualifying resource plan and request that the transmission provider study several combinations of those interconnection requests in a resource solicitation study.²⁴³⁶

1297. The Commission clarified that under this proposal, the resource planning entity would not receive a queue position: interconnection customers would maintain their queue position obtained through the cluster request window and proceed through the regular interconnection queue alongside all other customers.²⁴³⁷

1298. The Commission proposed that the transmission provider must evaluate each combination of interconnection requests submitted by the resource planning entity as a group, in the same manner it will perform cluster studies under the proposed *pro forma* LGIP.²⁴³⁸ The Commission proposed a 135-calendar day time limit on the optional resource solicitation study (compared to 150 calendar days for the cluster study).

1299. The Commission sought comment on: (1) the NOPR proposal to explicitly include state agencies that are required to develop a resource plan or conduct a resource solicitation process in the definition of a resource planning entity; (2) whether other entities should qualify as resource planning entities and therefore be able to request initiation of an optional resource solicitation study, and, if so, what impact, if any, their inclusion would have on the efficiency of the interconnection process and whether their inclusion would raise concerns of undue discrimination or preference; (3) whether the proposed optional resource solicitation study raises any confidentiality concerns, including whether the optional resource solicitation study report could be posted on the transmission provider's OASIS before the qualifying solicitation process has concluded; and (4) what, if any, challenges multistate transmission providers—in particular, those RTOs/ISOs that serve large, multi-state areas—may face regarding study timing, multiple concurrent studies, or other issues in offering an optional resource solicitation study option, and any proposals to mitigate such challenges.²⁴³⁹

b. Comments

i. Comments in Support

1300. Many commenters support the NOPR proposal and note that the ability to gather holistic information on a range of resource mix scenarios from transmission providers would support efforts by states and other resource planning entities to meet policy

objectives.²⁴⁴⁰ The North Dakota Commission notes that resource solicitation studies could help improve coordination and make state-level, bottom-up resource planning processes more efficient and cost-effective.²⁴⁴¹ Similarly, Ørsted argues that resource solicitation studies have the potential to reduce the uncertainty involving the interconnection cost portion of future state-sponsored resource solicitations.²⁴⁴²

ii. Comments in Opposition

1301. AES states that it does not believe reforms on this issue should be part of the final rule but does not oppose transmission providers submitting optional resource solicitation study proposals to the Commission pursuant to separate FPA section 205 filings after consultation with stakeholders.²⁴⁴³

1302. AEP disagrees with the Commission's conclusion that failure to provide for a resource solicitation process leads to unjust and unreasonable rates.²⁴⁴⁴ AEP argues that this reasoning only applies to "entities required to conduct a resource plan or resource solicitation process" and that, accordingly, there is no legal basis to "solve" the problem through a nationwide mandate, as transmission providers with no LSEs that are required to "conduct a resource plan or resource solicitation process" do not need to amend their tariffs to include the optional resource solicitation study proposal. AEP asserts that there is no evidence that LSEs in RTOs/ISOs need the optional resource solicitation study process to perform IRPs efficiently and reach appropriate procurement decisions. AECI argues that resource planning entities should maintain discretion over their portfolios, and that the Commission lacks jurisdiction to mandate deployment of any particular resource or to require transmission providers to provide preferential

treatment towards any specific technology.²⁴⁴⁵

1303. Several commenters argue that the proposed optional resource solicitation study is unnecessary, particularly in regions such as PJM and MISO, which have existing or proposed processes for considering state objectives.²⁴⁴⁶

1304. CAISO and SPP argue that the proposed optional resource solicitation study may create uncertainty regarding the cost and timing of interconnecting to the transmission system.²⁴⁴⁷ CAISO asserts that it is impossible to provide meaningful cost data to interconnection customers until the transmission provider knows precisely the entire make-up of the study cluster.²⁴⁴⁸

1305. Several commenters question the efficacy of the resource solicitation study proposal.²⁴⁴⁹ PJM argues that, because the study would include only a subset of the clustered interconnection requests, the results would not be indicative of the outcome when considering the entire cluster, and would not provide information upon which resource planning entities could act or base decisions.²⁴⁵⁰ Enel and Indicated PJM TOs argue that the studies would not be expected to yield a reliable estimate of the total costs of the portfolio of resources being contemplated by the resource planner.²⁴⁵¹ Similarly, Indicated PJM TOs argue that optional studies will divert scarce resources away from curing the fundamental problem, arguing that such studies may not be valuable to resource planners because they would be conducted in a vacuum, would not account for other interconnection requests, and would not necessarily lead to the most efficient combination of resources.²⁴⁵²

1306. Some commenters assert that prospective interconnection customers will have an incentive to lodge speculative interconnection requests antithetical to the desired streamlining of the *pro forma* LGIA and *pro forma* LGIP process contemplated by the

NOPR.²⁴⁵³ APPA–LPPC comment that, to the extent that the generating facilities associated with interconnection requests are competing in a resource solicitation in which they may not be selected, such interconnection requests could constitute the kind of speculative interconnection request that the NOPR otherwise discourages.²⁴⁵⁴

1307. Several commenters argue that the optional resource solicitation study will result in inefficiencies and delays that degrade the quality of the main cluster study.²⁴⁵⁵ Several commenters express concern that adding optional resource solicitation studies as a *pro forma* LGIP requirement would hinder the Commission's goal of increasing the speed of processing interconnection requests, arguing that the additional study requirements are time consuming and would require significant resources to complete.²⁴⁵⁶ Enel states that, because a transmission provider would be required to evaluate six full cluster studies (*i.e.*, one standard plus five sensitivities) with different combinations of generating facilities, the optional resource solicitation study would inevitably lead to delays, restudies, late-stage withdrawals, errors, and increased potential for inadequate consideration of lower cost and alternative mitigations.²⁴⁵⁷ The Colorado Commission argues that the NOPR proposal could materially delay the clean energy transition in Colorado given interconnection scarcity concerns if it required the elimination of resource solicitation clusters as currently implemented by the Colorado utilities.²⁴⁵⁸

1308. Some commenters question whether transmission providers can realistically manage interconnection cluster studies and perhaps multiple optional resource solicitation studies at the same time.²⁴⁵⁹ Indicated PJM TOs

state that the ability for any resource planning entity to initiate the resource solicitation study without warning at any time would be especially burdensome.²⁴⁶⁰ MISO warns that multiple resource planning entities could request an optional study with different combinations, requiring MISO to perform numerous iterations of its system impact studies.²⁴⁶¹ Several commenters argue that instituting an additional study will put further strain on transmission providers' limited staff resources.²⁴⁶² Bonneville, WAPA, and NRECA assert that most small transmission providers are not staffed or organized to accomplish the work discussed by the Commission.²⁴⁶³

1309. Several commenters caution the Commission that the optional resource solicitation studies could be costly.²⁴⁶⁴ MISO contends that mandating a new study activity without a corresponding study deposit may result in a situation where study deposit funds run out, halting interconnection studies until more funds are provided and leading to interconnection queue delays.²⁴⁶⁵ NRECA also argues that requiring both the optional informational interconnection studies and the optional resource solicitation studies increase costs for transmission customers.²⁴⁶⁶ SEIA argues that imposing an optional resource solicitation process in the early stages of the interconnection process, before interconnection customers receive the cost estimates of their network upgrades, means that the results from the study may not accurately reflect the costs of the network upgrades for the resources in the study.²⁴⁶⁷ Enel argues that, because the resource planning entity selects generating facilities for scenarios without any knowledge of interconnection results, it is possible that the selected generating facilities will end up being built despite large upgrade costs.²⁴⁶⁸

1310. Several commenters contend that the proposal is unjust, unreasonable, and unduly discriminatory or preferential because it gives special treatment to generating facilities selected to fulfill a resource plan without full consideration of interconnection upgrades.²⁴⁶⁹ Several commenters are concerned that this proposal could allow vertically integrated transmission providers or LSEs to use the process in a way that would inappropriately favor the interconnection of company-owned resources.²⁴⁷⁰ NARUC and SEIA explain that an LSE could have a transmission provider identify cost-saving interconnection options through the optional resource solicitation study for company-owned resources but exclude non-company-owned resources from the analysis, thus tipping the cost evaluation in favor of the company's resources.²⁴⁷¹ Likewise, Interwest and EPSA are concerned that priority in interconnection queue processing for interconnection requests selected in a resource plan and under contract with a utility may provide competitive advantages for vertically integrated utilities because of their control over the selection of projects and the identification and timing of the installation of network upgrades.²⁴⁷²

1311. SEIA also argues that an optional resource solicitation study in situations where there is a commercial readiness requirement presents numerous opportunities for a utility to discriminate against independent power producers in favor of that utility's own generation.²⁴⁷³ AEP argues that, in multi-state RTOs/ISOs, the proposal facially discriminates against LSEs that are not eligible resource planning entities or are located in states that are not eligible resource planning entities themselves, and shifts key RTO/ISO resources away from such entities.²⁴⁷⁴ In RTOs/ISOs that allow bilateral capacity procurement, AEP argues that

²⁴⁷³ SEIA Initial Comments at 36.

²⁴⁷⁴ AEP Initial Comments at 37–38.

the proposal likewise discriminates between LSEs with qualifying resource planning entities (which may well be themselves) and those without.

1312. Multiple commenters argue that the proposed requirement to perform an optional resource solicitation study in multiple states imposes a considerable burden on RTOs/ISOs without providing meaningful benefits.²⁴⁷⁵ PJM argues that requiring it “to serve as a de facto consultant” to resource planning entities in addition to its efforts to expedite and process the country's largest interconnection queue would require PJM to take on a role beyond its authority as a transmission provider.²⁴⁷⁶ Similarly, Indicated PJM TOs argue that there is no justification for requiring transmission providers to provide resource solicitation studies when consultants could do so.²⁴⁷⁷

1313. The North Dakota Commission suggests that the Commission should consider whether the proposal potentially allows cost-shifting from states or localities with significant resource build out mandates to other states within the RTO/ISO and how to mitigate such unjust cost-shifting.²⁴⁷⁸ Similarly, Interwest cautions that, in bilateral and RTO/ISO markets, requiring a ranking in priority between interconnection requests may result in setting up competition between the utilities, with each vying for space on the constrained system.²⁴⁷⁹

1314. Tri-State adds that there are “timing issues” regarding the optional resource solicitation study, as it does not align with the electric resource planning process within Colorado, and potentially other states.²⁴⁸⁰ The Colorado Commission is also concerned that, to the extent interconnection requests are permitted to be made into non-resource solicitation cluster studies without strong requirements to demonstrate that those requests are for viable generating facilities, the cluster study results may render later resource solicitation study results inaccurate.²⁴⁸¹

iii. Requests for Alternatives and Regional Flexibility

1315. Public Interest Organizations argue that the Commission should grant extra flexibility on the 135-calendar day study timeline.²⁴⁸² Several commenters support the implementation of boundaries or guardrails to ensure that optional resource solicitation studies do not delay the study of other interconnection requests by diverting needed resources away from the general interconnection queue.²⁴⁸³ Several commenters support the proposal so long as protections are included to prevent undue discrimination and maintain a competitive generation solicitation.²⁴⁸⁴

1316. NARUC asks the Commission to consider going farther than requiring the optional resource solicitation study only for purposes of transparency and cost estimation; it recommends making the results of the studies available for interconnection customers to pursue and a basis upon which interconnection customers could seek interconnection on an expedited basis.²⁴⁸⁵

1317. Xcel, the Colorado Commission, and EEI argue that the resource solicitation cluster should have its own queue position.²⁴⁸⁶ Enel recommends that the optional resource solicitation study be a separate queue cycle with an intermediate queue priority between the transmission provider's annual study clusters.²⁴⁸⁷ Several commenters argue that resources selected as part of the resource solicitation process should be given priority in the interconnection queue.²⁴⁸⁸ The Colorado Commission suggests that the Commission modify its proposal to prioritize interconnection requests selected to serve native and network load within the RTO/ISO.

1318. The Colorado Commission and Xcel encourage the Commission to determine that any current resource solicitation cluster processes already in

place remain just and reasonable or are consistent with/superior to the final rule.²⁴⁸⁹ SEIA disagrees, noting that PSCo's existing resource solicitation study procedures were approved by the Commission in 2004 only so long as PSCo did not "disadvantage or delay other Interconnection Requests not involved in the solicitation."²⁴⁹⁰ SEIA argues that the Colorado Commission's current proposal to prioritize interconnection requests selected in the state process conflicts with this 2004 order and the Commission's "longstanding prohibition against queue jumping."²⁴⁹¹

1319. Multiple commenters request clarification and changes to the NOPR's proposal on resource solicitation in multistate transmission areas,²⁴⁹² but NARUC and Xcel suggest that facilitated coordination of resource planning and interconnection as well as discussion across states and LSEs may be the most helpful practice to reduce the burden of differing state portfolio requirements on transmission providers in multi-state areas.²⁴⁹³

1320. Several commenters suggest that the proposed optional resource solicitation study should occur outside the tariff process.²⁴⁹⁴ NextEra argues that the absence of such a feature from the *pro forma* LGIP is in no way unjust and unreasonable and that, if a transmission provider feels the need to customize its LGIP in this way, the transmission provider can do so on its own.²⁴⁹⁵ NRECA suggests that the Commission require that base cases and support files are available for LSEs so the LSE can run these studies outside of the tariff process.²⁴⁹⁶ WAPA and Bonneville argue that resource solicitation studies should occur at the reliability coordinator level and not the transmission provider level.²⁴⁹⁷

1321. Several commenters argue that the Commission should allow transmission providers flexibility in

implementing resource solicitations.²⁴⁹⁸ NYISO asserts that it has addressed the NOPR's aims by permitting state agencies to act as a developer for purposes of obtaining a generic interconnection request that they can put out for solicitation.²⁴⁹⁹

c. Commission Determination

1322. We decline to adopt the NOPR proposal to modify the *pro forma* LGIP to require transmission providers to allow resource planning entities to initiate an optional resource solicitation study.²⁵⁰⁰ We find that there is insufficient evidence in the record to justify establishing the optional resource solicitation study process proposed in the NOPR as a generic solution across all regions for coordinating state-level resource planning with the interconnection process. As commenters explain, many transmission providers do not have LSEs that conduct a resource solicitation process. We are also concerned that the particular "one size fits all" approach proposed in the NOPR would create uncertainty regarding the cost and timing of interconnecting to the transmission system, because the proposed study would not result in useful network upgrade cost estimates. Finally, we agree with commenters that the proposal as set forth in the NOPR would divert transmission provider resources and potentially lead to delays in the processing of the interconnection queue.

1323. Notwithstanding our decision not to adopt the NOPR's resource solicitation proposal, we agree with commenters who note that, in certain regions, resource solicitation studies have the potential to reduce uncertainty, improve coordination, and make resource planning more efficient and cost effective. We acknowledge comments arguing that a resource solicitation study may be most effective if paired with a structure where the resources within the resource solicitation structure are granted their own queue position, as this provides the relevant resources and soliciting entity with actionable information and avoids the uncertainty and delay that may occur if a study is conducted only for informational purposes and the

associated resources do not have a queue position that corresponds to the study assumptions.²⁵⁰¹ We note that our decision not to adopt the NOPR's proposal in this final rule in no way prejudices any future resource solicitation study proposals that transmission providers may choose to file pursuant to FPA section 205.

C. Reforms To Incorporate Technological Advancements Into the Interconnection Process

1. Increasing Flexibility in the Generator Interconnection Process

a. Co-Located Generating Facilities Behind One Point of Interconnection With Shared Interconnection Requests

i. Need for Reform and NOPR Proposal

1324. In the NOPR, the Commission noted that the current *pro forma* LGIP does not address interconnection requests made up of multiple generating facilities seeking to co-locate and to share a single point of interconnection.²⁵⁰² The Commission preliminarily found that the lack of such a process limits the interconnection of generating facilities, hindering competition and rendering the Commission's existing *pro forma* LGIP unjust, unreasonable, and unduly discriminatory or preferential.²⁵⁰³

1325. The Commission therefore proposed to revise the *pro forma* LGIP and *pro forma* LGIA to "require transmission providers to allow more than one generating facility to co-locate on a shared site behind a single point of interconnection and share a single interconnection request."²⁵⁰⁴ The Commission explained that this proposed reform would "create a minimum standard that would remove barriers for co-located resources by creating a standardized procedure for these types of configurations to enable them to access the transmission system."²⁵⁰⁵

1326. The Commission proposed to revise the *pro forma* LGIP to: "(1) define 'Co-Located Resources' as 'more than one resource located behind the same point of interconnection'; (2) state that co-located resources can share an interconnection request; (3) modify the definition of site control such that it allows interconnection customers to demonstrate shared land-use for co-

located resources."²⁵⁰⁶ The Commission also proposed to modify the definition of interconnection facilities to clarify that multiple generating facilities located on the same site may share interconnection facilities.²⁵⁰⁷

1327. The Commission also proposed revisions to the *pro forma* LGIP to "require generating facilities that are co-locating to have technology to address differences in terminal voltage between the co-located generating facilities to ensure that these generating facilities have the same voltage levels."²⁵⁰⁸ The Commission noted that many co-located generating facilities are co-located with electric storage resources,²⁵⁰⁹ and proposed to define "electric storage resources" in the *pro forma* LGIP as a resource capable of receiving electric energy from the grid and storing it for later injection of electric energy back to the grid.²⁵¹⁰

ii. Comments

(a) Comments in Support

1328. Commenters overwhelmingly support the Commission's proposal.²⁵¹¹ Eversource conditionally supports the proposal as a solid step that will improve the interconnection process.²⁵¹² Avangrid is not opposed to the proposal but does not foresee the reform as providing incremental efficiency to transmission providers.²⁵¹³

1329. Evergreen Action avers that co-location is vital to connecting more generation in the short term as transmission providers begin to work

through large interconnection queue backlogs,²⁵¹⁴ and Evergreen Action and NRECA state that co-locating two or more resources will take advantage of technologies like battery storage to more efficiently use the transmission system.²⁵¹⁵ AEE and State Agencies argue that, because existing interconnection procedures were designed before battery storage and hybrid resource types came into common usage, these types of technologies are often underserved under existing interconnection procedures despite being well represented in current interconnection queues, making this reform timely.²⁵¹⁶ OSPA urges the Commission to implement this proposal as soon as possible.²⁵¹⁷

1330. Several commenters argue that the NOPR proposal will likely improve the overall efficiency of interconnection processes, result in more accurate interconnection queue positions, and help to ensure just and reasonable rates.²⁵¹⁸ Environmental Defense Fund argues that combinations of generation and storage on a single site will create several benefits, including reducing intermittency, shifting supply to better meet demand, responding to grid events, and enabling provision of ancillary services.²⁵¹⁹

1331. AEE argues that the greatest value of storage systems is their ability to respond rapidly with a high degree of controllability, and contends that hybrid resources smooth the output of variable resources, allowing for increased land use efficiencies.²⁵²⁰ Several commenters argue that the proposal will yield interconnection queue efficiency because the shared nature of the co-located resources can be fully accounted for in a single interconnection request; they contend that requiring co-located resources to submit multiple interconnection requests increases cost, timing, and complexity, while forgoing reliability benefits.²⁵²¹

²⁵⁰³ *Id.* P 240.

²⁵⁰⁴ *Id.* P 242.

²⁵⁰⁵ *Id.*

1332. In support of the proposal, AEE argues that several transmission providers already allow co-located generating facilities at the same point of interconnection to submit a single request (e.g., CAISO, ISO-NE, and MISO).²⁵²² AES contends that the Commission's proposed reforms are necessary to ensure parity across all RTOs/ISOs on this issue, as some RTOs'/ISOs' practices erect unnecessary and unreasonable barriers for generating facilities located behind a single point of interconnection to interconnect.²⁵²³

1333. Omaha Public Power supports the Commission's proposals to facilitate new technologies, specifically the reforms related to co-located resources, revisions to the modification process, and surplus interconnection capacity.²⁵²⁴ Omaha Public Power observes, however, that many transmission providers have already made progress in this area and therefore recommends that the Commission allow existing transmission provider processes that are facilitating new technologies to continue.

(b) Comments on Specific Proposal

1334. Avangrid asserts that the Commission's proposal should not change or supersede any regional metering requirements for market participation and contends that co-located resources must have separate meters even if they share a point of interconnection.²⁵²⁵

1335. NARUC and MISO support the Commission's proposal that co-located generating facilities must have technology to address differences in terminal voltage between the co-located generating facilities.²⁵²⁶ MISO states that having to study a single co-located generating facility with two points of interconnection at different voltages would be infeasible, and that co-located generating facilities should be required to inject at a single point of interconnection, at a single voltage.²⁵²⁷ SPP states that it is unclear what the Commission intended in the NOPR by proposing to require that generating facilities "address differences in terminal voltage between the co-located generating facilities to ensure that these generating facilities have the same voltage levels."²⁵²⁸ SPP contends that it would be simpler to require that such

generating facilities connect at the same point of interconnection and leave the details as to how to do that to the interconnection customer. Ameren argues that, so long as modeling is available to the transmission provider for the types of resources that are behind the point of interconnection, co-located resources with differences in terminal voltage should not be an issue when performing the interconnection studies.²⁵²⁹

1336. Ørsted supports the Commission's proposed changes to the definition of "interconnection facilities."²⁵³⁰ Enel states that the proposed insertion of the phrase "by interconnection customer" in the third sentence of the *pro forma* LGIA/LGIP definition of "interconnection facilities" should be changed to the phrase "by interconnection customer(s)."²⁵³¹ Enel further states that the proposed new fourth sentence to the definition of "interconnection facilities" explains that multiple interconnection customers may use a single set of interconnection facilities, and thus "sole use facilities" may have multiple interconnection customer beneficiaries.

1337. Southern states that, under the NOPR proposal, co-located resources can include different owners of different generating facilities.²⁵³² Pine Gate and Southern note that the proposal to allow interconnection customers to demonstrate shared land-use may require interconnection customers to provide transmission providers more detailed site maps to demonstrate valid site control for each generating facility.²⁵³³ Southern states that this is appropriate because the transmission provider should not be responsible for monitoring the legal relationship between the co-owners.²⁵³⁴ Southern states that co-located resources must either be owned by the same owner, or the different owners of the generating facilities must enter into an agreement that addresses off-take rights and ownership, and they must submit one interconnection request for the entire generating facility. Tri-State suggests clarifying that a separate agreement is not necessary when both co-located resources belong to the same interconnection customer.²⁵³⁵

1338. Clean Energy Associations support allowing multiple generating facilities that share a single point of

interconnection to submit a joint interconnection request as a hybrid or co-located resource. Clean Energy Associations argue that interconnection customers with proposed generating facilities where the electric storage resource and generating facility are co-located, and have two "resource IDs," should be allowed to choose to have each component studied separately.²⁵³⁶ Clean Energy Associations also submit that the generating equipment for the generating facilities should not be required to be located on a shared site. Clean Energy Associations further assert that such flexibility would allow, for example, a solar facility to obtain a faster ERIS study while the co-located storage could get a more detailed study for NRIS.

1339. Southern contends that co-located resources that intend to be qualifying facilities should be required to comply with PURPA requirements.²⁵³⁷

(c) Requests for Clarification and Flexibility

1340. Pine Gate agrees that co-located generating facilities must have technology to address differences in terminal voltage between the co-located generating facilities, arguing that such technology is likely necessary in instances where a co-located resource is being studied under a single interconnection request for a net injection at the point of interconnection.²⁵³⁸ However, Pine Gate requests that the Commission clarify that such technology is not necessary in instances in which the interconnection customer elects to submit a co-located resource using two separate interconnection requests.

1341. SPP notes that in the NOPR, the Commission proposed to define "co-located resources" as "more than one resource located behind the same point of interconnection," whereas the proposed definition in the *pro forma* LGIP reads, "Co-Located Resource shall mean multiple Generating Facilities located on the same site."²⁵³⁹ SPP states that two generating facilities can be located on the same site without connecting behind the same point of interconnection. SPP asks the Commission to clarify in the final rule which definition of co-located resource is required. SPP states that it supports a definition that explicitly states that the

²⁵³⁹ SPP Initial Comments at 23.

generating facilities must connect at the same point of interconnection.

1342. MISO and Southern request that the Commission clarify that co-located resources must be required to share an interconnection request.²⁵⁴⁰ According to MISO, its tariff and Order No. 807²⁵⁴¹ allow for different interconnection requests to share a generator tie line and thus share the same point of interconnection. MISO argues that failing to amend the definition of co-located resource would conflate the two scenarios under the same definition, such that two separate noncontiguous generating facilities that share a generator tie line would share the same point of interconnection, thus also falling under the definition of co-located resources without the intent to do so.²⁵⁴² Southern argues that the Commission should clarify that the interconnection tie line connecting the co-located resource to the transmission system is a radial facility, not a network facility.²⁵⁴³

1343. National Grid asks that the Commission clarify what is included in the definition of “co-located resources.”²⁵⁴⁴ National Grid understands that the term can apply to hybrid technologies owned by a single interconnection customer interconnecting to a single point of interconnection, such as a solar generating facility coupled with a storage facility. National Grid suggests that, to the extent the term also is intended to apply to multiple interconnection customers with separate generating facilities interconnecting to a single point of interconnection, that the proposal might create complexities not discussed in the NOPR but may merit consideration.

1344. SEIA requests clarification on the terminology used in the proposal.²⁵⁴⁵ SEIA states that in January 2021, in its order directing reports on information related to hybrid resources, the Commission used two distinct terms to identify hybrid resource market participation.²⁵⁴⁶ SEIA states that “co-located hybrid resources” are defined as two separate resources sharing a single point of interconnection that are modeled and dispatched separately.

SEIA states that “integrated hybrid resources” are defined as sets of resources that share a single point of interconnection and are modeled and dispatched as a single resource. Tri-State similarly states that the “electric storage resource” definition does not account for resources designed to be charged apart from the transmission system, such as solar or wind generating facilities that may charge an electric storage resource.²⁵⁴⁷ SEIA requests that the Commission adopt the terms co-located and integrated hybrid resources in the final rule and clarify that interconnection customers retain the choice of how to structure their interconnection requests to best suit their needs and the needs of their customers.²⁵⁴⁸

1345. Some commenters ask that the Commission provide regional flexibility as to the types of co-located resources permitted in each RTO/ISO and existing processes that may already accomplish the goals of the proposed reforms.²⁵⁴⁹ ISO-NE, NYISO, and MISO state that they are already in compliance with the proposed reform.²⁵⁵⁰

iii. Commission Determination

1346. We adopt, with modification, the NOPR proposal to revise *pro forma* LGIP section 3.1.2 to require transmission providers to allow more than one generating facility to co-locate on a shared site behind a single point of interconnection and share a single interconnection request. We decline to adopt the proposed definitions of “co-located resource” and “electric storage resource,” and we decline to adopt the proposed modifications to the definitions of interconnection facilities, and transmission provider’s interconnection facilities in *pro forma* LGIP section 1 and *pro forma* LGIA article 1.²⁵⁵¹ We find that including the definition of co-located resource in the *pro forma* LGIP and *pro forma* LGIA is not necessary to effectuate the process reforms detailed in the NOPR, and thus decline to adopt it here.²⁵⁵² Given that Order No. 845 revised the definition of generating facility to include electric

storage resources,²⁵⁵³ we also find it unnecessary to define the term electric storage resource in the *pro forma* LGIP and LGIA. We note that declining to adopt the definition of electric storage resource moots Tri-State’s concern that the proposed definition failed to account for electric storage resources that may be charged apart from the transmission system.²⁵⁵⁴

1347. We also decline to adopt the NOPR proposal to modify the definitions of interconnection facilities and transmission provider’s interconnection facilities to specify that interconnection facilities may be shared among interconnection customers. We find that such specification in the *pro forma* LGIP and *pro forma* LGIA is not needed because Commission policy does not prohibit interconnection customers from sharing interconnection facilities.²⁵⁵⁵ We expect that there may be benefits from interconnection customers being able to share transmission provider’s interconnection facilities and interconnection customer’s interconnection facilities, particularly in light of the Commission’s transition in this final rule to a cluster study approach. Under a cluster study approach, in which multiple interconnection requests are evaluated in a combined study, efficiencies may be gained (in cost and time to construct) by allowing interconnection customers to share use of, and payment for, interconnection facilities. We note that such efficiencies from allowing the interconnection facilities to be used by more than one interconnection customer do not exist under the Commission’s existing *pro forma* LGIP serial interconnection study process because the serial study process does not consider the interconnection facilities that would be necessary to accommodate the interconnection of *more than one interconnection customer*. In response to Ørsted and Enel’s comments expressing support for the revisions to the definitions of interconnection facilities and transmission provider’s interconnection facilities,²⁵⁵⁶ we state in this final rule that the interconnection facilities also may be used by more than one interconnection customer.

²⁵⁵¹ NOPR, 179 FERC ¶ 61,194 at P 243; proposed *pro forma* LGIA section 1.

²⁵⁵² Co-located generating facilities are more than one generating facility that are located on the same site and that are connected at the same point of interconnection that are operated and dispatched as separate generating facilities.

²⁵⁵³ See Order No. 845, 163 FERC ¶ 61,043, at P 275 (modifying the definition of “Generating Facility” in the *pro forma* LGIP and *pro forma* LGIA to include “and/or storage for later injection”).

²⁵⁵⁴ Tri-State Initial Comments at 25.

²⁵⁵⁵ See, e.g., Order No. 807, 150 FERC ¶ 61,211, at P 3 (discussing the ability of interconnection customer’s interconnection facilities owners to make excess capacity available to third parties).

²⁵⁵⁶ Ørsted Initial Comments at 18; Enel Initial Comments at 81–82.

1348. We also decline to adopt the NOPR proposal to revise the *pro forma* LGIP to require generating facilities that are co-locating to have technology to address differences in terminal voltage between the co-located generating facilities to ensure that these generating facilities have the same voltage levels.²⁵⁵⁷ We find that the preexisting language in *pro forma* LGIP section 3.1 (section 3.1.2 as revised by this final rule) is clear that “[a]n Interconnection Request to evaluate one site at two different voltage levels shall be treated as two Interconnection Requests.” This preexisting provision makes clear that a set of co-located generating facilities must be at a single terminal voltage in order to be treated as a single interconnection request. The additional requirement proposed in the NOPR is therefore unnecessary to adopt in the final rule. We note that declining to adopt the NOPR proposal with respect to this issue alleviates SPP’s concern with the NOPR proposal.²⁵⁵⁸ In response to Pine Gate, we reiterate that preexisting *pro forma* LGIP section 3.1 (section 3.1.2 as revised by this final rule) would require co-located generating facilities with different terminal voltage levels to submit separate interconnection requests.²⁵⁵⁹

1349. As the Commission stated in the NOPR, recent studies demonstrate that large numbers of generating facilities currently in interconnection queues are seeking to co-locate on a shared site behind one point of interconnection and share an interconnection request, while operating separately, and that the *pro forma* LGIP currently lacks provisions that explicitly allow them to do so.²⁵⁶⁰ We agree with commenters that this type of generating facility configuration, in spite of being prevalent in current interconnection queues, faces barriers to interconnection under existing interconnection procedures,²⁵⁶¹ and that this reform will effectively remove such barriers. We find that requiring transmission providers to allow interconnection customers to submit a single interconnection request that represents multiple generating facilities that are located behind a single point of interconnection is required to ensure just and reasonable rates. By doing so, this reform will improve efficiency for transmission providers in the study process by reducing the number of interconnection requests in the

interconnection queue and will reduce costs for interconnection customers because they will only submit a single set of deposits to enter the interconnection queue.

1350. We also believe that this reform will improve interconnection queue efficiency without imposing an adverse impact on the efficacy of interconnection study results or other interconnection customers. Because of the significant growth of generating facilities seeking to interconnect jointly at a single point of interconnection,²⁵⁶² we find that allowing co-located generating facilities to submit one interconnection request will lessen the delays experienced in many interconnection queues. We agree with commenters that transmission providers requiring co-located generating facilities to submit separate interconnection requests increases the cost and complexity of the interconnection process and creates undue delay to the interconnection process.²⁵⁶³ Allowing co-located generating facilities to share interconnection requests will ensure the interconnection queue moves along expediently, providing clarity, cost certainty, and increased transparency throughout the study process.

1351. Some commenters suggest that co-located generating facilities should always be required to share an interconnection request.²⁵⁶⁴ Others request that interconnection customers retain the choice whether to share an interconnection request.²⁵⁶⁵ We clarify that interconnection customers have the choice to structure their interconnection requests according to their preference. We are not *requiring* interconnection customers to share a single interconnection request for multiple generating facilities located on the same site.

1352. However, we further clarify in response to Clean Energy Associations²⁵⁶⁶ that interconnection customers may submit separate interconnection requests to have each device studied separately. We find that this clarification also addresses MISO’s concern about any potential conflict

with Order No. 807.²⁵⁶⁷ Additionally, we clarify that, where an interconnection customer chooses to submit a single interconnection request for multiple generating facilities, the generating facilities must be located on the same site in order to reduce complexity for the transmission provider.

1353. In response to Southern’s request that the Commission clarify that the interconnection tie line connecting the co-located resource to the transmission system is a radial facility, not a network facility, we clarify that, as explained in Order No. 807, the Commission now refers to tie lines as the interconnection customer’s interconnection facilities.²⁵⁶⁸ As the Commission stated in Order No. 807, the interconnection customer’s interconnection facilities “are sole-use, limited and discrete, radial in nature, and not part of an integrated transmission network.”²⁵⁶⁹ Radial facilities located between the generating facility and point of interconnection are considered interconnection facilities under the *pro forma* LGIP and *pro forma* LGIA.²⁵⁷⁰

1354. In response to Omaha Public Power’s suggestion that the Commission allow existing transmission provider processes that are facilitating new technologies to continue unimpeded, we clarify that, consistent with section IV of this final rule, to the extent transmission providers believe that they already comply with the adopted *pro forma* LGIP provisions, they may demonstrate this in their compliance filings.

1355. In response to concerns about multiple interconnection customers using the same interconnection

²⁵⁶⁷ MISO Initial Comments at 107–108.

²⁵⁶⁸ The Commission stated that “[t]he jurisdictional interconnection facilities for which this Final rule grants a waiver have sometimes in the past been referred to informally as ‘generator tie lines,’ but, in the Notice of Proposed Rulemaking, the Commission used the term [Interconnection Customer’s Interconnection Facilities] as defined in the *pro forma* documents issued with Order No. 2003.” Order No. 807, 150 FERC ¶ 61,211, at n.1 (citing Order No. 2003, 104 FERC ¶ 61,103).

²⁵⁶⁹ Order No. 807, 150 FERC ¶ 61,211 at P 114.

²⁵⁷⁰ Under the *pro forma* LGIP, “Interconnection Facilities shall mean Transmission Provider’s Interconnection Facilities and Interconnection Customer’s Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Generating Facility to Transmission Provider’s Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.” See *pro forma* LGIP section 1 and *pro forma* LGIA article 1.

²⁵⁵⁷ See NOPR, 179 FERC ¶ 61,194 at P 245.

²⁵⁵⁸ See SPP Initial Comments at 23.

²⁵⁶⁰ NOPR, 179 FERC ¶ 61,194 at P 238.

²⁵⁶¹ AEE Initial Comments at 38; State Agencies Initial Comments at 14.

²⁵⁶² Currently, 42% (285 GW) of solar and 8% (17 GW) of wind projects in the queue are proposed as hybrid resources that would include electric storage. Queued Up 2023 at 18.

²⁵⁶³ AEE Initial Comments at 39; Environmental Defense Fund Initial Comments at 5–6.

²⁵⁶⁴ MISO Initial Comments at 107; Southern Initial Comments at 36.

²⁵⁶⁵ Clean Energy Associations Initial Comments at 59–61 (arguing against such a requirement to enable co-located generating facilities to seek ERIS versus NRIS); SEIA Initial Comments at 38.

²⁵⁶⁶ Clean Energy Association Initial Comments at 59–61 (requesting that generating equipment not be required to be on the same site).

request,²⁵⁷¹ we clarify that co-located generating facilities can be owned by a single interconnection customer with multiple generating facilities sharing a site, or by multiple interconnection customers that have a contract or other agreement that allows for shared land use.²⁵⁷² In response to Tri-State,²⁵⁷³ we clarify that no such agreement is necessary when the generating facilities in question belong to the same interconnection customer. In response to Southern,²⁵⁷⁴ we clarify that generating facilities that co-locate still must adhere to all other applicable laws and regulations, including PURPA.

1356. We find that comments regarding the following issues are outside the scope of this proceeding because they pertain to market issues and other rules that were not addressed in the NOPR: (1) permitting an interconnection customer to specify the co-located generating facility's maximum injection level to the point of interconnection;²⁵⁷⁵ and (2) metering requirements for co-located generating facilities.²⁵⁷⁶

1357. We decline SEIA's request that the Commission adopt a more expansive definition of "co-located resources," including how the resources are modeled and dispatched. Modeling assumptions for electric storage resources and co-located or hybrid generating facilities containing electric storage resources are addressed elsewhere in this final rule.²⁵⁷⁷

b. Revisions to the Modification Process To Require Consideration of Generating Facility Additions

i. Need for Reform and NOPR Proposal

1358. In the NOPR, the Commission expressed concern that, because certain requests to add a generating facility to an existing interconnection request are often deemed material without an evaluation, even if the injection amount remains the same, the material modification process may result in unjust, unreasonable, and unduly discriminatory or preferential outcomes.²⁵⁷⁸ The Commission pointed out that, as explained in Order No.

2003, it is inadequate and inefficient to solve interconnection issues on a case-by-case basis.²⁵⁷⁹ The Commission explained that, in the case of processing modification requests, without a standard set of procedures, transmission providers have adopted varying strategies for processing requests to add electric storage or other generating facilities that do not change the requested interconnection service limit to existing interconnection requests. The Commission preliminarily found that this lack of uniformity leads to disparate outcomes across the country and leaves open the potential for undue discrimination.

1359. The Commission explained that the modification provisions in the *pro forma* LGIP do not specify whether an interconnection customer can modify its interconnection request to add another generating facility at the same point of interconnection without increasing the requested interconnection service level.²⁵⁸⁰ The Commission stated that many transmission providers treat such a request automatically as a material modification, such that the interconnection customer that wishes to make this type of change faces a loss of interconnection queue position regardless of the actual effect the addition of a generating facility to an interconnection request may have on the system. The Commission explained that this process is a significant barrier to interconnection customers that wish to make this type of change and preliminarily found that such a barrier hinders access to the transmission system and may render existing interconnection processes unjust, unreasonable, and unduly discriminatory or preferential.²⁵⁸¹

1360. In the NOPR, the Commission proposed to revise the *pro forma* LGIP to require transmission providers to evaluate the proposed addition of a generating facility to an interconnection request as long as the interconnection customer does not request a change to the originally requested interconnection service level.²⁵⁸² Under this proposed requirement, the transmission provider could not automatically consider such a request to be a material modification. Specifically, the Commission proposed to require that: (1) transmission providers evaluate the proposed addition of a generating facility to an interconnection request within 60 calendar days of receiving the request

for modification if such addition does not change the requested interconnection service level; (2) the change cannot be considered an automatic material modification and an evaluation (including studying the configuration and necessary modeling) must occur prior to determining whether the proposed change constitutes a material modification of the interconnection request; and (3) if the proposed addition does not have a material impact on the cost or timing of any interconnection request that is lower or equally queued, and does not cause any other reliability concerns, the addition will not be considered a material modification.²⁵⁸³ The Commission noted that the reliability concerns could include, for example, a material impact on the transmission system with regard to short circuit capability limits, steady-state thermal and voltage limits, or dynamic system stability and response.

1361. The Commission sought comment on: (1) whether the addition of a generating facility that does not alter an interconnection customer's interconnection service limit could nonetheless require a full interconnection service study; (2) how transmission providers should perform studies required to confirm that there is no adverse impact because of the addition of a generating facility to an interconnection request, such as confirmation that the electrical characteristics of the interconnection customer remain the same; (3) whether and how interconnection customers in a later cluster, or interconnection customers that are in the same cluster, could be adversely impacted by such changes; (4) whether the addition of electric storage when in charging mode (in terms of resistance, inductance, and capacitance) may change the electrical characteristics of an interconnection request, and whether those changes may affect the reliable operation of the generating facility related to that interconnection request; and (5) whether further specification is needed for the assessment of the electrical characteristics due to the addition of a complex load.²⁵⁸⁴

ii. Comments

(a) Comments in Support

1362. A diverse group of commenters indicate general support for the NOPR proposal.²⁵⁸⁵ NARUC agrees that the

proposed reform will promote consistency for interconnection customers throughout the country, in addition to promoting reliability, economic, and administrative efficiency as the generation fleet continues to evolve.²⁵⁸⁶ NARUC explains that the loss of interconnection queue position as a result of adding a generating facility that does not increase the requested service level or cause reliability issues, but rather could improve the performance and capability of a generating facility to manage reliability or lower the cost of energy to customers, is an inefficient and discriminatory outcome the Commission should seek to permanently remedy through this proceeding. AEE and Public Interest Organizations assert that a restudy would be automatically required for adding a generating facility such as storage, and that if there were not a restudy related to the addition of storage, they could provide numerous benefits, including firming up variable renewable generation, avoided curtailment, congestion relief, and, in the case of grid-forming inverters and batteries, fast frequency response and other grid flexibility services.²⁵⁸⁷ AEE contends that the loss of the benefits, primarily from adding storage, will harm reliability and result in unjust and unreasonable rates.²⁵⁸⁸ SEIA contends that adding an additional generating facility (such as storage) that does not increase the interconnection service level also should not increase the costs to later interconnection requests because it generally would not require additional network upgrades and should

not delay lower-queued interconnection requests.²⁵⁸⁹

1363. Clean Energy Associations and Shell add that a generating facility's addition of energy storage capability without increasing the power capability upon which its interconnection service level is based (e.g., increasing a two-hour battery to a four-hour battery) should not automatically be considered a material modification.²⁵⁹⁰ Clean Energy Associations also argue that the removal of a generating facility from a hybrid or co-located resource interconnection request should not automatically be considered a material modification if interconnection service levels do not change.²⁵⁹¹ Clean Energy Associations also request that the material modification rules allow for an increase in the underlying capability of the generating facility, rather than simply an addition of a new resource.

1364. Ameren believes that when considering the addition of a generating facility to an interconnection request, it is important to protect reliability while avoiding unjustly limiting interconnection customer changes by automatically deeming them material modifications.²⁵⁹² National Grid supports the proposal but asks the Commission to acknowledge that there may be instances when a determination that the requested generating facility addition is a material modification is necessary, such as if: (1) changes in load characteristics of the generating facility or in electrical characteristics of a resource; or (2) impacts to other interconnection customers in the interconnection queue.²⁵⁹³ SPP also generally supports the proposal but similarly notes there may be instances when a request that does not alter the interconnection service amount, it could require a full interconnection study and result in additional network upgrades (e.g., a request to change a generating facility from one type to another where changes to electric characteristics impact stability, fault current, or both).²⁵⁹⁴

1365. AES supports the proposal because it adds flexibility to the interconnection process, including the efficient addition of generating facilities such as electric storage resources to previously submitted interconnection

requests.²⁵⁹⁵ UMPA supports the flexibility of a generating facility's design if a more commercially viable option could be pursued without changing the level of interconnection service or causing reliability concerns, in particular when a prospective interconnection customer intends to acquire a preexisting interconnection queue position in accordance with *pro forma* LGIP section 4.3.²⁵⁹⁶

1366. AEE suggests that the flexibility to adopt "modest modifications" is important due to the current length of the interconnection process, technology changes, price declines, and other factors such as supply chain challenges.²⁵⁹⁷ AEE recognizes that some modifications may be material and will require restudy but suggests that disallowing modest changes like adding energy storage that may be beneficial, will harm reliability, and could increase consumer costs by limiting the ability to respond to changing opportunities and needs. NRECA supports the reform if it results in better use of the transmission system but argues that flexibility should not come at the expense of the NOPR's overall goal of reducing speculative interconnection requests, withdrawals, and restudies.²⁵⁹⁸

1367. Some commenters point out that certain RTOs/ISOs use similar approaches to those proposed.²⁵⁹⁹ NARUC highlights that certain planning regions have demonstrated that they can reliably accommodate generating facility additions that do not increase requested services levels without treating the modification as a material change.²⁶⁰⁰ NARUC underscores CAISO's flexible process that allows interconnection customers to modify the interconnection request and treats fewer resource additions as a material modification, which results in more consistent and predictable interconnection queue outcomes and ultimately more optimized investments.

(b) Comments in Opposition

1368. A number of commenters oppose the proposal.²⁶⁰¹ ISO-NE and

Idaho Power argue that the Commission should require that interconnection requests be fully conceived by the time a cluster request window is closed and modifications be proposed in a subsequent cluster so it does not delay the cluster.²⁶⁰² ISO-NE contends that the flexibility in the proposal is contrary to the NOPR's goal of improving study completion timelines and readiness requirements because adding a generating facility to an interconnection request could introduce major changes to study scope, upgrade results, and delay rather than increase study time speed.²⁶⁰³

1369. MISO opposes the proposal because it believes that the proposal will increase speculative interconnection requests, contrary to the stated intention of NOPR, and that the balance is disrupted between flexibility to make changes and promoting fairness and certainty to other interconnection customers.²⁶⁰⁴ PJM, MISO, and Indicated PJM TOs argue that the proposal will cause delays and divert resources that would have been used toward processing the interconnection queue,²⁶⁰⁵ and MISO states the proposal may enable an end-run around its site control deadlines by giving interconnection customers more time to obtain site control.²⁶⁰⁶

1370. MISO states that, each time an interconnection customer requests a fuel change (including the addition of storage), under the proposal, MISO would have to determine if a material modification exists within 60 days by doing the following: (1) stop processing the interconnection queue, create an alternative model, and then run two system impact studies based on the different models (original and alternate) to determine if there were any changes between the two studies; (2) rebuild the models of any lower-queued cycles and run alternate system impact studies to determine if that would create any impacts for those interconnection requests, which MISO would not be able to complete within 60 days; and (3) correct the data that had been sent to an affected system operator, noting it is

unclear if the affected system operator would be able to inform MISO if the change in data created a material modification.²⁶⁰⁷ MISO notes that it uses fuel-based dispatch in its interconnection modeling, which exacerbates the above problems because it models individual fuel types in different ways, and includes electric storage in its definition of a different fuel type, so the addition of electric storage would result in a different type of modeling.²⁶⁰⁸

1371. PJM argues that interconnection customers should only be able to modify their interconnection requests in certain circumstances, pointing to its proposal to allow interconnection customers to make changes that meet pre-defined conditions at three decision points, with the changes at each decision point restudied together.²⁶⁰⁹ PJM claims that even if the maximum generating facility output or capacity interconnection rights do not increase, adding a generating facility to an interconnection request can affect other interconnection customers. PJM and Avangrid assert that substituting battery storage facilities for a portion of a solar generating facility or other generating facility without changing the generating facility's maximum output or capacity interconnection rights would likely be a material modification because it would require a light load test or other testing that was not performed for the original solar generating facility interconnection request.²⁶¹⁰ Ameren also states that such interconnection request changes can present challenges (e.g., when an interconnection customer's chosen technology changes due to the passage of time) and can raise reliability issues if not properly addressed, and therefore it is necessary to evaluate or conduct a restudy to make sure that the studies reflect the technologies actually being interconnected.²⁶¹¹ PacifiCorp similarly argues that requests to incorporate grid-charging battery storage technology should be processed separately because grid-charging capabilities can alter the electrical characteristics of an interconnection request.²⁶¹²

NV Energy states that in these situations more detailed studies may be required in areas of the transmission

system where the fault duty is already high.²⁶¹³

1372. Southern argues that the proposal should not accept modifications to interconnection requests without review because these requests could affect other interconnection customers in the same cluster as well as lower-queued clusters, adding that it may be a material modification that impacts the cost or timing of other interconnection requests.²⁶¹⁴

1373. MISO asserts that it is unclear if the NOPR proposal will require the interconnection customer to submit evidence of site control before making the modification request or after the request is granted.²⁶¹⁵ Idaho Power notes that site control requirements (primarily acreage) are based on the technology type used in the interconnection request and would require modification if the technology is changed.²⁶¹⁶ Idaho Power therefore argues that changing fuel type enables speculative interconnection requests that can affect other interconnection customers both in later clusters and in the same cluster.

1374. Indicated PJM TOs also contend that not treating fuel type changes as material modifications would provide gaming opportunities, e.g., an interconnection customer could bypass the site control demonstration required at the outset of the study process by entering the interconnection queue with a proposed storage project with a small site footprint and later, without changing the size of the interconnection, adding a solar farm with a much larger site footprint.²⁶¹⁷ MISO also notes that the NOPR proposal is contrary to a recent Commission-approved MISO tariff revision regarding changing fuel types while it the interconnection queue, that went through a lengthy stakeholder process.²⁶¹⁸ MISO states that it uses fuel-based dispatch assumptions for interconnection modeling and argues that there is not a simple process to determine if changing fuel during the middle of the interconnection process could cause harm to lower- or equally queued interconnection requests without running a new study based on the updated model. MISO explains that it studies storage generating facilities differently than renewable generating

²⁶¹⁸ MISO Initial Comments at 112–13.

facilities, and this affects the interconnection modeling.²⁶¹⁹

1375. Indicated PJM TOs argue that determining the “materiality” of a particular type of generating facility modification needs to take into account the cumulative impact on the cluster studies of all similar requests.²⁶²⁰ Indicated PJM TOs explain that, even if a type of modification sought by a single interconnection customer may have modest system impacts and thus not be “material” in a particular case, the cumulative impact of multiple similar requests in the same area could be much larger.

1376. Indicated PJM TOs contend, however, that certain modifications made behind the point of interconnection have reliability impacts requiring restudy and thus amount to material modifications (e.g., changing fuel type by adding storage to a generating facility).²⁶²¹ Indicated PJM TOs contend that such changes will likely affect short circuit capability limits, steady-state thermal and voltage limits, or dynamic system stability and response.²⁶²² Indicated PJM TOs also ask that the Commission recognize that different fuel types among resources have very different seasonal characteristics and dynamic response, arguing that the overall reliability of the transmission system could suffer if certain types of changes are incorrectly identified as non-material.²⁶²³ However, Shell contends that studies of the addition of a generating facility to an interconnection request should be limited to determining increased costs and/or study or construction delays of equal or lower-queued interconnection requests.²⁶²⁴

1377. Indicated PJM TOs ask that, at a minimum, the Commission allow transmission providers to determine the scope of “material modifications” based on their practical experience on their own systems and apply that knowledge as to the types of changes that typically affect other customers and that trigger the need for restudies.²⁶²⁵ Tri-State asserts that, when the performance of a new proposed generating facility differs from the existing/incumbent generating facility, transient stability analysis would be required but steady state

analysis (thermal/voltage) would not be required.²⁶²⁶

1378. NERC argues that transmission providers should study the potential impacts of any material change to the generating facility, such as the addition of storage, even when the interconnection service level does not change, because material modifications to the generating facility could alter stability and the interaction of a resource with the transmission system (e.g., adding inverters, which can increase short circuit current, and charging batteries from the transmission system, which can impact system power flow).²⁶²⁷

1379. Eversource argues that transmission providers cannot be expected to meet strict deadlines in an adversarial environment while interconnection customers may compound these issues by suggesting significant (even if not “material” by the definition of the revised *pro forma* LGIP) changes to their generating facilities in the middle of the interconnection process.²⁶²⁸

(c) Comments on Specific Matters

(1) Comments Seeking Materiality Guidelines

1380. Public Interest Organizations assert that the lack of a standardized definition in the *pro forma* LGIP of what constitutes a material modification, such as the addition of storage, leads to a lack of uniformity among transmission providers and disparate outcomes that could result in undue discrimination.²⁶²⁹ Similarly, Environmental Defense Fund asks the Commission to clarify how much flexibility transmission providers will be permitted in determining whether adding co-located generating facilities changes the service level and becomes a material modification, and it suggests that the Commission adopt firm guidelines for transmission providers to determine when the addition of a generating facility changes the service level to prevent discrimination against generating facilities based on their inclusion of hybrid resources.²⁶³⁰

1381. Pine Gate asks the Commission to require transmission providers to publish additional, consistent criteria regarding what changes to an

interconnection request will and will not be deemed a material modification, and that transmission providers publish their determinations about previous modification requests.²⁶³¹ Pine Gate contends that this information, which certain RTOs/ISOs already provide to interconnection customers, will reduce the number of restudies, shorten overall interconnection queue processing timelines, and reduce costs. Pine Gate, SEIA, and Shell support establishing thresholds, arguing that providing guidance of what constitutes a material modification will provide certainty to both interconnection customers and transmission owners.²⁶³²

1382. OPSI asks the Commission to require transmission providers to publish guidance on technologies and generating facility designs that would qualify presumptively as minor system modifications.²⁶³³ Indicated PJM TOs ask for “bright line” criteria (based on technical standards) for material modification to the extent possible, to narrow the scope of changes in a service request that need to be evaluated.²⁶³⁴ However, Indicated PJM TOs also argue that, in regions with large interconnection queues, the Commission should give transmission providers the flexibility to define “material modification,” taking into account the cumulative impact of particular categories of requested modifications based on the transmission provider’s past experience regarding the expected number of such requests.²⁶³⁵

1383. APS supports the proposal but requests guidelines regarding different technology types (e.g., increasing the size of a battery while also decreasing the size of a solar generating facility to keep the interconnection amount the same).²⁶³⁶ APS recommends that each technology type be treated independently in relation to requests to increase or decrease the sizes in the original interconnection request or otherwise be deemed a material modification (e.g., if the characteristics of a storage component change, it should be considered a different request that may be a material modification).

1384. R Street similarly asks the Commission to consider standardized, non-discriminatory conditions that trigger a material change to an interconnection request, even if the service limit does not change, arguing

that hybrid resources should not be penalized for their technology profile.²⁶³⁷ R Street notes, for example, that adding an inverter-based generating facility to another such facility may not constitute a material change, but adding a natural gas turbine to a solar site, even with no increase to net output across the interconnection point, could create a material shift in interconnection facilities.

1385. NARUC asks the Commission to clarify the degree of flexibility transmission providers have in determining what constitutes a material reliability concern on the transmission system.²⁶³⁸ Cypress Creek asks the Commission to further modify the current material modification definition to state that certain equipment changes are not material (*e.g.*, changing solar modules, changing inverter models, adding storage capacity, or making minor adjustments to inverter performance) if planned export and import capacity remains the same and the technology changes comport with interconnection agreement requirements.²⁶³⁹ ClearPath asks: (1) whether under the proposed definition a change in equipment that necessitates submitting new models and input data is a material modification; and (2) how equipment changes for non-synchronous resources will be treated under the proposed definition of material modification and the proposed deadlines.²⁶⁴⁰

1386. Ørsted supports the proposed definition of “material modification” but disagrees with imposing restrictions on when material modifications can be submitted (*e.g.*, after the initial application).²⁶⁴¹ Ørsted asks the Commission to recognize that modifications may occur at various stages of the process to reflect the use of evolving technology or to meet Federal or state requirements.²⁶⁴² Ørsted acknowledges transmission providers’ time and effort to conduct studies associated with proposed modifications but states that there is also a need to balance the interests of the interconnection customer, as there are a number of reasons why changes to an interconnection request may be necessary and development time for resources must also be considered. Ørsted asserts that transmission providers’ differing processes for

assessing material modifications create regulatory uncertainty for interconnection customers seeking to develop generating facilities in different regions, which can have significant economic impacts for the generating facility.²⁶⁴³ Ørsted states that, if the Commission chooses not to make the proposed change to the modification process, then, at a minimum, the Commission should encourage development of best practices that can be implemented by all the RTOs/ISOs with the goal of increasing efficiency and regulatory certainty.

1387. Shell asks the Commission to define the differences between “co-located additive,” “co-located non-additive,” and “hybrid” resources, and explains that these categories will allow transmission providers to develop proper criteria and business practices governing additions and/or changes to pending interconnection requests.²⁶⁴⁴ Shell argues that, because transmission providers inconsistently apply the methods they use to assess which issues qualify as being adverse material impacts, the Commission should more clearly define the scope of an “adverse material impact” to ensure that transmission providers consistently determine whether an interconnection request impacts equally or lower-queued interconnection customer(s) to a sufficient level of harm.

(2) Comments on Study Timeline

1388. With respect to the study timeline, while NARUC supports the proposal to require transmission providers to evaluate proposed generation additions within 60 calendar days because it is a reasonable amount of time, it suggests that the Commission allow some flexibility because planning regions and the industry may face challenges aligning resources and expertise with increasingly aggressive schedules to perform complex interconnection studies.²⁶⁴⁵ Public Interest Organizations, on the other hand, argue that the 60-day timeline to perform an evaluation is critically important for continuing to reduce delays in interconnection queue processing.²⁶⁴⁶ Cypress Creek supports the concept of expedited study if the request for a modification does not change the level of service, there is no impact on cost or timing of a request that is lower- or equally queued, and it

does not cause reliability concerns.²⁶⁴⁷ Tri-State asks how the 60-day time frame would work with the cluster study process.²⁶⁴⁸ PJM opposes the 60-day timeline.²⁶⁴⁹

(3) Comments on Control Technologies

1389. ENGIE suggests that including control technologies in the evaluation of the addition of a generating facility to an existing interconnection request should confirm the lack of impact on other interconnection customers.²⁶⁵⁰ SEIA argues that transmission providers should be transparent about requiring specific types of control technologies to add an additional resource.²⁶⁵¹ Clean Energy Associations contend that hardware or software controls can also address, reliably and cost-effectively, concerns about the impact of the use or addition of energy storage on the reliable operation and delivery of energy (such as PJM’s concern regarding studies for light load conditions).²⁶⁵²

(4) Comments on Impacts of Storage in Charging Mode

1390. Pine Gate states that the scope of the required studies for the addition of storage will vary depending on the proposed configuration of the resource, such as whether it charges from the grid.²⁶⁵³ NV Energy states that any changes in the electrical characteristics of the storage system in charging mode versus generating mode are most likely negligible and unlikely to significantly impact studies.²⁶⁵⁴

1391. APS explains that, based on its experience, the introduction of new load (not electrical characteristics), such as storage charging from the grid in lieu of self-charging, which could require changes to the system overall, could affect the results of the existing study and other studies.²⁶⁵⁵

1392. Public Interest Organizations state that the transmission provider should study whether a storage generating facility’s charging and discharging load profiles may impact the grid.²⁶⁵⁶ Public Interest Organizations argue that the interconnection customer and transmission provider should work together to “identify the temporal and

physical charging characteristics to be agreed upon,” but that the Commission does not need to further assess the details of the storage generating facilities charging because those attributes will be tied to the unique properties of the transmission system at that location and assessed during the interconnection process to ensure that charging load and operational profiles do not adversely impact the system.

(5) Miscellaneous Comments

1393. PJM asks the Commission to restrict the ability to modify interconnection requests after the initial application by allowing (1) an interconnection customer to move its point of interconnection only in certain limited instances and (2) other specified modifications only at certain specified times to avoid restudies and study delays.²⁶⁵⁷ PJM contends that there is no need to study the materiality of a change in an interconnection request’s point of interconnection because each such change requires analysis and the application of engineering judgment, which takes time away from processing interconnection requests and performing the cluster study. PJM claims that interconnection customers making changes are really seeking to optimize their generating facilities mid-process rather than performing due diligence before entering the interconnection queue.

1394. With respect to the need for system impact studies, Illinois Commission argues that, although in some cases additional studies are necessary in response to a request to add a generating facility to an existing interconnection request to ensure reliability, transmission providers should minimize repeating system impact studies to the extent possible to avoid slowing down the interconnection queue.²⁶⁵⁸ In response to the concern that evaluating modifications is time-consuming, Ørsted asks the Commission to allow third-party consultants engaged by the interconnection customers to help inform any studies related to modifications to reduce the workload on RTO/ISO staff.²⁶⁵⁹

1395. PPL suggests that the transmission provider should assign an interconnection queue position to the proposed additional generating facility.²⁶⁶⁰ PPL recommends the study of the original and additional interconnection request together in the

initial phase of the interconnection process, and if they do not contribute to any network upgrades or require any interconnection facilities, PPL suggests they should be able to proceed directly to final agreements.

1396. Pine Gate states that, if addition of a grid-charging storage resource is deemed a material modification, the interconnection customer should be permitted to propose the addition of a non-grid-charging electric storage resource as an alternative.²⁶⁶¹ In order to reduce the burden on transmission providers, Pine Gate asks the Commission to permit interconnection customers to provide to transmission providers engineering analysis applying what Pine Gate suggests would be published engineering criteria to the requested modification and analyzing the impacts to other interconnection customers or reliability, with the transmission provider then validating the results and determining if the proposed modification is material.

1397. Clean Energy Associations explain that if transmission providers study each component of co-located generating facilities separately, a wind or solar generating facility could obtain a faster study for ERIS while the co-located storage could get a more detailed study for NRIS.²⁶⁶² Clean Energy Associations assert that this flexibility would provide transmission providers more visibility during interconnection processes, reduce requests to retrofit generating facilities with additional co-located resources, and enable faster interconnection processes for component resources that will accept curtailment.

(d) Requests for Clarification and Flexibility

1398. MISO asserts that, if the Commission adopts the proposal, the Commission should modify the proposed requirement to allow the “proposed addition of a generating facility to an interconnection request as long as the interconnection customer does not request a change to the originally requested interconnection service level and the proposed addition to the generating facility is modeled the same way as the original generating facility.”²⁶⁶³

1399. Clean Energy Associations ask the Commission to clarify whether (1) generating facility size reductions, which could result in upgrade costs being shifted to others in the same

cluster, would be a material modification and (2) there is a reduction threshold that would trigger a material modification.²⁶⁶⁴

1400. Invenergy asks the Commission to clarify that its proposed requirement to evaluate requests to add a generating facility extends to requests for surplus interconnection service and that those requests cannot automatically be deemed a material modification.²⁶⁶⁵ Invenergy argues that, when the surplus interconnection request is below the total original LGIA interconnection rights and determined a material modification, the interconnection customer should have the opportunity to mitigate the identified issue so that it is no longer a material modification.

1401. Equinor Wind seeks clarification that the proposed definition of material modification excludes changes that (1) occur on the interconnection customer’s side of the point of interconnection and (2) do not alter the electrical output or electrical characteristics of a generating facility, adding that such changes should not be subject to the transmission provider’s discretion or evaluation of whether they amount to a material modification.²⁶⁶⁶ Equinor Wind argues that these clarifications will reduce uncertainty for interconnection customers and allow for some appropriate flexibility during generating facility development, particularly for offshore wind. Equinor Wind asserts that this clarification will not create reliability concerns because these changes do not have transmission system impacts.

1402. Indicated PJM TOs ask the Commission to clarify the relationship between the use of the term “material modification” in the *pro forma* LGIP and the term “materially modify” in NERC Reliability Standards FAC-001-3 (Facility Interconnection Requirements) and FAC-002-2 (Facility Interconnection Studies), asserting that the lack of clarity and overlap between the two terms could cause confusion and may result in additional delays to the interconnection process.²⁶⁶⁷ UMPA asks the Commission to clarify that adding a generating facility includes technology changes beyond electric storage resources, such as changing from wind to solar.²⁶⁶⁸

²⁶⁶³ MISO Initial Comments at 108–12.

1403. With respect to who performs the study to determine the impact of adding a generating facility to an existing interconnection request, NARUC argues that, because the reliable operation of the bulk-power system is at issue, the Commission should clarify that the transmission providers determine whether (1) the addition of a generating facility requires a full interconnection service study and (2) the interconnection customers in the same cluster (or subsequent clusters) could be adversely impacted.²⁶⁶⁹ NARUC adds that the Commission should ensure that these processes are transparent, clearly communicated to interconnection customers, and allow interconnection customers to mitigate the impacts and revise their modifications requests.

1404. National Grid urges the Commission to allow ISO-NE and NYISO to maintain their processes that allow the transmission owner and RTO/ISO to evaluate the proposed change and the RTO/ISO to make the final determination as to whether the change constitutes a material modification.²⁶⁷⁰ Indicated PJM TOs argue that the final rule should have sufficient flexibility to allow PJM's proposed definition of "material modification" or permit PJM to obtain an independent entity variation for its proposed definition.²⁶⁷¹

1405. Omaha Public Power asks the Commission to allow transmission providers to continue their existing processes of facilitating the use of newer technologies such as storage to promote the stability of these processes rather than using the proposed process on the NOPR.²⁶⁷²

iii. Commission Determination

1406. We adopt, with modifications, the NOPR proposal to revise section 4.4.3 of the *pro forma* LGIP to require transmission providers to evaluate the proposed addition of a generating facility at the same point of interconnection prior to deeming such an addition a material modification, if the addition does not change the originally requested interconnection service level. We modify the NOPR proposal regarding section 4.4.3 of the *pro forma* LGIP, as discussed in greater detail below, to: (1) remove the 60-calendar day requirement for assessment of material modification; (2) limit the requirement that the transmission provider analyze a request

to add a generating facility to an existing interconnection request solely to requests received prior to the interconnection customer's return of the executed facilities study agreement to the transmission provider; and (3) create an exception for transmission providers that employ fuel-based dispatch assumptions from these requirements.

1407. We find that the record demonstrates that automatically deeming a request to add a generating facility to an existing interconnection request to be a material modification creates a significant barrier to access to the transmission system²⁶⁷³ and renders existing interconnection processes unjust and unreasonable. Such default treatment deters interconnection customers from proceeding with changes to a proposed generating facility that, after review, may be found not to be material, thereby reducing the number of generating facilities that can access the transmission system. This creates a barrier to the addition of a generating facility to an existing interconnection request that may improve the efficient use of the transmission system.

1408. We make several modifications to the NOPR proposal in response to concerns reflected in the record. First, we recognize that it may be difficult for some transmission providers to complete their material modification evaluations within 60 calendar days, depending on the details of their individual interconnection processes; therefore, we decline to adopt a 60-calendar day requirement. This preserves flexibility for transmission providers to address modification requests as is most efficient with their overall interconnection queue processing.

1409. Second, we modify the NOPR proposal to limit when an interconnection customer may request to add a generating facility to an existing interconnection request without such a request automatically being deemed a material modification. We are persuaded by commenters' arguments that allowing requests for evaluation to occur at any point in the interconnection process could impede the ability of the transmission provider to timely process its interconnection queue.²⁶⁷⁴ Thus, we modify the NOPR proposal, and transmission providers will only be required to evaluate

whether a request to add a generating facility to an existing interconnection request is material if it is submitted before the interconnection customer returns the executed facilities study agreement to the transmission provider. Once the executed facilities study agreement is returned, the transmission provider may decide to automatically treat requests to add a generating facility to an existing interconnection request as material modifications without review.

1410. We clarify that interconnection customers may continue to request changes to proposed generating facilities at any time in the interconnection process. Transmission providers that choose to evaluate modification requests later in the interconnection process than required by this rule (*i.e.*, after the interconnection customer returns the executed facilities study agreement to the transmission provider) may continue to do so. This final rule does not address how transmission providers evaluate modification requests after the facilities study agreement, and thus transmission providers are not required to include their modification processes after the facilities study agreement in their compliance filing with this final rule.

1411. We acknowledge that, as stated by commenters, transmission providers that employ fuel-based dispatch assumptions, such as MISO, may experience challenges with the proposal because the interconnection study assumptions in a fuel-based dispatch model vary depending on the fuel type; thus a request to add a generating facility of a different fuel type to an existing interconnection request would always constitute a modification that would require a study, thereby affecting the interconnection costs or study timing for lower- or equally-queued interconnection customers.²⁶⁷⁵ This type of request would most likely represent a material modification and would result in the loss of interconnection queue position under the tariff. Therefore, we modify the proposal to include an exception for transmission providers that use fuel-based dispatch assumptions in their interconnection studies.

1412. In response to EPSA's and Equinor Wind's request to provide a clearer standard definition of material modification,²⁶⁷⁶ we note that we are not changing the definition of material modification in this rule and do not believe a more prescriptive definition of material modification is reasonable

²⁶⁷⁶ EPSA Initial Comments at 13; Equinor Wind Reply Comments at 5–6.

given the nuances in transmission providers' processes for assessing material modification, as described in the comments.²⁶⁷⁷ With respect to NARUC's request to clarify the flexibility transmission providers have in determining what constitutes a material reliability concern on the transmission system,²⁶⁷⁸ we clarify that this reform only requires transmission providers to evaluate interconnection modification requests. As stated above, it does not alter the definition of material modification.

Transmission providers may continue to find requests to be material if they impact the cost or timing of an equally or lower-queued interconnection customers.

1413. Commenters request clarification about the requirements for demonstrating site control when submitting a modification request.²⁶⁷⁹ In response, we clarify that, where a modification request to add a generating facility to an existing interconnection request requires the interconnection customer to adhere to a larger footprint to support a modified facility design, the interconnection customer must provide evidence of the required site control when submitting the modification request to the transmission provider. The requirements for site control that the interconnection customer must adhere to may depend on the timing of the request for the modification as well as the technology type of the requested additional generating facility, as discussed in the site control portion of this rule.²⁶⁸⁰

1414. Indicated PJM TOs also request that the Commission clarify the relationship between the term "material modification" in the *pro forma* LGIP and the term "materially modify" in NERC Reliability Standard FAC-001-3.²⁶⁸¹ We find that this request to further define the relationship between the terms is outside of the scope of this rulemaking. As discussed above, this final rule does not alter the preexisting definition of a material modification. Moreover, we note that the Commission recently approved a change to the NERC FAC Reliability Standards to change "materially modify" to "qualifying change."²⁶⁸²

1415. ClearPath seeks clarification regarding equipment changes, specifically whether under the proposed definition of material modification, a change in equipment that necessitates submitting new models and input data is a material modification and how equipment changes for non-synchronous resources will be treated under the proposed definition of material modification and the proposed deadlines.²⁶⁸³ We clarify that an equipment change, whether for synchronous or non-synchronous resources, that does not change the originally requested interconnection service level and does not qualify for evaluation under the transmission provider's technological change procedure must be evaluated by the transmission provider to determine if it is a material modification.

1416. Similarly, Equinor Wind seeks clarification that the proposed definition of material modification excludes changes that do not alter the electrical output or electrical characteristics of an interconnection request, suggesting that such changes should not be subject to the transmission provider's discretion or evaluation of whether they amount to a material modification.²⁶⁸⁴ We note that the definition of material modification is based on whether changes have a material impact on the cost or timing of any interconnection request with an equal or lower interconnection queue position, and thus we decline to categorically exclude certain types of changes from the definition.

1417. Clean Energy Associations ask the Commission to clarify whether: (1) generating facility size reductions, which could result in upgrade costs being shifted to others in the same cluster, would be a material modification; and (2) there is a reduction threshold that would trigger a material modification.²⁶⁸⁵ We clarify that, as per *pro forma* LGIP section 4.4.1, prior to the return of the cluster study agreement from the transmission provider to the interconnection customer, a decrease of up to 60% of electrical output (MW) must not be considered a material modification. In addition, per *pro forma* LGIP section 4.4.2, prior to the return of the executed interconnection facilities study, an additional 15% decrease of electrical output of the proposed project must not

be considered a material modification if the change occurred either through a decrease in plant size (MW) or a decrease in interconnection service level accomplished by applying transmission provider-approved injection-limiting equipment.

1418. Invenenergy, in discussing both surplus interconnection and material modification, contends that in circumstances where a surplus interconnection request is below the total LGIA interconnection rights and determined to be a material modification, the interconnection customer should have the opportunity to mitigate identified issues such that there is no longer a material modification.²⁶⁸⁶ We find this request to be outside the scope of this proceeding because the final rule is not proposing a process whereby interconnection customers may mitigate identified issues to avoid a material modification determination. In response to Invenenergy's request to clarify that the proposed reforms to require evaluation of requests to add a generating facility extend to requests for surplus interconnection service, the Commission declines to make such a change. The surplus interconnection service process is separate from the material modification process, and the two processes should not be conflated.

1419. We decline to adopt firm guidelines that transmission providers will follow to determine what constitutes a material modification when a request to add a generating facility to an existing interconnection request involves adding co-located generating facilities.²⁶⁸⁷ The varying configurations and varying electrical characteristics that interconnection customers may propose through this process may alter how they impact equally or lower-queued interconnection customers, and therefore we find that transmission providers must retain flexibility to evaluate these requests.

c. Availability of Surplus Interconnection Service

i. Need for Reform and NOPR Proposal

1420. In the NOPR, the Commission noted that Order No. 845 established a surplus interconnection service process to enable a new interconnection customer to use the unused portion of an existing interconnection customer's

²⁶⁸⁵ Clean Energy Associations Initial Comments at 64.

²⁶⁸⁶ Invenenergy Initial Comments at 51.

²⁶⁸⁷ We consider Shell's request for the Commission to define the differences between "co-located additive," "co-located non-additive," and "hybrid" resources, as well as Shell's request to specify the approach to charging energy, to be included among the requests for firm guidelines.

approved interconnection service through the inclusion of an additional generating facility behind a single point of interconnection.²⁶⁸⁸ The Commission also noted that Order No. 845 did not specify when a generating facility is considered to be “existing,” and preliminarily found that limiting the use of surplus interconnection service to only interconnection customers that have achieved commercial operation may be unjust, unreasonable, and unduly discriminatory or preferential.²⁶⁸⁹

1421. The Commission proposed to revise the *pro forma* LGIP to require transmission providers to allow interconnection customers to access the surplus interconnection service process once the original interconnection customer has an executed LGIA or requests the filing of an unexecuted LGIA.²⁶⁹⁰

ii. Comments

(a) Comments in Support

1422. The vast majority of commenters on this topic either support or do not oppose the proposal regarding surplus interconnection service, though some seek various clarifications.²⁶⁹¹ MISO states that surplus interconnection requests are the proper method for interconnection customers to add storage or a different generating facility fuel source to an interconnection request for an unbuilt generating facility²⁶⁹² and suggests that the Commission limit when the transmission provider must tender a surplus interconnection agreement to the interconnection customer to prevent a surplus interconnection agreement from being tendered prior to the original interconnection agreement becoming effective. MISO explains that its generator interconnection procedures allow for a surplus interconnection request to be made during the processing of the interconnection queue and adds that MISO is not required to tender a surplus interconnection agreement until the original

interconnection agreement has become effective because a surplus interconnection agreement is a derivative of the original interconnection agreement. According to MISO, under the proposed reform, the surplus interconnection agreement could be tendered prior to the original interconnection agreement becoming effective if the original interconnection agreement is filed unexecuted and becomes the subject of a disputed proceeding.

(b) Comments in Opposition

1423. Some commenters either argue that the NOPR proposal is inappropriate for their situation or oppose it outright, in some cases arguing against the underlying concept of surplus interconnection service. For instance, NYISO asserts that it does not provide for the use of “surplus” interconnection service and the Commission has previously granted NYISO an independent entity variation from the surplus interconnection service requirement.²⁶⁹³ NYISO asserts that this independent entity variation remains just and reasonable and accomplishes the purposes of Order No. 845 and the instant NOPR to make it easier for proposed generating facilities to interconnect without costly upgrades.²⁶⁹⁴

1424. ISO-NE states that allowing for co-location of generating facilities meets the need of allowing surplus interconnection service to be available after executing an LGIA, rendering the proposed reform unnecessary.²⁶⁹⁵ ISO-NE explains that, unless the existing generating facility is already commercial, there is no unused capability available at the point of interconnection. ISO-NE asserts that, to the extent the interconnection customer wants to co-locate generating facilities, it should be required to propose that as part of the original interconnection request.

1425. CAISO disagrees that allowing an interconnection customer to request surplus interconnection service after the original interconnection customer executes an LGIA would enable interconnection customers with unused interconnection capacity to let other generating facilities use that capacity earlier than allowed.²⁶⁹⁶ CAISO contends that interconnection customers do not request to use surplus interconnection service, and further

reform is unlikely to have much effect because surplus interconnection service is unavailable independent of the Commission’s definition. CAISO asserts that interconnection customers do not oversize their interconnection capacity; therefore, other interconnection customers cannot avail themselves of any “surplus” because it is already subscribed.

1426. PJM asserts that the current surplus interconnection service construct provides no value due to the challenges inherent in assessing the dynamic response associated with adding a surplus generating facility to the system while not infringing on the rights of the interconnection customers in the interconnection queue or available “headroom.”²⁶⁹⁷ Therefore, PJM contends that it sees no benefit in expanding its application and that PJM’s current surplus interconnection service is rarely used. PJM asserts that surplus interconnection service imposes overhead costs without providing value to interconnection customers wishing to interconnect.

1427. In response to PJM and CAISO’s comments, SEIA replies that both PJM and CAISO take an overly narrow approach to surplus interconnection service and that past use of surplus interconnection service should not bar making the service available to future requests to add storage to a generating facility.²⁶⁹⁸

(c) Comments on Specific Proposal

1428. Other commenters argue that, at least in some situations, surplus interconnection service should be available even earlier than proposed in the NOPR. For instance, Ameren asserts that there is no need to restrict the request to an executed, or requested unexecuted, LGIA.²⁶⁹⁹ Ameren contends that, under the Commission’s proposal, MISO and the interconnection customer would have finalized the network upgrades and system impact study only to go back to assess what surplus interconnection capacity would have been available. Therefore, Ameren asks the Commission to allow for regional flexibility. Omaha Public Power likewise recommends that the Commission allow existing transmission provider processes that are facilitating new technologies to continue.²⁷⁰⁰

1429. Pine Gate favorably cites MISO’s process for surplus interconnection service and asserts that the Commission should expand its

current proposal to permit interconnection customers to access the surplus interconnection service process upon completion of the cluster restudy phase.²⁷⁰¹ Invenergy states that the Commission should permit requests for surplus interconnection service after an interconnection request has an executed facilities study agreement.²⁷⁰² Invenergy contends that the Commission could further clarify that an LGIA must be in place for the initial facility before any LGIA for the surplus interconnection service can be tendered. Invenergy asserts that, if the Commission does not modify the NOPR, it should clarify that transmission providers like MISO that have existing practices under which surplus interconnection service can be requested earlier in the process may continue those existing practices in compliance filings after any final rule may become effective. Invenergy also states that the Commission should reinforce its commitment in Order No. 845 that surplus interconnection service is available up to the maximum level allowed under the original interconnection agreement.²⁷⁰³ According to Invenergy, some transmission providers significantly limit an interconnection customer's surplus interconnection rights by deeming an otherwise permitted request a material modification except in the limited situation of direct current (DC)-coupled behind-the-meter storage, which effectively precludes surplus interconnection service in all other circumstances under a standard that is not well-defined or explained.

1430. Elevate encourages the Commission to consider modifying the duration of the period in which an interconnection customer taking surplus interconnection service can continue to operate following the original, host generating facility's retirement.²⁷⁰⁴ Elevate contends that, although an interconnection customer taking surplus interconnection service may operate for up to a year following the original generating facility's retirement, a one-year period is too short when it may take four years or more to navigate the interconnection process. According to Elevate, a surplus interconnection customer should be able to operate sufficiently long following the original generating facility's retirement that it has the ability to obtain permanent interconnection service through the submission of a new interconnection

request.²⁷⁰⁵ Elevate contends that this will ensure that generation capacity that has been fully constructed and is contributing to system reliability is not unnecessarily forced offline due to interconnection queue backlogs beyond their control.

(d) Requests for Clarification

1431. Shell contends that the Commission should clarify that transmission providers cannot deny surplus interconnection capacity except where (1) the total amount of interconnection service, measured in MW, at the point of interconnection has increased, or (2) there will be a reliability risk to the relevant transmission system.²⁷⁰⁶

1432. NARUC asks the Commission to clarify in the *pro forma* LGIP that an interconnection customer that has been fully studied and has an executed LGIA, or has filed an unexecuted LGIA, should be considered an existing facility for purposes of surplus interconnection service.²⁷⁰⁷ NARUC asserts that this clarification will increase efficiency in interconnection queues throughout the planning regions and ensure that available interconnection capacity can be used efficiently.

1433. Enel requests that the Commission specify that parallel, simultaneous operation and injection of two distinct, alternating current (AC)-coupled generating facilities is an acceptable configuration for surplus interconnection service so long as the total injection of energy at the point of interconnection does not exceed the interconnection service level.²⁷⁰⁸

1434. APS and PacifiCorp ask the Commission to clarify that no surplus can be provided if the LGIA of the original interconnection request is suspended.²⁷⁰⁹ PacifiCorp explains that, if the underlying LGIA is suspended, then there is no guarantee that the facilities required for interconnection will be installed.²⁷¹⁰ APS further asserts that, if an interconnection customer requests to go into suspension after a surplus request is granted, then that would also require the surplus interconnection to be suspended.²⁷¹¹ PacifiCorp asserts that any work the transmission provider were to undertake relating to the surplus interconnection service may be wasted effort if the LGIA

never comes out of suspension.²⁷¹² PacifiCorp asks the Commission to clarify that, if the original surplus interconnection request exceeds its permitted suspension period, both the original LGIA and any surplus interconnection service shall be terminated.

1435. Idaho Power requests clarification as to whether the Commission intends for the surplus interconnection service process to be used for an interconnection customer that owns a generating facility, either in-service or with an executed interconnection agreement, to add energy storage after the interconnection agreement is executed, or if the Commission intends for these additions to be evaluated under *pro forma* LGIA article 5.19 (Modification).²⁷¹³

iii. Commission Determination

1436. We adopt the NOPR proposal to revise section 3.3.1 of the *pro forma* LGIP to require transmission providers to allow interconnection customers to access the surplus interconnection service process once the original interconnection customer has an executed LGIA or requests the filing of an unexecuted LGIA.

1437. We find, based on the record, that this reform will enable interconnection customers with unused interconnection service to let other generating facilities use that interconnection service earlier than is currently allowed and, therefore, increases overall efficiency of the interconnection queue.²⁷¹⁴ Because we find this reform to be just and reasonable, to remedy the unjust and unreasonable rates caused by the limited ability to use surplus interconnection service today and ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner, we decline to adopt alternative proposals suggested by commenters.

1438. We find unpersuasive the comments from various RTOs/ISOs opposing the NOPR proposal.²⁷¹⁵ To the extent that they oppose the surplus interconnection service process approved by the Commission in Order No. 845, we find their arguments to be a collateral attack on the Commission's findings in Order No. 845 and irrelevant for purposes of determining whether the instant proposal is just and reasonable. Further, consistent with the NOPR, we

²⁷⁰⁴ Elevate Initial Comments at 11–12.

continue to find that expanding the availability of surplus interconnection service beyond those entities that have achieved commercial operation will address the Commission's concerns regarding undue restrictions on access to this surplus interconnection service,²⁷¹⁶ thereby making it available to a broader group of potential interconnection customers and achieving the efficiencies discussed above.

1439. We are also not persuaded by either Pine Gate's or Ameren's arguments²⁷¹⁷ to alter the NOPR proposal to require transmission providers to allow interconnection customers to access the surplus interconnection service process prior to the LGIA phase or Invenenergy's argument to allow requests for surplus interconnection service once there is an executed facilities study agreement.²⁷¹⁸ We find that allowing interconnection customers to access the surplus interconnection service process once the original interconnection customer obtains an executed LGIA, or requests the filing of an unexecuted LGIA, is appropriate because prior to that stage, the network upgrades necessary to create the identified amount of surplus interconnection service may not have been fully identified, let alone begun the process of being placed into service.

1440. In response to APS's and PacifiCorp's requests for clarification regarding suspensions,²⁷¹⁹ we clarify that: (1) if the LGIA of the original interconnection request is suspended, then any submitted requests for surplus interconnection service are likewise suspended, and new requests for surplus interconnection service may not be submitted, until after the suspension is lifted; and (2) if the original LGIA is terminated, including for exceeding the three-year suspension period (pursuant to *pro forma* LGIA article 5.16), any related surplus interconnection service allowed as a result of the original LGIA will be terminated because surplus interconnection service is dependent upon the underlying interconnection service used by existing generating facilities.

1441. In response to NARUC's request to clarify that an interconnection customer that has been fully studied and has an executed LGIA, or that has requested the filing of an unexecuted LGIA, should be considered an existing

facility for purposes of surplus interconnection service, we decline to make such clarification, but reiterate that where an interconnection customer has executed the LGIA, or requested that the LGIA be filed unexecuted, interconnection customers may submit surplus interconnection service requests to the transmission provider.

1442. We find that Enel's and Shell's respective requests²⁷²⁰ for clarification regarding establishing parameters on surplus interconnection service are outside the scope of this proceeding because this final rule is not proposing to modify eligibility for surplus interconnection service as established in Order No. 845.

1443. We also find that Elevate's request²⁷²¹ for the Commission to modify the duration in which an interconnection customer taking surplus interconnection service can continue to operate following the original, host generating facility's retirement is outside the scope of this proceeding because this final rule is not proposing to modify the length of time for which surplus interconnection service may be provided after the original generating facility retires.

1444. In response to Idaho Power's request for clarification regarding whether the Commission intends for the surplus interconnection service process to be used for an interconnection customer that owns a generating facility with an executed or unexecuted LGIA to later add energy storage,²⁷²² the answer depends upon how the energy storage facility will be used. If, for example, it is used only to firm up the underlying generating facility (e.g., a wind or solar power plant) without ever injecting in excess of the original interconnection service level, then surplus interconnection service may be used.²⁷²³ If, on the other hand, the new energy storage facility and the existing generating facility will be configured to inject together and exceed the original interconnection service limit, then surplus interconnection service may not be used.

1445. In response to Invenenergy's requests,²⁷²⁴ we clarify that the original interconnection customer must have an LGIA in place, either executed or requested to be filed unexecuted with

the Commission, prior to tendering any LGIA for surplus interconnection service. With respect to Invenenergy's request for flexibility for transmission providers that currently allow requests for surplus interconnection service before the LGIA phase, we note that transmission providers can propose deviations from the requirements adopted in this final rule and demonstrate how those deviations satisfy the standards discussed in section IV of this final rule, which the Commission will consider on a case-by-case basis.

1446. In response to Invenenergy's request to clarify that proposed reforms to require evaluation of requests to add a generating facility to an interconnection request extend to requests for surplus interconnection service, we clarify that the revisions to the modification process do not extend to the surplus interconnection service process. We note that the modification process revisions would be used by an interconnection customer while undergoing the interconnection study process, whereas the surplus interconnection process revisions would be used after the interconnection study process is complete and the interconnection customer has an executed LGIA, or an unexecuted and filed LGIA.

1447. Invenenergy requests that the Commission reiterate and reinforce its commitment in Order No. 845 that surplus interconnection service is available up to the maximum level allowed under the original interconnection agreement. Invenenergy contends that, when the surplus interconnection service request is below the total LGIA interconnection rights and determined to be a material modification, the interconnection customer should have the opportunity to mitigate identified issues such that there is no longer a material modification. We decline Invenenergy's request because the final rule does not address revisions to how the surplus interconnection service process is conducted; rather, the final rule addresses when a request for surplus interconnection service may be submitted.

d. Operating Assumptions for Interconnection Studies

i. Need for Reform and NOPR Proposal

1448. In the NOPR, the Commission stated that, as newer technologies with operating parameters that differ from traditional generation seek to interconnect, it is necessary for transmission providers to use

²⁷¹⁶ NOPR, 179 FERC ¶ 61,194 at P 263.

²⁷²⁴ Invenenergy Initial Comments at 50.

assumptions that accurately reflect “the operating parameters of electric storage resources and co-located resources containing electric storage resources (including hybrid resources) so that the unique operating characteristics of such resources are taken into account during the generator interconnection process.”²⁷²⁵ The Commission stated that, because the *pro forma* LGIP includes only general requirements regarding the operating assumptions for generating facilities in interconnection studies, it was concerned that “electric storage resources, and co-located resources containing electric storage resources, may be studied under inappropriate operating assumptions that result in assigning unnecessary network upgrades and increased costs to interconnection customers.”²⁷²⁶ The Commission therefore preliminarily found that “the lack of realistic operating assumptions used in interconnection studies for electric storage resources and co-located resources containing electric storage resources (including hybrid resources) can result in excessive and unnecessary network upgrades and may hinder the timely development of new generation, thereby stifling competition in the wholesale markets, and resulting in rates, terms, and conditions that are unjust and unreasonable.”²⁷²⁷ Further, the Commission preliminarily found that “the lack of appropriate operating assumptions used in interconnection studies may present an unduly discriminatory or preferential barrier to the interconnection of electric storage resources and co-located resources containing electric storage resources (including hybrid resources).”²⁷²⁸

1449. The Commission proposed to revise the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use “operating assumptions for interconnection studies that reflect the proposed operation of an electric storage resource or co-located resource containing an electric storage resource (including hybrid resources)—i.e., whether the interconnecting resource will or will not charge during peak load conditions, unless good utility practice, including applicable reliability standards, otherwise require the use of different operating assumptions.”²⁷²⁹ The Commission noted that, under this proposed reform, such operating assumptions shall be proposed by the

interconnection customer as part of its initial interconnection request.

1450. The Commission further proposed that such operating assumptions must be “reasonably representative of the likely behavior of an electric storage resource or co-located resource containing an electric storage resource (including hybrid resources) and, in cases where available, consistent with the historical performance of such resources in the relevant geographic area.”²⁷³⁰ Further, to help facilitate alignment between as-studied and real-world conditions, the Commission proposed to allow transmission providers to hold interconnection customers to the intended operation of their electric storage resource or co-located resource containing an electric storage resource (including hybrid resources) by: (1) memorializing these operating restrictions in the interconnection customer’s LGIA; and (2) requiring control technologies (software and/or hardware) in cases where appropriate, such as for electric storage that wishes to limit its operations, with such protection devices included in Appendix C of the LGIA.²⁷³¹ The Commission noted that, “if the interconnection customer fails to operate its electric storage resource or co-located resource containing an electric storage resource (including hybrid resources) in accordance with these conditions as memorialized in the LGIA, the interconnection customer may be considered in breach and the transmission provider may pursue termination pursuant to article 17 of the LGIA.”²⁷³² Additionally, the Commission proposed to “require that any transmission provider that requires electric storage resources or co-located resources containing an electric storage resource (including hybrid resources) to install control technologies to publicly post a list of acceptable control technologies.”²⁷³³ Furthermore, the Commission proposed revisions to the description of the ERS and NRIS studies in sections 3.2.1.2. and 3.2.2.2 of the *pro forma* LGIP to accommodate this proposed reform.

1451. The Commission proposed to require that interconnection customers clearly communicate to the transmission provider “the expected operating patterns of the electric storage resource, or co-located resource containing an electric storage resource (including hybrid resources).”²⁷³⁴ In addition, for

“the electric storage resource or co-located resource containing an electric storage resource (including hybrid resources) to be studied, the Commission proposed to require the interconnection customer to specify, as part of its initial interconnection request, the ancillary services that it would or would not provide so that the proper operating assumptions may be made in interconnection studies.”²⁷³⁵ Under the Commission’s proposal, regardless of any changes to operating assumptions, “all electric storage resources, or co-located resources containing an electric storage resource (including hybrid resources) would be required to continue to meet all requirements in the *pro forma* LGIP and *pro forma* LGIA, as well as all applicable reliability standards.”²⁷³⁶

1452. The Commission noted that, under this proposed reform, each transmission provider’s operating assumptions used in their interconnection studies must take into consideration the services that the generating facility would provide and the timing of such services, as applicable.²⁷³⁷ The Commission further noted that this could be done in a variety of ways, and the transmission provider would have flexibility to consider services as best fits its transmission system.

1453. The Commission proposed to clarify that “this proposed reform to study electric storage resources, or co-located resources containing an electric storage resource (including hybrid resources) according to their planned operating assumptions at the request of the interconnection customer as part of its initial interconnection request is intended to mean the operating assumptions for withdrawals of energy (e.g., the charging of an energy storage resource) in interconnection studies.”²⁷³⁸ The Commission proposed to require that the interconnection customer include in its initial interconnection request any operating assumptions for withdrawals of energy to be used by the transmission provider in interconnection studies.

1454. The Commission sought comment on whether the Commission should expand this reform to address operating assumptions for additional generating facility technologies that may currently be inaccurately modeled, such as variable energy resources.²⁷³⁹ For example, the Commission sought

²⁷²⁵ NOPR, 179 FERC ¶ 61,194 at P 279.

comment on whether to expand this proposal to specify only that, at the interconnection customer's request, a transmission provider must not study generating facilities in ways that are not physically possible, for example studying a solar resource as producing energy at night, or a wind resource as producing maximum energy during low wind seasons, or other circumstances wherein any resource is studied in ways that are not physically possible, subject to the same proposed requirement that the generating facility be equipped with sufficient control technology, such as special protection systems, and/or subject to penalties for deviating from dispatch. The Commission sought comment on whether other operating assumptions, in addition to the assumption that electric storage resources withdraw energy during peak load periods, should be considered as part of this proposed reform.

1455. The Commission sought comment on how to define the study parameters (e.g., should the Commission define the peak load period and/or net peak load during which transmission providers must not study a generating facility as withdrawing energy, and if so how).²⁷⁴⁰

1456. The Commission also sought comment on “whether, and if so how, to define firm and non-firm charging for electric storage resources and require transmission providers to define study criteria and possible ways to interconnect related to both firm and non-firm charging.”²⁷⁴¹ The Commission sought comment on whether providing such options would improve the effectiveness of this proposed reform and whether there would be other consequences of implementing such an approach. With respect to the definition of firm and non-firm charging, the Commission sought comment on whether to: (1) define firm charging service as interconnection service that allows the interconnection customer to be eligible to receive electric energy in a manner comparable to a transmission provider's load; and (2) define non-firm charging service as interconnection service that allows the interconnection customer to be eligible to receive electric energy using the existing firm or non-firm capacity of the transmission system on an “as available” basis, noting that in an RTO/ISO with market-based congestion management, a generating facility with non-firm charging service must respond to the RTO's/ISO's dispatch

instructions, including curtailment to manage congestion.²⁷⁴²

ii. Comments

(a) Comments in Support

1457. Many commenters support the Commission's proposal to revise the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use operating assumptions for interconnection studies that reflect the proposed operation of an electric storage resource or co-located resource containing an electric storage resource (including hybrid resources)—i.e., whether the interconnecting generating facility will or will not charge during peak load conditions, unless good utility practice, including applicable reliability standards, otherwise require the use of different operating assumptions.²⁷⁴³

1458. Many commenters agree with the Commission that the lack of realistic operating assumptions used in interconnection studies for electric storage resources and co-located resources containing electric storage resources (including hybrid resources) can result in excessive and unnecessary network upgrades and hinder the timely development of new generation, thereby stifling competition in the wholesale markets, and resulting in rates, terms, and conditions that are unjust and unreasonable.²⁷⁴⁴ These commenters also agree that using unrealistic operating assumptions in interconnection studies creates an

unduly discriminatory or preferential barrier to the interconnection of electric storage resources and co-located resources containing electric storage resources (including hybrid resources).

1459. Many commenters agree with the Commission that the assumptions used in interconnection studies for the charging of electric storage resources should closely resemble the expected “real-world” operation of such resources.²⁷⁴⁵ For example, NextEra asserts that operating assumptions should reflect the rational economic dispatch of electric storage and co-located resources and that interconnection customers with electric storage resources should be allowed to request a lower maximum allowed charging rate in place of being assigned network upgrade cost allocations.²⁷⁴⁶ Shell asserts that parameters used to study storage should consider market conditions.²⁷⁴⁷

1460. Many commenters argue that assuming in an interconnection study that an electric storage resource will withdraw energy during peak demand similar to firm end-use customer demand fails to recognize the real-time attributes of electric storage resources, such as the ability to respond within seconds to prices and dispatch signals from the transmission provider.²⁷⁴⁸ For example, NARUC and NESCOE argue that studying electric storage resources using worst-case operating assumptions, such as withdrawing energy during peak demand, ignores the real-time attributes and benefits of these technologies, such as their ability to respond within seconds to prices and dispatch signals from transmission providers and inject electricity during peak demand conditions.²⁷⁴⁹ Further, Union of Concerned Scientists asserts that modeling storage as charging during times of peak demand penalizes interconnection customers for trying to locate electric storage resources in places where they are most needed (e.g., load pockets) because the study inappropriately models electric storage resources as contributing to the problem

²⁷⁴¹ *Id.* P 288.

of transmission congestion rather than relieving it.²⁷⁵⁰ AEP argues that some electric storage resources do occasionally charge during peak demand; however, AEP has no objection to electric storage resources being studied under a certain set of operating conditions as long as operating restrictions are imposed through interconnection agreements and the resource owner/operator recognizes that it must abide by dispatch orders and bear the consequences of any limitations on its operation that result in penalties.²⁷⁵¹

(b) Comments in Opposition

1461. Some commenters argue that the proposed reform is overly burdensome on transmission providers and could add time and complexity to the interconnection process.²⁷⁵² For example, NYISO opposes the proposed reform, arguing that it would not streamline the interconnection study process and instead would add significantly more complexity to the process and increase the time required to complete studies.²⁷⁵³

1462. Some commenters oppose the proposed reform due to reliability concerns.²⁷⁵⁴ PJM argues that the proposal would be extremely difficult to police and enforce and would not guarantee that units will operate within their studied parameters, putting PJM at operational risk.²⁷⁵⁵ Southern opposes the proposed reform, stating that transmission providers are ultimately responsible for planning for the safety and reliable operation of their transmission systems, which includes standard assumptions for interconnection studies.²⁷⁵⁶ Southern contends that it may be viable to provide an information-only scenario using the assumptions provided by the interconnection customer, but it would not be just and reasonable to allow interconnection customers to dictate the study assumptions for their electric storage, hybrid, or co-located resources. NYISO asserts that its interconnection studies are designed to capture extreme system scenarios to best maintain the reliability of the system and to be prepared for rare extreme conditions

and without such planning, the interconnection studies could fail to identify essential non-local network upgrades.²⁷⁵⁷ SDG&E argues that the reform may introduce undue risk into the interconnection study process and could lead to the transmission system being operated in an unstudied/unplanned state.²⁷⁵⁸

1463. However, several commenters disagree that the proposed reform will introduce undue risk into the interconnection study process and real-time operations.²⁷⁵⁹ CESA asserts that many transmission providers continue to use historical planning standards that do not consider the capability of advanced firmware and software controls to dispatch resources in accordance with operating assumptions that can provide much needed additional capacity to the transmission system, which may result in continued delays and inefficiencies in the interconnection process.²⁷⁶⁰

1464. NARUC suggests that, in RTO/ISO regions, independent market monitors may be well-positioned to track deviations from proposed operational limits in real-time operations.²⁷⁶¹ For non-RTO/ISO regions, NARUC contends that it may be appropriate for an independent transmission monitor or NERC regional reliability entity to serve in such a role.

(c) Comments on Specific Proposal

1465. Some commenters support the flexibility that the proposed reform provides on the basis that it would allow for better use of the transmission system or help facilitate the interconnection process while still allowing for adequate controls.²⁷⁶² NRECA cautions, however, that such flexibility should not come at the expense of the NOPR's overall goal of reducing speculative interconnection requests, withdrawals, and restudies.²⁷⁶³ APS also believes that operating assumptions used in interconnection studies should be limited to factors that can be automatically controlled by the interconnection customer; otherwise, system issues may occur when interconnection facilities are operating

outside of the assumptions used in the studies.²⁷⁶⁴ Although AEP generally supports the proposed reform because interconnection studies should be as accurate as possible, AEP notes that using operating assumptions provided by the interconnection customer may complicate studies and thus realistic study time frames must be adopted.²⁷⁶⁵

1466. Many commenters support the proposal to allow transmission providers to require the use of controls to ensure compliance with planned operation.²⁷⁶⁶ Clean Energy Associations argue that electric storage resources are controllable with a level of precision and speed unparalleled by conventional generating facilities, which provides transmission owners and providers and interconnection customers with new opportunities to accommodate transmission system reliability needs and efficiently use scarce transmission interconnection capacity.²⁷⁶⁷ Clean Energy Associations assert that the proposed reform would acknowledge the fact that electric storage resources are highly controllable through hardware and software controls.²⁷⁶⁸ SEIA asserts that power control systems, which electronically limit or control steady state currents to a programmable limit, can ensure that electric storage resources follow operating assumptions, and that their use is growing.²⁷⁶⁹

1467. Idaho Power states that it currently has a generator control and monitoring technology that can be leveraged for monitoring and controlling electric storage charging.²⁷⁷⁰ However, Idaho Power asserts that it will need to implement a control scheme for operators to view and control interconnection facilities in order to intermittently interrupt discharge and charging due to system conditions and related outages, which would likely require upfront and ongoing costs for both Idaho Power and interconnection customers. Idaho Power requests that the Commission consider including additional language to ensure that the

transmission provider can disconnect, or take other action, including seeking damages, in the event that the charging electric storage resource does not follow its schedule.

1468. Eversource states that it is essential for system operators and transmission planners to have sufficient visibility and controls in place to ensure that the transmission system is not placed in unstudied and potentially insecure N–1 contingency states.²⁷⁷¹ Eversource suggests that this issue, as well as other issues of grid dispatch, should be the subject of its own proceeding. Alternatively, Eversource requests that the Commission require that interconnection customers with proposed operational study assumptions have technological controls in place that automatically limit the electric storage facility's operation to the proposed operational parameters. Eversource further requests that the Commission reflect these requirements in the body of the *pro forma* LGIA, and not only the appendices.

1469. NARUC and Public Interest Organizations support the proposed requirement to consider resources to be in breach of their LGIA if they fail to operate as intended.²⁷⁷² NARUC asserts that such a consequence, in combination with technology and software that can limit the operations of an electric storage resource, should sufficiently mitigate behavior that deviates from planned.²⁷⁷³ Public Interest Organizations contend that installing control technologies would allow the transmission provider and interconnection customer to engage in an interactive dialogue to develop a set of operating assumptions that both satisfy the interconnection customer's operational desires and align with "good utility practice."²⁷⁷⁴

1470. rPlus generally supports the proposal but argues that the proposed termination requirements for the interconnection customer should be the operational characteristics not be met are too stringent and restrictive.²⁷⁷⁵ rPlus agrees that it is important to memorialize the studied operational assumptions in the interconnection agreement but asserts that it would benefit from the inclusion of additional language should deviation from the originally defined operational assumptions be beneficial.

Therefore, rPlus suggests that the Commission remove any explicit or implied requirement for electric storage resources not to charge during peak load periods and add language to retain the possibility of altering the operational characteristics when these changes would benefit the reliable and efficient operation of the transmission system or benefit ratepayers.

1471. Invenenergy supports the proposed reform to accommodate study assumptions that more reasonably approximate anticipated actual operations, but opposes requiring the studied operating conditions to be memorialized in the interconnection agreement.²⁷⁷⁶ Invenenergy states that, if there are concerns that an unexpected event may require a facility to occasionally operate outside those conditions, those concerns should be addressed through the regional transmission planning process, rather than forcing interconnection customers to fund upgrades that are rarely if ever needed.²⁷⁷⁷

1472. Several commenters suggest modifications to the proposal to better achieve the Commission's goal. For example, Pine Gate suggests that the Commission require transmission providers to use a uniform set of minimum interconnection study requirements (e.g., by eliminating the use of extreme contingency scenarios and overly conservative operational characteristics and strategies) to facilitate effective, efficient interconnection queue processing, which is an essential prerequisite of consumer protection.²⁷⁷⁸ With respect to the provision of ancillary services, Pine Gate requests that the interconnection customer not be required to definitively indicate the specific ancillary services that it would or would not provide in the initial interconnection request because it is not possible for the interconnection customer to know with certainty which ancillary services it may be eligible to provide when it is ultimately placed in service.²⁷⁷⁹ For this reason, Pine Gate requests that the Commission require the interconnection customer to list in the original interconnection request only whether it intends to provide ancillary services generally.²⁷⁸⁰

1473. Union of Concerned Scientists urges the Commission to direct in the final rule that technical capabilities offered by an interconnection customer

be appropriately recognized and used in the modeling of transmission impacts and their mitigation, including the ability to respond to contingencies and provide dynamic real or reactive power, which if omitted could lead to millions of dollars of costs to customers to provide such capability by other means.²⁷⁸¹

1474. Interwest supports allowing interconnection customers to request that transmission providers apply certain study assumptions to better approximate realistic operations and requiring transmission providers to apply congestion management practices to unusual events, developed through regional transmission planning processes, rather than building in assumptions assuming worst-case operations scenarios.²⁷⁸²

1475. Public Interest Organizations recommend that, if a transmission provider finds an interconnection customer's proposed operating assumptions to be in conflict with "good utility practice," the transmission provider should be required to provide the interconnection customer with a clear explanation of why the submitted operating assumptions are insufficient or inappropriate, and allow the interconnection customer to revise and resubmit the proposed operating assumptions as necessary, within a reasonable time period.²⁷⁸³

1476. Clean Energy Associations urge the Commission to define study parameters such as "peak load" and "net peak load."²⁷⁸⁴ Clean Energy Associations request that the Commission define "net peak load" as the period during which transmission providers must not study a facility as withdrawing energy. Clean Energy Associations note that in regions with high solar penetration, the net peak load hour diverges from the peak load hour and migrates to later in the day and, under these conditions, low prices during the peak load hour may create incentives for storage to charge, whereas prices would be high during the net peak load hour creating incentives to discharge. Therefore, Clean Energy Associations contend that using the net peak load as the period of study will ensure that studies continue to accurately reflect expected economic price response of storage as system conditions evolve.

1477. NextEra and Clean Energy Associations urge the Commission to require transmission providers to use additional study assumptions beyond just whether electric storage and co-located resources (including hybrid resources) should charge during peak load periods. Both NextEra and Clean Energy Associations argue that transmission providers should not study electric storage resources as injecting energy during low load and shoulder periods because that does not reasonably reflect the rational economic behavior and typical operations of such resources.²⁷⁸⁵

1478. In contrast, MISO argues against requiring additional study assumptions for electric storage resources.²⁷⁸⁶ MISO notes that there may be times in the future when renewable resources are constrained or unavailable due to the lack of fuel (e.g., no wind or sun) such that the MISO transmission system will need to call upon electric storage resources for injection: but, if these resources are not permitted to discharge due to their operational assumptions, then the transmission system's reliance on those resources could lead to reliability risks.

1479. Several other commenters urge the Commission not to define study parameters, such as "peak load" or "net peak load," and instead allow for regional flexibility.²⁷⁸⁷ For example, rather than define peak load, Microgrid Resources states that the Commission should require individual evaluation of the expected operating assumptions for the resource(s) being studied.²⁷⁸⁸ Enel asserts that it does not believe clear and transparent criteria regarding the peak load period could be developed such that the limitations on a generating facility could appropriately be modeled with only a few power flow model "snapshots in time" serving as the basis for the restriction.²⁷⁸⁹

1480. Several commenters support eliminating unrealistic interconnection study assumptions for resource types other than electric storage resources, such as assuming that a solar facility will operate a night, or that a wind resource will produce maximum output during low-wind seasons.²⁷⁹⁰ Ameren,

Cypress Creek, Microgrid Resources, NARUC, Pine Gate, and rPlus all request that the Commission extend this reform to allow any resource type, not just electric storage or co-located resources, to request that interconnection studies be based on their particular operating assumptions and characteristics.²⁷⁹¹ NARUC further asserts that it is reasonable to allow interconnection customers to request that transmission providers not study interconnecting generating facilities in ways that are not physically possible, subject to the same proposed requirement that the generating facility be equipped with sufficient control technologies and penalties for deviations.²⁷⁹² Microgrid Resources urges the Commission to define microgrid in the tariff, noting particularly the inclusion of load, and to make clear that interconnection studies must be based on operating assumptions for the microgrid as a whole.²⁷⁹³

1481. Pattern Energy asserts that transmission providers should be required to update their operating assumptions annually, after stakeholder input.²⁷⁹⁴ Pattern Energy asserts that some transmission providers require light-load reliability analysis for wind resources but not for natural gas plants, which is unduly discriminatory.²⁷⁹⁵

1482. Some commenters support expanding the proposed reforms to the entire facility of hybrid or co-located resources. For instance, ENGIE recommends that interconnection customers submitting hybrid or co-located resources should be able to specify operating parameters across the entire generating facility, including variable energy resources, within their interconnection request to allow interconnection customers to reflect parameters such as solar-based charging of the electric storage resource more accurately.²⁷⁹⁶ Pine Gate states that co-located resources are typically studied independently, which requires studying the combined maximum injection of the two generating facilities that are co-located, despite the fact that studying in

this manner overestimates the impact on the transmission system and could trigger unnecessary network upgrades.²⁷⁹⁷ Pine Gate asserts that, consistent with the NOPR's proposals regarding operating assumptions for electric storage resources and co-located resources, the Commission should permit an interconnection customer to specify the proposed operation of all components of a co-located resource in its interconnection request.

SEIA contends that studying two, co-located resources as a single resource would be more accurate, as this would reflect the actual electrical impact to the transmission system.²⁷⁹⁸

1483. Although not entirely opposed to the proposed reform, PacifiCorp asserts that this proposed reform should not be extended to co-located and hybrid resources because monitoring and enforcing operational limitations could be complex, and incorporating operational limitations could complicate the cluster study process.²⁷⁹⁹ Nevertheless, PacifiCorp encourages the Commission to permit transmission providers to opt-in to extending this type of reform to hybrid resources if appropriate for their systems.

1484. Several other commenters urge the Commission to go further and require transmission providers to use more realistic operating assumptions without requiring the interconnection customer to request that transmission provider do so.²⁸⁰⁰ Public Interest Organizations argue that extending the reforms to all generation technologies would help prevent unduly discriminatory treatment.²⁸⁰¹ Therefore, Public Interest Organizations recommend that the Commission require transmission providers to work with interconnection customers to ensure operating assumptions reflect physical, operational, and market realities, "good utility practice," and applicable reliability standards. AES Clean Energy argues that the Commission should require transmission providers to establish a process to revisit and update operating assumptions of different resource types in consultation with stakeholders to ensure that these operating assumptions are realistic and approximately reflect

the expected actual operation of these resources.²⁸⁰²

1485. Shell supports the use of accurate modeling assumptions, including for variable energy resources, but argues that electric storage and renewable resources should not be treated in the same way because electric storage is dispatchable and renewable resources generally are not dispatchable.²⁸⁰³ Further, Shell asserts that the Commission should not assume all wind and solar resources are the same (and not dispatchable).

1486. AECI and NextEra oppose extending the proposed reform to other resources types.²⁸⁰⁴ NextEra opposes extending customized operating assumptions to wind and solar energy resources because doing so could unduly complicate subsequent operational decisions for the system operator and possibly restrict the system operator's ability to call on resources when needed.²⁸⁰⁵ AECI proposes to continue studying wind and solar resources as NRIS facilities that are dispatched at 100% to avoid potential reliability issues at the worst times.²⁸⁰⁶ MISO explains that it currently requires interconnection customers to be responsible for limiting and controlling their own dispatch in some conditions, but that it has no ability to monitor in real time if an interconnection customer violates its operating limits.²⁸⁰⁷ MISO states that it is unaware of any plant side control device or operational tool that MISO could use to prevent a generating facility's injection to enforce an electric storage resource's operating assumptions regarding discharging. Idaho Power states that it is unclear how a cluster study with multiple interconnection requests could be performed when accounting for numerous and potentially conflicting study parameters, such as "low wind season" for one interconnection customer but not for another.²⁸⁰⁸ Idaho Power seeks clarification of the definition of study parameters such as "low wind season."

1487. Some commenters support the Commission defining the terms firm and non-firm charging service for electric storage resources and requiring transmission providers to define study criteria to interconnect related to both

firm and non-firm charging.²⁸⁰⁹ For example, Clean Energy Associations support enabling interconnection customers with electric storage resources and hybrid resources to request non-firm transmission service for their charging energy, provided that transmission providers update study criteria and interconnection processes for such service accordingly and provide definitions of firm and non-firm charging service for electric storage resources.²⁸¹⁰ CESA argues that electric storage resources should not be forced to use one type of charging service over another since some resources may find it sufficient to take advantage of charging capacity as it is available whereas others may want or need greater assurances of charging capacity and are willing to pay for the requisite network upgrades.²⁸¹¹ CESA urges the Commission to set requirements as to how partial or full firm charging services should be offered on a flexible, as-requested basis, such that an interconnection customer can seek firm charging service for specific time windows or for a portion of the electric storage resource's nameplate or interconnection capacity. CESA asserts that, as discussed in the NOPR, accommodating firm and as-available charging service options should reflect the operating capabilities of the storage resource (*i.e.*, price responsive, dispatchable), achieve efficient market outcomes, and avoid expensive and unnecessary upgrades.²⁸¹²

1488. Clean Energy Associations assert that the Commission should direct transmission providers to use the following criteria for studying interconnection requests that opt for non-firm charging service: (1) the electric storage resource should have the option to receive electric energy using the existing firm or non-firm capacity of the transmission system on an "as available" basis; (2) any study of an electric storage resource charging should allow the interconnection customer to elect to use a lower charging level or a control technology to mitigate any identified constraints in lieu of being assigned network upgrades to address such constraints; and (3) the electric storage resource should receive information relative to any network upgrades, charging restrictions, or control requirements in advance of signing an interconnection

agreement.²⁸¹³ Clean Energy Associations urge the Commission to direct transmission owners to indicate conditions under which charging energy could be curtailed in interconnection agreements that include non-firm service for charging energy. Clean Energy Associations also caution that the Commission should avoid recategorizing charging energy of electric storage resources as a wholesale load, which would be contrary to the Commission's findings in Order No. 841.

1489. AEP suggests that clarifications would be needed for the proposed definitions of firm and non-firm charging to be effective. For example, AEP asserts that the proposed definitions for firm and non-firm charging service conflate different products and services required to charge an electric storage resource.²⁸¹⁴ AEP argues that charging service is not a form of interconnection service, nor is interconnection service referred to in the industry as firm or non-firm. According to AEP, it is the delivery service (*i.e.*, transmission and wholesale distribution service) that can be firm or non-firm and therefore the relevant question is whether, in the interconnection process, an electric storage resource can or needs to request to be studied as a "firm" or "non-firm" load for delivery purposes. AEP asserts that the Commission should recognize that, for electric storage resources, the interconnection cluster study process should include an analysis of transmission service. AEP notes that the Commission has permitted the California utilities to study the need for wholesale distribution upgrades required for charging on a firm basis as part of the interconnection study process. AEP argues that, if it is technically possible to distinguish loads, a load that affects human safety, health, and welfare directly should have priority over the charging of an electric storage resource, unless for example, if the electric storage resource will be used for blackstart after an outage, adding that the final rule does not need to interfere with emergency load shedding protocols.

1490. Shell asserts that the need for firm or non-firm transmission service will vary by generating facility, as well as by the usage pattern of the electric storage resource (*e.g.*, whether the electric storage resource is standalone or part of a hybrid resource that is AC-coupled, DC-coupled, or DC-tight-

coupled).²⁸¹⁵ Shell states that, if an electric storage resource is charging from the transmission system as non-firm load, and the resource owner is required to comply with the transmission provider's real-time dispatch orders to cease charging from the transmission system due to reliability concerns, then there is no need for long-term firm transmission service reservations to serve the electric storage resource. Shell contends that non-firm electric storage load should not be required to acquire transmission service prior to charging from the transmission system, as such charging will be captured by the revenue meter and can be billed at the transmission provider's non-firm point-to-point transmission rate at the end of the billing period.

1491. Xcel suggests that the evaluation of non-firm charging must assume a price and then the electric storage resource should be bound to that price.²⁸¹⁶ Xcel contends that, if an electric storage resource is studied as non-firm load but ends up offering to buy energy in the market above average market prices, the study will not represent the resulting dispatch. Therefore, Xcel recommends that electric storage resources and other non-firm load should be required to have a maximum bid price that is included in Attachment C of the *pro forma* LGIA.

1492. Some commenters oppose the Commission defining firm and non-firm charging or requiring transmission providers to define study criteria as part of this rulemaking.²⁸¹⁷ For example, PPL asserts that the Commission should leave defining such study parameters to the transmission providers.²⁸¹⁸

1493. Several commenters suggest clarifications to the proposed reform regarding the timing of submitting operating assumptions.²⁸¹⁹ Clean Energy Associations and ENGIE recommend that the Commission define a clear decision point in the interconnection study process before which interconnection customers may adjust operating assumptions and after which inputs remain constant.²⁸²⁰ APS suggests that the Commission modify the proposal to specify that any changes to the operating assumptions initially

provided by the interconnection customer would be considered a material modification.²⁸²¹

(d) Alternative Proposals and Requests for Further Process

1494. Enel argues that using power flow studies and assuming extreme transmission system conditions matches the concept of a firmer product well (e.g., for NRIS or transmission service studies), but applied to ERIIS studies it implies that an ERIIS resource cannot or will not curtail, absorb congestion costs, or be redispatched to mitigate transmission system disturbances, which goes beyond "as available" service and does not allow for lower-cost mitigation options.²⁸²² For these reasons, Enel recommends that the Commission direct transmission providers to replace power flow studies with Security Constrained Economic Dispatch analysis for ERIIS service studies instead of the Commission's proposed reform,²⁸²³ or in the alternative, require appropriately supported fuel-based dispatch assumptions in ERIIS and, where appropriate, NRIS study models.²⁸²⁴

1495. Several other commenters support requiring transmission providers to apply realistic fuel-based dispatch assumptions to all resource types.²⁸²⁵ Additionally, Invenenergy notes that both MISO and SPP already use realistic fuel-based dispatch assumptions in their interconnection study processes.²⁸²⁶ Although MISO believes that a fuel-based dispatch methodology would address the concerns stated in the NOPR about unrealistic operating assumptions, MISO also believes that study methods should be flexible to the unique needs of a region's stakeholders and that the Commission should allow flexibility regarding how a transmission provider conducts its studies.²⁸²⁷ MISO asserts that fuel-based dispatch enables more efficient generator interconnection because it recognizes that not all generating facilities will be dispatched up to their requested interconnection service at all times of the year and that some fuels will not be dispatched when other fuels are being dispatched.²⁸²⁸ MISO explains that its current fuel dispatch method also addresses

withdrawal for electric storage resources and was informed by operational data.²⁸²⁹

1496. Public Interest Organizations encourage the Commission to consider a requirement that would ensure operational and market realities are appropriately reflected in operating assumptions for the purposes of interconnection studies.²⁸³⁰ Public Interest Organizations state that this could include both operational practices and procedures as well as market-based price signals for curtailment and congestion management. Furthermore, Public Interest Organizations contend that fossil generating facilities should not be expected to generate at or near peak output during times when market prices are depressed, such as during periods of high renewable generation.²⁸³¹

1497. IREC asserts that interconnection application forms for small generating facilities should be updated to include information about electric storage resources and, where export controls are used, the type of export control and the equipment type and settings that will be used.²⁸³² IREC asserts that, in order for the interconnection process to fully recognize the ways electric storage resources can be designed and controlled to avoid transmission system constraints, utilities should consider operating profiles (which can include operating schedules) in their feasibility studies and system impact studies.²⁸³³

1498. Several commenters urge the Commission to hold a technical conference and/or open a new proceeding to sort out the complex details of this proposed reform.²⁸³⁴ For example, Clean Energy Associations note that the Commission could build a further evidentiary record regarding parameters for evaluating electric storage and other resources via a technical conference, with the aim of developing reasonable and consistent assumptions across regions.²⁸³⁵ SEIA urges the Commission to convene a technical conference in this proceeding

to increase transmission provider certainty and confidence in the capabilities and testing of power control systems.²⁸³⁶ ISO-NE suggests that its concerns with the proposed reform may be better addressed through the establishment of a new category of interconnection service for the charging mode of electric storage devices as part of a separate proceeding.²⁸³⁷

(e) Comments Regarding Transmission Service Request Studies

1499. Clean Energy Associations note that some RTOs/ISOs determine the network upgrades needed to accommodate the charging of electric storage resources as part of the interconnection process, whereas other transmission providers do so in the transmission service request process.²⁸³⁸ Similarly, Xcel states that charging from the transmission system can be evaluated and approved through the designation of a new delivery point as part of a transmission service request.²⁸³⁹ Xcel further notes that it is unaware of a transmission service study process defined in the *pro forma* tariff that specifically evaluates non-firm load. Puget Sound states that it currently studies charging outside of the interconnection process and recognizes that charging could be considered a retail or a transmission product once the load piece is interconnected.²⁸⁴⁰ However, Puget Sound asserts that charging should be studied in the interconnection process, and the transmission provider should be granted more time to study this additional element. Puget Sound seeks clarity as to whether the proposed reform means that charging should now be considered part of the interconnection process, or if it can be part of the process should the transmission provider wish to include it. Further, Puget Sound argues that the Commission should standardize the *pro forma* LGIA to include specific operating assumptions to avoid interconnection request delays due to needing to file a non-conforming LGIA with the Commission and/or interconnection customer hesitancy.

1500. In contrast, Tri-State argues that it is inappropriate to study charging of electric storage resources within a generator interconnection study, and instead asserts that this type of analysis is best performed as a part of a

transmission service study, which covers delivery of energy to load or charging of an electric storage resource.²⁸⁴¹ Similarly, SPP argues that evaluating the impact of an electric storage resource's charging on the transmission system is better suited to other existing processes designed to assess load impact, such as the long-term transmission service study process, the short-term transmission service evaluation process, or market processes.²⁸⁴²

(f) Requests for Clarification and Flexibility

1501. Pine Gate requests that the Commission provide additional guidance regarding how transmission owners should perform studies and what network upgrade costs will be allocated to interconnection customers as a result.²⁸⁴³ Pine Gate states that transmission providers may need to study electric storage or co-located resources based on worst-case operating assumptions to understand the potential impact these resources would have on the transmission system absent operating restrictions being implemented. However, Pine Gate requests that the Commission clarify that network upgrade costs will not be assigned to the interconnection customer based on the unrealistic worst-case scenarios where there is agreement to implement operating restrictions.

1502. Elevate requests that the Commission clarify that the proposed reform applies to all study processes related to the interconnection of electric storage resources, including generator replacement, surplus interconnection, and requests to modify an existing generation resource, arguing that there is no reason for the Commission to require that transmission providers use realistic study parameters only in the context of requests for new interconnection service while allowing unrealistic study assumptions in other study processes.²⁸⁴⁴

1503. CAISO is concerned that, if not modified, the proposed reform would require transmission providers to provide firm charging options, whereas CAISO asserts that it does not currently provide firm charging service and stakeholders have never requested such service.²⁸⁴⁵ CAISO argues that requiring firm charging service would have a profound impact on organized electricity markets and asserts that if the

Commission proposes to allow electric storage resources to bypass economic dispatch and charge whenever they desire—even during stressed peak conditions—it should do so expressly and not in the context of a rulemaking addressing interconnection. CAISO asserts that the Commission should consider a simple clarification and avoid requiring transmission providers to offer firm charging, but instead require transmission providers that offer firm charging to allow interconnection customers to request it at the outset of their interconnection request.

1504. Environmental Defense Fund urges the Commission to clarify that an apparent failure to operate in accordance with agreed-upon conditions should be treated as a normal alleged default or breach as governed by article 17 of the *pro forma* LGIA, which would not result in immediate termination.²⁸⁴⁶ Environmental Defense Fund asserts that the requirements of article 17.1 of the *pro forma* LGIA state that a breaching party be given an opportunity to cure the breach and that termination is only available if the breaching party fails to cure or the breach is not capable of being cured. Similarly, Hydropower Commenters generally support the proposal, but believe that the proposed requirement that if an interconnection customer fails to operate its electric storage resource in accordance with the operating assumptions memorialized in the interconnection agreement, the interconnection customer may be considered in breach and the transmission provider may pursue termination of the interconnection agreement, is overly restrictive, will discourage the development of pumped storage projects, and should be modified.²⁸⁴⁷ Instead, Hydropower Commenters urge the Commission to provide for a standard cure period to address deviations, and penalties in the event of failure to cure.

1505. MISO states that the proposed reform is unclear because the text of the NOPR states that the Commission intends operating instructions to only apply to an electric storage resource's ability to describe how it will withdraw energy from the transmission system (*i.e.*, charge a battery), whereas the proposed *pro forma* LGIP revisions state that the operating assumptions can also apply to the manner the interconnection request states that the electric storage

²⁸⁴⁶ Environmental Defense Fund Initial Comments at 6–7.

²⁸⁴⁷ Hydropower Commenters Initial Comments at 23–24.

resource will discharge.²⁸⁴⁸ MISO asks that the Commission clarify that the text of the NOPR is correct, and that the Commission did not intend to propose to allow electric storage resources to define the operating assumptions for how they will inject into the transmission system because, according to MISO, allowing interconnection requests to define operating assumptions regarding discharge would result in operational problems and would be discriminatory to other generating facilities.

1506. Hydropower Commenters suggest that the proposed reform be modified to include a simplified procedure for amending an interconnection customer's interconnection agreement to optimize the operating parameters of a pumped storage plant to the extent the transmission system is available.²⁸⁴⁹

1507. Some commenters note that several transmission providers already study electric storage resources using more realistic operating assumptions and assert that transmission providers should have the flexibility to determine the assumptions used when studying generating facilities interconnecting to the transmission system, including operating assumptions for electric storage resources, while also factoring in input from the interconnection customer.²⁸⁵⁰ NESCOE argues that the final rule should require transmission providers to work with the relevant states, transmission owners, electric storage resource interconnection customers, and stakeholders in their region to develop modeling assumptions for electric storage resources that are reasonable, realistic, and ensure the ability to interconnect is offered on a non-discriminatory basis.²⁸⁵¹

1508. National Grid recommends that the Commission provide regional flexibility to adopt or decline this proposed reform after transmission providers receive input from their stakeholders to determine if ad hoc proposed operating assumptions for interconnection requests are reasonable and appropriate or if certain pre-determined acceptable ranges of assumptions are consistent with reliability.²⁸⁵² APPA–LPPC argues that the proposal could entail creating entirely new models for off-peak

scenarios, not just running sensitivity analyses from an existing model, and therefore urges the Commission to give transmission providers the autonomy to determine whether additional transmission studies are needed.²⁸⁵³

iii. Commission Determination

1509. We adopt the NOPR proposal, subject to modification, to revise sections 3.1.2, 3.2.1.2, 3.2.2.2, 3.3.1, 3.4.2, 4.4.3, 7.3, 8.2, and Appendix 1 of the *pro forma* LGIP and article 17.2 and Appendix H of the *pro forma* LGIA to require transmission providers, at the request of the interconnection customer, to use operating assumptions in interconnection studies that reflect the proposed charging behavior of electric storage resources²⁸⁵⁴ (whether standalone, co-located generating facilities,²⁸⁵⁵ or part of a hybrid generating facility²⁸⁵⁶)—*i.e.*, whether the interconnecting generating facility will or will not charge during peak load conditions—unless good utility practice, including applicable reliability standards,²⁸⁵⁷ otherwise requires the use of different operating assumptions.²⁸⁵⁸ We clarify that studying electric storage resources, at the request of the interconnection customer, according to their planned operating assumptions means only the operating assumptions for withdrawals of energy (*e.g.*, the charging of an electric storage resource) in interconnection studies.

1510. We find that by more accurately reflecting the technical capabilities of electric storage resources in interconnection studies through the use of appropriate operating assumptions,

this reform ensures the reliable interconnection of new electric storage resources without overestimating their impact on the transmission system, thereby ensuring just and reasonable rates by avoiding excessive and unnecessary network upgrades that may hinder the timely development of new generating facilities that stifles competition in the wholesale market. We also find that reflecting the technical capabilities of electric storage resources through the use of appropriate operating assumptions in interconnection studies reduces unduly discriminatory or preferential barriers to the interconnection of electric storage resources.

1511. We adopt the proposed revisions, subject to modification, to section 3.1.2 of the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use operating assumptions that reflect the proposed charging behavior of an electric storage resource, allow interconnection customers to resubmit their operating assumptions if the transmission provider finds the originally proposed operating assumptions are in conflict with good utility practice, and allow the transmission provider to require the interconnection customer to install additional control technologies. We agree with Public Interest Organizations that transparency is necessary when a transmission provider finds that an interconnection customer's operating assumptions conflict with good utility practice.²⁸⁵⁹ Therefore, we modify the proposed revisions to section 3.1.2 of the *pro forma* LGIP to require that, if a transmission provider finds an interconnection customer's proposed operating assumptions to be in conflict with good utility practice, the transmission provider must provide the interconnection customer with a clear explanation in writing of why the submitted operating assumptions are insufficient or inappropriate by no later than 30 calendar days before the end of the customer engagement window and allow the interconnection customer to revise and resubmit the proposed operating assumptions one time at least 10 calendar days before the end of the customer engagement window.

1512. We adopt the proposed revisions to section 3.2.1.2 of the *pro forma* LGIP to require transmission providers to study electric storage resources that request ERS service according to the interconnection customer's proposed operating

²⁸⁵¹ NESCOE Reply Comments at 18.

²⁸⁵² National Grid Initial Comments at 41.

²⁸⁵³ APPA–LPPC Initial Comments at 29–30.

²⁸⁵⁴ An electric storage resource is a generating facility capable of receiving electric energy from the grid and storing it for later injection of electricity.

²⁸⁵⁵ As noted above, co-located generating facilities are more than one generating facility that are located on the same site and that are connected at the same point of interconnection that are operated and dispatched as separate generating facilities. See *supra* section III.C.1.a.iii.

²⁸⁵⁶ As noted above, a hybrid generating facility is a generating facility composed of more than one device of different technology types for the production and/or storage for later injection of electricity that are located on the same site and are operated and dispatched as a single integrated generating facility. See *supra* section III.A.6.b.iii.

²⁸⁵⁷ Applicable reliability standards means “the requirements and guidelines of the Electric Reliability Organization and the Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.” See *pro forma* LGIP section 1 (Definitions).

²⁸⁵⁸ For clarity, we note that the reforms described in this determination section and the related sections of the *pro forma* LGIP apply to all interconnecting electric storage resources, whether they are standalone, co-located generating facilities, or part of a hybrid generating facility.

²⁸⁵⁹ Public Interest Organizations Initial Comments at 47–49.

assumptions. We adopt the proposed revisions to section 3.2.2.2 of the *pro forma* LGIP to require transmission providers to study electric storage resources that request NRIS service according to the interconnection customer's proposed operating assumptions.

1513. We agree with Elevate and clarify that the reform to use operating assumptions in interconnection studies, at the request of the interconnection customer, that reflect the proposed charging behavior of an electric storage resource applies to the operating assumptions used in all study processes related to the interconnection of electric storage resources. Accordingly, we modify the NOPR proposal to require transmission providers, at the request of the interconnection customer, to use operating assumptions that reflect the proposed charging behavior of an electric storage resource in additional study processes, as described below.

1514. With respect to surplus interconnection service, we modify the NOPR proposal to revise section 3.3.1 of the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use operating assumptions that reflect the proposed charging behavior of an electric storage resource in the surplus interconnection service process.

1515. We adopt the proposed revisions to section 3.4.2 of the *pro forma* LGIP to require interconnection customers to include in their interconnection request the proposed operating assumptions that reflect the proposed charging behavior of the electric storage resource and a description of any control technologies that will limit the operation of the electric storage resource to its intended operation.

1516. To the extent an interconnection customer requests to modify a generating facility already in the interconnection queue by adding an electric storage resource to the interconnection request, the transmission provider shall study such a modification in accordance with section 4.4.3 of the *pro forma* LGIP using operating assumptions that reflect the proposed charging behavior of an electric storage resource, at the request of the interconnection customer. Accordingly, we modify the NOPR proposal to revise section 4.4.3 of the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use operating assumptions that reflect the proposed charging behavior of an electric storage resource in the material modification process.

1517. We adopt the proposed revisions to section 7.3 of the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use operating assumptions that reflect the proposed charging behavior of an electric storage resource in the cluster study process and to allow, but not require, transmission providers to: (1) memorialize the generating facility's operating assumptions in Appendix H of the interconnection customer's LGIA; and/or (2) require control technologies (software and/or hardware) for an electric storage resource that wishes to limit its operations during peak load conditions, with such protection devices included in Appendix C of the interconnection customer's LGIA.

1518. We adopt the proposed revisions to section 8.2 of the *pro forma* LGIP to require transmission providers, at the request of the interconnection customer, to use operating assumptions that reflect the proposed charging behavior of an electric storage resource in the interconnection facilities study process.

1519. We adopt the NOPR proposal to revise Appendix 1 of the *pro forma* LGIP to require interconnection customers to provide to the transmission provider as part of the initial interconnection request: (1) the requested operating assumptions for the interconnecting electric storage resource; and (2) a description of any applicable control technologies. However, we agree with MISO and Pine Gate that it is not necessary, and may not be possible, to specify the specific ancillary services that an electric storage resource will provide before entering the interconnection queue, particularly because the market rules addressing the provision of ancillary services from electric storage resources, whether they are standalone, part of co-located generating facilities, or part of a hybrid generating facility, are still being developed in multiple markets and such rules will likely change over the coming years.²⁸⁶⁰ Therefore, we decline to adopt the proposed revision to require interconnection customers to list the specific ancillary services they intend to provide as part of the initial interconnection request.²⁸⁶¹ In addition, we agree with MISO and CAISO that control technologies frequently evolve, and interconnection customers that choose to specify operating assumptions should be responsible for including appropriate control technologies with

their requests to use such operating assumptions. Therefore, we also decline to adopt the proposed revision to require transmission providers to publicly post a list of acceptable control technologies.

1520. We adopt the NOPR proposal to revise Appendix 1 of the *pro forma* LGIP to require interconnection customers to provide to the transmission provider any proposed operating assumptions for the interconnecting electric storage resource as part of the initial interconnection request. This timing ensures that the flexibility provided by this reform does not delay the cluster study process by ensuring the transmission provider has all necessary information at the time interconnection studies commence. In response to commenters that request that the Commission define a clear decision point after which changes to operating assumptions may be considered a material modification,²⁸⁶² we reiterate that the operating assumptions must be submitted as part of the initial interconnection request. Further, we clarify that such operating assumptions only pertain to the proposed charging behavior of an electric storage resource, *i.e.*, whether the interconnecting resource will or will not charge during peak load conditions.

1521. We modify the NOPR proposal to add article 17.2 to the *pro forma* LGIA to describe a violation of operating assumptions for generating facilities, including for an electric storage resource. We also add Appendix H to the *pro forma* LGIA as the location for the interconnection customer to memorialize its operating assumptions. If the owner of the generating facility fails to operate the generating facility in accordance with its operating assumptions, as memorialized in Appendix H of the *pro forma* LGIA, the transmission provider may pursue termination of the LGIA through the breach and cure provisions found in article 17 of the *pro forma* LGIA. As already provided for in article 17 of the *pro forma* LGIA, we agree with Environmental Defense Fund that interconnection customers should be given the opportunity to cure a breach of the LGIA if possible.²⁸⁶³ We clarify that, if an interconnection customer fails to operate its electric storage resource in accordance with the operating assumptions memorialized in the interconnection customer's LGIA, the

²⁸⁶⁰ MISO Initial Comments at 118; Pine Gate Initial Comments at 52.

²⁸⁶¹ NOPR, 179 FERC ¶ 61,194 at P 281.

²⁸⁶² AES Clean Energy Initial Comments at 24; APS Initial Comments at 22; Clean Energy Associations Initial Comments at 56–57; ENGIE Initial Comments at 11.

²⁸⁶³ Environmental Defense Fund Initial Comments at 6–7.

procedure for termination pursuant to articles 17.1.1 and 17.1.2 of the *pro forma* LGIA is appropriate. We believe that repeat violations of the operating assumptions memorialized in the LGIA are likely not consistent with good utility practice.²⁸⁶⁴ Additionally, we agree with rPlus and Idaho Power that there may be unique instances in real-time operations during which a transmission provider would want an electric storage resource to charge during peak load conditions (e.g., because the electric storage resource is located in a generation pocket). Therefore, we clarify that, if done so at the direction of the transmission provider to maintain the reliable and efficient operation of the transmission system, an electric storage resource that operates contrary to the operating assumptions specified in its LGIA in this instance must not be considered in breach of its LGIA by the transmission provider.

1522. We believe that, taken together, the revisions to the *pro forma* LGIP and *pro forma* LGIA will ensure that interconnection customers adhere to the operating assumptions used to study their electric storage resource and ameliorate concerns about possible reliability problems expressed by commenters. We agree with commenters that: (1) control devices can prevent electric storage resources from charging during peak load conditions; (2) modern electric storage resources can respond to signals from the transmission provider within seconds; (3) electric storage resources generally do not have an economic incentive to charge during peak load conditions; and (4) the consequence of being considered in breach of the LGIA provides an additional incentive for electric storage resources to follow the agreed-upon operating assumptions memorialized in their LGIA. Further, we note that some transmission providers already assume in their interconnection studies that electric storage resources will not charge during peak load conditions.²⁸⁶⁵ We

emphasize that, irrespective of these changes to operating assumptions, all electric storage resources must continue to meet all requirements in the *pro forma* LGIP and *pro forma* LGIA, as well as all applicable reliability standards.

1523. We agree with commenters that the speed and control with which electric storage resources can respond to signals from transmission providers sufficiently distinguishes the charging behavior of electric storage resources from that of firm customer end-use load. Therefore, for purposes of determining any network upgrades necessary to accommodate the reliable interconnection of electric storage resources, we find that the charging of electric storage resources should not be modeled equivalently to firm customer end-use load in interconnection studies if the interconnection customer memorializes its operating assumptions in the LGIA and installs control technologies, if required, to limit its operations as specified.

1524. For clarity and in response to MISO's concern about conflicting descriptions of the reform in the NOPR preamble and the proposed revisions to the *pro forma* LGIP, we modify the proposed revisions to the *pro forma* LGIP to clarify that these requirements apply only to the operating assumptions for withdrawals of energy (e.g., proposed charging behavior of electric storage resources, whether standalone, co-located generating facilities, or part of a hybrid generating facility), not to discharging.

1525. In response to Pine Gate's request for clarification about what network upgrade costs will be allocated to interconnection customers as a result of the adoption of the revisions related to operating assumptions, we clarify that the transmission provider must not assign network upgrade costs to the interconnection customer based on those worst-case operating assumptions (e.g., charging at maximum capacity during peak load conditions) where there is agreement from the interconnection customer to, if required, implement operating restrictions including installing or demonstrating that the generating facility already has control technologies (software and/or hardware) to limit its operations during peak load conditions. As addressed above, we believe that these conditions sufficiently address any reliability concerns associated with the unexpected operation of an electric storage resource and thus believe it is appropriate for the transmission provider to only assign costs for network upgrades based on the

proposed charging behavior of the electric storage resource.²⁸⁶⁶

1526. Several commenters point out that not all transmission providers use the same process to study the charging of electric storage resources. Some transmission providers determine the network upgrades needed to accommodate the charging of an electric storage resource in the interconnection process, whereas other transmission providers do so exclusively as part of a transmission service request.²⁸⁶⁷ In response to these commenters, we clarify that the requirement for transmission providers to use operating assumptions, at the request of the interconnection customer, in interconnection studies that reflect the proposed charging behavior of an electric storage resource applies only to the operating assumptions that transmission providers use in the interconnection process. This requirement does not apply to transmission service requests and this final rule does not propose to modify the process for requesting transmission service. In response to Puget Sound,²⁸⁶⁸ we further clarify that this reform does not require transmission providers to study charging as part of the interconnection process if they do not already do so. If a transmission provider does not determine the network upgrades needed to accommodate the charging of an electric storage resource through the interconnection process, then on compliance the transmission provider must demonstrate why this reform does not apply to that particular transmission provider.

1527. In the NOPR, the Commission sought comment on whether to define "peak load period" and/or "net peak load" period.²⁸⁶⁹ Given the variation in the scenarios that transmission providers study in the interconnection process (e.g., summer peak load, winter peak load, shoulder peak load, light load conditions, etc.), we agree with commenters that regional flexibility is warranted.²⁸⁷⁰ Therefore, we decline to adopt standardized definitions of "peak

²⁸⁶⁴ The *pro forma* LGIA states that "Each Party shall perform all of its obligations under this LGIA in accordance with Applicable Laws and Regulations, Applicable Reliability Standards, and Good Utility Practice, and to the extent a Party is required or prevented or limited in taking any action by such regulations and standards, such Party shall not be deemed to be in Breach of this LGIA for its compliance therewith." *Pro forma* LGIA art. 4.3 (Performance Standards).

²⁸⁶⁵ Bonneville Initial Comments at 23; MISO Comments at 117; see also *PacifiCorp*, 182 FERC ¶ 61,131 (2023) (accepting, subject to condition, revisions to PacifiCorp's LGIP and LGIA to allow PacifiCorp to study electric storage resources in its interconnection study process using operating assumptions that more accurately reflect their expected operation).

²⁸⁶⁶ See, e.g., AEE Initial Comments at 41–42; AEP Initial Comments at 46–47; CESA Reply Comments at 10; Clean Energy Associations Initial Comments at 52, 56–58; NARUC Initial Comments at 37; NESCOE Reply Comments at 18; Public Interest Organizations Initial Comments at 48–50; R Street Initial Comments at 16; SEIA Reply Comments at 26–27.

²⁸⁶⁷ See, e.g., Clean Energy Associations Initial Comments at 55; Puget Sound Initial Comments at 11–12; SPP Initial Comments at 25; Tri-State Initial Comments at 22; Xcel Initial Comments at 46–47.

²⁸⁶⁸ Puget Sound Initial Comments at 11–12.

²⁸⁷⁰ See, e.g., Ameren Initial Comments at 29; Microgrid Resources Initial Comments at 8.

load period” and/or “net peak load” period.

1528. In the NOPR, the Commission also sought comment on whether to define firm and non-firm charging for electric storage resources and require transmission providers to define study criteria and possible ways to interconnect related to both firm and non-firm charging.²⁸⁷¹ Further, the Commission sought comment on proposed definitions of firm and non-firm charging service. Several commenters express concerns about defining firm and non-firm charging service, including whether the proposed definitions conflate interconnection and transmission service. We believe that, given the other reforms adopted herein regarding operating assumptions, the proposed definitions of firm and non-firm charging service are not necessary to ensure that transmission providers, at the request of the interconnection customer, use more realistic operating assumptions to study electric storage resources in the interconnection process and to avoid excessive and unnecessary network upgrades that may otherwise hinder the timely development of new electric storage resources. Therefore, we decline to adopt any definitions of firm and non-firm charging service. As a result, we also clarify that this final rule does not require transmission providers to define conditions under which electric storage resources will be curtailed. In response to CAISO’s concern that a proposed definition of firm charging service would require transmission providers that do not currently provide firm charging service to do so, we clarify that this final rule does not require transmission providers to provide firm charging service.

1529. In the NOPR, the Commission sought comment on whether to expand this reform to address operating assumptions for additional generating facility technologies that may currently be inaccurately modeled, such as variable energy resources.²⁸⁷² The Commission also sought comment on whether other operating assumptions, in addition to the assumption that electric storage resources withdraw energy during peak load periods, should be addressed as part of this proposed reform. In response to several commenters’ concerns about potential reliability impacts and the administrative burden of extending the NOPR proposal to also address injections of power from electric storage resources or other resource types, we decline in this final rule to extend the

reform to apply to additional generating facility technologies or to other operating assumptions. We clarify that this reform does not apply to the operating assumptions used to study the injection of power from electric storage resources or the injection of power from other resource types (e.g., natural gas, solar, wind, etc.). We encourage transmission providers to examine on an individual basis what operating assumptions used to study the injection of power may be appropriate to render the study process more accurate. Similarly, we decline to require transmission providers to use fuel-based dispatch assumptions to study the injection of power from all resource types in interconnection studies at this time, as suggested by some commenters. We acknowledge that fuel-based dispatch assumptions may be able to address some of the identified challenges associated with inaccurate modeling assumptions for all resource types and encourage transmission providers to evaluate the merits of adopting it, but we do not believe that adopting such a requirement on a generic basis is supported by the record.

1530. We decline to address the potential implications of this reform for transmission providers with Commission-approved interconnection processes that vary from the *pro forma* requirements adopted in Order Nos. 2003 and 845. As explained in the section IV of this final rule, transmission providers with such variations from the *pro forma* LGIP and *pro forma* LGIA may seek approval as part of the compliance process to maintain those variations, which the Commission will consider on a case-by-case basis. What we adopt in this final rule are requirements that are part of the *pro forma* LGIP and *pro forma* LGIA, and we therefore only address the interaction of the requirements adopted herein with existing requirements that are part of the *pro forma* process and not variations thereto.

1531. We also decline to require transmission providers to use standardized operating assumptions, as some commenters suggest.²⁸⁷³ In the NOPR, the Commission did not propose to require transmission providers to use standardized operating assumptions, and we decline to do so here.

1532. In response to comments from Hydropower Commenters’ suggestion that the final rule include a simplified procedure for amending an executed interconnection agreement to optimize the operating parameters of a pumped

storage plant already in operation,²⁸⁷⁴ we find that such a request is outside the scope of this proceeding. In the NOPR, the Commission did not propose a new study process for resources already in operation to amend operating assumptions memorialized in their interconnection agreements.

1533. In response to Microgrid Resources’ request that the Commission explicitly include microgrids in the provisions of this rulemaking applied to hybrid resources,²⁸⁷⁵ we find such a request to be outside the scope of this proceeding. The Commission did not propose to define microgrids or apply specific reforms to microgrids in the NOPR, and we decline to do so now. Further, in response to Microgrid Resources’ and IREC’s requests that the Commission extend the proposed reforms for hybrid resources to the *pro forma* SGIP,²⁸⁷⁶ we note that the NOPR did not propose to revise the *pro forma* SGIP to require transmission providers to use operating assumptions in interconnection studies that reflect the proposed charging behavior of an electric storage resource, and we decline to do so here.

2. Incorporating the Enumerated Alternative Transmission Technologies Into the Generator Interconnection Process

a. Consideration of the Enumerated Alternative Transmission Technologies in Interconnection Studies Upon Request of the Interconnection Customer

i. Need for Reform and NOPR Proposal

1534. In the NOPR, the Commission stated that alternative transmission technologies can provide substantial benefits to optimize the transmission system in specific scenarios because they often can be deployed both more quickly and at lower costs than other network upgrades.²⁸⁷⁷ The Commission stated that, despite these potential benefits, alternative transmission technologies often do not receive the same consideration during generator interconnection processes as other network upgrades.²⁸⁷⁸ The Commission preliminarily found that failing to consider alternative transmission technologies that can be deployed both more quickly and at lower costs than network upgrades may render

²⁸⁷¹ NOPR, 179 FERC ¶ 61,194 at P 288.

²⁸⁷² *Id.* P 286.

²⁸⁷⁴ Hydropower Commenters Initial Comments at 24.

²⁸⁷⁵ Microgrid Resources Initial Comments at 7.

²⁸⁷⁶ *Id.*; IREC Initial Comments at 15, attach. A.

²⁸⁷⁷ NOPR, 179 FERC ¶ 61,194 at P 294.

²⁸⁷⁸ *Id.* P 296.

Commission-jurisdictional rates unjust and unreasonable.

1535. The Commission proposed to revise the *pro forma* LGIP and *pro forma* SGIP to require transmission providers, upon request of the interconnection customer, to evaluate the requested alternative transmission solution(s) during the *pro forma* LGIP cluster study and the *pro forma* SGIP system impact study and facilities study within the generator interconnection process.²⁸⁷⁹

1536. To provide more certainty for evaluation purposes, and focus on technologies that serve a transmission function and thus are subject to Commission jurisdiction, the Commission proposed to specify the technologies that the interconnection customer may request to be evaluated.²⁸⁸⁰ Specifically, the Commission proposed revisions to the *pro forma* LGIP and *pro forma* SGIP to require transmission providers to consider the following technologies within the cluster study of the *pro forma* LGIP and within the system impact study and facilities study of the *pro forma* SGIP upon request of the interconnection customer: advanced power flow control, transmission switching, dynamic line ratings, static synchronous compensators, and static VAR compensators. The Commission stated that it believes that the deployment of these transmission technologies may reduce interconnection costs by providing lower cost network upgrades to interconnect new generating facilities.²⁸⁸¹

1537. The Commission explained that, under this proposal, the interconnection customer may request, at the relevant scoping meeting, that the transmission provider consider a single, multiple, or all technologies on this list.²⁸⁸² The Commission proposed that the transmission provider would be required to evaluate the transmission technologies identified above for feasibility, cost, and time savings within the cluster study for the *pro forma* LGIP and the system impact study and facilities study for the *pro forma* SGIP, upon request of the interconnection customer. The Commission explained that the transmission provider, upon this request, must evaluate the identified transmission technology and, if feasible, determine whether it should be used, consistent with good utility practice and other applicable regulatory standards. Transmission providers

would continue to retain discretion regarding whether to use the transmission technology.

1538. The Commission sought comment on whether the list of alternative transmission technologies is sufficient.²⁸⁸³ In particular, the Commission sought comment on whether storage that performs a transmission function, synchronous condensers, and voltage source converters should be included in the list of alternative transmission technologies. The Commission also sought comment on: (1) whether there are software, operational, or other barriers to the use of these transmission technologies as proposed; (2) whether the use of alternative transmission technologies as supplements for, or in the place of, traditional network upgrades is sufficient to guarantee a level of service to accommodate an interconnection customer seeking NRIS, or whether such a network upgrade can only be used if the interconnection customer requested ERIS; (3) whether the existing study processes and models in the generator interconnection process remain suitable for considering alternative transmission technologies, whether additional processes or models are needed, and if so, which entity should be responsible for developing them; (4) how costs incurred for evaluating alternative transmission technology study requests would be allocated among interconnection customers in the cluster; (5) what reasonable number of transmission technology study requests from each interconnection customer would be workable, the burden (in terms of both time and resources) on transmission providers required to evaluate such requests, and whether interconnection study deadlines may need to be extended to account for time needed to evaluate the alternative transmission technology study requests; and (6) whether provisional interconnection service consideration for transmission technologies should be mandatory.²⁸⁸⁴

ii. Comments

(a) Comments in Support

1539. Numerous commenters support the Commission's proposal because they believe that it could reduce interconnection costs, increase flexibility, increase the speed of interconnections, and improve reliability.²⁸⁸⁵ Commenters assert that

the proposed alternative transmission technologies in the NOPR can reduce costs.²⁸⁸⁶ With respect to reducing interconnection costs, SEIA contends that, by decreasing the costs of network upgrades, the proposal will reduce the number of withdrawals from the interconnection queue, creating a more stable and efficient interconnection process.²⁸⁸⁷ SEIA also claims that decreasing these costs will reduce the interconnection costs for interconnection customers, who may then reflect those savings in power purchase agreements or integrated resource plan submissions.²⁸⁸⁸ Commenters contend that, if the Commission were to not adopt this proposal, the failure to lower interconnection costs by evaluating alternative transmission technologies would impose unjust and unreasonable costs on interconnection customers.²⁸⁸⁹

1540. With respect to reducing interconnection delays, Illinois Commission asserts, for example, that alternative transmission technologies allow resources to come online more quickly and allow for better use of the existing transmission system, requiring fewer transmission buildouts.²⁸⁹⁰ OMS contends that failing to consider alternative transmission technologies risks requiring longer lead-time network upgrades.²⁸⁹¹ WATT Coalition argues that use of the appropriate technologies will result in fewer withdrawals from

the interconnection queue and a reduction in restudies and delays.²⁸⁹² WATT Coalition points out that, when interconnection customers withdraw, grid enhancing technologies offer additional value because they are scalable and modular to address evolving needs and can be redeployed as those needs continue to change.²⁸⁹³

1541. With respect to reliability, Ohio Commission Consumer Advocate contends that some alternative transmission technologies could provide substantial benefits by resolving thermal overloads and avoiding voltage collapse.²⁸⁹⁴

1542. Some commenters argue that a requirement to study alternative transmission technologies would not slow down interconnection studies overall.²⁸⁹⁵ For example, AEE states that, if a technology is not proven or commercially viable, it will be quickly ruled out of further evaluation under prevailing study approaches.²⁸⁹⁶ ACORE claims that an evaluation of alternative transmission technologies would not be a burden but rather an integral part of interconnection studies because such an evaluation will likely reduce the number of withdrawals and restudies.²⁸⁹⁷ WATT Coalition argues that, because transmission providers currently use an iterative process when conducting interconnection studies, adding the proposed list of alternative transmission technologies to an iterative solution set should not significantly change the time frame or complexity of studies.²⁸⁹⁸

(b) Comments in Opposition

1543. Some commenters argue that the proposal is unnecessary because transmission providers already consider alternative transmission technologies in interconnection studies.²⁸⁹⁹ For example, Southern states that transmission providers already include the assessment of alternative transmission technologies such as static VAR compensators as needed in interconnection studies.²⁹⁰⁰ AEE responds that, if alternative transmission technologies are already

being evaluated, then the proposal will not place an additional burden on interconnection queues.²⁹⁰¹

1544. Several commenters oppose the proposal because they believe it conflates the use of alternative transmission technologies in operations with their use in planning.²⁹⁰² For instance, MISO argues that alternative transmission technologies are not necessarily the solution needed for any particular interconnection because these are often operational solutions that are inappropriate for wide-scale deployment in a planning process, which reviews an entire cycle of proposed interconnections and identifies solutions to support those interconnections for the expected lifetime of their interconnection.²⁹⁰³ MISO claims that using alternative transmission technologies in planning for interconnection rather than in operations may be inconsistent with “good utility practice” and “applicable regulatory standards”, and MISO expresses concerns about the impact or effectiveness of using alternative transmission technologies in place of network upgrades.²⁹⁰⁴ NYTOs assert that alternative transmission technologies should generally not be used in interconnection studies unless they are effective in the planning context.²⁹⁰⁵ PJM argues that alternative transmission technologies should not be incorporated into the generator interconnection process because they do not represent long-term solutions that can serve as blanket substitutes for the need for transmission expansion.²⁹⁰⁶ In response, AEE and WATT Coalition argue that the primary purpose of alternative transmission technologies is to serve as a complementary bridge technology while more robust transmission is built.²⁹⁰⁷

1545. Some commenters express concern that alternative transmission technologies are not always appropriate for addressing long-term, interconnection-related reliability issues.²⁹⁰⁸ Southern adds that, because transmission providers already consider

these technologies and are subject to mandatory reliability standards, interconnection customers should not be able to request certain reliability fixes because their overall focus may be to minimize cost instead of maximizing reliability.²⁹⁰⁹ EEI asserts that building firm transmission capacity or replacing or upgrading limiting equipment provides a more reliable long-term solution than the use of alternative transmission technologies because they are not dependable for reducing congestion or providing more capacity in the long-term or during extreme system conditions.²⁹¹⁰

1546. Ameren and EEI oppose the proposal because they assert it overlaps with pending proposals in other proceedings.²⁹¹¹ EEI argues the Commission should not promulgate requirements related to alternative transmission technologies in this proceeding while other Commission proceedings meant to address the use of these same technologies are pending.²⁹¹² ACORE responds that, given the benefits of incorporating alternative transmission technologies in interconnection studies, there is no justification for delaying this requirement pending action in the other Commission proceedings.²⁹¹³

1547. Other commenters argue that requiring interconnection studies to consider alternative transmission technologies will increase interconnection study timelines and therefore slow interconnection request processing speeds, contrary to the NOPR’s objective.²⁹¹⁴ Puget Sound asserts that “the time is not ripe” to enforce new standards concerning alternative transmission technologies, given the sweeping changes proposed in the NOPR, adding that advanced transmission technologies requirements

may not be possible in the short term and could negate the Commission's goals to streamline the interconnection process.²⁹¹⁵

1548. MISO contends that some alternative transmission technologies, *e.g.*, technologies that can control line impedances, may shift the burden of system impacts to other parties by causing additional new constraints.²⁹¹⁶ Indicated PJM TOs are concerned that, if one interconnection customer request changes power flows, such as through the use of phase angle regulators, it will impact other interconnection customers and effectively require a whole additional set of studies for large areas of the transmission system.²⁹¹⁷ AECI argues that the appropriate balance of the burden to justify the use of a particular technology should rest with the interconnection customer so that "capricious study requests" are avoided.²⁹¹⁸

1549. Several commenters argue that the NOPR proposal is overly burdensome for transmission providers.²⁹¹⁹ For instance, MISO TOs note the competing interests (*i.e.*, accelerating the interconnection process and layering numerous additional requirements and significantly increasing the number of studies an RTO/ISO and its transmission owners must perform).²⁹²⁰ MISO argues that the Commission's proposal would require MISO to conduct 4,780 evaluations in the first phase of its interconnection study process.²⁹²¹ MISO contends that, when evaluating how these technologies can be incorporated, the effects on the rest of the interconnection queue and system can generate debate that could slow down the interconnection process. Similarly, National Grid claims that new alternative transmission technologies can present modeling uncertainties (*e.g.*, operating parameters and cost uncertainties) and potential software limitations that transmission owners would need an unforeseeable amount of time to evaluate and could lead to possible penalties if study deadlines are not met.²⁹²²

(c) Comments on Specific Proposal (1) List of Alternative Transmission Technologies

1550. Some commenters broadly support the list of proposed alternative transmission technologies,²⁹²³ with others supporting particular technologies (*e.g.*, dynamic line ratings²⁹²⁴ and advanced power flow control²⁹²⁵).

1551. MISO and SoCal Edison oppose the proposed list of technologies because they contend that it includes technologies that are not appropriate for interconnection.²⁹²⁶ MISO asserts that, although the deployment of devices such as static series synchronous compensators could solve some problems, they could create other issues (*e.g.*, a change to the impedance of any one transmission facility could cause problems or impact operations elsewhere), requiring the holistic management of their operation and deployment.²⁹²⁷ SoCal Edison claims that certain technologies that the interconnection customer may request to be evaluated, such as dynamic line ratings, have not been fully tested by certain RTOs/ISOs and thus should be excluded from the permissible list of options requested by an interconnection customer.²⁹²⁸

1552. Some commenters assert that, although dynamic line ratings may be beneficial during operations, they may not be appropriate for interconnection or transmission planning.²⁹²⁹ Others note several operational challenges of using dynamic line ratings in interconnection, such as: (1) there is currently no Commission or NERC guidance on how to use dynamic line ratings absent thorough data on wind conditions, temperature, and other future system conditions;²⁹³⁰ and (2)

interconnection study software is not capable of incorporating dynamic line ratings, and it is not clear what assumptions should be used on affected systems.²⁹³¹ ISO-NE argues that the Commission should continue to consider the use and implementation of this technology in Docket No. AD22–5, rather than here.²⁹³² In response, WATT Coalition argues that there is significant value in considering dynamic line ratings in planning, adding that dynamic line ratings and other grid enhancing technologies are not more difficult to study than legacy devices and traditional solutions.²⁹³³

1553. While acknowledging the benefits that advanced power flow control devices provide for real-time operations, Indicated PJM TOs contend that they are inappropriate in the context of implementing solutions to facilitate interconnection.²⁹³⁴ Tri-State claims that advanced power flow control devices may push power onto other affected systems, which is a more significant challenge in non-RTO/ISO scenarios.²⁹³⁵ MISO asserts that the widespread use of advanced flow control devices can have widespread impacts due to sizeable adjustments to line impedances and that using these devices could result in a cascade of issues across the system, pushing the problem and the costs of remedying it to other customers.²⁹³⁶ WATT Coalition asserts that automatic power factor controllers are just as effective at mitigating overloads as reconductoring but that automatic power factor controllers are the only flexible AC transmission system devices that suffer from the "perverse incentive" identified by stakeholders because installation costs are much lower than the upgrades they compete with.²⁹³⁷ PacifiCorp states that in the course of the interconnection study process it often considers the use of advanced power flow control devices as potential alternatives to standard system infrastructure.²⁹³⁸

1554. Some commenters raise concerns about using transmission switching for interconnection. For instance, Tri-State questions whether transmission switching is meant to be a remedial action scheme or to create permanent open points on the system, which it argues may be problematic in non-RTOs/ISOs and may result in

reduced reliability on the transmission system.²⁹³⁹ MISO argues that applying automatic topology changes would be remedial action schemes, noting that MISO and its transmission owners have attempted to reduce the number of remedial action schemes employed on the system as a matter of good utility practice.²⁹⁴⁰ PacifiCorp contends that transmission switching is a complex process that can be implemented only under particular factual scenarios and system conditions, adding that it is unlikely that system congestion could be reliably reduced by requiring the analysis of transmission switching in the study process.²⁹⁴¹

1555. Other commenters argue that the Commission should not limit the alternative transmission technologies to a pre-approved list.²⁹⁴² Some commenters contend that the Commission's proposal could limit future grid enhancing technologies that might be the best solution because the list includes only five technologies and would not require transmission providers to consider new grid enhancing technologies until the list is expanded.²⁹⁴³ AEE and ENGIE ask the Commission to provide a non-exhaustive list of alternative transmission technologies and allow any alternative transmission technologies or grid enhancing technologies that are proven and commercially viable to qualify for evaluation, consistent with the Commission's statutory obligation to "encourage, as appropriate, the deployment of advanced transmission technologies" and the list of alternative transmission technologies included in that statute.²⁹⁴⁴

1556. Commenters suggest adding the following technologies to the list: (1) synchronous condensers and voltage source converters;²⁹⁴⁵ (2) IBR technology solutions for advanced control capabilities and control parameter tuning;²⁹⁴⁶ (3) microgrid

control technologies;²⁹⁴⁷ and (4) remedial action schemes, which they contend are an effective and inexpensive way to mitigate local transmission constraints the use of which is not allowed in many transmission providers' policies.²⁹⁴⁸

1557. Several commenters also suggest adding advanced conductors to the required list of alternative transmission technologies.²⁹⁴⁹ VEIR and ACORE argue that advanced conductors may be a beneficial alternative to network upgrades because: (1) advanced conductors meet the same criteria of quick deployment and low cost and have advantages over other network upgrades, especially the elimination of additional siting and permitting requirements;²⁹⁵⁰ and (2) a recent Grid Strategies LLC report finds "short lead time to reconductor existing lines can help manage risk and uncertainties and significantly increase system capacity to mitigate overloads identified in interconnection studies."²⁹⁵¹ NARUC asks the Commission to consider requiring an evaluation of the accuracy of transmission line ratings on surrounding or impacted transmission facilities if requested by an interconnection customer.²⁹⁵² Additionally, Ampjack proposes tower lifting to increase transmission line ratings due to the time savings, lack of outages, and use of existing structures.²⁹⁵³

1558. Many commenters recommend that the Commission add storage that performs a transmission function to the list.²⁹⁵⁴ Illinois Commission contends

that storage that performs a transmission function can relieve congestion, maintain reliability, and be placed on the transmission system more quickly and cheaply than building new transmission lines.²⁹⁵⁵ Tesla suggests expanding the list to include batteries as virtual transmission, arguing that it provides several benefits (e.g., providing emergency capacity for congested transmission lines and surplus generation and surplus load capacity to allow operation of transmission lines closer to thermal capacity without risk of outage and averting the need for load shed by providing grid stability service).²⁹⁵⁶ Clean Energy Associations note that the Commission has approved tariffs for storage that performs a transmission function. Clean Energy Associations assert that it would be inconsistent to prohibit an interconnection customer from adding electric storage to an interconnection request specifically to address transmission reliability impacts in lieu of conventional upgrades, while at the same time allowing an interconnection customer to add such storage to an interconnection request for purposes unrelated to transmission reliability or allowing an interconnection customer to limit electric storage operations as a means to avoid network upgrades.²⁹⁵⁷

1559. Other commenters do not agree with adding storage that performs a transmission function to the list.²⁹⁵⁸ MISO notes that, although it already evaluates storage that performs a transmission function in its generator interconnection process, it was a subject of considerable debate.²⁹⁵⁹ Shell states that, while storage that performs a transmission function may provide system benefits, it has concerns regarding the ability of storage that performs a transmission function to "queue jump" interconnection customers, thus putting those customers at a competitive disadvantage.²⁹⁶⁰

(2) Whether To Mandate the Consideration of Alternative Transmission Technologies

1560. Several commenters argue that these technologies should be studied by default, rather than at the request of the interconnection customer, with some suggesting an "opt-out" that the

interconnection customer could elect.²⁹⁶¹ Fervo Energy argues that mandating the consideration of grid enhancing technologies could be more efficient and facilitate more and faster interconnection, although there may be delays initially as transmission providers adjust.²⁹⁶² Clean Energy Associations ask that transmission providers automatically evaluate grid enhancing technologies, unless all interconnection customers in a cluster opt out.²⁹⁶³ Ørsted recommends that the Commission consider requiring that advanced transmission technologies be studied and implemented when network upgrades are needed but cannot be completed within three years of being identified.²⁹⁶⁴

1561. CAISO contends that the Commission should simply require transmission providers to include a statement in their tariffs that they will consider alternative transmission technologies for every interconnection and incorporate them when they are the cost-effective solution.²⁹⁶⁵ CAISO states that this would allow the interconnection customer to request an unexecuted interconnection agreement and to raise with the Commission any transmission provider refusal to consider a technology.²⁹⁶⁶ Ohio Commission Consumer Advocate suggests that transmission providers and interconnection customers mutually determine an appropriate number of evaluations for grid enhancing technologies.²⁹⁶⁷

(3) Alternative Transmission Technologies in Provisional Interconnection Service

1562. Some commenters argue that alternative transmission technologies could assist with provisional interconnection service. For instance, R Street and Hannon Armstrong assert

that these technologies can be used as a temporary measure until other network upgrades are completed, thus reducing the cost and delays of generator interconnection, even if they only serve as a bridge to a permanent solution set, such as cluster network upgrades.²⁹⁶⁸ NextEra contends that, when an alternative transmission technology may serve as a temporary solution, the transmission provider should reasonably cooperate with requests from an interconnection customer willing to fund installation of that technology as an interim solution.²⁹⁶⁹ Fervo Energy asks the Commission to require transmission providers to consider alternative transmission technologies when responding to a provisional interconnection request if these technologies allow for earlier in-service dates.²⁹⁷⁰

1563. Others oppose requiring evaluation of alternative transmission technologies for provisional interconnection service.²⁹⁷¹ For instance, MISO argues that the consideration of advanced transmission technologies for provisional interconnection service should not be mandatory because it may result in delays that are contrary to the goals of this proceeding.²⁹⁷²

(4) Alternative Transmission Technologies for NRIS or ERIS

1564. Some commenters responded to whether the use of alternative transmission technologies can support an interconnection customer's request for NRIS, or whether the use of such technologies can only be used if the interconnection customer requested ERIS. Hannon Armstrong asserts that one or more of these alternative transmission technologies may be able to delay or eliminate the needed network upgrades identified in interconnection studies under both ERIS and NRIS.²⁹⁷³ MISO argues that technologies that merely curtail generation would not be suitable for interconnection requests seeking NRIS as they could not pass the deliverability test, while technologies that can control transmission line impedances, such as phase shifters, are acceptable for NRIS.²⁹⁷⁴ Invenenergy contends that a given alternative transmission

technology may only facilitate ERIS service in certain circumstances but that there is no reason to limit the scope of alternative transmission technologies at the outset without having performed any relevant analysis.²⁹⁷⁵ Clean Energy Associations ask the Commission to require transmission providers to publicly post any service differences (e.g., if use of a given technology would enable ERIS but not necessarily NRIS).²⁹⁷⁶

(5) Study and Network Upgrade Cost Allocation for Alternative Transmission Technologies

1565. Commenters address the Commission's question about how costs incurred for evaluating alternative transmission technology study requests would be allocated among interconnection customers in the cluster. WATT Coalition argues that any marginal increase of study costs to accommodate the evaluation of grid enhancing technologies should be allocated evenly across interconnection customer cluster study participants.²⁹⁷⁷ However, NARUC and Indicated PJM TOs disagree, asserting that additional costs incurred for evaluating alternative transmission technologies should be allocated to the requesting interconnection customer(s) to maintain cost certainty and equity.²⁹⁷⁸ Fervo Energy proposes that, if the requested alternative transmission technology would benefit more than one interconnection customer in the cluster, a pro rata allocation of study cost among those interconnection customers would be appropriate; however, if the requested technology only serves one interconnection customer, Fervo Energy argues that direct cost allocation for that study cost is appropriate.²⁹⁷⁹ Fervo Energy adds that it would support pro rata allocation of costs even if the Commission mandates consideration of alternative transmission technologies.²⁹⁸⁰

1566. NextEra argues that, under the "but for" principle of cost allocation, the interconnection customer's cost responsibility should be limited to the cost of the alternative transmission technology that would have sufficed as a long-term solution for a given network upgrade, especially when transmission providers choose instead to construct more costly upgrades beyond what is

required for the interconnection customer's proposed generating facility.²⁹⁸¹ Tri-State instead argues that the Commission's proposal does not consider the likely outcome of an interconnection request advancing with a new technology, which will force the subsequent interconnection customer to fund costly network upgrades when it would be more equitable for the interconnection customers to share the cost of a single network upgrade.²⁹⁸²

(6) Timing of Alternative Transmission Technology Evaluation Requests

1567. Some commenters discuss limiting the request to include alternative transmission technologies to the initial stages of the interconnection process. ISO-NE and NESCOE argue that any alternatives that are proposed should be included in the initial interconnection request with specific assumptions that can be studied.²⁹⁸³

1568. Other commenters argue that interconnection customers should be able to request the study of alternative transmission technologies later in the interconnection process or when more information is available.²⁹⁸⁴ Clean Energy Associations contend that transmission providers should be required to post the costs of requested technologies and give interconnection customers the flexibility to adopt appropriate solutions, subject to system conditions and any limitations in the area.²⁹⁸⁵ Ørsted suggests that once cluster studies are done, and if the required upgrades are outside of the cluster area, then alternate transmission technologies, with the addition of energy storage, should be evaluated by the transmission provider during its system impact study phase.²⁹⁸⁶

1569. NARUC asks the Commission to ensure that there is an opportunity for information exchange between the transmission provider and interconnection customer to design alternative transmission technology solutions and supports implementation of a time frame to facilitate that information exchange.²⁹⁸⁷ Ohio Commission Consumer Advocate

contends that some changes would be required to address unique attributes of grid enhancing technologies that may be overlooked by existing frameworks and that the cost and duration of modeling and evaluations would be best addressed by transmission providers in concert with interconnection customers.²⁹⁸⁸

(d) Requests for Clarification and Flexibility

1570. Ameren asks how software or operational barriers (such as whether the MISO software can model the technology) will be addressed.²⁹⁸⁹ Ameren asks for clarification as to who pays for the software necessary to model the alternative transmission technology and whether that gets assigned to the interconnection customer requesting the use of the advanced transmission technology or to the cluster of interconnection customers, some of which may prefer a different solution that does not involve use of an advanced transmission technology. Ameren claims that it is unclear what happens if interconnection customers within the same cluster disagree about using an alternative transmission technology in place of a network upgrade and whether consensus is required.

1571. NARUC suggests that the Commission clarify that transmission providers need not perform a separate study for each requested alternative transmission technology.²⁹⁹⁰ NARUC also asks the Commission to clarify that interconnection customers bear the burden of designing the alternative transmission technology solutions, preparing necessary technical data, and determining whether it is temporary or permanent.

1572. NEPOOL urges the Commission to receive input from each RTO/ISO to consider how much flexibility to provide with respect to the list of alternative transmission technologies because they are the most informed with respect to which alternative transmission technologies are feasible.²⁹⁹¹ Similarly, NYTOs ask the Commission to allow regions to determine which alternative transmission technologies would be appropriate and beneficial in performing interconnection studies instead of mandating their use.²⁹⁹²

1573. Some commenters underscore the importance of transmission

providers retaining the discretion to decline to adopt an alternative transmission technology in the place of a network upgrade.²⁹⁹³ National Grid argues that, to the extent an interconnection customer requests evaluation of a new alternative transmission technology beyond the list proposed in the NOPR and provides studies in support of its proposed use, the transmission owner should be permitted to determine whether the evaluation of such a new technology will be beneficial.²⁹⁹⁴ Indicated PJM TOs request that, if the final rule requires transmission providers to consider alternative transmission technologies, the transmission provider and transmission owners have the ability to reject the request without a study when they have knowledge or experience that the request will not work.²⁹⁹⁵

(e) Miscellaneous

1574. Invenenergy argues that, if an alternative transmission technology is not selected, the transmission providers should provide detailed reports, including a cost-benefit analysis, behind the decision and there should be a process to resolve disagreements over the decision with the interconnection customer.²⁹⁹⁶ R Street requests that the Commission require transmission providers to describe the benefits, or lack thereof, of the set of technologies listed in the NOPR.²⁹⁹⁷ WATT Coalition and California Public Utilities Commissioner Darcie Houck request that transmission providers abide by strict standards when studying grid enhancing technologies.²⁹⁹⁸

1575. In addition to the study of alternative transmission technologies that the Commission envisions, Ørsted recommends requiring the deployment of these alternative transmission technologies as a medium-term or long-term alternative to transmission build out.²⁹⁹⁹

1576. EDF Renewables suggests that the Commission require the consideration of alternative transmission technologies not only in

interconnection and transmission planning but also in market operations upon an interconnection customer's request.³⁰⁰⁰

1577. Enel claims that interconnection customer interconnection facilities are underutilized and could be networked into the transmission system to mitigate transmission constraints and to increase system reliability.³⁰⁰¹ Enel suggests that the Commission add language to the *pro forma* LGIA that allows interconnection facilities to convert to distribution facilities or regional transmission facilities.

iii. Commission Determination

1578. We adopt, with modifications, the proposed revisions to section 7.3 of the *pro forma* LGIP, and sections 3.3.6 and 3.4.10 of the *pro forma* SGIP. We modify the NOPR proposal to require transmission providers to evaluate the following enumerated list of alternative transmission technologies: static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. We modify proposed *pro forma* LGIP section 7.3 to require transmission providers to evaluate the list of alternative transmission technologies enumerated in this final rule during the cluster study, including any restudies, of the generator interconnection process in all instances (*i.e.*, for all interconnection customers in a cluster), without the need for a request from an interconnection customer. We require transmission providers to evaluate each alternative transmission technology listed in *pro forma* LGIP section 7.3 and to determine, in the transmission provider's sole discretion, whether it should be used, consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements. Finally, we require transmission providers to include, in the *pro forma* LGIP cluster study report, an explanation of the results of the evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade.

1579. We modify the enumerated list of alternative transmission technologies from the NOPR proposal to: (1) retain synchronous, static VAR compensators, advanced power flow control, and transmission switching in the list; (2)

add synchronous condensers, voltage source converters, advanced conductors, and tower lifting to the list; and (3) remove dynamic line ratings from the list. Generally, we find that these enumerated alternative transmission technologies are those with the most potential to be useful to reduce interconnection costs by providing lower cost network upgrades to interconnect new generating facilities and, thus, we require transmission providers to evaluate these technologies in the interconnection process for their feasibility, cost, and time savings potential.

1580. We also adopt, with modifications, the proposed revisions to sections 3.3.6 and 3.4.10 of the *pro forma* SGIP. Consistent with the *pro forma* LGIP requirement, we require transmission providers to evaluate the enumerated alternative transmission technologies in all instances, without the need for a request from an interconnection customer. We modify the proposal to require such evaluations to occur during the *pro forma* SGIP feasibility study and system impact study of the generator interconnection process, as opposed to in the *pro forma* SGIP system impact study and facilities study. We find that it is appropriate to modify the proposal so that these evaluations occur during the relevant *pro forma* SGIP studies where network upgrades are identified, consistent with the *pro forma* LGIP requirement. We require transmission providers to evaluate each alternative transmission technology listed in *pro forma* SGIP sections 3.3.6 and 3.4.10 and determine, in the transmission provider's sole discretion, whether it should be used, consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements.

1581. Finally, we require transmission providers to include, in the feasibility study report and system impact study report, an explanation of the results of the evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade. We note that this reform is one of the few reforms in this final rule that applies to small generating facilities, in addition to large generating facilities. As described below, we find that the enumerated alternative transmission technologies that we are requiring transmission providers to evaluate in their interconnection studies are appropriate for evaluation in the *pro forma* SGIP context because they are scalable, and we find that the enumerated alternative transmission

technologies have the potential to provide similar benefits in the context of both small and large generating facilities, including cost and time savings. As such, we adopt, with modifications, the proposed revisions to require transmission providers to evaluate the enumerated alternative transmission technologies in all instances in both the *pro forma* LGIP and *pro forma* SGIP.

1582. This final rule does not create a presumption in favor of substituting alternative transmission technologies for necessary traditional network upgrades, either categorically or in specific cases.³⁰⁰² This final rule is agnostic as to whether, in a specific case, an alternative transmission technology is an acceptable alternative to a traditional network upgrade,³⁰⁰³ "that would allow the interconnection customer to flow the output of its generating facility onto the transmission provider's transmission system in a safe and reliable manner."³⁰⁰⁴ The determination in each specific case whether to require a traditional network upgrade or an alternative transmission

³⁰⁰² See PJM Initial Comments at 68 ("PJM therefore cautions the Commission not to conflate the operational benefits of alternative transmission technologies . . . with the need to address significant capacity enhancement needs (short and long-term) or long-range transmission needs under rapid growth or changing resource mix scenarios."); MISO Initial Comments at 120 ("However, the Commission fails to recognize that these technologies may be evaluated in the generator interconnection process already but may nonetheless not be adopted as they are not the appropriate solution to a Transmission Issue related to an interconnection.");

³⁰⁰³ See MISO Initial Comments at 121–22 ("Further, although these technologies may be evaluated, the technologies identified by the Commission still may not provide the appropriate solution from a planning perspective.[] Many of the technologies identified are appropriately considered as operational tools or short-term solutions but are not necessarily appropriate for planning to support a particular generator interconnection.");

³⁰⁰⁴ See Order No. 2003, 104 FERC ¶ 61,103 at P 767 ("Both Energy Resource Interconnection Service and Network Resource Interconnection Service provide for the construction of Network Upgrades that would allow the Interconnection Customer to flow the output of its Generating Facility onto the Transmission Provider's Transmission System in a safe and reliable manner"); Order No. 2003–A, 106 FERC ¶ 61,220 at P 404; *pro forma* LGIA art. 9.3 ("Transmission Provider shall cause the Transmission System and the Transmission Provider's Interconnection Facilities to be operated, maintained and controlled in a safe and reliable manner and in accordance with this LGIA"); *Midwest Indep. Transmission Sys. Operator, Inc.*, 138 FERC ¶ 61,233, at P 190 (2012), *reh'g denied*, 139 FERC ¶ 61,253 (2012), *partial reh'g granted on other grounds*, 150 FERC ¶ 61,035 (2015). See also *pro forma* LGIA art. 9.4 ("Interconnection Customer shall at its own expense operate, maintain and control the Large Generating Facility and Interconnection Customer's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA").

³⁰⁰⁰ EDF Renewables Initial Comments at 14–15.

³⁰⁰¹ Enel Initial Comments at 80–81.

technology is to be made by the transmission provider, and the determination should be consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements.³⁰⁰⁵ This rule mandates a *process* of evaluation of alternatives to traditional network upgrades, not outcomes in specific cases.

1583. Based on the record, we affirm the Commission's preliminary finding in the NOPR that alternative transmission technologies have the potential to provide benefits to optimize the transmission system in specific scenarios.³⁰⁰⁶ Specifically, a number of commenters argue that selecting alternative transmission technologies as network upgrades may reduce interconnection costs by providing lower cost transmission solutions to interconnecting new generating facilities³⁰⁰⁷ and may allow for a faster interconnection by providing solutions that can be implemented more quickly.³⁰⁰⁸ Commenters also point out that alternative transmission technologies allow for better use of the existing transmission system,³⁰⁰⁹ can enhance reliability,³⁰¹⁰ and may reduce withdrawals, restudies, and overall interconnection delays.³⁰¹¹ In addition, several commenters argue that decreasing the costs of network upgrades will reduce the number of withdrawals from interconnection queues, which will ultimately create a more efficient interconnection process by reducing the number of restudies triggered by withdrawals.³⁰¹²

³⁰⁰⁵ See MISO Initial Comments at 123 ("Additionally, as noted by the Commission in the proposed reform, although alternative transmission technologies may be useful tools for operations, relying on these tools for planning for interconnection may not be consistent with 'good utility practice' and 'applicable regulatory standards.'").

Furthermore, commenters argue that alternative transmission technologies offer additional value because they are scalable and modular to address evolving needs and can be redeployed as those needs continue to change.³⁰¹³ We find that failing to evaluate the enumerated alternative transmission technologies renders Commission-jurisdictional rates unjust and unreasonable and fails to ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner.³⁰¹⁴

1584. However, as stated above,³⁰¹⁵ this final rule mandates a process of evaluation of alternative transmission technologies, not outcomes in specific cases, and does not create a presumption in favor of using an alternative transmission technology as a substitute for a traditional network upgrade deemed necessary in a specific case. Rather, under the approach adopted here, in all cases, the transmission provider is required only to evaluate the use of alternative transmission technologies as network upgrades consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements.³⁰¹⁶ We recognize that, after the transmission provider evaluates the enumerated alternative transmission technologies, the transmission provider, in its sole discretion, may still decide to remedy an identified reliability problem with a traditional network upgrade.

1585. We modify the proposed requirement that transmission providers evaluate the enumerated alternative transmission technologies only at the request of the interconnection customer. Instead, we require transmission providers to evaluate the enumerated alternative transmission technologies in all instances, without a request from an interconnection customer. We find that this approach both ensures that the enumerated alternative transmission technologies are considered in the interconnection process and avoids introducing additional procedural complexity to the interconnection process. This approach, which was suggested by many commenters,³⁰¹⁷ will

provide the benefits of an evaluation of the enumerated alternative transmission technologies more broadly and consistently and in a more efficient manner. We believe that modifying the proposal addresses concerns raised by commenters about the NOPR proposal.³⁰¹⁸ More specifically, evaluating alternative transmission technologies only by request, as proposed in the NOPR, would create an overly complicated and time-consuming process under which transmission providers evaluate each alternative transmission technology for each interconnection request individually. Commenters also raise concerns about the impact on costs and timing for the entire cluster if only a portion of the cluster requests evaluation of alternative transmission technologies or if interconnection customers within the same cluster disagree about using an alternative transmission technology.³⁰¹⁹ Given these concerns, and the potential for benefits to be gained by the evaluation and use, at the transmission provider's sole discretion, of the enumerated alternative transmission technologies, we find that it would be overly burdensome and complex to require transmission providers to track and process interconnection customer-specific study requests and to resolve conflicts between interconnection customers' different study requests, at the expense of those benefits.

1586. The record before us demonstrates that the requirements we adopt today will not overly burden transmission providers.³⁰²⁰ We find that requiring transmission providers to evaluate the enumerated alternative transmission technologies in each interconnection study will not be a significant additional burden on interconnection queues for those transmission providers that already consider alternative transmission technologies in their interconnection process. Furthermore, we find that the benefits of evaluating and implementing the enumerated alternative transmission technologies outweigh the potential

burden or the potential of increased study times. As recognized by commenters and explained above, the evaluation and use, at the transmission provider's sole discretion, of the enumerated alternative transmission technologies could decrease network upgrade costs, withdrawals, and restudies, thereby increasing the efficiency of the interconnection process overall. For these reasons, we disagree with commenters that argue that requiring transmission providers to evaluate the enumerated alternative transmission technologies is contrary to the NOPR's goal of increasing the speed of interconnection queue processing.

1587. We find that, in conducting an evaluation of the enumerated alternative transmission technologies, it is appropriate for transmission providers to continue to retain discretion regarding whether to use each enumerated alternative transmission technology, consistent with the NOPR.³⁰²¹ The requirement is to *evaluate* the enumerated alternative transmission technologies in the interconnection process for feasibility, cost, and time savings and to determine whether, in the transmission provider's sole discretion, an alternative transmission technology should be used as a solution—consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements.³⁰²² The transmission provider must determine whether using any of the enumerated alternative transmission technologies is an appropriate and reliable network upgrade “that would allow the interconnection customer to flow the output of its generating facility onto the transmission provider's transmission system in a safe and reliable manner.”³⁰²³ The requirement to make

such a determination before allowing for the use of the enumerated alternative transmission technologies addresses concerns that their use may impinge on reliability, delay network upgrades instead of reducing the need for them or obviating the need for them altogether, or fail to address all transmission system issues that a traditional network upgrade would address. We recognize the need to avoid time-consuming delays and costly disputes or litigation over interconnection costs that could arise as a result of this reform.³⁰²⁴

Therefore, we find that, if a transmission provider evaluates the enumerated alternative transmission technologies as required herein and, in its sole discretion, determines not to use any enumerated alternative transmission technologies as an alternative to a traditional network upgrade, the transmission provider has complied with this final rule, including tariffs filed pursuant to this final rule.

1588. Because we modify the NOPR proposal and require transmission providers to evaluate the enumerated alternative transmission technologies in all instances, we find that the final rule will not “effectively require a whole additional set of studies for large areas of the transmission system” or exponentially increase the number of studies needed to consider the various combinations, as Indicated PJM TOs argue could occur under the NOPR proposal.³⁰²⁵ This is because transmission providers will not be evaluating the enumerated alternative transmission technologies for a subset of interconnection customers within a cluster—but rather for the entire cluster.

1589. Regarding WATT Coalition and California Public Utility Commissioner Darcie Houck's request that transmission providers abide by strict standards when studying alternative transmission technologies,³⁰²⁶ we decline to adopt any such standards in

the *pro forma* LGIP and *pro forma* SGIP governing the evaluation of alternative transmission technologies. We find that it is appropriate to continue to rely on transmission providers to use good utility practice, applicable reliability standards, and other applicable regulatory requirements, in their evaluations of alternative transmission technologies, including the enumerated list, because the specific evaluation may depend on the transmission provider's individual transmission system, cluster makeup, and other factors. Similarly, regarding National Grid's concern that studying every potential alternative transmission technology for every interconnection request could cause transmission providers to be penalized for not meeting study deadlines,³⁰²⁷ the final rule does not require the study of all technologies considered alternative transmission technologies but rather the evaluation of the enumerated alternative transmission technologies. Further, we find that the transmission provider—consistent with good utility practice, applicable reliability standards, and other applicable regulatory requirements—retains the sole discretion to determine whether a particular technology in the enumerated list of alternative transmission technologies is appropriate and reliable as a network upgrade, or not, for a given cluster.

1590. We also believe that the requirement that transmission providers evaluate the enumerated alternative transmission technologies for an entire cluster—rather than on an individual interconnection customer-request basis—and the modifications to the enumerated list of alternative transmission technologies (as discussed below) will ease the burden on transmission providers, thereby lessening the risk that they are unable to complete studies by the required deadlines. We note that we are not dictating how a transmission provider must evaluate each enumerated alternative transmission technology on the list in each instance; we recognize that in some cases transmission providers may be able to rapidly determine if a certain enumerated alternative transmission technology is inappropriate for further study. In response to Invenergy's request that transmission providers should provide detailed evaluation reports on why an alternative transmission technology was not selected, transmission providers are required to include an explanation of the results of the evaluation of the required alternative transmission

³⁰²¹ NOPR, 179 FERC ¶ 61,194 at P 299.

³⁰²² See MISO Initial Comments at 122–123 (“Additionally, as noted by the Commission in the proposed reform, although alternative transmission technologies may be useful tools for operations, relying on these tools for planning for interconnection may not be consistent with ‘good utility practice’ and ‘applicable regulatory standards.’”).

³⁰²⁷ National Grid Initial Comments at 42–43.

technologies for feasibility, cost, and time savings as an alternative to a traditional network upgrade in the applicable study report. However, we do not direct any additional detailed requirements related to this reporting requirement because we find they are not needed or appropriate. We find the required explanation of the results of the transmission provider's evaluation included in the applicable study report provides sufficient transparency without placing a further burden on transmission providers that would delay the processing of interconnection requests.

1591. Because we modify the NOPR proposal to require transmission providers to evaluate all the enumerated alternative transmission technologies in all instances, *i.e.*, regardless of an interconnection customer requesting such an evaluation, we decline to adopt commenters' request to require transmission providers to evaluate the required alternative transmission technologies by default with an "opt-out" option for interconnection customers. We are not persuaded that there are benefits to including an "opt-out" option in the requirement, and we find it would be overly burdensome and complex to require transmission providers to track and process interconnection customers' requests to "opt-out" of the evaluation of certain alternative transmission technologies. Further, an "opt-out" would run contrary to our goal to have transmission providers evaluate the enumerated technologies in order to achieve beneficial outcomes like decreasing network upgrade costs, withdrawals, and restudies, thereby increasing the efficiency of the interconnection process overall.

1592. As discussed above, the enumerated alternative transmission technologies that transmission providers must evaluate in interconnection studies are: static synchronous compensators, static VAR compensators, synchronous condensers, advanced power flow control, transmission switching, voltage source converters, advanced conductors, and tower lifting. We discuss each technology in turn.

1593. Regarding synchronous and static VAR compensators, we find that, in providing reactive power to the transmission system, such devices could reduce interconnection costs by providing the voltage support where needed for the new generation facility being interconnected to operate reliably, rather than building a traditional network upgrade to resolve the voltage support issues. This potentially results in lower cost network upgrades to

interconnect new generating facilities. ISO-NE states that it already evaluates static synchronous compensators when evaluating interconnection requests.³⁰²⁸ Similarly, as Indicated PJM TOs attest, PJM already considers static synchronous compensators in its interconnection and transmission planning processes.³⁰²⁹ Accordingly, we find that synchronous and static VAR compensators are appropriately included in the list of alternative transmission technologies enumerated in this final rule that transmission providers must evaluate in the interconnection process.

1594. Regarding advanced power flow controls, we find that these devices allow power to be pushed and pulled to alternate lines with spare capacity leading to maximum utilization of transmission capacity and mitigation of overloads. Advanced power flow control devices can be scaled back as needed, providing an advantage over new lines or reconductors.³⁰³⁰ PacifiCorp attests that it often considers the use of advanced power flow control devices as potential alternatives to standard system infrastructure, and Indicated PJM TOs note that PJM and PJM transmission owners already consider the appropriateness of power flow control devices when conducting interconnection studies.³⁰³¹ As discussed above, our decision to modify the NOPR proposal and require transmission providers to evaluate the enumerated alternative transmission technologies in all instances addresses Indicated PJM TOs' statement that evaluation of advanced power flow control devices in the interconnection process would significantly increase the complexity of interconnection studies and thus could cause delays in their completion.³⁰³² We acknowledge the possibility that use of advanced power flow control devices can have impacts on line impedance which may result in issues in other parts of the system, as suggested by MISO. However, the requirement of this Final rule is merely that the transmission provider evaluate each alternative transmission technology, not that they deploy them in all circumstances. We appreciate, and expect, that if a transmission provider's evaluation demonstrates that deployment of advanced power flow control devices would create issues on the transmission provider's system as

described by MISO, it will not select that advanced power flow control as the network upgrade.³⁰³³

1595. We also retain transmission switching on the enumerated list of alternative technologies in this final rule. Transmission switching can be used to route energy around areas with high congestion and improve the overall transfer capability of the system, potentially resulting in lower network upgrade costs. In regard to PacifiCorp's argument that transmission switching is a complex process that can be implemented only under very particular factual scenarios and system conditions, transmission providers are already required to evaluate the impact of the proposed interconnection on the reliability of the transmission system³⁰³⁴ and thus should understand whether the factual scenarios and system conditions exist that would make a transmission switching solution appropriate. In response to Tri-State's question about whether transmission switching is meant to be a remedial action scheme or to create permanent normally open points on the system, this final rule does not prescribe how transmission providers deploy any of the enumerated alternative transmission technologies on their systems if they determine to use them. To Tri-State's concern that transmission switching solutions may be "problematic in highly interconnected systems not operating in an RTO/ISO," we reiterate that transmission providers retain the discretion to determine whether to deploy any of the enumerated alternative transmission technologies, including transmission switching solutions.

1596. We find that the record supports including synchronous condensers and voltage source converters to the list because these technologies similarly may reduce interconnection costs in situations where voltage support is a constraint and where a new or modified transmission line with these technologies may provide a lower cost network upgrade option to interconnect new generating facilities. Specifically, ISO-NE states that it already evaluates synchronous condensers when evaluating interconnection requests,³⁰³⁵ and NARUC and Xcel urge the Commission to include evaluation of synchronous condensers and voltage

³⁰³⁵ ISO-NE Initial Comments at 41.

source converters in the interconnection process.³⁰³⁶

1597. We also add advanced conductors and tower lifting to the list of alternative transmission technologies enumerated in this final rule. We note the comments arguing that advanced conductors may be beneficial as network upgrades.³⁰³⁷ ACORE explains that deploying advanced conductors can significantly increase transmission capacity and allow for the interconnection of new generating facilities without the construction of new network upgrades.³⁰³⁸ Similarly, we find that tower lifting has the potential to increase transmission line ratings by providing additional clearance from the ground.³⁰³⁹ By increasing transmission line ratings, there will be more “headroom” on the system to address normal and contingency conditions identified in interconnection studies, and likely a reduced need for network upgrades.³⁰⁴⁰ Given these potential benefits to interconnection customers, we require transmission providers to evaluate advanced conductors and tower lifting in the interconnection process.

1598. We remove dynamic line ratings from the list of enumerated alternative transmission technologies proposed in the NOPR. We agree with commenters that the technology may be less beneficial in the interconnection context than in the transmission operations and planning context because, for example, dynamic line ratings’ ability to increase the available interconnection service depends on favorable weather and congestion parameters.³⁰⁴¹ That is, while dynamic line ratings may relieve

congestion to increase available interconnection service temporarily or in the short-term, they may not be an adequate substitute for building interconnection facilities and/or traditional network upgrades identified through the interconnection study process that are needed to reliably interconnect a generating facility to the transmission system during all hours.

1599. We decline to add storage that performs a transmission function to the list of alternative transmission technologies enumerated in this final rule. The Commission has determined that the evaluation of whether a storage resource performs a transmission function requires a case-by-case analysis of either how a particular storage resource would be operated or the requirements set forth in a tariff governing selection of such storage resources. For example, in approving SPP’s proposal to establish a framework under which an electric storage resource may be considered a transmission asset (thereby making the selected storage resources eligible for cost-based rate recovery through transmission rates), the Commission identified five considerations that, together, ensure that a selected storage resource will serve a transmission function.³⁰⁴²

1600. We clarify that transmission providers are not precluded from studying a technology that is not included in the enumerated list of alternative transmission technologies. Under the modified requirement, transmission providers must evaluate the enumerated alternative transmission technologies in all instances, but we are not precluding a transmission provider from studying or evaluating any other technology, including those such as dynamic line ratings that we have determined not to add to the list of technologies enumerated in this final rule. We acknowledge that certain transmission providers already evaluate in certain studies transmission technologies not included in the final rule list.³⁰⁴³ In addition, we clarify that, with respect to this final rule determination, transmission providers are not required to propose and justify on compliance any technology it studies in the interconnection process beyond those required in this final rule.

1601. In the NOPR, the Commission generally proposed a method to allocate the costs of cluster studies and the costs of network upgrades within a cluster

through the interconnection study process.³⁰⁴⁴ With respect to study costs, the Commission sought comment on how costs incurred for evaluating alternative transmission technology study requests would be allocated among interconnection customers in the cluster under a NOPR proposal in which interconnection customers would identify and request particular technologies to be studied.³⁰⁴⁵ Given our modification to the NOPR proposal to require transmission providers to evaluate the enumerated alternative transmission technologies in the *pro forma* LGIP cluster study on behalf of the whole cluster, rather than upon an individual customer’s request, we find that it is not necessary to consider alternative cost allocation methods for cluster study costs and network upgrade costs associated with the enumerated alternative transmission technologies. Specifically, we clarify that the allocation of cluster study costs for, and substation and system network upgrades associated with, the enumerated alternative transmission technologies must be consistent with the allocation of costs for cluster studies and associated substation and system network upgrades for any other network upgrades because the enumerated alternative transmission technologies located on the high-side of the point of interconnection would fall within the definition of substation and system network upgrades,³⁰⁴⁶ and they would be adopted only if they resolve system reliability issues triggered by an interconnection request. In other words, the enumerated alternative transmission technologies must be included among the set of options transmission providers consider when studying a cluster and any implemented enumerated alternative transmission technologies must receive the same cost treatment as any other option.

1602. Accordingly, the cost allocation concerns raised by several commenters in response to the NOPR proposal are now unfounded.³⁰⁴⁷ Regarding MISO’s concern that some alternative transmission technologies may shift the burden of system impacts to other

³⁰³⁶ NARUC Initial Comments at 39; Xcel Initial Comments at 47.

³⁰³⁷ ACORE Initial Comments at 6–7; CTC Global Initial Comments at 6–9; VEIR Initial Comments at 5–6.

³⁰³⁸ ACORE Initial Comments at 7 (citing Jay Caspary and Jesse Schneider, Grid Strategies, LLC, *Opportunities to Use Advanced Conductors to Accelerate Grid Decarbonization*, at 2 (Feb. 2022), <https://acore.org/wp-content/uploads/2022/03/AdvancedConductorstoAccelerateGridDecarbonization.pdf>).

³⁰³⁹ See Ampjack Initial Comments at 4. As with other network upgrades, we note that tower lifting may require a modification to a certificate of public convenience and necessity (CPCN) or similar permit issued by a state utility regulator, which may include tower height limits or other physical restrictions. To the extent the transmission provider considers potential delays or the possibility of not receiving such a state CPCN modification when evaluating potential network upgrades, it should include a similar consideration in its evaluation of alternative transmission technologies.

³⁰⁴⁶ Network Upgrades are “the additions, modifications, and upgrades to the Transmission Provider’s Transmission System required at or beyond the point at which the Interconnection Facilities connect to the Transmission Provider’s Transmission System to accommodate the interconnection of the Large Generating Facility to the Transmission Provider’s Transmission System.” *Pro forma* LGIP section 1 (Definitions).

³⁰⁴⁷ AEP Initial Comments at 52–53; Ameren Initial Comments at 32; NextEra Initial Comments at 38; and Tri-State Initial Comments at 23.

parties,³⁰⁴⁸ we find that the possibility of this burden shifting is minimal because the revised *pro forma* LGIP, as adopted in this final rule, requires transmission providers to evaluate the enumerated alternative transmission technologies on a cluster-wide basis for feasibility, cost, and time savings. We recognize that, after the transmission provider evaluates the enumerated alternative transmission technologies, the transmission provider, in its sole discretion, may still decide to remedy an identified reliability problem with a traditional network upgrade.

1603. Regarding cost treatment for the enumerated alternative transmission technologies in the *pro forma* SGIP, the Commission did not propose to require, and this final rule does not adopt, cluster studies for small generator interconnection requests. Accordingly, the study process for small generating facilities in the *pro forma* SGIP remains a serial process and costs for evaluating the enumerated alternative transmission technologies must be allocated to the small generator interconnection request being studied. Likewise, the costs for any implemented enumerated alternative transmission technologies must be allocated to a small generator interconnection customer consistent with the allocation of any other network upgrade costs in the small generator interconnection process.

1604. As explained in section III.A.3 of this final rule, we are not requiring transmission providers to allocate study costs on a pro rata basis, as Fervo Energy requests. Because this final rule does not adopt the NOPR proposal for interconnection customers to request the study of particular technologies, we need not address the arguments raised by NARUC and Indicated PJM TOs related to the study costs associated with that unadopted proposal.

1605. The Commission sought comment on whether transmission providers should be required to evaluate whether alternative transmission technologies can be deployed on a temporary basis to provide provisional interconnection service. We are not persuaded by arguments in favor of such a requirement. While we acknowledge commenters' arguments that alternative transmission technologies could serve as a temporary solution to reduce the overall costs and delays of generator interconnection, we agree with MISO that mandatory evaluation of alternative transmission technologies for provisional interconnection service could hinder ensuring that interconnection customers are able to

interconnect in a reliable, efficient, transparent, and timely manner by adding burden and delay.³⁰⁴⁹

1606. The Commission also sought comment on whether alternative transmission technologies as supplements for, or in the place of, traditional network upgrades was sufficient to guarantee a level of service to accommodate an interconnection customer seeking NRIS, or whether such a network upgrade could only relate to ERIS.³⁰⁵⁰ We agree with commenters that the enumerated alternative transmission technologies may enable NRIS, but such a determination will be dependent on the analysis by the particular transmission provider and the particular technology under evaluation. We decline to adopt Clean Energy Association's proposal that transmission providers be required to post additional information beyond the explanation of the results of the evaluation of each alternative transmission technology. As discussed above, transmission providers must include, in the applicable study report, an explanation of the results of the evaluation of the enumerated alternative transmission technologies for feasibility, cost, and time savings.

1607. We find that the following commenters' proposals are outside the scope of this proceeding and, therefore, we do not address the substance: (1) requiring transmission providers to consider alternative transmission technologies in market operations at the request of the interconnection customer;³⁰⁵¹ (2) adding language to the *pro forma* LGIA that would allow interconnection facilities to convert to distribution or regional transmission facilities;³⁰⁵² and (3) requiring transmission providers to study and implement advanced transmission technologies when network upgrades are needed but cannot be completed within three years of being identified.³⁰⁵³

1608. Because we adopt a requirement for transmission providers to evaluate the enumerated alternative transmission technologies, rather than at the request of the interconnection customer, we do not address comments regarding the following issues, which become moot by this modification to the NOPR proposal: the timing of submission of the alternative transmission technology evaluation request;³⁰⁵⁴ the burden of

proof for a submission of an alternative transmission technology evaluation request;³⁰⁵⁵ whether there should be a limit on alternative transmission technology evaluation requests;³⁰⁵⁶ whether transmission providers and transmission owners should be able to reject alternative transmission technology evaluation requests;³⁰⁵⁷ whether an interconnection customer can request evaluation of an alternative transmission technology not on the required list;³⁰⁵⁸ and whether transmission providers need to perform a separate study for each requested alternative transmission technology.³⁰⁵⁹

1609. We do not find compelling commenters' request that the Commission not require the evaluation of alternative transmission technologies while other proceedings concerning grid enhancing technologies are pending.³⁰⁶⁰ The Commission proposed and received extensive comment on evaluation of alternative transmission technologies in the interconnection process. Based on the record, we find that it is appropriate for the Commission to adopt a modified NOPR proposal to require transmission providers to evaluate the required list of enumerated alternative transmission technologies.

b. Annual Informational Report

i. NOPR Proposal

1610. In the NOPR, in order to add transparency to the evaluation process and deployment of alternative transmission technologies in generator interconnection processes, the Commission proposed to revise the *pro forma* LGIP and *pro forma* SGIP to require transmission providers to submit an annual informational report to the Commission that details whether, and if so how, advanced power flow control, transmission switching, dynamic line ratings, static synchronous compensators, and static VAR compensators were considered in interconnection requests over the last year.³⁰⁶¹ The Commission proposed to create a new docket to collect all annual informational report filings, and proposed that any informational reports that transmission providers file at the Commission would be for informational

purposes and would neither be formally noticed nor require additional action by the Commission. The Commission sought comment on: (1) whether to require transmission providers to explain why an alternative transmission technology that was considered was not deployed; and (2) the scope of the annual informational report, and whether additional information should be included.

ii. Comments

(a) Comments in Support

1611. A broad group of commenters support the NOPR proposal.³⁰⁶² Many commenters agree that the reports would be beneficial to interconnection customers because they would provide insight as to why alternative transmission technologies were or were not deployed.³⁰⁶³ Some commenters contend that the annual informational report will allow interconnection customers to better tailor their requests to consider alternative transmission technologies, such that those requests are most likely to be successful.³⁰⁶⁴ Similarly, commenters argue that the annual informational reports would allow sharing of best practices in the industry on the use of these technologies and their evaluation, and would lessen concerns over the potential risks of new technologies by socializing examples of their consideration and implementation.³⁰⁶⁵ ELCON and Fervo Energy assert that the annual informational reports will provide interconnection customers with additional information to ascertain the feasibility of certain configurations and interconnection points.³⁰⁶⁶

1612. Additionally, Enel states that transmission providers can be resistant to using advanced transmission technologies, and the annual informational report will allow the Commission to evaluate whether a transmission provider is artificially restricting the use of advanced transmission technologies, similar to the study completion metrics required by

the Commission in Order No. 845.³⁰⁶⁷ Some commenters argue that if the Commission observes that transmission providers are routinely citing certain technical or other reasons for not deploying certain technologies, the annual informational report will provide a record from which it can initiate action in a separate proceeding to remedy the issue.³⁰⁶⁸

1613. Several commenters argue in support of the annual informational report to promote transparency between market participants, interconnection customers, and regulators.³⁰⁶⁹ Lastly, commenters argue that the additional work and obligation for the annual informational report would be an effective use of limited resources to benefit the efficiency, transparency, and modernization of the interconnection process.³⁰⁷⁰

(b) Comments in Opposition

1614. Some commenters oppose the proposal on the basis that it would be too burdensome.³⁰⁷¹ Xcel Energy does not believe annual informational reports are necessary and requests that any informational reporting requirements be limited to decrease the burden on the engineers that need to focus on performing the interconnection studies.³⁰⁷² PacifiCorp states that imposing an additional reporting obligation on transmission providers would not only be duplicative, but it would add to an already significant list of administrative tasks that transmission providers must undertake to comply with existing, and proposed, interconnection obligations, without clear benefit.³⁰⁷³ NYTOs believe that preparing and submitting an annual informational report with detailed analysis of the consideration of alternative transmission technologies would require dedicated resources on the part of the transmission provider.³⁰⁷⁴ MISO asserts that the annual informational report at this time may not be useful, especially in the already transparent RTO/ISO context, and could divert scarce staff resources from the work of moving forward in the

study and agreements process for implementing much-needed new generation.³⁰⁷⁵ Similarly, Indicated PJM TOs state that PJM currently maintains a publicly available website that details all the types of network upgrades necessary to support interconnections, including the types of devices identified here by the Commission.³⁰⁷⁶ CAISO also opposes the proposal because CAISO believes that it is contrary to the goal of reducing interconnection queue backlogs by adding more studies and reporting requirements onto transmission provider staff.³⁰⁷⁷

1615. Idaho Power believes that the report may simply result in more disputes over why one entity allows a particular technology, while another one does not.³⁰⁷⁸

1616. CAISO and MISO also argue that there is limited value to interconnection reports.³⁰⁷⁹ CAISO argues that in this NOPR, the Commission recognizes that imposing reporting requirements in Order No. 845 failed to incentivize transmission providers to meet their study obligations, and thus the Commission should not repeat that mistake here by burdening transmission provider staff with yet another reporting requirement.³⁰⁸⁰ Similarly, MISO points out that neither the Commission nor any commenter used the interconnection queue reports required by Order No. 845 to discuss the topic of study delays.³⁰⁸¹

(c) Comments on Specific Proposal

1617. Several commenters emphasize the importance of transparency when an alternative transmission technology is not selected.³⁰⁸² ENGIE asks the Commission to require transmission providers to provide publicly available information addressing why or why not an alternative transmission technology was adopted or rejected in a specific case.³⁰⁸³ CTC Global believes that transmission providers should be required to include explanations regarding the alternative transmission technologies considered, deployed, or rejected in the annual reports.³⁰⁸⁴ CTC

Global requests that the Commission also mandate reporting on the energy efficiency of the components used in various network upgrades and through the interconnection process.³⁰⁸⁵

Eversource suggests that, in addition to the five technologies listed in the NOPR, transmission providers be allowed to provide reporting on any other grid enhancing technology or alternative transmission technology that was considered during the prior year.³⁰⁸⁶

1618. In contrast, Ameren argues that, if the Commission imposes this reporting burden on transmission providers, it should not further exacerbate the burden by requiring the transmission provider to also report explanations of common obstacles to the use of these alternative transmission technologies.³⁰⁸⁷ Instead, Ameren states that the Commission should encourage interconnection customers and transmission providers to share with Commission staff through a technical conference or other forum the types of technologies being considered and whether adopted. Ameren suggests that this type of information gathering should be undertaken before the Commission imposes specific reforms or reporting requirements.

iii. Commission Determination

1619. We decline to adopt the NOPR proposal to require transmission providers to submit an annual informational report to the Commission that details whether, and if so how, the list of alternative transmission technologies were considered in interconnection studies over the last year. We are persuaded by commenters' arguments that the time and resources required to produce the annual informational report may hinder the ability to increase the speed of interconnection queue processing.³⁰⁸⁸ We find that these challenges outweigh the incremental increased transparency to the evaluation process and deployment of alternative transmission technologies in generator interconnection processes, particularly in light of additional reporting requirements in other parts of this final rule.

1620. Specifically, the annual informational report would be duplicative of the requirement in section 7.3 of the *pro forma* LGIP and sections 3.3.6 and 3.4.10 of the *pro*

forma SGIP that we adopt in this final rule. Under these provisions, transmission providers must explain how the required alternative transmission technologies were evaluated for feasibility, cost, and time savings in each *pro forma* LGIP cluster study report or *pro forma* SGIP feasibility study and system impact study reports. The description of the results of the evaluation required in these reports should provide transparency into the evaluation process and deployment of alternative transmission technologies in generator interconnection processes. In response to Enel's argument that an annual informational report will allow the Commission to evaluate if a transmission provider is artificially restricting the use of alternative transmission technologies, we find that this concern is adequately addressed through the modified requirement that transmission providers evaluate all required alternative transmission technologies by default in all studies and restudies.

3. Modeling and Ride-Through Requirements for Non-Synchronous Generating Facilities

a. Modeling Requirements

i. Need for Reform and NOPR Proposal

1621. In the NOPR, the Commission preliminarily found that the *pro forma* LGIP and *pro forma* SGIP may be unduly discriminatory or preferential to the extent that they do not require non-synchronous generating facilities to provide accurate and validated models to transmission providers during the generator interconnection process.³⁰⁸⁹ Specifically, the Commission noted that, while Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP require all generating facilities to submit certain types of information, the information required is only sufficient to accurately model the behavior of synchronous generating facilities. The Commission stated its concern that, without a reform to require interconnection customers developing non-synchronous generating facilities³⁰⁹⁰ to provide sufficiently accurate and validated models, interconnection studies may not identify the appropriate interconnection

facilities and network upgrades, which could lead to unjust and unreasonable rates for interconnection service.³⁰⁹¹

1622. The Commission proposed to revise Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP to ensure that all interconnection customers requesting to interconnect a non-synchronous generating facility must provide the transmission provider with the models needed for accurate interconnection studies.³⁰⁹² Pursuant to this proposal, interconnection customers requesting to interconnect a non-synchronous generating facility would be required to provide models that contain the details necessary to accurately model the performance of the generating facility in response to system disturbances in accordance with the control system settings that would be used by the interconnection customer during the commissioning and operation of the generating facility.

1623. Specifically, the Commission proposed to require each interconnection customer requesting to interconnect a non-synchronous generating facility to submit to the transmission provider: (1) a validated, user-defined root mean square (RMS) positive sequence dynamic model; (2) an appropriately parameterized, generic library RMS positive sequence dynamic model, including a model block diagram of the inverter control system and plant control system, that corresponds to a model listed in a new table of acceptable models or a model otherwise approved by WECC; and (3) a validated EMT model, if the transmission provider performs an EMT study as part of the interconnection study process.³⁰⁹³

1624. With regard to the validated, user-defined RMS positive sequence dynamic model, the Commission proposed to define a user-defined model as any set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly software-based and represents the entities' control strategies but does not necessarily correspond to any particular generic library model.³⁰⁹⁴ The Commission explained that in order for this model to be "validated," it must be confirmed that the equipment behavior is consistent with the model behavior, and described how the interconnection customer may make such confirmation.

³⁰⁸⁹ NOPR, 179 FERC ¶ 61,194 at P 318.

³⁰⁹⁰ Non-synchronous generating facilities are "connected to the bulk power system through power electronics, but do not produce power at system frequency (60 Hz)." They "do not operate in the same way as traditional generators and respond differently to network disturbances." *Reactive Power Requirements for Non-Synchronous Generation*, Order No. 827, 81 FR 40793 (June 23, 2016), 155 FERC ¶ 61,277, at P 10 n.24 (2016).

³⁰⁹¹ NOPR, 179 FERC ¶ 61,194 at P 319.

³⁰⁹² *Id.* P 328.

³⁰⁹³ *Id.* P 329.

³⁰⁹⁴ *Id.* P 330.

³⁰⁸⁵ *Id.* at 14.

³⁰⁸⁶ Eversource Initial Comments at 37–38.

³⁰⁸⁷ Ameren Initial Comments at 33.

³⁰⁸⁸ MISO Initial Comments at 125; MISO Reply Comments at 18; NYTOs Initial Comments at 33; PacifiCorp Initial Comments at 44; Xcel Initial Comments at 48.

1625. With regard to the appropriately parameterized, generic library RMS positive sequence dynamic model, the Commission proposed a table of acceptable generic library models based on the current WECC list of approved dynamic models for renewable energy generating facilities.³⁰⁹⁵ The Commission noted that WECC's list of approved dynamic models has also been integrated into NERC reliability guidelines and that these models represent the current state of the art with regard to dynamic modeling requirements for non-synchronous generating facilities.

1626. The Commission stated that it believed that these models represent the full spectrum of modeling data that transmission providers need to perform accurate interconnection studies for non-synchronous generating facilities.³⁰⁹⁶ The Commission also recognized that the modeling data proposed to be required from non-synchronous generating facilities may be more voluminous than that required of synchronous generating facilities; however, the Commission noted that this data submission requirement is intended to result in a comparable level of modeling accuracy among all generating facilities.

1627. The Commission stated that an interconnection customer's failure to provide the above information within the deadlines established in the *pro forma* LGIP and *pro forma* SGIP would make the interconnection request incomplete and would be considered invalid in accordance with section 3.4.3 of the *pro forma* LGIP and section 1.3 of the *pro forma* SGIP.³⁰⁹⁷ Pursuant to those provisions, if the interconnection customer does not cure the deficiency within the 10-business day cure period, the interconnection request will be considered withdrawn pursuant to section 3.7 of the *pro forma* LGIP and section 1.3 of the *pro forma* SGIP. The Commission also proposed to require that any proposed modification of the interconnection request be accompanied by updated models of the proposed generating facility.³⁰⁹⁸

1628. The Commission sought comment on: (1) whether the proposed reforms are necessary and/or sufficient to ensure that interconnection customers proposing non-synchronous generating facilities would submit models during the generator interconnection process that accurately reflect the behavior of their proposed

generating facility; (2) whether the inclusion of the table based on NERC guidelines that cite WECC-approved models is appropriate; and (3) if not, how the Commission could require interconnection customers to submit models that are widely known in industry to be accurate without listing specific models.³⁰⁹⁹

ii. Comments

(a) Comments in Support

1629. Many commenters support the NOPR proposal.³¹⁰⁰ SPP states that it has the highest penetration of IBRs³¹⁰¹ of any RTO/ISO, so it is particularly sensitive to potential harm that could occur if those resources fail to perform as expected.³¹⁰² ISO-NE argues that data issues are one of the largest causes of study delays in its region, and requiring data accuracy will improve study processing time and support first-ready, first-served reforms.³¹⁰³ NERC contends that the existing interconnection process does not provide sufficiently accurate and validated models for IBRs.³¹⁰⁴

(b) Comments in Opposition

1630. Several commenters oppose the NOPR proposal in its entirety,³¹⁰⁵ while additional commenters express concerns about specific aspects. Pine Gate asserts that the Commission should not incorporate requirements into the *pro forma* LGIP and *pro forma* SGIP that are already being addressed by NERC

through the standards development process.³¹⁰⁶ Pine Gate states that the *pro forma* LGIA and *pro forma* SGIA require interconnection customers to remain compliant with the applicable reliability standards, and recommends that the Commission address these modeling and performance reforms under the generic statement regarding compliance with applicable NERC Reliability Standards or by adding a similar statement in each applicable section of article 9 in the *pro forma* LGIA.³¹⁰⁷

1631. NYISO argues that the final rule should not include a modeling requirement because it would be inefficient and necessitate a rebuild of NYISO's study base case.³¹⁰⁸ NYISO explains that, if the NOPR proposal is adopted, its interconnection study analysis would take much longer to ensure accurate results, significantly slowing the interconnection process.

1632. ENGIE argues that the required models in the NOPR proposal are very detailed, there are few consultants that perform this modeling, and the value obtained is low because the study likely will become outdated as project components are substituted for more advanced technologies. ENGIE recommends requiring a power flow and dynamic model, which it contends provides sufficient information on reliability impacts.³¹⁰⁹

(c) Comments on Specific Proposal

(1) Cure Period for Modeling Information

1633. AES asserts that a 10-day cure period for interconnection customers to correct or provide additional information on models for non-synchronous generating facilities is not adequate and that no less than a 20 business-day cure period is needed.³¹¹⁰

(2) Transmission Provider Requirements

1634. SEIA requests that the Commission modify the NOPR proposal to require transmission providers to make available to interconnection customers the necessary system data needed to create accurate models, provide clear modeling requirements and validation guidelines and procedures,³¹¹¹ and engage stakeholders before making any modeling changes.

³⁰⁹⁹ *Id.* P 335.

(3) Models Not Available Early in Interconnection Study Process

1635. Multiple commenters argue that accurate models for non-synchronous generating facilities may not be available early in the interconnection study process and may need to be updated during the process.³¹¹² Pine Gate and Public Interest Organizations assert that the Commission should revise the NOPR proposal to allow for later submission of such models to reduce the administrative burden on transmission providers and interconnection customers.³¹¹³

1636. SEIA requests that the Commission modify the NOPR proposal to require interconnection customers to provide all operating models within one year before the commercial operation date of the generating facility, so that the models reflect the most accurate operating information.³¹¹⁴ Clean Energy Associations assert that models requested very early in the interconnection study process, before product feature details have been finalized, may need to be updated prior to commercial operation, and argue that minor model changes should not result in excessive triggering of material modification rules.³¹¹⁵

1637. Alliant Energy and PPL state that technical information provided at the time an interconnection request is submitted can become outdated during the interconnection study process,³¹¹⁶ and Alliant Energy asserts that the Commission should therefore provide for flexibility as to when and how required information for modeling requirements is provided.³¹¹⁷ Ørsted argues that offshore wind interconnection customers may not be able to provide a validated model at the time of the interconnection request due to long lead times in generating facility development and equipment that is still being developed.³¹¹⁸

1638. EPRI suggests that an alternative approach to the NOPR proposal is to require the use of models that generally conform to the capability and

performance standards Institute of Electrical and Electronics Engineers (IEEE) Standard 2800–022 and IEEE Standard 1547–2018 during the interconnection study process, and notes that such studies are subject to further assessment once a detailed, site-specific model is available.³¹¹⁹

(4) RMS Models

1639. Several commenters request modifications to the proposed requirements for RMS models.³¹²⁰ Tesla and SEIA argue that the Commission should require transmission providers to accept user-defined library RMS positive sequence dynamics models, as these models better reflect the actual technology intended to be used by the resource, results in a much greater degree of modeling accuracy, and can help support greater penetration of renewable resources.³¹²¹ In addition, Tesla suggests that the Commission seek informational submissions from transmission providers regarding software tools and resources needed to integrate more accurate user-defined RMS modeling. Clean Energy Associations argue that the transmission provider should have discretion to require a user-defined RMS model, a generic library RMS model (with site-specific parameterization), or both, instead of always being required to collect both.³¹²² MISO encourages the Commission to require that the user-defined model be compatible with the transmission provider's software.³¹²³ Further, MISO requests that the Commission confirm that the user-defined model meets the transmission provider's MOD–032–1 requirements. Longroad Energy recommends that the Commission require NERC to improve the degree to which power flow software vendors allow accurate modeling of IBR technology before the Commission establishes modeling standards that might stifle technological improvements.³¹²⁴

1640. Other commenters express concern with the difficulties of user-defined models.³¹²⁵ Eversource requests that the Commission specify that all positive sequence models provided

must be non-proprietary and accessible to neighboring utilities, system operators, and other entities that need to access them.³¹²⁶ ISO–NE asserts that it does not accept user-defined models under its interconnection study procedures and requests that the final rule allow for a process where accurate, working, non-proprietary models are provided and screened in advance of the study process.³¹²⁷

(5) Model Validation

1641. Some commenters argue that the Commission should provide further direction regarding model validation requirements for non-synchronous generating facilities.³¹²⁸ NERC and SDG&E argue that reliability assessments indicate that model validation with actual installed equipment and a “true-up” of generator interconnection modeling would help ensure proper analysis and studies prior to commissioning.³¹²⁹ NERC recommends that the Commission enhance the interconnection process by ensuring more rigorous plant commissioning, with both the interconnection customer and the transmission provider signing off on models used in studies as compared with actual installed equipment.³¹³⁰ In addition, NERC asks the Commission to require transmission providers to conduct quality review of models before study and require interconnection customers to satisfy quality review milestones.³¹³¹

1642. Tesla argues that, in lieu of multiple attestations or test data, the Commission should develop an approach to validation that requires interconnection customers to submit “model-to-model” and “product-to-model” benchmarking data for non-synchronous generating facilities.³¹³²

1643. Clean Energy Associations assert that the Commission should add language that provides that the attestation required for model validation be the best available by the original equipment manufacturer at the time of model delivery.³¹³³ In addition, Clean Energy Associations and Ørsted argue that the Commission should define the

³¹³³ Clean Energy Associations Initial Comments at 66.

phrase “accurate and validated models.”³¹³⁴ Clean Energy Associations explain that it is common practice to submit an interconnection request with advanced, next-generation equipment that the manufacturer may still be developing, in which case the product and validated models may not be available at the time of the interconnection request, and request that the Commission allow transmission providers flexibility to accommodate such new equipment in their interconnection studies.³¹³⁵

1644. Clean Energy Associations and Ørsted assert that, if accurate and validated models require a comparison with unit level factory tests, then this may not be feasible for offshore wind farms, especially if they are connecting with HVDC transmission technology.³¹³⁶ They explain that these types of configurations are often project-specific and do not have a definition of a “validated model.” Ørsted also requests that the Commission explain why a “model block diagram of the inverter control system and plant control system” is necessary given the availability of WECC model block diagrams in simulation tools.³¹³⁷

1645. EPRI argues that the Commission should modify the language in the *pro forma* LGIA and *pro forma* SGIA to ensure that all models are validated and appropriately parameterized.³¹³⁸ EPRI contends that the NOPR proposal fails to provide adequate directions and requirements with respect to model validation, testing, verification, and conformity assessment, as required during various stages of the interconnection process. EPRI asserts that a “validated” plant model would not be available during the interconnection study stage because validation of the plant model is not possible—within reasonable efforts—until after the commissioning and commercial operation of the generating facility. EPRI states that alternatives to this would be requiring generic models that are appropriately parameterized and conform to IEEE Standard 2800–2022 requirements.

(6) Table of Acceptable RMS Models

1646. Several commenters agree that a table of acceptable RMS models based on NERC guidelines that cite WECC-

approved models is appropriate.³¹³⁹ Ameren asserts that the Commission should provide a table based on NERC guidelines that cite WECC-approved models as one but not the only example.³¹⁴⁰ Shell agrees that a table based on NERC guidelines is appropriate as long as the functionality and proprietary controls are adequately reflected (e.g., mimic the actual inverter performance of manufacturers’ models).³¹⁴¹ Shell explains that a generic model may not be able to support the operational characteristics of inverters. SPP states that, in its experience, some manufacturers do not support WECC-approved generic dynamics models and that having Commission support for more specific, detailed, and vetted modeling information requirements will be helpful to improve data quality and access.³¹⁴²

1647. R Street and EPRI offer alternatives to a table based on NERC guidelines that cite WECC-approved models.³¹⁴³ R Street argues that providing a list of models in the final rule is not prudent given the dynamic nature of the table, and that the list should instead be posted on relevant public industry websites, including those of NERC.³¹⁴⁴ EPRI states that one alternative could be to include a reference and hyperlink to the NERC and WECC-approved models lists.³¹⁴⁵ EPRI also suggests that if the Commission retains the table, it should consider revising the description of the DER_A model to add the word “aggregated” to the description and also consider adding columns with the model names from other applicable software tools.

(7) EMT Modeling

1648. NERC and EPRI support the EMT modeling proposal in the NOPR.³¹⁴⁶ NERC recommends that all non-synchronous generating facilities perform EMT models prior to interconnection for consideration by transmission operators and planners.³¹⁴⁷ NERC contends that event analysis underscores the value of EMT studies in helping manage reliability

risks of the modern transmission system.

1649. EPRI agrees that performing EMT studies should be at the discretion of the transmission provider.³¹⁴⁸ However, EPRI recommends collecting validated and appropriately parametrized EMT models during the interconnection process regardless of whether the transmission provider performs an EMT study because an EMT study may become necessary in the future, and the interconnection stage is the best time to obtain models due to the close coordination between interconnection customers, consultants, equipment manufacturers, and generating facility designers. EPRI also suggests that an industry-accepted generic EMT model could be required in lieu of a validated EMT model.³¹⁴⁹

1650. Clean Energy Associations argue that the Commission should require submission of an EMT model one year before the scheduled commercial operation date of the non-synchronous generating facility if the transmission provider performs an EMT study as part of the interconnection study process.³¹⁵⁰ Clean Energy Associations assert that, if the Commission moves forward with a requirement for interconnection customers to provide EMT models, it should require the transmission provider and its consultants to protect these models with the highest degree of confidentiality because these models contain proprietary and highly commercially sensitive material that could pose a reliability risk if obtained by malicious actors.

1651. Several commenters oppose the EMT modeling proposal.³¹⁵¹ AES contends that EMT modeling is not yet used widely in the industry and thus should not be adopted as a minimum standard.³¹⁵²

1652. Longroad Energy argues that EMT studies are more expensive than transient stability studies, require highly specialized engineering experience to perform, and are limited to modeling a fraction of a transmission provider’s transmission system.³¹⁵³ Longroad Energy asserts that the Commission should continue to allow transmission providers the discretion to determine where such studies will meaningfully

impact the interconnection requirements for an interconnection request. Further, Longroad Energy asserts that the Commission should require transmission providers to publish studies demonstrating the need for EMT studies to prevent unnecessarily imposing a costly, time-consuming step in the interconnection study process.

1653. SEIA asserts that EMT models are not yet industry standard models, require significant processing power compared to RMS models, and are not necessarily more accurate than RMS models.³¹⁵⁴ Bonneville asserts that it has found that EMT modeling studies are rarely necessary, and therefore any requirement to provide EMT models or studies should be left to the transmission provider's discretion.³¹⁵⁵

(d) Requests for Clarification

1654. Invenergy requests that the Commission clarify that, if a validated EMT model is unavailable at the time of submission of an interconnection request: (1) whether the interconnection request may proceed and provide a generic EMT model, if available; and (2) if a validated EMT model is determined to be necessary, whether the interconnection customer may submit this information by the time of cluster restudy, or as soon thereafter as it becomes available from the manufacturer.³¹⁵⁶

1655. APS requests clarity from the Commission on the process for curing deficiencies with respect to information provided by the interconnection customer, such as the number of times an interconnection customer is allowed to provide inaccurate data and cure deficiencies, before an interconnection request is deemed withdrawn.³¹⁵⁷

(e) Miscellaneous

1656. ClearPath asserts that the Commission should consider how the NOPR proposal will align with technological advancements and supply chain challenges.³¹⁵⁸ ClearPath explains that the average interconnection queue wait time is 3.7 years, which may present opportunities for interconnection customers to adopt newer, more advanced equipment after they enter the interconnection queue.

ClearPath further explains that supply chain challenges may force an interconnection customer to change equipment procurement unexpectedly while in the interconnection queue, and requests that the Commission explain whether a change in equipment that necessitates submitting new models and data is considered a material modification.

1657. Consumers Energy notes that NERC is currently in the interconnection data gathering process, potentially making inclusion of additional requirements within the rulemaking duplicative and recommends consistency between NERC and Commission interconnection improvement efforts.³¹⁵⁹

1658. EPRI states that the NOPR proposal does not specify information and data that the transmission providers may need to provide to the interconnection customer during the design stage (e.g., acceptable voltage ranges, protection details, short circuit levels, etc.).³¹⁶⁰ EPRI asserts that the final rule could consider the list of data from Annex H of IEEE 2800–2022, which includes definitions that could help define the combined generating and storage service level MW of a generating facility referred to in the NOPR proposal, including the continuous rating, continuous absorption rating, and short-term rating for IBRs.

iii. Commission Determination

1659. We adopt the NOPR proposal to revise Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP to require each interconnection customer requesting to interconnect a non-synchronous generating facility to submit to the transmission provider: (1) a validated user-defined RMS positive sequence dynamic model; (2) an appropriately parameterized generic library RMS positive sequence dynamic model, including a model block diagram of the inverter control system and plant control system, that corresponds to a model listed in a new table of acceptable models or a model otherwise approved by WECC; and (3) a validated EMT model, if the transmission provider performs an EMT study as part of the interconnection study process.

1660. We also adopt the NOPR proposals to: (1) define a user-defined model as any set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly

software-based and represent the entities' control strategies but does not necessarily correspond to any particular generic library model, as contained in Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP; (2) revise Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP to add a table of acceptable generic library models, based on the current WECC list of approved dynamic models for renewable energy generating facilities; and (3) revise section 4.4.4 of the *pro forma* LGIP and section 1.4 of the *pro forma* SGIP to require that any proposed modification of the interconnection request be accompanied by updated models of the proposed generating facility.

1661. Based on the record before us, we affirm the Commission's preliminary finding in the NOPR that the *pro forma* LGIP and *pro forma* SGIP are unduly discriminatory or preferential because they do not require non-synchronous generating facilities to provide accurate and validated models to transmission providers during the generator interconnection process that provide a comparable degree of accuracy as the models required of a synchronous generator. The current *pro forma* LGIP and *pro forma* SGIP provisions ensure that synchronous generating facilities are required to provide accurate, validated models to transmission providers during the generator interconnection process. However, the current *pro forma* LGIP and *pro forma* SGIP provisions are insufficient to ensure that non-synchronous generating facilities submit models with a comparable level of accuracy.

1662. Additionally, we find that the lack of a requirement for non-synchronous generating facilities to provide accurate and validated models to transmission providers in the *pro forma* LGIP and *pro forma* SGIP results in unjust and unreasonable rates. Accurate and validated models are necessary to minimize study delays and to ensure that transmission providers conduct accurate interconnection studies that identify the necessary interconnection facilities and network upgrades to accommodate the interconnection request. Data issues are commonly cited as a major source of study delays, which contributes to interconnection queue backlogs.³¹⁶¹ As described above, interconnection queue backlogs create uncertainty in the timing and cost of interconnecting to the transmission system and hinders the timely development of new generation.

Moreover, without accurate models, transmission providers cannot conduct accurate interconnection studies that identify the appropriate interconnection facilities and network upgrades, leading to the inaccurate assignment of interconnection costs and resulting in Commission-jurisdictional rates that are unjust and unreasonable.³¹⁶²

1663. Furthermore, many commenters agree that this reform will help prevent potential reliability concerns if non-synchronous generating facilities do not perform when in service as modeled during the interconnection process.³¹⁶³ For example, additional modeling requirements will significantly improve the accuracy of both interconnection and reliability studies as well as address concerns regarding non-synchronous generation disturbance events.³¹⁶⁴

1664. NYISO argues that the final rule would be inefficient and necessitate a rebuild of NYISO's study base case, take longer to ensure accurate results, and significantly slow the interconnection process.³¹⁶⁵ While we will not opine here on the NYISO-specific compliance with the final rule, we disagree that requiring accurate dynamic models of generating facilities will make the interconnection process take longer to ensure accurate results. To the contrary, we find here that a lack of accurate models is a major cause of study delays and contributes to interconnection study backlogs.

1665. The majority of commenters support the NOPR proposal.³¹⁶⁶ We affirm that, consistent with this final

rule, all interconnection customers requesting to interconnect a non-synchronous generating facility must provide the transmission provider with the required models needed for accurate interconnection studies. We find that the models required herein contain the details necessary to accurately model the performance of the non-synchronous generating facility in response to system disturbances, and we decline to adopt alternative model proposals put forth by commenters. This reform promotes a consistent approach among all generating facilities with respect to modeling, such that all interconnection customers are required to submit information sufficient to accurately model the behavior of their proposed generating facilities.

1666. We decline to adopt AES's request for a 20-day cure period for model deficiencies.³¹⁶⁷ Under the proposed provisions, if an interconnection customer fails to provide the required models above within the deadlines established in the *pro forma* LGIP and *pro forma* SGIP, its interconnection request will be incomplete and considered invalid in accordance with section 3.4.4 of the *pro forma* LGIP and section 1.3 of the *pro forma* SGIP. Pursuant to those provisions, if the interconnection customer does not cure such a deficiency within the 10-business day cure period, the interconnection request will be considered withdrawn pursuant to section 3.7 of the *pro forma* LGIP and section 1.3 of the *pro forma* SGIP. In its request, AES provides no explanation for why the 10-business day cure period is insufficient. Moreover, we believe that the existing 10-business day cure period should be consistently applied to all interconnection request deficiencies and that having an extended cure period for model deficiencies would potentially introduce delays in the interconnection process. We note that interconnection customers may submit their interconnection requests early in the customer request window, which will allow for more time to ensure their models are valid.

1667. We disagree with Pine Gate that the revisions to the *pro forma* LGIP and *pro forma* SGIP, as adopted, incorporate requirements into the *pro forma* LGIP and *pro forma* SGIP that are already being addressed by NERC through the standards development process.³¹⁶⁸ We note that NERC supports the NOPR proposal and argues that the existing interconnection process does not

provide sufficiently accurate and validated models for non-synchronous generating facilities to transmission providers.³¹⁶⁹ We find that these modeling requirements are appropriately addressed in the interconnection context, where interconnection customers must provide information to a transmission provider for use in interconnection studies, and thus adopt the revisions in the *pro forma* LGIP and *pro forma* SGIP. In addition, the *pro forma* LGIA and *pro forma* SGIA revisions apply to a wide spectrum of generating facilities, including newly interconnecting generating facilities that are currently outside the bounds of NERC's jurisdiction.³¹⁷⁰ As such, we find that this reform can holistically address the identified issues alongside the NERC standards; even if NERC is taking action, that need not prevent us from taking action here.

1668. We disagree with ENGIE that the value obtained from the models in the NOPR proposal is low because of the likelihood that the study will be outdated as project components are substituted with more advanced technology.³¹⁷¹ We recognize that the project components for non-synchronous generating facilities may change during the interconnection process. We find, however, that this does not diminish the value of a transmission provider receiving the identified information from interconnection customers requesting to interconnect a non-synchronous generating facility and receiving models that represent the best information interconnection customers have available about their proposed generating facilities because these models will ensure that the transmission provider can accurately model the impact of the proposed generating facility throughout the interconnection process. In addition, proposed section 4.4.4 of the *pro forma* LGIP and section 1.4 of the *pro forma* SGIP require that any modification of the interconnection request be accompanied by updates to the models. Pursuant to these provisions, the models are required to be updated as project components are changed. Ensuring that the model of the proposed generating

³¹⁶² NARUC Initial Comments at 42; *see also* EEI Initial Comments at 23 (explaining that this requirement will improve transmission provider's ability to identify appropriate interconnection facilities and network upgrades for non-synchronous generating facilities); MISO TOs Initial Comments at 33 (stating that the current lack of accurate modeling means that transmission providers are unable to fully assess their ability to respond to system disturbances).

³¹⁷¹ ENGIE Initial Comments at 13–14.

facility is accurate throughout the interconnection study process will allow the interconnection customer to understand the actual, potential impact on their interconnection request of changing these project components as they are considering such technological advancements.

1669. Similarly, we disagree with commenters that argue that accurate models for non-synchronous generating facilities may not be available early in the interconnection study process and may need to be updated during that process.³¹⁷² We find that the reforms we adopt herein are consistent with the principles behind other requirements in the *pro forma* LGIP and *pro forma* SGIP, namely those that set forth requirements for an interconnection request, including requirements that requests be viable and well-defined.³¹⁷³ The requirement to submit accurate models also reduces the chance that a transmission provider would need to perform additional studies, in this case if an interconnection customer submits models that are inaccurate and those inaccuracies are not discovered until late in the interconnection process. In that instance, *i.e.*, if model validation occurs at a point further into the interconnection process, inaccurate models that are used in interconnection studies could create errors in the studies, potentially leading to restudies and subsequent delays which would frustrate the efficiency gained by moving to a first-ready, first-served cluster study process. Further, we find that the definition of a validated model (*i.e.*, confirmation that the equipment behavior is consistent with the modeled behavior) is sufficiently flexible to enable interconnection customers to provide such a model with their interconnection requests.³¹⁷⁴ Moreover, the option for the interconnection customer to submit an attestation that the models accurately reflect the expected behavior of a proposed generating facility would be based in the interconnection customer's best understanding at the time of the interconnection request, providing further flexibility if the interconnection customer chooses to change the equipment or control systems of the

proposed generating facility, which is permitted as part of the interconnection process.

1670. In addition, we do not believe, as suggested by commenters,³¹⁷⁵ that there is a need to require transmission providers to make available additional information and system data in order for an interconnection customer to develop an RMS model. Although measured transmission system information is an input into the RMS model, the purpose of the model is to represent the behavior of the facility itself, and the interconnection customer should be able to use likely transmission system configurations to parameterize and validate the RMS model. To the extent that the interconnection customer believes that actual transmission data is required to tune the model block diagram, the scoping meeting provides a venue for such discussions. The provisions set forth in new *pro forma* LGIP section 3.4.6 further detail scoping meetings, which occur during the customer engagement window.

1671. We decline to adopt requirements that constrain the discretion of transmission providers to use either user-defined RMS models or generic library RMS models, as suggested by commenters.³¹⁷⁶ We find that the transmission provider is in the best position to determine the power flow modeling method that is best suited to ensuring the reliability of its system.

1672. We decline to modify the NOPR proposal to allow the transmission provider to require *either* a user-defined RMS model *or* a generic library RMS model, as suggested by Clean Energy Associations, rather than requiring the interconnection customer to submit both, as adopted in this final rule.³¹⁷⁷ We believe that requiring the interconnection customer to submit both models is of value in providing the transmission provider discretion to choose which model most accurately represents a given generating facility's behavior. Providing these models does not represent an unreasonable burden on the interconnection customer, as the process of developing and parameterizing an RMS model is significantly simpler than doing so for an EMT model.

1673. We decline to require the user-defined RMS model to be compatible with the transmission provider's software and meet the transmission provider's MOD-032-1 requirements at the time the interconnection request is submitted, as requested by MISO.³¹⁷⁸ While the user-defined RMS model will have to meet these requirements prior to the cluster study for generating facilities seeking to interconnect pursuant to the *pro forma* LGIP and optional feasibility study or system impact study for generating facilities seeking to interconnect pursuant to the *pro forma* SGIP, the scoping meeting is the appropriate time to provide and discuss this information in order to correct the model if it is incompatible with the transmission provider's software or otherwise causes the transmission system model to be unable to solve.³¹⁷⁹

1674. We decline to require NERC to improve the degree to which power flow software vendors allow accurate modeling of IBR technology, as requested by Longroad Energy.³¹⁸⁰ While we agree that improved accuracy of IBR modeling is beneficial, this rulemaking is focused on entities that execute, or request the unexecuted filing of, LGIAs and SGIAs, and placing obligations on NERC or vendors is outside the scope of this proceeding. Equipment providers can develop and submit validated generic models to the software vendors' model libraries or the WECC model validation process to be included in the WECC table of approved models, if they desire to do so.

1675. In response to commenters that argue that the Commission should provide further direction regarding model validation requirements for non-synchronous generating facilities,³¹⁸¹ we note that Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP, as adopted in this final rule, provide that, for a model to be "validated," the interconnection customer must provide evidence that the equipment behavior is consistent with the model behavior. In addition, Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro*

³¹⁷² MISO Initial Comments at 125.

³¹⁷⁹ The scoping meeting is a meeting between representatives of the interconnection customer and transmission provider "to exchange information including any transmission data and earlier study evaluations that would be reasonably expected to affect such interconnection options," and "to analyze such information." ³¹⁷⁷ Clean Energy Associations Initial Comments at 65-66.

forma SGIP provide that this can involve, for example, an attestation from the interconnection customer that the model accurately represents the entire generating facility, attestations from each equipment manufacturer that the user-defined model accurately represents the relevant component of the generating facility, or test data. We find that this definition of a “validated” model and examples of an attestation in the proposal are sufficient and provide flexibility to allow interconnection customers to provide such a model with their interconnection requests. Therefore, we decline to adopt alternative proposals for model validation put forth by commenters.

1676. We decline to adopt alternatives and revisions to the table of acceptable generic library models based on the current WECC list of approved dynamic models for renewable energy generating facilities, as suggested by R Street and EPRI.³¹⁸² We find that the table, as adopted, is appropriate because it represents the full spectrum of modeling data that transmission providers need to perform accurate interconnection studies for non-synchronous generating facilities. Nevertheless, we recognize that the list of models approved by WECC is subject to change and note that the table provides that “a model otherwise approved by [WECC],”³¹⁸³ and not reflected in the table, would also meet the model requirements.

1677. In response to commenters that oppose a requirement for a validated EMT model,³¹⁸⁴ we note that these concerns mischaracterize the NOPR proposal as mandating EMT models on a national basis. Rather, Attachment A to Appendix 1 of the *pro forma* LGIP and Attachment 2 of the *pro forma* SGIP, as adopted, requires that, in circumstances where the transmission provider performs an EMT study as part of its interconnection study process, the interconnection customer must provide an EMT model. We find that the transmission provider is in the best position to determine whether an EMT study is necessary to ensure system reliability because the transmission provider has the in-depth knowledge of its transmission system required to recognize where and when regular dynamic modeling is inadequate to

capture the true behavior of generating facilities.

1678. Similarly, we decline to adopt EPRI’s request to require EMT models regardless of whether the transmission provider performs an EMT study.³¹⁸⁵ Developing an EMT model may place an unreasonable administrative burden on an interconnection customer in situations where such a model is not used by the transmission provider. We also decline to adopt EPRI’s request to allow use of an industry-accepted, generic EMT model instead of a validated EMT model, as the record does not indicate that any such industry-accepted, generic models currently exist.³¹⁸⁶

1679. We decline Clean Energy Associations’ request that the Commission require submission of an EMT model one year before the scheduled commercial operation date of the non-synchronous generating facility if the transmission provider performs an EMT study as part of the interconnection study process.³¹⁸⁷ As noted above, we find that the proposal for models to be submitted with the interconnection request is consistent with the principles behind other requirements in the *pro forma* LGIP and *pro forma* SGIP and that transmission providers need these models to perform interconnection studies and ensure that prospective generating facilities do not create reliability risks to the transmission system. In response to Clean Energy Associations’ request that the Commission require the transmission provider and its consultants to protect the EMT models and other information with the highest degree of confidentiality,³¹⁸⁸ we note that the *pro forma* generator interconnection procedures and agreements include provisions for the treatment of confidential information.³¹⁸⁹

1680. In response to Invenery’s request for clarification regarding whether a generic EMT model may be provided if a validated EMT model is unavailable at the time of submission of an interconnection request,³¹⁹⁰ we note that there is currently no industry-accepted generic EMT model; therefore, a validated EMT model is required. In response to Invenery’s request for clarification regarding whether the

interconnection customer may submit this information by the time of a cluster restudy if a validated EMT model is determined to be necessary, we clarify that a validated EMT model, if required by the transmission provider, must be submitted with the interconnection request to proceed in the interconnection study process. As validation can consist of, for example an attestation from the interconnection customer that the model accurately represents the entire generating facility, based on the interconnection customer’s understanding at the time of submission, we believe an interconnection customer should be able to provide a validated EMT model at the time of the interconnection request.

1681. In response to APS’ request for clarification on the number of times an interconnection customer is allowed to provide inaccurate data and cure deficiencies before an interconnection request is deemed withdrawn,³¹⁹¹ we note that section 3.4.4 of the *pro forma* LGIP and section 1.3 of the *pro forma* SGIP provide the timeline for when a transmission provider must notify an interconnection customer that its interconnection request is deficient, and at that point, the interconnection customer has 10 business days to provide the additional requested information. We clarify that an interconnection customer has until the end of the 10 business-day period to cure deficiencies in its interconnection request. In the case of the *pro forma* LGIP, the interconnection customer may submit this information early in the cluster request window to ensure that there is sufficient time to address any issues with the interconnection request and the required models.

1682. In response to ClearPath’s question regarding whether a change in equipment that necessitates submitting updated models is considered a material modification,³¹⁹² we highlight that section 4.4 of the *pro forma* LGIP and section 1.4 of the *pro forma* SGIP set forth procedures for modifications to an interconnection request, including the evaluation of technical changes to a request. Further, we note that section 4.6 of the *pro forma* LGIP contains the transmission provider’s technological change procedure, which was designed to allow transmission providers to evaluate whether equipment changes to an interconnection request should trigger the material modification provisions. A change in equipment may also qualify under the transmission

provider's definition of permissible technological advancements in section 1 of the *pro forma* LGIP. This definition includes advancements that the interconnection process can accommodate without triggering the material modification provision of the *pro forma* LGIP.

1683. In response to Consumers Energy's recommendation that there should be consistency between NERC Reliability Standards and data collection efforts and the Commission's rulemaking,³¹⁹³ we are not persuaded that there is a conflict or duplication between this final rule and NERC's Reliability Standards and interconnection data collection efforts. NERC Reliability Standards apply only to entities that are registered with NERC. Many smaller non-synchronous generating facilities are currently excluded from NERC registration but interconnect under the *pro forma* SGIP and *pro forma* LGIP and execute, or request the unexecuted filing of, the *pro forma* SGIA or *pro forma* LGIA.³¹⁹⁴ The revisions to the *pro forma* interconnection procedures and *pro forma* interconnection agreements require all new interconnection customers that interconnect under the *pro forma* interconnection procedures and *pro forma* interconnection agreements to adhere to the new modeling requirements, regardless of whether the new interconnection customers must abide by the NERC Reliability Standards. We also note that NERC supports the proposed reforms.³¹⁹⁵

b. Ride Through Requirements

i. Need for Reform and NOPR Proposal

1684. In the NOPR, the Commission preliminarily found that the *pro forma* LGIA and *pro forma* SGIA ride through provisions could result in undue discrimination and preferential treatment.³¹⁹⁶ The Commission stated that, although synchronous and non-synchronous generating facilities are able to "ride through" system events and remain online and continue to provide real and reactive power following a disturbance, the existing *pro forma* LGIA and *pro forma* SGIA impose differing ride through requirements because they fail to account for a non-synchronous generating facility's ability to engage in momentary cessation.³¹⁹⁷ The Commission expressed concern that, given advances in inverter

technology, the lack of performance requirements regarding the use of momentary cessation by non-synchronous generating facilities may not be supportable on either a technical or cost basis.³¹⁹⁸

1685. The Commission proposed to require newly interconnecting non-synchronous generating facilities to continue current injection inside the "no trip zone" of the frequency and voltage ride through curves of NERC Reliability Standard PRC-024-3 or its successor standards.³¹⁹⁹ The Commission explained that the *pro forma* LGIA defined the term "ride through" as the ability of the large generating facility to stay connected to and synchronized with the transmission system during system disturbances within a range of under-frequency and over-frequency conditions. The Commission proposed to expand this definition to include the ability of the large generating facility to stay connected to and synchronized with the transmission system during system disturbances within under-voltage and over-voltage conditions.

1686. In addition, the Commission proposed to require any newly interconnecting non-synchronous generating facility to have the ability, during abnormal frequency conditions and voltage conditions within the "no trip zone" defined by NERC Reliability Standard PRC-024-3 or its successor standards, to maintain power production at pre-disturbance levels unless providing primary frequency response or fast frequency response, and to have the ability to provide dynamic reactive power to maintain system voltage in accordance with the generating facility's voltage schedule.³²⁰⁰ The Commission sought comment on whether adherence to these proposed requirements would be readily achievable through changes to control settings and whether such changes to control settings could be made at a relatively minor cost.³²⁰¹

ii. Comments

(a) Comments in Support

1687. Many commenters generally support the goal of the NOPR

³¹⁹⁸ *Id.* P 325.

³¹⁹⁹ *Id.* P 336. The "no trip zone" is defined as a set of voltage and frequency no trip boundaries within which applicable protection and controls may not be set to cause the generating facility to trip or cease current injection. See PRC-024-3—Frequency and Voltage Protection Settings for Generating Resources, <https://www.nerc.com/pa/Stand/Reliability%20Standards/PRC-024-3.pdf>.

³²⁰⁰ NOPR, 179 FERC ¶ 61,194 at P 337.

³²⁰¹ *Id.* P 338.

proposal.³²⁰² CAISO asserts that the proposed reforms are essential for transmission providers to maintain reliability as non-synchronous generating facilities proliferate, and it urges the Commission to impose the proposed requirements on all interconnection customers that have not yet executed LGIAs as well as all prospective interconnection customers.³²⁰³ CAISO argues that interconnection customers that have already procured certain inverters that cannot meet the requirements can request non-conforming LGIAs, or request that their LGIAs be filed unexecuted, but it notes that it recently implemented similar requirements, and interconnection customers have been able to procure the inverters and technology necessary to meet the requirements.

(b) Comments in Opposition

1688. Pine Gate asserts that the Commission should not incorporate requirements into the *pro forma* LGIP and *pro forma* SGIP that are already being addressed by NERC through the standards development process, which will add new requirements related to the vast majority of the modeling and performance issues identified in the NOPR.³²⁰⁴ In addition, Pine Gate notes that the *pro forma* LGIA and *pro forma* SGIA already require interconnection customers to remain compliant with the applicable reliability standards.³²⁰⁵

(c) Comments on Specific Proposal

(1) IEEE Standards 2800 and 1547

1689. NERC and MISO support modifying the *pro forma* LGIP to incorporate elements of NERC Reliability Standards, NERC guidelines, and IEEE standards.³²⁰⁶ Specifically, MISO supports adopting IEEE Standard 2800-2022 by reference in the *pro forma* LGIA.³²⁰⁷ MISO asserts that

³¹⁹⁷ *Id.* PP 320-321.

implementing IEEE Standard 2800–2022 will ensure resource capabilities protect against the types of events described in several recent NERC disturbance reports. NERC notes that the IEEE standards are inherently not mandatory unless a governing authority with jurisdiction adopts and enforces them and include many recommended practices that could be deemed informational.³²⁰⁸ Accordingly, NERC asserts that IEEE Standard 2800–2022 operates similar to NERC reliability guidelines, although IEEE Standard 2800–2022 is only available upon purchase.

1690. NERC recommends that the Commission explicitly integrate the requirements and recommendations from IEEE Standard 2800–2022 into the *pro forma* interconnection agreements.³²⁰⁹ Specifically, NERC contends that the Commission should prioritize the disturbance ride through, active power–frequency control, reactive power–voltage control, data sharing, and modeling provisions of IEEE Standard 2800–2022. However, NERC states that some transmission system conditions may require inverter control modes, settings, or protections that will not conform to IEEE Standard 2800–2022 region-wide expectations. NERC also argues that transmission providers should be permitted to establish additional performance requirements for specific locations and instances beyond region-wide requirements established under *pro forma* provisions, subject to transparency and public notice.

1691. Some commenters request that the Commission amend its proposal to reference IEEE Standard 2800 or successor standards for large generating facilities and IEEE Standard 1547 for small generating facilities.³²¹⁰ EPRI asserts that these standards have been developed through a rigorous process and provide for IBR performance that supports system reliability while providing sufficient flexibility for RTOs/ISOs and interconnection customers.³²¹¹ EPRI also notes that inverter manufacturers have publicly stated that state-of-the-art equipment already has the majority of the capabilities required by IEEE Standard 2800.

1692. EPRI argues that the Commission should consider narrowly specifying ride through requirements by reference to IEEE Standards 2800 and

1547; aligning all applicable definitions proposed in the NOPR with those standards; and evaluating the alignment of additional definitions or performance specifications with potential future revisions of those standards.³²¹² EPRI asserts that failing to do so could create undue technical barriers to IBRs, and that paraphrasing of IEEE standards, rather than directly referencing the standards' requirements, could lead to an inconsistent implementation of the final rule in different regions with insufficient reliability benefits.³²¹³

1693. EPRI asserts that, if the Commission specifies its own ride through performance requirements, an alternative but less preferred approach would be to use the precise language and definitions as published in IEEE Standards 2800 and 1547.³²¹⁴

1694. EPRI argues that the NOPR proposal does not seem entirely aligned with the NERC IBR guidelines and is not as clear as the applicable industry standards like IEEE Standard 2800–2022.³²¹⁵ EPRI also asserts that the Commission should consider what it characterizes as significant improvements in IEEE Standard 2800 over the NERC reliability guidelines. EPRI contends that the NERC IBR reliability guidelines cited in the NOPR did not fully consider all technical and stakeholder concerns considered by IEEE Standard 2800 and are therefore in contravention of the IEEE Standard 2800–2022 consensus requirements.³²¹⁶

1695. SEIA states that IBRs are currently capable of riding through disturbances and that many developers have implemented controls to ensure they do so following the release of the consensus-based IEEE standards.³²¹⁷ SEIA argues that incorporating IEEE Standard 2800 into the *pro forma* LGIA would bring some certainty in generating facility design because the reliability requirements for each generating facility would be known at the time of the interconnection request.³²¹⁸

(2) Feasibility of NOPR Proposal

1696. Some commenters argue that the proposed requirement in the NOPR “to maintain power production at pre-disturbance levels unless providing primary frequency response or fast frequency response” is not feasible.³²¹⁹

Invenergy asserts that, in order to increase reactive power output to maintain system voltage, a generator would necessarily have to reduce real power output: therefore, Invenergy requests that the NOPR proposal be revised to clarify this potential inconsistency.³²²⁰ Clean Energy Associations and Public Interest Organizations contend that a requirement to maintain active power injection at pre-disturbance levels would lead to an undesirable response from generating facilities during a grid disturbance that could lead to voltage collapse, and the more helpful response would be to shift some power output to prioritize reactive power.³²²¹

1697. Southern suggests adding a sentence to article 9.7.3 in the *pro forma* LGIA to address circumstances under which the generating facility is unable to maintain active power while delivering reactive power.³²²² Clean Energy Associations suggest that the Commission replace the requirement to maintain active power production with language from NERC Reliability Standard PRC–024–3, which requires current injection and not active power injection to continue at pre-disturbance levels.³²²³ Alternatively, Clean Energy Associations and Invenergy suggest the proposed language could be made more workable by only requiring a return to the pre-disturbance level of power production following voltage recovery, subject to the energy availability of the resource, which Clean Energy Associations explains would allow a generator to correctly shift from active power to reactive power during the voltage disturbance.³²²⁴

1698. CAISO requests that the Commission not require that inverters be able to provide real power during a transitory disturbance.³²²⁵ CAISO states that, unlike synchronous generating facilities, IBRs are current limited and generally operate at their maximum output. CAISO argues that maintaining

³²¹¹ EPRI Initial Comments at 5.

real power output at pre-disturbance levels would likely inhibit a non-synchronous generating facility's ability to provide reactive power during a disturbance, and to help ensure reliability CAISO recommends removing the real power requirements and requiring non-synchronous generating facilities to provide reactive power at pre-disturbance levels. EPRI agrees that maintaining active power at the pre-disturbance levels during and after the abnormal voltage period may not be practical, given that voltage disturbances tend to be limited to a region relatively close to the fault location, and is not aligned with IEEE Standard 2800–2022 or other international requirements.³²²⁶ EPRI and NERC recommend that IBR plant performance requirements should address active and/or reactive current during an abnormal voltage condition and requirements for the restoration of active power output in the post-fault period.³²²⁷

1699. EPRI argues that the implementation of frequency and voltage protection relay settings should not be exactly aligned with the NERC Reliability Standard PRC–024 curves but rather be based on the actual limits of equipment capability, with the objective to avoid potential damages.³²²⁸

1700. Ørsted argues that it is not possible to maintain real power production with depressed voltage that is still within the no trip zone of NERC Reliability Standard PRC–024–3, and explains that prioritizing reactive current during fault ride through mode (even within the no trip zone) is instrumental to maintain reliability.³²²⁹ Ørsted recommends replacing the reference to good utility practice in proposed article 9.7.3 of the *pro forma* LGIA and instead rely on Order No. 842 and its definition of “Bulk-Power System—Primary Frequency Response.”³²³⁰

1701. NERC notes that conventional grid-following IBRs are current-limited devices, and their active power output is voltage-dependent, making maintaining 100% of pre-disturbance active power while providing reactive power to support the bulk-power system during the fault period not always

feasible.³²³¹ NERC recommends referring to “controls that maintain pre-disturbance active current (Ip)” in addition to the provision of reactive current (Iq) (*i.e.*, reactive power support) rather than referring to “power.”³²³²

(3) Applicability to All Types of Generating Facilities

1702. Invenenergy asserts that the NOPR proposal should go beyond the *pro forma* LGIA's current requirements and apply evenly to all generating facilities, not just non-synchronous generating facilities.³²³³ Similarly, Clean Energy Associations assert that the Commission currently only requires that relay settings not trip a generating facility during a voltage or frequency excursion and that there is no actual performance standard to ride through a disturbance for synchronous generating facilities.³²³⁴ Clean Energy Associations assert that, to prevent undue discrimination, the Commission should either proceed with a similar effort to require ride through performance from synchronous generating facilities; or allow ride through performance exceptions for non-synchronous generating facility trips caused by auxiliary equipment performance, which are a primary cause of ride through failure for both synchronous and non-synchronous generating facilities.

1703. EPRI states that article 9.7.3 of the *pro forma* LGIA could benefit from additional modifications that differentiate between the ride through requirements for synchronous and non-synchronous large generating facilities because the two technologies have inherently different technical capabilities and operating principles.³²³⁵

1704. Ørsted urges the Commission to take note of the differences between technologies regarding their ability to ride through transmission system faults.³²³⁶ For example, Ørsted states that it uses a plant controller for wind turbines that is frozen in fault ride through mode and that controls aiding voltage recovery are performed by individual turbines until voltage profile is back within a normal operating band of 90–110% of rated voltage.

Ørsted concludes that not all non-synchronous generating facilities are subject to the types of operating and

power production concerns highlighted by the Commission in the NOPR.

(4) Proposed Revisions to the *Pro Forma* LGIA

1705. Ørsted asserts that interconnection customers can only “ensure” ride through capability of the generating and interconnection facilities per the definition in article 1 in the *pro forma* LGIA. Ørsted contends that the Commission's use of the term “transmission system” in article 9.7.3 of the *pro forma* LGIA is unclear in this context, and thus Ørsted alleges that it will be difficult to demonstrate compliance. Accordingly, Ørsted urges the Commission to use the term “generation and interconnection facilities” instead of “transmission system” in article 9.7.3 of the *pro forma* LGIA.³²³⁷

1706. Ørsted states that, in case of severe voltage dip, IBRs may freeze in phase locked loop, essentially holding the calculated angle of the external voltage at a certain value.³²³⁸ Ørsted argues that this makes IBR units not strictly synchronized with the transmission system during this period.³²³⁹ Accordingly, Ørsted asks the Commission to remove the phrase “stay synchronized” from article 9.7.3 of the *pro forma* LGIA.

(d) Requests for Clarification and Miscellaneous

1707. NV Energy questions the ramifications of non-synchronous generating facilities failing to maintain a composite power delivery at continuous rated power output at the high side of the generator substation at a power factor within the range of 0.95 leading to 0.95 lagging.³²⁴⁰ NV Energy suggests in this circumstance the non-synchronous generating facilities make a payment for failing to maintain the tariff-required composite power delivery. NV Energy notes that there is a pending reactive power rulemaking and inquires whether the industry should assume that payments for reactive power will be addressed in that rulemaking.

1708. Eversource requests that the Commission clarify that transmission providers may include additional performance requirements in the LGIA appendices for non-synchronous generating facilities that are necessary to

³²⁴⁰ NV Energy Initial Comments at 8.

ensure reliable interconnection in a given area, such as harmonics or radio frequency interference.³²⁴¹

1709. Invenenergy asserts that the Commission should not rely entirely on ride through and other burdens on interconnection customers to address larger transmission system issues that should be addressed through regional transmission planning processes.³²⁴²

1710. EPRI states that addressing how to apply grandfathering to existing facilities is an important consideration that should be addressed through Commission/NERC requirements. EPRI suggests that the Commission could add a procedure and criteria for a transmission provider to waive the grandfathering rule and require retrofits of existing facilities at the time of plant changes, or upgrades to meet the specified performance and modelling requirements, or to meet specific capability and performance standards such as IEEE Standard 2800–2022.³²⁴³

iii. Commission Determination

1711. We adopt, with modifications, the NOPR proposal to revise article 9.7.3 of the *pro forma* LGIA and article 1.5.7 of the *pro forma* SGIA to establish ride through requirements during abnormal frequency conditions and voltage conditions within the “no trip zone” defined by NERC Reliability Standard PRC–024–3 or successor mandatory ride through reliability standards, as set forth in the modified *pro forma* LGIA language discussed below. We modify the proposed requirements to acknowledge the physical limitations of newly interconnecting non-synchronous generating facilities. In the NOPR, the Commission stated that compliance with the NOPR proposal would be largely a control settings issue and may not be costly. We are persuaded by comments that contend that compliance with the NOPR proposal would be infeasible for certain types of inverters and non-synchronous generating facilities, and thus make modifications to address these concerns.

1712. Based on the record, we affirm the Commission’s preliminary finding in the NOPR that the *pro forma* LGIA and *pro forma* SGIA fail to account for a non-synchronous generating facility’s ability to engage in momentary cessation. We note that the physical characteristics of synchronous generating facilities result in such facilities continuing to inject electric current during transmission system disturbances, consistent with the

existing requirements to remain “connected to and synchronized with the [t]ransmission [s]ystem” as required by the *pro forma* LGIA and *pro forma* SGIA. As a result of these requirements, synchronous generating facilities continue to inject current during such disturbances, such that services provided supporting transmission system reliability are not disrupted during such events. However, the existing *pro forma* LGIA and *pro forma* SGIA do not currently require non-synchronous generating facilities to be capable of continuing to inject current in a manner comparable to synchronous generating facilities during system disturbances. As a result, non-synchronous generating facilities often cease injecting current during transmission system disturbances through “momentary cessation.” We agree with commenters that such behavior by non-synchronous generating facilities can pose significant risk to the reliability of the bulk-power system, as documented in several reports and NERC-issued alerts.³²⁴⁴

1713. Moreover, without requirements for non-synchronous generating facilities to remain connected to and synchronized with the transmission system, and not to engage in momentary cessation, interconnection studies may not be able to accurately model expected behavior and identify the appropriate interconnection facilities and network upgrades to accommodate the interconnection request, resulting in an inaccurate assignment of interconnection costs. As a result, we find that the lack of comparable requirements for non-synchronous generating facilities to have the capability to remain “connected to and synchronized with the [t]ransmission [s]ystem” in the *pro forma* LGIA and *pro forma* SGIA results in rates that are unjust, unreasonable, and unduly discriminatory or preferential.

1714. While a number of commenters object to the specific provisions proposed in the NOPR to resolve this issue, addressed further below, no commenter disagrees that there is a lack of requirements in the *pro forma* LGIA and *pro forma* SGIA regarding the use of momentary cessation by non-

synchronous generating facilities. Moreover, no commenter disputes the technical ability of non-synchronous generating facilities to continue to inject current during transmission system disturbances.

1715. Specifically, we require that during abnormal frequency conditions and voltage conditions within the “no trip zone” defined by NERC Reliability Standard PRC–024–3 or successor mandatory ride through reliability standards, the non-synchronous generating facility must ensure that, within any physical limitations of the generating facility, its control and protection settings are configured or set to: (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels unless providing primary frequency response or fast frequency response;³²⁴⁵ (2) minimize reductions in active power and remain within dynamic voltage and current limits, if reactive power priority mode is enabled, unless providing primary frequency response or fast frequency response; (3) not artificially limit dynamic reactive power capability during disturbances; and (4) return to pre-disturbance active power levels without artificial ramp rate limits if active power is reduced, unless providing primary frequency response or fast frequency response.

1716. In comparison to the NOPR proposal, this language, as adopted, provides non-synchronous generating facilities, within any physical limitations of the generating facility, the ability to reduce active power production in order to prioritize reactive power output in support of transmission system voltage.³²⁴⁶ This language also recognizes that such facilities may not be able to ride through disturbances with the same performance as synchronous generating facilities without costly equipment modification. However, this language requires non-synchronous generating facilities, within any physical limitations of the generating facility, to configure or set their facilities to ride through disturbances and continue to support

³²⁴⁵ Fast frequency response is defined as power injected to (or absorbed from) the grid in response to changes in measured or observed frequency during the arresting phase of a frequency excursion event to improve the frequency nadir or initial rate-of-change of frequency. See Fast Frequency Response Concepts and Bulk Power System Reliability Needs, https://www.nerc.com/comm/PC/InverterBased%20Resource%20Performance%20Task%20Force%20IRPT/Fast_Frequency_Response_Concepts_and_BPS_Reliability_Needs_White_Paper.pdf at 7.

³²⁴⁶ “Active power” as used here and “real power” as used in the NOPR proposal refer to the same concept: power than can be used by load in order to perform work.

³²⁴¹ Eversource Initial Comments at 38–39.

³²⁴² Invenenergy Initial Comments at 59.

³²⁴³ EPRI Initial Comments at 21–22.

³²⁴⁴ NERC Initial Comments at 9, 11 (citing NOPR, 179 FERC ¶ 61,194 at P 313 n.433 (citing *San Fernando Disturbance*, at vi (Nov. 2020), https://www.nerc.com/pa/rrm/ea/Documents/San_Fernando_Disturbance_Report.pdf; NERC and CAISO, *Multiple Solar PV Disturbances in CAISO* (Apr. 2022), https://www.nerc.com/pa/rrm/ea/Documents/NERC_2021_California_Solar_PV_Disturbances_Report.pdf; NERC, *Odessa Disturbance* (Sept. 2021) https://www.nerc.com/pa/rrm/ea/Documents/Odessa_Disturbance_Report.pdf)).

system reliability. This language is consistent with suggestions by a number of commenters that the final rule recognize that non-synchronous generating facilities cannot provide both real and reactive power at pre-disturbance levels during a disturbance,³²⁴⁷ allow for the prioritization of reactive power,³²⁴⁸ and address restoration of active power output in the post-fault period.³²⁴⁹

1717. The adopted language requires non-synchronous generating facilities, within any physical limitations of the generating facility, to configure or set their facilities to be able to ride through disturbances and continuing to support system reliability. Specifically, while grid-forming inverters are available, they are not widely commercially deployed due to lack of experience, cost, or other factors.³²⁵⁰ Given the existing technical capabilities of non-synchronous generating facilities, we agree with commenters that the NOPR proposal requiring active power to be maintained at pre-disturbance levels during a system disturbance in all instances may not be feasible, or preferable from a reliability perspective. For example, we agree there may be instances where the injection of reactive power should be prioritized to maintain reliability during a system disturbance, which may require non-synchronous generating facilities to temporarily reduce their injection of active power.³²⁵¹ As a result, we adopt a modified NOPR proposal to accommodate existing technical capabilities and physical limitations of non-synchronous generating facilities, by providing for reductions in active power to prioritize reactive power while prohibiting non-synchronous generating facilities from configuring or setting their control and protection settings to effectively

artificially limit such resources below their actual capability.

1718. We also adopt the NOPR proposal to revise article 9.7.3 of the *pro forma* LGIA to include in the definition of “ride through” the ability of the large generating facility to stay connected to and synchronized with the transmission system during system disturbances within under-voltage and over-voltage conditions. This revision ensures that large generating facilities are capable of remaining connected to and synchronized with the transmission system, consistent with the other ride through requirements adopted here and similar requirements in the *pro forma* SGIA.

1719. Some commenters request that the Commission either incorporate IEEE Standard 2800–2022 by reference, or explicitly incorporate this standard’s performance requirements into the *pro forma* LGIA. Although we acknowledge the value of IEEE 2800–2022, we decline to incorporate it by reference. IEEE 2800–2022 was developed for a different purpose; it is a voluntary guideline that uses discretionary terms (e.g., “may,” “should,” “can,” or “upon agreement”). It is unclear whether IEEE 2800–2022 would adequately address the problem identified by the Commission because the Commission would have limited authority to enforce these discretionary provisions.

1720. Invenergy and Clean Energy Associations assert that the Commission should impose similar ride through requirements on synchronous generating facilities. Alternatively, Clean Energy Associations assert that, to prevent undue discrimination, the Commission should allow ride through performance exceptions for non-synchronous generating facility trips caused by auxiliary equipment performance, which are a primary cause of ride through failure for both synchronous and non-synchronous generating facilities. We do not believe that imposing similar ride through requirements on synchronous generating facilities is necessary because the physical characteristics of synchronous generating facilities result in such facilities continuing to inject electric current during transmission system disturbances, *i.e.*, do not allow for momentary cessation.

1721. We also decline to grant Clean Energy Associations’ alternative request because we find that a ride through exception for non-synchronous generating facility trips caused by auxiliary equipment performance is not needed. As NERC has noted, protection on auxiliary equipment for non-synchronous resources, other than the

generator-connected unit auxiliary transformer, is already exempted from the requirements of NERC Reliability Standard PRC–024–3 specifically because protection for such auxiliary equipment does not cause a resource to trip or cease injecting current.³²⁵² We do not believe that auxiliary equipment performance is considered a physical limitation of a non-synchronous generating facility such that control and protection settings can be configured or set to reduce active power production during disturbances, and therefore no exception is needed.

1722. Pine Gate asserts that the Commission should not adopt requirements to the *pro forma* LGIP and *pro forma* SGIP that are already being addressed by NERC through the standards development process. We disagree because adding such provisions to the *pro forma* LGIA and *pro forma* SGIA will require all newly interconnecting generating facilities to abide by such provisions regardless of whether such newly interconnecting generating facilities are outside the bounds of NERC’s jurisdiction. As such, we find that this modified reform can holistically address the identified issues alongside the NERC standards.

1723. NV Energy raises questions about the ramifications of non-synchronous generating facilities failing to maintain reactive power and whether the Commission is proposing any changes to reactive power compensation. We clarify that the Commission is not proposing changes to reactive power compensation in this proceeding.

1724. Invenergy argues that the Commission should not rely entirely on ride through requirements and other burdens on interconnection customers to address larger transmission system issues that should be addressed through regional transmission planning processes. The need to establish interconnection requirements for generating facilities to “remain connected to and synchronized with the [t]ransmission [s]ystem” during system disturbances is properly addressed in this proceeding that deals with reforming the interconnection processes for newly interconnecting generating facilities. Regarding Invenergy’s arguments that larger transmission system issues need to be addressed in the regional transmission planning processes, we note that while reforms to regional transmission planning are

³²⁵⁰ A grid-forming inverter is an inverter that is capable of synthesizing voltage and frequency without an external reference. *See, e.g.*, Abraham Ellis, Grid Forming Inverters: Requirements and Practical Applications, at 4 (May 1, 2019) <https://www.osti.gov/servlets/purl/1639991>.

³²⁵¹ NERC Initial Comments at 23; CAISO Initial Comments at 40.

³²⁵² Petition of the North American Reliability Corporation for Approval of Proposed Reliability Standard PRC–024–3, Docket No. RD20–7, at 12 (filed Mar. 20, 2020).

outside the scope of this proceeding, the Commission is considering addressing regional transmission planning and cost allocation in another pending proceeding.³²⁵³

1725. EPRI argues that the grandfathering of existing non-synchronous generating facilities is an important consideration that should be addressed through Commission and NERC requirements and suggests that the Commission could add a procedure and criteria for a transmission provider to waive the grandfathering rule and require retrofits of existing non-synchronous generating facilities at the time of plant changes or require upgrades to meet the specified performance and modeling requirements. We decline to add the requested procedure. The final rule changes to the *pro forma* LGIA and *pro forma* SGIA adopted herein apply prospectively to interconnection customers that execute, or request the unexecuted filing of, an LGIA after the Commission-approved effective date of the transmission provider's filing in compliance with this final rule. Both the NOPR proposal and the adopted language were intended to be achieved through changes to control settings at minimal cost for current inverter technology; it did not contemplate imposing potentially significant retrofit or equipment costs on existing non-synchronous generating facilities.³²⁵⁴

1726. Ørsted requests clarification on how the NOPR proposal will affect a plant controller for wind turbines that is frozen in fault ride through mode and control actions aiding voltage recovery are performed by individual turbines until the voltage profile returns to the normal operating band of 90–110% of rated voltage. We note that the reforms, as adopted, apply to a non-synchronous generating facility as a whole, rather than to any individual component within the facility. As long as the non-synchronous generating facility as a whole meets the ride through requirements, it does not matter which part of the facility is controlling the generating facility's output.

1727. Ørsted also notes that non-synchronous generating facilities may freeze in phase locked loop during disturbances, making them not strictly synchronized with the transmission system. Ørsted asks the Commission to remove the phrase “stay synchronized” from article 9.7.3 of the *pro forma* LGIA. We decline to do so because the NOPR did not propose to revise this phrase

and this final rule establishes the specific ride through requirements for newly interconnecting non-synchronous generating facilities.

1728. Ørsted recommends that instead of references in this clause to “good utility practice,” the Commission should instead rely on Order No. 842 and its definition of “Bulk-Power System—Primary Frequency Response.” This comment refers to language not subject to the Commission's proposed revisions and is therefore outside the scope of this rulemaking proceeding. We also note that “Bulk-Power System—Primary Frequency Response” refers to the title of Order No. 842, and not any definition within.

c. Applicability of Ride Through Requirements

i. Need for Reform and NOPR Proposal

1729. In the NOPR, the Commission noted that generating facilities interconnecting under the *pro forma* LGIA that are subject to reliability standards are required to ride through frequency and voltage disturbance events, while generating facilities that are not already subject to reliability standards are not, despite the fact that all generating facilities newly interconnecting under the *pro forma* LGIA are technically capable of riding through disturbances.³²⁵⁵ The Commission explained that there is an existing gap in the applicability of ride through requirements for large generating facilities with a capacity above 20 MW and with a gross plant/facility aggregate nameplate rating of 75 MVA or less.³²⁵⁶ The Commission preliminarily found that the *pro forma* LGIA requirements could result in unduly discriminatory or preferential treatment due to this gap in the applicability of ride through performance requirements to similarly situated generating facilities.

1730. The Commission proposed to revise the *pro forma* LGIA to require that all newly interconnecting large generating facilities provide ride through capability consistent with any standards and guidelines that are applied to other generating facilities in the balancing authority area on a comparable basis.³²⁵⁷ The Commission noted that the proposed reform is consistent with existing language in article 1.5.7 of the *pro forma* SGIA that requires newly interconnecting small generating facilities to ride through

abnormal frequency and voltage events and not disconnect during such events.

1731. In addition to the substantive changes, the Commission proposed to replace the term “applicable reliability council” with “electric reliability organization,” and replace the term “control area” with “balancing authority area” throughout the *pro forma* LGIP and *pro forma* LGIA. The Commission explained that these proposed replacements reflect updated terminology.³²⁵⁸

ii. Comments

1732. Several commenters support the NOPR proposal.³²⁵⁹ Enel notes that the Commission's proposed definition of “electric reliability organization” includes NERC, but it does not include the applicable regional entity, which Enel asserts should be included because the regional entity may have approved the regional reliability standards.³²⁶⁰

iii. Commission Determination

1733. We adopt the NOPR proposal to revise the *pro forma* LGIA to require that all newly interconnecting large generating facilities provide frequency and voltage ride through capability consistent with any standards and guidelines that are applied to other generating facilities in the balancing authority area on a comparable basis. Adopting this reform enables the Commission to address an existing gap in the applicability of ride through requirements for large generating facilities with a capacity above 20 MW and with a gross plant/facility aggregate nameplate rating 75 MVA or less.

1734. Based on the record before us, we confirm the Commission's preliminary finding in the NOPR that the *pro forma* LGIP is unduly discriminatory or preferential insofar as generating facilities that are not already subject to reliability standards are not required to ride through frequency and voltage disturbance events, despite being technically capable of doing so. We note that no commenter opposes this reform.

1735. We also adopt the NOPR proposal to replace the term “applicable reliability council” with “electric reliability organization,” and the term “control area” with “balancing authority area,” throughout the *pro forma* LGIP and *pro forma* LGIA. In response to Enel's concerns, we note that, while regional reliability standards may be developed by the applicable

regional entity, the Commission has found that regional reliability standards are considered part of the electric reliability organization's set of reliability standards and are therefore covered under the proposed definition.³²⁶¹

D. Issues Beyond the Scope of This Rulemaking

1. Comments

1736. Multiple commenters ask the Commission to consider additional information or interconnection reforms not specifically raised in the NOPR. For example, some commenters address foundational issues such as generator retirement and/or replacement processes;³²⁶² the application of generator interconnection standards to merchant transmission and HVDC projects;³²⁶³ conducting a root-cause investigation of interconnection queue delays to identify and address key barriers to bringing new generating facilities online;³²⁶⁴ initiating a technical conference to identify additional reforms to meet present and future challenges;³²⁶⁵ establishing a process to provide access to transmission data to third-party businesses;³²⁶⁶ introduction of competition into the interconnection process or construction of network upgrades;³²⁶⁷ the introduction of project prioritization to allocate scarce interconnection access;³²⁶⁸ changes to operational practices to reduce network upgrade requirements;³²⁶⁹ and issues particular to different regions or transmission providers.³²⁷⁰

1737. Other commenters seek changes to tariff language such as additional reforms specific to small generating facilities and the small generator interconnection process;³²⁷¹ explicitly

stating that interconnection terms may be subject to remedial waiver upon appropriate Commission action;³²⁷² requiring detailed information be made available concerning either transmission congestion on transmission providers' systems or technical information associated with a particular point of interconnection;³²⁷³ clarifications to the interconnection service types (*i.e.*, energy-only or network resource);³²⁷⁴ replacing power flow studies with security constrained economic dispatch analysis for energy-only service studies;³²⁷⁵ the three-year suspension option in the *pro forma* LGIA;³²⁷⁶ and additional *pro forma* LGIA language on termination and breach.³²⁷⁷

1738. Several commenters focus on process-specific reforms, such as automation of the interconnection queue process to ease delays;³²⁷⁸ aligning the interconnection queue and the project development processes;³²⁷⁹ interconnection study issues such as staffing to conduct studies and study criteria and scope;³²⁸⁰ additional transparency from transmission providers on the interconnection study process, such as online interconnection queue tracking and performance metrics;³²⁸¹ and whether to implement an independent transmission monitor or allow third parties to conduct interconnection studies to reduce interconnection queue backlogs.³²⁸²

1739. Some commenters focus on network upgrade cost issues, in particular the participant funding model currently in place in certain RTOs/ISOs;³²⁸³ minimum thresholds for

identifying network upgrades;³²⁸⁴ a self-build option for stand-alone facilities;³²⁸⁵ and the "good faith" standard applied to cost and timeline estimates for network upgrades and related transmission facilities.³²⁸⁶

1740. Commenters raising resource-specific concerns address the interconnection of qualifying facilities;³²⁸⁷ challenges specific to the hydropower industry, including modifications to the readiness standard and site control requirements;³²⁸⁸ steps to promote new pumped storage projects;³²⁸⁹ using regional planning to develop operating assumptions applied to the study of electric storage resources;³²⁹⁰ and greater clarity on interconnection of battery storage additions to existing and proposed generating facilities.³²⁹¹

1741. Several commenters argue in favor of greater coordination between generator interconnection and transmission planning³²⁹² or identify interconnection as a matter requiring interregional planning.³²⁹³

1742. Some comments request that the Commission provide distinct treatment for Native American energy projects by adopting rules and policies that meet the unique needs of Tribes and that allow alternative means for fulfilling interconnection requirements, such as by providing additional time for the posting of deposits or eliminating commercial readiness requirements.³²⁹⁴

Other comments request that the Commission incorporate environmental justice considerations into the interconnection process by quantifying in the proportional impact analysis the remediation of past economic injustice and benefits of renewable development in impoverished areas³²⁹⁵ or by prioritizing the provision of low-cost, clean energy to low income and people of color communities under the FPA's public interest standard.³²⁹⁶

2. Commission Determination

1743. We consider the comments referenced in the section above to be beyond the scope of this proceeding. The Commission proposed specific reforms in the NOPR, to which commenters have responded and for which a record has been established. Even for those issues tangentially connected to NOPR proposals, the record here is inadequate to support their full consideration. Further, we consider issues regarding the coordination of transmission planning with generator interconnection to be beyond the scope of this rulemaking. We note that the Commission proposed reforms related to coordination between regional transmission planning and cost allocation and generator interconnection in Docket No. RM21-17-000.³²⁹⁷

IV. Compliance Procedures

A. NOPR Proposal

1744. In the NOPR, the Commission proposed to require each transmission provider to submit a compliance filing within 180 days of the effective date of the final rule revising its LGIP, LGIA, SGIP, and SGIA, as necessary, to demonstrate that it meets the requirements set forth in the final rule.³²⁹⁸ The Commission also proposed to permit appropriate entities to seek an "independent entity variation" or a "regional reliability variation" from the proposed requirements.³²⁹⁹ The Commission further noted that some transmission providers may have provisions in their existing LGIPs, LGIAs, SGIPs, and SGIAs subject to the Commission's jurisdiction that the Commission has previously deemed to be consistent with or superior to the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and/or *pro forma* SGIA or

permissible under the independent entity variation standard or regional reliability variation standard. Where these provisions would be modified by the final rule, the Commission proposed to require transmission providers to either comply with the final rule or demonstrate that these previously approved variations continue to meet the "consistent with or superior to" and "regional reliability variation" standard for non-RTO/ISO transmission providers and the independent entity variation standard for RTOs/ISOs.

1745. The Commission explained that it would assess whether each compliance filing satisfies the proposed requirements and issue additional orders as necessary to ensure that each transmission provider meets the requirements of the final rule.³³⁰⁰

1746. The Commission also proposed that non-public utility transmission providers would have to adopt the proposed requirements as a condition of maintaining the status of their safe harbor tariff or otherwise satisfying the reciprocity requirement of Order No. 888.³³⁰¹

B. Comments

1. Compliance Filing Deadline

1747. Consumers Energy and NRECA support the proposed requirement for transmission providers to submit compliance filings within 180 days of the effective date of a final rule in this proceeding.³³⁰² NRECA states that 180 days is a reasonable amount of time for transmission providers to assess their generation portfolios and for interconnection customers to gauge project viability and withdraw those interconnection requests that are not commercially ready.³³⁰³ Consumers Energy suggests that the Commission require RTOs/ISOs to justify any individual extensions for compliance filings.³³⁰⁴ NRECA asks the Commission to waive any existing withdrawal penalties during the period between a final rule and compliance filings to encourage the rapid withdrawal of speculative interconnection requests and the pursuit of ready interconnection requests.³³⁰⁵

1748. Some commenters argue that the Commission should provide a longer time period for compliance filings because the scope and complexity of the reforms will require substantial time

and resources and will involve lengthy stakeholder processes.³³⁰⁶ Some commenters also note that transmission providers will need to balance other priorities while developing compliance filings, such as administering the interconnection queue and pursuing transmission planning reforms.³³⁰⁷ Some commenters state that the 180-day period will be difficult for large, multi-state RTOs/ISOs that must develop large-scale tariff revisions in conjunction with large stakeholder communities.³³⁰⁸ EEI suggests a 240-day deadline for compliance filings,³³⁰⁹ while other commenters state that one year would be more appropriate.³³¹⁰

1749. PJM asks the Commission to hold its compliance filing obligation in abeyance until PJM completes the transition mechanism from its recent interconnection queue reform in Docket No. ER22-2110-000, which was the result of an 18-month stakeholder process.³³¹¹ PJM states that, if it is required to submit a compliance filing during the transition process, that will cast a cloud over the transition process while the request for an independent entity variation works through a prolonged regulatory process, bringing into doubt interconnection agreements finalized as part of the transition and further aggravating backlogs.³³¹² PJM explains that, when it completes this transition process, it can evaluate whether to adopt the final rule's reforms or demonstrate that its reforms are superior.³³¹³ PJM asserts that such a "staged" compliance process aligns with past Commission decisions and would bring more certainty to interconnection customers.³³¹⁴

2. Regional Flexibility

1750. A number of commenters call for the final rule to provide regional flexibility to account for differences in geography, state policies and regulatory

frameworks, different network electrical characteristics, market structures, resource mixes, and other factors.³³¹⁵ Many commenters explain that many transmission providers have already adopted or are in the process of adopting some of the NOPR proposals or similar processes targeting the challenges cited in the NOPR.³³¹⁶ Many commenters ask the Commission to ensure the final rule acknowledges and accommodates existing interconnection queue reform efforts and does not undo or disrupt progress.³³¹⁷ Some commenters specifically ask the Commission to allow transmission providers like PJM and Dominion to implement recent interconnection queue reform proposals, even though they differ in some aspects from the NOPR.³³¹⁸ Some commenters ask the Commission to continue applying its current standards for variations from the *pro forma* LGIP (*i.e.*, independent entity variations for RTOs/ISOs and consistent with or superior to variations for non-RTOs/ISOs).³³¹⁹ For example, ISO-NE

contends that the Commission should respect its existing independent entity variations and allow it to continue building upon those variations.³³²⁰

1751. In contrast, other commenters request that the Commission apply a new standard when evaluating variations from the *pro forma* requirements.³³²¹ OMS asks the Commission to allow transmission providers initiating their own stakeholder-supported interconnection reforms to continue developing regionally appropriate solutions upon a compliance showing of “substantial conformity” with the final rule requirements.³³²² MISO argues that the Commission should create an “independent entity presumption of reasonableness,” under which the Commission would rebuttably presume that any previous, proactive RTO/ISO reform that addresses the objectives of a final rule requirement (but does not conform to every detail) is eligible for an independent entity variation, unless an intervenor demonstrates that the previous reform does not provide the benefit that technical compliance with the final rule would.³³²³ NextEra also states that requiring transmission providers and stakeholders to have to justify whether their past reform initiatives match the Commission’s new rule would likely waste time and resources.³³²⁴

1752. Similarly, the Early Adopters Coalition ask the Commission to rebuttably presume that first-ready, first-served interconnection queue reforms already in place continue to be just and reasonable and not unduly discriminatory and consistent with or superior to the *pro forma* requirements.³³²⁵ Further, the Early Adopters Coalition and Indicated PJM TOs argue that there is an insufficient legal foundation under FPA section 206 to conclude that the Early Adopters

Coalition’s tariffs are unjust, unreasonable, and unduly discriminatory or preferential because the Commission’s FPA section 206 finding only speaks to the generic *pro forma* requirements, while many transmission providers’ tariffs have already departed from those requirements.³³²⁶ Indicated PJM TOs state that the Commission lacks the authority under FPA section 206 to require modification of a tariff that does not include the elements determined in the final rule to be unjust and unreasonable or unduly discriminatory.³³²⁷

1753. The Early Adopters Coalition also express concern that the proposed reforms would result in a higher burden of proof to justify departures from the *pro forma* requirements in future filings and signal that the Commission may not accept further incremental improvements; therefore, they ask the Commission to clarify that the final rule will not stifle their ability to improve their existing tariffs.³³²⁸

1754. PacifiCorp expresses concern that the NOPR proposal could disrupt some of PacifiCorp’s unique processes, including its inclusion of small generating facilities in the cluster study process with large generating facilities and its incorporation of the Commission-jurisdictional interconnection process into its state-level interconnection procedures.³³²⁹

1755. CREA and NewSun contest PacifiCorp’s and the other Early Adopters Coalition’s argument that the Commission’s approval of their LGIPs under FPA section 205 exempts them from any reforms adopted in a final rule in this proceeding because the Commission has an obligation under FPA section 206 to remedy unjust, unreasonable, and unduly discriminatory or preferential practices.³³³⁰ CREA and NewSun also note that neither utility- nor region-specific findings are necessary in a generic rulemaking; rather, the Commission can rely on basic economic theory and generic factual predictions.³³³¹ CREA and NewSun also

assert that the sole authority cited by the Early Adopters Coalition, *Emera Maine v. FERC*, is inapposite, because it involved a challenge to a specific transmission owners' base return on equity, not a nationwide rulemaking.³³³²

1756. In response to requests for additional flexibility, Public Interest Organizations and Clean Energy Associations assert that transmission providers should be required to demonstrate in compliance filings that their approach to a given requirement complies with the Commission's final rule.³³³³

1757. Xcel asks the Commission to state in the final rule that there is not just one just and reasonable approach to interconnection reform.³³³⁴ Xcel requests that the Commission confirm that alternative approaches used by RTOs/ISOs that achieve the policy goals of prioritizing ready interconnection requests and increasing the speed of interconnection queue processing are consistent with and superior to the *pro forma* LGIP, instead of using the independent entity variation standard when approving those RTOs/ISOs' compliance filings. Xcel explains that its preferred approach would allow non-RTOs/ISOs to replicate processes that are working efficiently in RTOs/ISOs.

1758. ACORE expresses concern that too much flexibility would detract from the benefits of a final rule.³³³⁵ ACORE explains that a consistent minimum set of requirements and common interconnection study methods and best practices is essential across all transmission providers.

3. Reciprocity Tariffs

1759. APPA-LPPC and NRECA seek clarification on the NOPR's statements regarding reciprocity tariffs.³³³⁶ They point out that Commission precedent allows non-public utilities to satisfy the reciprocity requirement of Order No. 888 through one of three means: (1) providing service to a public utility transmission provider under a safe harbor tariff; (2) providing service under a bilateral agreement; or (3) seeking waiver.³³³⁷ APPA-LPPC and NRECA explain that the NOPR's statement that

non-public utility transmission providers "will have to adopt the requirements of this Proposed Rule as a condition of maintaining the status of their safe harbor tariff or otherwise satisfying the reciprocity requirement of Order No. 888" could be read to suggest that the other ways of satisfying the reciprocity requirement no longer exist.³³³⁸ APPA-LPPC and NRECA ask the Commission to clarify that non-public utilities will still be able to satisfy reciprocity requirements through bilateral arrangements or waiver.

4. Effective Date

1760. MISO asks the Commission to make the reforms effective when orders on compliance are issued, rather than on the final rule's effective date, to avoid retroactive implementation of the proposed reforms and disruption in administering interconnection queues.³³³⁹ MISO explains that an effective date prior to the date of accepted compliance provisions would require a transmission provider to file new agreements with pending language, which means that transmission providers will need to file interconnection agreements and service agreements instead of using the electronic quarterly report (EQR) process.

5. Miscellaneous

1761. SoCal Edison states that the final rule should not automatically apply to a wholesale distribution access tariff without further consideration in a separate rulemaking.³³⁴⁰ SoCal Edison argues that the Commission should allow entities to align distribution-level tariffs with corresponding transmission-level tariffs to avoid gaming of interconnection locations and contends that the changes proposed in this NOPR are too extensive to apply to the unique characteristics of the distribution system.³³⁴¹ SoCal Edison states that the Commission has previously confirmed that reforms to the LGIP and LGIA are not required for the interconnection agreements under the wholesale distribution access tariff, and different processes, interconnection costs, and penalties could introduce new challenges for wholesale distribution providers and interconnection efficiencies that have not been addressed in the NOPR.

C. Commission Determination

1762. We modify the deadline for transmission providers to submit a compliance filing to adopt the requirements of this final rule as revisions to the LGIP, LGIA, SGIP, and SGIA in their tariffs. We require the submission of such compliance filings within 90 calendar days of the publication date of this final rule in the **Federal Register** rather than the proposed 180 days from the effective date of the final rule. We believe that it is important to implement this final rule in a timely manner, given the pressing need to reform the interconnection processes, as discussed in this final rule. On the Commission-approved effective date of the transmission provider's compliance filing with this final rule, the transmission provider will commence the transition study process.³³⁴² After the conclusion of the transition study process, the transmission provider will begin the first standard cluster study process,³³⁴³ and in its compliance filing, the transmission provider will indicate the number of calendar days after the conclusion of the transition study process when it will begin this first standard cluster study process (e.g., 30 calendar days after the conclusion of the transition study process).³³⁴⁴ By setting a 90-calendar day compliance filing deadline, the Commission may be in a position to act on the filings sooner, which will allow transmission providers to commence the transition process and progress to the first standard cluster study process earlier, and thereby implement the reforms contemplated by this final rule earlier rather than later.

1763. We note that 90 days is longer than the 60 days provided for compliance with Order No. 2003. In their compliance filings for Order No. 2003, transmission providers were required to adopt the *pro forma* LGIP and *pro forma* LGIA. Under this final rule, transmission providers are required to revise the LGIP, LGIA, SGIP, and SGIA in their tariffs, but are not provided significant discretion as to the terms of those documents, except for those who request deviations, as discussed below. While we recognize that the compliance filings for some transmission providers will entail more complexity, we believe that 90 calendar

³³⁴⁴ *Pro forma* LGIP section 3.4.1 (Cluster Request Window).

days should be sufficient time to prepare and submit even the more complex compliance filings. Further, the need to implement the reforms set forth in this final rule earlier rather than later outweighs the concerns raised about the timing of the compliance filing deadline.

1764. Consistent with Order Nos. 888, 890, 2003, 2006, and 845, we adopt the NOPR proposal to continue to apply the “consistent with or superior to” standard when considering proposals from non-RTO/ISO transmission providers to deviate from the requirements of this final rule.³³⁴⁵ Consistent with Order Nos. 2003, 2006, and 845, we adopt the NOPR proposal to continue to use the “independent entity variation” standard when considering such proposals from RTOs/ISOs.³³⁴⁶ Consistent with Order Nos. 888, 890, 2003, 2006, and 845, we adopt the NOPR proposal to continue to allow non-RTO/ISO transmission providers to use the regional differences rationale to seek variations made in response to established reliability requirements.³³⁴⁷ In this final rule, we make no changes to the standards used to judge requested variations, as described in Order Nos. 888, 890, 2003, 2006, and 845.

1765. We reject requests to presume that any transmission provider’s tariff meets the requirements of this final rule. We recognize that many transmission providers have adopted or are in the

process of adopting similar reforms to those adopted in this final rule. We do not intend to disrupt these ongoing transition processes or stifle further innovation. On compliance, transmission providers can propose deviations from the requirements adopted in this final rule—including deviations seeking to minimize interference with ongoing transition plans—and demonstrate how those deviations satisfy the standards discussed above, which the Commission will consider on a case-by-case basis.

1766. We disagree with commenters that suggest that FPA section 206 requires the Commission to make findings specific to each transmission provider’s tariff in this final rule to require transmission providers to comply with the requirements of this final rule. As some commenters recognize, neither utility- nor region-specific findings are necessary in a generic rulemaking.³³⁴⁸

1767. In response to commenters that prefer regional reform over generic one-size-fits-all reform, we note that transmission providers may seek the appropriate variation on compliance provided the reason for the variation is sufficiently justified and may continue to propose solutions to interconnection issues under FPA section 205. However, given the nation-wide need for reforms to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, as well as prevent undue discrimination, we believe that a generic rulemaking is appropriate, as explained above in section II and throughout this final rule.

1768. In the NOPR, the Commission stated that non-public utility transmission providers “will have to adopt the requirements of this Proposed Rule as a condition of maintaining the status of their safe harbor tariff or otherwise satisfying the reciprocity requirement of Order No. 888.”³³⁴⁹ As requested by NRECA and APPA-LPPC,³³⁵⁰ we clarify that this final rule does not modify the Commission’s reciprocity requirement in Order Nos. 888 and 2003.³³⁵¹ Thus, while a non-public utility’s adoption of the proposed LGIP/LGIA and SGIP/SGIA changes is a condition of maintaining a safe harbor

tariff,³³⁵² non-public utilities may still use a request for waiver or bilateral agreements to satisfy the reciprocity requirement of Order No. 888–A.³³⁵³

1769. With respect to MISO’s comments, as explained below, this final rule is effective November 6, 2023. This final rule will be effective as described above; however, the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIP requirements in transmission providers’ tariffs will not be effective until the Commission-approved effective date of the transmission provider’s filing in compliance with this final rule. In other words, interconnection customers seeking to interconnect to MISO’s transmission system will not be subject to the requirements of this final rule until the Commission issues an order on MISO’s compliance filing with a Commission-approved effective date for MISO’s tariff revisions.

1770. In response to SoCal Edison’s request for the Commission to clarify that the reforms described herein will not automatically apply to wholesale distribution access tariffs, we note that in Order No. 2003, the Commission stated that the *pro forma* LGIA and *pro forma* LGIP adopted in that final rule apply to a request to interconnect to a public utility’s “distribution” facilities used to transmit electric energy in interstate commerce on behalf of a wholesale purchaser pursuant to a Commission-filed open access transmission tariff.³³⁵⁴ To the extent that SoCal Edison has concerns about its specific wholesale distribution access

³³⁴⁵ Order No. 888, FERC Stats. & Regs. ¶ 31,036, at 31,769–770; Order No. 890, 118 FERC ¶ 61,119 at P 109 (“[W]e reiterate that any departures from the *pro forma* [open access transmission tariff] proposed by an ISO or an RTO must be ‘consistent with or superior to’ the *pro forma* [open access transmission tariff] in this Final Rule.”); Order No. 2003, 104 FERC ¶ 61,103 at P 825; Order No. 2006, 111 FERC ¶ 61,220 at PP 546–547; Order No. 845, 163 FERC ¶ 61,043 at P 43 (explaining that a transmission provider that is not an RTO/ISO that seeks a variation from the requirements of the final rule must present its justification for the variation as consistent with or superior to the *pro forma* LGIA or *pro forma* LGIP).

³³⁴⁶ Order No. 2003, 104 FERC ¶ 61,103 at P 826 (“[w]ith respect to an RTO or ISO . . . we will allow it to seek ‘independent entity variations’ from the Final Rule . . . This is a balanced approach that recognizes that an RTO or ISO has different operating characteristics depending on its size and location and is less likely to act in an unduly discriminatory manner than a Transmission Provider that is a market participant.”); Order No. 2006, 111 FERC ¶ 61,220 at PP 447, 549; Order No. 845, 163 FERC ¶ 61,043 at P 556.

³³⁵² Order No. 2003, 104 FERC ¶ 61,103 at P 842 (“A non-public utility that has a ‘safe harbor’ Tariff may add to its Tariff an interconnection agreement and interconnection procedures that substantially conform or are superior to the Final Rule LGIP and Final Rule LGIA if it wishes to continue to qualify for safe harbor treatment.”)

³³⁵³ Order No. 888–A, FERC Stats. & Regs. ¶ 31,048 at 30,285–86; see also Order No. 2003, 104 FERC ¶ 61,103 at P 841; Order No. 2003–A, 106 FERC ¶ 61,220 at P 760 (clarifying that reciprocity applies to interconnection service in a manner consistent with the reciprocity provision in the *pro forma* open access transmission tariff); Order No. 2006, 111 FERC ¶ 61,220 at P 534.

³³⁵⁴ See Order No. 2003, 104 FERC ¶ 61,103 at P 804; *id.* P 803 (some lower-voltage facilities are “local distribution” facilities not under our jurisdiction, but some are used for jurisdictional service such as carrying power to a wholesale power customer for resale and are included in a public utility’s open access transmission tariff (although in some instances, there is a separate open access transmission tariff rate for using them, sometimes called a wholesale distribution rate.)); Order No. 2003–A, 106 FERC ¶ 61,220 at P 733 (“We clarify that Order No. 2003 applies to all facilities subject to a Commission-approved [open access transmission tariff], regardless of how the facilities may be labeled by the Transmission Provider) (citing *N. Y. v. FERC*, 535 U.S. at 12; *Puget Sound Energy, Inc.*, 104 FERC ¶ 61,272, at PP 16–18 (2003)).

tariff, this is a matter better suited to SoCal Edison's compliance filing.³³⁵⁵

1771. We also note that, in addition to the modifications described above, the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, *pro forma* SGIP language below includes several corrections of clerical errors and other minor, clarifying edits: *see, e.g., pro forma* LGIA article 8.4, *pro forma* LGIP appendix G.

V. Information Collection Statement

1772. The information collection requirements contained in this final rule are subject to review by the Office of Management and Budget (OMB) under section 3507(d) of the Paperwork Reduction Act of 1995.³³⁵⁶ OMB's regulations require approval of certain information collection requirements imposed by agency rules.³³⁵⁷ Respondents subject to the filing requirements of this final rule will not be penalized for failing to respond to the collection of information unless the collection of information displays a valid OMB control number.

1773. The reforms adopted in this final rule revise the Commission's standard large generator interconnection procedures and agreements (*i.e.*, the *pro forma* LGIP and *pro forma* LGIA) and the Commission's standard small generator interconnection procedures and agreement (*i.e.*, the *pro forma* SGIP and *pro forma* SGIA) that every public utility transmission provider is required to include in their tariff under § 35.28 of the Commission's regulations.³³⁵⁸ This final rule requires each transmission provider to amend the standard large generator interconnection procedures and agreement and the standard small generator interconnection procedures and agreement in its tariff to implement the reforms adopted in this final rule, which are intended to ensure that the generator interconnection process is just, reasonable, and not unduly discriminatory or preferential. These provisions affect the following collections of information: FERC-516, Electric Rate Schedules and Tariff Filings (Control No. 1902-0096); and FERC-516A, Standardization of Small Generator Interconnection Agreements and Procedures (Control No. 1902-0203).

1774. In the NOPR, the Commission solicited comments on: the Commission's need for this information; whether the information will have practical utility; the accuracy of the burden estimates; ways to enhance the quality, utility, and clarity of the information to be collected or retained; and any suggested methods for minimizing respondents' burden. In response to comments on the NOPR,³³⁵⁹ we note that this information collection statement estimates only those burdens³³⁶⁰ to generate, maintain, retain, or disclose or provide information to or for a Federal agency, and does not intend to estimate overall compliance or implementation costs for transmission providers.

1775. Summary of the Revisions to the Collection of Information due to the final rule in Docket No. RM22-14-000:

- **FERC-516:** This final rule revises the Commission's *pro forma* LGIP and *pro forma* LGIA (and thus requires each public utility to amend its LGIP and LGIA) to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, and prevent undue discrimination. As illustrated in the table below, most reforms affect the *pro forma* LGIP and *pro forma* LGIA.

- **FERC-516A:** Among other requirements, this final rule amends the Commission's standard small generator interconnection procedures and agreement (*i.e.*, the *pro forma* SGIP and *pro forma* SGIA) regarding evaluation of alternative transmission technologies, modeling required for accurate interconnection studies, and maintenance of power production during abnormal frequency conditions and certain voltage conditions.

- **Title:** Electric Rate Schedules and Tariff Filings (FERC-516) and Standardization of Small Generator Interconnection Agreements and Procedures (FERC-516A).

- **Action:** Revision of collections of information in accordance with Docket No. RM22-14-000.

- **OMB Control Nos.:** 1902-0096 (FERC-516) and 1902-0203 (FERC-516A).

- **Respondents:** Public utility transmission providers, including RTOs/ISOs.

- **Frequency of Information Collection:** One time during Year 1. Multiple times during subsequent years.

- **Necessity of Information:** The reforms in this final rule ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, and prevent undue discrimination. The reforms are intended to ensure that the generator interconnection process is just, reasonable, and not unduly discriminatory or preferential.

- **Internal Review:** We have reviewed the reforms that impose information collection burdens and have determined that such reforms are necessary. These requirements conform to the Commission's need for efficient information collection, communication, and management within the energy industry. We have specific, objective support for the burden estimates associated with the information collection requirements.

- **Public Reporting Burden:** Our estimate of the number of reporting entities is based on the number of transmission providers that submitted compliance filings to the Commission in response to Order No. 845, which is the Commission's most recent rulemaking that required transmission providers to revise their generator interconnection procedures and agreements, and Order No. 881, which is the Commission's most recent major rulemaking adopting reforms to the *pro forma* tariff. As such, we estimate that 44 transmission providers, including RTOs/ISOs, will be subject to this rulemaking. The burden and cost estimates below are based on (1) the initial need for transmission providers to file revised versions of the standard interconnection procedures and agreements in Year 1 and (2) ongoing information collection activities in connection with reporting and disclosure requirements in subsequent years. For many reforms, we estimate no ongoing information collection burden because there is either no information collection aspect of the reform or the requirements would merely supplant existing ones.

1776. The Commission estimates that the final rule in Docket No. RM22-14-000 will adjust the burden and cost of FERC-516 and FERC-516A as follows:

³³⁵⁵ See Order No. 2003-A, 106 FERC ¶ 61,220 at P 734. We note, however, that the Commission has previously accepted SoCal Edison's filing, made in compliance with Order No. 2003, to implement provisions from the Commission's *pro forma* LGIA and *pro forma* LGIP into its wholesale distribution access tariff. *See S. Cal. Edison Co.*, 110 FERC ¶ 61,176 (2005).

³³⁵⁶ 44 U.S.C. 3507(d).

³³⁵⁷ 5 CFR 1320.11 (2022).

³³⁵⁸ 18 CFR 35.28(f)(1) (2022).

³³⁵⁹ Indicated PJM TOs state that the NOPR did not attempt to quantify the administrative burden for the transmission provider's staff to perform the tasks required by the proposed reforms, and SPP offered an estimated range of its potential costs of administering the proposed procedures. *See* Indicated PJM TOs Initial Comments at 7; SPP

Initial Comments at 28; *see also* NOPR, 179 FERC ¶ 61,194 at P 358 & n.480.

³³⁶⁰ "Burden" is the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. For further explanation of what is included in the information collection burden, refer to 5 CFR 1320.3 (2022).

TABLE 1—INFORMATION COLLECTION REQUIREMENTS

Changes due to Final Rule in Docket No. RM22–14–000					
Reforms	Number of respondents	Annual number of responses per respondent	Total number of responses (rounded)	Average burden (hr.) & cost (\$) per response ³³⁶¹	Total annual burden hours & total annual cost (\$) (rounded)

Ride-Through Requirements	44 (TPs)	Year 1: 1 Ongoing: 0	Year 1: 44 Ongoing: 0	Year 1: 4 hr; \$364 Ongoing: 0	Year 1: 176 hr; \$16,016 Ongoing: 0
Total New Burden for FERC–516A (due to Docket No. RM22–14–000).		Year 1: 132 responses Ongoing: 0		Year 1: 3,872 hr; \$352,352 Ongoing: 0	
Grand Total (FERC–516 plus FERC–516A, including all respondents).		Year 1: 1,056 Ongoing: 484		Year 1: 34,320 hr; \$3,123,120 Ongoing: 1,760 hr; \$160,160	
Grand Total Average Per Entity Cost (44 TPs).				Year 1: \$70,980 Ongoing: \$3,640	

1777. In this final rule, after accounting for the adjustments and inputs noted above, updated labor costs, and reforms not being adopted, the Commission used the numbers provided in the NOPR for all reforms being adopted.

1778. Interested persons may obtain information on the reporting requirements by contacting Ellen Brown, Office of the Executive Director, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426 via email (*DataClearance@ferc.gov*) or telephone ((202) 502–8663).

VI. Environmental Analysis

1779. The Commission is required to prepare an Environmental Assessment or an Environmental Impact Statement for any action that may have a significant adverse effect on the human environment.³³⁶³ We conclude that neither an Environmental Assessment nor an Environmental Impact Statement is required for this final rule under § 380.4(a)(15) of the Commission's regulations, which provides a categorical exemption for approval of

actions under sections 205 and 206 of the FPA relating to the filing of schedules containing all rates and charges for the transmission or sale of electric energy subject to the Commission's jurisdiction, plus the classification, practices, contracts, and regulations that affect rates, charges, classification, and services.³³⁶⁴

VII. Regulatory Flexibility Act

1780. The Regulatory Flexibility Act of 1980³³⁶⁵ requires a description and analysis of proposed and final rules that will have significant economic impact on a substantial number of small entities. The Small Business Administration (SBA) sets the threshold for what constitutes a small business. Under SBA's size standards,³³⁶⁶ transmission providers and RTOs/ISOs fall under the category of Electric Bulk Power Transmission and Control (North American Industry Classification System (NAICS) code 221121), that has a size threshold of under 950 employees (including the entity and its associates).³³⁶⁷

³³⁶⁴ 18 CFR 380.4(a)(15) (2022).

³³⁶⁵ 5 U.S.C. 601–612.

³³⁶⁶ 13 CFR 121.201 (2022).

³³⁶⁷ The RFA definition of “small entity” refers to the definition provided in the Small Business Act, which defines a “small business concern” as a business that is independently owned and operated and that is not dominant in its field of operation. The Small Business Administration's regulations define the threshold for a small Electric Bulk Power Transmission and Control entity (NAICS code 221121) to be 950 employees (“the maximum allowed for a concern and its affiliates to be considered small”). See 13 CFR 121.201 (2022); see also 5 U.S.C. 601(3) (citing to section 3 of the Small Business Act, 15 U.S.C. 632).

1781. We estimate that there are 44 transmission providers affected by the reforms proposed in this final rule. Furthermore, we estimate that 6 of the 44 total transmission providers, approximately 14% (rounded), are small entities.

1782. We estimate that one-time costs (in Year 1) associated with the reforms required by this final rule for one transmission provider (as shown in the table above) would be \$70,980. Following Year 1, we estimate that the annual ongoing costs for one transmission provider would be \$3,640. According to SBA guidance, the determination of significance of impact “should be seen as relative to the size of the business, the size of the competitor's business, and the impact the regulation has on larger competitors.”³³⁶⁸ We do not consider the estimated cost to be a significant economic impact. As a result, we certify that the reforms proposed in this final rule would not have a significant economic impact on a substantial number of small entities.

VIII. Document Availability

1783. In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the

³³⁶⁸ U.S. Small Business Administration, *A Guide for Government Agencies How to Comply with the Regulatory Flexibility Act*, at 18 (Aug. 2017), <https://cdn.advocacy.sba.gov/wp-content/uploads/2019/06/21110349/How-to-Comply-with-the-RFA.pdf>.

³³⁶¹ Commission staff estimate that respondents' hourly wages plus benefits are comparable to those of FERC employees. Therefore, the hourly cost used in this analysis is \$91 per hour (\$188,922 per year).

³³⁶² Commission staff only estimates the information collection burden associated with the requirements outlined in the final rule and does not estimate the potential appeal process burden, which an applicant can pursue voluntarily.

³³⁶³ *Regulations Implementing the National Environmental Policy Act*, Order No. 486, 52 FR 47897 (Dec. 17, 1987), FERC Stats. & Regs. Preambles 1986–1990 ¶ 30,783 (1987) (cross-referenced at 41 FERC ¶ 61,284).

Commission's Home Page (<https://www.ferc.gov>).

1784. From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number in the docket number field. User assistance is available for eLibrary and the Commission's website during normal business hours from the Commission's Online Support at (202) 502-6652 (toll free at 1-866-208-3676) or email at ferconlinesupport@ferc.gov, or the Public Reference Room at (202) 502-8371, TTY (202) 502-8659. Email the Public Reference Room at public.referenceroom@ferc.gov.

IX. Effective Date and Congressional Notification

1785. The final rule is effective November 6, 2023. The Commission has determined, with the concurrence of the Administrator of the Office of Information and Regulatory Affairs of

OMB, that this rule is a "major rule" as defined in section 351 of the Small Business Regulatory Enforcement Fairness Act of 1996.

List of Subjects in 18 CFR Part 35

Electric power rates, Electric utilities, Reporting and recordkeeping requirements.

By the Commission. Commissioner Danly is concurring with a separate statement attached.

Commissioner Clements is concurring with a separate statement attached.

Commissioner Christie is concurring with a separate statement attached.

Issued: July 28, 2023.

Kimberly D. Bose,
Secretary.

In consideration of the foregoing, the Commission amends part 35, chapter I, title 18, Code of Federal Regulations, as follows:

PART 35—FILING OF RATE SCHEDULES AND TARIFFS

■ 1. The authority citation for part 35 continues to read as follows:

Authority: 16 U.S.C. 791a–825r, 2601–2645; 31 U.S.C. 9701; 42 U.S.C. 7101–7352.

■ 2. Amend § 35.28 by adding paragraph (f)(1)(ii) to read as follows:

§ 35.28 Non-discriminatory open access transmission tariff.

* * * * *

(f) * * *

(1) * * *

(ii) Any public utility that conducts interconnection studies shall be liable for and eligible to appeal certain penalties under the interconnection procedures and agreements adopted by the Commission-approved independent system operator or regional transmission organization under paragraph (f)(1) of this section following that public utility's failure to complete an interconnection study by the appropriate deadline.

Appendix C: Pro forma LGIP

Note: Deletions are in brackets and additions are in italics.

Section 1. Definitions

Adverse System Impact shall mean the negative effects due to technical or operational limits on conductors or equipment being exceeded that may compromise the safety and reliability of the electric system.

Affected System shall mean an electric system other than [the] Transmission

Provider's Transmission System that may be affected by the proposed interconnection.

Affected System Facilities Construction Agreement shall mean the agreement contained in Appendix 11 to this LGIP that is made between Transmission Provider and Affected System Interconnection Customer to facilitate the construction of and to set forth cost responsibility for necessary Affected System Network Upgrades on Transmission Provider's Transmission System.

Affected System Interconnection Customer shall mean any entity that submits an interconnection request for a generating facility to a transmission system other than

Transmission Provider's Transmission System that may cause the need for Affected System Network Upgrades on the Transmission Provider's Transmission System.

Affected System Network Upgrades shall mean the additions, modifications, and upgrades to Transmission Provider's Transmission System required to accommodate Affected System Interconnection Customer's proposed interconnection to a transmission system other than Transmission Provider's Transmission System.

Affected System Operator shall mean the entity that operates an Affected System.

Affected System Queue Position shall mean the queue position of an Affected System Interconnection Customer in Transmission Provider's interconnection queue relative to Transmission Provider's Interconnection Customers' Queue Positions.

Affected System Study shall mean the evaluation of Affected System Interconnection Customers' proposed interconnection(s) to a transmission system other than Transmission Provider's Transmission System that have an impact on Transmission Provider's Transmission System, as described in Section 9 of this LGIP.

Affected System Study Agreement shall mean the agreement contained in Appendix 9 to this LGIP that is made between Transmission Provider and Affected System Interconnection Customer to conduct an Affected System Study pursuant to Section 9 of this LGIP.

Affected System Study Report shall mean the report issued following completion of an Affected System Study pursuant to Section 9.6 of this LGIP.

Affiliate shall mean, with respect to a corporation, partnership or other entity, each such other corporation, partnership or other entity that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such corporation, partnership or other entity.

Ancillary Services shall mean those services that are necessary to support the transmission of capacity and energy from resources to loads while maintaining reliable operation of the Transmission Provider's Transmission System in accordance with Good Utility Practice.

Applicable Laws and Regulations shall mean all duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

[Applicable Reliability Council shall mean the reliability council applicable to the Transmission System to which the Generating Facility is directly interconnected.]

Applicable Reliability Standards shall mean the requirements and guidelines of [NERC,] the [Applicable Reliability Council] *Electric Reliability Organization* and the [Control Area] *Balancing Authority Area* of the Transmission System to which the Generating Facility is directly interconnected.

Balancing Authority shall mean an entity that integrates resource plans ahead of time, maintains demand and resource balance within a Balancing Authority Area, and supports interconnection frequency in real time.

Balancing Authority Area shall mean the collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.

Base Case shall mean the base case power flow, short circuit, and stability data bases

used for the Interconnection Studies by [the] Transmission Provider or Interconnection Customer.

Breach shall mean the failure of a Party to perform or observe any material term or condition of the Standard Large Generator Interconnection Agreement.

Breaching Party shall mean a Party that is in Breach of the Standard Large Generator Interconnection Agreement.

Business Day shall mean Monday through Friday, excluding Federal Holidays.

Calendar Day shall mean any day including Saturday, Sunday or a Federal Holiday.

Cluster shall mean a group of one or more Interconnection Requests that are studied together for the purpose of conducting a Cluster Study.

Cluster Request Window shall mean the time period set forth in Section 3.4.1 of this LGIP.

Cluster Restudy shall mean a restudy of a Cluster Study conducted pursuant to Section 7.5 of this LGIP.

Cluster Restudy Report Meeting shall mean the meeting held to discuss the results of a Cluster Restudy pursuant to Section 7.5 of this LGIP.

Cluster Restudy Report shall mean the report issued following completion of a Cluster Restudy pursuant to Section 7.5 of this LGIP.

Cluster Study shall mean the evaluation of one or more Interconnection Requests within a Cluster as described in Section 7 of this LGIP.

Cluster Study Agreement shall mean the agreement contained in Appendix 2 to this LGIP for conducting the Cluster Study.

Cluster Study Process shall mean the following processes, conducted in sequence: the Cluster Request Window; the Customer Engagement Window and Scoping Meetings therein; the Cluster Study; any needed Cluster Restudies; and the Interconnection Facilities Study.

Cluster Study Report shall mean the report issued following completion of a Cluster Study pursuant to Section 7 of this LGIP.

Cluster Study Report Meeting shall mean the meeting held to discuss the results of a Cluster Study pursuant to Section 7 of this LGIP.

Clustering shall mean the process whereby one or more [a group of] Interconnection Requests [is] are studied together, instead of serially, [for the purpose of conducting the Interconnection System Impact Study] as described in Section 7 of this LGIP.

Commercial Operation shall mean the status of a Generating Facility that has commenced generating electricity for sale, excluding electricity generated during Trial Operation.

Commercial Operation Date of a unit shall mean the date on which the Generating Facility commences Commercial Operation as agreed to by the Parties pursuant to Appendix E to the Standard Large Generator Interconnection Agreement.

Commercial Readiness Deposit shall mean a deposit paid as set forth in Sections 3.4.2, 7.5, and 8.1 of this LGIP.

Confidential Information shall mean any confidential, proprietary or trade secret

information of a plan, specification, pattern, procedure, design, device, list, concept, policy or compilation relating to the present or planned business of a Party, which is designated as confidential by the Party supplying the information, whether conveyed orally, electronically, in writing, through inspection, or otherwise.

Contingent Facilities shall mean those unbuilt Interconnection Facilities and Network Upgrades upon which the Interconnection Request's costs, timing, and study findings are dependent, and if delayed or not built, could cause a need for [Restudies] restudies of the Interconnection Request or a reassessment of the Interconnection Facilities and/or Network Upgrades and/or costs and timing.

[Control Area shall mean an electrical system or systems bounded by interconnection metering and telemetry, capable of controlling generation to maintain its interchange schedule with other Control Areas and contributing to frequency regulation of the interconnection. A Control Area must be certified by an Applicable Reliability Council.]

Customer Engagement Window shall mean the time period set forth in Section 3.4.5 of this LGIP.

Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 17 of the Standard Large Generator Interconnection Agreement.

Dispute Resolution shall mean the procedure for resolution of a dispute between the Parties in which they will first attempt to resolve the dispute on an informal basis.

Distribution System shall mean the Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which distribution systems operate differ among areas.

Distribution Upgrades shall mean the additions, modifications, and upgrades to the Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Generating Facility and render the transmission service necessary to effect Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Effective Date shall mean the date on which the Standard Large Generator Interconnection Agreement becomes effective upon execution by the Parties subject to acceptance by FERC, or if filed unexecuted, upon the date specified by FERC.

Electric Reliability Organization shall mean the North American Electric Reliability Corporation or its successor organization.

Emergency Condition shall mean a condition or situation: (1) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (2) that, in the case of a Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to Transmission

Provider's Transmission System, Transmission Provider's Interconnection Facilities or the electric systems of others to which the Transmission Provider's Transmission System is directly connected; or (3) that, in the case of Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Generating Facility or Interconnection Customer's Interconnection Facilities. System restoration and black start shall be considered Emergency Conditions; provided that Interconnection Customer is not obligated by the Standard Large Generator Interconnection Agreement to possess black start capability.

Energy Resource Interconnection Service shall mean an Interconnection Service that allows the Interconnection Customer to connect its Generating Facility to the Transmission Provider's Transmission System to be eligible to deliver the Generating Facility's electric output using the existing firm or nonfirm capacity of the Transmission Provider's Transmission System on an as available basis. Energy Resource Interconnection Service in and of itself does not convey transmission service.

Engineering & Procurement (E&P) Agreement shall mean an agreement that authorizes the Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection in order to advance the implementation of the Interconnection Request.

Environmental Law shall mean Applicable Laws or Regulations relating to pollution or protection of the environment or natural resources.

Federal Power Act shall mean the Federal Power Act, as amended, 16 U.S.C. §§791a *et seq.*

FERC shall mean the Federal Energy Regulatory Commission (Commission) or its successor.

Force Majeure shall mean any act of God, labor disturbance, act of the public enemy, war, insurrection, riot, fire, storm or flood, explosion, breakage or accident to machinery or equipment, any order, regulation or restriction imposed by governmental, military or lawfully established civilian authorities, or any other cause beyond a Party's control. A Force Majeure event does not include acts of negligence or intentional wrongdoing by the Party claiming Force Majeure.

Generating Facility shall mean Interconnection Customer's [device] *device(s)* for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include [the] Interconnection Customer's Interconnection Facilities.

Generating Facility Capacity shall mean the net capacity of the Generating Facility [and] or the aggregate net capacity of the Generating Facility where it includes [multiple energy production devices] *more than one device for the production and/or storage for later injection of electricity.*

Good Utility Practice shall mean any of the practices, methods and acts engaged in or approved by a significant portion of the

electric industry during the relevant time period, or any of the practices, methods and acts which, in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Governmental Authority shall mean any federal, state, local or other governmental regulatory or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, police, or taxing authority or power; provided, however, that such term does not include Interconnection Customer, Transmission Provider, or any Affiliate thereof.

Hazardous Substances shall mean any chemicals, materials or substances defined as or included in the definition of "hazardous substances," "hazardous wastes," "hazardous materials," "hazardous constituents," "restricted hazardous materials," "extremely hazardous substances," "toxic substances," "radioactive substances," "contaminants," "pollutants," "toxic pollutants" or words of similar meaning and regulatory effect under any applicable Environmental Law, or any other chemical, material or substance, exposure to which is prohibited, limited or regulated by any applicable Environmental Law.

Initial Synchronization Date shall mean the date upon which the Generating Facility is initially synchronized and upon which Trial Operation begins.

In-Service Date shall mean the date upon which the Interconnection Customer reasonably expects it will be ready to begin use of the Transmission Provider's Interconnection Facilities to obtain back feed power.

Interconnection Customer shall mean any entity, including the Transmission Provider, Transmission Owner or any of the Affiliates or subsidiaries of either, that proposes to interconnect its Generating Facility with the Transmission Provider's Transmission System.

Interconnection Customer's Interconnection Facilities shall mean all facilities and equipment, as identified in Appendix A of the Standard Large Generator Interconnection Agreement, that are located between the Generating Facility and the Point of Change of Ownership, including any modification, addition, or upgrades to such facilities and equipment necessary to physically and electrically interconnect the Generating Facility to [the] Transmission Provider's Transmission System. Interconnection Customer's Interconnection Facilities are sole use facilities.

Interconnection Facilities shall mean [the] Transmission Provider's Interconnection

Facilities and [the] Interconnection Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Generating Facility to [the] Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Interconnection Facilities Study shall mean a study conducted by [the] Transmission Provider or a third party consultant for [the] Interconnection Customer to determine a list of facilities (including Transmission Provider's Interconnection Facilities and Network Upgrades as identified in the [Interconnection System Impact] *Cluster Study*), the cost of those facilities, and the time required to interconnect the Generating Facility with [the] Transmission Provider's Transmission System. The scope of the study is defined in Section 8 of *this LGIP* [the Standard Large Generator Interconnection Procedures].

Interconnection Facilities Study Agreement shall mean the form of agreement contained in Appendix 3[4] of *this LGIP* [the Standard Large Generator Interconnection Procedures] for conducting the Interconnection Facilities Study.

Interconnection Facilities Study Report shall mean the report issued following completion of an *Interconnection Facilities Study* pursuant to Section 8 of *this LGIP*.

[Interconnection Feasibility Study shall mean a preliminary evaluation of the system impact and cost of interconnecting the Generating Facility to Transmission Provider's Transmission System, the scope of which is described in Section 6 of the Standard Large Generator Interconnection Procedures.]

[Interconnection Feasibility Study Agreement shall mean the form of agreement contained in Appendix 2 of the Standard Large Generator Interconnection Procedures for conducting the Interconnection Feasibility Study.]

Interconnection Request shall mean an Interconnection Customer's request, in the form of Appendix 1 to *this LGIP* [the Standard Large Generator Interconnection Procedures], in accordance with the Tariff, to interconnect a new Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics of, an existing Generating Facility that is interconnected with the Transmission Provider's Transmission System.

Interconnection Service shall mean the service provided by the Transmission Provider associated with interconnecting the Interconnection Customer's Generating Facility to the Transmission Provider's Transmission System and enabling it to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Standard Large Generator Interconnection Agreement and, if applicable, the Transmission Provider's Tariff.

Interconnection Study shall mean any of the following studies: [the Interconnection Feasibility Study, the Interconnection System Impact Study,] *the Cluster Study, the Cluster Restudy, the Surplus Interconnection Service System Impact Study*, and the Interconnection Facilities Study, described in *this LGIP* [the Standard Large Generator Interconnection Procedures].

[Interconnection System Impact Study shall mean an engineering study that evaluates the impact of the proposed interconnection on the safety and reliability of Transmission Provider's Transmission System and, if applicable, an Affected System. The study shall identify and detail the system impacts that would result if the Generating Facility were interconnected without project modifications or system modifications, focusing on the Adverse System Impacts identified in the Interconnection Feasibility Study, or to study potential impacts, including but not limited to those identified in the Scoping Meeting as described in the Standard Large Generator Interconnection Procedures.]

[Interconnection System Impact Study Agreement shall mean the form of agreement contained in Appendix 3 of the Standard Large Generator Interconnection Procedures for conducting the Interconnection System Impact Study.]

IRS shall mean the Internal Revenue Service.

Joint Operating Committee shall be a group made up of representatives from Interconnection Customers and the Transmission Provider to coordinate operating and technical considerations of Interconnection Service.

Large Generating Facility shall mean a Generating Facility having a Generating Facility Capacity of more than 20 MW.

LGIA Deposit shall mean the deposit Interconnection Customer submits when returning the executed LGIA, or within 10 Business Days of requesting that the LGIA be filed unexecuted at the Commission, in accordance with Section 11.3 of this LGIP.

Loss shall mean any and all losses relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's performance, or non-performance of its obligations under the Standard Large Generator Interconnection Agreement on behalf of the [indemnifying] *Indemnifying Party*, except in cases of gross negligence or intentional wrongdoing by the [indemnifying] *Indemnifying Party*.

Material Modification shall mean those modifications that have a material impact on the cost or timing of any Interconnection Request with an equal or later *Queue Position* [queue priority date].

Metering Equipment shall mean all metering equipment installed or to be installed at the Generating Facility pursuant to the Standard Large Generator Interconnection Agreement at the metering points, including but not limited to instrument transformers, MWh-meters, data acquisition equipment, transducers, remote terminal unit, communications equipment, phone lines, and fiber optics.

Multiparty Affected System Facilities Construction Agreement shall mean the agreement contained in Appendix 12 to this LGIP that is made among Transmission Provider and multiple Affected System Interconnection Customers to facilitate the construction of and to set forth cost responsibility for necessary Affected System Network Upgrades on Transmission Provider's Transmission System.

Multiparty Affected System Study Agreement shall mean the agreement contained in Appendix 10 to this LGIP that is made among Transmission Provider and multiple Affected System Interconnection Customers to conduct an Affected System Study pursuant to Section 9 of this LGIP.

[NERC shall mean the North American Electric Reliability Council or its successor organization.]

Network Resource shall mean any designated generating resource owned, purchased, or leased by a Network Customer under the Network Integration Transmission Service Tariff. Network Resources do not include any resource, or any portion thereof, that is committed for sale to third parties or otherwise cannot be called upon to meet the Network Customer's Network Load on a non-interruptible basis.

Network Resource Interconnection Service shall mean an Interconnection Service that allows the Interconnection Customer to integrate its Large Generating Facility with the Transmission Provider's Transmission System (1) in a manner comparable to that in which the Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an RTO or ISO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service in and of itself does not convey transmission service.

Network Upgrades shall mean the additions, modifications, and upgrades to the Transmission Provider's Transmission System required at or beyond the point at which the Interconnection Facilities connect to the Transmission Provider's Transmission System to accommodate the interconnection of the Large Generating Facility to the Transmission Provider's Transmission System.

Notice of Dispute shall mean a written notice of a dispute or claim that arises out of or in connection with the Standard Large Generator Interconnection Agreement or its performance.

Optional Interconnection Study shall mean a sensitivity analysis based on assumptions specified by the Interconnection Customer in the Optional Interconnection Study Agreement.

Optional Interconnection Study Agreement shall mean the form of agreement contained in Appendix 4[5] of *this LGIP* [the Standard Large Generator Interconnection Procedures] for conducting the Optional Interconnection Study.

Party or Parties shall mean Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Permissible Technological Advancement {Transmission Provider inserts definition here.}

Point of Change of Ownership shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where the Interconnection Customer's Interconnection Facilities connect to the Transmission Provider's Interconnection Facilities.

Point of Interconnection shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where the Interconnection Facilities connect to the Transmission Provider's Transmission System.

Proportional Impact Method shall mean a technical analysis conducted by Transmission Provider to determine the degree to which each Generating Facility in the Cluster Study contributes to the need for a specific System Network Upgrade.

Provisional Interconnection Service shall mean Interconnection Service provided by Transmission Provider associated with interconnecting the Interconnection Customer's Generating Facility to Transmission Provider's Transmission System and enabling that Transmission System to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Provisional Large Generator Interconnection Agreement and, if applicable, the Tariff.

Provisional Large Generator Interconnection Agreement shall mean the interconnection agreement for Provisional Interconnection Service established between Transmission Provider and/or the Transmission Owner and the Interconnection Customer. This agreement shall take the form of the Large Generator Interconnection Agreement, modified for provisional purposes.

Queue Position shall mean the order of a valid Interconnection Request, relative to all other pending valid Interconnection Requests, [that is] established *pursuant to Section 4.1 of this LGIP*. [based upon the date and time of receipt of the valid Interconnection Request by the Transmission Provider.]

Reasonable Efforts shall mean, with respect to an action required to be attempted or taken by a Party under the Standard Large Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.

Scoping Meeting shall mean the meeting between representatives of [the]Interconnection Customer(s) and Transmission Provider conducted for the purpose of discussing the *proposed Interconnection Request* and any alternative interconnection options, [to]exchang[e]ing information including any transmission data and earlier study evaluations that would be reasonably expected to impact such interconnection options, *refining information and models provided by Interconnection Customer(s), discussing the Cluster Study materials posted to OASIS pursuant to Section 3.5 of this LGIP, and [to]analyz[e]ing such information*[, and to determine the potential feasible Points of Interconnection].

Site Control shall mean [documentation reasonably demonstrating]the *exclusive land*

right to develop, construct, operate, and maintain the Generating Facility over the term of expected operation of the Generating Facility. Site Control may be demonstrated by documentation establishing: (1) ownership of, a leasehold interest in, or a right to develop a site [for the purpose of constructing] of sufficient size to construct and operate the Generating Facility; (2) an option to purchase or acquire a leasehold site of sufficient size to construct and operate the Generating Facility [for such purpose]; or (3) [an exclusivity or other business relationship between] any other documentation that clearly demonstrates the right of Interconnection Customer [and the entity having the right to sell, lease or grant Interconnection Customer the right to possess or] to exclusively occupy a site [for such purpose] of sufficient size to construct and operate the Generating Facility. Transmission Provider will maintain acreage requirements for each Generating Facility type on its OASIS or public website.

Small Generating Facility shall mean a Generating Facility that has a Generating Facility Capacity of no more than 20 MW.

Stand Alone Network Upgrades shall mean Network Upgrades that are not part of an Affected System that an Interconnection Customer may construct without affecting day-to-day operations of the Transmission System during their construction and the following conditions are met: (1) a Substation Network Upgrade must only be required for a single Interconnection Customer in the Cluster and no other Interconnection Customer in that Cluster is required to interconnect to the same Substation Network Upgrades, and (2) a System Network Upgrade must only be required for a single Interconnection Customer in the Cluster, as indicated under the Transmission Provider's Proportional Impact Method. Both [the] Transmission Provider and [the] Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify them in Appendix A to the Standard Large Generator Interconnection Agreement. If [the] Transmission Provider and Interconnection Customer disagree about whether a particular Network Upgrade is a Stand Alone Network Upgrade, [the] Transmission Provider must provide [the] Interconnection Customer a written technical explanation outlining why [the] Transmission Provider does not consider the Network Upgrade to be a Stand Alone Network Upgrade within 15 days of its determination.

Standard Large Generator Interconnection Agreement (LGIA) shall mean the form of interconnection agreement applicable to an Interconnection Request pertaining to a Large Generating Facility that is included in the Transmission Provider's Tariff.

Standard Large Generator Interconnection Procedures (LGIP) shall mean the interconnection procedures applicable to an Interconnection Request pertaining to a Large Generating Facility that are included in the Transmission Provider's Tariff.

Substation Network Upgrades shall mean Network Upgrades that are required at the substation located at the Point of Interconnection.

Surplus Interconnection Service shall mean any unneeded portion of Interconnection Service established in a Large Generator Interconnection Agreement, such that if Surplus Interconnection Service is utilized, the total amount of Interconnection Service at the Point of Interconnection would remain the same.

System Network Upgrades shall mean Network Upgrades that are required beyond the substation located at the Point of Interconnection.

System Protection Facilities shall mean the equipment, including necessary protection signal communications equipment, required to protect (1) the Transmission Provider's Transmission System from faults or other electrical disturbances occurring at the Generating Facility and (2) the Generating Facility from faults or other electrical system disturbances occurring on the Transmission Provider's Transmission System or on other delivery systems or other generating systems to which the Transmission Provider's Transmission System is directly connected.

Tariff shall mean the Transmission Provider's Tariff through which open access transmission service and Interconnection Service are offered, as filed with FERC, and as amended or supplemented from time to time, or any successor tariff.

Transitional Cluster Study shall mean an Interconnection Study evaluating a Cluster of Interconnection Requests during the transition to the Cluster Study Process, as set forth in Section 5.1.1.2 of this LGIP.

Transitional Cluster Study Report shall mean the report issued following completion of a Transitional Cluster Study pursuant to Section 5.1.1.2 of this LGIP.

Transitional Serial Interconnection Facilities Study shall mean an Interconnection Facilities Study evaluating an Interconnection Request on a serial basis during the transition to the Cluster Study Process, as set forth in Section 5.1.1.1 of this LGIP.

Transitional Serial Interconnection Facilities Study Report shall mean the report issued following completion of a Transitional Interconnection Facilities Study pursuant to Section 5.1.1.1 of this LGIP.

Transmission Owner shall mean an entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Standard Large Generator Interconnection Agreement to the extent necessary.

Transmission Provider shall mean the public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from the Transmission Provider.

Transmission Provider's Interconnection Facilities shall mean all facilities and equipment owned, controlled, or operated by [the] Transmission Provider from the Point of Change of Ownership to the Point of Interconnection as identified in Appendix A

to the Standard Large Generator Interconnection Agreement, including any modifications, additions or upgrades to such facilities and equipment. Transmission Provider's Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Transmission System shall mean the facilities owned, controlled or operated by the Transmission Provider or Transmission Owner that are used to provide transmission service under the Tariff.

Trial Operation shall mean the period during which Interconnection Customer is engaged in on-site test operations and commissioning of the Generating Facility prior to Commercial Operation.

Withdrawal Penalty shall mean the penalty assessed by Transmission Provider to an Interconnection Customer that chooses to withdraw or is deemed withdrawn from Transmission Provider's interconnection queue or whose Generating Facility does not otherwise reach Commercial Operation. The calculation of the Withdrawal Penalty is set forth in Section 3.7.1 of this LGIP.

Section 2. Scope and Application

2.1 Application of Standard Large Generator Interconnection Procedures

Sections 2 through 13 apply to processing an Interconnection Request pertaining to a Large Generating Facility.

2.2 Comparability

Transmission Provider shall receive, process and analyze all Interconnection Requests in a timely manner as set forth in this LGIP. Transmission Provider [will use the same Reasonable Efforts] shall process[ing] and analyze[ing] Interconnection Requests from all Interconnection Customers comparably, regardless of whether the Generating Facilities are owned by Transmission Provider, its subsidiaries or Affiliates or others.

2.3 Base Case Data

Transmission Provider shall maintain base power flow, short circuit and stability databases, including all underlying assumptions, and contingency list on either its OASIS site or a password-protected website, subject to confidentiality provisions in LGIP Section 13.1. In addition, Transmission Provider shall maintain network models and underlying assumptions on either its OASIS site or a password-protected website. Such network models and underlying assumptions should reasonably represent those used during the most recent interconnection study and be representative of current system conditions. If Transmission Provider posts this information on a password-protected website, a link to the information must be provided on Transmission Provider's OASIS site. Transmission Provider is permitted to require that Interconnection Customers, OASIS site users and password-protected website users sign a confidentiality agreement before the release of commercially sensitive information or Critical Energy Infrastructure Information in the Base Case data. Such databases and lists, hereinafter referred to as Base Cases, shall include all (1) generation projects and

(2) transmission projects, including merchant transmission projects that are proposed for the Transmission System for which a transmission expansion plan has been submitted and approved by the applicable authority.

2.4 No Applicability to Transmission Service

Nothing in this LGIP shall constitute a request for transmission service or confer upon an Interconnection Customer any right to receive transmission service.

Section 3. Interconnection Requests

3.1 [General.] Interconnection Requests

3.1.1 Study Deposits

3.1.1.1 Study Deposit

[An] Interconnection Customer shall submit to Transmission Provider, *during a Cluster Request Window*, an Interconnection Request in the form of Appendix 1 to this LGIP, an application fee of \$5,000, and a refundable study deposit of [\$10,000]:

- a. \$35,000 plus \$1,000 per MW for Interconnection Requests ≥ 20 MW < 80 MW, or;
- b. \$150,000 for Interconnection Requests ≥ 80 MW < 200 MW; or
- c. \$250,000 for Interconnection Requests ≥ 200 MW.

Transmission Provider shall apply the study deposit toward the cost of the *Cluster* [an Interconnection Feasibility] Study Process.

3.1.2 Submission

Interconnection Customer shall submit a separate Interconnection Request for each site [and may submit multiple Interconnection Requests for a single site. Interconnection Customer must submit a deposit with each Interconnection Request even when more than one request is submitted for a single site]. *Where multiple Generating Facilities share a site, Interconnection Customer(s) may submit separate Interconnection Requests or a single Interconnection Request.* An Interconnection Request to evaluate one site at two different voltage levels shall be treated as two Interconnection Requests.

At Interconnection Customer's option, Transmission Provider and Interconnection Customer will identify alternative Point(s) of Interconnection and configurations at [the] a Scoping Meeting *within the Customer Engagement Window* to evaluate in this process and attempt to eliminate alternatives in a reasonable fashion given resources and information available. Interconnection Customer will select the definitive Point[(s)] of Interconnection to be studied no later than the execution of the [Interconnection Feasibility Study Agreement.] *Cluster Study Agreement.* For purposes of clustering Interconnection Requests, Transmission Provider may propose changes to the requested Point of Interconnection to facilitate efficient interconnection of Interconnection Customers at common Point(s) of Interconnection. Transmission Provider shall notify Interconnection Customers in writing of any intended changes to the requested Point of

Interconnection within the Customer Engagement Window, and the Point of Interconnection shall only change upon mutual agreement.

Transmission Provider shall have a process in place to consider requests for Interconnection Service below the Generating Facility Capacity. These requests for Interconnection Service shall be studied at the level of Interconnection Service requested for purposes of Interconnection Facilities, Network Upgrades, and associated costs, but may be subject to other studies at the full Generating Facility Capacity to ensure safety and reliability of the system, with the study costs borne by [the] Interconnection Customer. If after the additional studies are complete, Transmission Provider determines that additional Network Upgrades are necessary, then Transmission Provider must: (1) specify which additional Network Upgrade costs are based on which studies; and (2) provide a detailed explanation of why the additional Network Upgrades are necessary. Any Interconnection Facility and/or Network Upgrade costs required for safety and reliability also would be borne by [the] Interconnection Customer. Interconnection Customers may be subject to additional control technologies as well as testing and validation of those technologies consistent with Article 6 of the LGIA. The necessary control technologies and protection systems shall be established in Appendix C of that executed, or requested to be filed unexecuted, LGIA.

Transmission Provider shall have a process in place to study Generating Facilities that include at least one electric storage resource using operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of the Generating Facility as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions. If Transmission Provider finds Interconnection Customer's requested operating assumptions conflict with Good Utility Practice, Transmission Provider must provide Interconnection Customer an explanation in writing of why the submitted operating assumptions are insufficient or inappropriate by no later than thirty (30) Calendar Days before the end of the Customer Engagement Window and allow Interconnection Customer to revise and resubmit requested operating assumptions one time at least ten (10) Calendar Days prior to the end of the Customer Engagement Window. Transmission Provider shall study these requests for Interconnection Service, with the study costs borne by Interconnection Customer, using the submitted operating assumptions for purposes of Interconnection Facilities, Network Upgrades, and associated costs. These requests for Interconnection Service also may be subject to other studies at the full Generating Facility Capacity to ensure safety and reliability of the system, with the study costs borne by Interconnection Customer. Interconnection Customer's

Generating Facility may be subject to additional control technologies as well as testing and validation of such additional control technologies consistent with Article 6 of the LGIA. The necessary control technologies and protection systems shall be set forth in Appendix C of the Interconnection Customer's LGIA.

3.2 Identification of Types of Interconnection Services

At the time the Interconnection Request is submitted, Interconnection Customer must request either Energy Resource Interconnection Service or Network Resource Interconnection Service, as described; provided, however, any Interconnection Customer requesting Network Resource Interconnection Service may also request that it be concurrently studied for Energy Resource Interconnection Service, up to the point when an Interconnection Facility[y]ies Study Agreement is executed. Interconnection Customer may then elect to proceed with Network Resource Interconnection Service or to proceed under a lower level of interconnection service to the extent that only certain upgrades will be completed.

3.2.1 Energy Resource Interconnection Service

3.2.1.1 The Product

Energy Resource Interconnection Service allows Interconnection Customer to connect the Large Generating Facility to the Transmission System and be eligible to deliver the Large Generating Facility's output using the existing firm or non-firm capacity of the Transmission System on an "as available" basis. Energy Resource Interconnection Service does not in and of itself convey any right to deliver electricity to any specific customer or Point of Delivery.

3.2.1.2 The Study

The study consists of short circuit/fault duty, steady state (thermal and voltage) and stability analyses. The short circuit/fault duty analysis would identify direct Interconnection Facilities required and the Network Upgrades necessary to address short circuit issues associated with the Interconnection Facilities. The stability and steady state studies would identify necessary upgrades to allow full output of the proposed Large Generating Facility, *except for Generating Facilities that include at least one electric storage resource that request to use operating assumptions pursuant to Section 3.1.2, unless the Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions*, and would also identify the maximum allowed output, at the time the study is performed, of the interconnecting Large Generating Facility without requiring additional Network Upgrades.

3.2.2 Network Resource Interconnection Service

3.2.2.1 The Product

Transmission Provider must conduct the necessary studies and construct the Network

Upgrades needed to integrate the Large Generating Facility (1) in a manner comparable to that in which Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an ISO or RTO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service Allows Interconnection Customer's Large Generating Facility to be designated as a Network Resource, up to the Large Generating Facility's full output, on the same basis as existing Network Resources interconnected to Transmission Provider's Transmission System, and to be studied as a Network Resource on the assumption that such a designation will occur.

3.2.2.2 The Study

The Interconnection Study for Network Resource Interconnection Service shall assure that Interconnection Customer's Large Generating Facility meets the requirements for Network Resource Interconnection Service and as a general matter, that such Large Generating Facility's interconnection is also studied with Transmission Provider's Transmission System at peak load, under a variety of severely stressed conditions, to determine whether, with the Large Generating Facility at full output, *except for Generating Facilities that include at least one electric storage resource that request to use, and for which Transmission Provider approves, operating assumptions pursuant to Section 3.1.2*, the aggregate of generation in the local area can be delivered to the aggregate of load on Transmission Provider's Transmission System, consistent with Transmission Provider's reliability criteria and procedures. This approach assumes that some portion of existing Network Resources are displaced by the output of Interconnection Customer's Large Generating Facility. Network Resource Interconnection Service in and of itself does not convey any right to deliver electricity to any specific customer or Point of Delivery. The Transmission Provider may also study the Transmission System under non-peak load conditions. However, upon request by the Interconnection Customer, the Transmission Provider must explain in writing to the Interconnection Customer why the study of non-peak load conditions is required for reliability purposes.

3.3 Utilization of Surplus Interconnection Service

Transmission Provider must provide a process that allows an Interconnection Customer to utilize or transfer Surplus Interconnection Service at an existing Point of Interconnection. The original Interconnection Customer or one of its affiliates shall have priority to utilize Surplus Interconnection Service. If the existing Interconnection Customer or one of its affiliates does not exercise its priority, then that service may be made available to other potential Interconnection Customers.

3.3.1 Surplus Interconnection Service Request

Surplus Interconnection Service requests may be made by the existing Interconnection

Customer [whose Generating Facility is already interconnected] or one of its affiliates or may be submitted once Interconnection Customer has executed the LGIA or requested that the LGIA be filed unexecuted. Surplus Interconnection Service requests also may be made by another Interconnection Customer. Transmission Provider shall provide a process for evaluating Interconnection Requests for Surplus Interconnection Service. Studies for Surplus Interconnection Service shall consist of reactive power, short circuit/fault duty, stability analyses, and any other appropriate studies. Steady-state (thermal/voltage) analyses may be performed as necessary to ensure that all required reliability conditions are studied. If the Surplus Interconnection Service was not studied under off-peak conditions, off-peak steady state analyses shall be performed to the required level necessary to demonstrate reliable operation of the Surplus Interconnection Service. If the original system impact study report or Cluster Study Report is not available for the Surplus Interconnection Service, both off-peak and peak analysis may need to be performed for the existing Generating Facility associated with the request for Surplus Interconnection Service. The reactive power, short circuit/fault duty, stability, and steady-state analyses for Surplus Interconnection Service will identify any additional Interconnection Facilities and/or Network Upgrades necessary.

Transmission Provider shall study Surplus Interconnection Service requests for a Generating Facility that includes at least one electric storage resource using operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of the Generating Facility as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions.

3.4 Valid Interconnection Request

3.4.1 Cluster Request Window

Transmission Provider shall accept Interconnection Requests during a forty-five (45) Calendar Day period (the Cluster Request Window). The initial Cluster Request Window shall open for Interconnection Requests beginning {Transmission Provider to provide number of Calendar Days} after the conclusion of the transition process set out in Section 5.1 of this LGIP and successive Cluster Request Windows shall open annually every {Transmission Provider to provide Month and Day (e.g., January 1)} thereafter.

3.4.[1]2 Initiating an Interconnection Request

An Interconnection Customer seeking to join a Cluster shall submit its Interconnection Request to Transmission Provider within, and no later than the close of, the Cluster Request Window. Interconnection Requests submitted outside of the Cluster Request Window will not be considered. To initiate an Interconnection Request, Interconnection Customer must submit all of the following:

(i) [a \$10,000 deposit,] *applicable study deposit amount, pursuant to Section 3.1.1.1 of this LGIP,*

(ii) a completed application in the form of Appendix 1, [and]

(iii) demonstration of *no less than ninety percent (90%) Site Control* or [a posting of an additional deposit of \$10,000. Such deposits shall be applied toward any Interconnection Studies, pursuant to the Interconnection Request. If Interconnection Customer demonstrates Site Control within the cure period specified in Section 3.4.3 after submitting its Interconnection Request, the additional deposit shall be refundable; otherwise, all such deposit(s), additional and initial, become non-refundable.] (1) *a signed affidavit from an officer of the company indicating that Site Control is unobtainable due to regulatory limitations as such term is defined by the Transmission Provider; and (2) documentation sufficiently describing and explaining the source and effects of such regulatory limitations, including a description of any conditions that must be met to satisfy the regulatory limitations and the anticipated time by which Interconnection Customer expects to satisfy the regulatory requirements and (3) a deposit in lieu of Site Control of \$10,000 per MW, subject to a minimum of \$500,000 and a maximum of \$2,000,000. Interconnection Requests from multiple Interconnection Customers for multiple Generating Facilities that share a site must include a contract or other agreement that allows for shared land use.*

(iv) *Generating Facility Capacity (MW) (and requested Interconnection Service level if the requested Interconnection Service is less than the Generating Facility Capacity),*

(v) *If applicable, (1) the requested operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) to be used by Transmission Provider that reflect the proposed charging behavior of the Generating Facility that includes at least one electric storage resource, and (2) a description of any control technologies (software and/or hardware) that will limit the operation of the Generating Facility to the operating assumptions submitted by Interconnection Customer.*

(vi) *A Commercial Readiness Deposit equal to two times the study deposit described in Section 3.1.1.1 of this LGIP in the form of an irrevocable letter of credit or cash. This Commercial Readiness Deposit is refunded to Interconnection Customer according to Section 3.7 of this LGIP,*

(vii) *A Point of Interconnection, and (viii) Whether the Interconnection Request shall be studied for Network Resource Interconnection Service or for Energy Resource Interconnection Service, consistent with Section 3.2 of this LGIP.*

An Interconnection Customer that submits a deposit in lieu of Site Control due to demonstrated regulatory limitations must demonstrate that it is taking identifiable steps to secure the necessary regulatory approvals from the applicable federal, state, and/or tribal entities before execution of the Cluster Study Agreement. Such deposit will be held by Transmission Provider until

Interconnection Customer provides the required Site Control demonstration for its point in the Cluster Study Process. Interconnection Customers facing qualifying regulatory limitations must demonstrate one-hundred percent (100%) Site Control within one-hundred eighty (180) Calendar Days of the effective date of the LGIA.

Interconnection Customer shall promptly inform Transmission Provider of any material change to Interconnection Customer's demonstration of Site Control under Section 3.4.2(iii) of this LGIP. If Transmission Provider determines, based on Interconnection Customer's information, that Interconnection Customer no longer satisfies the Site Control requirement, Transmission Provider shall give Interconnection Customer ten (10) Business Days to demonstrate satisfaction with the applicable requirement subject to Transmission Provider's approval. Absent such, Transmission Provider shall deem the Interconnection Request withdrawn pursuant to Section 3.7 of this LGIP.

The expected In-Service Date of the new Large Generating Facility or increase in capacity of the existing Generating Facility shall be no more than the process window for the regional expansion planning period (or in the absence of a regional planning process, the process window for Transmission Provider's expansion planning period) not to exceed seven years from the date the Interconnection Request is received by Transmission Provider, unless Interconnection Customer demonstrates that engineering, permitting and construction of the new Large Generating Facility or increase in capacity of the existing Generating Facility will take longer than the regional expansion planning period. The In-Service Date may succeed the date the Interconnection Request is received by Transmission Provider by a period up to ten years, or longer where Interconnection Customer and Transmission Provider agree, such agreement not to be unreasonably withheld.

3.4.[2]3 Acknowledgment of Interconnection Request

Transmission Provider shall acknowledge receipt of the Interconnection Request within five (5) Business Days of receipt of the request and attach a copy of the received Interconnection Request to the acknowledgement.

3.4.[3]4 Deficiencies in Interconnection Request

An Interconnection Request will not be considered to be a valid request until all items in Section [3.4.1]3.4.2 of this LGIP have been received by Transmission Provider. If an Interconnection Request fails to meet the requirements set forth in Section [3.4.1]3.4.2 of this LGIP, Transmission Provider shall notify Interconnection Customer within five (5) Business Days of receipt of the initial Interconnection Request of the reasons for such failure and that the Interconnection Request does not constitute a valid request. Interconnection Customer shall provide Transmission Provider the additional requested information needed to constitute a valid request within ten (10) Business Days after receipt of such notice but no later than the close of the Cluster Request Window. At

any time, if Transmission Provider finds that the technical data provided by Interconnection Customer is incomplete or contains errors, Interconnection Customer and Transmission Provider shall work expeditiously and in good faith to remedy such issues. In the event that [Failure by] Interconnection Customer fails to comply with this Section 3.4.[3]4 of this LGIP, Transmission Providers shall deem the Interconnection Request withdrawn (without the cure period provided under Section 3.7 of this LGIP), the application fee is forfeited to the Transmission Provider, and the study deposit and Commercial Readiness Deposit shall be returned to Interconnection Customer [shall be treated in accordance with Section 3.7].

3.4.5 Customer Engagement Window

Upon the close of each Cluster Request Window, Transmission Provider shall open a sixty (60) Calendar Day period (Customer Engagement Window). During the Customer Engagement Window, Transmission Provider shall hold a Scoping Meeting with all interested Interconnection Customers. Notwithstanding the preceding requirements and upon written consent of all Interconnection Customers within the Cluster, Transmission Provider may shorten the Customer Engagement Window and begin the Cluster Study. Within ten (10) Business Days of the opening of the Customer Engagement Window, Transmission Provider shall post on its OASIS a list of Interconnection Requests for that Cluster. The list shall identify, for each anonymized Interconnection Request: (1) the requested amount of Interconnection Service; (2) the location by county and state; (3) the station or transmission line or lines where the interconnection will be made; (4) the projected In-Service Date; (5) the type of Interconnection Service requested; and (6) the type of Generating Facility or Facilities to be constructed, including fuel types, such as coal, natural gas, solar, or wind. The Transmission Provider must ensure that project information is anonymized and does not reveal the identity or commercial information of interconnection customers with submitted requests. During the Customer Engagement Window, Transmission Provider shall provide to Interconnection Customer a non-binding updated good faith estimate of the cost and timeframe for completing the Cluster Study and a Cluster Study Agreement to be executed prior to the close of the Customer Engagement Window.

At the end of the Customer Engagement Window, all Interconnection Requests deemed valid that have executed a Cluster Study Agreement in the form of Appendix 2 to this LGIP shall be included in the Cluster Study. Any Interconnection Requests not deemed valid at the close of the Customer Engagement Window shall be deemed withdrawn (without the cure period provided under Section 3.7 of this LGIP) by Transmission Provider, the application fee shall be forfeited to the Transmission Provider, and the Transmission Provider shall return the study deposit and Commercial Readiness Deposit to Interconnection Customer. Immediately

following the Customer Engagement Window, Transmission Provider shall initiate the Cluster Study described in Section 7 of this LGIP.

3.4.[4]6 Cluster Study Scoping Meetings

[Within ten (10) Business Days after receipt of a valid Interconnection Request] During the Customer Engagement Window, Transmission Provider shall [establish a date agreeable to] hold a Scoping Meeting with all Interconnection Customers whose valid Interconnection Requests were received in that Cluster Request Window.

The purpose of the Cluster Study Scoping Meeting shall be to discuss alternative interconnection options, to exchange information including any transmission data and earlier study evaluations that would reasonably be expected to impact such interconnection options, to discuss the Cluster Study materials posted to OASIS pursuant to Section 3.5 of this LGIP, if applicable, and to analyze such information [and to determine the potential feasible Points of Interconnection]. Transmission Provider and Interconnection Customer(s) will bring to the meeting such technical data, including, but not limited to: (i) general facility loadings, (ii) general instability issues, (iii) general short circuit issues, (iv) general voltage issues, and (v) general reliability issues as may be reasonably required to accomplish the purpose of the meeting. Transmission Provider and Interconnection Customer(s) will also bring to the meeting personnel and other resources as may be reasonably required to accomplish the purpose of the meeting in the time allocated for the meeting. On the basis of the meeting, Interconnection Customer(s) shall designate its Point of Interconnection[, pursuant to Section 6.1,] and one or more available alternative Point(s) of Interconnection. The duration of the meeting shall be sufficient to accomplish its purpose. If the Cluster Study Scoping Meeting consists of more than one Interconnection Customer, Transmission Provider shall issue, no later than fifteen (15) Business Days after the commencement of the Customer Engagement Window, and Interconnection Customer shall execute a non-disclosure agreement prior to a group Cluster Study Scoping Meeting, which will provide for confidentiality of identifying commercially sensitive information pertaining to any other Interconnection Customers.

3.5 OASIS Posting

3.5.1 OASIS Posting

Transmission Provider will maintain on its OASIS a list of all Interconnection Requests. The list will identify, for each Interconnection Request: (i) the maximum summer and winter megawatt electrical output; (ii) the location by county and state; (iii) the station or transmission line or lines where the interconnection will be made; (iv) the projected In-Service Date; (v) the status of the Interconnection Request, including Queue Position; (vi) the type of Interconnection Service being requested; and (vii) the availability of any studies related to the Interconnection Request; (viii) the date of the Interconnection Request; (ix) the type of

Generating Facility to be constructed [(combined cycle, base load or combustion turbine and fuel type)]; and (x) for Interconnection Requests that have not resulted in a completed interconnection, an explanation as to why it was not completed. Except in the case of an Affiliate, the list will not disclose the identity of Interconnection Customer until Interconnection Customer executes an LGIA or requests that Transmission Provider file an unexecuted LGIA with FERC. Before holding a Scoping Meeting with its Affiliate, Transmission Provider shall post on OASIS an advance notice of its intent to do so. Transmission Provider shall post to its OASIS site any deviations from the study timelines set forth herein. Interconnection Study reports and Optional Interconnection Study reports shall be posted to Transmission Provider's OASIS site subsequent to the meeting between Interconnection Customer and Transmission Provider to discuss the applicable study results. Transmission Provider shall also post any known deviations in the Large Generating Facility's In-Service Date.

3.5.2 Requirement To Post Interconnection Study Metrics

Transmission Provider will maintain on its OASIS or its website summary statistics related to processing Interconnection Studies pursuant to Interconnection Requests, updated quarterly. If Transmission Provider posts this information on its website, a link to the information must be provided on Transmission Provider's OASIS site. For each calendar quarter, Transmission Providers must calculate and post the information detailed in [sections] Sections 3.5.2.1 through 3.5.2.4 of this LGIP.

3.5.2.1 Interconnection [Feasibility Studies] Cluster Study Processing Time

(A) Number of Interconnection Requests that had [Interconnection Feasibility] Cluster Studies completed within Transmission Provider's coordinated region during the reporting quarter,

(B) Number of Interconnection Requests that had [Interconnection Feasibility] Cluster Studies completed within Transmission Provider's coordinated region during the reporting quarter that were completed more than [(timeline as listed in Transmission Provider's LGIP)] one hundred fifty (150) Calendar Days after [receipt by Transmission Provider of the Interconnection Customer's executed Interconnection Feasibility Study Agreement] the close of the Customer Engagement Window,

(C) At the end of the reporting quarter, the number of active valid Interconnection Requests with ongoing incomplete [Interconnection Feasibility] Cluster Studies where such Interconnection Requests had executed [Interconnection Feasibility] a Cluster Study Agreement[s] received by Transmission Provider more than [(timeline as listed in Transmission Provider's LGIP)] one hundred fifty (150) Calendar Days before the reporting quarter end,

(D) Mean time (in days), [Interconnection Feasibility] Cluster Studies completed within Transmission Provider's coordinated region during the reporting quarter, from the [date when Transmission Provider received the

executed Interconnection Feasibility Study Agreement] commencement of the Cluster Study to the date when Transmission Provider provided the completed [Interconnection Feasibility] Cluster Study Report to [the] Interconnection Customer,

(E) Mean time (in days), Cluster Studies were completed within Transmission Provider's coordinated region during the reporting quarter, from the close of the Cluster Request Window to the date when Transmission Provider provided the completed Cluster Study Report to Interconnection Customer.

[(E)](F) Percentage of [Interconnection Feasibility] Cluster Studies exceeding [(timeline as listed in Transmission Provider's LGIP)] one hundred fifty (150) Calendar Days to complete this reporting quarter, calculated as the sum of 3.5.2.1(B) plus 3.5.2.1(C) divided by the sum of 3.5.2.1(A) plus 3.5.2.1(C)].

3.5.2.2 [Interconnection System Impact Studies] Cluster Restudies Processing Time

(A) Number of Interconnection Requests that had [Interconnection System Impact Studies] Cluster Restudies completed within Transmission Provider's coordinated region during the reporting quarter,

(B) Number of Interconnection Requests that had [Interconnection System Impact Studies] Cluster Restudies completed within Transmission Provider's coordinated region during the reporting quarter that were completed more than [(timeline as listed in Transmission Provider's LGIP)] one hundred fifty (150) Calendar Days after [receipt by] Transmission Provider notifies Interconnection Customers in the Cluster that a Cluster Restudy is required pursuant to Section 7.5(4) of this LGIP [of the Interconnection Customer's executed Interconnection System Impact Study Agreement],

(C) At the end of the reporting quarter, the number of active valid Interconnection Requests with ongoing incomplete [System Impact Studies] Cluster Restudies where Transmission Provider notified Interconnection Customers in the Cluster that a Cluster Restudy is required pursuant to Section 7.5(4) of this LGIP [such Interconnection Requests had executed Interconnection System Impact Study Agreements received by Transmission Provider] more than [(timeline as listed in Transmission Provider's LGIP)] one hundred fifty (150) Calendar Days before the reporting quarter end,

(D) Mean time (in days), [Interconnection System Impact Studies] Cluster Restudies completed within Transmission Provider's coordinated region during the reporting quarter, from the date when Transmission Provider notifies Interconnection Customers in the Cluster that a Cluster Restudy is required pursuant to Section 7.5(4) of this LGIP [received the executed Interconnection System Impact Study Agreement] to the date when Transmission Provider provided the completed [Interconnection System Impact Study] Cluster Restudy Report to [the] Interconnection Customer,

(E) Mean time (in days), Cluster Restudies completed within Transmission Provider's coordinated region during the reporting

quarter, from the close of the Cluster Request Window to the date when Transmission Provider provided the completed Cluster Restudy Report to Interconnection Customer.

[(E)](F) Percentage of [Interconnection System Impact Studies] Cluster Restudies exceeding [(timeline as listed in Transmission Provider's LGIP)] one hundred fifty (150) Calendar Days to complete this reporting quarter, calculated as the sum of 3.5.2.2(B) plus 3.5.2.2(C) divided by the sum of 3.5.2.2(A) plus 3.5.2.2(C)].

3.5.2.3 Interconnection Facilities Studies Processing Time

(A) Number of Interconnection Requests that had Interconnection Facilities Studies that are completed within Transmission Provider's coordinated region during the reporting quarter,

(B) Number of Interconnection Requests that had Interconnection Facilities Studies that are completed within Transmission Provider's coordinated region during the reporting quarter that were completed more than {timeline as listed in Transmission Provider's LGIP} after receipt by Transmission Provider of the Interconnection Customer's executed Interconnection Facilities Study Agreement,

(C) At the end of the reporting quarter, the number of active valid Interconnection Service requests with ongoing incomplete Interconnection Facilities Studies where such Interconnection Requests had executed Interconnection Facilities Studies Agreement received by Transmission Provider more than {timeline as listed in Transmission Provider's LGIP} before the reporting quarter end,

(D) Mean time (in days), for Interconnection Facilities Studies completed within Transmission Provider's coordinated region during the reporting quarter, calculated from the date when Transmission Provider received the executed Interconnection Facilities Study Agreement to the date when Transmission Provider provided the completed Interconnection Facilities Study to the Interconnection Customer,

(E) Mean time (in days), Interconnection Facilities Studies completed within Transmission Provider's coordinated region during the reporting quarter, from the close of the Cluster Request Window to the date when Transmission Provider provided the completed Interconnection Facilities Study to Interconnection Customer.

[(E)](F) Percentage of delayed Interconnection Facilities Studies this reporting quarter, calculated as the sum of 3.5.2.3(B) plus 3.5.2.3(C) divided by the sum of 3.5.2.3(A) plus 3.5.2.3(C)].

3.5.2.4 Interconnection Service Requests Withdrawn From Interconnection Queue

(A) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter,

(B) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter before completion of any interconnection studies or execution of any interconnection study agreements,

(C) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter before completion of [an Interconnection System Impact] *a Cluster Study*,

(D) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue during the reporting quarter before completion of an Interconnection Facilities Study,

(E) Number of Interconnection Requests withdrawn from Transmission Provider's interconnection queue after execution of a generator interconnection agreement or Interconnection Customer requests the filing of an unexecuted, new interconnection agreement,

(F) Mean time (in days), for all withdrawn Interconnection Requests, from the date when the request was determined to be valid to when Transmission Provider received the request to withdraw from the queue.

3.5.3

Transmission Provider is required to post on OASIS or its website the measures in paragraph 3.5.2.1(A) through paragraph 3.5.2.4(F) for each calendar quarter within 30 days of the end of the calendar quarter. Transmission Provider will keep the quarterly measures posted on OASIS or its website for three calendar years with the first required report to be in the first quarter of 2020. If Transmission Provider retains this information on its website, a link to the information must be provided on Transmission Provider's OASIS site.

3.5.4

In the event that any of the values calculated in paragraphs 3.5.2.1(E), 3.5.2.2(E) or 3.5.2.3(E) exceeds 25 percent for two consecutive calendar quarters, Transmission Provider will have to comply with the measures below for the next four consecutive calendar quarters and must continue reporting this information until Transmission Provider reports four consecutive calendar quarters without the values calculated in 3.5.2.1(E), 3.5.2.2(E) or 3.5.2.3(E) exceeding 25 percent for two consecutive calendar quarters:

(i) Transmission Provider must submit a report to the Commission describing the reason for each *Cluster Study*, *Cluster Restudy*, or *individual Interconnection Facilities Study* [or group of clustered studies] pursuant to [an] *one or more* Interconnection Request(s) that exceeded its deadline (*i.e.*, [45,] 150, 90 or 180 days) for completion [(excluding any allowance for Reasonable Efforts)]. Transmission Provider must describe the reasons for each study delay and any steps taken to remedy these specific issues and, if applicable, prevent such delays in the future. The report must be filed at the Commission within 45 days of the end of the calendar quarter.

(ii) Transmission Provider shall aggregate the total number of employee-hours and third party consultant hours expended towards interconnection studies within its coordinated region that quarter and post on OASIS or its website. If Transmission Provider posts this information on its website, a link to the information must be

provided on Transmission Provider's OASIS site. This information is to be posted within 30 days of the end of the calendar quarter.

3.6 Coordination With Affected Systems

Transmission Provider will coordinate the conduct of any studies required to determine the impact of the Interconnection Request on Affected Systems with Affected System Operators [and, if possible, include those results in its applicable Interconnection Study within the time frame specified in this LGIP. Transmission Provider will include such Affected System Operators in all meetings held with Interconnection Customer as required by this LGIP]. Interconnection Customer will cooperate with Transmission Provider and Affected System Operator in all matters related to the conduct of studies and the determination of modifications to Affected Systems.

A Transmission Provider whose system may be impacted by a proposed interconnection on another transmission provider's transmission system [which may be an Affected System] shall cooperate with the [T]ransmission [P]rovider with whom interconnection has been requested in all matters related to the conduct of studies and the determination of modifications to Transmission Provider's Transmission System [Affected Systems].

3.6.1 Initial Notification

Transmission Provider must notify Affected System Operator of a potential Affected System impact caused by an Interconnection Request within ten (10) Business Days of the completion of the Cluster Study or, if the potential Affected System impact is only determined in the Cluster Restudy, the completion of the Cluster Restudy.

At the time of initial notification, Transmission Provider must provide Interconnection Customer with a list of potential Affected Systems, along with relevant contact information.

3.7 Withdrawal

Interconnection Customer may withdraw its Interconnection Request at any time by written notice of such withdrawal to Transmission Provider. In addition, if Interconnection Customer fails to adhere to all requirements of this LGIP, except as provided in Section 13.5 (Disputes), Transmission Provider shall deem the Interconnection Request to be withdrawn and shall provide written notice to Interconnection Customer of the deemed withdrawal and an explanation of the reasons for such deemed withdrawal. Upon receipt of such written notice, Interconnection Customer shall have fifteen (15) Business Days in which to either respond with information or actions that cures the deficiency or to notify Transmission Provider of its intent to pursue Dispute Resolution.

Withdrawal shall result in the loss of Interconnection Customer's Queue Position. If an Interconnection Customer disputes the withdrawal and loss of its Queue Position, then during Dispute Resolution, Interconnection Customer's Interconnection Request is eliminated from the queue until such time that the outcome of Dispute

Resolution would restore its Queue Position. An Interconnection Customer that withdraws or is deemed to have withdrawn its Interconnection Request shall pay to Transmission Provider all costs that Transmission Provider prudently incurs with respect to that Interconnection Request prior to Transmission Provider's receipt of notice described above. Interconnection Customer must pay all monies due to Transmission Provider before it is allowed to obtain any Interconnection Study data or results.

If Interconnection Customer withdraws its Interconnection Request or is deemed withdrawn by Transmission Provider under Section 3.7 of this LGIP, Transmission Provider shall (i) update the OASIS Queue Position posting; (ii) impose the Withdrawal Penalty described in Section 3.7.1 of this LGIP; and (iii) refund to Interconnection Customer any portion of the refundable portion of Interconnection Customer's study deposit [or study payments] that exceeds the costs that Transmission Provider has incurred, including interest calculated in accordance with Section 35.19a(a)(2) of FERC's regulations. Transmission Provider shall also refund any portion of the Commercial Readiness Deposit not applied to the Withdrawal Penalty and, if applicable, the deposit in lieu of site control. In the event of such withdrawal, Transmission Provider, subject to the confidentiality provisions of Section 13.1 of this LGIP, shall provide, at Interconnection Customer's request, all information that Transmission Provider developed for any completed study conducted up to the date of withdrawal of the Interconnection Request.

3.7.1 Withdrawal Penalty

Interconnection Customer shall be subject to a Withdrawal Penalty if it withdraws its Interconnection Request or is deemed withdrawn, or the Generating Facility does not otherwise reach Commercial Operation unless: (1) the withdrawal does not have a material impact on the cost or timing of any Interconnection Request with an equal or lower Queue Position; (2) Interconnection Customer withdraws after receiving Interconnection Customer's most recent Cluster Restudy Report and the Network Upgrade costs assigned to the Interconnection Request identified in that report have increased by more than twenty-five percent (25%) compared to costs identified in Interconnection Customer's preceding Cluster Study Report or Cluster Restudy Report; or (3) Interconnection Customer withdraws after receiving Interconnection Customer's Interconnection Facilities Study Report and the Network Upgrade costs assigned to the Interconnection Request identified in that report have increased by more than one hundred percent (100%) compared to costs identified in the Cluster Study Report.

3.7.1.1 Calculation of the Withdrawal Penalty

If Interconnection Customer withdraws its Interconnection Request or is deemed withdrawn prior to the commencement of the initial Cluster Study, Interconnection Customer shall not be subject to a

Withdrawal Penalty. If Interconnection Customer withdraws, is deemed withdrawn, or otherwise does not reach Commercial Operation at any point after the commencement of the initial Cluster Study, that Interconnection Customer's Withdrawal Penalty will be the greater of: (1) the Interconnection Customer's study deposit required under Section 3.1.1.1 of this LGIP; or (2) as follows in (a)–(d):

(a) If Interconnection Customer withdraws or is deemed withdrawn during the Cluster Study or after receipt of a Cluster Study Report, but prior to commencement of the Cluster Restudy or Interconnection Facilities Study, Interconnection Customer shall be charged two (2) times its actual allocated cost of all studies performed for Interconnection Customers in the Cluster up until that point in the interconnection study process.

(b) If Interconnection Customer withdraws or is deemed withdrawn during the Cluster Restudy or after receipt of any applicable restudy reports issued pursuant to Section 7.5 of this LGIP, but prior to commencement of the Interconnection Facilities Study, Interconnection Customer shall be charged five percent (5%) its estimated Network Upgrade costs.

(c) If Interconnection Customer withdraws or is deemed withdrawn during the Interconnection Facilities Study, after receipt of the Interconnection Facilities Study Report issued pursuant to Section 8.3 of this LGIP, or after receipt of the draft LGIA but before Interconnection Customer has executed an LGIA or has requested that its LGIA be filed unexecuted, and has satisfied the other requirements described in Section 11.3 of this LGIP (i.e., Site Control demonstration, LGIA Deposit, reasonable evidence of one or more milestones in the development of the Generating Facility), Interconnection Customer shall be charged ten percent (10%) its estimated Network Upgrade costs.

(d) If Interconnection Customer has executed an LGIA or has requested that its LGIA be filed unexecuted and has satisfied the other requirements described in Section 11.3 of this LGIP (i.e., Site Control demonstration, LGIA Deposit, reasonable evidence of one or more milestones in the development of the Generating Facility) and subsequently withdraws its Interconnection Request or if Interconnection Customer's Generating Facility otherwise does not reach Commercial Operation, that Interconnection Customer's Withdrawal Penalty shall be twenty percent (20%) its estimated Network Upgrade costs.

3.7.1.2 Distribution of the Withdrawal Penalty

3.7.1.2.1 Initial Distribution of Withdrawal Penalties Prior To Assessment of Network Upgrade Costs Previously Shared With Withdrawn Interconnection Customers in the Same Cluster

For a single cluster, Transmission Provider shall hold all Withdrawal Penalty funds until all Interconnection Customers in that Cluster have either: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted. Any Withdrawal Penalty funds collected from the Cluster shall first be used to fund studies

conducted under the Cluster Study Process for Interconnection Customers in the same Cluster that have executed the LGIA or requested the LGIA to be filed unexecuted. Next, after the Withdrawal Penalty funds are applied to relevant study costs in the same Cluster, Transmission Provider will apply the remaining Withdrawal Penalty funds to reduce net increases, for Interconnection Customers in the same Cluster, in Interconnection Customers' Network Upgrade cost assignment and associated financial security requirements under Article 11.5 of the pro forma LGIA attributable to the impacts of withdrawn Interconnection Customers that shared an obligation with the remaining Interconnection Customers to fund a Network Upgrade, as described in more detail in Sections 3.7.1.2.3 and 3.7.1.2.4.

Withdrawal Penalty funds shall first be applied as a refund to invoiced study costs for Interconnection Customers in the same Cluster that did not withdraw within 30 Calendar Days of such Interconnection Customers executing their LGIA or requesting to have their LGIA filed unexecuted. Distribution of Withdrawal Penalty funds within one specific Cluster Study for study costs shall not exceed the total actual Cluster Study costs. Withdrawal Penalty funds applied to study costs shall be allocated within the same Cluster to Interconnection Customers in a manner consistent with the Transmission Provider's method in Section 13.3 of this LGIP for allocating the costs of interconnection studies conducted on a clustered basis. Transmission Provider shall post the balance of Withdrawal Penalty funds held by Transmission Provider but not yet dispersed on its OASIS site and update this posting on a quarterly basis.

If an Interconnection Customer withdraws after it executes, or requests the unexecuted filing of, its LGIA, Transmission Provider shall first apply such Interconnection Customer's Withdrawal Penalty funds to any restudy costs required due to the Interconnection Customer's withdrawal as a credit to as-yet-to be invoiced study costs to be charged to the remaining Interconnection Customers in the same Cluster in a manner consistent with the Transmission Provider's method in Section 13.3 of this LGIP for allocating the costs of interconnection studies conducted on a clustered basis. Distribution of the Withdrawal Penalty funds for such restudy costs shall not exceed the total actual restudy costs.

3.7.1.2.2 Assessment of Network Upgrade Costs Previously Shared With Withdrawn Interconnection Customers in the Same Cluster

If Withdrawal Penalty funds remain for the same Cluster after the Withdrawal Penalty funds are applied to relevant study costs, Transmission Provider will determine if the withdrawn Interconnection Customers, at any point in the Cluster Study Process, shared cost assignment for one or more Network Upgrades with any remaining Interconnection Customers in the same Cluster based on the Cluster Study Report, Cluster Restudy Report(s), Interconnection Facilities Study Report, and any subsequent issued restudy report issued for the Cluster.

In section 3.7.1.2 of this LGIP, shared cost assignments for Network Upgrades refers to the cost of Network Upgrades still needed for the same Cluster for which an Interconnection Customer, prior to withdrawing its Interconnection Request, shared the obligation to fund along with Interconnection Customers that have executed an LGIA, or requested the LGIA to be filed unexecuted.

If Transmission Provider's assessment determines that there are no shared cost assignments for any Network Upgrades in the same Cluster for the withdrawn Interconnection Customer, or determines that the withdrawn Interconnection Customer's withdrawal did not cause a net increase in the shared cost assignment for any remaining Interconnection Customers' Network Upgrade(s) in the same Cluster, Transmission Provider will return any remaining Withdrawal Penalty funds to the withdrawn Interconnection Customer(s). Such remaining Withdrawal Penalty funds will be returned to withdrawn Interconnection Customers based on the proportion of each withdrawn Interconnection Customer's contribution to the total amount of Withdrawal Penalty funds collected for the Cluster (i.e., the total amount before the initial disbursement required under Section 3.7.1.2.1 of this LGIP). Transmission Provider must make such disbursement within sixty (60) Calendar Days of the date on which all Interconnection Customers in the same Cluster have either: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted. For the withdrawn Interconnection Customers that Transmission Provider determines have caused a net increase in the shared cost assignment for one or more Network Upgrade(s) in the same Cluster under subsection 3.7.1.2.3(a), Transmission Provider will determine each such withdrawn Interconnection Customers' Withdrawal Penalty funds remaining balance that will be applied toward net increases in Network Upgrade shared costs calculated under subsections 3.7.1.2.3(a) and 3.7.1.2.3(b) based on each such withdrawn Interconnection Customer's proportional contribution to the total amount of Withdrawal Penalty funds collected for the same Cluster (i.e., the total amount before the initial disbursement requirement under Section 3.7.1.2.1 of this LGIP).

If the Transmission Provider's assessment determines that there are shared cost assignments for Network Upgrades in the same Cluster, Transmission Provider will calculate the remaining Interconnection Customers' net increase in cost assignment for Network Upgrades due to a shared cost assignment for Network Upgrades with the withdrawn Interconnection Customer and distribute Withdrawal Penalty funds as described in Section 3.7.1.2.3, depending on whether the withdrawal occurred before the withdrawing Interconnection Customer executed the LGIA (or filed unexecuted), as described in subsection 3.7.1.2.3(a), or after such execution (or filing unexecuted) of an LGIA, as described in subsection 3.7.1.2.3(b).

As discussed in subsection 3.7.1.2.4, Transmission Provider will amend executed (or filed unexecuted) LGIAs of the remaining

Interconnection Customers in the same Cluster to apply the remaining Withdrawal Penalty funds to reduce net increases in Interconnection Customers' Network Upgrade cost assignment and associated financial security requirements under Article 11.5 of the pro forma LGIA attributable to the impacts of withdrawn Interconnection Customers on Interconnection Customers remaining in the same Cluster that had a shared cost assignment for Network Upgrades with the withdrawn Interconnection Customers.

3.7.1.2.3 Impact Calculations

3.7.1.2.3(a) Impact Calculation for Withdrawals During the Cluster Study Process

If an Interconnection Customer withdraws before it executes, or requests the unexecuted filing of, its LGIA, the Transmission Provider will distribute in the following manner the Withdrawal Penalty funds to reduce the Network Upgrade cost impact on the remaining Interconnection Customers in the same Cluster who had a shared cost assignment for a Network Upgrade with the withdrawn Interconnection Customer.

To calculate the reduction in the remaining Interconnection Customers' net increase in Network Upgrade costs and associated financial security requirements under Article 11.5 of the pro forma LGIA, the Transmission Provider will determine the financial impact of a withdrawing Interconnection Customer on other Interconnection Customers in the same Cluster that shared an obligation to fund the same Network Upgrade(s). Transmission Provider shall calculate this financial impact once all the Interconnection Customers in the same Cluster either: (1) have withdrawn or have been deemed withdrawn; (2) executed an LGIA; or (3) request an LGIA to be filed unexecuted. Transmission Provider will perform the financial impact calculation using the following steps.

First, Transmission Provider must determine which withdrawn Interconnection Customers shared an obligation to fund Network Upgrades with Interconnection Customers from the same Cluster that have LGIAs that are executed or have been requested to be filed unexecuted. Next, Transmission Provider shall perform the calculation of the financial impact of a withdrawal on another Interconnection Request in the same Cluster by performing a comparison of the Network Upgrade cost estimates between each of the following:

- (1) Cluster Study phase to Cluster Restudy phase (if Cluster Restudy was necessary);*
- (2) Cluster Restudy phase to Facilities Study phase (if a Cluster Restudy was necessary);*
- (3) Cluster Study phase to Facilities Study phase (if no Cluster Restudy was performed);*
- (4) Facilities Study phase to any subsequent restudy that was performed before the execution or filing of an unexecuted LGIA;*
- (5) the restudy to the executed, or filed unexecuted, LGIA (if a restudy was performed after the Facilities Study phase and before the execution or filing of an unexecuted LGIA).*

If, based on the above calculations, Transmission Provider determines:

(i) that the costs assigned to an Interconnection Customer in the same Cluster for Network Upgrades that a withdrawn Interconnection Customer shared cost assignment for increased between any two studies, and

(ii) after the impacted Interconnection Customer's LGIA was executed or filed unexecuted, the Interconnection Customer's cost assignment for the relevant Network Upgrade is greater than it was prior to the withdrawal of the Interconnection Customer in the same Cluster that shared cost assignment for the Network Upgrade,

then Transmission Provider shall apply the withdrawn Interconnection Customer's Withdrawal Penalty funds that has not already been applied to study costs in the amount of the financial impact by reducing, in the same Cluster, the remaining Interconnection Customer's Network Upgrade costs and associated financial security requirements under Article 11.5 of the pro forma LGIA.

If Transmission Provider determines that more than one Interconnection Customer in the same Cluster was financially impacted by the same withdrawn Interconnection Customer, Transmission Provider will apply the relevant withdrawn Interconnection Customer's Withdrawal Penalty funds that has not already been applied to study costs to reduce the financial impact to each Interconnection Customer based on each Interconnection Customer's proportional share of the financial impact, as determined by either the proportional impact method if it is a System Network Upgrade or on a per capita basis if it is a Substation Network Upgrade, as described under Section 4.2.1 of this LGIP.

3.7.1.2.3(b) Impact Calculation for Withdrawals in the Same Cluster After the Cluster Study Process

If an Interconnection Customer withdraws after it executes, or requests the unexecuted filing of, its LGIA, Transmission Provider will distribute in the following manner the remaining Withdrawal Penalty funds to reduce the Network Upgrade cost impact on the remaining Interconnection Customers in the same Cluster who had a shared cost assignment with the withdrawn Interconnection Customer for one or more Network Upgrades.

Transmission Provider will determine the financial impact on the remaining Interconnection Customers in the same Cluster within 30 calendar days after the withdrawal occurs. The Transmission Provider will determine that financial impact by comparing the Network Upgrade cost funding obligations the Interconnection Customers shared with the withdrawn Interconnection Customer before the withdrawal of the Interconnection Customer and after the withdrawal of the Interconnection Customer. If that comparison indicates an increase in Network Upgrade costs for an Interconnection Customer, Transmission Provider shall apply the withdrawn Interconnection Customer's Withdrawal Penalty funds to the increased

costs each impacted Interconnection Customer in the same Cluster experienced associated with such Network Upgrade(s) in proportion to each Interconnection Customer's increased cost assignment, as determined by Transmission Provider.

3.7.1.2.4 Amending LGIA To Apply Reductions To Interconnection Customer's Assigned Network Upgrade Costs and Associated Financial Security Requirement With Respect To Withdrawals in the Same Cluster

Within 30 Calendar Days of all Interconnection Customers in the same Cluster having: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted, Transmission Provider must perform the calculations described in subsection 3.7.1.2.3(a) of this LGIP and provide such Interconnection Customers with an amended LGIA that provides the reduction in Network Upgrade cost assignment and associated reduction to the Interconnection Customer's financial security requirements, under Article 11.5 of the pro forma LGIA, due from the Interconnection Customer to the Transmission Provider.

Where an Interconnection Customer executes the LGIA (or requests the filing of an unexecuted LGIA) and is later withdrawn or its LGIA is terminated, Transmission Provider must, within 30 Calendar Days of such withdrawal or termination, perform the calculations described in subsection 3.7.1.2.3(b) of this LGIP and provide such Interconnection Customers in the same Cluster with an amended LGIA that provides the reduction in Network Upgrade cost assignment and associated reduction to the Interconnection Customer's financial security requirements, under Article 11.5 of the pro forma LGIA, due from the Interconnection Customer to Transmission Provider.

Any repayment by Transmission Provider to Interconnection Customer under Article 11.4 of the pro forma LGIA of amounts advanced for Network Upgrades after the Generating Facility achieves Commercial Operation shall be limited to the Interconnection Customer's total amount of Network Upgrade costs paid and associated financial security provided to Transmission Provider under Article 11.5 of the pro forma LGIA.

3.7.1.2.5 Final Distribution of Withdrawal Penalty Funds

If Withdrawal Penalty funds remain for the Cluster after the Withdrawal Penalty funds are applied to relevant study costs and net increases in shared cost assignments for Network Upgrades to remaining Interconnection Customers, Transmission Provider will return any remaining Withdrawal Penalty funds to the withdrawn Interconnection Customers in the same Cluster net of the amount of each withdrawn Interconnection Customer's Withdrawal Penalty funds applied to study costs and net increases in shared cost assignments for Network Upgrades to remaining Interconnection Customers.

3.8 Identification of Contingent Facilities

Transmission Provider shall post in this section a method for identifying the

Contingent Facilities to be provided to Interconnection Customer at the conclusion of the [System Impact] *Cluster Study* and included in Interconnection Customer's Large Generator Interconnection Agreement. The method shall be sufficiently transparent to determine why a specific Contingent Facility was identified and how it relates to the Interconnection Request. Transmission Provider shall also provide, upon request of [the] Interconnection Customer, the estimated Interconnection Facility and/or Network Upgrade costs and estimated in-service completion time of each identified Contingent Facility when this information is readily available and not commercially sensitive.

3.9 Penalties for Failure To Meet Study Deadlines

(1) Transmission Provider shall be subject to a penalty if it fails to complete a Cluster Study, Cluster Restudy, Interconnection Facilities Study, or Affected Systems Study by the applicable deadline set forth in this LGIP. Transmission Provider must pay the penalty for each late Cluster Study, Cluster Restudy, and Interconnection Facilities Study on a pro rata basis per Interconnection Request to all Interconnection Customer(s) included in the relevant study that did not withdraw, or were not deemed withdrawn, from Transmission Provider's interconnection queue before the missed study deadline. Transmission Provider must pay the penalty for a late Affected Systems Study on a pro rata basis per interconnection request to all Affected System Interconnection Customer(s) included in the relevant Affected System Study that did not withdraw, or were not deemed withdrawn, from the host transmission provider's interconnection queue before the missed study deadline. The study delay penalty for each late study shall be distributed no later than forty-five (45) Calendar Days after the late study has been completed.

(2) For penalties assessed in accordance with this Section, the penalty amount will be equal to: \$1,000 per Business Day for delays of Cluster Studies beyond the applicable deadline set forth in this LGIP; \$2,000 per Business Day for delays of Cluster Re-Studies beyond the applicable deadline set forth in this LGIP; \$2,000 per Business Day for delays of Affected System Studies beyond the applicable deadline set forth in this LGIP; and \$2,500 per Business Day for delays of Interconnection Facilities Studies beyond the applicable deadline set forth in this LGIP. The total amount of a penalty assessed under this Section shall not exceed: (a) one hundred percent (100%) of the initial study deposit(s) received for all of the Interconnection Requests in the Cluster for Cluster Studies and Cluster Restudies; (b) one hundred percent (100%) of the initial study deposit received for the single Interconnection Request in the study for Facilities Studies; and (c) one hundred percent (100%) of the study deposit(s) that Transmission Provider collects for conducting the Affected System Study.

(3) Transmission Provider may appeal to the Commission any penalties imposed under this Section. Any such appeal must be filed no later than forty-five (45) Calendar

Days after the late study has been completed. While an appeal to the Commission is pending, Transmission Provider shall remain liable for the penalty, but need not distribute the penalty until forty-five (45) Calendar Days after (1) the deadline for filing a rehearing request has ended, if no requests for rehearing of the appeal have been filed, or (2) the date that any requests for rehearing of the Commission's decision on the appeal are no longer pending before the Commission. The Commission may excuse Transmission Provider from penalties under this Section for good cause.

(4) No penalty will be assessed under this Section where a study is delayed by ten (10) Business Days or less. If the study is delayed by more than ten (10) Business Days, the penalty amount will be calculated from the first Business Day the Transmission Provider misses the applicable study deadline.

(5) If (a) Transmission Provider needs to extend the deadline for a particular study subject to penalties under this Section and (b) all Interconnection Customers or Affected System Interconnection Customers included in the relevant study mutually agree to such an extension, the deadline for that study shall be extended thirty (30) Business Days from the original deadline. In such a scenario, no penalty will be assessed for Transmission Provider missing the original deadline.

(6) No penalties shall be assessed until the third Cluster Study cycle (including any Transitional Cluster Study cycle, but not Transitional Serial Studies) after the Commission-approved effective date of Transmission Provider's filing made in compliance with the Final rule in Docket No. RM22-14-000.

(7) Transmission Provider must maintain on its OASIS or its public website summary statistics related to penalties assessed under this Section, updated quarterly. For each calendar quarter, Transmission Provider must calculate and post (1) the total amount of penalties assessed under this Section during the previous reporting quarter and (2) the highest penalty assessed under this Section paid to a single Interconnection Customer or Affected System Interconnection Customer during the previous reporting quarter. Transmission Provider must post on its OASIS or its website these penalty amounts for each calendar quarter within thirty (30) Calendar Days of the end of the calendar quarter. Transmission Provider must maintain the quarterly measures posted on its OASIS or its website for three (3) calendar years with the first required posting to be the third Cluster Study cycle (including any Transitional Cluster Study cycle, but not Transitional Serial Studies) after Transmission Provider transitions to the Cluster Study Process.

Section 4. Interconnection Request Evaluation Process [Queue Position]

Once an Interconnection Customer has submitted a valid Interconnection Request pursuant to Section 3.4 of this LGIP, such Interconnection Request shall become part of the Transmission Provider's interconnection queue for further processing pursuant to the following procedures.

4.1 Queue Position [General]

4.1.1 Assignment of Queue Position

Transmission Provider shall assign a Queue Position as follows: *the Queue Position within the queue shall be assigned based upon the date and time of receipt of all items required pursuant to the provisions of Section 3.4 of this LGIP. All Interconnection Requests submitted and validated in a single Cluster Request Window shall be considered equally queued.* [based upon the date and time of receipt of the valid Interconnection Request; provided that, if the sole reason an Interconnection Request is not valid is the lack of required information on the application form, and Interconnection Customer provides such information in accordance with Section 3.4.3, then Transmission Provider shall assign Interconnection Customer a Queue Position based on the date the application form was originally filed. Moving a Point of Interconnection shall result in a lowering of Queue Position if it is deemed a Material Modification under Section 4.4.3.]

[The Queue Position of each Interconnection Request will be used to determine the order of performing the Interconnection Studies and determination of cost responsibility for the facilities necessary to accommodate the Interconnection Request. A higher queued]

4.1.2 Higher Queue Position

A higher Queue Position assigned to an Interconnection Request is one that has been placed "earlier" in the queue in relation to another Interconnection Request that is [lower queued. Transmission Provider may allocate the cost of the common upgrades for clustered Interconnection Requests without regard to Queue Position.] assigned a lower Queue Position. All requests studied in a single Cluster shall be considered equally queued. Interconnection Customers that are part of Clusters initiated earlier in time than an instant Queue shall be considered to have a higher Queue Position than Interconnection Customers that are part of Clusters initiated later than an instant Queue.

4.2 Clustering

At Transmission Provider's option, Interconnection Requests may be studied serially or in clusters for the purpose of the Interconnection System Impact Study.

Clustering shall be implemented on the basis of Queue Position. If Transmission Provider elects to study Interconnection Requests using Clustering, all Interconnection Requests received within a period not to exceed one hundred and eighty (180) Calendar Days, hereinafter referred to as the "Queue Cluster Window" shall be studied together without regard to the nature of the underlying Interconnection Service, whether Energy Resource Interconnection Service or Network Resource Interconnection Service. The deadline for completing all Interconnection System Impact Studies for which an Interconnection System Impact Study Agreement has been executed during a Queue Cluster Window shall be in accordance with Section 7.4, for all Interconnection Requests assigned to the same Queue Cluster Window. Transmission

Provider may study an Interconnection Request separately to the extent warranted by Good Utility Practice based upon the electrical remoteness of the proposed Large Generating Facility.]

4.2 General Study Process

[Clustering Interconnection System Impact Studies] *Interconnection Studies performed within the Cluster Study Process* shall be conducted in such a manner to ensure the efficient implementation of the applicable regional transmission expansion plan in light of the Transmission System's capabilities at the time of each study and consistent with Good Utility Practice.

Transmission Provider may use subgroups in the Cluster Study Process. In all instances in which Transmission Provider elects to use subgroups in the cluster study process, Transmission Provider must publish the criteria used to define and determine subgroups on its OASIS or public website.

[The Queue Cluster Window shall have a fixed time interval based on fixed annual opening and closing dates. Any changes to the established Queue Cluster Window interval and opening or closing dates shall be announced with a posting on Transmission Provider's OASIS beginning at least one hundred and eighty (180) Calendar Days in advance of the change and continuing thereafter through the end date of the first Queue Cluster Window that is to be modified.]

4.2.1 Cost Allocation for Interconnection Facilities and Network Upgrades

(1) *For Network Upgrades identified in Cluster Studies, Transmission Provider shall calculate each Interconnection Customer's share of the costs as follows:*

(a) *Substation Network Upgrades, including all switching stations, shall be allocated per capita to each Generating Facility interconnecting at the same substation.*

(b) *System Network Upgrades shall be allocated based on the proportional impact of each individual Generating Facility in the Cluster Study on the need for a specific System Network Upgrade. {Transmission Provider shall include in this section a description of how cost for each facility type designated as a network upgrade will be allocated using its proportional impact method.}*

(c) *An Interconnection Customer that funds Substation Network Upgrades and/or System Network Upgrades shall be entitled to transmission credits as provided in Article 11.4 of the LGIA.*

(2) *The costs of any needed Interconnection Facilities identified in the Cluster Study Process will be directly assigned to the Interconnection Customer(s) using such facilities. Where Interconnection Customers in the Cluster agree to share Interconnection Facilities, the cost of such Interconnection Facilities shall be allocated based on the number of Generating Facilities sharing use of such Interconnection Facilities on a per capita basis (i.e., on a per Generating Facility basis), unless Parties mutually agree to a different cost sharing arrangement.*

4.3 Transferability of Queue Position

An Interconnection Customer may transfer its Queue Position to another entity only if such entity acquires the specific Generating Facility identified in the Interconnection Request and the Point of Interconnection does not change.

4.4 Modifications

Interconnection Customer shall submit to Transmission Provider, in writing, modifications to any information provided in the Interconnection Request. Interconnection Customer shall retain its Queue Position if the modifications are in accordance with Sections 4.4.1, 4.4.2, or 4.4.5 of this LGIP, or are determined not to be Material Modifications pursuant to Section 4.4.3 of this LGIP.

Notwithstanding the above, during the course of the Interconnection Studies, either Interconnection Customer or Transmission Provider may identify changes to the planned interconnection that may improve the costs and benefits (including reliability) of the interconnection, and the ability of the proposed change to accommodate the Interconnection Request. To the extent the identified changes are acceptable to Transmission Provider[,] and Interconnection Customer, such acceptance not to be unreasonably withheld, Transmission Provider shall modify the Point of Interconnection prior to return of the executed Cluster Study Agreement, [and/or configuration in accordance with such changes and proceed with any re-studies necessary to do so in accordance with Section 6.4, Section 7.6 and Section 8.5 as applicable] and Interconnection Customer shall retain its Queue Position.

4.4.1 Prior to the return of the executed [Interconnection System Impact] Cluster Study Agreement to Transmission Provider, modifications permitted under this Section shall include specifically: (a) a decrease of up to 60 percent of electrical output (MW) of the proposed project, through either (1) a decrease in plant size or (2) a decrease in Interconnection Service level (consistent with the process described in Section 3.1 of this LGIP) accomplished by applying Transmission Provider-approved injection-limiting equipment; (b) modifying the technical parameters associated with the Large Generating Facility technology or the Large Generating Facility step-up transformer impedance characteristics; and (c) modifying the interconnection configuration. For plant increases, the incremental increase in plant output will go [to] in the [end of the queue] next Cluster Study Window for the purposes of cost allocation and study analysis.

4.4.2 Prior to the return of the executed Interconnection Facility Study Agreement to Transmission Provider, the modifications permitted under this Section shall include specifically: (a) additional 15 percent decrease of electrical output of the proposed project through either (1) a decrease in plant size (MW) or (2) a decrease in Interconnection Service level (consistent with the process described in Section 3.1) accomplished by applying Transmission Provider-approved injection-limiting

equipment; (b) Large Generating Facility technical parameters associated with modifications to Large Generating Facility technology and transformer impedances; provided, however, the incremental costs associated with those modifications are the responsibility of the requesting Interconnection Customer; and (c) a Permissible Technological Advancement for the Large Generating Facility after the submission of the Interconnection Request. Section 4.4.6 specifies a separate technological change procedure including the requisite information and process that will be followed to assess whether the Interconnection Customer's proposed technological advancement under Section 4.4.2(c) is a Material Modification. Section 1 contains a definition of Permissible Technological Advancement.

4.4.3 Prior to making any modification other than those specifically permitted by Sections 4.4.1, 4.4.2, and 4.4.5 of this LGIP, Interconnection Customer may first request that Transmission Provider evaluate whether such modification is a Material Modification. In response to Interconnection Customer's request, Transmission Provider shall evaluate the proposed modifications prior to making them and inform Interconnection Customer in writing of whether the modifications would constitute a Material Modification. Any change to the Point of Interconnection, except those deemed acceptable under Sections 3.1.2 or 4.4 of this LGIP [1, 6.1, 7.2] or so allowed elsewhere, shall constitute a Material Modification. Interconnection Customer may then withdraw the proposed modification or proceed with a new Interconnection Request for such modification. *Transmission Provider shall study the addition of a Generating Facility that includes at least one electric storage resource using operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of the Generating Facility as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions.*

{Transmission Providers using fuel-based dispatch assumptions in Interconnection Studies are not required to include Section 4.4.3.1 because it does not apply to them}

4.4.3.1 Interconnection Customer may request, and Transmission Provider shall evaluate, the addition to the Interconnection Request of a Generating Facility with the same Point of Interconnection indicated in the initial Interconnection Request, if the addition of the Generating Facility does not increase the requested Interconnection Service level. Transmission Provider must evaluate such modifications prior to deeming them a Material Modification, but only if Interconnection Customer submits them prior to the return of the executed Facilities Study Agreement by Interconnection Customer to Transmission Provider. Interconnection Customers requesting that such a modification be evaluated must demonstrate the required Site Control at the time such request is made.

4.4.4 Upon receipt of Interconnection Customer's request for modification permitted under this Section 4.4, Transmission Provider shall commence and perform any necessary additional studies as soon as practicable, but in no event shall Transmission Provider commence such studies later than thirty (30) Calendar Days after receiving notice of Interconnection Customer's request. Any additional studies resulting from such modification shall be done at Interconnection Customer's cost. *Any such request for modification of the Interconnection Request must be accompanied by any resulting updates to the models described in Attachment A to Appendix 1 of this LGIP.*

4.4.5 Extensions of less than three (3) cumulative years in the Commercial Operation Date of the Large Generating Facility to which the Interconnection Request relates are not material and should be handled through construction sequencing. *For purposes of this section, the Commercial Operation Date reflected in the initial Interconnection Request shall be used to calculate the permissible extension prior to Interconnection Customer executing an LGIA or requesting that the LGIA be filed unexecuted. After an LGIA is executed or requested to be filed unexecuted, the Commercial Operation Date reflected in the LGIA shall be used to calculate the permissible extension. Such cumulative extensions may not exceed three years including both extensions requested after execution of the LGIA by Interconnection Customer or the filing of an unexecuted LGIA by Transmission Provider and those requested prior to execution of the LGIA by Interconnection Customer or the filing of an unexecuted LGIA by Transmission Provider.*

4.4.6 Technological Change Procedures

{Insert technological change procedure here}

Section 5. Procedures for Interconnection Requests Submitted Prior to Effective Date of the Cluster Study Revisions[Standard Large Generator Interconnection Procedures]

5.1 Procedures for Transitioning to the Cluster Study Process [Queue Position for Pending Requests.]

5.1.1

[Any Interconnection Customer assigned a Queue Position prior to the effective date of this LGIP shall retain that Queue Position.]

Any Interconnection Customer assigned a Queue Position as of thirty (30) Calendar Days after {Transmission Provider to insert filing date} (the filing date of this LGIP) shall retain that Queue Position subject to the requirements in Sections 5.1.1.1 and 5.1.1.2 of this LGIP. Any Interconnection Customer that fails to meet these requirements shall have its Interconnection Request deemed withdrawn by Transmission Provider pursuant to Section 3.7 of this LGIP. In such case, Transmission Provider shall not assess the Interconnection Customer any Withdrawal Penalty.

Any Interconnection Customer that has received a final Interconnection Facilities Study Report before the commencement of

the studies under the transition process set forth in this section shall be tendered an LGIA pursuant to Section 11 of this LGIP, and shall not be required to enter this transition process.

5.1.1.1 Transitional Serial Study

[If an Interconnection Study Agreement has not been executed as of the effective date of this LGIP, then such Interconnection Study, and any subsequent Interconnection Studies, shall be processed in accordance with this LGIP.]

An Interconnection Customer that has been tendered an Interconnection Facilities Study Agreement as of thirty (30) Calendar Days after {Transmission Provider to insert filing date} (the filing date of this LGIP) may opt to proceed with an Interconnection Facilities Study. Transmission Provider shall tender each eligible Interconnection Customer a Transitional Serial Interconnection Facilities Study Agreement, in the form of Appendix 8 to this LGIP, no later than the Commission-approved effective date of this LGIP. Transmission Provider shall proceed with the Interconnection Facilities Study, provided that the Interconnection Customer: (1) meets each of the following requirements; and (2) executes the Transitional Serial Interconnection Facilities Study Agreement within sixty (60) Calendar Days of the Commission-approved effective date of this LGIP. If an eligible Interconnection Customer does not meet these requirements, its Interconnection Request shall be deemed withdrawn without penalty. Transmission Provider must commence the Transitional Serial Interconnection Facilities Study at the conclusion of this sixty (60) Calendar Day period. Transitional Serial Interconnection Facilities Study costs shall be allocated according to the method described in Section 13.3 of this LGIP.

All of the following must be included when an Interconnection Customer returns the Transitional Serial Interconnection Facilities Study Agreement:

(1) A deposit equal to one hundred percent (100%) of the costs identified for Transmission Provider's Interconnection Facilities and Network Upgrades in Interconnection Customer's system impact study report. If Interconnection Customer does not withdraw, the deposit shall be trued up to actual costs once they are known and applied to future construction costs described in Interconnection Customer's eventual LGIA. Any amounts in excess of the actual construction costs shall be returned to Interconnection Customer within thirty (30) Calendar Days of the issuance of a final invoice for construction costs, in accordance with Article 12.2 of the pro forma LGIA. If Interconnection Customer withdraws or otherwise does not reach Commercial Operation, Transmission Provider shall refund the remaining deposit after the final invoice for study costs and Withdrawal Penalty is settled. The deposit shall be in the form of an irrevocable letter of credit or cash where cash deposits shall be treated according to Section 3.7 of this LGIP.

(2) Exclusive Site Control for 100% of the proposed Generating Facility.

Transmission Provider shall conduct each Transitional Serial Interconnection Facilities

Study and issue the associated Transitional Serial Interconnection Facilities Study Report within one hundred fifty (150) Calendar Days of the Commission-approved effective date of this LGIP.

After Transmission Provider issues each Transitional Interconnection Facilities Study Report, Interconnection Customer shall proceed pursuant to Section 11 of this LGIP. If Interconnection Customer withdraws its Interconnection Request or if Interconnection Customer's Generating Facility otherwise does not reach Commercial Operation, a Withdrawal Penalty shall be imposed on Interconnection Customer equal to nine (9) times Interconnection Customer's total study cost incurred since entering the Transmission Provider's interconnection queue (including the cost of studies conducted under Section 5 of this LGIP).

5.1.1.2 Transitional Cluster Study

[If an Interconnection Study Agreement has been executed prior to the effective date of this LGIP, such Interconnection Study shall be completed in accordance with the terms of such agreement. With respect to any remaining studies for which an Interconnection Customer has not signed an Interconnection Study Agreement prior to the effective date of the LGIP, Transmission Provider must offer Interconnection Customer the option of either continuing under Transmission Provider's existing interconnection study process or going forward with the completion of the necessary Interconnection Studies (for which it does not have a signed Interconnection Studies Agreement) in accordance with this LGIP.]

An Interconnection Customer with an assigned Queue Position as of thirty (30) Calendar Days after {Transmission Provider to insert filing date} (the filing date of this LGIP) may opt to proceed with a Transitional Cluster Study. Transmission Provider shall tender each eligible Interconnection Customer a Transitional Cluster Study Agreement, in the form of Appendix 7 to this LGIP, no later than the Commission-approved effective date of this LGIP. Transmission Provider shall proceed with the Transitional Cluster Study that includes each Interconnection Customer that: (1) meets each of the following requirements listed as (1)–(3) in this section; and (2) executes the Transitional Cluster Study Agreement within sixty (60) Calendar Days of the Commission-approved effective date of this LGIP. All Interconnection Requests that enter the Transitional Cluster Study shall be considered to have an equal Queue Position that is lower than Interconnection Customer(s) proceeding with Transitional Serial Interconnection Facilities Study. If an eligible Interconnection Customer does not meet these requirements, its Interconnection Request shall be deemed withdrawn without penalty. Transmission Provider must commence the Transitional Cluster Study at the conclusion of this sixty (60) Calendar Day period. All identified Transmission Provider's Interconnection Facilities and Network Upgrade costs shall be allocated according to Section 4.2.1 of this LGIP. Transitional Cluster Study costs shall be allocated according to the method described in Section 13.3 of this LGIP.

Interconnection Customer may make a one-time extension to its requested Commercial Operation Date upon entry into the Transitional Cluster Study, where any such extension shall not result in a Commercial Operation Date later than December 31, 2027.

All of the following must be included when an Interconnection Customer returns the Transitional Cluster Study Agreement:

(1) A selection of either Energy Resource Interconnection Service or Network Resource Interconnection Service.

(2) A deposit of five million dollars (\$5,000,000) in the form of an irrevocable letter of credit or cash where cash deposits will be treated according to Section 3.7 of this LGIP. If Interconnection Customer does not withdraw, the deposit shall be reconciled with and applied towards future construction costs described in the LGIA. Any amounts in excess of the actual construction costs shall be returned to Interconnection Customer within thirty (30) Calendar Days of the issuance of a final invoice for construction costs, in accordance with Article 12.2 of the pro forma LGIA. If Interconnection Customer withdraws or otherwise does not reach Commercial Operation, Transmission Provider must refund the remaining deposit once the final invoice for study costs and Withdrawal Penalty is settled.

(3) Exclusive Site Control for 100% of the proposed Generating Facility.

Transmission Provider shall conduct the Transitional Cluster Study and issue both an associated interim Transitional Cluster Study Report and an associated final Transitional Cluster Study Report. The interim Transitional Cluster Study Report shall provide the following information:

- identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;
- identification of any thermal overload or voltage limit violations resulting from the interconnection;
- identification of any instability or inadequately damped response to system disturbances resulting from the interconnection; and
- Transmission Provider's Interconnection Facilities and Network Upgrades that are expected to be required as a result of the Interconnection Request(s) and a non-binding, good faith estimate of cost responsibility and a non-binding, good faith estimated time to construct.

In addition to the information provided in the interim Transitional Cluster Study Report, the final Transitional Cluster Study Report shall provide a description of, estimated cost of, and schedule for construction of the Transmission Provider's Interconnection Facilities and Network Upgrades required to interconnect the Generating Facility to the Transmission System that resolve issues identified in the interim Transitional Cluster Study Report.

The interim and final Transitional Cluster Study Reports shall be issued within three hundred (300) and three hundred sixty (360) Calendar Days of the Commission-approved effective date of this LGIP, respectively, and shall be posted on Transmission Provider's OASIS consistent with the posting of other

study results pursuant to Section 3.5.1 of this LGIP. Interconnection Customer shall have thirty (30) Calendar Days to comment on the interim Transitional Cluster Study Report, once it has been received.

After Transmission Provider issues the final Transitional Cluster Study Report, Interconnection Customer shall proceed pursuant to Section 11 of this LGIP. If Interconnection Customer withdraws its Interconnection Request or if Interconnection Customer's Generating Facility otherwise does not reach Commercial Operation, a Withdrawal Penalty will be imposed on Interconnection Customer equal to nine (9) times Interconnection Customer's total study cost incurred since entering the Transmission Provider's interconnection queue (including the cost of studies conducted under Section 5 of this LGIP).

5.1.1.3 If an LGIA has been submitted to FERC for approval before the effective date of the LGIP, then the LGIA would be grandfathered.

5.1.2 Transition Period

To the extent necessary, Transmission Provider and Interconnection Customers with an outstanding request (i.e., an Interconnection Request for which an LGIA has not been submitted to FERC for approval as of the effective date of this LGIP) shall transition to this LGIP within a reasonable period of time not to exceed sixty (60) Calendar Days. The use of the term "outstanding request" herein shall mean any Interconnection Request, on the effective date of this LGIP: (i) that has been submitted but not yet accepted by Transmission Provider; (ii) where the related interconnection agreement has not yet been submitted to FERC for approval in executed or unexecuted form, (iii) where the relevant Interconnection Study Agreements have not yet been executed, or (iv) where any of the relevant Interconnection Studies are in process but not yet completed. Any Interconnection Customer with an outstanding request as of the effective date of this LGIP may request a reasonable extension of any deadline, otherwise applicable, if necessary to avoid undue hardship or prejudice to its Interconnection Request. A reasonable extension shall be granted by Transmission Provider to the extent consistent with the intent and process provided for under this LGIP.]

5.2 New Transmission Provider

If Transmission Provider transfers control of its Transmission System to a successor Transmission Provider during the period when an Interconnection Request is pending, the original Transmission Provider shall transfer to the successor Transmission Provider any amount of the deposit or payment with interest thereon that exceeds the cost that it incurred to evaluate the request for interconnection. Any difference between such net amount and the deposit or payment required by this LGIP shall be paid by or refunded to the Interconnection Customer, as appropriate. The original Transmission Provider shall coordinate with the successor Transmission Provider to complete any Interconnection Study, as appropriate, that the original Transmission

Provider has begun but has not completed. If Transmission Provider has tendered a draft LGIA to Interconnection Customer but Interconnection Customer has not either executed the LGIA or requested the filing of an unexecuted LGIA with FERC, unless otherwise provided, Interconnection Customer must complete negotiations with the successor Transmission Provider.

Section 6. Interconnection Information Access [Feasibility Study]

6.1 Publicly Posted Interconnection Information

Transmission Provider shall maintain and make publicly available: (1) an interactive visual representation of the estimated incremental injection capacity (in megawatts) available at each point of interconnection in Transmission Provider's footprint under N-1 conditions, and (2) a table of metrics concerning the estimated impact of a potential Generating Facility on Transmission Provider's Transmission System based on a user-specified addition of a particular number of megawatts at a particular voltage level at a particular point of interconnection. At a minimum, for each transmission facility impacted by the user-specified megawatt addition, the following information will be provided in the table: (1) the distribution factor; (2) the megawatt impact (based on the megawatt values of the proposed Generating Facility and the distribution factor); (3) the percentage impact on each impacted transmission facility (based on the megawatt values of the proposed Generating Facility and the facility rating); (4) the percentage of power flow on each impacted transmission facility before the injection of the proposed project; (5) the percentage power flow on each impacted transmission facility after the injection of the proposed Generating Facility. These metrics must be calculated based on the power flow model of the Transmission System with the transfer simulated from each point of interconnection to the whole Transmission Provider's footprint (to approximate Network Resource Interconnection Service), and with the incremental capacity at each point of interconnection decremented by the existing and queued Generating Facilities (based on the existing or requested interconnection service limit of the generation). These metrics must be updated within thirty (30) Calendar Days after the completion of each Cluster Study and Cluster Restudy. This information must be publicly posted, without a password or a fee. The website will define all underlying assumptions, including the name of the most recent Cluster Study or Restudy used in the Base Case.

[6.1 Interconnection Feasibility Study Agreement

Simultaneously with the acknowledgement of a valid Interconnection Request Transmission Provider shall provide to Interconnection Customer an Interconnection Feasibility Study Agreement in the form of Appendix 2. The Interconnection Feasibility Study Agreement shall: specify that Interconnection Customer is responsible for the actual cost of the Interconnection Feasibility Study. Within five (5) Business

Days following the Scoping Meeting Interconnection Customer shall specify for inclusion in the attachment to the Interconnection Feasibility Study Agreement the Point(s) of Interconnection and any reasonable alternative Point(s) of Interconnection. Within five (5) Business Days following Transmission Provider's receipt of such designation, Transmission Provider shall tender to Interconnection Customer the Interconnection Feasibility Study Agreement signed by Transmission Provider, which includes a good faith estimate of the cost for completing the Interconnection Feasibility Study. Interconnection Customer shall execute and deliver to Transmission Provider the Interconnection Feasibility Study Agreement along with a \$10,000 deposit no later than thirty (30) Calendar Days after its receipt.

On or before the return of the executed Feasibility Study Agreement to Transmission Provider, Interconnection Customer shall provide the technical data called for in Appendix 1, Attachment A.

If the Interconnection Feasibility Study uncovers any unexpected result(s) not contemplated during the Scoping Meeting, a substitute Point of Interconnection identified by either Interconnection Customer or Transmission Provider, and acceptable to the other, such acceptance not to be unreasonably withheld, will be substituted for the designated Point of Interconnection specified above without loss of Queue Position, and Re-studies shall be completed pursuant to Section 6.4 as applicable. For the purpose of this Section 6.1, if Transmission Provider and Interconnection Customer cannot agree on the substituted Point of Interconnection, then Interconnection Customer may direct that one of the alternatives as specified in the Interconnection Feasibility Study Agreement, as specified pursuant to Section 3.4.4, shall be the substitute.

If Interconnection Customer and Transmission Provider agree to forgo the Interconnection Feasibility Study, Transmission Provider will initiate an Interconnection System Impact Study under Section 7 of this LGIP and apply the \$10,000 deposit towards the Interconnection System Impact Study.]

[6.2 Scope of Interconnection Feasibility Study

The Interconnection Feasibility Study shall preliminarily evaluate the feasibility of the proposed interconnection to the Transmission System.

The Interconnection Feasibility Study will consider the Base Case as well as all generating facilities (and with respect to (iii), any identified Network Upgrades) that, on the date the Interconnection Feasibility Study is commenced: (i) are directly interconnected to the Transmission System; (ii) are interconnected to Affected Systems and may have an impact on the Interconnection Request; (iii) have a pending higher queued Interconnection Request to interconnect to the Transmission System; and (iv) have no Queue Position but have executed an LGIA or requested that an unexecuted LGIA be filed with FERC. The Interconnection Feasibility Study will consist

of a power flow and short circuit analysis. The Interconnection Feasibility Study will provide a list of facilities and a non-binding good faith estimate of cost responsibility and a non-binding good faith estimated time to construct.]

[6.3 Interconnection Feasibility Study Procedures

Transmission Provider shall utilize existing studies to the extent practicable when it performs the study. Transmission Provider shall use Reasonable Efforts to complete the Interconnection Feasibility Study no later than forty-five (45) Calendar Days after Transmission Provider receives the fully executed Interconnection Feasibility Study Agreement. At the request of Interconnection Customer or at any time Transmission Provider determines that it will not meet the required time frame for completing the Interconnection Feasibility Study, Transmission Provider shall notify Interconnection Customer as to the schedule status of the Interconnection Feasibility Study. If Transmission Provider is unable to complete the Interconnection Feasibility Study within that time period, it shall notify Interconnection Customer and provide an estimated completion date with an explanation of the reasons why additional time is required. Upon request, Transmission Provider shall provide Interconnection Customer supporting documentation, workpapers and relevant power flow, short circuit and stability databases for the Interconnection Feasibility Study, subject to confidentiality arrangements consistent with Section 13.1.

Transmission Provider shall study the Interconnection Request at the level of service requested by the Interconnection Customer, unless otherwise required to study the full Generating Facility Capacity due to safety or reliability concerns.]

[6.3.1 Meeting With Transmission Provider

Within ten (10) Business Days of providing an Interconnection Feasibility Study report to Interconnection Customer, Transmission Provider and Interconnection Customer shall meet to discuss the results of the Interconnection Feasibility Study.]

[6.4 Re-Study

If Re-Study of the Interconnection Feasibility Study is required due to a higher queued project dropping out of the queue, or a modification of a higher queued project subject to Section 4.4, or re-designation of the Point of Interconnection pursuant to Section 6.1 Transmission Provider shall notify Interconnection Customer in writing. Such Re-Study shall take not longer than forty-five (45) Calendar Days from the date of the notice. Any cost of Re-Study shall be borne by the Interconnection Customer being re-studied.]

Section 7. [Interconnection System Impact] Cluster Study

7.1 [Interconnection System Impact] Cluster Study Agreement

[Unless otherwise agreed, pursuant to the Scoping Meeting provided in Section 3.4.4, simultaneously with the delivery of the Interconnection Feasibility Study to

Interconnection Customer] *No later than five (5) Business Days after the close of a Cluster Request Window*, Transmission Provider shall [provide] *tender to each* Interconnection Customer [an] *that submitted a valid Interconnection[System Impact] Request a Cluster Study Agreement in the form of Appendix 2[3] to this LGIP. The [Interconnection System Impact] Cluster Study Agreement shall [provide that] require Interconnection Customer [shall] to compensate Transmission Provider for the actual cost of the [Interconnection System Impact Study.]Cluster Study pursuant to Section 13.3 of this LGIP. The specifications, assumptions, or other provisions in the appendices of the Cluster Study Agreement provided pursuant to Section 7.1 of this LGIP shall be subject to change by Transmission Provider following the conclusion of the Scoping Meeting. [Within three (3) Business Days following the Interconnection Feasibility Study results meeting, Transmission Provider shall provide to Interconnection Customer a non-binding good faith estimate of the cost and timeframe for completing the Interconnection System Impact Study.]*

7.2 Execution of [Interconnection System Impact] Cluster Study Agreement

Interconnection Customer shall execute the [Interconnection System Impact] Cluster Study Agreement and deliver the executed [Interconnection System Impact] Cluster Study Agreement to Transmission Provider no later than [thirty (30) Calendar Days after its receipt along with demonstration of Site Control, and a \$50,000 deposit] *the close of the Customer Engagement Window.*

If Interconnection Customer does not provide all [such] *required* technical data when it delivers the [Interconnection System Impact] Cluster Study Agreement, Transmission Provider shall notify Interconnection Customer of the deficiency within five (5) Business Days of the receipt of the executed [Interconnection System Impact] Cluster Study Agreement and Interconnection Customer shall cure the deficiency within ten (10) Business Days of receipt of the notice, provided, however, such deficiency does not include failure to deliver the executed [Interconnection System Impact] Cluster Study Agreement or *Study Deposit.*

[If the Interconnection System Impact Study uncovers any unexpected result(s) not contemplated during the Scoping Meeting and the Interconnection Feasibility Study, a substitute Point of Interconnection identified by either Interconnection Customer or Transmission Provider, and acceptable to the other, such acceptance not to be unreasonably withheld, will be substituted for the designated Point of Interconnection specified above without loss of Queue Position, and restudies shall be completed pursuant to Section 7.6 as applicable. For the purpose of this Section 7.2, if Transmission Provider and Interconnection Customer cannot agree on the substituted Point of Interconnection, then Interconnection Customer may direct that one of the alternatives as specified in the Interconnection Feasibility Study Agreement,

as specified pursuant to Section 3.4.4, shall be the substitute.]

7.3 Scope of [Interconnection System Impact] Cluster Study

The [Interconnection System Impact] Cluster Study shall evaluate the impact of the proposed interconnection on the reliability of the Transmission System. The [Interconnection System Impact] Cluster Study will consider the Base Case as well as all Generating Facilities (and with respect to (iii) below, any identified Network Upgrades associated with such higher queued interconnection) that, on the date the [Interconnection System Impact] Cluster Study is commenced: (i) are directly interconnected to the Transmission System; (ii) are interconnected to Affected Systems and may have an impact on the Interconnection Request; (iii) have a pending higher queued Interconnection Request to interconnect to the Transmission System; and (iv) have no Queue Position but have executed an LGIA or requested that an unexecuted LGIA be filed with FERC.

For purposes of determining necessary Interconnection Facilities and Network Upgrades, the Cluster Study shall use the level of Interconnection Service requested by Interconnection Customers in the Cluster, except where the Transmission Provider otherwise determines that it must study the full Generating Facility Capacity due to safety or reliability concerns.

The [Interconnection System Impact] Cluster Study will consist of [a short circuit analysis, a] power flow, stability [analysis, and a power flow analysis. The Interconnection System Impact Study], and short circuit analyses, the results of which are documented in a single Cluster Study Report, as applicable. At the conclusion of the Cluster Study, Transmission Provider shall issue a Cluster Study Report. The Cluster Study Report will state the assumptions upon which it is based; state the results of the analyses; and provide the requirements or potential impediments to providing the requested interconnection service, including a preliminary indication of the cost and length of time that would be necessary to correct any problems identified in those analyses and implement the interconnection. [For purposes of determining necessary] The Cluster Study Report shall identify the Interconnection Facilities and Network Upgrades [], the System Impact Study shall consider the level of Interconnection Service requested by the Interconnection Customer, unless otherwise required to study the full Generating Facility Capacity due to safety or reliability concerns.] expected to be required to reliably interconnect the Generating Facilities in that Cluster Study at the requested Interconnection Service level and shall provide non-binding cost estimates for required Network Upgrades. The Cluster Study Report shall identify each Interconnection Customer's estimated allocated costs for Interconnection Facilities and Network Upgrades pursuant to the method in Section 4.2.1 of this LGIP. Transmission Provider shall hold an open stakeholder meeting pursuant to Section 7.4 of this LGIP.

For purposes of determining necessary Interconnection Facilities and Network Upgrades, the Cluster Study shall use operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) that reflect the proposed charging behavior of a Generating Facility that includes at least one electric storage resource as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise requires the use of different operating assumptions. Transmission Provider may require the inclusion of control technologies sufficient to limit the operation of the Generating Facility per the operating assumptions as set forth in the Interconnection Request and to respond to dispatch instructions by Transmission Provider. As determined by Transmission Provider, Interconnection Customer may be subject to testing and validation of those control technologies consistent with Article 6 of the LGIA.

[The Interconnection System Impact Study] The Cluster Study Report will provide a list of facilities that are required as a result of the Interconnection [Request] Requests within the Cluster and a non-binding good faith estimate of cost responsibility and a non-binding good faith estimated time to construct.

Upon issuance of a Cluster Study Report, or Cluster Restudy Report, if any, Transmission Provider shall simultaneously tender a draft Interconnection Facilities Study Agreement to each Interconnection Customer within the Cluster, subject to the conditions in Section 8.1 of this LGIP.

The Cluster Study shall evaluate the use of static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. Transmission Provider shall determine whether the above technologies should be used, consistent with Good Utility Practice and other applicable regulatory requirements. Transmission Provider shall include an explanation of the results of the Transmission Provider's evaluation for each technology in the Cluster Study Report.

7.4 [Interconnection System Impact] Cluster Study Procedures

Transmission Provider shall coordinate the [Interconnection System Impact] Cluster Study with any Affected System that is affected by the Interconnection Request pursuant to Section 3.6 [above] of this LGIP. Transmission Provider shall utilize existing studies to the extent practicable when it performs the [study] Cluster Study. Interconnection Requests for a Cluster Study may be submitted only within the Cluster Request Window and Transmission Provider shall [use Reasonable Efforts to complete the Interconnection System Impact Study within ninety (90) Calendar Days after the receipt of the Interconnection System Impact Study Agreement or notification to proceed, study payment, and technical data. If Transmission Provider uses Clustering, Transmission Provider shall use Reasonable Efforts to deliver a completed Interconnection System

Impact Study within ninety (90) Calendar Days after the close of the Queue Cluster Window.] initiate the Cluster Study process pursuant to Section 7 of this LGIP.

Transmission Provider shall complete the Cluster Study within one hundred fifty (150) Calendar Days of the close of the Customer Engagement Window.

Within ten (10) Business Days of simultaneously furnishing a Cluster Study Report to each Interconnection Customer within the Cluster and posting such report on OASIS, Transmission Provider shall convene a Cluster Study Report Meeting.

At the request of Interconnection Customer or at any time Transmission Provider determines that it will not meet the required time frame for completing the [Interconnection System Impact] Cluster Study, Transmission Provider shall notify Interconnection Customers as to the schedule status of the [Interconnection System Impact] Cluster Study. If Transmission Provider is unable to complete the [Interconnection System Impact] Cluster Study within the time period, it shall notify Interconnection Customers and provide an estimated completion date with an explanation of the reasons why additional time is required. Upon request, Transmission Provider shall provide to Interconnection Customers all supporting documentation, workpapers and relevant pre-Interconnection Request and post-Interconnection Request power flow, short circuit and stability databases for the [Interconnection System Impact] Cluster Study, subject to confidentiality arrangements consistent with Section 13.1 of this LGIP.

7.5 Cluster Study Restudies

(1) Within twenty (20) Calendar Days after the Cluster Study Report Meeting, Interconnection Customer must provide the following:

(a) Demonstration of continued Site Control pursuant to Section 3.4.2(iii) of this LGIP; and

(b) An additional deposit that brings the total Commercial Readiness Deposit submitted to Transmission Provider to five percent (5%) of the Interconnection Customer's Network Upgrade cost assignment identified in the Cluster Study in the form of an irrevocable letter of credit or cash. Transmission Provider shall refund the deposit to Interconnection Customer upon withdrawal in accordance with Section 3.7 of this LGIP.

Interconnection Customer shall promptly inform Transmission Provider of any material change to Interconnection Customer's demonstration of Site Control under Section 3.4.2(iii) of this LGIP. Upon Transmission Provider determining that Interconnection Customer no longer satisfies the Site Control requirement, Transmission Provider shall notify Interconnection Customer. Within ten (10) Business Days of such notification, Interconnection Customer must demonstrate compliance with the applicable requirement subject to Transmission Provider's approval, not to be unreasonably withheld. Absent such demonstration, Transmission Provider shall deem the subject Interconnection Request

withdrawn pursuant to Section 3.7 of this LGIP.

(2) If no Interconnection Customer withdraws from the Cluster after completion of the Cluster Study or Cluster Restudy or is deemed withdrawn pursuant to Section 3.7 of this LGIP after completion of the Cluster Study or Cluster Restudy, Transmission Provider shall notify Interconnection Customers in the Cluster that a Cluster Restudy is not required.

(3) If one or more Interconnection Customers withdraw from the Cluster or are deemed withdrawn pursuant to Section 3.7 of this LGIP, Transmission Provider shall determine if a Cluster Restudy is necessary within thirty (30) Calendar Days after the Cluster Study Report Meeting. If Transmission Provider determines a Cluster Restudy is not necessary, Transmission Provider shall notify Interconnection Customers in the Cluster that a Cluster Restudy is not required and Transmission Provider shall provide an updated Cluster Study Report within thirty (30) Calendar Days of such determination.

(4) If one or more Interconnection Customers withdraws from the Cluster or is deemed withdrawn pursuant to Section 3.7 of this LGIP, and Transmission Provider determines a Cluster Restudy is necessary as a result, Transmission Provider shall notify Interconnection Customers in the Cluster and post on OASIS that a Cluster Restudy is required within thirty (30) Calendar Days after the Cluster Study Report Meeting. Transmission Provider shall continue with such restudies until Transmission Provider determines that no further restudies are required. If an Interconnection Customer withdraws or is deemed withdrawn pursuant to Section 3.7 of this LGIP during the Interconnection Facilities Study, or after other Interconnection Customers in the same Cluster have executed LGIAs, or requested that unexecuted LGIAs be filed, and Transmission Provider determines a Cluster Restudy is necessary, the Cluster shall be restudied.

(5) The scope of any Cluster Restudy shall be consistent with the scope of an initial Cluster Study pursuant to Section 7.3 of this LGIP. Transmission Provider shall complete the Cluster Restudy within one hundred fifty (150) Calendar Days of the Transmission Provider informing the Interconnection Customers in the cluster that restudy is needed. The results of the Cluster Restudy shall be combined into a single report (Cluster Restudy Report). Transmission Provider shall hold a meeting with the Interconnection Customers in the cluster (Cluster Restudy Report Meeting) within ten (10) Business Days of simultaneously furnishing the Cluster Restudy Report to each Interconnection Customer in the Cluster Restudy and publishing the Cluster Restudy Report on OASIS.

If additional restudies are required, Interconnection Customer and Transmission Provider shall follow the procedures of this Section 7.5 of this LGIP until such time that Transmission Provider determines that no further restudies are required. Transmission Provider shall notify each Interconnection Customer within the Cluster when no further restudies are required.

[Meeting With Transmission Provider

Within ten (10) Business Days of providing an Interconnection System Impact Study report to Interconnection Customer, Transmission Provider and Interconnection Customer shall meet to discuss the results of the Interconnection System Impact Study.

7.6 Re-Study

If Re-Study of the Interconnection System Impact Study is required due to a higher queued project dropping out of the queue, or a modification of a higher queued project subject to 4.4, or re-designation of the Point of Interconnection pursuant to Section 7.2 Transmission Provider shall notify Interconnection Customer in writing. Such Re-Study shall take no longer than sixty (60) Calendar Days from the date of notice. Any cost of Re-Study shall be borne by the Interconnection Customer being re-studied.]

Section 8. Interconnection Facilities Study

8.1 Interconnection Facilities Study Agreement

Simultaneously with the delivery of the [Interconnection System Impact Study to Interconnection Customer] Cluster Study Report, or Cluster Restudy Report if applicable, Transmission Provider shall provide to Interconnection Customer an Interconnection Facilities Study Agreement in the form of Appendix 3[4] to this LGIP. [The Interconnection Facilities Study Agreement shall provide that] Interconnection Customer shall compensate Transmission Provider for the actual cost of the Interconnection Facilities Study. Within five (5) Business Days following the Cluster Report Meeting or Cluster Restudy Report Meeting if applicable, [Interconnection System Impact Study results meeting], Transmission Provider shall provide to Interconnection Customer a non-binding good faith estimate of the cost and timeframe for completing the Interconnection Facilities Study.

Interconnection Customer shall execute the Interconnection Facilities Study Agreement and deliver the executed Interconnection Facilities Study Agreement to Transmission Provider within thirty (30) Calendar Days after its receipt, together with [the]:

(1) any required technical data [and the greater of \$100,000 or Interconnection Customer's portion of the estimated monthly cost of conducting the Interconnection Facilities Study.];

(2) Demonstration of one-hundred percent (100%) Site Control or demonstration of a regulatory limitation and applicable deposit in lieu of Site Control provided to the Transmission Provider in accordance with section 3.4.2 of this LGIP; and

(3) An additional deposit that brings the total Commercial Readiness Deposit submitted to the Transmission Provider to ten percent (10%) of the Interconnection Customer's Network Upgrade cost assignment identified in the Cluster Study or Cluster Restudy, if applicable, in the form of an irrevocable letter of credit or cash. Transmission Provider shall refund the deposit to Interconnection Customer upon withdrawal in accordance with Section 3.7 of this LGIP.

Interconnection Customer shall promptly inform Transmission Provider of any material change to Interconnection Customer's demonstration of Site Control under Section 3.4.2(iii) of this LGIP. Upon Transmission Provider determining separately that Interconnection Customer no longer satisfies the Site Control requirement, Transmission Provider shall notify Interconnection Customer. Within ten (10) Business Days of such notification, Interconnection Customer must demonstrate compliance with the applicable requirement subject to Transmission Provider's approval, not to be unreasonably withheld. Absent such demonstration, Transmission Provider shall deem the subject Interconnection Request withdrawn pursuant to Section 3.7 of this LGIP.

[8.1.1 Transmission Provider shall invoice Interconnection Customer on a monthly basis for the work to be conducted on the Interconnection Facilities Study each month. Interconnection Customer shall pay invoiced amounts within thirty (30) Calendar Days of receipt of invoice. Transmission Provider shall continue to hold the amounts on deposit until settlement of the final invoice.]

8.2 Scope of Interconnection Facilities Study

The Interconnection Facilities Study shall be specific to each Interconnection Request and performed on an individual, i.e., non-clustered, basis. The Interconnection Facilities Study shall specify and provide a non-binding estimate of the cost of the equipment, engineering, procurement and construction work needed to implement the conclusions of the [Interconnection System Impact Study] Cluster Study Report (and any associated restudies) in accordance with Good Utility Practice to physically and electrically connect the Interconnection [Facility] Facilities to the Transmission System. The Interconnection Facilities Study shall also identify the electrical switching configuration of the connection equipment, including, without limitation: the transformer, switchgear, meters, and other station equipment; the nature and estimated cost of any Transmission Provider's Interconnection Facilities and Network Upgrades necessary to accomplish the interconnection; and an estimate of the time required to complete the construction and installation of such facilities. The Interconnection Facilities Study will also identify any potential control equipment for [requests for] (1) requests for Interconnection Service that are lower than the Generating Facility Capacity[,], and/or (2) requests to study a Generating Facility that includes at least one electric storage resource using operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) that reflect its proposed charging behavior, as requested by Interconnection Customer, unless Transmission Provider determines that Good Utility Practice, including Applicable Reliability Standards, otherwise require the use of different operating assumptions.

8.3 Interconnection Facilities Study Procedures

Transmission Provider shall coordinate the Interconnection Facilities Study with any Affected System pursuant to Section 3.6 of this LGIP. Transmission Provider shall utilize existing studies to the extent practicable in performing the Interconnection Facilities Study. Transmission Provider shall [use Reasonable Efforts to] complete the study and issue a draft Interconnection Facilities Study [r]Report to Interconnection Customer within the following number of days after receipt of an executed Interconnection Facilities Study Agreement: ninety (90) Calendar Days after receipt of an executed Interconnection Facilities Study Agreement, with no more than a $\pm$ 20 percent cost estimate contained in the report; or one hundred eighty (180) Calendar Days, if Interconnection Customer requests a $\pm$ 10 percent cost estimate.

At the request of Interconnection Customer or at any time Transmission Provider determines that it will not meet the required time frame for completing the Interconnection Facilities Study, Transmission Provider shall notify Interconnection Customer as to the schedule status of the Interconnection Facilities Study. If Transmission Provider is unable to complete the Interconnection Facilities Study and issue a draft Interconnection Facilities Study [r]Report within the time required, it shall notify Interconnection Customer and provide an estimated completion date and an explanation of the reasons why additional time is required.

Interconnection Customer may, within thirty (30) Calendar Days after receipt of the draft Interconnection Facilities Study [r]Report, provide written comments to Transmission Provider, which Transmission Provider shall include in completing the final Interconnection Facilities Study [r]Report. Transmission Provider shall issue the final Interconnection Facilities Study [r]Report within fifteen (15) Business Days of receiving Interconnection Customer's comments or promptly upon receiving Interconnection Customer's statement that it will not provide comments. Transmission Provider may reasonably extend such fifteen-[day] (15) Business Day period upon notice to Interconnection Customer if Interconnection Customer's comments require Transmission Provider to perform additional analyses or make other significant modifications prior to the issuance of the final Interconnection Facilities Study Report. Upon request, Transmission Provider shall provide Interconnection Customer supporting documentation, workpapers, and databases or data developed in the preparation of the Interconnection Facilities Study, subject to confidentiality arrangements consistent with Section 13.1 of this LGIP.

8.4 Meeting With Transmission Provider

Within ten (10) Business Days of providing a draft Interconnection Facilities Study [r]Report to Interconnection Customer, Transmission Provider and Interconnection Customer shall meet to discuss the results of the Interconnection Facilities Study.

8.5 [Re-Study]Restudy

If [Re-Study]Restudy of the Interconnection Facilities Study is required due to a higher or equally queued project [dropping out of] withdrawing from the queue or a modification of a higher or equally queued project pursuant to Section 4.4 of this LGIP, Transmission Provider shall so notify Interconnection Customer in writing. [Such]Transmission Provider shall ensure that such [Re-Study]Restudy [shall] takes no longer than sixty (60) Calendar Days from the date of notice. Except as provided in Section 3.7 of this LGIP in the case of withdrawing Interconnection Customers, any cost of [Re-Study]Restudy shall be borne by [the]Interconnection Customer being [re-studied]restudied.

Section 9 [Engineering & Procurement ('E&P') Agreement] Affected System Study

9.1 Applicability

This Section 9 outlines the duties of Transmission Provider when it receives notification that an Affected System Interconnection Customer's proposed interconnection to its host transmission provider may impact Transmission Provider's Transmission System.

9.2 Response to Initial Notification

When Transmission Provider receives notification that an Affected System Interconnection Customer's proposed interconnection to its host transmission provider may impact Transmission Provider's Transmission System, Transmission Provider must respond in writing within twenty (20) Business Days whether it intends to conduct an Affected System Study.

By fifteen (15) Business Days after the Transmission Provider responds with its affirmative intent to conduct an Affected System Study, Transmission Provider shall share with Affected System Interconnection Customer(s) and the Affected System Interconnection Customer's host transmission provider a non-binding good faith estimate of the cost and the schedule to complete the Affected System Study.

9.3 Affected System Queue Position

Transmission Provider must assign an Affected System Queue Position to Affected System Interconnection Customer(s) that require(s) an Affected System Study. Such Affected System Queue Position shall be assigned based upon the date of execution of the Affected System Study Agreement. Relative to the Transmission Provider's Interconnection Customers, this Affected System Queue Position shall be higher-queued than any Cluster that has not yet received its Cluster Study Report and shall be lower-queued than any Cluster that has already received its Cluster Study Report. Consistent with Section 9.7 of this LGIP, Transmission Provider shall study the Affected System Interconnection Customer(s) via Clustering, and all Affected System Interconnection Customers studied in the same Cluster under Section 9.7 shall be equally queued. For Affected System Interconnection Customers that are equally queued, the Affected System Queue Position

shall have no bearing on the assignment of Affected System Network Upgrades identified in the applicable Affected System Study. The costs of the Affected System Network Upgrades shall be allocated among the Affected System Interconnection Customers in accordance with Section 9.9 of this LGIP.

9.4 Affected System Study Agreement/Multiparty Affected System Study Agreement

Unless otherwise agreed, Transmission Provider shall provide to Affected System Interconnection Customer(s) an Affected System Study Agreement/Multiparty Affected System Study Agreement, in the form of Appendix 9 or Appendix 10 to this LGIP, as applicable, within ten (10) Business Days of Transmission Provider sharing the schedule for the Affected System Study per Section 9.2 of this LGIP.

Upon Affected System Interconnection Customer(s)' receipt of the Affected System Study Report, Affected System Interconnection Customer(s) shall compensate Transmission Provider for the actual cost of the Affected System Study. Any difference between the study deposit and the actual cost of the Affected System Study shall be paid by or refunded to the Affected System Interconnection Customer(s). Any invoices for the Affected System Study shall include a detailed and itemized accounting of the cost of the study. Affected System Interconnection Customer(s) shall pay any excess costs beyond the already-paid Affected System Study deposit or be reimbursed for any costs collected over the actual cost of the Affected System Study within thirty (30) Calendar Days of receipt of an invoice thereof. If Affected System Interconnection Customer(s) fail to pay such undisputed costs within the time allotted, it shall lose its Affected System Queue Position. Transmission Provider shall notify Affected System Interconnection Customer's host transmission provider of such failure to pay.

9.5 Execution of Affected System Study Agreement/Multiparty Affected System Study Agreement

Affected System Interconnection Customer(s) shall execute the Affected System Study Agreement/Multiparty Affected System Study Agreement, deliver the executed Affected System Study Agreement/Multiparty Affected System Study Agreement to Transmission Provider, and provide the Affected System Study deposit within ten (10) Business Days of receipt.

If Affected System Interconnection Customer does not provide all required technical data when it delivers the Affected System Study Agreement/Multiparty Affected System Study Agreement, Transmission Provider shall notify the deficient Affected System Interconnection Customer, as well as the host transmission provider with which Affected System Interconnection Customer seeks to interconnect, of the deficiency within five (5) Business Days of the receipt of the executed Affected System Study Agreement/Multiparty Affected System Study Agreement and the deficient Affected System Interconnection Customer shall cure the deficiency within ten (10) Business Days of receipt of the notice: provided, however, that

such deficiency does not include failure to deliver the executed Affected System Study Agreement/Multiparty Affected System Study Agreement or deposit for the Affected System Study Agreement/Multiparty Affected System Study Agreement. If Affected System Interconnection Customer does not cure the deficiency or fails to execute the Affected System Study Agreement/Multiparty Affected System Study Agreement or provide the deposit, the Affected System Interconnection Customer shall lose its Affected System Queue Position.

9.6 Scope of Affected System Study

The Affected System Study shall evaluate the impact that any Affected System Interconnection Customer's proposed interconnection to another transmission provider's transmission system will have on the reliability of Transmission Provider's Transmission System. The Affected System Study shall consider the Base Case as well as all Generating Facilities (and with respect to (iii) below, any identified Affected System Network Upgrades associated with such higher-queued Interconnection Request) that, on the date the Affected System Study is commenced: (i) are directly interconnected to Transmission Provider's Transmission System; (ii) are directly interconnected to another transmission provider's transmission system and may have an impact on Affected System Interconnection Customer's interconnection request; (iii) have a pending higher-queued Interconnection Request to interconnect to Transmission Provider's Transmission System; and (iv) have no queue position but have executed an LGIA or requested that an unexecuted LGIA be filed with FERC. Transmission Provider has no obligation to study impacts of Affected System Interconnection Customers of which it is not notified.

The Affected System Study shall consist of a power flow, stability, and short circuit analysis. The Affected System Study will: state the assumptions upon which it is based; state the results of the analyses; and provide the potential impediments to Affected System Interconnection Customer's receipt if interconnection service on its host transmission provider's transmission system, including a preliminary indication of the cost and length of time that would be necessary to correct any problems identified in those analyses and implement the interconnection. For purposes of determining necessary Affected System Network Upgrades, the Affected System Study shall consider the level of interconnection service requested in megawatts by Affected System Interconnection Customer, unless otherwise required to study the full generating facility capacity due to safety or reliability concerns. The Affected System Study shall provide a list of facilities that are required as a result of Affected System Interconnection Customer's proposed interconnection to another transmission provider's system, a non-binding good faith estimate of cost responsibility, and a non-binding good faith estimated time to construct. The Affected System Study may consist of a system impact study, a facilities study, or some combination thereof.

9.7 Affected System Study Procedures

Transmission Provider shall use Clustering in conducting the Affected System Study and shall use existing studies to the extent practicable, when multiple Affected System Interconnection Customers that are part of a single Cluster may cause the need for Affected System Network Upgrades. Transmission Provider shall complete the Affected System Study and provide the Affected System Study Report to Affected System Interconnection Customer(s) and the host transmission provider with whom interconnection has been requested within one hundred fifty (150) Calendar Days after the receipt of the Affected System Study Agreement and deposit.

At the request of Affected System Interconnection Customer, Transmission Provider shall notify Affected System Interconnection Customer as to the status of the Affected System Study. If Transmission Provider is unable to complete the Affected System Study within the requisite time period, it shall notify Affected System Interconnection Customer(s), as well as the transmission provider with which Affected System Interconnection Customer seeks to interconnect, and shall provide an estimated completion date with an explanation of the reasons why additional time is required. If Transmission Provider does not meet the deadlines in this section, Transmission Provider shall be subject to the financial penalties as described in Section 3.9 of this LGIP. Upon request, Transmission Provider shall provide Affected System Interconnection Customer(s) with all supporting documentation, workpapers and relevant power flow, short circuit and stability databases for the Affected System Study, subject to confidentiality arrangements consistent with Section 13.1 of this LGIP.

Transmission Provider must study an Affected System Interconnection Customer using the Energy Resource Interconnection Service modeling standard used for Interconnection Requests on its own Transmission System, regardless of the level of interconnection service that Affected System Interconnection Customer is seeking from the host transmission provider with whom it seeks to interconnect.

9.8 Meeting With Transmission Provider

Within ten (10) Business Days of providing the Affected System Study Report to Affected System Interconnection Customer(s), Transmission Provider and Affected System Interconnection Customer(s) shall meet to discuss the results of the Affected System Study.

9.9 Affected System Cost Allocation

Transmission Provider shall allocate Affected System Network Upgrade costs identified during the Affected System Study to Affected System Interconnection Customer(s) using a proportional impact method, consistent with Section 4.2.1(1)(b) of this LGIP.

9.10 Tender of Affected Systems Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement

Transmission Provider shall tender to Affected System Interconnection Customer(s) an Affected System Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement, as applicable, in the form of Appendix 11 or 12 to this LGIP, within thirty (30) Calendar Days of providing the Affected System Study Report. Within ten (10) Business Days of the receipt of the Affected System Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement, the Affected System Interconnection Customer(s) must execute the agreement or request the agreement to be filed unexecuted with FERC. Transmission Provider shall execute the agreement or file the agreement unexecuted within five (5) Business Days after receiving direction from Affected System Interconnection Customer(s). Affected System Interconnection Customer's failure to execute the Affected System Facilities Construction Agreement/Multiparty Affected System Facilities Construction Agreement, or failure to request the agreement to be filed unexecuted with FERC, shall result in the loss of its Affected System Queue Position.

9.11 Restudy

If restudy of the Affected System Study is required, Transmission Provider shall notify Affected System Interconnection Customer(s) in writing within thirty (30) Calendar Days of discovery of the need for restudy. Such restudy shall take no longer than sixty (60) Calendar Days from the date of notice. Any cost of restudy shall be borne by the Affected System Interconnection Customer(s) being restudied.

[Prior to executing an LGIA, an Interconnection Customer may, in order to advance the implementation of its interconnection, request and Transmission Provider shall offer the Interconnection Customer, an E&P Agreement that authorizes Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection. However, Transmission Provider shall not be obligated to offer an E&P Agreement if Interconnection Customer is in Dispute Resolution as a result of an allegation that Interconnection Customer has failed to meet any milestones or comply with any prerequisites specified in other parts of the LGIP. The E&P Agreement is an optional procedure and it will not alter the Interconnection Customer's Queue Position or In-Service Date. The E&P Agreement shall provide for Interconnection Customer to pay the cost of all activities authorized by Interconnection Customer and to make advance payments or provide other satisfactory security for such costs.

Interconnection Customer shall pay the cost of such authorized activities and any cancellation costs for equipment that is already ordered for its interconnection, which cannot be mitigated as hereafter described, whether or not such items or equipment later become unnecessary. If Interconnection Customer withdraws its

application for interconnection or either Party terminates the E&P Agreement, to the extent that the equipment ordered can be canceled under reasonable terms, Interconnection Customer shall be obligated to pay the associated cancellation costs. To the extent that the equipment cannot be reasonably canceled, Transmission Provider may elect: (i) to take title to the equipment, in which event Transmission Provider shall refund Interconnection Customer any amounts paid by Interconnection Customer for such equipment and shall pay the cost of delivery of such equipment, or (ii) to transfer title to and deliver such equipment to Interconnection Customer, in which event Interconnection Customer shall pay any unpaid balance and cost of delivery of such equipment.]

Section 10. Optional Interconnection Study

10.1 Optional Interconnection Study Agreement

On or after the date when Interconnection Customer receives [Interconnection System Impact Study] *Cluster Study* results, Interconnection Customer may request, and Transmission Provider shall perform a reasonable number of Optional Studies. The request shall describe the assumptions that Interconnection Customer wishes Transmission Provider to study within the scope described in Section 10.2. Within five (5) Business Days after receipt of a request for an Optional Interconnection Study, Transmission Provider shall provide to Interconnection Customer an Optional Interconnection Study Agreement in the form of Appendix 4[5].

The Optional Interconnection Study Agreement shall: (i) specify the technical data that Interconnection Customer must provide for each phase of the Optional Interconnection Study, (ii) specify Interconnection Customer's assumptions as to which Interconnection Requests with earlier queue priority dates will be excluded from the Optional Interconnection Study case and assumptions as to the type of interconnection service for Interconnection Requests remaining in the Optional Interconnection Study case, and (iii) Transmission Provider's estimate of the cost of the Optional Interconnection Study. To the extent known by Transmission Provider, such estimate shall include any costs expected to be incurred by any Affected System whose participation is necessary to complete the Optional Interconnection Study. Notwithstanding the above, Transmission Provider shall not be required as a result of an Optional Interconnection Study request to conduct any additional Interconnection Studies with respect to any other Interconnection Request.

Interconnection Customer shall execute the Optional Interconnection Study Agreement within ten (10) Business Days of receipt and deliver the Optional Interconnection Study Agreement, the technical data and a \$10,000 deposit to Transmission Provider.

10.2 Scope of Optional Interconnection Study

The Optional Interconnection Study will consist of a sensitivity analysis based on the

assumptions specified by Interconnection Customer in the Optional Interconnection Study Agreement. The Optional Interconnection Study will also identify Transmission Provider's Interconnection Facilities and the Network Upgrades, and the estimated cost thereof, that may be required to provide transmission service or Interconnection Service based upon the results of the Optional Interconnection Study. The Optional Interconnection Study shall be performed solely for informational purposes. Transmission Provider shall use Reasonable Efforts to coordinate the study with any Affected Systems that may be affected by the types of Interconnection Services that are being studied. Transmission Provider shall utilize existing studies to the extent practicable in conducting the Optional Interconnection Study.

10.3 Optional Interconnection Study Procedures

The executed Optional Interconnection Study Agreement, the prepayment, and technical and other data called for therein must be provided to Transmission Provider within ten (10) Business Days of Interconnection Customer receipt of the Optional Interconnection Study Agreement. Transmission Provider shall use Reasonable Efforts to complete the Optional Interconnection Study within a mutually agreed upon time period specified within the Optional Interconnection Study Agreement. If Transmission Provider is unable to complete the Optional Interconnection Study within such time period, it shall notify Interconnection Customer and provide an estimated completion date and an explanation of the reasons why additional time is required. Any difference between the study payment and the actual cost of the study shall be paid to Transmission Provider or refunded to Interconnection Customer, as appropriate. Upon request, Transmission Provider shall provide Interconnection Customer supporting documentation and workpapers and databases or data developed in the preparation of the Optional Interconnection Study, subject to confidentiality arrangements consistent with Section 13.1.

Section 11. Standard Large Generator Interconnection Agreement (LGIA)

11.1 Tender

Interconnection Customer shall tender comments on the draft Interconnection Facilities Study Report within thirty (30) Calendar Days of receipt of the report. Within thirty (30) Calendar Days after the comments are submitted or after Interconnection Customer notifies Transmission Provider that it will not provide comments, Transmission Provider shall tender a draft LGIA, together with draft appendices. The draft LGIA shall be in the form of Transmission Provider's FERC-approved standard form LGIA, which is in Appendix 5[6]. Interconnection Customer shall execute and return the LGIA and completed draft appendices within thirty (30) Calendar Days, unless (1) the sixty (60) Calendar Day negotiation period under Section 11.2 of this LGIP has commenced, or (2) LGIA execution, or filing unexecuted, has

been delayed to await the Affected System Study Report pursuant to Section 11.2.1 of this LGIP.

11.2 Negotiation

Notwithstanding Section 11.1, at the request of Interconnection Customer Transmission Provider shall begin negotiations with Interconnection Customer concerning the appendices to the LGIA at any time after Interconnection Customer executes the Interconnection Facilities Study Agreement. Transmission Provider and Interconnection Customer shall negotiate concerning any disputed provisions of the appendices to the draft LGIA for not more than sixty (60) Calendar Days after tender of the final Interconnection Facilities Study Report. If Interconnection Customer determines that negotiations are at an impasse, it may request termination of the negotiations at any time after tender of the draft LGIA pursuant to Section 11.1 and request submission of the unexecuted LGIA with FERC or initiate Dispute Resolution procedures pursuant to Section 13.5. If Interconnection Customer requests termination of the negotiations, but within sixty (60) Calendar Days thereafter fails to request either the filing of the unexecuted LGIA or initiate Dispute Resolution, it shall be deemed to have withdrawn its Interconnection Request. Unless otherwise agreed by the Parties, if Interconnection Customer has not executed the LGIA, requested filing of an unexecuted LGIA, or initiated Dispute Resolution procedures pursuant to Section 13.5 within sixty (60) Calendar Days of tender of draft LGIA, it shall be deemed to have withdrawn its Interconnection Request. Transmission Provider shall provide to Interconnection Customer a final LGIA within fifteen (15) Business Days after the completion of the negotiation process.

11.2.1 Delay in LGIA Execution, or Filing Unexecuted, To Await Affected System Study Report

If Interconnection Customer has not received its Affected System Study Report from the Affected System Operator prior to the date that it would be required to execute its LGIA (or request that its LGIA be filed unexecuted) pursuant to Section 11.1 of this LGIP, Transmission Provider shall, upon request of Interconnection Customer, extend this deadline to thirty (30) Calendar Days after Interconnection Customer's receipt of the Affected System Study Report. If Interconnection Customer, after delaying LGIA execution, or requesting unexecuted filing, to await Affected System Study Results, decides to proceed to LGIA execution, or request unexecuted filing, without those results, it may notify Transmission Provider of its intent to proceed with LGIA execution (or request that its LGIA be filed unexecuted) pursuant to Section 11.1 of this LGIP. If Transmission Provider determines that further delay to the LGIA execution date would cause a material impact on the cost or timing of an equal- or lower-queued interconnection customer, Transmission Provider must notify Interconnection Customer of such impacts and set the deadline to execute the LGIA (or

request that the LGIA be filed unexecuted) to thirty (30) Calendar Days after such notice is provided.

11.3 Execution and Filing

Simultaneously with submitting the executed LGIA to Transmission Provider, or within ten (10) Business Days after the Interconnection Customer requests that the Transmission Provider file the LGIA unexecuted at the Commission, [Within fifteen (15) Business Days after receipt of the final executed LGIA,] Interconnection Customer shall provide Transmission Provider with [(A) reasonable evidence that continued Site Control or (B) posting of \$250,000, non-refundable additional security, which shall be applied toward future construction costs](1) demonstration of continued Site Control pursuant to Section 8.1(2) of this LGIP; and (2) the LGIA Deposit equal to twenty percent (20%) of Interconnection Customer's estimated Network Upgrade costs identified in the draft LGIA minus the total amount of Commercial Readiness Deposits that Interconnection Customer has provided to Transmission Provider for its Interconnection Request. Transmission Provider shall use LGIA Deposit as (or as a portion of) the Interconnection Customer's security required under LGIA Article 11.5. Interconnection Customer may not request to suspend its LGIA under LGIA Article 5.16 until Interconnection Customer has provided (1) and (2) to Transmission Provider. If Interconnection Customer fails to provide (1) and (2) to Transmission Provider within the thirty (30) Calendar Days allowed for returning the executed LGIA and appendices under LGIP Section 11.1, or within ten (10) Business Days after Interconnection Customer requests that Transmission Provider file the LGIA unexecuted at the Commission as allowed in this Section 11.3 of this LGIP, the Interconnection Request will be deemed withdrawn pursuant to Section 3.7 of this LGIP.

At the same time, Interconnection Customer also shall provide reasonable evidence that one or more of the following milestones in the development of the Large Generating Facility, at Interconnection Customer election, has been achieved (*unless such milestone is inapplicable due to the characteristics of the Generating Facility*): (i) the execution of a contract for the supply or transportation of fuel to the Large Generating Facility; (ii) the execution of a contract for the supply of cooling water to the Large Generating Facility; (iii) execution of a contract for the engineering for, procurement of major equipment for, or construction of, the Large Generating Facility; (iv) execution of a contract (*or comparable evidence*) for the sale of electric energy or capacity from the Large Generating Facility; or (v) application for an air, water, or land use permit.

Interconnection Customer shall either: (i) execute two originals of the tendered LGIA and return them to Transmission Provider; or (ii) request in writing that Transmission Provider file with FERC an LGIA in unexecuted form. As soon as practicable, but not later than ten (10) Business Days after receiving either the two executed originals of

the tendered LGIA (if it does not conform with a FERC-approved standard form of interconnection agreement) or the request to file an unexecuted LGIA, Transmission Provider shall file the LGIA with FERC, together with its explanation of any matters as to which Interconnection Customer and Transmission Provider disagree and support for the costs that Transmission Provider proposes to charge to Interconnection Customer under the LGIA. An unexecuted LGIA should contain terms and conditions deemed appropriate by Transmission Provider for the Interconnection Request. If the Parties agree to proceed with design, procurement, and construction of facilities and upgrades under the agreed-upon terms of the unexecuted LGIA, they may proceed pending FERC action.

11.4 Commencement of Interconnection Activities

If Interconnection Customer executes the final LGIA, Transmission Provider and Interconnection Customer shall perform their respective obligations in accordance with the terms of the LGIA, subject to modification by FERC. Upon submission of an unexecuted LGIA, Interconnection Customer and Transmission Provider shall promptly comply with the unexecuted LGIA, subject to modification by FERC.

Section 12. Construction of Transmission Provider's Interconnection Facilities and Network Upgrades

12.1 Schedule

Transmission Provider and Interconnection Customer shall negotiate in good faith concerning a schedule for the construction of Transmission Provider's Interconnection Facilities and the Network Upgrades.

12.2 Construction Sequencing

12.2.1 General

In general, the In-Service Date of an Interconnection Customers seeking interconnection to the Transmission System will determine the sequence of construction of Network Upgrades.

12.2.2 Advance Construction of Network Upgrades That Are an Obligation of an Entity Other Than Interconnection Customer

An Interconnection Customer with an LGIA, in order to maintain its In-Service Date, may request that Transmission Provider advance to the extent necessary the completion of Network Upgrades that: (i) were assumed in the Interconnection Studies for such Interconnection Customer, (ii) are necessary to support such In-Service Date, and (iii) would otherwise not be completed, pursuant to a contractual obligation of an entity other than Interconnection Customer that is seeking interconnection to the Transmission System, in time to support such In-Service Date. Upon such request, Transmission Provider will use Reasonable Efforts to advance the construction of such Network Upgrades to accommodate such request; provided that Interconnection Customer commits to pay Transmission Provider: (i) any associated expediting costs and (ii) the cost of such Network Upgrades. Transmission Provider will refund to

Interconnection Customer both the expediting costs and the cost of Network Upgrades, in accordance with Article 11.4 of the LGIA. Consequently, the entity with a contractual obligation to construct such Network Upgrades shall be obligated to pay only that portion of the costs of the Network Upgrades that Transmission Provider has not refunded to Interconnection Customer. Payment by that entity shall be due on the date that it would have been due had there been no request for advance construction. Transmission Provider shall forward to Interconnection Customer the amount paid by the entity with a contractual obligation to construct the Network Upgrades as payment in full for the outstanding balance owed to Interconnection Customer. Transmission Provider then shall refund to that entity the amount that it paid for the Network Upgrades, in accordance with Article 11.4 of the LGIA.

12.2.3 Advancing Construction of Network Upgrades That Are Part of an Expansion Plan of the Transmission Provider

An Interconnection Customer with an LGIA, in order to maintain its In-Service Date, may request that Transmission Provider advance to the extent necessary the completion of Network Upgrades that: (i) are necessary to support such In-Service Date and (ii) would otherwise not be completed, pursuant to an expansion plan of Transmission Provider, in time to support such In-Service Date. Upon such request, Transmission Provider will use Reasonable Efforts to advance the construction of such Network Upgrades to accommodate such request; provided that Interconnection Customer commits to pay Transmission Provider any associated expediting costs. Interconnection Customer shall be entitled to transmission credits, if any, for any expediting costs paid.

12.2.4 Amended Interconnection [System Impact] Cluster Study Report

An Interconnection [System Impact] Cluster Study Report will be amended to determine the facilities necessary to support the requested In-Service Date. This amended study report will include those transmission and Large Generating Facilities that are expected to be on or before the requested In-Service Date.

Section 13. Miscellaneous

13.1 Confidentiality

Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied by either of the Parties to the other prior to the execution of an LGIA.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential.

If requested by either Party, the other Party shall provide in writing, the basis for asserting that the information referred to in

this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

13.1.1 Scope

Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a third party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of the LGIA; or (6) is required, in accordance with Section 13.1.6, Order of Disclosure, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under the LGIA. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the other Party that it no longer is confidential.

13.1.2 Release of Confidential Information

Neither Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), employees, consultants, or to parties who may be or considering providing financing to or equity participation with Interconnection Customer, or to potential purchasers or assignees of Interconnection Customer, on a need-to-know basis in connection with these procedures, unless such person has first been advised of the confidentiality provisions of this Section 13.1 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Section 13.1.

13.1.3 Rights

Each Party retains all rights, title, and interest in the Confidential Information that each Party discloses to the other Party. The disclosure by each Party to the other Party of Confidential Information shall not be deemed a waiver by either Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

13.1.4 No Warranties

By providing Confidential Information, neither Party makes any warranties or representations as to its accuracy or completeness. In addition, by supplying Confidential Information, neither Party obligates itself to provide any particular

information or Confidential Information to the other Party nor to enter into any further agreements or proceed with any other relationship or joint venture.

13.1.5 Standard of Care

Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under these procedures or its regulatory requirements.

13.1.6 Order of Disclosure

If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires either Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the other Party with prompt notice of such request(s) or requirement(s) so that the other Party may seek an appropriate protective order or waive compliance with the terms of the LGIA. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

13.1.7 Remedies

The Parties agree that monetary damages would be inadequate to compensate a Party for the other Party's Breach of its obligations under this Section 13.1. Each Party accordingly agrees that the other Party shall be entitled to equitable relief, by way of injunction or otherwise, if the first Party Breaches or threatens to Breach its obligations under this Section 13.1, which equitable relief shall be granted without bond or proof of damages, and the receiving Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Section 13.1, but shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Section 13.1.

13.1.8 Disclosure to FERC, its Staff, or a State

Notwithstanding anything in this Section 13.1 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from one of the Parties that is otherwise required to be maintained in confidence pursuant to the LGIP, the Party shall provide the requested information to FERC or its staff, within the time provided

for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Party to the LGIA when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner, consistent with applicable state rules and regulations.

13.1.9

Subject to the exception in Section 13.1.8 of this LGIP, any information that a Party claims is competitively sensitive, commercial or financial information ("Confidential Information") shall not be disclosed by the other Party to any person not employed or retained by the other Party, except to the extent disclosure is (i) required by law; (ii) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (iii) otherwise permitted by consent of the other Party, such consent not to be unreasonably withheld; or (iv) necessary to fulfill its obligations under this LGIP or as a transmission service provider or a [Control Area]Balancing Authority Area operator including disclosing the Confidential Information to an RTO or ISO or to a subregional, regional or national reliability organization or planning group. The Party asserting confidentiality shall notify the other Party in writing of the information it claims is confidential. Prior to any disclosures of the other Party's Confidential Information under this subparagraph, or if any third party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the disclosing Party agrees to promptly notify the other Party in writing and agrees to assert confidentiality and cooperate with the other Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order or other reasonable measures.

13.1.10

This provision shall not apply to any information that was or is hereafter in the public domain (except as a result of a Breach of this provision).

13.1.11

Transmission Provider shall, at Interconnection Customer's election, destroy, in a confidential manner, or return the Confidential Information provided at the time of Confidential Information is no longer needed.

13.2 Delegation of Responsibility

Transmission Provider may use the services of subcontractors as it deems

appropriate to perform its obligations under this LGIP. Transmission Provider shall remain primarily liable to Interconnection Customer for the performance of such subcontractors and compliance with its obligations of this LGIP. The subcontractor shall keep all information provided confidential and shall use such information solely for the performance of such obligation for which it was provided and no other purpose.

13.3 Obligation for Study Costs

In the event an Interconnection Customer withdraws its Interconnection Request prior to the commencement of the Cluster Study, Interconnection Customer must pay Transmission Provider the actual costs of processing its Interconnection Request. In the event an Interconnection Customer withdraws after the commencement of the Cluster Study, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Interconnection Studies. The costs of any interconnection study conducted on a clustered basis shall be allocated among each Interconnection Customer within the cluster as follows: {Transmission Provider shall include in this section a description of how the cost of any clustered interconnection study will be allocated.}

Any difference between the study deposit and the actual cost of the applicable Interconnection Study shall be paid by or refunded, except as otherwise provided herein, to Interconnection [Customer]Customers or offset against the cost of any future Interconnection Studies associated with the applicable [Interconnection Request]Cluster prior to beginning of any such future Interconnection Studies. Any invoices for Interconnection Studies shall include a detailed and itemized accounting of the cost of each Interconnection Study. Interconnection [Customer]Customers shall pay any such undisputed costs within thirty (30) Calendar Days of receipt of an invoice therefor. *If an Interconnection Customer fails to pay such undisputed costs within the time allotted, its Interconnection Request shall be deemed withdrawn from the Cluster Study Process and will be subject to Withdrawal Penalties pursuant to Section 3.7 of this LGIP.* [Transmission Provider shall not be obligated to perform or continue to perform any studies unless Interconnection Customer has paid all undisputed amounts in compliance herewith.]

13.4 Third Parties Conducting Studies

If (i) at the time of the signing of an Interconnection Study Agreement there is disagreement as to the estimated time to complete an Interconnection Study, (ii) Interconnection Customer receives notice pursuant to Sections 6.3, 7.4 or 8.3 that Transmission Provider will not complete an Interconnection Study within the applicable timeframe for such Interconnection Study, or (iii) Interconnection Customer receives neither the Interconnection Study nor a notice under Sections 6.3, 7.4 or 8.3 within the applicable timeframe for such Interconnection Study, then Interconnection Customer may require Transmission Provider

to utilize a third party consultant reasonably acceptable to Interconnection Customer and Transmission Provider to perform such Interconnection Study under the direction of Transmission Provider. At other times, Transmission Provider may also utilize a third party consultant to perform such Interconnection Study, either in response to a general request of Interconnection Customer, or on its own volition.

In all cases, use of a third party consultant shall be in accord with Article 26 of the LGIA (Subcontractors) and limited to situations where Transmission Provider determines that doing so will help maintain or accelerate the study process for Interconnection Customer's pending Interconnection Request and not interfere with Transmission Provider's progress on Interconnection Studies for other pending Interconnection Requests. In cases where Interconnection Customer requests use of a third party consultant to perform such Interconnection Study, Interconnection Customer and Transmission Provider shall negotiate all of the pertinent terms and conditions, including reimbursement arrangements and the estimated study completion date and study review deadline. Transmission Provider shall convey all workpapers, data bases, study results and all other supporting documentation prepared to date with respect to the Interconnection Request as soon as soon as practicable upon Interconnection Customer's request subject to the confidentiality provision in Section 13.1. In any case, such third party contract may be entered into with either Interconnection Customer or Transmission Provider at Transmission Provider's discretion. In the case of (iii) Interconnection Customer maintains its right to submit a claim to Dispute Resolution to recover the costs of such third party study. Such third party consultant shall be required to comply with this LGIP, Article 26 of the LGIA (Subcontractors), and the relevant Tariff procedures and protocols as would apply if Transmission Provider were to conduct the Interconnection Study and shall use the information provided to it solely for purposes of performing such services and for no other purposes. Transmission Provider shall cooperate with such third party consultant and Interconnection Customer to complete and issue the Interconnection Study in the shortest reasonable time.

13.5 Disputes

13.5.1 Submission

In the event either Party has a dispute, or asserts a claim, that arises out of or in connection with the LGIA, the LGIP, or their performance, such Party (the "disputing Party") shall provide the other Party with written notice of the dispute or claim ("Notice of Dispute"). Such dispute or claim shall be referred to a designated senior representative of each Party for resolution on an informal basis as promptly as practicable after receipt of the Notice of Dispute by the other Party. In the event the designated representatives are unable to resolve the claim or dispute through unassisted or assisted negotiations within thirty (30) Calendar Days of the other Party's receipt of the Notice of Dispute, such claim or dispute

may, upon mutual agreement of the Parties, be submitted to arbitration and resolved in accordance with the arbitration procedures set forth below. In the event the Parties do not agree to submit such claim or dispute to arbitration, each Party may exercise whatever rights and remedies it may have in equity or at law consistent with the terms of this LGIA.

13.5.2 External Arbitration Procedures

Any arbitration initiated under these procedures shall be conducted before a single neutral arbitrator appointed by the Parties. If the Parties fail to agree upon a single arbitrator within ten (10) Calendar Days of the submission of the dispute to arbitration, each Party shall choose one arbitrator who shall sit on a three-member arbitration panel. The two arbitrators so chosen shall within twenty (20) Calendar Days select a third arbitrator to chair the arbitration panel. In either case, the arbitrators shall be knowledgeable in electric utility matters, including electric transmission and bulk power issues, and shall not have any current or past substantial business or financial relationships with any party to the arbitration (except prior arbitration). The arbitrator(s) shall provide each of the Parties an opportunity to be heard and, except as otherwise provided herein, shall conduct the arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association ("Arbitration Rules") and any applicable FERC regulations or RTO rules; provided, however, in the event of a conflict between the Arbitration Rules and the terms of this Section 13, the terms of this Section 13 shall prevail.

13.5.3 Arbitration Decisions

Unless otherwise agreed by the Parties, the arbitrator(s) shall render a decision within ninety (90) Calendar Days of appointment and shall notify the Parties in writing of such decision and the reasons therefor. The arbitrator(s) shall be authorized only to interpret and apply the provisions of the LGIA and LGIP and shall have no power to modify or change any provision of the LGIA and LGIP in any manner. The decision of the arbitrator(s) shall be final and binding upon the Parties, and judgment on the award may be entered in any court having jurisdiction. The decision of the arbitrator(s) may be appealed solely on the grounds that the conduct of the arbitrator(s), or the decision itself, violated the standards set forth in the Federal Arbitration Act or the Administrative Dispute Resolution Act. The final decision of the arbitrator must also be filed with FERC if it affects jurisdictional rates, terms and conditions of service, Interconnection Facilities, or Network Upgrades.

13.5.4 Costs

Each Party shall be responsible for its own costs incurred during the arbitration process and for the following costs, if applicable: (1) the cost of the arbitrator chosen by the Party to sit on the three member panel and one half of the cost of the third arbitrator chosen; or (2) one half the cost of the single arbitrator jointly chosen by the Parties.

13.5.5 Non-Binding Dispute Resolution Procedures

If a Party has submitted a Notice of Dispute pursuant to S[]section 13.5.1, and the Parties are unable to resolve the claim or dispute through unassisted or assisted negotiations within the thirty (30) Calendar Days provided in that section, and the Parties cannot reach mutual agreement to pursue the S[]section 13.5 arbitration process, a Party may request that Transmission Provider engage in Non-binding Dispute Resolution pursuant to this section by providing written notice to Transmission Provider ("Request for Non-binding Dispute Resolution"). Conversely, either Party may file a Request for Non-binding Dispute Resolution pursuant to this section without first seeking mutual agreement to pursue the S[]section 13.5 arbitration process. The process in S[]section 13.5.5 shall serve as an alternative to, and not a replacement of, the section 13.5 arbitration process. Pursuant to this process, a Transmission Provider must within 30 days of receipt of the Request for Non-binding Dispute Resolution appoint a neutral decision-maker that is an independent subcontractor that shall not have any current or past substantial business or financial relationships with either Party. Unless otherwise agreed by the Parties, the decision-maker shall render a decision within sixty (60) Calendar Days of appointment and shall notify the Parties in writing of such decision and reasons therefore. This decision-maker shall be authorized only to interpret and apply the provisions of the LGIP and LGIA and shall have no power to modify or change any provision of the LGIP and LGIA in any manner. The result reached in this process is not binding, but, unless otherwise agreed, the Parties may cite the record and decision in the non-binding dispute resolution process in future dispute resolution processes, including in a S[]section 13.5 arbitration, or in a Federal Power Act section 206 complaint. Each Party shall be responsible for its own costs incurred during the process and the cost of the decision-maker shall be divided equally among each Party to the dispute.

13.6 Local Furnishing Bonds

13.6.1 Transmission Providers That Own Facilities Financed by Local Furnishing Bonds

This provision is applicable only to a Transmission Provider that has financed facilities for the local furnishing of electric energy with tax-exempt bonds, as described in Section 142(f) of the Internal Revenue Code ("local furnishing bonds"). Notwithstanding any other provision of this LGIA and LGIP, Transmission Provider shall not be required to provide Interconnection Service to Interconnection Customer pursuant to this LGIA and LGIP if the provision of such Transmission Service would jeopardize the tax-exempt status of any local furnishing bond(s) used to finance Transmission Provider's facilities that would be used in providing such Interconnection Service.

13.6.2 Alternative Procedures for Requesting Interconnection Service

If Transmission Provider determines that the provision of Interconnection Service requested by Interconnection Customer would jeopardize the tax-exempt status of any local furnishing bond(s) used to finance its facilities that would be used in providing such Interconnection Service, it shall advise the Interconnection Customer within thirty (30) Calendar Days of receipt of the Interconnection Request.

Interconnection Customer thereafter may renew its request for interconnection using the process specified in Article 5.2(ii) of the Transmission Provider's Tariff.

Section [9]13.7 Engineering & Procurement ('E&P') Agreement

Prior to executing an LGIA, an Interconnection Customer may, in order to advance the implementation of its interconnection, request and Transmission Provider shall offer Interconnection Customer, an E&P Agreement that authorizes Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection. However, Transmission Provider shall not be obligated to offer an E&P Agreement if Interconnection Customer is in Dispute Resolution as a result of an allegation that Interconnection Customer has failed to meet any milestones or comply with any prerequisites specified in other parts of the LGIP. The E&P Agreement is an optional procedure and it will not alter Interconnection Customer's Queue Position or In-Service Date. The E&P Agreement shall provide for Interconnection Customer to pay the cost of all activities authorized by Interconnection Customer and to make advance payments or provide other satisfactory security for such costs.

Interconnection Customer shall pay the cost of such authorized activities and any cancellation costs for equipment that is already ordered for its interconnection, which cannot be mitigated as hereafter described, whether or not such items or equipment later become unnecessary. If Interconnection Customer withdraws its Interconnection Request or either Party terminates the E&P Agreement, to the extent the equipment ordered can be canceled under reasonable terms, Interconnection Customer shall be obligated to pay the associated cancellation costs. To the extent that the equipment cannot be reasonably canceled, Transmission Provider may elect: (i) to take title to the equipment, in which event Transmission Provider shall refund Interconnection Customer any amounts paid by Interconnection Customer for such equipment and shall pay the cost of delivery of such equipment, or (ii) to transfer title to and deliver such equipment to Interconnection Customer, in which event Interconnection Customer shall pay any unpaid balance and cost of delivery of such equipment.

Appendix 1 to LGIP

INTERCONNECTION REQUEST FOR A LARGE GENERATING FACILITY

1. The undersigned Interconnection Customer submits this request to interconnect its Large Generating Facility with Transmission Provider's Transmission System pursuant to a Tariff.
- 2.
2. This Interconnection Request is for (check one):
 3. ____ A proposed new Large Generating Facility.
 4. ____ An increase in the generating capacity or a Material Modification of an existing Generating Facility.
3. The type of interconnection service requested (check one):
 5. ____ Energy Resource Interconnection Service
 6. ____ Network Resource Interconnection Service
4. ____ Check here only if Interconnection Customer requesting Network Resource Interconnection Service also seeks to have its Generating Facility studied for Energy Resource Interconnection Service
- 7.
5. Interconnection Customer provides the following information:
 - a. Address or location or the proposed new Large Generating Facility site (to the extent known) or, in the case of an existing Generating Facility, the name and specific location of the existing Generating Facility;
 - b. Maximum summer at ____ degrees C and winter at ____ degrees C megawatt electrical output of the proposed new Large Generating Facility or the amount of megawatt increase in the generating capacity of an existing Generating Facility;
 - c. General description of the equipment configuration;
 - d. Commercial Operation Date (Day, Month, and Year);
 - e. Name, address, telephone number, and email address of Interconnection Customer's contact person;
 - f. Approximate location of the proposed Point of Interconnection (optional);
 - g. Interconnection Customer Data (set forth in Attachment A);
 - h. Primary frequency response operating range for electric storage resources;
 - i. Requested capacity (in MW) of Interconnection Service (if lower than the Generating Facility Capacity)[.];
 - j. *If applicable, (1) the requested operating assumptions (i.e., whether the interconnecting Generating Facility will or will not charge at peak load) to be used by Transmission Provider that reflect the proposed charging behavior of a Generating Facility that includes at least one electric storage resource, and (2) a description of any control technologies (software and/or hardware) that will limit the operation of the Generating Facility to its intended operation.*
6. Applicable deposit amount as specified in the LGIP.
- 8.
7. Evidence of Site Control as specified in the LGIP (check one)
- 9.

10. ____ Is attached to this Interconnection Request

11. ____ Will be provided at a later date in accordance with this LGIP

8. This Interconnection Request shall be submitted to the representative indicated below:

12. {To be completed by Transmission Provider}

9. Representative of Interconnection Customer to contact:

13. [To be completed by Interconnection Customer]

Note: Please consult Transmission Provider prior to submitting the Interconnection Request to determine if the information designated by (*) is required.

Models for Non-Synchronous Generators

For a non-synchronous Large Generating Facility, Interconnection Customer shall provide (1) a validated user-defined root mean squared (RMS) positive sequence dynamics model; (2) an appropriately parameterized generic library RMS positive sequence dynamics model, including model block diagram of the inverter control and plant control systems, as defined by the selection in Table 1 or a model otherwise approved by the Western Electricity Coordinating Council, that corresponds to Interconnection Customer's Large Generating Facility; and (3) if applicable, a validated electromagnetic transient model if Transmission Provider performs an electromagnetic transient study as part of the interconnection study process. A user-

defined model is a set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly software based and represents the entities' control strategies but does not necessarily correspond to any generic library model. Interconnection Customer must also demonstrate that the model is validated by providing evidence that the equipment behavior is consistent with the model behavior (e.g., an attestation from Interconnection Customer that the model accurately represents the entire Large Generating Facility; attestations from each equipment manufacturer that the user defined model accurately represents the component of the Large Generating Facility; or test data).

Table 1—Acceptable Generic Library RMS Positive Sequence Dynamics Models

GE PSLF	Siemens PSS/E*	PowerWorld Simulator	Description
pvd1		PVD1	Distributed PV system model.
der_a	DERAU1	DER_A	Distributed energy resource model.
regc_a	REGCAU1, REGCA1	REGC_A	Generator/converter model.
regc_b	REGCBU1	REGC_B	Generator/converter model.
wt1g	WT1G1	WT1G and WT1G1	Wind turbine model for Type-1 wind turbines (conventional directly connected induction generator).
wt2g	WT2G1	WT2G and WT2G1	Generator model for generic Type-2 wind turbines.
wt2e	WT2E1	WT2E and WT2E1	Rotor resistance control model for wound-rotor induction wind-turbine generator wt2g.
reec_a	REECAU1, REECA1	REEC_A	Renewable energy electrical control model.
reec_c	REECCU1	REEC_C	Electrical control model for battery energy storage system.
reec_d	REECBU1	REEC_D	Renewable energy electrical control model.
wt1t	WT12T1	WT1T and WT12T1	Wind turbine model for Type-1 wind turbines (conventional directly connected induction generator).
wt1p_b	wt1p_b	WT12A1U_B	Generic wind turbine pitch controller for WTGs of Types 1 and 2.
wt2t	WT12T1	WT2T	Wind turbine model for Type-2 wind turbines (directly connected induction generator wind turbines with an external rotor resistance).
wtgt_a	WTDTAU1, WTDTA1	WTGT_A	Wind turbine drive train model.
wtga_a	WTARAU1, WTARA1	WTGA_A	Simple aerodynamic model.
wtgp_a	WTPTAU1, WTPTA1	WTGPT_A	Wind Turbine Generator Pitch controller.
wtgq_a	WTTQAU1, WTTQA1	WTGTRQ_A	Wind Turbine Generator Torque controller.
wtgwgo_a	WTGWGOAU	WTGWGO_A	Supplementary control model for Weak Grids.

wtgp_b	WTPTBU1	WTGPT_B	Wind Turbine Generator Pitch controller.
wtgt_b	WTDTBUI	WTGT_B	Drive train model.
repc_a	Type 4: REPCAUI (v33), REPCA1 (v34). Type 3: REPCTAUI (v33), REPCTA1 (v34).	REPC_A	Power Plant Controller.
repc_b	PLNTBU1	REPC_B	Power Plant Level Controller for controlling several plants/devices. In regard to Siemens PSS/E*: Names of other models for interface with other devices: REA3XBU1, REAX4BU1—for interface with Type 3 and 4 renewable machines. SWSAXBU1—for interface with SVC (modeled as switched shunt in powerflow). SYNTAXBU1—for interface with synchronous condenser. FCTAXBUI—for interface with FACTS device.
repc_c	REPCCU	REPC_C	Power plant controller.

Appendix 2 to LGIP

[Interconnection Feasibility Study Agreement]

[This agreement is made and entered into this __ day of ____, 20 __ by and between ____, a ____ organized and existing under the laws of ____ the State of ("Interconnection Customer"), and ____, a ____ existing under the

laws of the State of ____ ("Transmission Provider"). Interconnection Customer and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties."]

[Recitals]

[Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an

existing Generating Facility consistent with the Interconnection Request submitted by Interconnection customer dated ____; and]

[Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; and]

[Whereas, Interconnection Customer has requested Transmission Provider to perform an Interconnection Feasibility Study to assess the feasibility of interconnecting the

proposed Large Generating Facility to the Transmission System, and of any Affected Systems;]

[Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agree as follows:]

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in Transmission Provider's FERC-approved LGIP]

2.0 Interconnection Customer elects and Transmission Provider shall cause to be performed an Interconnection Feasibility Study consistent with Section 6.0 of this LGIP in accordance with the Tariff].

3.0 The scope of the Interconnection Feasibility Study shall be subject to the assumptions set forth in Attachment A to this Agreement.]

4.0 The Interconnection Feasibility Study shall be based on the technical information provided by Interconnection Customer in the Interconnection Request, as may be modified as the result of the Scoping Meeting. Transmission Provider reserves the right to request additional technical information from Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the Interconnection Feasibility Study and as designated in accordance with Section 3.4.4 of the LGIP. If, after the designation of the Point of Interconnection pursuant to Section 3.4.4 of the LGIP, Interconnection Customer modifies its Interconnection Request pursuant to Section 4.4, the time to complete the Interconnection Feasibility Study may be extended.]

5.0 The Interconnection Feasibility Study report shall provide the following information:]

- [preliminary identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;]
- [preliminary identification of any thermal overload or voltage limit violations resulting from the interconnection; and]
- [preliminary description and non-bonding estimated cost of facilities required to interconnect the Large Generating Facility to the Transmission System and to address the identified short circuit and power flow issues.]

6.0 Interconnection Customer shall provide a deposit of \$10,000 for the performance of the Interconnection Feasibility Study.]

[Upon receipt of the Interconnection Feasibility Study, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Interconnection Feasibility Study.]

[Any difference between the deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.]

7.0 Miscellaneous. The Interconnection Feasibility Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and

that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and the LGIA.]

[In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Appendix 2[3] to LGIP

[Interconnection System Impact]Cluster Study Agreement

This agreement is made and entered into this day of _____, 20__ by and between _____, a _____ organized and existing under the laws of the State of _____, ("Interconnection Customer,") and _____, a _____ organized and existing under the laws of the State of _____ ("Transmission Provider"). Interconnection Customer and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties."

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____; and

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System;

[Whereas, Transmission Provider has completed an Interconnection Feasibility Study (the "[Feasibility] Study") and provided the results of said study to

Interconnection Customer (This recital to be omitted if Transmission Provider does not require the Interconnection Feasibility Study.); and]

Whereas, Interconnection Customer has requested Transmission Provider to perform [an Interconnection System Impact]a *Cluster* Study to assess the impact of interconnecting the Large Generating Facility to the Transmission System, and of any Affected Systems;

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause to be performed [an Interconnection System Impact]a *Cluster* Study consistent with Section 7.0 of this LGIP in accordance with the Tariff.

3.0 The scope of the [Interconnection System Impact]Cluster Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The [Interconnection System Impact]Cluster Study will be based upon the [results of the Interconnection Feasibility Study and] the technical information provided by Interconnection Customer in the Interconnection Request, subject to any modifications in accordance with Section 4.4 of this LGIP. Transmission Provider reserves the right to request additional technical information from Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the [Interconnection Customer System Impact]Cluster Study. [If Interconnection Customer modifies its designated Point of Interconnection, Interconnection Request, or the technical information provided therein, the time to complete the Interconnection System Impact Study may be extended.]

5.0 The [Interconnection System Impact]Cluster Study [report]Report shall provide the following information:

- identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;
- identification of any thermal overload or voltage limit violations resulting from the interconnection;
- identification of any instability or inadequately damped response to system disturbances resulting from the interconnection; and
- description and non-binding, good faith estimated cost of facilities required to interconnect the Large Generating Facility to the Transmission System and to address the identified short circuit, instability, and power flow issues.

6.0 [Interconnection Customer shall provide a deposit of \$50,000 for the performance of the Interconnection System Impact Study.]Transmission Provider's good faith estimate for the time of completion of the [Interconnection System Impact]Cluster Study is {insert date}.

Upon receipt of the [Interconnection System Impact] *Cluster* Study Report, Transmission Provider shall charge and Interconnection Customer shall pay *its share* of the actual costs of the [Interconnection System Impact] *Cluster* Study, consistent with Section 13.3 of this LGIP.

Any difference between the deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.

7.0 Miscellaneous. The [Interconnection System Impact] *Cluster* Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and LGIA.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 2[3]

[Interconnection System Impact] *Cluster* Study Agreement

Assumptions Used in Conducting the [Interconnection System Impact] *Cluster* Study

The [Interconnection System Impact] *Cluster* Study will be based upon the *technical information provided by Interconnection Customer in the Interconnection Request*, [results of the Interconnection Feasibility Study,] subject to any modifications in accordance with Section 4.4 of this [e] LGIP, and the following assumptions:

Designation of Point of Interconnection and configuration to be studied.

Designation of alternative Point(s) of Interconnection and configuration.

{Above assumptions to be completed by Interconnection Customer and other assumptions to be provided by Interconnection Customer and Transmission Provider}

Appendix 3[4] to LGIP

Interconnection Facilities Study Agreement

This Agreement is made and entered into this ____ day of _____, 20____ by and between _____, a _____ organized and existing under the laws of the State of _____, (“Interconnection Customer,”) and _____ a _____ existing under the laws of the State of _____, (“Transmission Provider”). Interconnection

Customer and Transmission Provider each may be referred to as a “Party,” or collectively as the “Parties.”

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____; and

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System;

Whereas, Transmission Provider has completed an Interconnection [System Impact] *Cluster* Study (the “[System Impact] *Cluster* Study”) and provided the results of said study to Interconnection Customer; and

Whereas, Interconnection Customer has requested Transmission Provider to perform an Interconnection Facilities Study to specify and estimate the cost of the equipment, engineering, procurement and construction work needed to implement the conclusions of the [Interconnection System Impact] *Cluster* Study in accordance with Good Utility Practice to physically and electrically connect the Large Generating Facility to the Transmission System.

Now, therefore, in consideration of and subject to the mutual covenants contained herein the Parties agreed as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in Transmission Provider’s FERC-approved LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause an Interconnection Facilities Study consistent with Section 8.0 of this LGIP to be performed in accordance with the Tariff.

3.0 The scope of the Interconnection Facilities Study shall be subject to the assumptions set forth in Attachment A and the data provided in Attachment B to this Agreement.

4.0 The Interconnection Facilities Study [r]Report (i) shall provide a description, estimated cost of (consistent with Attachment A), schedule for required facilities to interconnect the Large Generating Facility to the Transmission System and (ii) shall address the short circuit, instability, and power flow issues identified in the [Interconnection System Impact] *Cluster* Study.

5.0 Interconnection Customer shall provide a *Commercial Readiness Deposit per Section 8.1 of this LGIP to enter* [deposit of \$100,000 for the performance of] the Interconnection Facilities Study. The time for completion of the Interconnection Facilities Study is specified in Attachment A.

[Transmission Provider shall invoice Interconnection Customer on a monthly basis for the work to be conducted on the Interconnection Facilities Study each month. Interconnection Customer shall pay invoiced amounts within thirty (30) Calendar Days of receipt of invoice. Transmission Provider shall continue to hold the amounts on deposit until settlement of the final invoice.]

6.0 Miscellaneous. The Interconnection Facilit[y]ies Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP and the LGIA.

In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 3[4]

Interconnection Facilities Study Agreement

Interconnection Customer Schedule Election for Conducting the Interconnection Facilities Study

Transmission Provider shall [use Reasonable Efforts to] complete the study and issue a draft Interconnection Facilities Study [r]Report to Interconnection Customer within the following number of days after [of] receipt of an executed copy of this Interconnection Facilities Study Agreement:

- ninety (90) Calendar Days with no more than a $\pm$ 20 percent cost estimate contained in the report, or
- one hundred eighty (180) Calendar Days with no more than a $\pm$ 10 percent cost estimate contained in the report.

Attachment B to Appendix 3[4]

Interconnection Facilities Study Agreement

Data Form To Be Provided by Interconnection Customer With the Interconnection Facilities Study Agreement

Provide location plan and simplified one-line diagram of the plant and station facilities. For staged projects, please indicate future generation, transmission circuits, etc.

One set of metering is required for each generation connection to the new ring bus or existing Transmission Provider station. Number of generation connections:

On the one line diagram indicate the generation capacity attached at each metering location. (Maximum load on CT/PT)

On the one line diagram indicate the location of auxiliary power. (Minimum load on CT/PT) Amps

Will an alternate source of auxiliary power be available during CT/PT maintenance?

____ Yes ____ No

Will a transfer bus on the generation side of the metering require that each meter set be

designed for the total plant generation?
Yes ___ No (Please indicate on one line diagram).
What type of control system or PLC will be located at Interconnection Customer's Large Generating Facility?

What protocol does the control system or PLC use?

Please provide a 7.5-minute quadrangle of the site. Sketch the plant, station, transmission line, and property line.
Physical dimensions of the proposed interconnection station:

Bus length from generation to interconnection station:

Line length from interconnection station to Transmission Provider's transmission line.

Tower number observed in the field. (Painted on tower leg) *

Number of third party easements required for transmission lines *:

*To be completed in coordination with Transmission Provider.
Is the Large Generating Facility in the Transmission Provider's service area?
Yes ___ No ___
Local provider:

Please provide proposed schedule dates:
Begin Construction
Date: _____
Generator step-up transformer receives back feed power
Date: _____
Generation Testing
Date: _____
Commercial Operation
Date: _____

Appendix 4[5] to LGIP

Optional Interconnection Study Agreement

This Agreement is made and entered into this ___ day of ___, 20___ by and between ___, a ___ organized and existing under the laws of the State of ___, ("Interconnection Customer,") and ___ a ___ existing under the laws of the State of ___, ("Transmission Provider"). Interconnection Customer and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties."

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____;
Whereas, Interconnection Customer is proposing to establish an interconnection with the Transmission System; and
Whereas, Interconnection Customer has submitted to Transmission Provider an Interconnection Request; and

Whereas, on or after the date when Interconnection Customer receives the [Interconnection System Impact] Cluster Study results, Interconnection Customer has further requested that Transmission Provider prepare an Optional Interconnection Study;
Now, Therefore, in consideration of and subject to the mutual covenants contained herein the Parties agree as follows:
1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in Transmission Provider's FERC-approved LGIP.
2.0 Interconnection Customer elects and Transmission Provider shall cause an Optional Interconnection Study consistent with Section 10.0 of this LGIP to be performed in accordance with the Tariff.
3.0 The scope of the Optional Interconnection Study shall be subject to the assumptions set forth in Attachment A to this Agreement.
4.0 The Optional Interconnection Study shall be performed solely for informational purposes.
5.0 The Optional Interconnection Study report shall provide a sensitivity analysis based on the assumptions specified by Interconnection Customer in Attachment A to this Agreement. The Optional Interconnection Study will identify Transmission Provider's Interconnection Facilities and the Network Upgrades, and the estimated cost thereof, that may be required to provide transmission service or interconnection service based upon the assumptions specified by Interconnection Customer in Attachment A.
6.0 Interconnection Customer shall provide a deposit of \$10,000 for the performance of the Optional Interconnection Study. Transmission Provider's good faith estimate for the time of completion of the Optional Interconnection Study is [insert date].
Upon receipt of the Optional Interconnection Study, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Optional Study.
Any difference between the initial payment and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.
7.0 Miscellaneous. The Optional Interconnection Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP and the LGIA.
In witness whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Appendix 5[6] to LGIP
Large Generator Interconnection Agreement (See LGIA)

Appendix 6[7]
Interconnection Procedures for A Wind Generating Plant

Appendix 6[7] sets forth procedures specific to a wind generating plant. All other requirements of this LGIP continue to apply to wind generating plant interconnections.
A. Special Procedures Applicable to Wind Generators
The wind plant Interconnection Customer, in completing the Interconnection Request required by S[ection] 3.3 of this LGIP, may provide to the Transmission Provider a set of preliminary electrical design specifications depicting the wind plant as a single equivalent generator. Upon satisfying these and other applicable Interconnection Request conditions, the wind plant may enter the queue and receive the base case data as provided for in this LGIP.
No later than six months after submitting an Interconnection Request completed in this manner, the wind plant Interconnection Customer must submit completed detailed electrical design specifications and other data (including collector system layout data) needed to allow the Transmission Provider to complete the [System Impact] Cluster Study.
Appendix 7 to LGIP
Transitional Cluster Study Agreement
This Agreement is made and entered into this ___ day of ___, 20___ by and between ___, a ___ organized and existing under the laws of the State of ___ ("Interconnection Customer"), and ___ a ___ organized and existing under the laws of the State of ___ ("Transmission Provider"). Interconnection Customer and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties."
Recitals
Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____;
Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; and
Whereas, Interconnection Customer has requested Transmission Provider to perform a "Transitional Cluster Study," which combines the Cluster Study and Interconnection Facilities Study, in a single

cluster study, followed by any needed restudies, to specify and estimate the cost of the equipment, engineering, procurement, and construction work needed to physically and electrically connect the Large Generating Facility to Transmission Provider's Transmission System; and

Whereas, Interconnection Customer has a valid Queue Position as of the {Transmission Provider to insert effective date of compliance filing};

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Interconnection Customer elects, and Transmission Provider shall cause to be performed, a Transitional Cluster Study.

3.0 The Transitional Cluster Study shall be based upon the technical information provided by Interconnection Customer in the Interconnection Request. Transmission Provider reserves the right to request additional technical information from Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the Transitional Cluster Study and Interconnection Customer shall provide such data as quickly as reasonable.

4.0 Pursuant to Section 5.1.1.2 of this LGIP, the interim Transitional Cluster Study Report shall provide the information below:

- identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;
- identification of any thermal overload or voltage limit violations resulting from the interconnection;

19.

- identification of any instability or inadequately damped response to system disturbances resulting from the interconnection; and
- Transmission Provider's Interconnection Facilities and Network Upgrades that are expected to be required as a result of the Interconnection Request(s) and a non-binding, good faith estimate of cost responsibility and a non-binding, good faith estimated time to construct.

5.0 Pursuant to Section 5.1.1.2 of this LGIP, the final Transitional Cluster Study Report shall: (1) provide all the information included in the interim Transitional Cluster Study Report; (2) provide a description of, estimated cost of, and schedule for required facilities to interconnect the Generating Facility to the Transmission System; and (3) address the short circuit, instability, and power flow issues identified in the interim Transitional Cluster Study Report.

6.0 Interconnection Customer has met the requirements described in Section 5.1.1.2 of this LGIP.

20.

7.0 Interconnection Customer previously provided a deposit for the performance of Interconnection Studies. Upon receipt of the final Transitional Cluster Study Report, Transmission Provider shall charge and Interconnection Customer shall pay the

actual costs of the Transitional Cluster Study. Any difference between the study deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, in accordance with the provisions of Section 13.3 of this LGIP.

8.0 Miscellaneous. The Transitional Cluster Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and the LGIA.

In Witness Whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Appendix 8 to LGIP

Transitional Serial Interconnection Facilities Study Agreement

This Agreement is made and entered into this ____ day of _____, 20____, by and between _____, a _____ organized and existing under the laws of the State of _____ ("Interconnection Customer") and _____, a _____ organized and existing under the laws of the State of _____ ("Transmission Provider"). Interconnection Customer and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties."

Recitals

Whereas, Interconnection Customer is proposing to develop a Large Generating Facility or generating capacity addition to an existing Large Generating Facility consistent with the Interconnection Request submitted by Interconnection Customer dated _____; and

Whereas, Interconnection Customer desires to interconnect the Large Generating Facility with the Transmission System; and

Whereas, Interconnection Customer has requested Transmission Provider to continue processing its Interconnection Facilities Study to specify and estimate the cost of the equipment, engineering, procurement, and construction work needed to implement the conclusions of the final interconnection system impact study (from the previously effective serial study process) in accordance with Good Utility Practice to physically and electrically connect the Large Generating Facility to the Transmission System; and

Whereas, Transmission Provider has provided an Interconnection Facilities Study Agreement to the Interconnection Customer

on or before {Transmission Provider to insert effective date of compliance filing}.

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Interconnection Customer elects and Transmission Provider shall cause to be performed an Interconnection Facilities Study consistent with Section 8 of this LGIP.

3.0 The scope of the Interconnection Facilities Study shall be subject to the assumptions set forth in Attachment A to this Agreement, which shall be the same assumptions as the previous Interconnection Facilities Study Agreement executed by the Interconnection Customer.

4.0 The Interconnection Facilities Study Report shall: (1) provide a description, estimated cost of (consistent with Attachment A), and schedule for required facilities to interconnect the Large Generating Facility to the Transmission System; and (2) address the short circuit, instability, and power flow issues identified in the most recently published Cluster Study Report.

5.0 Interconnection Customer has met the requirements described in Section 5.1.1.1 of this LGIP. The time for completion of the Interconnection Facilities Study is specified in Attachment A, and shall be no later than 150 Calendar Days after {Transmission Provider to insert effective date accepted on compliance}.

6.0 Interconnection Customer previously provided a deposit of _____ dollars (\$ _____) for the performance of the Interconnection Facilities Study.

7.0 Upon receipt of the Interconnection Facilities Study results, Transmission Provider shall charge and Interconnection Customer shall pay the actual costs of the Interconnection Facilities Study.

8.0 Any difference between the study deposit and the actual cost of the study shall be paid by or refunded to Interconnection Customer, as appropriate.

9.0 Miscellaneous. The Interconnection Facilities Study Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, that reflect best practices in the electric industry, and that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP and this LGIA.

In Witness Whereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 8

Transitional Serial Interconnection Facilities Study Agreement

Assumptions Used In Conducting The Transitional Serial Interconnection Facilities Study

{Assumptions to be completed by Interconnection Customer and Transmission Provider}

Appendix 9 to LGIP

Two-Party Affected System Study Agreement

This Agreement is made and entered into this ____ day of _____, 20____, by and between _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer) and _____, a _____ organized and existing under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customer and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties."

Recitals

Whereas, Affected System Interconnection Customer is proposing to develop a {description of generating facility or generating capacity addition to an existing generating facility} consistent with the interconnection request submitted by Affected System Interconnection Customer to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customer desires to interconnect the {generating facility} with {name of host transmission provider}'s transmission system;

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Transmission Provider shall coordinate with Affected System Interconnection Customer to perform an Affected System Study consistent with Section 9 of this LGIP.

3.0 The scope of the Affected System Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The Affected System Study will be based upon the technical information provided by Affected System Interconnection Customer and {name of host transmission provider}. Transmission Provider reserves the right to request additional technical information from Affected System Interconnection Customer as may reasonably become necessary consistent with Good Utility Practice during the course of the Affected System Study.

5.0 The Affected System Study shall provide the following information:

- identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;
- identification of any thermal overload or voltage limit violations resulting from the interconnection;
- identification of any instability or inadequately damped response to system disturbances resulting from the interconnection;
- non-binding, good faith estimated cost and time required to construct facilities required on Transmission Provider's Transmission System to accommodate the interconnection of the {generating facility} to the transmission system of the host transmission provider; and
- description of how such facilities will address the identified short circuit, instability, and power flow issues.

6.0 Affected System Interconnection Customer shall provide a deposit of ____ for performance of the Affected System Study. Upon receipt of the results of the Affected System Study by the Affected System Interconnection Customer, Transmission Provider shall charge, and Affected System Interconnection Customer shall pay, the actual cost of the Affected System Study. Any difference between the deposit and the actual cost of the Affected System Study shall be paid by or refunded to Affected System Interconnection Customer, as appropriate, including interest calculated in accordance with section 35.19a(2) of FERC's regulations.

7.0 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability, and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 9—Two-Party Affected System Study Agreement

Assumptions Used In Conducting The Affected System Study

The Affected System Study will be based upon the following assumptions:

{Assumptions to be completed by Affected System Interconnection Customer and Transmission Provider}

Appendix 10 to LGIP

Multiparty Affected System Study Agreement

This Agreement is made and entered into this ____ day of _____, 20____, by and among _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); and _____, a _____ organized and existing under the laws of the State of _____ (Transmission Provider).

Affected System Interconnection Customers and Transmission Provider each may be referred to as a "Party," or collectively as the "Parties." When it is not important to differentiate among them, Affected System Interconnection Customers each may be referred to as "Affected System Interconnection Customer" or collectively as the "Affected System Interconnection Customers."

Recitals

Whereas, Affected System Interconnection Customers are proposing to develop {description of generating facilities or generating capacity additions to an existing generating facility}, consistent with the interconnection requests submitted by Affected System Interconnection Customers to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customers desire to interconnect the {generating facilities} with {name of host transmission provider}'s transmission system;

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

1.0 When used in this Agreement, with initial capitalization, the terms specified shall have the meanings indicated in this LGIP.

2.0 Transmission Provider shall coordinate with Affected System Interconnection Customers to perform an Affected System Study consistent with Section 9 of this LGIP.

3.0 The scope of the Affected System Study shall be subject to the assumptions set forth in Attachment A to this Agreement.

4.0 The Affected System Study will be based upon the technical information provided by Affected System Interconnection Customers and {name of host transmission provider}. Transmission Provider reserves the right to request additional technical information from Affected System Interconnection Customers as may reasonably become necessary consistent with Good Utility Practice during the course of the Affected System Study.

5.0 The Affected System Study shall provide the following information:

- identification of any circuit breaker short circuit capability limits exceeded as a result of the interconnection;
- identification of any thermal overload or voltage limit violations resulting from the interconnection;
- identification of any instability or inadequately damped response to system disturbances resulting from the interconnection;
- non-binding, good faith estimated cost and time required to construct facilities required on Transmission Provider's Transmission System to accommodate the interconnection of the {generating facilities} to the transmission system of the host transmission provider; and
- description of how such facilities will address the identified short circuit, instability, and power flow issues.

6.0 Affected System Interconnection Customers shall each provide a deposit of _____ for performance of the Affected System Study. Upon receipt of the results of the Affected System Study by the Affected System Interconnection Customers, Transmission Provider shall charge, and Affected System Interconnection Customers shall pay, the actual cost of the Affected System Study. Any difference between the deposit and the actual cost of the Affected System Study shall be paid by or refunded to Affected System Interconnection Customers, as appropriate, including interest calculated in accordance with section 35.19a(a)(2) of FERC's regulations.

7.0 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability, and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of the LGIP.

In witness thereof, the Parties have caused this Agreement to be duly executed by their duly authorized officers or agents on the day and year first above written.

Attachment A to Appendix 10— Multiparty Affected System Study Agreement

Assumptions Used in Conducting the Multiparty Affected System Study

The Affected System Study will be based upon the following assumptions:
{Assumptions to be completed by Affected System Interconnection Customers and Transmission Provider}

Appendix 11 to LGIP

Two-Party Affected System Facilities Construction Agreement

This Agreement is made and entered into this ____ day of _____, 20____, by and between _____, organized and existing under the laws of the State of _____ (Affected System Interconnection Customer) and _____, an entity organized under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customer and Transmission Provider each may be referred to as a "Party" or collectively as the "Parties."

Recitals

Whereas, Affected System Interconnection Customer is proposing to develop a {description of generating facility or generating capacity addition to an existing generating facility} consistent with the interconnection request submitted by Affected System Interconnection Customer to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customer desires to interconnect the {generating facility} to {name of host transmission provider}'s transmission system; and

Whereas, additions, modifications, and upgrade(s) must be made to certain existing facilities of Transmission Provider's Transmission System to accommodate such interconnection; and

Whereas, Affected System Interconnection Customer has requested, and Transmission Provider has agreed, to enter into this Agreement for the purpose of facilitating the construction of necessary Affected System Network Upgrade(s);

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

Article 1—Definitions

When used in this Agreement, with initial capitalization, the terms specified and not otherwise defined in this Agreement shall have the meanings indicated in this LGIP.

Article 2—Term of Agreement

2.1 Effective Date. This Agreement shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by FERC.

2.2 Term.

2.2.1 General. This Agreement shall become effective as provided in Article 2.1

and shall continue in full force and effect until the earlier of (1) the final repayment, where applicable, by Transmission Provider of the amount funded by Affected System Interconnection Customer for Transmission Provider's design, procurement, construction and installation of the Affected System Network Upgrade(s) provided in Appendix A; (2) the Parties agree to mutually terminate this Agreement; (3) earlier termination is permitted or provided for under Appendix A of this Agreement; or (4) Affected System Interconnection Customer terminates this Agreement after providing Transmission Provider with written notice at least sixty (60) Calendar Days prior to the proposed termination date, provided that Affected System Interconnection Customer has no outstanding contractual obligations to Transmission Provider under this Agreement. No termination of this Agreement shall be effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination. The term of this Agreement may be adjusted upon mutual agreement of the Parties if (1) the commercial operation date for the {generating facility} is adjusted in accordance with the rules and procedures established by {name of host transmission provider} or (2) the in-service date for the Affected System Network Upgrade(s) is adjusted in accordance with the rules and procedures established by Transmission Provider.

2.2.2 Termination Upon Default. Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 5 of this Agreement where Breach and Breaching Party are defined in Article 5. Defaulting Party shall mean the Party that is in Default. In the event of a Default by a Party, the non-Defaulting Party shall have the termination rights described in Articles 5 and 6; provided, however, Transmission Provider may not terminate this Agreement if Affected System Interconnection Customer is the Defaulting Party and compensates Transmission Provider within thirty (30) Calendar Days for the amount of damages billed to Affected System Interconnection Customer by Transmission Provider for any such damages, including costs and expenses, incurred by Transmission Provider as a result of such Default.

2.2.3 Consequences of Termination. In the event of a termination by either Party, other than a termination by Affected System Interconnection Customer due to a Default by Transmission Provider, Affected System Interconnection Customer shall be responsible for the payment to Transmission Provider of all amounts then due and payable for construction and installation of the Affected System Network Upgrade(s) (including, without limitation, any equipment ordered related to such construction), plus all out-of-pocket expenses incurred by Transmission Provider in connection with the construction and installation of the Affected System Network Upgrade(s), through the date of termination, and, in the event of the termination of the entire Agreement, any actual costs which Transmission Provider reasonably incurs in (1) winding up work and construction demobilization and (2) ensuring the safety of

persons and property and the integrity and safe and reliable operation of Transmission Provider's Transmission System. Transmission Provider shall use Reasonable Efforts to minimize such costs.

2.2.4 **Reservation of Rights.** Transmission Provider shall have the right to make a unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and Affected System Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations thereunder, except to the extent that the Parties otherwise mutually agree as provided herein.

2.3 **Filing.** Transmission Provider shall file this Agreement (and any amendment hereto) with the appropriate Governmental Authority, if required. Affected System Interconnection Customer may request that any information so provided be subject to the confidentiality provisions of Article 8. If Affected System Interconnection Customer has executed this Agreement, or any amendment thereto, Affected System Interconnection Customer shall reasonably cooperate with Transmission Provider with respect to such filing and to provide any information reasonably requested by Transmission Provider needed to comply with applicable regulatory requirements.

2.4 **Survival.** This Agreement shall continue in effect after termination, to the extent necessary, to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this Agreement; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this Agreement or other applicable agreements, to disconnect, remove, or salvage its own facilities and equipment.

2.5 **Termination Obligations.** Upon any termination pursuant to this Agreement, Affected System Interconnection Customer shall be responsible for the payment of all costs or other contractual obligations incurred prior to the termination date, including previously incurred capital costs, penalties for early termination, and costs of removal and site restoration.

Article 3—Construction of Affected System Network Upgrade(s)

3.1 Construction.

3.1.1 **Transmission Provider Obligations.** Transmission Provider shall (or shall cause

such action to) design, procure, construct, and install, and Affected System Interconnection Customer shall pay, consistent with Article 3.2, the costs of all Affected System Network Upgrade(s) identified in Appendix A. All Affected System Network Upgrade(s) designed, procured, constructed, and installed by Transmission Provider pursuant to this Agreement shall satisfy all requirements of applicable safety and/or engineering codes and comply with Good Utility Practice, and further, shall satisfy all Applicable Laws and Regulations. Transmission Provider shall not be required to undertake any action which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, or any Applicable Laws and Regulations.

3.1.2 Suspension of Work.

3.1.2.1 **Right to Suspend.** Affected System Interconnection Customer must provide to Transmission Provider written notice of its request for suspension. Only the milestones described in the Appendices of this Agreement are subject to suspension under this Article 3.1.2. Affected System Network Upgrade(s) will be constructed on the schedule described in the Appendices of this Agreement unless: (1) construction is prevented by the order of a Governmental Authority; (2) the Affected System Network Upgrade(s) are not needed by any other Interconnection Customer; or (3) Transmission Provider determines that a Force Majeure event prevents construction. In the event of (1), (2), or (3), any security paid to Transmission Provider under Article 4.1 of this Agreement shall be released by Transmission Provider upon the determination by Transmission Provider that the Affected System Network Upgrade(s) will no longer be constructed. If suspension occurs, Affected System Interconnection Customer shall be responsible for the costs which Transmission Provider incurs (i) in accordance with this Agreement prior to the suspension; (ii) in suspending such work, including any costs incurred to perform such work as may be necessary to ensure the safety of persons and property and the integrity of Transmission Provider's Transmission System and, if applicable, any costs incurred in connection with the cancellation of contracts and orders for material which Transmission Provider cannot reasonably avoid; and (iii) reasonably incurs in winding up work and construction demobilization; provided, however, that, prior to canceling any such contracts or orders, Transmission Provider shall obtain Affected System Interconnection Customer's authorization. Affected System Interconnection Customer shall be responsible for all costs incurred in connection with Affected System Interconnection Customer's failure to authorize cancellation of such contracts or orders.

Interest on amounts paid by Affected System Interconnection Customer to Transmission Provider for the design, procurement, construction, and installation of the Affected System Network Upgrade(s)

shall not accrue during periods in which Affected System Interconnection Customer has suspended construction under this Article 3.1.2.

Transmission Provider shall invoice Affected System Interconnection Customer pursuant to Article 4 and will use Reasonable Efforts to minimize its costs. In the event Affected System Interconnection Customer suspends work by Affected System Transmission Provider required under this Agreement pursuant to this Article 3.1.2.1, and has not requested Affected System Transmission Provider to recommence the work required under this Agreement on or before the expiration of three (3) years following commencement of such suspension, this Agreement shall be deemed terminated. The three-year period shall begin on the date the suspension is requested, or the date of the written notice to Affected System Transmission Provider, whichever is earlier, if no effective date of suspension is specified.

3.1.2.2 **Recommencing of Work.** If Affected System Interconnection Customer requests that Transmission Provider recommence construction of Affected System Network Upgrade(s), Transmission Provider shall have no obligation to afford such work the priority it would have had but for the prior actions of Affected System Interconnection Customer to suspend the work. In such event, Affected System Interconnection Customer shall be responsible for any costs incurred in recommencing the work. All recommenced work shall be completed pursuant to an amended schedule for the interconnection agreed to by the Parties. Transmission Provider has the right to conduct a restudy of the Affected System Study if conditions have materially changed subsequent to the request to suspend. Affected System Interconnection Customer shall be responsible for the costs of any studies or restudies required.

3.1.2.3 **Right to Suspend Due to Default.** Transmission Provider reserves the right, upon written notice to Affected System Interconnection Customer, to suspend, at any time, work by Transmission Provider due to Default by Affected System Interconnection Customer. Affected System Interconnection Customer shall be responsible for any additional expenses incurred by Transmission Provider associated with the construction and installation of the Affected System Network Upgrade(s) (as set forth in Article 2.2.3) upon the occurrence of either a Breach that Affected System Interconnection Customer is unable to cure pursuant to Article 5 or a Default pursuant to Article 5. Any form of suspension by Transmission Provider shall not be barred by Articles 2.2.2, 2.2.3, or 5.2.2, nor shall it affect Transmission Provider's right to terminate the work or this Agreement pursuant to Article 6.

3.1.3 **Construction Status.** Transmission Provider shall keep Affected System Interconnection Customer advised periodically as to the progress of its design, procurement and construction efforts, as described in Appendix A. Affected System Interconnection Customer may, at any time

and reasonably, request a progress report from Transmission Provider. If, at any time, Affected System Interconnection Customer determines that the completion of the Affected System Network Upgrade(s) will not be required until after the specified in-service date, Affected System Interconnection Customer will provide written notice to Transmission Provider of such later date upon which the completion of the Affected System Network Upgrade(s) would be required. Transmission Provider may delay the in-service date of the Affected System Network Upgrade(s) accordingly.

3.1.4 *Timely Completion.* Transmission Provider shall use Reasonable Efforts to design, procure, construct, install, and test the Affected System Network Upgrade(s) in accordance with the schedule set forth in Appendix A, which schedule may be revised from time to time by mutual agreement of the Parties. If any event occurs that will affect the time or ability to complete the Affected System Network Upgrade(s), Transmission Provider shall promptly notify Affected System Interconnection Customer. In such circumstances, Transmission Provider shall, within fifteen (15) Calendar Days of such notice, convene a meeting with Affected System Interconnection Customer to evaluate the alternatives available to Affected System Interconnection Customer. Transmission Provider shall also make available to Affected System Interconnection Customer all studies and work papers related to the event and corresponding delay, including all information that is in the possession of Transmission Provider that is reasonably needed by Affected System Interconnection Customer to evaluate alternatives, subject to confidentiality arrangements consistent with Article 8. Transmission Provider shall, at Affected System Interconnection Customer's request and expense, use Reasonable Efforts to accelerate its work under this Agreement to meet the schedule set forth in Appendix A, provided that (1) Affected System Interconnection Customer authorizes such actions, such authorization to be withheld, conditioned, or delayed by Affected System Interconnection Customer only if it can demonstrate that the acceleration would have a material adverse effect on it; and (2) the Affected System Interconnection Customer funds costs associated therewith in advance.

3.2 Interconnection Costs.

3.2.1 *Costs.* Affected System Interconnection Customer shall pay to Transmission Provider costs (including taxes and financing costs) associated with seeking and obtaining all necessary approvals and of designing, engineering, constructing, and testing the Affected System Network Upgrade(s), as identified in Appendix A, in accordance with the cost recovery method provided herein. Unless Transmission Provider elects to fund the Affected System Network Upgrade(s), they shall be initially funded by Affected System Interconnection Customer.

3.2.1.1 *Lands of Other Property Owners.* If any part of the Affected System Network Upgrade(s) is to be installed on property owned by persons other than Affected System Interconnection Customer or Transmission

Provider, Transmission Provider shall, at Affected System Interconnection Customer's expense, use efforts similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority to the extent permitted and consistent with Applicable Laws and Regulations and, to the extent consistent with such Applicable Laws and Regulations, to procure from such persons any rights of use, licenses, rights-of-way, and easements that are necessary to construct, operate, maintain, test, inspect, replace, or remove the Affected System Network Upgrade(s) upon such property.

3.2.2 Repayment.

3.2.2.1 *Repayment.* Consistent with Articles 11.4.1 and 11.4.2 of the Transmission Provider's pro forma LGIA, Affected System Interconnection Customer shall be entitled to a cash repayment by Transmission Provider of the amount paid to Transmission Provider, if any, for the Affected System Network Upgrade(s), including any tax gross-up or other tax-related payments associated with the Affected System Network Upgrade(s), and not refunded to Affected System Interconnection Customer pursuant to Article 3.3.1 or otherwise. The Parties may mutually agree to a repayment schedule, to be outlined in Appendix A, not to exceed twenty (20) years from the commercial operation date, for the complete repayment for all applicable costs associated with the Affected System Network Upgrade(s). Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19 a(a)(2)(iii) from the date of any payment for Affected System Network Upgrade(s) through the date on which Affected System Interconnection Customer receives a repayment of such payment pursuant to this subparagraph. Interest shall not accrue during periods in which Affected System Interconnection Customer has suspended construction pursuant to Article 3.1.2. Affected System Interconnection Customer may assign such repayment rights to any person.

3.2.2.2 *Impact of Failure to Achieve Commercial Operation.* If the Affected System Interconnection Customer's generating facility fails to achieve commercial operation, but it or another generating facility is later constructed and makes use of the Affected System Network Upgrade(s), Transmission Provider shall at that time reimburse Affected System Interconnection Customer for the amounts advanced for the Affected System Network Upgrade(s). Before any such reimbursement can occur, Affected System Interconnection Customer (or the entity that ultimately constructs the generating facility, if different), is responsible for identifying the entity to which the reimbursement must be made.

3.3 Taxes.

3.3.1 *Indemnification for Contributions in Aid of Construction.* With regard only to payments made by Affected System Interconnection Customer to Transmission Provider for the installation of the Affected System Network Upgrade(s), Transmission Provider shall not include a gross-up for

income taxes in the amounts it charges Affected System Interconnection Customer for the installation of the Affected System Network Upgrade(s) unless (1) Transmission Provider has determined, in good faith, that the payments or property transfers made by Affected System Interconnection Customer to Transmission Provider should be reported as income subject to taxation, or (2) any Governmental Authority directs Transmission Provider to report payments or property as income subject to taxation. Affected System Interconnection Customer shall reimburse Transmission Provider for such costs on a fully grossed-up basis, in accordance with this Article, within thirty (30) Calendar Days of receiving written notification from Transmission Provider of the amount due, including detail about how the amount was calculated.

The indemnification obligation shall terminate at the earlier of (1) the expiration of the ten (10)-year testing period and the applicable statute of limitation, as it may be extended by Transmission Provider upon request of the Internal Revenue Service, to keep these years open for audit or adjustment, or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article. Notwithstanding the foregoing provisions of this Article 3.3.1, and to the extent permitted by law, to the extent that the receipt of such payments by Transmission Provider is determined by any Governmental Authority to constitute income by Transmission Provider subject to taxation, Affected System Interconnection Customer shall protect, indemnify, and hold harmless Transmission Provider and its Affiliates, from all claims by any such Governmental Authority for any tax, interest, and/or penalties associated with such determination. Upon receiving written notification of such determination from the Governmental Authority, Transmission Provider shall provide Affected System Interconnection Customer with written notification within thirty (30) Calendar Days of such determination and notification. Transmission Provider, upon the timely written request by Affected System Interconnection Customer and at Affected System Interconnection Customer's expense, shall appeal, protest, seek abatement of, or otherwise oppose such determination. Transmission Provider reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement or other contest, including the compromise or settlement of the claim; provided that Transmission Provider shall cooperate and consult in good faith with Affected System Interconnection Customer regarding the conduct of such contest. Affected System Interconnection Customer shall not be required to pay Transmission Provider for the tax, interest, and/or penalties prior to the seventh (7th) Calendar Day before the date on which Transmission Provider (1) is required to pay the tax, interest, and/or penalties or other amount in lieu thereof pursuant to a compromise or settlement of the appeal, protest, abatement, or other contest; (2) is required to pay the tax, interest, and/or penalties as the result of a

final, non-appealable order by a Governmental Authority; or (3) is required to pay the tax, interest, and/or penalties as a prerequisite to an appeal, protest, abatement, or other contest. In the event such appeal, protest, abatement, or other contest results in a determination that Transmission Provider is not liable for any portion of any tax, interest, and/or penalties for which Affected System Interconnection Customer has already made payment to Transmission Provider, Transmission Provider shall promptly refund to Affected System Interconnection Customer any payment attributable to the amount determined to be non-taxable, plus any interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)) or other payments Transmission Provider receives or which Transmission Provider may be entitled with respect to such payment. Affected System Interconnection Customer shall provide Transmission Provider with credit assurances sufficient to meet Affected System Interconnection Customer's estimated liability for reimbursement of Transmission Provider for taxes, interest, and/or penalties under this Article 3.3.1. Such estimated liability shall be stated in Appendix A.

To the extent that Transmission Provider is a limited liability company and not a corporation, and has elected to be taxed as a partnership, then the following shall apply: Transmission Provider represents, and the Parties acknowledge, that Transmission Provider is a limited liability company and is treated as a partnership for federal income tax purposes. Any payment made by Affected System Interconnection Customer to Transmission Provider for Affected System Network Upgrade(s) is to be treated as an upfront payment. It is anticipated by the Parties that any amounts paid by Affected System Interconnection Customer to Transmission Provider for Affected System Network Upgrade(s) will be reimbursed to Affected System Interconnection Customer in accordance with the terms of this Agreement, provided Affected System Interconnection Customer fulfills its obligations under this Agreement.

3.3.2 Private Letter Ruling. At Affected System Interconnection Customer's request and expense, Transmission Provider shall file with the Internal Revenue Service a request for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by Affected System Interconnection Customer to Transmission Provider under this Agreement are subject to federal income taxation. Affected System Interconnection Customer will prepare the initial draft of the request for a private letter ruling and will certify under penalties of perjury that all facts represented in such request are true and accurate to the best of Affected System Interconnection Customer's knowledge. Transmission Provider and Affected System Interconnection Customer shall cooperate in good faith with respect to the submission of such request.

3.3.3 Other Taxes. Upon the timely request by Affected System Interconnection Customer, and at Affected System Interconnection Customer's sole expense, Transmission Provider shall appeal, protest, seek abatement of, or otherwise contest any

tax (other than federal or state income tax) asserted or assessed against Transmission Provider for which Affected System Interconnection Customer may be required to reimburse Transmission Provider under the terms of this Agreement. Affected System Interconnection Customer shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement, or other contest. Affected System Interconnection Customer and Transmission Provider shall cooperate in good faith with respect to any such contest. Unless the payment of such taxes is a prerequisite to an appeal or abatement or cannot be deferred, no amount shall be payable by Affected System Interconnection Customer to Transmission Provider for such taxes until they are assessed by a final, non-appealable order by any court or agency of competent jurisdiction. In the event that a tax payment is withheld and ultimately due and payable after appeal, Affected System Interconnection Customer will be responsible for all taxes, interest and penalties, other than penalties attributable to any delay caused by Transmission Provider. Each Party shall cooperate with the other Party to maintain each Party's tax status. Nothing in this Agreement is intended to adversely affect any Party's tax-exempt status with respect to the issuance of bonds including, but not limited to, local furnishing bonds, as described in section 142(f) of the Internal Revenue Code.

Article 4

Security, Billing, and Payments

4.1 Provision of Security. By the earlier of (1) thirty (30) Calendar Days prior to the due date for Affected System Interconnection Customer's first payment under the payment schedule specified in Appendix A, or (2) the first date specified in Appendix A for the ordering of equipment by Transmission Provider for installing the Affected System Network Upgrade(s), Affected System Interconnection Customer shall provide Transmission Provider, at Affected System Interconnection Customer's option, a guarantee, a surety bond, letter of credit or other form of security that is reasonably acceptable to Transmission Provider. Such security for payment shall be in an amount sufficient to cover the costs for constructing, procuring, and installing the applicable portion of Affected System Network Upgrade(s) and shall be reduced on a dollar-for-dollar basis for payments made to Transmission Provider for these purposes.

The guarantee must be made by an entity that meets the creditworthiness requirements of Transmission Provider and contain terms and conditions that guarantee payment of any amount that may be due from Affected System Interconnection Customer, up to an agreed-to maximum amount. The letter of credit must be issued by a financial institution reasonably acceptable to Transmission Provider and must specify a reasonable expiration date. The surety bond must be issued by an insurer reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

4.2 Invoice. Each Party shall submit to the other Party, on a monthly basis, invoices of amounts due, if any, for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to the other Party under this Agreement, including interest payments, shall be netted so that only the net amount remaining due shall be paid by the owing Party.

4.3 Payment. Invoices shall be rendered to the paying Party at the address specified by the Parties. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by a Party will not constitute a waiver of any rights or claims that Party may have under this Agreement.

4.4 Final Invoice. Within six (6) months after completion of the construction of the Affected System Network Upgrade(s), Transmission Provider shall provide an invoice of the final cost of the construction of the Affected System Network Upgrade(s) and shall set forth such costs in sufficient detail to enable Affected System Interconnection Customer to compare the actual costs with the estimates and to ascertain deviations, if any, from the cost estimates. Transmission Provider shall refund, with interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)), to Affected System Interconnection Customer any amount by which the actual payment by Affected System Interconnection Customer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

4.5 Interest. Interest on any unpaid amounts shall be calculated in accordance with 18 CFR 35.19a(a)(2)(iii).

4.6 Payment During Dispute. In the event of a billing dispute among the Parties, Transmission Provider shall continue to construct the Affected System Network Upgrade(s) under this Agreement as long as Affected System Interconnection Customer: (1) continues to make all payments not in dispute; and (2) pays to Transmission Provider or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If Affected System Interconnection Customer fails to meet these two requirements, then Transmission Provider may provide notice to Affected System Interconnection Customer of a Default pursuant to Article 5. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to another Party shall pay the amount due with interest calculated in accordance with the methodology set forth in 18 CFR 35.19a(a)(2)(iii).

Article 5

Breach, Cure and Default

5.1 Events of Breach. A Breach of this Agreement shall include the:

(a) Failure to pay any amount when due;
(b) Failure to comply with any material term or condition of this Agreement, including but not limited to any material Breach of a representation, warranty, or covenant made in this Agreement;

(c) Failure of a Party to provide such access rights, or a Party's attempt to revoke access or terminate such access rights, as provided under this Agreement; or

(d) Failure of a Party to provide information or data to another Party as required under this Agreement, provided the Party entitled to the information or data under this Agreement requires such information or data to satisfy its obligations under this Agreement.

5.2 Definition. Breaching Party shall mean the Party that is in Breach.

5.3 Notice of Breach, Cure, and Default. Upon the occurrence of an event of Breach, the Party not in Breach, when it becomes aware of the Breach, shall give written notice of the Breach to the Breaching Party and to any other person representing a Party to this Agreement identified in writing to the other Party in advance. Such notice shall set forth, in reasonable detail, the nature of the Breach, and where known and applicable, the steps necessary to cure such Breach.

5.3.1 Upon receiving written notice of the Breach hereunder, the Breaching Party shall have a period to cure such Breach (hereinafter referred to as the "Cure Period") which shall be sixty (60) Calendar Days.

5.3.2 In the event the Breaching Party fails to cure within the Cure Period, the Breaching Party will be in Default of this Agreement, and the non-Defaulting Party may terminate this Agreement in accordance with Article 6.2 of this Agreement or take whatever action at law or in equity as may appear necessary or desirable to enforce the performance or observance of any rights, remedies, obligations, agreement, or covenants under this Agreement.

5.4 Rights in the Event of Default. Notwithstanding the foregoing, upon the occurrence of a Default, the non-Defaulting Party shall be entitled to exercise all rights and remedies it may have in equity or at law.

Article 6

Termination of Agreement

6.1 Expiration of Term. Except as otherwise specified in this Article 6, the Parties' obligations under this Agreement shall terminate at the conclusion of the term of this Agreement.

6.2 Termination. In addition to the termination provisions set forth in Article 2.2, a Party may terminate this Agreement upon the Default of the other Party in accordance with Article 5.2.2 of this Agreement. Subject to the limitations set forth in Article 6.3, in the event of a Default, the termination of this Agreement by the non-Defaulting Party shall require a filing at FERC of a notice of termination, which filing must be accepted for filing by FERC.

6.3 Disposition of Facilities Upon Termination of Agreement.

6.3.1 Transmission Provider Obligations. Upon termination of this Agreement, unless otherwise agreed to by the Parties in writing, Transmission Provider:

(a) shall, prior to the construction and installation of any portion of the Affected System Network Upgrade(s) and to the extent possible, cancel any pending orders of, or return, such equipment or material for such Affected System Network Upgrade(s);

(b) may keep in place any portion of the Affected System Network Upgrade(s) already constructed and installed; and,

(c) shall perform such work as may be necessary to ensure the safety of persons and property and to preserve the integrity of Transmission Provider's Transmission System (e.g., construction demobilization to return the system to its original state, wind-up work).

6.3.2 Affected System Interconnection Customer Obligations. Upon billing by Transmission Provider, Affected System Interconnection Customer shall reimburse Transmission Provider for any costs incurred by Transmission Provider in performance of the actions required or permitted by Article 6.3.1 and for the cost of any Affected System Network Upgrade(s) described in Appendix A. Transmission Provider shall use Reasonable Efforts to minimize costs and shall offset the amounts owed by any salvage value of facilities, if applicable. Affected System Interconnection Customer shall pay these costs pursuant to Article 4.3 of this Agreement.

6.3.3 Pre-construction or Installation. Upon termination of this Agreement and prior to the construction and installation of any portion of the Affected System Network Upgrade(s), Transmission Provider may, at its option, retain any portion of such Affected System Network Upgrade(s) not cancelled or returned in accordance with Article 6.3.1(a), in which case Transmission Provider shall be responsible for all costs associated with procuring such Affected System Network Upgrade(s). To the extent that Affected System Interconnection Customer has already paid Transmission Provider for any or all of such costs, Transmission Provider shall refund Affected System Interconnection Customer for those payments. If Transmission Provider elects to not retain any portion of such facilities, Transmission Provider shall convey and make available to Affected System Interconnection Customer such facilities as soon as practicable after Affected System Interconnection Customer's payment for such facilities.

6.4 Survival of Rights. Termination or expiration of this Agreement shall not relieve either Party of any of its liabilities and obligations arising hereunder prior to the date termination becomes effective, and each Party may take whatever judicial or administrative actions as appear necessary or desirable to enforce its rights hereunder. The applicable provisions of this Agreement will continue in effect after expiration, or early termination hereof to the extent necessary to provide for (1) final billings, billing adjustments, and other billing procedures set forth in this Agreement; (2) the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and (3) the confidentiality provisions set forth in Article 8.

Article 7

Subcontractors

7.1 Subcontractors. Nothing in this Agreement shall prevent a Party from utilizing the services of subcontractors, as it deems appropriate, to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services, and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

7.1.1 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. In accordance with the provisions of this Agreement, each Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor it hires as if no subcontract had been made. Any applicable obligation imposed by this Agreement upon a Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

7.1.2 No Third-Party Beneficiary. Except as may be specifically set forth to the contrary herein, no subcontractor or any other party is intended to be, nor will it be deemed to be, a third-party beneficiary of this Agreement.

7.1.3 No Limitation by Insurance. The obligations under this Article 7 will not be limited in any way by any limitation of any insurance policies or coverages, including any subcontractor's insurance.

Article 8

Confidentiality

8.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied to the other Party prior to the execution of this Agreement.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential. The Parties shall maintain as confidential any information that is provided and identified by a Party as Critical Energy Infrastructure Information (CEII), as that term is defined in 18 CFR 388.113(c).

Such confidentiality will be maintained in accordance with this Article 8. If requested by the receiving Party, the disclosing Party shall provide in writing, the basis for asserting that the information referred to in this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

8.1.1 Term. During the term of this Agreement, and for a period of three (3) years after the expiration or termination of this

Agreement, except as otherwise provided in this Article 8 or with regard to CEII, each Party shall hold in confidence and shall not disclose to any person Confidential Information. CEII shall be treated in accordance with FERC policies and regulations.

8.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a non-Party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this Agreement; or (6) is required, in accordance with Article 8.1.6 of this Agreement, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under this Agreement. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the receiving Party that it no longer is confidential.

8.1.3 Release of Confidential Information. No Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, agents, consultants, or to non-Parties that may be or are considering providing financing to or equity participation with Affected System Interconnection Customer, or to potential purchasers or assignees of Affected System Interconnection Customer, on a need-to-know basis in connection with this Agreement, unless such person has first been advised of the confidentiality provisions of this Article 8 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Article 8.

8.1.4 Rights. Each Party shall retain all rights, title, and interest in the Confidential Information that it discloses to the receiving Party. The disclosure by a Party to the receiving Party of Confidential Information shall not be deemed a waiver by the disclosing Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

8.1.5 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication, or dissemination. Each Party may use Confidential Information solely to

fulfill its obligations to the other Party under this Agreement or its regulatory requirements.

8.1.6 Order of Disclosure. If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires either Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the disclosing Party with prompt notice of such request(s) or requirement(s) so that the disclosing Party may seek an appropriate protective order or waive compliance with the terms of this Agreement. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

8.1.7 Termination of Agreement. Upon termination of this Agreement for any reason, each Party shall, within ten (10) Business Days of receipt of a written request from the other Party, use Reasonable Efforts to destroy, erase, or delete (with such destruction, erasure, and deletion certified in writing to the requesting Party) or return to the requesting Party any and all written or electronic Confidential Information received from the requesting Party, except that each Party may keep one copy for archival purposes, provided that the obligation to treat it as Confidential Information in accordance with this Article 8 shall survive such termination.

8.1.8 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for the other Party's Breach of its obligations under this Article 8. Each Party accordingly agrees that the disclosing Party shall be entitled to equitable relief, by way of injunction or otherwise, if the receiving Party Breaches or threatens to Breach its obligations under this Article 8, which equitable relief shall be granted without bond or proof of damages, and the breaching Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 8, but it shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. Neither Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 8.

8.1.9 Disclosure to FERC, its Staff, or a State Regulatory Body. Notwithstanding anything in this Article 8 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from a Party that is otherwise required to be maintained in confidence pursuant to this Agreement, the Party shall provide the requested

information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party to this Agreement prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Party to the Agreement when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

8.1.10 Subject to the exception in Article 8.1.9, any information that a disclosing Party claims is competitively sensitive, commercial, or financial information under this Agreement shall not be disclosed by the receiving Party to any person not employed or retained by the receiving Party, except to the extent disclosure is (1) required by law; (2) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (3) otherwise permitted by consent of the disclosing Party, such consent not to be unreasonably withheld; or (4) necessary to fulfill its obligations under this Agreement or as the Transmission Provider or a balancing authority, including disclosing the Confidential Information to a regional or national reliability organization. The Party asserting confidentiality shall notify the receiving Party in writing of the information that Party claims is confidential. Prior to any disclosures of that Party's Confidential Information under this subparagraph, or if any non-Party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the Party that received the Confidential Information from the disclosing Party agrees to promptly notify the disclosing Party in writing and agrees to assert confidentiality and cooperate with the disclosing Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order, or other reasonable measures.

Article 9

Information Access and Audit Rights

9.1 Information Access. Each Party shall make available to the other Party information necessary to verify the costs incurred by the other Party for which the requesting Party is responsible under this Agreement and carry out obligations and responsibilities under this Agreement, provided that the Parties shall not use such information for purposes other than those set forth in this Article 9.1 and to enforce their rights under this Agreement.

9.2 Audit Rights. Subject to the requirements of confidentiality under Article

8 of this Agreement, the accounts and records related to the design, engineering, procurement, and construction of the Affected System Network Upgrade(s) shall be subject to audit during the period of this Agreement and for a period of twenty-four (24) months following Transmission Provider's issuance of a final invoice in accordance with Article 4.4. Affected System Interconnection Customer at its expense shall have the right, during normal business hours, and upon prior reasonable notice to Transmission Provider, to audit such accounts and records. Any audit authorized by this Article 9.2 shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to obligations under this Agreement.

Article 10

Notices

10.1 General. Any notice, demand, or request required or permitted to be given by a Party to the other Party, and any instrument required or permitted to be tendered or delivered by a Party in writing to another Party, may be so given, tendered, or delivered, as the case may be, by depositing the same with the United States Postal Service with postage prepaid, for transmission by certified or registered mail, addressed to the Parties, or personally delivered to the Parties, at the address set out below:

To Transmission Provider:
To Affected System Interconnection Customer:

10.2 Billings and Payments. Billings and payments shall be sent to the addresses shown in Article 10.1 unless otherwise agreed to by the Parties.

10.3 Alternative Forms of Notice. Any notice or request required or permitted to be given by a Party to the other Party and not required by this Agreement to be given in writing may be so given by telephone, facsimile or email to the telephone numbers and email addresses set out below:

To Transmission Provider:
To Affected System Interconnection Customer:

10.4 Execution and Filing. Affected System Interconnection Customer shall either: (i) execute two originals of this tendered Agreement and return them to Transmission Provider; or (ii) request in writing that Transmission Provider file with FERC this Agreement in unexecuted form. As soon as practicable, but not later than ten (10) Business Days after receiving either the two executed originals of this tendered Agreement (if it does not conform with a FERC-approved standard form of this Agreement) or the request to file this Agreement unexecuted, Transmission Provider shall file this Agreement with FERC, together with its explanation of any matters as to which Affected System Interconnection Customer and Transmission Provider disagree and support for the costs that Transmission Provider proposes to charge to Affected System Interconnection Customer under this Agreement. An unexecuted version of this Agreement should contain terms and conditions deemed appropriate by Transmission Provider for the Affected System Interconnection Customer's generating facility. If the Parties agree to proceed with design, procurement, and construction of facilities and upgrades under the agreed-upon terms of the unexecuted version of this Agreement, they may proceed pending FERC action.

Article 11

Miscellaneous

11.1 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations and the organizational nature of each Party. All of these provisions, to the extent practicable,

shall be consistent with the provisions of this LGIP.

[Signature Page to Follow]

In witness whereof, the Parties have executed this Agreement in multiple originals, each of which shall constitute and be an original Agreement among the Parties.

Attachment A to Appendix 11

Two-Party Affected System Facilities Construction Agreement

Affected System Network Upgrade(s), Cost Estimates and Responsibility, Construction Schedule and Monthly Payment Schedule

This Appendix A is a part of the Affected System Facilities Construction Agreement between Affected System Interconnection Customer and Transmission Provider.

1.1 Affected System Network Upgrade(s) to be installed by Transmission Provider.

{description}

1.2 First Equipment Order (including permitting).

{description}

1.2.1. Permitting and Land Rights—Transmission Provider Affected System Network Upgrade(s)

{description}

1.3 Construction Schedule. Where applicable, construction of the Affected System Network Upgrade(s) is scheduled as follows and will be periodically updated as necessary:

TABLE 1—TRANSMISSION PROVIDER CONSTRUCTION ACTIVITIES

Milestone number	Description	Start date	End date

Note: Construction schedule assumes that Transmission Provider has obtained final authorizations and security from Affected System Interconnection Customer and all necessary permits from Governmental Authorities as necessary prerequisites to commence construction of any of the Affected System Network Upgrade(s).

- 1.4 Payment Schedule.
- 1.4.1 Timing of and Adjustments to Affected System Interconnection Customer's Payments and Security.
{description}
- 1.4.2 Monthly Payment Schedule.
Affected System Interconnection Customer's payment schedule is as follows.
{description}

TABLE 2—AFFECTED SYSTEM INTER-CONNECTION CUSTOMER'S PAYMENT/ SECURITY OBLIGATIONS FOR AFFECTED SYSTEM NETWORK UPGRADE(S).

Milestone number	Description	Date
	.	
	.	
	.	
	.	
	.	

Note: Affected System Interconnection Customer's payment or provision of security as provided in this Agreement operates as a condition precedent to Transmission Provider's obligations to construct any Affected System Network Upgrade(s), and failure to meet this schedule will constitute a Breach pursuant to Article 5.1 of this Agreement.

- 1.5 Permits, Licenses, and Authorizations.
{description}

Attachment B to Appendix 11
Two-Party Affected System Facilities Construction Agreement
Notification of Completed Construction

This Appendix B is a part of the Affected System Facilities Construction Agreement between Affected System Interconnection Customer and Transmission Provider. Where applicable, when Transmission Provider has completed construction of the Affected System Network Upgrade(s), Transmission Provider shall send notice to Affected System Interconnection Customer in substantially the form following:

{Date}
{Affected System Interconnection Customer Address}
Re: Completion of Affected System Network Upgrade(s)
Dear {Name or Title}:

This letter is sent pursuant to the Affected System Facilities Construction Agreement between {Transmission Provider} and {Affected System Interconnection Customer}, dated _____, 20____.

On {Date}, Transmission Provider completed to its satisfaction all work on the Affected System Network Upgrade(s) required to facilitate the safe and reliable interconnection and operation of Affected System Interconnection Customer's {description of generating facility}. Transmission Provider confirms that the Affected System Network Upgrade(s) are in place.

Thank you.

Appendix 12 to LGIP
Multiparty Affected System Facilities Construction Agreement

This agreement is made and entered into this _____ day of _____, 20____ by and among _____, organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); _____, a _____ organized and existing under the laws of the State of _____ (Affected System Interconnection Customer); and _____, an entity organized under the laws of the State of _____ (Transmission Provider). Affected System Interconnection Customers and Transmission Provider each may be referred to as a "Party" or collectively as the "Parties." When it is not important to differentiate among them, Affected System Interconnection Customers each may be referred to as "Affected System Interconnection Customer" or collectively as "Affected System Interconnection Customers."

Recitals

Whereas, Affected System Interconnection Customers are proposing to develop {description of generating facilities or generating capacity additions to an existing

generating facility}, consistent with the interconnection requests submitted by Affected System Interconnection Customers to {name of host transmission provider}, dated _____, for which {name of host transmission provider} found impacts on Transmission Provider's Transmission System; and

Whereas, Affected System Interconnection Customers desire to interconnect the {generating facilities} to {name of host transmission provider}'s transmission system; and

Whereas, additions, modifications, and upgrade(s) must be made to certain existing facilities of Transmission Provider's Transmission System to accommodate such interconnection; and

Whereas, Affected System Interconnection Customers have requested, and Transmission Provider has agreed, to enter into this Agreement for the purpose of facilitating the construction of necessary Affected System Network Upgrade(s);

Now, therefore, in consideration of and subject to the mutual covenants contained herein, the Parties agree as follows:

Article 1
Definitions

When used in this Agreement, with initial capitalization, the terms specified and not otherwise defined in this Agreement shall have the meanings indicated in this LGIP.

Article 2
Term of Agreement

2.1 Effective Date. This Agreement shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by FERC.

2.2 Term.

2.2.1 General. This Agreement shall become effective as provided in Article 2.1 and shall continue in full force and effect until the earlier of (1) the final repayment, where applicable, by Transmission Provider of the amount funded by Affected System Interconnection Customers for Transmission Provider's design, procurement, construction, and installation of the Affected System Network Upgrade(s) provided in Appendix A; (2) the Parties agree to mutually terminate this Agreement; (3) earlier termination is permitted or provided for under Appendix A of this Agreement; or (4) Affected System Interconnection Customers terminate this Agreement after providing Transmission Provider with written notice at least sixty (60) Calendar Days prior to the proposed termination date, provided that Affected System Interconnection Customers have no outstanding contractual obligations to Transmission Provider under this Agreement. No termination of this Agreement shall be effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination. The term of this Agreement may be adjusted upon mutual agreement of the Parties if the commercial operation date(s) for the {generating facilities} is adjusted in accordance with the rules and procedures established by {name of host transmission provider} or the in-service

date for the Affected System Network Upgrade(s) is adjusted in accordance with the rules and procedures established by Transmission Provider.

2.2.2 Termination Upon Default. Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 5 of this Agreement where Breach and Breaching Party are defined in Article 5. Defaulting Party shall mean the Party that is in Default. In the event of a Default by a Party, each non-Defaulting Party shall have the termination rights described in Articles 5 and 6; provided, however, Transmission Provider may not terminate this Agreement if an Affected System Interconnection Customer is the Defaulting Party and compensates Transmission Provider within thirty (30) Calendar Days for the amount of damages billed to Affected System Interconnection Customer(s) by Transmission Provider for any such damages, including costs and expenses incurred by Transmission Provider as a result of such Default. Notwithstanding the foregoing, Default by one or more Affected System Interconnection Customers shall not provide the other Affected System Interconnection Customer(s), either individually or in concert, with the right to terminate the entire Agreement. The non-Defaulting Party/Parties may, individually or in concert, initiate the removal of an Affected System Interconnection Customer that is a Defaulting Party from this Agreement. Transmission Provider shall not terminate this Agreement or the participation of any Affected System Interconnection Customer without provision being made for Transmission Provider to be fully reimbursed for all of its costs incurred under this Agreement.

2.2.3 Consequences of Termination. In the event of a termination by a Party, other than a termination by Affected System Interconnection Customer(s) due to a Default by Transmission Provider, each Affected System Interconnection Customer whose participation in this Agreement is terminated shall be responsible for the payment to Transmission Provider of all amounts then due and payable for construction and installation of the Affected System Network Upgrade(s) (including, without limitation, any equipment ordered related to such construction), plus all out-of-pocket expenses incurred by Transmission Provider in connection with the construction and installation of the Affected System Network Upgrade(s), through the date of termination, and, in the event of the termination of the entire Agreement, any actual costs which Transmission Provider reasonably incurs in (1) winding up work and construction demobilization and (2) ensuring the safety of persons and property and the integrity and safe and reliable operation of Transmission Provider's Transmission System. Transmission Provider shall use Reasonable Efforts to minimize such costs. The cost responsibility of other Affected System Interconnection Customers shall be adjusted, as necessary, based on the payments by an Affected System Interconnection Customer that is terminated from the Agreement.

2.2.4 Reservation of Rights. Transmission Provider shall have the right to make a

unilateral filing with FERC to modify this Agreement with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and Affected System Interconnection Customers shall have the right to make a unilateral filing with FERC to modify this Agreement pursuant to section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this Agreement shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations thereunder, except to the extent that the Parties otherwise mutually agree as provided herein.

2.3 Filing. Transmission Provider shall file this Agreement (and any amendment hereto) with the appropriate Governmental Authority, if required. Affected System Interconnection Customers may request that any information so provided be subject to the confidentiality provisions of Article 8. Each Affected System Interconnection Customer that has executed this Agreement, or any amendment thereto, shall reasonably cooperate with Transmission Provider with respect to such filing and to provide any information reasonably requested by Transmission Provider needed to comply with applicable regulatory requirements.

2.4 Survival. This Agreement shall continue in effect after termination, to the extent necessary, to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this Agreement; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this Agreement or other applicable agreements, to disconnect, remove, or salvage its own facilities and equipment.

2.5 Termination Obligations. Upon any termination pursuant to this Agreement or termination of the participation in this Agreement of an Affected System Interconnection Customer, each Affected System Interconnection Customer shall be responsible for the payment of its proportionate share of all costs or other contractual obligations incurred prior to the termination date, including previously incurred capital costs, penalties for early termination, and costs of removal and site restoration. The cost responsibility of the other Affected System Interconnection Customers shall be adjusted as necessary.

Article 3

Construction of Affected System Network Upgrade(s)

3.1 Construction.

3.1.1 Transmission Provider Obligations. Transmission Provider shall (or shall cause such action to) design, procure, construct,

and install, and Affected System Interconnection Customers shall pay, consistent with Article 3.2, the costs of all Affected System Network Upgrade(s) identified in Appendix A. All Affected System Network Upgrade(s) designed, procured, constructed, and installed by Transmission Provider pursuant to this Agreement shall satisfy all requirements of applicable safety and/or engineering codes and comply with Good Utility Practice, and further, shall satisfy all Applicable Laws and Regulations. Transmission Provider shall not be required to undertake any action which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, or any Applicable Laws and Regulations.

3.1.2 Suspension of Work.

3.1.2.1 Right to Suspend. Affected System Interconnection Customers must jointly provide to Transmission Provider written notice of their request for suspension. Only the milestones described in the Appendices of this Agreement are subject to suspension under this Article 3.1.2. Affected System Network Upgrade(s) will be constructed on the schedule described in the Appendices of this Agreement unless: (1) construction is prevented by the order of a Governmental Authority; (2) the Affected System Network Upgrade(s) are not needed by any other Interconnection Customer; or (3) Transmission Provider determines that a Force Majeure event prevents construction. In the event of (1), (2), or (3), any security paid to Transmission Provider under Article 4.1 of this Agreement shall be released by Transmission Provider upon the determination by Transmission Provider that the Affected System Network Upgrade(s) will no longer be constructed. If suspension occurs, Affected System Interconnection Customers shall be responsible for the costs which Transmission Provider incurs (i) in accordance with this Agreement prior to the suspension; (ii) in suspending such work, including any costs incurred to perform such work as may be necessary to ensure the safety of persons and property and the integrity of Transmission Provider's Transmission System and, if applicable, any costs incurred in connection with the cancellation of contracts and orders for material which Transmission Provider cannot reasonably avoid; and (iii) reasonably incurs in winding up work and construction demobilization; provided, however, that, prior to canceling any such contracts or orders, Transmission Provider shall obtain Affected System Interconnection Customers' authorization. Affected System Interconnection Customers shall be responsible for all costs incurred in connection with Affected System Interconnection Customers' failure to authorize cancellation of such contracts or orders.

Interest on amounts paid by Affected System Interconnection Customers to Transmission Provider for the design, procurement, construction, and installation of the Affected System Network Upgrade(s) shall not accrue during periods in which

Affected System Interconnection Customers have suspended construction under this Article 3.1.2.

Transmission Provider shall invoice Affected System Interconnection Customers pursuant to Article 4 and will use Reasonable Efforts to minimize its costs. In the event Affected System Interconnection Customers suspend work by Affected System Transmission Provider required under this Agreement pursuant to this Article 3.1.2.1, and have not requested Affected System Transmission Provider to recommence the work required under this Agreement on or before the expiration of three (3) years following commencement of such suspension, this Agreement shall be deemed terminated. The three-year period shall begin on the date the suspension is requested, or the date of the written notice to Affected System Transmission Provider, whichever is earlier, if no effective date of suspension is specified.

3.1.2.2 Recommencing of Work. If Affected System Interconnection Customers request that Transmission Provider recommence construction of Affected System Network Upgrade(s), Transmission Provider shall have no obligation to afford such work the priority it would have had but for the prior actions of Affected System Interconnection Customers to suspend the work. In such event, Affected System Interconnection Customers shall be responsible for any costs incurred in recommencing the work. All recommended work shall be completed pursuant to an amended schedule for the interconnection agreed to by the Parties. Transmission Provider has the right to conduct a restudy of the Affected System Study if conditions have materially changed subsequent to the request to suspend. Affected System Interconnection Customers shall be responsible for the costs of any studies or restudies required.

3.1.2.3 Right to Suspend Due to Default. Transmission Provider reserves the right, upon written notice to Affected System Interconnection Customers, to suspend, at any time, work by Transmission Provider due to a Default by Affected System Interconnection Customer(s). Defaulting-Affected System Interconnection Customer(s) shall be responsible for any additional expenses incurred by Transmission Provider associated with the construction and installation of the Affected System Network Upgrade(s) (as set forth in Article 2.2.3) upon the occurrence of a Default pursuant to Article 5. Any form of suspension by Transmission Provider shall not be barred by Articles 2.2.2, 2.2.3, or 5.2.2, nor shall it affect Transmission Provider's right to terminate the work or this Agreement pursuant to Article 6.

3.1.3 Construction Status. Transmission Provider shall keep Affected System Interconnection Customers advised periodically as to the progress of its design, procurement, and construction efforts, as described in Appendix A. An Affected System Interconnection Customer may, at any time and reasonably, request a progress report from Transmission Provider. If, at any time, an Affected System Interconnection

Customer determines that the completion of the Affected System Network Upgrade(s) will not be required until after the specified in-service date, such Affected System Interconnection Customer will provide written notice to all other Parties of such later date for which the completion of the Affected System Network Upgrade(s) would be required. Transmission Provider may delay the in-service date of the Affected System Network Upgrade(s) accordingly, but only if agreed to by all other Affected System Interconnection Customers.

3.1.4 Timely Completion. Transmission Provider shall use Reasonable Efforts to design, procure, construct, install, and test the Affected System Network Upgrade(s) in accordance with the schedule set forth in Appendix A, which schedule may be revised from time to time by mutual agreement of the Parties. If any event occurs that will affect the time or ability to complete the Affected System Network Upgrade(s), Transmission Provider shall promptly notify all other Parties. In such circumstances, Transmission Provider shall, within fifteen (15) Calendar Days of such notice, convene a meeting with Affected System Interconnection Customers to evaluate the alternatives available to Affected System Interconnection Customers. Transmission Provider shall also make available to Affected System Interconnection Customers all studies and work papers related to the event and corresponding delay, including all information that is in the possession of Transmission Provider that is reasonably needed by Affected System Interconnection Customers to evaluate alternatives, subject to confidentiality arrangements consistent with Article 8. Transmission Provider shall, at any Affected System Interconnection Customer's request and expense, use Reasonable Efforts to accelerate its work under this Agreement to meet the schedule set forth in Appendix A, provided that (1) Affected System Interconnection Customers jointly authorize such actions, such authorizations to be withheld, conditioned, or delayed by a given Affected System Interconnection Customer only if it can demonstrate that the acceleration would have a material adverse effect on it; and (2) the requesting Affected System Interconnection Customer(s) funds the costs associated therewith in advance, or all Affected System Interconnection Customers agree in advance to fund such costs based on such other allocation method as they may adopt.

3.2 Interconnection Costs.

3.2.1 Costs. Affected System Interconnection Customers shall pay to Transmission Provider costs (including taxes and financing costs) associated with seeking and obtaining all necessary approvals and of designing, engineering, constructing, and testing the Affected System Network Upgrade(s), as identified in Appendix A, in accordance with the cost recovery method provided herein. Except as expressly otherwise agreed, Affected System Interconnection Customers shall be collectively responsible for these costs, based on their proportionate share of cost responsibility, as provided in Appendix A. Unless Transmission Provider elects to fund

the Affected System Network Upgrade(s), they shall be initially funded by the applicable Affected System Interconnection Customer.

3.2.1.1 Lands of Other Property Owners. If any part of the Affected System Network Upgrade(s) is to be installed on property owned by persons other than Affected System Interconnection Customers or Transmission Provider, Transmission Provider shall, at Affected System Interconnection Customers' expense, use efforts similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority to the extent permitted and consistent with Applicable Laws and Regulations and, to the extent consistent with such Applicable Laws and Regulations, to procure from such persons any rights of use, licenses, rights-of-way, and easements that are necessary to construct, operate, maintain, test, inspect, replace, or remove the Affected System Network Upgrade(s) upon such property.

3.2.2 Repayment.

3.2.2.1 Repayment. Consistent with articles 11.4.1 and 11.4.2 of the Transmission Provider's pro forma LGIA, each Affected System Interconnection Customer shall be entitled to a cash repayment by Transmission Provider of the amount each Affected System Interconnection Customer paid to Transmission Provider, if any, for the Affected System Network Upgrade(s), including any tax gross-up or other tax-related payments associated with the Affected System Network Upgrade(s), and not refunded to Affected System Interconnection Customer pursuant to Article 3.3.1 or otherwise. The Parties may mutually agree to a repayment schedule, to be outlined in Appendix A, not to exceed twenty (20) years from the commercial operation date, for the complete repayment for all applicable costs associated with the Affected System Network Upgrade(s). Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19 a(a)(2)(iii) from the date of any payment for Affected System Network Upgrade(s) through the date on which Affected System Interconnection Customers receive a repayment of such payment pursuant to this subparagraph. Interest shall not accrue during periods in which Affected System Interconnection Customers have suspended construction pursuant to Article 3.1.2.1. Affected System Interconnection Customers may assign such repayment rights to any person.

3.2.2.2 Impact of Failure to Achieve Commercial Operation. If an Affected System Interconnection Customer's generating facility fails to achieve commercial operation, but it or another generating facility is later constructed and makes use of the Affected System Network Upgrade(s), Transmission Provider shall at that time reimburse such Affected System Interconnection Customers for the portion of the Affected System Network Upgrade(s) it funded. Before any such reimbursement can occur, Affected System Interconnection Customer (or the entity that ultimately constructs the generating facility, if different),

is responsible for identifying the entity to which the reimbursement must be made.

3.3 Taxes.

3.3.1 *Indemnification for Contributions in Aid of Construction.* With regard only to payments made by Affected System Interconnection Customers to Transmission Provider for the installation of the Affected System Network Upgrade(s), Transmission Provider shall not include a gross-up for income taxes in the amounts it charges Affected System Interconnection Customers for the installation of the Affected System Network Upgrade(s) unless (1) Transmission Provider has determined, in good faith, that the payments or property transfers made by Affected System Interconnection Customers to Transmission Provider should be reported as income subject to taxation, or (2) any Governmental Authority directs Transmission Provider to report payments or property as income subject to taxation. Affected System Interconnection Customers shall reimburse Transmission Provider for such costs on a fully grossed-up basis, in accordance with this Article, within thirty (30) Calendar Days of receiving written notification from Transmission Provider of the amount due, including detail about how the amount was calculated.

The indemnification obligation shall terminate at the earlier of (1) the expiration of the ten (10)-year testing period and the applicable statute of limitation, as it may be extended by Transmission Provider upon request of the Internal Revenue Service, to keep these years open for audit or adjustment, or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article.

Notwithstanding the foregoing provisions of this Article 3.3.1, and to the extent permitted by law, to the extent that the receipt of such payments by Transmission Provider is determined by any Governmental Authority to constitute income by Transmission Provider subject to taxation, Affected System Interconnection Customers shall protect, indemnify, and hold harmless Transmission Provider and its Affiliates, from all claims by any such Governmental Authority for any tax, interest, and/or penalties associated with such determination. Upon receiving written notification of such determination from the Governmental Authority, Transmission Provider shall provide Affected System Interconnection Customers with written notification within thirty (30) Calendar Days of such determination and notification. Transmission Provider, upon the timely written request by any one or more Affected System Interconnection Customer(s) and at the expense of such Affected System Interconnection Customer(s), shall appeal, protest, seek abatement of, or otherwise oppose such determination. Transmission Provider reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement or other contest, including the compromise or settlement of the claim; provided that Transmission Provider shall cooperate and consult in good faith with the requesting Affected System Interconnection Customer(s) regarding the conduct of such contest.

Affected System Interconnection Customer(s) shall not be required to pay Transmission Provider for the tax, interest, and/or penalties prior to the seventh (7th) Calendar Day before the date on which Transmission Provider (1) is required to pay the tax, interest, and/or penalties or other amount in lieu thereof pursuant to a compromise or settlement of the appeal, protest, abatement, or other contest; (2) is required to pay the tax, interest, and/or penalties as the result of a final, non-appealable order by a Governmental Authority; or (3) is required to pay the tax, interest, and/or penalties as a prerequisite to an appeal, protest, abatement, or other contest. In the event such appeal, protest, abatement, or other contest results in a determination that Transmission Provider is not liable for any portion of any tax, interest, and/or penalties for which any Affected System Interconnection Customer(s) has already made payment to Transmission Provider, Transmission Provider shall promptly refund to such Affected System Interconnection Customer(s) any payment attributable to the amount determined to be non-taxable, plus any interest (calculated in accordance with 18 CFR 35.19(a)(2)(iii)) or other payments Transmission Provider receives or to which Transmission Provider may be entitled with respect to such payment. Each Affected System Interconnection Customer shall provide Transmission Provider with credit assurances sufficient to meet each Affected System Interconnection Customer's estimated liability for reimbursement of Transmission Provider for taxes, interest, and/or penalties under this Article 3.3.1. Such estimated liability shall be stated in Appendix A.

To the extent that Transmission Provider is a limited liability company and not a corporation, and has elected to be taxed as a partnership, then the following shall apply: Transmission Provider represents, and the Parties acknowledge, that Transmission Provider is a limited liability company and is treated as a partnership for federal income tax purposes. Any payment made by Affected System Interconnection Customers to Transmission Provider for Affected System Network Upgrade(s) is to be treated as an upfront payment. It is anticipated by the Parties that any amounts paid by each Affected System Interconnection Customer to Transmission Provider for Affected System Network Upgrade(s) will be reimbursed to such Affected System Interconnection Customer in accordance with the terms of this Agreement, provided such Affected System Interconnection Customer fulfills its obligations under this Agreement.

3.3.2 *Private Letter Ruling.* At the request and expense of any Affected System Interconnection Customer(s), Transmission Provider shall file with the Internal Revenue Service a request for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by such Affected System Interconnection Customer(s) to Transmission Provider under this Agreement are subject to federal income taxation. Each Affected System Interconnection Customer desiring such a request will prepare the initial draft of the request for a private letter ruling and will certify under penalties of perjury that all

facts represented in such request are true and accurate to the best of such Affected System Interconnection Customer's knowledge. Transmission Provider and such Affected System Interconnection Customer(s) shall cooperate in good faith with respect to the submission of such request.

3.3.3 *Other Taxes.* Upon the timely request by any one or more Affected System Interconnection Customer(s), and at such Affected System Interconnection Customer(s)' sole expense, Transmission Provider shall appeal, protest, seek abatement of, or otherwise contest any tax (other than federal or state income tax) asserted or assessed against Transmission Provider for which such Affected System Interconnection Customer(s) may be required to reimburse Transmission Provider under the terms of this Agreement. Affected System Interconnection Customer(s) who requested the action shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement, or other contest. The requesting Affected System Interconnection Customer(s) and Transmission Provider shall cooperate in good faith with respect to any such contest. Unless the payment of such taxes is a prerequisite to an appeal or abatement or cannot be deferred, no amount shall be payable by Affected System Interconnection Customer(s) to Transmission Provider for such taxes until they are assessed by a final, non-appealable order by any court or agency of competent jurisdiction. In the event that a tax payment is withheld and ultimately due and payable after appeal, Affected System Interconnection Customer(s) will be responsible for all taxes, interest, and penalties, other than penalties attributable to any delay caused by Transmission Provider. Each Party shall cooperate with the other Party to maintain each Party's tax status. Nothing in this Agreement is intended to adversely affect any Party's tax-exempt status with respect to the issuance of bonds including, but not limited to, local furnishing bonds, as described in section 142(f) of the Internal Revenue Code.

Article 4

Security, Billing, and Payments

4.1 *Provision of Security.* By the earlier of (1) thirty (30) Calendar Days prior to the due date for each Affected System Interconnection Customer's first payment under the payment schedule specified in Appendix A, or (2) the first date specified in Appendix A for the ordering of equipment by Transmission Provider for installing the Affected System Network Upgrade(s), each Affected System Interconnection Customer shall provide Transmission Provider, at each Affected System Interconnection Customer's option, a guarantee, a surety bond, letter of credit, or other form of security that is reasonably acceptable to Transmission Provider. Such security for payment shall be in an amount sufficient to cover the costs for constructing, procuring, and installing the applicable portion of Affected System Network Upgrade(s) and shall be reduced on a dollar-for-dollar basis for payments made to Transmission Provider for these purposes.

The guarantee must be made by an entity that meets the creditworthiness requirements of Transmission Provider and contain terms and conditions that guarantee payment of any amount that may be due from such Affected System Interconnection Customer, up to an agreed-to maximum amount. The letter of credit must be issued by a financial institution reasonably acceptable to Transmission Provider and must specify a reasonable expiration date. The surety bond must be issued by an insurer reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

4.2 *Invoice.* Each Party shall submit to the other Parties, on a monthly basis, invoices of amounts due, if any, for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to another Party under this Agreement, including interest payments, shall be netted so that only the net amount remaining due shall be paid by the owing Party.

4.3 *Payment.* Invoices shall be rendered to the paying Party at the address specified by the Parties. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by a Party will not constitute a waiver of any rights or claims that Party may have under this Agreement.

4.4 *Final Invoice.* Within six (6) months after completion of the construction of the Affected System Network Upgrade(s) Transmission Provider shall provide an invoice of the final cost of the construction of the Affected System Network Upgrade(s) and shall set forth such costs in sufficient detail to enable each Affected System Interconnection Customer to compare the actual costs with the estimates and to ascertain deviations, if any, from the cost estimates. Transmission Provider shall refund, with interest (calculated in accordance with 18 CFR 35.19a(a)(2)(iii)), to each Affected System Interconnection Customer any amount by which the actual payment by Affected System Interconnection Customer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

4.5 *Interest.* Interest on any unpaid amounts shall be calculated in accordance with 18 CFR 35.19a(a)(2)(iii).

4.6 *Payment During Dispute.* In the event of a billing dispute among the Parties, Transmission Provider shall continue to construct the Affected System Network Upgrade(s) under this Agreement as long as each Affected System Interconnection Customer: (1) continues to make all payments not in dispute; and (2) pays to Transmission Provider or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If any Affected System

Interconnection Customer fails to meet these two requirements, then Transmission Provider may provide notice to such Affected System Interconnection Customer of a Default pursuant to Article 5. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to another Party shall pay the amount due with interest calculated in accordance with the methodology set forth in 18 CFR 35.19a(a)(2)(iii).

Article 5

Breach, Cure, and Default

5.1 *Events of Breach.* A Breach of this Agreement shall include the:

(a) Failure to pay any amount when due;

(b) Failure to comply with any material term or condition of this Agreement, including but not limited to any material Breach of a representation, warranty, or covenant made in this Agreement;

(c) Failure of a Party to provide such access rights, or a Party's attempt to revoke access or terminate such access rights, as provided under this Agreement; or

(d) Failure of a Party to provide information or data to another Party as required under this Agreement, provided the Party entitled to the information or data under this Agreement requires such information or data to satisfy its obligations under this Agreement.

5.2 *Definition.* Breaching Party shall mean the Party that is in Breach.

5.3 *Notice of Breach, Cure, and Default.* Upon the occurrence of an event of Breach, any Party aggrieved by the Breach, when it becomes aware of the Breach, shall give written notice of the Breach to the Breaching Party and to any other person representing a Party to this Agreement identified in writing to the other Party in advance. Such notice shall set forth, in reasonable detail, the nature of the Breach, and where known and applicable, the steps necessary to cure such Breach.

5.2.1 Upon receiving written notice of the Breach hereunder, the Breaching Party shall have a period to cure such Breach (hereinafter referred to as the "Cure Period") which shall be sixty (60) Calendar Days. If an Affected System Interconnection Customer is the Breaching Party and the Breach results from a failure to provide payments or security under Article 4.1 of this Agreement, the other Affected System Interconnection Customers, either individually or in concert, may cure the Breach by paying the amounts owed or by providing adequate security, without waiver of contribution rights against the breaching Affected System Interconnection Customer. Such cure for the Breach of an Affected System Interconnection Customer is subject to the reasonable consent of Transmission Provider. Transmission Provider may also cure such Breach by funding the proportionate share of the Affected System Network Upgrade costs related to the Breach of Affected System Interconnection Customer. Transmission Provider must notify all Parties that it will exercise this option within thirty (30) Calendar Days of notification that an Affected System Interconnection Customer has failed to provide payments or security under Article 4.1.

5.2.2 In the event the Breach is not cured within the Cure Period, the Breaching Party will be in Default of this Agreement, and the non-Defaulting Parties may (1) act in concert to amend the Agreement to remove an Affected System Interconnection Customer that is in Default from this Agreement for cause and to make other changes as necessary, or (2) either in concert or individually take whatever action at law or in equity as may appear necessary or desirable to enforce the performance or observance of any rights, remedies, obligations, agreement, or covenants under this Agreement.

5.3 *Rights in the Event of Default.*

Notwithstanding the foregoing, upon the occurrence of Default, the non-Defaulting Parties shall be entitled to exercise all rights and remedies it may have in equity or at law.

Article 6

Termination of Agreement

6.1 *Expiration of Term.* Except as otherwise specified in this Article 6, the Parties' obligations under this Agreement shall terminate at the conclusion of the term of this Agreement.

6.2 *Termination and Removal.* Subject to the limitations set forth in Article 6.3, in the event of a Default, termination of this Agreement, as to a given Affected System Interconnection Customer or in its entirety, shall require a filing at FERC of a notice of termination, which filing must be accepted for filing by FERC.

6.3 *Disposition of Facilities Upon Termination of Agreement.*

6.3.1 *Transmission Provider Obligations.* Upon termination of this Agreement, unless otherwise agreed to by the Parties in writing, Transmission Provider:

(a) shall, prior to the construction and installation of any portion of the Affected System Network Upgrade(s) and to the extent possible, cancel any pending orders of, or return, such equipment or material for such Affected System Network Upgrade(s);

(b) may keep in place any portion of the Affected System Network Upgrade(s) already constructed and installed; and,

(c) shall perform such work as may be necessary to ensure the safety of persons and property and to preserve the integrity of Transmission Provider's Transmission System (e.g., construction demobilization to return the system to its original state, wind-up work).

6.3.2 *Affected System Interconnection Customer Obligations.* Upon billing by Transmission Provider, each Affected System Interconnection Customer shall reimburse Transmission Provider for its share of any costs incurred by Transmission Provider in performance of the actions required or permitted by Article 6.3.1 and for its share of the cost of any Affected System Network Upgrade(s) described in Appendix A. Transmission Provider shall use Reasonable Efforts to minimize costs and shall offset the amounts owed by any salvage value of facilities, if applicable. Each Affected System Interconnection Customer shall pay these costs pursuant to Article 4.3 of this Agreement.

6.3.3 *Pre-construction or Installation.* Upon termination of this Agreement and

prior to the construction and installation of any portion of the Affected System Network Upgrade(s), Transmission Provider may, at its option, retain any portion of such Affected System Network Upgrade(s) not cancelled or returned in accordance with Article 6.3.1(a), in which case Transmission Provider shall be responsible for all costs associated with procuring such Affected System Network Upgrade(s). To the extent that an Affected System Interconnection Customer has already paid Transmission Provider for any or all of such costs, Transmission Provider shall refund Affected System Interconnection Customer for those payments. If Transmission Provider elects to not retain any portion of such facilities, and one or more of Affected System Interconnection Customers wish to purchase such facilities, Transmission Provider shall convey and make available to the applicable Affected System Interconnection Customer(s) such facilities as soon as practicable after Affected System Interconnection Customer(s)' payment for such facilities.

6.4 Survival of Rights. Termination or expiration of this Agreement shall not relieve any Party of any of its liabilities and obligations arising hereunder prior to the date termination becomes effective, and each Party may take whatever judicial or administrative actions as appear necessary or desirable to enforce its rights hereunder. The applicable provisions of this Agreement will continue in effect after expiration, or early termination hereof, to the extent necessary to provide for (1) final billings, billing adjustments, and other billing procedures set forth in this Agreement; (2) the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this Agreement was in effect; and (3) the confidentiality provisions set forth in Article 8.

Article 7

Subcontractors

7.1 Subcontractors. Nothing in this Agreement shall prevent a Party from utilizing the services of subcontractors, as it deems appropriate, to perform its obligations under this Agreement; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this Agreement in providing such services, and each Party shall remain primarily liable to the other Parties for the performance of such subcontractor.

7.1.1 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this Agreement. In accordance with the provisions of this Agreement, each Party shall be fully responsible to the other Parties for the acts or omissions of any subcontractor it hires as if no subcontract had been made. Any applicable obligation imposed by this Agreement upon a Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

7.1.2 No Third-Party Beneficiary. Except as may be specifically set forth to the contrary herein, no subcontractor or any

other party is intended to be, nor will it be deemed to be, a third-party beneficiary of this Agreement.

7.1.3 No Limitation by Insurance. The obligations under this Article 7 will not be limited in any way by any limitation of any insurance policies or coverages, including any subcontractor's insurance.

Article 8

Confidentiality

8.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied to the other Parties prior to the execution of this Agreement.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential. The Parties shall maintain as confidential any information that is provided and identified by a Party as Critical Energy Infrastructure Information (CEII), as that term is defined in 18 CFR 388.113(c).

Such confidentiality will be maintained in accordance with this Article 8. If requested by the receiving Party, the disclosing Party shall provide in writing, the basis for asserting that the information referred to in this Article warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

8.1.1 Term. During the term of this Agreement, and for a period of three (3) years after the expiration or termination of this Agreement, except as otherwise provided in this Article 8 or with regard to CEII, each Party shall hold in confidence and shall not disclose to any person Confidential Information. CEII shall be treated in accordance with FERC policies and regulations.

8.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a non-Party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this Agreement; or (6) is required, in accordance with Article 8.1.6 of this Agreement, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal

proceeding establishing rights and obligations under this Agreement. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the receiving Party that it no longer is confidential.

8.1.3 Release of Confidential Information. No Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, agents, consultants, or to non-Parties that may be or are considering providing financing to or equity participation with Affected System Interconnection Customer(s), or to potential purchasers or assignees of Affected System Interconnection Customer(s), on a need-to-know basis in connection with this Agreement, unless such person has first been advised of the confidentiality provisions of this Article 8 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Article 8.

8.1.4 Rights. Each Party shall retain all rights, title, and interest in the Confidential Information that it discloses to the receiving Party. The disclosure by a Party to the receiving Party of Confidential Information shall not be deemed a waiver by the disclosing Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

8.1.5 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication, or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under this Agreement or its regulatory requirements.

8.1.6 Order of Disclosure. If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires any Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the disclosing Party with prompt notice of such request(s) or requirement(s) so that the disclosing Party may seek an appropriate protective order or waive compliance with the terms of this Agreement. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

8.1.7 Termination of Agreement. Upon termination of this Agreement for any reason, each Party shall, within ten (10) Business Days of receipt of a written request from the other Party, use Reasonable Efforts to destroy, erase, or delete (with such

destruction, erasure, and deletion certified in writing to the requesting Party) or return to the requesting Party any and all written or electronic Confidential Information received from the requesting Party, except that each Party may keep one copy for archival purposes, provided that the obligation to treat it as Confidential Information in accordance with this Article 8 shall survive such termination.

8.1.8 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for another Party's Breach of its obligations under this Article 8. Each Party accordingly agrees that the disclosing Party shall be entitled to equitable relief, by way of injunction or otherwise, if the receiving Party Breaches or threatens to Breach its obligations under this Article 8, which equitable relief shall be granted without bond or proof of damages, and the Breaching Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 8, but it shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 8.

8.1.9 Disclosure to FERC, its Staff, or a State Regulatory Body. Notwithstanding anything in this Article 8 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from a Party that is otherwise required to be maintained in confidence pursuant to this Agreement, the Party shall provide the requested information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Parties to this Agreement prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Parties to the Agreement when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

8.1.10 Subject to the exception in Article 8.1.9, any information that a disclosing Party claims is competitively sensitive, commercial, or financial information under this Agreement shall not be disclosed by the receiving Party to any person not employed or retained by the receiving Party, except to the extent disclosure is (1) required by law;

(2) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (3) otherwise permitted by consent of the disclosing Party, such consent not to be unreasonably withheld; or (4) necessary to fulfill its obligations under this Agreement or as Transmission Provider or a balancing authority, including disclosing the Confidential Information to a regional or national reliability organization. The Party asserting confidentiality shall notify the receiving Party in writing of the information that Party claims is confidential. Prior to any disclosures of that Party's Confidential Information under this subparagraph, or if any non-Party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the Party that received the Confidential Information from the disclosing Party agrees to promptly notify the disclosing Party in writing and agrees to assert confidentiality and cooperate with the disclosing Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order, or other reasonable measures.

Article 9

Information Access and Audit Rights

9.1 Information Access. Each Party shall make available to the other Parties information necessary to verify the costs incurred by the other Parties for which the requesting Party is responsible under this Agreement and carry out obligations and responsibilities under this Agreement, provided that the Parties shall not use such information for purposes other than those set forth in this Article 9.1 and to enforce their rights under this Agreement.

9.2 Audit Rights. Subject to the requirements of confidentiality under Article 8 of this Agreement, the accounts and records related to the design, engineering, procurement, and construction of the Affected System Network Upgrade(s) shall be subject to audit during the period of this Agreement and for a period of twenty-four (24) months following Transmission Provider's issuance of a final invoice in accordance with Article 4.4. Affected System Interconnection Customers may, jointly or individually, at the expense of the requesting Party(ies), during normal business hours, and upon prior reasonable notice to Transmission Provider, audit such accounts and records. Any audit authorized by this Article 9.2 shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to obligations under this Agreement.

Article 10

Notices

10.1 General. Any notice, demand, or request required or permitted to be given by a Party to the other Parties, and any instrument required or permitted to be tendered or delivered by a Party in writing to another Party, may be so given, tendered, or delivered, as the case may be, by depositing

the same with the United States Postal Service with postage prepaid, for transmission by certified or registered mail, addressed to the Parties, or personally delivered to the Parties, at the address set out below:

To Transmission Provider:
To Affected System Interconnection Customers:

10.2 Billings and Payments. Billings and payments shall be sent to the addresses shown in Article 10.1 unless otherwise agreed to by the Parties.

10.3 Alternative Forms of Notice. Any notice or request required or permitted to be given by a Party to the other Parties and not required by this Agreement to be given in writing may be so given by telephone, facsimile, or email to the telephone numbers and email addresses set out below:

To Transmission Provider:
To Affected System Interconnection Customers:

10.4 Execution and Filing. Affected System Interconnection Customers shall either: (i) execute two originals of this tendered Agreement and return them to Transmission Provider; or (ii) request in writing that Transmission Provider file with FERC this Agreement in unexecuted form. As soon as practicable, but not later than ten (10) Business Days after receiving either the two executed originals of this tendered Agreement (if it does not conform with a FERC-approved standard form of this Agreement) or the request to file this Agreement unexecuted, Transmission Provider shall file this Agreement with FERC, together with its explanation of any matters as to which Affected System Interconnection Customers and Transmission Provider disagree and support for the costs that Transmission Provider proposes to charge to Affected System Interconnection Customers under this Agreement. An unexecuted version of this Agreement should contain terms and conditions deemed appropriate by Transmission Provider for the Affected System Interconnection Customers' generating facilities. If the Parties agree to proceed with design, procurement, and construction of facilities and upgrades under the agreed-upon terms of the unexecuted version of this Agreement, they may proceed pending FERC action.

Article 11—Miscellaneous

11.1 This Agreement shall include standard miscellaneous terms including, but not limited to, indemnities, representations, disclaimers, warranties, governing law, amendment, execution, waiver, enforceability, and assignment, which reflect best practices in the electric industry, that are consistent with regional practices, Applicable Laws and Regulations, and the organizational nature of each Party. All of these provisions, to the extent practicable, shall be consistent with the provisions of this LGIP.

[Signature Page to Follow]

In witness whereof, the Parties have executed this Agreement in multiple originals, each of which shall constitute and be an original Agreement among the Parties.

Transmission Provider {Transmission Provider}	Project No. ____	{description}

Attachment B to Appendix 12—Multiparty Affected System Facilities Construction Agreement

Notification of Completed Construction

This Appendix B is a part of the Multiparty Affected System Facilities Construction Agreement among Affected System Interconnection Customers and Transmission Provider. Where applicable, when Transmission Provider has completed construction of the Affected System Network Upgrade(s), Transmission Provider shall send notice to Affected System Interconnection Customers in substantially the form following:

{Date}

{Affected System Interconnection Customers Addresses}

Re: Completion of Affected System Network Upgrade(s)

Dear {Name or Title}:

This letter is sent pursuant to the Multiparty Affected System Facilities Construction Agreement among {Transmission Provider} and {Affected System Interconnection Customers}, dated ____, 20__.

On {Date}, Transmission Provider completed to its satisfaction all work on the Affected System Network Upgrade(s) required to facilitate the safe and reliable interconnection and operation of Affected System Interconnection Customer's generating facilities. Transmission Provider confirms that the Affected System Network Upgrade(s) are in place.

Thank you.

Standard Large Generator Interconnection Agreement

THIS STANDARD LARGE GENERATOR INTERCONNECTION AGREEMENT ("Agreement") is made and entered into this _ day of __, 20__, by and between __, a __ organized and existing under the laws of the State/Commonwealth of __ ("Interconnection Customer" with a Large Generating Facility), and __, a __ organized and existing under the laws of the State/Commonwealth of __ ("Transmission Provider and/or Transmission Owner"). Interconnection Customer and Transmission Provider each may be referred to as a "Party" or collectively as the "Parties."

Recitals

Whereas, Transmission Provider operates the Transmission System; and

Whereas, Interconnection Customer intends to own, lease and/or control and operate the Generating Facility identified as a Large Generating Facility in Appendix C to this Agreement; and,

Whereas, Interconnection Customer and Transmission Provider have agreed to enter into this Agreement for the purpose of interconnecting the Large Generating Facility with the Transmission System;

Now, therefore, in consideration of and subject to the mutual covenants contained herein, it is agreed:

When used in this Standard Large Generator Interconnection Agreement, terms with initial capitalization that are not defined in Article 1 shall have the meanings specified in the Article in which they are used or the Open Access Transmission Tariff (Tariff).

Article 1. Definitions

Adverse System Impact shall mean the negative effects due to technical or operational limits on conductors or equipment being exceeded that may compromise the safety and reliability of the electric system.

Affected System shall mean an electric system other than [the] Transmission Provider's Transmission System that may be affected by the proposed interconnection.

Affected System Operator shall mean the entity that operates an Affected System.

Affiliate shall mean, with respect to a corporation, partnership or other entity, each such other corporation, partnership or other entity that directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with, such corporation, partnership or other entity.

Ancillary Services shall mean those services that are necessary to support the transmission of capacity and energy from resources to loads while maintaining reliable operation of the Transmission Provider's Transmission System in accordance with Good Utility Practice.

Applicable Laws and Regulations shall mean all duly promulgated applicable federal, state and local laws, regulations,

rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

[Applicable Reliability Council shall mean the reliability council applicable to the Transmission System to which the Generating Facility is directly interconnected.]

Applicable Reliability Standards shall mean the requirements and guidelines of [NERC,]the [Applicable Reliability Council]Electric Reliability Organization and the [Control Area]Balancing Authority Area of the Transmission System to which the Generating Facility is directly interconnected.

Balancing Authority shall mean an entity that integrates resource plans ahead of time, maintains demand and resource balance within a Balancing Authority Area, and supports interconnection frequency in real time.

Balancing Authority Area shall mean the collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.

Base Case shall mean the base case power flow, short circuit, and stability data bases used for the Interconnection Studies by [the] Transmission Provider or Interconnection Customer.

Breach shall mean the failure of a Party to perform or observe any material term or condition of the Standard Large Generator Interconnection Agreement.

Breaching Party shall mean a Party that is in Breach of the Standard Large Generator Interconnection Agreement.

Business Day shall mean Monday through Friday, excluding Federal Holidays.

Calendar Day shall mean any day including Saturday, Sunday or a Federal Holiday.

Cluster shall mean a group of one or more Interconnection Requests that are studied together for the purpose of conducting a Cluster Study.

Cluster Restudy shall mean a restudy of a Cluster Study conducted pursuant to Section 7.5 of the LGIP.

Cluster Study shall mean the evaluation of one or more Interconnection Requests within a Cluster as described in Section 7 of the LGIP.

Clustering shall mean the process whereby one or more [a group of]Interconnection Requests [is] are studied together, instead of serially, [for the purpose of conducting the Interconnection System Impact Study]as described in Section 7 of the LGIP.

Commercial Operation shall mean the status of a Generating Facility that has commenced generating electricity for sale, excluding electricity generated during Trial Operation.

Commercial Operation Date of a unit shall mean the date on which the Generating Facility commences Commercial Operation as agreed to by the Parties pursuant to Appendix E to the Standard Large Generator Interconnection Agreement.

Confidential Information shall mean any confidential, proprietary or trade secret

information of a plan, specification, pattern, procedure, design, device, list, concept, policy or compilation relating to the present or planned business of a Party, which is designated as confidential by the Party supplying the information, whether conveyed orally, electronically, in writing, through inspection, or otherwise.

Contingent Facilities shall mean those unbuilt Interconnection Facilities and Network Upgrades upon which the Interconnection Request's costs, timing, and study findings are dependent, and if delayed or not built, could cause a need for restudies of the Interconnection Request or a reassessment of the Interconnection Facilities and/or Network Upgrades and/or costs and timing.

[Control Area shall mean an electrical system or systems bounded by interconnection metering and telemetry, capable of controlling generation to maintain its interchange schedule with other Control Areas and contributing to frequency regulation of the interconnection. A Control Area must be certified by an Applicable Reliability Council.]

Default shall mean the failure of a Breaching Party to cure its Breach in accordance with Article 17 of the Standard Large Generator Interconnection Agreement.

Dispute Resolution shall mean the procedure for resolution of a dispute between the Parties in which they will first attempt to resolve the dispute on an informal basis.

Distribution System shall mean the Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which distribution systems operate differ among areas.

Distribution Upgrades shall mean the additions, modifications, and upgrades to the Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Generating Facility and render the transmission service necessary to effect Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Effective Date shall mean the date on which the Standard Large Generator Interconnection Agreement becomes effective upon execution by the Parties subject to acceptance by FERC, or if filed unexecuted, upon the date specified by FERC.

Electric Reliability Organization shall mean the North American Electric Reliability Corporation or its successor organization.

Emergency Condition shall mean a condition or situation: (1) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (2) that, in the case of a Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to Transmission Provider's Transmission System, Transmission Provider's Interconnection Facilities or the electric systems of others to

which the Transmission Provider's Transmission System is directly connected; or (3) that, in the case of Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Generating Facility or Interconnection Customer's Interconnection Facilities. System restoration and black start shall be considered Emergency Conditions; provided, that Interconnection Customer is not obligated by the Standard Large Generator Interconnection Agreement to possess black start capability.

Energy Resource Interconnection Service shall mean an Interconnection Service that allows the Interconnection Customer to connect its Generating Facility to the Transmission Provider's Transmission System to be eligible to deliver the Generating Facility's electric output using the existing firm or nonfirm capacity of the Transmission Provider's Transmission System on an as available basis. Energy Resource Interconnection Service in and of itself does not convey transmission service.

Engineering & Procurement (E&P) Agreement shall mean an agreement that authorizes the Transmission Provider to begin engineering and procurement of long lead-time items necessary for the establishment of the interconnection in order to advance the implementation of the Interconnection Request.

Environmental Law shall mean Applicable Laws or Regulations relating to pollution or protection of the environment or natural resources.

Federal Power Act shall mean the Federal Power Act, as amended, 16 U.S.C. 791a *et seq.*

FERC shall mean the Federal Energy Regulatory Commission (Commission) or its successor.

Force Majeure shall mean any act of God, labor disturbance, act of the public enemy, war, insurrection, riot, fire, storm or flood, explosion, breakage or accident to machinery or equipment, any order, regulation or restriction imposed by governmental, military or lawfully established civilian authorities, or any other cause beyond a Party's control. A Force Majeure event does not include acts of negligence or intentional wrongdoing by the Party claiming Force Majeure.

Generating Facility shall mean Interconnection Customer's [device] *device(s)* for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include [the] Interconnection Customer's Interconnection Facilities.

Generating Facility Capacity shall mean the net capacity of the Generating Facility [and] or the aggregate net capacity of the Generating Facility where it includes [multiple energy production devices] *more than one device for the production and/or storage for later injection of electricity.*

Good Utility Practice shall mean any of the practices, methods and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods and acts which, in the exercise of reasonable

judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Governmental Authority shall mean any federal, state, local or other governmental regulatory or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, police, or taxing authority or power; provided, however, that such term does not include Interconnection Customer, Transmission Provider, or any Affiliate thereof.

Hazardous Substances shall mean any chemicals, materials or substances defined as or included in the definition of "hazardous substances," "hazardous wastes," "hazardous materials," "hazardous constituents," "restricted hazardous materials," "extremely hazardous substances," "toxic substances," "radioactive substances," "contaminants," "pollutants," "toxic pollutants" or words of similar meaning and regulatory effect under any applicable Environmental Law, or any other chemical, material or substance, exposure to which is prohibited, limited or regulated by any applicable Environmental Law.

Initial Synchronization Date shall mean the date upon which the Generating Facility is initially synchronized and upon which Trial Operation begins.

In-Service Date shall mean the date upon which the Interconnection Customer reasonably expects it will be ready to begin use of the Transmission Provider's Interconnection Facilities to obtain back feed power.

Interconnection Customer shall mean any entity, including the Transmission Provider, Transmission Owner or any of the Affiliates or subsidiaries of either, that proposes to interconnect its Generating Facility with the Transmission Provider's Transmission System.

Interconnection Customer's Interconnection Facilities shall mean all facilities and equipment, as identified in Appendix A of the Standard Large Generator Interconnection Agreement, that are located between the Generating Facility and the Point of Change of Ownership, including any modification, addition, or upgrades to such facilities and equipment necessary to physically and electrically interconnect the Generating Facility to the Transmission Provider's Transmission System. Interconnection Customer's Interconnection Facilities are sole use facilities.

Interconnection Facilities shall mean [the] Transmission Provider's Interconnection Facilities and [the] Interconnection Customer's Interconnection Facilities.

Collectively, Interconnection Facilities include all facilities and equipment between the Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Generating Facility to [the] Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Interconnection Facilities Study shall mean a study conducted by [the] Transmission Provider or a third party consultant for [the] Interconnection Customer to determine a list of facilities (including Transmission Provider's Interconnection Facilities and Network Upgrades as identified in the [Interconnection System Impact] *Cluster Study*), the cost of those facilities, and the time required to interconnect the Generating Facility with [the] Transmission Provider's Transmission System. The scope of the study is defined in Section 8 of the *LGIP* [the Standard Large Generator Interconnection Procedures].

Interconnection Facilities Study Agreement shall mean the form of agreement contained in Appendix 3[4] of the Standard Large Generator Interconnection Procedures for conducting the Interconnection Facilities Study.

Interconnection Feasibility Study shall mean a preliminary evaluation of the system impact and cost of interconnecting the Generating Facility to the Transmission Provider's Transmission System, the scope of which is described in Section 6 of the Standard Large Generator Interconnection Procedures.]

[Interconnection Feasibility Study Agreement shall mean the form of agreement contained in Appendix 2 of the Standard Large Generator Interconnection Procedures for conducting the Interconnection Feasibility Study.]

Interconnection Request shall mean an Interconnection Customer's request, in the form of Appendix 1 to the *LGIP* [the Standard Large Generator Interconnection Procedures], in accordance with the Tariff, to interconnect a new Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics of, an existing Generating Facility that is interconnected with the Transmission Provider's Transmission System.

Interconnection Service shall mean the service provided by the Transmission Provider associated with interconnecting the Interconnection Customer's Generating Facility to the Transmission Provider's Transmission System and enabling it to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Standard Large Generator Interconnection Agreement and, if applicable, the Transmission Provider's Tariff.

Interconnection Study shall mean any of the following studies: [the Interconnection Feasibility Study, the Interconnection System Impact Study,] *the Cluster Study, the Cluster Restudy, the Surplus Interconnection Service System Impact Study*, and the

Interconnection Facilities Study, described in the *LGIP* [the Standard Large Generator Interconnection Procedures].

[Interconnection System Impact Study shall mean an engineering study that evaluates the impact of the proposed interconnection on the safety and reliability of Transmission Provider's Transmission System and, if applicable, an Affected System. The study shall identify and detail the system impacts that would result if the Generating Facility were interconnected without project modifications or system modifications, focusing on the Adverse System Impacts identified in the Interconnection Feasibility Study, or to study potential impacts, including but not limited to those identified in the Scoping Meeting as described in the Standard Large Generator Interconnection Procedures.]

Interconnection System Impact Study Agreement shall mean the form of agreement contained in Appendix 3 of the Standard Large Generator Interconnection Procedures for conducting the Interconnection System Impact Study.]

IRS shall mean the Internal Revenue Service.

Joint Operating Committee shall be a group made up of representatives from Interconnection Customers and the Transmission Provider to coordinate operating and technical considerations of Interconnection Service.

Large Generating Facility shall mean a Generating Facility having a Generating Facility Capacity of more than 20 MW.

LGIA Deposit shall mean the deposit Interconnection Customer submits when returning the executed LGIA, or within 10 Business Days of requesting that the LGIA be filed unexecuted at the Commission, in accordance with Section 11.3 of the LGIP.

Loss shall mean any and all losses relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's performance, or non-performance of its obligations under the Standard Large Generator Interconnection Agreement on behalf of the Indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the Indemnifying Party.

Material Modification shall mean those modifications that have a material impact on the cost or timing of any Interconnection Request with an equal or later Queue Position [queue priority date].

Metering Equipment shall mean all metering equipment installed or to be installed at the Generating Facility pursuant to the Standard Large Generator Interconnection Agreement at the metering points, including but not limited to instrument transformers, MWh-meters, data acquisition equipment, transducers, remote terminal unit, communications equipment, phone lines, and fiber optics.

[NERC shall mean the North American Electric Reliability Council or its successor organization.]

Network Resource shall mean any designated generating resource owned, purchased, or leased by a Network Customer

under the Network Integration Transmission Service Tariff. Network Resources do not include any resource, or any portion thereof, that is committed for sale to third parties or otherwise cannot be called upon to meet the Network Customer's Network Load on a non-interruptible basis.

Network Resource Interconnection Service shall mean an Interconnection Service that allows the Interconnection Customer to integrate its Large Generating Facility with the Transmission Provider's Transmission System (1) in a manner comparable to that in which the Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an RTO or ISO with market based congestion management, in the same manner as Network Resources. Network Resource Interconnection Service in and of itself does not convey transmission service.

Network Upgrades shall mean the additions, modifications, and upgrades to the Transmission Provider's Transmission System required at or beyond the point at which the Interconnection Facilities connect to the Transmission Provider's Transmission System to accommodate the interconnection of the Large Generating Facility to the Transmission Provider's Transmission System.

Notice of Dispute shall mean a written notice of a dispute or claim that arises out of or in connection with the Standard Large Generator Interconnection Agreement or its performance.

Optional Interconnection Study shall mean a sensitivity analysis based on assumptions specified by the Interconnection Customer in the Optional Interconnection Study Agreement.

Optional Interconnection Study Agreement shall mean the form of agreement contained in Appendix 4[5] of the *LGIP* [the Standard Large Generator Interconnection Procedures] for conducting the Optional Interconnection Study.

Party or Parties shall mean Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Point of Change of Ownership shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where the Interconnection Customer's Interconnection Facilities connect to the Transmission Provider's Interconnection Facilities.

Point of Interconnection shall mean the point, as set forth in Appendix A to the Standard Large Generator Interconnection Agreement, where the Interconnection Facilities connect to the Transmission Provider's Transmission System.

Proportional Impact Method shall mean a technical analysis conducted by Transmission Provider to determine the degree to which each Generating Facility in the Cluster Study contributes to the need for a specific System Network Upgrade.

Provisional Interconnection Service shall mean Interconnection Service provided by Transmission Provider associated with interconnecting the Interconnection Customer's Generating Facility to Transmission Provider's Transmission System and enabling that Transmission

System to receive electric energy and capacity from the Generating Facility at the Point of Interconnection, pursuant to the terms of the Provisional Large Generator Interconnection Agreement and, if applicable, the Tariff.

Provisional Large Generator Interconnection Agreement shall mean the interconnection agreement for Provisional Interconnection Service established between Transmission Provider and/or the Transmission Owner and the Interconnection Customer. This agreement shall take the form of the Large Generator Interconnection Agreement, modified for provisional purposes.

Queue Position shall mean the order of a valid Interconnection Request, relative to all other pending valid Interconnection Requests, [that is] established pursuant to Section 4.1 of the *LGIP*. [based upon the date and time of receipt of the valid Interconnection Request by the Transmission Provider.]

Reasonable Efforts shall mean, with respect to an action required to be attempted or taken by a Party under the Standard Large Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.

Scoping Meeting shall mean the meeting between representatives of [the] Interconnection Customer(s) and Transmission Provider conducted for the purpose of discussing the proposed Interconnection Request and any alternative interconnection options, [to] exchanging information including any transmission data and earlier study evaluations that would be reasonably expected to impact such interconnection options, refining information and models provided by Interconnection Customer(s), discussing the Cluster Study materials posted to OASIS pursuant to Section 3.5 of the *LGIP*, and [to] analyzing such information[, and to determine the potential feasible Points of Interconnection].

Site Control shall mean [documentation reasonably demonstrating] the exclusive land right to develop, construct, operate, and maintain the Generating Facility over the term of expected operation of the Generating Facility. Site Control may be demonstrated by documentation establishing: (1) ownership of, a leasehold interest in, or a right to develop a site [for the purpose of constructing] of sufficient size to construct and operate the Generating Facility; (2) an option to purchase or acquire a leasehold site of sufficient size to construct and operate the Generating Facility for such purpose; or (3) [an exclusivity or other business relationship between] any other documentation that clearly demonstrates the right of Interconnection Customer [and the entity having the right to sell, lease or grant Interconnection Customer the right to possess or] to exclusively occupy a site [for such purpose] of sufficient size to construct and operate the Generating Facility. Transmission Provider will maintain acreage requirements for each Generating Facility type on its OASIS or public website.

Small Generating Facility shall mean a Generating Facility that has a Generating Facility Capacity of no more than 20 MW.

Stand Alone Network Upgrades shall mean Network Upgrades that are not part of an Affected System that an Interconnection Customer may construct without affecting day-to-day operations of the Transmission System during their construction and the following conditions are met: (1) a Substation Network Upgrade must only be required for a single Interconnection Customer in the Cluster and no other Interconnection Customer in that Cluster is required to interconnect to the same Substation Network Upgrades, and (2) a System Network Upgrade must only be required for a single Interconnection Customer in the Cluster, as indicated under Transmission Provider's Proportional Impact Method. Both [the]Transmission Provider and [the]Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify them in Appendix A to the Standard Large Generator Interconnection Agreement. If [the]Transmission Provider and Interconnection Customer disagree about whether a particular Network Upgrade is a Stand Alone Network Upgrade, [the]Transmission Provider must provide [the]Interconnection Customer a written technical explanation outlining why [the] Transmission Provider does not consider the Network Upgrade to be a Stand Alone Network Upgrade within 15 days of its determination.

Standard Large Generator Interconnection Agreement (LGIA) shall mean the form of interconnection agreement applicable to an Interconnection Request pertaining to a Large Generating Facility that is included in the Transmission Provider's Tariff.

Standard Large Generator Interconnection Procedures (LGIP) shall mean the interconnection procedures applicable to an Interconnection Request pertaining to a Large Generating Facility that are included in the Transmission Provider's Tariff.

Substation Network Upgrades shall mean Network Upgrades that are required at the substation located at the Point of Interconnection.

Surplus Interconnection Service shall mean any unneeded portion of Interconnection Service established in a Large Generator Interconnection Agreement, such that if Surplus Interconnection Service is utilized the total amount of Interconnection Service at the Point of Interconnection would remain the same.

System Network Upgrades shall mean Network Upgrades that are required beyond the substation located at the Point of Interconnection.

System Protection Facilities shall mean the equipment, including necessary protection signal communications equipment, required to protect (1) the Transmission Provider's Transmission System from faults or other electrical disturbances occurring at the Generating Facility and (2) the Generating Facility from faults or other electrical system disturbances occurring on the Transmission Provider's Transmission System or on other delivery systems or other generating systems

to which the Transmission Provider's Transmission System is directly connected.

Tariff shall mean the Transmission Provider's Tariff through which open access transmission service and Interconnection Service are offered, as filed with FERC, and as amended or supplemented from time to time, or any successor tariff.

Transmission Owner shall mean an entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Standard Large Generator Interconnection Agreement to the extent necessary.

Transmission Provider shall mean the public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from the Transmission Provider.

Transmission Provider's Interconnection Facilities shall mean all facilities and equipment owned, controlled, or operated by [the]Transmission Provider from the Point of Change of Ownership to the Point of Interconnection as identified in Appendix A to the Standard Large Generator Interconnection Agreement, including any modifications, additions or upgrades to such facilities and equipment. Transmission Provider's Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades, Stand Alone Network Upgrades or Network Upgrades.

Transmission System shall mean the facilities owned, controlled or operated by the Transmission Provider or Transmission Owner that are used to provide transmission service under the Tariff.

Trial Operation shall mean the period during which Interconnection Customer is engaged in on-site test operations and commissioning of the Generating Facility prior to Commercial Operation.

Variable Energy Resource shall mean a device for the production of electricity that is characterized by an energy source that: (1) is renewable; (2) cannot be stored by the facility owner or operator; and (3) has variability that is beyond the control of the facility owner or operator.

Withdrawal Penalty shall mean the penalty assessed by Transmission Provider to an Interconnection Customer that chooses to withdraw or is deemed withdrawn from Transmission Provider's interconnection queue or whose Generating Facility does not otherwise reach Commercial Operation. The calculation of the Withdrawal Penalty is set forth in Section 3.7.1 of the LGIP.

Article 2. Effective Date, Term, and Termination

2.1 Effective Date. This LGIA shall become effective upon execution by the Parties subject to acceptance by FERC (if applicable), or if filed unexecuted, upon the date specified by FERC. Transmission Provider shall promptly file this LGIA with FERC upon execution in accordance with Article 3.1, if required.

2.2 Term of Agreement. Subject to the provisions of Article 2.3, this LGIA shall remain in effect for a period of ten (10) years from the Effective Date or such other longer period as Interconnection Customer may request (Term to be specified in individual agreements) and shall be automatically renewed for each successive one-year period thereafter.

2.3 Termination Procedures.

2.3.1 Written Notice. This LGIA may be terminated by Interconnection Customer after giving Transmission Provider ninety (90) Calendar Days advance written notice, or by Transmission Provider notifying FERC after the Generating Facility permanently ceases Commercial Operation.

2.3.2 Default. Either Party may terminate this LGIA in accordance with Article 17.

2.3.3 Notwithstanding Articles 2.3.1 and 2.3.2, no termination shall become effective until the Parties have complied with all Applicable Laws and Regulations applicable to such termination, including the filing with FERC of a notice of termination of this LGIA, which notice has been accepted for filing by FERC.

2.4 Termination Costs. If a Party elects to terminate this Agreement pursuant to Article 2.3 above, each Party shall pay all costs incurred (including any cancellation costs relating to orders or contracts for Interconnection Facilities and equipment) or charges assessed by the other Party, as of the date of the other Party's receipt of such notice of termination, that are the responsibility of the Terminating Party under this LGIA. In the event of termination by a Party, the Parties shall use commercially Reasonable Efforts to mitigate the costs, damages and charges arising as a consequence of termination. Upon termination of this LGIA, unless otherwise ordered or approved by FERC:

2.4.1 With respect to any portion of Transmission Provider's Interconnection Facilities that have not yet been constructed or installed, Transmission Provider shall to the extent possible and with Interconnection Customer's authorization cancel any pending orders of, or return, any materials or equipment for, or contracts for construction of, such facilities; provided that in the event Interconnection Customer elects not to authorize such cancellation, Interconnection Customer shall assume all payment obligations with respect to such materials, equipment, and contracts, and Transmission Provider shall deliver such material and equipment, and, if necessary, assign such contracts, to Interconnection Customer as soon as practicable, at Interconnection Customer's expense. To the extent that Interconnection Customer has already paid Transmission Provider for any or all such costs of materials or equipment not taken by Interconnection Customer, Transmission Provider shall promptly refund such amounts to Interconnection Customer, less any costs, including penalties incurred by Transmission Provider to cancel any pending orders of or return such materials, equipment, or contracts.

If an Interconnection Customer terminates this LGIA, it shall be responsible for all costs incurred in association with that

Interconnection Customer's interconnection, including any cancellation costs relating to orders or contracts for Interconnection Facilities and equipment, and other expenses including any Network Upgrades for which Transmission Provider has incurred expenses and has not been reimbursed by Interconnection Customer.

2.4.2 Transmission Provider may, at its option, retain any portion of such materials, equipment, or facilities that Interconnection Customer chooses not to accept delivery of, in which case Transmission Provider shall be responsible for all costs associated with procuring such materials, equipment, or facilities.

2.4.3 With respect to any portion of the Interconnection Facilities, and any other facilities already installed or constructed pursuant to the terms of this LGIA, Interconnection Customer shall be responsible for all costs associated with the removal, relocation or other disposition or retirement of such materials, equipment, or facilities.

2.5 Disconnection. Upon termination of this LGIA, the Parties will take all appropriate steps to disconnect the Large Generating Facility from the Transmission System. All costs required to effectuate such disconnection shall be borne by the terminating Party, unless such termination resulted from the non-terminating Party's Default of this LGIA or such non-terminating Party otherwise is responsible for these costs under this LGIA.

2.6 Survival. This LGIA shall continue in effect after termination to the extent necessary to provide for final billings and payments and for costs incurred hereunder, including billings and payments pursuant to this LGIA; to permit the determination and enforcement of liability and indemnification obligations arising from acts or events that occurred while this LGIA was in effect; and to permit each Party to have access to the lands of the other Party pursuant to this LGIA or other applicable agreements, to disconnect, remove or salvage its own facilities and equipment.

Article 3. Regulatory Filings

3.1 Filing. Transmission Provider shall file this LGIA (and any amendment hereto) with the appropriate Governmental Authority, if required. Interconnection Customer may request that any information so provided be subject to the confidentiality provisions of Article 22. If Interconnection Customer has executed this LGIA, or any amendment thereto, Interconnection Customer shall reasonably cooperate with Transmission Provider with respect to such filing and to provide any information reasonably requested by Transmission Provider needed to comply with applicable regulatory requirements.

Article 4. Scope of Service

4.1 Interconnection Product Options. Interconnection Customer has selected the following (checked) type of Interconnection Service:

4.1.1 Energy Resource Interconnection Service

4.1.1.1 The Product. Energy Resource Interconnection Service allows Interconnection Customer to connect the Large Generating Facility to the Transmission System and be eligible to deliver the Large Generating Facility's output using the existing firm or non-firm capacity of the Transmission System on an "as available" basis. To the extent Interconnection Customer wants to receive Energy Resource Interconnection Service, Transmission Provider shall construct facilities identified in Attachment A.

4.1.1.2 Transmission Delivery Service Implications. Under Energy Resource Interconnection Service, Interconnection Customer will be eligible to inject power from the Large Generating Facility into and deliver power across the interconnecting Transmission Provider's Transmission System on an "as available" basis up to the amount of MWs identified in the applicable stability and steady state studies to the extent the upgrades initially required to qualify for Energy Resource Interconnection Service have been constructed. Where eligible to do so (e.g., PJM, ISO-NE, NYISO), Interconnection Customer may place a bid to sell into the market up to the maximum identified Large Generating Facility output, subject to any conditions specified in the interconnection service approval, and the Large Generating Facility will be dispatched to the extent Interconnection Customer's bid clears. In all other instances, no transmission delivery service from the Large Generating Facility is assured, but Interconnection Customer may obtain Point-to-Point Transmission Service, Network Integration Transmission Service, or be used for secondary network transmission service, pursuant to Transmission Provider's Tariff, up to the maximum output identified in the stability and steady state studies. In those instances, in order for Interconnection Customer to obtain the right to deliver or inject energy beyond the Large Generating Facility Point of Interconnection or to improve its ability to do so, transmission delivery service must be obtained pursuant to the provisions of Transmission Provider's Tariff. The Interconnection Customer's ability to inject its Large Generating Facility output beyond the Point of Interconnection, therefore, will depend on the existing capacity of Transmission Provider's Transmission System at such time as a transmission service request is made that would accommodate such delivery. The provision of firm Point-to-Point Transmission Service or Network Integration Transmission Service may require the construction of additional Network Upgrades.

4.1.2 Network Resource Interconnection Service

4.1.2.1 The Product. Transmission Provider must conduct the necessary studies and construct the Network Upgrades needed to integrate the Large Generating Facility (1) in a manner comparable to that in which Transmission Provider integrates its generating facilities to serve native load customers; or (2) in an ISO or RTO with

market based congestion management, in the same manner as all Network Resources. To the extent Interconnection Customer wants to receive Network Resource Interconnection Service, Transmission Provider shall construct the facilities identified in Attachment A to this LGIA.

4.1.2.2 Transmission Delivery Service Implications. Network Resource Interconnection Service allows Interconnection Customer's Large Generating Facility to be designated by any Network Customer under the Tariff on Transmission Provider's Transmission System as a Network Resource, up to the Large Generating Facility's full output, on the same basis as existing Network Resources interconnected to Transmission Provider's Transmission System, and to be studied as a Network Resource on the assumption that such a designation will occur. Although Network Resource Interconnection Service does not convey a reservation of transmission service, any Network Customer under the Tariff can utilize its network service under the Tariff to obtain delivery of energy from the interconnected Interconnection Customer's Large Generating Facility in the same manner as it accesses Network Resources. A Large Generating Facility receiving Network Resource Interconnection Service may also be used to provide Ancillary Services after technical studies and/or periodic analyses are performed with respect to the Large Generating Facility's ability to provide any applicable Ancillary Services, provided that such studies and analyses have been or would be required in connection with the provision of such Ancillary Services by any existing Network Resource. However, if an Interconnection Customer's Large Generating Facility has not been designated as a Network Resource by any load, it cannot be required to provide Ancillary Services except to the extent such requirements extend to all generating facilities that are similarly situated. The provision of Network Integration Transmission Service or firm Point-to-Point Transmission Service may require additional studies and the construction of additional upgrades. Because such studies and upgrades would be associated with a request for delivery service under the Tariff, cost responsibility for the studies and upgrades would be in accordance with FERC's policy for pricing transmission delivery services.

Network Resource Interconnection Service does not necessarily provide Interconnection Customer with the capability to physically deliver the output of its Large Generating Facility to any particular load on Transmission Provider's Transmission System without incurring congestion costs. In the event of transmission constraints on Transmission Provider's Transmission System, Interconnection Customer's Large Generating Facility shall be subject to the applicable congestion management procedures in Transmission Provider's Transmission System in the same manner as Network Resources.

There is no requirement either at the time of study or interconnection, or at any point in the future, that Interconnection Customer's Large Generating Facility be designated as a

Network Resource by a Network Service Customer under the Tariff or that Interconnection Customer identify a specific buyer (or sink). To the extent a Network Customer does designate the Large Generating Facility as a Network Resource, it must do so pursuant to Transmission Provider's Tariff.

Once an Interconnection Customer satisfies the requirements for obtaining Network Resource Interconnection Service, any future transmission service request for delivery from the Large Generating Facility within Transmission Provider's Transmission System of any amount of capacity and/or energy, up to the amount initially studied, will not require that any additional studies be performed or that any further upgrades associated with such Large Generating Facility be undertaken, regardless of whether or not such Large Generating Facility is ever designated by a Network Customer as a Network Resource and regardless of changes in ownership of the Large Generating Facility. However, the reduction or elimination of congestion or redispatch costs may require additional studies and the construction of additional upgrades.

To the extent Interconnection Customer enters into an arrangement for long term transmission service for deliveries from the Large Generating Facility outside Transmission Provider's Transmission System, such request may require additional studies and upgrades in order for Transmission Provider to grant such request.

4.2 Provision of Service. Transmission Provider shall provide Interconnection Service for the Large Generating Facility at the Point of Interconnection.

4.3 Performance Standards. Each Party shall perform all of its obligations under this LGIA in accordance with Applicable Laws and Regulations, Applicable Reliability Standards, and Good Utility Practice, and to the extent a Party is required or prevented or limited in taking any action by such regulations and standards, such Party shall not be deemed to be in Breach of this LGIA for its compliance therewith. If such Party is a Transmission Provider or Transmission Owner, then that Party shall amend the LGIA and submit the amendment to FERC for approval.

4.4 No Transmission Delivery Service. The execution of this LGIA does not constitute a request for, nor the provision of, any transmission delivery service under Transmission Provider's Tariff, and does not convey any right to deliver electricity to any specific customer or Point of Delivery.

4.5 Interconnection Customer Provided Services. The services provided by Interconnection Customer under this LGIA are set forth in Article 9.6 and Article 13.5.1. Interconnection Customer shall be paid for such services in accordance with Article 11.6.

Article 5. Interconnection Facilities Engineering, Procurement, & Construction

5.1 Options. Unless otherwise mutually agreed to between the Parties, Interconnection Customer shall select the In-Service Date, Initial Synchronization Date, and Commercial Operation Date; and either

the Standard Option or Alternate Option set forth below, and such dates and selected option shall be set forth in Appendix B, Milestones. At the same time, Interconnection Customer shall indicate whether it elects to exercise the Option to Build set forth in Article 5.1.3 below. If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, Transmission Provider shall so notify Interconnection Customer within thirty (30) Calendar Days. Upon receipt of the notification that Interconnection Customer's designated dates are not acceptable to Transmission Provider, the Interconnection Customer shall notify Transmission Provider within thirty (30) Calendar Days whether it elects to exercise the Option to Build if it has not already elected to exercise the Option to Build.

5.1.1 Standard Option. Transmission Provider shall design, procure, and construct Transmission Provider's Interconnection Facilities and Network Upgrades, using Reasonable Efforts to complete Transmission Provider's Interconnection Facilities and Network Upgrades by the dates set forth in Appendix B, Milestones. Transmission Provider shall not be required to undertake any action which is inconsistent with its standard safety practices, its material and equipment specifications, its design criteria and construction procedures, its labor agreements, and Applicable Laws and Regulations. In the event Transmission Provider reasonably expects that it will not be able to complete Transmission Provider's Interconnection Facilities and Network Upgrades by the specified dates, Transmission Provider shall promptly provide written notice to Interconnection Customer and shall undertake Reasonable Efforts to meet the earliest dates thereafter.

5.1.2 Alternate Option. If the dates designated by Interconnection Customer are acceptable to Transmission Provider, Transmission Provider shall so notify Interconnection Customer within thirty (30) Calendar Days, and shall assume responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities by the designated dates.

If Transmission Provider subsequently fails to complete Transmission Provider's Interconnection Facilities by the In-Service Date, to the extent necessary to provide back feed power; or fails to complete Network Upgrades by the Initial Synchronization Date to the extent necessary to allow for Trial Operation at full power output, unless other arrangements are made by the Parties for such Trial Operation; or fails to complete the Network Upgrades by the Commercial Operation Date, as such dates are reflected in Appendix B, Milestones; Transmission Provider shall pay Interconnection Customer liquidated damages in accordance with Article 5.3, Liquidated Damages, provided, however, the dates designated by Interconnection Customer shall be extended day for day for each day that the applicable RTO or ISO refuses to grant clearances to install equipment.

5.1.3 Option to Build. Interconnection Customer shall have the option to assume

responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades on the dates specified in Article 5.1.2. Transmission Provider and Interconnection Customer must agree as to what constitutes Stand Alone Network Upgrades and identify such Stand Alone Network Upgrades in Appendix A. Except for Stand Alone Network Upgrades, Interconnection Customer shall have no right to construct Network Upgrades under this option.

5.1.4 Negotiated Option. If the dates designated by Interconnection Customer are not acceptable to Transmission Provider, the Parties shall in good faith attempt to negotiate terms and conditions (including revision of the specified dates and liquidated damages, the provision of incentives, or the procurement and construction of all facilities other than Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades if the Interconnection Customer elects to exercise the Option to Build under Article 5.1.3). If the Parties are unable to reach agreement on such terms and conditions, then pursuant to Article 5.1.1 (Standard Option), Transmission Provider shall assume responsibility for the design, procurement and construction of all facilities other than Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades if the Interconnection Customer elects to exercise the Option to Build.

5.2 General Conditions Applicable to Option to Build. If Interconnection Customer assumes responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades,

(1) Interconnection Customer shall engineer, procure equipment, and construct Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades (or portions thereof) using Good Utility Practice and using standards and specifications provided in advance by Transmission Provider;

(2) Interconnection Customer's engineering, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades shall comply with all requirements of law to which Transmission Provider would be subject in the engineering, procurement or construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades;

(3) Transmission Provider shall review and approve the engineering design, equipment acceptance tests, and the construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades;

(4) prior to commencement of construction, Interconnection Customer shall provide to Transmission Provider a schedule for construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades, and shall promptly respond to requests for information from Transmission Provider;

(5) at any time during construction, Transmission Provider shall have the right to

gain unrestricted access to Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades and to conduct inspections of the same;

(6) at any time during construction, should any phase of the engineering, equipment procurement, or construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades not meet the standards and specifications provided by Transmission Provider, Interconnection Customer shall be obligated to remedy deficiencies in that portion of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades;

(7) Interconnection Customer shall indemnify Transmission Provider for claims arising from Interconnection Customer's construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades under the terms and procedures applicable to Article 18.1 Indemnity;

(8) Interconnection Customer shall transfer control of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades to Transmission Provider;

(9) Unless Parties otherwise agree, Interconnection Customer shall transfer ownership of Transmission Provider's Interconnection Facilities and Stand-Alone Network Upgrades to Transmission Provider;

(10) Transmission Provider shall approve and accept for operation and maintenance Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades to the extent engineered, procured, and constructed in accordance with this Article 5.2; and

(11) Interconnection Customer shall deliver to Transmission Provider "as-built" drawings, information, and any other documents that are reasonably required by Transmission Provider to assure that the Interconnection Facilities and Stand-Alone Network Upgrades are built to the standards and specifications required by Transmission Provider.

(12) If Interconnection Customer exercises the Option to Build pursuant to Article 5.1.3, Interconnection Customer shall pay Transmission Provider the agreed upon amount of [\$ PLACEHOLDER] for Transmission Provider to execute the responsibilities enumerated to Transmission Provider under Article 5.2. Transmission Provider shall invoice Interconnection Customer for this total amount to be divided on a monthly basis pursuant to Article 12.

5.3 Liquidated Damages. The actual damages to Interconnection Customer, in the event Transmission Provider's Interconnection Facilities or Network Upgrades are not completed by the dates designated by Interconnection Customer and accepted by Transmission Provider pursuant to subparagraphs 5.1.2 or 5.1.4, above, may include Interconnection Customer's fixed operation and maintenance costs and lost opportunity costs. Such actual damages are uncertain and impossible to determine at this time. Because of such uncertainty, any liquidated damages paid by Transmission Provider to Interconnection Customer in the event that Transmission Provider does not

complete any portion of Transmission Provider's Interconnection Facilities or Network Upgrades by the applicable dates, shall be an amount equal to $\frac{1}{2}$ of 1 percent per day of the actual cost of Transmission Provider's Interconnection Facilities and Network Upgrades, in the aggregate, for which Transmission Provider has assumed responsibility to design, procure and construct.

However, in no event shall the total liquidated damages exceed 20 percent of the actual cost of Transmission Provider's Interconnection Facilities and Network Upgrades for which Transmission Provider has assumed responsibility to design, procure, and construct. The foregoing payments will be made by Transmission Provider to Interconnection Customer as just compensation for the damages caused to Interconnection Customer, which actual damages are uncertain and impossible to determine at this time, and as reasonable liquidated damages, but not as a penalty or a method to secure performance of this LGIA. Liquidated damages, when the Parties agree to them, are the exclusive remedy for the Transmission Provider's failure to meet its schedule.

No liquidated damages shall be paid to Interconnection Customer if: (1) Interconnection Customer is not ready to commence use of Transmission Provider's Interconnection Facilities or Network Upgrades to take the delivery of power for the Large Generating Facility's Trial Operation or to export power from the Large Generating Facility on the specified dates, unless Interconnection Customer would have been able to commence use of Transmission Provider's Interconnection Facilities or Network Upgrades to take the delivery of power for Large Generating Facility's Trial Operation or to export power from the Large Generating Facility, but for Transmission Provider's delay; (2) Transmission Provider's failure to meet the specified dates is the result of the action or inaction of Interconnection Customer or any other Interconnection Customer who has entered into an LGIA with Transmission Provider or any cause beyond Transmission Provider's reasonable control or reasonable ability to cure; (3) the Interconnection Customer has assumed responsibility for the design, procurement and construction of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades; or (4) the Parties have otherwise agreed.

5.4 Power System Stabilizers. [The]Interconnection Customer shall procure, install, maintain and operate Power System Stabilizers in accordance with the guidelines and procedures established by the [Applicable Reliability Council]*Electric Reliability Organization*. Transmission Provider reserves the right to reasonably establish minimum acceptable settings for any installed Power System Stabilizers, subject to the design and operating limitations of the Large Generating Facility. If the Large Generating Facility's Power System Stabilizers are removed from service or not capable of automatic operation, Interconnection Customer shall immediately

notify Transmission Provider's system operator, or its designated representative. The requirements of this paragraph shall not apply to wind generators.

5.5 Equipment Procurement. If responsibility for construction of Transmission Provider's Interconnection Facilities or Network Upgrades is to be borne by Transmission Provider, then Transmission Provider shall commence design of Transmission Provider's Interconnection Facilities or Network Upgrades and procure necessary equipment as soon as practicable after all of the following conditions are satisfied, unless the Parties otherwise agree in writing:

5.5.1 Transmission Provider has completed the Facilities Study pursuant to the Facilities Study Agreement;

5.5.2 Transmission Provider has received written authorization to proceed with design and procurement from Interconnection Customer by the date specified in Appendix B, Milestones; and

5.5.3 Interconnection Customer has provided security to Transmission Provider in accordance with Article 11.5 by the dates specified in Appendix B, Milestones.

5.6 Construction Commencement. Transmission Provider shall commence construction of Transmission Provider's Interconnection Facilities and Network Upgrades for which it is responsible as soon as practicable after the following additional conditions are satisfied:

5.6.1 Approval of the appropriate Governmental Authority has been obtained for any facilities requiring regulatory approval;

5.6.2 Necessary real property rights and rights-of-way have been obtained, to the extent required for the construction of a discrete aspect of Transmission Provider's Interconnection Facilities and Network Upgrades;

5.6.3 Transmission Provider has received written authorization to proceed with construction from Interconnection Customer by the date specified in Appendix B, Milestones; and

5.6.4 Interconnection Customer has provided security to Transmission Provider in accordance with Article 11.5 by the dates specified in Appendix B, Milestones.

5.7 Work Progress. The Parties will keep each other advised periodically as to the progress of their respective design, procurement and construction efforts. Either Party may, at any time, request a progress report from the other Party. If, at any time, Interconnection Customer determines that the completion of Transmission Provider's Interconnection Facilities will not be required until after the specified In-Service Date, Interconnection Customer will provide written notice to Transmission Provider of such later date upon which the completion of Transmission Provider's Interconnection Facilities will be required.

5.8 Information Exchange. As soon as reasonably practicable after the Effective Date, the Parties shall exchange information regarding the design and compatibility of the Parties' Interconnection Facilities and compatibility of the Interconnection Facilities with Transmission Provider's

Transmission System, and shall work diligently and in good faith to make any necessary design changes.

5.9 Other Interconnection Options.

5.9.1 Limited Operation. If any of Transmission Provider's Interconnection Facilities or Network Upgrades are not reasonably expected to be completed prior to the Commercial Operation Date of the Large Generating Facility, Transmission Provider shall, upon the request and at the expense of Interconnection Customer, perform operating studies on a timely basis to determine the extent to which the Large Generating Facility and Interconnection Customer's Interconnection Facilities may operate prior to the completion of Transmission Provider's Interconnection Facilities or Network Upgrades consistent with Applicable Laws and Regulations, Applicable Reliability Standards, Good Utility Practice, and this LGIA. Transmission Provider shall permit Interconnection Customer to operate the Large Generating Facility and Interconnection Customer's Interconnection Facilities in accordance with the results of such studies.

5.9.2 Provisional Interconnection Service. Upon the request of Interconnection Customer, and prior to completion of requisite Interconnection Facilities, Network Upgrades, Distribution Upgrades, or System Protection Facilities Transmission Provider may execute a Provisional Large Generator Interconnection Agreement or Interconnection Customer may request the filing of an unexecuted Provisional Large Generator Interconnection Agreement with the Interconnection Customer for limited Interconnection Service at the discretion of Transmission Provider based upon an evaluation that will consider the results of available studies. Transmission Provider shall determine, through available studies or additional studies as necessary, whether stability, short circuit, thermal, and/or voltage issues would arise if Interconnection Customer interconnects without modifications to the Generating Facility or Transmission System. Transmission Provider shall determine whether any Interconnection Facilities, Network Upgrades, Distribution Upgrades, or System Protection Facilities that are necessary to meet the requirements of [NERC] *the Electric Reliability Organization*, or any applicable Regional Entity for the interconnection of a new, modified and/or expanded Generating Facility are in place prior to the commencement of Interconnection Service from the Generating Facility. Where available studies indicate that such, Interconnection Facilities, Network Upgrades, Distribution Upgrades, and/or System Protection Facilities that are required for the interconnection of a new, modified and/or expanded Generating Facility are not currently in place, Transmission Provider will perform a study, at the Interconnection Customer's expense, to confirm the facilities that are required for Provisional Interconnection Service. The maximum permissible output of the Generating Facility in the Provisional Large Generator Interconnection Agreement shall be studied and updated [on a frequency determined by Transmission Provider and at

the Interconnection Customer's expense]. Interconnection Customer assumes all risk and liabilities with respect to changes between the Provisional Large Generator Interconnection Agreement and the Large Generator Interconnection Agreement, including changes in output limits and Interconnection Facilities, Network Upgrades, Distribution Upgrades, and/or System Protection Facilities cost responsibilities.

5.10 Interconnection Customer's Interconnection Facilities ("ICIF"). Interconnection Customer shall, at its expense, design, procure, construct, own and install the ICIF, as set forth in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades.

5.10.1 Interconnection Customer's Interconnection Facility Specifications. Interconnection Customer shall submit initial specifications for the ICIF, including System Protection Facilities, to Transmission Provider at least one hundred eighty (180) Calendar Days prior to the Initial Synchronization Date; and final specifications for review and comment at least ninety (90) Calendar Days prior to the Initial Synchronization Date. Transmission Provider shall review such specifications to ensure that the ICIF are compatible with the technical specifications, operational control, and safety requirements of Transmission Provider and comment on such specifications within thirty (30) Calendar Days of Interconnection Customer's submission. All specifications provided hereunder shall be deemed confidential.

5.10.2 Transmission Provider's Review. Transmission Provider's review of Interconnection Customer's final specifications shall not be construed as confirming, endorsing, or providing a warranty as to the design, fitness, safety, durability or reliability of the Large Generating Facility, or the ICIF. Interconnection Customer shall make such changes to the ICIF as may reasonably be required by Transmission Provider, in accordance with Good Utility Practice, to ensure that the ICIF are compatible with the technical specifications, operational control, and safety requirements of Transmission Provider.

5.10.3 ICIF Construction. The ICIF shall be designed and constructed in accordance with Good Utility Practice. Within one hundred twenty (120) Calendar Days after the Commercial Operation Date, unless the Parties agree on another mutually acceptable deadline, Interconnection Customer shall deliver to Transmission Provider "as-built" drawings, information and documents for the ICIF, such as: a one-line diagram, a site plan showing the Large Generating Facility and the ICIF, plan and elevation drawings showing the layout of the ICIF, a relay functional diagram, relaying AC and DC schematic wiring diagrams and relay settings for all facilities associated with Interconnection Customer's step-up transformers, the facilities connecting the Large Generating Facility to the step-up transformers and the ICIF, and the impedances (determined by factory tests) for the associated step-up transformers and the

Large Generating Facility. The Interconnection Customer shall provide Transmission Provider specifications for the excitation system, automatic voltage regulator, Large Generating Facility control and protection settings, transformer tap settings, and communications, if applicable.

5.11 Transmission Provider's Interconnection Facilities Construction. Transmission Provider's Interconnection Facilities shall be designed and constructed in accordance with Good Utility Practice. Upon request, within one hundred twenty (120) Calendar Days after the Commercial Operation Date, unless the Parties agree on another mutually acceptable deadline, Transmission Provider shall deliver to Interconnection Customer the following "as-built" drawings, information and documents for Transmission Provider's Interconnection Facilities [include appropriate drawings and relay diagrams].

Transmission Provider will obtain control of Transmission Provider's Interconnection Facilities and Stand Alone Network Upgrades upon completion of such facilities.

5.12 Access Rights. Upon reasonable notice and supervision by a Party, and subject to any required or necessary regulatory approvals, a Party ("Granting Party") shall furnish *at no cost* to the other Party ("Access Party") any rights of use, licenses, rights of way and easements with respect to lands owned or controlled by the Granting Party, its agents (if allowed under the applicable agency agreement), or any Affiliate, that are necessary to enable the Access Party to obtain ingress and egress to construct, operate, maintain, repair, test (or witness testing), inspect, replace or remove facilities and equipment to: (i) interconnect the Large Generating Facility with the Transmission System; (ii) operate and maintain the Large Generating Facility, the Interconnection Facilities and the Transmission System; and (iii) disconnect or remove the Access Party's facilities and equipment upon termination of this LGIA. In exercising such licenses, rights of way and easements, the Access Party shall not unreasonably disrupt or interfere with normal operation of the Granting Party's business and shall adhere to the safety rules and procedures established in advance, as may be changed from time to time, by the Granting Party and provided to the Access Party.

5.13 Lands of Other Property Owners. If any part of Transmission Provider or Transmission Owner's Interconnection Facilities and/or Network Upgrades is to be installed on property owned by persons other than Interconnection Customer or Transmission Provider or Transmission Owner, Transmission Provider or Transmission Owner shall at Interconnection Customer's expense use efforts, similar in nature and extent to those that it typically undertakes on its own behalf or on behalf of its Affiliates, including use of its eminent domain authority, and to the extent consistent with state law, to procure from such persons any rights of use, licenses, rights of way and easements that are necessary to construct, operate, maintain, test, inspect, replace or remove Transmission

Provider or Transmission Owner's Interconnection Facilities and/or Network Upgrades upon such property.

5.14 Permits. Transmission Provider or Transmission Owner and Interconnection Customer shall cooperate with each other in good faith in obtaining all permits, licenses, and authorizations that are necessary to accomplish the interconnection in compliance with Applicable Laws and Regulations. With respect to this paragraph, Transmission Provider or Transmission Owner shall provide permitting assistance to Interconnection Customer comparable to that provided to Transmission Provider's own, or an Affiliate's generation.

5.15 Early Construction of Base Case Facilities. Interconnection Customer may request Transmission Provider to construct, and Transmission Provider shall construct, using Reasonable Efforts to accommodate Interconnection Customer's In-Service Date, all or any portion of any Network Upgrades required for Interconnection Customer to be interconnected to the Transmission System which are included in the Base Case of the Facilities Study for Interconnection Customer, and which also are required to be constructed for another Interconnection Customer, but where such construction is not scheduled to be completed in time to achieve Interconnection Customer's In-Service Date.

5.16 Suspension. Interconnection Customer reserves the right, upon written notice to Transmission Provider, to suspend at any time all work by Transmission Provider associated with the construction and installation of Transmission Provider's Interconnection Facilities and/or Network Upgrades required under this LGIA with the condition that Transmission System shall be left in a safe and reliable condition in accordance with Good Utility Practice and Transmission Provider's safety and reliability criteria. In such event, Interconnection Customer shall be responsible for all reasonable and necessary costs which Transmission Provider (i) has incurred pursuant to this LGIA prior to the suspension and (ii) incurs in suspending such work, including any costs incurred to perform such work as may be necessary to ensure the safety of persons and property and the integrity of the Transmission System during such suspension and, if applicable, any costs incurred in connection with the cancellation or suspension of material, equipment and labor contracts which Transmission Provider cannot reasonably avoid; provided, however, that prior to canceling or suspending any such material, equipment or labor contract, Transmission Provider shall obtain Interconnection Customer's authorization to do so.

Transmission Provider shall invoice Interconnection Customer for such costs pursuant to Article 12 and shall use due diligence to minimize its costs. In the event Interconnection Customer suspends work by Transmission Provider required under this LGIA pursuant to this Article 5.16, and has not requested Transmission Provider to recommence the work required under this LGIA on or before the expiration of three (3) years following commencement of such suspension, this LGIA shall be deemed

terminated. The three-year period shall begin on the date the suspension is requested, or the date of the written notice to Transmission Provider, if no effective date is specified.

5.17 Taxes.

5.17.1 Interconnection Customer Payments Not Taxable. The Parties intend that all payments or property transfers made by Interconnection Customer to Transmission Provider for the installation of Transmission Provider's Interconnection Facilities and the Network Upgrades shall be non-taxable, either as contributions to capital, or as an advance, in accordance with the Internal Revenue Code and any applicable state income tax laws and shall not be taxable as contributions in aid of construction or otherwise under the Internal Revenue Code and any applicable state income tax laws.

5.17.2 Representations and Covenants. In accordance with IRS Notice 2001–82 and IRS Notice 88–129, Interconnection Customer represents and covenants that (i) ownership of the electricity generated at the Large Generating Facility will pass to another party prior to the transmission of the electricity on the Transmission System, (ii) for income tax purposes, the amount of any payments and the cost of any property transferred to Transmission Provider for Transmission Provider's Interconnection Facilities will be capitalized by Interconnection Customer as an intangible asset and recovered using the straight-line method over a useful life of twenty (20) years, and (iii) any portion of Transmission Provider's Interconnection Facilities that is a “dual-use intertie,” within the meaning of IRS Notice 88–129, is reasonably expected to carry only a de minimis amount of electricity in the direction of the Large Generating Facility. For this purpose, “de minimis amount” means no more than 5 percent of the total power flows in both directions, calculated in accordance with the “5 percent test” set forth in IRS Notice 88–129. This is not intended to be an exclusive list of the relevant conditions that must be met to conform to IRS requirements for non-taxable treatment.

At Transmission Provider's request, Interconnection Customer shall provide Transmission Provider with a report from an independent engineer confirming its representation in clause (iii), above. Transmission Provider represents and covenants that the cost of Transmission Provider's Interconnection Facilities paid for by Interconnection Customer will have no net effect on the base upon which rates are determined.

5.17.3 Indemnification for the Cost Consequences of Current Tax Liability Imposed Upon the Transmission Provider. Notwithstanding Article 5.17.1, Interconnection Customer shall protect, indemnify and hold harmless Transmission Provider from the cost consequences of any current tax liability imposed against Transmission Provider as the result of payments or property transfers made by Interconnection Customer to Transmission Provider under this LGIA for Interconnection Facilities, as well as any interest and penalties, other than interest and penalties attributable to any delay caused by Transmission Provider.

Transmission Provider shall not include a gross-up for the cost consequences of any current tax liability in the amounts it charges Interconnection Customer under this LGIA unless (i) Transmission Provider has determined, in good faith, that the payments or property transfers made by Interconnection Customer to Transmission Provider should be reported as income subject to taxation or (ii) any Governmental Authority directs Transmission Provider to report payments or property as income subject to taxation; *provided, however*, that Transmission Provider may require Interconnection Customer to provide security for Interconnection Facilities, in a form reasonably acceptable to Transmission Provider (such as a parental guarantee or a letter of credit), in an amount equal to the cost consequences of any current tax liability under this Article 5.17. Interconnection Customer shall reimburse Transmission Provider for such costs on a fully grossed-up basis, in accordance with Article 5.17.4, within thirty (30) Calendar Days of receiving written notification from Transmission Provider of the amount due, including detail about how the amount was calculated.

The indemnification obligation shall terminate at the earlier of (1) the expiration of the ten year testing period and the applicable statute of limitation, as it may be extended by Transmission Provider upon request of the IRS, to keep these years open for audit or adjustment, or (2) the occurrence of a subsequent taxable event and the payment of any related indemnification obligations as contemplated by this Article 5.17.

5.17.4 Tax Gross-Up Amount. Interconnection Customer's liability for the cost consequences of any current tax liability under this Article 5.17 shall be calculated on a fully grossed-up basis. Except as may otherwise be agreed to by the parties, this means that Interconnection Customer will pay Transmission Provider, in addition to the amount paid for the Interconnection Facilities and Network Upgrades, an amount equal to (1) the current taxes imposed on Transmission Provider (“Current Taxes”) on the excess of (a) the gross income realized by Transmission Provider as a result of payments or property transfers made by Interconnection Customer to Transmission Provider under this LGIA (without regard to any payments under this Article 5.17) (the “Gross Income Amount”) over (b) the present value of future tax deductions for depreciation that will be available as a result of such payments or property transfers (the “Present Value Depreciation Amount”), plus (2) an additional amount sufficient to permit Transmission Provider to receive and retain, after the payment of all Current Taxes, an amount equal to the net amount described in clause (1).

For this purpose, (i) Current Taxes shall be computed based on Transmission Provider's composite federal and state tax rates at the time the payments or property transfers are received and Transmission Provider will be treated as being subject to tax at the highest marginal rates in effect at that time (the “Current Tax Rate”), and (ii) the Present Value Depreciation Amount shall be

computed by discounting Transmission Provider's anticipated tax depreciation deductions as a result of such payments or property transfers by Transmission Provider's current weighted average cost of capital. Thus, the formula for calculating Interconnection Customer's liability to Transmission Owner pursuant to this Article 5.17.4 can be expressed as follows: (Current Tax Rate x (Gross Income Amount—Present Value of Tax Depreciation))/(1—Current Tax Rate). Interconnection Customer's estimated tax liability in the event taxes are imposed shall be stated in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades.

5.17.5 Private Letter Ruling or Change or Clarification of Law. At Interconnection Customer's request and expense, Transmission Provider shall file with the IRS a request for a private letter ruling as to whether any property transferred or sums paid, or to be paid, by Interconnection Customer to Transmission Provider under this LGIA are subject to federal income taxation. Interconnection Customer will prepare the initial draft of the request for a private letter ruling, and will certify under penalties of perjury that all facts represented in such request are true and accurate to the best of Interconnection Customer's knowledge. Transmission Provider and Interconnection Customer shall cooperate in good faith with respect to the submission of such request.

Transmission Provider shall keep Interconnection Customer fully informed of the status of such request for a private letter ruling and shall execute either a privacy act waiver or a limited power of attorney, in a form acceptable to the IRS, that authorizes Interconnection Customer to participate in all discussions with the IRS regarding such request for a private letter ruling. Transmission Provider shall allow Interconnection Customer to attend all meetings with IRS officials about the request and shall permit Interconnection Customer to prepare the initial drafts of any follow-up letters in connection with the request.

5.17.6 Subsequent Taxable Events. If, within 10 years from the date on which the relevant Transmission Provider's Interconnection Facilities are placed in service, (i) Interconnection Customer Breaches the covenants contained in Article 5.17.2, (ii) a "disqualification event" occurs within the meaning of IRS Notice 88–129, or (iii) this LGIA terminates and Transmission Provider retains ownership of the Interconnection Facilities and Network Upgrades, Interconnection Customer shall pay a tax gross-up for the cost consequences of any current tax liability imposed on Transmission Provider, calculated using the methodology described in Article 5.17.4 and in accordance with IRS Notice 90–60.

5.17.7 Contests. In the event any Governmental Authority determines that Transmission Provider's receipt of payments or property constitutes income that is subject to taxation, Transmission Provider shall notify Interconnection Customer, in writing, within thirty (30) Calendar Days of receiving notification of such determination by a Governmental Authority. Upon the timely

written request by Interconnection Customer and at Interconnection Customer's sole expense, Transmission Provider may appeal, protest, seek abatement of, or otherwise oppose such determination. Upon Interconnection Customer's written request and sole expense, Transmission Provider may file a claim for refund with respect to any taxes paid under this Article 5.17, whether or not it has received such a determination. Transmission Provider reserves the right to make all decisions with regard to the prosecution of such appeal, protest, abatement or other contest, including the selection of counsel and compromise or settlement of the claim, but Transmission Provider shall keep Interconnection Customer informed, shall consider in good faith suggestions from Interconnection Customer about the conduct of the contest, and shall reasonably permit Interconnection Customer or an Interconnection Customer representative to attend contest proceedings.

Interconnection Customer shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement or other contest. At any time during the contest, Transmission Provider may agree to a settlement either with Interconnection Customer's consent or after obtaining written advice from nationally recognized tax counsel, selected by Transmission Provider, but reasonably acceptable to Interconnection Customer, that the proposed settlement represents a reasonable settlement given the hazards of litigation. Interconnection Customer's obligation shall be based on the amount of the settlement agreed to by Interconnection Customer, or if a higher amount, so much of the settlement that is supported by the written advice from nationally recognized tax counsel selected under the terms of the preceding sentence. The settlement amount shall be calculated on a fully grossed-up basis to cover any related cost consequences of the current tax liability. Any settlement without Interconnection Customer's consent or such written advice will relieve Interconnection Customer from any obligation to indemnify Transmission Provider for the tax at issue in the contest.

5.17.8 Refund. In the event that (a) a private letter ruling is issued to Transmission Provider which holds that any amount paid or the value of any property transferred by Interconnection Customer to Transmission Provider under the terms of this LGIA is not subject to federal income taxation, (b) any legislative change or administrative announcement, notice, ruling or other determination makes it reasonably clear to Transmission Provider in good faith that any amount paid or the value of any property transferred by Interconnection Customer to Transmission Provider under the terms of this LGIA is not taxable to Transmission Provider, (c) any abatement, appeal, protest, or other contest results in a determination that any payments or transfers made by Interconnection Customer to Transmission Provider are not subject to federal income tax, or (d) if Transmission Provider receives a refund from any taxing authority for any

overpayment of tax attributable to any payment or property transfer made by Interconnection Customer to Transmission Provider pursuant to this LGIA, Transmission Provider shall promptly refund to Interconnection Customer the following:

(i) any payment made by Interconnection Customer under this Article 5.17 for taxes that is attributable to the amount determined to be non-taxable, together with interest thereon,

(ii) interest on any amounts paid by Interconnection Customer to Transmission Provider for such taxes which Transmission Provider did not submit to the taxing authority, calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19a(a)(2)(iii) from the date payment was made by Interconnection Customer to the date Transmission Provider refunds such payment to Interconnection Customer, and

(iii) with respect to any such taxes paid by Transmission Provider, any refund or credit Transmission Provider receives or to which it may be entitled from any Governmental Authority, interest (or that portion thereof attributable to the payment described in clause (i), above) owed to Transmission Provider for such overpayment of taxes (including any reduction in interest otherwise payable by Transmission Provider to any Governmental Authority resulting from an offset or credit); *provided, however*, that Transmission Provider will remit such amount promptly to Interconnection Customer only after and to the extent that Transmission Provider has received a tax refund, credit or offset from any Governmental Authority for any applicable overpayment of income tax related to Transmission Provider's Interconnection Facilities.

The intent of this provision is to leave the Parties, to the extent practicable, in the event that no taxes are due with respect to any payment for Interconnection Facilities and Network Upgrades hereunder, in the same position they would have been in had no such tax payments been made.

5.17.9 Taxes Other Than Income Taxes. Upon the timely request by Interconnection Customer, and at Interconnection Customer's sole expense, Transmission Provider may appeal, protest, seek abatement of, or otherwise contest any tax (other than federal or state income tax) asserted or assessed against Transmission Provider for which Interconnection Customer may be required to reimburse Transmission Provider under the terms of this LGIA. Interconnection Customer shall pay to Transmission Provider on a periodic basis, as invoiced by Transmission Provider, Transmission Provider's documented reasonable costs of prosecuting such appeal, protest, abatement, or other contest. Interconnection Customer and Transmission Provider shall cooperate in good faith with respect to any such contest. Unless the payment of such taxes is a prerequisite to an appeal or abatement or cannot be deferred, no amount shall be payable by Interconnection Customer to Transmission Provider for such taxes until they are assessed by a final, non-appealable order by any court or agency of competent

jurisdiction. In the event that a tax payment is withheld and ultimately due and payable after appeal, Interconnection Customer will be responsible for all taxes, interest and penalties, other than penalties attributable to any delay caused by Transmission Provider.

5.17.10 Transmission Owners Who Are Not Transmission Providers. If Transmission Provider is not the same entity as the Transmission Owner, then (i) all references in this Article 5.17 to Transmission Provider shall be deemed also to refer to and to include the Transmission Owner, as appropriate, and (ii) this LGIA shall not become effective until such Transmission Owner shall have agreed in writing to assume all of the duties and obligations of Transmission Provider under this Article 5.17 of this LGIA.

5.18 Tax Status. Each Party shall cooperate with the other to maintain the other Party's tax status. Nothing in this LGIA is intended to adversely affect any Transmission Provider's tax exempt status with respect to the issuance of bonds including, but not limited to, Local Furnishing Bonds.

5.19 Modification.

5.19.1 General. Either Party may undertake modifications to its facilities. If a Party plans to undertake a modification that reasonably may be expected to affect the other Party's facilities, that Party shall provide to the other Party sufficient information regarding such modification so that the other Party may evaluate the potential impact of such modification prior to commencement of the work. Such information shall be deemed to be confidential hereunder and shall include information concerning the timing of such modifications and whether such modifications are expected to interrupt the flow of electricity from the Large Generating Facility. The Party desiring to perform such work shall provide the relevant drawings, plans, and specifications to the other Party at least ninety (90) Calendar Days in advance of the commencement of the work or such shorter period upon which the Parties may agree, which agreement shall not unreasonably be withheld, conditioned or delayed.

In the case of Large Generating Facility modifications that do not require Interconnection Customer to submit an Interconnection Request, Transmission Provider shall provide, within thirty (30) Calendar Days (or such other time as the Parties may agree), an estimate of any additional modifications to the Transmission System, Transmission Provider's Interconnection Facilities or Network Upgrades necessitated by such Interconnection Customer modification and a good faith estimate of the costs thereof.

5.19.2 Standards. Any additions, modifications, or replacements made to a Party's facilities shall be designed, constructed and operated in accordance with this LGIA and Good Utility Practice.

5.19.3 Modification Costs. Interconnection Customer shall not be directly assigned for the costs of any additions, modifications, or replacements that Transmission Provider makes to

Transmission Provider's Interconnection Facilities or the Transmission System to facilitate the interconnection of a third party to Transmission Provider's Interconnection Facilities or the Transmission System, or to provide transmission service to a third party under Transmission Provider's Tariff. Interconnection Customer shall be responsible for the costs of any additions, modifications, or replacements to Interconnection Customer's Interconnection Facilities that may be necessary to maintain or upgrade such Interconnection Customer's Interconnection Facilities consistent with Applicable Laws and Regulations, Applicable Reliability Standards or Good Utility Practice.

Article 6. Testing and Inspection

6.1 Pre-Commercial Operation Date Testing and Modifications. Prior to the Commercial Operation Date, Transmission Provider shall test Transmission Provider's Interconnection Facilities and Network Upgrades and Interconnection Customer shall test the Large Generating Facility and Interconnection Customer's Interconnection Facilities to ensure their safe and reliable operation. Similar testing may be required after initial operation. Each Party shall make any modifications to its facilities that are found to be necessary as a result of such testing. Interconnection Customer shall bear the cost of all such testing and modifications. Interconnection Customer shall generate test energy at the Large Generating Facility only if it has arranged for the delivery of such test energy.

6.2 Post-Commercial Operation Date Testing and Modifications. Each Party shall at its own expense perform routine inspection and testing of its facilities and equipment in accordance with Good Utility Practice as may be necessary to ensure the continued interconnection of the Large Generating Facility with the Transmission System in a safe and reliable manner. Each Party shall have the right, upon advance written notice, to require reasonable additional testing of the other Party's facilities, at the requesting Party's expense, as may be in accordance with Good Utility Practice.

6.3 Right to Observe Testing. Each Party shall notify the other Party in advance of its performance of tests of its Interconnection Facilities. The other Party has the right, at its own expense, to observe such testing.

6.4 Right to Inspect. Each Party shall have the right, but shall have no obligation to: (i) observe the other Party's tests and/or inspection of any of its System Protection Facilities and other protective equipment, including Power System Stabilizers; (ii) review the settings of the other Party's System Protection Facilities and other protective equipment; and (iii) review the other Party's maintenance records relative to the Interconnection Facilities, the System Protection Facilities and other protective equipment. A Party may exercise these rights from time to time as it deems necessary upon reasonable notice to the other Party. The exercise or non-exercise by a Party of any such rights shall not be construed as an endorsement or confirmation of any element

or condition of the Interconnection Facilities or the System Protection Facilities or other protective equipment or the operation thereof, or as a warranty as to the fitness, safety, desirability, or reliability of same. Any information that a Party obtains through the exercise of any of its rights under this Article 6.4 shall be deemed to be Confidential Information and treated pursuant to Article 22 of this LGIA.

Article 7. Metering

7.1 General. Each Party shall comply with the [Applicable Reliability Council] *Electric Reliability Organization* requirements. Unless otherwise agreed by the Parties, Transmission Provider shall install Metering Equipment at the Point of Interconnection prior to any operation of the Large Generating Facility and shall own, operate, test and maintain such Metering Equipment. Power flows to and from the Large Generating Facility shall be measured at or, at Transmission Provider's option, compensated to, the Point of Interconnection. Transmission Provider shall provide metering quantities, in analog and/or digital form, to Interconnection Customer upon request. Interconnection Customer shall bear all reasonable documented costs associated with the purchase, installation, operation, testing and maintenance of the Metering Equipment.

7.2 Check Meters. Interconnection Customer, at its option and expense, may install and operate, on its premises and on its side of the Point of Interconnection, one or more check meters to check Transmission Provider's meters. Such check meters shall be for check purposes only and shall not be used for the measurement of power flows for purposes of this LGIA, except as provided in Article 7.4 below. The check meters shall be subject at all reasonable times to inspection and examination by Transmission Provider or its designee. The installation, operation and maintenance thereof shall be performed entirely by Interconnection Customer in accordance with Good Utility Practice.

7.3 Standards. Transmission Provider shall install, calibrate, and test revenue quality Metering Equipment in accordance with applicable ANSI standards.

7.4 Testing of Metering Equipment. Transmission Provider shall inspect and test all Transmission Provider-owned Metering Equipment upon installation and at least once every two (2) years thereafter. If requested to do so by Interconnection Customer, Transmission Provider shall, at Interconnection Customer's expense, inspect or test Metering Equipment more frequently than every two (2) years. Transmission Provider shall give reasonable notice of the time when any inspection or test shall take place, and Interconnection Customer may have representatives present at the test or inspection. If at any time Metering Equipment is found to be inaccurate or defective, it shall be adjusted, repaired or replaced at Interconnection Customer's expense, in order to provide accurate metering, unless the inaccuracy or defect is due to Transmission Provider's failure to maintain, then Transmission Provider shall pay. If Metering Equipment fails to register,

or if the measurement made by Metering Equipment during a test varies by more than two percent from the measurement made by the standard meter used in the test, Transmission Provider shall adjust the measurements by correcting all measurements for the period during which Metering Equipment was in error by using Interconnection Customer's check meters, if installed. If no such check meters are installed or if the period cannot be reasonably ascertained, the adjustment shall be for the period immediately preceding the test of the Metering Equipment equal to one-half the time from the date of the last previous test of the Metering Equipment.

7.5 Metering Data. At Interconnection Customer's expense, the metered data shall be telemetered to one or more locations designated by Transmission Provider and one or more locations designated by Interconnection Customer. Such telemetered data shall be used, under normal operating conditions, as the official measurement of the amount of energy delivered from the Large Generating Facility to the Point of Interconnection.

Article 8. Communications

8.1 Interconnection Customer Obligations. Interconnection Customer shall maintain satisfactory operating communications with Transmission Provider's Transmission System dispatcher or representative designated by Transmission Provider. Interconnection Customer shall provide standard voice line, dedicated voice line and facsimile communications at its Large Generating Facility control room or central dispatch facility through use of either the public telephone system, or a voice communications system that does not rely on the public telephone system. Interconnection Customer shall also provide the dedicated data circuit(s) necessary to provide Interconnection Customer data to Transmission Provider as set forth in Appendix D, Security Arrangements Details. The data circuit(s) shall extend from the Large Generating Facility to the location(s) specified by Transmission Provider. Any required maintenance of such communications equipment shall be performed by Interconnection Customer. Operational communications shall be activated and maintained under, but not be limited to, the following events: system paralleling or separation, scheduled and unscheduled shutdowns, equipment clearances, and hourly and daily load data.

8.2 Remote Terminal Unit. Prior to the Initial Synchronization Date of the Large Generating Facility, a Remote Terminal Unit, or equivalent data collection and transfer equipment acceptable to the Parties, shall be installed by Interconnection Customer, or by Transmission Provider at Interconnection Customer's expense, to gather accumulated and instantaneous data to be telemetered to the location(s) designated by Transmission Provider through use of a dedicated point-to-point data circuit(s) as indicated in Article 8.1. The communication protocol for the data circuit(s) shall be specified by Transmission Provider. Instantaneous bi-directional analog real power and reactive power flow

information must be telemetered directly to the location(s) specified by Transmission Provider.

Each Party will promptly advise the other Party if it detects or otherwise learns of any metering, telemetry or communications equipment errors or malfunctions that require the attention and/or correction by the other Party. The Party owning such equipment shall correct such error or malfunction as soon as reasonably feasible.

8.3 No Annexation. Any and all equipment placed on the premises of a Party shall be and remain the property of the Party providing such equipment regardless of the mode and manner of annexation or attachment to real property, unless otherwise mutually agreed by the Parties.

8.4 Provision of Data from a Variable Energy Resource. The Interconnection Customer whose Generating Facility *contains at least one*[is] Variable Energy Resource shall provide meteorological and forced outage data to the Transmission Provider to the extent necessary for the Transmission Provider's development and deployment of power production forecasts for that class of Variable Energy Resources. The Interconnection Customer with a Variable Energy Resource having wind as the energy source, at a minimum, will be required to provide the Transmission Provider with site-specific meteorological data including: temperature, wind speed, wind direction, and atmospheric pressure. The Interconnection Customer with a Variable Energy Resource having solar as the energy source, at a minimum, will be required to provide the Transmission Provider with site-specific meteorological data including: temperature, atmospheric pressure, and irradiance. The Transmission Provider and Interconnection Customer whose Generating Facility *contains* [is] a Variable Energy Resource shall mutually agree to any additional meteorological data that are required for the development and deployment of a power production forecast. The Interconnection Customer whose Generating Facility *contains* [is] a Variable Energy Resource also shall submit data to the Transmission Provider regarding all forced outages to the extent necessary for the Transmission Provider's development and deployment of power production forecasts for that class of Variable Energy Resources. The exact specifications of the meteorological and forced outage data to be provided by the Interconnection Customer to the Transmission Provider, including the frequency and timing of data submittals, shall be made taking into account the size and configuration of the Variable Energy Resource, its characteristics, location, and its importance in maintaining generation resource adequacy and transmission system reliability in its area. All requirements for meteorological and forced outage data must be commensurate with the power production forecasting employed by the Transmission Provider. Such requirements for meteorological and forced outage data are set forth in Appendix C, Interconnection Details, of this LGIA, as they may change from time to time.

Article 9. Operations

9.1 General. Each Party shall comply with the [Applicable Reliability Council] *Electric Reliability Organization* requirements. Each Party shall provide to the other Party all information that may reasonably be required by the other Party to comply with Applicable Laws and Regulations and Applicable Reliability Standards.

9.2 [Control Area] *Balancing Authority Area* Notification. At least three months before Initial Synchronization Date, Interconnection Customer shall notify Transmission Provider in writing of the [Control Area] *Balancing Authority Area* in which the Large Generating Facility will be located. If Interconnection Customer elects to locate the Large Generating Facility in a [Control Area] *Balancing Authority Area* other than the [Control Area] *Balancing Authority Area* in which the Large Generating Facility is physically located, and if permitted to do so by the relevant transmission tariffs, all necessary arrangements, including but not limited to those set forth in Article 7 and Article 8 of this LGIA, and remote [Control Area] *Balancing Authority Area* generator interchange agreements, if applicable, and the appropriate measures under such agreements, shall be executed and implemented prior to the placement of the Large Generating Facility in the other [Control Area] *Balancing Authority Area*.

9.3 Transmission Provider Obligations. Transmission Provider shall cause the Transmission System and Transmission Provider's Interconnection Facilities to be operated, maintained and controlled in a safe and reliable manner and in accordance with this LGIA. Transmission Provider may provide operating instructions to Interconnection Customer consistent with this LGIA and Transmission Provider's operating protocols and procedures as they may change from time to time. Transmission Provider will consider changes to its operating protocols and procedures proposed by Interconnection Customer.

9.4 Interconnection Customer Obligations. Interconnection Customer shall at its own expense operate, maintain and control the Large Generating Facility and Interconnection Customer's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA. Interconnection Customer shall operate the Large Generating Facility and Interconnection Customer's Interconnection Facilities in accordance with all applicable requirements of the [Control Area] *Balancing Authority Area* of which it is part, as such requirements are set forth in Appendix C, Interconnection Details, of this LGIA. Appendix C, Interconnection Details, will be modified to reflect changes to the requirements as they may change from time to time. Either Party may request that the other Party provide copies of the requirements set forth in Appendix C, Interconnection Details, of this LGIA.

9.5 Start-Up and Synchronization. Consistent with the Parties' mutually acceptable procedures, Interconnection Customer is responsible for the proper synchronization of the Large Generating

Facility to Transmission Provider's Transmission System.

9.6 Reactive Power and Primary Frequency Response.

9.6.1 Power Factor Design Criteria.

9.6.1.1 Synchronous Generation.

Interconnection Customer shall design the Large Generating Facility to maintain a composite power delivery at continuous rated power output at the Point of Interconnection at a power factor within the range of 0.95 leading to 0.95 lagging, unless [the] Transmission Provider has established different requirements that apply to all synchronous generators in the [Control Area] *Balancing Authority Area* on a comparable basis.

9.6.1.2 Non-Synchronous Generation. Interconnection Customer shall design the Large Generating Facility to maintain a composite power delivery at continuous rated power output at the high-side of the generator substation at a power factor within the range of 0.95 leading to 0.95 lagging, unless [the] Transmission Provider has established a different power factor range that applies to all non-synchronous generators in the [Control Area] *Balancing Authority Area* on a comparable basis. This power factor range standard shall be dynamic and can be met using, for example, power electronics designed to supply this level of reactive capability (taking into account any limitations due to voltage level, real power output, etc.) or fixed and switched capacitors, or a combination of the two. This requirement shall only apply to newly interconnecting non-synchronous generators that have not yet executed a Facilities Study Agreement as of the effective date of the Final rule establishing this requirement (Order No. 827).

9.6.2 Voltage Schedules. Once Interconnection Customer has synchronized the Large Generating Facility with the Transmission System, Transmission Provider shall require Interconnection Customer to operate the Large Generating Facility to produce or absorb reactive power within the design limitations of the Large Generating Facility set forth in Article 9.6.1 (Power Factor Design Criteria). Transmission Provider's voltage schedules shall treat all sources of reactive power in the [Control Area] *Balancing Authority Area* in an equitable and not unduly discriminatory manner. Transmission Provider shall exercise Reasonable Efforts to provide Interconnection Customer with such schedules at least one (1) day in advance, and may make changes to such schedules as necessary to maintain the reliability of the Transmission System. Interconnection Customer shall operate the Large Generating Facility to maintain the specified output voltage or power factor at the Point of Interconnection within the design limitations of the Large Generating Facility set forth in Article 9.6.1 (Power Factor Design Criteria). If Interconnection Customer is unable to maintain the specified voltage or power factor, it shall promptly notify the System Operator.

9.6.2.1 Voltage Regulators. Whenever the Large Generating Facility is operated in parallel with the Transmission System and voltage regulators are capable of operation,

Interconnection Customer shall operate the Large Generating Facility with its voltage regulators in automatic operation. If the Large Generating Facility's voltage regulators are not capable of such automatic operation, Interconnection Customer shall immediately notify Transmission Provider's system operator, or its designated representative, and ensure that such Large Generating Facility's reactive power production or absorption (measured in MVARs) are within the design capability of the Large Generating Facility's generating unit(s) and steady state stability limits. Interconnection Customer shall not cause its Large Generating Facility to disconnect automatically or instantaneously from the Transmission System or trip any generating unit comprising the Large Generating Facility for an under or over frequency condition unless the abnormal frequency condition persists for a time period beyond the limits set forth in ANSI/IEEE Standard C37.106, or such other standard as applied to other generators in the [Control Area] *Balancing Authority Area* on a comparable basis.

9.6.3 Payment for Reactive Power. Transmission Provider is required to pay Interconnection Customer for reactive power that Interconnection Customer provides or absorbs from the Large Generating Facility when Transmission Provider requests Interconnection Customer to operate its Large Generating Facility outside the range specified in Article 9.6.1, provided that if Transmission Provider pays its own or affiliated generators for reactive power service within the specified range, it must also pay Interconnection Customer. Payments shall be pursuant to Article 11.6 or such other agreement to which the Parties have otherwise agreed.

9.6.4 Primary Frequency Response. Interconnection Customer shall ensure the primary frequency response capability of its Large Generating Facility by installing, maintaining, and operating a functioning governor or equivalent controls. The term "functioning governor or equivalent controls" as used herein shall mean the required hardware and/or software that provides frequency responsive real power control with the ability to sense changes in system frequency and autonomously adjust the Large Generating Facility's real power output in accordance with the droop and deadband parameters and in the direction needed to correct frequency deviations. Interconnection Customer is required to install a governor or equivalent controls with the capability of operating: (1) with a maximum 5 percent droop and ± 0.036 Hz deadband; or (2) in accordance with the relevant droop, deadband, and timely and sustained response settings from an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard providing for equivalent or more stringent parameters. The droop characteristic shall be: (1) based on the nameplate capacity of the Large Generating Facility, and shall be linear in the range of frequencies between 59 to 61 Hz that are outside of the deadband parameter; or (2) based on an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard providing for an equivalent or more stringent

parameter. The deadband parameter shall be: the range of frequencies above and below nominal (60 Hz) in which the governor or equivalent controls is not expected to adjust the Large Generating Facility's real power output in response to frequency deviations. The deadband shall be implemented: (1) without a step to the droop curve, that is, once the frequency deviation exceeds the deadband parameter, the expected change in the Large Generating Facility's real power output in response to frequency deviations shall start from zero and then increase (for under-frequency deviations) or decrease (for over-frequency deviations) linearly in proportion to the magnitude of the frequency deviation; or (2) in accordance with an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard providing for an equivalent or more stringent parameter. Interconnection Customer shall notify Transmission Provider that the primary frequency response capability of the Large Generating Facility has been tested and confirmed during commissioning. Once Interconnection Customer has synchronized the Large Generating Facility with the Transmission System, Interconnection Customer shall operate the Large Generating Facility consistent with the provisions specified in Sections 9.6.4.1 and 9.6.4.2 of this Agreement. The primary frequency response requirements contained herein shall apply to both synchronous and non-synchronous Large Generating Facilities.

9.6.4.1 Governor or Equivalent Controls. Whenever the Large Generating Facility is operated in parallel with the Transmission System, Interconnection Customer shall operate the Large Generating Facility with its governor or equivalent controls in service and responsive to frequency. Interconnection Customer shall: (1) in coordination with Transmission Provider and/or the relevant balancing authority, set the deadband parameter to: (1) a maximum of ± 0.036 Hz and set the droop parameter to a maximum of 5 percent; or (2) implement the relevant droop and deadband settings from an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard that provides for equivalent or more stringent parameters. Interconnection Customer shall be required to provide the status and settings of the governor or equivalent controls to Transmission Provider and/or the relevant balancing authority upon request. If Interconnection Customer needs to operate the Large Generating Facility with its governor or equivalent controls not in service, Interconnection Customer shall immediately notify Transmission Provider and the relevant balancing authority, and provide both with the following information: (1) the operating status of the governor or equivalent controls (*i.e.*, whether it is currently out of service or when it will be taken out of service); (2) the reasons for removing the governor or equivalent controls from service; and (3) a reasonable estimate of when the governor or equivalent controls will be returned to service. Interconnection Customer shall make Reasonable Efforts to return its governor or equivalent controls into service as soon as practicable. Interconnection Customer shall make

Reasonable Efforts to keep outages of the Large Generating Facility's governor or equivalent controls to a minimum whenever the Large Generating Facility is operated in parallel with the Transmission System.

9.6.4.2 **Timely and Sustained Response.** Interconnection Customer shall ensure that the Large Generating Facility's real power response to sustained frequency deviations outside of the deadband setting is automatically provided and shall begin immediately after frequency deviates outside of the deadband, and to the extent the Large Generating Facility has operating capability in the direction needed to correct the frequency deviation. Interconnection Customer shall not block or otherwise inhibit the ability of the governor or equivalent controls to respond and shall ensure that the response is not inhibited, except under certain operational constraints including, but not limited to, ambient temperature limitations, physical energy limitations, outages of mechanical equipment, or regulatory requirements. The Large Generating Facility shall sustain the real power response at least until system frequency returns to a value within the deadband setting of the governor or equivalent controls. A Commission-approved [R]eliability [S]tandard with equivalent or more stringent requirements shall supersede the above requirements.

9.6.4.3 **Exemptions.** Large Generating Facilities that are regulated by the United States Nuclear Regulatory Commission shall be exempt from Sections 9.6.4, 9.6.4.1, and 9.6.4.2 of this Agreement. Large Generating Facilities that are behind the meter generation that is sized-to-load (*i.e.*, the thermal load and the generation are near-balanced in real-time operation and the generation is primarily controlled to maintain the unique thermal, chemical, or mechanical output necessary for the operating requirements of its host facility) shall be required to install primary frequency response capability in accordance with the droop and deadband capability requirements specified in Section 9.6.4, but shall be otherwise exempt from the operating requirements in Sections 9.6.4, 9.6.4.1, 9.6.4.2, and 9.6.4.4 of this Agreement.

9.6.4.4 **Electric Storage Resources.** Interconnection Customer interconnecting a *Generating Facility that contains* an electric storage resource shall establish an operating range in Appendix C of its LGIA that specifies a minimum state of charge and a maximum state of charge between which the electric storage resource will be required to provide primary frequency response consistent with the conditions set forth in Sections 9.6.4, 9.6.4.1, 9.6.4.2 and 9.6.4.3 of this Agreement. Appendix C shall specify whether the operating range is static or dynamic, and shall consider (1) the expected magnitude of frequency deviations in the interconnection; (2) the expected duration that system frequency will remain outside of the deadband parameter in the interconnection; (3) the expected incidence of frequency deviations outside of the deadband parameter in the interconnection; (4) the physical capabilities of the electric storage resource; (5) operational limitations

of the electric storage resource due to manufacturer specifications; and (6) any other relevant factors agreed to by Transmission Provider and Interconnection Customer, and in consultation with the relevant transmission owner or balancing authority as appropriate. If the operating range is dynamic, then Appendix C must establish how frequently the operating range will be reevaluated and the factors that may be considered during its reevaluation.

Interconnection Customer's electric storage resource is required to provide timely and sustained primary frequency response consistent with Section 9.6.4.2 of this Agreement when it is online and dispatched to inject electricity to the Transmission System and/or receive electricity from the Transmission System. This excludes circumstances when the electric storage resource is not dispatched to inject electricity to the Transmission System and/or dispatched to receive electricity from the Transmission System. If Interconnection Customer's electric storage resource is charging at the time of a frequency deviation outside of its deadband parameter, it is to increase (for over-frequency deviations) or decrease (for under-frequency deviations) the rate at which it is charging in accordance with its droop parameter. Interconnection Customer's electric storage resource is not required to change from charging to discharging, or vice versa, unless the response necessitated by the droop and deadband settings requires it to do so and it is technically capable of making such a transition.

9.7 Outages and Interruptions.

9.7.1 Outages.

9.7.1.1 **Outage Authority and Coordination.** Each Party may in accordance with Good Utility Practice in coordination with the other Party remove from service any of its respective Interconnection Facilities or Network Upgrades that may impact the other Party's facilities as necessary to perform maintenance or testing or to install or replace equipment. Absent an Emergency Condition, the Party scheduling a removal of such facility(ies) from service will use Reasonable Efforts to schedule such removal on a date and time mutually acceptable to the Parties. In all circumstances, any Party planning to remove such facility(ies) from service shall use Reasonable Efforts to minimize the effect on the other Party of such removal.

9.7.1.2 **Outage Schedules.** Transmission Provider shall post scheduled outages of its transmission facilities on the OASIS. Interconnection Customer shall submit its planned maintenance schedules for the Large Generating Facility to Transmission Provider for a minimum of a rolling twenty-four month period. Interconnection Customer shall update its planned maintenance schedules as necessary. Transmission Provider may request Interconnection Customer to reschedule its maintenance as necessary to maintain the reliability of the Transmission System; provided, however, adequacy of generation supply shall not be a criterion in determining Transmission System reliability. Transmission Provider shall compensate Interconnection Customer for any additional direct costs that

Interconnection Customer incurs as a result of having to reschedule maintenance, including any additional overtime, breaking of maintenance contracts or other costs above and beyond the cost Interconnection Customer would have incurred absent Transmission Provider's request to reschedule maintenance. Interconnection Customer will not be eligible to receive compensation, if during the twelve (12) months prior to the date of the scheduled maintenance, Interconnection Customer had modified its schedule of maintenance activities.

9.7.1.3 **Outage Restoration.** If an outage on a Party's Interconnection Facilities or Network Upgrades adversely affects the other Party's operations or facilities, the Party that owns or controls the facility that is out of service shall use Reasonable Efforts to promptly restore such facility(ies) to a normal operating condition consistent with the nature of the outage. The Party that owns or controls the facility that is out of service shall provide the other Party, to the extent such information is known, information on the nature of the Emergency Condition, an estimated time of restoration, and any corrective actions required. Initial verbal notice shall be followed up as soon as practicable with written notice explaining the nature of the outage.

9.7.2 **Interruption of Service.** If required by Good Utility Practice to do so, Transmission Provider may require Interconnection Customer to interrupt or reduce deliveries of electricity if such delivery of electricity could adversely affect Transmission Provider's ability to perform such activities as are necessary to safely and reliably operate and maintain the Transmission System. The following provisions shall apply to any interruption or reduction permitted under this Article 9.7.2:

9.7.2.1 The interruption or reduction shall continue only for so long as reasonably necessary under Good Utility Practice;

9.7.2.2 Any such interruption or reduction shall be made on an equitable, non-discriminatory basis with respect to all generating facilities directly connected to the Transmission System;

9.7.2.3 When the interruption or reduction must be made under circumstances which do not allow for advance notice, Transmission Provider shall notify Interconnection Customer by telephone as soon as practicable of the reasons for the curtailment, interruption, or reduction, and, if known, its expected duration. Telephone notification shall be followed by written notification as soon as practicable;

9.7.2.4 Except during the existence of an Emergency Condition, when the interruption or reduction can be scheduled without advance notice, Transmission Provider shall notify Interconnection Customer in advance regarding the timing of such scheduling and further notify Interconnection Customer of the expected duration. Transmission Provider shall coordinate with Interconnection Customer using Good Utility Practice to schedule the interruption or reduction during periods of least impact to Interconnection Customer and Transmission Provider;

9.7.2.5 The Parties shall cooperate and coordinate with each other to the extent necessary in order to restore the Large Generating Facility, Interconnection Facilities, and the Transmission System to their normal operating state, consistent with system conditions and Good Utility Practice.

9.7.3 [Under-Frequency and Over Frequency Conditions]*Ride Through Capability and Performance.* The Transmission System is designed to automatically activate a load-shed program as required by the [Applicable Reliability Council]*Electric Reliability Organization* in the event of an underfrequency system disturbance. Interconnection Customer shall implement under-frequency and over-frequency relay set points for the Large Generating Facility as required by the [Applicable Reliability Council] *Electric Reliability Organization* to ensure frequency “ride through” capability of the Transmission System. Large Generating Facility response to frequency deviations of pre-determined magnitudes, both under-frequency and over-frequency deviations, shall be studied and coordinated with Transmission Provider in accordance with Good Utility Practice. *Interconnection Customer shall also implement under-voltage and over-voltage relay set points, or equivalent electronic controls, as required by the Electric Reliability Organization to ensure voltage “ride through” capability of the Transmission System.* The term “ride through” as used herein shall mean the ability of a Large Generating Facility to stay connected to and synchronized with the Transmission System during system disturbances within a range of under-frequency, [and] over-frequency, under-voltage, and over-voltage conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other Generating Facilities in the Balancing Authority Area on a comparable basis. *For abnormal frequency conditions and voltage conditions within the “no trip zone” defined by Reliability Standard PRC-024-3 or successor mandatory ride through reliability standards, the non-synchronous Large Generating Facility must ensure that, within any physical limitations of the Large Generating Facility, its control and protection settings are configured or set to (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels, unless providing primary frequency response or fast frequency response; (2) minimize reductions in active power and remain within dynamic voltage and current limits, if reactive power priority mode is enabled, unless providing primary frequency response or fast frequency response; (3) not artificially limit dynamic reactive power capability during disturbances; and (4) return to pre-disturbance active power levels without artificial ramp rate limits if active power is reduced, unless providing primary frequency response or fast frequency response.*

9.7.4 System Protection and Other Control Requirements.

9.7.4.1 System Protection Facilities. Interconnection Customer shall, at its expense, install, operate and maintain

System Protection Facilities as a part of the Large Generating Facility or Interconnection Customer's Interconnection Facilities.

Transmission Provider shall install at Interconnection Customer's expense any System Protection Facilities that may be required on Transmission Provider's Interconnection Facilities or the Transmission System as a result of the interconnection of the Large Generating Facility and Interconnection Customer's Interconnection Facilities.

9.7.4.2 Each Party's protection facilities shall be designed and coordinated with other systems in accordance with Good Utility Practice.

9.7.4.3 Each Party shall be responsible for protection of its facilities consistent with Good Utility Practice.

9.7.4.4 Each Party's protective relay design shall incorporate the necessary test switches to perform the tests required in Article 6. The required test switches will be placed such that they allow operation of lockout relays while preventing breaker failure schemes from operating and causing unnecessary breaker operations and/or the tripping of Interconnection Customer's units.

9.7.4.5 Each Party will test, operate and maintain System Protection Facilities in accordance with Good Utility Practice.

9.7.4.6 Prior to the In-Service Date, and again prior to the Commercial Operation Date, each Party or its agent shall perform a complete calibration test and functional trip test of the System Protection Facilities. At intervals suggested by Good Utility Practice and following any apparent malfunction of the System Protection Facilities, each Party shall perform both calibration and functional trip tests of its System Protection Facilities. These tests do not require the tripping of any in-service generation unit. These tests do, however, require that all protective relays and lockout contacts be activated.

9.7.5 Requirements for Protection. In compliance with Good Utility Practice, Interconnection Customer shall provide, install, own, and maintain relays, circuit breakers and all other devices necessary to remove any fault contribution of the Large Generating Facility to any short circuit occurring on the Transmission System not otherwise isolated by Transmission Provider's equipment, such that the removal of the fault contribution shall be coordinated with the protective requirements of the Transmission System. Such protective equipment shall include, without limitation, a disconnecting device or switch with load-interrupting capability located between the Large Generating Facility and the Transmission System at a site selected upon mutual agreement (not to be unreasonably withheld, conditioned or delayed) of the Parties. Interconnection Customer shall be responsible for protection of the Large Generating Facility and Interconnection Customer's other equipment from such conditions as negative sequence currents, over- or under-frequency, sudden load rejection, over- or under-voltage, and generator loss-of-field. Interconnection Customer shall be solely responsible to disconnect the Large Generating Facility and Interconnection Customer's other equipment

if conditions on the Transmission System could adversely affect the Large Generating Facility.

9.7.6 Power Quality. Neither Party's facilities shall cause excessive voltage flicker nor introduce excessive distortion to the sinusoidal voltage or current waves as defined by ANSI Standard C84.1-1989, in accordance with IEEE Standard 519, or any applicable superseding electric industry standard. In the event of a conflict between ANSI Standard C84.1-1989, or any applicable superseding electric industry standard, ANSI Standard C84.1-1989, or the applicable superseding electric industry standard, shall control.

9.8 Switching and Tagging Rules. Each Party shall provide the other Party a copy of its switching and tagging rules that are applicable to the other Party's activities. Such switching and tagging rules shall be developed on a non-discriminatory basis. The Parties shall comply with applicable switching and tagging rules, as amended from time to time, in obtaining clearances for work or for switching operations on equipment.

9.9 Use of Interconnection Facilities by Third Parties.

9.9.1 Purpose of Interconnection Facilities. Except as may be required by Applicable Laws and Regulations, or as otherwise agreed to among the Parties, the Interconnection Facilities shall be constructed for the sole purpose of interconnecting the Large Generating Facility to the Transmission System and shall be used for no other purpose.

9.9.2 Third Party Users. If required by Applicable Laws and Regulations or if the Parties mutually agree, such agreement not to be unreasonably withheld, to allow one or more third parties to use Transmission Provider's Interconnection Facilities, or any part thereof, Interconnection Customer will be entitled to compensation for the capital expenses it incurred in connection with the Interconnection Facilities based upon the pro rata use of the Interconnection Facilities by Transmission Provider, all third party users, and Interconnection Customer, in accordance with Applicable Laws and Regulations or upon some other mutually agreed upon methodology. In addition, cost responsibility for ongoing costs, including operation and maintenance costs associated with the Interconnection Facilities, will be allocated between Interconnection Customer and any third party users based upon the pro rata use of the Interconnection Facilities by Transmission Provider, all third party users, and Interconnection Customer, in accordance with Applicable Laws and Regulations or upon some other mutually agreed upon methodology. If the issue of such compensation or allocation cannot be resolved through such negotiations, it shall be submitted to FERC for resolution.

9.10 Disturbance Analysis Data Exchange. The Parties will cooperate with one another in the analysis of disturbances to either the Large Generating Facility or Transmission Provider's Transmission System by gathering and providing access to any information relating to any disturbance, including information from oscillography, protective

relay targets, breaker operations and sequence of events records, and any disturbance information required by Good Utility Practice.

Article 10. Maintenance

10.1 Transmission Provider Obligations. Transmission Provider shall maintain the Transmission System and Transmission Provider's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA.

10.2 Interconnection Customer Obligations. Interconnection Customer shall maintain the Large Generating Facility and Interconnection Customer's Interconnection Facilities in a safe and reliable manner and in accordance with this LGIA.

10.3 Coordination. The Parties shall confer regularly to coordinate the planning, scheduling and performance of preventive and corrective maintenance on the Large Generating Facility and the Interconnection Facilities.

10.4 Secondary Systems. Each Party shall cooperate with the other in the inspection, maintenance, and testing of control or power circuits that operate below 600 volts, AC or DC, including, but not limited to, any hardware, control or protective devices, cables, conductors, electric raceways, secondary equipment panels, transducers, batteries, chargers, and voltage and current transformers that directly affect the operation of a Party's facilities and equipment which may reasonably be expected to impact the other Party. Each Party shall provide advance notice to the other Party before undertaking any work on such circuits, especially on electrical circuits involving circuit breaker trip and close contacts, current transformers, or potential transformers.

10.5 Operating and Maintenance Expenses. Subject to the provisions herein addressing the use of facilities by others, and except for operations and maintenance expenses associated with modifications made for providing interconnection or transmission service to a third party and such third party pays for such expenses, Interconnection Customer shall be responsible for all reasonable expenses including overheads, associated with: (1) owning, operating, maintaining, repairing, and replacing Interconnection Customer's Interconnection Facilities; and (2) operation, maintenance, repair and replacement of Transmission Provider's Interconnection Facilities.

Article 11. Performance Obligation

11.1 Interconnection Customer Interconnection Facilities. Interconnection Customer shall design, procure, construct, install, own and/or control Interconnection Customer Interconnection Facilities described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades, at its sole expense.

11.2 Transmission Provider's Interconnection Facilities. Transmission Provider or Transmission Owner shall design, procure, construct, install, own and/or control the Transmission Provider's Interconnection Facilities described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution

Upgrades, at the sole expense of the Interconnection Customer.

11.3 Network Upgrades and Distribution Upgrades. Transmission Provider or Transmission Owner shall design, procure, construct, install, and own the Network Upgrades and Distribution Upgrades described in Appendix A, Interconnection Facilities, Network Upgrades and Distribution Upgrades. [The]Interconnection Customer shall be responsible for all costs related to Distribution Upgrades. Unless Transmission Provider or Transmission Owner elects to fund the capital for the Network Upgrades, they shall be solely funded by Interconnection Customer.

11.4 Transmission Credits.

11.4.1 Repayment of Amounts Advanced for Network Upgrades. Interconnection Customer shall be entitled to a cash repayment, equal to the total amount paid to Transmission Provider and Affected System Operator, if any, for the Network Upgrades, including any tax gross-up or other tax-related payments associated with Network Upgrades, and not refunded to Interconnection Customer pursuant to Article 5.17.8 or otherwise, to be paid to Interconnection Customer on a dollar-for-dollar basis for the non-usage sensitive portion of transmission charges, as payments are made under Transmission Provider's Tariff and Affected System's Tariff for transmission services with respect to the Large Generating Facility. Any repayment shall include interest calculated in accordance with the methodology set forth in FERC's regulations at 18 CFR 35.19(a)(2)(iii) from the date of any payment for Network Upgrades through the date on which the Interconnection Customer receives a repayment of such payment pursuant to this subparagraph. Interconnection Customer may assign such repayment rights to any person.

Notwithstanding the foregoing, Interconnection Customer, Transmission Provider, and Affected System Operator may adopt any alternative payment schedule that is mutually agreeable so long as Transmission Provider and Affected System Operator take one of the following actions no later than five years from the Commercial Operation Date: (1) return to Interconnection Customer any amounts advanced for Network Upgrades not previously repaid, or (2) declare in writing that Transmission Provider or Affected System Operator will continue to provide payments to Interconnection Customer on a dollar-for-dollar basis for the non-usage sensitive portion of transmission charges, or develop an alternative schedule that is mutually agreeable and provides for the return of all amounts advanced for Network Upgrades not previously repaid; however, full reimbursement shall not extend beyond twenty (20) years from the Commercial Operation Date.

If the Large Generating Facility fails to achieve commercial operation, but it or another Generating Facility is later constructed and makes use of the Network Upgrades, Transmission Provider and Affected System Operator shall at that time reimburse Interconnection Customer for the amounts advanced for the Network Upgrades. Before any such reimbursement can occur,

the Interconnection Customer, or the entity that ultimately constructs the Generating Facility, if different, is responsible for identifying the entity to which reimbursement must be made.

11.4.2 Special Provisions for Affected Systems. Unless Transmission Provider provides, under the LGIA, for the repayment of amounts advanced to Affected System Operator for Network Upgrades, Interconnection Customer and Affected System Operator shall enter into an agreement that provides for such repayment. The agreement shall specify the terms governing payments to be made by Interconnection Customer to the Affected System Operator as well as the repayment by the Affected System Operator.

11.4.3 Notwithstanding any other provision of this LGIA, nothing herein shall be construed as relinquishing or foreclosing any rights, including but not limited to firm transmission rights, capacity rights, transmission congestion rights, or transmission credits, that Interconnection Customer, shall be entitled to, now or in the future under any other agreement or tariff as a result of, or otherwise associated with, the transmission capacity, if any, created by the Network Upgrades, including the right to obtain cash reimbursements or transmission credits for transmission service that is not associated with the Large Generating Facility.

11.5 Provision of Security. At least thirty (30) Calendar Days prior to the commencement of the procurement, installation, or construction of a discrete portion of a Transmission Provider's Interconnection Facilities, Network Upgrades, or Distribution Upgrades, Interconnection Customer shall provide Transmission Provider, at Interconnection Customer's option, a guarantee, a surety bond, letter of credit or other form of security that is reasonably acceptable to Transmission Provider and is consistent with the Uniform Commercial Code of the jurisdiction identified in Article 14.2.1. Such security for payment, *as specified in Appendix B of this LGIA*, shall be in an amount sufficient to cover the costs for constructing, procuring and installing the applicable portion of Transmission Provider's Interconnection Facilities, Network Upgrades, or Distribution Upgrades and shall be reduced on a dollar-for-dollar basis for payments made to Transmission Provider for these purposes. *Transmission Provider must use the LGIA Deposit required in Section 11.3 of the LGIP before requiring Interconnection Customer to submit security in addition to that LGIA Deposit. Transmission Provider must specify, in Appendix B of this LGIA, the dates for which Interconnection Customer must provide additional security for construction of each discrete portion of Transmission Provider's Interconnection Facilities, Network Upgrades, or Distribution Upgrades and Interconnection Customer must provide such additional security.*

In addition:

11.5.1 The guarantee must be made by an entity that meets the creditworthiness requirements of Transmission Provider, and contain terms and conditions that guarantee payment of any amount that may be due from

Interconnection Customer, up to an agreed-to maximum amount.

11.5.2 The letter of credit must be issued by a financial institution reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

11.5.3 The surety bond must be issued by an insurer reasonably acceptable to Transmission Provider and must specify a reasonable expiration date.

11.6 Interconnection Customer Compensation. If Transmission Provider requests or directs Interconnection Customer to provide a service pursuant to Articles 9.6.3 (Payment for Reactive Power), or 13.5.1 of this LGIA, Transmission Provider shall compensate Interconnection Customer in accordance with Interconnection Customer's applicable rate schedule then in effect unless the provision of such service(s) is subject to an RTO or ISO FERC-approved rate schedule. Interconnection Customer shall serve Transmission Provider or RTO or ISO with any filing of a proposed rate schedule at the time of such filing with FERC. To the extent that no rate schedule is in effect at the time the Interconnection Customer is required to provide or absorb any Reactive Power under this LGIA, Transmission Provider agrees to compensate Interconnection Customer in such amount as would have been due Interconnection Customer had the rate schedule been in effect at the time service commenced; provided, however, that such rate schedule must be filed at FERC or other appropriate Governmental Authority within sixty (60) Calendar Days of the commencement of service.

11.6.1 Interconnection Customer Compensation for Actions During Emergency Condition. Transmission Provider or RTO or ISO shall compensate Interconnection Customer for its provision of real and reactive power and other Emergency Condition services that Interconnection Customer provides to support the Transmission System during an Emergency Condition in accordance with Article 11.6.

Article 12. Invoice

12.1 General. Each Party shall submit to the other Party, on a monthly basis, invoices of amounts due for the preceding month. Each invoice shall state the month to which the invoice applies and fully describe the services and equipment provided. The Parties may discharge mutual debts and payment obligations due and owing to each other on the same date through netting, in which case all amounts a Party owes to the other Party under this LGIA, including interest payments or credits, shall be netted so that only the net amount remaining due shall be paid by the owing Party.

12.2 Final Invoice. Within six months after completion of the construction of Transmission Provider's Interconnection Facilities and the Network Upgrades, Transmission Provider shall provide an invoice of the final cost of the construction of Transmission Provider's Interconnection Facilities and the Network Upgrades and shall set forth such costs in sufficient detail to enable Interconnection Customer to compare the actual costs with the estimates and to ascertain deviations, if any, from the

cost estimates. Transmission Provider shall refund to Interconnection Customer any amount by which the actual payment by Interconnection Customer for estimated costs exceeds the actual costs of construction within thirty (30) Calendar Days of the issuance of such final construction invoice.

12.3 Payment. Invoices shall be rendered to the paying Party at the address specified in Appendix F. The Party receiving the invoice shall pay the invoice within thirty (30) Calendar Days of receipt. All payments shall be made in immediately available funds payable to the other Party, or by wire transfer to a bank named and account designated by the invoicing Party. Payment of invoices by either Party will not constitute a waiver of any rights or claims either Party may have under this LGIA.

12.4 Disputes. In the event of a billing dispute between Transmission Provider and Interconnection Customer, Transmission Provider shall continue to provide Interconnection Service under this LGIA as long as Interconnection Customer: (i) continues to make all payments not in dispute; and (ii) pays to Transmission Provider or into an independent escrow account the portion of the invoice in dispute, pending resolution of such dispute. If Interconnection Customer fails to meet these two requirements for continuation of service, then Transmission Provider may provide notice to Interconnection Customer of a Default pursuant to Article 17. Within thirty (30) Calendar Days after the resolution of the dispute, the Party that owes money to the other Party shall pay the amount due with interest calculated in accord with the methodology set forth in FERC's regulations at 18 CFR 35.19a(a)(2)(iii).

Article 13. Emergencies

13.1 Definition. "Emergency Condition" shall mean a condition or situation: (i) that in the judgment of the Party making the claim is imminently likely to endanger life or property; or (ii) that, in the case of Transmission Provider, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to the Transmission System, Transmission Provider's Interconnection Facilities or the Transmission Systems of others to which the Transmission System is directly connected; or (iii) that, in the case of Interconnection Customer, is imminently likely (as determined in a non-discriminatory manner) to cause a material adverse effect on the security of, or damage to, the Large Generating Facility or Interconnection Customer's Interconnection Facilities' System restoration and black start shall be considered Emergency Conditions; provided, that Interconnection Customer is not obligated by this LGIA to possess black start capability.

13.2 Obligations. Each Party shall comply with the Emergency Condition procedures of the applicable ISO/RTO, [NERC,] the [Applicable Reliability Council] *Electric Reliability Organization*, Applicable Laws and Regulations, and any emergency procedures agreed to by the Joint Operating Committee.

13.3 Notice. Transmission Provider shall notify Interconnection Customer promptly when it becomes aware of an Emergency Condition that affects Transmission Provider's Interconnection Facilities or the Transmission System that may reasonably be expected to affect Interconnection Customer's operation of the Large Generating Facility or Interconnection Customer's Interconnection Facilities. Interconnection Customer shall notify Transmission Provider promptly when it becomes aware of an Emergency Condition that affects the Large Generating Facility or Interconnection Customer's Interconnection Facilities that may reasonably be expected to affect the Transmission System or Transmission Provider's Interconnection Facilities. To the extent information is known, the notification shall describe the Emergency Condition, the extent of the damage or deficiency, the expected effect on the operation of Interconnection Customer's or Transmission Provider's facilities and operations, its anticipated duration and the corrective action taken and/or to be taken. The initial notice shall be followed as soon as practicable with written notice.

13.4 Immediate Action. Unless, in Interconnection Customer's reasonable judgment, immediate action is required, Interconnection Customer shall obtain the consent of Transmission Provider, such consent to not be unreasonably withheld, prior to performing any manual switching operations at the Large Generating Facility or Interconnection Customer's Interconnection Facilities in response to an Emergency Condition either declared by Transmission Provider or otherwise regarding the Transmission System.

13.5 Transmission Provider Authority.

13.5.1 General. Transmission Provider may take whatever actions or inactions with regard to the Transmission System or Transmission Provider's Interconnection Facilities it deems necessary during an Emergency Condition in order to (i) preserve public health and safety, (ii) preserve the reliability of the Transmission System or Transmission Provider's Interconnection Facilities, (iii) limit or prevent damage, and (iv) expedite restoration of service.

Transmission Provider shall use Reasonable Efforts to minimize the effect of such actions or inactions on the Large Generating Facility or Interconnection Customer's Interconnection Facilities. Transmission Provider may, on the basis of technical considerations, require the Large Generating Facility to mitigate an Emergency Condition by taking actions necessary and limited in scope to remedy the Emergency Condition, including, but not limited to, directing Interconnection Customer to shut-down, start-up, increase or decrease the real or reactive power output of the Large Generating Facility; implementing a reduction or disconnection pursuant to Article 13.5.2; directing Interconnection Customer to assist with blackstart (if available) or restoration efforts; or altering the outage schedules of the Large Generating Facility and Interconnection Customer's Interconnection Facilities. Interconnection Customer shall comply with all of Transmission Provider's operating

instructions concerning Large Generating Facility real power and reactive power output within the manufacturer's design limitations of the Large Generating Facility's equipment that is in service and physically available for operation at the time, in compliance with Applicable Laws and Regulations.

13.5.2 Reduction and Disconnection. Transmission Provider may reduce Interconnection Service or disconnect the Large Generating Facility or Interconnection Customer's Interconnection Facilities, when such, reduction or disconnection is necessary under Good Utility Practice due to Emergency Conditions. These rights are separate and distinct from any right of curtailment of Transmission Provider pursuant to Transmission Provider's Tariff. When Transmission Provider can schedule the reduction or disconnection in advance, Transmission Provider shall notify Interconnection Customer of the reasons, timing and expected duration of the reduction or disconnection. Transmission Provider shall coordinate with Interconnection Customer using Good Utility Practice to schedule the reduction or disconnection during periods of least impact to Interconnection Customer and Transmission Provider. Any reduction or disconnection shall continue only for so long as reasonably necessary under Good Utility Practice. The Parties shall cooperate with each other to restore the Large Generating Facility, the Interconnection Facilities, and the Transmission System to their normal operating state as soon as practicable consistent with Good Utility Practice.

13.6 Interconnection Customer Authority. Consistent with Good Utility Practice and the LGIA and the LGIP, Interconnection Customer may take actions or inactions with regard to the Large Generating Facility or Interconnection Customer's Interconnection Facilities during an Emergency Condition in order to (i) preserve public health and safety, (ii) preserve the reliability of the Large Generating Facility or Interconnection Customer's Interconnection Facilities, (iii) limit or prevent damage, and (iv) expedite restoration of service. Interconnection Customer shall use Reasonable Efforts to minimize the effect of such actions or inactions on the Transmission System and Transmission Provider's Interconnection Facilities. Transmission Provider shall use Reasonable Efforts to assist Interconnection Customer in such actions.

13.7 Limited Liability. Except as otherwise provided in Article 11.6.1 of this LGIA, neither Party shall be liable to the other for any action it takes in responding to an Emergency Condition so long as such action is made in good faith and is consistent with Good Utility Practice.

Article 14. Regulatory Requirements and Governing Law

14.1 Regulatory Requirements. Each Party's obligations under this LGIA shall be subject to its receipt of any required approval or certificate from one or more Governmental Authorities in the form and substance satisfactory to the applying Party, or the Party making any required filings with, or

providing notice to, such Governmental Authorities, and the expiration of any time period associated therewith. Each Party shall in good faith seek and use its Reasonable Efforts to obtain such other approvals. Nothing in this LGIA shall require Interconnection Customer to take any action that could result in its inability to obtain, or its loss of, status or exemption under the Federal Power Act, the Public Utility Holding Company Act of 1935, as amended, or the Public Utility Regulatory Policies Act of 1978.

14.2 Governing Law.

14.2.1 The validity, interpretation and performance of this LGIA and each of its provisions shall be governed by the laws of the state where the Point of Interconnection is located, without regard to its conflicts of law principles.

14.2.2 This LGIA is subject to all Applicable Laws and Regulations.

14.2.3 Each Party expressly reserves the right to seek changes in, appeal, or otherwise contest any laws, orders, rules, or regulations of a Governmental Authority.

Article 15. Notices

15.1 General. Unless otherwise provided in this LGIA, any notice, demand or request required or permitted to be given by either Party to the other and any instrument required or permitted to be tendered or delivered by either Party in writing to the other shall be effective when delivered and may be so given, tendered or delivered, by recognized national courier, or by depositing the same with the United States Postal Service with postage prepaid, for delivery by certified or registered mail, addressed to the Party, or personally delivered to the Party, at the address set out in Appendix F, Addresses for Delivery of Notices and Billings.

Either Party may change the notice information in this LGIA by giving five (5) Business Days written notice prior to the effective date of the change.

15.2 Billings and Payments. Billings and payments shall be sent to the addresses set out in Appendix F.

15.3 Alternative Forms of Notice. Any notice or request required or permitted to be given by a Party to the other and not required by this Agreement to be given in writing may be so given by telephone, facsimile or email to the telephone numbers and email addresses set out in Appendix F.

15.4 Operations and Maintenance Notice. Each Party shall notify the other Party in writing of the identity of the person(s) that it designates as the point(s) of contact with respect to the implementation of Articles 9 and 10.

Article 16. Force Majeure

16.1 Force Majeure.

16.1.1 Economic hardship is not considered a Force Majeure event.

16.1.2 Neither Party shall be considered to be in Default with respect to any obligation hereunder, (including obligations under Article 4), other than the obligation to pay money when due, if prevented from fulfilling such obligation by Force Majeure. A Party unable to fulfill any obligation hereunder (other than an obligation to pay money when

due) by reason of Force Majeure shall give notice and the full particulars of such Force Majeure to the other Party in writing or by telephone as soon as reasonably possible after the occurrence of the cause relied upon. Telephone notices given pursuant to this article shall be confirmed in writing as soon as reasonably possible and shall specifically state full particulars of the Force Majeure, the time and date when the Force Majeure occurred and when the Force Majeure is reasonably expected to cease. The Party affected shall exercise due diligence to remove such disability with reasonable dispatch, but shall not be required to accede or agree to any provision not satisfactory to it in order to settle and terminate a strike or other labor disturbance.

Article 17. Default

17.1 Default.

17.1.1 General. No Default shall exist where such failure to discharge an obligation (other than the payment of money) is the result of Force Majeure as defined in this LGIA or the result of an act of omission of the other Party. Upon a Breach, the non-breaching Party shall give written notice of such Breach to the breaching Party. Except as provided in Article 17.1.2, the breaching Party shall have thirty (30) Calendar Days from receipt of the Default notice within which to cure such Breach; provided however, if such Breach is not capable of cure within thirty (30) Calendar Days, the breaching Party shall commence such cure within thirty (30) Calendar Days after notice and continuously and diligently complete such cure within ninety (90) Calendar Days from receipt of the Default notice; and, if cured within such time, the Breach specified in such notice shall cease to exist.

17.1.2 Right to Terminate. If a Breach is not cured as provided in this article, or if a Breach is not capable of being cured within the period provided for herein, the non-breaching Party shall have the right to declare a Default and terminate this LGIA by written notice at any time until cure occurs, and be relieved of any further obligation hereunder and, whether or not that Party terminates this LGIA, to recover from the breaching Party all amounts due hereunder, plus all other damages and remedies to which it is entitled at law or in equity. The provisions of this article will survive termination of this LGIA.

17.2 Violation of Operating Assumptions for Generating Facilities. If Transmission Provider requires Interconnection Customer to memorialize the operating assumptions for the charging behavior of a Generating Facility that includes at least one electric storage resource in Appendix H of this LGIA, Transmission Provider may consider Interconnection Customer to be in Breach of the LGIA if Interconnection Customer fails to operate the Generating Facility in accordance with those operating assumptions for charging behavior. However, if Interconnection Customer operates contrary to the operating assumptions for charging behavior specified in Appendix H of this LGIA at the direction of Transmission Provider, Transmission Provider shall not consider Interconnection Customer in Breach of this LGIA.

Article 18. Indemnity, Consequential Damages and Insurance

18.1 Indemnity. The Parties shall at all times indemnify, defend, and hold the other Party harmless from, any and all damages, losses, claims, including claims and actions relating to injury to or death of any person or damage to property, demand, suits, recoveries, costs and expenses, court costs, attorney fees, and all other obligations by or to third parties, arising out of or resulting from the other Party's action or inactions of its obligations under this LGIA on behalf of the Indemnifying Party, except in cases of gross negligence or intentional wrongdoing by the indemnified Party.

18.1.1 Indemnified Person. If an Indemnified Person is entitled to indemnification under this Article 18 as a result of a claim by a third party, and the Indemnifying Party fails, after notice and reasonable opportunity to proceed under Article 18.1, to assume the defense of such claim, such Indemnified Person may at the expense of the Indemnifying Party contest, settle or consent to the entry of any judgment with respect to, or pay in full, such claim.

18.1.2 Indemnifying Party. If an Indemnifying Party is obligated to indemnify and hold any Indemnified Person harmless under this Article 18, the amount owing to the Indemnified Person shall be the amount of such Indemnified Person's actual Loss, net of any insurance or other recovery.

18.1.3 Indemnity Procedures. Promptly after receipt by an Indemnified Person of any claim or notice of the commencement of any action or administrative or legal proceeding or investigation as to which the indemnity provided for in Article 18.1 may apply, the Indemnified Person shall notify the Indemnifying Party of such fact. Any failure of or delay in such notification shall not affect a Party's indemnification obligation unless such failure or delay is materially prejudicial to the Indemnifying Party.

The Indemnifying Party shall have the right to assume the defense thereof with counsel designated by such Indemnifying Party and reasonably satisfactory to the Indemnified Person. If the defendants in any such action include one or more Indemnified Persons and the Indemnifying Party and if the Indemnified Person reasonably concludes that there may be legal defenses available to it and/or other Indemnified Persons which are different from or additional to those available to the Indemnifying Party, the Indemnified Person shall have the right to select separate counsel to assert such legal defenses and to otherwise participate in the defense of such action on its own behalf. In such instances, the Indemnifying Party shall only be required to pay the fees and expenses of one additional attorney to represent an Indemnified Person or Indemnified Persons having such differing or additional legal defenses.

The Indemnified Person shall be entitled, at its expense, to participate in any such action, suit or proceeding, the defense of which has been assumed by the Indemnifying Party. Notwithstanding the foregoing, the Indemnifying Party (i) shall not be entitled to assume and control the defense of any such action, suit or proceedings if and

to the extent that, in the opinion of the Indemnified Person and its counsel, such action, suit or proceeding involves the potential imposition of criminal liability on the Indemnified Person, or there exists a conflict or adversity of interest between the Indemnified Person and the Indemnifying Party, in such event the Indemnifying Party shall pay the reasonable expenses of the Indemnified Person, and (ii) shall not settle or consent to the entry of any judgment in any action, suit or proceeding without the consent of the Indemnified Person, which shall not be reasonably withheld, conditioned or delayed.

18.2 Consequential Damages. Other than the Liquidated Damages heretofore described, in no event shall either Party be liable under any provision of this LGIA for any losses, damages, costs or expenses for any special, indirect, incidental, consequential, or punitive damages, including but not limited to loss of profit or revenue, loss of the use of equipment, cost of capital, cost of temporary equipment or services, whether based in whole or in part in contract, in tort, including negligence, strict liability, or any other theory of liability; provided, however, that damages for which a Party may be liable to the other Party under another agreement will not be considered to be special, indirect, incidental, or consequential damages hereunder.

18.3 Insurance. Each party shall, at its own expense, maintain in force throughout the period of this LGIA, and until released by the other Party, the following minimum insurance coverages, with insurers authorized to do business in the state where the Point of Interconnection is located:

18.3.1 Employers' Liability and Workers' Compensation Insurance providing statutory benefits in accordance with the laws and regulations of the state in which the Point of Interconnection is located.

18.3.2 Commercial General Liability Insurance including premises and operations, personal injury, broad form property damage, broad form blanket contractual liability coverage (including coverage for the contractual indemnification) products and completed operations coverage, coverage for explosion, collapse and underground hazards, independent contractors coverage, coverage for pollution to the extent normally available and punitive damages to the extent normally available and a cross liability endorsement, with minimum limits of One Million Dollars (\$1,000,000) per occurrence/One Million Dollars (\$1,000,000) aggregate combined single limit for personal injury, bodily injury, including death and property damage.

18.3.3 Comprehensive Automobile Liability Insurance for coverage of owned and non-owned and hired vehicles, trailers or semi-trailers designed for travel on public roads, with a minimum, combined single limit of One Million Dollars (\$1,000,000) per occurrence for bodily injury, including death, and property damage.

18.3.4 Excess Public Liability Insurance over and above the Employers' Liability Commercial General Liability and Comprehensive Automobile Liability Insurance coverage, with a minimum

combined single limit of Twenty Million Dollars (\$20,000,000) per occurrence/Twenty Million Dollars (\$20,000,000) aggregate.

18.3.5 The Commercial General Liability Insurance, Comprehensive Automobile Insurance and Excess Public Liability Insurance policies shall name the other Party, its parent, associated and Affiliate companies and their respective directors, officers, agents, servants and employees ("Other Party Group") as additional insured. All policies shall contain provisions whereby the insurers waive all rights of subrogation in accordance with the provisions of this LGIA against the Other Party Group and provide thirty (30) Calendar Days advance written notice to the Other Party Group prior to anniversary date of cancellation or any material change in coverage or condition.

18.3.6 The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance and Excess Public Liability Insurance policies shall contain provisions that specify that the policies are primary and shall apply to such extent without consideration for other policies separately carried and shall state that each insured is provided coverage as though a separate policy had been issued to each, except the insurer's liability shall not be increased beyond the amount for which the insurer would have been liable had only one insured been covered. Each Party shall be responsible for its respective deductibles or retentions.

18.3.7 The Commercial General Liability Insurance, Comprehensive Automobile Liability Insurance and Excess Public Liability Insurance policies, if written on a Claims First Made Basis, shall be maintained in full force and effect for two (2) years after termination of this LGIA, which coverage may be in the form of tail coverage or extended reporting period coverage if agreed by the Parties.

18.3.8 The requirements contained herein as to the types and limits of all insurance to be maintained by the Parties are not intended to and shall not in any manner, limit or qualify the liabilities and obligations assumed by the Parties under this LGIA.

18.3.9 Within ten (10) days following execution of this LGIA, and as soon as practicable after the end of each fiscal year or at the renewal of the insurance policy and in any event within ninety (90) days thereafter, each Party shall provide certification of all insurance required in this LGIA, executed by each insurer or by an authorized representative of each insurer.

18.3.10 Notwithstanding the foregoing, each Party may self-insure to meet the minimum insurance requirements of Articles 18.3.2 through 18.3.8 to the extent it maintains a self-insurance program; provided that, such Party's senior secured debt is rated at investment grade or better by Standard & Poor's and that its self-insurance program meets the minimum insurance requirements of Articles 18.3.2 through 18.3.8. For any period of time that a Party's senior secured debt is unrated by Standard & Poor's or is rated at less than investment grade by Standard & Poor's, such Party shall comply with the insurance requirements applicable to it under Articles 18.3.2 through 18.3.9. In

the event that a Party is permitted to self-insure pursuant to this article, it shall notify the other Party that it meets the requirements to self-insure and that its self-insurance program meets the minimum insurance requirements in a manner consistent with that specified in Article 18.3.9.

18.3.11 The Parties agree to report to each other in writing as soon as practical all accidents or occurrences resulting in injuries to any person, including death, and any property damage arising out of this LGIA.

Article 19. Assignment

19.1 Assignment. This LGIA may be assigned by either Party only with the written consent of the other; provided that either Party may assign this LGIA without the consent of the other Party to any Affiliate of the assigning Party with an equal or greater credit rating and with the legal authority and operational ability to satisfy the obligations of the assigning Party under this LGIA; and provided further that Interconnection Customer shall have the right to assign this LGIA, without the consent of Transmission Provider, for collateral security purposes to aid in providing financing for the Large Generating Facility, provided that Interconnection Customer will promptly notify Transmission Provider of any such assignment. Any financing arrangement entered into by Interconnection Customer pursuant to this article will provide that prior to or upon the exercise of the secured party's, trustee's or mortgagee's assignment rights pursuant to said arrangement, the secured creditor, the trustee or mortgagee will notify Transmission Provider of the date and particulars of any such exercise of assignment right(s), including providing the Transmission Provider with proof that it meets the requirements of Articles 11.5 and 18.3. Any attempted assignment that violates this article is void and ineffective. Any assignment under this LGIA shall not relieve a Party of its obligations, nor shall a Party's obligations be enlarged, in whole or in part, by reason thereof. Where required, consent to assignment will not be unreasonably withheld, conditioned or delayed.

Article 20. Severability

20.1 Severability. If any provision in this LGIA is finally determined to be invalid, void or unenforceable by any court or other Governmental Authority having jurisdiction, such determination shall not invalidate, void or make unenforceable any other provision, agreement or covenant of this LGIA; provided that if Interconnection Customer (or any third party, but only if such third party is not acting at the direction of Transmission Provider) seeks and obtains such a final determination with respect to any provision of the Alternate Option (Article 5.1.2), or the Negotiated Option (Article 5.1.4), then none of these provisions shall thereafter have any force or effect and the Parties' rights and obligations shall be governed solely by the Standard Option (Article 5.1.1).

Article 21. Comparability

21.1 Comparability. The Parties will comply with all applicable comparability and code of conduct laws, rules and regulations, as amended from time to time.

Article 22. Confidentiality

22.1 Confidentiality. Confidential Information shall include, without limitation, all information relating to a Party's technology, research and development, business affairs, and pricing, and any information supplied by either of the Parties to the other prior to the execution of this LGIA.

Information is Confidential Information only if it is clearly designated or marked in writing as confidential on the face of the document, or, if the information is conveyed orally or by inspection, if the Party providing the information orally informs the Party receiving the information that the information is confidential.

If requested by either Party, the other Party shall provide in writing, the basis for asserting that the information referred to in this Article 22 warrants confidential treatment, and the requesting Party may disclose such writing to the appropriate Governmental Authority. Each Party shall be responsible for the costs associated with affording confidential treatment to its information.

22.1.1 Term. During the term of this LGIA, and for a period of three (3) years after the expiration or termination of this LGIA, except as otherwise provided in this Article 22, each Party shall hold in confidence and shall not disclose to any person Confidential Information.

22.1.2 Scope. Confidential Information shall not include information that the receiving Party can demonstrate: (1) is generally available to the public other than as a result of a disclosure by the receiving Party; (2) was in the lawful possession of the receiving Party on a non-confidential basis before receiving it from the disclosing Party; (3) was supplied to the receiving Party without restriction by a third party, who, to the knowledge of the receiving Party after due inquiry, was under no obligation to the disclosing Party to keep such information confidential; (4) was independently developed by the receiving Party without reference to Confidential Information of the disclosing Party; (5) is, or becomes, publicly known, through no wrongful act or omission of the receiving Party or Breach of this LGIA; or (6) is required, in accordance with Article 22.1.7 of the LGIA, Order of Disclosure, to be disclosed by any Governmental Authority or is otherwise required to be disclosed by law or subpoena, or is necessary in any legal proceeding establishing rights and obligations under this LGIA. Information designated as Confidential Information will no longer be deemed confidential if the Party that designated the information as confidential notifies the other Party that it no longer is confidential.

22.1.3 Release of Confidential Information. Neither Party shall release or disclose Confidential Information to any other person, except to its Affiliates (limited by the Standards of Conduct requirements), subcontractors, employees, consultants, or to parties who may be or considering providing financing to or equity participation with Interconnection Customer, or to potential purchasers or assignees of Interconnection Customer, on a need-to-know basis in

connection with this LGIA, unless such person has first been advised of the confidentiality provisions of this Article 22 and has agreed to comply with such provisions. Notwithstanding the foregoing, a Party providing Confidential Information to any person shall remain primarily responsible for any release of Confidential Information in contravention of this Article 22.

22.1.4 Rights. Each Party retains all rights, title, and interest in the Confidential Information that each Party discloses to the other Party. The disclosure by each Party to the other Party of Confidential Information shall not be deemed a waiver by either Party or any other person or entity of the right to protect the Confidential Information from public disclosure.

22.1.5 No Warranties. By providing Confidential Information, neither Party makes any warranties or representations as to its accuracy or completeness. In addition, by supplying Confidential Information, neither Party obligates itself to provide any particular information or Confidential Information to the other Party nor to enter into any further agreements or proceed with any other relationship or joint venture.

22.1.6 Standard of Care. Each Party shall use at least the same standard of care to protect Confidential Information it receives as it uses to protect its own Confidential Information from unauthorized disclosure, publication or dissemination. Each Party may use Confidential Information solely to fulfill its obligations to the other Party under this LGIA or its regulatory requirements.

22.1.7 Order of Disclosure. If a court or a Government Authority or entity with the right, power, and apparent authority to do so requests or requires either Party, by subpoena, oral deposition, interrogatories, requests for production of documents, administrative order, or otherwise, to disclose Confidential Information, that Party shall provide the other Party with prompt notice of such request(s) or requirement(s) so that the other Party may seek an appropriate protective order or waive compliance with the terms of this LGIA. Notwithstanding the absence of a protective order or waiver, the Party may disclose such Confidential Information which, in the opinion of its counsel, the Party is legally compelled to disclose. Each Party will use Reasonable Efforts to obtain reliable assurance that confidential treatment will be accorded any Confidential Information so furnished.

22.1.8 Termination of Agreement. Upon termination of this LGIA for any reason, each Party shall, within ten (10) Calendar Days of receipt of a written request from the other Party, use Reasonable Efforts to destroy, erase, or delete (with such destruction, erasure, and deletion certified in writing to the other Party) or return to the other Party, without retaining copies thereof, any and all written or electronic Confidential Information received from the other Party.

22.1.9 Remedies. The Parties agree that monetary damages would be inadequate to compensate a Party for the other Party's Breach of its obligations under this Article 22. Each Party accordingly agrees that the other Party shall be entitled to equitable

relief, by way of injunction or otherwise, if the first Party Breaches or threatens to Breach its obligations under this Article 22, which equitable relief shall be granted without bond or proof of damages, and the receiving Party shall not plead in defense that there would be an adequate remedy at law. Such remedy shall not be deemed an exclusive remedy for the Breach of this Article 22, but shall be in addition to all other remedies available at law or in equity. The Parties further acknowledge and agree that the covenants contained herein are necessary for the protection of legitimate business interests and are reasonable in scope. No Party, however, shall be liable for indirect, incidental, or consequential or punitive damages of any nature or kind resulting from or arising in connection with this Article 22.

22.1.10 Disclosure to FERC, its Staff, or a State. Notwithstanding anything in this Article 22 to the contrary, and pursuant to 18 CFR 1b.20, if FERC or its staff, during the course of an investigation or otherwise, requests information from one of the Parties that is otherwise required to be maintained in confidence pursuant to this LGIA, the Party shall provide the requested information to FERC or its staff, within the time provided for in the request for information. In providing the information to FERC or its staff, the Party must, consistent with 18 CFR 388.112, request that the information be treated as confidential and non-public by FERC and its staff and that the information be withheld from public disclosure. Parties are prohibited from notifying the other Party to this LGIA prior to the release of the Confidential Information to FERC or its staff. The Party shall notify the other Party to the LGIA when it is notified by FERC or its staff that a request to release Confidential Information has been received by FERC, at which time either of the Parties may respond before such information would be made public, pursuant to 18 CFR 388.112. Requests from a state regulatory body conducting a confidential investigation shall be treated in a similar manner if consistent with the applicable state rules and regulations.

22.1.11 Subject to the exception in Article 22.1.10, any information that a Party claims is competitively sensitive, commercial or financial information under this LGIA ("Confidential Information") shall not be disclosed by the other Party to any person not employed or retained by the other Party, except to the extent disclosure is (i) required by law; (ii) reasonably deemed by the disclosing Party to be required to be disclosed in connection with a dispute between or among the Parties, or the defense of litigation or dispute; (iii) otherwise permitted by consent of the other Party, such consent not to be unreasonably withheld; or (iv) necessary to fulfill its obligations under this LGIA or as a transmission service provider or a [Control Area] *Balancing Authority Area* operator including disclosing the Confidential Information to an RTO or ISO or to a regional or national reliability organization. The Party asserting confidentiality shall notify the other Party in writing of the information it claims is confidential. Prior to any disclosures of the other Party's Confidential Information under

this subparagraph, or if any third party or Governmental Authority makes any request or demand for any of the information described in this subparagraph, the disclosing Party agrees to promptly notify the other Party in writing and agrees to assert confidentiality and cooperate with the other Party in seeking to protect the Confidential Information from public disclosure by confidentiality agreement, protective order or other reasonable measures.

Article 23. Environmental Releases

23.1 Each Party shall notify the other Party, first orally and then in writing, of the release of any Hazardous Substances, any asbestos or lead abatement activities, or any type of remediation activities related to the Large Generating Facility or the Interconnection Facilities, each of which may reasonably be expected to affect the other Party. The notifying Party shall: (i) provide the notice as soon as practicable, provided such Party makes a good faith effort to provide the notice no later than twenty-four hours after such Party becomes aware of the occurrence; and (ii) promptly furnish to the other Party copies of any publicly available reports filed with any Governmental Authorities addressing such events.

Article 24. Information Requirements

24.1 Information Acquisition. Transmission Provider and Interconnection Customer shall submit specific information regarding the electrical characteristics of their respective facilities to each other as described below and in accordance with Applicable Reliability Standards.

24.2 Information Submission by Transmission Provider. The initial information submission by Transmission Provider shall occur no later than one hundred eighty (180) Calendar Days prior to Trial Operation and shall include Transmission System information necessary to allow Interconnection Customer to select equipment and meet any system protection and stability requirements, unless otherwise agreed to by the Parties. On a monthly basis Transmission Provider shall provide Interconnection Customer a status report on the construction and installation of Transmission Provider's Interconnection Facilities and Network Upgrades, including, but not limited to, the following information: (1) progress to date; (2) a description of the activities since the last report (3) a description of the action items for the next period; and (4) the delivery status of equipment ordered.

24.3 Updated Information Submission by Interconnection Customer. The updated information submission by Interconnection Customer, including manufacturer information, shall occur no later than one hundred eighty (180) Calendar Days prior to the Trial Operation. Interconnection Customer shall submit a completed copy of the Large Generating Facility data requirements contained in Appendix 1 to the LGIP. It shall also include any additional information provided to Transmission Provider for the [Feasibility] *Cluster Study* and Facilities Study. Information in this submission shall be the most current Large

Generating Facility design or expected performance data. Information submitted for stability models shall be compatible with Transmission Provider standard models. If there is no compatible model, Interconnection Customer will work with a consultant mutually agreed to by the Parties to develop and supply a standard model and associated information.

If Interconnection Customer's data is materially different from what was originally provided to Transmission Provider pursuant to the Interconnection Study Agreement between Transmission Provider and Interconnection Customer, then Transmission Provider will conduct appropriate studies to determine the impact on Transmission Provider Transmission System based on the actual data submitted pursuant to this Article 24.3. [The] Interconnection Customer shall not begin Trial Operation until such studies are completed.

24.4 Information Supplementation. Prior to the Operation Date, the Parties shall supplement their information submissions described above in this Article 24 with any and all "as-built" Large Generating Facility information or "as-tested" performance information that differs from the initial submissions or, alternatively, written confirmation that no such differences exist. The Interconnection Customer shall conduct tests on the Large Generating Facility as required by Good Utility Practice such as an open circuit "step voltage" test on the Large Generating Facility to verify proper operation of the Large Generating Facility's automatic voltage regulator.

Unless otherwise agreed, the test conditions shall include: (1) Large Generating Facility at synchronous speed; (2) automatic voltage regulator on and in voltage control mode; and (3) a five percent change in Large Generating Facility terminal voltage initiated by a change in the voltage regulators reference voltage. Interconnection Customer shall provide validated test recordings showing the responses of Large Generating Facility terminal and field voltages. In the event that direct recordings of these voltages is impractical, recordings of other voltages or currents that mirror the response of the Large Generating Facility's terminal or field voltage are acceptable if information necessary to translate these alternate quantities to actual Large Generating Facility terminal or field voltages is provided. Large Generating Facility testing shall be conducted and results provided to Transmission Provider for each individual generating unit in a station.

Subsequent to the Operation Date, Interconnection Customer shall provide Transmission Provider any information changes due to equipment replacement, repair, or adjustment. Transmission Provider shall provide Interconnection Customer any information changes due to equipment replacement, repair or adjustment in the directly connected substation or any adjacent Transmission Provider-owned substation that may affect Interconnection Customer's Interconnection Facilities equipment ratings, protection or operating requirements. The Parties shall provide such information no later than thirty (30) Calendar Days after the

date of the equipment replacement, repair or adjustment.

Article 25. Information Access and Audit Rights

25.1 Information Access. Each Party (the “disclosing Party”) shall make available to the other Party information that is in the possession of the disclosing Party and is necessary in order for the other Party to: (i) verify the costs incurred by the disclosing Party for which the other Party is responsible under this LGIA; and (ii) carry out its obligations and responsibilities under this LGIA. The Parties shall not use such information for purposes other than those set forth in this Article 25.1 and to enforce their rights under this LGIA.

25.2 Reporting of Non-Force Majeure Events. Each Party (the “notifying Party”) shall notify the other Party when the notifying Party becomes aware of its inability to comply with the provisions of this LGIA for a reason other than a Force Majeure event. The Parties agree to cooperate with each other and provide necessary information regarding such inability to comply, including the date, duration, reason for the inability to comply, and corrective actions taken or planned to be taken with respect to such inability to comply. Notwithstanding the foregoing, notification, cooperation or information provided under this article shall not entitle the Party receiving such notification to allege a cause for anticipatory breach of this LGIA.

25.3 Audit Rights. Subject to the requirements of confidentiality under Article 22 of this LGIA, each Party shall have the right, during normal business hours, and upon prior reasonable notice to the other Party, to audit at its own expense the other Party’s accounts and records pertaining to either Party’s performance or either Party’s satisfaction of obligations under this LGIA. Such audit rights shall include audits of the other Party’s costs, calculation of invoiced amounts, Transmission Provider’s efforts to allocate responsibility for the provision of reactive support to the Transmission System, Transmission Provider’s efforts to allocate responsibility for interruption or reduction of generation on the Transmission System, and each Party’s actions in an Emergency Condition. Any audit authorized by this article shall be performed at the offices where such accounts and records are maintained and shall be limited to those portions of such accounts and records that relate to each Party’s performance and satisfaction of obligations under this LGIA. Each Party shall keep such accounts and records for a period equivalent to the audit rights periods described in Article 25.4.

25.4 Audit Rights Periods.

25.4.1 Audit Rights Period for Construction-Related Accounts and Records. Accounts and records related to the design, engineering, procurement, and construction of Transmission Provider’s Interconnection Facilities and Network Upgrades shall be subject to audit for a period of twenty-four months following Transmission Provider’s issuance of a final invoice in accordance with Article 12.2.

25.4.2 Audit Rights Period for All Other Accounts and Records. Accounts and records related to either Party’s performance or satisfaction of all obligations under this LGIA other than those described in Article 25.4.1 shall be subject to audit as follows: (i) for an audit relating to cost obligations, the applicable audit rights period shall be twenty-four months after the auditing Party’s receipt of an invoice giving rise to such cost obligations; and (ii) for an audit relating to all other obligations, the applicable audit rights period shall be twenty-four months after the event for which the audit is sought.

25.5 Audit Results. If an audit by a Party determines that an overpayment or an underpayment has occurred, a notice of such overpayment or underpayment shall be given to the other Party together with those records from the audit which support such determination.

Article 26. Subcontractors

26.1 General. Nothing in this LGIA shall prevent a Party from utilizing the services of any subcontractor as it deems appropriate to perform its obligations under this LGIA; provided, however, that each Party shall require its subcontractors to comply with all applicable terms and conditions of this LGIA in providing such services and each Party shall remain primarily liable to the other Party for the performance of such subcontractor.

26.2 Responsibility of Principal. The creation of any subcontract relationship shall not relieve the hiring Party of any of its obligations under this LGIA. The hiring Party shall be fully responsible to the other Party for the acts or omissions of any subcontractor the hiring Party hires as if no subcontract had been made; provided, however, that in no event shall Transmission Provider be liable for the actions or inactions of Interconnection Customer or its subcontractors with respect to obligations of Interconnection Customer under Article 5 of this LGIA. Any applicable obligation imposed by this LGIA upon the hiring Party shall be equally binding upon, and shall be construed as having application to, any subcontractor of such Party.

26.3 No Limitation by Insurance. The obligations under this Article 26 will not be limited in any way by any limitation of subcontractor’s insurance.

Article 27. Disputes

27.1 Submission. In the event either Party has a dispute, or asserts a claim, that arises out of or in connection with this LGIA or its performance, such Party (the “disputing Party”) shall provide the other Party with written notice of the dispute or claim (“Notice of Dispute”). Such dispute or claim shall be referred to a designated senior representative of each Party for resolution on an informal basis as promptly as practicable after receipt of the Notice of Dispute by the other Party. In the event the designated representatives are unable to resolve the claim or dispute through unassisted or assisted negotiations within thirty (30) Calendar Days of the other Party’s receipt of the Notice of Dispute, such claim or dispute may, upon mutual agreement of the Parties, be submitted to arbitration and resolved in

accordance with the arbitration procedures set forth below. In the event the Parties do not agree to submit such claim or dispute to arbitration, each Party may exercise whatever rights and remedies it may have in equity or at law consistent with the terms of this LGIA.

27.2 External Arbitration Procedures. Any arbitration initiated under this LGIA shall be conducted before a single neutral arbitrator appointed by the Parties. If the Parties fail to agree upon a single arbitrator within ten (10) Calendar Days of the submission of the dispute to arbitration, each Party shall choose one arbitrator who shall sit on a three-member arbitration panel. The two arbitrators so chosen shall within twenty (20) Calendar Days select a third arbitrator to chair the arbitration panel. In either case, the arbitrators shall be knowledgeable in electric utility matters, including electric transmission and bulk power issues, and shall not have any current or past substantial business or financial relationships with any party to the arbitration (except prior arbitration). The arbitrator(s) shall provide each of the Parties an opportunity to be heard and, except as otherwise provided herein, shall conduct the arbitration in accordance with the Commercial Arbitration Rules of the American Arbitration Association (“Arbitration Rules”) and any applicable FERC regulations or RTO rules; provided, however, in the event of a conflict between the Arbitration Rules and the terms of this Article 27, the terms of this Article 27 shall prevail.

27.3 Arbitration Decisions. Unless otherwise agreed by the Parties, the arbitrator(s) shall render a decision within ninety (90) Calendar Days of appointment and shall notify the Parties in writing of such decision and the reasons therefor. The arbitrator(s) shall be authorized only to interpret and apply the provisions of this LGIA and shall have no power to modify or change any provision of this Agreement in any manner. The decision of the arbitrator(s) shall be final and binding upon the Parties, and judgment on the award may be entered in any court having jurisdiction. The decision of the arbitrator(s) may be appealed solely on the grounds that the conduct of the arbitrator(s), or the decision itself, violated the standards set forth in the Federal Arbitration Act or the Administrative Dispute Resolution Act. The final decision of the arbitrator must also be filed with FERC if it affects jurisdictional rates, terms and conditions of service, Interconnection Facilities, or Network Upgrades.

27.4 Costs. Each Party shall be responsible for its own costs incurred during the arbitration process and for the following costs, if applicable: (1) the cost of the arbitrator chosen by the Party to sit on the three member panel and one half of the cost of the third arbitrator chosen; or (2) one half the cost of the single arbitrator jointly chosen by the Parties.

Article 28. Representations, Warranties, and Covenants

28.1 General. Each Party makes the following representations, warranties and covenants:

28.1.1 Good Standing. Such Party is duly organized, validly existing and in good

standing under the laws of the state in which it is organized, formed, or incorporated, as applicable; that it is qualified to do business in the state or states in which the Large Generating Facility, Interconnection Facilities and Network Upgrades owned by such Party, as applicable, are located; and that it has the corporate power and authority to own its properties, to carry on its business as now being conducted and to enter into this LGIA and carry out the transactions contemplated hereby and perform and carry out all covenants and obligations on its part to be performed under and pursuant to this LGIA.

28.1.2 Authority. Such Party has the right, power and authority to enter into this LGIA, to become a Party hereto and to perform its obligations hereunder. This LGIA is a legal, valid and binding obligation of such Party, enforceable against such Party in accordance with its terms, except as the enforceability thereof may be limited by applicable bankruptcy, insolvency, reorganization or other similar laws affecting creditors' rights generally and by general equitable principles (regardless of whether enforceability is sought in a proceeding in equity or at law).

28.1.3 No Conflict. The execution, delivery and performance of this LGIA does not violate or conflict with the organizational or formation documents, or bylaws or operating agreement, of such Party, or any judgment, license, permit, order, material agreement or instrument applicable to or binding upon such Party or any of its assets.

28.1.4 Consent and Approval. Such Party has sought or obtained, or, in accordance with this LGIA will seek or obtain, each consent, approval, authorization, order, or acceptance by any Governmental Authority in connection with the execution, delivery and performance of this LGIA, and it will provide to any Governmental Authority notice of any actions under this LGIA that are required by Applicable Laws and Regulations.

Article 29. Joint Operating Committee

29.1 Joint Operating Committee. Except in the case of ISOs and RTOs, Transmission Provider shall constitute a Joint Operating Committee to coordinate operating and technical considerations of Interconnection Service. At least six (6) months prior to the expected Initial Synchronization Date, Interconnection Customer and Transmission Provider shall each appoint one representative and one alternate to the Joint Operating Committee. Each Interconnection Customer shall notify Transmission Provider of its appointment in writing. Such appointments may be changed at any time by similar notice. The Joint Operating Committee shall meet as necessary, but not less than once each calendar year, to carry out the duties set forth herein. The Joint Operating Committee shall hold a meeting at the request of either Party, at a time and place agreed upon by the representatives. The Joint Operating Committee shall perform all of its duties consistent with the provisions of this LGIA. Each Party shall cooperate in providing to the Joint Operating Committee all information required in the performance

of the Joint Operating Committee's duties. All decisions and agreements, if any, made by the Joint Operating Committee, shall be evidenced in writing. The duties of the Joint Operating Committee shall include the following:

29.1.1 Establish data requirements and operating record requirements.

29.1.2 Review the requirements, standards, and procedures for data acquisition equipment, protective equipment, and any other equipment or software.

29.1.3 Annually review the one (1) year forecast of maintenance and planned outage schedules of Transmission Provider's and Interconnection Customer's facilities at the Point of Interconnection.

29.1.4 Coordinate the scheduling of maintenance and planned outages on the Interconnection Facilities, the Large Generating Facility and other facilities that impact the normal operation of the interconnection of the Large Generating Facility to the Transmission System.

29.1.5 Ensure that information is being provided by each Party regarding equipment availability.

29.1.6 Perform such other duties as may be conferred upon it by mutual agreement of the Parties.

Article 30. Miscellaneous

30.1 Binding Effect. This LGIA and the rights and obligations hereof, shall be binding upon and shall inure to the benefit of the successors and assigns of the Parties hereto.

30.2 Conflicts. In the event of a conflict between the body of this LGIA and any attachment, appendices or exhibits hereto, the terms and provisions of the body of this LGIA shall prevail and be deemed the final intent of the Parties.

30.3 Rules of Interpretation. This LGIA, unless a clear contrary intention appears, shall be construed and interpreted as follows: (1) the singular number includes the plural number and vice versa; (2) reference to any person includes such person's successors and assigns but, in the case of a Party, only if such successors and assigns are permitted by this LGIA, and reference to a person in a particular capacity excludes such person in any other capacity or individually; (3) reference to any agreement (including this LGIA), document, instrument or tariff means such agreement, document, instrument, or tariff as amended or modified and in effect from time to time in accordance with the terms thereof and, if applicable, the terms hereof; (4) reference to any Applicable Laws and Regulations means such Applicable Laws and Regulations as amended, modified, codified, or reenacted, in whole or in part, and in effect from time to time, including, if applicable, rules and regulations promulgated thereunder; (5) unless expressly stated otherwise, reference to any Article, Section or Appendix means such Article of this LGIA or such Appendix to this LGIA, or such Section to the LGIP or such Appendix to the LGIP, as the case may be; (6) "hereunder", "hereof", "herein", "hereto" and words of similar import shall be deemed references to this LGIA as a whole and not to any particular Article or other provision

hereof or thereof; (7) "including" (and with correlative meaning "include") means including without limiting the generality of any description preceding such term; and (8) relative to the determination of any period of time, "from" means "from and including", "to" means "to but excluding" and "through" means "through and including".

30.4 Entire Agreement. This LGIA, including all Appendices and Schedules attached hereto, constitutes the entire agreement between the Parties with reference to the subject matter hereof, and supersedes all prior and contemporaneous understandings or agreements, oral or written, between the Parties with respect to the subject matter of this LGIA. There are no other agreements, representations, warranties, or covenants which constitute any part of the consideration for, or any condition to, either Party's compliance with its obligations under this LGIA.

30.5 No Third Party Beneficiaries. This LGIA is not intended to and does not create rights, remedies, or benefits of any character whatsoever in favor of any persons, corporations, associations, or entities other than the Parties, and the obligations herein assumed are solely for the use and benefit of the Parties, their successors in interest and, where permitted, their assigns.

30.6 Waiver. The failure of a Party to this LGIA to insist, on any occasion, upon strict performance of any provision of this LGIA will not be considered a waiver of any obligation, right, or duty of, or imposed upon, such Party.

Any waiver at any time by either Party of its rights with respect to this LGIA shall not be deemed a continuing waiver or a waiver with respect to any other failure to comply with any other obligation, right, duty of this LGIA. Termination or Default of this LGIA for any reason by Interconnection Customer shall not constitute a waiver of Interconnection Customer's legal rights to obtain an interconnection from Transmission Provider. Any waiver of this LGIA shall, if requested, be provided in writing.

30.7 Headings. The descriptive headings of the various Articles of this LGIA have been inserted for convenience of reference only and are of no significance in the interpretation or construction of this LGIA.

30.8 Multiple Counterparts. This LGIA may be executed in two or more counterparts, each of which is deemed an original but all constitute one and the same instrument.

30.9 Amendment. The Parties may by mutual agreement amend this LGIA by a written instrument duly executed by the Parties.

30.10 Modification by the Parties. The Parties may by mutual agreement amend the Appendices to this LGIA by a written instrument duly executed by the Parties. Such amendment shall become effective and a part of this LGIA upon satisfaction of all Applicable Laws and Regulations.

30.11 Reservation of Rights. Transmission Provider shall have the right to make a unilateral filing with FERC to modify this LGIA with respect to any rates, terms and conditions, charges, classifications of service, rule or regulation under section 205 or any

other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder, and Interconnection Customer shall have the right to make a unilateral filing with FERC to modify this LGIA pursuant to section 206 or any other applicable provision of the Federal Power Act and FERC's rules and regulations thereunder; provided that each Party shall have the right to protest any such filing by the other Party and to participate fully in any proceeding before FERC in which such modifications may be considered. Nothing in this LGIA shall limit the rights of the Parties or of FERC under sections 205 or 206 of the Federal Power Act and FERC's rules and regulations thereunder, except to the extent that the Parties otherwise mutually agree as provided herein.

30.12 No Partnership. This LGIA shall not be interpreted or construed to create an association, joint venture, agency relationship, or partnership between the Parties or to impose any partnership obligation or partnership liability upon either Party. Neither Party shall have any right, power or authority to enter into any agreement or undertaking for, or act on behalf of, or to act as or be an agent or representative of, or to otherwise bind, the other Party.

IN WITNESS WHEREOF, the Parties have executed this LGIA in duplicate originals, each of which shall constitute and be an original effective Agreement between the Parties.

Milestones

Site Control

Check box if applicable []

Interconnection Customer with qualifying regulatory limitations must demonstrate 100% Site Control by {Transmission Provider to insert date 180 days from the effective date of this LGIA} or the LGIA may be terminated per Article 17 (Default) of this LGIA and the Interconnection Customer may be subject to Withdrawal Penalties per Section 3.7.1.1 of

the Transmission Provider's LGIP (Calculation of the Withdrawal Penalty).

Appendix C to LGIA

Interconnection Details

Appendix D to LGIA

Security Arrangements Details

Infrastructure security of Transmission System equipment and operations and control hardware and software is essential to ensure day-to-day Transmission System reliability and operational security. FERC will expect all Transmission Providers, market participants, and Interconnection Customers interconnected to the Transmission System to comply with the recommendations offered by the President's Critical Infrastructure Protection Board and, eventually, best practice recommendations from the electric reliability authority. All public utilities will be expected to meet basic standards for system infrastructure and operational security, including physical, operational, and cyber-security practices.

APPENDIX G

Interconnection Requirements for a Wind Generating Plant

Appendix G sets forth requirements and provisions specific to a wind generating plant or a Generating Facility that contains a wind generating plant. All other requirements of this LGIA continue to apply to wind generating plant interconnections.

A. Technical Standards Applicable to a Wind Generating Plant

i. Low Voltage Ride-Through (LVRT) Capability

A wind generating plant shall be able to remain online during voltage disturbances up to the time periods and associated voltage levels set forth in the standard below. The LVRT standard provides for a transition period standard and a post-transition period standard.

Transition Period LVRT Standard

The transition period standard applies to wind generating plants subject to FERC Order 661 that have either: (i) interconnection agreements signed and filed with the Commission, filed with the Commission in unexecuted form, or filed with the Commission as non-conforming agreements between January 1, 2006 and December 31, 2006, with a scheduled in-service date no later than December 31, 2007, or (ii) wind generating turbines subject to a wind turbine procurement contract executed prior to December 31, 2005, for delivery through 2007.

1. Wind generating plants are required to remain in-service during three-phase faults with normal clearing (which is a time period of approximately 4–9 cycles) and single line to ground faults with delayed clearing, and subsequent post-fault voltage recovery to pre-fault voltage unless clearing the fault effectively disconnects the generator from the system. The clearing time requirement for a three-phase fault will be specific to the wind generating plant substation location, as determined by and documented by the transmission provider. The maximum clearing time the wind generating plant shall be required to withstand for a three-phase fault shall be 9 cycles at a voltage as low as 0.15 p.u., as measured at the high side of the wind generating plant step-up transformer (*i.e.* the transformer that steps the voltage up to the transmission interconnection voltage or "GSU"), after which, if the fault remains following the location-specific normal clearing time for three-phase faults, the wind generating plant may disconnect from the transmission system.

2. This requirement does not apply to faults that would occur between the wind generator terminals and the high side of the GSU or to faults that would result in a voltage lower than 0.15 per unit on the high side of the GSU serving the facility.

3. Wind generating plants may be tripped after the fault period if this action is intended as part of a special protection system.

4. Wind generating plants may meet the LVRT requirements of this standard by the performance of the generators or by installing additional equipment (*e.g.*, Static VAR

Compensator, etc.) within the wind generating plant or by a combination of generator performance and additional equipment.

5. Existing individual generator units that are, or have been, interconnected to the network at the same location at the effective date of the Appendix G LVRT Standard are exempt from meeting the Appendix G LVRT Standard for the remaining life of the existing generation equipment. Existing individual generator units that are replaced are required to meet the Appendix G LVRT Standard.

Post-transition Period LVRT Standard

All wind generating plants subject to FERC Order No. 661 and not covered by the transition period described above must meet the following requirements:

1. Wind generating plants are required to remain in-service during three-phase faults with normal clearing (which is a time period of approximately 4–9 cycles) and single line to ground faults with delayed clearing, and subsequent post-fault voltage recovery to prefault voltage unless clearing the fault effectively disconnects the generator from the system. The clearing time requirement for a three-phase fault will be specific to the wind generating plant substation location, as determined by and documented by the transmission provider. The maximum clearing time the wind generating plant shall be required to withstand for a three-phase fault shall be 9 cycles after which, if the fault remains following the location-specific normal clearing time for three-phase faults, the wind generating plant may disconnect from the transmission system. A wind generating plant shall remain interconnected during such a fault on the transmission system for a voltage level as low as zero volts, as measured at the high voltage side of the wind GSU.

2. This requirement does not apply to faults that would occur between the wind generator terminals and the high side of the GSU.

3. Wind generating plants may be tripped after the fault period if this action is intended as part of a special protection system.

4. Wind generating plants may meet the LVRT requirements of this standard by the performance of the generators or by installing additional equipment (*e.g.*, Static VAR Compensator) within the wind generating plant or by a combination of generator performance and additional equipment.

Existing individual generator units that are, or have been, interconnected to the network at the same location at the effective date of the Appendix G LVRT Standard are exempt from meeting the Appendix G LVRT Standard for the remaining life of the existing generation equipment. Existing individual generator units that are replaced are required to meet the Appendix G LVRT Standard.

ii. Power Factor Design Criteria (Reactive Power)

The following reactive power requirements apply only to a newly interconnecting wind generating plant that has executed a Facilities Study Agreement as of the effective date of the Final rule establishing the reactive power requirements for non-synchronous generators in S[ection] 9.6.1 of this LGIA (Order No.

827). A wind generating plant to which this provision applies shall maintain a power factor within the range of 0.95 leading to 0.95 lagging, measured at the Point of Interconnection as defined in this LGIA, if the Transmission Provider's [System Impact] Cluster Study shows that such a requirement is necessary to ensure safety or reliability. The power factor range standard can be met by using, for example, power electronics designed to supply this level of reactive capability 606 (taking into account any limitations due to voltage level, real power output, etc.) or fixed and switched capacitors if agreed to by the Transmission Provider, or a combination of the two. The Interconnection Customer shall not disable power factor equipment while the wind plant is in operation. Wind plants shall also be able to provide sufficient dynamic voltage support in lieu of the power system stabilizer and automatic voltage regulation at the generator excitation system if the System Impact Study shows this to be required for system safety or reliability.

iii. Supervisory Control and Data Acquisition (SCADA) Capability

The wind plant shall provide SCADA capability to transmit data and receive instructions from the Transmission Provider to protect system reliability. The Transmission Provider and the wind plant Interconnection Customer shall determine what SCADA information is essential for the proposed wind plant, taking into account the size of the plant and its characteristics, location, and importance in maintaining generation resource adequacy and transmission system reliability in its area.

Operating Assumptions for Generating Facility

Check box if applicable []

Operating Assumptions:

{insert operating assumptions that reflect the charging behavior of the Generating Facility that includes at least one electric storage resource}

Appendix E: Pro Forma SGIP

Note: Deletions are in brackets and additions are in italics.

Section 1. Application

* * * * *

1.4 *Modification of the Interconnection Request*

Any modification to machine data or equipment configuration or to the interconnection site of the Small Generating Facility not agreed to in writing by the Transmission Provider and the Interconnection Customer may be deemed a withdrawal of the Interconnection Request and may require submission of a new Interconnection Request, unless proper notification of each Party by the other and a reasonable time to cure the problems created by the changes are undertaken. *Any such modification of the Interconnection Request must be accompanied by any resulting*

updates to the models described in Attachment 2 of this SGIP.

* * * * *

Section 3. Study Process

* * * * *

3.3 *Feasibility Study*

3.3.1 The feasibility study shall identify any potential adverse system impacts that would result from the interconnection of the Small Generating Facility.

3.3.2 A deposit of the lesser of 50 percent of the good faith estimated feasibility study costs or earnest money of \$1,000 may be required from the Interconnection Customer.

3.3.3 The scope of and cost responsibilities for the feasibility study are described in the attached feasibility study agreement (Attachment 6).

3.3.4 If the feasibility study shows no potential for adverse system impacts, the Transmission Provider shall send the Interconnection Customer a facilities study agreement, including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study. If no additional facilities are required, the Transmission Provider shall send the Interconnection Customer an executable interconnection agreement within five Business Days.

3.3.5 If the feasibility study shows the potential for adverse system impacts, the review process shall proceed to the appropriate system impact study(s).

3.3.6 *The feasibility study shall evaluate static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. Transmission Provider shall evaluate each identified alternative transmission technology and determine whether it should be used, consistent with Good Utility Practice and other applicable regulatory requirements. Transmission Provider shall include an explanation of the results of Transmission Provider's evaluation for each technology in the feasibility study report.*

3.4 *System Impact Study*

3.4.1 A system impact study shall identify and detail the electric system impacts that would result if the proposed Small Generating Facility were interconnected without project modifications or electric system modifications, focusing on the adverse system impacts identified in the feasibility study, or to study potential impacts, including but not limited to those identified in the scoping meeting. A system impact study shall evaluate the impact of the proposed interconnection on the reliability of the electric system.

3.4.2 If no transmission system impact study is required, but potential electric power Distribution System adverse system impacts are identified in the scoping meeting or shown in the feasibility study, a distribution system impact study must be performed. The Transmission Provider shall send the Interconnection Customer a distribution system impact study agreement within 15 Business Days of transmittal of the feasibility study report, including an outline of the scope of the study and a non-binding

good faith estimate of the cost to perform the study, or following the scoping meeting if no feasibility study is to be performed.

3.4.3 In instances where the feasibility study or the distribution system impact study shows potential for transmission system adverse system impacts, within five Business Days following transmittal of the feasibility study report, the Transmission Provider shall send the Interconnection Customer a transmission system impact study agreement, including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study, if such a study is required.

3.4.4 If a transmission system impact study is not required, but electric power Distribution System adverse system impacts are shown by the feasibility study to be possible and no distribution system impact study has been conducted, [the]Transmission Provider shall send [the]Interconnection Customer a distribution system impact study agreement.

3.4.5 If the feasibility study shows no potential for transmission system or Distribution System adverse system impacts, the Transmission Provider shall send the Interconnection Customer either a facilities study agreement (Attachment 8), including an outline of the scope of the study and a non-binding good faith estimate of the cost to perform the study, or an executable interconnection agreement, as applicable.

3.4.6 In order to remain under consideration for interconnection, the Interconnection Customer must return executed system impact study agreements, if applicable, within 30 Business Days.

3.4.7 A deposit of the good faith estimated costs for each system impact study

may be required from the Interconnection Customer.

3.4.8 The scope of and cost responsibilities for a system impact study are described in the attached system impact study agreement.

3.4.9 Where transmission systems and Distribution Systems have separate owners, such as is the case with transmission-dependent utilities (“TDUs”)—whether investor-owned or not—the Interconnection Customer may apply to the nearest Transmission Provider (Transmission Owner, Regional Transmission Operator, or Independent Transmission Provider) providing transmission service to the TDU to request project coordination. Affected Systems shall participate in the study and provide all information necessary to prepare the study.

3.4.10 The system impact study shall evaluate static synchronous compensators, static VAR compensators, advanced power flow control devices, transmission switching, synchronous condensers, voltage source converters, advanced conductors, and tower lifting. Transmission Provider shall evaluate each identified alternative transmission technology and determine whether it should be used, consistent with Good Utility Practice and other applicable regulatory requirements. Transmission Provider shall include an explanation of the results of Transmission Provider’s evaluation for each technology in the system impact study report.

* * * * *

Attachment 2

Small Generator Interconnection Request

(Application Form)

* * * * *

Models for Non-synchronous Small Generating Facilities

For a non-synchronous Small Generating Facility, Interconnection Customer shall provide (1) a validated user-defined root mean squared (RMS) positive sequence dynamics model; (2) an appropriately parameterized generic library RMS positive sequence dynamics model, including model block diagram of the inverter control and plant control systems, as defined by the selection in Table 1 or a model otherwise approved by the Western Electricity Coordinating Council, that corresponds to Interconnection Customer’s Small Generating Facility; and (3) if applicable, a validated electromagnetic transient model if Transmission Provider performs an electromagnetic transient study as part of the interconnection study process. A user-defined model is a set of programming code created by equipment manufacturers or developers that captures the latest features of controllers that are mainly software based and represents the entities’ control strategies but does not necessarily correspond to any generic library model. Interconnection Customer must also demonstrate that the model is validated by providing evidence that the equipment behavior is consistent with the model behavior (e.g., an attestation from Interconnection Customer that the model accurately represents the entire Small Generating Facility; attestations from each equipment manufacturer that the user defined model accurately represents the component of the Small Generating Facility; or test data).

Article 1. Scope and Limitations of Agreement

* * * * *

1.5 Responsibilities of the Parties

1.5.1 The Parties shall perform all obligations of this Agreement in accordance with all Applicable Laws and Regulations, Operating Requirements, and Good Utility Practice.

1.5.2 The Interconnection Customer shall construct, interconnect, operate and maintain its Small Generating Facility and construct, operate, and maintain its Interconnection Facilities in accordance with the applicable manufacturer's recommended maintenance schedule, and in accordance with this Agreement, and with Good Utility Practice.

1.5.3 The Transmission Provider shall construct, operate, and maintain its Transmission System and Interconnection Facilities in accordance with this Agreement, and with Good Utility Practice.

1.5.4 The Interconnection Customer agrees to construct its facilities or systems in accordance with applicable specifications that meet or exceed those provided by the National Electrical Safety Code, the American National Standards Institute, IEEE, Underwriter's Laboratory, and Operating Requirements in effect at the time of construction and other applicable national and state codes and standards. The Interconnection Customer agrees to design, install, maintain, and operate its Small Generating Facility so as to reasonably minimize the likelihood of a disturbance adversely affecting or impairing the system or equipment of the Transmission Provider and any Affected Systems.

1.5.5 Each Party shall operate, maintain, repair, and inspect, and shall be fully responsible for the facilities that it now or subsequently may own unless otherwise specified in the Attachments to this Agreement. Each Party shall be responsible for the safe installation, maintenance, repair and condition of their respective lines and appurtenances on their respective sides of the point of change of ownership. The Transmission Provider and the Interconnection Customer, as appropriate, shall provide Interconnection Facilities that adequately protect the Transmission Provider's Transmission System, personnel, and other persons from damage and injury. The allocation of responsibility for the design, installation, operation, maintenance and ownership of Interconnection Facilities

shall be delineated in the Attachments to this Agreement.

1.5.6 The Transmission Provider shall coordinate with all Affected Systems to support the interconnection.

1.5.7 The Interconnection Customer shall ensure "frequency ride through" capability and "voltage ride through" capability of its Small Generating Facility. The Interconnection Customer shall enable these capabilities such that its Small Generating Facility shall not disconnect automatically or instantaneously from the system or equipment of the Transmission Provider and any Affected Systems for a defined under-frequency or over-frequency condition, or an under-voltage or over-voltage condition, as tested pursuant to S[s]ection 2.1 of this agreement. The defined conditions shall be in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. The Small Generating Facility's protective equipment settings shall comply with the Transmission Provider's automatic load-shed program. The Transmission Provider shall review the protective equipment settings to confirm compliance with the automatic load-shed program. The term "ride through" as used herein shall mean the ability of a Small Generating Facility to stay connected to and synchronized with the system or equipment of the Transmission Provider and any Affected Systems during system disturbances within a range of conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. The term "frequency ride through" as used herein shall mean the ability of a Small Generating Facility to stay connected to and synchronized with the system or equipment of the Transmission Provider and any Affected Systems during system disturbances within a range of under-frequency and over-frequency conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. The term "voltage ride through" as used herein shall mean the ability of a Small Generating Facility to stay connected to and synchronized with the system or equipment of the Transmission Provider and any Affected Systems during system disturbances within a range of under-voltage and over-voltage conditions, in accordance with Good Utility Practice and consistent with any standards and guidelines that are applied to other generating facilities in the Balancing Authority Area on a comparable basis. *For abnormal frequency conditions and voltage conditions within the "no trip zone" defined*

by Reliability Standard PRC-024-3 or successor mandatory ride through Applicable Reliability Standards, the non-synchronous Small Generating Facility must ensure that, within any physical limitations of the Small Generating Facility, its control and protection settings are configured or set to (1) continue active power production during disturbance and post disturbance periods at pre-disturbance levels unless providing primary frequency response or fast frequency response; (2) minimize reductions in active power and remain within dynamic voltage and current limits, if reactive power protection mode is enabled, unless providing primary frequency response or fast frequency response; (3) not artificially limit dynamic reactive power capability during disturbances; and (4) return to pre-disturbance active power levels without artificial ramp rate limits if active power is reduced, unless providing primary frequency response or fast frequency response.

1.6 Parallel Operation Obligations

Once the Small Generating Facility has been authorized to commence parallel operation, the Interconnection Customer shall abide by all rules and procedures pertaining to the parallel operation of the Small Generating Facility in the applicable [control area] *Balancing Authority Area*, including, but not limited to: (1) the rules and procedures concerning the operation of generation set forth in the Tariff or by the applicable system operator(s) for the Transmission Provider's Transmission System and; (2) the Operating Requirements set forth in Attachment 5 of this Agreement.

* * * * *

1.8 Reactive Power and Primary Frequency Response**1.8.1 Power Factor Design Criteria**

1.8.1.1 *Synchronous Generation.* The Interconnection Customer shall design its Small Generating Facility to maintain a composite power delivery at continuous rated power output at the Point of Interconnection at a power factor within the range of 0.95 leading to 0.95 lagging, unless the Transmission Provider has established different requirements that apply to all similarly situated synchronous generators in the [control area] *Balancing Authority Area* on a comparable basis.

1.8.1.2 *Non-Synchronous Generation.* The Interconnection Customer shall design its Small Generating Facility to maintain a composite power delivery at continuous rated power output at the high-side of the generator substation at a power factor within the range of 0.95 leading to 0.95 lagging, unless the Transmission Provider has established a different power factor range that applies to all similarly situated non-

synchronous generators in the [control area] *Balancing Authority Area* on a comparable basis. This power factor range standard shall be dynamic and can be met using, for example, power electronics designed to supply this level of reactive capability (taking into account any limitations due to voltage level, real power output, etc.) or fixed and switched capacitors, or a combination of the two. This requirement shall only apply to newly interconnecting non-synchronous generators that have not yet executed a Facilities Study Agreement as of the effective date of the Final rule establishing this requirement (Order No. 827).

1.8.2 The Transmission Provider is required to pay the Interconnection Customer for reactive power that the Interconnection Customer provides or absorbs from the Small Generating Facility when the Transmission Provider requests the Interconnection Customer to operate its Small Generating Facility outside the range specified in A[a]rticle 1.8.1. In addition, if the Transmission Provider pays its own or affiliated generators for reactive power service within the specified range, it must also pay the Interconnection Customer.

1.8.3 Payments shall be in accordance with the Interconnection Customer's applicable rate schedule then in effect unless the provision of such service(s) is subject to a regional transmission organization or independent system operator FERC-approved rate schedule. To the extent that no rate schedule is in effect at the time the Interconnection Customer is required to provide or absorb reactive power under this Agreement, the Parties agree to expeditiously file such rate schedule and agree to support any request for waiver of the Commission's prior notice requirement in order to compensate the Interconnection Customer from the time service commenced.

1.8.4 *Primary Frequency Response.* Interconnection Customer shall ensure the primary frequency response capability of its Small Generating Facility by installing, maintaining, and operating a functioning governor or equivalent controls. The term "functioning governor or equivalent controls" as used herein shall mean the required hardware and/or software that provides frequency responsive real power control with the ability to sense changes in system frequency and autonomously adjust the Small Generating Facility's real power output in accordance with the droop and deadband parameters and in the direction needed to correct frequency deviations. Interconnection Customer is required to install a governor or equivalent controls with the capability of operating: (1) with a maximum 5 percent droop and ± 0.036 Hz deadband; or (2) in accordance with the relevant droop, deadband, and timely and sustained response settings from an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard providing for equivalent or more stringent parameters. The droop characteristic shall be: (1) based on the nameplate capacity of the Small Generating Facility, and shall be linear in the range of frequencies between 59 to 61 Hz that are outside of the deadband parameter; or (2) based on an approved [NERC] *Electric Reliability*

Organization [R]reliability [S]standard providing for an equivalent or more stringent parameter. The deadband parameter shall be: the range of frequencies above and below nominal (60 Hz) in which the governor or equivalent controls is not expected to adjust the Small Generating Facility's real power output in response to frequency deviations. The deadband shall be implemented: (1) without a step to the droop curve, that is, once the frequency deviation exceeds the deadband parameter, the expected change in the Small Generating Facility's real power output in response to frequency deviations shall start from zero and then increase (for under-frequency deviations) or decrease (for over-frequency deviations) linearly in proportion to the magnitude of the frequency deviation; or (2) in accordance with an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard providing for an equivalent or more stringent parameter. Interconnection Customer shall notify Transmission Provider that the primary frequency response capability of the Small Generating Facility has been tested and confirmed during commissioning. Once Interconnection Customer has synchronized the Small Generating Facility with the Transmission System, Interconnection Customer shall operate the Small Generating Facility consistent with the provisions specified in Sections 1.8.4.1 and 1.8.4.2 of this Agreement. The primary frequency response requirements contained herein shall apply to both synchronous and non-synchronous Small Generating Facilities.

1.8.4.1 *Governor or Equivalent Controls.* Whenever the Small Generating Facility is operated in parallel with the Transmission System, Interconnection Customer shall operate the Small Generating Facility with its governor or equivalent controls in service and responsive to frequency. Interconnection Customer shall: (1) in coordination with Transmission Provider and/or the relevant [b]Balancing [a]Authority, set the deadband parameter to: (1) a maximum of ± 0.036 Hz and set the droop parameter to a maximum of 5 percent; or (2) implement the relevant droop and deadband settings from an approved [NERC] *Electric Reliability Organization* [R]reliability [S]standard that provides for equivalent or more stringent parameters. Interconnection Customer shall be required to provide the status and settings of the governor or equivalent controls to Transmission Provider and/or the relevant [b]Balancing [a]Authority upon request. If Interconnection Customer needs to operate the Small Generating Facility with its governor or equivalent controls not in service, Interconnection Customer shall immediately notify Transmission Provider and the relevant [b]Balancing [a]Authority, and provide both with the following information: (1) the operating status of the governor or equivalent controls (*i.e.*, whether it is currently out of service or when it will be taken out of service); (2) the reasons for removing the governor or equivalent controls from service; and (3) a reasonable estimate of when the governor or equivalent controls will be returned to service. Interconnection Customer shall make Reasonable Efforts to return its governor or equivalent controls into

service as soon as practicable.

Interconnection Customer shall make Reasonable Efforts to keep outages of the Small Generating Facility's governor or equivalent controls to a minimum whenever the Small Generating Facility is operated in parallel with the Transmission System.

1.8.4.2 *Timely and Sustained Response.* Interconnection Customer shall ensure that the Small Generating Facility's real power response to sustained frequency deviations outside of the deadband setting is automatically provided and shall begin immediately after frequency deviates outside of the deadband, and to the extent the Small Generating Facility has operating capability in the direction needed to correct the frequency deviation. Interconnection Customer shall not block or otherwise inhibit the ability of the governor or equivalent controls to respond and shall ensure that the response is not inhibited, except under certain operational constraints including, but not limited to, ambient temperature limitations, physical energy limitations, outages of mechanical equipment, or regulatory requirements. The Small Generating Facility shall sustain the real power response at least until system frequency returns to a value within the deadband setting of the governor or equivalent controls. A Commission-approved Reliability Standard with equivalent or more stringent requirements shall supersede the above requirements.

1.8.4.3 *Exemptions.* Small Generating Facilities that are regulated by the United States Nuclear Regulatory Commission shall be exempt from Sections 1.8.4, 1.8.4.1, and 1.8.4.2 of this Agreement. Small Generating Facilities that are behind the meter generation that is sized-to-load (*i.e.*, the thermal load and the generation are near-balanced in real-time operation and the generation is primarily controlled to maintain the unique thermal, chemical, or mechanical output necessary for the operating requirements of its host facility) shall be required to install primary frequency response capability in accordance with the droop and deadband capability requirements specified in Section 1.8.4, but shall be otherwise exempt from the operating requirements in Sections 1.8.4, 1.8.4.1, 1.8.4.2, and 1.8.4.4 of this Agreement.

1.8.4.4 *Electric Storage Resources.* Interconnection Customer interconnecting an electric storage resource shall establish an operating range in Attachment 5 of its SGIA that specifies a minimum state of charge and a maximum state of charge between which the electric storage resource will be required to provide primary frequency response consistent with the conditions set forth in Sections 1.8.4, 1.8.4.1, 1.8.4.2 and 1.8.4.3 of this Agreement. Attachment 5 shall specify whether the operating range is static or dynamic, and shall consider: (1) the expected magnitude of frequency deviations in the interconnection; (2) the expected duration that system frequency will remain outside of the deadband parameter in the interconnection; (3) the expected incidence of frequency deviations outside of the deadband parameter in the interconnection; (4) the physical capabilities of the electric

storage resource; (5) operational limitations of the electric storage resource due to manufacturer specifications; and (6) any other relevant factors agreed to by Transmission Provider and Interconnection Customer, and in consultation with the relevant transmission owner or [b]Balancing [a]Authority as appropriate. If the operating range is dynamic, then Attachment 5 must establish how frequently the operating range will be reevaluated and the factors that may be considered during its reevaluation.

Interconnection Customer's electric storage resource is required to provide timely and sustained primary frequency response consistent with Section 1.8.4.2 of this Agreement when it is online and dispatched to inject electricity to the Transmission System and/or receive electricity from the Transmission System. This excludes circumstances when the electric storage resource is not dispatched to inject electricity to the Transmission System and/or dispatched to receive electricity from the Transmission System. If Interconnection Customer's electric storage resource is charging at the time of a frequency deviation outside of its deadband parameter, it is to increase (for over-frequency deviations) or decrease (for under-frequency deviations) the rate at which it is charging in accordance with its droop parameter. Interconnection Customer's electric storage resource is not required to change from charging to discharging, or vice versa, unless the response necessitated by the droop and deadband settings requires it to do so and it is technically capable of making such a transition.

* * * * *

Attachment 1

Glossary of Terms

Affected System—An electric system other than the Transmission Provider's Transmission System that may be affected by the proposed interconnection.

Applicable Laws and Regulations—All duly promulgated applicable federal, state and local laws, regulations, rules, ordinances, codes, decrees, judgments, directives, or judicial or administrative orders, permits and other duly authorized actions of any Governmental Authority.

Balancing Authority shall mean an entity that integrates resource plans ahead of time, maintains demand and resource balance within a Balancing Authority Area, and supports interconnection frequency in real time.

Balancing Authority Area shall mean the collection of generation, transmission, and loads within the metered boundaries of the Balancing Authority. The Balancing Authority maintains load-resource balance within this area.

Business Day—Monday through Friday, excluding Federal Holidays.

Default—The failure of a breaching Party to cure its breach under the Small Generator Interconnection Agreement.

Distribution System—The Transmission Provider's facilities and equipment used to transmit electricity to ultimate usage points such as homes and industries directly from

nearby generators or from interchanges with higher voltage transmission networks which transport bulk power over longer distances. The voltage levels at which Distribution Systems operate differ among areas.

Distribution Upgrades—The additions, modifications, and upgrades to the Transmission Provider's Distribution System at or beyond the Point of Interconnection to facilitate interconnection of the Small Generating Facility and render the transmission service necessary to effect the Interconnection Customer's wholesale sale of electricity in interstate commerce. Distribution Upgrades do not include Interconnection Facilities.

Good Utility Practice—Any of the practices, methods and acts engaged in or approved by a significant portion of the electric industry during the relevant time period, or any of the practices, methods and acts which, in the exercise of reasonable judgment in light of the facts known at the time the decision was made, could have been expected to accomplish the desired result at a reasonable cost consistent with good business practices, reliability, safety and expedition. Good Utility Practice is not intended to be limited to the optimum practice, method, or act to the exclusion of all others, but rather to be acceptable practices, methods, or acts generally accepted in the region.

Governmental Authority—Any federal, state, local or other governmental regulatory or administrative agency, court, commission, department, board, or other governmental subdivision, legislature, rulemaking board, tribunal, or other governmental authority having jurisdiction over the Parties, their respective facilities, or the respective services they provide, and exercising or entitled to exercise any administrative, executive, police, or taxing authority or power; provided, however, that such term does not include the Interconnection Customer, the Interconnection Provider, or any Affiliate thereof.

Interconnection Customer—Any entity, including the Transmission Provider, the Transmission Owner or any of the affiliates or subsidiaries of either, that proposes to interconnect its Small Generating Facility with the Transmission Provider's Transmission System.

Interconnection Facilities—The Transmission Provider's Interconnection Facilities and the Interconnection Customer's Interconnection Facilities. Collectively, Interconnection Facilities include all facilities and equipment between the Small Generating Facility and the Point of Interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the Small Generating Facility to the Transmission Provider's Transmission System. Interconnection Facilities are sole use facilities and shall not include Distribution Upgrades or Network Upgrades.

Interconnection Request—The Interconnection Customer's request, in accordance with the Tariff, to interconnect a new Small Generating Facility, or to increase the capacity of, or make a Material Modification to the operating characteristics

of, an existing Small Generating Facility that is interconnected with the Transmission Provider's Transmission System.

Material Modification—A modification that has a material impact on the cost or timing of any Interconnection Request with a later queue priority date.

Network Upgrades—Additions, modifications, and upgrades to the Transmission Provider's Transmission System required at or beyond the point at which the Small Generating Facility interconnects with the Transmission Provider's Transmission System to accommodate the interconnection of the Small Generating Facility with the Transmission Provider's Transmission System. Network Upgrades do not include Distribution Upgrades.

Operating Requirements—Any operating and technical requirements that may be applicable due to Regional Transmission Organization, Independent System Operator, [control area]Balancing Authority Area, or [the]Transmission Providers requirements, including those set forth in the Small Generator Interconnection Agreement.

Party or Parties—The Transmission Provider, Transmission Owner, Interconnection Customer or any combination of the above.

Point of Interconnection—The point where the Interconnection Facilities connect with the Transmission Provider's Transmission System.

Reasonable Efforts—With respect to an action required to be attempted or taken by a Party under the Small Generator Interconnection Agreement, efforts that are timely and consistent with Good Utility Practice and are otherwise substantially equivalent to those a Party would use to protect its own interests.

Small Generating Facility—The Interconnection Customer's device for the production and/or storage for later injection of electricity identified in the Interconnection Request, but shall not include the Interconnection Customer's Interconnection Facilities.

Tariff—The Transmission Provider or Affected System's Tariff through which open access transmission service and Interconnection Service are offered, as filed with the FERC, and as amended or supplemented from time to time, or any successor tariff.

Transmission Owner—The entity that owns, leases or otherwise possesses an interest in the portion of the Transmission System at the Point of Interconnection and may be a Party to the Small Generator Interconnection Agreement to the extent necessary.

Transmission Provider—The public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electricity in interstate commerce and provides transmission service under the Tariff. The term Transmission Provider should be read to include the Transmission Owner when the Transmission Owner is separate from the Transmission Provider.

Transmission System—The facilities owned, controlled or operated by the

Transmission Provider or the Transmission Owner that are used to provide transmission service under the Tariff.

Upgrades—The required additions and modifications to the Transmission Provider's Transmission System at or beyond the Point of Interconnection. Upgrades may be Network Upgrades or Distribution Upgrades. Upgrades do not include Interconnection Facilities.

Improvements to Generator Interconnection—Docket No. RM22-14-000

Procedures and Agreements

DANLY, Commissioner, *concurring*:

1. I concur in the issuance of today's final rule. I write separately to state that, while I continue to harbor misgivings about the Commission's power to implement far-reaching, uniform policies based on our authority under FPA section 206,¹ I am satisfied on this record that existing interconnection procedures in both RTO and non-RTO regions have been shown to be unjust and unreasonable, and that we take today's action consistent with the standards articulated in precedent.² Though I am not convinced that this precedent will ultimately be proven correct in declaring that "the Commission may rely on 'generic' or 'general' findings of a systemic problem to support imposition of an industry-wide solution," the Commission is entitled to act under prevailing case law.³

2. I also agree that the relatively narrow reforms contemplated in this final rule appear, based on this record, to be a just and reasonable replacement rate. I am pleased that most of that which I considered to be the most problematic elements in the Notice of Proposed Rulemaking have been excluded from this rule.⁴ I also remind parties of the availability of "the independent entity variation standard for regional transmission organizations (RTO) and independent system operators (ISO) and the consistent with or superior to standard for non-RTO/ISO transmission providers" should they choose to seek variations from these rules.⁵

3. While I vote to approve today's order, I will also thoroughly review any requests for rehearing, particularly to the extent to which parties to the proceeding wish to advance arguments that we have exceeded our authority under FPA section 206, or that we have failed to carry our evidentiary burden, either generally, or in a sufficient number of specific cases that our order amounts to an unlawful exercise of our powers.

¹ 16 U.S.C. 824e.

² *Improvements to Generator Interconnection Procedures & Agreements*, 184 FERC ¶ 61,054, at P 57 & n.149 (2023) (Interconnection Rule) (citing *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d 41, 67 (D.C. Cir. 2014) (quoting *Interstate Nat. Gas Ass'n v. FERC*, 285 F.3d 18, 37 (D.C. Cir. 2002))).

³ *Id.*

⁴ *Improvements to Generator Interconnection Procedures & Agreements*, 179 FERC ¶ 61,194 (2022) (Danly, Comm'r, concurring at PP 6–10) (NOPR Concurrence).

⁵ Interconnection Rule, 184 FERC ¶ 61,054 at P 10 (citation omitted).

4. I would have preferred to receive section 205⁶ filings from utilities proposing interconnection reforms—and indeed we have received and ruled upon a number of such filings. Failing that, I would have preferred for the Commission or interested parties to have initiated FPA section 206 complaints against the RTOs or other entities with interconnection delays, rather than to have proceeded generically in an effort to establish uniformity.⁷ However, my preferences do not make this rule unlawful, and I am satisfied that today's rule is consistent with our legal obligations.

For these reasons, I respectfully concur.

James P. Danly,
Commissioner.

Improvements to Generator Interconnection—Docket No. RM22-14-000

Procedures and Agreements

CLEMENTS, Commissioner, *concurring*:

1. As the findings of this final rule illustrate, our nation is facing a grid infrastructure crisis. Five years ago, the Commission issued Order No. 845 in an effort to improve interconnection queue delays, noting that "despite Commission efforts to improve the interconnection process . . . many interconnection customers experience delays, and some interconnection queues have significant backlogs and long timelines."¹ Unfortunately, the same observation can be made today, only the problem has gotten far worse.² As of the end of 2022, a staggering 10,000 projects representing over 2,000 GW of potential generation and storage capacity are stuck in line to connect to the grid.³ That is nearly double the 1,250 GW of total installed capacity in the United States today.⁴ Wait times have "increased markedly," with Lawrence Berkeley National Lab reporting that "[t]he typical project built in 2022 took 5 years from the interconnection request to commercial operations, compared to 3 years in 2015 and [less than] 2 years in 2008."⁵ Meanwhile, interconnection costs have increased significantly.⁶ Project completion rates are very low,⁷ and late-stage withdrawal is becoming more common.⁸ In addition, the

⁶ 16 U.S.C. 824d.

⁷ See NOPR Concurrence at PP 1, 4.

¹ *Reform of Generator Interconnection Procs. & Agreements*, Order No. 845, 83 FR 21342 (May 9, 2018), 163 FERC ¶ 61,043, at P 24 (2018), *order on reh'g*, Order No. 845–A, 166 FERC ¶ 61,137, 84 FR 8156 (Mar. 6, 2019), *order on reh'g*, Order No. 845–B, 168 FERC ¶ 61,092 (2019).

² See *Improvements to Generator Interconnection Procedures and Agreements*, Order No. 2023, 184 FERC ¶ 61,054, at PP 37–40 (2023) [hereinafter Final Rule].

⁴ *Id.* at 10.

⁵ *Id.* at 3.

⁶ See Final rule at P 41 (detailing interconnection cost increases seen across different regions).

⁷ See *Queued Up* 2023 at 18–20.

⁸ *Id.* at 22.

typical timespan between the execution of a project's interconnection agreement and its commercial operations date has also increased, from roughly 17 months for projects built between 2007–2014 to around 22 months for projects built between 2015–2022.⁹

2. Ultimately, the dysfunction of the interconnection process harms consumers. It prevents low-cost generation from coming online that could have reduced the cost of electricity,¹⁰ and it harms reliability. Several of the nation's largest grid operators have stated that they could face resource adequacy problems if new resource entry does not occur rapidly enough to match the pace of resource retirements.¹¹ Given these challenges and their attendant impacts on consumers, I enthusiastically support this final rule, which includes a number of helpful reforms that will improve interconnection processes across the country. The bulk of these reforms will widely extend proven best practices to utilities around the country.

3. What we have learned through consideration of comments to and stakeholder engagement about the Commission's Notice of Proposed Rulemaking, however, is that while this rule can be expected to improve matters, more will be necessary to solve the problem. What was perhaps considered a straightforward kitchen renovation has become more complicated. After we have removed the cabinets and taken out the drywall, we have discovered outdated wires, rusted pipes and cracks in the foundation. None of these additional challenges are insurmountable, but they are in some ways more fundamental to getting that modern, working kitchen up and running.

4. I therefore write separately to highlight some of the remaining issues and potential solutions parties have brought forward that may address the remainder of the full interconnection reform challenge, as well as to encourage stakeholders to remain focused on taking additional critical steps toward addressing these issues.

5. I do not suggest that solving the remaining challenges related to interconnection will be easy. The record

Sys. Operator, *2022 Regional Resource Assessment* at 4, 20 (Nov. 2022), <https://cdn.misoenergy.org/2022%20Regional%20Resource%20Assessment%20Report627163.pdf>; California Indep. Sys. Operator, *Summer Loads and Resources Assessment* at 20 (May 18, 2022), <http://www.caiso.com/Documents/2022-Summer-Loads-and-Resources-Assessment.pdf>.

reveals quite the opposite. A comprehensive solution set will require out-of-the-box thinking in some areas and continued incremental improvements in others.

6. Fortunately, we have received many thoughtful suggestions for further reforms, which serve as the seeds for future solutions. Below, I discuss two categories of promising ideas meriting further discussion: (1) deeper reforms that get at some of the remaining fundamental challenges with interconnection processes; and (2) additional nuts and bolts changes that could enhance the effectiveness of a variety of interconnection processes, but which were not part of the proposal giving rise to this final rule.

7. I urge stakeholders to examine these and related suggestions, and for transmission planners to adopt regionally appropriate solutions beyond those required by this final rule.

I. Deeper reforms

8. In considering interconnection processes across the country, twin challenges emerge as the most fundamental problems. First, interconnection studies initially examine clusters of projects that often bear little resemblance to what ultimately interconnects to the system. They rely on a long and painful process of attrition to arrive at a final set of projects along with corresponding network upgrades.

9. More specifically, processes that rely solely on interconnection applications to determine study scope, and which require substantial study work for each customer based on inputs that depend on other projects in the queue, have become overwhelmed. For example, S&P reports that the California Independent System Operator (CAISO) received more than 350 GW of projects in its latest application window, driving its total queue to over 500 GW.¹² Meanwhile, the Midcontinent Independent System Operator's (MISO) queue has ballooned to 339 GW, while PJM Interconnection, LLC's (PJM) has risen to 298 GW, both comfortably greater than the present installed capacity of either region.¹³ According to a recent CAISO stakeholder presentation, "[t]he massive increase in interconnection requests seeking to meet the accelerated cadence of resource development . . . has overwhelmed critical planning and engineering resources across the industry. . . . The current generator interconnection processes simply cannot efficiently accommodate the latest level of

interconnection requests received."¹⁴ Other queues are similarly overwhelmed.¹⁵

10. Second, project developers face enormous cost uncertainty.¹⁶ Initial study results may be far different from final costs because the number of projects reaching the facilities study stage (the final stage before the execution of a generator interconnection agreement) can be far fewer than those earlier examined in the cluster study stage. As CAISO observed in a recent stakeholder presentation, its "[s]tudy results lose accuracy, meaning and utility when the level of cluster [Interconnection Resource] capacity [is] multiple times the existing or planned transmission capacity for an area."¹⁷

11. Today's final rule will help to ameliorate these problems. In particular, the rule's site control requirements,¹⁸ requirement for an interconnection customer to select a definitive point of interconnection,¹⁹ commercial readiness requirements,²⁰ and withdrawal penalty framework²¹ will each contribute to more streamlined study clusters. As we have learned through this proceeding, however, they will likely be inadequate, on their own, to fully solve these deep challenges.²²

12. In my estimation, the record of this proceeding, as well as recent stakeholder

initiatives, suggest several options for further improvement. They are not necessarily exclusive of one another, and appropriate application may depend on the particular regional context. They include: (1) linking the interconnection process to proactive transmission system planning; (2) in applicable regions, aligning the interconnection process more closely with competitive resource solicitations; and (3) transitioning to a "focused" interconnection process or "connect and manage" approach for all energy-only resources.

A. Link The Interconnection Process to Proactive Transmission System Planning

13. Foundationally, it should be acknowledged that for interconnection reform to succeed, holistic, forward-looking transmission planning, as included in the Commission's notice of proposed rulemaking on regional planning and cost allocation,²³ must also succeed. Interconnection processes are overloaded in part because they are being relied on to build out core transmission system infrastructure that should be considered in regional planning processes. We know interconnection processes were not intended for, and are ill suited to perform, this task. As a coalition of consumer groups and the R Street Institute argues in a recent letter to the Commission, "[t]he cost of network upgrades can be dramatically reduced through proactive regional transmission planning, which enables major reductions in [Generator Interconnection] requirements and delays."²⁴ Even prior to the adoption of any final rule in the Commission's regional transmission planning proceeding, individual transmission providers can make significant strides toward the cost-effective construction of new transmission infrastructure via regionally tailored proposals and initiatives.²⁵

14. There may also be opportunities to streamline the interconnection process by more closely linking it to the transmission system planning process,²⁶ or to carry out forward-looking interconnection studies driven by a more holistic assessment of interconnection needs.

15. Southwest Power Pool (SPP) and its stakeholders have embarked on a potentially promising initiative along these lines, which proposes a "Consolidated Planning Process" that would connect SPP's interconnection

¹⁴ CAISO, *2023 Interconnection Process Enhancements: Summary of June 20 & 21 Track 2 Working Group Meeting—Revised Principles and Problem Statements 1 and 2*, at 4 (June 23, 2023), <http://www.caiso.com/InitiativeDocuments/Revised-Principles-and-Problem-Statements-Interconnection-Process-Enhancements-2023-Track%202-Jun%2020-212023.pdf>.

¹⁵ See Queued Up 2023 at 9 (showing very large amounts of queue capacity across several regions).

¹⁶ See Final rule at P 43 ("Cost uncertainty poses an especially significant obstacle because interconnection customers may not be able to finance substantial increases in unexpected interconnection costs."). For example, in one relatively recent interconnection cluster in MISO, the preliminary system impact study estimated \$3.2 billion in network upgrades for 31 projects, but that estimate was cut to only \$330 million by Decision Point I after more than half of the projects withdrew. See *Midcontinent Indep. Sys. Operator*, 169 FERC ¶ 61,173, at P 11 (2019).

²⁰ *Id.* at PP 690–707.

²¹ *Id.* at PP 780–813].

²² The Arizona Corporation Commission, for example, argues that "'first-ready' queue reforms that are not explicitly linked to an effective rationing process will likely fail to help resolve the growing backlog. Some mechanism to prioritize projects and allocate scarce interconnection access to the highest quality projects is likely needed." Arizona Commission Initial Comments at 1–2. Similarly, a coalition of consumer groups and the R Street Institute argues that the Commission's notice of proposed rulemaking in this proceeding "leaves many critical reforms unresolved." R Street Institute et al. June 8, 2023 Comments in Support of Generator Interconnection Reform Under RM22–14, at 2. See also Cypress Creek Initial Comments at 12 (arguing that "a cluster-based approach alone, without further changes, will not provide adequate reform").

²³ See *Building for the Future Through Elec. Reg'l Transmission Planning & Cost Allocation & Generator Interconnection*, 179 FERC ¶ 61,028 (2022).

²⁴ R Street Institute et al. June 8, 2023 Comments in Support of Generator Interconnection Reform Under RM22–14, at 2.

²⁵ See, e.g., MISO, *MTEP21 Report Addendum: Long Range Transmission Planning Tranche 1 Executive Summary* at 1 (2022), <https://cdn.misoenergy.org/MTEP21%20Addendum-LRTP%20Tranche%201%20Report%20with%20Executive%20Summary%20625790.pdf> (describing a proposed "portfolio of 18 transmission projects located in the MISO Midwest Subregions with a total investment of \$10.3 billion, and benefit-to-cost ratios average of 2.6").

²⁶ See, e.g., AEE Initial Comments at 10–13 (advocating for a closer linkage between transmission planning and generator interconnection).

¹² Garrett Hering, *California ISO Tackles 'Broken' Interconnection Process as Queue Tops 500 GW*, S&P Global (July 19, 2023); see also CAISO, *Cluster 15 Interconnection Requests*, <http://www.caiso.com/planning/Pages/GeneratorInterconnection/Default.aspx> (last visited July 26, 2023).

¹³ Queued Up 2023 at 9–10.

process to its regional transmission planning process.²⁷ Similarly, CAISO is seeking to “[p]rioritize interconnection in zones where transmission capacity exists or new transmission has been approved, while providing opportunities to identify and provide alternative points of interconnection or upgrades.”²⁸ Like SPP, CAISO aims to overhaul a bloated queue that requires initial studies that bear little relation to transmission system reality, and instead chart a course to a new process that produces “meaningful study results that take into account system capability, resource planning and procurement.”²⁹

16. The promise of a forward-looking approach is also becoming clear through the ongoing effort that MISO and SPP are pioneering in the affected systems context. That effort, known as the Joint Targeted Interconnection Queue (JTIQ), examines a larger portfolio of projects to identify solutions that more efficiently solve their collective needs.³⁰ By assessing larger, long-

term system needs across study clusters, this approach identifies efficiencies that could not be captured on a more project-specific basis.³¹

17. As these regions’ proposals are still in flux and have yet to be filed with the Commission, I do not prejudge them. But, at a high level, it appears that these types of approaches may hold the potential to provide developers more certainty; avoid a dynamic whereby large upgrades are assigned to individual projects that then drop from the queue, causing a cascading need for restudy; and deliver benefits to consumers by identifying more efficient infrastructure solutions than would be delivered on a piecemeal basis.

18. Questions worth exploring as these types of processes develop include:

a. How can the process ensure that fees charged to interconnection customers provide the funds needed for the relevant proactively-planned network upgrades, while providing developers with a reasonable degree of cost certainty?

b. Would a mechanism such as a competitive auction or open season administered by the transmission provider be an effective tool for allocating scarce interconnection capacity identified by the forward-looking plans, and/or are there other processes that can effectively streamline the study process?

c. How can such processes be designed in a manner that is not unduly discriminatory and is consistent with open access principles?; and

d. What process is appropriate for interconnection applications that do not align with the transmission provider’s forward-looking regional transmission plan?

B. Align Interconnection Processes With Competitive Resource Solicitations

19. In some regions of the country, it may be appropriate to link aspects of the interconnection process to resource solicitation.³² The Colorado Public Utilities Commission (Colorado Commission), for example, characterizes the interconnection queue management processes of transmission providers in its state as “highly functional.”³³ The key, it says, is that its “existing FERC-approved tariffs and bilateral market structure . . . ensures that projects selected in [its] competitive resource planning and acquisition process obtain

scarce interconnection in a cost-effective and timely manner.”³⁴

20. The Colorado Commission and Arizona Corporation Commission (Arizona Commission) argue that a mechanism to allocate scarce interconnection capacity is needed.³⁵ The Colorado Commission explains that if there is 400 MW of low-cost headroom on the system, for instance, several commercially viable projects that collectively exceed that amount may compete for that headroom yet be unviable on a collective basis if all proceed.³⁶ It contends that, lacking a mechanism to allocate the headroom, a cluster study process may result in an inefficient cycle of study, re-study and delay, without necessarily ensuring that the 400 MW of headroom is used efficiently.³⁷ It argues that facilitating a process where state-jurisdictional competitive solicitation can be used to allocate scarce interconnection capacity is appropriate given “state priorities involving reliability, customer, and environmental preferences.”³⁸

21. FERC proposed a similar “optional resource solicitation” study in this proceeding. Our proposed process differed in a critical respect: the resource solicitation was not granted a queue position,³⁹ and being selected in the resource solicitation would not serve as a mechanism for allocating scarce interconnection capacity. The possibility of more comprehensively aligning the interconnection process with competitive resource solicitations (beyond the jurisdictions where such an approach is currently used) raises many questions, such as:

a. How can competitive solicitations and interconnection processes be designed to effectively coordinate with one another, especially where the soliciting entity (e.g., a state) is different from the transmission provider (e.g., an RTO)?

b. To be effective as a mechanism to allocate scarce interconnection capacity, must a competitive solicitation be paired with a mechanism such as further strengthened commercial readiness requirements to limit the pool of resources in the queue not responding to solicitations, or be designed in a fashion that limits the interactions in the study process between resources responding to the relevant solicitation(s) and those that do not?⁴⁰ Can

³⁴ *Id.*

³⁵ Arizona Commission Initial Comments at 1–2; Colorado Commission Initial Comments at 21–27.

³⁶ Colorado Commission Initial Comments at 21–27.

³⁷ *Id.*

³⁸ *Id.* at 29.

³⁹ Commenters argue that the Commission should have proposed to grant a queue position to the resource solicitation. See, e.g., Colorado Commission Reply Comments at 6; EEI Initial Comments at 5–6; Xcel Initial Comments at 11–14; Clean Energy Associations Initial Comments at 51. Without a queue position for the resource solicitation, the costs identified in the study may not hold true for the various queue positions of underlying resources.

⁴⁰ The Colorado Commission argues that if projects to be studied as part of a competitive solicitation request are “comingled with a much broader pool of speculative projects,” the process

Continued

²⁷ See Southwest Power Pool, *Consolidated Planning Process Task Force*, <https://www.spp.org/stakeholder-groups-list/organizational-groups/board-of-directorsmembers-committee/consolidated-planning-process-task-force/> (last visited July 26, 2023); Southwest Power Pool, *Consolidated Planning Process: Phase 1 Recommendations* (May 17, 2023), <https://www.spp.org/spp-documents-filings/?id=297513> (when accessing “CPPTF Meeting Materials 20230621”). SPP proposes to calculate an “entry fee,” which would involve per-MW costs of any “regional” or “sub-regional” interconnection network infrastructure, along with a “local” component derived from a narrower reliability assessment examining any necessary facilities at the point of interconnection. See Southwest Power Pool, *CPP Entry Fee Rate Structure*, at 20 (July 14, 2023), <https://www.spp.org/spp-documents-filings/?id=297513> (when accessing “CPPTF Meeting Materials 20230714”) (setting forth entry fee components). The key to SPP’s proposal, as I understand it, is that the regional and sub-regional components of the entry fee would be identified by “forward-casting,” a “longer-term assessment” derived from estimated costs of interconnecting resources in a fashion that is integrated with SPP’s long-term regional plan. *Id.* By assessing costs across a broader range of projects than any individual cluster, and by calculating it based on SPP’s proactive planning vision rather than calculating costs for a hypothetical cluster of initial applicants that will not all reach commercial operation, SPP may be able to offer far greater cost certainty for project developers and thereby greatly streamline and accelerate the interconnection process. *Id.* at 11, 19 (illustrating a greatly simplified flow chart for the consolidated planning approach as compared to SPP’s status quo).

²⁸ CAISO, *2023 Interconnection Process Enhancements Track 2 Working Group* at 9 (July 11, 2023), <http://www.caiso.com/InitiativeDocuments/Presentation-Interconnection-Process-Enhancements-2023-Track-2-Working-Group-July112023.pdf>.

²⁹ *Id.*

³⁰ See generally SPP & MISO, *SPP–MISO Joint Targeted Interconnection Queue Cost Allocation and Affected System Study Process Changes White Paper* (Dec. 20, 2022), <https://www.spp.org/documents/68518/spp-miso%20jtiq%20study%20updated%20white%20paper%2020221220.pdf>. Because this approach looks at projects that have reached the affected systems study stage, it does not provide a template for narrowing the initial pool of projects to facilitate meaningful study results. But the

forward-looking nature of the initiative may nevertheless provide valuable insights to regional interconnection processes more broadly.

³¹ See SPP & MISO, *MISO–SPP Joint Targeted Interconnection Queue Update* at 7 (March 27, 2023), <https://cdn.misoenergy.org/20230337%20MISO%20SPP%20JTIQ%20Update628357.pdf>.

³² See, e.g., Clean Energy Associations Initial Comments at 38 (urging the acceptance of “regionally specific proposals that would align the interconnection process with competitive procurements associated with resource planning, rather than placing them at odds”). Such alignment may not be appropriate or feasible, of course, in certain multi-state regions in which the bulk of resource development is driven by anticipated market revenues.

³³ Colorado Commission Initial Comments at 2.

such requirements be designed in a manner that is not unduly discriminatory, and if so, how?

c. Are safeguards necessary to render not unduly discriminatory an interconnection process closely linked to a competitive solicitation process, and if so, what safeguards are necessary or appropriate?⁴¹

d. Is linking the interconnection process to competitive solicitations a viable option in RTO regions, in which state solicitation processes play a large role in supporting new market entrants but other paths to commercial viability may also exist?

C. Facilitate a “Focused” Interconnection Process

22. Other promising ideas for improving cost certainty and reducing delays were put forward to the Commission in this proceeding. In particular, several commenters endorse a more “focused”

could become “unworkable.” Colorado Commission Reply Comments at 5. It argues that, in the RTO context, commercial readiness requirements will be inadequate for this task, and suggests that the Commission allow transmission providers to prioritize native load, using solicitations as a mechanism to allocate scarce interconnection capacity. See Colorado Commission Initial Comments at 21–30. In contrast, the Interwest Energy Alliance argues that while competitive resource solicitations could be a useful tool to organize a portion of the interconnection process, they should not “becom[e] the only pathway through the cluster study process,” because “alternative pathways with reasonable commercial readiness requirements may . . . reveal opportunities for independent transmission companies (potentially associated with independent generation developers) to discover cost-effective ways to add much-needed transmission expansion through additional lines along with additional interconnection capacity.” Interwest Initial Comments at 11–12. Alternatives may be available that allow for other development opportunities alongside resources solicitation clusters. For example, a resource solicitation might be granted its own cluster (so as to allow the soliciting entity to understand the interconnection costs for its combination of resources), while providing for serial processing of clusters composed of resources not participating in the resource solicitation. See Enel Initial Comments at 72 (arguing that if the Commission were to adopt an optional resource solicitation process that designated a queue position, it “should be a separate queue cycle with an intermediate queue priority between the Transmission Provider’s annual study clusters”).

⁴¹ Several entities highlighted the need for guardrails to prevent undue discrimination with regard to the Commission’s proposal of an optional resource solicitation study. See, e.g., R Street Initial Comments at 15–16 (“Guardrails may be helpful to prevent inefficiencies, preference or undue discrimination”); NARUC Initial Comments at 26 (“NARUC strongly supports FERC’s proposal to limit the applicability of the optional resource solicitation study to instances where the resource acquisition is overseen by a state regulatory authority and is competitive and open. Without this requirement, NARUC is concerned about the opportunity for load-serving entities to potentially use the process in a way that would inappropriately favor the interconnection of company-owned resources.”); Pine Gate Initial Comments at 43 (advocating for “appropriate safeguards”). This concern is heightened in the context where the solicitation is granted a queue position, and/or where inclusion in the solicitation serves as a commercial readiness indicator.

interconnection process that streamlines study scope and reduces the need for restudies for projects requesting energy-only service.⁴² As Enel observes, the dilemma of unwieldy studies and cascading restudy needs, and the delay and cost uncertainty that stems from these challenges, is ultimately caused by “the interdependence amongst Interconnection Customers.”⁴³ Cypress Creek notes that “[i]n one extreme example, a group of non-firm, energy-only resource interconnection service (‘ERIS’) requests triggered the need for upgrades up to 1,000 miles away on three different systems.”⁴⁴ Accordingly, another way to facilitate a more workable interconnection process could be to focus study of new projects on their immediate impact to the system. While the number of studies pursuant to such a process could still be large, their scope would be smaller and the potential for cascading restudies would be greatly reduced.

23. Johannes Pfeifenberger of The Brattle Group notes that, using a “connect and manage” approach, the Electric Reliability Council of Texas (ERCOT) has interconnected more generation more quickly than other regions.⁴⁵ Under its system, which “limits restudy needs,” “[p]rojects can be developed and interconnected within 2–3 years,” while “in other regions, the interconnection study process itself may take longer than that.”⁴⁶ Public Interest Organizations state that “[t]he UK’s ‘Connect and Manage’ approach has reduced lead times by 5 years compared to its previous ‘Invest and Connect’ approach.”⁴⁷

24. While ERCOT’s system, which treats all generators as energy-only resources,⁴⁸ may not provide a model for capacity resources, it could provide a template for ERIS

interconnection. Enel argues that a “focused” approach to interconnection is appropriate for resources seeking ERIS because “the Transmission Provider is not obligated to maintain the transmission system such that ERIS generators can maintain the same level of as available injection throughout the life of the generator,” and accordingly, “it would be unreasonable to expect an ERIS generator to mitigate every constraint identified” in a more expansive study that uses a lower transfer distribution factor (TDF) threshold to identify more remote impacts of the project.⁴⁹ Streamlining ERIS interconnection assessment could allow transmission providers to focus their study resources on a smaller number of requests seeking network resource interconnection service (NRIS).⁵⁰

25. Cypress Creek argues that a more focused study approach could be implemented across the many regions that provide an NRIS interconnection option through use of a “two-step ERIS–NRIS” process by which the transmission provider could by default study all resources for ERIS and provide a subsequent process by which an interconnection customer can add firm rights.⁵¹ Such a process might even feasibly provide a faster path to commercial operation while still facilitating deliverable resources in the long run if “NRIS requests [could] be connected more quickly on an ERIS basis while NRIS-related network upgrade study and construction work is still pending.”⁵² While the final rule did not adopt the recommendation for a two-step study process because it was outside the scope of this proceeding,⁵³ individual transmission providers could propose to implement such a process on their own initiative or the Commission could take up this suggestion in a subsequent rulemaking.

26. Key questions that this approach raises include:

a. What is the appropriate mechanism to narrow the scope of ERIS studies to limit the interdependence of projects in the study process? For example, Enel argues that ERIS resources should be studied using a minimum TDF threshold of 20 percent,⁵⁴ and that transmission providers should replace power flow models that assume extreme grid conditions with more realistic economic

⁴⁹ Enel Initial Comments at 23.

⁵⁰ See Public Interest Organizations Initial Comments at 50–52.

⁵¹ Cypress Creek Initial Comments at 8–9.

⁵² Public Interest Organizations Initial Comments at 52. Cypress Creek highlights that SPP currently allows for interim energy-only injection service, providing for a subsequent process by which a generator can add firm rights. Cypress Creek Initial Comments at 8–9. Such a process to add deliverability rights to ERIS resources may hold potential to facilitate immediate contributions to system reliability by these resources, even if such resources are not fully deliverable or compensated in capacity markets or accounted for in applicable resource adequacy analysis.

⁵³ Final rule at P 183.

⁵⁴ Enel Initial Comments at 21–25; see also AEE Reply Comments at 10 (supporting a minimum impact threshold); SEIA Initial Comments at 11 (same); Clean Energy Associations Initial Comments at 27 (same); Pine Gate Initial Comments at 19 (supporting a minimum distribution factor impact threshold of 20 percent).

⁴² See, e.g., R Street Institute et al. June 8, 2023 Comments in Support of Generator Interconnection Reform, at 2 (urging the Commission to “[c]onsider a focused interconnection study approach”); Public Interest Organizations Initial Comments at 50–52 (highlighting the potential for a narrow study process for ERIS resources to produce significantly faster interconnection timelines); ACORE Initial Comments at 2–3 (identifying potential benefits from an interconnection process “focused on local transmission needs only”); R Street Initial Comments at 6–7 (arguing that ERCOT’s “connect and manage” approach is “perhaps the most effective” domestic interconnection process).

⁴³ Enel Initial Comments at 2.

⁴⁴ Cypress Creek Initial Comments at 3–4 (citing Pfeifenberger, *Generation Interconnection and Transmission Planning* (Aug. 9, 2022), <https://www.esig.energy/download/generation-interconnection-and-transmission-planning-johannespfeifenberger/?wpdmdl=9241&refresh=62f38b6ade44a1660128106>).

⁴⁸ See Cypress Creek Initial Comments at 7–8.

dispatch models reflecting security constrained economic dispatch.⁵⁵ How do these approaches interact and are they mutually exclusive? Are there other appropriate mechanisms?

b. To the extent that ERIIS studies are narrowed, are changes to market dispatch rules or other measures appropriate to account for the possibility that NRIS resources or resources with long-term firm transmission service may be curtailed before them?⁵⁶

c. If a two-step study process that considers ERIIS analysis first is appropriate, how should it be designed?⁵⁷ Would it be effective to provide for a process that allows ERIIS resources to be converted to NRIS after they are constructed?⁵⁸

d. Could a focused interconnection approach for ERIIS resources be combined with approaches above that may align the interconnection process more closely with long-term transmission planning, and/or use competitive selection processes to allocate scarce interconnection capacity?⁵⁹

II. General Interconnection Process Improvements

27. In addition to these deeper reforms, commenters identified several potential incremental improvements to interconnection processes that were not proposed in the Commission's notice of proposed rulemaking. I discuss some of the most promising ideas below, which in some or most cases may be applicable on a generic basis.⁶⁰

A. Further Refine Study Assumptions

28. Commenters identified a number of ways that study assumptions could be further

clarified, which may help to streamline and improve the accuracy of the interconnection process.

1. Clarify ERIIS and NRIS Assumptions

29. As Enel points out, the Commission has not to date clarified what ERIIS studies should entail, and it has "observed vastly different treatments of" resources seeking ERIIS by different transmission providers.⁶¹ As discussed above, a narrow approach to ERIIS studies may facilitate a more streamlined interconnection process. In addition, some developers contend that grid operators deploy widely varying study assumptions on issues such as whether the models used allow for resource re-dispatch to mitigate any reliability issues that are identified.⁶² They argue that requiring "a uniform set of minimum interconnection study requirements" would "facilitate effective, efficient interconnection queue processing."⁶³

30. While the Commission declined to provide direction on how ERIIS should be studied because such requests were outside the scope of this final rule,⁶⁴ the Commission could take up this topic as part of a subsequent rulemaking. As an initial step, the Commission could solicit information from transmission providers documenting what assumptions and processes are used for ERIIS and NRIS, respectively, to provide a starting point for dialogue around what study assumptions may be appropriate.⁶⁵ Topics that may benefit from further clarification include: (1) the definition and scope of ERIIS; (2) the study assumptions that should be implemented in examining ERIIS requests; and (3) the proper scope of study results and other information that must be provided by transmission providers to interconnection customers so that they can understand the results.

2. Provide for More Accurate Assumptions Regarding Injection of Energy by Resources

31. The final rule clarifies that its requirement to more accurately reflect the proposed charging behavior of electric

storage resources extends only to "the operating assumptions for withdrawals of energy."⁶⁶ In part due to concerns regarding the administrative burden of extending the proposal to injections or other resource types, the final rule declines to extend the reform in these areas.⁶⁷ But while the Commission determined that this record did not support adopting a structure where such assumptions would be studied at the request of individual generators, further examination of how to render operating assumptions more accurate is warranted.

32. Many commenters argued that the Commission should also require more accurate assumptions regarding injections of storage.⁶⁸ And as the final rule acknowledges, many commenters "support eliminating unrealistic interconnection study assumptions for resource types other than electric storage resources, such as assuming that a solar facility will operate at night, or that a wind resource will produce maximum output during low-wind seasons."⁶⁹ Further, several commenters highlighted the benefits of using realistic fuel-based dispatch assumptions in studies, as demonstrated by MISO.⁷⁰ The final rule "acknowledge[s] that fuel-based dispatch assumptions may be able to address some of the identified challenges associated with inaccurate modeling assumptions for all resource types and encourage[s] transmission providers to

⁵⁵ Final rule at PP 1509, 1524.

⁵⁶ Final rule at P 1529.

⁵⁷ See, e.g., Clean Energy Associations Initial Comments at 53 ("[T]he Clean Energy Associations recommend that the Commission specify that transmission providers should also not study electric storage resources as 100% injecting energy during low load periods by default.") (emphasis in original); NextEra Initial Comments at 37 ("Transmission providers should not study electric storage resources as . . . injecting energy during low load and shoulder periods, as [this does] not reasonably reflect typical operations of such units."); Pine Gate Initial Comments at 51 (arguing that the Commission should prohibit transmission providers from using unrealistic operating assumptions, which includes "assuming that electric storage resources will . . . discharge during light load periods").

⁵⁸ Final rule at P 1480 (citing Enel Initial Comments at 74; AES Clean Energy Initial Comments at 24–25; Ameren Initial Comments at 29; CREA and NewSun Initial Comments at 92; Cypress Creek Initial Comments at 9–10; Invenery Initial Comments at 59–61; Microgrid Resources Initial Comments at 7–8; Pine Gate Initial Comments at 54; Public Interest Organizations Initial Comments at 48–49; R Street Initial Comments at 16; rPlus Initial Comments at 6); see also *id.* ("Ameren, Cypress Creek, Microgrid Resources, NARUC, Pine Gate, and rPlus all request that the Commission extend this reform to allow any resource type, not just electric storage or co-located resources, to request that interconnection studies be based on their particular operating assumptions and characteristics.").

⁶⁰ See Invenery Initial Comments at 59–61 (highlighting MISO's practice, as well as "recently approved more realistic fuel-based dispatch" assumptions in SPP); see also Enel Initial Comments at 77–78 (arguing that the Commission should require fuel-based dispatch of generators in modeling "[i]f Power flow analyses are not replaced with SCED studies"); Interwest Reply Comment at 15 (urging the adoption of "realistic fuel-based dispatch assumptions").

⁶¹ Enel Initial Comments at 26–27.

⁶² See, e.g., Cypress Creek Initial Comments at 6 n.11 ("Some RTOs conduct power flow analyses that consider redispatch opportunities (e.g., NYISO via a manual process, PJM via a simplified approach) but many do not check if generation redispatch can address an identified criteria violation."); Pine Gate Initial Comments at 54 ("The primary issues identified relative to current study assumptions are extreme contingency scenarios and overly conservative operational characteristics and strategies (i.e., redispatch protocols).").

⁶³ Pine Gate Initial Comments at 55; see also Cypress Creek Initial Comments at 6 ("re-dispatch should be a standard approach"); Clean Energy Associations Initial Comments at 28 ("[T]he study approach to re-dispatching the system to account for proposed injections . . . is a crucial assumption that is not well understood or defined, but can trigger significant upgrades and increase complexity of interconnection process, even for energy-only (non-firm) interconnection requests. . . . Economic redispatch should be a standard approach to limit regional upgrades identified in the study process, particularly for energy-only interconnection requests.").

⁶⁴ Final rule at P 1291.

⁶⁵ See Enel Initial Comments at 26–27.

⁵⁵ Enel Initial Comments at 73–74.

⁵⁶ Xcel objects to the treatment of ERIIS resources in RTO markets because "[t]hese resources do not bear the costs necessary to ensure that they are deliverable to load as NRIS resources or ERIIS resources that have acquired long term firm transmission service do," and suggests that, as a consequence, it may be appropriate for "ERIS-only service [to] receive a lower dispatch priority." Xcel Initial Comments at 15–16.

⁵⁷ Some regions currently employ a similar two-step process that considers local project needs prior to considering deliverability analysis non-local upgrades based on project interactions. See, e.g., New York State Department Initial Comments at 5–6 (describing NYISO's Class Year study process).

⁵⁸ See Public Interest Organizations Initial Comments at 52 (arguing that "[i]deally, the interconnecting customer would receive an upfront estimate of typical curtailment levels to be expected under ERIIS and would have the option to apply for NRIS at a later date if experienced curtailment levels rise above acceptable levels"). Might such a process be able to efficiently examine a large number of projects, while still requiring significantly fewer restudies than existing interconnection processes by examining only projects that have already secured ERIIS?

⁵⁹ For example, might a transmission provider efficiently assess ERIIS upgrades by studying them using a distribution factor of 20 percent, while simultaneously developing an "entry fee" or open season process aligned with its forward-looking transmission plan to fund upgrades to guarantee deliverability of NRIS resources?

⁶⁰ The discussion herein is not intended to comprehensively capture all potential reforms, but rather to highlight some of the ideas that may be appropriate for further stakeholder discussion.

evaluate the merits of adopting it.”⁷¹ Individual transmission providers remain free to advance such assumptions on an individual basis, and further examination of this concept could create a record adequate for the Commission to determine whether to require fuel-based operating assumptions on a generic basis, and if so, how to precisely structure such a requirement.

B. Use Automation To Facilitate More Efficient Interconnection

33. Currently, the interconnection study and queue process is heavily labor-intensive, and market participants frequently suffer from shortages of qualified study staff, including transmission planners and engineers, in the face of a high volume of interconnection requests.⁷² Accordingly, numerous commenters noted the great potential of automation to conserve staffing resources and speed up this process.⁷³ The broad term “automation” in this context can refer to a wide variety of time-saving steps to bring the queue process fully into the digital age, such as standardized data entry and collection; a web-based application process and data submission with automated validation; automated study model construction and study processes; and pre-population of manufacturer models for relevant equipment.⁷⁴ Commenters requested steps, including the convening of a technical conference, to study how the interconnection process might become more robustly automated to save resources⁷⁵ and facilitate other benefits, such as the more robust integration of grid enhancing technologies (referred to as “alternative transmission technologies” in the final rule) into the bulk power system.⁷⁶ Of course, continuing to

support career path development in this area will remain critical. At the same time, as we have seen in many other industries, automation done right has the potential to save a great deal of unnecessary time, effort, and expense. I support more deeply exploring the range of options available in this domain.

C. Reduce Delay and Cost Overruns in Network Upgrade Construction

34. While there appears to be a lack of good data about the timing and cost of construction of network upgrades once an interconnection agreement is executed,⁷⁷ developers have raised concerns that they have little recourse if such upgrades are delayed or subject to cost increases.⁷⁸ As noted above, the Lawrence Berkeley National Laboratory’s *Queued Up* report does not trace the cause of delays between execution of a project’s interconnection agreement and commercial operation, but shows that the average timespan for this period has increased from roughly 17 months for projects built between 2007–2014 to around 22 months for projects built between 2015–2022, with projects in CAISO showing particularly heightened delays.⁷⁹ Enel contends that “upgrades for Interconnection Customers are only overseen by the Commission for adherence to good utility practice standards,” and “[t]he Commission does not review the timeliness or cost of upgrades unless an Interconnection Customer elects to file an LGIA in unexecuted form and challenge these specific assumptions,” a choice that could result in “costly delays in project timelines that often outweigh any benefit that might be gained from a favorable Commission decision.”⁸⁰

35. Accordingly, it may be appropriate for the Commission to take action to facilitate more timely and cost-conscious construction of such upgrades. One initial step could be for the Commission to gather more data concerning delays that may affect the commercial operation date of a generating facility, and to establish “metrics associated with the delayed construction of facilities.”⁸¹ The Commission could also consider adopting penalties for delays or cost overruns, or an incentive structure for transmission providers that carry out construction on time and on budget.⁸²

36. Finally, it may be appropriate to reconsider the scope of “stand alone network upgrades” to include facilities that may be needed for multiple interconnection customers, and to develop a process that either designates an interconnection customer to build such upgrades, or competitively solicits bids to award construction rights. While this final rule “clarif[ies] that, for a network upgrade to be eligible for treatment as a stand alone network upgrade, the network upgrade must be required for only one interconnection customer,”⁸³ it does so in order to “explicitly maintain[] the status quo.”⁸⁴ The Commission’s Notice of Proposed Rulemaking examined changes to the definition of stand alone network upgrade necessary “to implement a first-ready, first-served cluster study process,”⁸⁵ and did not contemplate any mechanism to “prevent lengthy conflict and negotiations in instances where multiple interconnection requests trigger the need for a network upgrade” beyond restricting such upgrades to those that are required for only one interconnection customer.⁸⁶

37. Ideas were put forth in this proceeding, however, that may hold potential to efficiently allocate construction rights and obligations. In particular, one idea is that “the Commission should consider establishing a new third-party construction option” pursuant to which stand alone network upgrades could “be bid out and built by third parties, such as non-incumbent utilities, independent transmission developers or contractors.”⁸⁷ To develop

cost management. *See, e.g.*, Advanced Energy Economy, Pre-Conference Comments, Docket No. AD22–8, at 2–3 (filed Oct. 4, 2022) (noting that a “major driver[] of transmission cost increases in recent years [has] been . . . incremental network upgrades identified in generator interconnection studies”). In that docket, the Commission has considered, and some commenters have supported, among other measures, new independent entities to monitor transmission planning. *See, e.g.*, Electricity Transmission Competition Coalition, Comments, Docket No. AD22–8, at 6 (filed Oct. 4, 2022); Harvard Electricity Law Initiative, Comment, Docket No. AD22–8, at 18–31 (filed Mar. 23, 2023); R Street Institute, Comments, Docket No. AD22–8, at 6–7 (filed Mar. 23, 2023). To the extent that such entities are established, the Commission could also consider tasking them with monitoring the timely and cost-conscious construction of network upgrades.

⁸³ Final rule at P 192.

⁸⁴ *Id.* at P 193.

⁸⁶ *Id.*; *see* final rule at P 194 (requests to “expand the definition of stand alone network upgrade . . . are outside the scope of this proceeding, which is not proposing to modify the scope of interconnection customers’ option to build certain stand alone network upgrades but rather is only revising definitions insofar as is necessary to implement reforms adopted elsewhere in this final rule”).

⁸⁷ Enel Initial Comments at 52; *see also* Pine Gate Initial Comments at 63–64 (proposing that “the Commission should grant the interconnection customer with the largest projected impact on a potential Stand Alone Network Upgrade facility the ability to elect the option to build with priority falling to each interconnection customer based on

⁷¹ Final rule at P 1529.

⁷² *See, e.g.*, *Cal. Indep. Sys. Operator Corp.*, 176 FERC ¶ 61,207, at PP 7, 21 (2021) (noting CAISO’s statement of its difficulty in finding sufficient expert staff and consultants to timely process a large cluster study); MISO, Informational Report, Docket No. ER19–1960, at 12 (filed Nov. 16, 2020) (noting similar delays); *see also* Akielly Hu, *US Clean Energy Rollout Continues to Be Hamstrung by Grid Challenges*, *Canary Media* (June 13, 2023), <https://www.canarymedia.com/articles/transmission/us-clean-energy-rollout-continues-to-be-hamstrung-by-grid-challenges> (noting that “interconnection studies rely on a workforce of engineers at grid operators, and experts say there are not enough to get the job done,” and quoting the author of Lawrence Berkeley National Laboratory’s *Queued Up* study as saying this staffing issue represents a “fundamental constraint” on queue processing); Avangrid Reply Comments at 12 (“Transmission providers are processing unprecedented numbers of interconnection requests at a time when these qualified transmission planners and engineers are scarce.”); APPA–LPPC Initial Comments at 13 (noting that “available industry system simulation tools” can in some cases ameliorate “labor-intensive study obligations”).

⁷³ *See, e.g.*, California Energy Storage Alliance Initial Comments at 5; NextEra Initial Comments at 14, 40; MISO Initial Comments at 26 n.107; ACORE Initial Comments at 5; ACE–NY Initial Comments at 2–3; Pine Gate Reply Comments at 5.

⁷⁴ NextEra Initial Comments at 14, 40.

⁷⁵ *See* NextEra Initial Comments at 14; Pine Gate Reply Comments at 5.

⁷⁶ *See, e.g.*, WATT Coalition Reply Comments at 2–3.

⁷⁷ *See* *Queued Up* 2023 at 30 (“[L]imited data were available to analyze typical durations from interconnection agreement to commercial operations.”).

⁷⁸ *See, e.g.*, Enel Initial Comments at 50 (“Under the current standard[] of . . . good utility practice, there is a notable lack of incentive, and often a disincentive, for Transmission Owners to perform . . . EPC work in a timely and cost-conscious manner.”); Pine Gate Initial Comments at 64 (expressing concern that limiting the option for interconnection customers to self build will “further exacerbate construction delays and . . . ultimately harm consumers”).

⁷⁹ *See* *Queued Up* 2023 at 30. “The typical solar project built in CAISO since 2018 took over 4 years to reach commercial operations after securing an interconnection agreement; those built in 2022 averaged over 6 years.” *Id.* (emphasis in original).

⁸⁰ Enel Initial Comments at 50–51.

⁸¹ Pine Gate Initial Comments at 64.

⁸² This issue has also arisen in the context of the Commission’s docket on transmission planning and

such an option, the Commission would need to consider “details such as the posting of minimum design standards that must be met, the criteria for choosing a winning bidder, the incentives to hold the winning bidder to cost and schedule estimates, responsibility for cost overruns, rights to own, operate and maintain the Stand-Alone Network Upgrades, and the profit awarded to the winning bidder.”⁸⁸ Further process is warranted to examine this concept.⁸⁹ I encourage transmission providers to work with interconnection customers and other stakeholders to explore structures such as this that may provide greater certainty surrounding the timing and cost of certain network upgrades.

D. Address Challenges Faced by Projects Serving Tribes and Tribal Communities

38. Beyond these recommendations to further facilitate efficient interconnection of new resources, I encourage transmission providers to examine potential changes to address important considerations of equity and fairness related to interconnection of resources serving or developed by Tribes. In particular, I encourage transmission providers to examine whether any exceptions or waivers to the commercial readiness requirements or withdrawal penalties framework are appropriate for certain projects serving Tribal nations or their communities. While the commercial readiness deposit and withdrawal framework adopted in this final rule hold the potential to make interconnection processes more efficient, they may act as a barrier to projects serving or developed by Tribes in cases where such projects adopt unique ownership and financing structures.⁹⁰ This may also be a concern with regard to projects developed by, or in partnership with, communities that have been historically marginalized or overburdened by pollution, and I encourage further dialogue examining whether that is the case.

39. For example, the Commission recently granted a waiver to the SAGE Development Authority (SAGE), an entity developing a wind generation project on Tribal land, to allow it more time to post financial security as required by SPP.⁹¹ SAGE was created by the Standing Rock Sioux Tribe and is developing the project through “a community-led process designed to, among other things, implement Tribal values and ensure that the financial benefits of the Project will in turn support further community projects intended to address disparities around public health and other issues.”⁹² The Commission granted SAGE’s requested waiver in part because “due to its

unique Tribal business structure, it [was] unable to secure credit in advance” of the relevant security deposit deadline.⁹³ Waiver “provide[d] SAGE the time necessary to secure additional credit.”⁹⁴

40. To the extent this rule’s deposit requirements subject Tribal projects to greater risk, the need for similar waivers could be heightened. Accordingly, I encourage further inquiry into whether certain projects developed to serve Tribal communities or disadvantaged communities may have other characteristics that uniquely demonstrate commercial readiness as alternatives to the new deposit requirements. The inquiry could also consider other measures that may allow such projects to overcome any unique barriers that they face.⁹⁵

41. While challenges remain, the Commission’s issuance of a final rule today is an important step forward in the effort to address interconnection backlogs around the country. The ideas for continuing reform that I describe in this concurrence represent best practices and innovative thinking by regions and stakeholders considering how to solve the challenges the final rule does not address. I encourage transmission providers, interconnection customers and other stakeholders to consider the rule’s requirements a strong baseline and not a ceiling, and to continue to engage on the topics I have addressed herein.

For these reasons, I respectfully concur.

Allison Clements,
Commissioner.

Improvements to Generator Interconnection Docket No. RM22–14–000

Procedures and Agreements—

CHRISTIE, Commissioner, *concurring*:

1. I concur to this final rule,¹ which represents major progress towards the primary goal we set out to accomplish last year when we issued the NOPR: To move from a system of “first come, first served” to a system of “first ready, first served” by identifying generation projects in the interconnection queues that are commercially more viable and then moving them ahead of requests that are speculative and which have been causing major backlogs. I write separately about four issues contained within:

I. Evaluation of Alternative Transmission Technologies (Section III.C.2.iii)

2. Alternative transmission technologies, or grid-enhancing technologies (GETs), is a short-hand categorical term that covers a sweeping array of very different technologies. A GET may hold the potential of squeezing

more juice—literally—out of the existing transmission grid. By increasing the capacity of the existing grid, a GET could reduce or even eliminate the need for the future construction of new transmission assets. So the potential for cost-savings from the use of GETs is too important to ignore.

3. One of the most promising GETs—dynamic line ratings (DLRs)—could potentially save billions of dollars in avoided costs for new transmission assets. DLRs are not covered by this final rule, but are the subject of a separate proceeding,² and I hope we will use the record of that proceeding to move forward on a proposed rule to require implementation of DLRs when and where DLRs will be technologically sound and cost-effective.

4. While DLRs have tremendous potential and should be pursued, there is a problem with any categorical regulatory mandate to use GETs, which is this: Some GETs work somewhere but not everywhere; some work sometimes but not all the time; some only work under certain weather conditions; some don’t work at all, or at least not as advertised; and some are only cost-effective where the congestion costs are greater than the cost of the GET itself.

5. Given these engineering and economic realities, some knowledgeable transmission planning experts have argued that GETs categorically are not planning tools, but rather are *operational* applications that should be deployed when and where their efficacy is likely and can be appropriately proven. If they work in the real world as advertised, they could reduce or eliminate the need for *future* network upgrades or even backbone transmission assets, but they should not be mandated as planning tools or as potential substitutes for network upgrades caused by interconnection requests.³

6. Against this cautious view of GETs, I recognize the counterargument that transmission *owners* themselves have an economic incentive to favor the construction of costly new transmission assets rather than deploy GETs to squeeze out more capacity. New transmission assets can be rate-based, and the transmission owner can take advantage of the very generous formula rate treatment offered here at the Commission (another issue I have raised concerns about).⁴

² *Implementation of Dynamic Line Ratings*, 178 FERC ¶ 61,110 (2022).

³ See PJM Initial Comments at 68 (“PJM therefore cautions the Commission *not* to conflate the *operational* benefits of alternative transmission technologies . . . with the need to address significant capacity enhancement needs (short and long-term) or long-range transmission needs under rapid growth or changing resource mix scenarios.”); MISO Initial Comments at 121–22 (“Further, although these technologies may be evaluated, the technologies identified by the Commission still may *not* provide the appropriate solution from a *planning* perspective. Many of the technologies identified are appropriately considered as *operational tools* or *short-term solutions* but are *not* necessarily appropriate for *planning* to support a particular generator interconnection.”) (emphases added, footnote omitted).

⁴ See, e.g., *Sw. Power Pool, Inc.*, 183 FERC ¶ 61,151 (2023) (Clements, Comm’r, and Christie, Comm’r, concurring at P 4) (“Indeed, the

their interconnection request having the next largest impact on the Stand Alone Network Upgrade”).

⁸⁸ Enel Initial Comments at 52.

⁸⁹ Enel notes that “[t]he Commission could establish workshops or other mechanisms to further explore and develop these details.” *Id.*

⁹⁰ See OSPA Initial Comments at 8, 15–16 (arguing that SPP’s current security deposit regime has been “an insuperable barrier to renewable energy development on Tribal lands”).

⁹¹ See *SAGE Development Authority*, 182 FERC ¶ 61,180 (2023).

⁹² *Id.* at P 4.

⁹³ *Id.* at P 20.

⁹⁴ *Id.*

⁹⁵ See also Energy Keepers Initial Comments at 2–3 (arguing that it would not be “unduly discriminatory or preferential for transmission providers to expedite the processing of Native American interconnection requests,” considering “prior environmental justice inequities.”).

¹ *Improvements to Generator Interconnection Procedures and Agreements*, 184 FERC ¶ 61,054 (2023) (Final Rule).

So to overcome this incentive against GETs deployment, proponents argue that the Commission should require it.

7. But—as usual—the economic incentives argument has more than one side. The companies that sell GETs (and the organizations they fund) stand to profit from any regulation mandating that their products must be used. And generation developers (and the organizations they fund) have every incentive to lobby for a regulation mandating the use of GETs as a way to avoid paying the costs of the traditional network upgrades made necessary by their interconnections. This incentive is particularly salient in RTOs/ISOs that use participant funding to pay for the costs of network upgrades caused by the interconnecting customers (*i.e.*, developers).

8. So—again, as usual with sweeping Commission regulations—there is plenty of rent-seeking to go around. Striking the appropriate balance—one that is in the *public* interest—is a challenge. I believe this final rule—unlike the NOPR—does strike the right balance, in terms of a requirement simply to evaluate GETs in determining the appropriate network upgrade.

9. Importantly, the final rule makes it explicitly clear that while it is requiring the *evaluation* of certain listed GETs in the interconnection studies process, it is *not* requiring—nor even suggesting—that a GET must be deployed as an alternative to a necessary network upgrade. Indeed, the final rule explicitly says:

This final rule does not create a presumption in favor of substituting alternative transmission technologies for necessary traditional network upgrades, either categorically or in specific cases. This final rule is agnostic as to whether, in a specific case, an alternative transmission technology is an acceptable alternative to a traditional network upgrade

10. The final rule also makes it explicitly clear that the determination in each case is to be made at the *sole* discretion of the transmission provider (*i.e.*, RTO/ISOs or non-RTO transmission providers), applying good utility practices, applicable reliability standards, and other applicable regulatory requirements. To avoid continual litigation aimed at the transmission provider's determination in specific cases when a generation developer does not want to pay the costs of a network upgrade, the final rule explicitly makes clear that it is requiring a

Commission grants formula rate treatment, including a presumption of prudence, to filings from transmission owners seeking cost recovery for transmission projects without regard to whether such projects have been subject to a serious vetting in any proceeding in which both need and prudence of cost must be demonstrated by the transmission developer. We have expressed concerns about this lack of oversight previously, and this filing by SPP illustrates exactly why that is a major problem pertinent to the issue of rising consumer costs for transmission.”), <https://www.ferc.gov/news-events/news/commissioner-clements-and-commissioner-christies-joint-concurrence-spp-project>; Transmission Planning and Cost Management, Technical Conference, Docket No. AD22–8–000, Tr. 16:4–20:11 (Comm'r Mark Christie) (Oct. 6, 2022).

process of evaluation, *not mandating outcomes* in specific cases. And it makes clear that if the transmission provider performs the *evaluation* as required in the final rule, it has complied with the final rule.

11. This agnosticism as to outcomes in specific cases is critically important. Transmission providers must require the appropriate network upgrade necessary to fix the reliability issue caused by the interconnection request. If a GET is used instead, and it fails to fix the reliability issue caused by the interconnection, a later network upgrade will be required, one potentially more costly than the network upgrade originally required. And who will pay those costs? Certainly in RTOs/ISOs using participant funding, *load (retail consumers) should not*. Sticking those costs on consumers would raise a serious question of unjust and unreasonable rates.

12. In summary though, I believe that this final rule strikes the appropriate balance between requiring the evaluation of GETs, but not mandating the use of a GET in specific cases unless the transmission provider—and only the transmission provider—determines it would work from a real-world applicability standpoint. In all cases, the transmission provider should apply its engineering expertise to come to the right determination as to the necessary network upgrades. This final rule requires nothing less.

II. Repayment of Affected Systems Network Upgrade Costs (Section III.B.2.c.iii(c))

13. The final rule essentially codifies existing precedent as to the repayment of affected systems network upgrade costs when a generation developer interconnects at or near a seam between an RTO (which uses participant funding to pay for interconnection costs) and a non-RTO, vertically integrated load-serving utility that uses a crediting mechanism.

14. Three recent cases involving Duke Energy Progress, LLC (Duke) in North Carolina⁵ illustrate my concern about the Commission's repayment policy.⁶ In these

⁵ *Duke Energy Progress, LLC*, 181 FERC ¶ 61,229 (2022), *reh'g deemed denied*, 182 FERC ¶ 62,088 (2023); *Duke Energy Progress, LLC*, 180 FERC ¶ 61,005, *order on reh'g*, 181 FERC ¶ 61,197 (2022) (Edgecombe Rehearing Order); *Duke Energy Progress, LLC*, 177 FERC ¶ 61,001 (2021), *order on reh'g*, 179 FERC ¶ 61,007 (2022) (American Beech Rehearing Order). My concurrences to the Edgecombe Rehearing Order and American Beech Rehearing Order set forth my concerns as well. *See* Edgecombe Rehearing Order, 181 FERC ¶ 61,197 (Christie, Comm'r, concurring) (Edgecombe Concurrence), <https://www.ferc.gov/news-events/news/commissioner-christies-concurrence-concerning-rehearing-duke-energy-progress>; American Beech Rehearing Order, 179 FERC ¶ 61,007 (Christie, Comm'r, concurring).

⁶ *See Standardization of Generator Interconnection Agreements & Procs.*, Order No. 2003, 68 FR 49846 (Aug. 19, 2003), 104 FERC ¶ 61,103, at PP 693–696, 720–739 (2003), *order on reh'g*, Order No. 2003–A, 69 FR 15932, 106 FERC ¶ 61,220, at PP 584–586, *order on reh'g*, Order No. 2003–B, 70 FR 265 (Jan. 19, 2005), 109 FERC ¶ 61,287 (2004), *order on reh'g*, Order No. 2003–C, 70 FR 37661 (July 18, 2005), 111 FERC ¶ 61,401 (2005), *aff'd sub nom. Nat'l Ass'n of Regul. Util. Comm'rs v. FERC*, 475 F.3d 1277 (D.C. Cir. 2007).

cases, generation developers located within the PJM footprint, which extends into a corner of northeastern North Carolina due to Dominion Energy, Inc.'s PJM membership, chose to interconnect very close to the seam with Duke's North Carolina territory. Duke is a vertically integrated utility regulated by the North Carolina Utilities Commission (NCUC) on an Integrated Resource Plan (IRP) model. Duke builds transmission (and generation) subject to an IRP approved by the NCUC, and the costs of network upgrades caused by that new generation are paid by retail consumers. Since the NCUC approves new generation through its IRP process, which includes the costs to interconnect that new generation, the NCUC decides the generation and interconnection costs that are appropriately paid for by retail consumers.

15. In these three cases, however, Duke was considered an “affected system” for the interconnection costs caused by the generation developers located just across the seam in PJM's footprint. So the affected systems network upgrades were not paid by the developer (creating an incentive to locate close to the seam), but by Duke's retail consumers through crediting pursuant to Commission policy. And unlike the costs of transmission and network upgrades built with the prior approval of the NCUC, no state-approved IRP controls the construction of generation in the PJM footprint in North Carolina. Not surprisingly, the NCUC and the NCUC Public Staff, which represents consumers in North Carolina, filed vigorous—and in my opinion, persuasive—comments in several proceedings on these issues.⁷

I note that this policy applies not just to affected systems network upgrades but also network upgrades on the host transmission provider's system.

⁷ *See* NCUC and NCUC Public Staff Initial Comments at 6; NCUC and NCUC Public Staff, Joint Comments, Docket No. RM21–17–000, at 12 (filed Aug. 17, 2022); NCUC Public Staff, Comments, Docket No. RM21–17–000, at 13–15 (filed Oct. 12, 2021); NCUC Public Staff Reply Comments, Docket No. RM21–17–000, at 6 (filed Nov. 30, 2021) (“[U]nder the crediting policy, ratepayers are left paying the bill regardless of the benefits, or lack thereof, they received from the network upgrades. Further, the [NCUC] Public Staff believes that [interconnection customers] are beginning to ‘game’ the system by placing large merchant plants into the interconnection queue in congested areas to take advantage of the crediting policy and fill what excess capacity is then created with state jurisdictional projects that would normally have to fund the upgrades themselves.”); *see also* NCUC Public Staff, Motion to Intervene Out-of-Time and Comment, Docket No. ER21–1955–003, at 1–9 (filed Nov. 9, 2021) (generally arguing, *inter alia*, that Duke customers will not or will only minimally benefit from upgrading its system to accommodate power being interconnected and delivering to PJM; that Duke ratepayers are subsidizing costs that should be paid for by the developer, the party that is both causing the costs to be incurred and reaping the resulting benefits; that given the proliferation of merchant generation trying to locate in this area of North Carolina, the NCUC Public Staff is concerned that Duke ratepayers will be burdened with potentially hundreds of millions of dollars in affected systems network upgrade cost as a result of the Commission's actions; and that the project in American Beech had not yet received a CPCN from North Carolina so any decision put the “cart before the horse.”).

16. While I recognize that the results in these cases were consistent with prior precedent and Order No. 2003,⁸ I think that precedent and, if necessary, Order No. 2003 itself, should be revisited as to the affected systems repayment policy. I concur to the issuance of this final rule because this final rule is not the appropriate place to revisit the issue and because the final rule by its own terms does not go beyond existing precedent.

III. Inappropriate Allocation of Certain Costs to Consumers

17. As described below, while I support the final rule, I am concerned that study delay penalties on RTOs/ISOs and the costs of transmission provider heatmaps used as a tool for interconnection customers will be inappropriately allocated to consumers even though they both appear to provide much more of a benefit to generation developers than consumers. I address each in turn.

A. Study Delay Penalties on RTOs/ISOs (Section III.B.1.c.x)

18. The final rule adopts the NOPR proposal to eliminate the reasonable efforts standard from the *pro forma* LGIP, and it adds a new section to the *pro forma* LGIP that imposes penalties on transmission providers who miss study deadlines. I have no qualms about assessing penalties on non-RTO/ISO transmission providers and transmission-owning members of RTOs/ISOs. These are generally investor-owned companies and stockholders will bear such costs. On the other hand, I have concerns about assessing study penalties on RTOs/ISOs, as they are not-for-profit entities who do not have stockholders. In my concurrence to the NOPR, I explained:

[T]he penalty provisions do not answer definitively the most important question of all: Who will pay these penalties in an RTO or ISO which has no stockholders? Consumers certainly should not pay, directly or indirectly.⁹

The final rule does not fully address this question and does not provide complete assurance that consumers will be protected.

19. However, the final rule does have some protections in place to protect against consumers ultimately having to pay for study delay penalties. First, the final rule modifies the NOPR proposal to prohibit non-RTO/ISO transmission providers and transmission-owning members of RTOs/ISOs from recovering study delay penalty amounts through transmission rates.¹⁰ Second, the final rule modifies the NOPR proposal to

adopt a new provision in our regulations specifying that, for RTOs/ISOs in which the transmission-owning members perform certain interconnection studies, the study delay penalties will automatically be imposed directly on the transmission-owning member(s) that conducted the late study.

20. But these provisions still leave open the question of how RTOs/ISOs will recover those study delay penalties that are not automatically imposed on a transmission-owning member. The final rule essentially punts on this question, explaining that RTOs/ISOs may submit an FPA section 205 filing to propose a default structure for recovering study delay penalties and/or make individual FPA section 205 filings to recover the costs of any specific study delay penalties. I urge that any such RTO/ISO filing make protections to consumers paramount.

B. Cost of Heatmap (Section III.A.1.c.iii)

21. This final rule requires transmission providers to publicly post a “heatmap” with certain information after the completion of each cluster study and cluster restudy period. The final rule finds that the heatmap will benefit *interconnection customers*, including prospective interconnection customers, by providing them further transparency as to expected congestion and potential network upgrades and therefore will reduce the number of speculative interconnection requests. I agree that a requirement to post a heatmap will greatly benefit interconnection customers and support the requirement’s addition to the *pro forma* LGIP.

22. Where I am concerned, however, is how the heatmap should be funded. The final rule clarifies that transmission providers, *not* interconnection customers, are responsible for paying the costs associated with the heatmap requirement. Further, the final rule contemplates transmission providers recovering the costs of the heatmap from transmission customers and *ex ante* determines that such rate treatment is appropriate because interconnection queue efficiency benefits transmission customers. Commission policy may dictate that interconnection queue efficiency benefits transmission customers;¹¹ however, that should not result in the costs of a requirement that best benefits interconnection customers, and really *prospective* interconnection customers that may ultimately not seek to interconnect, being recovered from *consumers* through transmission rates *carte blanche*. The Commission simply cannot ask retail consumers to foot the bill for every single “efficiency,” especially where many of these “efficiencies” largely benefit generation developers and then get folded into transmission rates and receive an ROE.¹²

23. I believe this issue merits further scrutiny, and I look forward to future comments on this issue.

IV. “Hold Harmless” Provisions (Sections I, III.A.6.c.iii, IV.C)

24. In my concurrence to the NOPR, I wrote that while I supported the proposed queue reforms (subject, of course, to comment):

I also caution strongly that we should avoid undermining through this NOPR what the RTOs/ISOs, working through their stakeholder processes, are already doing to fix their own queue problems. We should recognize that each RTO/ISO is different and faces unique local challenges and needs. The queue reforms proposed in today’s NOPR should be seen more as guideposts or general standards rather than unyielding mandates that refuse to take local solutions into consideration. *I would allow RTOs/ISOs the opportunity to demonstrate that if their own efforts to enact queue reforms achieve the same goals in a different, but equally effective manner, their individual reform may be acceptable in complying with any final rule.* While this NOPR currently recognizes the potential for regional flexibility, I hope the need for such flexibility is explicitly memorialized in any final rule.¹³

25. This final rule contains language that is intended to recognize the earnest and good-faith efforts undertaken by the RTOs to enact queue reforms. Some RTOs, such as PJM, have already launched extensive queue reforms; others, such as CAISO, are hard at work on developing queue reforms.

26. I concur because this final rule does contain language that is at least intended to recognize the efforts of RTOs to act on their own queue reforms without waiting on a Commission rulemaking. Whether the language of this final rule adequately recognizes or “holds harmless” those efforts will be an issue for compliance filings.

For these reasons, I concur.

Mark C. Christie,
Commissioner.

Medicare and Medicaid Programs; Minimum Staffing Standards for Long-Term Care Facilities and Medicaid Institutional Payment Transparency Reporting

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This proposed rule would establish minimum staffing standards for long-term care facilities, as part of the Biden-Harris Administration's Nursing Home Reform initiative to ensure safe and quality care in long-term care facilities. In addition, this rule proposes to require States to report the percent of Medicaid payments for certain Medicaid-covered institutional services that are spent on compensation for direct care workers and support staff.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, by November 6, 2023.

ADDRESSES: In commenting, please refer to file code CMS-3442-P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the "Submit a comment" instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-3442-P, P.O. Box 8016, Baltimore, MD 21244-8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-3442-P, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: The Clinical Standard Group's Long Term Care Team at HealthandSafetyInquiries@cms.hhs.gov for information related to the minimum staffing standards.

Anne Blackfield, (410) 786-8518, for information related to Medicaid institutional payment transparency reporting.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that website to view public comments. CMS will not post on [Regulations.gov](http://www.Regulations.gov) public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

I. Executive Summary

A. Purpose

This proposed rule would establish minimum staffing standards to address ongoing safety and quality concerns for the 1.4 million¹ residents receiving care in Medicare and Medicaid certified Long-Term Care (LTC) facilities. On February 28, 2022, President Biden

announced that CMS would propose minimum staffing standards that nursing homes must meet, based in part on evidence from a new research study that will focus on the level and type of staffing needed to ensure safe and quality care.² In addition, on April 18, 2023, President Biden issued "Executive Order on Increasing Access to High-Quality Care and Supporting Caregivers",³ which directs the Secretary of HHS to consider actions to encourage LTC facilities to reduce nursing staff turnover that is associated with improving safety and quality of care.^{4,5}

These safety and quality concerns stem, at least in part, from chronic understaffing in LTC facilities, and are particularly associated with insufficient numbers of registered nurses (RNs) and nurse aides (NAs), as evidenced from, *inter alia*, a review of data collected since 2016 and lessons learned during the COVID-19 Public Health Emergency (PHE). Numerous studies, including our new research study as well as existing literature, have shown that staffing levels are closely correlated with the quality of care that LTC facility residents receive, and with improved health outcomes. The minimum staffing standards would also provide staff in LTC facilities the support they need to safely care for residents, help prevent staff—burnout, thereby reducing staff turnover, which can lead to improved safety and quality for residents and staff. This proposed rule would also promote public transparency related to the percent of Medicaid payments for certain institutional services that are spent on compensation to direct care workers and support staff.

B. Summary of Major Provisions

We are proposing to update the Federal participation "Requirements for Medicare and Medicaid Long Term Care Facilities" minimum staffing standards ("LTC requirements"). The updates to

the LTC requirements proposed in this rule would be used to survey facilities for compliance and enforced as part of CMS's existing survey, certification, and enforcement process for LTC facilities. In addition, consistent with the President's strategic plan, we also intend to display our determinations of facility compliance with the minimum staffing standards on Care Compare. We welcome comments on the most appropriate approach for doing so.

We are proposing to establish Federal minimum nurse staffing standards for a number of reasons, including the growing body of evidence demonstrating the importance of staffing to resident health and safety, continued insufficient staffing, non-compliance by a subset of facilities, the need to reduce variability in the minimum floor for nurse-to-resident ratios across States by creating a consistent floor, and, most importantly, to reduce the risk of residents receiving unsafe and low-quality care.

The proposed regulatory updates are based on evidence we collected using a multifaceted approach, which included conducting a new nursing home staffing study, gathering feedback during listening sessions, considering more than 3,000 comments received from the Fiscal Year 2023 Skilled Nursing Facility Prospective Payment System proposed rule (FY2023 SNF PPS) request for information (RFI), assessing Payroll-Based Journal (PBJ) System data on nursing home staffing, and reviewing the existing literature.

Specifically, we propose to revise § 483.35(b) to require an RN to be on site 24 hours per day and 7 days per week to provide skilled nursing care to all residents in accordance with resident care plans. We also propose individual minimum staffing type standards, based on case-mix adjusted data for RNs and NAs, to supplement the existing "Nursing Services" requirements at 42 CFR 483.35(a)(1)(i) and (ii) to specify that facilities must provide, at a minimum, 0.55 RN hours per resident day (HPRD) and 2.45 NA HPRD. We note that while the 0.55 and 2.45 HPRD standards were developed using case-mix adjusted data sources, the standards themselves will be implemented and enforced independent of a facility's case-mix. In other words, facilities must meet the 0.55 RN and 2.45 NA HPRD standards, at a minimum, regardless of the individual facility's patient case-mix. RN and NA staffing can never be lower than these proposed minimum standards, and if the acuity needs of residents in a facility require a higher level of care, a higher RN and NA staffing level will also be required. CMS

is also seeking comments on whether in addition to the 0.55 RN and 2.45 NA HPRD standards, a minimum total nurse staffing standard, discussed later in the rule, should also be required. For compliance, hours per resident day (HPRD) is defined as staffing hours per resident per day which is the total number of hours worked by each type of staff divided by the total number of residents as calculated by the CMS. As further described below, the proposed minimum staffing standard is supported by literature evidence, analysis of staffing data and health outcomes, discussions with residents, staff, and industry⁶ and other factors.

We note that each of the minimum staffing requirements independently supports resident health and safety. Therefore, compliance with the 24/7 RN requirement does not imply compliance with the minimum 0.55 RN HPRD and 2.45 NA HPRD requirements or vice versa. Specifically, as discussed elsewhere in this rule, the presence of an RN in a LTC facility on a 24-hour basis improves overall quality of care. Similarly, but separately, a minimum number of RN and NA hours per resident per day improve overall quality of care. Both independently and collaboratively, these requirements would support compliance with statutory mandates to provide services to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident, in accordance with a written plan of care.

As noted elsewhere, this proposal is informed by multiple sources of information, including the 2022 Nursing Home Staffing Study, more than 3,000 public comment submissions, academic and other literature, PBJ System data, and detailed listening sessions with residents and their families, workers, health care providers, and advocacy groups. We recognize that some of the materials we have relied upon offer support for a higher minimum HPRD standard. For several reasons discussed later in this proposed rule, including the importance of setting achievable staffing targets as the long-term care sector recovers from the effects of the COVID-19 pandemic and the desire to preserve resident access to care as the sector expands hiring to meet staffing standards, we are proposing a set of policies that balance the urgent need to improve resident safety and quality of care alongside these practical

considerations. The policies include minimum HPRD standards for direct care by nursing staff, required access to an RN 24 hours per day 7 days per week, and enhanced facility staffing assessments.

For example, the 2022 Nursing Home Staffing Study found that a total nurse staffing level of 3.67 or 3.88 HPRD was linked with additional facilities improving quality and safety relative to current low performers, and that total nurse staffing levels between 3.8 HPRD and 4.6 HPRD (including 1.4 licensed nurse HPRD) were linked with reductions in the amount of delayed or omitted clinical care. Our proposal squares these associations between higher HPRD nurse staffing levels and better care outcomes with the goal of establishing implementable minimum standards that can substantially improve quality and safety at all LTC facilities in the near-term. We also considered variation and contradiction between different information sources, including the 2022 Nursing Home Staffing Study, namely regarding the benefits of a staffing standard inclusive of or specific to LPN/LVNs. We further considered the benefits of a requirement for 24/7 on-site RN staffing and strengthened facility staffing assessments, which under this proposed rule apply independently of the HPRD requirements.

The resulting, evidence-based proposal appropriately prioritizes quality and safety of care gains from establishing minimum standards for RNs and NAs, with a particular emphasis on the direct care delivered at the bedside by NAs, and effective implementation of these new requirements. As noted elsewhere, if finalized, these new required floors would increase staffing in more than 75 percent of nursing facilities nationwide, and the proposed NA and RN HPRD requirements exceed those of nearly all States. We remain committed to continued examination of staffing thresholds, including careful work to review quality and safety data resulting from initial implementation of finalized policies, and robust public engagement. Should subsequent data indicate that additional increases to staffing minimums would be warranted and feasible, we anticipate that we will revisit the minimum staffing standards to shift them toward the higher ranges supported by the evidence, such as those described above, with continued consideration of all relevant factors.

We also propose to revise the existing Facility Assessment requirements at § 483.70(e) by moving the provisions to a standalone section and modifying the

⁶ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

requirements to ensure that facilities have an efficient process for consistently assessing and documenting the necessary resources and staff that the facility requires to provide ongoing care for its population that is based on the specific needs of its residents.

We are proposing to stagger the implementation dates of these requirements sufficiently to allow facilities the time needed to prepare and be in compliance with the new requirements. Specifically, we propose that the RN on site, 24 hours per day, for 7 days a week would take effect 2 years after publication of the final rule; and we propose that the individual minimum standards of 0.55 HPRD for RNs and 2.45 HPRD for NAs would take effect 3 years after publication of the final rule. Under the proposal facilities in rural areas would be required to meet the proposed RN on site 24 hours per day, for 7 days a week, 3 years after publication of the final rule; and the proposed minimum standards of 0.55 HPRD for RNs and 2.45 HPRD for NAs would take effect 5 years after publication of the final rule.

Exemption from the proposed minimum standards of 0.55 HPRD for

RNs and 2.45 HPRD for NAs would be available only in limited circumstances, where all four of the following criteria are met. The four exemption criteria are: (1) where workforce is unavailable, or the facility is at least 20 miles from another long-term care facility, as determined by CMS; (2) the facility is making a good faith effort to hire and retain staff; (3) the facility provides documentation of its financial commitment to staffing; and (4) the facility has not failed to submit PBJ data in accordance with re-designated 483.70(p), is not a Special Focus Facility (SFF); has not been cited for widespread insufficient staffing with resultant resident actual harm or a pattern of insufficient staffing with resultant resident actual harm, as determined by CMS; and has not been cited at the “immediate jeopardy” level of severity with respect to insufficient staffing within the 12 months preceding the survey during which the facility’s non-compliance is identified.

If finalized, enforcement actions, also called remedies, would be taken against LTC facilities that are not in compliance with these Federal participation requirements. The remedies CMS may

impose include, but are not be limited to, the termination of the provider agreement, denial of payment for all Medicare and/or Medicaid individuals by CMS, and/or civil money penalties.

We are also proposing new regulations at 42 CFR 442.43 (with a cross-reference at 42 CFR 438.82) that would require that State Medicaid agencies report on the percent of payments for Medicaid-covered services in nursing facilities and intermediate care facilities for individuals with intellectual disabilities (ICF/IIDs) that are spent on compensation for direct care workers and support staff. This proposal is designed to inform efforts to address the link between sufficient payments being received by the institutional direct care and support staff workforce and access to and, ultimately, the quality of services received by Medicaid beneficiaries. Taken together, we believe that these proposals will improve safety and quality of care for residents in Medicare and Medicaid certified LTC facilities and Medicaid certified ICF/IIDs.

C. Summary of Cost and Benefits

TABLE 1—COST AND BENEFITS

Provision description	Total transfers/costs
Comprehensive Staffing Requirement for LTC Facilities	Without accounting for any exemptions, we estimate that the overall economic impact for the proposed minimum staffing requirements for LTC facilities (that is, collection of information costs and compliance with the 24/7 RN, facility assessment, and minimum 0.55 RN and 2.45 NA HPRD requirements), which includes staggered implementation of the requirements, would result in an estimated cost of approximately for \$32 million in year 1; \$246 million in year 2; \$4 billion in year 3; with costs increasing to \$5.7 billion by year 10. We estimate the total cost over 10 years will be \$40.6 billion, which was derived from <i>FY 2021 Part V</i> of the Medicare Cost Report. LTC facilities would be expected to bear the burden of these costs, unless payors increase rates to cover cost. Quantified benefits include but are not limited to, increased community discharges, reduced hospitalizations, and emergency department visits, with a minimum estimated savings of gross costs of \$318 million per year for Medicare starting in year 3. Various categories of other important but hard to quantify benefits include reduced staff burnout and turnover, and increased safety and quality of care for LTC residents. Lack of quantification is also noteworthy as regards key categories of costs.
Medicaid Institutional Payment Transparency Reporting	The overall economic impact for the proposed reporting requirement is a one time cost of \$38 million and ongoing annual costs of \$18 million per year.

II. Minimum Staffing Standards for Long-Term Care Facilities

A. Background

1. Statutory Authority and Regulatory Requirements for Direct Care Nurse Staffing in Long-Term-Care (LTC) Facilities

Sections 1819 and 1919 of the Social Security Act (the Act) set out regulatory

requirements for Medicare and Medicaid long-term care facilities, respectively. Specific statutory language at sections 1819(d)(4)(B) and 1919(d)(4)(B) of the Act permit the Secretary of the Department of Health and Human Services (the Secretary) to establish any additional requirements relating to the health, safety, and well-

being⁷ of residents in skilled nursing facilities (SNF) and nursing facilities (NF), as the Secretary finds necessary. This provision and other statutory authorities set out in section 1819 and

⁷ Section 1819(d)(4)(B) of the Act contains the word “well-being”, which does not appear in section 1919(d)(4)(B). We do not interpret the presence of this word as requiring separate regulatory treatment of Medicare and Medicaid long term care facilities.

1919 of the Act provide CMS with the authority to issue a regulation revising the existing requirements and to mandate a staffing minimum for nursing care. Under sections 1866 and 1902 of the Act, providers of services in Long Term Care (LTC) facilities seeking to participate in the Medicare or Medicaid program, or both, must enter into an agreement with the Secretary or the State Medicaid agency, respectively. LTC facilities seeking to be Medicare or Medicaid providers of services must be certified as meeting Federal participation requirements. These Federal participation requirements are the basis for survey activities in LTC facilities for ensuring residents' minimum health and safety requirements are met and maintained, to receive payment and remain in the Medicare or Medicaid program or both. LTC facilities include SNFs for Medicare and NFs for Medicaid. The Federal participation requirements for SNFs, NFs, or dually certified facilities, are codified in the implementing regulations at 42 CFR part 483, subpart B. In addition to those provisions, sections 1819(b)(1)(A) and 1919(b)(1)(A) of the Act require that a SNF or NF must care for its residents in such a manner and in such an environment as will promote maintenance or enhancement of the safety and quality of life of each resident. Section 1819(b)(4)(C)(i) of the Act requires that a SNF must provide 24-hour licensed nursing services, sufficient to meet the nursing needs of its residents, and must use the services of a registered professional nurse at least 8 consecutive hours a day. These provisions are largely paralleled at section 1919(b)(4)(C)(i) of the Act for NFs. Sections 1819(f)(1) and 1919(f)(1) of the Act require that the Secretary assure that requirements which govern the provision of care in skilled nursing facilities under this title, and the enforcement of such requirements, are adequate to protect the health, safety, welfare, and rights of residents and to promote the effective and efficient use of public moneys.

In addition, sections 1819(b)(2) and 1919(b)(2) of the Act require that a SNF or NF provide services to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident, in accordance with a written plan of care. The plan of care must describe the medical, nursing, and psychosocial needs of the resident and how the needs will be met. The plan of care is developed with the resident or resident's family or legal representative, and by a team which includes the

resident's attending physician and an RN with responsibility for the resident. The plan of care should be periodically reviewed and revised by the team after required assessments. Sections 1819(b)(3) and 1919(b)(3) of the Act require that a SNF or NF conduct a comprehensive, accurate, standardized, reproducible assessment of each resident's functional capacity. Assessments are required to be conducted or coordinated by a registered nurse at specified frequencies.

The participation requirements for LTC facilities (Federal requirements) are set forth at §§ 483.1 through 483.95. In general, the health and safety standards for LTC facilities address facility administration, resident rights, care planning, quality assessment, performance improvement, services provided, emergency preparedness, as well as staffing requirements. Federal requirements state that LTC facilities must use the services of a registered nurse (RN) for at least 8 consecutive hours a day, 7 days a week (§ 483.35(b)(1)), and must provide the services of "sufficient numbers" of licensed nurses and other nursing personnel, which includes but is not limited to nurse aides (NAs), 24 hours a day to provide nursing care to all residents in accordance with the resident care plans (§ 483.35(a)(1)). The LTC facility must also designate an RN to serve as the director of nursing (DON) on a full-time basis (§ 483.35(b)(2)).

While these Federal requirements do specify a specific number of hours that these licensed nurses and other nursing personnel must be available, there is no requirement that those hours be specifically dedicated to direct resident care. With respect to staffing requirements specific to individual residents, such as RN staffing levels per resident, Federal regulations currently require that facilities provide staff sufficient to "assure resident safety and attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident". Facilities should determine whether this is met through "resident assessments and individual plans of care and considering the number, acuity, and diagnoses or the facility's resident population" (§§ 483.35 and 483.70(e)).

2. The Need for a Minimum Nurse Staffing Requirement in LTC Facilities

On October 4, 2016, we issued a final rule titled, "Medicare and Medicaid Programs; Reform of Requirements for Long-Term Care Facilities" (81 FR 68688). This final rule significantly

revised the list of requirements that LTC facilities must meet to participate in the Medicare and Medicaid programs. Prior to the final rule, LTC facilities' requirements had not been comprehensively reviewed and updated since 1991 (56 FR 48826, September 26, 1991), despite substantial changes in service delivery in this setting. The final rule included revisions that reflect advances in the theory and practice of LTC service delivery and safety. The various revisions sought to achieve broad-based improvements in the quality of care provided in LTC facilities and in resident safety. As part of this 2016 final rule, we revised LTC facilities requirements to include competency requirements for determining the sufficiency of nursing staff, based on a facility assessment requirement that LTC facilities must conduct to determine what resources are needed to competently care for their residents during both day-to-day operations and emergencies. In the 2015 proposed rule, we included a robust discussion regarding the long-standing interest in increasing the required hours of nurse staffing per day and the various literature surrounding the issue of minimum nurse staffing standards in LTC facilities (see 80 FR 42199). In the 2016 final rule, we also included a discussion of the feedback received regarding our competency-based staffing approach (see 81 FR 68688). At the time, we highlighted the importance of establishing national staffing standards to promote safe, high-quality care for residents in LTC facilities and our desire to further explore potential options, however we noted that we needed additional evidence before pursuing potential requirements. We acknowledged that additional literature evidence along with data from sources such as Payroll Based Journal (PBJ) System would be helpful in determining if and what staffing levels should be established as minimum staffing standards to improve safety and the quality of care.⁸ Additionally, the availability of PBJ System data is essential to adequately enforcing oversight of minimum staffing standards. Since issuing the 2016 final rule and establishing a competency-based approach to staffing in the list of LTC requirements, we have collected several years of mandated PBJ System data and new evidence from the literature.

⁸ <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/NursingHomeQuality/Initiatives/Staffing-Data-Submission-PBJ>.

Additionally, as a part of the FY 2023 Skilled Nursing Facility Prospective Payment System Proposed Rule Request for Information (FY 2023 SNF PPS RFI) discussed later in this proposed rule, commenters provided examples of ongoing quality and safety concerns within understaffed LTC facilities. These included, but are not limited to, residents going entire shifts without receiving toileting or days without bathing assistance, increases in falls, residents not receiving basic feeding or changing services, and even abuse in cases where no one was watching. The 2022 Nursing Home Staffing Study (also discussed later in this proposed rule) corroborated these comments and identified that basic care tasks, such as bathing, toileting, and mobility assistance, are often delayed when LTC facilities are understaffed. Interviews with various nurse staff highlighted ongoing concerns that care is often rushed, including for high-acuity residents, which can often lead to errors or safety issues.

The COVID-19 Public Health Emergency (PHE) highlighted and exacerbated the long-standing concerns with inadequate staffing in LTC facilities. However, the COVID-19 PHE also yielded evidence that appropriate staffing made a difference as a part of the overall response to the COVID-19 PHE in LTC facilities. The Centers for Disease Control and Prevention (CDC) noted that nursing home residents were at high risk for infection, serious illness, and death from the COVID-19 infection and Medicare beneficiaries were disproportionately impacted by the COVID-19 infection, with 76 percent of COVID-19 related deaths attributed to the people aged 65 years and older by the end of 2021.⁹ One study looking at 4,254 LTC facilities across eight States found that there were fewer COVID-19 cases in LTC facilities with four or five stars for nurse staffing in the Five Star Quality Rating System than in counterpart facilities with one to three stars for staffing.¹⁰ These findings suggest that LTC facilities with low nurse staffing levels may have been more susceptible to the spread of the COVID-19 infection. Findings from a recent 2020 study involving all 215 nursing homes in Connecticut revealed that a 20-minute increase in RN time spent providing direct care to residents was associated with 22 percent fewer

confirmed cases of COVID-19 and 26 percent fewer COVID-19 related deaths.¹¹ These findings suggest that there is a positive relationship between the hours of direct care that RNs provide and infection transmission in LTC facilities.

Workforce challenges have contributed to understaffing and nurse burnout. The lack of adequate staffing impedes staff members' ability to devote adequate time and attention to each resident. One study looked at the impact of nurse burnout on organization and position turnover. Findings indicated that 54 percent of the nurses sampled suffered from moderate burnout and the impact of burnout on organizational turnover was significant.¹² While workforce challenges have existed for years, and have many contributing factors, interested parties have reported that the COVID-19 PHE exacerbated the problem as many long-term care facilities experienced high worker turnover. Potential factors contributing to this turnover include higher rates of worker reported-stress; an inability of some workers to return to their positions held prior to the pandemic (for instance, due to difficulty accessing child care or concerns about contracting the COVID-19 infection for people with higher risk of severe illness); high rates of mortality among long-term-care workers; and lower pay and job quality in long-term care settings relative to others, such as more competitive wage increases in retail and other industry jobs that tend to draw from the same pool of workers.^{13 14 15} Although the COVID-19 PHE has officially ended, the long-term care nursing workforce has

been slower to recover than the nursing workforce in other healthcare settings, although it has steadily increased over the past year and a half.^{16 17} Demand for direct care workers is also expected to continue rising due to the growing needs of the aging population.^{18 19}

The studies discussed in this section, corroborated by public comment submissions, input provided through listening sessions, and the 2022 Nursing Home Staffing Study, demonstrate the consequences of understaffing on resident health and safety. Yet, ongoing insufficient staffing as well as the widespread variability in existing minimum staffing standards across the United States (for example, 38 States and the District of Columbia have minimum nursing staffing standards; however, there are significant variations in their requirements) highlights the need for national minimum staffing standards for direct care in LTC facilities.

Chronic understaffing continues in LTC facilities, and evidence demonstrates the benefits of increased nurse staffing in these facilities. For example, a report by the Office of the Inspector General (OIG) highlighted that in 2018, roughly 7 percent of nursing homes failed to provide 8 hours per day of RN staffing on at least 30 total days during the year.²⁰ Some studies have demonstrated that increased staffing levels were specifically beneficial to vulnerable subpopulations in nursing homes, such as residents with dementia or Alzheimer's disease. One cross sectional study of long-stay residents with Alzheimer's disease and related dementias found that residents in

nursing homes that had higher licensed nurse staffing levels had better end-of-life care and were less likely to experience potentially avoidable hospitalizations.²¹ Yet, the literature evidence suggests that staffing levels within facilities across the United States vary considerably, with less staffed facilities more likely to be for-profit, larger, rural, and have a higher share of Medicaid residents.

Finally, multiple studies have shown that nursing home quality is generally lower in LTC facilities that serve high proportions of minority residents.^{22 23 24} Facilities that have a higher proportion of minority residents tend to have limited clinical and financial resources, low nurse staffing levels, and a high number of care deficiency citations.^{25 26} Furthermore, disparities in safety and quality care exist between LTC facilities with a high number of Medicaid residents and LTC facilities that have a high number of Medicare residents.²⁷ These disparities can contribute to differences in quality across facilities' sites.²⁸

As such, we believe that national minimum staffing standards in LTC facilities and the adoption of a 24/7 RN and enhanced facility assessment requirements (as discussed later in this proposed rule), will help to advance equitable, safe, and quality care for all residents. Specifically, we propose individual minimum nurse staffing standards of 0.55 hours per resident day (HPRD) for RNs and 2.45 HPRD for NAs, that were developed using case-mix adjusted data sources. There were several considerations that helped us arrive at these proposed standards (discussed in detail later in this proposed rule). First, the evidence and findings from the 2022 Nursing Home Staffing Study demonstrated that there

was a statistically significant difference in safety and quality care at 0.45 HPRD for RNs and higher including 0.55 HPRD; there was a statistically significant difference in safety and quality care at 2.45 HPRD and higher for NAs. Second, we evaluated existing State requirements and note that the proposed RN requirement of 0.55 HPRD is higher than every State and only lower than the District of Columbia (DC) based on September 2022 data. Third, we aimed to strike an appropriate balance between cost and benefit that would yield the strongest improvements in quality and safety for residents. We are not proposing minimum staffing standards based on HPRD for licensed nurses, that is, RNs plus LPN/LVNs, nor for total nurse staffing, that is, RNs, LPN/LVNs, and NAs because of evidence in the literature described below.

This proposed policy is based on statistical evidence from clinical settings which suggests that more positive clinical outcomes are associated with increasing the number of RNs and NAs. We are not setting a minimum staffing standard for LPN/LVNs. In addition, as noted in the next section, it has been reported in the literature that LPN/LVNs may find themselves practicing outside their scope of practice when there is not sufficient RN staffing in a facility to provide supervision. This is concerning because LPN/LVNs require an RN or a physician's supervision to practice. Furthermore, total licensed nurse staffing standards may ensure adequate levels of licensed nurse staffing and allow nursing homes the flexibility to substitute nurse type for example LPN/LVNs for RNs, or NAs for LPN/LVNs, but may result in compromising the safety and quality of care. Multiple studies have found no evidence of a consistent relationship of quality and safety with LPN staffing.²⁹ First, literature evidence suggests that there is a negative correlation between LPN and RN staffing, indicating that nursing homes with higher LPN staffing levels tend to have lower RN staffing levels.³⁰ Second, the 2022 Nursing Home Staffing Study did not demonstrate an

association between LPN/LVNs' HPRD, at any level, and safe and quality care.³¹

Many studies indicate that consistent, adequate nurse staffing is correlated with resident health and safety, but we seek additional information to make fully informed policy decisions. We welcome input from interested parties on the considerations and proposals discussed in this rule, and other comments that may be relevant. We encourage commenters to submit evidence and data to support any recommendations to the extent possible. We continue to seek additional information that supports our efforts for improving the safety and quality of care for residents within LTC facilities, including feedback on how to improve care transitions and discharge planning, such as information about and assistance with programs that assist with community placements.

We are soliciting comments and recommendations in this area and have also included specific information requests that are embedded throughout this rule regarding certain proposals. We seek this information in anticipation that additional comments and recommendations will assist us in ensuring that we finalize appropriate minimum staffing standards to ensure the health and safety of residents and provide staff the support they need to care for residents while also considering the limited resources including the local supply of RNs and NAs, that may exist as the long-term care sector recovers from the COVID-19 PHE and an increased demand due to a growing older population.

3. CMS Actions and Key Considerations To Inform Mandatory Minimum Staffing Standards

In February 2022, President Biden announced a comprehensive set of reforms aimed at improving the safety and quality of care within the nation's nursing homes. One key initiative within the Biden-Harris Administration's strategy is to establish a minimum nursing home staffing requirement for LTC facilities participating in Medicare and Medicaid.³² Establishing minimum staffing standards improves the likelihood that all nursing home residents are provided safe, high-quality

care, and that workers have the support they need to provide high-quality care.

To help inform our efforts in establishing consistent and broadly applicable national minimum staffing standards, we launched a multi-faceted approach aimed at determining the minimum level and type of staffing needed to enable safe and quality care in LTC facilities. This effort included issuing the FY2023 SNF PPS RFI,³³ hosting listening sessions with various interested parties, and conducting a 2022 Nursing Home Staffing Study, which builds on existing evidence and several research studies using multiple data sources. In addition to launching our multi-faceted approach, we considered how any potential minimum staffing standards affect other CMS programs and/or initiatives as well as the enforceability of such standards. Our strategic approach and considerations are discussed later in this section.

a. Request for Information in the FY 2023 Skilled Nursing Facility Prospective Payment System Proposed Rule (FY 2023 SNF PPS RFI)

We published the FY 2023 SNF PPS RFI in April 2022, soliciting public comments on minimum staffing standards. In response to the FY 2023 SNF PPS RFI, we received over 3,000 comments from a variety of parties interested in addressing LTC facilities' issues including advocacy groups, long-term care ombudsmen, industry associations (providers), labor unions and organizations, nursing home residents, staff and administrators, industry experts, researchers, family members, and caregivers of residents in LTC facilities.

Notably, industry associations and resident advocates expressed divergent views on the establishment of minimum staffing standards. Resident advocacy groups and family members of residents were strongly supportive of establishing minimum staffing standards, while industry and provider groups expressed significant concern and opposition to such standards.

Commenters supporting the establishment of minimum staffing

standards voiced safety concerns regarding residents not receiving adequate care due to chronic understaffing in facilities. For example, residents going entire shifts without receiving toileting assistance, which can lead to an increase in falls or the development or worsening of pressure ulcers. Commenters noted that NAs barely have time to get each resident dressed, fed, and bathed; that residents lie for hours in wet and soiled diapers; that residents who need help to eat struggle to feed themselves; and that residents suffer abuse from staff and other residents because no one is watching. Commenters also shared stories of residents wearing the same outfit for a week without a change of clothing or a shower. Commenters highlighted the contribution of facility staff and attributed the lack of quality care to insufficient staffing levels.

Commenters also offered recommendations for implementing minimum staffing standards including staffing with a RN on every shift. Some commenters suggested that CMS focus on implementing an acuity (that is, the medical complexity and needs of a resident) staffing model per shift as part of any minimum staffing standards. Others recommended that minimum staffing standards be established for residents with the lowest care needs, assessed using the Minimum Data Set (MDS) 3.0 assessment forms, citing concerns that acuity-based minimum standards will be more susceptible to gaming around composition of the patient population (that is, avoiding taking on residents with more complex medical needs).

Concerns raised by the local ombudsmen in the 2020 OIG Report on staffing levels echoed those raised by commenters. Some of the concerns identified in the OIG Report as a result of understaffing include residents' call lights going unanswered, medication errors, untreated wounds, and inadequate bathing, including residents going a week without a shower. The ombudsmen also focused on problems related to weekend staffing below required levels, resulting in resident falls and altercations between residents; the ombudsmen attributed such outcomes to facilities' inadequate leadership, as well as insufficient numbers of NAs.³⁴ This information supports what was shared with us during the listening sessions as well as

during the public comment period on the FY 2023 SNF PPS RFI.

Commenters also provided information on several resident and facility factors for consideration when assessing a facility's ability to meet any mandated staffing standards, including whether the facility has a high Medicaid census, high bed count, for-profit ownership, high SNF competition within the same county, high community poverty rates, low Medicare census, and for staffing, availability of RNs specifically. Other commenters stated that resident acuity should be a primary determinant in establishing minimum staffing standards, noting that CMS pays nursing homes based on resident acuity level.

We also received comments on factors impacting facilities' ability to recruit and retain staff, with most commenters in support of creating avenues for competitive wages for nursing home staff to address issues of recruitment and retention. Other commenters, however, suggested that year-over-year reductions in skilled nursing facility payments complicate facilities' ability to increase staff wages and benefits.

Finally, we received differing comments on the study design, payment, and cost impacts of establishing minimum staffing standards. Some commenters indicated that there is variability in Medicaid labor reimbursement amounts and many States' Medicaid rates do not keep up with rising labor costs. Others, however, noted that most facilities have adequate resources to increase their staffing levels without additional Medicaid resources, and cited a recent study that suggests that most major publicly traded nursing home companies were highly profitable, even during the COVID-19 PHE. Commenters provided robust feedback on the study design and method for implementing nurse staffing standards, while others noted that resident acuity could change on a daily basis and recommended that CMS establish benchmarks rather than absolute values in staffing standards. Other commenters recommended using both minimum nurse HPRD and nurse to resident ratios.

Additionally, we note that several members of Congress have provided input regarding the establishment of minimum staffing standards. While some Members of Congress have expressed concern that requiring minimum staffing standards could create access issues for rural communities, other Members of Congress have expressed support for establishing minimum staffing

standards for LTC facilities.³⁵ We appreciate the thoughtful feedback from commenters and have considered the varying feedback that we received to inform the staffing study design and proposal for minimum staffing standards discussed in this rule.

b. The 2022 Nursing Home Staffing Study³⁶

The CMS commissioned a nursing home staffing study in 2001, entitled “Appropriateness of Minimum Nurse Staffing Ratios in Nursing Homes”,³⁷ commonly referred to as the 2001 CMS Staffing Study, that focused on two empirical analyses related to the link between staffing and quality: (1) whether there is a nurse staffing ratio above which no additional improvements in quality are observed, and (2) what nurse staffing thresholds are minimally necessary to provide care processes consistent with the Omnibus Budget Reconciliation Act (OBRA) of 1987 optimal standards and related regulations.

The study findings identified nursing home staffing thresholds beyond which additional staff did not lead to significant further improvements in care. These staffing levels, expressed in HPRD, varied by outcomes—short-stay or -long-stay- quality measures, by nurse staff type, and by level of nurse staffing. Depending on the nature of the nursing home population (case-mix), these thresholds ranged between: 0.55 to 0.75 HPRD for RNs; 1.15 to 1.30 HPRD for licensed nurses (RNs and LPN/LVNs); and 2.4 to 2.8 HPRD for NAs. The 2001 study also reported that “[m]inimum staffing levels at any level up to these thresholds are associated with incremental quality improvements, with the greatest benefits as these thresholds are approached.” In other words, 4.1 HPRD was the highest HPRD of

combined NAs and licensed staff (RNs/ LPN/LVN) for long-stay measures beyond which no further improvement in safety and quality was observed. The 4.1 HPRD drawn from the 2001 Study is commonly misinterpreted as the minimum total nurse staffing that is needed to protect resident health and safety.

The CMS also commissioned a simulation analysis (“time motion study”) on NA time expended for providing five key care processes,³⁸ in addition to routine care, to determine an HPRD level for NAs to provide optimal nursing care. The study findings suggest that the NA HPRD level ranged between 2.8 (low workload facility) and 3.2 HPRD (high workload facility) for NAs only, depending on the NA workload requirements which was based on the nursing home resident population.

Given the growing body of evidence demonstrating the importance of staffing to resident health and safety, the continued insufficient staffing, and variability in nurse-to-resident ratios across States, creating a consistent floor will reduce the risk of residents receiving unsafe and low-quality care. In 2022, given the age of the 2001 study and the persistent chronic nurse understaffing linked to poor safety and quality care, which was exacerbated by the COVID-19 PHE, we commissioned a new nursing home study that focused on a non-empirical analysis and four empirical analyses to develop minimum staffing standards using case-mix adjusted data sources, as well as staffing types and levels for improving safety and quality care in nursing homes.

These non-empirical and empirical analyses, also known as study tasks, included a systematic literature review, qualitative analysis of data collected using interviews and surveys conducted during scheduled site visits, an observation study (“similar to the time motion study”) followed by simulation modeling analysis for licensed nurses (RNs and LPN/LVNs), quantitative analyses which included descriptive and impact analyses, and cost analyses. The key takeaways from the multifaceted approach are:

- Recent literature as well as testimonials from nursing home staff, residents, and family members underscore the relationship between staffing and care quality; however, there is no clear, consistent, and universal methodology for setting specific minimum staffing standards, as

evidenced by the varying current standards across certain States.

- Nurse staffing levels vary considerably nationwide by LTC facilities’ characteristics, such as location, size, and profit status and States. Thirty-eight States and the District of Columbia have minimum staffing standards, which vary considerably. We note that the proposed RN requirement of 0.55 HPRD is higher than every State, and only lower than the District of Columbia (DC) based on data from September 2022. Our proposed NA requirement of 2.45 HPRD is higher than all States and DC, based on data reported in September 2022.^{36 39} To reiterate, LTC facilities would be required to meet both the proposed 0.55 HPRD for RNs and the 2.45 HPRD for NAs.

- The relationship between staffing and quality of care and safety, varies by staff type and level as follows:

- ++ RN hours per resident day of 0.45 or more have a strong association with safety and quality care.

- ++ NA hours per resident day of 2.45 or more also have a strong association with safety and quality care.

- ++ LPN/LVN hours per resident day, at any level, do not have any association with safety and quality of care.^{40 41 42}

- Increasing nursing staffing level is associated with costs, namely financial costs to LTC facilities, as well as benefits, including enhanced safety and quality to varying degrees.

In brief, the 2022 Nursing Home Staffing Study was conducted as a general framework to survey different sources of information and to conduct different types of analyses to help inform the minimum staffing decision process, while considering the potential

⁴¹ Yang, Bo Kyum et al. “Nurse Staffing and Skill Mix Patterns in Relation to Resident Care Outcomes in US Nursing Homes.” *Journal of the American Medical Directors Association* vol. 22,5 (2021): 1081–1087.e1. doi:10.1016/j.jamda.2020.09.009.

⁴² Spilsbury, Karen et al. “The relationship between Nurse staffing and quality of care in nursing homes: a systematic review.” *International journal of nursing studies* vol. 48,6 (2011): 732–50. doi:10.1016/j.ijnurstu.2011.02.014.

cost and benefit. The study⁴³ was unable to examine the relationship between staffing levels by shift and quality/patient safety because the PBJ System does not include information on staffing by shift. In addition, there was limited information on non-nurse staffing, so the study team was unable to examine minimum staffing standards for non-nurse staff.

Unlike the 2001 CMS Staffing Study, the 2022 Nursing Home Staffing Study was guided by a conceptual model (see Figure 1), that hypothesizes that administrative practices (for example, nurse staffing levels, staffing mix, care delivery model, and organizational environment) influence the quality and safety of care provided in a nursing home, which, in turn, influences

nursing home residents' outcomes (that is, clinical, safety, and disparity). Clinical outcomes were defined using Care Compare quality measures derived from the MDS and Medicare claims data. Patient safety was defined using measures from health inspection surveys.

FIGURE B-1: Conceptual Model for Nursing Home Staffing Study.

Patient Safety and Quality: An Evidence-Based Handbook for Nurses. Rockville (MD): Agency for Healthcare Research and Quality (US); 2008 Apr. Chapter 25. <https://www.ncbi.nlm.nih.gov/books/NBK2676/>.

(1) Systematic Literature Review

The overall goal of the systematic literature review was to summarize timely and current evidence of the relationship between minimum staffing standards in nursing homes and the safety and quality of care, as well as clarify the relative strengths and weaknesses of the available literature. In addition, the systematic literature review of existing peer-reviewed and “gray literature” (that is, published outside the traditional research publications such as opinion pieces, advocacy materials, and non-statistically rigorous research published by government agencies) which includes printed articles, for the initial period 2019–2022, and prior to 2019 if

needed, focused on addressing the following questions:

- What is the relationship between nurse staffing levels and safety and quality of care? What minimum staffing levels associated with safety and quality of care have been identified in previous studies, and what is the empirical basis for them?
- What are the current State and Federal standards for staffing level/types and outcomes in nursing homes for weekdays, weekends, and evenings?
- What is the role of different nurse types (that is, RNs/LPN/LVNs/NAs) in ensuring safety and quality of nursing home care?
- What are the costs associated with nurse staffing in nursing homes? What

are the costs associated with implementing minimum nurse staffing standards and increasing nurse staffing levels/types?

Most importantly, an increase in nurse staffing was associated with improved quality of care. In a 2021 study, where interview data were examined, and multivariate analyses of resident outcomes were conducted, authors concluded that higher total nurse staffing had a significant correlation with a decreased number of pressure ulcers, an increase in influenza vaccination, an increase in pneumonia vaccination, and decreased number of

⁴³ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for

the Centers for Medicare & Medicaid Services.

outpatient emergency department visits.⁴⁴

However, the OBRA of 1987,⁴⁵ which amended sections 1819 and 1919 of the Act to mandate staffing standards in nursing homes, did not mandate specific numerical minimum nurse staffing standards. As such several States mandated variable staffing standards to help meet the standards in sections 1819 and 1919 of the Act.

As stated in the 2022 Nursing Home Staffing Study report,⁴⁶ which will be published concurrently with this proposed rule, studies found that States that established higher nurse staffing standards resulted in increased staffing within nursing homes, but the magnitude of this increase varied by the staff type. For example, authors found that when the States of California and Ohio required increased licensed nurse or total nurse staffing standards, this resulted in some actual increase in staffing levels. California required facilities to increase the hours for direct resident care per day from 3.0 to 3.2 and prohibited the previous practice of allowing RN or LPN hours to be counted twice, also known as “doubling”. The rationale for doubling was to increase the number of licensed staff. Ohio law required facilities to increase total nurse staffing (RN, LPN/LVN, and NA) direct care hours from 1.6 to 2.75. Results showed that for both California and Ohio, nursing homes that ranked in the bottom quartile at baseline on total nurse staffing significantly increased their HPRDs for all three types of nursing staff (RN, LPN/LVN, and NA). However, there was a reduction in professional skill mix, meaning there were fewer RNs relative to other direct care staff, 71 percent of the increase in nursing staff represented an increase in NA hours.⁴⁷

Another study, when controlling for changes in State minimum direct care staffing standards during the study period, in Arkansas, Delaware, Florida, and Ohio, found that nursing homes

serving a higher share of Medicaid patients reported large increases in staffing, specifically RNs, in response to a one HPRD increase in total nurse staffing from a baseline of 2.0 HPRD requirement for total nurse staffing.⁴⁸ In sum, studies found that nursing homes in States with higher minimum staffing standards employed more staff.

Most LTC facilities typically have nurse teams providing care to residents with very few RNs (8 percent) making up the team, compared to other nurse team members, (that is, administrative RNs, LPN/LVNs and unlicensed assisting staff)^{49, 50} which suggests that LPN/LVNs provide most of the clinical care with minimal supervision from RNs.⁵¹ Other study findings suggest that some Directors of nursing (DONs) view the roles of RNs and LPN/LVNs interchangeably despite the difference in educational preparation and scope of practice. Yet, study findings suggest that having more RNs in LTC facilities to provide clinical skills and supervision of LPNs positively influences LPNs contributions to improved quality care.⁵² In summary, the presence of more RNs on a team influences the quality of care provided.

Based on gray literature, a coalition of resident nursing home advocates and the National Academies of Sciences, Engineering, and Medicine recommended RN coverage, with at least one RN, for 24 hours a day, 7 days a week, with additional RN coverage if needed, as part of the minimum staffing standards.^{53, 54}

Several costs for increasing nurse staffing were cited in the literature, we note that these costs differ from our estimated costs as set out in this proposed rule. For example, in one study, by trade groups representing the industry, 4.1 HPRD for total nurse staffing (that is, RNs, LPN/LVNs and NAs) was found to cost the long-term care industry more than \$10 billion annually.⁵⁵ Another study estimated that the additional staffing costs to meet the 4.1 HPRD for total nurse staffing as \$7.25 billion.⁵⁶ In summary, several studies found that higher levels of nurse staffing, including RNs, were associated with improved resident care outcomes and increased costs.

(2) Qualitative Analysis

Thirty-one nursing homes were selected for scheduled site visits in 14 States, specifically California, Colorado, Florida, Illinois, Massachusetts, Maryland, Missouri, North Carolina, New York, Ohio, Pennsylvania, Virginia, Washington, and Wyoming. These site visits started in September 2022, and ended in December 2022. nursing homes were selected to ensure a national representation by size, ownership type, geographic location, Medicaid population, and overall rating under the *Five-Star Quality Rating System*. Nursing homes voluntarily participated in these site visits and no incentives were offered. Site visit protocols and interview guides were reviewed and approved by Abt Associates Inc. Institutional Review Board.⁵⁷ Site visits were conducted under the Nursing Home Reform Law in the Omnibus Budget Reconciliation Act of 1987 (OBRA '87) (Pub. L. 100–203), which is exempt from the Paperwork Reduction Act (PRA).

During site visits, interviews (n=361) were conducted with 76 nursing home leadership, 195 direct care staff

(including RNs, LPN/LVNs, and NAs), 65 residents, and 25 family members to better understand the relationship between staffing levels, staffing mix (what types of staff are present), and resident outcomes and experiences (that is, clinical outcomes, safety, health disparities). Staff completed 168 Missed Nursing Care (MISSCARE)⁵⁸ surveys to determine any omitted or delayed care.

Findings from data analyses of surveys and interviews highlighted that activities of daily living care tasks, including bathing, toileting, and mobility assistance, are the most frequently delayed tasks when shifts/units are short staffed. Family members also reported that quality of life, quality of care, and resident safety are adversely affected when nursing homes are short staffed. Some staff stated that rushing through care due to having high-acuity residents, meaning that their condition is severe and imminently dangerous, or a high number of assigned residents led to medication errors and safety issues. For example, one nurse stated that being assigned 33 patients without any other staff is not safe. Respondents also noted that different staffing requirements for NAs and licensed nurses, among other factors, should be considered when developing minimum staffing standards. Nursing home staff respondents also suggested minimum staff-to-resident ratios. NA respondents proposed a ratio of 5 to 14 residents per NA, whereas RNs and LPN/LVNs suggested ratios from 8 to 25 residents per licensed nurse (RN and LPN/LVNs). Respondents worked across a variety of shifts, units, and resident types (for example, skilled nursing/rehabilitation, long-term care, total care, dementia care, and behavioral issues), so the acuity of residents they typically supported varied as did the ratios they proposed.

(3) Observation Study/Simulation Modeling

Twenty LTC facilities were selected based on a convenience sampling method for the observation study. Time data of 8,249 unique care tasks were collected via direct observations of licensed nursing staff (that is, RN and LPN/LVNs) providing common clinical tasks including medication pass, resident assessment, wound care, and catheter/device care. Previous simulation modeling research focused on NAs providing non-clinical tasks specifically, activities of daily living

(ADL) tasks,⁵⁹ but not on clinical tasks. Thus, this simulation study was aimed at addressing this gap in knowledge and focused exclusively on specific clinical tasks provided by licensed nurses.

These data were used to develop a simulation model to examine the impact of different levels of licensed nurses and resident acuity, on the quality and timeliness of providing certain care tasks defined as delayed and omitted care respectively. This simulation model is important to add to existing literature on delayed care and help the staffing study reflect not just what staffing levels exist currently as a descriptive model, but also what staffing levels are needed for safe, quality care for residents at varying acuity levels for the studied clinical tasks.

As stated in the 2022 Nursing Home Staffing Study report,⁶⁰ which will be published concurrently with this proposed rule, simulation findings suggest that a staffing level of four licensed nurses (that is, a combination of RNs and LPN/LVNs) in this setting, would reduce the amount of delayed or omitted care for the clinical tasks studied to a rate below 5 percent in a 70-resident nursing home. Five licensed nurses would virtually eliminate delayed or omitted care in this setting. The 4 to 5 licensed nurses correspond to approximately 1.4 to 1.7 HPRD at such a nursing home. However, the study has several limitations. One is that these study observations did not differentiate between RN and LPN/LVN tasks, so we are unable to separate estimates of potential delayed or omitted care for an RN versus an LPN. Most importantly, simulation studies did not incorporate any patient-level data or facility-level data from site observations. Instead, simulations estimated patient acuity using MDS data. Therefore, patient acuity in simulations were based on population-level estimates, rather than estimates at the nursing-home level or the individual patient level.

Because the simulation did not use actual patient- or facility-level data, facilities specializing in treatment of high or low acuity residents were not properly represented in the staffing simulation models. For example,

different staffing needs may arise in facilities specializing in care for persons experiencing disabilities resulting in paraplegia/quadruplegia, or in facilities specializing in persons experiencing advanced cognitive impairment. Analysis of specialized care facilities was outside of the scope of this simulation research. Furthermore, other existing simulation research focused on NAs only, so NAs were considered as part of the evidence base for this work but were not included in the analysis.

(4) Quantitative Analysis

Secondary Analysis: The quantitative analysis used secondary data of nursing homes (n = 14,529) from the CMS' PBJ System, the MDS 3.0, Medicare cost reports, and health inspection surveys to establish minimum staffing standards for different types of nurse staff (that is, total nurse staffing and individual RNs, LPN/LVNs, and NAs) and for non-nurse staff (that is, social workers, feeding assistant, other activities staff, and physical therapy assistant among others) that is associated with an acceptable quality of care and safety in nursing homes. Quality was defined based on a total composite quality measure made up of *Short-Stay Measures* (that is, community discharge, hospital readmissions, emergency department visits, Functional improvement) and *Long-Stay Measures* (that is, activities of daily living decline, antipsychotic medication use, mobility decline, high-risk pressure ulcer, hospitalizations, and emergency department visits).⁶¹

Safety was measured based on the relative on-site health inspection performance of nursing homes within a State using surveys for the following deficiencies: Immediate jeopardy to resident health or safety; Actual harm that is not immediate jeopardy; No actual harm with potential for more than minimal harm that is not immediate jeopardy; and, No actual harm with potential for minimal harm.

Similar to other CMS nursing home improvement quality initiatives such as Value Based Payment for nursing homes, acceptable quality and safety was defined using the 25th and 50th percentile cut-offs on the current distribution of the total quality measure (QM) score and within-State performance on health inspection survey data, based on the predicted probability of nursing homes exceeding the threshold across the full distribution of nurse staffing levels. Moreover, some

⁶⁰ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

⁶¹ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

nursing homes are staffed at levels that place their residents at substantially higher risk of poor quality (for example, being in the lowest quartile of QM score, defined as the 25th percentile cut off) and low safety (for example, lowest quartile of performance on health inspection survey, defined as the 25th percentile cut off). The PBJ System data for the fourth quarter of 2019 through the first quarter of 2022, for 14,688 Medicare and/or Medicaid certified nursing homes in the United States were included in the analyses.

Descriptive analyses examined HPRD for nurse and non-nurse staff in nursing homes ($n=14,529$) across all States. Regression modeling analyses controlled for case-mix adjusted data for nurse staffing (that is, RN, LPN/LVN, and NA), LTC facility ownership (for example, non-profit, Government), percent of Medicaid residents, hospital-based facility, Continuing Care Retirement Community (CCRC) facility, rural location, number of certified beds (per 1-bed increase), and Special Focus Facility status. Using a correlational descriptive analysis, findings indicate that there is a consistent positive relationship between higher RN staffing and better performance, regardless of the measure (that is, total quality measure score or within-State health inspection score), the performance standard (that is, acceptable quality and safety at the 25th, or 50th percentile), or the case-mix adjusted RN staffing decile measured in HPRD.

Among all nurse staffing types, RNs exhibit the strongest association with acceptable quality ($p<.0001$, significant at $\alpha = 0.05$) and safety (pHowever, similar to previous analyses,^{62 63 64} this study found no relationship between LPN/LVNs HPRD levels and quality care and safety. This finding may be influenced by the LPN/LVN's role⁶⁵ and the fact that nursing homes with higher LPN/LVN staffing levels tend to have

lower RN staffing levels.⁶⁶ The volume and number of HPRD reported in PBJ System for non-nurse staff were very low, ranging from 0.00–0.11; as such were insufficient to examine further for establishing minimum non-nurse staffing standards.

We considered findings from the 2022 Nursing Home Staffing Study, specifically that there was no statistically significant difference in safety and quality care below 2.45 HPRDs for NAs. In other words, staffing below 2.45 HPRD for NAs did not improve safety and quality care for LTC facility residents. Also, our proposed NA requirement of 2.45 HPRD which was developed using case-mix adjusted data sources, is higher than the minimum requirements in all States and DC, based on data reported in September 2022.

We also considered findings from the 2022 Nursing Home Staffing Study that there was no correlation between safety and quality care, and LPN/LVNs. We examined findings from the 2022 Nursing Home Staffing Study, that there was a statistically significant difference in safety and quality care at 0.45 HPRD for RNs and higher. We also factored the minimum RN requirements in all States and the District of Columbia, which with the exception of two States, all had less than the 0.45 HPRD for RNs, which was the lowest level presented in the 2022 Nursing Home Staffing Study. However, current State minimum RN staffing levels are associated with increased risk for unsafe and poor quality care. Therefore, we are proposing the level of 0.55 HPRD for RNs, which was developed based on case-mix adjusted data sources and the 2022 Nursing Home Staffing Study findings. In addition, 0.55 HPRD for RNs will result in a large majority (78 percent) of LTC facilities increasing staffing to provide safe and quality care. CMS is also seeking comments on whether in addition to the 0.55 RN and 2.45 NA HPRD standards, a minimum total nurse staffing standard, such as 3.48 among other alternatives, discussed later in the rule, should also be required.

Furthermore, we considered striking a balance between cost and benefit for LTC facilities, nursing staff, and residents, and the minimum number of HPRDs by staff type that will improve safety and quality care. Therefore, we proposed 0.55 and 2.45 HPRD for RNs and NAs, respectively, which were

developed using case-mix adjusted data sources, because we believe that proposing lower staffing levels than current State requirements would be insufficient to meet the statutory goals of improving health and safety.

Impact Analysis: The impact of State minimum staffing policies on nurse staffing, and safety and quality care in nursing homes during the recent COVID-19 PHE, can inform policy makers on potential outcomes to Federal minimum staffing standards. The study also provided analyses of the recently revised Massachusetts minimum staffing standards, in the wake of the COVID-19 PHE, making the findings the most timely and relevant of various State-level analyses. The researchers determined that the analysis of the Massachusetts staffing standard would be particularly informative given that the State increased its HPRD to a relatively high level and incorporated a Medicaid payment reduction of 2 percent for noncompliant facilities. As such a quasi-experimental study was conducted to determine the impact of the Massachusetts minimum staffing standards on quality of care and safety in nursing homes.

The Massachusetts nursing home minimum staffing standards requires 3.58 HPRD for total nurse staffing (that is, RN, LPN, and NA), of which 0.508 HPRD was for an RN, and provided for a financial penalty for noncompliance with the total nurse staffing standard. The study period was defined as 2015 Q3 through 2022 Q2. The Massachusetts nursing home minimum staffing policy was effective January 1, 2021. Impact analysis of existing nursing homes ($n=40$) data from the PBJ System data (2015Q3–2022Q2) and Care Compare (quality measure and health inspection survey data) were used. The comparison group selected from the sample of national nursing homes ($n=1,617$) was constructed using a synthetic control approach. Synthetic control is a statistical method for creating a comparison group of nursing homes from a region that did not experience the same health policy intervention, but closely resembles the nursing home staffing level and trend in Massachusetts using weighted estimates. Difference-in-differences regression analyses were conducted by stratified nursing home Medicaid share and staffing level. Difference-in-differences regression is a statistical method for estimating the causal effect of the Massachusetts minimum staffing standards, when compared to a region that did not experience the same policy intervention.

⁶⁶ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

These regression models did not find a discernible impact on quality of care nor safety within the time period studied. They did, however, find an increase in total nurse staffing levels among low-staffed nursing homes with a high share of residents with Medicaid in Massachusetts. The observed staffing increase was significant for NAs (average treatment effect on the treated (ATT)=.179, $p=0.03$). The analysis thus demonstrates that nursing homes were able to expand staffing in response to the new requirement, notwithstanding workforce challenges since the pandemic.

One limitation of the analysis was the small number of nursing homes included because the analysis focused on a subset of nursing homes with the strongest incentive to respond to the new policy, that is, those with high Medicaid resident shares (≥ 75 th percentile) and initial staffing levels below the new Massachusetts minimum staffing requirement ($\text{HPRD} \leq 3.58$ for total nurse staffing), resulting in 1,617 out of 15,333 nursing homes nationwide for the control group, and 40 out of 373 nursing homes in Massachusetts. Also, about one third of the nursing homes did not complete health inspection surveys due to the COVID-19 PHE, so there was a substantial amount of missing data for examining the safety outcome. Furthermore, the analysis of quality of care and safety outcomes was limited by the short post-implementation study period of Massachusetts's minimum staffing standards, which does not allow for sufficient time for a complete evaluation of the policy. Additionally, the impact analysis was focused on data from roughly the first year of implementation, which usually involves resource planning and operational changes to meet the new policy standards, and thus may not be representative.

These study results show that there was an increase in NA staffing, which supports the proposed policy to require facilities to meet the minimum staffing standards or otherwise be subject to, civil money penalties and denial of payment for all Medicare and/or Medicaid individuals among other penalties in accordance with 42 CFR 488.406.

(5) Cost and Savings Analysis

The cost analyses were conducted to determine any associated incremental costs that nursing homes would likely experience to meet minimum staffing standards, as well as any Medicare savings. Cost analyses used the 2021 Q2 PBJ System (staffing data), facility-specific information on hourly costs for

RNs, LPN/LVNs, and NAs from *Worksheet S-3, FY 2021 Part V* of the Medicare Cost Report for 14,688 SNFs, and information on resident census that is available from files produced for comparison to evaluate any associated incremental costs. We note that the cost analyses were independent of a facility's case-mix.

Study findings indicate that the staffing costs for increasing RN and NA staffing levels in nursing homes to meet the minimum staffing standards ranges from \$2.2 to \$6.0 billion per year. The minimum estimated cost savings to Medicare, based on savings from the RN staffing requirement, are from the decreased use of acute care services (fewer hospitalizations and emergency department visits) and increased community discharges (defined as a reduction in Medicare-covered SNF days); cost savings ranges from \$187 to \$465 million. The decision to focus on estimated savings for RNs only, was because RN staffing levels were found to have a much stronger and a more consistent positive correlation with hospitalizations and emergency department visits than NAs or LPNs.

These quantitative analyses of savings to Medicare were limited to quality metrics for which there are extant secondary data. However, there are likely additional benefits to quality of care and life that cannot be fully identified through the analysis in the 2022 Nursing Home Staffing Study. Moreover, these analyses do not consider facilities' existing resources, ability to pay for possible staffing levels, or access to trained healthcare professionals.

Overall, the study⁶⁷ was unable to examine the relationship between staffing levels by shift and quality/patient safety because the PBJ System does not include information on staffing by shift. In addition, there was limited information on non-nurse staffing, so the study team was unable to examine minimum staffing standards for non-nurse staff.

c. Listening Sessions

In addition to commissioning the 2022 Nursing Home Staffing Study and issuing the FY 2023 SNF PPS RFI, we also held two listening sessions on June 27, 2022, and August 29, 2022, to provide information on the study and solicit additional input on the study design and approach for establishing minimum staffing standards. The first

listening session was attended by 18 interested parties representing various groups within the LTC community. During this session, this small group discussed several "big picture" questions about minimum staffing standards and provided input on the overall study approach. The second listening session was attended by 668 participants who offered feedback on specific questions that were included on the registration form, such as how to ensure that health equity/health care disparities are addressed when establishing minimum nurse staffing standards and how minimum staffing standards should consider differences in costs for job categories and variations across States.

During the August 2022 listening session,⁶⁸ participants shared their opinions that the current state of staffing standards was not adequate, and there was consensus that minimum staffing standards should be the same across the country. Participants recommended that CMS consider resident characteristics and care needs when developing staffing standards. Participants indicated that the interdisciplinary team and the care provided by non-nursing staff such as physical, occupational, speech therapists, respiratory therapists (especially with pediatric specialty/ventilator units), podiatrists, and psychiatrists also need to be considered. Others also suggested that the inclusion of non-nurse staff to meet staffing standards may positively contribute to aspects of quality of life for residents.

Similar to the suggestions received in the FY 2023 SNF PPS RFI, some participants suggested that CMS create a staff-to-resident ratio minimum standard, which can further support a HPRD staffing standard. Participants also suggested that facilities should report and display staff-to-resident ratios on a daily basis for all shifts. Participants in favor of a staff-to-resident ratio requirement noted that increased transparency will help residents and family members to easily determine if the facility is in compliance with minimum staffing standards.

Lastly, some participants indicated that minimum staffing standards should consider the need for consistent NA qualifications across all 50 States and to allow for more online training to eliminate the backlog of availability for NAs testing and increase the availability of classes near candidates to support staff shortages.

⁶⁷ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

⁶⁸ <https://www.cms.gov/nursing-homes>.

4. Ongoing CMS Initiatives and Programs Impacting LTC Facilities

In establishing the proposed minimum staffing standards, we also considered ongoing CMS policies, programs, and operations, including Medicaid institutional payment and transparency, the SNF prospective payment system, the SNF Value-based Purchasing Program (SNF VBP), oversight and enforcement, and CMS policies intended to enhance access to Medicaid home and community-based services and promote community-based placements.

a. Medicaid Institutional Payments and Payment Transparency

In this proposed rule we are also proposing a Medicaid Institutional Payment Transparency provision that is intended to promote public payment transparency. Greater transparency will help us assess the extent to which LTC facilities with a large Medicaid population have challenges achieving compliance with minimum staffing standards. State Medicaid Agencies would be required to publicly report the percentage of payments expended for direct care workers and support staff services in Medicaid-participating nursing facilities and Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID) (see section III. of this proposed rule). We expect that as a result of this transparency requirement, some facilities would likely increase staffing independent of our proposed minimum staffing standards.

b. Medicare Skilled Nursing Facility Prospective Payment System

The Medicare Skilled Nursing Facility Prospective Payment System is a comprehensive per diem rate under Medicare for all costs for providing covered Part A SNF services (that is, routine, ancillary, and capital-related costs). There are over 15,000 Medicare-certified SNFs. The FY 2023 SNF PPS proposed rule published on April 4, 2023 updated Medicare payment policies and rates for SNFs for FY 2024. The FY2023 SNF PPS proposed rule estimated that the aggregate impact of the payment policies in the rule would result in a net increase of 3.7 percent, or approximately \$1.2 billion, in Medicare Part A payments to SNFs in FY 2024. We note that Section 1888(e)(4)(E) of the Act requires the SNF PPS payment rates to be updated annually. These updates take into account a number of factors, including but not limited to, wages, salaries, and other labor-related costs. Specifics

regarding the process to update SNF PPS payment rates are discussed in the rule.⁶⁹

c. Skilled Nursing Facility (SNF) Value-Based Payment (VBP) Program Staffing Measure

In the FY 2023 SNF PPS final rule, we adopted a new Total Nurse Staffing quality measure under the SNF VBP Program, which is used to provide an incentive to LTC facilities for improving quality of care provided to residents.⁷⁰ Performance on the Total Nurse Staffing measure begins in FY 2024, and payment adjustments based on performance on this measure (as well as others) occurs in FY 2026. This is a structural measure that uses auditable electronic data reported to CMS' PBJ system to calculate HPRD for total nurse staffing. Our proposal is not to be duplicative of this existing measure; rather, we expect our proposed minimum staffing standards to be complementary by establishing a consistent and broadly applicable national floor at which residents are at a significantly lower risk of receiving unsafe and low-quality care. At the same time, the Total Nurse Staffing quality measure will drive continued improvement in staffing across LTC facilities.

d. Nursing Home Survey and Enforcement

The LTC minimum staffing standards proposed in this regulation are part of the Federal participation requirements for LTC facilities and these Federal participation requirements are the basis for survey activities and for the minimum health and safety requirements that must be met and maintained to receive payment and remain as a Medicare or Medicaid provider. As such compliance with these requirements will be assessed through CMS' existing survey, certification, and enforcement process.⁷¹ Enforcement actions taken against LTC facilities that are not in compliance with these Federal participation requirements are called

remedies. The agency that conducts on-site surveys cites deficiencies that indicate the specific Federal participation requirements that the facility did not meet. Sections 1819(h) and 1919(h) of the Act, as well as 42 CFR 488.404, 488.406, and 488.408, provide that CMS or the State may impose one or more remedies in addition to, or instead of, termination of the provider agreement when the CMS or the State finds that a facility is out of compliance with the Federal participation requirements. Specifically, enforcement remedies that may be imposed include the following:

- Termination of the provider agreement;
- Temporary management;
- Denial of payment for all Medicare and/or Medicaid individuals by CMS;
- Denial of payment for all new Medicare and/or Medicaid admissions;
- Civil money penalties;
- State monitoring;
- Transfer of residents;
- Transfer of residents with closure of facility;
- Directed plan of correction;
- Directed in-service training; and
- Alternative or additional State remedies approved by CMS.

In general, to select the appropriate enforcement remedy(ies), the scope and severity levels of the deficiencies is assessed. The severity level reflects the impact of the deficiency on resident health and safety and the scope level reflects how many residents were affected by the deficiency. The survey agency determines the scope and severity levels for each deficiency cited at a survey.

As part of these survey and enforcement activities, we currently publish data for all LTC facilities on the Care Compare website, including number of certified beds, an overall Five Star rating, and three individual star ratings in the categories of inspections, staffing, and quality measurement.⁷² In addition, individual performance measures are included on Care Compare. With respect to staffing, this includes the following staffing data: total number of nurse staff HPRD, RN HPRD, LPN/LVN HPRD, and NA HPRD, as well as some additional staffing measures, including weekend hours. These published data are collected through a variety of mechanisms, including during CMS surveys (inspection data), through the reporting

of PBJ System and are also self-reported by LTC facilities to us.

In general, facilities report employing three types of nursing staff: RNs, LPNs/LVNs, and NAs. We have been moving towards more data-driven enforcement, including use of the self-reported PBJ System data to guide monitoring, surveys and enforcement of existing staffing requirements. We continue to recognize the value of assessing the sufficiency of a facility's staffing based on observations of resident care conducted during the onsite survey. For example, while compliance with numeric minimum staffing standards could be assessed using PBJ System data, it is possible that due to a facility's layout, management, and staff assignments, a facility could meet the numeric staffing standards but not provide the sufficient level of staffing needed to protect residents' health and safety. Resident health status and acuity (for example, proportion of residents with cognitive decline or use of ventilators) are also factors in determining adequate staffing. Therefore, when assessing the sufficiency of a facility's staffing it is important to note that any numeric minimum staffing requirement is not a target and facilities must assess the needs of their resident population and make comprehensive staffing decisions based on those needs. The additional requirements proposed in this rule to bolster facility assessments are intended to address this need and guard against any attempts by LTC facilities to treat the minimum staffing standards included here as a ceiling, rather than a floor.

In summary, the benefits and success of minimum staffing standards are heavily dependent on the survey process. Therefore, in establishing numerical minimum staffing standards our goal is to ensure that they are both implementable and enforceable, as determined through both the PBJ System as well as on-site surveys.

e. Medicaid Home and Community-Based Services

We remain committed to a holistic approach to meeting the long-term care needs of Americans and their families. This requires a focus on access to high-quality care in the community while also ensuring the health and safety of those who receive care in LTC facilities. In the proposed April 2023 Ensuring Access to Medicaid Services (Access NPRM) and Medicaid and CHIP Managed Care Access, Finance, and Quality (Managed Care NPRM), we proposed several policies intended to work alongside those included in this

proposed rule. These proposals require that at least 80 percent of Medicaid payments for personal care, homemaker and home health aide services be spent on compensation for the direct care workforce (as opposed to administrative overhead or profit); establish standardized reporting requirements related to health and safety, beneficiary service plans and assessments, access, and quality of care; and promote transparency through public reporting on quality, performance, compliance as well as Medicaid managed care plans' payment rates for direct care workers. Additionally, we remain committed to facilitating transfers from LTC facilities to the community through the continued implementation of the Money Follows the Person program.⁷³

Notably, we believe that the proposed minimum staffing standards will improve quality of care which includes facilitating the transition of care to community based care services; similar to findings that are reported in the 2022 Nursing Home Staffing Study as well as potential Medicare savings.

B. Provisions of the Proposed Regulations

As discussed above, meeting minimum staffing standards may be influenced by and/or affect existing CMS initiatives and programs, and programs within LTC facilities. Given these factors and the broad spectrum of suggestions and inputs discussed, we acknowledge that there are many considerations and potential policy options for establishing minimum staffing standards. Therefore, we propose a comprehensive staffing approach that consists of the three following elements: (1) establishing new minimum nurse staffing standards based on case-mix adjusted staffing; (2) revising the on-site RN requirement; and (3) revising the existing facility assessment requirement. We believe, when taken together, these three elements will establish a consistent and broadly applicable national minimum staffing standards as a floor, while also ensuring that LTC facilities staff beyond the minimum staffing standards as needed, based on their resident population.

While we expect LTC facilities to meet the comprehensive staffing standards, we acknowledge that there may be circumstances related to the nursing workforce that require efforts to both ensure access to care and maintain quality care and safety. Therefore, we

are proposing options for exemptions and a staggered implementation of the proposal's components for meeting the minimum staffing standards. This comprehensive approach aims to strike the appropriate balance between ensuring resident health and safety, while guarding against unintended consequences, and preserving access to care.

Our goal is to protect resident health and safety and ensure that facilities are considering the unique characteristics of their resident population in developing staffing plans, while balancing operational requirements and supporting access to care. Moreover, the comprehensive staffing standards will provide staff with the support they need to safely care for residents.

We believe that the elements of the proposed comprehensive staffing standards discussed in this rule support these goals and align with the key function of the LTC facility participation requirements, which is to establish minimum standards to ensure safety and quality care for all residents.

We also acknowledge the impact that proposed minimum staffing standards will have on the LTC facility industry and recognize the potential for unintended consequences, such as facilities' misinterpretation of the minimum staffing standards. Such misinterpretation could result in inappropriate behaviors, such as choosing to staff only at the minimum RN and NA HPRD requirements, without adequate consideration of facility characteristics and resident acuity and needs; healthcare workforce substitution (hiring for one position by eliminating another); task diversion (assigning non-standard tasks to a position); or gamesmanship around composition of the patient population (avoiding residents with more complex medical needs). Such actions would not result in the improved safety, quality, and person-centered care that we seek in facilities. As such, we are soliciting public comments on the policy proposals outlined below, in particular the feasibility of the proposals, any unintended consequences, and alternatives that we should consider. We will consider all feedback to inform the final policy.

1. Nursing Services (§ 483.35)

a. Sufficient Staff (§ 483.35(a)(1))

In general, LTC facilities report employing three types of nursing staff: RNs, LPN/LVNs, and NAs. RNs are assigned both administrative roles and resident assessment and care planning, which typically results in less hands-on

⁷³ Money Follows the Person | Medicaid, <https://www.medicaid.gov/medicaid/long-term-services-supports/money-follows-person/index.html>.

time with residents and more non-clinical skills (for example, managerial and time management skills). They are able to assess resident health problems and needs, develop and implement care plans, and maintain medical records. LPN/LVNs are entry-level licensed nurses providing basic level care under a RN or physician supervision such as checking blood pressure, changing bandages and dressings, and documenting patient care records. NAs spend the most time providing care to residents by assisting with activities of daily living (for example, feeding, bathing, and dressing). Moreover, roles for NAs may differ from LPN/LVNs depending on the State.

NAs are paid on average \$16.90/hour, whereas RNs and LVN/LPNs are paid an average hourly wage of \$37.11 and \$28.17 in Nursing Care Facilities.⁷⁴ While the work of NAs and other direct care workers, like home health aides and personal care assistants, requires considerable technical and interpersonal skills, these workers historically receive low pay, rarely receive benefits, and experience high injury rates.⁷⁵ Despite the rising demand for services, direct care workers continue to earn poverty-level low wages. Almost one-half of the direct care workforce (45 percent) live below 200 percent of the Federal poverty level and about one-half (47 percent) rely on public assistance. Recent research by the U.S. Assistant Secretary for Planning and Evaluation finds that wages for direct care workers, including NAs, lag behind workers in other industries with similar entry-level requirements, exacerbating recruitment and retention challenges. According to its findings, average hourly wages also vary considerably State to State—as low as \$10.90 for NAs in Louisiana to as high as \$18.66 in Alaska.

Current regulations at § 483.35(a)(1)(i) and (ii) require facilities to have sufficient numbers of licensed nurses and other nursing personnel, including but not limited to NAs, available 24 hours a day to provide nursing care to all residents in accordance with the resident care plans.⁷⁶ In the 2016 LTC

final rule mentioned previously,⁷⁷ CMS described the complexity of establishing minimum staffing standards at that time given that the PBJ System reporting program had only been recently implemented. Therefore, we did not have adequate information in terms of facility-level staffing data that would be needed to establish minimum staffing standards. We further stated that once a sufficient amount of data was collected and analyzed, we could re-visit the establishment of minimum staffing standards in LTC facilities. As of calendar year 2022, we have access to about 6 years of self-reported data from the PBJ System which are sufficient to examine the staffing issues in LTC facilities that still persist and were exacerbated by the COVID-19 PHE.

According to CMS survey and enforcement data, over 1,000 facilities were cited for insufficient staffing in 2022 and residents, family, ombudsmen, researchers, and others continue to report to CMS that understaffing negatively affects care. There is also considerable variation in State staffing requirements. As previously stated, a review of State staffing requirements indicates that 38 States and the District of Columbia currently have minimum staffing standards in LTC facilities, but these standards differ across States by staff types, hours and measurement across States, and more so during the COVID-19 PHE.⁷⁸ The proposed RN requirement of 0.55 HPRD is higher than every State, and only lower than the District of Columbia. The proposed NA requirement of 2.45 HPRD is higher than all States and the District of Columbia, based on data from September 2022.

For example, only 10 States out of the 38 States have minimum HPRD standards for NAs ranging from 1.04 to 2.44 (see Table 2).

‡ FL revised CNA HPRD from 2.45 to 2.0 on 4/2022.

Source: RTI International, 2021, Review of State Policies Related to Nursing Facility Staffing.

Some States have implemented a total hour per resident day (HPRD) model, with some including licensed nurses in this calculation, whereas others exclude LPN/LVNs but include RNs, DONs, and NAs only. For example, the District of Columbia requires a minimum daily average of 4.1 hours of direct nursing care per resident per day (with an opportunity to adjust the requirements above or below this level, as determined by the Director of the Department of Health), an RN on site 24 hours a day, 7 days a week, plus additional nursing and medical staffing requirements.⁷⁹ Some States implemented a ratio of numbers of full-time equivalent NAs per resident. For example, California requires 3.5 HPRD for total nurse staffing with at least 0.24 of those hours provided by RNs, and 2.4 HPRD for NAs, and no HPRD required for LPN/LVNs. Massachusetts requires 3.58 HPRD for total nurse staffing with at least 0.508 of those hours provided by a RN.⁸⁰ Arkansas requires at least 3.36 average HPRD for nurse and non-nurse staff each month to include licensed nurses, NAs, medication assistants, physicians, physician assistants, licensed physical or occupational therapists or licensed therapy assistants, registered respiratory therapists, licensed speech language pathologists, infection preventionists, and other healthcare professionals licensed or certified in the State, plus requirements for minimum numbers of licensed nurses per residents per shift. There is also limited evidence on how these different staffing standards were developed and their impact.

⁷⁶ 42 CFR 483.35 <https://www.whitehouse.gov/briefing-room/statements-releases/2022/02/28/fact-sheet-protecting-seniors-and-people-with-disabilities-by-improving-safety-and-quality-of-care-in-the-nations-nursing-homes/>.

The 2022 Nursing Home Staffing Study⁸¹ included an analysis of PBJ System data for the fourth quarter of 2019 through the first quarter of 2022. The 2022 Nursing Home Staffing Study, as discussed previously, provided CMS with findings to inform the proposal for minimum staffing standards, and discussed trade-offs associated with balancing cost and feasibility with implications for acceptable quality care and safety, especially among the lowest performing facilities (that is, at or below the 25th percentile for total safety and quality measure scores) that are at the most risk for providing unsafe care.

After considering all of the available evidence and extensive comments provided, we are proposing revisions to the Nursing Services regulations at § 483.35 to establish national, quantitative minimum staffing standards to ensure all facilities provide at least the same baseline level of high-quality and safe care to residents across all participating LTC facilities. We propose to revise § 483.35(a)(1)(i) and (ii) to further define “sufficient numbers” by establishing a numerical minimum level for HPRD for RNs and NAs. We also propose to revise § 483.5 to include the definition of “hours per resident day” (HPRD), that is, staffing hours per resident per day is the total number of hours worked by each type of staff divided by the total number of residents as calculated by CMS.⁸² Specifically, at § 483.35(a)(1)(i) we propose individual nurse staffing type standards for RNs and NAs. We propose to require facilities to have minimum staffing standards of 0.55 HPRD of RNs and 2.45 HPRD of NAs as well as to maintain sufficient additional nursing personnel, including but not limited to LPN/LVNs, and other clinical and non-clinical staff, to ensure safe and quality care, based on the proposed facility assessment requirements at § 483.71. CMS is also seeking comments on a minimum total nurse staffing standard of 3.48 HPRD discussed later in the rule.

We are not proposing minimum nurse staffing standards that include HPRD for licensed nurses (that is, RNs plus LPN/LVNs) nor for total nurse staffing (that is, RNs, LPN/LVNs, and NAs). This proposed policy is based on the 2022 Nursing Home staffing study findings and other literature evidence demonstrating that RNs and NAs have a larger effect on quality than LPN/LVNs.

In addition, literature and statistical evidence suggests that improved clinical outcomes are associated with increasing the HPRD rates of RNs and NAs⁸³ especially among nursing homes that have a high reliance on Medicaid.⁸⁴ Moreover, when LPN/LVNs work with higher numbers of HPRD for RNs and NAs (that is, total nurse staff) it appears to reduce delayed or omitted care and increase gross cost savings to Medicare.⁸⁵ We believe that establishing national, numerical standards of direct care hours will improve safety and quality in many LTC facilities. By creating a consistent Federal floor for staffing expectations, we will better define the minimum number of care hours residents should receive to protect health and safety, while also facilitating strengthened oversight and enforcement.

As an example, when establishing the proposed HPRD level of 0.55 for RNs and 2.45 for NAs, we note that the minimum number of RN hours (that is 0.55 HPRD) provided in a facility that has 100 residents and runs an 8-hour shift per 24 hours, would require a total of 55 RN hours per 24 hours.⁸⁶ In other words, at least two RNs on staff each 8-hour shift, plus a third RN for one shift, would be necessary in this scenario although no per shift minimum is being established in this rule. Similarly, the minimum number of NA hours (that is 2.45 HPRD) provided in a facility that has 100 residents and runs an 8-hour shift per 24 hours will require at least a total of 245 NA hours per 24 hours.⁸⁷ In other words, at least 10 NAs on staff each 8-hour shift, plus a third NA for one shift would be necessary in this scenario although no per shift minimum is being established in this rule.

These proposed levels for hours of care would establish the minimum nurse staffing levels needed to provide safe and high-quality nursing services to each resident per day. We underscore

that these standards reflect only the absolute minimum floor adjusting for the average acuity across all LTC facilities, and the required hours of nursing care may be greater but never lower than the proposed minimum standards, if the acuity needs of residents in a facility requires a higher level of care. Additionally, the proposed staffing levels require all facilities to meet at least this minimum floor, even if the facility has below average acuity, given that resident population can shift more rapidly than staffing plans; most facilities have either an average acuity or higher of resident population; and as noted above, the evidence can also support a higher range of staffing thresholds.

Notably, we are proposing to specify HPRD for RNs and NAs in the minimum staffing requirement at § 483.35(a) and are not proposing a total nurse staffing level under which facilities have the flexibility to decide between types of licensed nurses to meet the minimum requirement. We have taken this approach given the evidence that shows a strong positive association between RN staffing levels and safety and quality, as well as NA staffing levels at higher HPRDs. Literature evidence also indicates that the increased presence of RNs in nursing facilities would help address several issues.

First, research evidence suggests that greater RN presence has been associated with higher quality of care and fewer deficiencies. Second, it has been reported in the literature that where standards provide flexibility as between types of licensed nurses (that is, do not specify RN hours), LPN/LVNs may find themselves practicing outside of their scope of practice partly because there are not enough RNs providing direct patient care and supervision of LPN/LVNs. The specificity of this approach would increase the number of hours per day that a LTC facility must have RNs in the facility and would alleviate concerns about LPN/LVNs engaging in activities outside their scope of practice in the face of resident need during times when no RN is on site (80 FR 42168, 42200). Moreover, to prevent a high rate of unusual patient safety events, the National Academy of Medicine (NAM) (formerly the Institute of Medicine (IOM)) suggests having adequate staffing levels, specifically NAs, who provide most of the care to nursing home residents.⁸⁸ In addition, our proposal,

⁸³ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

⁸⁴ Bowblis J.R. (2011). Staffing ratios and quality: an analysis of minimum direct care staffing requirements for nursing homes. *Health services research*, 46(5), 1495–1516. <https://doi.org/10.1111/j.1475-6773.2011.01274.x>.

⁸⁸ Institute of Medicine (US) Committee on the Work Environment for Nurses and Patient Safety. *Keeping Patients Safe: Transforming the Work Environment of Nurses*. Edited by Ann Page, National Academies Press (US), 2004. doi:10.17226/10851.

which focuses on sufficient numbers of nursing staff, does not contemplate staffing levels for non-nursing staffing because nursing staff are most critical to ensuring minimum standards of care, and there is insufficient information on non-nurse staffing levels in the PBJ System and other available data sources that limits our efforts to examine staffing requirements for non-nurse staff at this time. We solicit comment on the need to allow for substitution, such as substituting LPN/LVNs for NAs, in extraordinary cases and specifically what extreme circumstances would appropriately allow for such substitution.

As noted, based on the findings reported in the 2022 Nursing Home Staffing Study, information gathered through the FY2023 SNF PPS RFI, listening sessions, assessment of the PBJ System data, and review of the literature evidence, we are proposing individual minimum staffing levels at 0.55 HPRD for RNs and 2.45 HPRD for NAs. In establishing this proposal, we considered the context of substantial cost that the proposed policy may impose on LTC facilities, especially those with limited resources that may face difficult decisions in terms of how to allocate funding and resources (see Regulatory Impact Section for more detail). Likewise, the evidence from the 2022 Nursing Home Staffing Study supports the proposed minimum staffing level for RNs and NAs for improving safety and leading to higher quality care. As such, we are proposing minimum nurse staffing standards for these two types of nursing staff that we believe are reasonable and creates meaningful, positive impact on resident quality and safety. These standards will especially help ensure all facilities reach acceptable levels of safety and quality care, working in tandem with CMS' other quality improvement programs that focus on raising performance beyond minimum requirements.

The proposed minimum nurse staffing standards would create broadly applicable minimum standards at which all residents across all LTC facilities would be at a significantly lower risk of receiving unsafe and low-quality care. LTC facilities would be required to staff above these minimum adjusted baseline levels, as appropriate, to address the specific needs of their unique resident population. This additional staffing should be based at the facility level using the facility assessment and an examination of resident acuity levels.

LTC facilities are also responsible for compliance with other requirements for participation, including but not limited

to § 483.24, which requires that each resident must receive and the facility must provide the necessary care and services to attain or maintain the highest practicable physical, mental, and psychosocial well-being, consistent with the resident's comprehensive assessment and plan of care. Therefore, we propose to add a new § 483.35(a)(1)(v) to reinforce this standard. Specifically, at § 483.35(a)(1)(v), we propose to specify that compliance with minimum HPRD for RN and NA should not be construed as approval for a facility to have fewer nursing and non-nursing staff than the number of staff with the appropriate competencies and skills sets necessary to assure resident safety, and to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident, as determined by resident assessments, acuity and diagnoses of the facility's resident population in accordance with the facility assessment required at current § 483.70(e), which we propose to be redesignate as new § 483.71.

The acuity and characteristics of residents in LTC facilities has continued to evolve and change over the years. For example, there are more residents with a psychiatric diagnosis with reports showing that the proportion of residents with schizophrenia increased from 6.5 percent in 2000 to 12.4 percent in 2017.⁸⁹ There has also been an increase in the percentage of facilities with an Alzheimer's unit and more residents appear to need assistance with activities of daily living. For example, it was reported that on average 96 percent of residents at the facility level needed assistance with bathing in 2015, compared to the national average of 89 percent of residents in 1985.⁹⁰ Also the percentage of residents with bladder incontinence has also increased over the years from 49.3 to 62.1 percent.³

Furthermore, there appears to be an increase in the proportion of younger residents, under 65 years of age, in part due to severe mental illness and substance use disorders, who have different needs from the traditional

nursing home population.⁹¹ Given the variation in resident acuity and complexity of care required for a facility's unique resident population, facilities must make thoughtful, informed staffing plans and decisions that are focused on meeting resident needs, including maintaining or improving resident safety and quality of life, which will often result in the need for a facility to staff above the minimum nurse staffing requirement. Based on the needs of its resident population, an individual facility may need to maintain levels of HPRD for RN, NA and other staffing that surpasses the proposed minimum nurse staffing HPRD.

This need for increased staff would be evidenced by the facility assessment (§ 483.70(e)) and resident assessments (§ 483.20) which would require facilities to make staffing and care planning decisions that account for resident acuity, physical/cognitive abilities, conditions, diagnoses, etc. . . . Compliance with the numerical minimum staffing requirement is necessary but not necessarily sufficient to meet staffing needs for every facility. Later in this proposed rule, we discuss an additional element of this comprehensive proposal, revising the facility assessment requirement at § 483.70(e) which we believe would help avoid the unintended consequence of facilities inappropriately staffing at the minimum staffing requirement.

We note that, as discussed previously, while the 0.55 and 2.45 HPRD standards were developed using case-mix adjusted data sources, the standards themselves will be implemented and enforced independent of a facility's case-mix. In other words, facilities must meet the 0.55 RN and 2.45 NA HPRD standards, regardless of the individual facility's patient case-mix. Based on the October 2021 Care Compare data, we estimate that approximately 6,094 facilities are staffed below a level of 0.55 for RNs, and approximately 9,998 are currently staffed below a level of 2.45 for NAs out of an estimated 14,688 total facilities with complete information. These estimates do not reflect proposed exemptions discussed below. Similarly, we recognize that there are facilities currently staffing at levels greater than or equal to 0.55 RN HPRD (n=8,594) and 2.45 NA HPRD (n=4,690) who would not be directly impacted by this proposed policy at this time. However, staffing should be assessed on an ongoing basis and we emphasize that

⁸⁹ M. Barton Laws, Aly Beeman, Sylvia Haigh, Ira B. Wilson, Renée R. Shield, Prevalence of Serious Mental Illness and Under 65 Population in Nursing Homes Continues to Grow. *Journal of the American Medical Directors Association*, Volume 23, Issue 7, 2022, Pages 1262–1263, <https://doi.org/10.1016/j.jamda.2021.10.020>.

⁹⁰ Fashaw, Shekinah A et al. "Thirty-Year Trends in Nursing Home Composition and Quality Since the Passage of the Omnibus Reconciliation Act." *Journal of the American Medical Directors Association* vol. 21.2 (2020): 233–239. doi:10.1016/j.jamda.2019.07.004.

⁹¹ Laws, M Barton et al. "Changes in Nursing Home Populations Challenge Practice and Policy." *Policy, politics & nursing practice* vol. 23.4 (2022): 238–248. doi:10.1177/15271544221118315.

the facility must provide adequate nursing care to meet the needs of each resident.

Typical characteristics of LTC facilities that may need to staff up to meet this minimum requirement, based on having current staffing, below the proposed levels are:

- For-profit facilities (compared to government and non-profit facilities).
- Larger facilities.
- Freestanding LTC facilities (relative to hospital-based).
- Facilities that are part of a Continuing Care Retirement Community.
- Facilities with higher shares of Medicaid residents.
- Facilities that are Special Focus Facilities (SFF) or SFF candidates.
- Rural facilities.

We note that the existing statutory waiver for Medicaid NFs, authorized by section 1919(b)(4)(C)(ii) of the Act and implemented at § 483.35(e) for a State to waive the requirements of § 483.35(b) to provide licensed nurses on a 24-hour basis would still be in place for NFs to pursue through the current waiver process. The statutory waiver is discussed further under Section II.B. 3. “Hardship Exemption from the Minimum Hours Per Resident Day Requirements for RNs and NAs.” In addition, we propose to add new paragraphs (a)(1)(iii) and (iv) to existing § 483.35 to specify that facilities may be exempted from the minimum HPRD requirement for RNs and NAs using separate criteria, and to indicate the period of time that will be assessed to determine compliance.

At new § 483.35(a)(1)(iii), we propose facilities that are found non-compliant with the HPRD requirement for RNs and NAs and meet certain eligibility criteria may be exempted from the 0.55 HPRD for RNs and/or 2.45 HPRD for NAs requirements. The details of this exemption framework and the specific eligibility criteria are discussed further in section II.B.3. “Hardship Exemption from the Minimum Hours Per Resident Day Requirements for RNs and NAs.” of this rule. At new § 483.35(a)(1)(iv), we propose that determinations of compliance with minimum HPRD requirements for RNs and NAs will be made based on the most recent available quarter of PBJ System data submitted in accordance with the requirements at existing § 483.70(p) (“Mandatory Submission of Staffing Information Based on Payroll Data in a Uniform Format”).

We solicit comments on the timeframe used to determine compliance with the minimum HPRD, specifically if the lookback period

should be longer, for example 1 year to cover a full certification period, or some other timeframe to ensure the most reliable and realistic assessment of staffing data. We also invite public comments on the following proposals discussed in this section. As highlighted throughout the discussion, we acknowledge multiple avenues for establishing a minimum nurse staffing requirement. Based on the proposed policy presented in this rule, we are seeking feedback regarding whether or not alternative policy options are necessary to meet and maintain acceptable quality and safety within LTC facilities, while balancing a facility’s ability to comply and ensure access to care.

In developing the proposed rule, we considered varying staffing models that are available and different approaches we could have adopted for establishing minimum nurse staffing standards. For example, we could have adopted multiple different types of combinations of staffing requirements, such as a four-part requirement (inclusive of a total nurse staffing ratio, RNs, LPN/LVNs, and NAs) or a three-part requirement (inclusive of a total nursing staffing ratio, RNs, NAs or separate standards for RNs, LPN/LVNs, and NAs). We also considered that LTC facilities differed across States in their reliance on LPN/LVNs, which was one of the reasons that we did not set a minimum requirement for LPN/LVNs, in addition to available evidence on LPN/LVN associations with safety and high—quality care.

Alternatively, we could have proposed staffing requirements for professionals such as social workers, therapists, feeding assistants and other non—nurse staff in the minimum staffing requirement. However, the HPRD reported in PBJ System data for non-nurse staff were insufficient for use in establishing minimum staffing requirements at this time.

We propose to use HPRD that LTC facilities self-report to CMS and currently reported and auditable in the CMS’ PBJ System. However, we recognize that staffing levels can be measured in at least 19 different ways with HPRD being the most frequently used.⁹² This includes measuring staffing levels as either full time equivalent per resident, full time equivalent per 100 beds, minutes per resident day, or nursing staff to resident ratios. Alternative minimum staffing policy

options could also focus on the need to increase or decrease the number of HPRD or FTEs by nurse staff and/or type or on specifying the number by shift (including day, evening, night, or weekends or over a 24-hour period).

We are soliciting comments on establishing a total nurse staffing standard such as 3.48 HPRD among other alternatives, in place of a requirement only for RNs and NAs, or in addition to a requirement for RNs and NAs. For example, we considered an alternative 3.48 HPRD for the total nurse staffing standard—inclusive of the 0.55 HPRD RN and 2.45 HPRD NA minimum standards—based on the evidence from the 2022 Nursing Home Staffing Study, in addition to other factors discussed throughout the proposed rule. We considered 0.55 HPRD for RNs and 2.45 HPRD for NAs as a part of this alternative total nurse staffing standard based on the evidence from the 2022 Nursing Home Staffing Study and other inputs; 0.55 HPRD for RN and 2.45 HPRD for NA staffing were found to be positively associated with safety and quality. Furthermore, NAs spend the most time providing care to residents by assisting with activities of daily living (for example, feeding, bathing, and dressing). Including an overarching minimum total staffing standard, such as 3.48 HPRD, could enable LTC facilities flexibility on staffing while protecting residents from preventable negative outcomes and would discourage facilities that currently meet the individual RN and NA minimums from decreasing total staffing. We seek comments on the necessity of a total staffing standard and whether a total staffing standard should be adopted alongside individual standards. We specifically seek comment on a standard of 3.48 HPRD among other alternatives.

To maximize the usefulness of the feedback from interested parties on alternative policy options, we emphasize that the recommended policy must support and promote acceptable quality and safety in LTC facilities as the intended goal. We seek comments on the effectiveness of a minimum staffing standard in maintaining quality and safety and ways to minimize administrative burden, both for LTC facilities and for CMS in maintaining and enforcing such a standard and enhance compliance among LTC facilities through the use of automated data collection techniques or other forms of information technology.

We encourage commenters to submit evidence and data to support their recommendations to the extent possible. All comments will be reviewed and analyzed, including consideration for

⁹² Clemes, S., Wodchis, W., McGilton, K., McGrail, K., & McMaho, M. (2021). The relationship between quality and staffing in long-term care: A systematic review of the literature 2008–2020. *International Journal of Nursing Studies*, 122, <https://doi.org/10.1016/j.ijnurstu.2021.104036>.

potential future rulemaking. We welcome comments on the following questions:

- What are the benefits and trade-offs associated with a two-part minimum nurse staffing standard as proposed (inclusive of RNs and NAs) relative to a three-part standard (inclusive of a 3.48 HPRD for total nurse staffing, RNs, and NAs) or a four-part standard (inclusive of a total nurse staffing ratio, RNs, LPNs/LVNs, and NAs)?

- What evidence did States rely on when they adopted their specific minimum nurse staffing standards, both with respect to HPRD and the inclusion or exclusion of certain nursing staff, and what is the rate of compliance?

- Whether we should consider a case-mix adjusted staffing HPRD for each facility to assess compliance with the minimum staffing standards? A case-mix adjusted staffing HPRD would adjust the minimum staffing levels based on the health status of the residents in each facility (known as “case-mix adjustment”). Specifically, the case-mix adjustment methodology aggregates data from each resident’s assessment (the Minimum Data Set (MDS)) to identify the general level of acuity of each facility’s residents. The level of acuity is then combined with the facility’s self-reported (that is, unadjusted) staffing information to calculate the level of staff the facility has that is equivalent to other facilities.

If we were to adjust the minimum staffing levels based on the health status of the residents in each facility to ensure that staffing levels are adequate to meet the unique needs of the residents in each facility—

- What steps can CMS take to support LTC facilities in predicting what their case-mix adjusted staff might be and hire in expectation of that adjusted staffing level? What resources will facilities need to proactively calculate their existing HPRD for nursing staff, and what may be needed?

- What alternative policies or strategies should we consider to ensure that we enhance compliance, safeguard resident access to care, and minimize provider burden? Are there are other alternative policy strategies we should consider?

b. Registered Nurse (§ 483.35(b)(1))

The existing LTC facility staffing regulations require an RN to be on site 8 consecutive hours a day for 7 days a week (§ 483.35(b)(1)).⁹³ This

requirement serves as a minimum to protect the health and safety of LTC facility residents. In other words, an RN is required to be onsite for a total of 8 consecutive hours out of 24 hours a day. The LTC facility may decide to allocate all 8 consecutive hours of RN time to one day shift or an evening shift for a 24-hour day, similarly to the HPRD proposed for RNs.

However, to prevent avoidable patient safety events, some organizations have recommended higher recommendations to each RN staffing levels. For example, in 2022, the National Academies of Science, Engineering, and Medicine (NASEM) published a report that recommended direct-care RN coverage 24 hours a day, 7 days a week.⁹⁴ Like NASEM, we are concerned that even with minimum HPRD standards, these residents are at risk for preventable safety events when there is no RN on site, particularly during evenings, nights, weekends, and holidays. Therefore, to avoid placing LTC facility residents at risk of preventable safety events due to the absence of an RN, we are proposing to revise § 483.35(b)(1) to require LTC facilities to have an RN onsite 24 hours a day, 7 days a week.

LTC facilities provide care for residents with increasing medically complex and acute health conditions that require substantial resources and care. This care is provided or supervised by an RN. In the FY 2016 final rule, we indicated that CMS was proposing changes to the LTC facility participation requirements to ensure that LTC facilities are providing quality and safe care to medically complex residents among others (81 FR 68688). We noted that not only has the acuity of the resident population generally increased, but there has also been a dramatic increase in the number of residents recovering from an acute episode of major surgery, injury, or illness (sub-acute resident population).

Medicare payment policy has also contributed to higher acuity levels in LTC facilities. After Medicare implemented the prospective payment system for hospitals in 1983, there were shorter hospital stays for Medicare beneficiaries and increased funding for post-acute stays in LTC facilities (80 FR 42168, 42174–42175). This payment policy resulted in a growing sub-acute resident population in LTC facilities that would have previously experienced longer hospital stays. Also, with the

increase in alternatives to LTC facilities, such as assisted-living facilities and home care, LTC facilities are caring for more dependent residents who require more complex basic medical care and rehabilitative services. In addition, LTC facilities are caring for a significant number of residents with dementia, depression, or other behavioral health issues. LTC facilities today have even been referred to as “mini-hospitals.”⁹⁵

While RNs and LPNs/LVNs appear to provide some similar nursing services, such as administering medications, there are crucial differences. Compared to LPNs and LVNs, RNs’ scope of practice is broader and they receive more education.⁹⁶ Most importantly, RNs practice independently and are qualified to conduct clinical nursing assessments, whereas LPNs and LVNs require an RN or a physician’s supervision. This is a critical feature in the RN scope of practice given the higher acuity of today’s LTC facility resident population and the need to properly clinically assess residents to ensure they are receiving the appropriate care. Also, it has been reported in the literature that LPN/LVNs may find themselves practicing outside their scope of practice when there is not sufficient RN staffing in a facility to provide direct or supervised resident care (80 FR 42168, 42200). Thus, we are also proposing that the RN be available to provide direct resident care around the clock.

For several decades, studies and gray literature materials other than traditional research publications, such as opinion pieces, advocacy materials, and non-statistically rigorous research published by government agencies have recommended an RN onsite 24–7 in LTC facilities for similar reasons. As noted previously in this proposed rule, the 2022 NASEM report, recommended that LTC facilities have 24 hours a day, 7 days a week RN onsite coverage. NASEM noted that most LTC facilities provide care for both short-term residents who require rehabilitation or subacute care and long-term care for residents. While the acuity of short-term residents would vary greatly depending upon their reason for admission and condition, NASEM noted that the long-term care residents typically have multiple chronic conditions that require professional nursing surveillance to

⁹⁴ National Academies of Sciences, Engineering, and Medicine. 2022. *The National Imperative to Improve Nursing Home Quality: Honoring Our Commitment to Residents, Families, and Staff*. Washington, DC: The National Academies Press. <https://doi.org/10.17226/26526>.

monitor the residents for changes that might require hospitalization or potentially be life-threatening.⁹⁷ As noted previously in this rule, it is the RN that has the education, training, and qualifications to conduct clinical nursing assessments. The report also suggested that there be additional RN coverage when needed and that the DON not be counted towards this requirement.

In the 2016 LTC facility final rule,⁹⁸ we noted that several commenters, including the Center for Medicare Advocacy and the California Advocates for Nursing Home Reform, recommended that LTC facilities have 24-hours RN onsite coverage. These commenters argued that 24-hours RN coverage was necessary due to the increased acuity in residents and that expert nursing skill is needed to “anticipate, identify and respond to changes in [a resident’s] condition,” as well as for the residents to have appropriate rehabilitation services and the best chance for being discharged home in a safe and timely manner (80 FR 68754). Other commenters noted that RN staffing was essential for safe and effective resident care.⁹⁹ While we agreed with the commenters on the importance of staffing, and noted that due to their education and licensure, RNs possess the skills that are “essential for timely assessment, intervention and treatment,”¹⁰⁰ we did not establish a minimum nursing staff standard at that time for the reasons noted in the 2016 final regulation. Instead, at § 483.35, we finalized an approach that required the LTC facility to have sufficient nursing staff to assure safety and well-being of each resident as determined by resident assessments and individual plans of care and considering the number and acuity of diagnoses of the facility’s resident population in accordance with the facility assessment required at § 483.70(e). Among other reasons, we did not propose a 24-hour RN onsite requirement due to lack of sufficient data including PBJ System data. As discussed previously in this proposed rule, we did not yet have the data from the PBJ System or another reliable source upon which to base a minimum staffing requirement. We now also have the Abt study discussed above that demonstrated the importance of RNs to the quality-of-care residents receive. Others, including professional nursing

organizations, also contended that the requirements should be focused on resident acuity and the competencies and skill sets of the nursing staff than a specific numerical requirement for categories of staff (80 FR 42168, 42200 and 42201). We were also concerned that some LTC facilities, especially those in rural and underserved areas, might find complying with such a requirement especially challenging (81 FR 68694, 68752, 68755).

We also heard these same concerns reiterated in the FY 2023 SNF PPS RFI comments and the interested parties listening sessions discussed previously. These commenters noted that RNs, by the virtue of their education and training, have diagnostic and assessment skills that other types of nurse staff do not. They noted that LTC facilities have populations with the highest needs and complex medical issues and the availability of RNs for resident assessments is necessary and could prevent avoidable resident hospitalizations. Based on comments received in the FY 2023 SNF PPS RFI, NASEM’s recommendations, and other gray and peer-reviewed literature, we propose that all LTC facilities must have an RN onsite 24 hours a day, 7 days a week at § 483.35(b)(1).

An existing statutory waiver for Medicare SNFs, set out at section 1819(b)(4)(C)(ii) of the Act and implemented at § 483.35(f), permits the Secretary to waive the requirements of § 483.35(b) to provide the services of a RN for more than 40 hours a week, including the director of nursing. This waiver would still be in place for SNFs to pursue through the current waiver process. Facilities would also use this process to pursue a waiver of the 24 hours a day, 7 days a week requirement. However, we discuss certain criteria that may exempt a LTC facility (SNF or NF) from meeting the proposed HPRD levels for RNs and NAs specifically established in § 483.35(a)(1)(i) and (ii) in section III.B.4 of this rule. We welcome comments regarding our proposed requirements for each LTC facility to have an RN on site 24 hours a day, 7 days a week that is available for direct resident care.

In addition to our proposed 24-hour, 7 days a week requirement for an RN, we continue to maintain a separate requirement for the DON. All LTC facilities must designate an RN to serve as the DON on a full-time basis (§ 483.35(b)(2)). The current rule stipulates that the DON can serve as a charge nurse only if the facility has an average daily occupancy of 60 or fewer residents (§ 483.35(b)(3)). Since the DON must be an RN, the DON is

included in the proposed nurse minimum staffing requirements as an RN. All RNs with administrative duties, including the DON, should be available for direct resident care when needed. However, the DON, as well as other nurses with administrative duties, would probably have limited time to devote to direct resident care. We are concerned that for some LTC facilities having the DON as the only RN on site might be insufficient to provide safe and quality care to residents. This concern was also expressed in the NASEM 2022 publication discussed previously, in which the NASEM recommended that the DON not be counted in the requirement for an RN 24 hours, 7 days a week.¹⁰¹ All comments regarding these questions will be reviewed and analyzed, including consideration for potential future rulemaking.

We welcome comments on the following questions:

- Does your facility, or one you are aware of, have an RN onsite 24 hours a day, 7 days a week? If not, how does the facility ensure that staff with the appropriate skill sets and competencies are available to assess and provide care as needed?
- If a requirement for a 24 hour, 7 day a week onsite RN who is available to provide direct resident care does not seem feasible, could a requirement more feasibly be imposed for a RN to be “available” for a certain number of hours during a 24 hour period to assess and provide necessary care or consultation provide safe care for residents? If so, under what circumstances and using what definition of “available”?
- Should the DON be counted towards the 24/7 RN requirement or should the DON only count in particular circumstances or with certain guardrails? Please explain why or why not.
- Are there alternative policy strategies that we should consider to address staffing supply issues such as nursing shortages?

2. Administration (§ 483.70)

We believe that a comprehensive approach to establishing staffing requirements is necessary to ensure that facilities are making thoughtful, informed staffing plans and decisions to support the health, safety, and well-being of residents. In particular, we want to avoid unintended consequences of establishing a minimum nurse

⁹⁷ FN #93, NASEM, p. 58.

staffing requirement that could lead to a regression by those facilities currently staffing above the staffing requirement or facilities only staffing at the minimum level proposed without considering whether resident acuity or resident census, requires additional staffing above that floor. It is our expectation that LTC facilities will consider their capabilities and capacity, as well as the number, acuity, and diagnoses of their residents when developing staffing schedules.

As previously discussed, in 2016, we released a final rule that revised the requirements that LTC facilities must meet to participate in the Medicare and Medicaid Programs.¹⁰² As part of those revisions, we finalized revisions at § 483.70(e), *Administration*, to require facilities to conduct, document, and annually review a facility-wide assessment to determine what resources are necessary to care for its residents competently during both day-to-day operations and emergencies. This facility-wide assessment requires LTC facilities to determine adequate staffing type and level based on the number of residents, resident acuity, range of diagnoses, the content of care plans, and other factors. LTC facilities are also required to address and document in their facility assessments their resident population (that is, number of residents, overall types of care and staff competencies required by residents, and cultural aspects), resources (for example, equipment, and overall personnel), and a facility-based and community-based risk assessment.

While we assumed when we finalized the 2016 rule that most LTC facilities already conducted some type of facility assessment of the resident population and resources required as part of their normal strategic planning, our revisions aimed to ensure that facilities had a formal process for consistently conducting and documenting these assessments and keeping them up-to-date. The formal facility assessment process requires facilities to make thoughtful, person-centered staffing plans and decisions focused on meeting resident needs that may help improve the safety of residents. We believe this approach will help facilities comply with the requirement to have sufficient staff, which is investigated during surveys.

One of the goals of the 2016 revisions to the LTC facility participation requirements for health and safety was

to ensure that our regulations align with current clinical practice and allow flexibility to accommodate multiple care delivery models to meet the needs of diverse populations that receive services in these facilities. As noted previously, given the limitations of the PBJ System data in 2016, we enacted a competency-based approach in the 2016 final rule, that focused on achieving the statutorily mandated outcome of ensuring that each resident is provided care that allows the resident to maintain or attain their highest practicable physical, mental, and psychosocial well-being. The facility assessment requirement was central to the revised 2016 LTC facility participation requirements, and was intended to be used by the facility for multiple purposes, including, but not limited to, determining adequate staffing and other resources, establishing a Quality Assurance and Performance Improvement (QAPI) program, and conducting emergency preparedness planning.

Our expectation was that the application and development of the facility assessment requirement and competence-based staffing decisions would involve every service provided by a LTC facility and apply to all staff, including the interdisciplinary team. For example, a facility that provides dementia care would need to ensure that it has a sufficient number of staff with the necessary skill sets and competencies to care for individuals living with dementia. In addition, CMS intended for facilities to use the facility assessment as a resource and planning tool for both short-term (day-to-day) and long-term (strategic) purposes.

As part of the FY2023 SNF PPS proposed rule, we sought public input on how the facility assessment requirement should impact the minimum staffing requirement (87 FR 22720). Many commenters suggested that the facility assessment requirement should be used to complement the minimum staffing requirement and to determine any additional nursing staff that the facility needs, based on the acuity and needs of its resident population. Other commenters shared concerns that the Federal regulations established in 2016 requiring nursing homes to conduct a facility self-assessment have never been adequately enforced or surveyed.

As discussed earlier in this proposed rule, the recent 2022 Nursing Home Staffing Study¹⁰³ included in-person

interviews and surveys with facility leadership, direct care staff, and residents and their family members to better understand the relationship among nurse staffing levels, staffing mix, and the safety and quality of resident care. During interviews, staff respondents (RNs, LPNs, NAs) were asked to identify the number of residents that they could provide with quality and safe care and to recommend minimum staffing requirements. Respondents consistently noted that resident acuity was more important than the actual number of assigned residents in determining whether they could provide quality and safe care based on their staffing assignments. Some respondents suggested minimum staffing requirements in terms of the number of residents per shift/unit, accounting for acuity, that they could safely manage and reported that their usual shift/unit is frequently short-staffed. Some respondents also reported concerns about a potential minimum staffing requirement being set too low, fearing that administrators will understaff shifts, or that the minimum will become the maximum.

Furthermore, we share the concern that there may be facilities who currently exceed the proposed minimum staffing level and could potentially be perversely incentivized to lower their staffing levels to the required minimum staffing levels, rather than continuing to staff above that level to meet the unique care needs of their residents. Therefore, we underscore that in addition to meeting the proposed minimum staffing levels, the facility assessment must continue to be used to determine the necessary resources and staff that the facility requires to care for its residents, regardless of whether or not the facility is staffed at or above the new minimum staffing requirement. Furthermore, we emphasize that a LTC facility's staffing decisions should be based on the specific needs of its resident population and not motivated by cost-savings. Thus, while each LTC facility must comply with the minimum nurse staffing requirements set forth at § 483.35(a), unless the facility qualifies for a hardship exemption under § 483.35(g), the facility must also provide sufficient staff (RNs, licensed nurses, and NAs) to provide nursing care to all residents in accordance with the residents' assessments and individual care plans (§ 483.35—introductory statement). Lastly, we note that this proposed rule is not intended to, and would not preempt the applicability of any State or local law providing a higher standard (in this case, a higher HPRD ratio or an RN

¹⁰² <https://www.federalregister.gov/documents/2016/10/04/2016-23503/medicare-and-medicaid-programs-reform-of-requirements-for-long-term-care-facilities>.

¹⁰³ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Report prepared for the Centers for Medicare and Medicaid Services <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

coverage requirement in excess of one RN on site 24-hours per day, 7 days a week) than would be required by these proposed rules. To the extent Federal standards exceed State and local minimum staffing standards, no Federal pre-emption is implicated because facilities complying with Federal law would also be in compliance with State law. We are not aware of any State or local law providing for a maximum staffing level. However, we note that this proposed rule is intended to and would preempt the applicability of any State or local law providing for a maximum staffing level, to the extent that such a State or local maximum staffing level would prohibit a Medicare and Medicaid certified LTC facility from meeting the minimum HPRD ratios and RN coverage levels proposed in this rule.

To ensure that facilities are utilizing the facility assessment as intended, we are proposing to redesignate the existing requirements for the facility assessment to its own standalone section from § 483.70(e) to proposed § 483.71. We note that we are also proposing technical changes throughout the CFR to replace references to § 483.70(e) with § 483.71 based on this proposed change. Given the importance of the facility assessment requirement and the multiple program ways in which the assessment may be used to inform a facility's decision-making and planning, we believe that the requirements should be set out as a standalone section rather than in the Administration section. In addition, while the responsibility to implement and utilize the facility assessment to inform facility operations belongs to the facility's administrator and governing body, we acknowledge that a multitude of facility leadership and management contribute to the development of the assessment given its importance and broad applicability.

In addition to redesignating (this is, relocating or moving) the existing requirements to a standalone section, we are also proposing clarifications throughout the section to further specify what the facility assessment must be used for. We propose to redesignate the stem statement for current § 483.70(e) to the stem statement for proposed § 483.71. Existing paragraphs § 483.70(e)(1) through (3) identify the key elements of the facility assessment and specify the considerations that the assessment must account for, including the facility's resident population, resources, and the facility and community-based risk assessment which is required to complete as part of the facility's emergency planning. This includes using their assessment of

resident needs to determine the competencies and skill sets their staff needs to provide safe and quality care for the residents. The LTC facility should also use the information from the facility assessment to determine their training needs for its staff. We propose to redesignate § 483.70(e)(1) through (3) as proposed § 483.71(a)(1) through (3), respectively. We note the discussion of the proposed revisions follows the organization of the requirements as presented in the new standalone section we are proposing at § 483.71.

At new paragraph § 483.71(a)(1)(ii), we propose to clarify that facilities would have to address in the facility assessment details of its resident population, including the care required by the resident population, using evidence-based, data driven methods that consider the types of diseases, conditions, physical and behavioral health issues, cognitive disabilities, overall acuity, and other pertinent facts that are present within that population, consistent with and informed by individual resident assessments as required under existing § 483.20 "Resident Assessment.". Specifically, we propose to revise this paragraph by specifying the "use of evidence-based, data driven methods" and create a link to the requirements for the resident assessment. Facilities are expected to update their facility assessment as needed, no less than annually, using evidence-based, data-driven methods, that consider the needs of their residents and the competencies of their staff. For example, facilities need to be able to describe residents' acuity levels in order to understand the care and services required, and we would expect that they refer to data sources such as the resident assessments; comprehensive care plans; MDS; RUG-IV categories, if available; or, other resident acuity tools. Assessing acuity levels and effectively using MDS and discharge planning are also an important part of ensuring that an individual can return to the community whenever possible in the least restrictive environment.

In addition, existing regulations at § 483.40 require LTC facilities to provide each resident with the necessary behavioral health care and services for the resident to attain or maintain the highest practicable physical, mental, and psychosocial well-being, in accordance with his or her comprehensive assessment and plan of care. Hence, we also propose to revise this paragraph to add "behavioral health issues" to clarify that LTC facilities must consider their residents' physical

and behavioral health issues. We are also concerned with issues of inaccurate MDS coding of residents with a diagnosis of schizophrenia and are taking action to reduce the inappropriate use of antipsychotics without clinical indication in nursing homes.¹⁰⁴ Therefore, we believe these revisions are necessary to ensure that facilities are providing residents with appropriate services and care for behavioral health. At new § 483.71(a)(1)(iii), we propose to add "and skill sets" so the requirement reads, "(iii) The staff competencies and skill sets that are necessary to provide the level and types of care needed for the resident population." At new § 483.71(a)(3), we propose to add a cross-reference to the existing requirements for facilities to conduct a facility and community-based risk assessment as part of their emergency planning resources.

At new § 483.71(a)(4), we propose to require facilities to include the input of facility staff, including but not limited to categories such as nursing home leadership, management, direct care staff and their representatives, and staff providing other services. A comprehensive assessment of what resources are required for a LTC facility to provide safe care for its resident population requires the input from facility staff familiar with all of its essential services. Nursing staff working in facilities can provide information to facility management regarding their caseload and how many residents they believe they can safely provide quality care to on a daily basis. Nursing staff are also familiar with the unique needs of their resident population and can speak to the staffing needs at both a shift and unit level.

In addition, direct care employee representation in the facility assessment is critically important to securing an accurate analysis of staffing needs required to ensure resident health and safety. Direct care employees and their representatives are uniquely positioned to assess and communicate what staffing competencies and levels, as well as equipment and other resources are needed to provide appropriate care. These individuals have a unique understanding of the resident population's health needs because of their on-the-ground knowledge of residents' care needs and facility operations. As examples, direct care employees have distinct perspectives into what additional training is needed to manage increased acuity in resident

¹⁰⁴ <https://www.cms.gov/files/document/qso-23-05-nh.pdf>.

needs; what ethnic, cultural, and religious factors are critical to the provision of culturally competent resident care; and how health information technology may be better leveraged to deliver consistent, quality care according to resident preferences.

Input into the facility assessment from any authorized representatives of direct care employees serves several important functions. Such representatives may sometimes be better positioned to directly communicate about facility conditions and the needs of the resident population on behalf of direct care employees who may fear retaliation from their employer. There may also be circumstances where direct care employees are not fluent in English or not familiar with translating observations into resource categories and want a trusted representative to enable open and effective communication in the facility assessment. Alongside direct care employees, their representatives may also help ensure facility assessments are up-to-date and used to inform facility staffing.

Representatives of direct care employees may take different forms. One scenario of representation may involve union workplaces where employees have designated a union representative, such as an employee or third-party elected local union representative, business agent, or safety and health specialist. Representation may also arise in workplaces without collective bargaining agreements where at least one employee or a subset of employees have designated a representative from amongst themselves or a third-party worker advocacy group, community organization, local safety organization, or labor union to serve as their representative in a facility assessment. For example, employees may choose to authorize a union safety and health specialist to help compile staff observations regarding unmet training needs or communicate safety concerns regarding outdated medical equipment, which they may not otherwise feel comfortable sharing as part of their direct reflections on resident needs.

These benefits of enabling the participation of direct employee representatives are consistent with the demonstrated positive association between union representation and resident well-being. According to a recent study, resident mortality and worker infection rates were lower in nursing homes with union representation compared to those without; specifically, the study found unions were associated with 10.8

percent lower resident COVID-19 mortality rates and 6.8 percent lower worker infection rates.¹⁰⁵ We are soliciting public comments on additional studies and data that demonstrate the benefits of the participation of direct employee representatives in the facility assessment process.

Other staff, including but not limited to those in food and nutrition, pharmacy, and facility services, could provide vital information on essential services and resources required to care for the resident population. If the LTC facility provides other services including but not limited to physical therapy or dialysis, it should include input from staff familiar with these services as well. A comprehensive assessment of what resources are required for a LTC facility to provide safe care for its resident population requires the input from facility staff familiar with all of its essential services. We encourage LTC facilities to include the input of not only those personnel from the specifically mentioned areas in the proposed requirement, but also of staff from all areas and their representatives that provide essential services or resources for residents. We request comments on the operational challenges or burdens of this provision as well as how CMS can best provide oversight of this proposed requirement.

We propose at new § 483.71(b)(1) to require facilities to use the facility assessment to inform staffing decisions to ensure appropriate staff are available with the necessary competencies and skill sets necessary to care for its residents' needs as identified through resident assessments and plans of care as required in § 483.35(a)(3). This requirement will help to address some outstanding concerns due to limitations in the PBJ System. While PBJ System data has allowed for additional insight into the staffing levels of facilities, there remain some limitations as to what that data can tell us regarding how facilities are staffed. For example, PBJ System data cannot give us insight into how different resident units are staffed. There are some units in LTC facilities that require higher levels of care based upon the resident acuity, such as memory care or ventilator units. PBJ System data also does not provide information regarding how different shifts are staffed within a LTC facility. The Government Accountability Office, HHS, and OIG have raised concerns

¹⁰⁵ Dean, A., McCallum, J. et al. Resident Mortality And Worker Infection Rates From COVID-19 Lower In Union Than Nonunion US Nursing Homes, 2020–21. April 20, 2022. <https://doi.org/10.1377/hlthaff.2021.01687>.

related to inadequate staffing in LTC facilities on the weekends and at night.¹⁰⁶ The new requirement at § 483.71(b)(1) will help address that.

In addition, we propose at new § 483.71(b)(2) to require facilities to use the facility assessment to assess the specific needs for each resident unit in the facility, and to adjust as necessary based on any significant changes in the resident population. Facilities would also be required, at new § 483.71(b)(3), to consider the specific staffing needs for each shift, such as day, evening, night, weekends, and to adjust as necessary based on any significant changes to the resident population.

We propose at new § 483.71(b)(4) that LTC facilities would have to use their facility assessment to develop and maintain a staffing plan to maximize recruitment and retention of nursing staff. This staffing plan requirement is consistent with the aims President Biden articulated in the April 2023 “Executive Order on Increasing Access to High-Quality Care and Supporting Caregivers”.¹⁰⁸ That E.O. directs the Secretary of HHS to consider actions to encourage LTC facilities to reduce nursing staff turnover.¹⁰⁹ This action may help improve quality in LTC facilities since literature evidence suggests that decreases in quality are associated with even a low-to-moderate increase in RN turnover.¹¹⁰ This E.O. also directs the Secretary to consider additional actions to improve retention of nursing staff by advancing efforts to measure and adjust payments based on staff turnover.¹¹¹ For LTC facilities to not only comply with both the current and proposed staffing requirements in this rule but also to achieve the E.O.’s goal of increasing access to higher quality care for LTC facility residents and supporting LTC facility nursing staff, it would be necessary for these facilities to be able to recruit and retain

¹¹¹ FN #107, Section 2(b)(ii).

sufficient numbers of nursing staff with the appropriate education, training, competencies, and skill sets. To meet these objectives, we believe LTC facilities would need a staffing plan to address staff turnover and consider ways to support staff retention. We have not specified how the staffing plan should be developed or what it must contain because we believe that LTC facilities should have flexibility in developing these plans. However, we encourage LTC facilities to assess the compensation package the facility offers its direct care staff as part of developing the staffing plan. We request comments on the operational challenges or burdens of this provision, as well as how CMS can best provide oversight of this proposed requirement.

We are aware that the COVID-19 PHE has had an impact on the availability of nursing staff in many States, with more facilities needing to use temporary staffing agencies to fill positions, and we want to ensure that facilities have a plan in place should staffing shortages impact their ability to safely provide care to their residents. At proposed § 483.71(b)(5), we are proposing to require facilities to use the facility assessment to inform contingency planning for events that do not require the activation of the facility's emergency plan but do have the potential to impact resident care. For example, facilities should have a contingency plan in place in the event that there is unavailability of direct care nursing staff or other resources needed for resident care.

In summary, we note that the facility assessment works in conjunction with the minimum nursing staff requirements proposed in § 483.35. While we propose to require all LTC facilities (subject to exemptions) to comply with the minimum nursing staffing requirements as set forth at § 483.35(a), those minimum standards are only the beginning. By conducting the facility assessment, the facility will be able to determine what is sufficient staffing, as required by § 483.35(a), for its resident population. The facility assessment will determine not only the sufficient number of staff, but also what competencies and skill sets that staff needs to provide safe care for the resident population. Thus, we emphasize that all LTC facilities must comply with the nursing staff minimums; however, these minimums alone are not targets nor a safe harbor, and facilities may need to staff above the minimum requirements proposed in this rule to satisfy the requirement for sufficient staffing. Conducting the facility assessment will determine not only the number of staff but also the

competencies and skill sets that staff must possess to provide safe and high-quality care for the facility's resident population as identified through resident assessments and plans of care as required in existing § 483.35(a)(3).

3. Hardship Exemption From the Minimum Hours per Resident Day Requirements for RNs and NAs

As noted earlier, we are proposing a hardship exemption to the HPRD requirements portion of the minimum staffing standards. The exemption would apply only to the RN and/or NA HPRD requirements and is separate and distinct from existing the existing statutory waiver process that addresses, in particular, overarching RN staffing requirements. While we acknowledge the potential for overlap between the exemption and the waiver (that is, a 24/7 RN may meet the HPRD requirement), each of the minimum staffing requirements independently supports resident health and safety. Therefore, meeting the 24/7 requirement does not also count as meeting the 0.55 RN HPRD and 2.45 NA HPRD and vice versa. Specifically, as discussed elsewhere in this rule, the presence of an RN in a LTC facility on a 24-hour basis improves overall quality of care. Similarly, but separately, a minimum number of RN and NA hours per resident per day improve overall quality of care. Both independently and collaboratively, these requirements support meeting statutory mandates to provide services to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident, in accordance with a written plan of care. Both the exemptions and the waiver are discussed in more detail below.

We fully expect that LTC facilities will be able to comply with our proposed standards for nursing staff. However, we recognize that some interested parties have expressed that, in some instances, external circumstances may prevent a LTC facility from meeting our proposed minimum staffing requirements, despite the LTC facility's best efforts. We note, for example, that the COVID-19 PHE exacerbated workforce unavailability issues for some LTC facilities. Some LTC facilities may be challenged in hiring and retaining nursing staff such as registered nurses and certified nursing assistants due to local workforce unavailability, while others may need to improve pay and job quality in order to attract and retain staff, given competition from higher-paying positions or alternate career paths. A 2020 Assistant Secretary for

Planning and Evaluation (ASPE) Report found that the COVID-19 PHE contributed to staffing shortages and health care worker attrition, pushing nursing homes to create and implement new recruitment infrastructures, increase wages, and augment benefits to retain staff.¹¹² As noted in the FY 2023 SNF PPS RFI comments and by interested parties during the CMS hosted listening sessions previously discussed, there is concern from LTC trade associations about whether there is adequate staffing available to meet resident needs and about the feasibility of increasing staffing over a short timeframe given workforce and cost considerations. LTC facility staff interviewees who were part of the qualitative portion of the 2022 Nursing Home Staffing Study¹¹³ also shared concerns about unintended consequences of requiring minimum staffing levels, with fears that some nursing homes could be forced to close if they cannot come into compliance with the minimum requirements.

According to the Bureau of Labor Statistics (BLS), in March 2020, there were 3,372,000 health care staff working in nursing homes and other LTC facilities. This dropped to a low of 2,961,200 in January 2022, a loss of 410,000 staff. This is rebounding, as of June 2023 there are roughly 235,900 fewer health care staff working in nursing homes and other LTC facilities compared to March of 2020.¹¹⁴ The decline in staff coincided with decreasing LTC facility census beginning in March 2020, as noted below. A January 2023 AHCA/NCAL Report analyzing BLS data notes that other health care sectors (Physician Offices, Outpatient settings, Home Health, and Hospitals) rebounded more quickly than the nursing home sector. This difference in return to employment may have been driven by the comparatively low pay and difficult working conditions for nursing home workers.¹¹⁵ Commenters to the FY 2023

¹¹⁵ <https://www.ahcanal.org/News-and-Communications/Fact-Sheets/FactSheets/LTC-Jobs-Report-Jan2023.pdf>.

SNF PPS RFI noted concerns such as, “We are losing many long-term employees to jobs with better salaries and many of these jobs are not in healthcare. New hires are demanding a higher starting salary as well as large sign on bonuses.” Several labor and consumer advocacy groups noted competitive wages as a driving factor in staff retention/recruitment. Based on our estimations detailed in section VI. (Regulatory Impact Analysis), of this rule, we expect that a total of 12,639 additional RNs and 76,376 additional NAs will be needed to meet our proposed HPRD requirements, before accounting for any exemptions. In particular, we recognize that lower staffed nursing homes are more likely to be for-profit, larger, rural, and have a higher share of Medicaid residents.¹¹⁶ Some recent developments, however, should ease staffing difficulties at LTC facilities. According to BLS data, as of January 2022, the number of LTC facility staff has begun to rebound. The number of health care staff working in nursing homes and other LTC facilities as of June 2023 is 3,136,100, with preliminary data indicating continued rebound.¹¹⁷ Furthermore, beginning in March 2020, facility census declined. By the end of September 2020, nursing home census had declined by an average of nine residents per nursing home, going from an average of 86 residents in January 2020 to 77 residents in September 2020.¹¹⁸

We recognize that LTC facility workers—disproportionately women of color—are among the lowest-paid in the country and often have to rely on public benefits despite working complex and demanding jobs. In addition, poor working conditions in LTC facilities have been found to influence the quality of care provided to residents.¹¹⁹

Investments in the care workforce, including competitive wages, are foundational to helping to retain LTC facility workers and improving health and educational outcomes. Unfortunately, lack of transparency regarding nursing home finances, operations, and ownership impedes the ability to fully understand how current resources are allocated.¹²⁰ This obscures evaluation of the industry’s ability to absorb the costs of increased staffing and improved working conditions. It is the policy of the Biden-Harris Administration to ensure that the LTC workforce is supported, valued, and well-paid. Indeed, as previously noted, on April 18, 2023, President Biden issued an E.O. on Increasing Access to High Quality Care and Supporting Caregivers. Section 2 of that E.O. addresses Increasing Compensation and Improving Job Quality for Family Caregivers, Early Educators, and Long-Term Care Workers.¹²¹

To improve working conditions and job quality in federally-funded LTC facility programs, we are encouraging providers to establish incentives to recruit and retain LTC facility workers, help prevent burnout, make it as easy as possible for LTC facility workers to access behavioral health services, and improve the care that individuals receive. The considerations described above, ranging from workforce issues exacerbated by the COVID–19 pandemic, to persistently low wages and benefits, and poor working conditions for the direct care workforce, have informed our approach to the proposed minimum staffing standards, including the 0.55 RN and 2.45 NA HPRD requirements and the proposed exemptions.

The goal of the proposed minimum nursing staffing requirement is to ensure that residents receive safe and high-quality care. It is our intention to balance this goal with the need to ensure access to care, which is an important health and safety consideration. Therefore, CMS is proposing a hardship exemption to the minimum staffing standards, either the 0.55 RN or the 2.45 NA HPRD requirements, or both, proposed at

§ 483.35(a)(1)(i) and (ii). These proposed exemptions will help to address the current workforce constraints in certain jurisdictions and other potential barriers that some LTC facilities may be experiencing in the wake of the COVID–19 PHE, and to ensure that our proposals do not unintentionally create access issues. Specifically, we propose to re-designate the existing requirements for nurse staffing information at existing § 483.35(g) to a new paragraph (h). We propose at new § 483.35(g) to allow LTC facilities with a verifiable hardship that precludes the LTC facility from achieving or maintaining compliance to be exempt from one or both of the proposed requirements at § 483.35(a)(1)(i) and (a)(1)(ii). Given the complex health needs of LTC residents, to protect resident health and safety, we believe that it is important for exempted LTC facilities to maintain compliance with the 24/7 RN requirement as there are longstanding concerns related to low staffing levels in LTC facilities on weekends and evenings and ongoing RN presence is needed to provide care and monitor resident health. That requirement may be waived only through the waiver process implemented at § 483.35(f) and described below.

In developing our proposed minimum standards for nurse staffing, we recognized that sections 1819(b)(4)(C)(ii) and 1919(b)(4)(C)(ii) of the Act established a waiver process for RN/licensed nurse staffing in LTC facilities. We therefore considered whether or not a similar mechanism would be appropriate for minimum HPRD requirements. We determined, in the same spirit as the existing waiver process, to propose exemptions intended to address underlying workforce unavailability concerns, especially in rural and other underserved areas, while balancing the need for efforts by LTC facilities to recruit staff and improve quality of care. While allowing for these exemptions, we note that each LTC facility must still comply with its statutory and regulatory obligations to have sufficient staff to assure resident safety, and to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident.

These exemptions, while serving a similar purpose, differ from, but are not inconsistent with the waiver for RN and licensed nurse staffing under sections 1819(b)(4)(C)(ii) and 1919(b)(4)(C)(ii) of the Act. The waiver provisions are implemented at § 483.35 (e) and (f). The proposed exemptions will be located at § 483.35(g). We emphasize that the exemptions apply only to the

¹²¹ <https://www.whitehouse.gov/briefing-room/presidential-actions/2023/04/18/executive-order-on-increasing-access-to-high-quality-care-and-supporting-caregivers/>.

requirements at § 483.35(a)(1)(i) and (ii) for LTC facilities to meet minimum HPRD staffing requirements for RNs and NAs, while the statutory waiver applies specifically to either RN or licensed nurse services more broadly. Both take into consideration ensuring staff sufficiency to achieve resident safety and well-being, but will be different processes.

The proposed exemption process would be implemented with as little administrative burden on LTC facilities as possible, while also limiting opportunities for inappropriate granting of exemptions; it would also ensure that we are aware of the staffing status of the LTC facility. To obtain an exemption, a LTC facility must demonstrate that it has been unable to recruit appropriate personnel. In addition, the facility remains obligated to ensure the health and safety of facility residents. Therefore, prior to being granted an exemption, the LTC facility must be surveyed to assess the health and safety of the residents. If a LTC facility is found noncompliant with the minimum staffing requirements and does not meet the exclusionary criteria discussed below, the LTC facility's documentation of a good faith effort to hire and retain staff and the LTC facility's documentation of financial commitment must be submitted to CMS. If a LTC facility meets the exclusionary criteria, it will not be considered for an exemption. Such criteria include that the LTC facility must not have failed to submit PBJ System data in accordance with re-designated § 483.70(p), must not be an SFF facility, and must not have been cited by us as having "widespread" or "a pattern of insufficient staffing with resultant resident harm" or at an "Immediate Jeopardy to resident health and safety" level of severity with respect to understaffing within the 12 months preceding the survey during which the facility's non-compliance is identified. We note that the exemptions do not have a separate requirement for the availability of an RN or physician for immediate response, as the exemptions do not relieve the LTC facility of its obligation to have 24/7 RN presence. If a LTC facility were to obtain a waiver of RN/licensed nurse staffing through the existing waiver process, the LTC facility would provide assurances related to having necessary staff availability, among other assurances, as part of that process to obtain such a waiver. We intend to make publicly available information on LTC facilities that have an exemption to the minimum

staffing requirements, to assist residents and families in choosing a LTC facility.

To qualify for a hardship exemption, we are proposing that LTC facilities must meet all of the criteria specified at § 483.35(g)(1) through (4). Those criteria include:

1. *Location (proposed § 483.35(g)(1))*: To meet the criterion for location, a LTC facility must either be located:

a. In an area where the supply of the applicable health care staff (either RN, or NA, or both) is not sufficient to meet geographic area needs as evidenced by either a medium (that is, 20 percent below the national average) or low (that is, 40 percent below national average) provider-population ratio for nursing workforce (§ 483.35(g)(1)(i)), as calculated by us, currently by using Bureau of Labor Statistics and Census Bureau data, or

b. Twenty miles or more from the next closest LTC facility, as determined by CMS (§ 483.35(g)(1)(ii)).

2. *Demonstrated Good Faith Effort to Hire and Retain Staff (proposed § 483.35(g)(2))*: To meet the criterion for demonstrated good faith effort to hire and retain nursing staff, a LTC facility must be surveyed and cited as noncompliant with the minimum staffing requirements, while not meeting the exclusionary criteria in section 4. To meet this good faith effort criterion, a LTC facility must have developed and implemented a recruitment and retention plan, as required at proposed § 483.71(b)(5), and must demonstrate that it has been unable, despite diligent efforts including offering prevailing wages, to recruit and retain appropriate nursing staff including NAs. The LTC facility must document recruitment efforts. Such documentation is expected to include job listings in commonly used recruitment forums found online, at American Job Centers (coordinated by the U.S. Department of Labor's Employment and Training Administration), and other forums as appropriate (§ 483.35(g)(2)(i)), job vacancies including the number and duration of vacancies, and offers made (§ 483.35(g)(2)(ii)). The documentation must show that offers are made at prevailing wages or better, as reflected by looking at data on the average wages in the Metropolitan Statistical Area in which the LTC facility is located, and vacancies by industry as reported by the Bureau of Labor Statistics or by the State's Department of Labor (§ 483.35(g)(2)(iii)). This look-back would occur for the time period following when the vacancies occurred. Generally, we would expect that to be a 4- to 6-month period, but could encompass the full year, based on

circumstances around the vacancies. Finally, the documentation must include the LTC facility's staffing plan in accordance with proposed § 483.71(b)(4).

3. *Demonstrated Financial Commitment (proposed § 483.35(g)(3))*:

To meet the criterion for financial commitment, a LTC facility must be surveyed and cited as noncompliant with the minimum staffing requirements, while not meeting the exclusionary criteria in section 4. Once a finding of noncompliance has occurred, the LTC facility must demonstrate through documentation the financial resources that the LTC facility expends annually on nurse staffing relative to revenue.

4. *Exclusions*. LTC Facilities must not have failed to submit PBJ System data in accordance with re-designated § 483.70(p), must not have been determined by us to be an SFF facility, and must not have been cited by us as having "widespread insufficient staffing with resultant resident harm" or "a pattern of insufficient staffing with resultant resident harm", or at an "Immediate Jeopardy to resident health and safety" level of severity with respect to understaffing within the 12 months preceding the survey during which the facility's non-compliance is identified.

With respect to location, we are proposing that LTC facilities meet one of two distinct sub criterion to qualify for an exemption. If an LTC meets one of those criteria, they would then be evaluated for fulfilling the remaining criteria listed above.

The first sub criterion applies to LTC facilities that are located in a geographical area that has a shortage of RNs and/or NAs. We define the geographical area as the metropolitan statistical area (MSA) or non-metropolitan statistical area (non-MSA) where the LTC facility is located using data from the U.S. Bureau of Labor Statistics (available at https://www.bls.gov/oes/current/msa_def.htm). We determine that there is a "shortage" when the MSA or non-MSA has a RN and/or NA to population ratio that is 20 percent below the national average. We provide the definitions of both medium and low provider to population ratio to facilitate comment on the appropriate level to use.

To calculate whether a LTC facility is in an area with a shortage of RNs or NAs, we first use the Care Compare data to identify the State and county where each LTC facility is located. We then combine these data with information from the U.S. Bureau of Labor Statistics (available at <https://www.bls.gov/oes/>

current/msa_def.htm) on the counties in each MSA and non-MSA to identify the MSA or non-MSA where each LTC facility is located. Next, we identify the total number of RNs and NAs in each MSA and non-MSA using the Bureau of Labor Statistics's Occupational Employment and Wage Statistics Query System (available at <https://data.bls.gov/oes/#/home>). Afterwards, we calculate the population for each MSA or non-MSA using population estimates from the United States Census Bureau by summing the population for all counties in the MSA or non-MSA (available at <https://www.census.gov/data/tables/time-series/demo/popest/2020s-counties-total.html#v2022>).

Finally, we calculate whether the LTC facility is located in an MSA or a non-MSA with a medium or low provider-to-population ratio by comparing the area's provider-to-population ratio to the average provider-to-population ratio for the United States.

The second location sub criterion is distance to the next closest LTC facility. We are proposing this alternative distance criterion to address potential workforce unavailability within an MSA or non-MSA that overall has adequate workforce availability, but may have pockets within it that are experiencing shortages. We note that MSA and non-MSA's may be quite large—for example, one MSA extends from Arlington, VA to West Virginia. Particularly for NAs, the availability, or lack thereof, of public transportation in some areas, and the costs and availability of private transportation can make long work commutes unfeasible. We also recognize there may be access to care concerns should a LTC facility limit admissions or close as a result of staff unavailability within a particular community. In addition to access to care and workforce availability issues, we also recognize the burden on residents and resident families when loved ones have to be located in LTC facilities (or relocated to

LTC facilities) at a distance that makes family visitation and participation in care difficult. According to a 2021 study, “travel time has a substantively and statistically significant negative association on visit probability for all age groups”.¹²²

We considered mileage increments from 15 to 50 miles for this alternative criterion. After considering the number of LTC facilities impacted, the overlap of the provider-population ratio, and consideration of travel for both staff and visitors, we determined that 20 miles best addressed these factors compared to a 15-mile increment. As noted below, we welcome comment on this mileage and the factors we should consider in determining an appropriate mileage criterion. We note that all certified nursing homes are geocoded into CMS' online survey and enforcement system. This allows us to easily and accurately calculate the exact distance of LTC facilities to one another. The following chart provides our analyses of distances.

TABLE 3—LTC FACILITIES AT VARIOUS DISTANCES FROM NEXT CLOSEST LTC FACILITY

Distance	# of LTC Facilities without any other LTC facility nearby	% of LTC Facilities without any other LTC facility nearby (percent)
Within 15 miles	852	5.6
Within 20 miles	422	2.8
Within 25 miles	223	1.5
Within 30 miles	155	1.0
Within 35 miles	106	0.7
Within 50 miles	40	0.3

Note: The analysis includes 15,089 LTC facilities (1) active as February 2023 and (2) with non-missing values in latitude or longitude.

There are three exclusions from the exemption criteria. First, LTC facilities must be in compliance with requirements for the submission of PBJ System data. This data is critical to our evaluation of LTC facility staffing. Next, sections 1819(f)(8) and 1919(f)(10) of the Act require us to maintain a SFF program for enforcement of participation requirements for LTC facilities that have been identified as having substantially failed to meet applicable health and safety requirements. We are statutorily-required to survey these LTC facilities once every 6 months. LTC Facilities designated as SFFs have a history of serious quality issues and are included in this program to stimulate improvements in their quality of care. A LTC facility that is designated as a SFF

is excluded from receiving an exemption from the minimum HPRD staffing requirements.

Finally, most LTC facilities have some deficiencies, but some LTC facilities have significantly more problems than others (about twice the average number of deficiencies), or have more serious problems than most other LTC facilities (including harm or injury experienced by residents, and a pattern of serious problems that have persisted over a long period of time). An OIG report on adverse events in nursing homes noted that 59 percent of adverse events and temporary harm events were clearly or likely preventable, and attributed much of the preventable harm to substandard treatment, inadequate resident monitoring, and failure or delay of necessary care.¹²³ Therefore, while we

are acknowledging the potential for LTC facility constraints that may create access to care issues and providing for exemptions as it relates to the minimum nursing staffing requirement, we must ensure that LTC facilities are providing safe and acceptable care despite any exemption. Therefore, we propose at § 483.35(g)(4)(ii) that LTC facilities that have been cited for “widespread insufficient staffing with resultant resident harm” or “a pattern of insufficient staffing with resultant resident harm” or are cited at the immediate jeopardy level of severity with respect to insufficient staffing within the 12 months preceding the survey during which the facility's non-compliance is identified would also not meet the criteria for an exemption from the requirements at § 483.35(a)(1)(i) and

¹²³ Adverse Events in Skilled Nursing Facilities: National Incidence Among Medicare Beneficiaries, Department of Health and Human Services, Office of Inspector General.

(ii). Due to the serious quality issues with these LTC facilities and the intent of the proposed requirement, we believe it is necessary to exclude these LTC facilities from the exemption to maintain the health and safety of residents residing in these LTC facilities.

We emphasize again that the exemptions apply only to the requirements at § 483.35(a)(1)(i) and (ii) for LTC facilities to meet minimum HPRD staffing requirements for RNs and NAs. As such, LTC facilities that qualify for an exemption would still be required to comply with the base requirement at § 483.35(a)(1) that LTC facilities provide services by a sufficient number of [nursing] staff on a 24-hour basis to provide nursing care to all residents in accordance with resident care plans, as well as the proposed requirement at § 483.35(b)(1), for a LTC facility to provide onsite RN coverage 24 hours a day, 7 days a week; the proposed requirements at § 483.71, to conduct a facility assessment; as well as the multitude of additional minimum health and safety standards for LTC facilities in 42 CFR part 483, subpart B. They are expected to make the effort to hire as many RNs and NAs as necessary to meet resident needs. We note that LTC facilities remain able to apply for a waiver of the RN and licensed nurse staffing requirements, as required by statute and as applicable to the LTC facility. The requirements for such a waiver are set forth in § 483.35 (e) and (f).

Finally, we propose at § 483.35(g)(5) to specify that determinations of eligibility for an exemption are based on paragraphs (g)(1) through (3) and that facilities must provide supporting documentation when requested. At § 483.35(g)(5), we propose that hardship exemptions would be granted for a period of 1-year and could be extended in increments of one additional year, after the initial 1-year period, if the LTC facility continued to meet the exemption criteria without experiencing additional issues that would prevent them from eligibility.

It is our expectation that LTC facilities that qualify for an exemption would make ongoing efforts to increase their capabilities to achieve compliance with the minimum nurse staffing requirement. Likewise, we expect that additional CMS programs, such as the SNF VBP quality measures, will also incentivize facilities to improve staffing at higher levels to both ensure their ability to address resident needs day to day and also to capitalize on incentives that are at their disposal for quality improvements. We solicit comment on

these opportunities for hardship exemptions for facilities. We welcome all feedback but are particularly interested in the following:

- What are additional data sources that CMS can use to verify LTC facility hardships based on location or workforce unavailability and shortages or grant hardship exemptions? For example, the review of health professional shortage areas (HPSAs). Which data source or criterion, or combination of data sources or criteria, could accurately indicate hardship while minimizing burden to facilities?

- Is 20 miles the right distance from the next closest LTC facility to warrant a hardship exemption? What distance from the next closest LTC facility results in a hardship for resident families?

- Are there other criteria CMS should consider for a facility to demonstrate good faith effort to hire and retain nursing staff. Should CMS use BLS's median OES data to determine prevailing wage?

- Are there additional approaches to mitigating access to care concerns that CMS should consider without allowing for exemptions to the minimum nurse staffing requirement?

- Are there additional exclusions to the proposed exemptions that CMS should consider to protect resident health and safety? For example, should we exclude candidates for the SFF program from receiving an exemption?

- Is 12 months the right look-back time frame for exclusions? If not, what is the best time frame? Should it be 15 months? Should it be to and including the last recertification survey?

- Are there additional hardships that CMS should consider? If so, how will such considerations support quality care and protect resident health and safety?

- Should CMS provide an exemption for facilities based on financial difficulty/constraints? If so, what would be an appropriate judgment of a LTC facility's financial status and/or financial effort? Considering the Medicaid transparency proposal discussed in this proposed rule, should CMS identify minimum spending thresholds for direct care staff that facilities must meet before being considered for an exemption? Is there a specific spending to revenue threshold that would be appropriate? What type of data and/or data sources can be used to maximize transparency and provide an objective determination?

- Are there additional steps that CMS can take to increase transparency and address staffing shortages? For example, this regulation discusses a proposal to require States to report to CMS on the percentage of payments for Medicaid-

covered nursing facility services that are spent on direct care workers and support staff. Are there additional efforts that CMS and facilities can take to promote transparency and accountability related to funding for and supporting staffing?

4. Implementation Timeframe

As discussed, we are proposing a minimum nurse staffing requirement for LTC facilities of 0.55 and 2.45 HPRD by RNs and NAs, respectively. We also propose revisions to the existing RN staffing to require an RN on site 24 hours a day, 7 days a week to provide nursing care to all residents in accordance with resident care plans; and propose revisions to the facility assessment requirement. The adoption of these requirements would improve the safety and quality of care of residents and provide direct care workers with the support needed to provide high-quality care.

We are proposing to implement these proposed requirements in three phases, to avoid any unintended consequences or unanticipated risks to resident care when a facility is developing new policies and procedures necessary to comply with these requirements.

We acknowledge that these proposed requirements would require approximately 79 percent of LTC facilities to increase their staff levels to meet either the RN onsite 24 hours a day, 7 days a week requirement or the minimum RN and NA HPRD requirements to ensure full compliance with the new proposals discussed in the rule.¹²⁴ In addition, we anticipate that additional time would be needed to develop revised interpretive guidance and survey processes, conduct surveyor training on the changes, and implement the software changes in the Long-Term Care Survey Process system.

For facilities located in urban areas, we propose that implementation of the final requirements be achieved in three phases, over a 3-year period. Specifically, we propose that—

- Phase 1 would require facilities to comply with the Facility assessment requirements (§ 483.71) 60-days after the publication date of the final rule.

- Phase 2 would require facilities to comply with the requirement for a RN onsite 24 hours a day, 7 days a week (§ 483.35(b)(1)) 2 years after the publication date of the final rule.

- Phase 3 would require facilities to comply with the minimum staffing

¹²⁴ Calculations use the October 2021 Care Compare data set that provides each nursing home's average daily resident census and HPRD for each nurse type (that is, RNs, LPNs/LVNs, NAs) using the PBJ System data for 2021 Q2.

requirement of 0.55 and 2.45 HPRD for RNs and NAs respectively (§ 483.35(a)(1)(i) and § 483.35(a)(1)(ii)) 3 years after the publication date of the final rule.

Given that there are fewer rural LTC facilities and a higher percentage of rural LTC facilities have greater distances between neighboring facilities, if a facility was not able to comply with the staffing requirement, it can have a more pronounced impact on access of care. Therefore, we expect that facilities in rural areas will require more time to

comply with these requirements, compared to facilities in urban areas.

For facilities located in rural areas, we propose the implementation of the final requirements be achieved in three phases, over a 5-year period. Specifically, we propose that—

- Phase 1 would require facilities to comply with the Facility assessment requirements (§ 483.71) 60-days after the publication date of the final rule.
- Phase 2 would require facilities to comply with the requirement for a RN onsite 24 hours a day, 7 days a week

(§ 483.35(b)(1)) 3 years after the publication date of the final rule.

- Phase 3 would require facilities to comply with the minimum staffing requirement of 0.55 and 2.45 HPRD for RNs and NAs respectively (§ 483.35(a)(1)(i) and (ii)) 5 years after the publication date of the final rule.

We note that the final regulations would be effective 60 days following the publication of the final rule in the **Federal Register**. The implementation date for the specific requirements are listed in detail in Tables 4 and 5.

TABLE 4—IMPLEMENTATION TIMEFRAMES FOR FACILITIES IN URBAN AREAS

Regulatory section(s)	Implementation date
Proposed § 483.71	<i>Phase 1:</i> 60-days after the publication date of the final rule.
§ 483.35(b)(1)	<i>Phase 2:</i> 2 years after the publication date of the final rule.
§ 483.35(a)(1)(i) and (ii)	<i>Phase 3:</i> 3 years after the publication date of the final rule.

TABLE 5—IMPLEMENTATION TIMEFRAMES FOR FACILITIES IN RURAL AREAS

Regulatory section(s)	Implementation date
Proposed § 483.71	<i>Phase 1:</i> 60-days after the publication date of the final rule.
§ 483.35(b)(1)	<i>Phase 2:</i> 3 years after the publication date of the final rule.
§ 483.35(a)(1)(i) and (ii)	<i>Phase 3:</i> 5 years after the publication date of the final rule.

We are defining “rural” in accordance with the Census definition. “Rural” encompasses all population, housing, and territory not included within an urban area.¹²⁵ We solicit public comments on whether a different definition should be used. Also, we seek feedback on the following:

- Is the proposed implementation timeframe appropriate? If not, are there any alternative implementation approaches for these requirements?
- Do other underserved communities similarly require longer implementation timeframes?
- To what extent are facilities and State governments planning to phase in, budget for, and prepare for the requirements before they go into effect? Additionally, what are the anticipated effects on resident health and safety that may be associated with these preparations?

We seek input from State Medicaid programs and Medicaid interested parties. Specifically:

- Are there any alternative implementation approaches for these requirements?
- How might the proposed implementation timeframe impact their finances and their ability to recruit in the same labor market?

- How do you foresee potential interactions with other Medicaid initiatives, including implementing access standards on home and community-based services (HCBS)?

Finally, to the extent a court may enjoin any part of the rule, the Department intends that other provisions or parts of provisions should remain in effect. Any provision of this section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, shall be construed so as to continue to give maximum effect to the provision permitted by law, unless such holding shall be one of utter invalidity or unenforceability, in which event the provision shall be severable from this section and shall not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances.

5. Consultation With State Agencies, and Other Organizations

Section 1863 of the Act (42 U.S.C. 1395z), requires the Secretary to consult with appropriate State agencies and recognized national listing or accrediting bodies, and appropriate local agencies, in relation to the determination of conditions of participation for providers of services.

Pursuant to section 1863 of the Act, in addition to publishing the proposed rule we will consult further with the

relevant entities following the publication of the proposed rule.

III. Medicaid Institutional Payment Transparency Reporting Provision (§§ 438.72 and 442.43)

A. Background and Scope

Millions of Americans, including children and adults of all ages, need long-term services and supports (LTSS) because of disabling conditions, chronic illness, and other factors. Medicaid allows for the coverage of these services through several authorities and over a variety of settings, ranging from institutional facilities to home and community-based settings. Medicaid programs are required to provide a nursing facility benefit for eligible individuals aged 21 or older. Medicaid programs may also provide other institutional LTSS as optional services, including services in Intermediate Care Facilities for Individuals with Intellectual Disabilities (ICF/IID). Medicaid is the largest payer nationally of LTSS. In 2019, 1.5 million Medicaid beneficiaries received nursing facility or ICF/IID services,¹²⁶ which accounted for

Continued

over \$61 billion in Medicaid expenditures, or 13 percent of the \$478 billion in total Medicaid expenditures during that year.¹²⁷ Demand for LTSS, whether delivered in institutional settings or in the home, is expected to continue rising due to the growing needs of the aging population.^{128 129}

As discussed in the section on Minimum Staffing Standards (section II. of this proposed rule), anecdotal, quantitative, and qualitative evidence indicates that consistent, adequate direct care nurse staffing is vital to residents' health and safety. Through our regular interactions with State Medicaid agencies, provider groups, and beneficiary advocates, we have observed that all these interested parties routinely express the concern that chronic understaffing and high rates of worker turnover of direct care workers in Medicaid-participating nursing facilities and ICF/IIDs make it difficult to ensure access to high-quality institutional services for people with disabilities and older adults. In addition to direct care nursing staff, other types of direct care workers—such as physical therapists or feeding assistants—provide long-term care services and supports (including, if applicable, components of active treatment as defined at § 483.440) to allow residents to attain or maintain the highest practicable physical, mental, and psychosocial well-being. Additionally, direct care workers play a critical role in helping some residents develop the daily living skills needed to transition out of facilities and back to

the community, as well as with assessing individuals' readiness for discharge and assisting with discharge planning. Also critical to residents' quality of life and quality of care are support staff who maintain the physical environment of the care facility or provide other supports to residents, such as housekeeping or transportation.

Understaffing in nursing facilities and ICF/IIDs can reduce the efficiency of Medicaid payment for services, most clearly when the payment methodology is based on the actual cost of delivering services and such costs are increased due to reliance on overtime and temporary staff, which can have higher hourly costs than non-overtime wages paid to permanent staff. Further, understaffing can reduce quality of care, which can lead to poorer outcomes for people in institutional settings and result in costly emergency department visits and hospitalizations.^{130 131 132} Accordingly, understaffing can reduce the cost-effectiveness of Medicaid institutional services.

In response to these concerns about the institutional workforce, we are proposing new Federal requirements that are intended to promote public transparency around States' statutory obligation under section 1902(a)(30)(A) of the Act and around the quality requirements in section 1932(c) of the Act for services furnished through managed care organizations (as well as for prepaid inpatient health plans (PIHPs) under our authority under section 1902(a)(4) of the Act), to make Medicaid payments that are sufficient to enlist enough providers so that quality LTSS are available to the beneficiaries who want and require such care. Specifically, we are proposing to add new Federal requirements that are intended to promote better understanding and transparency related to the percentages of Medicaid payments for nursing facility and ICF/IID services that are spent on

compensation to direct care workers and support staff. We note that this proposal is specific to nursing facility and ICF/IID services, which we at times may refer to collectively in this preamble as "institutional services." We also note that unlike in sections I. and II. of this proposed rule, we will not be referring to LTC facilities, as the term "LTC facility," for our purposes in this section, is both over-inclusive (because it can refer to both Medicare- and Medicaid-certified nursing facilities) and under-inclusive (because the term typically is not used to describe ICF/IIDs.)

We are focusing in this proposal on compensation because many direct care workers and support staff earn low wages and receive limited benefits.¹³³ Evidence suggests that there is a connection between wages and high rates of turnover among some workers in the institutional workforce.¹³⁴ However, we recognize that other factors, such as local labor market conditions, worker satisfaction, facility culture, and management practices, also play important roles in worker turnover and shortages.¹³⁵ Many of these other factors lie outside of our regulatory purview or the scope of this proposal. This proposal is centered on our authority under sections 1902(a)(4), 1902(a)(30), and 1932(c) of the Act to examine specific ways in which Medicaid payments in fee-for-service (FFS) and managed care delivery systems are allocated to support efficient, effective, and high-quality LTSS.

We are aware that some interested parties, including commenters who responded to the FY2023 SNF PPS RFI, have expressed concerns about whether some States' Medicaid rates have kept pace with rising labor costs.¹³⁶ We are

¹³⁶ Referring to the Request for Information released April 2022, included in Medicare Program; Prospective Payment System and Consolidated Billing for Skilled Nursing Facilities; Updates to the

also aware of the growing scrutiny of nursing facilities that have been purchased by companies such as private equity organizations, and evidence suggests that these business models have an impact on the quality of institutional care.¹³⁷ We do not intend through this proposal to express an opinion about amounts of States' expenditures on nursing facility and ICF/IID services, nor to comment on corporate organizational structures within the long-term care industry. As will be discussed in greater detail below, we are focusing in this proposal on data collection and transparency around the issue of compensation to direct care workers and support staff for some types of Medicaid-covered institutional services, not on proposing minimum reimbursement or payment standards for State Medicaid agencies or providers.

We also recognize that there are workforce challenges that may impact access to other Medicaid-covered services aside from institutional services. We are focusing in this proposed rule on addressing the workforce in certain institutional services. We are proposing to address HCBS workforce challenges outside of this rulemaking in the Ensuring Access to Medicaid Services proposed rule (88 FR 27960), published in the May 3, 2023 issue of the **Federal Register**. We will continue to assess the feasibility and potential impact of other possible actions to address workforce shortages in other parts of the health care sector.

B. Purpose and Statutory Basis

Title XIX of the Act established the Medicaid program as a joint Federal and State program to provide medical assistance to eligible individuals. Under the Medicaid program, each State that chooses to participate in the program and receive Federal financial participation (FFP) for program expenditures establishes eligibility standards, benefits packages, and

payment rates, and undertakes program administration in accordance with Federal statutory and regulatory requirements. The provisions of each State's Medicaid program are described in the Medicaid "State plan" and, as applicable, in documents related to a State's use of other authorities, such as demonstration projects and waivers of State plan requirements. Among other responsibilities, we approve State plans, State plan amendments, demonstration projects authorized under section 1115 of the Act, and waivers authorized under section 1915 of the Act; monitor activities; and review expenditures for compliance with Federal Medicaid law, including the requirements of section 1902(a)(30)(A) of the Act relating to efficiency, economy, quality of care, and access, to ensure that all applicable Federal requirements are met.

Section 1902(a)(30)(A) of the Act requires State Medicaid programs to ensure that payments to providers are consistent with efficiency, economy, and quality of care and are sufficient to enlist enough providers so that care and services are available to beneficiaries at least to the extent as to the general population in the same geographic area. High-quality institutional services require hands-on services delivered by direct care workers. In institutional settings, direct care workers provide a variety of services, including nursing services, assistance with activities of daily living (such as mobility, personal hygiene, and eating), therapies, and recreation. High-quality institutional services also require support staff who maintain the physical environment of the care facility or provide other services for residents (such as housekeeping, janitorial and environmental services, food preparation, and transportation.) We discuss our proposed definitions of direct care workers and support staff in more detail later in the next section.

Without a sufficient number of people joining or remaining in the direct care and support staff workforce, facilities may be less able to meet the care needs of their residents, whether due to understaffing or the hiring of workers without the appropriate training, expertise, or experience to deliver high-quality services and maintain the physical environment of the care facility. Insufficient numbers of qualified direct care workers and support staff can lead to poorer health outcomes and quality of life for people who need institutional services.^{138 139 140 141 142} Further, these

challenges can result in facility closures that in some cases result in residents being relocated to other facilities far from their friends and families, due to a lack of immediately-available alternative LTSS options in their geographical area or due to a lack of sufficient time to seek other options for care.¹⁴³ Therefore, as discussed in greater detail in the next section, we propose at § 442.43(b) to require that States report annually on the percent of payments claimed by the State for Medicaid-covered services delivered by nursing facilities and ICF/IIDs that are spent on compensation to direct care workers and support staff. As discussed later in this section, this proposal is intended to promote transparency around compensation for direct care workers and support staff. We believe that gathering and sharing data about the amount of Medicaid dollars that are going to the compensation of workers is a critical step in the larger effort to understand the ways we can enact policies that support the institutional care workforce and thereby help advance access to high quality care for Medicaid beneficiaries.

Section 1902(a)(6) of the Act requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to

and potential of America's direct care workforce. Bronx, NY: PHI <http://phinational.org/wp-content/uploads/2021/01/Caring-for-the-Future-2021-PHI.pdf>.

¹³⁸ Campbell, S., A. Del Rio Drake, R. Espinoza, K. Scales. 2021. Caring for the future: The power

comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports. Under our authority at section 1902(a)(6) of the Act, and consistent with section 1902(a)(30)(A) of the Act, we propose to newly require that State Medicaid agencies report, at the facility level, on the portion of payments for nursing facility and ICF/IID services that are spent on compensation for the direct care and support staff workforce.¹⁴⁴ While some States have voluntarily established similar transparency policies or initiatives, we believe a Federal requirement is necessary and would be more effective to generate more meaningful and comparable data and support transparency nationwide.

We find no basis for applying these proposed requirements only when States' LTSS delivery systems are FFS, and thus for the same reasons we are proposing them for FFS delivery systems, we are also proposing to apply them when LTSS systems are covered through managed care. For States that contract with MCOs and PIHPs to cover services delivered by nursing facilities and ICF/IIDs, we propose that States report annually on the percent of payments made to nursing facilities and ICF/IIDs that is spent for compensation to direct care workers and support staff. Section 1932(c) of the Act lays out quality assurance standards with which States must comply when delivering Medicaid services through managed care organizations. Including services delivered by managed care organizations is authorized under section 1932(c), which requires the Secretary to both monitor States and consult with States on strategies to ensure quality of care. Additionally, based on our authority under section 1902(a)(4) of the Act to specify "methods of administration" that are "necessary for proper and efficient" administration of the State plan, we also propose to include prepaid inpatient health plans (PIHPs) in this proposed rule. Again, we see no basis for excluding services furnished through a PIHP from the proposed requirements; throughout this document, the use of the term "managed care plan" means MCOs and PIHPs and is used only when the discussion applies to both arrangements.

This proposal is intended to promote transparency around compensation for direct care workers and support staff.

We believe that gathering and sharing data about the amount of Medicaid dollars that are going to the compensation of workers is a critical step in the larger effort to understand the ways we can enact policies that support the institutional care workforce, which plays an essential part in the economy, efficiency, and quality of institutional services. We believe that compensation levels are a factor in the creation of a stable workforce, and that a stable workforce will result in better qualified employees, lower turnover, and safer and higher quality care.^{145 146} If individuals are attracted to the institutional LTSS workforce and incentivized to remain employed in it, the workforce is more likely to be comprised of workers with the training, expertise, and experience to meet the diverse and often complex needs of individuals with disabilities and older adults residing in institutions. A stable and qualified workforce will also enable beneficiaries to access providers of the services they have been assessed to need.

As we discuss below, we are not proposing a minimum percentage of Medicaid payments for nursing facility services and ICF/IID services that must be spent on compensation to direct care workers and support staff. We do not have adequate information at this time to determine such a minimum percentage, nor what impact requiring a minimum percentage would have on Medicaid institutional payments. We are aware that data collected from nursing facilities as part of the PBJ reporting program in § 483.70(q) provides the potential to begin extrapolating information about the relationships between staffing hours and staff compensation in nursing facilities that serve Medicaid residents.¹⁴⁷ We also understand that the variability among States' Medicaid institutional payment rate methodologies and

payment rates presents challenges to national studies on issues related to staffing and compensation. In addition, we note that, because there are comparatively fewer reporting requirements for ICF/IIDs than there are for nursing facilities, there is a need for greater data and transparency on the workforce in these facilities. We view this proposed transparency requirement as a necessary step in gathering and making publicly available more information about Medicaid institutional payments that can aid in further analyses, which in turn can inform future policy development and potential rulemaking. Please refer to the discussion in section IV. (Collection of Information) of this proposed rule where we discuss in greater detail the specifics of the activities and resources we anticipate would be required from States, managed care plans, and providers to implement and comply with these proposed requirements.

We also note that while aspects of this proposal are intended to complement the goals expressed in section II of this preamble, the following proposals presented below would be, if finalized, distinct provisions. To the extent a court may enjoin any part of a final rule, the Department intends that other provisions or parts of provisions should remain in effect. Should they be finalized, we intend that any provision of the proposals described in this section or in another section held to be invalid or unenforceable by its terms, or as applied to any person or circumstance, would be construed so as to continue to give maximum effect to the provision permitted by law, unless such holding is one of utter invalidity or unenforceability, in which event we intend that the provision would be severable from the other finalized provisions described in this section and in other sections and would not affect the remainder thereof or the application of the provision to persons not similarly situated or to dissimilar circumstances

C. Proposed Provisions

We are proposing to create a new provision, § 442.43, which would specify requirements for States to report on compensation for direct care workers and support staff as a percentage of Medicaid payments for nursing facility and ICF/IID services. At § 442.43(a)(1), we propose to define compensation to include salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.*, 29 CFR parts 531 and 778), and benefits (such as health and dental benefits, sick leave, and tuition reimbursement). In

¹⁴⁴ Throughout this discussion, we use the term "States" to include all States, Washington, DC, and the territories that include nursing facility services or ICF/IID services in their State plans.

¹⁴⁵ See, for example, the discussion of low wages among direct care workers in Campbell, S., A. Del Rio Drake, R. Espinoza, K. Scales. 2021. *Caring for the future: The power and potential of America's direct care workforce*. Bronx, NY: PHI <http://phinational.org/wp-content/uploads/2021/01/Caring-for-the-Future-2021-PHI.pdf>.

¹⁴⁶ See, for example, the discussion of the relationship between staff turnover and nursing home quality in Zheng Q, Williams CS, Shulman ET, White AJ. Association between staff turnover and nursing home quality—evidence from Payroll Based journal data. *J Am Geriatr Soc*. 2022 Sep;70(9):2508–2516. doi: 10.1111/jgs.17843. Epub 2022 May 7. PMID: 35524769.

¹⁴⁷ See, for example, the use of Payroll Based Journal data to analyze staffing hours and compensation in Bowblis, J., Brunt, C., Xu, H., and Grabowski, D. Understanding Nursing Home Spending And Staff Levels In The Context Of Recent Nursing Staff Recommendations. *Health Affairs*. 2022;42(2) 197–206.

addition, we propose to define compensation to include the employer share of payroll taxes for direct care workers and support staff delivering Medicaid-covered nursing facility and ICF/IID services (which, while not necessarily paid directly to the workers, is paid on their behalf). We considered whether to include training or other costs in our proposed definition of compensation. However, we believe that a definition that more directly addresses the financial benefits to workers would better measure the portion of the payment for services that went to direct care workers and support staff, as it is unclear that the cost of training and other workforce activities is an appropriate way to quantify the benefit of those activities for workers. We are also concerned that requesting providers to quantify and include costs of non-financial benefits in their reporting would prove burdensome and could introduce a lack of uniformity in determining and reporting related costs. We request comment on our proposed definition of compensation, particularly whether the definition of compensation should include other specific financial and non-financial forms of compensation for the workers included in these proposed provisions.

At § 442.43(a)(2), for the purposes of the proposed reporting provision at § 442.43(b), we propose to define direct care workers to include: nurses (registered nurses, licensed practical nurses, nurse practitioners, or clinical nurse specialists) who provide nursing services to Medicaid-eligible individuals receiving nursing facility and ICF/IID services; certified nurse aides who provide such services under the supervision of one of the foregoing nurse provider types; licensed physical therapists, occupational therapists, speech-language pathologists, and respiratory therapists; certified physical therapy assistants, occupational therapy assistants, speech-language therapy assistants, and respiratory therapy assistants or technicians; social workers; personal care aides; medication assistants, aides, and technicians; feeding assistants; activities staff; and other individuals who are paid to provide clinical services, behavioral supports, active treatment (as defined at § 483.440¹⁴⁸), or address activities of daily living (such as those described in § 483.24(b), which includes activities related to mobility, personal hygiene, eating, elimination, and communication), for individuals

receiving Medicaid-covered nursing facility and ICF/IID services. Our proposed definition of direct care worker is intended to broadly define such workers to ensure that the definition appropriately captures the diversity of roles and titles that direct care workers may have.

We recognize that our proposed definition of direct care worker differs from the definition of direct care staff at § 483.70(q)(1), which was established for the PBJ reporting program at § 483.70(q). The PBJ reporting program requires that LTC facilities report on the staffing hours of specified direct care staff (but does not require reporting on the compensation for direct care staff). In particular, our proposed definition does not include administrators (or staff whose primary function is administrative or supervisory), nor do we propose to include physicians or physician assistants. This difference is intentional as we are more closely aligning our proposed definition of direct care worker with the definition of direct care worker for a similar provision focused on HCBS in the Ensuring Access to Medicaid Services proposed rule (88 FR 27960), published in the May 3, 2023 issue of the **Federal Register**. We believe that closer alignment of the definition in this proposed rule with the definition in the Ensuring Access to Medicaid Services proposed rule would help to provide a more consistent picture of the direct care workforce for individuals receiving Medicaid-covered LTSS across settings. We also believe that this may reduce State reporting burden. Additionally, we believe the definition of direct care workers proposed in this rule represents a subset of the categories of direct care staff that nursing facilities are already familiar with as part of the PBJ reporting requirement.¹⁴⁹ Further, we note that ICF/IIDs are currently not required to participate in the PBJ reporting, and thus, we do not expect them to be affected by the definition of direct care staff at § 483.70(q)(1).

We request feedback on our proposed definition of direct care worker at § 442.43(a)(2). We specifically request whether there are categories of staff we should add to, or remove from, our proposed definition. Additionally, we are particularly interested in ensuring that this provision includes staff who can be instrumental in helping residents

achieve the level of health or develop skills needed to transition from nursing facilities back into the community, assess residents for readiness for transition, and support in discharge planning. We request feedback from the public as to whether our proposed definition appropriately includes workers who provide these services, or if we would need to include such staff as a distinct category of staff within this provision. We also request comment on whether we should adopt the definition of direct care staff at § 483.70(q)(1), instead of our proposed definition of direct care worker. If commenters support adopting the definition of § 483.70(q)(1), we request that they also provide information on whether this definition would include the staff who help residents achieve the level of health or develop the skills needed to transition from nursing facilities back into the community, assess residents for readiness for transition, and support in discharge planning, or if these staff would still need to be specified as a separate category.

We also propose in § 442.43(a)(2) to define direct care workers to include individuals employed by or contracted or subcontracted with a Medicaid provider or State or local government agency. This proposal is in recognition of the varied ownership and employment relationships that can exist in Medicaid institutional services. For instance, differences may include: institutions that are privately owned and operated or facilities owned and operated by a local or State government; facilities that are partially or wholly staffed through a third-party staffing organization through a contractual arrangement; or staff who are employed directly or as independent contractors. We solicit comment on whether this component of our proposed definition adequately captures the universe of potential employment or contractual relationships between institutional facilities and relevant direct care workers.

At § 442.43(a)(3), for the purposes of the proposed reporting requirement at § 442.43(b), we propose to define support staff to include individuals who are not direct care workers and who maintain the physical environment of the care facility or support other services (such as cooking or housekeeping) for residents. Similar to our proposed definition of direct care worker, our proposed definition of support staff is intended to broadly define such workers to ensure that the definition appropriately captures the diversity of roles and titles that such workers may have. Specifically, we

¹⁴⁹ Centers for Medicare & Medicaid Services, Electronic Staffing Data Submission Payroll Based Journal: Long-Term Care Facility Policy Manual. <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/NursingHomeQualityInits/Downloads/PBJ-Policy-Manual-Final-V25-11-19-2018.pdf>.

¹⁴⁸ Active treatment services, as defined in 42 CFR 483.440, are services required in ICF/IIDs as part of their Medicaid Conditions of Participation.

propose to define support staff to include: housekeepers; janitors and environmental services workers; groundskeepers; food service and dietary workers; drivers responsible for transporting residents; and any other individuals who are not direct care workers and who maintain the physical environment of the care facility or support other services for individuals receiving Medicaid-covered nursing facility and ICF/IID services. We request comment on whether there are other specific types of workers, such as security guards, who should be included in the definition. We are also soliciting comment on whether any of the types of workers listed in this proposal should be excluded from the definition of support staff. We also request comment, generally, on our proposal to include support staff in this proposed reporting requirement.

We propose to define support staff to include individuals employed by or contracted or subcontracted with a Medicaid provider or State or local government agency. Similar to our discussion of the proposed definition of direct care worker in § 442.43(a)(2), our intention with this proposal is to recognize the varied employment relationships that can exist in Medicaid institutional services, including the use of third-party employers. (For instance, a facility may contract with a third-party transportation company to provide transportation services to residents.) We solicit comment on whether this component of our proposed definition adequately captures the universe of potential employment or contractual relationships between institutional facilities and relevant support staff.

Based on our authority at sections 1902(a)(6) and (a)(30)(A) of the Act with respect to FFS, and sections 1902(a)(4) and 1932(c) of the Act with respect to managed care plans, we are proposing new reporting requirements at § 442.43(b) to require States to report annually, by delivery system (if applicable) and by facility, on the percent of Medicaid payments for nursing facility and ICF/IID services that is spent on compensation for direct care workers and on compensation for support staff, at the time and in the form and manner specified by CMS. We believe that this information would help identify national trends and would also help States identify facilities that appear to be outliers in terms of the amount of Medicaid payment going to direct care worker and support staff compensation. We believe that contextualizing direct care worker and support staff compensation information in this manner would help States understand

whether current payment rates for nursing facility and ICF/IID services are consistent with economy, efficiency, and quality, and sufficient to ensure meaningful beneficiary access.

We are proposing that the reporting to CMS would be for all Medicaid payments made to nursing facility and ICF/IID providers. For FFS payments, this would include base payments and supplemental payments for nursing facility and ICF/IID services. We note that for FFS base and supplemental payments, we are relying on the definition of “supplemental payments” provided in section 1903(bb)(2) of the Act, which defines supplemental payments as Medicaid payments to a provider that are in addition to any base payment made to providers under the State plan or under demonstration authority. As discussed in guidance released in 2021, we interpret “base payment” (as used in the definition of “supplemental payment” in section 1903(bb)(2)(A) of the Act), to refer to a standard payment to the provider on a per-claim basis for services rendered to a Medicaid beneficiary in an FFS environment. The base payment can include: (1) any payment adjustments; (2) any add-ons; and/or (3) any other additional payments received by the provider that can be attributed to services identifiable as having been provided to an individual beneficiary, including those that are made to account for a higher level of care, complexity, or intensity of services provided to an individual beneficiary.¹⁵⁰

We are proposing that States report on FFS base and supplemental payments made to facilities because we believe this would provide a comprehensive picture of Medicaid FFS payments made for these services. However, we recognize that, given the variability in both base and supplemental payments across (and even within) States, there may be value in understanding the percent of the base payments alone that is going to compensation for direct care workers and support staff. We solicit comment on whether, for FFS payments, we should instead request reporting on only the percent of base payments spent on such compensation, or separate reporting on the percent of base payments and on the percent of aggregated payments (base plus

supplemental payments) spent on such compensation.

We also propose at § 442.43(b) that for States that contract with MCOs and/or PIHPs to cover services delivered by nursing facilities and/or ICF/IIDs, that States report on the percent of payments made by the MCO or PIHP to nursing facilities and ICF/IIDs that is spent for compensation to direct care workers and support staff. For these managed care plans, payments would include the managed care plan’s contractually negotiated rate, State directed payments defined in § 438.6(a), pass-through payments defined in § 438.6(a) for nursing facilities, and any other payments from the MCO or PIHP to the nursing facility or ICF/IID. We are also proposing to require that States, if they deliver the relevant services through both FFS and managed care, they report separately for each delivery system.

We note that we are proposing that the reporting be performed annually. We solicit comment on this timeframe. We request comment on whether annual reporting is reasonable, or if we should reduce the frequency of reporting to every other year or every 3 years.

We propose at § 442.43(b)(1) to require this reporting for payments, including FFS base and supplemental payments and payments from managed care plans, to nursing facilities and ICF/IIDs for Medicaid-covered services, with the exception of services offered in swing bed hospitals (as described in § 440.40(a)(1)(ii)(B)). We are proposing to exclude swing bed hospitals, as we do not want to pose a burden on rural hospitals that provide LTSS to a comparatively small number of beneficiaries. We welcome comment on this proposal.

At § 442.43(b)(2), we propose that States exclude from the reporting payments for which Medicaid is not the primary payer. If finalized, this would mean that States would exclude Medicaid payments to cover only cost-sharing payments on behalf of residents who are dually eligible for Medicare and Medicaid and whose skilled nursing care services are paid for by Medicare. We are proposing this exclusion for two reasons. The first is that, given that facilities (particularly nursing facilities) receive revenue from sources other than Medicaid, we wish to reiterate that this reporting is limited to only the percent of Medicaid payments going to compensation for direct care workers and support staff (and thus would not include Medicare or private payments). The second reason for this exclusion is that the goal of this reporting, as discussed throughout this preamble, is to collect data demonstrating the

¹⁵⁰ Centers for Medicare & Medicaid Services, State Medicaid Directors Letter # 21–006, New Supplemental Payment Reporting and Medicaid Disproportionate Share Hospital Requirements under the Consolidated Appropriations Act, 2021, December 10, 2021. <https://www.medicaid.gov/federal-policy-guidance/downloads/smd21006.pdf>.

relationship between Medicaid payments for nursing facility and ICF/IID services and the wages paid to direct care workers and support staff. We believe that including cost-sharing payments for services that were primarily paid for by Medicare is outside the scope of this data collection. However, we solicit feedback from the public on whether including cost-sharing payments for services that were primarily paid for by Medicare would provide a more accurate picture of the relationship between Medicaid payments and worker compensation. We also request comment on whether excluding cost-sharing payments would increase or decrease burden on States and providers.

We also note that we are not proposing to exclude beneficiary contributions to their care when Medicaid is the primary payer of the services. For FFS programs, base payments included in the reporting should be representative of the total payment amount a provider would expect to receive as payment-in-full for the provision of Medicaid services to individual beneficiaries. (We note that § 447.15 defines payment-in-full as “the amounts paid by the agency plus any deductible, coinsurance or copayment required by the plan to be paid by the individual.”) For managed care delivery systems, although the term “payment-in-full” as defined at § 447.15 is not applicable, for consistency between FFS and managed care delivery systems, any deductible, coinsurance or copayment required to be paid by the individual would similarly be included in the total amount used to determine the percent of Medicaid payments for nursing facility and ICF/IID services that is spent on compensation for direct care workers and support staff. Therefore, we believe the rate used for comparison should be inclusive of total payment from the Medicaid agency, MCO, or PIHP plus any applicable coinsurance, copayments and deductibles, to the extent that a beneficiary is expected to be liable for those payments. We note that this understanding helps promote consistency with a proposal regarding payment reporting in the Ensuring Access to Medicaid Services proposed rule (see, in particular, the discussion at 88 FR 28012). We welcome feedback on whether commenters believe beneficiary contributions should be excluded.

We considered whether to allow States, at their option, to exclude from their reporting payments to providers that have low Medicaid revenues or serve a small number of Medicaid beneficiaries, based on Medicaid revenues for the service, the number of

Medicaid beneficiaries receiving the service, or other Medicaid utilization data including but not limited to Medicaid bed days. We considered this option as a way to reduce State, managed care plan, and provider data collection and reporting burden based on the experience of States that have implemented similar reporting requirements. However, we are concerned that such an option could discourage providers from serving Medicaid beneficiaries or increasing the number of Medicaid beneficiaries served. We request comment on whether we should allow States the option to exclude, from their reporting to us, payments to providers that have low Medicaid revenues or serve a small number of Medicaid beneficiaries, based on Medicaid revenues for the service, the number of Medicaid beneficiaries receiving the service, or other Medicaid utilization data including but not limited to Medicaid bed days. We also request comment on whether we should establish a specific limit on such an exclusion and, if so, the specific limit we should establish, such as to limit the exclusion to providers in the lowest 5th, 10th, 15th, or 20th percentile of providers in terms of Medicaid revenues for the service, number of Medicaid beneficiaries served, or other Medicaid utilization data (including but not limited to Medicaid bed days.)

At § 442.43(c)(1), we propose that the reporting must provide information necessary to identify, at the facility level, the percent of Medicaid payments spent on compensation to: direct care workers at each nursing facility, support staff at each nursing facility, direct care workers at each ICF/IID, and support staff at each ICF/IID. We anticipate that States and providers would be able to obtain the information needed to calculate the percent of Medicaid payments made to direct care workers and support staff using data used in rate setting, internal wage information, cost reports, and resident census numbers (which would indicate the number of days residents had Medicaid-covered stays during the year.) However, we solicit comment on our proposal that information be reported at the facility level, particularly on any concerns about potential burden on providers and States.

In constructing this proposal, we sought to balance the need for useful data with burden on States and providers, and we do not want to request more information than is necessary to get basic insight into the relationship between Medicaid payments and direct worker and support staff compensation. To that end,

we are proposing to include in the reporting requirement the percentages of Medicaid payments to each nursing facility or ICF/IID that are going towards compensation to direct care workers and support staff at those facilities. However, we would consider adding to the proposed reporting requirements additional elements for States to report on median hourly compensation for direct care workers and median hourly compensation for support staff, in addition to the percent of Medicaid payments going to overall compensation for these workers. If commenters believe reporting on median compensation would yield useful information, we request that commenters also provide feedback on whether the reporting should be on salary/wages, or on total compensation (salary/wages and other remuneration, including employer expenditures for benefits and payroll taxes), and whether the information should be calculated for all direct care workers and for all support staff, or further broken down by the staff categories specified in our proposal at § 442.43(a)(2) and (3).

At § 442.43(c)(2), we propose that States must report the information required at § 442.43(c)(1) (the percent of Medicaid payment going to compensation for direct care workers and support staff and, if added to the provision, median hourly wages) according to a methodology that we provide. We believe it is important to have States use a consistent methodology when collecting and reporting information from facilities. If this proposal is finalized, we would specify a reporting methodology as part of the reporting instrument, which would be submitted separately for formal public comment under the processes set forth by the Paperwork Reduction Act. We are not proposing to codify a specific reporting methodology to allow for increased flexibility to refine and adapt the reporting methodology as States and CMS gain experience with the process. At this time, we solicit initial suggestions for an appropriate methodology for identifying the percentage of Medicaid payment that has gone to direct care worker and support staff compensation (noting that the underlying elements of the methodology could change should any final reporting requirements change in response to comments received on this proposed rule). We also solicit initial suggestions whether separate methodologies would be appropriate for base payments and supplemental payments, and if so, suggestions for each. Commenters who support adding

a requirement to report median hourly wages are also welcome to provide suggestions for a methodology for those calculations.

To support our goal of transparency, we are considering adding a provision requiring that States make publicly available information about the underlying FFS payment rates themselves for nursing facility and ICF/IID services. We believe it is likely that being able to view the reported information (percent of Medicaid payments going to compensation for direct care workers and support staff and, if added to the provisions, the median hourly wages) might be more meaningful if interested parties could review this data with the added context of information about typical nursing facility and ICF/IID FFS per diem payments in those States that use a FFS delivery model for these services. While we approve States' FFS methodologies for setting the rates for nursing facility and ICF/IID services as part of the State plan amendment process, we do not currently require States to report the rates for these services. Further, the amounts can change over time without further State plan review according to the CMS-approved rate methodology (for example, when the State plan rate methodology is based on Medicare rates for services and not a fixed fee schedule). We have also heard from interested parties that members of the public would be interested in comparing the per diem rates nationally. Additionally, we have heard from providers that, as Medicaid payments to individual facilities may vary due to differences in acuity, add-on payments, or other factors, providers would be interested in comparing their own Medicaid revenues against an average or typical per diem rate in their State. We are considering adding to the proposed reporting provisions a requirement that, as applicable, States report a single average statewide FFS per diem rate (one reported rate for nursing facility services and one reported rate for ICF/IID services.) If commenters agree that this information should be added to the reporting requirements, we request comment on whether the reported average should be the average of only the per diem base payment rates, or the average of the per diem base payment rates plus supplemental payments. We are weighing both options, as reporting on the average of the per diem base payment rate (without including supplemental payments) would provide an average that is more representative of the "typical" per diem rate (since not all facilities necessarily receive

supplemental payments.) On the other hand, an average that includes both the per diem base payment rate and supplemental payments would provide a more complete picture of the total Medicaid spending on these services. We request comment on which option interested parties believe would provide the most useful snapshot of payment for these services.

We do note that in the Ensuring Access to Medicaid Services proposed rule (88 FR 27960), we are proposing at § 447.203(b)(1) that States publish all Medicaid FFS rates. This new proposed process would require States to publish their FFS Medicaid base payment rates in a clearly accessible, public location on the State's website. In § 447.203(b)(2) and (3) of the Ensuring Access to Medicaid Services proposed rule, we proposed that States would be required to conduct a comparative payment rate analysis between the States' Medicaid payment rates and Medicare rates for certain services, and provide a payment rate disclosure for certain HCBS that would include an average hourly rate for those specified HCBS.

We believe that the proposal we are considering here is both complementary to, and distinguishable from, the proposals in the Ensuring Access to Medicaid Services proposed rule. The payment rate transparency proposal in the Ensuring Access to Medicaid Services proposed rule at § 447.203(b)(1), while comprehensive, would request specifically payment rates made to providers delivering Medicaid services to Medicaid beneficiaries through the FFS delivery model. To the extent rates are bundled, we are proposing publication of unbundled rates by constituent service. This is distinct from the proposal in this proposed rule, which is proposing to examine per diem rates, solely in nursing facilities and ICF/IID. A per diem rate is akin to a bundled rate and typically is not reflective of the cost of an individual service; as such, the proposals generally would examine different payment rates. Additionally, the comparative payment rate analysis proposed in the Ensuring Access to Medicaid Services proposed rule at § 447.203(b)(2) focuses on comparing to Medicare rates for specified services, which is not an element included in this proposal. Finally, the proposal in the Ensuring Access to Medicaid Services proposed rule at § 447.203(b)(3) that would require disclosure of hourly payment rates is for HCBS and would therefore not overlap with nursing facility and ICF/IID services.

We also note that this potential reporting requirement would only be for

FFS systems. For managed care programs, we are not considering requiring the public reporting of the contractually negotiated rates for individual providers.

We considered whether to propose a requirement that a minimum percentage of all Medicaid payments, including but not limited to base payments and supplemental payments, with respect to Medicaid-covered nursing facility services and ICF/IID services be spent on compensation to direct care workers and support staff. However, we do not have adequate information at this time to determine a minimum percentage of the payments for Medicaid-covered nursing facility services and ICF/IID services that should be spent on compensation for direct care workers and support staff. In consideration of potential future rulemaking, we request comment on whether we should require that a minimum percentage of the payments for Medicaid-covered nursing facility services and ICF/IID services be spent on compensation for direct care workers and support staff. We also request comment on whether such a requirement would be necessary to ensure that payment rates and methodologies are economic and efficient and consistent with meaningful beneficiary access to safe, high-quality care, or otherwise necessary for the proper and efficient operation of the State plan. Additionally, we request suggestions on the specific minimum percentage of payments for Medicaid-covered nursing facility services and ICF/IID services that should be required to be spent on compensation to direct care workers and support staff. If a minimum percentage is recommended, we request that commenters provide separate recommendations for nursing facility services and ICF/IID services and the rationale for each such minimum percentage that is recommended. We request that commenters provide data or evidence to support such recommendations, which we will review as part of our consideration of policy and rulemaking options.

Based on our authority in sections 1902(a)(6) and 1902(a)(30)(A) of the Act with respect to FFS, and sections 1902(a)(4) and 1932(c) of the Act with respect to managed care plans, we are proposing new requirements to promote public transparency related to the administration of Medicaid-covered institutional services. We believe that promoting public transparency is an important first step for holding States accountable for ensuring that Medicaid payments are used in a way that is efficient and economic, to provide a

foundation for future analyses of whether the payments are sufficient to enlist enough providers so that quality LTSS are available to the beneficiaries who want and require such care. Feedback from interested parties during various public engagement activities over the past several years has indicated that States do not routinely make publicly available information on the percent of payments that are going to the workforce, specifically. As a result, we believe that the proposal described immediately below is needed to support the efficient administration of Medicaid coverage of nursing facility and ICF/IID services by promoting public transparency and accountability related to the percent of payments for such services that goes to compensation to direct care workers and support staff.

Specifically, at § 442.43(d), we propose to require States to operate a website that meets the availability and accessibility requirements at § 435.905(b) of this chapter and that provides the results of the newly proposed reporting requirements in § 442.43(b). We request comment on whether the proposed requirements at § 435.905(b) are adequate to ensure the availability and the accessibility of the information for people receiving LTSS and other interested parties. We note that the accessibility and availability requirements set forth in § 435.905(b) focus on whether the language used on a website is accessible to computer users with disabilities or limited English proficiency. Other accessibility considerations, including the labelling of website links, ensuring the website content is up-to-date, or providing specific information about how users may access assistance are addressed in subsequent proposals below.

At § 442.43(d)(1), we propose to require that the data and information that States are required to report in § 442.43(b) be provided on one website, either directly or by linking to relevant information on the websites of the managed care plan that is contracted to cover nursing facility or ICF/IID services. We intend for the States to be ultimately responsible for ensuring compliance with the proposal, including to ensure through contractual arrangements with managed care plans, as applicable, that the proposed requirements are satisfied when required information is provided on websites maintained by these plans. Proposed § 442.43(d) contemplates that some States that provide nursing facility or ICF/IID services through managed care may decide to work with their managed care plans to make the reporting information available on the

managed care plans' websites, rather than replicating the information directly on the State's website. We request comment on whether States should be permitted to link to websites of these managed care plans, and if so, whether we should limit the number of separate websites that a State could link to in place of directly reporting the information on its own website; or whether we should require that all the required information be posted directly on a website maintained by the State.

At § 442.43(d)(2), we propose to require that the website include clear and easy to understand labels on documents and links. At § 442.43(d)(3), we propose to require that States verify the accurate function of the website and the timeliness of the information and links at least quarterly. We note here that the intent of § 442.43(d)(3) is to require that States ensure that the reporting information on their own website is up to date. We would also expect, if the State is linking to a managed care plan website, that the State ensure on at least a quarterly basis that the links are operational and continue to link to the information States are required to report in § 442.43(b). We are not proposing to direct that managed care plans must also review their websites quarterly, but rather we expect that States would develop a process with their managed care plans to ensure that any reporting information contained on a managed care plan website is timely and accurate. If a State obtains information that a managed care plan website to which the State links as a means of publishing the required reporting information is not being maintained with timely updates for ongoing accuracy, we expect that the State would work with the relevant managed care plan to correct the situation and, if unsuccessful, would cease linking to that managed care plan's website and would begin to post the required reporting information on a State-maintained website. We request comment on this proposal, including whether this timeframe for website review is sufficient or if we should require a shorter timeframe (monthly) or a longer timeframe (semi-annually or annually).

At § 442.43(d)(4), we propose to require that States include prominent language on the website explaining that assistance in accessing the required information on the website is available at no cost to the public and include information on the availability of oral interpretation in all languages and written translation available in each non-English language, how to request auxiliary aids and services, and a toll-

free and TTY/TDY telephone number. We request comment on whether these requirements are sufficient to ensure the accessibility of the information for people receiving nursing facility or ICF/IID services and other interested parties.

We are also proposing at § 442.43(e) that we must report on our website (Medicaid.gov or a successor website) the information reported by States to us under § 442.43(b). Specifically, we envision that we would update our website to provide information reported by each State on the percent of payments for Medicaid-covered services delivered by nursing facilities and ICF/IIDs that is spent on compensation to direct care workers and support staff (and, if added to the provision, information on median hourly wages) which would allow the information to be compared across States and providers. We also envision using data from State reporting in future iterations of the CMS Medicaid and CHIP Scorecard.¹⁵¹ We note that if, based on public comment, we add a requirement that States provide information about their payment rates for nursing facility and ICF/IID services, we would provide this information on our website as a way of providing easy-to-find context for the other payment information reported by States. We currently do not intend to include the information on payment rates in the CMS Medicaid and CHIP Scorecard.

We recognize that many States may need time to implement these requirements, including to amend provider agreements or managed care contracts, make State regulatory or policy changes, implement process or procedural changes, update information systems for data collection and reporting, or conduct other activities to implement these proposed payment transparency reporting requirements. We also expect that it would take a substantial amount of time for managed care plans and providers to establish the necessary systems, data collection tools, and processes necessary to collect the required information to report to States. As a result, we are proposing, at § 442.43(f), to provide States with 4 years to implement these requirements in FFS delivery systems following the effective date of the final rule. This proposed timeline reflects feedback from States and other interested parties that it could take 3 to 4 years for States to complete any necessary work to amend State regulations, policies, operational processes, information

¹⁵¹ CMS's Medicaid and CHIP Scorecard. Accessed at <https://www.medicicaid.gov/state-overviews/scorecard/index.html>.

systems, and contracts to support implementation of the proposals outlined in this section. We invite comments on whether this timeframe is sufficient, whether we should require a shorter or longer timeframe (such as 3 or 5 years) to implement these provisions, and if a shorter or longer timeframe is recommended, the rationale for that shorter or longer timeframe.

In the context of Medicaid coverage of nursing facility and ICF/IID services, we believe that the foregoing reasons for the reporting requirements proposed in this rule apply to the delivery of these services regardless of whether they are covered directly by the State on an FFS basis or by a managed care plan for its enrollees. Accordingly, we are proposing to apply the requirements at § 442.43 to both FFS and managed care delivery systems through incorporation by reference in a new regulation in 42 CFR part 438, which generally governs Medicaid managed care programs. Specifically, we propose to add a cross-reference to the requirements in proposed § 438.72(a) to be explicit that States that include nursing facility and/or ICF/IID services in their MCO or PIHP contracts would have to amend their contracts to the extent necessary to comply with the requirements at § 442.43 and propose at § 442.43(b) that payments from MCOs and PIHPs count as “Medicaid payments” for purposes of those requirements. We believe this would make the obligations of States that implement LTSS programs through a managed care delivery system clear and consistent with the State obligations for Medicaid FFS delivery systems. Additionally, for States with managed care delivery systems under the authority of sections 1915(a), 1915(b), 1932(a), or 1115(a) of the Act and that include coverage of nursing facility services and/or ICF/IID services in the MCO’s or PIHP’s contract, we are proposing to provide States until the first managed care plan contract rating period that begins on or after the date that is 4 years after the effective date of the final rule to implement these requirements. We solicit feedback on

the proposed application of the reporting requirement to managed care and the proposed effective date. We also invite comments on whether the proposed effective date timeframe is sufficient, whether we should require a longer timeframe (such as 5 years) to implement these provisions, and if a longer timeframe is recommended, the rationale for that longer timeframe.

We expect that, should we finalize these reporting requirements, we would establish new processes and forms for States to meet the reporting requirements, provide additional technical information on how States can meet the reporting requirements, and establish new templates consistent with requirements under the Paperwork Reduction Act. We invite comment on this approach, particularly regarding any additional guidance we would need to provide or actions we would need to take to facilitate States’ implementation of these proposed provisions.

Finally, in consideration of potential future rulemaking, we request comment on whether we should propose that States implement an interested parties’ advisory group in parallel with proposed requirements at § 447.203(b)(6) in the Ensuring Access to Medicaid Services proposed rule (88 FR 29260). Per the discussion in the Ensuring Access to Medicaid Services proposed rule at 88 FR 28024, we are proposing at § 447.203(a)(6) to require States to establish an interested parties advisory group to advise and consult on the sufficiency of FFS rates paid to direct care workers providing certain HCBS. We would be interested in hearing from the public if we should consider developing requirements for States to establish a similar group to advise and consult on nursing facility and ICF/IID service rates.

IV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comments before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and

approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In analyzing information collection requirements (ICRs), we rely heavily on wage and salary information. Unless otherwise indicated, we obtained all salary information from the May 2022 National Occupational Employment and Wage Estimates, BLS at https://www.bls.gov/oes/current/oes_nat.htm. We have calculated the estimated hourly rates in this proposed rule based upon the national mean salary for that particular position increased by 100 percent to account for overhead costs and fringe benefits. The wage and salary data from the BLS do not include health, retirement, and other fringe benefits, or the rent, utilities, information technology, administrative, and other types of overhead costs supporting each employee. The HHS wide guidance on preparation of regulatory and paperwork burden estimates states that doubling salary costs is a good approximation for including these overhead and fringe benefit costs.

Table 6 presents the BLS occupation code and title, the associated LTC facility staff position in this regulation, the estimated average or mean hourly wage, and the adjusted hourly wage (with a 100 percent markup of the salary to include fringe benefits and overhead costs). Where available, the mean hourly wage for Nursing Care Facilities (Skilled Nursing Facilities)¹⁵² was used.

¹⁵² https://www.bls.gov/oes/current/naics4_623100.htm.

TABLE 6—SUMMARY INFORMATION OF ESTIMATED HOURLY COSTS

Occupation code	BLS occupation title	Associated position title in this regulation	Mean hourly wage (\$/hour)	Adjusted hourly wage (with 100% markup for fringe benefits & overhead) (\$/hour) (rounded to nearest dollar)
29-1141	Registered Nurses (Nursing Care Facilities (Skilled Nursing Facilities)).	Registered Nurse	\$37.11	\$74
11-9111	Medical and Health Services Managers (Nursing Care Facilities (Skilled Nursing Facilities)).	Director of Nursing (DON) and Administrator.	49.91	100
29-1216	General Internal Medicine Physicians (General Medical and Surgical Hospitals).	Medical Director	93.90	188
43-6013	Medical Secretaries and Administrative Assistants (General Medical and Surgical Hospitals).	Administrative Assistant	20.30	41
29-1229	Physician, All Other (Specialty (except Psychiatric and Substance Abuse)).	Medical Director	135.86	272
29-1031	Dietitians and Nutritionists	Food and Nutrition Manager	31.63	63
11-3013	(Nursing Care Facilities (Skilled Nursing Facilities))	Facilities Manager	50.95	102
29-2061	Facilities Manager	Licensed Nurse	28.10	56
31-1131	Licensed Practical and Licensed Vocational Nurses (Nursing Care Facilities (Skilled Nursing Facilities)).	Certified Nursing Assistance (CNA).	16.90	34
	Nursing Assistants (Nursing Care Facilities (Skilled Nursing Facilities)).			

We are soliciting public comments on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs Regarding § 483.35 Nursing Services

At § 483.35(a), we propose that each LTC facility would have to provide services by sufficient numbers of each of the following types of personnel identified in this section on a 24-hour basis to provide nursing care to all residents in accordance with resident care plans. Except when exempted under paragraph (g) of this section, licensed nurses, including but not limited to 0.55 hours per resident day of registered nurses; and other nursing personnel, including but not limited to 2.45 hours per resident day of NAs or, if necessary, LPNs. Except when waived under paragraph (e) of this section, each LTC facility must also have a RN on site 24 hours per day, for 7 days a week that is available to provide direct resident care.

These proposed requirements would require each LTC facility to review and modify, as necessary, its policies and procedures regarding nurse staffing. We believe the review and modifications to the necessary policies and procedures would require activities by the director of nursing (DON), an administrator, and an administrative assistant. The DON and the administrator would need to review the requirements, as well as the facility assessment, to determine if any changes are necessary to the policies and procedures and, if so, make

those necessary changes. The DON would then need to work with a medical administrative assistant to ensure that those changes were made to the appropriate documents and ensure that all appropriate individuals in the facility were made aware of the changes. We estimate that these activities would require 2 burden hours for an administrator at a cost of \$200 (\$100 × 2), 3 hours for the DON at a cost of \$300 (\$100 × 3), and 1 hour for the administrative assistant at a cost of \$41 (\$41 × 1). Hence, for each LTC facility the burden estimate would be 6 hours (2 + 3 + 1) at a cost of \$ 541 (\$200 + \$300 + \$41). There are currently 14,688 LTC facilities. Thus, the burden for all LTC facilities would be 88,128 (14,688 × 6) hours at a cost of \$7,946,208 (\$541 × 14,688 LTC facilities).

B. ICRs Regarding § 483.71 Facility Assessment

For the proposed new section, § 483.71 Facility assessment, we propose to relocate the existing requirements at § 483.70(e) Facility assessment to the new § 483.71. We also propose to modify certain specific requirements and add a third section that will set forth the activities for which we expect LTC facilities to use their facility assessments.

We are proposing to relocate current § 483.70(e)(1) (i) through (v) to § 483.71(a)(1)(i) through (v). This section sets forth what the facility assessment must address or include, but is not limited to, regarding the facility's resident population. At § 483.71(a)(1)(ii), we propose to add

“using evidence-based, data-driven methods” and “behavioral health issues” so that the requirement would now read, “(ii) The care required by the resident population, using evidence-based, data driven methods that consider the types of diseases, conditions, physical and behavioral health issues, cognitive disabilities, overall acuity, and other pertinent facts that are present within that population;”. At § 483.71(a)(1)(iii), we propose to add, “and skill sets” so the requirement reads, (iii) The staff competencies and skill sets that are necessary to provide the level and types of care needed for the resident population. We believe these modifications constitute clarifications in the requirements and are not new requirements for which the LTC facilities must comply. Hence, we will not be analyzing any new or additional burden related to these changes.

We propose to relocate the current requirements at § 483.70(e)(2)(i) through (vi) to § 483.71(a)(2)(i) through (vi). At § 483.71(a)(2)(iii), we propose to add “behavioral health” so that the requirement reads, (iii) Services provided, such as physical therapy, pharmacy, behavioral health, and specific rehabilitation therapies. Behavioral health services requirements are set forth at § 483.40 and are integral to the health of residents. All LTC facilities should be considering the behavioral health care needs of their residents. Hence, this change does not constitute a new requirement but a clarification. Hence, we will not be

analyzing any new or additional burden related to this change.

We propose to add a new requirement at § 483.71(a)(4) for LTC facilities to incorporate the input of facility staff and their representatives into their facility assessment. These staff categories include, but are not limited to, nursing home leadership, management, direct care staff and representatives and other service workers. We believe that LTC facilities already include many of these categories of individuals when they conduct or update their facility assessments. Thus, this requirement constitutes a clarification and not a new requirement. Hence, we will not be analyzing any new or additional burden related to this change.

We propose to add new requirements at § 483.71(b). These requirements set forth specific activities for which the LTC facilities would be expected to use their facility assessments. These assessments would inform staffing decisions to ensure that a sufficient number of staff with the appropriate competencies and skill sets necessary to care for its residents' needs as identified through resident assessments and plans of care as required in § 483.35(a)(3); consider specific staffing needs for each resident unit in the facility, and adjust as necessary based on changes its to resident population; consider specific staffing needs for each shift, such as day, evening, night, and adjust as necessary based on any changes to its resident population; and, develop and maintain a plan to maximize recruitment and retention of direct care staff.

We believe that LTC facilities are either already using their facility assessments for these activities or will be based upon the other requirements in this proposed rule, except for using their facility assessments to develop and maintain a plan to maximize recruitment and retention of direct care staff. Based upon our experience with LTC facilities, these facilities are already

working on recruitment and retention of direct care staff. However, we also believe these facilities would need to review their current efforts to determine if there are opportunities to improve their efforts and, if so, decide how to do so. The LTC facility's facility assessment would require the development of a plan to maximize recruitment and retention and accomplish the associated tasks and would also be an invaluable tool in assessing and maintaining sufficient staff for their facility.

The staff involved in developing this plan would vary by the type of care and services provided by the individual facilities. Some LTC facilities might have various therapists on staff, such as physical and occupational therapists. Others might employ psychologists, social workers, or complementary medicine or American Indian/Alaska Native Traditional Healers who provide behavioral health services to residents. When developing a recruitment and retention plan, we encourage LTC facilities to include participation, or at least input, from the various types of direct care staff in their facilities and representatives of these workers, although the hours worked by those staff cannot be used as substitutes for the direct care minimums for RNs and NAs required under this rule. All LTC facilities provide 24-hour nursing services and the direct care nursing staff would include RNs, other licensed nurses (LPNs or LVNs), and nursing assistants (NAs). For the purpose of estimating the burden for developing a recruitment and retention plan, we estimate the burden for an administrator, the DON, and one individual from each of the nursing categories, an RN, LPN/LVN, and NA to develop the plan. These individuals would have to meet to develop a plan and then the administrator will need to obtain approval for the plan from the governing body. During the development process and after approval,

an administrative assistant would need to provide support and ensure the plan is disseminated and save appropriately in the facility's records. We estimate that developing a recruitment and retention plan would require 6 hours for an administrator at a cost of \$600 ($\$100 \times 6$); 6 hours for the DON at a cost of \$600 ($\$100 \times 6$); 4 hours for a registered nurse at a cost of \$296 ($\$74 \times 4$); 2 hours for a LPN/LVN at a cost of \$112 ($\$56 \times 2$); 2 hours for a nursing assistant at a cost of \$68 ($\$34 \times 2$); and, 2 hours for an administrative assistant \$82 ($\$41 \times 2$). Thus, the burden for each LTC facility is 22 ($6 + 6 + 4 + 2 + 2 + 2$) hours at an estimated cost of \$1,758 ($\$ 600 + \$600 + \$296 + \$112 + \$68 + 82$). For all 14,688 LTC facilities the burden would be 323,136 hours (14,688 LTC facilities $\times$ 22) at an estimated cost of \$25,821,504 ($\$1,758 \times 14,688$ LTC facilities). We are requesting comment on our estimated number of burden hours for the proposal for each of the activities and total annual burden and cost for each facility.

Hence, the total estimated burden for the ICRs in part 483 is 411,264 ($88,128 + 323,136$) hours at a cost of \$33,767,712 ($\$7,946,208 + \$25,821,504$). The burden will be included in this revised Information Collection Request under the OMB control number 0938–1363; Expiration date: April 30, 2026.

C. ICR Related to Medicaid Institutional Payment Transparency

1. Wage Estimates

To derive average costs, we used data from the U.S. Bureau of Labor Statistics (BLS) May 2022 National Occupational Employment and Wage Estimates for all salary estimates (http://www.bls.gov/oes/current/oes_nat.htm). In this regard, Table 7 presents BLS's mean hourly wage, our estimated cost of fringe benefits and other indirect costs (calculated at 100 percent of salary), and our adjusted hourly wage.

TABLE 7—NATIONAL OCCUPATIONAL EMPLOYMENT AND WAGE ESTIMATES

Occupation title	Occupation code	Mean hourly wage (\$/hr)	Fringe benefits and overhead (\$/hr)	Adjusted hourly wage (\$/hr)
Administrative Services Manager	11–3012	55.59	55.59	111.18
Chief Executive	11–1011	118.48	118.48	236.96
Compensation, Benefits, and Job Analyst	13–1141	36.50	36.50	73.00
Computer Programmer	15–1251	49.42	49.42	98.84
General and Operations Manager	11–1021	59.07	59.07	118.14
Management Analyst	13–1111	50.32	50.32	100.64
Training and Development Specialist	13–1151	33.59	33.59	67.18

For States and the private sector, our employee hourly wage estimates have been adjusted by a factor of 100 percent. This is necessarily a rough adjustment, both because fringe benefits and other indirect costs vary significantly across employers, and because methods of estimating these costs vary widely across studies. Nonetheless, we believe that doubling the hourly wage to estimate total cost is a reasonably accurate estimation method.

To estimate the financial burden on States related to the proposed Medicaid Institutional Payment Transparency Reporting provisions (discussed below), it was important to consider the Federal government's contribution to the cost of administering the Medicaid program. The Federal government provides funding based on a Federal medical assistance percentage (FMAP) that is established for each State, based on the per capita income in the State as compared to the national average. FMAPs range from a minimum of 50 percent in States with higher per capita incomes to a maximum of 83 percent in States with lower per capita incomes. For Medicaid, all States receive a 50 percent FMAP for administration. States also receive higher Federal matching rates for certain systems improvements, redesign, or operations. Taking into account the Federal contribution to the costs of administering the Medicaid programs for purposes of estimating State burden with respect to collection of information, we elected to use the higher end estimate that the States would contribute 50 percent of the costs, even though the burden would likely be much smaller. We are requesting comment on our estimated number of burden hours for the proposal for each of the activities and total annual burden and cost for each facility.

3. Proposed Information Collection Requirements (ICRs)

The following proposed changes will be submitted to OMB for their approval when our survey instrument has been developed; we are using feedback from this proposed rule to inform the development of the survey instrument. The survey instrument and burden will be made available to the public for their review under the standard non-rule PRA process which includes the publication of 60- and 30-day **Federal Register** notices. In the meantime, we are setting out our preliminary burden figures (see below) as a means of scoring the impact of this rule's proposed changes. The availability of the survey instrument and more definitive burden estimates will be announced in both **Federal**

Register notices. The CMS ID number for that collection of information request is CMS–10851 (OMB control number 0938–TBD). Since this would be a new collection of information request, the OMB control number has yet to be determined (TBD) but will be issued by OMB upon their approval of the new collection of information request. Note that we intend that the following proposed changes associated with §§ 442.43(b), (c), and (d), discussed later in this section, will be submitted to OMB for review as a single PRA package under control number 0938–TBD (CMS–10851).

a. State and Provider Burden Under § 442.43(b) and (c)—Payment Transparency Reporting

As discussed in section III. of this proposed rule, under our authority at sections 1902(a)(6) and 1902(a)(30)(A) with respect to FFS, and sections 1902(a)(4) and 1932(c) of the Act with respect to managed care, we are proposing new reporting requirements at § 442.43(b) for States to report annually on the percent of payments for Medicaid-covered services delivered by nursing facilities and ICF/IIDs that are spent on compensation for direct care workers and support staff. (Our proposed definitions of who is included in direct care workers and support staff, at proposed §§ 442.43(a)(2) and (3), respectively, are discussed in the preamble in section III. of this proposed rule.) The intent of this proposed requirement is for States to report separately, by delivery system and at the provider level, on the percent of payments for nursing facility services that are spent on compensation to direct care workers, the percent of payments for nursing facility services that are spent on compensation to support staff, the percent of payments for ICF/IID services that are spent on compensation to direct care workers, and the percent of payments for ICF/IID services that are spent on compensation to support staff. We propose to add a cross-reference to the requirements in proposed § 438.72 to specify that States that include nursing facility and ICF/IID services in their contracts with managed care organizations (MCOs) or prepaid inpatient health plans (PIHPs) would have to comply with the requirements at § 442.43(b). Where they appear, references to the proposed requirements at § 442.43(b) apply to both FFS and managed care delivery systems.

We are considering adding to the proposed reporting requirements additional elements for States to report on median hourly compensation for direct care workers and median hourly

compensation for support staff, in addition to the percent of Medicaid payments going to overall compensation for these workers. Although we may not finalize these additional reporting requirements, we will include them in our cost estimate to avoid underestimating the costs of this proposal. If finalized, we expect that these additional reporting requirements would also apply to both FFS and managed care delivery systems.

We are also considering adding at § 442.43(c) a provision requiring that States make publicly available information about the underlying FFS payment rates themselves for nursing facility and ICF/IID services. If the proposal was finalized, we would require that States report a single average statewide FFS per diem rate (one reported rate for nursing facility services and one reported rate for ICF/IID services) as part of the reporting requirement required at § 442.43(b). Again, to avoid underestimating, we are including the estimated cost of this potential additional requirement in our cost estimates.

(1) State Institutional Payment Transparency Reporting Requirements and Burden

The burden associated with the proposed reporting requirements would affect all 51 States (including Washington DC). While not all States cover ICF/IID services (because it is an optional Medicaid benefit), all States must offer Medicaid nursing facility services (because it is a mandatory Medicaid benefit). Thus, we anticipate that all 51 States (including Washington, DC) would participate in the reporting requirements proposed at § 442.43(b). Additionally, three territories (Guam, Puerto Rico, and the U.S. Virgin Islands) are required to include nursing facility services in their State plans, and thus will be included in these calculations as well.¹⁵³ While we will include these territories in our cost estimates, we will continue to refer to the affected entities collectively as “States”. We estimate both a one-time and ongoing burden to States to implement these requirements at the State level.

¹⁵³ Note that due to waiver under section 1902(j) of the Social Security Act, American Samoa and the Commonwealth of the Northern Mariana Islands are not required to include nursing facility services in their State plans and thus are not included in these estimates. Additionally, no territory currently includes the optional ICF/IID benefit in their State plan.

One-Time Reporting Requirements and Burden (§ 442.43(b)): States

Under proposed § 442.43(b) and (c), we anticipate as one-time burdens that States, through their designated State Medicaid agency, would have to: (1) draft new policy describing the State-specific reporting process (one-time); (2) update any related provider manuals and other policy guidance (one-time); (3) build, design, and operationalize an electronic system for data collection and aggregation (one-time); (4) identify the information that would be needed to report the State's per diem rates, if that additional proposal is finalized (one-time); and (5) develop and conduct an initial training for providers on the reporting requirement and State-developed reporting system (one-time). We note that we are not proposing to require that States update their Medicaid State plans as part of this reporting requirement, and thus we are not estimating a burden associated with State plan amendments.

With regard to this one-time burden for States, we estimate it would take: 40 hours at \$111.18/hr. for an administrative services manager to draft new policy describing the State-specific reporting process; 14 hours at \$100.64/

hr. for a management analyst to update any related provider manuals and other policy guidance; an additional 1 hour at \$100.64/hr. for a management analyst to identify what information will be needed to report a FFS per diem rate for nursing facility and ICF/IID services,¹⁵⁴ if the additional reporting requirement is finalized; 25 hours at \$98.84/hr. for a computer programmer to build, design, and operationalize an electronic system for data collection on the percent of Medicaid payments going to compensation and (if finalized) median hourly compensation, including data aggregation and stratification by provider, provider type, and worker type (direct care worker or support staff); 30 hours at \$67.18/hr. for a training and development specialist to develop and conduct training for providers on the reporting requirement and system; 3 hours at \$118.14/hr. for a general and operations manager to review and approve policy updates, provider agreement updates, and training materials; and 1 hour at \$236.96/hr. for a chief executive to review and approve all operations associated with this requirement.

In addition to these activities outlined above, States may also have to update

managed care contracts to reflect the new reporting requirement and provide managed care-specific guidance on the reporting requirement. Recent data indicates that 24 States provide at least some long-term services through managed care.¹⁵⁵ For the managed care-specific burden, we estimate 10 hours at \$111.18/hr. for an administrative services manager to draft updates to managed care contracts. (We anticipate that all other State activities associated with managed care plans would be reflected in the activities described previously in this section.)

In aggregate, we estimate a one-time burden of 6,396 hours [(114 hr. × 54 States) + (10 × 24 States)]. We estimate a cost of \$595,867 (54 States × [(40 hr. × \$111.18) + (15 hr. × \$100.64) + (25 hr. × \$98.84) + (30 hr. × \$67.18) + (3 hr. × \$118.14) + (1 hr. × \$236.96)]), with an additional \$26,683 for managed care-related costs (24 States × [10 hr. × \$100.64]). The total cost is estimated at \$622,551 (\$595,867 + \$26,683). Taking into account the Federal contribution to Medicaid administration, the estimated State share of the cost would be \$311,275 (\$622,551 × 0.50).

TABLE 8—SUMMARY OF ONE-TIME BURDEN FOR STATES FOR THE MEDICAID INSTITUTIONAL PAYMENT TRANSPARENCY REPORTING REQUIREMENTS AT § 442.43(b)

Requirement	Number respondents	Total responses	Frequency	Time per response (hr.)	Total time (hr.)	Wage (\$/hr.)	Total cost (\$)	State share (\$)
Draft new policy describing the State-specific reporting process.	54	54	Once	40	2,160	111.18	240,149	120,074
Update any related provider manuals and other policy guidance.	54	54	Once	14	756	100.64	76,084	38,042
Identify information needed for per diem rate reporting	54	54	Once	1	54	100.64	5,435	2,717
Build, design, and operationalize an electronic system for data collection, aggregate, and stratify reporting.	54	54	Once	25	1,350	98.84	133,434	66,717
Develop and conduct training for providers on the reporting requirement and system.	54	54	Once	30	1,620	67.18	108,832	54,416
Review and approve policy updates and training materials ...	54	54	Once	3	162	118.14	19,139	9,569
Review and approve all operations associated with this requirement.	54	54	Once	1	54	236.96	12,796	6,398
Draft contract modifications for managed care plans	24	24	Once	10	240	111.18	26,683	13,342
Total	Varies	402	Once	Varies	6,396	Varies	622,551	311,275

Ongoing Reporting Requirements and Burden (§ 442.43(b)): States

Under proposed § 442.43(b), we estimate as ongoing burdens that States would: (1) notify and train nursing facility and ICF/IID providers about the annual reporting requirement, including the State-level process for collecting

data (ongoing); (2) collect information from providers annually (ongoing); (3) aggregate or stratify data as needed (ongoing); (4) derive percentages for compensation (ongoing); and (5) develop a report for CMS on an annual basis (ongoing).

With regard to the ongoing burden, we estimate it would take: 8 hours at \$67.18/hr. for a training and development specialist to notify and train providers about annual reporting requirement; 2 hours at \$100.64 for a management analyst to gather the State's information needed to include per diem

¹⁵⁴ As discussed in section III. of this proposed rule, if finalized, the proposal to report per diem rates for nursing facility and ICF/IID services would only be applied to FFS rates. If finalized, this proposal would not apply to States that deliver nursing facility and ICF/IID services solely through managed care. However, some States with managed

care delivery systems still pay for some LTSS under a FFS delivery system. For the purposes of this estimate, we are assuming all States will be participating in this reporting requirement, even though the requirement might apply to fewer than 54 States upon implementation.

¹⁵⁵ Data taken from Centers for Medicare & Medicaid Services, "Managed Long Term Services and Supports (MLTSS) Enrollees," available at <https://data.medicare.gov/dataset/5394bcab-c748-5e4b-af07-b5bf77ed3aa3>.

rates for the State's FFS nursing facility and ICF/IID services (if finalized); 6 hours at \$98.84/hr. for a computer programmer to collect information from providers, aggregate data as needed, derive percentages for compensation, and develop a report for the State; 2 hours at \$118.14/hr. by a general and

operations manager to review, verify, and submit the report to CMS; and 1 hour at \$236.96/hr. for a chief executive to review and approve all operations associated with this requirement.

In aggregate, we estimate an ongoing burden of 1,026 hours (19 hr. × 54 States) at a cost of \$97,470 (54 States ×

[(8 hr. × \$67.18) + (2 hr. × \$100.64) + (6 hr. × \$98.84) + (2 hr. × \$118.14) + (1 hr. × \$236.96)]. Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be \$48,735 (\$97,470 × 0.50) per year.

TABLE 9—SUMMARY OF ONGOING BURDEN FOR STATES FOR THE MEDICAID INSTITUTIONAL PAYMENT TRANSPARENCY REPORTING REQUIREMENTS AT § 442.43(b)

Requirement	Number respondents	Total responses	Frequency	Time per response (hr.)	Total time (hr.)	Wage (\$/hr.)	Total cost (\$)	State share (\$)
Notify and train providers about annual reporting requirement	54	54	Annually ..	8	416	67.18	29,022	14,511
Gather information needed to report State FFS per diem rates.	54	54	Annually ..	2	108	100.64	10,869	5,435
Collect information from providers; aggregate data as required; derive an overall percentage for compensation; and develop report for State.	54	54	Annually ..	6	312	98.84	32,024	16,012

Review and approve all operations associated with this requirement.	54	54	Annually ..	1	52	236.96	12,796	6,398
Total	54	270	Annually ..	Varies	1,026	Varies	97,470	48,735

(2) Nursing Facility and ICF/IID Institutional Payment Transparency Reporting Requirements and Burden

The burden associated with this proposed rule would affect nursing facility and ICF/IID providers in both FFS and managed care systems. We estimate both a one-time and ongoing burden to implement the reporting requirement proposed at § 442.43(b).

To estimate the number of nursing facility and ICF/IID providers that would be impacted by this proposed rule, we used data from the CMS Quality Certification and Oversight Reports (QCOR) system (*qcor.cms.gov*) to identify the total number of Medicaid-certified nursing facilities and ICF/IIDs in all States (including Washington DC) and the three territories that are required to include nursing facility services in their State plan. Data from QCOR indicates that in FY 2022, there were 14,194 freestanding Medicaid-certified nursing facilities (including facilities dually certified for both Medicare and Medicaid, and Medicaid-only facilities). Additionally, in FY 2022, there were 5,713 ICF/IIDs.

In total, we estimate 19,907 Medicaid-certified nursing facilities and ICF/IIDs that could be impacted by this proposed reporting requirement and may need to provide data to the State on what percentage of their Medicaid reimbursements for nursing facility and ICF/IID services went to direct care worker and support staff compensation.

Under proposed § 442.43(b), we anticipate that nursing facilities and ICF/IIDs would need to: (1) learn the State-specific reporting policies and process (one-time); (2) calculate compensation for each direct care worker and support staff if they do not already have that information readily available (one-time); and (3) build, design and operationalize an internal system for developing the report for the State (one-time). We note that we do not anticipate any additional burden on providers associated with the proposed additional reporting requirements (to report median hourly wages and the State's FFS per diem rates). We expect that States would be able to calculate median hourly wages based on the information collected from providers.

We also believe the State, not, providers, would have the information needed to report the State's FFS per diem rates for nursing facility and ICF/IID services.

One-Time Reporting Requirements and Burden (§ 442.43(b)): Nursing Facility and ICF/IID Providers

With regard to the one-time burden for providers, we estimate it would take: 10 hours at \$73.00/hr. for a compensation, benefits, and job analysis specialist to learn the State-specific reporting policy and calculate compensation for each direct care worker and support staff; 10 hours at \$98.84/hr. for a computer programmer to build, design, and operationalize an internal system for developing the report for the State; and 1 hour at \$118.14/hr. for a general and operations manager to review and approve the reporting system. In aggregate, we estimate a one-time burden of 418,047 hours (19,907 facilities × 21 hr.) at a cost of \$36,560,002 (19,907 providers × [(10 hr. × \$73.00) + (10 hr. × \$98.84) + (1 hr. × \$118.14)]).

TABLE 10—SUMMARY OF ONE-TIME BURDEN FOR NURSING FACILITIES AND ICF/IIDs FOR THE MEDICAID INSTITUTIONAL PAYMENT TRANSPARENCY REPORTING REQUIREMENTS AT § 442.43(b)

Requirement	Number respondents	Total responses	Frequency	Time per response (hr.)	Total time (hr.)	Wage (\$/hr.)	Total cost (\$)	State share (\$)
Learn State-specific reporting policy; calculate compensation for each direct care worker and support staff.	19,907	19,907	Once	10	199,070	73.00	14,532,110	n/a
Build, design, and operationalize an internal system for developing the report for the State.	19,907	19,907	Once	10	199,070	98.84	19,676,079	n/a
Review and approve reporting system	19,907	19,907	Once	1	19,907	118.14	2,351,813	n/a
Total	19,907	59,721	Once	Varies	418,047	Varies	36,560,002	n/a

Ongoing Reporting Requirements and Burden (§ 442.43(b)): Nursing Facility and ICF/IID Providers

With regard to the ongoing burden, we anticipate nursing facilities and ICF/IIDs would have to: (1) update compensation calculations to account for on-going staffing changes among direct care workers and support staff (in other words, ensure their system includes newly hired direct care workers or support staff and takes into

account staff departures); (2) calculate the aggregated compensation of direct care workers and support staff as a percentage of their annual Medicaid claims (ongoing); and (3) report the information to the State annually (ongoing).

We estimate it would take 8 hours at \$73.00/hr. for a compensation, benefits, and job analysis specialist to update compensation calculations to account for staffing changes; 2 hours at \$98.84/

hr. for a computer programmer to calculate compensation, aggregate data, and report to the State as required; and 1 hour at \$118.14/hr. for a general and operations manager to review, approve, and submit the report to the State. In aggregate, we estimate an on-going burden of 218,977 hours (19,907 providers × 11 hr.) at a cost of \$17,912,717 (19,907 facilities × [(8 hr. × \$73.00) + (2 hr. × \$98.84) + (1 hr. × \$118.14)]).

TABLE 11—SUMMARY OF ONGOING BURDEN FOR NURSING FACILITY AND ICF/IIDs FOR THE MEDICAID INSTITUTIONAL PAYMENT TRANSPARENCY REPORTING REQUIREMENTS AT § 442.43(b)

Requirement	Number respondents	Total responses	Frequency	Time per response (hr.)	Total time (hr.)	Wage (\$/hr.)	Total cost (\$)	State share (\$)
Account for staffing changes among employees and contracted employees.	19,907	19,907	Annually ..	8	159,256	73.00	11,625,688	n/a

Review, approve, submit report to the State	19,907	19,907	Annually ..	1	19,907	118.14	2,351,813	n/a
Total	19,907	59,721	Annually ..	Varies	218,977	Varies	17,912,717	n/a

b. State Website Posting Requirements and Burden (§ 442.43(d))

At § 442.43(d), we propose to require States to operate a website that meets the availability and accessibility requirements at § 435.905(b) of this chapter and that provides the results of the newly proposed reporting requirements in § 442.43(b). We also propose at § 442.43(d) that States must verify, no less than quarterly, the accurate function of the website and the timeliness of the information and links.

As noted above, we anticipate that this provision would affect all 51 States (including Washington, DC) and the territories required to have nursing facility services in their State plans which we refer to collectively as “States.”. We estimate both a one-time and ongoing burden to implement these requirements at the State level, which would be the same regardless of whether the State offers nursing facility and ICF/IID services through FFS or

managed care systems. In developing our burden estimate, we assumed that States would provide the data and information that States are required to report under newly proposed § 442.43(d) by adding to an existing website, rather than developing an entirely new website to meet this requirement. We note that we are not proposing to require that States update their Medicaid State plans as part of this reporting requirement and are not estimating a burden associated with State plan amendments. We are also not anticipating an additional website burden associated with the possible additional reporting requirements (to report median hourly wage and to report the State’s FFS per diem rates) discussed previously in this section as this information, if finalized, would be integrated into the other website posting activities.

One Time Website Posting Requirements and Burden (§ 442.43(d)): States

With regard to the one-time burden, based on the website requirements, we estimate it would take: 10 hours at \$111.18/hr. for an administrative services manager to determine the content of the website; 30 hours at \$98.84/hr. for a computer programmer to develop the website; 1 hour at \$118.14/hr. for a general and operations manager to review and approve the website; and 1 hour at \$236.96/hr. for a chief executive to review and approve the website. In aggregate, we estimate a one-time burden of 2,268 hours (54 States × 42 hr.) at a cost of \$239,333 (54 States × [(10 hr. × \$111.18) + (30 hr. × \$98.84) + (1 hr. × \$118.14) + (1 hr. × \$236.96)]). Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be \$119,667 (\$239,333 × 0.50) per year.

TABLE 12—SUMMARY OF THE ONE-TIME BURDEN FOR STATES FOR THE WEBSITE POSTING REQUIREMENTS AT § 442.43(f)

Requirement	Number respondents	Total responses	Frequency	Time per response (hr.)	Total time (hr.)	Wage (\$/hr.)	Total cost (\$)	State share (\$)/year
Determine content of website	54	54	Once	10	540	111.18	60,037	30,019
Develop website	54	54	Once	30	1,620	98.84	160,121	80,060
Review and approve the website at the management level ...	54	54	Once	1	54	118.14	6,380	3,190
Review and approve the website at the executive level	54	54	Once	1	54	236.96	12,796	6,398
Total	54	216	Once	Varies	2,268	Varies	239,333	119,667

Ongoing Website Posting Requirements and Burden (§ 442.43(d)): States

With regard to the States' ongoing burden related to the website requirement, per quarter we estimate it would take: 2 hours at \$111.18/hr. for an administrative services manager to provide any updated data and information for posting and to verify the

accuracy of the website; 8 hours at \$98.84/hr. for a computer programmer to make any needed updates to the website; 1 hour at \$118.14/hr. for a general and operations manager to review and approve the website; and 1 hour at \$236.96/hr. for a chief executive to review and approve the website. In aggregate, we estimate an ongoing

annual burden of 2,592 hours (12 hr. × 54 States × 4 quarters) at a cost of \$295,527 (54 States × 4 quarters × [(2 hr. × \$111.18) + (8 hr. × \$98.84) + (1 hr. × \$118.14) + (1 hr. × \$236.96)]. Taking into account the Federal contribution to Medicaid administration, the estimated State share of this cost would be \$147,763 (\$295,527 × 0.50) per year.

TABLE 13—SUMMARY OF THE ONGOING BURDEN FOR STATES FOR THE WEBSITE POSTING REQUIREMENTS AT § 442.43(f)

Requirement	Number respondents	Total responses	Frequency	Time per response (hr.)	Total time (hr.)	Wage (\$/hr.)	Total cost (\$)	State share (\$)
Provide updated data and information for posting and verify the accuracy of the website.	54	216	Quarterly	2	432	111.18	48,030	24,015
Update website	54	216	Quarterly	8	1,728	98.84	170,796	85,398
Review and approve website at the management level	54	216	Quarterly	1	216	118.14	25,518	12,759

V. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

VI. Regulatory Impact Analysis

A. Statement of Need

1. Minimum Nurse Staffing

With respect to the requirements for minimum nurse staffing in LTC facilities, sections 1819 and 1919 of the Act, authorize the Secretary to issue requirements for participation in

Medicare and Medicaid, including such regulations as may be necessary to protect the health and safety of residents (sections 1819(d)(4)(B) and 1919(d)(4)(B) of the Act). Such regulations are codified in the implementing regulations at 42 CFR part 483, subpart B.

Approximately 1.4 million Americans are residents in LTC facilities with Medicare and Medicaid serving as the payor for most residents.¹⁵⁶ As we have discussed in detail in sections II. and III. of this proposed rule, a large body of quantitative and qualitative research suggests that adequate nurse staffing is vital for ensuring residents' health and safety. More specifically, there is a positive association between the number of hours of care that a resident receives each day and resident health

and safety.^{157 158 159} Research also suggests that there is a relationship between inadequate staffing and nursing staff burnout, which can lead to high

¹⁵⁶ <https://data.cms.gov/summary-statistics-on-use-and-payments/medicare-service-type-reports/cms-program-statistics-medicare-skilled-nursing-facility>.

employee turnover.¹⁶⁰ High employee turnover, in turn, can lead to lower continuity of resident care.

During our regular interactions with State Medicaid agencies, provider groups, and beneficiary advocates, we have observed that all these interested parties routinely express the concern that chronic understaffing in LTC facilities is making it difficult for residents to receive high quality care. Low quality care also has a negative impact on Medicare and Medicaid leading to higher spending due to more hospitalizations and unplanned Emergency Department visits.^{161 162 163} As we have noted throughout this rule, the available evidence suggests that a wide range of requirements for LTC facility staff could increase the quality of care in LTC facilities. We also recognized, however, that staffing in the long-term care sector is still recovering from the COVID-19 pandemic that saw a large number of employees leave the sector, leading to concerns about resident access to care. In response to these concerns, and after evaluating a wide range of research and stakeholder feedback, we developed a proposed 24/7 on-site RN requirement and minimum RN and NA HPRD requirements that aim to increase resident safety and quality of care while preserving resident access to care.

Specifically, we are proposing that LTC facilities provide RN coverage onsite 24 hours per day, 7 days a week (24/7 RN). In addition, we are proposing that they provide a minimum of 0.55 RN and 2.45 NA hours of care per resident day (HPRD). We note that, as discussed in section II above, while the 0.55 and 2.45 HPRD standards were developed using case-mix adjusted data sources, the standards themselves will be

implemented and enforced independent of a facility's case-mix. In other words, facilities must meet the 0.55 RN and 2.45 NA HPRD standards, regardless of the individual facility's patient case-mix. Requiring 24/7 RN and a minimum number of hours of RN and NA hours of care for each resident will help protect resident health and safety by ensuring that all facilities provide a minimal level of staff care to address residents' health and safety needs. These standards reflect only the minimum level of staffing required and all LTC facilities must provide adequate staffing to meet their specific population's needs based on their facility assessments.

2. Medicaid Institutional Payment Transparency Reporting

Millions of Americans, including children and adults of all ages, receive Medicaid-covered long-term services and supports (LTSS) because of disabling conditions, chronic illness, and other factors. Medicaid is the largest payer nationally of LTSS. In 2019, 1.5 million Medicaid beneficiaries received nursing facility or intermediate care facility for individuals with intellectual disability (ICF/IID) services,¹⁶⁴ which accounted for over \$61 billion in Medicaid expenditures, or 13 percent of the \$478 billion in total Medicaid expenditures for that year.¹⁶⁵

Through our regular interactions with State Medicaid agencies, provider groups, and beneficiary advocates, we have observed that all these interested parties routinely express the concern that understaffing in facilities and high rates of worker turnover of direct care workers make it difficult to have the

sufficient workforce of well-trained and qualified staff needed to help ensure access to high-quality institutional services for people with disabilities and older adults. Further, demand for direct care workers is expected to continue rising due to the growing needs of the aging population.^{166 167}

As discussed in sections II. and III. of this proposed rule, anecdotal, quantitative, and qualitative evidence indicates that consistent, adequate direct care nurse staffing is vital to residents' health and safety. Worker turnover or understaffing also can reduce the efficiency of Medicaid payment for services, most clearly when the payment methodology is based on the actual cost of delivering services and such costs are increased due to reliance on overtime and temporary staff, which can have higher hourly costs than non-overtime wages paid to permanent staff. Further, understaffing can reduce quality of care, which can lead to poorer outcomes for people in institutional settings and result in costly emergency department visits and hospitalizations.^{168 169 170} Accordingly, understaffing can reduce the cost-effectiveness of Medicaid institutional services.

In response to these concerns about the institutional workforce, we are proposing new Federal reporting requirements that are intended to promote public transparency around States' statutory obligation under section 1902(a)(30)(A) of the Act and around the quality requirements in section 1932(c) of the Act for services furnished through managed care

organizations (MCOs) (as well as for prepaid inpatient health plans (PIHPs). We do so under our authority at section 1902(a)(4)), to make Medicaid payments that are sufficient to enlist enough providers so that high-quality LTSS are available to the beneficiaries who want and require such care. We are also relying on our authority under section 1902(a)(6) of the Act, which requires State Medicaid agencies to make such reports, in such form and containing such information, as the Secretary may from time to time require, and to comply with such provisions as the Secretary may from time to time find necessary to assure the correctness and verification of such reports.

Specifically, we are proposing to require that State Medicaid agencies report annually, at the facility level and by delivery system (if applicable), on the portion of payments to nursing facility and ICF/IID services that are spent on compensation for the direct care and support staff workforce.¹⁷¹ We are also proposing that States make this information available to the public by posting the information on a website. We are focusing on this compensation proposal because many direct care workers and support staff earn low wages and receive limited benefits.¹⁷² Evidence suggests that there is a connection between wages and high rates of turnover among some workers in the institutional workforce.¹⁷³ In order to develop relevant policies to support high quality care for Medicaid beneficiaries, we first need clear, consistent data from States and facilities about the current percent of Medicaid payments going to the compensation of direct care workers and support staff. Data regarding the percent of Medicaid payments going to compensation of direct care workers and support staff is not currently being reported to CMS.

B. Overall Impacts

We have examined the impacts of this proposed rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review

(January 18, 2011), the Regulatory Flexibility Act (RFA, September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA, March 22, 1995; Pub. L. 104–4), and Executive Order 13132 on Federalism (August 4, 1999).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094 entitled “Modernizing Regulatory Review” (hereinafter, the Modernizing E.O.) amends section 3(f)(1) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) having an annual effect on the economy of \$200 million or more in any 1 year (adjusted every 3 years by the Administrator of OIRA for changes in gross domestic product), or adversely affect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising legal or policy issues for which centralized review would meaningfully further the President’s priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case.

A regulatory impact analysis (RIA) must be prepared for regulatory actions with significant effects as per section 3(f)(1) (\$200 million or more in any 1 year). Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the rulemaking.

For this proposed rule, we have calculated the annual cost of the proposed minimum staffing requirements in Table 20 hours based on hours per resident day in CY 2021 dollars, assuming the implementation and enforcement of these requirements as being applied independent of a facility’s case-mix. We estimate that the aggregate impact of the staffing-related

provisions proposed in this rule, which includes a phased-in implementation of a requirement for 24 hours per day, 7 days per week RN onsite coverage, as well as the 0.55 RN and 2.45 NA minimum HPRD requirements, will result in an estimated cost of approximately \$32 million in year 1, \$246 million in year 2, \$4.06 billion in year 3, with costs increasing to \$5.7 billion by year 10. We estimate the total cost over 10 years will be \$40.6 billion with an average annual cost of \$4.06 billion.

Additionally, we have estimated in Table 30 the economic impact of the proposed requirement that States report, by facility and by delivery system (if applicable), on the percentage of Medicaid payments being spent on compensation for direct care workers and support staff delivering Medicaid-covered nursing facility and ICF/IID services. We are proposing that these requirements would become effective 4 years after finalization. We estimate an initial implementation cost of \$9,355,472 for years 1 to 4 (resulting in total initial implementation costs of \$37,421,886) and ongoing annual costs of \$18,305,713 per year starting in year 5.

C. Detailed Economic Analysis

1. Impacts for LTC Minimum Staff Requirement

a. Nursing Services (\$ 483.35)

We are proposing to make two changes to the existing requirements for Nursing Services for LTC facilities at \$ 483.35. We are proposing to require facilities to provide RN coverage onsite 24 hours per day, 7 days a week and to meet a minimum staffing standard of 0.55 RN and 2.45 NA HPRD. We note that these estimates do not include the exemption criteria, which could reduce the rule’s cost (including cost associated with potential LTC facility closure or reduction in patient load capacity per facility) and benefits, based on the use of exemptions.

(1) RN On Site 24 Hours a Day, 7 Days a Week (24/7 RN)

To estimate the cost to the industry for the RN on site 24 hours a day, 7 days a week (24/7 RN) requirement we first summed the current annual RN salary cost for each facility. We then subtracted this amount from the estimated annual RN salary cost that the facility will incur to meet the new requirement.

To measure the current RN staff cost to the industry, we estimated the total number of RNs currently employed in LTC facilities and their loaded

¹⁷¹ Throughout this discussion, we use the term “States” to include all States, Washington, DC, and any territories that include nursing facility services or ICF/IID services in their State plan.

respective labor wages using data from the 2022 Nursing Home Staffing Study, which has information on 14,688 LTC facilities. This study uses the 2021 SNF—Medicare Cost Report data set to find the total facilities, the total number of reported LTC specific RNs and their loaded annual salaries, defined as salary and fringe benefits. Using this dataset, we were able to estimate the aggregate RN loaded salary costs and the cost per facility.

To estimate the RN cost per resident census, we used the October 2021 Care Compare data set that calculates average hours per resident day (HPRD) for RNs using the PBJ System data from 2021 Q2. Hours per resident day is defined as the average hours of RN care that each resident in the facility receives per day. For example, a facility that has an average HPRD of 0.5 for RNs would provide, on average, 0.5 hours (30 minutes) of RN care for each resident. We linked this dataset using the facility unique ID variable with the 2021 SNF—Medicare Cost Report data set to create a complete dataset. Using this combined dataset, we were also able to view the impact by resident census as well as the impact by LTC facility characteristics such as facility ownership, bed size, Five-Star Quality Rating System staffing ratings, payer mix, and location. This complete dataset helped provide an understanding of which types of LTC facilities would bear the largest cost burden of a new Federal 24/7 RN requirement.

For each facility, we first calculated the total number of hours each day that an RN is on site by multiplying the average RN hours per resident day by the average number of residents in the facility (daily hours of RN care = RN HPRD × Residents in Facility). We then estimated the number of additional hours of RN care that facility would need to meet the 24/7 RN requirement by subtracting the current daily hours of RN care from 24 hours (additional daily RN hours needed = 24 – current daily hours of RN care). We then calculated

the total number of additional RN hours needed per year by multiplying this amount by 365 (additional yearly RN hours needed = additional daily RN hours needed × 365). Finally, we estimated each facility’s yearly cost for meeting the requirement by multiplying the total number of the yearly hours needed by the loaded hourly wage (yearly 24/7 RN cost = additional yearly RN hours needed × facility RN wage rate).

For example, if a facility had an average of 0.4 RN HPRD and had 50 residents it would provide 20 hours of total RN hours per day (0.4 HPRD × 50 residents = 20 total RN hours per day). To meet the 24/7 RN requirement, this facility would have to increase its total RN hours per day by 4 hours (24 hours needed – 20 hours current RN care = 4 hours needed) and 1,460 hours (4 hours per day × 365 days/year) annually. Using the loaded hourly wage cost of \$44 per hour, this facility would spend \$64,240 per year (\$44 × 4 RN hours per day × 365 day per year = \$64,240) to be in compliance with the 24/7 RN requirement.

After estimating each facility’s cost for meeting the 24/7 RN requirement, the next step was to sum the additional cost for all LTC facilities to meet the 24/7 RN requirement for an aggregate cost to the industry of \$349 million per year. We also found approximately 78 percent of LTC facilities had 24/7 RN coverage within a 90-day window based on PBJ System data from 2021 Q2 showing that they provided at least 24 hours of RN care per day. We assumed this estimate for all quarters, for an annual estimate of approximately 22 percent (100 percent – 78 percent = 22 percent) or 3,261 LTC facilities (0.222 × 14,688 LTC facilities = 3,261 LTC facilities) that would need to increase their RN staffing to comply with the 24/7 RN requirement. Among this 22 percent of facilities needing to increase RN staffing, there was an average of 0.43 hours of RN care per resident day.

Table 15 summarizes the average annual cost for LTC facilities to meet the

24/7 RN Staffing Requirement over a 10-year period, which includes any associated collection of information costs as described in section IV. In estimating the cost, we take into account expected growth in wages that will result from greater demand for RNs in LTC facilities to meet this proposed 24/7 RN requirement, as well as the 0.55 RN hours per resident day requirement that we discuss in more detail later in the analysis. All costs are reflected in 2021 US dollars.

There is uncertainty about how much RN wages will change over the next 10 years due to changes in demand for RNs emerging due to both this proposed rule, as well as broader patterns of healthcare use in the United States. A 2009 study¹⁷⁴ examined minimum licensed nurse (RN/LPN) staffing standards in California for acute care hospitals that went into effect in March 2004. The authors found that compared to metropolitan areas outside of California that did not have the regulation, RN wage growth in California increased 12.8 percent more between 2000 and 2006. A more recent study¹⁷⁵ found that real nurse wage rates increased by nearly 10 percent between 2001 and 2017, with changes in rates varying during years of U.S. economic growth and recession. During its strongest growth between 2001 and 2004, real wages increased at an average rate of 2.41 percent annually. Given the uncertainty in growth and increased demands for RNs, we assumed that real wages each year would increase at 2.31 percent.

We provide separate cost estimates for facilities in rural and urban areas since facilities in rural areas would have to meet the requirement 3 years after the final rule publication. Facilities in urban areas, in contrast, would need to meet the requirement 2 years after the final rule publication. This resulted in an average annual cost of approximately \$347 million in 2021 US dollars without considering exemptions.

TABLE 15—ANNUAL COST FOR 24/7 RN REQUIREMENT

Year	Collection of information costs for 24/7 RN (\$ 483.35 nursing services)	24/7 RN requirement (urban facilities)	24/7 RN requirement (rural facilities)	Total cost
1	\$7,461,504.00	\$0.00	\$0.00	\$7,461,504.00

TABLE 15—ANNUAL COST FOR 24/7 RN REQUIREMENT—Continued

Year	Collection of information costs for 24/7 RN (\$ 483.35 nursing services)	24/7 RN requirement (urban facilities)	24/7 RN requirement (rural facilities)	Total cost
4	7,990,622.80	223,754,075.83	149,989,560.03	381,734,258.67
5	8,175,206.19	228,922,794.98	153,454,318.87	390,552,320.04
6	8,364,053.45	234,210,911.55	156,999,113.64	399,574,078.64
7	8,557,263.08	239,621,183.61	160,625,793.16	408,804,239.85
8	8,754,935.86	245,156,432.95	164,336,248.98	418,247,617.79
9	8,957,174.88	250,819,546.55	168,132,416.34	427,909,137.76
10	9,164,085.62	256,613,478.07	172,016,275.15	437,793,838.85
10 Year Total Cost	82,868,918	2,111,564,589	1,272,156,756	3,466,590,263.09

We are soliciting comments on our assumptions, particularly our assumption that real wage rates for RNs will increase at annual rate of 2.31 percent, and burden estimates. We are also soliciting comments on how the available supply of RNs and potential changes in this supply and demand across different geographical areas over the next 10 years may influence the rule's cost for LTC facilities and other health care providers competing for the same supply of RNs.

(2) RN On Site 24 Hours a Day, 7 Days a Week (24/7 RN)—State Level Analysis

To provide a more in-depth understanding of the financial and staffing effects of the 24/7 RN proposed requirement, we examined its impact for different groups of LTC facilities in each State, as well as Washington DC and Puerto Rico. We first assessed how many full-time RNs LTC facilities would need to hire to meet the proposed requirement. In this analysis, we defined a full-time employee as an employee who worked 1,950 hours per year. This definition was based on a full-time employee working 5 days per week, 8 hours per day, with a 30-minute break (37.5 hours/week × 52 weeks/

year). To meet the 24/7 RN requirement, each facility would need to provide a minimum of 8,760 hours (24 hours/day × 365 days) of RN care annually since we did not include any facility exemptions in these calculations. All calculations used the October 2021 *Care Compare* data set that provides each LTC facility's average daily resident census and HPRD for RNs using the PBJ System data from 2021 Q2.

For each facility, we first calculated the total number of full-time RNs in the facility using the following formula: (facility specific RN HPRD × average daily resident census × 365)/1,950. For example, if a facility had 100 residents and provided an average of 0.2 RN HPRD, then during the year, it will provide a total of 7,300 hours of RN care (0.2 RN HPRD × 100 residents × 365 days = 7,300 hours) yearly and have 3.74 full-time RNs. We then calculated the number of additional full-time RNs needed by subtracting the total hours of RN care that the facility currently provides yearly from the 8,760 hours needed to ensure 24/7 RN coverage and dividing by 1,950, which is the number of hours of yearly care provided by a full-time RN. Continuing with our

example in this section, the LTC facility would need to provide 1,460 additional RN hours per year (8,760 hours – 7,300 hours = 1,460 hours) and hire 0.75 additional full-time RNs.

Table 16 shows the total number of RNs currently employed by LTC facilities in each State's urban and rural areas, the number of full-time RNs and NAs that LTC facilities would need to hire, and the percent increase in RNs that LTC facilities in each State would need to meet the proposed minimum staffing standard barring any exemptions. Oklahoma would need the largest increase in RNs in percentage terms for rural facilities, needing to increase the size of its RN workforce by 27 percent. Meanwhile, for urban facilities, the largest percentage increase in RNs would be in Louisiana at 17.6 percent. Facilities in Texas would need to hire the most overall RNs with the State needing 653 additional full-time RNs. Across the United States, however, the number of RNs that facilities would need to meet the requirement varies widely with several States, including Florida and Illinois, needing to increase the size of their LTC facilities' RN labor force by less than 1 percent.

TABLE 16—CURRENT AND ADDITIONAL FULL-TIME RNS NEEDED PER STATE TO MEET THE 24/7 RN REQUIREMENT [Absent an exemption]

State	Existing full-time RNs in rural areas	Additional RNs needed in rural areas	Percent increase in RNs needed in rural areas	Existing full-time RNs in urban areas	Additional RNs needed in urban areas	Percent increase in RNs needed in urban areas

Oregon	158	5	3.2	762	29	3.8
Pennsylvania	1,026	1	0.1	7,575	9	0.1
Puerto Rico	0	0		29	0	0.0
Rhode Island	0	0		947	0	0.0
South Carolina	279	8	2.9	1,325	26	2.0
South Dakota	488	19	3.9	240	4	1.7
Tennessee	683	28	4.1	1,693	25	1.5
Texas	1,138	250	22.0	4,451	403	9.1
Utah	122	2	1.6	926	8	0.9
Vermont	250	4	1.6	72	1	1.4
Virginia	574	6	1.0	1,951	22	1.1
Washington	193	3	1.6	1,967	5	0.3
West Virginia	399	10	2.5	682	2	0.3
Wisconsin	1,142	11	1.0	2,214	20	0.9
Wyoming	245	5	2.0	85	0	0.0
United States	26,708	1,358	5.1	108,220	1,909	1.8

We then assessed the financial cost for facilities to implement the proposed 24/7 RN requirement. To estimate the yearly cost per State, we used the formulas described in section VI.C.1.a.(1) of this proposed rule to first estimate each facility's yearly cost to meet the requirement. We also assumed that LTC facilities exceeding the minimum requirements for RNs would not reduce RNs to the minimum required level or lay off other staff to reduce costs. We then calculated the average cost per resident day by summing the total cost of meeting the requirement for all facilities in the State

and dividing it by the total number of resident days for *all facilities needing additional RNs*. We estimated the average cost per resident day only for facilities needing staff to provide a more complete picture of the burden that the rule would impose on these facilities.

Table 17 provides the yearly Statewide cost to implement the requirement, as well as the average cost per resident day for facilities in rural and urban areas that would need to hire additional RN to meet the requirement. Delaware would have the highest cost per resident day with a single facility that is not meeting the 24/7 RN

requirement and would need to spend \$87.45 per resident day. The highest overall cost occurs in Texas where facilities would need to collectively spend more than \$84 million to meet the minimum staffing requirement. The cost also varied across urban and rural areas. In New Hampshire, LTC facilities in urban areas that need staff would need to spend an average of \$8.95 per resident day to meet the requirement, while in Hawaii, Puerto Rico, and Wyoming these facilities would incur no cost. Nevada would have the highest average cost for rural LTC facilities at \$21.81 per resident day.

Table 18 shows the average cost per resident day to implement the requirement for facilities in each State that would need additional RNs, dividing facilities based on their size into three groups: less than 50 beds, 50

to 100 beds, and more than 100 beds. Within each group of LTC facilities, the cost varied widely by number of beds and State. In West Virginia, the average cost per resident day for facilities that have more than 100 beds and need

additional RNs would be \$0.72, while in North Carolina, the average cost per resident day for facilities with fewer than 50 beds would be \$29.19.

In Table 19, we calculated the average cost by State for facilities needing staff to meet the minimum staffing requirement based on whether the facility accepted patients with Medicare, Medicaid, or both Medicare

and Medicaid. The highest per resident day cost would be for 14 Medicaid-only facilities in Illinois that would need to spend an average of \$29 per resident day to meet the staffing requirement. The lowest per resident day cost for

facilities needing staff would be for a single Medicaid-only facility in South Dakota that would need to spend \$0.33 per resident day to meet the requirement.

(3) Minimum Nurse Staffing Requirement of at Least 0.55 RN and 2.45 NA HPRD

To estimate the incremental impact of the minimum nurse staffing requirement of 0.55 RN and 2.45 NA HPRD, we first estimated the industry's aggregate annual cost for nurse staff (RNs, LPNs/LVNS, and NAs) at current staffing levels. We then estimated the aggregate annual cost for nurse staff (RNs, LPNs/LVNs, and NAs) for all facilities to meet the minimum requirement. As discussed above, we note that the minimum staffing requirements are applied independent of a facility's individual case-mix, meaning the expected costs to a facility are based solely on the cost of facilities adding

additional staff to meet the 0.55 RN and 2.45 NA HPRD based on the facility's current staffing data, regardless of the facility's case-mix. Finally, we calculated the requirement's expected cost to the industry by subtracting the industry's current nurse staff cost from the estimated nurse staff cost for all facilities to meet the minimum requirement (Nurse Staff Cost for All Facilities to Meet Minimum Requirement—All Facilities' Current Nurse Staff Cost). To measure the current nurse staffing cost to the industry, we estimated the total number of nurse staff currently employed in LTC facilities and their loaded respective labor wages. This study used the 2021 SNF—Medicare Cost Report

dataset to find the total of facilities, the total number of reported LTC specific nurse-type staff and their loaded annual salaries, defined as salary and fringe benefits. Using this dataset, we were able to estimate the aggregate total nurse staffing salary costs and the cost per facility.

To estimate the nurse staffing cost by staff type, that is, RNs, LPNs/LVNs, NAs, per resident census we used the October 2021 *Care Compare* data set that calculates average hours per resident day (HPRD) for each nurse type using the PBJ System data from 2021 Q2. Hours per resident day was defined as the average hours of care that each resident in the facility receives from that nurse type. For example, a facility that

had an average HPRD of 0.5 for RNs would provide, on average, 0.5 hours (30 minutes) of RN care for each resident. We linked this dataset using the facility unique ID variable with the 2021 SNF—Medicare Cost Report data set to create a complete dataset. Using this combined dataset, we were also able to view the impact by staff type per resident census as well as the impact by LTC facility characteristics such as facility ownership, bed size, Five-Star Quality Rating System staffing ratings, payer mix, and location. This complete dataset helped provide an understanding of which types of LTC facilities would bear the largest cost burden of a new Federal minimum staffing requirement.

Using the above dataset, we estimated each facility's current total annual salary costs for each nurse type (RN, LPN/LVN, NA) as follows: [facility specific nurse type] loaded hourly wage $\times$ [facility specific nurse type] reported HPRD $\times$ facility-level average daily facility resident census $\times$ 365. For example, if a facility reported an average loaded hourly wage of \$44 for its RNs, an average of 0.4 RN HPRD, and an average daily resident census of 100, its estimated annual salary costs for RNs would be calculated as: $\$44 \times 0.4 \times 100 \times 365 = \$642,400$. Taking this example further, if this same facility reported a loaded average hourly wage of \$21 for its NAs, an average of 2.1 NA HPRD, and an average daily resident census of 100, its estimated annual salary costs for NAs would be calculated as: $\$21 \times 2.1 \times 100 \times 365 = \$1,609,650$. If this facility only employed RNs and NAs as part of its total nurse staff, then the facility's current total nurse staff cost would be \$2,252,050 ($\$642,400 + \$1,609,650 = \$2,252,050$). To estimate the aggregate current nurse staff cost across all facilities, the next step was to sum all facilities' current total (RN, LPN/LVN, and NA) nurse staff cost for an overall industry nurse staff cost of \$43.4 billion.¹⁷⁶ To estimate the cost of the minimum nurse staffing requirement, we subtracted the total current nurse staff cost per facility from the total nurse staff cost per facility with the minimum nurse staffing standard. The formula applied to calculate each facility's cost

of meeting the requirement per specific nurse type was: [facility specific nurse type] hourly wage $\times$ [[facility specific nurse type] required HPRD – [facility specific nurse type] reported HPRD] $\times$ facility level average daily resident census $\times$ 365. Using the same LTC facility example from the paragraph above where the facility had an average of 0.4 RN HPRD and 2.1 NA HPRD, for this LTC facility to comply it would need to increase its RN HPRD from 0.4 to 0.55 and NA HPRD from 2.1 to 2.45. The cost for this requirement on this facility would thus be \$509,175 ($(\$44 \times (0.55 - 0.4) \times 100 \times 365) + (\$21 \times (2.45 - 2.1) \times 100 \times 365) = \$509,175$).

When LTC facilities hire RNs to meet the 24/7 RN requirement, the hours these RNs work will also count toward the 0.55 RN HPRD requirement. To avoid overestimating the number of RNs that LTC facilities will need to hire and the cost to hire them, if a LTC facility has less than 0.55 RN HPRD, we subtracted any cost that the facility would incur to meet the 24/7 RN requirement up to the point where the LTC facility will meet the 0.55 RN HPRD requirement using the following formula: [facility specific cost to meet 0.55 RN and 2.45 NA HPRD Requirement] – [Facility Cost to Meet 24/7 RN Requirement].

Once we apply this formula to each facility in our dataset, we summed each facility's total cost to obtain the requirement cost to the industry of approximately \$4.23 billion.

This \$4.23 billion estimate assumed that LTC facilities would respond to the minimum nurse staffing requirement by increasing their RN and their NA staffing levels to the minimum necessary levels, without reducing other staff, such as administrative staff. We also assumed that LTC facilities would not obtain exemptions from the minimum staffing requirement. Finally, we assumed LTC facilities that were above the minimum staffing requirements for RNs and NAs would not decrease their current staffing levels and that owners of LTC chain facilities would not shift staff from facilities above the minimum proposed requirement to facilities below the minimum proposed requirement.¹⁷⁷

If LTC facilities covered under this proposed rule reduced other staff not covered by the rule, owners of LTC chain facilities shifted RN and NAs to other facilities below the requirements, or if LTC facilities obtained exemptions from the minimum staffing requirements the \$4.23 billion estimate may decline significantly. Any reduction in other staff, however, could also impose costs on residents due to reductions in support activities, such as housekeeping and food service, that contribute to quality of life in the LTC facility. As such, we seek comments on all the assumptions used in these cost models.

Table 20 summarizes the estimated total cost for the comprehensive minimum nurse staffing requirement which includes any associated collection of information costs as described in section IV. Collection of Information Requirements, but not the regulatory review costs which we discuss in more detail later in this section. To account for real growth in RN and NA wages over time, we used the same assumption that we used to estimate the cost of the 24/7 RN requirement. More specifically, we assumed that real wages for RNs and NAs needed to meet the proposed 0.55 RN and 2.45 HPRD requirement, as well as collection of information costs, would increase at 2.31 percent annually. Since rural and urban LTC facilities have different phase-in periods to meet the 24/7 RN (2 years for facilities in urban areas and 3 years for facilities in rural areas) and the 0.55 RN and 2.45 NA HPRD requirements (3 years for facilities in urban areas and 5 years for facilities in rural areas) we provided separate cost estimates for facilities located in each area. Over a 10-year period, we anticipate an average annual cost of approximately \$4.06 billion.

compared with a benefits estimate that also reflects net staffing changes; a quantitative approach to such benefits might extrapolate from reduced-form estimates of the effects on patients of other jurisdictions' nursing staffing requirements. By contrast, if benefits assessment reflects an explicit or implicit assumption that new nursing staff spend all their time on nursing activities—not newly covering any of the duties that would have been performed by lost housekeeping, food service or activities staff—then costs from a society-wide perspective are approximated by the (gross) new nursing staffing costs. In other words, in the latter case, a focus only on payroll effects would omit the harms to consumer satisfaction and conditions for remaining staff due to reductions in housekeeping, food service and activities.

¹⁷⁶ Calculated as the sum of reported salary costs for total nurse staff across all LTC facilities in the study sample. More specifically, Total annual salary costs for all LTC facilities = $\sum_{i=1}^{14,668} \text{Annual salary costs for total nurse staff}_i$.

¹⁷⁷ Appropriate accounting of costs depends on consistency with the benefits to which they are compared. The overall change in staffing cost (increasing nursing staff cost, net of housekeeping, food service and activities-staff costs—which are potentially decreasing) would appropriately be

TABLE 20—ANNUAL COST FOR THE COMPREHENSIVE MINIMUM NURSE STAFFING REQUIREMENT

This proposed rule does not include any provisions requiring Medicare, Medicaid or other non-Medicare/Medicaid payors to increase payment rates to providers to meet any or all the expected costs of the proposed requirements. Below, however, we provide estimates of how much of this estimated cost would be due to residents whose care is covered by three payor groups: Medicaid, Medicare, and other non-Medicare/Medicaid payors.

Table 21 provides annual estimates and a 10-year total estimate for the share of facilities' increased staffing costs that would be due to residents utilizing Medicaid. These estimates excluded all collection of information costs. Over a 10-year period, the average annual cost for facilities' due to residents whose stay is paid for by Medicaid would be approximately \$2.69 billion. If Medicaid were to fully cover these costs (although there is no expectation that it will), then States would pay \$1.1 billion and the Federal government would pay \$1.57 billion.

To build these estimates, we used a scenario where facilities' increased cost to meet the new minimum staffing and 24/7 RN requirement for residents utilizing Medicaid was equal to share of residents in the facility using Medicaid. More formally, we first calculated each facility's increased cost for these residents using the following formula: Increased Facility Cost for Medicaid Residents = (minimum staffing requirement cost + 24/7 RN staffing requirement cost) × (% facility residents

covered by Medicaid). We then summed all facilities' share of increased costs that was due to residents utilizing Medicaid to the obtain a total estimated cost of \$26.9 billion over 10 years.

To provide further details about the facilities' share of the total minimum staffing and 24/7 RN requirements' cost that is due to resident utilizing Medicaid, we broke down the Medicaid costs into how the costs would typically be divided between the Federal and State Medicaid programs. For these estimates, we assumed that the Federal Medicaid share would be equal to the State's FMAP (Federal Medical Assistance Percentage), while each State's share would be equal to the remaining amount (1–FMAP). Using this strategy, we estimated that States' portion of the Medicaid cost would be approximately \$11.1 billion over 10 years, while the Federal government's portion of the Medicaid cost would be \$15.7 billion.

Table 22 provides annual estimates and a 10-year estimate for the share of facilities' increased labor costs that would be due to residents whose care was covered by Medicare and other non-Medicare/Medicaid payors. These estimates continue to exclude all collection of information costs. Over a 10-year period, facilities' annual cost to meet the proposed requirements would be approximately \$454 million for residents utilizing Medicare and \$886 million for residents utilizing other non-Medicare/Medicaid payors.

To obtain these estimates, we used a scenario where the cost facilities would incur to meet the new minimum staffing and 24/7 RN requirements for residents utilizing Medicare and other non-Medicare/Medicaid payors would be equal to the share of residents covered by Medicare and non-Medicare/Medicaid payors in each facility.

To obtain the total cost due to residents utilizing Medicare, we first calculated each facility's increased staffing cost for residents utilizing Medicare using the following formula: Increased Facility Cost for Medicare Residents = (minimum staffing requirement cost + 24/7 RN staffing requirement cost) × (% facility residents covered by Medicare). We then summed all facilities' increased costs that was due to residents utilizing Medicare to the obtain a total estimated cost for Medicare of \$4.54 billion over 10 years. To obtain the total cost due to residents utilizing other non-Medicare/Medicaid payors, we first calculated each facility's increased cost for residents using a non-Medicare/Medicaid payor using the following formula: Increased Facility Cost for Non-Medicare/Medicaid Payors = (minimum staffing requirement cost + 24/7 RN staffing requirement cost) × (% facility residents covered by non-Medicare/Medicaid Payors). We then summed all facilities' increased costs that were due to residents utilizing other Non-Medicare/Medicaid payors to obtain a total estimated cost of \$8.86 billion over 10 years.

As previously stated, this rule does not include any provisions requiring

Medicare to increase payment rates to providers to meet any or all the

expected costs of the proposed requirements. With specific regards to

the SNF PPS, we do not believe this rule will have meaningful impacts on SNF PPS payment rates. Under section 1888(e)(4) of the Act, the SNF PPS uses per diem Federal payment rates based on mean SNF costs in a base year (FY 1995) updated for inflation to the first effective period of the PPS. Section 1888(e)(5)(A) of the Act requires us to establish a SNF market basket that reflects changes over time in the prices of an appropriate mix of goods and services included in covered SNF services. The SNF market basket is used to compute the market basket percentage increase that is used to update the SNF Federal rates on an annual basis, as required by section 1888(e)(4)(ii)(IV) of the Act. While this rule may have minimal impacts on the calculation of the SNF market basket percentage, which could impact annual updates to the SNF PPS rates, we believe that these impacts would be limited.

Additionally, under section 1888(e)(4)(G)(i) of the Act, the Federal rate also incorporates an adjustment to account for facility case-mix, using a classification system that accounts for the relative resource utilization of different patient types. The statute specifies that the adjustment is to reflect both a resident classification system that the Secretary establishes to account for the relative resource use of different patient types, as well as resident assessment data and other data that the Secretary considers appropriate. While we understand that increased staffing will have an impact on facility costs, we do not believe that these additional costs fall within the scope of relative resource utilization of different patient types. Since this rule impacts the facility as a whole, rather than individual patient types, we do not believe that the rule would impact adjustments made under the SNF PPS to account for facility case-mix.

Finally, section 1888(e)(4)(G)(ii) of the Act requires that we adjust the Federal rates to account for differences in area wage levels, using a wage index that the Secretary determines appropriate. Since the inception of the SNF PPS, we have used hospital inpatient wage data in developing a wage index to be applied to SNFs. As noted most recently in the FY 2024 SNF PPS final rule (88 FR 53211), we continue to use this practice in FY 2024. Given that the wage index used under the SNF PPS is based on analysis of hospital wages and staffing hours and because this rule will impact only on SNF wages and staffing hours, we do not anticipate that the impacts of this rule will be reflected in the SNF PPS wage index. We understand that, as

discussed in the FY 2024 SNF PPS final rule (88 FR 53212), there have been comments encouraging CMS to develop a wage index adjustment under the SNF PPS that uses SNF wages and staffing hours as the basis for calculating the adjustment. However, as we state in that rule,

We note that section 315 of the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554, enacted December 21, 2000) gave the Secretary the discretion to establish a geographic reclassification procedure specific to SNFs, but only after collecting the data necessary to establish a SNF PPS wage index that is based on wage data from nursing homes. To date, this has proven to be unfeasible due to the volatility of existing SNF wage data and the significant amount of resources that would be required to improve the quality of the data. More specifically, auditing all SNF cost reports, similar to the process used to audit inpatient hospital cost reports for purposes of the IPPS wage index, would place a burden on providers in terms of recordkeeping and completion of the cost report worksheet. Adopting such an approach would require a significant commitment of resources by CMS and the Medicare Administrative Contractors (MACs), potentially far in excess of those required under the IPPS, given that there are nearly five times as many SNFs as there are inpatient hospitals. While we continue to believe that the development of such an audit process could improve SNF cost reports, which is determined to be adequately accurate for cost development purposes, in such a manner as to permit us to establish a SNF-specific wage index, we do not believe this undertaking is feasible. (88 FR 53212).

We solicit comment on these assumptions regarding the impact of this rule on the rates paid under the SNF PPS.

Sources of uncertainty about the cost estimate for the 24/7 RN and 0.55 RN and 2.45 NA HPRD requirement include:

The cost estimate assumed that LTC facilities needing RNs and/or NAs to meet these requirements will hire them without laying off other direct care or support staff. Some research,^{178 179} however, has found that when States implemented minimum hour per day requirements for direct care staff (RNs, LPNs, and NAs), LTC facilities responded by reducing indirect care staff, such as housekeeping, food

service, and activities staff. If LTC facilities responded to the 24/7 RN and 0.55 and 2.45 NA requirement in similar ways, then a facility's total cost for the requirements could decline significantly relative to what was presented above (see earlier discussion about appropriate accounting of costs depending on consistency between benefit and cost analytic approaches).

The cost estimate assumed that real wages for RNs and NAs would grow at an annual rate of 2.31 percent due to increasing demand for these direct care staff. Differences in demand for RNs and NAs across geographical areas, however, could lead to wages in different areas to increase at different rates, altering the cost for LTC facilities.

The 24/7 cost estimate assumed that RNs would make the average hourly rate for RNs in the facility. If, however, LTC facilities needed to hire RNs to work overnight shifts, which typically command a higher hourly rate, the costs for LTC facilities to meet this requirement could increase.

The cost estimate assumed that no LTC facilities would obtain exemptions from the 0.55 RN and 2.45 NA HPRD requirements, although some facilities could obtain an exemption. Our analysis suggests that using the criteria of being located in an area with a medium staffing shortage, which is defined as the area having an RN and/or NA to population ratio that is 20 percent below the national average, or being located 20-miles from the nearest LTC facility, up to 24 percent of LTC facilities would meet the initial criteria for an exemption from the 2.45 NA HPRD requirement while 28 percent would be eligible for an exemption from the 0.55 RN HPRD requirement. Depending on the number of facilities that obtained an exemption and their expected cost to meet the HPRD requirement, the total cost of the rule for LTC facilities could decline significantly.

In addition to uncertainty about the magnitude of costs, there is uncertainty about whether LTC facilities or other entities in society would bear the cost of meeting the minimum staffing and 24/7 RN requirements. Payors might increase payment rates to meet some or all the rule's cost, which could reduce the cost for LTC facilities relative to what is estimated above.

We welcome any comments regarding the methodology that resulted in an estimated cost of approximately \$40.63 billion over a 10-year period for the Comprehensive Minimum Nurse Staffing Requirement and on the potential State and Federal Medicaid impact, as well as the potential impact

¹⁷⁸ Thomas, Kali S., Kathryn Hyer, Ross Andel, and Robert Weech-Maldonado. The Unintended Consequences of Staffing Mandates in Florida Nursing Homes: Impacts on Indirect-Care Staff, 2010, Medicare Care Research and Review, Volume 67, Issue 5, Pages 555–573.

on Medicare and other non-Medicare/Medicaid payors. We are also soliciting comments on all the assumptions we used in our estimate, especially how the available supply of RNs and NAs in different areas nationwide may influence the proposed rule's cost for LTC facilities and other health care providers competing for the same supply of RNs and NAs. Finally, we are seeking comments on how LTC chain ownership may lead to a shifting of employees across facilities from those facilities that are exceeding the proposed minimum staffing requirements to those that are below it.

(4) Impact of 0.55 RN and 2.45 NA HPRD Requirement on States

To provide a more in-depth understanding of the financial and staffing effects of the 0.55 RN HPRD and 2.45 NA HPRD proposed minimum requirement, we examined its impact for different groups of LTC facilities in each State, as well as Washington, DC and Puerto Rico. We first assessed how many full-time employees LTC facilities would need to hire to meet the proposed requirement. In this analysis, we defined a full-time employee as an employee who worked 1,950 hours per year. This definition was based on a full-time employee working 5 days per week, 8 hours per day, with a 30-minute break (37.5 hours/week $\times$ 52 weeks/year). We continued to assume that no facilities would obtain exemptions from the minimum staffing requirement. We also continued to subtract any cost that facilities incur or employees they would need to hire to meet the 24/7 RN requirements up to 0.55 RN HPRD. All calculations used the October 2021 *Care*

Compare data set that provided each LTC facility's average daily resident census and HPRD for RNs, LPNs/LVNs and NAs using the PBJ System data from 2021 Q2.

For each facility, we first calculated the total number of full-time RNs, LPN/LVNs, and NAs working in a facility using the following formula: (facility specific care type HPRD $\times$ Average daily resident census $\times$ 365)/1,950. For example, if a facility has 10 residents and provides an average of 0.1 RN HPRD, then during the year, it will provide a total of 365 hours of RN care (0.1 RN HPRD $\times$ 10 residents $\times$ 365 days) yearly and have 0.187 full-time RNs. We then calculated the number of additional RNs needed by subtracting the current average hours per resident day for RNs from the minimum required hours per resident day. Continuing with our example in this section, the LTC facility would need to provide 1,642.5 additional RN hours per year [(0.55 RN HPRD $-$ 0.1 HPRD) $\times$ 10 residents $\times$ 365 days = 1642.5 hours] and hire 0.84 additional full-time RNs.

To calculate the total number of additional NAs needed we subtracted the current average hours per resident day for NAs from the minimum required hours per resident day. For example, if the same facility as previously mentioned with 10 residents provided an average of 2.2 NA HPRD, then to meet the 2.45 HPRD requirement it would need to provide 912.5 additional NA hours per year [(2.45 NA HPRD $-$ 2.2 NA HPRD) $\times$ 10 residents $\times$ 365 days = 912.5 hours] and hire 0.47 (912.5 hours needed/1,950 hours yearly per full-time employee) full-time NAs.

Table 23 shows the total number of RNs and NAs employed by LTC facilities in each State's urban areas, the number of full-time RNs and NAs that LTC facilities would need to hire, and the percent increase in RNs and NAs that LTC facilities in each State would need to meet the proposed minimum staffing standard. Table 24 provides the same information for LTC facilities located in each State's rural areas.

Louisiana would need the largest increase in RNs in percentage terms. The number of full-time RNs in urban LTC facilities would need to increase by nearly 96 percent, while rural LTCs would need to increase the number of RNs by more than 73 percent to meet minimum standard. Facilities in Texas would need to hire the most overall RNs with the State needing 1,615 additional full-time RNs in urban areas and more than 311 RNs in rural areas. Across the United States, however, the number of RNs that facilities would need to hire varies widely, with several States, including Delaware and Hawaii, not needing to hire any RNs to meet the requirement.

Illinois would need the largest percentage increase for NAs in urban areas. The State would need to add nearly 6,000 full-time NAs and increase the overall number of NAs working in LTC facilities by more than 42 percent. Similar to RNs, however, there would be wide variation in the percentage increase in NAs across States. Florida, for example, would need to increase the size of its NA labor force in LTC facilities by less than 2 percent to meet the requirement.

TABLE 23—CURRENT AND ADDITIONAL FULL-TIME RNS AND NAs NEEDED PER STATE TO MEET 0.55 RN AND 2.45 NA HPRD STAFFING REQUIREMENT FOR URBAN LTC FACILITIES

We then assessed the financial cost for facilities to implement the proposed 0.55 RN and 2.45 NA HPRD minimum staffing requirement. To estimate the yearly cost per State, we used the formulas described in section VI.C.1.(a) to first estimate each facility's yearly cost to meet the requirement. We also assumed that LTC facilities exceeding the minimum requirements for either RNs and/or NAs would not reduce staff to the minimum required level or lay off other staff to reduce costs. We then calculated the average cost per resident day by summing the total cost of meeting the requirement for all facilities

in the State and dividing it by the total number of resident days for all facilities needing additional RNs or NAs. We estimated the average cost per resident day only for facilities needing staff to provide a more complete picture of the burden that the rule would impose on these facilities.

Table 25 provides the yearly Statewide cost to implement the requirement, as well as the average cost per resident day for facilities in rural and urban areas that will need to hire staff to meet the requirement. Facilities in Illinois that were not meeting the minimum staffing standard would need

to spend the most with an average cost of \$20.41 per resident day. The highest overall cost occurs in New York where facilities would need to collectively spend nearly \$409 million to meet the minimum staffing requirement. The cost also varied across urban and rural areas. In Illinois, LTC facilities in urban areas that need staff would need to spend an average of \$21.70 per resident day to meet the requirement, while in Florida, they would need to spend less than \$5.25 per resident day. Virginia had the highest average cost for rural LTC facilities at \$17.63 per resident day.

TABLE 25—LTC FACILITIES IN EACH STATE NEEDING RNS AND/OR NAs AND AVERAGE COST PER RESIDENT DAY BY RURAL AND URBAN LOCATION

State	Yearly state-wide cost (\$ million)	Average cost per resident day (statewide)	Urban LTC facilities needing RNs and/or NAs	Average cost per resident day (urban areas)	Rural LTC facilities needing RNs and/or NAs	Average cost per resident day (rural areas)

Table 26 shows the average cost per resident day for facilities in each State that need additional staff, dividing facilities based on their size into three groups: less than 50 beds, 50 to 100

beds, and more than 100 beds. Within each group of LTC facilities, the cost varied widely by the number of beds and State. In Oklahoma, the average cost per resident day for facilities that have

fewer than 50 beds and need additional RNs or NAs would be \$1.84, while in Illinois, the average cost per resident day for facilities with more than 100 beds would be \$22.10.

TABLE 26—NUMBER OF LTC FACILITIES IN EACH STATE NEEDED TO HIRE RNS AND/OR NAs AND AVERAGE COST PER RESIDENT DAY BY FACILITY SIZE

In Table 27, we calculated the average cost by State for facilities needing staff to meet the minimum staffing requirement based on whether the facility accepted patients with Medicare, Medicaid, or both Medicare

and Medicaid. The highest per resident day cost would be for a single Medicaid-only facility in North Dakota that would need to spend an average of \$31.33 per resident day to meet the staffing requirement. The lowest per resident

day cost for facilities needing staff would be for two Medicare-only facilities in West Virginia that would need to spend \$0.59 per resident day to meet the requirement.

TABLE 27—NUMBER OF LTC FACILITIES IN STATE NEEDING TO HIRE RNS AND/OR NAs AND AVERAGE COST PER RESIDENT DAY BY MEDICARE, MEDICAID AND DUAL ACCEPTANCE STATUS

b. Benefits of LTC Minimum Staff Requirement

Literature evidence suggests that higher staffing is associated with better quality of patient care and patient health outcomes.^{180 181 182} While many of these benefits are difficult to quantify, research suggests a positive correlation between higher RN HPRD and more community discharges, as well as fewer hospitalizations and emergency department visits that result in significant savings for Medicare. The strongest comes from the 2022 Nursing Home Staffing Study that analyzes the Medicare savings that are likely to result from different case-mix adjusted RN hours per resident day (HPRD) requirements.

The study first used the PBJ system, which contains data on daily hours worked by RNs, and data from the Minimum Data Set (MDS) on resident acuity and the number of residents in the facility, to calculate the acuity-adjusted RN HPRD for 14,140 LTC

facilities based on data from 2022 Q2.¹⁸³ We would note, as discussed above, that while the benefits described in this section were calculated on the basis of acuity-adjusted data, the minimum staffing requirements being proposed in this rule will be applied independent of an individual facility's case-mix. We understand that this may impact the comparability of the benefits described in this section to those which may occur if these requirements are finalized, but we also believe that the acuity adjusted data more accurately reflect that which is publicly reported through Care Compare and the PBJ System. Registered nurses included RNs, RNs with administrative duties, and RN directors of nursing. It then used Nurse Home Compare Data from 2021Q2 to 2022Q1 to examine the impact of different RN staffing levels on five claims-based measures: short-stay hospital readmission, short-stay emergency department (ED) visits, long-stay hospitalizations per 1,000 long-stay resident days, long-stay ED visits per 1,000 long-stay resident days, and the rate of successful return to home or community. More specifically, the study ran a multivariate regression model that used the 1st and 2nd RN staffing decile as the reference group and included the 3rd through the 10th deciles of RN staffing as covariates in the model. The model also includes several additional covariates that take into account LTC facility specific characteristics that include: (1) facility size (number of certified beds), (2) ownership type (for-profit, non-profit or government owned), (3) whether the facility is located in a rural area, (4) the facility's Medicaid population quartile, (5)

whether the facility is hospital-based, (6) the facility's status in the Special Focus Facility Program, and (7) whether the facility is part of a continuing care retirement community. They then used the model coefficients to identify the mean outcomes that were associated with each staffing level above the 1st and 2nd RN staffing deciles.

After identifying the mean outcome rate for each of the five measures that was associated with each staffing level, they compared it to the adjusted mean outcome rate for each facility to the rate the facility would have if it met the minimum required RN staffing level. For those facilities above the minimum RN staffing level, they assumed that they would maintain their current RN staffing level. Based on the facility's number of short-stay residents, as well as long-stay resident days, they then estimated the total savings at the facility level. To measure costs savings for Medicare, the used an average estimated cost of \$20,400 per hospitalization, \$2,500 per ED visit, and for community and home discharge, the reduction in the number of Medicare-covered SNF days multiplied by the average daily payment amount. Using these criteria, the study estimates that a minimum RN requirement of between 0.52 and 0.60 HPRD would result in \$318,259,715 in annual Medicare savings.¹⁸⁴

Given that our proposed RN HPRD level is 0.55 we consider this amount to be our best estimate of the rule's financial benefits. There are also likely to be cost savings for Medicaid due to fewer hospitalizations and emergency department visits, although the 2022

¹⁸³ In the study, Appendix E, Section E.1.1 provides details on the criteria used for the acuity adjustment.

¹⁸⁴ Abt Associates. (2022). Nursing Home Staffing Study Comprehensive report. Page 110. Report prepared for the Centers for Medicare & Medicaid Services. <https://edit.cms.gov/files/document/nursing-home-staffing-study-final-report-appendix-june-2023.pdf>.

Nursing Home Staffing Study did not quantify them. Higher RN and NA staffing levels may also lead to lower employee burnout and turnover, reducing LTC facilities' costs to recruit new staff and lowering dependence on temporary employees, who often command higher hourly rates. Additionally, while the savings estimate above reflects an acuity-adjusted standard, given variability in acuity across facilities, we believe that these savings estimates provide guidance on

the potential impact of applying the minimum staffing requirements independent of a facility's case-mix. We invite comments on this assumption and to what extent the benefits described in this section should be calculated using unadjusted data from PBJ and Care Compare.

Table 28 provides the estimated quantifiable benefits annually and over 10 years. Since the 0.55 RN HPRD requirement will not go into effect until Year 3, we estimate no reduction in

Emergency Department visits and hospitalizations, as well as increase in discharges to home or the community for the first 2 years. Over 10 years, we estimate a total of approximately \$2.55 billion in Medicare cost savings. We are soliciting comments on additional benefits from increased RN and NA staffing and note that the table below does not reflect the unquantifiable benefits of this rule.

TABLE 28—MINIMUM STAFFING REQUIREMENT AND MEDICARE COST SAVINGS

Year	Medicare cost savings
1	\$0

6	318,259,715
7	318,259,715
8	318,259,715
9	318,259,715
10	318,259,715
Total 10 Year Savings	2,546,077,720

Sources of uncertainty about the benefits of the 24/7 RN and 0.55 RN and 2.45 NA HPRD requirement parallel the cost uncertainty discussed earlier but with some differences:

The benefits estimate assumed that LTC facilities needing RNs and/or NAs to meet these requirements will hire the necessary staff. It does not, however, take into account how changes in the number of hours per resident day of other direct care or support staff might affect the impact that increasing the RN HPRD will have on Medicare cost savings. Some research, however, has found that when States implemented minimum hour per day requirements for direct care staff (RNs, LPNs, and NAs), LTC facilities responded by reducing indirect care staff, such as housekeeping, food service, and activities staff.^{185 186} If LTC facilities respond to the newly proposed 24/7 RN and 0.55 and 2.45 NA requirement in similar ways, then benefits of the requirements would be lower than what is presented above (see earlier

discussion about appropriate accounting depending on the consistency between benefit and cost analytic approaches).

The benefits estimate assumed that LTC facilities that exceed the 24/7 RN and 0.55 RN and 2.45 NA HPRD requirements would maintain RN and NA staffing at their current levels. Research examining how LTC facilities have responded to State level staffing mandates provides mixed evidence for this assumption, with some research finding no evidence that LTC facilities exceeding minimum requirements reduce staffing, while other research suggests that they do.¹⁸⁷ If LTC facilities reduced RN and NA staffing levels to a level that is closer to the minimum requirement, then benefits would be lower than what is estimated above.

The benefits estimate assumed that no LTC facilities would obtain exemptions from the 0.55 RN and 2.45 NA HPRD requirements, although some facilities could obtain such an exemption. Our analysis suggests that, using the criteria of being located in an area with a medium staffing shortage or being located 20 miles from the nearest LTC facility, up to 24 percent of LTC facilities would meet the initial criteria for an exemption from the 2.45 NA HPRD requirement while 28 percent

would be eligible for an exemption from the 0.55 RN HPRD requirement.

Depending on the number of facilities that obtain an exemption, the total benefits of the rule could be lower than what is presented above.

States could vary in how they respond to the increased staffing requirement, including whether they pay at least some of the additional nursing staffing costs with Medicaid funds. Benefits consequences are contingent upon such choices. For example, if overall Medicaid spending does not increase, but funds are shifted from other uses to increased LTC facility staffing, there would be negative health benefits for the patients experiencing reduced Medicaid coverage.

c. Transfers Associated With the 24/7 RN and 0.55 RN and 2.45 NA HPRD Minimum Staffing Requirements

We do not estimate transfers associated with the 24/7 RN and 0.55 RN and 2.45 NA HPRD minimum staffing portion of this rule since there are no requirements that Medicare, Medicaid and other non-Medicare/Medicaid payors increase payment rates in response to these requirements. In Tables 21 and 22, however, we do provide a breakdown of how much of the estimated cost from the proposed rule is due to LTC residents whose stay is covered by each payor type

(Medicare, Medicaid, and other non-Medicare/Medicaid payors).

(5) Medicaid Institutional Payment Transparency Reporting Provision Impacts

Under our authority at sections 1902(a)(6) and (a)(30) of the Act with regard to fee-for-service delivery systems, and sections 1902(a)(4) and 1932(c) of the Act with regard to managed care, we are proposing new reporting requirements at §§ 442.43(b) and 442.43(c) for States to report annually, by facility and by delivery system, on the percent of payments for Medicaid-covered services delivered by nursing facilities and ICF/IIDs that are spent on compensation for direct care workers and support staff.

Under this proposal, States would be required to report annually to us on the percent of payments for nursing facility and ICF/IID services that are spent on compensation for direct care workers and support staff. We are considering additional requirements that States report on median hourly wages for direct care workers and support staff in these facilities, and the State's FFS per diem rates for nursing facility and ICF/IID services. (The estimated costs of these additional proposals have been factored into our overall cost estimates.) We are proposing that States would be required to post all reported data on a State-maintained website, which States would review quarterly to ensure the information remains accurate and up-to-date. We believe that gathering and sharing data about the amount of Medicaid dollars that are going to the compensation of workers is a critical step in the larger effort to understand the ways we can enact policies that support the institutional care workforce and thereby help advance access to high quality care for Medicaid beneficiaries.

a. Costs of Medicaid Institutional Payment Transparency Reporting

As outlined in the Collection of Information (section IV. of this proposed rule), we estimate implementation costs to States of \$622,551 to come into compliance with the reporting requirements proposed at §§ 442.43(b)

and 442.43(c); we estimate an annual total cost of \$97,470 once the reporting requirement went into effect. Additionally, under our proposal at § 442.43(d), States would be required to make this information available on a public website; as outlined in the Collection of Information (section IV. of this proposed rule) we estimate an implementation cost to States of \$239,333 and an ongoing annual cost of \$295,527 once reporting starts. The total State costs for both the proposed reporting and website requirements are thus estimated at \$861,884 for implementation costs (\$622,551 + \$239,333) and \$392,997 ongoing annual costs once the reporting starts (\$97,470 + \$295,527).

However, as discussed in the Collection of Information (section IV. of this proposed rule) the Federal Government, through Federal Financial Participation, has a share in State Medicaid expenditures. For the purposes of this proposal, we have estimated that the Federal share of States' Medicaid expenditures is 50 percent. This means that the States and the Federal Government will each have a 50 percent share in the costs estimated in the prior paragraph. Therefore, we estimate that the States' and Federal Government's shares of the implementation costs for the proposals would be \$430,942 (\$861,884 × 0.5) and ongoing annual costs once the requirements took effect of \$196,498 (\$392,997 × 0.5).

As discussed in the Collection of Information (section IV. of this proposed rule) we estimate that the total cost to providers to prepare for compliance with the reporting requirement proposed at § 442.43(b) and (c) would be \$36,560,002, and an annual total cost to providers of \$17,912,717.

We do not estimate a cost to providers for the website posting requirement proposed at § 442.43(d). We also do not anticipate costs to beneficiaries associated with either the proposed reporting requirement or the proposed website posting requirement.

Table 29 provides a detailed summary of the estimated costs of each of the provisions for States, the Federal

Government, and providers. Table 30 summarizes the estimated costs of the provisions in § 442.43 for States, the Federal Government, and providers (Nursing Care Facilities (NAICS 623110) and Residential Intellectual and Developmental Disabilities Facilities (NAICS 623210)), over 10 years. Aside from regulatory review costs (discussed in the next section) this comprises the entirety of anticipated quantifiable costs associated with proposed changes to part 442, subpart B. The implementation costs associated with the proposed reporting and website posting requirements are split evenly over the years leading up to the proposed effective date, which is 4 years from the final rule's publication. For States and the Federal Government, this means that the implementation costs are represented as \$107,736 per year for 4 years (\$430,942 estimated implementation costs/4 years). For providers, the implementation costs are represented as \$9,140,000 per year for 4 years (\$36,560,002 estimated implementation costs/4 years). We also anticipate that once the rule goes into effect in Year 5, the ongoing annual costs will be relatively stable. We have shown the recurring annual estimate for Years 5–10 in Table 30. The estimates below do not account for higher costs associated with medical care; the costs calculated here are related exclusively to reporting and website posting costs. Per OMB guidelines, the projected estimates for future years are reported in real (non-inflation-indexed) dollars.

As discussed in the Collection of Information (section IV. of this proposed rule), costs were based on: (1) the number of States (including Washington, DC and certain territories) that currently operate Medicaid programs that cover nursing facility or ICF/IID services; (2) the number of States that deliver long-term services and supports through managed care; and (3) the total number of freestanding Medicaid-certified nursing facility and ICF/IID facilities in all States. We do not anticipate the number of entities changing significantly over the 10 years included in the cost calculations.

b. Benefits of Medicaid Institutional Payment Transparency Reporting

Our proposal is intended to support the sufficiency of the direct care and support staff workforce through public reporting of the direct payments to these workers. The immediate benefits (and the intermediate costs in the cause-and-effect chain connecting reporting to long-term benefits) are difficult to quantify. However, we believe that these provisions, if finalized, will pave the way for long-term benefits to Medicaid beneficiaries and help hold States accountable for ensuring that Medicaid payments are sufficient to enlist enough workers so that high quality LTSS are available to the beneficiaries who want and require such care.

We believe that compensation levels are a factor in the creation of a stable workforce, and that a stable workforce will result in better qualified employees, lower turnover, and a higher quality of care.^{188 189} If individuals are attracted to the institutional LTSS workforce and incentivized to remain employed in it,

the workforce is more likely to be comprised of workers with the training, expertise, and experience to meet the diverse and often complex needs of individuals with disabilities and older adults residing in institutions. As discussed above, a consistent, adequate direct care workforce can reduce reliance on overtime and costlier temporary staff and reduce the incidence of emergency department visits and hospitalizations.^{190 191 192}

There are many factors that contribute to understaffing in institutional settings. We are constantly seeking opportunities to address these challenges through guidance, policies, and rulemaking. These provisions in this proposed rule are intended to promote transparency around compensation for direct care workers and support staff. We believe that gathering and sharing data about

the amount of Medicaid payments going to the compensation of workers is a critical step in the larger effort to understand the ways we can enact future policies that support the institutional care workforce.

c. Transfers Associated With Medicaid Institutional Payment Transparency Reporting

We do not estimate transfers associated with these proposed provisions.

D. Alternative Direct Care Staff HPRD Requirement Considered

As detailed in this proposed rule, despite the existing requirements and the efforts to improve safety, as well as residents' quality of care and quality of life through the revisions in the 2016 final rule, understaffing in LTC facilities continues to be a concern. We believe the changes we have proposed are consistent with current standards of practice and necessary to increase resident safety and quality of care. We acknowledge, however, there are multiple avenues for establishing a minimum nurse staffing requirement and solicit comments on alternative policy options, including a specific comment solicitation in the "Provisions of the Proposed Regulation" section.

In developing the proposed rule, we considered varying staffing models that are available and different approaches we could have adopted for the proposed minimum nurse staffing requirement. We could have adopted multiple different types of combinations of a

¹⁸⁸ See, for example, the discussion of low wages among direct care workers in Campbell, S., A. Del Rio Drake, R. Espinoza, K. Scales. 2021. Caring for the future: The power and potential of America's direct care workforce. Bronx, NY: PHI <http://phinational.org/wp-content/uploads/2021/01/Caring-for-the-Future-2021-PHI.pdf>.

Effect of nurse staffing on rehospitalizations and emergency department visits among short-stay nursing home residents: A Cross-sectional study using the US Nursing Home Compare database. *Geriatr Nurs*. 2019 Mar-Apr;40(2):160–165. doi: 10.1016/j.gerinurse.2018.09.010. Epub 2018 Oct 4. PMID: 30292528.

staffing requirement such as separate requirements for RNs, LVNs/LPNs, and NAs or defining requirements for licensed nurse staffing, that is, combining RNs and LVNs/LPNs or creating standards for NAs only. Alternatively, we could have adopted non-nurse staffing requirements such as social workers, therapists, feeding assistants and other non-nurse staffing types in the minimum staffing requirement. Alternative minimum staffing policy options could also focus on the need to increase or decrease the number of HPRD or FTEs by nurse staff and/or type or on specifying the number by shift (including day, evening, night, or weekends or over a 24-hour period).

Ultimately, we chose the comprehensive 24/7 RN and 0.55 RN and 2.45 NA HPRD requirements in this proposed rule to strike a balance between ensuring resident health and safety, while preserving access to care, including discharge to community-based services. We considered a staffing standard that would maintain the 24/7 and 2.45 NA HPRD requirements but would have a lower RN HPRD requirement. We found, however, that even a small reduction in the RN HPRD requirement would lead to a large decline in quality of care. For example, the 2022 Nursing Home Staffing Study¹⁹³ found that reducing the case-mix adjusted RN HPRD requirement to between 0.45 and 0.52 hours per resident day would lead the staffing standard to have a smaller impact on Medicare savings, reduced hospitalizations and ED visits, and fewer community discharges. More specifically, the number of reduced hospitalizations would decline from 10,445 to 5,781, the number of reduced ED visits would decline from 7,525 to 4,466, increased community discharges would decline from 5,798 to 3,930, and Medicare savings would decline by more than \$130 million annually.

We seek comments on choosing a lower HPRD minimum staffing requirement. In particular, how a lower minimum staffing requirement may

influence quality of care and resident safety, as well as access to care.

We also considered alternative minimum staffing requirements at higher levels than the one we proposed. To illustrate this approach, we considered an alternative minimum staffing requirement that would retain the 24/7 RN requirement but would increase the minimum HPRD requirement. More specifically, this alternative minimum requirement would include a minimum staffing level of 0.55 RN HPRD, 2.45 NA HPRD, and 3.48 total nurse staff (RN, LPN/LVN, NA) HPRD. It is important to note that these estimates do not include the exemption criteria, which could significantly reduce the rule's cost.

To estimate the incremental impact of the Minimum Nurse Staffing Requirement of 0.55 RN HPRD, 2.45 NA HPRD, and 3.48 total nurse staff HPRD, we used the same methodology described in section VI.C.1 to first estimate the cost of facilities meeting the 0.55 RN and 2.45 NA hours per resident day, minimum staffing requirement. After accounting for any increase in RN and NA hours per resident day needed to meet the 0.55 RN and 2.45 NA requirements, we then calculated the total number of additional hours per resident day of nurse care that LTC facilities would need to provide to meet the 3.48 HPRD total nurse staff requirement. We did this calculation by subtracting the total nurse staff hours (RN, LVN/LPN, and NA) provided from 3.48 using the following formula: $[3.48 - (\text{RN HPRD} + \text{LVN/LPN HPRD} + \text{NA HPRD})]$. For any facilities that were below the 3.48 total nurse staff requirement, we assumed that they would hire NAs to fulfill any remaining hours. Using this strategy, we estimate that this alternative HPRD option would have an annual cost of approximately \$4.25 billion for all facilities.

This \$4.25 billion estimate assumed that LTC facilities would respond to the minimum staffing requirement by increasing their RN and NA staffing

levels to the level necessary to meet the requirements, without reducing other staff such as administrative staff. We also assumed LTC facilities that were above the minimum staffing requirements for RNs or total nurse staff hours per resident day would not decrease their staffing levels to the mandated minimum. Finally, we assumed that LTC facilities would not lay off LVNs/LPNs and replace them with NAs, who are less costly. If facilities covered under this proposed rule reduced other staff not covered by the rule, reduced nurse staff levels to the mandate minimum, or they obtained exemptions from the minimum staffing requirements, the requirement's cost and benefits could decline significantly relative to what is presented above. Non-quantified effects, such as costs associated with LTC closure or reduction in patient load per facility, would also be reduced).

Table 31 summarizes the 10-year total cost for this alternative minimum nurse staffing proposal in 2021 US dollars. The total cost for this alternative proposal included the 24/7 RN requirement, the 3.48 HPRD requirement, and any associated collection of information costs as described in section IV. Collection of Information Requirement. To account for changes in real nurse staff wages over time, we assumed that real wages would rise at a rate of 2.31 percent annually. Since this estimate continued to assume that the rule would have different phase-in periods for rural and urban LTC facilities to meet the 24/7 RN (2 years for facilities in urban areas and 3 years for facilities in rural areas) and the 0.55 RN HPRD, 2.45 NA HPRD, and 3.48 total nurse staff (RN, LPN/LVN, NA) HPRD (3 years for facilities in urban areas and 5 years for facilities in rural areas) requirements, we provided separate estimates for facilities located in each area. Over a 10-year period, we anticipated an average annual cost of approximately \$4.08 billion.

10 Year Total Cost	82,868,918	268,508,343	2,111,564,589	1,272,156,756	31,893,781,974	5,140,787,285	40,769,667,866

As we have previously noted, this rule does not require payors to increase payment rates to providers to meet the expected costs of the minimum staffing and 24/7 RN requirements. Below, however, we provide estimates of how much of facilities' costs to meet the minimum staffing and 24/7 RN requirements are due to residents whose stays are covered by Medicaid, Medicare, and other non-Medicare/Medicaid payors.

Table 32 lays out the share of the facility's cost to meet the requirement that is due to residents utilizing Medicaid, with an average annual cost of approximately \$2.68 billion in 2021 US dollars over a 10-year period. Table 33 lays out the share of the facility's cost that is due to residents utilizing Medicare and other non-Medicare/Medicaid payors, with an average annual cost of approximately \$453 million for Medicare and \$884 million for other payors in 2021 US dollars over

a 10-year period. These estimates were based on the assumptions listed in section VI.C.1.a.(3) of this proposed rule.

We seek comments on choosing a higher HPRD minimum staffing requirement. In particular, we welcome comments regarding how a higher minimum staffing requirement may influence quality of care and resident safety, as well as access to care.

Total 10 Year Cost	\$109,903,766	\$259,327,462	\$554,931,767	\$3,609,210,800	\$305,190,890	\$1,084,566,465	\$6,963,203,345	\$4,533,373,794	\$8,844,343,270

2. Medicaid Institutional Payment Transparency Reporting

We considered proposing to require in § 442.43(b) that States report at the beneficiary level or other more granular levels but did not include such requirements because we expected that this would increase reporting burden for States and providers without giving us additional information necessary for determining the percent of payments that are going to the workforce.

We also considered whether to allow States, at their option, to exclude from their reporting to CMS payments to providers that have low Medicaid revenues or serve a small number of Medicaid beneficiaries, based on Medicaid revenues for the service, or the number of Medicaid beneficiaries receiving the service. We considered this option as a way to reduce State and provider data collection and reporting burden based on the experience of States that have implemented similar reporting requirements. However, we are concerned that such an option could discourage providers from serving Medicaid beneficiaries or increasing the number of Medicaid beneficiaries served.

E. Regulatory Review Costs

1. Regulatory Review Costs of 24/7 RN and 0.55 RN and 2.45 NA HPRD Minimum Nurse Staffing

If the 24/7 RN and the Minimum Nurse staffing proposals impose administrative costs on private entities, such as the time needed to read and interpret this proposed rule, we should estimate the cost associated with regulatory review. As discussed in the Collection of Information (section III. of this proposed rule), 14,688 LTC facilities would be impacted by the proposed requirements. We assume that seventy-five percent (75 percent) of LTC facilities will proactively review this proposed rule, or 11,016. (We note that the FY 2023 SNF PPS proposed rule, 87 FR 22720, had around 18,000 views, as shown at <https://www.federalregister.gov/documents/2022/04/15/2022-07906/medicare-program-prospective-payment-system-and-consolidated-billing-for-skilled-nursing-facilities>. Some of these views were likely multiple views by the same reader.) We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all of the affected LTC facilities will read this proposed rule, or that there may be more than one individual reviewing the rule for some

LTC facilities. It is also possible that entities other than LTC facilities, such as beneficiary advocacy groups, may review this rule. We welcome any comments on the approach in estimating the number of LTC facilities which will review this proposed rule.

We also recognize that different types of entities are in many cases affected by mutually exclusive sections of some proposed rules, or that some entities may not find it necessary to fully read each rule, and therefore for the purposes of our estimate we assume that each reviewer will read approximately 50 percent of the section of the rule discussing the 24/7 RN requirement and the 0.55 RN and 2.45 NA HPRD requirement.

We seek comments on this assumption.

Using the wage information from the Bureau of Labor Statistics, May 2022 National Occupational Employment and Wage Estimates, https://www.bls.gov/oes/current/oes_nat.htm, for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$123.06 per hour, including overhead and fringe benefits. Assuming an average reading speed of 250 words per minute, and assuming that two-thirds (67 percent) of this proposed rule pertains to the 24/7 RN and 0.55 RN and 2.45 NA HPRD requirement, with approximately 40,000 words (of which we estimate 20,000 words will be read by reviewers), we estimate that it would take 80 minutes or 1.33 hours for the staff to review all the sections of the proposed rule pertaining to the 24/7 RN and 0.55 RN and 2.45 NA HPRD requirements. For each employee that reviews the rule, the estimated cost is \$163.67 (1.33 hours × \$123.06). Therefore, we estimate that the total one-time cost of reviewing this regulation is \$1,802,989 (163.67 × 11,016).

2. Regulatory Review Costs of Medicaid Institutional Payment Transparency Reporting

As discussed in the Collection of Information (section III. of this proposed rule), 52 State Medicaid agencies and approximately 19,907 nursing facilities and ICF/IIDs would be impacted by the proposed requirements (totaling 19,959 interested parties). Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that seventy-five percent (75 percent) of these affected entities will proactively review this proposed rule, or 14,969. (We note that the FY 2023 SNF PPS

proposed rule, 87 FR 22720, had around 18,000 views, as shown at <https://www.federalregister.gov/documents/2022/04/15/2022-07906/medicare-program-prospective-payment-system-and-consolidated-billing-for-skilled-nursing-facilities>. Some of these views were likely multiple views by the same reader.) We acknowledge that this assumption may understate or overstate the costs of reviewing this rule. It is possible that not all those affected entities will read this proposed rule, or that there may be more than one individual reviewing the rule for some of the affected entities. It is also possible that entities other than State Medicaid agencies or institutional facilities, such as beneficiary advocacy groups, may review this rule. We welcome any comments on the approach in estimating the number of entities which will review this proposed rule. We also recognize that different types of entities are in many cases affected by mutually exclusive sections of some proposed rules, or that some entities may not find it necessary to fully read each rule, and therefore for the purposes of our estimate we assume that each reviewer will read half of the sections of the rule discussing Medicaid institutional payment adequacy. We seek comments on this assumption.

Using the wage information from the Bureau of Labor Statistics, May 2022 National Occupational Employment and Wage Estimates, https://www.bls.gov/oes/current/oes_nat.htm, for medical and health service managers (Code 11-9111), we estimate that the cost of reviewing this rule is \$123.06 per hour, including overhead and fringe benefits. Assuming an average reading speed of 250 words per minute, and assuming that one-third of this rule pertains to Medicaid Institutional Payment Transparency Reporting, with approximately 20,000 words (of which we estimate 10,000 words will be read by reviewers), we estimate that it would take 40 minutes or 0.67 hours for the staff to review portions of the sections of the proposed rule pertaining to the Medicaid Institutional Payment Transparency Reporting. For each employee that reviews the rule, the estimated cost is \$82.45 (0.67 hours × \$123.06). Therefore, we estimate that the total one-time cost of reviewing this regulation is \$1,234,194 (\$82.45 × 14,969).

Table 34 provides the total estimated regulatory review costs for the rule, which is \$3,037,183.

TABLE 34—REGULATORY REVIEW COST

Medicaid institutional payment transparency reporting	24/7 RN and 0.55 RN and 2.45 NA HPRD minimum nurse staffing	Total cost
\$1,234,194	\$1,802,989	\$3,037,183

F. Accounting Statement

As required by OMB Circular A–4 (available online at https://obamawhitehouse.archives.gov/omb/circulars_a004_a-4/), we have prepared an accounting statement in Table 34 showing classification of the costs and benefits associated with the provisions

of this proposed rule. This includes the total cost for the 24/7 RN and the 0.55 RN and 2.45 NA HPRD requirements as provided in Table 20, the total cost for the Medicaid Institutional Transparency Reporting as provided in Table 30, the total cost for the regulatory review as provided in Table 34, and Medicare

savings due to fewer hospitalizations and emergency department visits, as well as greater return to home and community, as provided in Table 28. There are \$0 in transfer estimates in the statement. This statement provides our best estimate for the Medicare and Medicaid provisions of this rule.

TABLE 35—ACCOUNTING STATEMENT: 24/7 RN REQUIREMENT, 0.55 RN AND 2.45 NA HPRD REQUIREMENT, AND MEDICAID INSTITUTIONAL PAYMENT TRANSPARENCY REPORTING REQUIREMENT

Category	Estimates	Units		
		Year dollar	Discount rate	Period covered
Benefits				
Annualized Monetized (\$million/year)	236	2021	7%	2024–2033
	247	2021	3	2024–2033
Costs				
Annualized Monetized (\$million/year)	3,733	2021	7%	2024–2033
	3,930	2021	3	2024–2033

G. Regulatory Flexibility Act Analysis (RFA)

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that almost all Skilled Nursing Facilities (NAICS 6231) and Intellectual and Developmental Disabilities Facilities (NAICS 6232) are small entities, as that term is used in the RFA (including small businesses, nonprofit organizations, and small governmental jurisdictions). The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the Small

Business Administration (SBA) definition of a small business (that is, having revenues of less than \$8.0 million to \$41.5 million in any 1 year).

We utilized the revenues of individual SNF *providers* (from recent Medicare Cost Reports) to classify a small business, and not the revenue of a larger firm with which they may be affiliated. As a result, for the purposes of the RFA, we estimate that almost all SNFs are small entities as that term is used in the RFA, according to the Small Business Administration's latest size standards, with total revenues of \$34 million or less in any 1 year. In addition, approximately 20 percent of SNFs classified as small entities are non-profit organizations. Therefore, approximately 95 percent of the health

care industries impacted are considered small businesses according to the Small Business Administration's size standards with total revenues of \$41 million or less in any 1 year. Individuals and States are not included in the definition of a small entity. According to the 2017 Economic Census, Skilled Nursing Facilities (NAICS 6231) and Intellectual and Developmental Disabilities Facilities (NAICS 6232) together earned approximately \$162 billion annually with Skilled Nursing Facilities earning nearly \$119 billion and Intellectual and Developmental Disabilities Facilities earning approximately \$44 billion. Overall, the cost is estimated to be between 2.30 and 2.42 percent of revenues.

TABLE 36—REGULATORY FLEXIBILITY ACT ANALYSIS

	Annual revenue	Estimated average annual cost for providers with 3% discount rate	Estimated average annual cost for providers with 7% discount rate	Cost as % of revenue with 3% discount rate	Cost as % of revenue with 7% discount rate
Skilled Nursing Facilities and Intellectual and Developmental Disabilities Facilities	\$162,451,136,000	\$3,733,000,000	\$3,930,000,000	2.30	2.42

Individuals and States are not included in the definition of a small entity. This rule will not have a significant impact measured change in revenue of 3 to 5 percent on a substantial number of small businesses or other small entities. As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. At this time, we do not believe that this threshold will be reached by the requirements in this proposed rule. Therefore, the Secretary has certified that this proposed rule will not have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an MSA and has fewer than 100 beds. These proposals pertain solely to SNFs and NFs. Therefore, the Secretary has determined that these proposals will not have a significant impact on the operations of a substantial number of small rural hospitals.

H. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act (UMRA) of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately \$177 million. Based on the cost estimates discussed in this section, we have assessed the various costs and benefits of the proposed updates to the requirements for participation for LTC facilities. These proposed updates will not impose new requirements for State, local, or tribal governments. For the private sector facilities, the regulatory impact section, together with the remainder of the preamble, constitutes the analysis required under UMRA.

I. Federalism Analysis

Executive Order 13132 establishes certain requirements that an agency must meet when it issues a proposed rule that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. With regard to the updates to the

requirements for participation for LTC facilities, the provisions in this proposed rule are not intended to, and would not preempt the applicability of any State or local law providing a higher standard (in this case, a higher HPRD requirement for RNs and/or NAs or an RN coverage requirement in excess of at least one RN on site 24-hours per day, 7 days a week) than would be required by this proposed rule. To the extent Federal standards exceed State and local law minimum staffing standards, no Federal pre-emption is implicated because facilities complying with Federal law would also be in compliance with State law. We are not aware of any State or local law providing for a maximum staffing level. This proposed rule, however, is intended to and would preempt the applicability of any State or local law providing for a maximum staffing level, to the extent that such a State or local maximum staffing level would prohibit a Medicare, Medicaid, or dually certified LTC facility from meeting the minimum HPRD requirements and RN coverage levels proposed in this rule or from meeting higher staffing levels required based on the facility assessment proposed in this rule.

In accordance with the provisions of Executive Order 12866, this proposed rule was reviewed by the Office of Management and Budget.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on August 15, 2023.

List of Subjects

42 CFR Part 438

Administrative practice and procedure, Grant programs—health, Health professions, Medicaid, Older adults, People with Disabilities, Reporting and recordkeeping requirements.

42 CFR Part 442

Administrative practice and procedure, Grant programs—health, Health professions, Medicaid, Older adults, People with Disabilities, Reporting and recordkeeping requirements.

42 CFR Part 483

Grant programs—health, Health facilities, Health professions, Health records, Medicaid, Medicare, Nursing homes, Nutrition, Reporting and recordkeeping requirements, Safety.

For the reasons set forth in the preamble, the Centers for Medicare &

Medicaid Services proposes to amend 42 CFR chapter IV as set forth below:

PART 438—MANAGED CARE

■ 1. The authority citation for part 438 continues to read as follows:

Authority: 42 U.S.C. 1302.

■ 2. Section 438.72 is added to subpart B to read as follows:

§ 438.72 Additional requirements for long-term services and supports.

(a) *Nursing facilities services and services delivered in Intermediate Care Facilities for Individuals with Intellectual Disabilities.* If the State includes nursing facility and/or ICF/IID services in their MCO or PIHP contracts, the State must include requirements in these contracts imposing obligations on the MCO or PIHP to the extent necessary to comply with the reporting requirements in § 442.43 of this subchapter, and must comply by the first rating period for contracts with MCOs or PIHPs beginning on or after the effective date specified in § 442.43(f) of this subchapter.

(b) [Reserved]

PART 442—STANDARDS FOR PAYMENT TO NURSING FACILITIES AND INTERMEDIATE CARE FACILITIES FOR INDIVIDUALS WITH INTELLECTUAL DISABILITIES

■ 3. The authority citation for part 442 continues to read as follows:

Authority: Sec. 1102 of the Social Security Act (42 U.S.C. 1302), unless otherwise noted.

■ 4. Section 442.43 is added to subpart B to read as follows:

§ 442.43 Payment Transparency Reporting.

(a) *Definitions.* (1) *Compensation* means, with respect to direct care workers and support staff delivering services authorized under this part:

(i) Salary, wages, and other remuneration as defined by the Fair Labor Standards Act and implementing regulations (29 U.S.C. 201 *et seq.*, 29 CFR parts 531 and 778);

(ii) Benefits (such as health and dental benefits, sick leave, and tuition reimbursement); and

(iii) The employer share of payroll taxes.

(2) *Direct Care Worker* means one of the following individuals who provides services to Medicaid-eligible individuals receiving services under this part, who may be employed by or contracted or subcontracted with a Medicaid provider or State or local government agency:

(i) A registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist;

(ii) A certified nurse aide who provides services under the supervision of a registered nurse, licensed practical nurse, nurse practitioner, or clinical nurse specialist;

(iii) A licensed physical therapist, occupational therapist, speech-language pathologist, or respiratory therapist;

(iv) A certified physical therapy assistant, occupational therapy assistant, speech-language therapy assistant, or respiratory therapy assistant or technician;

(v) A social worker;

(vi) A personal care aide;

(vii) A medication assistant, aide, or technician;

(viii) A feeding assistant;

(ix) Activities staff; or

(x) Any other individual who is paid to provide clinical services, behavioral supports, active treatment (as defined at § 483.440) or address activities of daily living (such as those described in § 483.24(b)) for Medicaid-eligible individuals receiving Medicaid services under this part.

(3) *Support Staff* means an individual who is not a direct care worker and who maintains the physical environment of the care facility or supports other services for residents. Support staff may be employed by or contracted or subcontracted with a Medicaid provider or State or local government agency. They include any of the following individuals:

(i) A housekeeper;

(ii) A janitor or environmental services worker;

(iii) A groundskeeper;

(iv) A food service or dietary worker;

(v) A driver responsible for transporting residents; or

(vi) Any other individual who is not a direct care worker and who maintains the physical environment of the care facility or supports other services for Medicaid-eligible individuals receiving Medicaid services under this part.

(b) *Reporting requirements.* The State must report to CMS annually, by delivery system and by facility, the percent of Medicaid payments (which for fee-for-service includes base and supplemental payments as defined by section 1903(bb)(2) of the Social Security Act, and for payments from a managed care organization or prepaid inpatient health plan (as these entities are defined in § 438.2 of this chapter) includes the managed care organization's or prepaid inpatient health plan's contractually negotiated rate, State directed payments as defined in § 438.6(c) of this chapter, pass-

through payments as defined in § 438.6(a) of this chapter for nursing facilities, and any other payments from the managed care organization or prepaid inpatient health plan) for services specified in paragraph (b)(1) of this section, that is spent on compensation for direct care workers and on compensation for support staff, at the time and in the form and manner specified by CMS.

(1) *Services.* Except as provided in paragraph (b)(2) of this section, reporting must be based on all Medicaid payments (including but not limited to FFS base and supplemental payments, and payments from an MCO or PIHP, as applicable) made to nursing facility and ICF/IID providers for Medicaid-covered services, with the exception of services provided in swing bed hospitals as defined in § 440.40(a)(1)(ii)(B) of this chapter.

(2) *Exclusion of specified payments.* The State must exclude from its reporting to CMS payments claimed by the State for Federal financial participation under this part for which Medicaid is not the primary payer.

(c) *Report contents and methodology.*

(1) *Contents.* Reporting must provide information necessary to identify, at the facility level, the percent of Medicaid payments spent on compensation to:

(i) Direct care workers at each nursing facility;

(ii) Support staff at each nursing facility;

(iii) Direct care workers at each ICF/IID, and

(iv) Support staff at each ICF/IID.

(2) *Methodology.* The State must provide information according to the methodology, form, and manner of reporting stipulated by CMS.

(d) *Availability and accessibility requirements.* The State must operate a website consistent with § 435.905(b) of this chapter that provides the results of the reporting requirements specified in paragraphs (b) and (c) of this section. In the case of the State that implements a managed care delivery system under the authority of sections 1915(a), 1915(b), 1932(a), and/or 1115(a) of the Act and that includes nursing facility and/or ICF/IID services in their managed care organization or prepaid inpatient health plan contracts, the State may meet this requirement by linking to individual managed care organization or prepaid inpatient health plan websites. The State must:

(1) Include clear and easy to understand labels on documents and links;

(2) Verify no less than quarterly, the accurate function of the website and the

current accuracy of the information and links; and

(3) Include prominent language on the website explaining that assistance in accessing the required information on the website is available at no cost and include information on the availability of oral interpretation in all languages and written translation available in each non-English language, how to request auxiliary aids and services, and a toll-free and TTY/TDY telephone number.

(e) *Information reported by States.*

CMS must report on its website the results of the reporting requirements specified in paragraphs (b) and (c) of this section that the State reports to CMS.

(f) *Effective Date.* The requirements in this section are effective [4 YEARS AFTER THE EFFECTIVE DATE OF THE FINAL RULE].

PART 483—REQUIREMENTS FOR STATES AND LONG TERM CARE FACILITIES

■ 5. The authority citation for part 483 continues to read as follows:

Authority: 42 U.S.C. 1302, 1320a–7, 1395i, 1395hh and 1396r.

■ 6. Amend § 483.5 by adding the definitions of “Hours per resident day” and “Representative of direct care employees” in alphabetical order to read as follows:

§ 483.5 Definitions.

* * * * *

Hours per resident day. Staffing hours per resident per day is the total number of hours worked by each type of staff divided by the total number of residents as calculated by CMS.

* * * * *

Representative of direct care employees. A representative of direct care employees is an employee of the facility or a third party authorized by direct care employees at the facility to provide expertise and input on behalf of the employees for the purposes of informing a facility assessment.

* * * * *

§ 483.10 [Amended]

■ 7. Amend paragraph (h)(3)(i) by removing the reference “§ 483.70(i)(2)” and adding in its place the reference “§ 483.70(h)(2)”.

§ 483.15 [Amended]

■ 8. Amend paragraph (c)(8) by removing the reference “§ 483.70(l)” and adding in its place the reference “§ 483.70(k)”.

§ 483.35 [Amended]

■ 9. Amend § 483.35 by:

- a. In the introductory text removing the reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”;
- b. Revising paragraphs (a)(1)(i), (ii);
- c. Adding paragraphs (a)(1)(iii) through (v);
- d. In paragraph (a)(2) removing the phrase “paragraph (c)” and adding in its place the phrase “paragraph (e)”;
- e. Revising paragraph (b)(1);
- f. . In paragraph (e)(4) removing the phrase “paragraph (c)” and adding in its place the phrase “paragraph (e)”;
- g. In paragraph (f)(2) removing the phrase “paragraph (d)(1)” and adding in its place the phrase “paragraph (f)(1)”;
- h. Redesignating paragraph (g) as (h);
- i. Adding a new paragraph (g); and
- j. In newly redesignated paragraph (h)(2)(i) removing the phrase “paragraph (e)(1)” and adding in its place the phrase “paragraph (h)(1)”.

The revision and additions read as follows:

§ 483.35 Nursing services.

* * * * *

(a) * * *

(1) * * *

(i) Licensed nurses, including but not limited to a minimum 0.55 hours per resident day for registered nurses (RN); and

(ii) Other nursing personnel, in accordance with § 483.71, including but not limited to a minimum total of 2.45 hours per resident day for nurse aides (NA).

(iii) The 0.55 hours per resident day for RN and 2.45 hours per resident day for NA requirement may be exempted under paragraph (g) of this section for facilities that are found non-compliant and meet the eligibility criteria as determined by the Secretary.

(iv) Determinations of compliance with hours per resident day requirements will be made based on the most recent available quarter of Payroll Based Journal System data submitted in accordance with § 483.70(p) of this part.

(v) Compliance with minimum hours per resident day for RN and NA should not be construed as approval for a facility to staff only to these numerical standards. Facilities must ensure there are adequate staff with the appropriate competencies and skills sets necessary to assure resident safety and to attain or maintain the highest practicable physical, mental, and psychosocial well-being of each resident, as determined by resident assessments, acuity and diagnoses of the facility's resident population in accordance with the facility assessment at § 483.71 of this part.

* * * * *

(b) * * *

(1) Except when waived under paragraph (e) or (f) of this section, the facility must have a registered nurse on site 24 hours per day, for 7 days a week that is available to provide direct resident care.

* * * * *

(g) *Hardship Exemption from the Minimum Hours Per Resident Day Requirements.* A facility may be exempted by the Secretary from the requirements of paragraphs (a)(1)(i) and (ii) of this section if a verifiable hardship exists that prohibits the facility from achieving or maintaining compliance. The facility must meet the four following criteria to qualify for a hardship exemption:

(1) *Location.* The facility is located in an area where:

(i) The supply of applicable healthcare staff (either RN, or NA, or both) is not sufficient to meet area needs as evidenced by a medium (20 percent below the national average) or low (40 percent below the national average) provider-population ratio for nursing workforce; or

(ii) The facility is at least 20 miles from another long-term care facility, as determined by CMS; and

(2) *Good Faith Efforts to Hire.* The facility demonstrates that it has been unable, despite diligent efforts, including offering at least prevailing wages, to recruit and retain appropriate personnel. The information is verified through:

(i) Job listings in commonly used recruitment forums found online at American Job Centers (coordinated by the U.S. Department of Labor's Employment and Training Administration), and other forums as appropriate;

(ii) Documented job vacancies including the number and duration of the vacancies and documentation of offers made, including that they were made at least at prevailing wages;

(iii) Data on the average wages in the Metropolitan Statistical Area in which the facility is located and vacancies by industry as reported by the Bureau of Labor Statistics or by the State's Department of Labor; and

(iv) The facility's staffing plan in accordance with § 483.71(b)(4) of this subpart; and

(3) *Demonstrated Financial Commitment.* The facility demonstrates through documentation the amount of financial resources that the facility expends on nurse staffing relative to revenue.

(4) *Exclusions.* Facilities must not:

(i) Be a Special Focus Facility, pursuant to the Special Focus Facility

Program established under sections 1819(f)(8) and 1919(f)(10) of the Act; or

(ii) Have been cited for having widespread insufficient staffing with resultant resident actual harm or a pattern of insufficient staffing with resultant resident actual harm, or cited at the immediate jeopardy level of severity with respect to insufficient staffing as determined by CMS, within the 12 months preceding the survey during which the facility's non-compliance is identified, or

(iii) Have failed to submit Payroll Based Journal data in accordance with § 483.70(p).

(iv) An exemption under this paragraph does not constitute a waiver of paragraph (b) of this section. Such a waiver must be granted in accordance with paragraph (e) or (f) of this section.

(5) *Determination of Eligibility.* The Secretary will determine eligibility for an exemption based on the criteria in paragraphs (g)(1) through (4) of this section. The facility must provide supporting documentation when requested.

(6) *Timeframe.* The term for a hardship exemption is 1-year, unless the facility becomes an SFF facility or is cited for widespread insufficient staffing with resultant resident actual harm or a pattern of insufficient staffing with resultant resident actual harm. A hardship exemption may be extended on a yearly basis, after the initial 1-year period, if the facility continues to meet the exemption criteria in paragraphs (g)(1) through (4) of this section, as determined by the Secretary. There are no limits on the number of exemptions that an eligible facility can be granted.

* * * * *

§ 483.40 [Amended]

■ 10. Amend § 483.40 by:

■ a. In paragraphs (a) introductory text and (a)(1) removing the reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”; and

■ b. In paragraph (c)(2) by removing the reference “§ 483.70(g)” and adding in its place the reference “§ 483.70(f)”.

§ 483.45 [Amended]

■ 11. Amend § 483.45 in the introductory text by removing the reference “§ 483.70(g)” and adding in its place the reference “§ 483.70(f)”.

§ 483.55 [Amended]

■ 12. In § 483.55 amend paragraphs (a)(1) and (b)(1) by removing the reference “§ 483.70(g)” and adding in its place the reference “§ 483.70(f)”.

§ 483.60 [Amended]

■ 13. In § 483.60 amend paragraph (a) introductory text by removing the

reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”.

§ 483.65 [Amended]

■ 14. In § 483.65 amend paragraph (a)(2) by removing the reference “§ 483.70(g)” and adding in its place the reference “§ 483.70(f)”.

§ 483.70 [Amended]

■ 15. Amend § 483.70 by—

■ a. Removing paragraph (e); and
■ b. Redesignating paragraphs (f) through (q) as paragraphs (e) through (p), respectively.

■ 16. Section § 483.71 is added to subpart B to read as follows:

§ 483.71 Facility Assessment.

The facility must conduct and document a facility-wide assessment to determine what resources are necessary to care for its residents competently during both day-to-day operations (including nights and weekends) and emergencies. The facility must review and update that assessment, as necessary, and at least annually. The facility must also review and update this assessment whenever there is, or the facility plans for, any change that would require a substantial modification to any part of this assessment.

(a) The facility assessment must address or include the following:

(1) The facility’s resident population, including, but not limited to:

(i) Both the number of residents and the facility’s resident capacity;

(ii) The care required by the resident population, using evidence-based, data-driven methods that consider the types of diseases, conditions, physical and behavioral health issues, cognitive disabilities, overall acuity, and other pertinent facts that are present within that population, consistent with and informed by individual resident assessments as required under § 483.20 of this part;

(iii) The staff competencies and skill sets that are necessary to provide the

level and types of care needed for the resident population;

(iv) The physical environment, equipment, services, and other physical plant considerations that are necessary to care for this population; and

(v) Any ethnic, cultural, or religious factors that may potentially affect the care provided by the facility, including, but not limited to, activities and food and nutrition services.

(2) The facility’s resources, including but not limited to the following:

(i) All buildings and/or other physical structures and vehicles;

(ii) Equipment (medical and non-medical);

(iii) Services provided, such as physical therapy, pharmacy, behavioral health, and specific rehabilitation therapies;

(iv) All personnel, including managers, nursing and other direct care staff (both employees and those who provide services under contract), and volunteers, as well as their education and/or training and any competencies related to resident care;

(v) Contracts, memorandums of understanding, or other agreements with third parties to provide services or equipment to the facility during both normal operations and emergencies; and

(vi) Health information technology resources, such as systems for electronically managing patient records and electronically sharing information with other organizations.

(3) A facility-based and community-based risk assessment, utilizing an all-hazards approach as required in § 483.73(a)(1).

(4) The input of facility staff, including, but not limited to nursing home leadership, management, direct care staff, the representatives of direct care employees, and staff providing other services.

(b) The facility must use this facility assessment to:

(1) Inform staffing decisions to ensure that there are a sufficient number of staff

with the appropriate competencies and skill sets necessary to care for its residents’ needs as identified through resident assessments and plans of care as required in § 483.35(a)(3).

(2) Consider specific staffing needs for each resident unit in the facility, and adjust as necessary based on changes to its resident population.

(3) Consider specific staffing needs for each shift, such as day, evening, night, and adjust as necessary based on any changes to its resident population.

(4) Develop and maintain a plan to maximize recruitment and retention of direct care staff.

(5) Inform contingency planning for events that do not require activation of the facility’s emergency plan, but do have the potential to affect resident care, such as, but not limited to, the availability of direct care nurse staffing or other resources needed for resident care.

§ 483.75 [Amended]

■ 17. Amend § 483.75 by:

■ a. In paragraph (c)(2) removing the reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”; and

■ b. In paragraph (e)(3) removing the reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”.

§ 483.80 [Amended]

■ 18. In § 483.80 amend paragraph (a)(1) by removing the reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”.

§ 483.95 [Amended]

■ 19. In § 483.95 amend the introductory text by removing the reference “§ 483.70(e)” and adding in its place the reference “§ 483.71”.

Xavier Becerra,

Secretary, Department of Health and Human Services.

Vol. 88

Wednesday,

No. 171

September 6, 2023

Part IV

Commodity Futures Trading Commission

17 CFR Parts 37, 38, and 40

Provisions Common to Registered Entities; Proposed Rule

COMMODITY FUTURES TRADING COMMISSION

17 CFR Parts 37, 38, and 40

RIN 3038-AF28

Provisions Common to Registered Entities

AGENCY: Commodity Futures Trading Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Commodity Futures Trading Commission (“Commission”) is proposing to amend the Commission’s regulations under the Commodity Exchange Act (“CEA” or “Act”) that govern how registered entities submit self-certifications, and requests for approval, of their rules, rule amendments, and new products for trading and clearing, as well as the Commission’s review and processing of such submissions. The proposed amendments are intended to clarify, simplify and enhance the utility of those regulations for market participants and the Commission.

DATES: Comments must be received on or before November 6, 2023.

ADDRESSES: You may submit comments, identified by RIN 3038-AF28, by any of the following methods:

- *CFTC Comments Portal:* <https://comments.cftc.gov>. Select the “Submit Comments” link for this rulemaking and follow the instructions on the Public Comment Form.

- *Mail:* Send to Christopher Kirkpatrick, Secretary of the Commission, Commodity Futures Trading Commission, Three Lafayette Centre, 1155 21st Street NW, Washington, DC 20581.

- *Hand Delivery/Courier:* Follow the same instructions as for Mail, above. Please submit your comments using only one of these methods. To avoid possible delays with mail or in-person deliveries, submissions through the CFTC Comments Portal are encouraged.

All comments must be submitted in English, or if not, accompanied by an English translation. Comments will be posted as received to <https://comments.cftc.gov>. You should submit only information that you wish to make available publicly. If you wish the Commission to consider information that may be exempt from disclosure under the Freedom of Information Act (“FOIA”),¹ a petition for confidential treatment of the exempt information may be submitted according to the

procedures established in § 145.9 of the Commission’s regulations.²

The Commission reserves the right, but shall have no obligation, to review, pre-screen, filter, redact, refuse, or remove any or all of your submission from <https://comments.cftc.gov> that it may deem to be inappropriate for publication, such as obscene language. All submissions that have been redacted or removed that contain comments on the merits of the rulemaking will be retained in the public comment file and will be considered as required under the Administrative Procedure Act and other applicable laws, and may be accessible under FOIA.

FOR FURTHER INFORMATION CONTACT:

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Background
- II. Proposed Regulations
- III. Related Matters
 - A. Regulatory Flexibility Act
 - B. Paperwork Reduction Act
 - C. Cost Benefit Considerations

I. Background

Part 40 of the Commission’s regulations implements section 5c(c) of the CEA and sets forth provisions that are common to registered entities, including designated contract markets (“DCMs”), derivatives clearing organizations (“DCOs”), swap execution facilities (“SEFs”) and swap data repositories (“SDRs”).³ Part 40 establishes requirements and procedures for registered entities to submit their rules and products to the Commission prior to implementing rules, listing products for trading, or accepting products for clearing. Part 40 generally provides two means for registered entities to submit rules and products to the Commission. Typically, a registered entity elects to certify that

their product or rule complies with the CEA and the Commission regulations.⁴ This process is known as self-certification. Alternatively, a registered entity may seek Commission approval of the product or rule.⁵

The part 40 regulations also provide the Commission’s procedures for review (including approval or non-approval) of such product and rule submissions. The part 40 regulations prescribe certain information that must be made publicly available in connection with an application to become a DCM, SEF, DCO or SDR and when registered entities file new products, new rules and rule amendments.⁶ Additionally, the regulations include special certification provisions for certain rules submitted by systemically important DCOs (“SIDCOs”).⁷

With two exceptions, the Commission last amended the part 40 regulations in 2011,⁸ in connection with implementing various amendments the Dodd-Frank Wall Street Reform and Consumer Protection Act (“Dodd-Frank Act”) made to the CEA. Based on the Commission’s experience applying the part 40 regulations over the ensuing years, the Commission is proposing amendments that are intended to clarify, simplify and enhance the utility of the part 40 regulations for registered entities and the Commission.⁹

⁴ See CEA section 5c(c)(1); 17 CFR 40.2 and 40.6. But see § 40.4 (requiring that a DCM submit for Commission approval any rule that would materially change a term or condition of a contract for future delivery in an agricultural commodity enumerated in CEA section 1a(9) or of an option on such contract or commodity).

⁵ See CEA section 5c(c)(1); 17 CFR 40.3 and 40.5.

⁶ See § 40.8. Regulation § 40.8 is not the subject of this rulemaking.

⁷ See § 40.10.

⁸ Provisions Common to Registered Entities, 76 FR 44776 (July 27, 2011) (the “2011 Final Rule”). In 2021, the Commission made targeted, conforming amendments to § 40.1(j)(1)(vii) and (j)(2)(vii) (the portion of the definition of “terms and conditions” that relates to position limits) to conform this text to reflect the position limits amendments adopted by the Commission at that time. See Position Limits for Derivatives, 86 FR 3236 (January 14, 2021). Additionally, in 2015, the Commission removed from § 40.8 and appendix D to part 40 all references to electronic trading facilities on which significant price discovery contracts are traded or executed to reflect the fact that the Dodd-Frank Act eliminated these facilities from the CEA. See Repeal of the Exempt Commercial Market and Exempt Board of Trade Exemptions, 80 FR 59575 (October 2, 2015).

⁹ As discussed below in note 10, the Commission also proposes to make two conforming, non-substantive changes to update the citations referencing the definition of emergency located in the guidance section regarding Emergency Authority of appendix B for each of parts 37 and 38. Regulation § 40.11 relates to the Commission’s review of certain event contracts and is not the subject of this rulemaking.

² Regulation 145.9. Commission regulations referred to in this release are found at 17 CFR chapter I (2021), and are accessible on the Commission’s website at <https://www.cftc.gov/LawRegulation/CommodityExchangeAct/index.htm>.

³ Section 1a(40) of the CEA defines the term registered entity to include DCMs, DCOs, SEFs and SDRs.

¹ 5 U.S.C. 552.

II. Proposed Amendments

A. Section 40.1—Definitions

1. Formatting Change to § 40.1

Currently, the defined terms in § 40.1 are arranged in alphabetical order, with lettered headers. The Commission proposes to remove the lettered headers and instead arrange the defined terms in § 40.1 solely in alphabetical order,¹⁰ requiring the Commission to make fewer conforming changes to § 40.1 and other regulations when adding or removing defined terms in the future.¹¹

2. Non-Substantive Amendments to the Definition of “Business Day”

The Commission proposes non-substantive changes to the definition of the term “Business day” in § 40.1(a). Currently, the definition of the term “Business day” in § 40.1(a) uses the term “business hour” and defines the term “business hour” to mean “any hour between 8:15 a.m. and 4:45 p.m.” With the exception of § 40.1(a), the term “business hour” is not used in part 40. To enhance the readability of the definition of “Business day,” the Commission proposes to delete the definition of the term “business hour” and all references to the term “business hour” that currently appear in the definition of “Business day” in § 40.1(a). As amended, the term “Business day” would mean the intraday period of time starting at 8:15 a.m. and ending at 4:45 p.m. Eastern Standard Time or Eastern Daylight Savings Time, whichever is currently in effect in Washington, DC, on all days except Saturdays, Sundays, and Federal holidays in Washington, DC.¹²

3. Amendments to the Definitions of Dormant Entities

The Commission proposes to amend the definitions of the terms “Dormant designated contract market,” “Dormant derivatives clearing organization,” “Dormant swap data repository,” and “Dormant swap execution facility” in current § 40.1(c) through (f). These amendments relate to the duration of

inactivity of a registered entity that will result in the registered entity being deemed dormant, and are intended to enhance the clarity and consistency of the relevant regulatory text.

The current definitions in § 40.1(c) and (f) generally provide that a DCM and a SEF, respectively, will become dormant if there is no trading on the entity for a period of approximately 12 months, provided that the entity will not become dormant during the 36-month period following the entity’s initial and original designation or registration, respectively. Similarly, the definition in current § 40.1(d) generally provides that a DCO will become dormant if the entity has not accepted an agreement, contract or transaction for clearing for a period of 12 months, provided that the entity will not become dormant during the 36-month period following the entity’s initial and original registration. The definition in current § 40.1(e) generally provides that an SDR will become dormant if no data has resided on the entity for a period of approximately 12 months.¹³

The definitions are inconsistent and, in some cases, unclear as to how the applicable 12-month and 36-month periods are determined. In particular, the definitions vary in their use of the terms “consecutive” vs “complete” calendar months. Additionally, staff have observed that the phrases “preceding the first day of the most recent calendar month” and “preceding the most recent calendar month” have been a source of uncertainty when calculating whether an entity has become dormant. The Commission has observed that the definitions have been interpreted differently sometimes by registered entities than was intended by the Commission and believes the proposed changes will provide consistency.

To simplify the calculation of how long a registered entity has been inactive and to reduce the potential that market participants may interpret the regulatory language differently, the Commission proposes to amend the regulations to consistently state the time periods in days—i.e., 365 days instead of 12 months, and 1,095 days rather than 36 months.

4. Removal of the Terms “Dormant Contract or Dormant Product” and “Dormant Rule,” and Related Requirements

Regulation § 40.1(b) defines the term “Dormant contract or dormant product,” and § 40.1(g) defines the term “Dormant rule.” If a contract or product of a DCM or SEF is dormant pursuant to § 40.1(b), § 40.2(a) prohibits the DCM or SEF from listing the contract or product until the DCM or SEF either self-certifies that the contract or product to be listed complies with the CEA and Commission regulations pursuant to § 40.2(a) or obtains Commission approval of the contract or product pursuant to § 40.3. Likewise, under § 40.6(a), a registered entity may not implement a rule that has become dormant unless the registered entity either certifies that the rule complies with the CEA and Commission regulations in accordance with § 40.6(a) or obtains Commission approval of the rule pursuant to § 40.5.

The Commission proposes to remove the terms “Dormant contract or dormant product” and “Dormant rule” from § 40.1, and the requirements relating to dormant products and dormant rules from §§ 40.2 and 40.6. At the time the Commission adopted the dormant contract definition and the applicable requirements, contract markets were generally required to obtain Commission approval of any new products prior to listing the products. The CEA no longer requires approval of each contract or product listed by an exchange.¹⁴ Rather, an exchange may list a product after self-certifying that the product to be listed complies with the CEA and Commission regulations in accordance with § 40.2. Given this flexibility, exchanges now typically delist a contract that has no open interest before the contract can be considered dormant through self-certification pursuant to § 40.6(a).

In the Commission’s experience, registrants have effectively managed the removal of dormant products or rules as appropriate, particularly since the adoption of the self-certification process. Furthermore, while the removal of the term “dormant product” would enable a contract that has not been traded for an extended period of time to remain listed, the Commission believes any new trading may not pose concerns regarding market integrity or safety given that a DCM or SEF listing a contract has a continuing obligation to ensure that the contract complies with

¹⁰ The Commission also proposes to make two conforming changes that are necessitated by this proposed change to § 40.1. Specifically, the Commission proposes to update the references to the definition of emergency located in the guidance section regarding Emergency Authority of appendix B for each of parts 37 and 38 such that they reference § 40.1 rather than § 40.1(h). No substance is intended to be changed by these amendments.

¹¹ The Office of the Federal Register prefers the solely alphabetical approach to definitions sections. See *Document Drafting Handbook, Office of the Federal Register* at 2–27 (Revision 1.4, January 7, 2022).

¹² The Commission is not proposing any substantive changes to the definition of “Business day.”

¹³ Unlike the definitions for a dormant DCM, dormant DCO and dormant SEF in § 40.1(c), (d), and (f), respectively, the dormant SDR definition in § 40.1(e) does not provide a 36-month grace period after the entity’s initial and original registration before an SDR may become dormant.

¹⁴ Section 113 of the Commodity Futures Modernization Act of 2000, Appendix E of Public Law 106–554, 114 Stat. 2763 added section 5c(c) to the CEA.

the CEA and Commission's regulations thereunder. In addition, the Commission is unaware of any instances in which the dormancy of a product or rule for an extended period has caused any market or market participant material harm. The Commission preliminarily believes that deleting the definitions would result in little, if any, reduction in market integrity or safety while potentially reducing compliance costs for market participants and oversight costs for the Commission.

Accordingly, the Commission proposes to remove the definitions of "dormant contract or dormant product" and "dormant rule," and all references to "dormant contract or dormant product" and "dormant rule" in the regulations. As discussed above, the Commission will retain its definitions of dormant registered entities, and the rules of a dormant DCM, dormant SEF, dormant DCO, or dormant SDR would need to be approved in connection with the entity being reinstated as a DCM, SEF, DCO or SDR, respectively.¹⁵ Also, products would need to be approved or self-certified in order to be listed for trading by the DCM or SEF offered for clearing by the DCO.¹⁶

5. Amendment to the Definitions of "Rule" and "Terms and Conditions"

The Commission proposes to add "margin methodology" to the definition of "Rule" in § 40.1. Prior to 2011, the definition included a restriction on Commission review of rules relating to margin levels, based on section 8a(7) of the Act.¹⁷ After section 736 of the Dodd-

Frank Act amended section 8a(7) of the Act to remove the restriction on Commission review of rules relating to margin levels,¹⁸ the Commission removed the restriction from the definition of "Rule." Although DCOs have been submitting margin-related rule changes to the Commission since 2011, in order to provide clarity regarding the requirement to submit changes to margin methodologies, the Commission is proposing to revise the definition of "Rule" to include an explicit reference to margin methodology.

The Commission proposes to amend the definition "Terms and conditions" by removing the following items from the scope of the definition such that the items to be removed will no longer be treated as terms and conditions. With respect to a contract for the purchase or sale of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap), the Commission proposes to remove "Payment or collection of commodity option premiums or margins" from § 40.1(j)(1)(xi). With respect to a swap, the Commission proposes to remove "Payment or collection of option premiums or margins" from § 40.1(j)(2)(xi). Further, the Commission is proposing to add these items to the categories of rules that may be implemented without certification pursuant to § 40.6(d)(2). The Commission preliminarily believes that registered entities should be able to submit rules or rule amendments governing the payment or collection of these premiums or margins through weekly notices to the Commission pursuant to § 40.6(d)(2) as this will lower the burden for registered entities and still provide sufficient notice to the Commission given the fact that these rules and rule amendments governing the payment or collection of these premiums or margins are general in substance.¹⁹

2011 amendments to part 40. Section 8a(7)(D), as amended by the Dodd-Frank Act, now permits the Commission to alter the rules of a DCO with respect to margin requirements, provided, however, that the Commission may not set specific margin amounts. The Commission eliminated the exclusion of the setting of margin levels from the definition of "rule" in its 2011 Final Rule.

¹⁸ Specifically, section 8a(7) of the Act provides that the Commission is authorized to alter or supplement rules of a DCO including rules with respect to margin requirements, provided that the rules shall be limited to protecting the financial integrity of the DCO, be designed for risk management purposes to protect the financial integrity of transactions, and not set specific margin amounts.

¹⁹ The Commission notes for clarity that these rules and rule amendments do not include details regarding the models used to calculate the premiums or margins.

The Commission requests comment on all aspects of its proposed amendments to § 40.1.

B. Section 40.2—Listing Products for Trading by Certification

1. Proposed Amendments to § 40.2(a)(3)(i) and Appendix D

Regulation § 40.2(a)(3)(i) requires a product certification submission to include a copy of the submission cover sheet in accordance with the instructions in appendix D to part 40. The same requirement is in the part 40 regulations governing the submission of rule certifications and product and rule approval requests. With the development and evolution of the Commission's online portal for the filing of rule and product submissions, the cover sheet information required by appendix D is currently entered by registered entities via the portal and processed and stored in the Commission's online systems, making the cover sheet itself unnecessary.

Accordingly, the Commission proposes to revise § 40.2(a)(3)(i), the analogous provisions in §§ 40.3, 40.5 and 40.6,²⁰ and appendix D to remove the cover sheet requirement and related references. As proposed, appendix D will continue to specify the information that must be entered by a registered entity as part of the filing process, and the Commission will continue to use such information as part of its processing and review of submissions.

Additionally, the Commission proposes to amend appendix D to require a SEF or DCM when submitting a new product to indicate whether the product is a "referenced contract" as such term is defined in § 150.1 and as is described in appendix C to part 150. By way of background, the Commission's amendments to position limits that became effective on March 15, 2021 introduced the term "referenced contract" and incorporated the term "referenced contract" into the regulatory text that defines the term "terms and conditions" in part 40.²¹ As

²⁰ Specifically, the analogous provisions are §§ 40.3(a)(2), 40.5(a)(2) and 40.6(a)(7)(i).

²¹ See 86 FR 3236, 3307 (January 14, 2021) Position Limits for Derivatives (adding the definition of "referenced contract" to § 150.1 and incorporating the term referenced contract into § 40.1(j)(1)(vii) and (j)(2)(vii)). See also Appendix C to Part 150—Guidance Regarding the Definition of Referenced Contract. Generally, the term "referenced contract" as used for purposes of Federal position limits in part 150 and as defined in § 150.1 means either a futures contract or an option on a futures contract whose settlement price is determined by reference, directly or indirectly, to the price of one of 25 physically-settled core referenced futures contracts enumerated in § 150.2, or a swap that qualifies as an "economically

¹⁵ See, e.g., §§ 38.4(a)(2), 37.4(d), and 49.8(b). Similarly, in adopting changes to § 39.4(a) in 2020, the Commission stated that its issuance of an order of registration as a DCO constitutes an approval of the applicant's rules that were submitted as part of the application. 85 FR 4852, Jan. 27, 2020.

¹⁶ See, e.g., §§ 38.4(b), 37.4(d), 40.2, and 40.3.

¹⁷ Prior to the enactment of the CFMA in 2000, section 5a(a)(12)(A) of the Act required that all changes to contract terms and conditions be submitted to the Commission for approval "except those rules relating to the setting of levels of margin." In section 113 of the CFMA, Congress removed section 5a(a)(12)(A) and adopted new section 5c(c), allowing registered entities to amend their rules by self-certification. The new provision did not retain any reference to the exclusion of margin rules. However, section 8a(7) of the Act was not amended by the CFMA except to replace "contract market" with "registered entity", and retained the provision that allowed the Commission to alter or supplement the rules of a DCO, except for rules related to "the setting of levels of margin," thereby creating uncertainty as to whether registered entities could adopt or change margin rules without certifying those rules to the Commission. Because there was no indication that Congress intended to alter the special status of rules relating to the setting of margin levels, the Commission had resolved this ambiguity by excluding the setting of margin levels, with limited exceptions, from the definition of "rule" in Regulation § 40.1(h), as in effect prior to the July

a result, before listing a new contract for trading, a DCM or SEF must determine whether a new contract to be listed is a referenced contract.²² To facilitate market participants' compliance with position limits, Commission staff maintain a workbook of all the referenced contracts that are listed on DCMs and SEFs. To better enable Commission staff to consider whether new contracts to be listed should be added to the workbook in a timely, efficient manner and to review such submissions, the Commission is proposing to amend appendix D to require a DCM or SEF to indicate as part of the filing process if a contract to be listed is a referenced contract. The identification of new products as referenced contracts as part of the filing process will enable the Commission to more efficiently process and review such submissions.

Finally, as a related matter, the Commission is amending the filing format and manner requirement in §§ 40.2(a)(1), 40.3(a)(1), 40.5(a)(1) and 40.6(a)(1) to remove the reference to the "Secretary of" the Commission. The Commission is also proposing to delegate the Commission's authority to specify the format and manner of filing under these regulations to the Directors of the Division of Market Oversight and the Division of Clearing and Risk by adding proposed § 40.7(e).

2. Proposed Amendments to § 40.2(a)(3)(ii)

Currently, the text of §§ 40.2(a)(3)(ii) and 40.3(a)(3) both describe a requirement to submit as part of a self-certification or a voluntary submission for Commission approval, respectively, the rules that set forth a contract's terms and conditions. The two provisions use similar, but slightly different, language.²³ Given that the two provisions use slightly different words, but are both intended to require that the DCM or SEF include a copy of the rules that set forth the contract's terms and conditions, the Commission proposes to amend the text of § 40.2(a)(3)(ii) to mirror the text used in § 40.3(a)(3) so that both provisions use the same

equivalent swap" (as such term is defined in § 150.1) to any of the 25 physically-settled core referenced futures contracts enumerated in § 150.2.

²² See § 40.1(j)(1)(vii) and (j)(2)(vii), and §§ 40.2 and 40.3.

²³ Regulation § 40.2(a)(3)(ii) requires the self-certification to include "a copy of the product's rules including all rules related to its terms and conditions." Regulation 40.3(a)(3) says substantively the same thing, but using different words (requiring the voluntary submission for Commission approval of a product to include "a copy of the rules that set forth the contract's terms and conditions").

language for consistency and avoid any potential misreading that the differences in language between the two provisions are intended to signify a difference in substance.

3. Proposed Amendments to § 40.2(a)(3)(v)

Regulation § 40.2(a)(3)(v) requires a DCM or SEF that self-certifies a product to submit a concise explanation and analysis of the product and its compliance with applicable provisions of the Act, including core principles, and the Commission's regulations thereunder. Staff primarily bases its analysis of the product on the explanation and analysis the DCM or SEF must provide regarding the product's compliance with the Act and Commission regulations, including analysis of the commodity underlying the product. Staff has observed a trend that new product certifications tend not to include sufficient information on the underlying commodity to enable the Commission to complete its analysis, particularly for contracts on new commodities (e.g., rare earth metals) for which staff may have less prior experience. The Commission notes that a DCM or SEF that provides the information described in appendix C to part 38 that applies to a contract would be sufficient for the Commission to determine the compliance of the contract's terms and conditions with the applicable core principles.²⁴

To ensure staff receive adequate information regarding the product and the commodity underlying the product in order to analyze the compliance of self-certified products with the applicable core principles, the Commission proposes the following changes to § 40.2(a)(3)(v). The Commission proposes to amend the text to include references to the "terms and conditions" of the product and to "the underlying commodity" to clarify the Commission's intent that § 40.2(a)(3)(v) requires an explanation and analysis of

²⁴ Appendix C to part 38. Specifically, for the listing of futures contracts, see paragraph (a) of appendix C to part 38. For the listing of futures contracts settled by physical delivery, see paragraph (b) of appendix C to part 38. For the listing of futures contracts settled by cash delivery, see paragraph (c) of appendix C to part 38. For the listing of options on futures contracts, see paragraph (d) of appendix C to part 38. For the listing of security futures products, see paragraph (e) of appendix C to part 38. For the listing of non-price-based contracts, see paragraph (f) of appendix C to part 38. For the listing of swap contracts, see paragraph (g) of appendix C to part 38. See also Appendix B to part 37 (pointing SEFs to appendix C of part 38 for guidance on how to demonstrate compliance with SEF Core Principle 3 for swaps that are settled by physical delivery or cash settlement).

the product's underlying commodity, as well as both the product's terms and conditions, and the product's compliance with the applicable provisions of the Act, including core principles, and the Commission's regulations thereunder. The Commission also proposes to add the words "that is complete with respect to" the product's terms and conditions, the underlying commodity, and the product's compliance with applicable provisions of the Act, including core principles, and the Commission's regulations thereunder to ensure that, although the explanation be concise, it nevertheless has to include an explanation of how and why the contract's terms and conditions comply with the applicable core principles and relate to the cash market of the underlying commodity.²⁵

As noted above, the information described in appendix C to part 38 that applies to a contract would be sufficient for the Commission to determine the compliance of a contract's terms and conditions with the applicable core principles.²⁶ Appendix C to part 38 provides guidance on the quality standards that should be defined for the underlying commodity in the contract's terms and conditions for a futures contract.²⁷ The quality standards used should reflect those used in transactions in the commodity in normal cash marketing channels and comply with those industry established standards.²⁸ Accordingly, to be complete, submissions pursuant to § 40.2(a)(3)(v) should be guided by portions of appendix C to part 38 that apply to the contract being listed.²⁹

To improve the understanding of the level of detail expected by the Commission, the discussion below addresses two common categories of contracts and provides two specific product examples that illustrate the level of detail that would meet the "concise" and "complete" standard to enable the Commission to analyze the compliance of the contract with the applicable core principles.

Generally, when listing a cash settled or physically settled contract on a

²⁵ See § 38.252 which provides, among other things, that the DCM must demonstrate for physical delivery contracts that it monitors a contract's terms and conditions as they relate to the underlying commodity market and to the convergence between the contract price and the price of the underlying commodity and show a good-faith effort to resolve conditions that are interfering with convergence.

²⁶ See note 24.

²⁷ See Appendix C to part 38, paragraph (b)(2)(i)(A) for physically-settled contracts and paragraph (c)(4)(i)(A) for cash-settled contracts.

²⁸ See *id.*

²⁹ See note 24.

commodity, the explanation and analysis the DCM or SEF submits describing the characteristics of the contract's underlying commodity pursuant to § 40.2(a)(3)(v) should include characteristics such as the deliverable commodity's grade, quality and deliverable supply, as applicable, as well as the other applicable requirements described in appendix C to part 38. Appendix C to part 38 provides guidance on the quality standards that should be defined for the underlying commodity in the contract's terms and conditions for a physically-settled futures contract.³⁰ The quality standards used should reflect those used in transactions in the commodity in normal cash marketing channels and comply with those industry established standards.³¹

As a specific example for a physically settled futures contract, when listing a physically settled futures contract on copper, the DCM should specify the acceptable standard of copper that is eligible for delivery on the physically-settled futures contract.³² Today, an acceptable quality standard for copper in the cash market is Grade 1 Electrolytic Copper Cathodes (full plate or cut) that conforms to the latest chemical and physical specifications adopted by the American Society for Testing and Materials for Grade 1 Electrolytic Copper Cathode (B115–00 or its latest revision). If a DCM lists a physically settled futures contract on Grade 1 Electrolytic Copper Cathodes, the only quality of copper allowed for delivery at the settlement of the futures contract would be copper of the quality that meets this industry-set standard, and as a result, the price of the futures contract would reflect the price of only this kind of copper.

Throughout the life of the futures contract up until the time of expiration, copper located in a DCM-approved warehouse of the quality specified in the contract would be eligible to be warranted by the warehouse for delivery on the contract. The price of the

physical copper (Grade 1 Electrolytic Copper Cathode) to which the futures contract settles and the price of the physically settled futures contract on Grade 1 Electrolytic Copper Cathode should match—or converge—at the expiration date. The convergence demonstrates that the futures contract accurately reflects the cash price of the underlying commodity and compliance with DCM Core Principle 3 (that the contract is not readily susceptible to manipulation).

Similarly, when listing a cash-settled contract based on an excluded commodity, the explanation and analysis the DCM or SEF submits describing the characteristics of the contract's underlying commodity should include characteristics such as the rate, index methodology, and pricing source, as applicable, as well as other applicable characteristics described in appendix C to part 38.³³ Appendix C to part 38 provides guidance on the cash settlement price calculation for a cash-settled futures contract.³⁴ Appendix C provides that the cash-settlement price series used by a DCM or SEF to settle a cash settled contract should be reflective of the underlying cash-market of the commodity, publicly available, timely and reliable.³⁵ The DCM or SEF should include this information in its explanation of how the product complies with the applicable provisions of the Act, including core principles, and the Commission's regulations thereunder.

As a specific product example for a cash-settled excluded commodity, when listing a cash-settled futures contract on a stock index price series, such as the S&P 500 (a stock index of large capitalization stocks listed on U.S. stock exchanges), the DCM should specify how the cash settlement price based on the S&P 500 Index is reflective of the underlying cash-market, reliable, publicly available and timely.³⁶ The DCM should describe how the S&P 500 Index price series is reflective of the underlying cash market of domestic large capitalization stocks by describing the methodology for constructing and maintaining the S&P 500 Index. The DCM should describe how the S&P 500 Index is considered by industry as an

accurate and reliable index of large capitalization stocks by describing how the index is used as a benchmark for measuring the movements of the U.S. stock exchanges. The DCM should describe how frequently the index is calculated and where it is disseminated to the market place to describe how the index is publicly available and timely.

The Commission requests comment on all aspects of its proposed amendments to § 40.2.

C. Section 40.3—Voluntary Submission of New Products for Commission Review and Approval

1. Proposed Amendments to § 40.3(a)(4)

Regulation § 40.3(a)(4) requires that when a DCM, SEF or DCO voluntarily submits a new product for Commission review and approval prior to its listing for trading or accepting the product for clearing, the DCM, SEF or DCO must send the Commission an explanation and analysis of the product and its compliance with applicable provisions of the Act, including core principles, and the Commission's regulations thereunder. Currently, staff relies primarily on the explanation and analysis provided pursuant to this requirement to analyze the compliance of a product submitted for review and approval by the Commission, including the explanation and analysis of the commodity underlying the product. The Commission proposes to amend § 40.3(a)(4) to clarify that by “product”, the regulation requires an explanation and analysis “that is complete with respect to” the product's terms and conditions, the underlying commodity and the product's compliance with the applicable provisions of the Act and Commission regulations thereunder.³⁷ This amendment is intended to ensure the Commission receives adequate information regarding the product and the commodity underlying the product to analyze the compliance of the product submitted for voluntary Commission review and approval.

2. Proposed Amendments to § 40.3(a)(10)

Currently, § 40.3(a)(10) provides that when a registered entity voluntarily submits a contract for Commission approval, Commission staff may request additional evidence, information or data to demonstrate that the contract meets, initially or on a continuing basis, the

³⁷ While the Commission proposes to include the word “complete,” the Commission notes that the “explanation and analysis” requirement in proposed § 40.3(a)(4) does not include the qualifier that the submission be “concise” for the same reasons discussed below in note 47.

³⁰ Appendix C to part 38, paragraph (b)(2)(i)(A).

³¹ See *id.* Appendix C also provides that regardless of the type of commodity underlying the contract, the DCM or SEF's explanation and analysis should describe the cash market for the underlying commodity and how the contract's terms and conditions: reflect the cash market transactions in the underlying commodity; meet the risk management needs of prospective users; and promote price discovery of the underlying commodity. Appendix C to part 38, paragraph (a).

³² See Appendix C to part 38, paragraph (b)(2)(i)(A). When listing a cash settled futures contract on copper, the DCM should specify the acceptable standard of copper that underlies the cash price series or the physically-settled futures referenced price used for cash settlement purposes. See Appendix C to part 38, paragraph (c)(4)(i)(A).

³³ See Appendix C to part 38, paragraphs (a) and (c).

³⁴ For example, when listing a cash settled futures contract on the S&P 500 Index, the DCM's contract specifications should describe the index and its methodology.

³⁵ See Appendix C to part 38, paragraphs (a) and (c).

³⁶ Appendix C to part 38, paragraphs (c)(3)(iv) and (v).

requirements of the Act, or other requirement for designation or registration under the Act, or the Commission's regulations or policies thereunder. Upon such request, the registered entity must provide the requested additional evidence, information or data by the open of business two business days after the date staff made such request, or at the conclusion of such extended period agreed to by Commission staff after timely receipt of a written request from the registered entity.

The Commission proposes to remove the two business day deadline from § 40.3(a)(10) and replace it with "the time specified by the Commission staff" to reflect the fact that the two business day deadline is often not practical and that the amount of time the registered entity needs to respond depends on the nature and scope of the requested information.

3. Proposed Amendments to § 40.3(c), (d) and (f)

The Commission proposes to reorganize paragraphs (c) and (d) of § 40.3, which address the Commission's review and determination (*i.e.*, approval or non-approval) of products submitted for Commission approval. More specifically, to enhance the readability of § 40.3(c), the Commission proposes to reorganize § 40.3 so that all of the provisions that may affect the length of the review period of a product submitted for Commission approval pursuant to § 40.3 appear together in § 40.3(c).³⁸ The Commission proposes to reorganize § 40.3(d) to address the Commission's determination, including: approval through the passage of the applicable review period; and non-approval.

Currently, § 40.3(c) provides that all products submitted for Commission approval under § 40.3(c) shall be deemed approved by the Commission 45 days after receipt by the Commission, or at the conclusion of an extended period as provided under § 40.3(d), "unless notified otherwise within the applicable period;" provided that the conditions set forth in § 40.3(c)(1) and (2) are satisfied. The Commission proposes to amend the text of the introductory paragraph in § 40.3(c) (which the Commission proposes to move to § 40.3(d)(1)) to clarify that the phrase "unless notified otherwise

within the applicable period" (which provides a vague reference to the notification involved) means unless the Commission issues a notice of non-approval to the registered entity under paragraph (d)(2) of § 40.3 within the applicable review period.

In addition, the Commission is proposing to amend the condition in § 40.3(c)(2) (which the Commission proposes to move to § 40.3(c)(4)) that must be met for the deemed approval to be effective. Regulation § 40.3(c)(2) currently requires that the submitting entity does not amend the terms or conditions of the product or supplement the request for approval, except as requested by the Commission or for correction of typographical errors, renumbering or other non-substantive revisions, during that period. Any voluntary, substantive amendment by the submitting entity will be treated as a new submission under § 40.3(c)(2). The Commission proposes to amend this condition by removing the phrase, except as requested by the Commission, and the reference to voluntary in the next sentence and by adding text that states that an amendment or supplementation requested by the Commission will be treated as a new submission under § 40.3 and will restart the review period of the submission. As amended, any substantive amendment to the terms or conditions of the product or supplementation to the request for product approval, including any substantive amendment requested by the Commission or any other substantive amendment made voluntarily by the submitting entity, will be treated as a new submission under § 40.3 and will restart the review period of the submission.³⁹ The Commission believes these proposed amendments are necessary to better ensure the Commission has sufficient time to review substantive changes to requests for product approval.

The Commission also proposes to amend § 40.3(d)(1) (which the Commission proposes to move to

§ 40.3(c)(2)) to provide that the Commission may extend the request for a product approval if the submission is incomplete or the requestor does not respond completely to Commission questions in a timely manner. The Commission has the authority to extend their review of a rule approval request submission under current § 40.5(d)(1) if the submission is incomplete or the requestor does not respond completely to Commission questions in a timely manner⁴⁰ and the Commission believes the same ability for reviews of product approval request submissions under § 40.3 would better enable the Commission to review products when requested by registered entities.

The Commission proposes to add § 40.3(c)(5) to extend the review period under proposed § 40.3(c)(1) when the review period would end on a day that is not a business day to instead end on the next business day,⁴¹ and to revise current § 40.3(d)(1), proposed to be redesignated as § 40.3(c)(2), to permit an additional extension of *up to* 45 days. By way of background, § 40.3(d)(1) (which the Commission proposes moving to § 40.3(c)(2)) provides that the Commission may extend the review period for an additional 45 days if the product raises novel or complex issues that require additional time for analysis. Under current § 40.3(c) and (d)(1), the initial 45-day review period and the 45-day extended review period do not exceed the 90 days permitted by section 5c(c)(4)(C) of the CEA,⁴² absent agreement by the requestor to a further extension.⁴³ To ensure that the total review period will not extend beyond 90 days after the request is submitted, the Commission proposes to change the extended review period under § 40.3(d)(1) from "an additional 45 days" to "up to an additional 45 days" in proposed § 40.3(c)(2). For example, if the end of the initial 45-day review period would fall on a Saturday, and is

⁴⁰ Under current § 40.5(d)(1), the timely manner standard is dependent upon the facts and circumstances. The Commission proposes the same timely manner standard for § 40.3(d)(1).

⁴¹ The Commission proposes to revise the heading of § 40.3(c) from "Forty-five day review" to "Commission review" to reflect the fact that the review period may be extended beyond forty-five days due to adjustments so that the review period ends on a business day.

⁴² The relevant portions of section 5c(c)(4)(C) of the Act provide that the Commission shall take final action on the request not later than 90 days after submission of the request, unless the person submitting the request agrees to an extension of the time limitation established under paragraph (c)(4)(C).

⁴³ Because an extension to which a registered entity may agree under proposed § 40.3(c)(3) is not required to be a specified number of days, Commission staff can ensure that the extended period ends on a business day.

³⁸ The Commission proposes these changes to enhance readability and address some confusion regarding the § 40.3 process. The Commission also proposes changes to reorganize § 40.5 to enhance readability and, in general, is proposing parallel structural changes to §§ 40.3 and 40.5 for consistency.

³⁹ One example of a substantive amendment would be changes in the delivery grade or characteristics of the underlying commodity for a physically settled contract that may affect estimated deliverable supply and thus position limits for the contract. Another example would be a change in the price reference series of a new cash-settled contract that settles to a Price Reporting Agency source ("PRA"). Most PRAs have various series on the same commodity that differ from each other depending on characteristics such as geographical location of commodity transaction or commodity quality characteristics. PRA methodologies for the same commodity can differ between PRAs. If an amendment changes a PRA as the source, the underlying methodology for the price series would need to be examined to determine if it is not readily susceptible to manipulation.

extended by proposed § 40.3(c)(5) to Monday, the next business day, for a total of 47 days, any additional extension under proposed § 40.3(c)(2) could not exceed 43 days ($47 + 43 = 90$).

The Commission also proposes to make explicit in proposed § 40.3(c)(3) that the Commission may at any time extend its review period for any period of time, provided that it does so with the written agreement of the registered entity.⁴⁴

Additionally, the Commission is proposing to amend § 40.3(f)(1) (which the Commission proposes to move to § 40.3(e)(1)). Current § 40.3(f)(1) provides that notification to a registered entity under paragraph (e) of § 40.3 of the Commission's determination not to approve a product does not prejudice the entity from subsequently submitting a revised version of the product for Commission approval or from submitting the product as initially proposed pursuant to a supplemented submission. The Commission believes that amending the text by replacing the word "prejudice" with "prevent", replacing the words "pursuant to" with "in", adding the phrase "the revised or supplemented submission will be reviewed without prejudice" at the end, and inserting two commas will help avoid any confusion as to the effect of the non-approval. Also, the changes to the paragraph would improve consistency with §§ 40.5(e)(1) and 40.6(c)(5)(i).

Finally, the Commission proposes to amend § 40.3(f)(2) (which the Commission proposes to move to § 40.3(e)(2)). Currently, the section provides that notification to a registered entity under paragraph (e) of § 40.3 of the Commission's refusal to approve a product shall be presumptive evidence that the entity may not truthfully certify under § 40.2 that the same, or substantially the same, product does not violate the Act or the Commission's regulations thereunder. The Commission believes that amending the text by replacing the words "refusal" with "determination not"—as well as replacing the words "does not violate the Act" with "complies with the Act"—will have the effect of increasing clarity and provide consistency with §§ 40.2(a)(3)(iv) and 40.5(f)(2) (which the Commission proposes to be redesignated as § 40.5(e)(2)).

The Commission requests comment on all aspects of its proposed amendments to § 40.3.

D. Section 40.4—Amendments to Terms or Conditions of Enumerated Agricultural Products

1. Clarification Regarding Scope of § 40.4(a) and Materiality Under § 40.4

Regulation § 40.4(a) requires a DCM to submit rule changes that would materially change a term or condition of a contract on an agricultural product enumerated in section 1a(9) of the CEA with open interest for Commission approval under the procedures of § 40.5. The Commission notes that § 40.4(a) applies strictly to rules that materially change a product's economic terms and conditions, and does not apply to other rules. To ensure this is clear, the Commission proposes to add the word "product's" to the text of § 40.4(a) to modify "term or condition" as used therein and to replace the words "should not be submitted under this section" with the words "are not required by this section to be submitted for Commission approval under the procedures of § 40.5."

By way of background, when a registered entity submits a change to any terms or conditions of a contract on an agricultural product enumerated in section 1a(9) of the CEA with open interest, the DCM's assessment of materiality affects whether the registered entity submits the change for Commission approval under § 40.5 (as is required for material changes). A DCM may file a change that falls within any of the four types of discrete changes that the Commission enumerates in § 40.4(b)(1) through (4) through self-certification or notice filing, as applicable.⁴⁵ For any other rule that the DCM believes to be non-material, § 40.4(b)(5) sets forth a process for the DCM to implement the change through self-certification pursuant to § 40.6(a). In order for a DCM to self-certify the change, § 40.4(b)(5) requires the DCM to make a non-materiality filing and explain why it considers the rule change to be "non-material."

To assist a DCM in assessing and explaining whether a change to the terms and conditions of a contract on an agricultural product enumerated in section 1a(9) of the CEA that has open interest is a material change (and thus should be filed under § 40.5 pursuant to § 40.4(a)) or is non-material (and thus

can be implemented through the § 40.6(a) self-certification process in accordance with § 40.4(b)(5)), the Commission proposes to add an appendix E to part 40 and to include therein the criteria that the Commission generally considers as evidence that an enumerated agricultural product rule change is non-material under § 40.4(b)(5). Specifically, proposed appendix E to part 40 provides that a non-material change: should not affect a reasonable trader's decision to enter into, or maintain, a position; should not affect a reasonable trader's decision to make or take delivery on the contract or to exercise an option on the contract; and should not have an effect on the value of existing positions, including, but not limited to, a change affecting the price of the contract due to a change in the commodity quality characteristics of the existing contract, a change to the size of the existing contract, or a change to a cost of effecting delivery for the existing contract.

2. Proposed Amendments to § 40.4(b)

The Commission proposes amendments to § 40.4(b)(1) through (5) to enhance the readability, consistency and clarity of this regulatory text. Specifically, the Commission proposes to clarify that the intent of § 40.4(b) is that the rules and rule amendments identified as non-material need not be submitted for Commission approval under the procedures of § 40.5 by replacing the text stating that the rules and rule amendments enumerated in § 40.4(b) as not material "should not be submitted under this section" with text stating that such rules and rule amendments "are not required by this section to be submitted for Commission approval under the procedures of § 40.5." The Commission also proposes to replace the word "changes" in each of § 40.4(b)(1) through (4) with "rules or rule amendments" so that the text of paragraphs (b)(1) through (4) use the same language as the text used in the introductory paragraph of § 40.4(b). Additionally, the Commission proposes to replace the word "if" in each of § 40.4(b)(1), (3) and (4) with the words "provided that they are" to clarify (and address confusion) that the implementation specified in the applicable paragraph (§ 40.4(b)(1), (3) and (4)) is a condition that must be satisfied in order to rely upon § 40.4(b)(1), (3) or (4), as applicable. None of these amendments are intended to alter the substance of § 40.4.

The Commission proposes to remove the reference to "changes in no cancellation ranges" in § 40.4(b)(3). As discussed below in section II.E.4, the

⁴⁴ Current § 40.3(d)(2) provides the Commission with authority to extend the review period with the written agreement of the registered entity. The proposed amendment in § 40.3(c)(3) would ensure it is clear that the authority also applies during any extended review period.

⁴⁵ Given that the Commission states specifically in § 40.4(b)(1) through (4) that the changes covered therein are not material, a DCM filing a change under § 40.4(b)(1) through (4) does not need to file a non-materiality explanation.

Commission proposes to amend § 40.6(d) to allow a registered entity to file rules and rule amendments governing changes in no cancellation ranges pursuant to the notification procedures of § 40.6(d). By filing rules and rule amendments governing no cancellation ranges pursuant to the notification procedures of § 40.6(d), such rules and rule amendments would be non-material pursuant to § 40.4(b)(1), making the current reference to “changes in no cancellation ranges” in § 40.4(b)(3) redundant and unnecessary.

Additionally, to enhance readability of § 40.4(b)(5), the Commission proposes to move from § 40.4(b)(5)(iii) to § 40.4(b)(5)(i) the text requiring that a rule or rule amendment filed under § 40.4(b)(5) be submitted pursuant to the procedures of § 40.6(a), and to delete redundant text in § 40.4(b)(5)(iii). The Commission proposes to add text to § 40.4(b)(5)(ii) to provide that when a DCM provides an explanation as to why it considers the rule “non-material,” the DCM shall, if applicable, include a previously approved rule or rule amendment that is, in substance, the same as the current non-material rule or rule amendment. The Commission believes the copy of the previously approved rule or rule amendment would provide market participants with context and background that would be helpful information in understanding the current rule or rule amendment and why it is non-material.

The Commission requests comment on all aspects of its proposed amendments to § 40.4.

E. Section 40.5—Voluntary Submission of Rules for Commission Review and Approval

1. Reorganization and Clarification of § 40.5

The Commission proposes to reorganize and clarify § 40.5, which addresses the submission by registered entities of requests for Commission approval of new rules and rule amendments and the Commission’s review of such rules and rule amendments. Under the proposed amendments, paragraphs (a) and (b) of § 40.5 would remain largely unchanged, with the exception of conforming amendments previously discussed,⁴⁶ as well as the following two changes.

The Commission proposes to clarify that § 40.5(a)(5) requires an explanation and analysis “that is complete with respect to” the proposed rule changes for the same reasons the language

regarding completeness is being proposed in §§ 40.2(a)(3)(v), 40.3(a)(4), and 40.6(a)(7)(v).⁴⁷

Currently, § 40.5(a)(6) provides that the registered entity shall certify that it posted a notice of the “pending rule with the Commission.” To clarify that the “pending rule” is intended to mean the registered entity’s request for approval, the Commission proposes to amend the text of § 40.5(a)(6) to replace the words “pending rule with the Commission” with the words “a notice of its request for Commission approval of the new rule or rule amendment”. The proposed language would also use language that is consistent with § 40.3(a)(9).⁴⁸

The Commission proposes to reorganize paragraphs (c) and (d) of § 40.5, which address the Commission’s review and determination (*i.e.*, approval or non-approval) of new rules and rule amendments. More specifically, to enhance the readability of § 40.5(c), the Commission proposes to reorganize § 40.5 so that all of the provisions that may affect the length of the review period of a rule submitted for Commission approval pursuant to § 40.5 appear together in § 40.5(c)—with the exception of expedited approval (which the Commission proposes to move to § 40.5(d)(2)).⁴⁹ The Commission proposes to add § 40.5(c)(6) to extend the review period under proposed § 40.5(c)(1)⁵⁰ when the review period would end on a day that is not a business day to instead end on the next business day,⁵¹ and to revise current § 40.5(d)(1), proposed to be redesignated

as § 40.5(c)(2), to permit an additional extension of *up to* 45 days.

By way of background, § 40.5(d)(1) (which the Commission proposes moving to § 40.5(c)(2)) provides that the Commission may extend the review period for an additional 45 days if the proposed rule raises novel or complex issues that require additional time for review or is of major economic significance, the submission is incomplete or the requestor does not respond completely to Commission questions in a timely manner. Under current § 40.5(c) and (d)(1), the initial 45-day review period and the 45-day extended review period do not exceed the 90 days permitted by section 5c(c)(4)(C) of the CEA, absent agreement by the requestor to a further extension. To ensure that the total review period will not extend beyond 90 days after the request is submitted, the Commission proposes to change the extended review period under § 40.5(c)(2) from “an additional 45 days” to “up to an additional 45 days.” For example, if the end of the initial 45-day review period would fall on a Saturday, and is extended by proposed § 40.5(c)(6) to Monday, the next business day, for a total of 47 days, any additional extension under proposed § 40.5(c)(2) could not exceed 43 days (47 + 43 = 90).

The other changes to the regulatory text in proposed § 40.5(c) are non-substantive and are not intended to alter the length of time the Commission will review a rule submitted for Commission approval under § 40.5(a).⁵² As part of these non-substantive amendments, the Commission proposes to make explicit in proposed § 40.5(c)(3) that the Commission may at any time extend its review period for any period of time, provided that it does so with the written agreement of the registered entity.⁵³

The Commission proposes to reorganize § 40.5(d) to address the Commission’s determination, including: approval through the passage of the applicable review period; expedited approval; and non-approval. Current § 40.5(g), which addresses expedited approval of a proposed rule or rule amendment, would be redesignated as

⁴⁷ While the Commission proposes to include the word “complete,” the Commission notes that the “explanation and analysis” requirement in proposed § 40.5(a)(5) does not include the qualifier that the submission be “concise.” See the 2011 Final Rule at 44782 (explaining that the “explanation and analysis” requirement in final § 40.5(a)(5) does not include the qualifier that the submission be “concise.” The Commission requires registered entities to provide a more detailed explanation and analysis of rules voluntarily submitted for Commission approval under the provisions of § 40.5.).

⁴⁸ The Commission also proposes to eliminate the word “which” from the second sentence of § 40.5(a)(6) to improve clarity and readability.

⁴⁹ The Commission proposes these changes to enhance readability and address some confusion regarding the § 40.5 process. Changes to proposed § 40.5(d)(2) are discussed below.

⁵⁰ Because an extension to which a registered entity may agree under § 40.5(c)(3) is not required to be a specified number of days, Commission staff can ensure that the extended period ends on a business day.

⁵¹ The Commission proposes to revise the heading of § 40.5(c) from “Forty-five-day review” to “Commission review” to reflect the fact that the review period may be extended beyond forty-five days due to adjustments so that the review period ends on a business day.

⁵² The Commission proposes to add descriptive language into § 40.5(c)(5) to provide the reader with context to better understand the interaction of the provisions in proposed §§ 40.4(b)(5) and 40.5(c)(5). The descriptive language added to § 40.5(c)(5) is consistent with current § 40.5(c)(2). For a discussion of the materiality determination under § 40.4(b)(5), see section II.D above.

⁵³ Current § 40.5(d)(2) provides the Commission authority to extend the review period with the written agreement of the registered entity. The proposed amendment in § 40.5(c)(3) would ensure it is clear that the authority also applies during any extended review period.

⁴⁶ The amendments include the removal of references to a cover sheet, dormant rules, and submission to the Secretary of the Commission.

§ 40.5(d)(2) and amended to remove the limitations that: expedited approval may be used only for “changes to” a proposed rule or a rule amendment; and the changes to the proposed rule or rule amendment may only be approved through expedited approval if they are consistent with “standards approved or established by the Commission.” The Commission believes that the quoted text that these amendments will remove is not necessary or could be misconstrued in connection with the ability of the Commission to approve proposed rules and rule amendments that are consistent with the CEA and Commission regulations on an expedited basis.⁵⁴ Current § 40.5(f), which addresses the impact of non-approval, would be redesignated as § 40.5(e).

The current text of § 40.5(f)(1) (proposed to be redesignated as § 40.5(e)(1)) provides that notification to a registered entity under paragraph (d)(3) of § 40.5 does not prevent the registered entity from subsequently submitting a revised version of a proposed rule or rule amendment for Commission review and approval, or from submitting the new rule or rule amendment as initially proposed in a supplemented submission, and that the revised submission will be reviewed without prejudice. To clarify that notification to a registered entity under paragraph (d)(3) means a notification of non-approval by the Commission, the Commission proposes to amend the text of § 40.5(f)(1) to include “of the Commission’s determination not to approve a new rule or rule amendment”. The Commission also proposes to add the words “or supplemented” to the text to clarify that supplemented submissions are reviewed without prejudice.⁵⁵ The Commission believes this will help avoid any potential confusion and make the section more consistent with § 40.5(f)(2) (proposed to be redesignated as § 40.5(e)(2)).

Current § 40.5(f)(2) (proposed to be redesignated as § 40.5(e)(2)) provides that notification to a registered entity under paragraph (d)(3) of § 40.5 of the Commission’s determination not to approve a proposed rule or rule amendment is presumptive evidence

that the entity may not truthfully certify the same, or substantially the same, proposed rule or rule amendment under § 40.6(a). To clarify that certification under § 40.6(a) is referring to the certification that the rule or rule amendment complies with the CEA and the Commission’s regulations, the Commission proposes to amend the text of § 40.5(f)(2) to add “complies with the Act and the Commission’s regulations thereunder” and move the reference to § 40.6(a) to earlier in the text. The Commission believes these changes will enhance clarity and improve context.⁵⁶

The Commission requests comment on all aspects of its proposed amendments to § 40.5.

F. Section 40.6—Self-Certification of Rules

1. Proposed Amendments to 40.6(a)

Regulation § 40.6(a) sets forth the submission requirements for rule certifications under CEA section 5c(c)(1). The Commission proposes various non-substantive amendments to § 40.6(a) to enhance its clarity. The proposed non-substantive amendments include: revising the introductory text of § 40.6(a), including the heading, to better reflect the content of the regulation; moving the requirements for delisting of products with no open interest from the introductory text to a new § 40.6(a)(9); and revising the heading and ordering of § 40.6(a)(6) to better reflect its purposes.⁵⁷ The Commission also proposes to remove references to dormant rules, the submission cover sheet, and the Secretary of the Commission, as previously discussed, and to correct the reference to the statutory definition of the term commodity in § 40.6(a)(5) from “section 1a(4) of the Act” to “section 1a(9) of the Act.”

The Commission proposes to replace the word “of” in current § 40.6(a)(7)(v) with the words “that is complete with respect to.” This condition would then read as shown in the proposed revised text of § 40.6(a)(7)(v) presented in this Notice of Proposed Rulemaking. The Commission has previously explained that like the explanation and analysis required for new product submissions, the explanation and analysis of certified rules or rule amendments should be a

clear and informative—but not necessarily lengthy—discussion of the submission, the factors leading to the adoption of the rule or rule amendment, and the expected impact of the rule or rule amendment on the public and market participants.⁵⁸ Similar to the discussion above in section II.B.3 regarding the level of detail in the explanation and analysis provided in new contract submissions, the Commission has found that some new rule submissions, while being concise, have not provided sufficient detail for staff to evaluate compliance of the proposed rule. Adding the words “that is complete with respect to” to current § 40.6(a)(7)(v) is intended to add more direction to submitters that, while the required explanation be concise, it must also be sufficiently comprehensive to address the operation, purpose, and effect of the proposed rule or rule amendment and its compliance with applicable provisions of the Act, including core principles, and the Commission’s regulations.

As set forth in the current introductory text to § 40.6(a), the delisting or withdrawal of the certification of a product with no open interest must comply with the submission and certification requirements in § 40.6(a)(1) and (2) and § 40.6(a)(7). The Commission proposes to move this provision from the introductory paragraph of § 40.6(a) to new § 40.6(a)(9) to enhance the readability of § 40.6(a) and clarify the provision. Specifically, proposed new § 40.6(a)(9) would explicitly state that a new rule or a rule amendment that delists, or withdraws the certification of, a product with no open interest may become effective immediately upon the filing of the submission, provided that the submission is made in compliance with § 40.6(a)(1) and (2) and § 40.6(a)(7). The Commission notes that while the current introductory text to § 40.6(a) is intended to enable a registered entity to delist, or withdraw a certification of, a product with no open interest immediately upon a submission,⁵⁹ the current provision has not been well understood and it would be useful to

⁵⁸ 2011 Final Rule at 44782–44783.

⁵⁹ *Id.* at 44783 (explaining that the Commission, in consideration of comments from both CME and OCX, determined to amend § 40.6(a) to make rules delisting or withdrawing the certification of products effective upon submission to the Commission. The Commission agreed that such submissions should be exempt from the 10-business-day review period in order to avoid complicating the delisting of the product by providing market participants an opportunity to enter into contracts between the time period of submission and the effective date of the rule.).

⁵⁴ The Commission also proposes to replace the word “under” with “in compliance with” in § 40.5(d)(1) to clarify that consideration for approval is contingent upon complying with the requirements of § 40.5(a).

⁵⁵ The Commission additionally proposes to non-substantively revise § 40.5(f)(1) to include two new commas. The Commission believes this will improve readability and reduce the risk of confusion.

⁵⁶ These changes also make this language consistent with the corresponding language in §§ 40.3 and 40.5.

⁵⁷ The Commission also proposes to amend § 40.6(a)(6)(ii) by adding the words “or may be submitted pursuant to § 40.5” to clarify that new rules or rule amendments that establish standards for responding to an emergency may be either certified pursuant to § 40.6(a) or submitted for Commission approval pursuant to § 40.5.

clarify by adding an explicit statement into the regulatory text.

2. Proposed Amendments to § 40.6(b)

Regulation § 40.6(b) sets forth the Commission's review period for a rule certification under § 40.6(a). The regulation provides the Commission with a 10-business day review period after which the rule is deemed certified, unless the rule is stayed by the Commission during the review period. The Commission proposes to amend § 40.6(b) to provide that any substantive amendment or supplementation of the rule submission will be deemed a new submission and restart the 10-business day review period, unless the amendment or supplementation is made for correction of typographical errors, renumbering or other non-substantive revisions. The proposed amendments are intended to preserve the Commission's 10-business day review period where a registered entity makes a substantive change to a rule certification.

3. Proposed Amendments to § 40.6(c)

Regulation § 40.6(c) sets forth the Commission's authority and procedures for staying a submission pursuant to § 40.6(a). The Commission proposes to add the phrase "and can be implemented" in § 40.6(c)(3) in order to make clear that upon the expiration of a stay (without Commission objection), the registered entity may opt to implement the rule at a later time.⁶⁰

The Commission proposes to amend § 40.6 by adding a new § 40.6(c)(5) to address the effect of a Commission objection to a rule submitted pursuant to § 40.6(a). The proposed provision is based on the similar provision in current § 40.5(f) (Effect of non-approval). Proposed § 40.6(c)(5)(ii) would provide that a Commission objection to a rule certification pursuant to § 40.6(c)(3) is presumptive evidence that the entity may not truthfully certify that the same, or substantially the same, rule complies with the Act and the Commission's regulations. Proposed § 40.6(c)(5)(i) would provide that a Commission objection does not, however, prevent the registered entity from subsequently submitting a revised or supplemented version of the proposed rule or rule amendment for review and approval or for certification. As discussed above with respect to current § 40.5(f), the revisions must provide a substantive basis to treat the

⁶⁰ The Commission also proposes to change the reference in § 40.6(c)(3) from "proposed certification" to "certification."

revised rule differently from the previously submitted rule.

4. Proposed Amendments to § 40.6(d)

Regulation § 40.6(d)(2) sets forth various categories of rules that may be implemented by a registered entity without certification, provided that the registered entity complies with the weekly notification requirements in § 40.6(d)(1). The Commission proposes to add the following new categories of rules to § 40.6(d)(2): updates to email addresses or other contact information that market participants use to submit block trades; amendments to existing trading months; with respect to a contract for the purchase or sale of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap), payment or collection of commodity options premiums or margins and changes to no cancellation ranges; and with respect to a swap, payment or collection of option premiums or margins. The Commission believes updates to contact information for the submission of block trades are not substantive for compliance purposes and need not be subject to self-certification and Commission review requirements of § 40.6(a). As discussed above in section II.A.5, the Commission preliminarily believes that registered entities should be able to submit rules or rule amendments governing the payment or collection of these premiums or margins (which are currently within the definition of terms and conditions in § 40.1) through weekly notices to the Commission pursuant to § 40.6(d)(2) as this will lower the burden for registered entities and still provide sufficient notice to the Commission. The Commission also preliminarily believes that registered entities should be able to submit rules or rule amendments that change no cancellation ranges or amend existing trading months through weekly notices to the Commission pursuant to § 40.6(d)(2) as this will lower the burden for registered entities to implement such changes and still provide sufficient notice to the Commission.

Regulation § 40.6(d)(3) currently sets forth various categories of rules that may be implemented without certification or notice to the Commission. The Commission proposes to amend current § 40.6(d)(3)(ii)(E)(1) (which would become § 40.6(e)(2)(v)(A)) to add the words "per contract" to be consistent with the corresponding provision in § 40.6(d)(2)(v)(A). The Commission also proposes to make a non-substantive amendment to redesignate § 40.6(d)(3) as § 40.6(e) and

make corresponding designation changes to the other paragraphs of the section.⁶¹

The Commission requests comment on all aspects of its proposed amendments to § 40.6. In particular, the Commission requests comment on its proposed new categories of rules that may be filed pursuant to § 40.6(d)(2). The Commission further requests comments on the following questions: Are there other categories of rules, including rules specific to DCOs, DCMs, SEFs, or SDRs, that should be added to § 40.6(d)(2)? If so, what is the rationale for the addition? Are there categories of rules that should be added to current § 40.6(d)(3) (which is proposed to be moved to § 40.6(e))? If so, what is the rationale for the addition?

In addition, the Commission requests comment on whether the per-contract fee change parameters in § 40.6(d)(2)(v)(A) and 40.6(d)(3)(ii)(E)(1) (the latter of which would become § 40.6(e)(2)(v)(A)) (*i.e.*, above or below one dollar per contract) should be increased given the passage of time since the adoption of the current regulation.

G. Section 40.7—Delegations

1. Proposed Amendments to § 40.7

Regulation § 40.7 sets forth delegations of the Commission's authority to take various actions under the provisions of part 40. The Commission proposes to amend § 40.7 to enhance the regulation's utility and clarity and to add three new delegations.

The Commission proposes to amend § 40.7(b)(3) by adding the words "or relate to" to clarify that this delegation includes authority to approve rules or rule amendments of a registered entity that relate to, but do not establish or amend, speculative limits or position accountability provisions.⁶²

The Commission proposes to delegate under proposed § 40.7(a)(1)(iv) and (v) the authority in proposed §§ 40.3(c)(3) and 40.5(c)(3) to extend the applicable review period set forth in §§ 40.3(c) and 40.5(c), respectively, for the period of time agreed to in writing by the registered entity. The Commission believes these two delegations are appropriate given the agreement by the registered entity to the extension.

⁶¹ The Commission believes the current designations are inconsistent with the introductory text of § 40.6(d).

⁶² The delegation is not intended to and does not affect any substantive authority including, for example, the Commission's authority to bring an enforcement action based on a person's violation of a registered entity's position limit rules pursuant to CEA Section 4a(e).

With respect to proposed § 40.7(a)(1)(iv) and (v), should the Commission impose a maximum period of time that the staff, under delegated authority, may extend the period agreed to in writing by the registered entity? Why or why not? The Commission would still have the authority to extend the time for review for the period agreed to in writing by the registered entity, pursuant to proposed §§ 40.3(c)(3) and 40.5(c)(3).

Also, the Commission proposes to amend the text of § 40.7(a)(5), which delegates the Commission's authority to determine if a proposed rule is material under § 40.4(b)(5). The proposed amendments streamline and simplify the text of the regulation by eliminating text that is not relevant to the delegation as well as an inconsistent reference to § 40.6(d).⁶³

Finally, as discussed above, the Commission is also proposing to add § 40.7(e) to delegate the Commission's authority to specify the format and manner of filing under these regulations to the Directors of the Division of Market Oversight and the Division of Clearing and Risk. Given that technology is used for the Commission to receive submissions from the registered entities under these regulations and the speed at which technology evolves, the Commission believes it is useful for staff to be able to specify the format and manner of filing under these regulations to facilitate the regulations remaining current with technological advances that registered entities and the Commission may use in the future.

The Commission requests comment on all aspects of its proposed amendments to § 40.7.

H. Section 40.10—Special Certification Procedures for Submission of Rules by SIDCOs

1. Definition of “Materiality” in § 40.10

Regulation § 40.10(a), which implements section 806(e) of the Dodd-Frank Act, requires a SIDCO to provide notice to the Commission not less than 60 days in advance of any proposed change to its rules, procedures, or operations that could materially affect the nature or level of risks presented by the SIDCO. When the Commission first adopted this requirement in 2011, it further defined “materially affect the nature or level of risks presented” in

§ 40.10(b) as matters as to which there is a reasonable possibility that the change could affect the performance of essential clearing and settlement functions or the overall nature or level of risk presented by the SIDCO, and notes that such changes may include changes that materially affect financial resources, participant and product eligibility, risk management (including matters relating to margin and stress testing), daily or intraday settlement procedures, default procedures, system safeguards (business continuity and disaster recovery), and governance. The Commission is proposing to revise this definition.

In the more than a decade since its adoption, the Commission has found that the definition in § 40.10(b) is so broad and vague that it does not provide meaningful guidance to SIDCOs. Rather, the determination as to whether a proposed change is subject to advance notice under § 40.10(a) is usually made through discussions between the SIDCOs and Commission staff.

The Commission is therefore proposing to revise the definition in § 40.10(b) to specify that proposed changes that require advance notice under § 40.10 may include, but are not limited to, material changes to the SIDCO's default management plan or default rules or procedures under § 39.16 or § 39.35, program of risk analysis and oversight required under § 39.18, or recovery and wind down plans required under § 39.39; the adoption of a new or materially revised margin methodology; the establishment of a cross-margining program or similar arrangement with another clearing organization; and material changes to its approach to the stress testing required under § 39.13(h)(3), § 39.36(a), or § 39.36(c).

The Commission notes that the “may include, but are not limited to” language means that the examples listed in the definition are not exhaustive and a proposed change that is not specifically mentioned nevertheless may be subject to advance notice if it meets the standard in § 40.10(a), including proposed changes that may fall under the broad categories listed in the current definition in § 40.10(b). The Commission requests comment on whether there are other examples of changes that should be listed in the definition in § 40.10(b), or whether there are other ways the definition could be revised to provide better guidance to SIDCOs as to when advance notice of a proposed change is required under § 40.10.

2. SIDCO Submission Under § 40.10 of Rules Otherwise Required To Be Submitted Under § 40.5

The Commission is proposing to add new § 40.10(i) to require that where any provision of the Commission's regulations requires a DCO to file rules for approval under § 40.5, a SIDCO would be required instead to file those rules under § 40.10, if the rules could materially affect the nature or level of risks presented by the SIDCO. Without this change, a requirement for DCOs to file rules pursuant to § 40.5 could be misinterpreted as relieving a SIDCO from having to file those same rules pursuant to § 40.10, or as creating a duplicative requirement for SIDCOs to submit rules under both § 40.5 and § 40.10. Current regulations that require a DCO to file rules for approval include requests for transfer of open positions in § 39.3(g); holding securities in a futures account pursuant to a portfolio margining program in § 39.4(f); cross-margining programs in § 39.13(i); and commingling of customer positions and associated funds in either a futures or cleared swaps customer account in § 39.15(b).

3. Technical Corrections to § 40.10

The Commission is proposing to revise the first sentence of § 40.10(a), which references a registered DCO that has been designated by the Financial Stability Oversight Council as a systemically important DCO. After § 40.10(a) was adopted, the Commission adopted a definition of “systemically important derivatives clearing organization” in § 39.2. The Commission proposes to change the reference to a systemically important DCO, “as defined in § 39.2 of this chapter.”

The Commission is also proposing to revise § 40.10 to remove references to “the purposes of the Dodd-Frank Act.” At the time § 40.10 was adopted, the Commission was still in the process of incorporating in its regulations changes necessary to reflect the purposes of the Dodd-Frank Act. The Commission subsequently adopted revisions to its DCO regulations that address the Dodd-Frank Act requirements. Accordingly, the references in § 40.10(d) and (h)(3) to the purposes of the Dodd-Frank Act are no longer necessary.

The Commission requests comment on all aspects of its proposed amendments to § 40.10.

I. Technical Correction to Authority Section of Part 40

The Commission is proposing to remove the reference to section 7a of the

⁶³ Current § 40.7(a)(5) provides that if the Commission determines that a rule submitted by a DCM pursuant to § 40.4(b)(5) is not material, the rule may be reported pursuant to the provisions of § 40.6(d). However, § 40.4(b)(5) itself provides that if a rule is deemed not material pursuant to the regulation, it may be filed pursuant to § 40.6(a).

CEA, which was repealed by the Dodd-Frank Act,⁶⁴ from the authority section for part 40.

III. Related Matters

A. Regulatory Flexibility Act

The Regulatory Flexibility Act (“RFA”) requires agencies to consider whether the rules they propose will have a significant economic impact on a substantial number of small entities and, if so, provide a regulatory flexibility analysis with respect to such impact.⁶⁵ The Commission has previously established certain definitions of “small entities” to be used by the Commission in evaluating the impact of its regulations on small entities in accordance with the RFA.⁶⁶ The proposed amendments to part 40 set forth herein would impact DCMs, DCOs, SEFs and SDRs. The Commission has previously determined that DCMs,⁶⁷ DCOs,⁶⁸ SEFs,⁶⁹ and SDRs⁷⁰ are not small entities for purposes of the RFA. Therefore, the Chairman, on behalf of the Commission, pursuant to 5 U.S.C. 605(b), hereby certifies that the proposed rules will not have a significant economic impact on a substantial number of small entities.

B. Paperwork Reduction Act

The Paperwork Reduction Act (“PRA”) ⁷¹ provides that Federal agencies, including the Commission, may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a valid control number from the Office of Management and Budget (“OMB”). This proposed rulemaking contains reporting and recordkeeping requirements that are collections of information within the meaning of the PRA. This section addresses the impact of the proposal on existing information collection requirements associated with part 40 of the Commission’s regulations. Changes to the existing information requirements as a result of this proposal are set forth below. OMB has assigned Control No 3038–0093, “Part 40, Provisions Common to Registered Entities,” to the information collections

associated with these regulations.⁷² The Commission is revising its total burden estimates for this clearance to reflect the proposed amendments.

The proposed amendments will modify the existing information collection entitled Part 40, Provisions Common to Registered Entities, (“Part 40 Information Collection”), which is one of two Information Collections under OMB control number 3038–0093.⁷³ The Part 40 Information Collection encompasses the reporting burdens associated with §§ 40.2 and 40.3 (product submissions); §§ 40.5 and 40.6 (rule submissions); and § 40.10 (SIDCO submissions).

1. Burden Estimates

The proposed amendments to §§ 40.2(a)(3)(v), 40.3(a)(4), and 40.6(a)(7)(v) would clarify that these regulations require registered entities to provide sufficient detail for staff to evaluate compliance of the products and rules registered entities are proposing in their submissions. This additional detail (e.g., about the underlying commodity in a derivatives contract) is necessary to allow Commission staff to assess whether new products and amendments to existing products terms and conditions comply with the CEA and Commission regulations. The Commission anticipates that, if adopted, these amendments are likely to increase reporting burden for registered entities, although some registered entities are already providing this information.⁷⁴ Specifically, for rule submissions under § 40.6, these new requirements would add an additional average of 30 minutes (for a new total of 2.5 hours). For product submissions under §§ 40.2 and 40.3, the proposed amendments would add an additional average 1 hour of burden (for a new total of 22 hours).

The aggregate burden for the Part 40 Information Collection, including the burden from the proposed amendments and the updates to number of responses

based on current Commission data, is estimated as follows:

Product Submissions (§§ 40.2 and 40.3)

For product submissions (§§ 40.2 and 40.3), the number of respondents remains 70. The Commission estimates that for product submissions under §§ 40.2 and 40.3, the proposed amendments to §§ 40.2(a)(3)(v) and 40.3(a)(4) would add an additional average 1 hour of burden (for a new total of 22 hours). Based on an updated review of its annual reporting data for the past three years (2020–2022), the Commission estimates that reporting entities are likely to submit on average an aggregate of 848 reports annually.

Accordingly, the aggregate annual estimate for the reporting burden associated with product submissions (§§ 40.2 and 40.3), as amended by the proposal, is as follows:

Estimated number of respondents: 70.

Estimated number of reports per respondent: 12.⁷⁵

Average number of hours per report: 22.⁷⁶

Estimated gross annual reporting burden (hours): 18,480.⁷⁷

Rule Submissions (§§ 40.5 and 40.6)

For rule submissions (§§ 40.5 and 40.6), the number of respondents remains 70. Although the proposed amendments only increase reporting burden for § 40.6 submissions, the Commission averages §§ 40.5 and 40.6 for PRA purposes. Based on an updated review of recent submission data from 2020–2022, the Commission estimates that respondents submit on average 1,412 reports per year. Further, the Commission estimates that, if the proposed amendments to § 40.6(a)(7)(v) are adopted, each respondent would spend approximately 2.5 hours to prepare and submit the required reports. Accordingly, the aggregate annual estimate for the reporting burden, as amended by the proposal, is as follows:

⁶⁴ Public Law 111–203, title VII, sec. 734(a), July 21, 2010, 124 Stat. 1718 (2010).

⁶⁵ 5 U.S.C. 601 *et seq.*

⁶⁶ See Policy Statement and Establishment of “Small Entities” for purposes of the Regulatory Flexibility Act, 47 FR 18618 (Apr. 30, 1982).

⁶⁷ 47 FR 18618, 18619 (April 30, 1982).

⁶⁸ New Regulatory Framework for Clearing Organizations, 66 FR 45604, 45609 (Aug. 29, 2001).

⁶⁹ Core Principles and Other Requirements for Swap Execution Facilities, 78 FR 33476, 33548 (June 4, 2013).

⁷⁰ Swap Data Repositories, 75 FR 80898, 80926 (Dec. 23, 2010).

⁷¹ 44 U.S.C. 3501 *et seq.*

⁷² For the previously approved estimates, see ICR Reference No. 202102–3038–001 (conclusion date Feb. 24, 2021), available at https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202102-3038-001.

⁷³ OMB Control Number 3038–0093 has two Information Collections: Part 40, Provisions Common to Registered Entities; and Part 150, Position Limits. See https://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=202102-3038-001.

⁷⁴ As discussed above in sections II.B.3, II.C.1, and II.F.1, the proposed amendments clarify the Commission’s expectations for the content of submissions, which some registered entities had not been meeting in their recent filings. Although the Commission views the proposed amendments as clarifying filing requirements rather than new requirements, they will increase the reporting burden compared to some registered entities’ current filing practices.

⁷⁵ The 3-year average of total responses for §§ 40.2 and 40.3 submissions combined was 848 responses, calculated by taking the annual total submissions received under §§ 40.2 and 40.3 combined from all entities and averaging them for the years of 2020, 2021 and 2022. The estimated number of reports per respondent is calculated as 848 responses divided by 70 respondents (848 responses/70 respondents = 12 responses per respondent).

⁷⁶ The aggregate number of hours per report for §§ 40.2 and 40.3 adds 1 hour to the existing burden estimate of 21 hours, for a total of 22.

⁷⁷ The estimated gross annual reporting burden (hours) is calculated by multiplying the estimated number of respondents times the estimated number of reports per respondent times the average number of hours per report (70 respondents × 12 reports per respondent × 22 hours per report = 18,480 hours).

Estimated number of respondents: 70.⁷⁸

Estimated number of reports per respondent: 20.⁷⁹

Average number of hours per report: 2.5.⁸⁰

Estimated gross annual reporting burden (hours): 3,500.⁸¹

SIDCO Submissions (§ 40.10)

The burden for SIDCO submissions under § 40.10 is unaffected by the proposed amendments, but has been updated based on review of existing data. Based on an updated review of recent submission data from 2020–2022, the number of SIDCO respondents remains 2 and each respondent typically submits 1 report annually. The Commission estimates that each registered entity will continue to spend on average 50 hours to prepare and submit its report. The aggregate annual estimate burden for § 40.10 submissions is as follows:

Estimated number of respondents: 2.
Estimated number of reports per respondent: 1.⁸²

Average number of hours per report: 50.

Estimated gross annual reporting burden (hours): 100.⁸³

The Commission believes that the other proposed changes to reporting proposed in this NPRM will not increase the burden on the registered entities, and in some cases, may reduce reporting burden. The Commission

anticipates that the following proposed changes will not result in any increase in reporting burden:

Dormancy (§ 40.1(b) and (g)). If the proposed removal of the definitions of “dormant contract or dormant product” and “dormant rule” is adopted, registered entities would no longer be required to make submissions to revive dormant rules or products under §§ 40.2, 40.3, 40.5, or 40.6, other than when required to do so in connection with reinstating a registered entity’s registration or designation from dormancy. Accordingly, the proposed changes would not add any burden on registered entities but may reduce burdens.

Margin methodology rules (§§ 40.1, 40.5, 40.6, 40.10). This provision would add “margin methodology” to the definition of “rule” and thus require the corresponding rule submissions. However, registered entities already have been submitting margin-related rule changes under the current requirements. The proposed change only clarifies existing filing requirements and would not add new reporting burdens.

Terms and conditions; weekly notification (§§ 40.1(j), 40.2, and 40.6(d)(2)). The proposed changes to the definition of “terms and conditions” remove certain categories of information, such as payments and collections of certain margins and premiums that registered entities must submit to the Commission as part of their rule submissions under § 40.6(a). Instead, the information would be filed as rules under the less burdensome weekly notification requirements of § 40.6(d)(2). Contact information for block trades and amendments to “no cancellation ranges” would also be added to the less-burdensome weekly notification category under § 40.6(d)(2).

Cover sheet (§§ 40.2, 40.3, 40.5, 40.6 and Appendix D). The proposal would remove the requirement for filers to submit a cover sheet. The Commission’s electronic portal now collects the required information and generates a cover sheet automatically, allowing the cover-sheet requirement to be removed and reducing burden to the registered entities.

Time period for submitting additional materials for product approvals (§ 40.3(a)(10)). The proposed rule would provide Commission staff greater flexibility to set deadlines for submission of any additional information requested by the Commission for voluntary product approval by registered entities. Currently, the regulation requires an initial two-business-day limit after the

Commission requests the information. The greater staff discretion to set more flexible deadlines would reduce the need for registered entities to submit extension requests, thereby reducing their burden.

Non-materiality criteria (§ 40.4(b)(5)). This provision would provide guidance to registered entities about the non-materiality determination required for certain products. It would not change the submission requirements, but rather help registered entities understand Commission requirements for their submissions. The Commission anticipates that these clarifications are likely to reduce burden for reporting entities by providing more specificity about submission requirements.

Materiality; submission of related rules (§ 40.4(b)(5)(ii)). If adopted, the proposed rules would require that non-materiality submissions include any relevant previous rules or rule amendments that support non-materiality. This could impose additional research, information collection, and filing burdens. However, according to Commission data, fewer than one non-materiality submission is made annually. Accordingly, the Commission anticipates that this requirement is unlikely to impose any material increase in reporting burden for covered entities.

Resubmission (§ 40.6(c)(5)(ii)). This proposed provision describes how an objection by the Commission to a registered entity’s certification of a proposed rule or rule amendment would affect any future filings by the registered entity of the proposed rule or rule amendment to which the Commission objected. Because objections are infrequent, the Commission anticipates that the burden of this provision is unlikely to result in increased burden for reporting entities.

Materiality standard (§ 40.10(b)). Under the proposed amendments, the definition “materially affect the nature or level of risks presented” for SIDCO rule submissions would be revised to provide more useful guidance to registered entities. This change would not affect the reporting burden.

SIDCO submission under § 40.10 of rules otherwise required to be submitted under § 40.5. This proposed amendment would clarify filing requirements, but would not result in a substantive change to filing obligations. The Commission also anticipates that this clarification may reduce burden by eliminating mistaken duplicate filings.

“Referenced contract” data element (Appendix D). Submissions for new products would include a new structured data element in the online

⁷⁸ The estimated number of 70 respondents includes 16 active DCMs, 23 registered SEFs, 15 registered DCOs, 5 provisionally registered SDRs, plus pending applications for those entities.

⁷⁹ As noted above, the proposed amendment increases the burden only for § 40.6 filings (and not for § 40.5 filings). However, the Commission aggregates §§ 40.5 and 40.6 for PRA purposes. The 3-year average of total responses for §§ 40.5 and 40.6 submissions combined was 1,412 responses, calculated by taking the annual total submissions received under §§ 40.5 and 40.6 combined from all entities and averaging them for the years of 2020, 2021 and 2022. The estimated number of reports per respondent is calculated as 1,412 responses divided by 70 respondents (1,412 responses/70 respondents = 20 responses per respondent).

⁸⁰ The aggregate number of hours per report for §§ 40.5 and 40.6 adds 0.5 hours to the existing burden of 2 hours per report, for a total of 2.5.

⁸¹ The estimated gross annual reporting burden (hours) is calculated by multiplying the estimated number of respondents times the estimated number of reports per respondent times the average number of hours per report (70 respondents × 20 reports per respondent × 2.5 hours per report = 3,500 hours).

⁸² The 3-year average of total responses for § 40.10 submissions was 2, calculated by taking the annual total submissions received under § 40.10 from all entities and averaging them for the years of 2020, 2021 and 2022.

⁸³ The estimated gross annual reporting burden (hours) is calculated by multiplying the estimated number of respondents times the estimated number of reports per respondent times the average number of hours per report (2 respondents × 1 reports per respondent × 50 hours per report = 100 hours).

portal indicating whether the product is a “referenced contract.” This information would be the same as the “reference contract” determination set out in § 150.1 and appendix C to part 150. Accordingly, this is a non-substantive revision that will have de minimis impact on reporting burden.

2. Request for Comment

The Commission invites the public and other Federal agencies to comment on any aspect of the proposed information collection requirements discussed above. Pursuant to 44 U.S.C. 3506(c)(2)(B), the Commission will consider public comments on this proposed collection of information in:

(a) Evaluating whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information will have a practical use;

(b) Evaluating the accuracy of the estimated burden of the proposed collection of information, including the degree to which the methodology and the assumptions that the Commission employed were valid;

(c) Enhancing the quality, utility, and clarity of the information proposed to be collected; and

(d) Minimizing the burden of the proposed information collection requirements on registered entities, including through the use of appropriate automated, electronic, mechanical, or other technological information collection techniques, *e.g.*, permitting electronic submission of responses.

Copies of the submission from the Commission to OMB are available from the CFTC Clearance Officer, 1155 21st Street NW, Washington, DC 20581, (202) 418–5160 or from <https://RegInfo.gov>. Organizations and individuals desiring to submit comments on the proposed information collection requirements should send those comments to:

- The Office of Information and Regulatory Affairs, Office of Management and Budget, Room 10235, New Executive Office Building, Washington, DC 20503, Attn: Desk Officer of the Commodity Futures Trading Commission;
- (202) 395–6566 (fax); or
- OIRASubmissions@omb.eop.gov (email).

Please provide the Commission with a copy of submitted comments so that comments can be summarized and addressed in the final rulemaking, and please refer to the **ADDRESSES** section of this rulemaking for instructions on submitting comments to the Commission. OMB is required to make a decision concerning the proposed

information collection requirements between 30 and 60 days after publication of this release in the **Federal Register**. Therefore, a comment to OMB is best assured of receiving full consideration if OMB receives it within 30 calendar days of publication of this release. Nothing in the foregoing affects the deadline enumerated above for public comment to the Commission on the proposed rules.

C. Cost Benefit Considerations

1. CEA Section 15(a)

Section 15(a) of the CEA requires the Commission to consider the costs and benefits of its actions before issuing new regulations under the CEA.⁸⁴ By its terms, section 15(a) does not require the Commission to quantify the costs and benefits of a new rule or to determine whether the benefits of the adopted rule outweigh its costs. Rather, section 15(a) requires the Commission to “consider the costs and benefits” of a subject rule.

Section 15(a) further specifies that the costs and benefits of the proposed regulations shall be evaluated in light of five broad areas of market and public concern: (1) protection of market participants and the public; (2) efficiency, competitiveness, and financial integrity of futures markets; (3) price discovery; (4) sound risk management practices; and (5) other public interest considerations. Collectively, these five factors are referred to herein as section 15(a) factors and they are addressed below. In conducting its analysis, the Commission may, in its discretion, give greater weight to any one of the five enumerated areas of concern and may determine that, notwithstanding its costs, a particular rule is necessary or appropriate to protect the public interest or to effectuate any of the provisions or to accomplish any of the purposes of the Act.

The Commission recognizes that the proposed amendments may impose costs. Some of the proposed amendments, however, are format, organizational, and non-substantive changes, which will have no costs. The Commission has endeavored to assess the expected costs and benefits of the proposed amendments in quantitative terms, including PRA related costs, where possible. In situations where the Commission is unable to quantify the costs and benefits, the Commission identifies and considers the costs and benefits of the applicable proposed amendments in qualitative terms. The lack of data and information to estimate

those costs is attributable in part to the nature of the proposed amendments. Additionally, any initial and recurring compliance costs for any particular DCM, DCO, SDR, or SEF will depend on the size, existing infrastructure, practices, and cost structure of the entity.

The Commission generally requests comment on all aspects of its cost benefit considerations, including the identification and assessment of any costs and benefits not discussed herein; data and any other information to assist or otherwise inform the Commission’s ability to quantify or qualitatively describe the costs and benefits of the proposed amendments; and substantiating data, statistics, and any other information to support positions posited by commenters with respect to the Commission’s discussion. The Commission welcomes comment on such costs.

2. Statutory and Regulatory Background

Part 40 of the Commission’s regulations implements section 5c(c) of the CEA and requirements and procedures for registered entities, including DCMs, DCOs, SEFs, SDRs, and SIDCOs, to submit their rules and products to the Commission prior to implementing rules, listing products for trading, or accepting products for clearing. Part 40 generally provides two means for registered entities to submit rules and products to the Commission. There is a self-certification process and a Commission-approval process.⁸⁵

With two exceptions, the Commission last amended the part 40 regulations in 2011.⁸⁶ After years of experience with registered entities following the processes set forth in the part 40 regulations, the Commission is proposing amendments to clarify, simplify, and enhance the utility of, the part 40 regulations for registered entities and the Commission. Changes proposed include amendments to: § 40.1 to simplify the determination of whether a registered entity is deemed dormant and to remove the terms “dormant rule” and “dormant contract or dormant product”; §§ 40.2, 40.3, 40.4, 40.5 and 40.6 and appendix D to part 40 to reflect the development, evolution and use of the Commission’s online portal for the filing of rule and product submissions; and §§ 40.5, 40.6 and 40.7 to reorganize and enhance the regulations’ utility. The Commission also proposes to amend

⁸⁵ See §§ 40.2, 40.3, 40.4, 40.5 and 40.6.

⁸⁶ See 2011 Final Rule; Repeal of the Exempt Commercial Market and Exempt Board of Trade Exemptions, 80 FR 59575 (October 2, 2015); and Position Limits for Derivatives, 86 FR 3236 (January 14, 2021).

⁸⁴ 7 U.S.C. 19(a).

§ 40.10 to provide meaningful guidance to SIDCOs regarding filing instructions for rules that could materially affect the nature or level of risks presented by the SIDCO.

3. Baseline

The baseline for the Commission's consideration of the costs and benefits of this proposed rulemaking is the existing statutory and regulatory framework applicable to DCMs, DCOs, SDRs, and SEFs, in 17 CFR part 40. Current part 40 provides substantive and procedural regulatory requirements for the submission of registered entities' self-certifications, and requests for approval, of new products for trading and clearing and new rules and rule amendments. Current part 40 also establishes guidelines for the Commission's review and processing of registered entities' submissions. Current part 40 regulations explain what information must be made publicly available in relation to the application to become a DCM, DCO, SDR, or SEF, and when registered entities file submissions for new products, new rules and rule amendments. There are also special requirements for certain rules submitted by SIDCOs.

The Commission notes that this cost-benefit consideration is based on its understanding that the derivatives market regulated by the Commission functions internationally with: (1) transactions that involve U.S. entities occurring across different international jurisdictions; (2) some entities organized outside of the United States that are registered with the Commission; and (3) some entities that typically operate both within and outside the United States and that follow substantially similar business practices wherever located. Where the Commission does not specifically refer to matters of location, the discussion of costs and benefits below refers to the effects of the proposed regulations on all relevant derivatives activity, whether based on their actual occurrence in the United States or on their connection with, or effect on U.S. commerce.⁸⁷

4. Proposed Amendments

a. Proposed Amendments to § 40.1 Regarding Dormant Registered Entities, Products, Contracts, and Rules

The Commission proposes to amend its regulations to simplify the calculation of how long a registered entity is inactive and when a registered DCM, DCO, SDR or SEF is deemed dormant. The proposed amendments to § 40.1(c) through (f) would conform the

wording of these sections across the different types of registered entity such that any registered entity would be considered dormant if it is inactive for a period of 365 days, provided that a DCM, DCO or SEF will not become dormant during the 1,095 days following the entity's initial and original order of designation or registration, as applicable. The proposed amendments replace the current regulatory text that measures time periods in months with language that measures the equivalent time in days and the proposed amendments provide for consistent, clear start and end dates for measuring inactivity in connection with dormancy status.

In addition, the Commission proposes removing from § 40.1(b) and (g) the definitions and related requirements for the following terms: "dormant contract or dormant product," and "dormant rule", respectively. As amended, the rules of a dormant DCM, dormant SEF, dormant DCO, or dormant SDR would still need to be approved and the products would still need to be self-certified or approved in connection with the entity being reinstated as a DCM, SEF, DCO or SDR, respectively, but a DCM, SEF, DCO or SDR that is not dormant would no longer need to certify, or seek approval, of a particular rule or product that was already approved or certified solely due to a lack of implementation of the rule or inactivity of the particular product.

i. Benefits

The Commission believes that the proposed changes to the part 40 dormancy regulations will benefit registered entities by helping registrants interpret dormancy period requirements consistently across the relevant registration types and more readily identify when dormancy applies. Additionally, the removal of the terms "dormant contract or dormant product," and "dormant rule" and the associated requirements will remove the administrative and compliance burdens of tracking whether a product or rule has become dormant and the potential costs of recertifying (or obtaining approval of) a dormant contract, product, or rule.

ii. Costs

The Commission expects that registered entities will not incur any increased costs related to the proposed amendments to the current dormancy regulations in part 40. The proposed amendments would eliminate ambiguity regarding how registered entities calculate entity dormancy periods and remove requirements for determining

when a product or rule is considered dormant and related submission requirements for dormant products and rules. Furthermore, by removing the dormant rule regulations in their entirety, the Commission believes that it has generated a cost-savings because entities no longer need to monitor whether rules are dormant. Regarding the potential for a cost in the reduction of market oversight, based on experience with dormant products and rules to date, the Commission preliminarily believes that deleting the definitions would result in little, if any, cost to regulatory oversight because the Commission has observed that registrants typically manage products with no trading activity or inactive rules and the Commission is not aware of any market disruptions resulting from the inactivity of products or rules.

b. Proposed Amendments to § 40.1(i) and (j) Regarding Definitions of Rule and Terms and Conditions

The Commission proposes to amend § 40.1(i)—the definition of the term "rule"—by including "margin methodology" in the list of specific items that are considered a "rule," thereby making explicit what is already understood by current DCOs as implicitly included and codifying the current practice of DCOs submitting margin methodologies as rules to the Commission. The Commission also proposes to amend § 40.1(j)—the definition of the term "terms and conditions"—by removing from the list of terms that are considered "terms and conditions" payments or collections of certain premiums or margins from § 40.1(j)(1)(xi) and (j)(2)(xi). The Commission proposes to add the payments or collections of such premiums or margins, as well as changes to the no cancellation ranges, to the categories of rules that may be submitted without certification pursuant to § 40.6(d)(2).

i. Benefits

The proposed amendments to the definition of "terms and conditions" will reduce compliance burdens for registered entities for rule amendments that address payments or collections of certain premiums or margins and changes to the no cancellation ranges as these could be filed through a weekly notification pursuant to § 40.6(d)(2), which is a less burdensome, less costly process than through the current process under § 40.6(a). The § 40.6(d) process permits a registered entity to implement a rule immediately and without self-certification provided that the entity files a summary notification

⁸⁷ See, e.g., 7 U.S.C. 2(i).

within a week of the rule amendment. The Commission believes that by adding margin-related rule changes to the list of items considered a rule, the Commission is making it clear what type of information is considered a rule and codifying a current practice.

ii. Costs

The Commission believes that the proposed amendment to the definition of “rule” to state explicitly that “margin methodology” is included in the definition will make the term consistent with the current DCO practice and understanding of implicit requirements and therefore will not place any additional cost or burden on registered entities that submit rules to the Commission under part 40.

The Commission does not expect registered entities to incur any additional costs or burdens related to the proposed changes to the definition of “terms and conditions” because the proposed amendments reduce the number of items of information registered entities must submit to the Commission under § 40.6(a). The proposed amendments also allow rules relating to the new categories of information to be implemented more quickly and efficiently by filing such rules in accordance with the requirements of § 40.6(d) (a process which allows a registered entity to implement rules enumerated in § 40.6(d) immediately and without self-certification, provided that the registered entity provides the Commission with a required summary notification of such actions within a week of making the rule amendments).

c. Proposed Amendments to §§ 40.2 and 40.3 Regarding Instructions for Self-Certification and Approval of Products

The Commission is proposing changes to current §§ 40.2 and 40.3 to update Commission processes and clarify filing instructions for registered entities’ submission of products to the Commission. Proposed amendments to §§ 40.2(a)(1) and 40.3(a)(1) remove references to the Commission Secretary. To reflect the fact that registered entities now file submissions through the Commission’s portal and a cover sheet is no longer necessary, proposed changes to §§ 40.2(a)(3) and 40.3(a)(2) remove the references to a cover sheet and replace them with a requirement directing registered entities to provide the information required by appendix D to part 40.

Proposed changes to § 40.2(a)(3) clarify that a registered entity’s concise explanation of a product must also be complete and that the explanation

include the product’s terms and conditions, the underlying commodity, and the product’s compliance with the CEA and associated regulations. Proposed changes to § 40.3(a)(4) clarify that a registered entity’s explanation of a product must be complete and that the explanation include the product’s terms and conditions, the underlying commodity, and the product’s compliance with the CEA and associated regulations.

The proposed amendments to § 40.3(a)(10) eliminate the two-business day deadline for registered entities to respond to Commission staff requests for additional information with respect to product approval requests under § 40.3 and grant Commission staff authority to set response deadlines.

Proposed amendments to § 40.3(c) concern the length of the review period. Proposed amendment to § 40.3(c) make it clear that there is a 45-day review period that the Commission may extend for an additional 45-days, but not to exceed 90 days, if the product raises novel or complex issues that require additional time for analysis. The proposed amendments to § 40.3(c) would also permit the Commission to extend for an additional 45-days if the submission is “incomplete” or the entity doesn’t respond completely to “Commission questions in a timely manner.” The proposed amendments to § 40.3(c) also state that the Commission may extend the review period for any period of time, provided there is written agreement by the registered entity, and that any subsequent, substantive submission of information for a product under a § 40.3 review, whether requested by the Commission or voluntarily provided by the submitting entity, restarts the 45-day review period. The Commission also proposes an amendment to § 40.3(c)(5) providing that if a review period ends on a non-business day, such review is extended to the next business day.

i. Benefits

The Commission believes the removal of the reference to the Secretary in the regulations is beneficial because the deletion modernizes the regulation and makes it consistent with current practices and technologies. For example, submitting entities no longer send submissions to the Commission’s Secretary because they upload documents to the Commission’s portal. The Commission believes that the elimination of the cover sheet requirement under §§ 40.2 and 40.3 removes redundancy because the online portal requires registered entities to input the same information that is

required on the coversheet. The Commission believes that the proposed amendments will benefit registered entities by clarifying the Commission’s intent as to the scope of the explanation and analysis required for the submission of self-certified products pursuant to § 40.2 or for requests for a product approval pursuant to § 40.3. In addition, the proposed amendments will help achieve improved regulatory effectiveness of the product self-certification and approval processes by clarifying the level of detail in the information provided thereby enabling the Commission to more effectively complete its analysis.

The Commission believes that amending § 40.3(a)(10) to eliminate the two business day deadline for responding to Commission request for additional information and granting Commission staff the authority to set a deadline based on the nature of the requested information will provide more flexibility to registered entities and better enable the Commission to manage its resources and conduct more effective oversight over registered entities. The proposed changes to § 40.3(c)(4) also provide that any substantive amendment of a § 40.3 submission would restart the 45-day review period provided in § 40.3(c) to ensure that the Commission has sufficient time to analyze and consider the substantive changes. The restarting of the 45-day review period provided in § 40.3(c) upon a registered entity making any substantive changes to their § 40.3(c) filing would also encourage registered entities to be precise and consult with Commission staff regarding any questions when preparing § 40.3 submissions.

ii. Costs

The Commission believes that there will not be new costs associated with the proposed amendments §§ 40.2 and 40.3 requiring registered entities to provide complete explanations of their products as this information is already required under the current regulations. The current regulations instruct registered entities to submit explanations and analyses about products (which are to be “concise” when self-certifying under § 40.2). The amendment is intended to clarify the Commission’s original intent that the explanation and analysis contain sufficient detail for the Commission to evaluate the submissions for the purpose intended—to assess whether the new products would comply with the CEA and associated regulations. In general, the proposed amendments to §§ 40.2 and 40.3 will provide greater

specificity, leaving less room for regulatory ambiguity, improve the quality of submissions, and reduce any administrative costs registered entities might incur when determining what information must be submitted to the Commission for a product self-certification or product approval request. The proposed amendments eliminating the two-business day deadline and regarding extending the 45-day review period as a result of any substantive amendments to a § 40.3 submission, the submission being “incomplete” or the entity not responding completely to “Commission questions in a timely manner” may cause registered entities to incur costs related to the offering of products or contracts, if the timelines affect product-launch dates.

d. Proposed Amendments to § 40.4 and Appendix E Regarding Terms or Conditions for Enumerated Agricultural Products

Current § 40.4 applies to DCMs and identifies the rules or rule amendments for enumerated agricultural products that are not material and required to be submitted for approval by the Commission when the products being changed have open interest. The Commission proposes to add appendix E to part 40 to provide guidance to DCMs regarding criteria that the Commission considers as evidence that an enumerated agricultural product rule change is non-material. The Commission proposes to add text to current § 40.4(b)(5)(ii) to provide that when a DCM explains why it considers a rule “non-material” pursuant to § 40.4(b)(5), the DCM will, if applicable, include a copy of a previously approved rule or rule amendment that is, in substance, the same as the non-material rule or rule amendment.

i. Benefits

The Commission believes that appendix E to part 40 will aid DCMs in determining whether a proposed change to terms and conditions is material. Specifically, the guidance offered in appendix E should reduce uncertainties and enable DCMs to more efficiently determine whether a proposed change would be material. Additionally, by directing DCMs to include a copy of a previously approved rule or rule amendment with submissions to the Commission pursuant to § 40.4(b)(5)(ii), the Commission believes this effort will provide market participants with context and background that would help them understand the current rule or rule amendment and why it is non-material. In other words, the proposed

amendments will improve transparency for market participants.

ii. Costs

The Commission anticipates appendix E to part 40 might cause DCMs to incur a one-time compliance cost related to understanding appendix E’s guidance to assessing whether a rule is material. The Commission believes that DCMs will incur costs related to researching and collecting previously approved rules or rule amendments for submissions to the Commission.

e. Proposed Amendments to §§ 40.5, 40.6, and 40.10 Regarding Filing Instructions for Rules

The Commission is proposing changes to update Commission processes and clarify submission procedures for a registered entity to voluntarily submit its rules for Commission approval and for a registered entity to self-certify that its rules comply with the Act and Commission regulations. Proposed amendments to §§ 40.5(a)(1) and 40.6(a)(1) remove references to the Commission Secretary. Proposed amendments to §§ 40.5(a)(2) and 40.6(a)(7)(i) remove the references to the cover sheet and replace these with references to the “information required by Appendix D” to part 40.

The proposed amendments to the self-certification submission requirements in § 40.6(a)(7) clarify the Commission’s intent as to the scope of the explanation and analysis that registered entities must submit by adding that the explanation and analysis needs to also be “complete” to ensure enough information is provided so that Commission staff can effectively evaluate the rule submissions. The Commission proposes to move certain language from the introductory paragraph of § 40.6(a) to become § 40.6(a)(9) and to state more clearly therein that a new rule or a rule amendment that delists, or withdraws the certification of, a product with no open interest may become effective immediately upon the filing of the submission, provided that the submission is made in compliance with § 40.6(a)(1) and (2) and (7). In addition, the proposed amendments in § 40.6(b)(2) provide that if a registered entity amends or supplements its initial rule submission under § 40.6(a), the Commission will treat the amendment as a new submission and restart the Commission’s 10-day review period, unless the amendments or supplementation is requested by the Commission or is for non-substantive revisions.

The proposed amendments in § 40.6(c)(5) make it clear that if the Commission stays and ultimately objects to a rule certification, the registered entity may re-submit a revised version with a substantive basis for treating the revised rule differently. Specifically, under the proposed amendment, a Commission objection to a certification of a rule or rule amendment that is inconsistent with the Act or the Commission’s regulations does not prevent a registered entity from submitting a revised proposed rule or rule amendment, or from submitting the new rule or rule amendment as initially proposed, in a supplemental submission, for certification or Commission review and approval. In addition, the objection by the Commission will be treated as presumptive evidence that the entity may not truthfully certify that the same proposed rule or substantially the same rule complies with CEA or the Commission’s regulations.

The proposed amendments to § 40.6(d)(2) expand the categories of rules that may be implemented without a certification to include a number of new categories of rules. The new categories include rule amendments updating email addresses or contact information that market participants use to submit block trades; rules amending existing trading months; rules changing the price ranges within which a trade will not be cancelled; and rules governing the payment or collection of option premiums or margins.⁸⁸ Registered entities may implement rules within these categories by notifying the Commission of the rule changes on a weekly basis pursuant to § 40.6(d)(2). The proposed amendments to § 40.6(d)(2) align with the Commission’s proposal to remove a subset of the same categories of rules from the definition of “terms and conditions” in § 40.1.

For SIDCOs certifying rules that could materially affect the nature or level of risks presented by the SIDCO, the

⁸⁸ Proposed § 40.6(d)(2)(xi) will allow registered entities to submit rules to allow updates of email addresses and contact information that market participants use to submit block trades. Proposed § 40.6(d)(2)(xii) will allow registered entities to submit rules that make changes to no cancellation ranges on contracts for the purchase or sale of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap). Proposed § 40.6(d)(2)(xiii) will allow registered entities to submit rules that set or amend the payment or collection of commodity options premiums or margins for the purchase or sale of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap). Proposed § 40.6(d)(2)(xiii) will allow registered entities to submit rules that set or amend the payments or collections of option premiums or margins for a swap.

Commission proposes amendments to § 40.10(b) to revise the definition in § 40.10(b) to specify that proposed changes that require advance notice under § 40.10 may include, but are not limited to, material changes to the SIDCO's default management plan or default rules or procedures under § 39.16 or § 39.35, program of risk analysis and oversight required under § 39.18, or recovery and wind down plans required under § 39.39; the adoption of a new or materially revised margin methodology; the establishment of a cross-margining program or similar arrangement with another clearing organization; and material changes to its approach to the stress testing required under §§ 39.13(h)(3), 39.36(a), or 39.36(c). Finally, the Commission proposes an amendment to § 40.10 that expressly states that where any provision of the Commission's regulations requires a DCO to file rules for approval under § 40.5, a SIDCO would be required instead to file those rules under § 40.10, if the rules could materially affect the nature or level of risks presented by the SIDCO.

i. Benefits

The Commission believes the removal of the reference to the Secretary modernizes the regulation and makes it consistent with current practices and technologies. Submitting entities no longer send submissions to the Secretary with a cover sheet because they instead file submissions through uploading documents to, and entering information into, the Commission's portal. The Commission also believes that the elimination of the cover sheet requirement in the text of §§ 40.5 and 40.6 removes redundancy because the online portal requires registered entities to input into the online portal the same information that is required on the cover sheet.

The Commission believes the proposed amendments to § 40.6(a)(7) stating that registered entities must provide complete explanations and analysis to the Commission for self-certifying rules clarifies the Commission's intent as to the scope of the explanation and analysis required by establishing the information and detail to be addressed. This amendment will assist registrants with better understanding what to include in the submissions and the information provided will enable Commission staff to better assess whether the proposed rules comply with the CEA and Commission regulations. Proposed amendment § 40.6(a)(9) will benefit registered entities by providing certainty that a registered entity may immediately

delist, or withdraw a certification of, a product with no open interest upon making a § 40.6(a) submission.

The proposed amendments to § 40.6(b)(2) that state that new information restarts the review period make it clear that the review period will be extended and should encourage registered entities to be thorough to ensure that their initial submissions are complete. The proposed amendments to § 40.6(c)(5) provide clarity regarding the impact of an objection by the Commission to a registered entity's certification of a proposed rule or rule amendment on the grounds that the proposed rule or rule amendment is inconsistent with the Act or the Commission's regulations. Specifically, under the proposed amendment, if a registered entity wishes to resubmit through self-certification a rule or rule amendment that the Commission objected to on the grounds that the proposed rule or rule amendment is inconsistent with the Act or the Commission's regulations, the registered entity must first substantively change or supplement the proposed rule or rule amendment to address the Commission's objection.

The proposed amendments to § 40.6(d)(2) to add new categories of rules that may be implemented through a weekly notification to the Commission will enable registered entities to more quickly implement rules that fall within these new categories as the registered entity may implement these rules immediately and file a weekly notification of any rule amendments within a week of making such amendments. The process of drafting a weekly notification is less involved than the process of submitting the rules pursuant to § 40.6(a), including self-certification that the rules comply with the Act and Commission regulations. Registered entities will be able to redirect their time to other compliance or operational activities. Proposed amendments to § 40.10(b) should aid SIDCOs in making determinations regarding the type of rules that must be submitted to the Commission under § 40.10. Proposed amendment § 40.10(i) also should eliminate potentially duplicative regulatory filings under current § 40.5, and, as a result, SIDCOs will benefit from the cost-savings of not having to dedicate administrative efforts two times for the similar submissions.

ii. Costs

The Commission believes that the proposed amendments to §§ 40.5(a) and 40.6(a), (b)(2), and (c)(5), regarding filing instructions for rules will not place any additional costs or burdens on

registered entities because the proposed amendments clarify the Commission's expectations. The Commission does not believe that there are costs associated with proposed amendments to § 40.5(d). The proposed amendments to § 40.6(a)(7) inform registered entities of the quality of explanations and analysis needed for rule submissions and will lessen the likelihood that registered entities would need to amend or supplement submissions. If the Commission requests additional evidence, information or data pursuant to § 40.6(a)(8), proposed § 40.6(b) may result in an extended review period (as a result of the review period restarting) and the delay in implementation of a rule may impose a cost on a registered entity, depending on the nature of the rule. The Commission does not believe that there are costs associated with proposed amendments to § 40.6(c)(5). The Commission believes that the proposed changes to § 40.10 will not place additional costs or burdens on SIDCOs because they clarify the types of submissions that SIDCOs must file under § 40.10 and eliminate potential duplication in regulatory filings.

f. Proposed Amendments to § 40.7 Regarding Delegation of Authority

The Commission proposes to amend § 40.7 to enhance the utility and clarity of the regulation and add three new delegations. Proposed § 40.7(a)(1)(iv) and (v) delegates the authority in proposed §§ 40.3(c)(3) and 40.5(c)(3) to extend the applicable review period set forth in §§ 40.3(c) and 40.5(c), respectively, for the period of time agreed to in writing by the registered entity. Finally, as discussed above, the Commission is also proposing to add § 40.7(e) to delegate the Commission's authority to specify the format and manner of filing under these regulations to the Directors of the Division of Market Oversight and the Division of Clearing and Risk.

i. Benefits

The proposed amendments to § 40.7 will benefit regulated entities and the public by improving the readability of this regulation because the delegations are organized by the applicable section of part 40 from the which the delegated authorities originated. The Commission believes that delegating the authority in proposed §§ 40.3(c)(3) and 40.5(c)(3) to the Divisions to extend the applicable review period set forth in §§ 40.3(c) and 40.5(c), respectively, for the period of time agreed to in writing by the registered entity will enable the Commission to complete this process more efficiently. The Commission also

believes that delegating authority to the Divisions to specify format and manner of filing in proposed § 40.7(e) also enhances efficiency.

ii. Costs

The Commission expects that there will be no costs incurred by registered entities by the proposed amendments clarifying and amending the authorities delegated to Commission staff under part 40.

g. Proposed Amendments to Appendix D to Part 40

With the development and use of the Commission's online portal for the filing of rule and product submissions, the Commission is proposing amendments to appendix D to part 40 that reorganizes rule text and clarify instructions to registered entities on what information shall be uploaded to the portal. The Commission also is proposing a new requirement that DCMs and SEFs indicate when listing a new product whether the new product meets the definition of "referenced contract" as defined in § 150.1 and described in appendix C to part 150 that is titled "Guidance Regarding the Definition of Reference Contract." Part 150 of the Commission's regulations outlines the requirements for Federal and exchange-set position limits.⁸⁹ Part 150, together with §§ 40.1(j)(1)(vii) and (j)(2)(vii), 40.2(a)(3)(ii) and 40.3(a)(3), require DCMs and SEFs to identify referenced contracts to assess whether a contract is subject to Federal position limits.

i. Benefits

The Commission believes that the proposed amendments to appendix D to part 40 will provide several benefits. First, the proposed changes clarify and modernize instructions. The current rule text is more applicable to paper submissions. The proposed text is consistent with the current technological practice where registered entities upload product and rule submissions using the Commission's online portal. Second, the proposed amendment to appendix D to part 40 would require DCMs and SEFs to indicate as part of filing the submission whether a new product to be listed meets the definition of a referenced contract, thereby alerting Commission staff when contracts that may need to be added to the Staff Workbook are being listed and enable the Commission to process and review the submission more efficiently.

ii. Costs

The Commission expects that there will be negligible, if any, costs incurred by registered entities with respect to the amendments proposed to modernize appendix D as registered entities are already submitting the covered rules and products using the portal. With regards to the amendment proposing that DCMs and SEFs indicate whether a new product to be listed meets the definition of referenced contract, the Commission notes that DCMs and SEFs will incur costs to make these indications. These costs, however, will be negligible because registered entities are already making the analytical determinations as to whether contracts are referenced contracts to meet their obligations under §§ 40.1(j)(1)(vii) and (j)(2)(vii), 40.2(a)(3)(ii), 40.3(a)(3) and part 150 of the Commission's regulations.

h. Section 15(a) Factors

In addition to the discussion above, the Commission has evaluated the costs and benefits of the proposed amendments to 17 CFR part 40 in light of the following five broad areas of market and public concern identified in section 15(a) of the CEA: protection of market participants and the public; efficiency, competitiveness, and financial integrity of futures markets; price discovery; sound risk management practices; and other public interest considerations.

Protection of market participants and the public: The Commission believes that the proposed changes to §§ 40.2, 40.3, 40.5 and 40.6, regarding the requirement for complete explanations and analysis for product and rule submissions will help protect market participants and the public by encouraging registered entities to submit comprehensive and informative filings for product and rule changes thereby providing the Commission with sufficient information to evaluate whether the new products or rules comply with the CEA and Commission rules. The Commission believes that the proposed changes to §§ 40.3 and 40.6, regarding restarting review periods under specific circumstances, provide the Commission with the necessary time to evaluate changes and consider risks, and ultimately protect the interests of market participants and the public.

Efficiency, competitiveness, and financial integrity of futures markets: The proposed improvements to the regulations providing for "complete" products and rules submissions sets forth in more detail the Commission's original intention regarding the level of

detail thereby better ensuring that the Commission can provide adequate oversight with minimal disruption to market efficiency. The Commission has not identified any effect of the proposed regulations on innovation and competition.

Price discovery: The Commission has not identified any effect of the proposed regulations on price discovery.

Sound risk management practices: The Commission has not identified any other effect of the proposed regulations on sound risk management practices.

Other public interest considerations: The Commission has not identified any effect of the proposed regulations on other public interest considerations.

List of Subjects in Parts 37, 38, and 40

Commodity futures, Reporting and recordkeeping requirements.

For the reasons stated in the preamble, the Commodity Futures Trading Commission proposes to amend 17 CFR chapter I as follows:

PART 37—SWAP EXECUTION FACILITIES

■ 1. The authority citation for part 37 continues to read as follows:

Authority: 7 U.S.C. 1a, 2, 5, 6, 6c, 7, 7a–2, 7b–3, and 12a, as amended by Titles VII and VIII of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111–203, 124 Stat. 1376.

Appendix B to Part 37 [Amended]

■ 2. Amend appendix B to part 37, under the heading Core Principle 8 of Section 5h of the Act—Emergency Authority, in the first sentence of paragraph (a)(1), by removing the cross-reference "\$ 40.1(h)" and adding in its place "\$ 40.1".

PART 38—DESIGNATED CONTRACT MARKETS

■ 3. The authority citation for part 38 continues to read as follows:

Authority: 7 U.S.C. 1a, 2, 6, 6a, 6c, 6d, 6e, 6f, 6g, 6i, 6j, 6k, 6l, 6m, 6n, 7, 7a–2, 7b, 7b–1, 7b–3, 8, 9, 15, and 21, as amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111–203, 124 Stat. 1376.

Appendix B to Part 38 [Amended]

■ 4. Amend appendix B to part 38, under the heading Core Principle 6 of section 5(d) of the Act: EMERGENCY AUTHORITY, in the third sentence of paragraph (a), by removing the cross-reference "\$ 40.1(h)" and adding in its place "\$ 40.1".

⁸⁹ 17 CFR part 150. The Commission's latest amendments to part 150 became effective on March 15, 2021. 86 FR 3236 (Jan. 14, 2021).

PART 40—PROVISIONS COMMON TO REGISTERED ENTITIES

■ 5. The authority citation for part 40 is revised to read as follows:

Authority: 7 U.S.C. 1a, 2, 5, 6, 7, 8 and 12, as amended by Titles VII and VIII of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Pub. L. 111–203, 124 Stat. 1376 (2010).

■ 6. Revise § 40.1 to read as follows:

§ 40.1 Definitions.

As used in this part:

Business day means the intraday period of time starting at 8:15 a.m. and ending at 4:45 p.m. Eastern Standard Time or Eastern Daylight Savings Time, whichever is currently in effect in Washington, DC, on all days except Saturdays, Sundays, and Federal holidays in Washington, DC.

Dormant derivatives clearing organization means any derivatives clearing organization registered pursuant to section 5b of the Act that has not accepted for clearing any agreement, contract or transaction that is required or permitted to be cleared by a derivatives clearing organization under sections 5b(a) and 5b(b) of the Act, respectively, for a period of 365 days; *provided, however*, no derivatives clearing organization shall be considered dormant if its initial and original Commission order of registration was issued within the preceding 1,095 days.

Dormant designated contract market means any designated contract market on which no trading has occurred for a period of 365 days; *provided, however*, no designated contract market shall be considered dormant if its initial and original Commission order of designation was issued within the preceding 1,095 days.

Dormant swap data repository means any registered swap data repository on which no data has resided for a period of 365 days.

Dormant swap execution facility means any swap execution facility on which no trading has occurred for a period of 365 days; *provided, however*, no swap execution facility shall be considered dormant if its initial and original Commission order of registration was issued within the preceding 1,095 days.

Emergency means any occurrence or circumstance that, in the opinion of the governing board of a registered entity, or a person or persons duly authorized to issue such an opinion on behalf of the governing board of a registered entity under circumstances and pursuant to procedures that are specified by rule, requires immediate action and threatens

or may threaten such things as the fair and orderly trading in, or the liquidation of or delivery pursuant to, any agreements, contracts, swaps or transactions or the timely collection and payment of funds in connection with clearing and settlement by a derivatives clearing organization, including:

(1) Any manipulative or attempted manipulative activity;

(2) Any actual, attempted, or threatened corner, squeeze, congestion, or undue concentration of positions;

(3) Any circumstances which may materially affect the performance of agreements, contracts, swaps or transactions, including failure of the payment system or the bankruptcy or insolvency of any participant;

(4) Any action taken by any governmental body, or any other registered entity, board of trade, market or facility which may have a direct impact on trading or clearing and settlement; and

(5) Any other circumstance which may have a severe, adverse effect upon the functioning of a registered entity.

Rule means any constitutional provision, article of incorporation, bylaw, rule, regulation, resolution, interpretation, stated policy, advisory, terms and conditions, trading protocol, margin methodology, agreement or instrument corresponding thereto, including those that authorize a response or establish standards for responding to a specific emergency, and any amendment or addition thereto or repeal thereof, made or issued by a registered entity or by the governing board thereof or any committee thereof, in whatever form adopted.

Terms and conditions means any definition of the trading unit or the specific commodity underlying a contract for the future delivery of a commodity or commodity option contract, description of the payments to be exchanged under a swap, specification of cash settlement or delivery standards and procedures, and establishment of buyers' and sellers' rights and obligations under the swap or contract. Terms and conditions include provisions relating to the following:

(1) For a contract for the purchase or sale of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap):

(i) Quality and other standards that define the commodity or instrument underlying the contract;

(ii) Quantity standards or other provisions related to contract size;

(iii) Any applicable premiums or discounts for delivery of nonpar products;

(iv) Trading hours, trading months and the listing of contracts;

(v) The pricing basis, minimum price fluctuations, and maximum price fluctuations;

(vi) Any price limits, no cancellation ranges, trading halts, or circuit breaker provisions, and procedures for the establishment of daily settlement prices;

(vii) Speculative position limits, position accountability standards, and position reporting requirements, including an indication as to whether the contract meets the definition of a referenced contract as defined in § 150.1 of this chapter, and if so, the name of either the core referenced futures contract or other referenced contract upon which the new referenced contract submitted under this part is based.

(viii) Delivery points and locational price differentials;

(ix) Delivery standards and procedures, including fees related to delivery or the delivery process; alternatives to delivery and applicable penalties or sanctions for failure to perform;

(x) If cash settled; the definition, composition, calculation and revision of the cash settlement price or index;

(xi) [Reserved];

(xii) Option exercise price, if it is constant, and method for calculating the exercise price, if it is variable;

(xiii) Threshold prices for an option contract, the existence of which is contingent upon those prices; and

(xiv) Any restrictions or requirements for exercising an option; and

(2) For a swap:

(i) Identification of the major group, category, type or class in which the swap falls (such as an interest rate, commodity, credit or equity swap) and of any further sub-group, category, type or class that further describes the swap;

(ii) Notional amounts, quantity standards, or other unit size characteristics;

(iii) Any applicable premiums or discounts for delivery of nonpar products;

(iv) Trading hours and the listing of swaps;

(v) Pricing basis for establishing the payment obligations under, and mark-to-market value of, the swap including, as applicable, the accrual start dates, termination or maturity dates, and, for each leg of the swap, the initial cash flow components, spreads, and points, and the relevant indexes, prices, rates, coupons, or other price reference measures;

(vi) Any price limits, trading halts, or circuit breaker provisions, and procedures for the establishment of daily settlement prices;

(vii) Speculative position limits, position accountability standards, and position reporting requirements, including an indication as to whether the contract meets the definition of economically equivalent swap as defined in § 150.1 of this chapter, and, if so, the name of either the core referenced futures contract or referenced contract, as applicable, to which the swap submitted under this part is economically equivalent.

(viii) Payment and reset frequency, day count conventions, business calendars, and accrual features;

(ix) If physical delivery applies, delivery standards and procedures, including fees related to delivery or the delivery process, alternatives to delivery and applicable penalties or sanctions for failure to perform;

(x) If cash settled, the definition, composition, calculation and revision of the cash settlement price, and the settlement currency;

(xi) [Reserved];

(xii) Option exercise price, if it is constant, and method for calculating the exercise price, if it is variable;

(xiii) Threshold prices for an option, the existence of which is contingent upon those prices;

(xiv) Any restrictions or requirements for exercising an option; and

(xv) Life cycle events.

■ 7. Amend § 40.2 by revising the introductory text of paragraph (a) and paragraphs (a)(1), (a)(3)(i), (ii), (v), and (vi), and (d) to read as follows:

§ 40.2 Listing products for trading by certification.

(a) *Submission requirements.* A designated contract market or a swap execution facility must comply with the submission requirements of this section prior to listing a product for trading that has not been approved under § 40.3. A submission shall comply with the following conditions:

(1) The designated contract market or the swap execution facility has filed its submission electronically in a format and manner specified by the Commission;

* * *

(3) * * *

(i) The information required by appendix D of this part;

(ii) A copy of the rules that set forth the contract's terms and conditions;

* * *

(v) A concise explanation and analysis that is complete with respect to the product's terms and conditions, the underlying commodity, and the product's compliance with applicable provisions of the Act, including core principles, and the Commission's

regulations thereunder. This explanation and analysis shall either be accompanied by the documentation relied upon to establish the basis for compliance with applicable law, or incorporate information contained in such documentation, with appropriate citations to data sources;

(vi) A certification that the registered entity posted a notice of a pending product certification with the Commission and a copy of the submission, concurrent with the filing of a submission with the Commission, on the registered entity's website. Information that the registered entity seeks to keep confidential may be redacted from the documents published on the registered entity's website but must be republished consistent with any determination made pursuant to § 40.8(c)(4); and

* * *

(d) *Class certification of swaps.* (1) A designated contract market or swap execution facility may list or facilitate trading in any swap or number of swaps based upon an "excluded commodity," as defined in section 1a(19)(i) of the Act, not including any security, security index, and currency other than the United States Dollar and a "major foreign currency," as defined in § 15.03(a) of this chapter, or an "excluded commodity," as defined in section 1a(19)(ii)–(iv) of the Act, provided the designated contract market or swap execution facility certifies, under § 40.2(a)(1) and (2) and (3)(i), (iv), and (vi), the following:

(i) Each particular swap within the certified class of swaps is based upon an excluded commodity specified in § 40.2(d)(1);

(ii) Each particular swap within the certified class of swaps is based upon an excluded commodity with an identical pricing source, formula, procedure, and methodology for calculating reference prices and payment obligations;

(iii) The pricing source, formula, procedure, and methodology for calculating reference prices and payment obligations in each particular swap within the certified class of swaps is identical to a pricing source, formula, procedure, and methodology for calculating reference prices and payment obligations in a product previously submitted to the Commission and certified or approved pursuant to § 40.2 or § 40.3; and

(iv) Each particular swap within the certified class of swaps is based upon an excluded commodity involving an identical currency or identical currencies.

(2) The Commission may in its discretion require a registered entity to

withdraw its certification under § 40.2(d)(1) and to submit each individual swap or certain individual swaps within the submission for Commission review pursuant to § 40.2 or § 40.3.

■ 8. Amend § 40.3 as follows:

■ a. Revise the introductory text of paragraph (a) and paragraphs (a)(1) and (2), (4), (9) and (10), (c), and (d);

■ b. Remove paragraph (e); and

■ c. Redesignate paragraph (f) as paragraph (e) and revise newly redesignated paragraph (e).

The revisions read as follows:

§ 40.3 Voluntary submission of new products for Commission review and approval.

(a) *Request for approval.* Pursuant to section 5c(c) of the Act, a designated contract market, a swap execution facility, or a derivatives clearing organization may request that the Commission approve a new product prior to listing the product for trading or accepting the product for clearing, or if a product was initially submitted under § 40.2 or § 39.5 of this chapter, subsequent to listing the product for trading or accepting the product for clearing. A submission requesting approval shall:

(1) Be filed electronically in a format and manner specified by the Commission;

(2) Include the information required by appendix D of this part;

* * *

(4) Include an explanation and analysis that is complete with respect to the product's terms and conditions, the underlying commodity, and the product's compliance with applicable provisions of the Act, including core principles, and the Commission's regulations thereunder. This explanation and analysis shall either be accompanied by the documentation relied upon to establish the basis for compliance with the applicable law, or incorporate information contained in such documentation, with appropriate citations to data sources;

* * *

(9) Certify that the registered entity posted a notice of its request for Commission approval of the new product and a copy of the submission, concurrent with the filing of a submission with the Commission, on the registered entity's website.

Information the registered entity seeks to keep confidential may be redacted from the documents published on the registered entity's website but must be republished consistent with any determination made pursuant to § 40.8(c)(4); and

(10) Include, if requested by Commission staff, additional evidence, information or data demonstrating that the contract meets, initially or on a continuing basis, the requirements of the Act, or other requirement for designation or registration under the Act, or the Commission's regulations or policies thereunder. The registered entity shall submit the requested information by the time specified by Commission staff, or at the conclusion of any extended period agreed to by Commission staff after timely receipt of a written request from the registered entity.

* * * * *

(c) *Commission review.* (1) All products submitted for Commission approval pursuant to, and in compliance with the submission requirements of, paragraph (a) of this section shall be subject to review by the Commission for a period of 45 days after receipt by the Commission.

(2) The Commission may extend the initial 45-day review period for up to an additional 45 days if the product raises novel or complex issues that require additional time to analyze, the submission is incomplete or the requestor does not respond completely to Commission questions in a timely manner, in which case the Commission shall notify the submitting registered entity within the initial 45-day review period and shall briefly describe the nature of the specific issues for which additional time for review shall be required.

(3) At any time during its review of a proposed product under this section, the Commission may extend the review period for any period of time to which the registered entity agrees in writing.

(4) Any amendment or supplementation made by the registered entity to the submission will be treated as the filing of a new submission under this section and be subject to the initial 45-day review period in accordance with paragraph (c)(1) of this section, unless the amendment or supplementation is made for correction of typographical errors, renumbering or other non-substantive revisions. Any substantive amendment or supplementation by the submitting entity, including an amendment or supplementation requested by the Commission, will be treated as a new submission under this section.

(5) If the review period described in paragraph (c)(1) of this section would end on a day that is not a business day, such review period shall instead be extended to end on the next business day.

(d) *Commission determination—(1) Approval.* Any product submitted for Commission approval in compliance with paragraph (a) of this section shall be deemed approved by the Commission under section 5c(c) of the Act at the conclusion of the applicable review period under paragraph (c) of this section, unless the Commission issues a notice of non-approval to the registered entity under paragraph (d)(2) of this section within the applicable review period.

(2) *Notice of non-approval.* Any time during its review under this section, the Commission may notify the registered entity that it will not, or is unable to, approve the new product. This notification will briefly specify the nature of the issues raised and the specific provision of the Act or the Commission's regulations, including the form or content requirements of this section, with which the new product is inconsistent or appears to be inconsistent with the Act or the Commission's regulations.

(e) *Effect of non-approval.* (1) Notification to a registered entity under paragraph (d)(2) of this section of the Commission's determination not to approve a product does not prevent the entity from subsequently submitting a revised version of the product for Commission approval, or from submitting the product as initially proposed, in a supplemented submission; the revised or supplemented submission will be reviewed without prejudice.

(2) Notification to a registered entity under paragraph (d)(2) of this section of the Commission's determination not to approve a product shall be presumptive evidence that the entity may not truthfully certify under § 40.2 that the same, or substantially the same, product complies with the Act and the Commission's regulations thereunder.

■ 9. Revise § 40.4 to read as follows:

§ 40.4 Amendments to terms or conditions of enumerated agricultural products.

(a) Notwithstanding the provisions of this part, a designated contract market must submit for Commission approval under the procedures of § 40.5, prior to its implementation, any rule that, for a delivery month having open interest, would materially change a product's term or condition, as defined in § 40.1, of a contract for future delivery in an agricultural commodity enumerated in section 1a(9) of the Act, or of an option on such a contract or commodity.

(b) The following rules or rule amendments are not material and are not required by this section to be

submitted for Commission approval under the procedures of § 40.5:

(1) Rules or rule amendments that are enumerated in § 40.6(d)(2) may be implemented without prior approval or certification, provided that they are implemented pursuant to the notification procedures of § 40.6(d);

(2) Rules or rule amendments that are enumerated in § 40.6(e)(2) may be implemented without prior approval or certification or notification as permitted pursuant to § 40.6(e);

(3) Rules or rule amendments governing trading hours may be implemented without prior approval, provided that they are implemented pursuant to the procedures of § 40.6(a);

(4) Rules or rule amendments that are required to comply with a binding order of a court of competent jurisdiction, or a rule, regulation or order of the Commission or of another Federal regulatory authority, may be implemented without prior approval, provided that they are implemented pursuant to the procedures of § 40.6(a); or

(5) Any rule or rule amendment:

(i) The text of which has been submitted pursuant to the procedures of §§ 40.4(b)(5) and 40.6(a) at least ten business days prior to its implementation and that has been labeled "Non-Material Agricultural Rule Change;"

(ii) For which the designated contract market has provided an explanation as to why it considers the rule "non-material," and any other information that may be beneficial to the Commission in analyzing the merits of the entity's claim of non-materiality including, if applicable, a copy of a previously approved rule or rule amendment that is, in substance, the same as the non-material rule or rule amendment; and

(iii) With respect to which the Commission has not notified the contract market during the review period that the rule appears to require or does require prior approval under this section.

■ 10. Amend § 40.5 as follows:

■ a. Revise the introductory text of paragraph (a) and paragraphs (a)(1) and (2), (5) and (6), and (9), the paragraph heading of paragraph (c), and paragraph (c)(1);

■ b. Remove paragraph (c)(2);

■ c. Redesignate paragraph (d)(1) as paragraph (c)(2) and revise newly redesignated paragraph (c)(2);

■ d. Redesignate paragraph (d)(2) as paragraph (c)(3) and revise newly redesignated paragraph (c)(3);

■ e. Add paragraphs (c)(4) through (6);

■ f. Revise the paragraph heading of paragraph (d), remove paragraph (d) introductory text, and add a new paragraph (d)(1);

■ g. Redesignate paragraph (g) as paragraph (d)(2) and revise newly redesignated paragraph (d)(2);

■ h. Redesignate paragraph (e) as paragraph (d)(3) and revise newly redesignated paragraph (d)(3); and

■ i. Redesignate paragraph (f) as paragraph (e) and revise newly redesignated paragraph (e).

The revisions and additions read as follows:

§ 40.5 Voluntary submission of rules for Commission review and approval.

(a) *Request for approval of rules.* Pursuant to section 5c(c) of the Act, a registered entity may request that the Commission approve a new rule or rule amendment prior to implementation of the rule, or if the rule or rule amendment was initially submitted under § 40.2 or § 40.6, subsequent to implementation of the rule. A request for approval shall:

(1) Be filed electronically in a format and manner specified by the Commission;

(2) Include the information required by appendix D of this part;

* * * * *

(5) Provide an explanation and analysis that is complete with respect to the operation, purpose, and effect of the proposed rule or rule amendment and its compliance with applicable provisions of the Act, including core principles, and the Commission's regulations thereunder, including, as applicable, a description of the anticipated benefits to market participants or others, any potential anticompetitive effects on market participants or others, and how the rule fits into the registered entity's framework of self-regulation;

(6) Certify that the registered entity posted a notice of its request for Commission approval of the new rule or rule amendment and a copy of the submission, concurrent with the filing of a submission with the Commission, on the registered entity's website. Information the registered entity seeks to keep confidential may be redacted from the documents published on the registered entity's website but must be republished consistent with any determination made pursuant to § 40.8(c)(4);

* * * * *

(9) Identify any Commission regulation that the Commission may need to amend, or sections of the Act or the Commission's regulations that the Commission may need to interpret, in

order to approve the new rule or rule amendment. To the extent that such an amendment or interpretation is necessary to accommodate a new rule or rule amendment, the submission should include a reasoned analysis supporting the amendment to the Commission's regulation or the interpretation; and

* * * * *

(c) *Commission review.* (1) Any rule submitted for Commission approval pursuant to, and in compliance with the submission requirements of, paragraph (a) of this section shall be subject to review by the Commission for a period of 45 days after receipt by the Commission.

(2) The Commission may extend the initial 45-day review period for up to an additional 45 days if the proposed rule raises novel or complex issues that require additional time for review or is of major economic significance, the submission is incomplete or the requestor does not respond completely to Commission questions in a timely manner, in which case the Commission shall notify the submitting registered entity within the initial 45-day review period and shall briefly describe the nature of the specific issues for which additional time for review shall be required.

(3) At any time during its review of a proposed rule under this section, the Commission may extend the review period for any period of time to which the registered entity agrees in writing.

(4) Any amendment or supplementation made by the registered entity to the submission will be treated as the filing of a new submission under this section and be subject to the initial 45-day review period in accordance with paragraph (c)(1) of this section, unless the amendment or supplementation is requested by the Commission or is made for correction of typographical errors, renumbering or other non-substantive revisions.

(5) If a rule or rule amendment that is submitted for Commission approval under paragraph (a) of this section is also submitted and labeled as a "Non-Material Agricultural Rule Change" in accordance with § 40.4(b)(5), the Commission shall commence the 45-day review period in paragraph (c)(1) of this section ten business days after receiving the submission.

(6) If the review period described in paragraph (c)(1) of this section would end on a day that is not a business day, such review period shall instead be extended to end on the next business day.

(d) *Commission determination—(1) Approval.* Any rule submitted for

Commission approval in compliance with paragraph (a) of this section shall be deemed approved by the Commission under section 5c(c) of the Act at the conclusion of the applicable review period under paragraph (c) of this section, unless the Commission issues a notice of non-approval to the registered entity under paragraph (d)(3) of this section within the applicable review period.

(2) *Expedited approval.*

Notwithstanding the provisions of paragraph (c) of this section, a proposed rule or rule amendment, including changes to terms and conditions of a product that are consistent with the Act and Commission regulations, may be approved by the Commission at such time and under such conditions as the Commission shall specify in a written notification.

(3) *Notice of non-approval.* Any time during its review under this section, the Commission may notify the registered entity that it will not, or is unable to, approve the new rule or rule amendment. This notification will briefly specify the nature of the issues raised and the specific provision of the Act or the Commission's regulations, including the form or content requirements of this section, with which the new rule or rule amendment is inconsistent or appears to be inconsistent with the Act or the Commission's regulations.

(e) *Effect of non-approval.* (1) Notification to a registered entity under paragraph (d)(3) of this section of the Commission's determination not to approve a new rule or rule amendment does not prevent the registered entity from subsequently submitting a revised version of the proposed rule or rule amendment for Commission review and approval, or from submitting the new rule or rule amendment as initially proposed, in a supplemented submission; the revised or supplemented submission will be reviewed without prejudice.

(2) Notification to a registered entity under paragraph (d)(3) of this section of the Commission's determination not to approve a proposed rule or rule amendment of a registered entity shall be presumptive evidence that the entity may not truthfully certify under § 40.6 that the same, or substantially the same, proposed rule or rule amendment complies with the Act and the Commission's regulations thereunder.

■ 11. Amend § 40.6 as follows:

■ a. Revise the introductory text of paragraph (a) and paragraphs (a)(1) and (2) and (5) through (8);

■ b. Add paragraph (a)(9);

- c. Revise paragraphs (b) and (c)(2) and (3);
- d. Add paragraph (c)(5);
- e. Revise paragraphs (d)(1) and (d)(2)(iii), (iv), and (ix);
- f. Add paragraphs (d)(2)(xi) through (xiii); and
- g. Redesignate paragraph (d)(3) as paragraph (e) and revise newly redesignated paragraph (e).

The revisions and additions read as follows:

§ 40.6 Self-certification of rules.

(a) *Submission requirements.* A registered entity shall comply with the certification and submission requirements of this section prior to implementing any rule that has not obtained Commission approval under § 40.5, or that is submitted under § 40.10, except as otherwise provided by § 40.10(a). A submission shall comply with the following conditions:

(1) The registered entity has filed its submission electronically in a format and manner specified by the Commission.

(2) The registered entity has provided a certification that the registered entity posted a notice of pending certification with the Commission and a copy of the submission, concurrent with the filing of a submission with the Commission, on the registered entity's website. Information that the registered entity seeks to keep confidential may be redacted from the documents published on the registered entity's website but it must be republished consistent with any determination made pursuant to § 40.8(c)(4).

* * * * *

(5) The rule or rule amendment is not a rule or rule amendment of a designated contract market that materially changes a term or condition of a contract for future delivery of an agricultural commodity enumerated in section 1a(9) of the Act or an option on such a contract or commodity in a delivery month having open interest.

(6)(i) Rules or rule amendments implemented under procedures of the governing board to respond to an emergency as defined in § 40.1, shall, if practicable, be filed with the Commission prior to the implementation or, if not practicable, be filed with the Commission at the earliest possible time after implementation, but in no event more than twenty-four hours after implementation. Such rules shall be subject to the review and stay provisions of paragraphs (b) and (c) of this section.

(ii) New rules or rule amendments that establish standards for responding to an emergency must be submitted

pursuant to § 40.6(a) or may be submitted pursuant to § 40.5.

(7) The rule submission shall include:

(i) The information required by appendix D of this part ("Emergency Rule Certification" should be noted in the Description section in the case of a rule or rule amendment that responds to an emergency);

(ii) The text of the rule (in the case of a rule amendment, deletions and additions must be indicated);

(iii) The date of intended implementation;

(iv) A certification by the registered entity that the rule complies with the Act and the Commission's regulations thereunder;

(v) A concise explanation and analysis that is complete with respect to the operation, purpose, and effect of the proposed rule or rule amendment and its compliance with applicable provisions of the Act, including core principles, and the Commission's regulations thereunder;

(vi) A brief explanation of any substantive opposing views expressed to the registered entity by governing board or committee members, members of the entity or market participants, that were not incorporated into the rule, or a statement that no such opposing views were expressed; and

(vii) As appropriate, a request for confidential treatment pursuant to the procedures provided in § 40.8;

(8) The registered entity shall provide, if requested by Commission staff, additional evidence, information or data that may be beneficial to the Commission in conducting a due diligence assessment of the filing and the registered entity's compliance with any of the requirements of the Act or the Commission's regulations or policies thereunder; and

(9) Notwithstanding the 10 business day filing requirement of paragraphs (a)(3) and (b)(1) of this section, a registered entity may file a submission and certification of a new rule or a rule amendment that delists, or withdraws the certification of, a product that has no open interest and may make the delisting or withdrawal of the product with no open interest effective immediately upon filing the submission, provided that the submission is made in compliance with paragraphs (a)(1) and (2) and (7) of this section.

(b) *Review by the Commission.* (1) The Commission shall have 10 business days to review the new rule or rule amendment before the new rule or rule amendment is deemed certified and can be made effective, unless the Commission notifies the registered entity during the 10-business day

review period that it intends to issue a stay of the certification under paragraph (c) of this section.

(2) Any amendment or supplementation made by the registered entity to the submission will be treated as the filing of a new submission under this section and be subject to the initial 10-business day review period in accordance with paragraph (b)(1) of this section, unless the amendment or supplementation is made for correction of typographical errors, renumbering or other non-substantive revisions.

(c) * * *

(2) *Public comment.* The Commission shall provide a 30-day comment period within the 90-day period in which the stay is in effect as described in paragraph (c)(1) of this section. The Commission shall publish a notice of the 30-day comment period on the Commission website. Comments from the public shall be submitted as specified in that notice.

(3) *Expiration of a stay of certification of new rule or rule amendment.* A new rule or rule amendment subject to a stay pursuant to this paragraph shall become effective and can be implemented, pursuant to the certification, at the expiration of the 90-day review period described in paragraph (c)(1) of this section unless the Commission withdraws the stay prior to that time, or the Commission notifies the registered entity during the 90-day time period that it objects to the certification on the grounds that the proposed rule or rule amendment is inconsistent with the Act or the Commission's regulations.

* * * * *

(5) *Effect of objection.* (i) Notification to a registered entity under paragraph (c) of this section of the Commission's objection to a certification by a registered entity on the grounds that the proposed rule or rule amendment is inconsistent with the Act or the Commission's regulations does not prevent the registered entity from subsequently submitting a revised version of the proposed rule or rule amendment for certification or Commission review and approval, or from submitting the new rule or rule amendment as initially proposed, in a supplemented submission; the revised or supplemented submission will be reviewed without prejudice.

(ii) Notification to a registered entity under paragraph (c) of this section of the Commission's objection to a certification by a registered entity shall be presumptive evidence that the entity may not truthfully certify under this section that the same, or substantially the same, proposed rule or rule

amendment complies with the Act and the Commission's regulations thereunder.

(d) * * *

(1) The registered entity provides to the Commission at least weekly a summary notice of all rule amendments made effective pursuant to this paragraph (d) during the preceding week. Such notice must be labeled "Weekly Notification of Rule Amendments" and need not be filed for weeks during which no such actions have been taken. One copy of each such submission shall be furnished electronically in a format and manner specified by the Commission; and

(2) * * *

(iii) *Index products*. Routine changes in the composition, computation, or method of selection of component entities of an index (other than routine changes to securities indexes to the extent that such changes are not described in paragraph (e)(2)(vi) of this section) referenced and defined in the product's terms, that do not affect the pricing basis of the index, which are made by an independent third party whose business relates to the collection or dissemination of price information and which was not formed solely for the purpose of compiling an index for use in connection with a futures or option product;

(iv) *Option contract terms*. Changes to option contract rules, which may qualify for implementation without notice pursuant to paragraph (e)(2)(vii) of this section, relating to the strike price listing procedures, strike price intervals, and the listing of strike prices on a discretionary basis;

* * * * *

(ix) *Trading months*. The initial listing of trading months, or an amendment to existing trading months, which may qualify for implementation without notice pursuant to paragraph (e)(2)(viii) of this section, within the currently established cycle of trading months;

* * * * *

(xi) *Contact information*. Updates of email addresses or other contact information that market participants use to submit block trades;

(xii) *Changes to no cancellation ranges*. For a contract for the purchase or sale of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap), changes to no cancellation ranges (which are the price ranges within which a trade will not be cancelled); or

(xiii) *Option premiums or margins*. For a contract for the purchase or sale

of a commodity for future delivery or an option on such a contract or an option on a commodity (other than a swap), payment or collection of commodity options premiums or margins; or for a swap, payment or collection of option premiums or margins.

(e) *Notification of rule amendments not required*. Notwithstanding the rule certification requirements of section 5c(c)(1) of the Act and paragraph (a) of this section, a registered entity may place the following rules or rule amendments into effect without certification or notice to the Commission if the following conditions are met:

(1) The registered entity maintains documentation regarding all changes to rules; and

(2) The rule governs:

(i) *Transfer of membership or ownership*. Procedures and forms for the purchase, sale or transfer of membership or ownership, but not including qualifications for membership or ownership, any right or obligation of membership or ownership or dues or assessments;

(ii) *Administrative procedures*. The organization and administrative procedures of a registered entity governing bodies such as a Board of Directors, Officers and Committees, but not voting requirements, Board of Directors or Committee composition requirements or procedures, decision making procedures, use or disclosure of material non-public information gained through the performance of official duties, or requirements relating to conflicts of interest;

(iii) *Administration*. The routine, daily administration, direction and control of employees, requirements relating to gratuity and similar funds, but not guaranty, reserves, or similar funds; declaration of holidays, and changes to facilities housing the market, trading floor or trading area;

(iv) *Standards of decorum*. Standards of decorum or attire or similar provisions relating to admission to the floor, badges, or visitors, but not the establishment of penalties for violations of such rules; and

(v) *Fees*. Fees or fee changes, other than fees or fee changes associated with market making or trading incentive programs, that:

(A) Are less than \$1.00 per contract; or

(B) Relate to matters such as dues, badges, telecommunication services, booth space, real time quotations, historical information, publications, software licenses or other matters that are administrative in nature.

(vi) *Securities indexes*. Routine changes to the composition, computation or method of security selection of an index that is referenced and defined in the product's rules, and which is made by an independent third party.

(vii) *Option contract terms*. For registered entities that are in compliance with the daily reporting requirements of § 16.01 of this chapter, changes to option contract rules relating to the strike price listing procedures, strike price intervals, and the listing of strike prices on a discretionary basis.

(viii) *Trading months*. For registered entities that are in compliance with the daily reporting requirements of § 16.01 of this chapter, the initial listing of trading months which are within the currently established cycle of trading months.

■ 12. Amend § 40.7 by adding paragraphs (a)(1)(iv) and (v), revising paragraphs (a)(5) and (b)(3), and adding paragraph (e) to read as follows:

§ 40.7 Delegations.

(a) * * *

(1) * * *

(iv) To extend, pursuant to § 40.3(c)(3), the applicable review period set forth in § 40.3(c) for the period agreed to in writing by the registered entity;

(v) To extend, pursuant to § 40.5(c)(3), the applicable review period set forth in § 40.5(c) for the period agreed to in writing by the registered entity.

* * * * *

(5) The Commission hereby delegates to the Director of the Division of Market Oversight, to be exercised by the Director or by such employees of the Commission that the Director may designate from time to time, with the concurrence of the General Counsel or the General Counsel's delegate, the authority to determine whether a rule or rule amendment submitted by a designated contract market is material under § 40.4(b)(5), and to notify the designated contract market of such determination.

(b) * * *

(3) Establish or amend or relate to speculative limits or position accountability provisions that are in compliance with the requirements of the Act and the Commission's regulations;

* * * * *

(e) The Commission hereby delegates, until it orders otherwise, to the Director of the Division of Clearing and Risk and, separately, to the Director of the Division of Market Oversight, to be exercised by either Director, as appropriate, or by such employees of

the Commission that either Director may designate from time to time, the authority to specify the format and manner to be used by a registered entity when filing a submission pursuant to this part.

■ 13. Amend § 40.10 by revising the introductory text of paragraph (a), paragraph (b), the introductory text of paragraph (d), and paragraph (h)(3), and adding paragraph (i) to read as follows:

§ 40.10 Special certification procedures for submission of rules by systemically important derivatives clearing organizations.

(a) *Advance notice.* A systemically important derivatives clearing organization, as defined in § 39.2 of this chapter, shall provide notice to the Commission not less than 60 days in advance of any proposed change to its rules, procedures, or operations that could materially affect the nature or level of risks presented by the systemically important derivatives clearing organization. A notice submitted under this section shall be subject to the filing requirements of § 40.6(a)(1) and the website publication requirements of § 40.6(a)(2).

* * * * *

(b) *Changes requiring advance notice.* Changes to a systemically important derivatives clearing organization's rules, procedures, or operations that could materially affect the nature or level of risks presented by the systemically important derivatives clearing organization may include, but are not limited to: material changes to its default management plan or default rules or procedures required under § 39.16 or § 39.35 of this chapter, program of risk analysis and oversight required under § 39.18 of this chapter, or recovery and wind down plans required under § 39.39 of this chapter; the adoption of a new or materially revised margin methodology; the establishment of a cross-margining program or similar arrangement with another clearing organization; and material changes to its approach to the stress testing required under § 39.13(h)(3), or § 39.36(a) or (c) of this chapter. If a systemically important derivatives clearing organization determines that a proposed change could not materially affect the nature or level of risks it presents and therefore does not file an advance notice, the Commission may determine otherwise and require the systemically important derivatives clearing organization to withdraw the proposed change and provide notice pursuant to this section.

* * * * *

(d) *Notice of objection.* A systemically important derivatives clearing organization shall not implement a change to which the Commission has an objection on the grounds that the proposed change is not consistent with the Act or the Commission's regulations, or any applicable rules, orders, or standards prescribed under section 805(a) of the Dodd-Frank Act. The Commission will notify the systemically important derivatives clearing organization in writing of any objection regarding the proposed change within 60 days from the later of:

* * * * *

(h) * * *

(3) The Commission may require modification or rescission of the emergency change if it finds that the change is not consistent with the Act or the Commission's regulations, or any applicable rules, orders, or standards prescribed under section 805(a) of the Dodd-Frank Act.

(i) Where in §§ 39.3(g), 39.4(f), 39.13(i), and 39.15(b)(2) of this chapter a derivatives clearing organization is required to submit rules for approval pursuant to § 40.5, a systemically important derivatives clearing organization instead shall submit such rules pursuant to § 40.10 if the rules could materially affect the nature or level of risks presented by the systemically important derivatives clearing organization.

■ 14. Revise appendix D to part 40 to read as follows:

Appendix D to Part 40—Submission Instructions for Rules and Products

(a) Rule and product submissions shall be submitted electronically to the Commission by a registered entity in a format and manner specified by the Commission, and shall include all of the following information:

1. *Date*—The date of the filing.
2. *Organization*—The name of the organization filing the submission (e.g., CBOT).
3. *Type of Registered Entity*—An indication as to whether the rule or product is being submitted by a designated contract market (DCM), derivatives clearing organization (DCO), swap execution facility (SEF), or swap data repository (SDR).

4. *Type of Filing*—An indication as to whether the filing is a new rule, rule amendment or new product and the section of part 40 under which the filing is submitted. For a new product to be listed by a DCM or a SEF, an indication whether the new product meets the definition of referenced contract as such term is defined in § 150.1 of this chapter and is described in Appendix C to Part 150 of this chapter—Guidance Regarding the Definition of Referenced Contract.

5. *Rule Numbers*—For rule filings, the rule number(s) being adopted or modified in the case of rule amendment filings.

6. *Description*—For rule or rule amendment filings, a description of the new rule or rule amendment, including a discussion of its expected impact on the registered entity, market participants, and the overall market. The narrative should describe the substance of the submission with enough specificity to characterize all material aspects of the filing.

7. *Identifier Code (optional)*—A registered entity Identifier Code, if applicable. Such codes are commonly generated by registered entities to provide an identifier that is unique to each filing (e.g., NYMEX Submission 03–116).

(b) *Other Requirements*—A submission shall comply with all applicable filing requirements for proposed rules, rule amendments, or products. The entry of the information required by paragraph (a) of this appendix does not obviate the registered entity's responsibility to comply with applicable filing requirements (e.g., rules submitted for Commission approval under § 40.5 must be accompanied by an explanation of the purpose and effect of the proposed rule along with a description of any substantive opposing views).

(c) An indication of "confidential treatment requested" does not obviate the submitter's responsibility to comply with all applicable requirements for requesting confidential treatment in § 40.8 and, where appropriate, § 145.9 of this chapter, and will not substitute for notice or full compliance with such requirements.

■ 15. Add appendix E to part 40 to read as follows:

Appendix E to Part 40—Guidance on Compliance With the Materiality Assessment in § 40.4

(a) This appendix provides guidance on complying with the requirement in § 40.4(a) that a DCM must submit rule changes that would materially change a term or condition of a contract on an agricultural product enumerated in section 1a(9) of the CEA with open interest for Commission approval under the procedures of § 40.5. Section 40.4(a) applies strictly to rules that materially change a product's economic terms and conditions, and does not apply to other rules. Guidance is set forth in this appendix to assist a DCM in assessing whether a change to the terms and conditions is material pursuant to § 40.4(a) and in explaining why it considers a rule to be non-material when § 40.4(b)(5) is applicable. The guidance in this appendix can be used to demonstrate to the Commission compliance with the requirement in § 40.4(b)(5)(ii) that the DCM explain why it considers a rule to be non-material when applicable.

Materiality of a Change of a Term or Condition

(b) Any change that is enumerated by the Commission in § 40.4(b)(1) through (4) is not material for purposes of § 40.4(a) and may be submitted under the applicable § 40.6 provision that is specified in the applicable section of § 40.4(b). For any other rule that the DCM believes to be non-material, § 40.4(b)(5) sets forth a process for the DCM

to implement the change through self-certification pursuant to § 40.6(a).

(c) In order for a DCM to self-certify a change to a term or condition of a contract on an agricultural product enumerated in CEA section 1a(9) with open interest that the DCM believes to be non-material, § 40.4(b)(5) requires the DCM to make a non-materiality filing and explain why it considers the rule change to be “non-material.” To assist an exchange in assessing and explaining whether a change to the terms and conditions is non-material pursuant to § 40.4(b)(5), the following paragraphs set forth the criteria that the Commission generally considers as evidence that an enumerated agricultural product rule change is non-material under § 40.4(a) pursuant to § 40.4(b)(5). A DCM may address these criteria in its assessment and explanation to demonstrate compliance with § 40.4(b)(5).

(d) The Commission considers a change to the terms and conditions of a contract on an agricultural product enumerated in CEA section 1a(9) that has open interest as a non-material change if:

(1) The change should not affect a reasonable trader’s decision to enter into, or maintain, a position;

(2) The change should not affect a reasonable trader’s decision to make or take delivery on the contract or to exercise an option on the contract; and

(3) The change should not have an effect on the value of existing positions, including, but not limited to, a change affecting the price of the contract due to a change in the commodity quality characteristics of the existing contract, a change to the size of the existing contract, or a change to a cost of effecting delivery for the existing contract.

Issued in Washington, DC, on August 24, 2023, by the Commission.

Christopher Kirkpatrick,
Secretary of the Commission.

Note: The following appendices will not appear in the Code of Federal Regulations.

Appendices to Provisions Common to Registered Entities—Commission Voting Summary, Chairman’s Statement, and Commissioners’ Statements

Appendix 1—Commission Voting Summary

On this matter, Chairman Behnam and Commissioners Goldsmith Romero and Pham voted in the affirmative. Commissioners Johnson and Mersinger concurred. No Commissioner voted in the negative.

Appendix 2—Statement of Support of Chairman Rostin Behnam

The Commission votes today [at the Commission Open Meeting held on July 26, 2023] on a proposed rule to amend part 40 of the Commission regulations. Part 40 sets forth provisions common to registered entities, including designated contract markets (DCMs), derivatives clearing organizations (DCOs), swap execution facilities (SEFs), and swap data repositories (SDRs), and establishes requirements and

procedures for submitting rules and products, listing products for trading, and accepting products for clearing. Part 40 has not been amended comprehensively since 2011; the proposal would amend part 40 based on the Commission’s experience applying the part 40 regulations since 2011, and is intended to clarify and enhance the utility of part 40. I support this proposed rule.

At a high level, the proposed amendments would: (1) simplify the determination of whether a registered entity is deemed dormant; (2) edit language to reflect the development and use of the Commission’s online portal for filing of rule and product submissions; (3) reorganize and enhance the utility of rules regarding rule submissions and delegations of authority; and (4) provide meaningful guidance to SIDCOs regarding filing instructions for rules that could materially affect the nature or level of risks presented by the SIDCO.

Appendix 3—Statement of Support of Commissioner Kristin N. Johnson

I support the Commission’s issuance for notice and comment of proposed amendments to provisions common to registered entities as set forth in part 40 of the Commission’s regulations.¹ These regulations implement section 5c(c) of the Commodity Exchange Act (CEA or Act),² which prescribes the procedures for listing by registered entities of new products, as well as for approval of new rules or rule amendments, and also standards for review for and approval of the same by the Commission.³ These provisions apply to designated contract markets (DCMs), derivatives clearing organizations (DCOs), Swap Execution Facilities (SEFs), and swap data repositories (SDRs).

Part 40 has not been amended comprehensively for a decade. Over the course of that same decade, a number of other notable market events have transpired. For example, in 2008, an unidentified person—or group of people—using the pseudonym Satoshi Nakamoto published a white paper, innocently titled Bitcoin: A Peer-to-Peer Electronic Cash System, that outlined a decentralized peer-to-peer system for making and processing payments. In the decade since the white paper’s release, we have witnessed exponential growth in the market for digital assets, including cryptocurrencies, as well as the explosion of the digital asset ecosystem.

In addition to the developments regarding the creation and proliferation of digital assets, we have witnessed remarkable growth in the market for carbon credits. There is an indisputable and urgent need for markets to focus on sustainability. This Commission’s Second Voluntary Carbon Markets Convening held in this room last week highlighted this necessity. It also highlighted the need for

careful consideration of important questions such as the potential for fraud or the veracity of claims regarding additionality and concerns regarding greenwashing.

I am enthusiastic to support the Director of the Division of Enforcement Ian McGinley as we stand up the Environmental Fraud Task Force and continue the work of the Digital Asset Task Force. Yet, I strongly believe that effectively addressing fraud and market manipulation requires not only vigorous enforcement, but also thoughtful and proactive regulation. The amendments proposed today [at the Commission Open Meeting held on July 26, 2023] are a significant step in empowering the Commission to better understand new products and new rules in our markets in support of our regulatory mission.

Turning to the rulemaking under consideration today [at the Commission Open Meeting held on July 26, 2023], registered entities generally have two options when submitting products and rules for approval: they may self-certify that the product or rule complies with the CEA and Commission regulations, or they may submit the product or rule for Commission approval.⁴ The proposed amendments are intended to build on the Commission’s experience over the past decade in applying the part 40 regulations to product and rule submissions to clarify, simplify, and enhance the utility of the part 40 regulations for both registered entities and the Commission. Many of these revisions are technical in nature, and I appreciate the wisdom of the staff in both the Division of Clearing and Risk and the Division of Market Oversight in proposing them. I note that there are additional revisions that update the regulations to reflect technological developments in the ways that registered entities communicate with the Commission—*i.e.*, by using the internet.

Consequently, the revisions to the requirements under regulations §§ 40.2(a)(3)(v) and 40.3(a)(4) merit additional focus. These amendments require a registered entity to provide an explanation of the nature of the new product self-certified or submitted to the Commission for approval, “that is complete with respect to” the product’s terms and conditions as well as the product’s compliance with the applicable provisions of the Act, including core principles, and the Commission’s regulations.⁵ Staff have noted that, in their experience, registered entities have not always included sufficient information about the underlying commodity to a new product to allow the Commission to complete the analysis of compliance required under the CEA and the part 40 regulations. The proposed amendments not only call for additional information about the product’s underlying commodity, including characteristics such as the deliverable commodity’s grade, quality and deliverable supply, as applicable, but also specifically reference the guidance provided in appendix C to part 38⁶ as providing the requisite level

of detail to comply with the newly proposed standard.

I support the proposed amendments to part 40 because I support making our rules clearer and easier to administer. I look forward to hearing from commenters as to whether these new requirements are fit for purpose and will enable the Commission to effectively address innovations regarding products, platforms, and technologies. I thank staff in the Division of Clearing and Risk and the Division of Market Oversight, including Rachel Kaplan Reicher, Steven Benton, Nancy Markowitz, and Eileen Chotiner, for their efforts, and look forward to receiving comments from registered entities and the public that will assist the Commission in achieving the best outcome with this rulemaking.

Appendix 4—Statement of Support of Commissioner Christy Goldsmith Romero

Over the last few years, derivatives markets have had to react quickly to new technologies, new government policies, and new economic realities. Exchanges have added many new products for futures in traditional commodity types. For example, in 2023, exchanges listed new metals contracts for lithium and molybdenum to meet growing demand in response to the historic investment in and demand for electric vehicles and batteries. And we have also seen entirely new product types proliferate. Exchanges have listed new contracts that reference novel commodities, such as digital assets and voluntary carbon market credits.

As sponsor of the CFTC's Technology Advisory Committee, I feel comfortable saying that there is no shortage of participants with new ideas seeking access to our regulated markets. Under the Commodity Exchange Act, the Commission's role includes promoting responsible innovation, while protecting customers and promoting the market integrity and transparency that makes American capital markets the deepest and most liquid in the world. New products may improve access to financial markets, reduce costs, and help manage novel risks. But novel derivative contracts and the commodity they are based on may lack a meaningful history that shows that the contract is not readily susceptible to manipulation. And for digital assets, showing that the contract is derivative of commodities rather than securities is important to prevent regulatory arbitrage.

Especially in novel cases, the Commission needs complete information so it can conduct oversight over new products on our markets. The Commission needs to be able to understand if an exchange is fulfilling its core principles that govern its conduct, to determine whether the new product complies with the law, and to understand any increased risk the contract may pose to customers and financial stability.

Under the Commodity Exchange Act, most exchanges are permitted to self-certify that new products comply with the core principles, including that they are not readily susceptible to manipulation. That means a potentially complex or novel product may enter the market even before the Commission's staff have been able to

understand fully whether it complies with the law, and the risks that it could pose. To make this assessment quickly, our staff need complete information about both the characteristics of the product and of the market for the underlying commodity that determines its price.

I support this proposal because it recognizes and helps address a trend that Commission staff have experienced—submissions not including sufficient information for the staff to fulfill the Commission's regulatory responsibility. By requiring a "complete" explanation of a new product's terms and conditions and providing context on what it means for an explanation to be "complete," this proposal would enable the Commission to fulfill its oversight responsibility, including to determine the lawfulness of the product and to assess risk.

Under the proposed changes, the Commission's ability to understand how the product's terms and conditions comply with the law is increased. This also allows the Commission to ensure that when exchanges do add new products, their decisions follow the core principles in the law, do not put market integrity at risk, and are supported by the twin pillars of customer protection and financial stability.

This proposal will help achieve the purposes of the Commission's existing heightened review standard for digital assets.¹ The heart of this heightened review is "extensive visibility and monitoring of markets and for virtual currency derivatives and underlying settlement reference rates."² Complete information at the self-certification phase will help staff better understand the risks posed by products that may not have the extensive history that allows manipulative trading patterns to be identified and that may reference digital assets traded on unregulated or unregistered spot exchanges. "Complete" information will enable a more comprehensive Commission review of risks associated with these products and underlying commodities, and any changes necessary for market integrity or to protect customers and financial stability.

This proposal would also help the Commission extend heightened review to self-certified climate and environmental products listed on exchanges, a recommendation I first made in March at ISDA's ESG Conference.³ The Commission has recognized the challenges that exist in the integrity of the spot market for carbon credits and launched an Environmental Fraud Task Force, which I advocated for, to combat fraud in this space that can impact derivatives carbon products. Adopting a

heightened review framework will allow the Commission to work closely with exchanges to ensure that they are fulfilling interest in these products in a responsible fashion. That is aided by the Commission's access to complete information about their terms and conditions and the underlying commodity at the initial self-certification.

Even where contracts address more traditional markets, the economic circumstances and customer needs are changing and the Commission needs complete information to keep pace. Notably, the Commission needs complete information on new contracts on lithium, rare earth metals, and copper, products that are drawing increased interest due to growing investment in EV's and batteries encouraged by the "triple whammy" of new laws—the Inflation Reduction Act (IRA), the Bipartisan Infrastructure Law (BIL) and the CHIPS and Science Act. Users of these products may have sourcing and production location requirements for taking advantage of the IRA's tax credits. As I said before the Environmental and Energy Advisory Market Committee, the CFTC should work with exchanges on listing standards that address those needs.⁴ Complete information will be an important tool in that effort.

The addition of requiring "complete" information would also apply to new rules that are self-certified by an exchange or clearinghouse. The emergence of novel products and technologies has also created interest in modifying long-standing rules about traditional market structure. When the CFTC released its request for comment on "vertical integration," on novel market structures, I said that this is an area that needs to be studied to determine any increased risk or unintended consequences.⁵ As I said in my statement, I am open to considering such changes to traditional market structures, but only if they do not result in increased risk to customers and financial stability.⁶ This is just as true for an existing exchange or clearinghouse seeking to change its business model as it is for a novel registrant coming before the CFTC for the first time.

The Commission has a brief window to delay implementation of self-certified rule changes that it can use when they present novel or complex issues. Complete information will help us understand when to exercise that authority.

The power of markets is that, when they work well, they are an unmatched tool for innovation. It is our responsibility as a regulator to keep updating our rules in ways that both promote responsible innovation

⁶ See *Id.*

and impose appropriate guardrails that promote market integrity and transparency. I am thankful to the staff for their hard work on making an update in that spirit, and the Commission for considering this requirement.

Finally, I support the proposal because it includes changes designed to decrease systemic risk. The Commission proposes to specify when systemically important clearing houses must notify the Commission when changing rules, procedures or operations. The Commission's experience has been that the current standard of notification, which is rules, procedures or operations "that materially affect the nature or level of risks presented" is too broad or vague to be meaningful. I support the proposed notification to the Commission on material changes such as to the default management rule, programs related to risk analysis, recovery and wind down plans, revised margin methodology, cross-margining programs, or stress testing. Each of these have the potential to be related to systemic risk. The proposed changes enable the Commission to manage systemic risk, which is one of our key roles as a financial regulator.

I appreciate all of the work of the staff, and I look forward to public comment on the rule.

Appendix 5—Statement of Support of Commissioner Caroline D. Pham

I support the Notice of Proposed Rulemaking regarding Amendments to Provisions Common to Registered Entities under part 40 of the CFTC's Regulations (Part 40 Proposal) because it is important to continuously improve our rules and do good housekeeping.¹ I appreciate that this Part 40 Proposal is "intended to clarify, simplify and enhance the utility of the part 40 regulations for market participants and the Commission," as stated in the preamble. I would like to thank Rachel Kaplan Reicher, Steven Benton, and Nancy Markowitz of the Division of Market Oversight (DMO) and Eileen Chotiner of the Division of Clearing and Risk (DCR), as well as Jeannette Curtis and Phil Raimondi, for their work on the Part 40 Proposal. I appreciate the staff working with me to make revisions and address my concerns.

The Product Review Branch and Market Review Branch of DMO, and the Risk Surveillance Branch and Clearing Policy Branch of DCR, together with support from the Chief Counsel's office of each division, handle part 40² submissions. In fiscal year 2022, DMO reviewed 1,145 product filings and 1,054 rule filings. DCR reviewed 320 rule filings. These reviews are foundational to the oversight of our markets.

Accordingly, the Part 40 Proposal is intended to improve processes for review of product and rule submissions in order to use

CFTC staff resources more effectively, particularly in light of increasing volumes of filings related to binary options. The sizeable increase in listing of new binary option contracts is unsustainable, and I encourage taking a serious look at how to address this problem. Efforts could include a staff roundtable or rulemaking on the listing and trading of binary options and appropriate customer protections.

Effective Self-Regulation

The Part 40 Proposal provides a good opportunity to examine the CFTC's regulatory framework and the role of self-regulation. Part 40 was established pursuant to the Commodity Futures Modernization Act of 2000 and has been in place since 2001.³ Part 40 created a new framework for the certification and approval of new products, rules, and rule amendments that are submitted to the CFTC by registered entities⁴ such as designated contract markets (DCMs), swap execution facilities (SEFs), derivatives clearing organizations (DCOs), and swap data repositories (SDRs). It was again amended in 2011 pursuant to the Dodd-Frank Act.⁵ The Part 40 Proposal preamble states that part 40 "govern[s] how registered entities submit self-certifications, and requests for approval, of their rules, rule amendments, and new products for trading and clearing, as well as the CFTC's review and processing of such submissions."

As I have noted before, the Commodity Exchange Act⁶ (CEA or Act) mandates that the Commission serve the public interest through our oversight of "a system of effective self-regulation of trading facilities, clearing systems, market participants and market professionals."⁷ Part 40 is the cornerstone of effective self-regulation in our derivatives markets because it sets forth the standards for listing new contracts and issuing or amending rules for registered entities, including those that are self-regulatory organizations (SROs) and have rulebooks that are enforceable against SRO members. The penalties for violating SRO rules can be severe, including fines, suspension, or revocation of membership.

Our system of self-regulation works because our SROs take their role seriously in upholding the CFTC's regulatory framework and ensuring market integrity.⁸ Self-regulation is effective when it is cooperative. I commend DCMs, SEFs, DCOs, and SDRs

that recognize and support the efforts of our DMO and DCR staff, and I urge these registered entities to do their best to assist staff and make the review process as efficient as possible.

Existing Checks and Balances on Self-Regulation

Notwithstanding the important role of SROs in the CFTC's regulatory framework, the Commission must be able to exercise oversight of registered entities' new products and new rules or rule amendments. That is why our existing part 40 regulations include checks and balances on self-certification and Commission approval or non-approval for product and rule filings.

Stay of Self-Certification or Extension of Review Period

For example, regarding new products, under Rule 40.2 the Commission can stay the self-certification of a new product in circumstances involving a false certification, or a petition to alter or amend the contract terms and conditions pursuant to Section 8a(7)⁹ of the CEA.¹⁰ Under Rule 40.3, new products can be submitted to the Commission for review and approval, and the review period can be extended if the product raises novel or complex issues.¹¹

Similarly, regarding new rules or rule amendments submitted under Rule 40.5 for Commission review and approval, the Commission can extend the review period for (1) novel or complex issues, (2) major economic significance, (3) incomplete submissions, and (4) not responding completely to CFTC questions in a timely manner.¹² And under Rule 40.6, the Commission can stay the self-certification of new rule or rule amendment filings involving (1) novel or complex issues, (2) inadequate explanation, or (3) potential inconsistency with the CEA or CFTC regulations.¹³

These checks and balances are integral to the Commission's oversight of SROs, and I support DMO and DCR staff's use of all these provisions to extend or stay the review period if any of these criteria have been met—especially if there are, as applicable, incomplete submissions, inadequate explanation, or for not responding completely to CFTC questions in a timely manner. Registered entities must ensure that they dot their *i*'s and cross their *t*'s, and show their work, when submitting product or rule filings.

Non-Approval of New Products or New Rule or Rule Amendments

I want to emphasize that the existing part 40 regulations provide for Commission non-approval of new products, or new rule or rule amendments, submitted for review under Rule 40.3 or 40.5, respectively.¹⁴ Obviously,

⁹ 7 U.S.C. 12a(7). This section authorizes the Commission, in certain circumstances, "to alter or supplement the rules of a registered entity insofar as necessary or appropriate by rule or regulation or by order."

⁸ See Statement of Commissioner Caroline D. Pham Regarding Request for Comment on the Impact of Affiliations Between Certain CFTC-Regulated Entities, U.S. Commodity Futures Trading Commission (June 28, 2023), <https://www.cftc.gov/PressRoom/SpeechesTestimony/phamstatement062823>.

a product or rule will not be approved if it violates or is inconsistent, respectively, with the CEA or CFTC regulations.¹⁵ The Commission can determine that “it will not, or is unable to approve” the product or rule, including for form and content requirements for submission, because the product “violates, appears to violate or potentially violates but which cannot be ascertained from the submission,” or the rule or rule amendment “is inconsistent or appears to be inconsistent” with the CEA and CFTC regulations.¹⁶

These standards and criteria grant the Commission and CFTC staff considerable discretion in conducting reviews of product and rule filings for approval or non-approval. Again, I support the Commission issuing a notice of *non-approval* if any of these criteria have been met.

Delegation of Authority

A hallmark of our American system of government is the constitutional law doctrine of separation of powers among the legislative, executive, and judicial branches of government.¹⁷ This doctrine ensures that each branch of government will provide checks and balances upon another branch’s exercise of power for encroachment or aggrandizement. I believe that this approach of checks and balances to defend against the over-concentration of power is especially prudent in regards to administrative agencies, who wield the authority to impose obligations on the public or withdraw previously-granted entitlements. These regulatory agencies must be fair and just in the exercise of the administrative power, which is derived from both the legislative branch and the executive branches of government.

The self-regulatory framework set forth in the CEA and CFTC regulations reflects the scales of justice in the balance between a free, and safe, society. I caution against any attempt to put a thumb on the scale which would upset this delicate balance, including

further delegations of authority by the Commission to the staff.¹⁸

It is a truism that the heads of administrative agencies are a step removed from the will of the people,¹⁹ because agency heads are not directly elected, but are instead appointed by the President with the advice and consent of the Senate. Therefore, this sentiment rings even more true with respect to the delegation of authority by the Commission to the staff, who though are dedicated public servants, are even more attenuated from the will of the people. Like liberty, both the public trust and delegations of authority by the Commission, “once lost, is lost forever.”²⁰

Other Part 40 Issues

Finally, good process produces good outcomes, and there are other issues in part 40 that should be addressed.²¹ I hope that the Commission does not wait another 12 years to fix them.

Derivatives Markets and the Real Economy

The CFTC is uniquely positioned at the intersection of the real economy and financial markets. Derivatives are inextricably linked to the underlying reference asset, and our derivatives markets

span the breadth of agricultural products and other goods and articles, services, rights, and interests in the stream of commerce and financial markets.²²

Because of the importance of derivatives markets to the real economy—in order to facilitate risk management and price discovery for farmers and ranchers, all the way to the largest Fortune 100 companies—the Commission is mandated to serve this “national public interest” through our oversight of a system of effective self-regulation.²³

This statutory mandate is intentional, and coupled with the mandate to promote responsible innovation and fair competition,²⁴ the message is clear: Derivatives markets should enable growth and progress for commercial enterprise and free markets through providing a release valve for risk transfer as part of the engine of the real economy.

Growth and progress is how the United States and the American people have achieved the largest economy in the world, with the deepest and most liquid capital markets. This is why America is the land of opportunity—why I stand for growth, progress, and access to markets—and why the Commission must preserve the balance in our system of effective self-regulation in the derivatives markets.

I look forward to public comment on the Part 40 Proposal.

¹⁵ 17 CFR 40.3(b), (e) and 40.5(b), (e).

¹⁶ *Id.*

¹⁷ “[T]he accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny.” James Madison, *The Federalist* No. 48 (Feb. 1, 1788), <https://guides.loc.gov/federalist-papers/text-41-50#s-lg-box-wrapper-25493415>.

¹⁸ See generally James Madison, *The Federalist* No. 51 (Feb. 8, 1788) (“But the great security against a gradual concentration of the several powers in the same department, consists in giving to those who administer each department the necessary constitutional means and personal motives to resist encroachments of the others.”), <https://guides.loc.gov/federalist-papers/text-51-60>.

¹⁹ Cf. The general will, or *volonté générale*. Jean-Jacques Rousseau, Article VI, Declaration of the Rights of Man and of the Citizen (1789).

²⁰ The full quotation is: “But a Constitution of Government once changed from Freedom, can never be restored. Liberty once lost is lost forever.” “John Adams to Abigail Adams, 7 July 1775,” *Founders Online*, National Archives, <https://founders.archives.gov/documents/Adams/04-01-02-0160>.

²¹ See Walt Lukken, FIA CEO, Open letter to CFTC Chairman Giancarlo regarding the listing of cryptocurrency derivatives (Dec. 7, 2017), <https://www.fia.org/fia/articles/open-letter-cftc-chairman-giancarlo-regarding-listing-cryptocurrency-derivatives> and Dissenting Statement of Commissioner Caroline D. Pham Regarding the Review and Stay of KalshiEX LLC’s Political Event Contracts, U.S. Commodity Futures Trading Commission (Aug. 26, 2022), <https://www.cftc.gov/PressRoom/SpeechesTestimony/phamstatement082622>.

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: www.govinfo.gov.

Federal Register information and research tools, including Public Inspection List and electronic text are located at: www.federalregister.gov.

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to <https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new>, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html> and select *Join or leave the list (or change settings)*; then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: fedreg.info@nara.gov

The Federal Register staff cannot interpret specific documents or regulations.

FEDERAL REGISTER PAGES AND DATE, SEPTEMBER

60317-60564..... 1
60565-60866..... 5

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List August 9, 2023

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to <https://portalguard.gsa.gov/—layouts/PG/register.aspx>.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
