

FEDERAL REGISTER

Vol. 88

Wednesday,

No. 171

September 6, 2023

Pages 60867–61462

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 88 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

Proclamation 10610 of August 31, 2023

The President

National Childhood Cancer Awareness Month, 2023

By the President of the United States of America

A Proclamation

During National Childhood Cancer Awareness Month, we honor the extraordinary courage, strength, and optimism of the tens of thousands of families now fighting the leading cause of death by disease for children: cancer. We remember the bright lives cut short and recommit to ending cancer as we know it, for all those we have lost and all those we can save.

Cancer is brutal no matter whom it strikes, but it is particularly cruel when it affects the youngest among us. When they should be learning in school and playing outside, children with cancer are oftentimes fighting for their lives in hospitals instead. A cancer diagnosis takes a tremendous toll on their family, friends, and community. Caregivers are often left struggling to deal with a flood of medical information, to make sense of treatment options, and to navigate mounting medical bills all while trying to stay hopeful and steal moments of joy with their loved ones.

Over the past 50 years, cancer researchers have made major advances treating some types of pediatric cancer—but we have much more to do. Last year, the First Lady and I reignited the Cancer Moonshot, setting an ambitious new goal to cut America’s overall cancer death rate by at least half over the next 25 years, turn more cancers from death sentences into treatable diseases, and improve support for patients and families. As a first step, I worked with the Congress to establish the Advanced Research Projects Agency for Health, securing \$2.5 billion in bipartisan funding to develop breakthroughs in preventing, diagnosing, and treating cancer and other deadly diseases and pioneering partnerships to get those breakthroughs out to patients and clinics across the Nation. We’re also making lifesaving health care more affordable for millions of American families, expanding health care coverage for families through Medicaid and the Affordable Care Act, and helping millions of families save \$800 per year on health insurance premiums.

At the same time, the National Cancer Institute has developed a National Cancer Plan to speed up the development of effective cancer treatments, including those for children. The Institute’s Childhood Cancer Data Initiative is also providing free molecular testing of tumors, further helping my Administration implement the RACE for Children Act, to quickly identify and approve precision pediatric cancer drugs. Earlier this year, I was also proud to sign the Childhood Cancer STAR Reauthorization Act, boosting funding for childhood cancer research, including research into late effects of childhood cancer treatment and new ways to care for survivors. And as a part of the Cancer Moonshot, the National Cancer Institute launched the *Childhood Cancer–Data Integration for Research, Education, Care, and Clinical Trials*, a first-of-its-kind, public-private partnership that will help children, adolescents, and young adults with cancer and their families reach out for support, connect to excellent care, and obtain opportunities to participate in research.

During National Childhood Cancer Awareness Month, we honor the absolute courage of the tens of thousands of children who fight cancer every day and all of the loved ones who support them. And we recognize the medical

professionals, researchers, companies, philanthropies, and academic institutions who search tirelessly for early detection methods, better and safer treatments and even cures. Together, we will create a cancer-free future for our kids.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2023 as National Childhood Cancer Awareness Month. I encourage citizens, government agencies, private businesses, nonprofit organizations, the media, and other interested groups to increase awareness of what Americans can do to support the fight against childhood cancer. I encourage anyone experiencing uncertainty around risk factors or treatment options, or looking for other opportunities for support to connect with a trained specialist at 1-800-4-CANCER or visit www.cancer.gov.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", with a long, sweeping horizontal line extending to the left.

Presidential Documents

Proclamation 10611 of August 31, 2023

National Ovarian Cancer Awareness Month, 2023

By the President of the United States of America

A Proclamation

This year, nearly 20,000 women in the United States will be diagnosed with ovarian cancer—the deadliest of all female reproductive system cancers. Like so many American families, the pain of cancer and the devastation left in its wake are personal for me and my family. During National Ovarian Cancer Awareness Month, we stand in solidarity with the brave women fighting this terrible disease. We honor the mothers, sisters, daughters, wives, and friends we have tragically lost. And we renew our commitment to ending cancer as we know it.

Despite remarkable scientific breakthroughs, no reliable method for asymptomatic screening and detection exists, often delaying discovery until the cancer has progressed to far deadlier, advanced stages. Even for patients who receive a timely diagnosis, the flood of medical information can be overwhelming, and the cost of life-saving care can be financially crippling. Thousands of Americans pay more than \$10,000 per year for ovarian cancer drugs.

Our Nation must do more to change that. Last year, the First Lady and I reignited the Cancer Moonshot, setting ambitious goals to cut the overall cancer death rate by at least half in the next 25 years, turning more cancers from death sentences into treatable diseases and working to improve the experience for patients and their families. As a first step, I worked with the Congress to establish the Advanced Research Projects Agency for Health, securing \$2.5 billion in bipartisan funding to drive scientific breakthroughs in preventing, detecting, and treating cancer and other deadly diseases and pioneering partnerships to get those breakthroughs out to clinics and patients.

My Administration is also working to get patients and their families the breathing room they deserve—since taking office, we have lowered prescription drug costs and made lifesaving health care more affordable for millions of American families. We have strengthened Medicaid and the Affordable Care Act, expanding health care coverage to millions of Americans and helping 13 million people save \$800 per year on health insurance premiums. The Inflation Reduction Act will also cap out-of-pocket drug costs for people on Medicare at \$2,000 per year, even for expensive cancer drugs.

We also know that early detection greatly improves chances of survival for ovarian cancer. All women should discuss risk factors with their doctors and remain vigilant against symptoms. Experts recommend that patients with a personal or family history of breast or ovarian cancer—or whose ancestry is associated with harmful gene variants—have a discussion of risk factors with their doctors to see if genetic counseling and testing may be appropriate.

Every day, people across the country share their stories of cancer with me—stories of pain and perseverance, stories of loss and love, and stories of heartache and hope. In observance of National Ovarian Cancer Month, let us pay tribute to all the lives we can save and to all the lives we have lost. Let us support the families and medical community working tirelessly to provide them with treatment and care. And let us recommit to ending cancer as we know it, once and for all.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2023 as National Ovarian Cancer Awareness Month. I call upon the people of the United States to speak with their doctors and health care providers to learn more about ovarian cancer. I encourage citizens, government agencies, private businesses, nonprofit organizations, the media, and other interested groups to increase awareness of what Americans can do to detect and treat ovarian cancer.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", with a long, sweeping horizontal line extending to the left.

Presidential Documents

Proclamation 10612 of August 31, 2023

National Preparedness Month, 2023

By the President of the United States of America

A Proclamation

In America, we pride ourselves on emerging from every crisis stronger than when we entered it. That is because our people are resilient—and when we invest in preparing them for disasters seen and unforeseen, we can meet every challenge together. This National Preparedness Month, we recommit to doing just that: Building a stronger and more resilient Nation and equipping Americans with the resources they need to remain safe and secure.

This year alone, historic flooding, wildfires, smoke, and extreme heat has claimed the lives of many Americans and, more broadly, threatened the lives and livelihoods of people across our Nation. Other Americans have had to face personal emergencies at a moment's notice—whether it is supply chains breaking down and preventing them from accessing the products they need, prolonged power outages because of extreme weather events, or a health emergency that puts a loved one in the hospital. And, climate change is making many of these challenges more ferocious, frequent, and costly.

To meet these challenges of today—and prepare for the crises of tomorrow—my Administration is taking historic action to invest in the security and well-being of America and Americans. That is what my Invest in America agenda is all about. Between the funding from the Bipartisan Infrastructure Law and the Inflation Reduction Act alone, we have secured more than \$50 billion so far in climate resilience so that communities can better withstand the impacts of climate change and extreme weather. That includes making transportation infrastructure more resilient by elevating roads and bridges over projected flood zones, planting urban trees to mitigate heat, increasing pay for our Federal firefighters, and upgrading housing and buildings to make them more energy efficient and better able to withstand extreme weather. These investments are also about securing our future: They put us on a path to cut America's greenhouse gas emissions in half by 2030, help communities prepare for climate-related disasters, and invest in American workers and American-made products. Together, we will ensure that, when disaster hits, our economy stays strong, Americans' livelihoods remain secure, and critical goods and services are there when we need them most.

When disaster does strike, every American should have peace of mind knowing that they can access health care for themselves and their family. That is why we expanded Affordable Care Act health care coverage for millions of Americans through the Inflation Reduction Act, saving millions of working families an average of \$800 a year on their health care premiums.

This National Preparedness Month, may we honor all of our first responders, who run toward disaster at a moment's notice. May we also recognize that our Nation is best prepared to face disaster when our national security, climate security, and economic security are strong and when every American has the resources and support they need. To learn more about readiness, visit www.Ready.gov or www.Listo.gov for Spanish speakers. With the help of our partners in every sector and across local, State, Tribal, and territorial

governments, may we all meet this moment and protect our families, communities, and country for generations to come.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2023 as National Preparedness Month. I encourage all Americans to recognize the importance of preparedness and work together to enhance our resilience and readiness.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", with a long, sweeping horizontal line extending to the left.

Presidential Documents

Proclamation 10613 of August 31, 2023

National Prostate Cancer Awareness Month, 2023

By the President of the United States of America

A Proclamation

This year alone, more than 280,000 Americans will be diagnosed with prostate cancer. During National Prostate Cancer Awareness Month, we honor the lives ended too soon and all those we can still save by redoubling our efforts to end cancer as we know it.

When someone is diagnosed with prostate cancer, every second counts. But patients are too often left advocating for basic care while drowning in a flood of medical information. Even when treatment is available, some struggle to afford it or insurance may not cover it. And stark inequities exist: Black men are more than twice as likely to die from prostate cancer in this country than other men.

Our Nation must do more to change that. Last year, the First Lady and I reignited the Cancer Moonshot, setting an ambitious new goal to cut America's cancer death rate by at least half over the next 25 years, turning more cancers from death sentences into treatable diseases and improving support for patients and families. I worked with the Congress to establish the Advanced Research Projects Agency for Health, securing \$2.5 billion in bipartisan funding to develop breakthroughs in preventing, diagnosing, and treating cancer and other deadly diseases and pioneering partnerships to get those breakthroughs out to clinics and patients. We are making life-saving cancer care more affordable for millions of Americans, expanding coverage through Medicaid and the Affordable Care Act, and helping many who had received relief during the pandemic to keep saving \$800 a year on insurance premiums. The Inflation Reduction Act will soon cap total out-of-pocket prescription drug costs for seniors on Medicare at \$2,000 a year—including for expensive cancer medicines—which could save some prostate cancer patients up to \$6,000 a year.

We are also working to make sure prevention, detection, and treatment procedures are available to patients of all communities and backgrounds. The National Institutes of Health is continuing expansive research into environmental and genetic factors to better understand why prostate cancer disproportionately affects Black men. In response to our Cancer Moonshot, the Department of Veterans Affairs expanded its National Precision Oncology Program to better tailor treatments to individual veterans. And we know that screening matters: Experts recommend that men with a higher risk of cancer—based on race or ethnicity, family history, or other factors—discuss it with their doctors.

Everyone's journey with cancer is different, but the First Lady and I know how hard it can be on the whole family. To all those caring for loved ones with prostate cancer and all those facing it themselves, we stand with you. My Administration is working around the clock on breakthroughs that can bring hope and more choices to the fight against this disease.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2023

as National Prostate Cancer Awareness Month. I encourage citizens, government agencies, private businesses, nonprofit organizations, and other interested groups to join in activities that will increase awareness of what Americans can do to prevent and cure prostate cancer.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", is written over a diagonal line that extends from the bottom left towards the top right.

Proclamation 10614 of August 31, 2023

National Recovery Month, 2023

By the President of the United States of America

A Proclamation

During National Recovery Month, we celebrate the more than 20 million Americans who have had the courage to seek help for substance use disorder, showing millions of others that recovery is possible. We honor their resilience and recommit to making sure that every American has access to the services and support they need to rebuild lives of purpose and hope.

Substance use disorder affects families in every corner of our country. Drug overdoses last year took more than 100,000 American lives. Addressing this crisis is a core pillar of my Unity Agenda—one of the big issues we can tackle together as a Nation.

That work starts by fulfilling the promise of true parity for mental health and substance use disorder treatment for all Americans. Mental health and substance use disorder care is health care. It is essential to people's well-being—to their ability to lead full and productive lives, to find joy and meaning, to take care of themselves and their loved ones, and to give back to their communities and our Nation. It is about dignity. Health insurers should cover it the same way they would cover treatment for a broken bone or any other kind of health condition. And since I took office, that is what we have been fighting to do.

The American Rescue Plan delivered more than \$5 billion to expand mental health and substance use disorder services. I have worked with a group of bipartisan members of the Congress to make it easier for doctors to prescribe effective treatments for opioid use disorder, and the Food and Drug Administration has approved two Naloxone products for over-the-counter use, expanding access to life-saving opioid-reversal medications that can prevent fatal overdoses. We have expanded the Nation's system of Certified Community Behavioral Health Clinics, opening 140 new centers to provide frontline care, regardless of a patient's ability to pay. We also launched a nationwide Suicide and Crisis Lifeline (9–8–8), which connects callers to trained counselors around the clock. The Department of Labor created a Recovery-Ready Workplace Resource Hub to help employers support and hire people in recovery.

We have come a long way toward improving access to care and building our Nation's recovery support services infrastructure, but there is much more to do. Last month, my Administration proposed a new rule that would require health insurers to identify any gaps in the mental health and substance use disorder care they provide and to ensure that mental and physical health services are equally accessible. We are also working with States to ensure that millions of Medicaid patients enrolled in private Medicaid health plans have coverage for mental health and substance use disorder services. In all, my Fiscal Year 2024 Budget requests a historic \$46 billion for prevention, treatment, and recovery services for substance use disorder, as well as reducing the supply of deadly drugs.

Millions of Americans know and love someone who is in recovery. We want everyone to know that they are never alone. As a Nation working together, we can make recovery real for more Americans.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2023 as National Recovery Month. I call upon all citizens, government agencies, private businesses, nonprofit organizations, and other groups to take action to promote recovery and improve the health of our Nation.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", with a long, sweeping horizontal line extending to the left.

Proclamation 10615 of August 31, 2023

National Sickle Cell Awareness Month, 2023

By the President of the United States of America

A Proclamation

During National Sickle Cell Awareness Month, we recognize the perseverance and strength of the community of people living with this disease and recommit to developing more effective treatments.

Approximately 100,000 Americans have Sickle Cell Disease (SCD)—a group of inherited red blood cell disorders that can cause acute, chronic pain and serious health complications, including infections, strokes, organ damage, vision problems, and serious fatigue. Living with SCD often means putting the goals and plans of everyday life on hold to accommodate the demands of the disease, enduring frequent unplanned hospital stays and struggling to pay for costly treatments not covered by insurance.

There is no widely available cure for SCD. While bone marrow and stem cell transplants can work for some people with SCD, low donor availability and treatment-related complications put those options out of reach for many living with the disease. Although SCD affects people of all backgrounds, it disproportionately affects Black and Hispanic Americans. Combined with the documented disparities in treatment and care, people living with SCD often lack access to specialized care, treatment, and information about the disease, and they face barriers to receiving pain management and treatment support.

That is why my Administration is working tirelessly to close these health disparities and help deliver the care SCD patients and their families deserve. We are working with State, territorial, and local governments, nonprofits, and private sector partners to make that happen. The Centers for Disease Control and Prevention's Sickle Cell Data Collection program is gathering more comprehensive information on the experiences of SCD patients, which will inform new treatments and health care services. The Centers for Medicare & Medicaid Services is developing a Cell and Gene Therapy Access Model, which would help Medicaid beneficiaries gain access to potentially life-changing, high-cost specialty drugs for illnesses like sickle cell disease. The Health Resources and Services Administration is assisting with early identification and treatment of SCD and helping community-based organizations and clinics conduct testing, counseling, and education. The Food and Drug Administration has approved new drug therapies that help people with SCD manage their pain, and the National Institutes of Health (NIH) is funding clinical trials to test new advancements in the alleviation of chronic pain for those living with SCD. NIH is also researching possible personalized treatment approaches for SCD-associated pain. And through its "Cure Sickle Cell Initiative," we are accelerating the development of effective and accessible genetic therapies that will help cure SCD once and for all.

This month, we acknowledge all those living with SCD and the many health and medical professionals working to find new treatments and a cure for this disease. May we honor the progress we have made together and strengthen our resolve in finding a cure for SCD.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution

and the laws of the United States, do hereby proclaim September 2023 as National Sickle Cell Awareness Month. I call upon the people of the United States to learn more about Sickle Cell Disease and the progress we are making to reduce the burden of this disease on our fellow Americans.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", is written over a diagonal line that extends from the bottom left towards the top right.

Proclamation 10616 of August 31, 2023

National Wilderness Month, 2023

By the President of the United States of America

A Proclamation

America's natural wonders are marvels of the world. People travel across seas and continents to behold the spirit of this great land embodied by our majestic mountains, breathtaking deserts, emerald valleys, and mighty rivers. During National Wilderness Month, we celebrate the power and promise of our country's extraordinary natural gifts and renew our commitment to protecting them for generations to come.

When we conserve our country's landscapes and wilderness, we do more than preserve their beauty for our own enjoyment. We safeguard the future of people who depend on and sustain the land as a way of life—Indigenous peoples, farmers and ranchers, recreation businesses, and rural communities. We enshrine landmarks that identify the places where the history of our Nation was made. We protect sacred spaces that have been stewarded by Tribal Nations since time immemorial. And we mitigate the impacts of climate change to help make our country more resilient.

A respect for nature's ability to support and enrich our lives has led my Administration to develop the most ambitious land and water conservation agenda in American history. During my first week in office, I issued an Executive Order establishing the country's first-ever National Conservation Goal to conserve at least 30 percent of our lands and waters by 2030. It is the cornerstone of my "America the Beautiful" campaign to support locally led and voluntary conservation and restoration efforts across the country. I also signed an Executive Order to protect America's forests, harness the power of nature in the fight against climate change, and initiate the first National Nature Assessment to evaluate the state of our lands, waters, and wildlife. And with funding through the Bipartisan Infrastructure Law and alongside the Department of Agriculture, I have created a nearly \$1 billion Community Wildfire Defense grant so that communities can take steps to protect themselves from the devastation of wildfires.

With the help of critical partners in every sector, we continue to make strong progress toward these conservation and climate goals. Together, my Bipartisan Infrastructure Law and Inflation Reduction Act represent the largest investment in climate and conservation ever—accelerating the clean energy economy here at home, protecting communities from climate impacts, and creating good-paying jobs that boost our economy. The new National Monuments I have designated will protect the soaring peaks of Camp Hale in Colorado, the irreplaceable Avi Kwa Ame in Nevada, the magnificent Castner Range in Texas, and the sacred sites and lands that surround the Grand Canyon. We have conserved the ancient and vast conifers of the Tongass National Forest; safeguarded the incomparable Bristol Bay watershed in Alaska; and restored protections for Bears Ears, Grand Staircase-Escalante, and the Northeast Canyons and Seamounts National Monuments.

My Administration has protected the Boundary Waters in Minnesota and Chaco Canyon in New Mexico, and we are accelerating efforts to restore the Great Lakes, the Chesapeake Bay, the Everglades, and the Columbia River Basin. At my direction, the Secretary of Commerce has begun exploring the designation of approximately 770,000 square miles in the Pacific Ocean,

an area almost three times the size of Texas, as a new national marine sanctuary to protect the integrity of our oceans. The Department of the Interior has also begun the process of preserving more than 13 million acres of lands of significant natural and cultural value in the Western Arctic. And I declared the entire United States Arctic Ocean off-limits to new oil and gas development. These landscapes and sacred spaces are precious. If they are lost, they can never be replaced.

Though these are great accomplishments, I realize we still have much more work to do to protect our wilderness. That is why we are continuing to take ambitious steps to accelerate conservation. We are coordinating across Federal agencies and encouraging collaboration with non-Federal partners to better conserve ecological connectivity and wildlife corridors. We are also partnering with Tribal Nations, working together as co-stewards of the lands that are most precious to them.

To harness the tremendous power of the ocean to help in our fight against the climate crisis, we published the first-ever United States Ocean Climate Action Plan, and the Budget I released earlier this year includes new funding to ensure our natural areas are accessible to all Americans. I want to build on legislation I signed last year that established Wilderness Act protections for more than 182,000 acres of public lands in Nevada, so I look forward to continuing to work with the Congress to advance locally led and locally supported proposals for protecting our most unique and beautiful lands and waters.

This National Wilderness Month, we renew our commitment to protecting our wilderness areas and ensuring that all their splendor is passed down from generation to generation of Americans, helping to bridge our past and our future.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim September 2023 as National Wilderness Month. I encourage all Americans to experience our Nation's outdoor heritage, to recreate responsibly and leave no trace, to celebrate the value of preserving an enduring wilderness, and to strengthen our commitment to protecting these vital lands and waters now and for future generations.

IN WITNESS WHEREOF, I have hereunto set my hand this thirty-first day of August, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "Joe Biden", is written over a horizontal line.

Rules and Regulations

Federal Register

Vol. 88, No. 171

Wednesday, September 6, 2023

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF AGRICULTURE

Rural Housing Service

7 CFR Part 3550

[Docket No. RHS–23–SFH–0017]

Single Family Housing Section 504 Home Repair Loans and Grants in Presidentially Declared Disaster Areas Pilot Program; Correction

AGENCY: Rural Housing Service, USDA.

ACTION: Notification; correction.

SUMMARY: The Rural Housing Service (RHS or Agency), a Rural Development (RD) agency of the United States Department of Agriculture (USDA), is correcting a notice that published in the **Federal Register** on July 18, 2023, entitled “Single Family Housing Section 504 Home Repair Loans and Grants in Presidentially Declared Disaster Areas Pilot Program.” The purpose of the notification was to announce the waiver of four regulatory requirements for the Section 504 Home Repair Loans and Grants in a Presidentially Declared Disaster Areas (PDDAs) pilot program. The purpose of this document is to correct inadvertent errors that were previously published in the notification on July 18, 2023, in the **Federal Register**.

DATES: The correction is effective September 6, 2023.

FOR FURTHER INFORMATION CONTACT: Anthony Williams, Management and Program Analyst, Special Programs, Single Family Housing Direct Loan Division, Rural Development, 1400 Independence Ave., Washington, DC 20250, U.S. Department of Agriculture, Email: anthonyl.williams@usda.gov; Phone: (202) 720–9649.

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of July 18, 2023, in FR Doc. 2023–15174 (88 FR 45809), on page 45809, in the second

column, under the “Background” heading, in the third paragraph, beginning on the first line remove the text “The following twenty-four (24) States and U.S. Territories are selected based on presidentially declared disasters in calendar year 2022, involvement in the Rural Partners Network, and to provide wide geographic and historic production variation for the pilot: Alabama, Alaska, American Samoa, California, Florida, Georgia, Kansas, Kentucky, Minnesota, Mississippi, Montana, North Carolina, North Dakota, Nebraska, New Mexico, New York, Puerto Rico, South Carolina, South Dakota, Tennessee, Texas, Washington, West Virginia, and Wisconsin.” and add in its place the text “The pilot applies to all homes damaged by a Presidentially Declared Disaster that occurred on or after July 18, 2022, until the conclusion of the pilot on July 18, 2025. This pilot is subject to the availability of funds and the Agency will review the effectiveness of this pilot after one year.”

Karissa Stiers,

Acting Administrator, Rural Housing Service.

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2023–1813; Project Identifier MCAI–2023–00980–R; Amendment 39–22540; AD 2023–17–51]

RIN 2120–AA64

Airworthiness Directives; Bell Textron Canada Limited Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; request for comments.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for all Bell Textron Canada Limited Model 407 helicopters. The FAA previously sent this AD as an emergency AD to all known U.S. owners and operators of these helicopters. This AD was prompted by a report of a disbonded area in a tail rotor (T/R) blade. This AD requires determining if an affected T/R

blade is installed, inspecting each of those T/R blades and, depending on the results, replacing the T/R blade as specified in a Transport Canada emergency AD, which is incorporated by reference. This AD also limits the installation of T/R blades to certain T/R blades. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective September 21, 2023. Emergency AD 2023–17–51, issued on August 18, 2023, which contained the requirements of this amendment, was effective with actual notice.

The Director of the Federal Register approved the incorporation by reference of a certain publication identified in this AD as of September 21, 2023.

The FAA must receive comments on this AD by October 23, 2023.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to [regulations.gov](https://www.regulations.gov). Follow the instructions for submitting comments.

- *Fax:* (202) 493–2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2023–1813; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the Transport Canada emergency AD, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For Transport Canada material that is incorporated by reference in this final rule, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario, K1A 0N5, CANADA; phone 888–663–3639; email TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca; internet tc.canada.ca/en/aviation. You may find the Transport Canada material

on the Transport Canada website at tc.canada.ca/en/aviation.

- You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110. It is also available at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1813.

Other Related Service Information: For Bell service information identified in this final rule, contact Bell Textron Canada Limited, 12,800 Rue de l'Avenir, Mirabel, Quebec J7J 1R4, Canada; phone 1-450-437-2862 or 1-800-363-8023; fax 1-450-433-0272; email productsupport@bellflight.com; or at bellflight.com/support/contact-support. You may also view this service information at the FAA contact information under *Material Incorporated by Reference* above.

FOR FURTHER INFORMATION CONTACT: Dan McCully, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone (404) 474-5548; email william.mccully@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written data, views, or arguments about this final rule. Send your comments to an address listed under **ADDRESSES**. Include "Docket No. FAA-2023-1813; Project Identifier MCAI-2023-00980-R" at the beginning of your comments. The most helpful comments reference a specific portion of the final rule, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this final rule because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to [regulations.gov](https://www.regulations.gov), including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this final rule.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this AD contain commercial or financial information

that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this AD, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this AD. Submissions containing CBI should be sent to Dan McCully, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone (404) 474-5548; email william.mccully@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued Emergency AD 2023-17-51, dated August 18, 2023 (the emergency AD), to address an unsafe condition on Bell Textron Canada Limited Model 407 helicopters. The FAA sent the emergency AD to all known U.S. owners and operators of these helicopters. The emergency AD requires determining if certain serial-numbered T/R blade part number 406-016-100-119 is installed, tap inspecting each affected T/R blade for skin to core voids and, depending on the results, replacing the T/R blade. The emergency AD also limits the installation of T/R blades to affected T/R blades that have passed its required inspection and unaffected T/R blades.

The emergency AD was prompted by Transport Canada Emergency AD CF-2023-63, dated August 17, 2023 (Transport Canada AD CF-2023-63), issued by Transport Canada, which is the aviation authority for Canada, to correct an unsafe condition on certain serial-numbered Bell Textron Canada Limited Model 407 helicopters. Transport Canada AD CF-2023-63 states that an operator identified an abnormal sound in a T/R blade while manually rotating it. A subsequent tap inspection revealed a disbanded area that exceeds allowable limits. According to Transport Canada, an investigation by Bell Textron Canada Limited identified 43 T/R blades that could have missing adhesive between the upper skin and core that was caused during the manufacturing process. This condition, if not addressed, could result in severe vibration, failure of the T/R blade, and subsequent loss of T/R control. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine Transport Canada AD CF-2023-63 in the AD docket at

[regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1813.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Transport Canada AD CF-2023-63, which requires determining if an affected T/R blade is installed, inspecting each of those T/R blades and, depending on the results, replacing the T/R blade. Transport Canada AD CF-2023-63 also limits installation of T/R blades to serviceable T/R blades, as defined therein.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Other Related Service Information

The FAA also reviewed Bell Alert Service Bulletin 407-23-132, dated August 14, 2023, which identifies affected T/R blade part number 406-016-100-119 serial numbers and specifies procedures for inspecting affected T/R blades for skin to core voids. Depending on the results, this service information specifies procedures for reporting information to Bell Product Support Engineering, returning specified T/R blades to Bell for investigation, and replacing a T/R blade.

FAA's Determination

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in its emergency AD referenced above. The FAA is issuing this AD after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

AD Requirements

This AD requires accomplishing the actions specified in Transport Canada AD CF-2023-63, described previously, as incorporated by reference, except for any differences identified as exceptions in the regulatory text of this AD and except as discussed under "Differences Between this AD and the Transport Canada Emergency AD."

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with

requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, Transport Canada AD CF-2023-63 is incorporated by reference in this FAA AD. This AD, therefore, requires compliance with Transport Canada AD CF-2023-63 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this AD. Using common terms that are the same as the heading of a particular section in Transport Canada AD CF-2023-63 does not mean that operators need comply only with that section. For example, where the AD requirement refers to “all required actions and compliance times,” compliance with this AD requirement is not limited to the section titled “Corrective Actions” in Transport Canada AD CF-2023-63.

Differences Between This AD and the Transport Canada Emergency AD

Transport Canada AD CF-2023-63 applies to certain serial-numbered Bell Textron Canada Limited Model 407 helicopters, whereas this AD applies to all Bell Textron Canada Limited Model 407 helicopters. Transport Canada AD CF-2023-63 does not clearly specify how to inspect affected T/R blades for skin to core voids, whereas this AD requires tap inspecting each affected T/R blade for skin to core voids.

Justification for Immediate Adoption and Determination of the Effective Date

Section 553(b)(3)(B) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to dispense with notice and comment procedures for rules when the agency, for “good cause,” finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under this section, an agency, upon finding good cause, may issue a final rule without providing notice and seeking comment prior to issuance. Further, section 553(d) of the APA authorizes agencies to make rules effective in less than thirty days, upon a finding of good cause.

An unsafe condition exists that required the immediate adoption of Emergency AD 2023-17-51, issued on August 18, 2023, to all known U.S. owners and operators of these helicopters. The FAA found that the risk to the flying public justified waiving notice and comment prior to adoption of this rule because each T/R blade is critical to the control of a helicopter. Debonding of a T/R blade could lead to instantaneous failure before detection. Additionally, affected T/R blades are installed on high usage helicopters,

which could increase the likeliness of occurrence of a failure. In light of this, the initial action required by this AD must be accomplished within 10 hours time-in-service or 14 days, whichever occurs first. This compliance time is shorter than the time necessary for the public to comment and for publication of the final rule. These conditions still exist, therefore, notice and opportunity for prior public comment are impracticable and contrary to the public interest pursuant to 5 U.S.C. 553(b)(3)(B).

In addition, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days, for the same reasons the FAA found good cause to forego notice and comment.

Regulatory Flexibility Act

The requirements of the Regulatory Flexibility Act (RFA) do not apply when an agency finds good cause pursuant to 5 U.S.C. 553 to adopt a rule without prior notice and comment. Because FAA has determined that it has good cause to adopt this rule without prior notice and comment, RFA analysis is not required.

Costs of Compliance

The FAA estimates that this AD affects up to 43 helicopters of U.S. registry. Labor rates are estimated at \$85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this AD.

Determining if an affected T/R blade is installed takes about 0.5 work-hour for an estimated cost of \$43 per helicopter and up to \$1,849 for the U.S. fleet. Tap inspecting an affected T/R blade takes about 1 work-hour for an estimated cost of \$85 per T/R blade. If required, replacing a T/R blade takes about 5 work-hours and parts cost about \$42,951 for an estimated cost of \$43,376 per T/R blade.

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under

that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a “significant regulatory action” under Executive Order 12866, and
- (2) Will not affect intrastate aviation in Alaska.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2023-17-51 Bell Textron Canada Limited: Amendment 39-22540; Docket No. FAA-2023-1813; Project Identifier MCAI-2023-00980-R.

(a) Effective Date

The FAA issued Emergency Airworthiness Directive (AD) 2023-17-51 on August 18, 2023, directly to affected owners and operators. As a result of such actual notice, the emergency AD was effective for those owners and operators on the date it was provided. This AD contains the same requirements as the emergency AD and, for those who did not receive actual notice, is effective on September 21, 2023.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Bell Textron Canada Limited Model 407 helicopters, certificated in any category.

(d) Subject

Joint Aircraft Service Component (JASC) Code: 6410, Tail Rotor Blades.

(e) Unsafe Condition

This AD was prompted by a report of a disbonded area in a tail rotor (T/R) blade due to missing adhesive between the upper skin and core. The FAA is issuing this AD to detect skin to core voids that exceed allowable limits in affected T/R blades. The unsafe condition, if not addressed, could result in severe vibration, failure of the T/R blade, and subsequent loss of T/R control.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraphs (h) and (i) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada Emergency AD CF-2023-63, dated August 17, 2023 (Transport Canada AD CF-2023-63).

(h) Exceptions to Transport Canada AD CF-2023-63

(1) Where Transport Canada AD CF-2023-63 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Transport Canada AD CF-2023-63 requires compliance in terms of hours air time, this AD requires compliance using hours time-in-service.

(3) Where paragraph A.2. of Transport Canada AD CF-2023-63 requires inspecting an affected T/R blade and the service information referenced in paragraph A.2. of Transport Canada AD CF-2023-63 specifies inspecting an affected T/R blade, this AD requires using a steel tap hammer and tap inspecting each affected T/R blade.

(4) Where the service information referenced in Transport Canada AD CF-2023-63 specifies returning parts to the manufacturer, this AD does not include that requirement.

(i) No Reporting Requirement

Although the service information referenced in Transport Canada AD CF-2023-63 specifies to submit certain information to the manufacturer, this AD does not include that requirement.

(j) Special Flight Permits

A special flight permit may be issued in accordance with 14 CFR 21.197 and 21.199 to operate the helicopter to a location where the tap inspection can be performed, provided no passengers are onboard.

(k) Alternative Methods of Compliance (AMOCs)

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 39.19. In accordance

with 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (l) of this AD or email to: 9-AVS-AIR-730-AMOC@faa.gov. If mailing information, also submit information by email.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(l) Additional Information

For more information about this AD, contact Dan McCully, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone (404) 474-5548; email william.mccully@faa.gov.

(m) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Transport Canada Emergency AD CF-2023-63, dated August 17, 2023.

(ii) [Reserved]

(3) For Transport Canada Emergency AD CF-2023-63, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario, K1A 0N5, CANADA; phone 888-663-3639; email TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca; internet tc.canada.ca/en/aviation. You may find the Transport Canada material on the Transport Canada website at tc.canada.ca/en/aviation.

(4) You may view this service information at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued on August 25, 2023.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 71**

[Docket No. FAA-2022-0216; Airspace Docket No. 19-AAL-63]

RIN 2120-AA66

Amendment of United States Area Navigation (RNAV) Route T-230; St. Paul Island, AK

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule; correction.

SUMMARY: This action corrects a final rule published by the FAA in the **Federal Register** on July 17, 2023, that amends United States Area Navigation (RNAV) route T-230 in the vicinity of St. Paul Island, AK, in support of a large and comprehensive T-route modernization project for the state of Alaska. The final rule identified the GARRS, AK, route point as a waypoint (WP), in error. This action makes an editorial correction to the reference of the GARRS, AK, WP to change it to be reflected as a Fix and match the FAA's National Airspace System Resource (NASR) database information.

DATES: Effective date 0901 UTC, October 5, 2023. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: FAA Order JO 7400.11G, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at https://www.faa.gov/air_traffic/publications/. For further information, you can contact the Rules and Regulations Group, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267-8783.

FOR FURTHER INFORMATION CONTACT:

Steven Roff, Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267-8783.

SUPPLEMENTARY INFORMATION:**History**

The FAA published a final rule in the **Federal Register** (88 FR 45329; July 17, 2023), amending T-230 in support of a large and comprehensive T-route modernization project for the state of Alaska. Subsequent to publication of the final rule, the FAA determined that the GARRS, AK, route point was inadvertently identified as a WP, in

error. This rule corrects that error by changing the reference of the GARRS, AK, WP to the GARRS, AK, Fix. This is an editorial change only to match the FAA's NASR database information and does not alter the alignment of the affected T-230 route.

Correction to Final Rule

Accordingly, pursuant to the authority delegated to me, reference to the GARRS, AK, WP that is reflected in Docket No. FAA-2022-0216, as published in the **Federal Register** of

July 17, 2023 (88 FR 45329), FR Doc. 2023-15011, is corrected as follows:

■ 1. In FR Doc. 2023-15011, appearing on page 45330 correct the table for T-230 St. Paul Island, AK (SPY) to King Salmon, AK (AKN) to read:

T-230 St. Paul Island, AK (SPY) to King Salmon, AK (AKN) [Amended]

St. Paul Island, AK (SPY)	NDB/DME	(Lat. 57°09'25.20" N, long. 170°13'58.77" W)
GARRS, AK	Fix	(Lat. 58°19'05.80" N, long. 161°20'31.74" W)
Salmon, AK (AKN)	VORTAC	(Lat. 58°43'28.97" N, long. 156°45'08.45" W)

* * * * *

Issued in Washington, DC, on August 30, 2023.

Karen Chiodini,

Acting Manager, Airspace Rules and Regulations.

BILLING CODE 4910-13-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

15 CFR Part 922

[Docket No. 230829-0205]

RIN 0648-BM58

Florida Keys National Marine Sanctuary: Establishment of Temporary Special Use Area for Coral Nursery

AGENCY: Office of National Marine Sanctuaries (ONMS), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Final temporary rule; emergency action.

SUMMARY: The National Oceanic and Atmospheric Administration (NOAA) is issuing a final temporary rule establishing a special use area which will prohibit all entry except for restoration activities under a valid Office of National Marine Sanctuaries (ONMS) permit, continuous transit without interruption, and for law enforcement purposes into a 0.07 square mile area approximately five miles southeast of the community of Tavernier, on the island of Key Largo, within Federal waters of the Florida Keys National Marine Sanctuary (FKNMS) from September 6, 2023 to November 6, 2023. This temporary rule is necessary to prevent or minimize destruction of, loss of, or injury to sanctuary resources, specifically to facilitate restoration activities to improve or repair living habitats through protecting coral nursery stock at

this site from potential impacts caused by anchor damage and/or fishing gear. This temporary special use area will expire within 60 days unless it is extended an additional 60 days.

DATES: This final temporary rule is effective September 6, 2023 through November 6, 2023.

ADDRESSES: Sarah Fangman, Superintendent, Florida Keys National Marine Sanctuary, 33 East Quay Road, Key West, FL 33040, 305-360-2713 phone, or by email at sarah.fangman@noaa.gov.

Additional background materials can be found on the FKNMS website at <https://floridakeys.noaa.gov>.

FOR FURTHER INFORMATION CONTACT:

Sarah Fangman, Superintendent, Florida Keys National Marine Sanctuary, 33 East Quay Road, Key West, FL 33040, 305-360-2713 phone, or by email at sarah.fangman@noaa.gov.

SUPPLEMENTARY INFORMATION: NOAA is by this final rule creating a temporary special use area for the purpose of coral restoration located approximately five miles southeast of the community of Tavernier, on the island of Key Largo, within Federal waters of FKNMS. Section 15 CFR 922.164(e) of the FKNMS regulations allows the ONMS Director to set aside discrete areas of the Sanctuary as special use areas in order to provide for, among other uses, the restoration of degraded or otherwise injured sanctuary resources (15 CFR 922.164(e)(1)(i)). A special use area shall be no larger than the size the ONMS Director deems reasonably necessary to accomplish the applicable objective. No person may enter a special use area except to conduct restoration activities under a valid ONMS permit, for continuous transit without interruption, or for law enforcement purposes. Activities that are currently allowed in the area, including fishing, will be prohibited.

This temporary special use area is established to limit the potential for physical impact to a coral nursery that are being temporarily relocated to deeper waters to protect the nursery corals from heat stress caused by the

current on-going marine heat wave. Creation of this temporary special use area will limit the potential for physical impact to this sensitive coral nursery stock from anchoring, unintentional fouling of fishing gear, and bottom tending fishing gear including traps. The ONMS Director has determined that the size of 0.07 square miles is no larger than the size reasonably necessary to protect the coral nursery stock from physical damage. NOAA will provide notice of the location of this area through sanctuary radio announcements, press releases, and with assistance from the U.S. Coast Guard and FKNMS staff. NOAA has requested that the U.S. Coast Guard give notification to vessels, via notice to mariners, to remain in continuous transit through this temporary area.

Justification for Emergency Action

This action is taken in accordance with 15 CFR 922.165 of the FKNMS regulations (62 FR 32154, June 12, 1997). Section 922.165 provides that, where necessary to prevent or minimize the destruction of, loss of, or injury to a Sanctuary resource, any and all activities are subject to immediate temporary regulation, including prohibition, for up to 60 days, with one 60-day extension. This final temporary rule is necessitated by the current ongoing marine heat wave that is impacting and likely killing coral reefs in the Florida Keys at an unprecedented rate and scale. South Florida sea temperatures as reported by NOAA are 35°C, which is the warmest on record. These conditions became unsustainable for coral reef ecosystems in July and expert forecasts suggest that extreme ocean temperatures will likely persist until at least October 2023. At most risk are the coral nursery stock because these are located in shallow, nearshore protected environments that heat up much more than offshore locations. There are currently 14 active coral nursery sites throughout the Florida Keys. These nursery sites are strategically located in close proximity to the sites where the nursery coral will

be outplanted to promote coral restoration. Active coral restoration in the Florida Keys is necessary to facilitate coral restoration, as in the last 40 years, healthy coral cover in the Florida Keys reefs has declined by more than 90 percent.

In the face of the current marine heat wave, four of these nursery sites have already sustained mortality of 80–90% and the others are now showing increased signs of stress and bleaching. While some of the coral nursery stock from these sites is being relocated to land facilities, the capacity of these land-based systems is not adequate to hold the bulk of the biomass. NOAA and restoration partners have identified deep water locations that currently have temperatures below the bleaching threshold, are not exposed to deleterious levels of Ultraviolet (UV) radiation and experience substantial water movement, all conditions more conducive to coral survival. A portion of the most valuable corals, including representative colonies of each species of boulder and branching corals, samples of elkhorn coral, staghorn coral, star corals (*Orbicella spp.*), pillar corals and cactus coral listed under the Endangered Species Act, as well as multiple representative genotypes of these corals to ensure we protect the genetic diversity of these species, are being relocated to deeper water sites within FKNMS Federal waters. Temperature meters at these deep sites have consistently shown readings below the bleaching threshold of 30.5°C.

This emergency action establishes a new temporary special use area to limit the potential for physical impact to this sensitive coral nursery stock that is being grown to support critical sanctuary restoration efforts. Physical impact could result from anchoring, unintentional fouling of fishing gear, and bottom tending fishing gear including traps. The protections afforded by establishing this special use area need to be in place to avoid further damage to these sensitive nursery corals that have already experienced impact from heat stress. As such, immediate establishment of this special use area is necessary to prevent or minimize the destruction of, loss of, or injury to Sanctuary resources.

Emergency Measures

This final temporary rule establishes one special use area, approximately 0.07 square miles in size, into which all entry will be prohibited except for conducting restoration activities under a valid ONMS permit, continuous transit without interruption, and law enforcement purposes. This special use

area will be effective for 60 days after publication of this final rule, and could be extended an additional 60 days. If the special use area is extended another 60 days, NOAA would publish another document in the **Federal Register**.

The coordinates for this temporary special use area are included below.

Location and Boundary

Effective immediately, all entry except for conducting restoration activities under a valid ONMS permit, continuous transit without interruption, and law enforcement purposes is prohibited within this temporary special use area which is approximately five miles southeast of the community of Tavernier, on the island of Key Largo. The boundary for the special use area begins at Point 1 in the amended appendix and continues to each subsequent point in numerical order ending at Point 5. (Coordinates are unprojected (Geographic) and based on the North American Datum of 1983).

Penalties

Pursuant to 16 U.S.C. 1437(d)(1) and 15 CFR 922.8(a), any person who violates this rule is subject to a civil penalty. The maximum civil monetary penalty authorized under the National Marine Sanctuaries Act (NMSA) has been adjusted for inflation over time and is currently \$210,161 per violation per day. See 15 CFR 6.3(f)(13). Furthermore, NMSA also authorizes a proceeding in rem against any vessel used in violation of this regulation. See 16 U.S.C. 1437(d)(3).

Classification

A. National Marine Sanctuaries Act

This action is issued pursuant to the National Marine Sanctuaries Act, 16 U.S.C. 1431 *et seq.* and implementing regulations at 15 CFR part 922. This action is being taken pursuant to the emergency provision of the Florida Keys National Marine Sanctuary regulations at 15 CFR 922.164(e) and 922.165.

B. National Environmental Policy Act

NOAA's Policy and Procedures for Compliance with the National Environmental Policy Act (NEPA) and Related Authorities (NOAA Administrative Order (NAO) 216–6A and Companion Manual for NAO 216–6A) provide that all NOAA major Federal actions be reviewed with respect to environmental consequences on the human environment. Based on the NAO and Companion Manual, NOAA examined the final temporary rule for its potential to impact the quality of the human environment and concluded that it is categorically

excluded from the requirement to prepare an Environmental Assessment or Environmental Impact Statement in accordance with the NOAA Categorical Exclusion C1, as a habitat restoration action (see Appendix E of the NOAA NEPA Companion Manual). It qualifies for this categorical exclusion provided that such action: (1) transplants only organisms currently or formerly present at the site or in its immediate vicinity (if transplant is a component of the action); (2) does not require substantial placement of fill or dredging; (3) does not involve any removal of debris, excavation, or conditioning of soils unless such removal of debris, excavation, or conditioning of soils is geographically limited to the impact area such that site conditions will not impede or negatively alter natural processes, is in compliance with all permit and disposal requirements, and will not impact critical aquifers or recharge areas; and (4) does not involve an added risk of human or environmental exposure to toxic or hazardous substances, pathogens, or radioactive materials. In considering the list of extraordinary circumstances, NOAA determined that none would be triggered by the temporary emergency action. Therefore, NOAA concludes that this action will not result in significant effects to the human environment and is categorically excluded from the need for further NEPA review.

C. Executive Order 12866: Regulatory Impact

The Office of Management and Budget (OMB) has determined that this emergency rule is not significant within the meaning of section 3(f) of Executive Order 12866.

D. Regulatory Flexibility Act

This emergency rule is exempt from the procedures of the Regulatory Flexibility Act because the rule will not include prior notice or an opportunity for public comment pursuant to 5 U.S.C. 553 or other law. Accordingly, no regulatory flexibility analysis is required and none has been prepared.

E. Administrative Procedure Act

Pursuant to 5 U.S.C. 553(b)(3)(B), the Assistant Administrator of the National Ocean Service, NOAA, finds good cause to waive notice and public comment, as it would be impracticable and contrary to the public interest. Ongoing impacts from the current marine heat wave are resulting in immediate and large-scale impacts to the coral reef ecosystems in the Florida Keys with greatest risk to the most sensitive coral nursery stock located at several permitted sites

throughout the Florida Keys. Coral nursery sites are established throughout the Florida Keys and are essential in supporting coral restoration efforts due to the loss of healthy coral cover in the Florida Keys reefs that has declined by more than 90 percent in the last 40 years. While some of the coral nursery stock is being relocated to land-based sites some coral nursery sites are being moved to offshore and deeper areas with cooler waters. It is possible that humans entering the waters of the offshore areas where these coral nursery stock are being relocated could inadvertently cause irreparable damage from anchoring and/or dropping or entangling fishing gear in the coral nursery structures. Establishment of a special use area will prohibit all entry except to conduct restoration activities under a valid ONMS permit, for continuous transit without interruption, and for law enforcement purposes. The protections afforded by establishing this special use area need to be in place to avoid further damage to these sensitive nursery corals that have already experienced impact from heat stress. As such, further damage to these sensitive nursery corals would occur if the prohibition implemented by this rule is delayed to provide prior notice and opportunity for public comment.

For the reasons outlined above, NOAA finds it impracticable and contrary to the public interest to provide prior notice and public comment on these emergency measures. For the same reasons, NOAA finds good cause to waive the delay in the effective date of this rule pursuant to 5 U.S.C. 553(d)(3).

List of Subjects in 15 CFR Part 922

Administrative practice and procedure, Coastal zone, Natural resources, Historic preservation, Marine protected areas, Marine resources, National marine sanctuaries, Recreation and recreation areas, Corals.

Nicole R. LeBoeuf,

Assistant Administrator for Ocean Services and Coastal Zone Management, National Ocean Service, National Oceanic and Atmospheric Administration.

For the reasons set forth above, NOAA amends part 922, title 15 of the Code of Federal Regulations as follows:

PART 922—NATIONAL MARINE SANCTUARY PROGRAM REGULATIONS

■ 1. The authority citation for part 922 continues to read as follows:

Authority: 16 U.S.C. 1431 *et seq.*

■ 2. In appendix VI to subpart P, add a temporary entry for “Tavernier” at the end to read as follows:

Appendix VI to Subpart P of Part 922—Special-Use Areas Boundary Coordinates and Use Designations

* * * * *

Tavernier (Temporary)

(Restoration Only)—[The coordinates are unprojected (Geographic) and based on the North American Datum of 1983. The boundary for the special use area begins at Point 1 and continues to each successive point in numerical order until ending at Point 5 as listed in the coordinate in the following table.]

BILLING CODE 3510–NK–P

DEPARTMENT OF THE TREASURY

Office of Foreign Assets Control

31 CFR Part 586

Publication of Chinese Military-Industrial Complex Sanctions Regulations Web General Licenses 1, 1A, 1B, and 2

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Publication of web general licenses.

SUMMARY: The Department of the Treasury’s Office of Foreign Assets Control (OFAC) is publishing four general licenses (GLs) issued in the Chinese Military Industrial Complex program: GLs 1, 1A, 1B, and 2, each of which was previously made available on OFAC’s website.

DATES: GL 1 was issued on January 8, 2021. See **SUPPLEMENTARY INFORMATION** for additional relevant dates.

FOR FURTHER INFORMATION CONTACT: OFAC: Assistant Director for Licensing, 202–622–2480; Assistant Director for Regulatory Affairs, 202–622–4855; or Assistant Director for Compliance, 202–622–2490.

SUPPLEMENTARY INFORMATION:

Electronic Availability

This document and additional information concerning OFAC are available on OFAC’s website: <https://ofac.treasury.gov>.

Background

On January 8, 2021, OFAC issued GL 1 to authorize certain transactions otherwise prohibited by Executive Order (E.O.) 13959 of November 12, 2020, “Addressing the Threat From Securities Investments That Finance Communist Chinese Military Companies” (85 FR 73185, November 17, 2020). Subsequently, OFAC issued two further iterations of GL 1, each of which authorized activities otherwise prohibited pursuant to E.O. 13959 as amended by E.O. 13974 of January 13, 2021, “Amending Executive Order 13959—Addressing the Threat From Securities Investments That Finance Communist Chinese Military Companies” (86 FR 4875, January 19, 2021): on January 26, 2021, OFAC issued GL 1A, which superseded GL 1; and on May 18, 2021, OFAC issued GL 1B, which superseded GL 1A. Each of these GLs is now expired. On January 14, 2021, OFAC issued GL 2 to authorize certain transactions otherwise prohibited by E.O. 13959, as amended. Each GL was made available on OFAC’s website (<https://ofac.treasury.gov>) when it was issued. The text of these GLs is provided below.

OFFICE OF FOREIGN ASSETS CONTROL

Executive Order 13959 of November 12, 2020

Addressing the Threat From Securities Investments That Finance Communist Chinese Military Companies

GENERAL LICENSE NO. 1

Authorizing Transactions Involving Securities of Certain Communist Chinese Military Companies

(a) Except as provided in paragraph (b) of this general license, all transactions and activities prohibited by section 1(a)(i) of Executive Order (E.O.) 13959 involving publicly traded securities, or any securities that are derivative of, or are designed to provide investment exposure to such securities, of an entity whose name closely matches the name of a Communist Chinese military company identified in the Annex to E.O. 13959 but that has not been listed on the Office of Foreign Assets Control’s Non-SDN Communist Chinese Military Companies List, are authorized through 9:30 a.m. eastern standard time, January 28, 2021.

(b) This general license does not authorize any transactions or activities otherwise prohibited by E.O. 13959, any other E.O. or statute, or any part of 31 CFR chapter V.

Andrea Gacki,

Director, Office of Foreign Assets Control.

Dated: January 8, 2021.

OFFICE OF FOREIGN ASSETS CONTROL

Executive Order 13959 of November 12, 2020

Addressing the Threat From Securities Investments That Finance Communist Chinese Military Companies, as Amended

GENERAL LICENSE NO. 1A

Authorizing Transactions Involving Securities of Certain Communist Chinese Military Companies

(a) Except as provided in paragraph (b) of this general license, all transactions and activities prohibited by section 1(a) of Executive Order (E.O.) 13959, as amended by E.O. 13974 of January 13, 2021, involving publicly traded securities, or any securities that are derivative of, or are designed to provide investment exposure to such securities, of an entity whose name closely matches, but does not exactly match, the name of a Communist Chinese military company as defined by section 4(a) of E.O. 13959, as amended, are authorized through 9:30 a.m. eastern daylight time, May 27, 2021.

(b) This general license does not authorize:

(1) Any transactions or activities involving publicly traded securities, or any securities that are derivative of, or are designed to provide investment exposure to such securities, of entities identified in the Office of Foreign Assets Control's Non-SDN Communist Chinese Military Companies List (NS-CCMC List) pursuant to section 4(a)(iii) of E.O. 13959, as amended, as a subsidiary of a person determined to be a Communist Chinese military company, including entities added to the NS-CCMC List on January 8, 2021 (CNOOC Limited, China Mobile Limited, China Telecom Corporation Limited, China Unicom (Hong Kong) Limited).

Note to paragraph (b)(1): Pursuant to section 1(a)(ii) of E.O. 13959, as amended, prohibitions relevant to entities identified in the NS-CCMC List pursuant to section 4(a)(iii) of E.O. 13959, as amended, including entities added to the NS-CCMC List on January 8, 2021 (CNOOC Limited, China Mobile Limited, China Telecom Corporation Limited, China Unicom (Hong Kong) Limited), take effect beginning 9:30 a.m. eastern time on the date that is 60 days after such listing.

(2) Any transactions or activities otherwise prohibited by E.O. 13959, as amended, any other E.O. or statute, or any part of 31 CFR chapter V.

(c) Effective January 27, 2021, General License No. 1, dated January 8, 2021, is replaced and superseded in its entirety by this General License No. 1A.

Bradley T. Smith,

Acting Director, Office of Foreign Assets Control.

Dated: January 26, 2021.

GENERAL LICENSE NO. 1B

Authorizing Transactions Involving Securities of Certain Communist Chinese Military Companies

(a) Except as provided in paragraph (b) of this general license, all transactions and activities prohibited by section 1(a) of Executive Order (E.O.) 13959, as amended by E.O. 13974 of January 13, 2021, involving publicly traded securities, or any securities that are derivative of, or are designed to provide investment exposure to such securities, of an entity whose name closely matches, but does not exactly match, the name of a Communist Chinese military company as defined by section 4(a) of E.O. 13959, as amended, are authorized through 9:30 a.m. eastern daylight time, June 11, 2021.

(b) This general license does not authorize:

(1) Any transactions or activities involving publicly traded securities, or any securities that are derivative of, or are designed to provide investment exposure to such securities, of entities identified in the Office of Foreign Assets Control's Non-SDN Communist Chinese Military Companies List (NS-CCMC List) pursuant to section 4(a)(iii) of E.O. 13959, as amended, as a subsidiary of a person determined to be a Communist Chinese military company, including entities added to the NS-CCMC List on January 8, 2021 (CNOOC Limited, China Mobile Limited, China Telecom Corporation Limited, China Unicom (Hong Kong) Limited).

Note to paragraph (b)(1): Pursuant to section 1(a)(ii) of E.O. 13959, as amended, prohibitions relevant to entities identified in the NS-CCMC List pursuant to section 4(a)(iii) of E.O. 13959, as amended, including entities added to the NS-CCMC List on January 8, 2021 (CNOOC Limited, China Mobile Limited, China Telecom Corporation Limited, China Unicom (Hong Kong) Limited), take effect beginning 9:30 a.m. eastern time on the date that is 60 days after such listing.

(2) Any transactions or activities otherwise prohibited by E.O. 13959, as amended, any other E.O. or statute, or any part of 31 CFR chapter V.

(c) Effective May 18, 2021, General License No. 1A, dated January 26, 2021, is replaced and superseded in its entirety by this General License No. 1B.

Bradley T. Smith,

Acting Director, Office of Foreign Assets Control.

Dated: May 18, 2021.

OFFICE OF FOREIGN ASSETS CONTROL

Executive Order 13959 of November 12, 2020

Addressing the Threat From Securities Investments That Finance Communist Chinese Military Companies, as Amended

GENERAL LICENSE NO. 2

Authorizing Securities Exchanges Operated by U.S. Persons To Engage in Transactions Involving Securities of Communist Chinese Military Companies

(a) Except as provided in paragraph (b) of this general license, all transactions and activities by securities exchanges operated by U.S. persons prohibited by section 1(a)(ii) of Executive Order (E.O.) 13959, as amended by the E.O. of January 13, 2021, involving publicly traded securities, or any securities that are derivative of, or are designed to provide investment exposure to such securities, of any entity that is listed on the Office of Foreign Assets Control's Non-SDN Communist Chinese Military Companies List (NS-CCMC List) after 12:01 a.m. eastern standard time, January 14, 2021, are authorized through 12:01 a.m. eastern time on the date that is 365 days after the date the entity is listed on the NS-CCMC List.

(b) This general license does not authorize any transactions or activities otherwise prohibited by E.O. 13959, as amended, any other E.O. or statute, or any part of 31 CFR chapter V.

BILLING CODE 4810-AL-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG-2023-0613]

RIN 1625-AA00

Safety Zone; Kanawha River, Mile Markers 41.5 to 42.5, Nitro, WV, Change in Dates

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters within a half mile radius of the Donald Legg Memorial Bridge. The safety zone is needed to protect personnel, vessels, and the marine environment from potential hazards created by adding a center section of the bridge. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the

Captain of the Port Sector Ohio Valley (COTP) or a designated representative. This temporary final rule reflects a change in the dates of the bridge construction than we previously announced in a prior temporary final rule.

DATES: This rule is effective without actual notice from September 6, 2023 through September 18, 2023. For the purposes of enforcement, actual notice will be used from September 4, 2023 until September 6, 2023.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to <https://www.regulations.gov>, type USCG-2023-0613 in the search box and click "Search." Next, in the Document Type column, select "Supporting & Related Material."

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Petty Officer Chelsea Zimmerman, Marine Safety Unit Huntington, U.S. Coast Guard, telephone 304-733-0198, email Chelsea.M.Zimmerman@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard previously published a temporary final rule for a safety zone on August 17, 2023, titled "Safety Zone; Kanawha River, Mile Markers 41.5 to 42.5, Nitro, WV" at 88 FR 55913. That safety zone was going to be effective August 28, 2023, through August 29, 2023. The Coast Guard received notice on August 29, 2023, that the project manager must change the dates of the bridge construction. Therefore, we must change the effective dates and enforcement times from that original safety zone temporary final rule. This rule replaces the previous rule issued on August 17, 2023, at 88 FR 55913. We will no longer be enforcing the safety zone on the dates described in that rule. Instead, this safety zone will be over the span of two weeks, from September 4, 2023, to September 18, 2023, and subject to enforcement when announced via Broadcast Notice to Mariners.

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the

Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest."

Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because publishing an NPRM would be impracticable. A safety zone is needed to alleviate safety concerns associated with construction operations for the purpose of adding the center section of the Donald Legg Memorial Bridge. It is impracticable to publish an NPRM because late notice was given for the change in enforcement dates, which now require the establishment of a safety zone by September 4, 2023, and lack sufficient time to provide a reasonable comment period and then consider those comments before issuing the rule.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to the public interest because we must establish the safety zone by September 4, 2023, in order to protect personnel, vessels, and the marine environment from the potential safety hazards associated with the bridge construction beginning on that date.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Sector Ohio Valley (COTP) has determined that safety needs associated with construction operations on the Donald Legg Memorial Bridge from September 4, 2023, to September 18, 2023, present a safety concern. The purpose of this rulemaking is to ensure the safety of the public surrounding regulated area before, during, and after the construction event.

IV. Discussion of the Rule

This rule establishes a safety zone that will be subject to enforcement via Broadcast Notice to Mariners from September 4, 2023, through September 18, 2023, daily between 5:30 a.m. to 8 p.m. The safety zone will cover all navigable waters between mile markers 41.5 to 42.5 on the Kanawha River. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters while the bridge span is being

added. No vessel or person will be permitted to enter the safety zone without obtaining permission from the COTP or a designated representative. A designated representative means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Sector Ohio Valley (COTP) in the enforcement of the safety zone.

Persons or vessels seeking to enter the safety zone must request permission from the COTP on VHF-FM channel 16 or by telephone at 1-502-779-5424. If permission is granted, all persons and vessels shall comply with the instructions of the COTP or designated representative.

The COTP or a designated representative will inform the public of the enforcement times and date for this safety zone through Broadcast Notices to Mariners, Local Notices to Mariners, and/or Safety Marine Information Broadcasts as appropriate.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a "significant regulatory action," under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and time-of-day of the regulated area. This rule is limited to the Kanawha River from mile 41.5 to 42.5 on September 4, 2023, through September 18, 2023, and will be enforced only during the times specified. Moreover, the Coast Guard will issue Broadcast Notice to Mariners via VHF-FM marine channel 16 about the regulated area and the rule allows vessels to seek permission to enter the area.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of

power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves establishing a temporary safety zone on the Kanawha River at mile 41.5 to 42.5 on September 4, 2023, through September 18, 2023. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to

coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Revise § 165.T08–0613 to read as follows:

§ 165.T08–0613 Safety Zone; Kanawha River, Mile Markers 41.5 to 42.5 Nitro, WV, Change in Dates.

(a) *Location.* The following area is a safety zone: all navigable waters of the Kanawha River from mile marker 41.5 to mile marker 42.5, extending the entire width of the river.

(b) *Definitions.* *Designated representative* means a Coast Guard Patrol Commander (PATCOM), including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Ohio Valley (COTP) in the enforcement of the regulations in this section.

(c) *Regulations.* (1) Under the general safety zone regulations in subpart C of this part, you may not enter the safety zone described in paragraph (a) of this section unless authorized by the COTP or the COTP’s designated representative. The Coast Guard may patrol the event area under the direction of a designated Coast Guard Patrol Commander.

(2) To seek permission to enter, the COTP or the COTP’s representative may be contacted on Channel 16 VHF–FM (156.8 MHz) by the call sign “PATCOM”, or phone at 1–502–779–5424. Those in the safety zone must comply with all lawful orders or directions given to them by the COTP or the COTP’s designated representative.

(3) The Patrol Commander may forbid and control the movement of all vessels in the regulated area. When hailed or signaled by an official patrol vessel, a vessel shall come to an immediate stop and comply with the directions given. Failure to do so may result in expulsion

from the area, citation for failure to comply, or both.

(4) The Patrol Commander may terminate the event or the operation of any vessel at any time it is deemed necessary for the protection of life or property.

(5) The COTP will provide notice of the regulated area through advanced notice via local notice to mariners and broadcast notice to mariners and by on-scene designated representatives.

(d) *Enforcement periods.* This section will be subject to enforcement from September 4, 2023, through September 18, 2023, between 5:30 a.m. to 8 p.m.

Dated: August 30, 2023.

H.R. Mattern,

Captain, U.S. Coast Guard, Captain of the Port Sector Ohio Valley.

BILLING CODE 9110-04-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R01-OAR-2023-0188; FRL-11025-02-R1]

Air Plan Approval; New Hampshire; Reasonable Available Control Technology for the 2008 and 2015 Ozone Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving portions of State Implementation Plan (SIP) revisions submitted by the State of New Hampshire that certify that the state has adopted regulations meeting the requirements for reasonably available control technology (RACT) for the 2008 and 2015 ozone national ambient air quality standards (NAAQS), and portions of amendments to a related regulation that New Hampshire revised to fulfill RACT requirements for these two NAAQS. We are also approving a revision to the state's definition of emergency generator. These actions are being taken in accordance with the Clean Air Act.

DATES: This rule is effective on October 6, 2023.

ADDRESSES: EPA has established a docket for this action under Docket Identification No. EPA-R01-OAR-2023-0188. All documents in the docket are listed on the <https://www.regulations.gov> website. Although listed in the index, some information is not publicly available, *i.e.*, CBI or other

information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available at <https://www.regulations.gov> or at the U.S. Environmental Protection Agency, EPA Region 1 Regional Office, Air and Radiation Division, 5 Post Office Square—Suite 100, Boston, MA. EPA requests that if at all possible, you contact the contact listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding legal holidays and facility closures due to COVID-19.

FOR FURTHER INFORMATION CONTACT: Bob McConnell, Environmental Engineer, Air and Radiation Division (Mail Code 5-MD), U.S. Environmental Protection Agency, Region 1, 5 Post Office Square, Suite 100, Boston, Massachusetts, 02109-3912; (617) 918-1046.

SUPPLEMENTARY INFORMATION:

Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA.

Table of Contents

- I. Background and Purpose
- II. Final Action
- III. Incorporation by Reference
- IV. Statutory and Executive Order Reviews

I. Background and Purpose

On July 10, 2023 (88 FR 43483), EPA published a Notice of Proposed Rulemaking (NPRM) for the State of New Hampshire. The NPRM proposed approval that the state has adopted regulations meeting the requirements for reasonably available control technology (RACT) for the 2008 and 2015 ozone national ambient air quality standards (NAAQS), amendments to Env-A 1300, NO_x RACT, which New Hampshire revised as part of its RACT requirements for these two ozone NAAQS, a revision to the State's definition of emergency generator to address a court decision that vacated the allowance for such engines to operate for demand-response purposes, and removal from the SIP of two previously issued RACT orders related to Merrimack Station. During the public comment period, EPA received one comment letter from the Sierra Club dated August 9, 2023, that opposed New Hampshire's NO_x RACT limits applicable to coal-fired cyclone boilers. EPA is evaluating those comments in light of our July 10, 2023 proposed approval, and will take final action on New Hampshire's NO_x RACT requirements for coal-fired cyclone

boilers and New Hampshire's request to withdraw from the SIP two previously issued RACT orders applicable to Merrimack Station boilers in a subsequent final rule. We did not receive comments on any other portions of our July 10, 2023 proposed action and are therefore approving within this final rule New Hampshire's SIP revisions presented in our July 10, 2023 proposal for all provisions for which we did not receive comments. Please see our July 10, 2023 proposed rule for additional background and a more detailed explanation of EPA's rationale related to this action.

II. Final Action

EPA is approving portions of SIP revisions submitted by the State of New Hampshire. Specifically, EPA is approving the VOC RACT certifications for the 2008 and 2015 ozone NAAQS; the NO_x RACT certifications for these same standards except for the certification regarding NO_x RACT for coal-fired cyclone boilers for which EPA received adverse comments; the state's revised NO_x RACT regulation, Env-A 1300, except for sections within Env-A 1303.06 concerning limits for coal-fired cyclone boilers for which EPA received adverse comments; and the state's revised definition of emergency generator in Regulation Env-A 100.

III. Incorporation by Reference

In this rule, the EPA is finalizing regulatory text that includes incorporation by reference. In accordance with requirements of 1 CFR 51.5, the EPA is finalizing the incorporation by reference of New Hampshire regulation Env-A 1300, NO_x RACT, and a revision to the state's definition of emergency generator in regulation Env-A 100, which contains the state's definition of terms used within its air pollution control regulations, as discussed in Section II of this preamble and described in the amendments to 40 CFR part 52 set forth below. The EPA has made, and will continue to make, these documents generally available through <https://www.regulations.gov> and at the EPA Region 1 Office (please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section of this preamble for more information). Therefore, these materials have been approved by EPA for inclusion in the State implementation plan, have been incorporated by reference by EPA into that plan, are fully federally enforceable under sections 110 and 113 of the CAA as of the effective date of the final rulemaking of EPA's approval, and will

be incorporated by reference in the next update to the SIP compilation.¹

IV. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993) and 13563 (76 FR 3821, January 21, 2011);
 - Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
 - Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
 - Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
 - Does not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
 - Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
 - Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001); and
 - Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act.
- In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal

governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, Feb. 16, 1994) directs Federal agencies to identify and address “disproportionately high and adverse human health or environmental effects” of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. EPA defines environmental justice (EJ) as “the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.” EPA further defines the term fair treatment to mean that “no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.”

The New Hampshire Department of Environmental Services did not evaluate environmental justice considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898 of achieving environmental justice for people of color, low-income populations, and Indigenous peoples.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in

the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by November 6, 2023. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: August 30, 2023.

David Cash,

Regional Administrator, EPA Region 1.

Part 52 of chapter I, title 40 of the Code of Federal Regulations is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

- 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart EE—New Hampshire

- 2. In § 52.1520 (c), amend the table by adding an entry for “Env-A 100”, immediately preceding the entry for “Env-A 200”; revising the entry for “Env-A 1300”; and in § 52.1520 (e), amending the table to add entries for “Certifications for RACT for the 2008 and 2015 ozone standards” and for “Negative declarations included in New Hampshire’s State Implementation Plan for purposes of the 2008 and 2015 ozone standards” to the end of the table, to read as follows:

§ 52.1520 Identification of plan.

BILLING CODE 6560–50–P

Proposed Rules

Federal Register

Vol. 88, No. 171

Wednesday, September 6, 2023

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2023-1811; Project Identifier MCAI-2023-00146-E]

RIN 2120-AA64

Airworthiness Directives; GE Aviation Czech s.r.o. (Type Certificate Previously Held by WALTER Engines a.s., Walter a.s., and MOTORLET a.s.) Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to supersede Airworthiness Directive (AD) 2023-01-07, which applies to all GE Aviation Czech s.r.o. (GEAC) (type certificate previously held by WALTER Engines a.s., Walter a.s., and MOTORLET a.s.) Model H75-100, H75-200, H80, H80-100, H80-200, H85-100, and H85-200 engines. AD 2023-01-07 requires revising the airworthiness limitations section (ALS) of the existing engine maintenance manual (EMM) and the operator's existing approved maintenance or inspection program, as applicable, to incorporate updated coefficients and recalculate the cycles accumulated on critical parts. Since the FAA issued AD 2023-01-07, the manufacturer revised the ALS of the EMM to introduce new and more restrictive airworthiness limitations and associated thresholds and intervals for life-limited parts, which prompted this proposed AD. This proposed AD would require revising the ALS of the existing EMM and the operator's existing approved engine maintenance or inspection program, as applicable, to incorporate new and more restrictive instructions and associated thresholds and intervals for life-limited parts, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference

(IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this NPRM by October 23, 2023.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to [regulations.gov](https://www.regulations.gov). Follow the instructions for submitting comments.
- *Fax:* (202) 493-2251.
- *Mail:* U.S. Department of

Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1811; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For service information that is proposed for IBR in this NPRM, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: ADs@easa.europa.eu; website: easa.europa.eu. You may find this material on the EASA website at ad.easa.europa.eu. It is also available at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1811.

- You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222-5110.

FOR FURTHER INFORMATION CONTACT:

Barbara Caufield, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (781) 238-7146; email: barbara.caufield@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or

arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include "Docket No. FAA-2023-1811; Project Identifier MCAI-2023-00146-E" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend the proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to [regulations.gov](https://www.regulations.gov), including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Barbara Caufield, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued AD 2023-01-07, Amendment 39-22301 (88 FR 7355, February 3, 2023; corrected February 16, 2023 (88 FR 10013)) (AD 2023-01-07), for all GEAC Model H75-100, H75-200, H80, H80-100, H80-200, H85-100, and H85-200 engines. AD 2023-01-07 was prompted by an MCAI originated by

EASA, which is the Technical Agent for the Member States of the European Union. EASA issued EASA AD 2022–0008, dated January 19, 2022 (EASA AD 2022–0008), to address an unsafe condition identified as failure of the engine. EASA AD 2022–0008 stated that the airworthiness limitations for H series engine models have been identified as mandatory for continued airworthiness, and that failure to accomplish these instructions could result in an unsafe condition. EASA AD 2022–0008 also explained that the manufacturer published a revised ALS to introduce updated coefficients for the calculation of the cyclic life and safe life for the main shaft.

AD 2023–01–07 requires revising the ALS of the existing EMM and the operator's existing approved maintenance or inspection program, as applicable, to incorporate updated coefficients and recalculate the cycles accumulated on critical parts. The FAA issued AD 2023–01–07 to prevent failure of the engine.

Actions Since AD 2023–01–07 Was Issued

Since the FAA issued AD 2023–01–07, EASA superseded EASA AD 2022–0008 and issued EASA AD 2023–0021, dated January 23, 2023 (EASA AD 2023–0021) (also referred to after this as the MCAI). The MCAI states that the manufacturer revised the ALS to introduce new and more restrictive instructions and associated thresholds and intervals for life-limited parts. The MCAI also states that GEAC published an Alert Service Bulletin, ASB–H75–72–10–00–0062, ASB–H80–72–10–00–0107, ASB–H85–72–10–00–0051, ASB–M601F–72–10–00–0070, ASB–M601E–72–10–00–0120, ASB–M601D–72–10–00–0087 and ASB–M601Z–72–10–00–0069; Revision 1, dated January 20, 2023, published as a single document, which provides instructions to determine the accumulated life of certain propeller shafts.

You may examine the MCAI in the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2023–1811.

Related Service Information Under 1 CFR Part 51

The FAA reviewed EASA AD 2023–0021, which specifies procedures for operators to revise the ALS of the existing EMM and the operator's existing approved engine maintenance or inspection program, as applicable, to incorporate new and more restrictive instructions and associated thresholds

and intervals for life-limited parts, as applicable to each engine model.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

FAA's Determination

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the MCAI described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD and as discussed under "Differences Between this Proposed AD and the MCAI." The owner/operator (pilot) holding at least a private pilot certificate may revise the ALS of the existing EMM and must enter compliance with the applicable paragraph of this proposed AD into the engine maintenance records in accordance with 14 CFR 43.9(a) and 91.417(a)(2)(v). The pilot may perform this action because it only involves revising the pilot's manual. This action could be performed equally well by a pilot or a mechanic. This is an exception to the FAA's standard maintenance regulations.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has since coordinated with other manufacturers and CAAs to use this process. As a result, the FAA proposes to incorporate by reference EASA AD 2023–0021 in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2023–0021 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed

AD. Using common terms that are the same as the heading of a particular section in the EASA AD does not mean that operators need comply only with that section. For example, where the AD requirement refers to "all required actions within the compliance times," compliance with this AD requirement is not limited to the section titled "Required Action(s) and Compliance Time(s)" in EASA AD 2023–0021. Service information required by the EASA AD for compliance will be available at [regulations.gov](https://www.regulations.gov) by searching for and locating Docket No. FAA–2023–1811 after the FAA final rule is published.

Differences Between This Proposed AD and the MCAI

Where EASA AD 2023–0021 defines the AMP as the approved Aircraft Maintenance Programme containing the tasks on the basis of which the scheduled maintenance is conducted to ensure the continuing airworthiness of each operated engine, this proposed AD defines the AMP as the aircraft maintenance program containing the tasks on the basis of which the scheduled maintenance is conducted to ensure the continuing airworthiness of each operated airplane.

Where EASA AD 2023–0021 defines the ALS as the Airworthiness Limitations Section of the GEAC EMM No. 0983402 Revision 25, dated November 21, 2022, this proposed AD defines the ALS as the airworthiness limitations section of the GEAC EMM No. 0983402 Revision 26, dated February 1, 2023. The ALS in Revision 26 of the EMM is unchanged from Revision 25 of the EMM.

Where paragraph (3) of EASA AD 2023–0021 specifies revising the approved Aircraft Maintenance Programme within 12 months after the effective date of EASA AD 2023–0021, this proposed AD would require revising the ALS of the existing approved engine maintenance or inspection program, as applicable, within 90 days after the effective date of this AD.

This proposed AD would not require compliance with paragraphs (1), (2), (4), and (5) of EASA AD 2023–0021.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 33 engines installed on airplanes of U.S. registry.

The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Revise the ALS	1 work-hour × \$85 per hour = \$85	\$0	\$85	\$2,805

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that the proposed regulation:

(1) Is not a "significant regulatory action" under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:
 ■ a. Removing Airworthiness Directive 2023–01–07, Amendment 39–22301 (88 FR 7355, February 3, 2023; corrected February 16, 2023 (88 FR 10013)); and
 ■ b. Adding the following new airworthiness directive:

GE Aviation Czech s.r.o. (Type Certificate Previously held by WALTER Engines a.s., Walter a.s., and MOTORLET a.s.):
 Docket No. FAA–2023–1811; Project Identifier MCAI–2023–00146–E.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 23, 2023.

(b) Affected ADs

This AD replaces AD 2023–01–07, Amendment 39–22301 (88 FR 7355, February 3, 2023; corrected February 16, 2023 (88 FR 10013)).

(c) Applicability

This AD applies to GE Aviation Czech s.r.o. (Type Certificate Previously held by WALTER Engines a.s., Walter a.s., and MOTORLET a.s.) Model H75–100, H75–200, H80, H80–100, H80–200, H85–100, and H85–200 engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7200, Engine (Turbine/Turboprop).

(e) Unsafe Condition

This AD was prompted by the manufacturer revising the airworthiness limitations section (ALS) of the existing engine maintenance manual (EMM) to introduce new and more restrictive airworthiness limitations and associated thresholds and intervals for life-limited parts. The FAA is issuing this AD to prevent failure of the engine. The unsafe condition, if not addressed, could result in uncontained release of a critical part, damage to the engine, and damage to the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Except as specified in paragraph (h) of this AD: Perform all required actions within

the compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2023–0021, dated January 23, 2023 (EASA AD 2023–0021).

(2) The action required by paragraph (g)(1) of this AD may be performed by the owner/operator (pilot) holding at least a private pilot certificate and must be entered into the aircraft records showing compliance with this AD in accordance with 14 CFR 43.9(a) and 91.417(a)(2)(v). The record must be maintained as required by 14 CFR 91.417, 121.380, or 135.439.

(h) Exceptions to EASA AD 2023–0021

(1) Where EASA AD 2023–0021 defines the AMP as "the approved Aircraft Maintenance Programme containing the tasks on the basis of which the scheduled maintenance is conducted to ensure the continuing airworthiness of each operated engine," for this AD, replace that text with, "the aircraft maintenance program containing the tasks on the basis of which the scheduled maintenance is conducted to ensure the continuing airworthiness of each operated airplane."

(2) Where EASA AD 2023–0021 defines the ALS as "the Airworthiness Limitations Section of GEAC EMM No. 0983402 Revision 25, dated November 21, 2022," for this AD, replace that text with, "the airworthiness limitations section of GEAC EMM No. 0983402 Revision 26, dated February 1, 2023." The ALS in Revision 26 of the EMM is unchanged from Revision 25 of the EMM.

(3) Where EASA AD 2023–0021 refers to its effective date, this AD requires using the effective date of this AD.

(4) Where paragraph (3) of EASA AD 2023–0021 specifies revising "the approved AMP within 12 months after the effective date of EASA AD 2023–0021," replace that text with, "the ALS of the existing approved engine maintenance or inspection program, as applicable, within 90 days after the effective date of this AD."

(5) This AD does not require compliance with paragraphs (1), (2), (4), and (5) of EASA AD 2023–0021.

(6) This AD does not adopt the Remarks paragraph of EASA AD 2023–0021.

(i) Provisions for Alternative Actions and Intervals

After performing the actions required by paragraph (g) of this AD, no alternative actions and associated thresholds and intervals, including life limits, are allowed unless they are approved as specified in the provisions of the "Ref. Publications" section of EASA AD 2023–0021.

(j) Alternative Methods of Compliance (AMOCs):

(1) The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the

procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, send it to the attention of the person identified in paragraph (k) of this AD and email to ANE-AD-AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Additional Information

For more information about this AD, contact Barbara Caufield, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (781) 238-7146; email: barbara.caufield@faa.gov.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) European Union Aviation Safety Agency AD 2023-0021, dated January 23, 2023.

(ii) [Reserved]

(3) For EASA AD 2023-0021, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; phone: +49 221 8999 000; email: ADs@easa.europa.eu; website: easa.europa.eu. You may find this EASA AD on the EASA website at ad.easa.europa.eu.

(4) You may view this service information at FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222-5110.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email: fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued on August 25, 2023.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2023-1817; Project Identifier MCAI-2023-00664-T]

RIN 2120-AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus Canada Limited Partnership Model BD-500-1A10 and BD-500-1A11 airplanes. This proposed AD was prompted by a design review that identified the fixed emergency locator transmitter (ELT) lithium batteries would not be sufficiently cooled by the outside air in the event of a thermal runaway event. This proposed AD would require replacing the ELT with a new ELT with redesigned batteries, as specified in a Transport Canada AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 23, 2023.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- **Federal eRulemaking Portal:** Go to regulations.gov. Follow the instructions for submitting comments.

- **Fax:** 202-493-2251.

- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- **Hand Delivery:** Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at regulations.gov under Docket No. FAA-2023-1817; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and

other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For material that is proposed for IBR in this NPRM, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888-663-3639; email TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca; website tc.canada.ca/en/aviation. It is also available at regulations.gov under Docket No. FAA-2023-1817.

- You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195.

FOR FURTHER INFORMATION CONTACT:

Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516-228-7300; email 9-avs-nyaco-cos@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include "Docket No. FAA-2023-1817; Project Identifier MCAI-2023-00664-T" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as

private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email 9-avs-nyaco-cos@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

Transport Canada, which is the aviation authority for Canada, has issued Transport Canada AD CF–2023–31, dated May 8, 2023 (Transport Canada AD CF–2023–31) (also referred to as the MCAI), to correct an unsafe condition for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. The MCAI states a design review identified that the fixed ELT lithium batteries would not be sufficiently cooled by the outside air in the event of a thermal runaway event. As a result, a thermal runaway could lead to an uncontrolled fire of the fixed ELT, which may compromise the structural integrity of the aircraft structure in the area where the fixed ELT is installed.

The FAA is proposing this AD to address the unsafe condition on these products. You may examine the MCAI in the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2023–1817.

Related Service Information Under 1 CFR Part 51

Transport Canada AD CF–2023–31 specifies procedures for replacing the fixed ELT with an ELT with improved batteries that do not rely on cooling from the outside. The replacement includes modifying two electrical harnesses and installing a new ELT support assembly, ELT, and aircraft identification module (AIM). This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in ADDRESSES section.

FAA’s Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in

Transport Canada AD CF–2023–31 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate Transport Canada AD CF–2023–31 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with Transport Canada AD CF–2023–31 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Service information required by Transport Canada AD CF–2023–31 for compliance will be available at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2023–1817 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 71 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
19 work-hours × \$85 per hour = \$1,615	\$12,804	\$14,419	\$1,023,749

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a “significant regulatory action” under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.): Docket No. FAA–2023–1817; Project Identifier MCAI–2023–00664–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 23, 2023.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (Type Certificate previously held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Model BD–500–1A10 and BD–500–1A11 airplanes, certificated in any category, as identified in Transport Canada AD CF–2023–31, dated May 8, 2023 (Transport Canada AD CF–2023–31).

(d) Subject

Air Transport Association (ATA) of America Code: 25, Equipment/furnishings.

(e) Unsafe Condition

This AD was prompted by a design review that identified the fixed emergency locator transmitter (ELT) lithium batteries would not be sufficiently cooled by the outside air in the event of a thermal runaway event. The FAA is issuing this AD to address a thermal runaway that could lead to an uncontrolled fire of the fixed ELT. The unsafe condition, if not addressed, may compromise the structural integrity of the aircraft structure in the area where the fixed ELT is installed.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2023–31.

(h) Exceptions to Transport Canada AD CF–2023–31

Where Transport Canada AD CF–2023–31 refers to its effective date, this AD requires using the effective date of this AD.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the International Validation Branch, send it to the attention of the person identified in paragraph (j) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Airbus Canada Limited Partnership's Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(3) *Required for Compliance (RC):* Except as required by paragraph (i)(2) of this AD, if any service information contains procedures or tests that are identified as RC, those procedures and tests must be done to comply with this AD; any procedures or tests that are not identified as RC are recommended. Those procedures and tests that are not identified as RC may be deviated from using accepted methods in accordance with the operator's maintenance or inspection program without obtaining approval of an AMOC, provided the procedures and tests identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to procedures or tests identified as RC require approval of an AMOC.

(j) Additional Information

For more information about this AD, contact: Steven Dzierzynski, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516–228–7300; email 9-avs-nyaco-cos@faa.gov.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference

(IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF–2023–31, dated May 8, 2023.

(ii) [Reserved]

(3) For Transport Canada AD CF–2023–31, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888–663–3639; email TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca; website tc.canada.ca/en/aviation.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued on August 30, 2023.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

RIN 2120–AA64

Airworthiness Directives; Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain Airbus Canada Limited Partnership Model BD–500–1A10 and BD–500–1A11 airplanes. This proposed AD was prompted by a report of a fouling condition (interference) between the gimbal bushing and the airplane horizontal stabilizer trim actuator (HSTA) structural fitting, which prevented engagement of the secondary load path. This proposed AD would

require replacing the upper gimbal bushing flanges, as specified in a Transport Canada AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 23, 2023.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to [regulations.gov](https://www.regulations.gov). Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1818; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For material that is proposed for IBR in this NPRM, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888-663-3639; email: TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca; website: tc.canada.ca/en/aviation. It is also available at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1818.

- You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195.

FOR FURTHER INFORMATION CONTACT: Gabriel Kim, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516-228-7300; email 9-avs-nyaco-cos@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or

arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA-2023-1818; Project Identifier MCAI-2023-00582-T” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to [regulations.gov](https://www.regulations.gov), including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Gabriel Kim, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 516-228-7300; email 9-avs-nyaco-cos@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

Transport Canada, which is the aviation authority for Canada, has issued Transport Canada AD CF-2023-23, dated April 5, 2023 (Transport Canada AD CF-2023-23) (also referred to as the MCAI), to correct an unsafe condition for certain Airbus Canada Limited Partnership Model BD-500-1A10 and BD-500-1A11 airplanes. The MCAI states that interference was found between the gimbal bushing and the airplane HSTA structural fitting, which

prevented engagement of the secondary load path. On multiple other BD-500-1A10 and BD-500-1A11 airplanes, similar interference caused visible damage, but the secondary load path was successfully engaged. Inability to engage the HSTA secondary load path, following a failure of the primary load path, may result in a loss of pitch control of the airplane.

The FAA is proposing this AD to address the unsafe condition on these products. You may examine the MCAI in the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-1818.

Related Service Information Under 14 CFR Part 51

Transport Canada AD CF-2023-23 specifies procedures for replacing the upper gimbal bushing flanges. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES** section.

FAA’s Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in Transport Canada AD CF-2023-23 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate Transport Canada AD CF-2023-23 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with Transport Canada AD CF-2023-23 in its entirety through that incorporation,

except for any differences identified as exceptions in the regulatory text of this proposed AD. Service information required by Transport Canada AD CF–2023–23 for compliance will be available at [regulations.gov](https://www.regulations.gov) under

Docket No. FAA–2023–1818 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 4

airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 24 work-hours × \$85 per hour = \$2,040	\$5,883	Up to \$7,923	Up to \$31,692.

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some or all of the costs of this proposed AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus Canada Limited Partnership (Type Certificate Previously Held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.): Docket No. FAA–2023–1818; Project Identifier MCAL–2023–00582–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 23, 2023.

(b) Affected ADs

None.

(c) Applicability

This AD applies to Airbus Canada Limited Partnership (Type Certificate previously held by C Series Aircraft Limited Partnership (CSALP); Bombardier, Inc.) Model BD–500–1A10 and BD–500–1A11 airplanes, certificated in any category, as identified in Transport Canada AD CF–2023–23, dated April 5, 2023 (Transport Canada AD CF–2023–23).

(d) Subject

Air Transport Association (ATA) of America Code: 27, Flight Controls.

(e) Unsafe Condition

This AD was prompted by a report of interference between the gimbal bushing and the airplane horizontal stabilizer trim actuator (HSTA) structural fitting. The FAA is issuing this AD to ensure no interference occurs between the bushing and HSTA. The

unsafe condition, if not addressed, could result in the inability of the HSTA secondary load path to engage, following a failure of the primary load path, which may result in a loss of pitch control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Transport Canada AD CF–2023–23.

(h) Exceptions to Transport Canada AD CF–2023–23

(1) Where Transport Canada AD CF–2023–23 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where Transport Canada AD CF–2023–23 refers to hours air time, this AD requires using flight hours.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the International Validation Branch, send it to the attention of the person identified in paragraph (j) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or Transport Canada; or Airbus Canada Limited Partnership's Transport Canada Design Approval Organization (DAO). If approved by the DAO, the approval must include the DAO-authorized signature.

(j) Additional Information

For more information about this AD, contact Gabriel Kim, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite

410, Westbury, NY 11590; telephone 516-228-7300; email 9-avs-nyaco-cos@faa.gov.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Transport Canada AD CF-2023-23, dated April 5, 2023.

(ii) [Reserved]

(3) For Transport Canada AD CF-2023-23, contact Transport Canada, Transport Canada National Aircraft Certification, 159 Cleopatra Drive, Nepean, Ontario K1A 0N5, Canada; telephone 888-663-3639; email: TC.AirworthinessDirectives-Consignesdenavigabilite.TC@tc.gc.ca; website: tc.canada.ca/en/aviation.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued on August 30, 2023.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

[Docket No. FAA-2023-0017; Project Identifier AD-2022-01418-T]

RIN 2120-AA64

Airworthiness Directives; The Boeing Company Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Supplemental notice of proposed rulemaking (SNPRM).

SUMMARY: The FAA is revising a notice of proposed rulemaking (NPRM) that applied to all The Boeing Company Model 757 airplanes. This action revises the NPRM by adding inspections for airplanes modified to a cargo configuration. The FAA is proposing this airworthiness directive (AD) to address the unsafe condition on these products. Since these actions would

impose an additional burden over those in the NPRM, the FAA is requesting comments on this SNPRM.

DATES: The FAA must receive comments on this SNPRM by October 23, 2023.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- **Federal eRulemaking Portal:** Go to [regulations.gov](https://www.regulations.gov). Follow the instructions for submitting comments.
- **Fax:** 202-493-2251.
- **Mail:** U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.
- **Hand Delivery:** Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA-2023-0017; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains the NPRM, this SNPRM, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For service information identified in this SNPRM, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminister Blvd., MC 110-SK57, Seal Beach, CA 90740-5600; telephone 562-797-1717; website myboeingfleet.com.

• You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195. It is also available at [regulations.gov](https://www.regulations.gov) by searching for and locating Docket No. FAA-2023-0017.

FOR FURTHER INFORMATION CONTACT:

Wayne Ha, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: 562-627-5238; email: wayne.ha@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA-2023-0017; Project Identifier AD-2022-01418-T” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any

recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may again revise this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to [regulations.gov](https://www.regulations.gov), including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this proposed AD.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this SNPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this SNPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this SNPRM. Submissions containing CBI should be sent to Wayne Ha, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: 562-627-5238; email: wayne.ha@faa.gov. Any commentary that the FAA receives that is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA issued an NPRM to amend 14 CFR part 39 by adding an AD that would apply to all The Boeing Company Model 757 airplanes. The NPRM published in the **Federal Register** on January 26, 2023 (88 FR 4920). The NPRM was prompted by the potential for cracks to start in hidden areas underneath the scuff plates in the fuselage skin and bear strap of certain doors. In the NPRM, the FAA stated that certain maintenance inspections do not include a step to remove the scuff plates, which contributes to the inability to find cracks before they become critical. Cracks underneath the scuff plates in the fuselage skin and bear strap, if not addressed, could adversely affect the structural integrity of the airplane.

In the NPRM, the FAA proposed to require a general visual inspection or a maintenance records check for repairs in the areas around the fuselage skin door cutout lower corners of certain doors. The FAA also proposed applicable on-condition actions including repetitive low frequency and high frequency eddy current inspections for cracks in the skin or bear strap in the unrepaired areas, and crack repair.

Actions Since the NPRM Was Issued

Based on the comments the FAA received on the NPRM, the FAA is proposing additional inspections for Model 757–200 series airplanes that have been modified from a passenger configuration to a cargo configuration under supplemental type certificate (STC) ST04242AT, ST03562AT, or ST03952AT. As proposed in the NPRM, for Model 757–200 series airplanes with STC ST04242AT, ST03562AT, or ST03952AT, only the No. 1, No. 2, and No. 4 passenger entry doors, and the No. 1, No. 2, and No. 3 cargo doors, would have to be inspected. With this SNPRM, the FAA is proposing that for those airplanes, the crew entry door and main deck cargo door, as applicable, would also have to be inspected. This change is more fully discussed under the Comments section.

Comments

The FAA received comments from the Air Line Pilots Association, International, Boeing, and United Airlines, who supported the NPRM without change.

The FAA also received comments from Aviation Partners Boeing, VT Mobile Aerospace Engineering (VT MAE), and Federal Express (FedEx). The following presents the comments received on the NPRM and the FAA's response to each comment.

Effect of Winglets on Accomplishment of the Proposed Actions

Aviation Partners Boeing stated that the installation of blended or scimitar blended winglets per STC ST01518SE does not affect compliance with the actions in the proposed AD.

The FAA agrees with the commenter. The FAA has redesignated paragraph (c) of the proposed AD (of the NPRM) as paragraph (c)(1) of this proposed AD (of the SNPRM) and added paragraph (c)(2) to this proposed AD to state that installation of STC ST01518SE does not affect the ability to accomplish the actions required by this AD. Therefore, for airplanes on which STC ST01518SE is installed, a “change in product” alternative method of compliance (AMOC) approval request is not

necessary to comply with the requirements of 14 CFR 39.17.

Request To Change Required Inspections and Compliance Time for Airplanes Modified per VT MAE STC ST04242AT

VT MAE requested the FAA change the proposed inspections for airplanes modified under STC ST04242AT from a passenger configuration to a 15-pallet cargo configuration. VT MAE stated that under STC ST04242AT, the No. 1 left hand side (LHS), No. 1 right hand side (RHS), No. 4 LHS, and No. 4 RHS passenger entry doors have been plugged (re-skinned). Thus, the commenter requested the FAA not require these airplanes to be subject to the inspection of the No. 1 LHS, No. 1 RHS, No. 4 LHS and No. 4 RHS passenger entry doors specified in Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022. In addition, the commenter stated that under STC ST04242AT, the crew entry door and the main deck cargo door surround cutout structure is similar to that of Boeing Model 757–200 PF airplanes identified as Group 4 in Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022. As a result, VT MAE requested that these airplanes be required to do the inspection of the crew entry door and main deck cargo door (Table 4 and Table 5 of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022), that is specified for Group 4 airplanes.

The FAA agrees that Model 757–200 series airplanes modified under VT MAE STC ST04242AT should be subject to the same inspections as those required for Model 757–200 PF series airplanes (Group 4 in the service information), due to the similar design. The FAA has added paragraph (g)(2) of this proposed AD to require these additional inspections. The FAA disagrees with the request to omit the inspection of the passenger doors because the commenter did not submit sufficient data to substantiate an acceptable level of safety.

VT MAE also requested the FAA change the proposed compliance time to start after the airplane is converted from passenger to cargo configuration for the inspection at the door cutout lower corners of the crew entry door and the door cutout lower corners of main deck cargo door. The commenter stated that the cutout structures are newly installed during the freighter conversion.

The FAA disagrees with the request to revise the compliance time because the commenter did not submit sufficient data to substantiate an acceptable level

of safety. However, the FAA will consider requests for approval of AMOCs and compliance times if sufficient data is submitted to substantiate the changes would provide an acceptable level of safety.

Request To Add Inspections and Change Compliance Time for Airplanes Modified per VT MAE STC ST03562AT or ST03952AT

FedEx and VT MAE requested the FAA add inspections for airplanes modified from a passenger configuration to a cargo configuration. VT MAE stated that under STCs ST03562AT and ST03952AT, the main deck cargo door surround cutout structure is similar in design to Boeing Model 757–200 airplanes in a special freighter configuration under STC ST00916WI–D (identified as Group 6 in Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022). Thus, VT MAE requested that airplanes modified under STC ST03562AT or ST03952AT be inspected as specified in Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022, including the inspection at the door cutout lower corners of the main deck cargo door specified for Group 6 in Table 5. FedEx made the same request regarding airplanes modified under STC ST03562AT.

The FAA agrees that Model 757–200 airplanes modified under VT MAE STC ST03562AT or ST03952AT should be subject to the same inspections as those required for Model 757–200 airplanes modified under STC ST00916WI–D (Group 6 in the service information), due to the similar design. The FAA has added paragraph (g)(3) of this proposed AD to require these additional inspections.

VT MAE and FedEx also requested the FAA change the proposed compliance time to start after the airplane is converted from passenger to cargo configuration for the inspection at the door cutout lower corners of main deck cargo door. The commenters stated that the cutout structure surrounding the main deck cargo doors are added during passenger-to-cargo conversion, rather than when the airplanes are manufactured.

The FAA disagrees with the request to revise the compliance time because the commenters did not submit sufficient data to substantiate an acceptable level of safety. However, the FAA will consider requests for approval of alternative compliance times as an AMOC if sufficient data is submitted to substantiate the change would provide an acceptable level of safety.

Request To Clarify Exceptions Paragraph

FedEx requested the FAA clarify paragraph (h)(2) of the proposed AD and provided suggested language.

The FAA determined that the language provided by the commenter is identical to the language in paragraph (h)(2) of the proposed AD. However, the FAA has revised the language in paragraph (h)(2) of this proposed AD to clarify which conditions the exception applies to.

FAA’s Determination

The FAA is issuing this SNPRM after determining the unsafe condition described previously is likely to exist or develop in other products of the same type design. Certain changes described above expand the scope of the NPRM. As a result, it is necessary to reopen the comment period to provide additional

opportunity for the public to comment on this SNPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022. This service information specifies procedures for either a general visual inspection or a maintenance records check for repairs in the areas around the fuselage skin door cutout lower corners of the No. 1, No. 2, and No. 4 passenger entry doors; crew entry door; No. 1, No. 2, and No. 3 cargo doors; and main deck cargo door; and applicable on-condition actions, including repetitive low frequency and high frequency eddy current inspections for cracks in the skin or bear strap in the unrepaired areas, and crack repair. This service information is reasonably available because the interested parties have

access to it through their normal course of business or by the means identified in **ADDRESSES**.

Proposed AD Requirements in This SNPRM

This proposed AD would require accomplishing the actions specified in the service information already described, except for any differences identified as exceptions in the regulatory text of this proposed AD. For information on the procedures and compliance times, see this service information at *regulations.gov* by searching for and locating Docket No. FAA–2023–0017.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 482 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
General visual inspection for repairs	1 work-hour × \$85 per hour = \$85	\$0	\$85	\$40,970

The FAA estimates the following costs to do any necessary on-condition actions that would be required based on

the results of the proposed inspection. The agency has no way of determining

the number of airplanes that might need these on-condition actions:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Inspections for cracks	Up to 27 work-hours × \$85 per hour = Up to \$2,295 per inspection cycle.	\$0	Up to \$2,295 per inspection cycle.

The extent of cracking found during the on-condition inspection could vary significantly from airplane to airplane. The FAA has no way of determining the extent of cracking that may be found on each airplane, the cost to repair the cracking on each airplane, or the number of airplanes that may require repair.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs describes in more detail the scope of the Agency’s authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA

with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

The Boeing Company: Docket No. FAA–2023–0017; Project Identifier AD–2022–01418–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 23, 2023.

(b) Affected ADs

None.

(c) Applicability

(1) This AD applies to all The Boeing Company Model 757–200, –200PF, –200CB, and –300 series airplanes, certificated in any category.

(2) Installation of Supplemental Type Certificate (STC) ST01518SE does not affect the ability to accomplish the actions required by this AD. Therefore, for airplanes on which STC ST01518SE is installed, a “change in product” alternative method of compliance (AMOC) approval request is not necessary to comply with the requirements of 14 CFR 39.17.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by the potential for cracks to start in hidden areas underneath the scuff plates in the fuselage skin and bear strap of certain doors. The FAA is issuing this AD to address cracks caused by higher fatigue stresses at the fuselage skin door cutout lower corners. This unsafe condition, if not addressed, could adversely affect the structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) For all airplanes: Except as specified by paragraph (h) of this AD, at the applicable times specified in the “Compliance” paragraph of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022, do all applicable actions identified in, and in accordance with, the Accomplishment Instructions of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022.

(2) For Model 757–200 series airplanes that have been modified from a passenger to cargo configuration under VT Mobile Aerospace Engineering (VT MAE) STC ST04242AT: Except as specified by paragraph (h) of this AD, at the applicable times specified in Table

4 and Table 5 of the “Compliance” paragraph of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022, do all applicable actions for Group 4 identified in, and in accordance with, Table 4 and Table 5 of the Accomplishment Instructions of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022.

(3) For Model 757–200 series airplanes that have been modified from a passenger to cargo configuration under VT MAE STC ST03562AT or ST03952AT: Except as specified by paragraph (h) of this AD, at the applicable times specified in Table 5 of the “Compliance” paragraph of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022, do all applicable actions for Group 6 identified in, and in accordance with, Table 5 of the Accomplishment Instructions of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022.

Note 1 to paragraph (g): Guidance for accomplishing the actions required by this AD can be found in Boeing Alert Service Bulletin 757–53A0119, dated October 12, 2022, which is referred to in Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022.

(h) Exceptions to Service Information Specifications

(1) Where the Compliance Time columns of the tables in the “Compliance” paragraph of Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022, use the phrase “the original issue date of Requirements Bulletin 757–53A0119 RB,” this AD requires using “the effective date of this AD.”

(2) Where Boeing Alert Requirements Bulletin 757–53A0119RB, dated October 12, 2022, specifies performing a general visual inspection (GVI) or a maintenance records check for any existing repair, if only a maintenance records check is accomplished with no GVI, then any initial high frequency eddy current (HFEC) or low frequency eddy current (LFEC) inspection with a compliance time of before further flight must be done prior to the accumulation of 30,000 total flight cycles, or within 3,000 flight cycles after the effective date of this AD, whichever occurs later.

(3) Where Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022, specifies contacting Boeing for repair instructions or for alternative inspections: This AD requires doing the repair, or doing the alternative inspections and applicable on-condition actions, before further flight using a method approved in accordance with the procedures specified in paragraph (i) of this AD.

(i) AMOCs

(1) The Manager, AIR–520, Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the Continued Operational Safety Branch, send it to the attention of the

person identified in paragraph (j) of this AD. Information may be emailed to: 9-ANM-Seattle-ACO-AMOC-Requests@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(3) An AMOC that provides an acceptable level of safety may be used for any repair, modification, or alteration required by this AD if it is approved by The Boeing Company Organization Designation Authorization (ODA) that has been authorized by the Manager, AIR–520, Continued Operational Safety Branch, to make those findings. To be approved, the repair method, modification deviation, or alteration deviation must meet the certification basis of the airplane, and the approval must specifically refer to this AD.

(j) Related Information

(1) For more information about this AD, contact Wayne Ha, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: 562–627–5238; email: wayne.ha@faa.gov.

(2) Service information identified in this AD that is not incorporated by reference is available at the addresses specified in paragraphs (k)(3) and (4) of this AD.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) Boeing Alert Requirements Bulletin 757–53A0119 RB, dated October 12, 2022.

(ii) [Reserved]

(3) For service information identified in this AD, contact Boeing Commercial Airplanes, Attention: Contractual & Data Services (C&DS), 2600 Westminister Blvd., MC 110–SK57, Seal Beach, CA 90740–5600; telephone 562–797–1717; website myboeingfleet.com.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this service information that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html.

Issued on August 23, 2023.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA–2023–1815; Project Identifier MCAI–2023–00581–T]

RIN 2120–AA64

Airworthiness Directives; Airbus SAS Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Airbus SAS Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. This proposed AD was prompted by stress analysis results indicating that cracks may appear in the center wing box at frame 42 and slanted junction areas. This proposed AD would require a one-time inspection of the center wing box at frame 42 and slanted junction areas, and applicable corrective actions, if necessary, as specified in a European Union Aviation Safety Agency (EASA) AD, which is proposed for incorporation by reference (IBR). The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 23, 2023.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov*. Follow the instructions for submitting comments.

- *Fax:* 202–493–2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–1815; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For EASA material that is proposed for IBR in this AD, contact EASA,

Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu*; website *easa.europa.eu*. You may find this material on the EASA website at *ad.easa.europa.eu*.

- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

FOR FURTHER INFORMATION CONTACT: Tim Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 206–231–3667; email: *timothy.p.dowling@faa.gov*.

SUPPLEMENTARY INFORMATION:**Comments Invited**

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under **ADDRESSES**. Include “Docket No. FAA–2023–1815; Project Identifier MCAI–2023–0581–T” at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to *regulations.gov*, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as “PROPIN.” The FAA will treat such marked submissions as confidential under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI

should be sent to Tim Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 206–231–3667; email: *timothy.p.dowling@faa.gov*. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

EASA, which is the Technical Agent for the Member States of the European Union, has issued EASA AD 2023–0074, dated April 5, 2023 (EASA AD 2023–0074) (also referred to as the MCAI), to correct an unsafe condition for all Airbus SAS Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes. The MCAI states that stress analysis results from A321 XLFR certification and fatigue and damage tolerance harmonization have revealed that cracks may appear in the center wing box at frame 42 and slanted junction areas of the affected airplanes. Cracks may appear due to the high fatigue stress in affected areas.

The FAA is proposing this AD to detect potential cracks in the center wing box at frame 42 and slanted junction areas. The unsafe condition, if not addressed, could affect the structural integrity of the fuselage. See EASA AD 2023–0074 for additional background information.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2023–1815.

Related Service Information Under 14 CFR Part 51

EASA AD 2023–0074 specifies procedures for one-time rototest and high frequency eddy current inspections for cracks of the center wing box rear lower spar junction area at frame 42; a rototest inspection for cracks of the frame 42 slanted beam connection; a detailed visual inspection of certain fasteners for damage; and applicable corrective actions. Corrective actions include obtaining and following instructions for crack repair and replacing damaged fasteners. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

FAA’s Determination

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described

in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in EASA AD 2023–0074 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA's ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA)

ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate EASA AD 2023–0074 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with EASA AD 2023–0074 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Using common terms that are the same as the heading of a particular section in EASA AD 2023–0074 does not mean that operators need comply only with that section. For example, where the AD requirement refers to "all required actions and compliance times," compliance with this AD requirement is

not limited to the section titled "Required Action(s) and Compliance Time(s)" in EASA AD 2023–0074. Service information required by EASA AD 2023–0074 for compliance will be available at *regulations.gov* under Docket No. FAA–2023–1815 after the FAA final rule is published.

Interim Action

The FAA considers that this proposed AD would be an interim action. If final action is later identified, the FAA might consider further rulemaking then.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 657 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Up to 25 work-hours × \$85 per hour = Up to \$2,125	* \$0	Up to \$2,125	Up to \$1,396,125.

* Additional work will be required if repairs are needed. Inspection results will determine extent (time and materials) of repair costs.

The FAA has received no definitive data on which to base the cost estimates for the on-condition actions specified in this proposed AD.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to take approximately 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a "significant regulatory action" under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Airbus SAS: Docket No. FAA–2023–1815; Project Identifier MCAI–2023–00581–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 23, 2023.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Airbus SAS Model A321–111, –112, –131, –211, –212, –213, –231, and –232 airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 57, Wings.

(e) Unsafe Condition

This AD was prompted by stress analysis results indicating that cracks may appear in the center wing box at frame 42 and slanted junction areas. The FAA is issuing this AD to detect potential cracks in the center wing box at frame 42 and slanted junction areas. The unsafe condition, if not addressed, could affect the structural integrity of the fuselage.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2023–0074, dated April 5, 2023 (EASA AD 2023–0074).

(h) Exceptions to EASA AD 2023–0074

(1) Where EASA AD 2023–0074 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where EASA AD 2023–0074 specifies to comply with “the instructions of the AOT,” this AD requires compliance with the procedures marked as required for compliance (RC) in the Alert Operators Transmission (AOT).

(3) This AD does not adopt the “Remarks” section of EASA AD 2023–0074.

(4) Where paragraph (3) of EASA AD 2023–0074 specifies to “contact Airbus for approved repair instructions and, within the compliance time specified therein, accomplish those instructions accordingly,” for this AD, if any cracking is detected, the cracking must be repaired before further flight using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(5) Paragraph (4) of EASA AD 2023–0074 specifies to report inspection results to Airbus within a certain compliance time. For this AD, report inspection results at the applicable time specified in paragraph (h)(5)(i) or (ii) of this AD.

(i) If the inspection was done on or after the effective date of this AD: Submit the report within 90 days after the inspection.

(ii) If the inspection was done before the effective date of this AD: Submit the report within 90 days after the effective date of this AD.

(6) Where paragraph (2) of EASA AD 2023–0074 refers to a ferry flight, a special flight permit may be issued in accordance with 14

CFR 21.197 and 21.199 provided the operators comply with the provisions specified in paragraph (2) of EASA AD 2023–0074.

(j) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs)*: The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the International Validation Branch, send it to the attention of the person identified in paragraph (k) of this AD. Information may be emailed to: 9-AVS-AIR-730-AMOC@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer*: For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Airbus SAS’s EASA DOA. If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Required for Compliance (RC)*: Except as required by paragraphs (h)(2) and (j)(2) of this AD, if any service information referenced in EASA AD 2023–0074 contains paragraphs that are labeled as RC, the instructions in RC paragraphs, including subparagraphs under an RC paragraph, must be done to comply with this AD; any paragraphs, including subparagraphs under those paragraphs, that are not identified as RC are recommended. The instructions in paragraphs, including subparagraphs under those paragraphs, not identified as RC may be deviated from using accepted methods in accordance with the operator’s maintenance or inspection program without obtaining approval of an AMOC, provided the instructions identified as RC can be done and the airplane can be put back in an airworthy condition. Any substitutions or changes to instructions identified as RC require approval of an AMOC.

(k) Additional Information

For more information about this AD, contact Tim Dowling, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone 206–231–3667; email: timothy.p.dowling@faa.gov.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0074, dated April 5, 2023.

(ii) [Reserved]

(3) For EASA AD 2023–0074, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email ADs@easa.europa.eu; website easa.europa.eu. You may find this EASA AD on the EASA website at ad.easa.europa.eu.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(5) You may view this material that is incorporated by reference at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, email fr.inspection@nara.gov, or go to: www.archives.gov/federal-register/cfr/ibr-locations.html.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 71**

[Docket No. FAA–2023–1780; Airspace Docket No. 23–ASO–35]

RIN 2120–AA66

Revocation of Class D and Class E Airspace; Milton, FL

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to remove Class D airspace, Class E surface airspace, and Class E airspace extending upward from 700 feet above the surface for Choctaw NOLF, Milton, FL.

DATES: Comments must be received on or before October 23, 2023.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2023–1780 and Airspace Docket No. 23–ASO–35 using any of the following methods:

* *Federal eRulemaking Portal:* Go to www.regulations.gov and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey

Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except for Federal holidays.

* Fax: Fax comments to Docket Operations at (202) 493-2251.

Docket: Background documents or comments received may be read at www.regulations.gov anytime. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except for Federal holidays.

FAA Order JO 7400.11G Airspace Designations and Reporting Points and subsequent amendments can be viewed online at www.faa.gov/air_traffic/publications/. You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267-8783.

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Avenue, College Park, GA 30337; Telephone: (404) 305-6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would remove Class D and Class E airspace in Milton, FL. The closing of the air traffic control tower and cancellation of all instrument approaches determined that this update is necessary to support operations in the area.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the proposal's overall regulatory, aeronautical, economic, environmental, and energy-related aspects. The most helpful comments reference a specific portion of the

proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives and a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL-14 FDMS), which can be reviewed at www.dot.gov/privacy.

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the internet at www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA's web page at www.faa.gov/air_traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during normal business hours at the office of the Eastern Service Center, Federal Aviation Administration, Room 210, 1701 Columbia Ave., College Park, GA 30337.

Incorporation by Reference

Class D and Class E airspace designations are published in Paragraphs 5000, 6002, and 6005 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 annually. This document proposes to amend the current version of that order, FAA Order JO 7400.11G, Airspace Designations and Reporting Points, dated August 19, 2022, and

effective September 15, 2022. These updates would be published subsequently in the next update to FAA Order JO 7400.11. FAA Order JO 7400.11G is publicly available as listed in the **ADDRESSES** section of this document. FAA Order JO 7400.11G lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA proposes an amendment to 14 CFR part 71 to remove Class D airspace, Class E surface airspace, and Class E airspace extending upward from 700 feet above the surface for Choctaw NOLF, Milton, FL, as the air traffic control tower has closed, and all instrument approaches canceled.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal will be subject to an environmental analysis per FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," before any FAA final regulatory action.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11G, Airspace Designations and Reporting Points, dated August 19, 2022, and effective September 15, 2022, is amended as follows:

Paragraph 5000 Class D Airspace.
* * * * *

ASO FL D Milton, FL [Removed]
* * * * *
Paragraph 6002 Class E Surface Airspace.
* * * * *

ASO FL E2 Milton, FL [Removed]
* * * * *
Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.
* * * * *

ASO FL E5 Choctaw Outlying Field, FL [Removed]
* * * * *
ASO FL E5 Milton, FL [Removed]
* * * * *
Issued in College Park, Georgia, on August 29, 2023.
Lisa E. Burrows,
Manager, Airspace & Procedures Team North, Eastern Service Center, Air Traffic Organization.

Wednesday, September 6, 2023

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Food and Nutrition Service

Agency Information Collection

Activities: Assessing Equity in Work Requirements and SNAP Employment & Training

AGENCY: Food and Nutrition Service, U.S. Department of Agriculture.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice invites the general public and other public agencies to comment on this proposed information collection for the *Assessing Equity in Work Requirements and SNAP [Supplemental Nutrition Assistance Program] Employment & Training* study. This is a new information collection request. This study informs the U.S. Department of Agriculture's (USDA) Food and Nutrition Service (FNS) about feasible options for assessing and monitoring equity in the administration of SNAP work requirements and SNAP Employment and Training (E&T) services.

DATES: Written comments must be received on or before November 6, 2023.

ADDRESSES: Comments may be sent to Kristen Corey, USDA Food and Nutrition Service, Office of Policy Support, 1320 Braddock Place, Alexandria, VA 22314. Comments may also be submitted via email to Kristen.Corey@usda.gov. Comments will also be accepted through the Federal eRulemaking Portal. Go to <http://www.regulations.gov>, and follow the online instructions for submitting comments electronically.

All responses to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will be a matter of public record.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information or

copies of this information collection should be directed to Kristen Corey at (703) 305-2517.

SUPPLEMENTARY INFORMATION: Comments are invited on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions that were used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Title: Assessing Equity in Work Requirements and SNAP Employment and Training.

Form Number: Not applicable.

OMB Number: 0584-NEW.

Expiration date: Not yet determined.

Type of request: New collection.

Abstract: Section 17 [7 U.S.C. 2026] (a)(1) of the Food and Nutrition Act of 2008, as amended, provides general legislative authority for the planned data collection. It authorizes the Secretary of Agriculture to enter into contracts with private institutions to undertake research that will help improve the administration and effectiveness of SNAP.

FNS is conducting this study to identify data available from SNAP State agencies, their E&T provider partners, and other sources that can be used to develop measures to assess equity in the administration of SNAP work requirements and E&T services. The developed measures can be used to determine how and whether States are providing equitable access to SNAP through the administration of work requirements, achieving equitable participation in education and training opportunities through the SNAP E&T program, and adopting program option and discretionary policies and procedures that influence disparities. FNS has identified four objectives for this study:

(1) Identify areas in the administration of work requirements in

SNAP and in SNAP E&T program administration and access where equity issues could occur.

(2) Identify and describe the data that could be used to assess access and outcomes in the areas identified in Objective 1.

(3) Describe how State agencies address equity in administering work requirements in their SNAP and SNAP E&T programs.

(4) Develop recommendations on how FNS should assess and measure equity in the administration of work requirements in SNAP and in SNAP E&T program administration and access.

The study will gather data through a web-based survey and document review of all 53 SNAP State agencies and key informant interviews in six States. The web-based survey will provide information on current practices addressing equity and data available to assess equity. The web-based survey questions will be limited to those not answerable through the document review. The document review will include extant documents, manuals, guides, and other data sources from all 53 SNAP State agencies. We will identify nine SNAP State agencies and recruit as necessary to ensure the completion of key informant interviews in six States. The key informant interviews will include staff from each of the six study States at (1) the SNAP State agency office and (2) the SNAP local office; interviews will also include (3) SNAP E&T providers and (4) relevant interested parties, who may be government employees or representatives of academic and business interests (e.g., community-based organizations, community college consortium, American Job Centers). We will pretest the web-based survey with individuals with previous experience working in SNAP State agencies. We will pretest the key informant interviews with State and local office staff from a SNAP State agency not selected as a study State.

This study aligns with President Biden's January 20, 2021, Executive Order on Advancing Racial Equity and Support for Underserved Communities Through the Federal Government and the goal of equitable implementation of Federal programs.¹ These data will

¹ The White House. (2021). Executive order on advancing racial equity and support for

ultimately result in recommendations on how FNS can assess and measure equity in the administration of work requirements and SNAP E&T. The data collected will be kept private and will not be shared with anyone outside the study team and FNS research and administrative staff.

Affected public: Members of the public affected by the data collection include State, local, and Tribal governments; business (for profit and not for profit); and individuals.

Respondent groups identified include the following:

(1) *State, local, and Tribal government:* The web-based survey will be completed by all 53 SNAP State agency Directors with input from SNAP E&T Directors and SNAP State agency data analysts who are familiar with SNAP data and data systems. Submission of files for document review will be completed by the SNAP State agency Directors and data analysts.

Staff from the SNAP State office, the SNAP local office, and an interested party will pretest the interview instruments. The key informant interviews will be conducted in the six study States with SNAP State agency Directors, State agency data analysts, SNAP E&T Directors, staff from two local offices, SNAP E&T providers, and interested parties, such as staff at American Job Centers.

(2) *Business (for profit and not for profit):* One SNAP E&T provider will pretest the interview instrument. SNAP E&T providers and interested parties, such as staff at community-based organizations from the six study States, will participate in key informant interviews.

(3) *Individuals:* Six individuals will pretest the web-based survey instrument.

Pretesting: We anticipate 100 percent participation from the respondents involved in pretesting the web-based survey and the key informant interview guides. Six individuals with previous experience working in SNAP State agencies will pretest the web-based survey. Key informant interview instruments will be pretested by one SNAP State Director, one local SNAP E&T administrator, one interested party, and one SNAP E&T provider.

Survey: We will contact all 53 SNAP State agency Directors to request that they complete the survey. FNS anticipates 100 percent participation

from the SNAP State agency Directors. Each SNAP State agency Director may designate up to two staff to complete sections of the survey, accounting for up to an additional 106 State agency staff participating as respondents (159 SNAP State agency staff respondents total). This is the highest possible number of survey respondents.

Document review: When recruited for participation in the survey, SNAP State agencies will also be asked to submit documents for a document review; FNS anticipates 100 percent participation. We will reach out to 53 SNAP State agency Directors to submit documents; Directors will be assisted by one staff member (*i.e.*, data analyst) to identify the necessary documents.

Key informant interviews: We will identify nine candidate States and conduct key informant interview in six States. The key informant interviews will involve semi-structured interviews with program administrators and staff of SNAP State agencies and SNAP local agencies, businesses or other agencies providing SNAP E&T services, and interested parties representing other government agencies or businesses. After FNS and the study team recruit the six States, FNS expects all selected local SNAP agencies, SNAP providers, and interested parties to participate.

Estimated number of respondents: The total estimated number of respondents is 264 as follows: 203 State, local, and Tribal government staff; 55 business (for profit and not for profit) staff; and 6 individuals. Of the 264 contacted, 264 are estimated to be responsive, and three are estimated to be nonresponsive. The breakout of respondents follows:

(1) *State, local, and Tribal government staff:* Of the 159 SNAP State agency staff contacted, 159 are estimated to be responsive, and three will be nonresponsive. The web-based survey will be completed by 53 SNAP State Directors, 53 data analysts, and 53 SNAP E&T Directors; we expect them all to be responsive. The submission of files for document review will be completed by 53 SNAP State Directors and 53 data analysts; we expect them all to be responsive. Before beginning key informant interviews, we will pretest the interview instruments with a SNAP State Director, a local SNAP E&T administrator, and an interested party working for the government; we expect them all to be responsive. We will conduct key informant interviews in six study States. To successfully recruit six study States, FNS and the study team will contact up to nine SNAP State Directors; six SNAP State Directors will agree to participate in the interviews

and three will be nonresponsive. Other State staff joining the SNAP State Directors for the key informant interviews will be six data analysts and six SNAP E&T Directors, who will all be responsive, and zero will be nonresponsive. Other local government staff will include 12 local SNAP E&T administrators, 24 local office staff, and six interested parties working for the government will be contacted and be responsive; zero will be nonresponsive.

(2) *Business (for profit and not for profit) staff:* One SNAP E&T provider will be recruited to pretest the key informant interview instrument, and they will be responsive. Of the 48 SNAP E&T providers contacted for key informant interviews in the six study States, 48 are estimated to be responsive, and zero will be nonresponsive. Six interested parties employed by businesses will be contacted for key informant interviews; we expect all six to be responsive and zero to be nonresponsive.

(3) *Individuals:* Of the six individuals recruited to pretest the web-based survey, all six are estimated to be responsive, and zero will be nonresponsive.

Estimated number of responses per respondent: 3.67—based on 981 total annual responses (978 responsive and 3 nonresponsive) made by the 264 respondents (264 responsive and three nonresponsive). See table 1 for the estimated number of responses per respondent for each type of respondent.

The estimate breakout follows:

(1) State, local, and Tribal government staff:

(a) *SNAP State Staff (159):* The estimated number of responses per SNAP State staff is 4.23:

—Fifty-three SNAP State Directors will receive recruitment emails from FNS and the study team for the web-based survey. They will all respond and complete the web-based survey. The SNAP State Directors will coordinate with their staff to support the accurate completion of the survey; 53 data analysts and 53 SNAP E&T Directors will assist in the completion of the web-based survey.

—Fifty-three SNAP State Directors will respond to the request for the submission of files for document review, including reading advance materials and preparation of the files for submission. SNAP State Directors will coordinate with their staff to obtain the necessary files; 53 data analysts will assist in the preparation of documents.

—One SNAP State Director will be recruited and will pretest the key

informant interview instrument that will be used with SNAP State office staff.

- Up to nine SNAP State Directors will receive and respond to an email invitation to participate in key informant interviews. SNAP State Directors in selected States will receive an introductory email from the study team and have a meeting to schedule interviews and ask questions. Of the up to nine SNAP State Directors, six will agree to participate in the virtual key informant interviews and up to three will decline to participate.

- Six SNAP E&T Directors and six data analysts will also participate in virtual key informant interviews.

(b) *Local SNAP office staff (37)*: The estimated number of responses per local SNAP office staff is 2.97:

- One local SNAP E&T administrator will be recruited and will pretest the key informant interview instrument that will be used with SNAP local office staff.
- Twelve local SNAP E&T administrators will respond to scheduling and take part in virtual key informant interviews; 24 additional local SNAP office staff will take part in virtual key informant interviews.

(c) *Non-SNAP State and local government agency staff (7)*: The estimated number of responses per non-SNAP State and local staff is 2.86:

- One interested party will be recruited and will pretest the key informant interview instrument that will be used with interested parties.
- Six interested parties employed by either State or local government agencies will respond to scheduling and take part in virtual key informant interviews.

(2) *Business (for profit and not for profit) SNAP E&T providers (55)*: The estimated number of responses per business stakeholder staff is 2.98:

- One SNAP E&T provider will be recruited and will pretest the key informant interview instrument that will be used with E&T providers.
- Forty-eight business E&T provider staff will respond to scheduling and participate in virtual key informant interviews.
- Six interested parties employed by a for-profit or not-for-profit business will respond to scheduling and participate in virtual key informant interviews.

(3) *Individuals (6)*: The estimated number of responses per individuals is 2.00:

- Six individuals will be recruited and will pretest the web-based survey that will be administered to all 53 SNAP State agencies.

Estimated total frequency response per respondent. FNS anticipates 3.67 responses per respondent.

Estimated total annual responses: 981 (978 annual responses for responsive participants and 3 annual responses for nonresponsive participants).

Estimated time per response: 0.3796 hours (0.38 hours for responsive participants and 0.25 hours for nonresponsive participants). Among respondents, the estimated time of response varies from 0.03 hours to 1.50 hours depending on respondent group and activity, as table 1 shows.

Estimated total annual burden on respondents and nonrespondents: 372.41 hours (371.66 hours for responsive participants and 0.75 hours for nonresponsive participants). See table 1 for estimated total annual burden for each type of respondent.

Tameka Owens,

Acting Administrator, Food and Nutrition Service.

Footnotes:

^a Numbers are always rounded up to the next whole number.^b Decimal values have been calculated by multiplying the decimal unit value of one minute (.0167) by the total number of minutes (Conversion of Minutes to Decimals)^c All hourly wage rates are fully loaded (using average hourly wage * 1.33 to obtain fully loaded wage).^d Costs are rounded up to the next whole cent.^e SNAP State directors invited to participate in interviews are a subset of the directors participating in the survey. We expect that nine directors will be invited to participate in interviews and three will decline to participate. The three non-respondents are noted in the table, but not double-counted in the sample size column.

DEPARTMENT OF AGRICULTURE**Forest Service****Grand Mesa, Uncompahgre, and Gunnison National Forests; Revision of the Land Management Plan for the Grand Mesa, Uncompahgre, and Gunnison National Forests**

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of opportunity to object to the revised Land Management Plan and the Regional Forester's list of species of conservation concern for the Grand Mesa, Uncompahgre, and Gunnison National Forests.

SUMMARY: The Forest Service, U.S. Department of Agriculture, is revising the Grand Mesa, Uncompahgre, and Gunnison National Forests' Land Management Plan (Plan). The Forest Service has prepared a Final Environmental Impact Statement (FEIS) for the revised Plan and draft Record of Decision (ROD). This notice is to inform the public that the Grand Mesa, Uncompahgre, and Gunnison National Forests (GMUG National Forests) are initiating a 60-day period where individuals or entities with specific concerns about the Grand Mesa, Uncompahgre, and Gunnison National Forests' revised Plan and the associated FEIS may file objections for Forest Service review prior to the approval of the revised Plan. This is also an opportunity to object to the Regional Forester's list of species of conservation concern for the Grand Mesa, Uncompahgre, and Gunnison National Forests.

DATES: The publication date of the legal notice in the Grand Mesa, Uncompahgre, and Gunnison National Forests' newspaper of record, *Grand Junction Sentinel*, initiates the 60-day objection filing period and is the exclusive means for calculating the time to file an objection (36 CFR 219.52(c)(5)). An electronic copy of the legal notice with the publication date will be posted at <https://www.fs.usda.gov/goto/gmug/forestplan>.

ADDRESSES: The Grand Mesa, Uncompahgre, and Gunnison National Forests' revised Plan, FEIS, draft ROD, the Regional Forester's list of species of conservation concern, and other supporting information will be available for review at: <https://www.fs.usda.gov/goto/gmug/forestplan> or at the following office: Grand Mesa, Uncompahgre, and Gunnison National Forests, 2250 Main Street, Delta, CO 81416, phone: 970-874-6600.

Objections must be submitted to the Objection Reviewing Officer by one of the following methods:

- *Electronically to the Objection Reviewing Officer:* Electronic objections are preferred and may be submitted through the project web page at <https://www.fs.usda.gov/goto/gmug/forestplan/objections>; Electronic submissions (including all attachments) must be submitted in a format (Word, PDF, or Rich Text) that is readable and searchable with optical character recognition software. An automated response will confirm your electronic objection has been received.

- *Via Regular Mail, Private Carrier, or Hand Delivery to the Following Address:* USDA Forest Service, Rocky Mountain Region, Attn: Objection Reviewing Officer, C/O Director of Strategic Planning, 2nd floor, 1617 Cole Blvd., Bldg. 17, Lakewood, CO 80401. For hand delivery, office hours are Monday through Friday, 8 a.m. to 4:30 p.m., excluding Federal holidays.

- *By Fax:* If fax is the only method available for objection, please contact Administrative Review Specialist Scarlett Vallaire at scarlett.vallaire@usda.gov or 801-989-6605.

FOR FURTHER INFORMATION CONTACT:

Forest Plan Revision Team Leader, Samantha Staley, at samantha.j.staley@usda.gov or 970-852-9812. Individuals who use telecommunication devices for the deaf and hard of hearing (TDD) may call the Federal Relay Service (FRS) at 800-877-8339, 24 hours a day, every day of the year, including holidays.

SUPPLEMENTARY INFORMATION: The decision to approve the revised Plan and the Regional Forester's list of species of conservation concern for the Grand Mesa, Uncompahgre, and Gunnison National Forests will be subject to the objection process identified in 36 CFR part 219 subpart B (219.50 to 219.62). Per 36 CFR 219.53, only individuals and entities who have submitted substantive formal comments related to a plan revision during the opportunities for public comment that are attributable to the objector may file an objection unless the objection concerns an issue that arose after the opportunities for formal comment.

How To File an Objection

Objections must be submitted to the Objection Reviewing Officer at the address shown in the **ADDRESSES** section of this notice. An objection must include the following (36 CFR 219.54(c)):

(1) The objector's name and address along with a telephone number or email address if available. In cases where no

identifiable name is attached to an objection, the Forest Service will attempt to verify the identity of the objector to confirm objection eligibility;

(2) Signature or other verification of authorship upon request (a scanned signature for electronic mail may be filed with the objection);

(3) Identification of the lead objector when multiple names are listed on an objection. The Forest Service will communicate to all parties to an objection through the lead objector. Verification of the identity of the lead objector must also be provided if requested;

(4) The name of the plan revision being objected to, and the name and title of the responsible official;

(5) A statement of the issues and/or parts of the plan revision to which the objection applies;

(6) A concise statement explaining the objection and suggesting how the draft plan decision may be improved. If the objector believes that the plan revision is inconsistent with law, regulation, or policy, an explanation should be included;

(7) A statement that demonstrates the link between the objector's prior substantive formal comments and the content of the objection, unless the objection concerns an issue that arose after the opportunities for formal comment; and

(8) All documents referenced in the objection (a bibliography is not sufficient), except the following need not be provided:

a. All or any part of a Federal law or regulation,

b. Forest Service Directive System documents and land management plans or other published Forest Service documents,

c. Documents referenced by the Forest Service in the planning documentation related to the proposal subject to objection, and

d. Formal comments previously provided to the Forest Service by the objector during the proposed plan, plan amendment, or plan revision comment period.

Additionally, objections should be identified as pertaining to the "GMUG National Forests Plan" or the "Regional Forester's Species of Conservation Concern List" for the GMUG National Forests, as these are subject to separate objection processes. Objectors filing objections on both topics should submit these as separate objection letters.

It is the responsibility of the objector to ensure that the Objection Reviewing Officer receives the objection in a timely manner. The regulations generally prohibit extending the length of the

objection filing period (36 CFR 219.56(d)). However, when the time period expires on a Saturday, Sunday, or a Federal holiday, the time is extended to the end of the next Federal working day (11:59 p.m. for objections filed by electronic means such as email or facsimile machine) (36 CFR 219.56).

Responsible Official: The responsible official who will approve the ROD for the Grand Mesa, Uncompahgre, and Gunnison National Forests' revised Plan is Forest Supervisor Chad Stewart, Grand Mesa, Uncompahgre, and Gunnison National Forests Headquarters, 2250 South Main Street, Delta, CO 81416, and phone: 970-874-6674. The responsible official for the list of species of conservation concern is Regional Forester Frank Beum, USDA Forest Service Rocky Mountain Region, 1617 Cole Blvd., Lakewood, CO 80401.

The Regional Forester is the reviewing officer for the revised Plan because the Forest Supervisor is the responsible official (36 CFR 219.56(e)). Objection review of the Regional Forester's list of species of conservation concern will be subject to a separate objection process from the objection review of the Plan. The Chief of the Forest Service is the reviewing officer for the list of species of conservation concern because the Regional Forester is the responsible official (36 CFR 219.56(e)(2)). This authority may be delegated to an individual Deputy Chief or Associate Deputy Chief for the National Forest System, consistent with delegations of authority provided in the Forest Service Manual at sections 1235.4 and 1235.5.

Dated: August 30, 2023.

Troy Heithecker,

Associate Deputy Chief, National Forest System.

Steel Propane Cylinders From Thailand: Preliminary Results of Antidumping Duty Administrative Review; 2021-2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily finds that Sahamitr Pressure Container Plc. (also known as Sahamitr Pressure Container Public Company Limited) (SMPC) made sales of steel propane

cylinders from Thailand at less than normal value (NV) during the period of review (POR), August 1, 2021, through July 31, 2022. We invite interested parties to comment on these preliminary results.

DATES: Applicable September 6, 2023.

FOR FURTHER INFORMATION CONTACT:

Samuel Brummitt, AD/CVD Operations, Office III, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-7851.

SUPPLEMENTARY INFORMATION:

Background

On August 15, 2019, Commerce published in the **Federal Register** the antidumping duty order on steel propane cylinders from Thailand.¹ On August 2, 2022, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the *Order*.² On October 11, 2022, based on timely requests for review and in accordance with section 751(a)(1) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.221(c)(1)(i), Commerce initiated an administrative review of the *Order*.³ Pursuant to section 751(a)(3)(A) of the Act, Commerce extended the deadline for the preliminary results until August 31, 2023.⁴

For a complete description of the events that followed the initiation of this review, see the Preliminary Decision Memorandum.⁵ A list of the topics included in the Preliminary Decision Memorandum is included as the appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and

Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

Scope of the Order

The merchandise covered by this *Order* is steel propane cylinders from Thailand. For a complete description of the scope of the *Order*, see the Preliminary Decision Memorandum.⁶

Methodology

Commerce is conducting this review in accordance with section 751(a) of the Act. Export price was calculated in accordance with section 772 of the Act. NV was calculated in accordance with section 773 of the Act. For a full description of the methodology underlying these preliminary results, see the Preliminary Decision Memorandum.

Preliminary Results of the Review

We preliminarily determine that the following estimated weighted-average dumping margin exists for the period August 1, 2021, through July 31, 2022:

Exporter/producer	Weighted-average dumping margin (percent)
Sahamitr Pressure Container Plc	2.12

Disclosure and Public Comment

We intend to disclose the calculations used for these preliminary results to interested parties within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b). Interested parties may submit case briefs not later than seven days after the date on which the verification report is issued in this administrative review.⁷ Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than seven days after the date for filing case briefs.⁸ Parties who submit case briefs or rebuttal briefs in this review are encouraged to submit with each argument: (1) a statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.⁹ Executive

summaries should be limited to five pages total, including footnotes. All briefs must be filed electronically using ACCESS.¹⁰

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, must submit a written request to the Assistant Secretary for Enforcement and Compliance, within 30 days after the date of publication of this notice in the **Federal Register**. Requests should contain: (1) the party's name, address and telephone number; (2) the number of participants; and (3) whether any participant is a foreign national; and (4) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised by each party in their respective case and rebuttal briefs. If a request for a hearing is made, Commerce will announce the date and time of the hearing. Parties should confirm by telephone the date and time of the hearing two days before the scheduled hearing date.

Note that Commerce has temporarily modified certain of its requirements for serving documents containing business proprietary information, until further notice.¹¹ An electronically filed document must be received successfully in its entirety in ACCESS by 5:00 p.m. Eastern Time on the due date.

We intend to issue the final results of this administrative review, including the results of our analysis of the issues raised in any written briefs, not later than 120 days after the date of publication of this notice, unless extended, pursuant to section 751(a)(3)(A) of the Act.

Verification

On January 18, 2023, Worthington Industries (the petitioner) requested that Commerce conduct verification of SMPC's responses.¹² Accordingly, as provided in section 782(i)(3) of the Act, Commerce intends to verify the information relied upon in determining its final results.

Assessment Rates

Upon issuance of the final results of this review, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review. If the weighted-average dumping margin for SMPC (*i.e.*, the sole individually-examined respondent in this review) is not zero or *de minimis* (*i.e.*, greater than or equal to 0.5 percent) in the final results of this review, we

will calculate importer-specific *ad valorem* antidumping duty assessment rates on the basis of the ratio of the total amount of dumping calculated for the examined sales made during the POR to each importer and the total entered value of those same sales, in accordance with 19 CFR 351.212(b)(1). If SMPC has not reported entered values, we will calculate a per-unit assessment rate for each importer by dividing the total amount of dumping calculated for the examined sales made to that importer by the total quantity associated with those transactions. To determine whether an importer-specific, per-unit assessment rate is *de minimis*, in accordance with 19 CFR 351.106(c)(2), we also will calculate an importer-specific *ad valorem* ratio based on estimated entered values. Where either SMPC's weighted average dumping margin is zero or *de minimis*, or an importer-specific assessment *ad valorem* rate is zero or *de minimis*, we intend to instruct CBP to liquidate appropriate entries without regard to antidumping duties.¹³ The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by this review where applicable.

For entries of subject merchandise during the POR produced by SMPC for which the producer did not know its merchandise was destined for the United States, we will instruct CBP to liquidate those entries at the all-others rate (*i.e.*, 10.77 percent)¹⁴ if there is no rate for the intermediate company(ies) involved in the transaction.¹⁵

We intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse,

for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for SMPC will be equal to the weighted-average dumping margin established in the final results of this administrative review, except if the rate is less than 0.50 percent and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for previously reviewed or investigated companies not listed above, the cash deposit rate will continue to be the company-specific rate published for the most recently completed segment of this proceeding in which the company participated; (3) if the exporter is not a firm covered in this review, a prior review, or in the less-than-fair-value investigation (LTFV) but the producer is, the cash deposit rate will be the rate established for the most recently completed segment of this proceeding for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be the all-others rate of 10.77 percent, the rate established in the LTFV investigation of this proceeding.¹⁶ These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification to Interested Parties

We are issuing and publishing these preliminary results of review in accordance with sections 751(a)(1) and 777(i) of the Act, and 19 CFR 351.213(h)(2) and 19 CFR 351.221(b)(4).

Dated: August 30, 2023.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity To Request Administrative Review and Join Annual Inquiry Service List

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

FOR FURTHER INFORMATION CONTACT: Brenda E. Brown, Office of AD/CVD Operations, Customs Liaison Unit, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230, telephone: (202) 482–4735.

SUPPLEMENTARY INFORMATION:

Background

Each year during the anniversary month of the publication of an antidumping or countervailing duty order, finding, or suspended investigation, an interested party, as defined in section 771(9) of the Tariff Act of 1930, as amended (the Act), may request, in accordance with 19 CFR 351.213, that the U.S. Department of Commerce (Commerce) conduct an administrative review of that antidumping or countervailing duty order, finding, or suspended investigation.

All deadlines for the submission of comments or actions by Commerce discussed below refer to the number of calendar days from the applicable starting date.

Respondent Selection

In the event Commerce limits the number of respondents for individual examination for administrative reviews initiated pursuant to requests made for the orders identified below, Commerce intends to select respondents based on U.S. Customs and Border Protection (CBP) data for U.S. imports during the period of review. We intend to release the CBP data under administrative protective order (APO) to all parties having an APO within five days of publication of the initiation notice and to make our decision regarding

respondent selection within 35 days of publication of the initiation **Federal Register** notice. Therefore, we encourage all parties interested in commenting on respondent selection to submit their APO applications on the date of publication of the initiation notice, or as soon thereafter as possible. Commerce invites comments regarding the CBP data and respondent selection within five days of placement of the CBP data on the record of the review.

In the event Commerce decides it is necessary to limit individual examination of respondents and conduct respondent selection under section 777A(c)(2) of the Act:

In general, Commerce finds that determinations concerning whether particular companies should be “collapsed” (*i.e.*, treated as a single entity for purposes of calculating antidumping duty rates) require a substantial amount of detailed information and analysis, which often require follow-up questions and analysis. Accordingly, Commerce will not conduct collapsing analyses at the respondent selection phase of a review and will not collapse companies at the respondent selection phase unless there has been a determination to collapse certain companies in a previous segment of this antidumping proceeding (*i.e.*, investigation, administrative review, new shipper review or changed circumstances review). For any company subject to a review, if Commerce determined, or continued to treat, that company as collapsed with others, Commerce will assume that such companies continue to operate in the same manner and will collapse them for respondent selection purposes.

Otherwise, Commerce will not collapse companies for purposes of respondent selection. *Parties are requested to:* (a) identify which companies subject to review previously were collapsed; and (b) provide a citation to the proceeding in which they were collapsed. Further, if companies are requested to complete a quantity and value questionnaire for purposes of respondent selection, in general each company must report volume and value data separately for itself. Parties should not include data for any other party, even if they believe they should be treated as a single entity with that other party. If a company was collapsed with another company or companies in the most recently completed segment of a proceeding where Commerce considered collapsing that entity, complete quantity and value

data for that collapsed entity must be submitted.

Deadline for Withdrawal of Request for Administrative Review

Pursuant to 19 CFR 351.213(d)(1), a party that requests a review may withdraw that request within 90 days of the date of publication of the notice of initiation of the requested review. The regulation provides that Commerce may extend this time if it is reasonable to do so. Determinations by Commerce to extend the 90-day deadline will be made on a case-by-case basis.

Deadline for Particular Market Situation Allegation

Section 504 of the Trade Preferences Extension Act of 2015 amended the Act by adding the concept of particular market situation (PMS) for purposes of constructed value under section 773(e) of the Act.¹ Section 773(e) of the Act states that “if a particular market situation exists such that the cost of materials and fabrication or other processing of any kind does not accurately reflect the cost of production in the ordinary course of trade, the administering authority may use another calculation methodology under this subtitle or any other calculation methodology.” When an interested party submits a PMS allegation pursuant to section 773(e) of the Act, Commerce will respond to such a submission consistent with 19 CFR 351.301(c)(2)(v). If Commerce finds that a PMS exists under section 773(e) of the Act, then it will modify its dumping calculations appropriately.

Neither section 773(e) of the Act nor 19 CFR 351.301(c)(2)(v) set a deadline for the submission of PMS allegations and supporting factual information. However, in order to administer section 773(e) of the Act, Commerce must receive PMS allegations and supporting factual information with enough time to consider the submission. Thus, should an interested party wish to submit a PMS allegation and supporting new factual information pursuant to section 773(e) of the Act, it must do so no later than 20 days after submission of initial Section D responses.

Opportunity To Request A Review: Not later than the last day of September 2023,² interested parties may request administrative review of the following orders, findings, or suspended investigations, with anniversary dates in September for the following periods:

¹ See Trade Preferences Extension Act of 2015, Public Law 114–27, 129 Stat. 362 (2015).

² Or the next business day, if the deadline falls on a weekend, federal holiday or any other day when Commerce is closed.

Suspension Agreements

MEXICO: Fresh Tomatoes, A-201-820	1/1/22-12/31/22

In accordance with 19 CFR 351.213(b), an interested party as defined by section 771(9) of the Act may request in writing that the Secretary conduct an administrative review. For both antidumping and countervailing duty reviews, the interested party must

specify the individual producers or exporters covered by an antidumping finding or an antidumping or countervailing duty order or suspension agreement for which it is requesting a review. In addition, a domestic interested party or an interested party

described in section 771(9)(B) of the Act must state why it desires the Secretary to review those particular producers or exporters. If the interested party intends for the Secretary to review sales of merchandise by an exporter (or a producer if that producer also exports

merchandise from other suppliers) which was produced in more than one country of origin and each country of origin is subject to a separate order, then the interested party must state specifically, on an order-by-order basis, which exporter(s) the request is intended to cover.

Note that, for any party Commerce was unable to locate in prior segments, Commerce will not accept a request for an administrative review of that party absent new information as to the party's location. Moreover, if the interested party who files a request for review is unable to locate the producer or exporter for which it requested the review, the interested party must provide an explanation of the attempts it made to locate the producer or exporter at the same time it files its request for review, in order for the Secretary to determine if the interested party's attempts were reasonable, pursuant to 19 CFR 351.303(f)(3)(ii).

As explained in *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties*, 68 FR 23954 (May 6, 2003), and *Non-Market Economy Antidumping Proceedings: Assessment of Antidumping Duties*, 76 FR 65694 (October 24, 2011), Commerce clarified its practice with respect to the collection of final antidumping duties on imports of merchandise where intermediate firms are involved. The public should be aware of this clarification in determining whether to request an administrative review of merchandise subject to antidumping findings and orders.³

Commerce no longer considers the non-market economy (NME) entity as an exporter conditionally subject to an antidumping duty administrative reviews.⁴ Accordingly, the NME entity will not be under review unless Commerce specifically receives a request for, or self-initiates, a review of the NME entity.⁵ In administrative reviews of antidumping duty orders on merchandise from NME countries where a review of the NME entity has not been initiated, but where an individual exporter for which a review was

initiated does not qualify for a separate rate, Commerce will issue a final decision indicating that the company in question is part of the NME entity. However, in that situation, because no review of the NME entity was conducted, the NME entity's entries were not subject to the review and the rate for the NME entity is not subject to change as a result of that review (although the rate for the individual exporter may change as a function of the finding that the exporter is part of the NME entity). Following initiation of an antidumping administrative review when there is no review requested of the NME entity, Commerce will instruct CBP to liquidate entries for all exporters not named in the initiation notice, including those that were suspended at the NME entity rate.

All requests must be filed electronically in Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS) on Enforcement and Compliance's ACCESS website at <https://access.trade.gov>.⁶ Further, in accordance with 19 CFR 351.303(f)(1)(i), a copy of each request must be served on the petitioner and each exporter or producer specified in the request. Note that Commerce has temporarily modified certain of its requirements for serving documents containing business proprietary information, until further notice.⁷

Commerce will publish in the **Federal Register** a notice of "Initiation of Administrative Review of Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation" for requests received by the last day of September 2023. If Commerce does not receive, by the last day of September 2023, a request for review of entries covered by an order, finding, or suspended investigation listed in this notice and for the period identified above, Commerce will instruct CBP to assess antidumping or countervailing duties on those entries at a rate equal to the cash deposit of estimated antidumping or countervailing duties required on those entries at the time of entry, or withdrawal from warehouse, for consumption and to continue to collect the cash deposit previously ordered.

For the first administrative review of any order, there will be no assessment of antidumping or countervailing duties

on entries of subject merchandise entered, or withdrawn from warehouse, for consumption during the relevant provisional-measures "gap" period of the order, if such a gap period is applicable to the period of review.

Establishment of and Updates to the Annual Inquiry Service List

On September 20, 2021, Commerce published the final rule titled "*Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws*" in the **Federal Register**.⁸ On September 27, 2021, Commerce also published the notice entitled "*Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions*" in the **Federal Register**.⁹ The *Final Rule* and *Procedural Guidance* provide that Commerce will maintain an annual inquiry service list for each order or suspended investigation, and any interested party submitting a scope ruling application or request for circumvention inquiry shall serve a copy of the application or request on the persons on the annual inquiry service list for that order, as well as any companion order covering the same merchandise from the same country of origin.¹⁰

In accordance with the *Procedural Guidance*, for orders published in the **Federal Register** before November 4, 2021, Commerce created an annual inquiry service list segment for each order and suspended investigation. Interested parties who wished to be added to the annual inquiry service list for an order submitted an entry of appearance to the annual inquiry service list segment for the order in ACCESS, and on November 4, 2021, Commerce finalized the initial annual inquiry service lists for each order and suspended investigation. Each annual inquiry service list has been saved as a public service list in ACCESS, under each case number, and under a specific segment type called "AISL-Annual Inquiry Service List."¹¹

⁸ See *Regulations to Improve Administration and Enforcement of Antidumping and Countervailing Duty Laws*, 86 FR 52300 (September 20, 2021) (*Final Rule*).

⁹ See *Scope Ruling Application; Annual Inquiry Service List; and Informational Sessions*, 86 FR 53205 (September 27, 2021) (*Procedural Guidance*).

¹⁰ *Id.*

¹¹ This segment has been combined with the ACCESS Segment Specific Information (SSI) field which will display the month in which the notice of the order or suspended investigation was published in the **Federal Register**, also known as the anniversary month. For example, for an order under case number A-000-000 that was published in the **Federal Register** in January, the relevant segment and SSI combination will appear in

³ See the Enforcement and Compliance website at <https://www.trade.gov/us-antidumping-and-countervailing-duties>.

⁴ See *Antidumping Proceedings: Announcement of Change in Department Practice for Respondent Selection in Antidumping Duty Proceedings and Conditional Review of the Nonmarket Economy Entity in NME Antidumping Duty Proceedings*, 78 FR 65963 (November 4, 2013).

⁵ In accordance with 19 CFR 351.213(b)(1), parties should specify that they are requesting a review of entries from exporters comprising the entity, and to the extent possible, include the names of such exporters in their request.

⁶ See *Antidumping and Countervailing Duty Proceedings: Electronic Filing Procedures; Administrative Protective Order Procedures*, 76 FR 39263 (July 6, 2011).

⁷ See *Temporary Rule Modifying AD/CVD Service Requirements Due to COVID-19; Extension of Effective Period*, 85 FR 41363 (July 10, 2020).

As mentioned in the *Procedural Guidance*, beginning in January 2022, Commerce will update these annual inquiry service lists on an annual basis when the *Opportunity Notice* for the anniversary month of the order or suspended investigation is published in the **Federal Register**.¹² Accordingly, Commerce will update the annual inquiry service lists for the above-listed antidumping and countervailing duty proceedings. All interested parties wishing to appear on the updated annual inquiry service list must take one of the two following actions: (1) new interested parties who did not previously submit an entry of appearance must submit a new entry of appearance at this time; or (2) interested parties who were included in the preceding annual inquiry service list must submit an amended entry of appearance to be included in the next year's annual inquiry service list. For these interested parties, Commerce will change the entry of appearance status from "Active" to "Needs Amendment" for the annual inquiry service lists corresponding to the above-listed proceedings. This will allow those interested parties to make any necessary amendments and resubmit their entries of appearance. If no amendments need to be made, the interested party should indicate in the area on the ACCESS form requesting an explanation for the amendment that it is resubmitting its entry of appearance for inclusion in the annual inquiry service list for the following year. As mentioned in the *Final Rule*,¹³ once the petitioners and foreign governments have submitted an entry of appearance for the first time, they will automatically be added to the updated annual inquiry service list each year.

Interested parties have 30 days after the date of this notice to submit new or amended entries of appearance. Commerce will then finalize the annual inquiry service lists five business days thereafter. For ease of administration, please note that Commerce requests that law firms with more than one attorney representing interested parties in a proceeding designate a lead attorney to be included on the annual inquiry service list.

Commerce may update an annual inquiry service list at any time as needed based on interested parties' amendments to their entries of appearance to remove or otherwise

ACCESS as "AISL-January Anniversary." Note that there will be only one annual inquiry service list segment per case number, and the anniversary month will be pre-populated in ACCESS.

¹² See *Procedural Guidance*, 86 FR at 53206.

¹³ See *Final Rule*, 86 FR at 52335.

modify their list of members and representatives, or to update contact information. Any changes or announcements pertaining to these procedures will be posted to the ACCESS website at <https://access.trade.gov>.

Special Instructions for Petitioners and Foreign Governments

In the *Final Rule*, Commerce stated that, "after an initial request and placement on the annual inquiry service list, both petitioners and foreign governments will automatically be placed on the annual inquiry service list in the years that follow."¹⁴ Accordingly, as stated above and pursuant to 19 CFR 351.225(n)(3), the petitioners and foreign governments will not need to resubmit their entries of appearance each year to continue to be included on the annual inquiry service list. However, the petitioners and foreign governments are responsible for making amendments to their entries of appearance during the annual update to the annual inquiry service list in accordance with the procedures described above.

This notice is not required by statute but is published as a service to the international trading community.

Dated: August 23, 2023.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

International Trade Administration

[A-570-028]

Hydrofluorocarbon Blends From the People's Republic of China: Preliminary Results of Antidumping Duty Administrative Review; 2021-2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that the sole mandatory respondent under review did not make sales of Hydrofluorocarbon Blends (HFC blends) from the People's Republic of China (China) at less than normal value (NV) during the period of review (POR), August 31, 2021, through July 31, 2022. Interested parties are invited to comment on these preliminary results.

¹⁴ *Id.*

DATES: Applicable September 6, 2023.

FOR FURTHER INFORMATION CONTACT: Alex Wood, AD/CVD Operations, Office II, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-1959.

SUPPLEMENTARY INFORMATION:

Background

On August 19, 2016, Commerce published the antidumping duty (AD) order on HFC blends from China.¹ On August 2, 2022, Commerce published a notice of opportunity to request an administrative review of the *Order*, covering the POR, pursuant to section 751(a)(1) of the Tariff Act of 1930, as amended (the Act).² On October 11, 2022, based on timely requests for review from American HFC Coalition and Zhejiang Sanmei Chemical Industry Co., Ltd. (Sanmei),³ Commerce initiated an administrative review of the *Order* covering the POR.⁴ The administrative review covers 17 companies,⁵ including the mandatory respondent, Sanmei. On April 10, 2023, Commerce extended the deadline for the preliminary results of this review to no later than August 31, 2023.⁶

Scope of the Order

The products covered by the *Order* are shipments of HFC blends from China. For a full description of the scope of the *Order*, see the Preliminary Decision Memorandum.⁷

Separate Rate

Commerce preliminarily determines that one respondent, Sanmei, the only company individually examined in this

¹ See *Hydrofluorocarbon Blends from the People's Republic of China: Antidumping Duty Order*, 81 FR 55436 (August 19, 2016) (*Order*).

² See *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation; Opportunity to Request Administrative Review and Join Annual Inquiry Service List*, 87 FR 47187 (August 2, 2022).

³ See HFC Coalition's Letter, "Request for Administrative Review," dated August 31, 2022; see also Sanmei's Letter, "Request for Administrative Review," dated August 31, 2022.

⁴ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 87 FR 61278 (October 11, 2022) (*Initiation Notice*).

⁵ The *Initiation Notice* listed 18 companies. However, Zhejiang Sanmei Chemical Ind. Co., Ltd. is the same company as Zhejiang Sanmei Chemical Industry Co., Ltd.

⁶ See Memorandum, "Extension of Deadline for Preliminary Results of 2021-2022 Antidumping Duty Administrative Review," dated April 10, 2023.

⁷ See Memorandum, "Decision Memorandum for the Preliminary Results of the 2021-2022 Antidumping Duty Administrative Review of Hydrofluorocarbon Blends from the People's Republic of China," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

review, is eligible to receive a separate rate in this review.⁸

China-Wide Entity

Under Commerce's policy regarding the conditional review of the China-wide entity,⁹ the China-wide entity will not be under review unless a party specifically requests, or Commerce self-initiates, a review of the entity. Because no party requested a review of the China-wide entity in this review, the entity is not under review, and the entity's rate (*i.e.*, 216.37 percent) is not subject to change.¹⁰ Commerce considers the 16 companies for which a review was requested (which did not file a separate rate application or did not demonstrate separate rate eligibility) listed in Appendix II to this notice, to be part of the China-wide entity.¹¹

Methodology

Commerce is conducting this review in accordance with section 751(a)(1)(B) of the Act. We calculated export price in accordance with section 772 of the Act. Because China is an NME country within the meaning of section 771(18) of the Act, we calculated normal value in accordance with section 773(c) of the Act.

For a full description of the methodology underlying our preliminary results, *see* the Preliminary Decision Memorandum.¹² A list of topics discussed in the Preliminary Decision Memorandum is included as Appendix I to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Preliminary Decision Memorandum can be found at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

⁹ *See Antidumping Proceedings: Announcement of Change in Department Practice for Respondent Selection in Antidumping Duty Proceedings and Conditional Review of the Nonmarket Economy Entity in NME Antidumping Duty Proceedings*, 78 FR 65963 (November 4, 2013).

¹⁰ *See Order*.

¹¹ *See Initiation Notice* ("All firms listed below that wish to qualify for separate rate status in the administrative reviews involving NME countries must complete, as appropriate, either a separate rate application or certification, as described below."), 87 FR at 61285; *see also* Appendix II, *infra*, for the list of companies that are subject to this administrative review that are considered to be part of the China-wide entity.

¹² *See Preliminary Decision Memorandum* at "Discussion of the Methodology."

Preliminary Results of Review

Commerce preliminarily determines that the following weighted-average dumping margin exists for the period August 31, 2021, through July 31, 2022:

Exporter	Weighted-average dumping margin (percent)
Sanmei Chemical Industry Co., Ltd	0.00

Disclosure

Commerce intends to disclose the calculations performed in connection with these preliminary results to interested parties within five days after the date of publication of this notice.¹³

Public Comment

Case briefs or other written comments may be submitted to Commerce no later than 30 days after the date of publication of this notice.¹⁴ Rebuttal briefs, limited to issues raised in the case briefs, may be filed no later than seven days after the time limit for filing case briefs.¹⁵ Parties who submit case briefs or rebuttal briefs in this proceeding are encouraged to submit with each argument: (1) a statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.¹⁶ Case and rebuttal briefs should be filed using ACCESS.¹⁷ Note that Commerce has temporarily modified certain of its requirements for serving documents containing business proprietary information, until further notice.¹⁸

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, filed electronically via ACCESS within 30 days after the date of publication of this notice.¹⁹ Hearing requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to issues raised in the briefs. If a request

for a hearing is made, Commerce intends to hold the hearing at a date and time to be determined.²⁰ Parties should confirm by telephone the date and time of the hearing two days before the scheduled date. An electronically filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the established deadline.

Unless the deadline is extended, Commerce intends to issue the final results of this administrative review, including the results of its analysis of issues raised in any written briefs, not later than 120 days after the date of publication of this notice.²¹

Assessment Rates

Upon completion of the final results, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review.²² If the preliminary results are unchanged for the final results, we will instruct CBP to apply an *ad valorem* assessment rate of 216.37 percent to all entries of subject merchandise during the POR which were exported by the companies considered to be a part of the China-wide entity listed in Appendix II of this notice.

If the individually examined respondent's weighted-average dumping margin is above *de minimis* (*i.e.*, 0.50 percent) in the final results of this review, we will calculate an importer-specific assessment rate on the basis of the ratio of the total amount of dumping calculated for each importer's examined sales and, where possible, the total entered value of those same sales in accordance with 19 CFR 351.212(b)(1).²³ Where an importer- (or customer-) specific *ad valorem* rate is zero or *de minimis*, we will instruct CBP to liquidate appropriate entries without regard to antidumping duties.²⁴

For entries that were not reported in the U.S. sales database submitted by exporter individually examined during this review, Commerce will instruct CBP to liquidate such entries at the China-wide rate.²⁵

¹⁷ *See* 19 CFR 351.303.

¹⁸ *See Temporary Rule*.

¹⁹ *See* 19 CFR 351.310(c).

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided for by section 751(a)(2)(C) of the Act: (1) for the subject merchandise exported by the company listed above that has a separate rate, the cash deposit rate will be equal to the weighted-average dumping margin established in the final results of this administrative review (except, if the rate is zero or *de minimis*, then zero cash deposit will be required); (2) for previously investigated or reviewed Chinese and non-Chinese exporters not listed above that received a separate rate in a prior segment of this proceeding, the cash deposit rate will continue to be the existing exporter-specific rate; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be that for the China-wide entity; and (4) for all non-Chinese exporters of subject merchandise which have not received their own rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied that non-Chinese exporter. These deposit requirements, when imposed, shall remain in effect until further notice. These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these preliminary results of review in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.221(b)(4).

Dated: August 29, 2023.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

Certain Cold-Drawn Mechanical Tubing of Carbon and Alloy Steel From India: Final Results of Countervailing Duty Administrative Review; 2021

AGENCY: Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies are being provided to producers and exporters of certain cold-drawn mechanical tubing of carbon and alloy steel (cold-drawn mechanical tubing) from India during the period of review, January 1, 2021, through December 31, 2021.

DATES: Applicable September 6, 2023.

FOR FURTHER INFORMATION CONTACT:

Eliza DeLong or Eric Hawkins, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–3878 or (202) 482–1988, respectively.

SUPPLEMENTARY INFORMATION:

Background

Commerce published the *Preliminary Results* of this review on March 7, 2023.¹ We invited interested parties to comment on the *Preliminary Results*.² On May 30, 2023, Commerce extended the deadline for the final results of this review until September 1, 2023.³ For a complete description of the events that occurred since the *Preliminary Results*, see the Issues and Decision Memorandum.⁴

Scope of the Order⁵

The merchandise covered by the *Order* is cold-drawn mechanical tubing from India. For a complete description of the scope of the *Order*, see the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised in interested parties' briefs are addressed in the Issues and Decision Memorandum. A list of the issues raised by interested parties, to which we responded in the Issues and Decision Memorandum, is provided as an appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete

version of the Issues and Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

Changes Since the Preliminary Results

Based on a review of the record and comments received from interested parties regarding our *Preliminary Results*, and for the reasons explained in the Issues and Decision Memorandum, we made certain changes for these final results of review.

Methodology

Commerce conducted this review in accordance with section 751(a)(1)(A) of the Tariff Act of 1930, as amended (the Act). For each of the subsidy programs found countervailable, we find that there is a subsidy, *i.e.*, a financial contribution from a government or public entity that gives rise to a benefit to the recipient, and the subsidy is specific.⁶ For a full description of the methodology underlying our conclusions, including any determination that relied upon the use of adverse facts available pursuant to section 776(a) and (b) of the Act, *see* the Issues and Decision Memorandum.

Companies Not Selected for Individual Review

We made no changes to the methodology for determining a rate for companies not selected for individual examination from the *Preliminary Results*. However, due to changes in calculations for Goodluck India Limited, the non-selected rate changed for each of the non-selected companies for which a review was requested and not rescinded, and which were not selected as mandatory respondents.⁷

Final Results of Review

We determine the total estimated net countervailable subsidy rates for the period January 1, 2021, through December 31, 2021, to be as follows:

Producer/exporter	Subsidy rate (percent <i>ad valorem</i>)
Goodluck India Limited ⁸	3.39
Tube Investments of India Ltd ⁹	3.97

⁶ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁷ See Memorandum, "Calculation of Subsidy Rate for Non-Selected Companies Under Review," dated concurrently with this notice.

Producer/exporter	Subsidy rate (percent <i>ad valorem</i>)
Review-Specific Average Rate Applicable to the Following	
Lal Baba Seamless Tubes Pvt. Ltd	3.74
Metamorphosis Engitech India Pvt. Ltd	3.74

Disclosure

Commerce will disclose to interested parties the calculations performed for these final results within five days of public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final results in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rate

Consistent with section 751(a)(2)(C) of the Act, upon issuance of the final results, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries covered by this review. Commerce intends to issue appropriate assessment instructions to CBP no earlier than 35 days after publication of these final results. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Cash Deposit Requirements

Pursuant to section 751(a)(1) of the Act, Commerce intends to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts indicated above with regard to shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this review. For all non-reviewed firms, CBP will continue to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposit instructions, when imposed, shall remain in effect until further notice.

Administrative Protective Order

This notice also serves as a final reminder to parties subject to an

administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of proceeding. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

These final results are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.221(b)(5).

Dated: August 29, 2023.

Lisa W. Wang,

Assistant Secretary for Enforcement and Compliance.

Utility Scale Wind Towers From the Republic of Korea: Preliminary Results of Antidumping Duty Administrative Review and Preliminary Determination of No Shipments; 2021–2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily

⁸ Entries for Goodluck India Limited may have been made under the following company names: Goodluck India Limited (formerly Good Luck Steel Tubes Limited); Good Luck Steel Tubes Limited Good Luck House; and Good Luck Industries.

⁹ Tube Investments of India Ltd. is also known as Tube Investments of India Limited.

determines that sales of utility scale wind towers (wind towers) from the Republic of Korea (Korea) were made at less than normal value (NV) during the period of review (POR) August 1, 2021, through July 31, 2022. We also preliminarily determine that two companies had no shipments. Interested parties are invited to comment on these preliminary results.

DATES: Applicable September 6, 2023.

FOR FURTHER INFORMATION CONTACT: Adam Simons, AD/CVD Operations, Office IX, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-6172.

SUPPLEMENTARY INFORMATION:

Background

On October 11, 2022, based on timely requests for review, in accordance with 19 CFR 351.221(c)(1)(i), we initiated an administrative review of the antidumping duty order¹ on wind towers from Korea.² This review covers 15 producers/exporters of the subject merchandise. In April 2023, we extended the deadline for issuing the preliminary results of this review to no later than August 31, 2023.³ For a complete description of the events that followed the initiation of this review, see the Preliminary Decision Memorandum.⁴

Scope of the Order

The merchandise subject to the *Order* is wind towers.⁵ The product is currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheading 7308.20.0020 or 8502.31.0000 and may also be classified under HTSUS subheading 7308.20.0020 or 8502.31.0000. While the HTSUS subheadings are provided for convenience and customs purposes, the written product description remains dispositive.

Preliminary Determination of No Shipments

On October 28 and November 10, 2022, respectively, we received letters from Hyosung Heavy Industries Corporation (Hyosung) and CS Wind Corporation (CS Wind), timely notifying Commerce that they had no exports, sales, or entries of subject merchandise during the POR.⁶ Based on their certifications and our analysis of U.S. Customs and Border Protection (CBP) information, we preliminarily determine that CS Wind and Hyosung had no shipments during the POR. Consistent with our practice, we are not rescinding the review with respect to CS Wind and Hyosung. Instead, we will complete the review and issue appropriate instructions to CBP based on the final results of this review.⁷

Methodology

Commerce is conducting this review in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act). Export price is calculated in accordance with section 772 of the Act. NV is calculated in accordance with section 773 of the Act. For a full description of the methodology underlying our conclusions, see the Preliminary Decision Memorandum. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>. A list of the topics discussed in the Preliminary Decision Memorandum is attached in Appendix I of this notice.

Preliminary Results of Review

As a result of this review, we preliminarily determine the following estimated weighted-average dumping margin for the period August 1, 2021, through July 31, 2022:

Producer/exporter	Weighted-average dumping margin (percent)
Dongkuk S&C Co., Ltd	1.95
Companies Not Selected for Individual Review	1.95

Rate for Companies Not Selected for Individual Examination

The Act and Commerce's regulations do not address the establishment of a weighted-average dumping margin to be applied to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in a less-than-fair-value (LTFV) investigation, for guidance when calculating the weighted-average dumping margin for companies which were not selected for individual examination in an administrative review. Under section 735(c)(5)(A) of the Act, the all-others rate is normally equal to the weighted average of the estimated weighted-average dumping margins established for exporters and producers individually examined, excluding rates that are zero, *de minimis* (i.e., less than 0.5 percent), or determined entirely on the basis of facts available.

For these preliminary results, we have preliminarily assigned a dumping margin to these companies based on the rate calculated for Dongkuk S&C Co., Ltd. (Dongkuk). The companies not selected for individual review are listed in Appendix II.

Disclosure and Public Comment

Commerce intends to disclose the calculations performed in connection with these preliminary results to interested parties within five days after the date of publication of this notice in the **Federal Register**.⁸ Interested parties may submit case briefs or other written comments to Commerce no later than 30 days after the date of publication of this notice.⁹ Rebuttal briefs, limited to issues raised in the case briefs, may be filed no later than seven days after the time limit

⁸ See 19 CFR 351.224(b).

⁹ See 19 CFR 351.309(c).

for filing case briefs.¹⁰ Parties who submit case briefs or rebuttal briefs in this proceeding are encouraged to submit with each argument: (1) a statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.¹¹ Case and rebuttal briefs should be filed using ACCESS.¹² An electronically filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the established deadline. Note that Commerce has temporarily modified certain of its requirements for serving documents containing business proprietary information, until further notice.¹³

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS within 30 days after the date of publication of this notice.¹⁴ Hearing requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Oral presentations at the hearing will be limited to issues raised in the briefs. If a request for a hearing is made, parties will be notified of the time and date for the hearing.¹⁵

Commerce intends to issue the final results of this administrative review, including the results of its analysis raised in any written briefs, not later than 120 days after the date of publication of this notice, unless otherwise extended.¹⁶

Assessment Rates

Upon issuing the final results, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries. Pursuant to 19 CFR 351.212(b)(1), because Dongkuk reported the entered value of its U.S. sales, we calculated importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of dumping calculated for the examined sales to the total entered value of those sales. Where either the respondent's weighted-average dumping margin is

zero or *de minimis* within the meaning of 19 CFR 351.106(c)(1), or an importer-specific rate is zero or *de minimis*, we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

Commerce's "automatic assessment" practice will apply to entries of subject merchandise during the POR produced by Dongkuk for which Dongkuk did not know that the merchandise it sold to the intermediary (e.g., a reseller, trading company, or exporter) was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.

For the companies which were not selected for individual examination, we intend to assign an antidumping duty assessment rate equal to the dumping margin calculated in the final results of this review for Dongkuk. Further, if we continue to find in the final results that CS Wind and Hyosung had no shipments of subject merchandise during the POR, we will instruct CBP to liquidate any suspended entries that entered under their antidumping duty case numbers (i.e., at that exporter's rate) at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.

In accordance with section 751(a)(2)(C) of the Act, the final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (i.e., within 90 days of publication).

Cash Deposit Requirements

The following deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the company listed above will be that established in the final results of this review, except if the rate is less than 0.50 percent and,

therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for previously investigated or reviewed companies not covered in this review, the cash deposit rate will continue to be the company-specific cash deposit rate published for the most recently completed segment of this proceeding in which the company participated; (3) if the exporter is not a firm covered in this review, or the LTFV investigation, but the manufacturer is, then the cash deposit rate will be the rate established for the most recent segment for the manufacturer of the merchandise; and (4) the cash deposit rate for all other manufacturers or exporters will continue to be 5.41 percent, the all-others rate established in the LTFV investigation.¹⁷ These deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: August 29, 2023.

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; CHIPS Full-Application Information Collection

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on Wednesday, April 12, 2023, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Institute of Standards and Technology (NIST), Commerce.

Title: CHIPS Full-application Information Collection.

OMB Control Number: 0693–0094.

Form Number(s): None.

Type of Request: Regular.

Number of Respondents: 140.

Average Hours per Response: 125 hours.

Burden Hours: 17,500 hours.

Needs and Uses: Businesses and other entities applying for CHIPS Act funding under the CHIPS Incentive Program must submit a full application via a form available at <https://applications.chips.gov/>, which includes:

- Cover Page
- Covered Incentive
- Description of Project(s)
- Applicant Profile
- Alignment with Economic and National Security Objectives
- Commercial Strategy
- Financial Information
- Project Technical Feasibility
- Organization Information
- Workforce Development Plan

- Broader Impacts
- Standard Forms

Affected Public: Business or other for-profit organizations.

Frequency: Once.

Respondent's Obligation: Mandatory to be eligible for CHIPS Act funding.

Legal Authority: CHIPS Act of 2022 (Division A of Pub. L. 117–167) (the Act).

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of the collection or the OMB Control Number 0693–0094.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD269]

Taking and Importing Marine Mammals; Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; modification to expiration date of Letter of Authorization.

SUMMARY: In accordance with the Marine Mammal Protection Act (MMPA), as amended, its implementing regulations, and NMFS' MMPA regulations for Taking Marine Mammals Incidental to Geophysical Surveys Related to Oil and Gas Activities in the Gulf of Mexico (GOM), notification is hereby given that NMFS has modified the expiration date of a Letter of Authorization (LOA) issued to Shell Offshore Inc. (Shell) for the take of

marine mammals incidental to geophysical survey activity in the GOM.

DATES: This LOA is effective through September 15, 2023.

ADDRESSES: The LOA, LOA request, and supporting documentation are available online at: <https://www.fisheries.noaa.gov/action/incidental-take-authorization-oil-and-gas-industry-geophysical-survey-activity-gulf-mexico>. In case of problems accessing these documents, please call the contact listed below (see **FOR FURTHER INFORMATION CONTACT**).

FOR FURTHER INFORMATION CONTACT: Rachel Wachtendonk, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

An authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined “negligible impact” in 50 CFR 216.103 as an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival.

Except with respect to certain activities not pertinent here, the MMPA defines “harassment” as any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild (Level A harassment); or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering (Level B harassment).

On January 19, 2021, we issued a final rule with regulations to govern the unintentional taking of marine mammals incidental to geophysical survey activities conducted by oil and gas industry operators, and those persons authorized to conduct activities on their behalf (collectively “industry operators”), in U.S. waters of the GOM over the course of 5 years (86 FR 5322). The rule was based on our findings that the total taking from the specified activities over the 5-year period will have a negligible impact on the affected species or stock(s) of marine mammals and will not have an unmitigable adverse impact on the availability of those species or stocks for subsistence uses. The rule became effective on April 19, 2021.

Our regulations at 50 CFR 217.180 *et seq.* allow for the issuance of LOAs to industry operators for the incidental take of marine mammals during geophysical survey activities and prescribe the permissible methods of taking and other means of affecting the least practicable adverse impact on marine mammal species or stocks and their habitat (often referred to as mitigation), as well as requirements pertaining to the monitoring and reporting of such taking. Under section 217.186(e), issuance of an LOA shall be based on a determination that the level of taking will be consistent with the findings made for the total taking allowable under these regulations and a determination that the amount of take authorized under the LOA is of no more than small numbers.

NMFS issued an LOA to Shell on October 1, 2022, for the take of marine mammals incidental to a 3-dimensional (3D) ocean bottom node (OBN) survey in Garden Banks Lease Block GB555 and GB556 and the surrounding 414 lease blocks effective through August 31, 2023. Please see the **Federal Register** notification of issuance (87 FR 55790, September 12, 2022) for additional detail regarding the LOA and the survey activity.

Shell initially anticipated that the activity would occur at some point between October 1, 2022 and August 31, 2023. Shell subsequently conveyed to NMFS that the survey would not be able to be completed by the original end date. Shell has requested modification to the expiration date of the LOA (from August 31, 2023, to September 15, 2023) to accommodate the survey delays.

Authorization

NMFS has changed the expiration date of the LOA from August 31, 2023 to September 15, 2023. There are no other changes to the LOA as described

in the September 12, 2023, **Federal Register** notice of issuance (87 FR 55790): the specified survey activity; estimated take by incidental harassment; and small numbers analysis and determination remain unchanged.

Dated: August 28, 2023.

Kimberly Damon-Randall,
Director, Office of Protected Resources,
National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD316]

New England Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting.

SUMMARY: The New England Fishery Management Council (Council) is scheduling a public hybrid meeting of its Groundfish Committee to consider actions affecting New England fisheries in the exclusive economic zone (EEZ). Recommendations from this group will be brought to the full Council for formal consideration and action, if appropriate.

DATES: This hybrid meeting will be held on September 22, 2023, at 9:30 a.m.

ADDRESSES:

Meeting address: This meeting will be held at the DoubleTree by Hilton, 50 Ferncroft Road, Danvers, MA 01923; telephone: (978) 777–2500.

Webinar registration URL information: <https://attendee.gotowebinar.com/register/5463173544525981530>.

Council address: New England Fishery Management Council, 50 Water Street, Mill 2, Newburyport, MA 01950.

FOR FURTHER INFORMATION CONTACT: Cate O’Keefe, Executive Director, New England Fishery Management Council; telephone: (978) 465–0492.

SUPPLEMENTARY INFORMATION:

Agenda

The Groundfish Committee will meet to discuss recommendations from the Recreational Advisory Panel and Groundfish Advisory Panel. They will discuss Atlantic Cod Transition Plan—a summary of fishery data from the Research Track stock assessment for Atlantic cod as well as Framework Adjustment 66/Specifications and

Management Measures—an update on the development of draft alternatives and a report from the Transboundary Management Guidance Committee (TMGC). The Committee will discuss Framework Adjustment 68/Acceptable Biological Catches (ABC) Control Rules—the findings from the facilitated meeting and Groundfish Committee motions from meeting held on August 17, 2023 as well as 2024 Council Priorities—possible groundfish priorities for the Council to consider for 2024, and provide recommendations to the Council, as appropriate. Other business will be discussed as necessary.

Although non-emergency issues not contained on the agenda may come before this Council for discussion, those issues may not be the subject of formal action during this meeting. Council action will be restricted to those issues specifically listed in this notice and any issues arising after publication of this notice that require emergency action under section 305(c) of the Magnuson-Stevens Act, provided the public has been notified of the Council’s intent to take final action to address the emergency. The public also should be aware that the meeting will be recorded. Consistent with 16 U.S.C. 1852, a copy of the recording is available upon request.

Special Accommodations

This meeting is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Cate O’Keefe, Executive Director, at (978) 465–0492, at least 5 days prior to the meeting date.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 31, 2023.

Rey Israel Marquez,

Acting Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Workplace Violence Prevention and Response Forms

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance

with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on December 27, 2022 (87 FR 79279) during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic and Atmospheric Administration (NOAA), Commerce.

Title: Workplace Violence Prevention and Response Forms.

OMB Control Number: 0648–XXXX.

Form Number(s): None.

Type of Request: Regular submission, new information collection.

Number of Respondents: 323.

Average Hours Per Response: Impacted Person Reporting Preference Form and SASH.

Data Collection Form: 1 hour; Workplace Culture Survey: 30 minutes; Ocean Acidification.

Post-Cruise Survey: 10 minutes.

Total Annual Burden Hours: 237.

Needs and Uses: This is a request for a new information collection.

This information collection will be used to document elements of the sexual assault/sexual harassment (SASH) response and/or reporting process and comply with procedures set up to effectively manage National Oceanic and Atmospheric Administration (NOAA), Workplace Violence Prevention and Response (WVPR). Under 33 U.S.C. 894, NOAA is required to establish a mechanism by which sexual assault and sexual harassment can be reported on a Restricted and Unrestricted basis. Further, Congress directs NOAA to reference Department of Defense (DoD) policy and procedures in the standup of our SASH response program. WVPR requires various Intake forms to document a victim's election of a Restricted or Unrestricted Report of sexual assault or sexual harassment, as well as document that the details of each reporting option have been properly communicated with the victim. WVPR has modeled its forms after the DoD sexual assault/sexual harassment forms in accordance with guidance by Congress. NOAA may also use this collection to survey federal employees, contractors, affiliates, interns, volunteers, or other individuals who work in or visit NOAA-occupied facilities, vessels, or aircraft to

determine their perceptions of incidents of SASH, pursuant to NOAA Administrative Order (NAO) 202–1106, Section 5.01e.

Affected Public: Individuals employed by NOAA, including affiliates and contractors.

Frequency: As needed.

Respondent's Obligation: Voluntary.

Legal Authority: 33 U.S.C. 894.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function and entering the title of the collection.

Department of the Navy

Board of Visitors, Marine Corps University; Notice of Federal Advisory Committee Meeting

AGENCY: Department of the Navy (DoN), Department of Defense (DoD).

ACTION: Notice of open meeting.

SUMMARY: The Board of Visitors of the Marine Corps University (BOV MCU) will meet to review, develop and provide recommendations on all aspects of the academic and administrative policies of the University; examine all aspects of professional military education operations; and provide such oversight and advice, as is necessary, to facilitate high educational standards and cost effective operations. The Board will be focusing primarily on the internal procedures of Marine Corps University.

DATES: The meeting will be held on Monday, 18 September 2023, from 8:00 a.m. to 4:30 p.m. and 19 September from 08:30 a.m. to 12:00 p.m. Pacific Time Zone.

ADDRESSES: The meeting will be held at Camp Pendleton, California. The

address is: Education Center, Building 23195, Marine Corps Air Station, Camp Pendleton, CA 92055. All sessions of the meeting will be open to the public via

Microsoft Teams: <https://www.microsoft.com/en-us/microsoft-teams/join-a-meeting?rtc=1>.

Meeting ID: 257 829 522 460.

Passcode: nTQqLr.

Or call in (audio only) +1 323–792–6328, United States, Los Angeles.

Phone Conference ID: 979 155 738#.

FOR FURTHER INFORMATION CONTACT: Dr. Kim Florich, Director of Faculty Development and Outreach, Marine Corps University Board of Visitors, 2076 South Street, Quantico, Virginia 22134, telephone number 703–432–4837.

SUPPLEMENTARY INFORMATION:

Written Comments and Statements: Pursuant to section 10(a)(3) of the FACA and 41 CFR 102–3.105(j) and 102–3.140, interested persons may submit a written statement for consideration at any time, but should be received by the Designated Federal Officer at least 5 business days prior to the meeting date so that the comments may be made available to the Board for their consideration prior to the meeting. Written statements should be submitted via email to: Kimberly.florich@usmcu.edu. Please note that since the Board operates under the provisions of the FACA, as amended, all submitted comments and public presentations may be treated as public documents and may be made available for public inspection, including, but not limited to, being posted on the board website.

Dated: August 30, 2023.

J.E. Koningisor,

Lieutenant Commander, Judge Advocate General's Corps, U.S. Navy, Federal Register Liaison Officer.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2023–SCC–0157]

Agency Information Collection Activities; Comment Request; 2020/25 Beginning Postsecondary Students (BPS:20/25) Field Test

AGENCY: National Center for Education Statistics (NCES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a revision of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before November 6, 2023.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED–2023–SCC–0157. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the www.regulations.gov site is not available to the public for any reason, the Department will temporarily accept comments at ICDocketMgr@ed.gov. Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. Please note that comments submitted after the comment period will not be accepted. Written requests for information or comments submitted by postal mail or delivery should be addressed to the Manager of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 4C210, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Carrie Clarady, (202) 245–6347.

SUPPLEMENTARY INFORMATION: The Department, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested data in the desired format. The Department is soliciting comments on the proposed information collection request (ICR) that is described below. The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the

respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: 2020/25 Beginning Postsecondary Students (BPS:20/25) Field Test.

OMB Control Number: 1850–0631.

Type of Review: Revision of a currently approved ICR.

Respondents/Affected Public: Individuals or households *Total Estimated Number of Annual Responses:* 6,927.

Total Estimated Number of Annual Burden Hours: 1,279.

Abstract: The 2020/25 Beginning Postsecondary Students Full-Scale (BPS:20/25) is conducted by the National Center for Education Statistics, part of the Institute of Education Sciences, within the Department of Education, and is part of the Beginning Postsecondary Students Longitudinal Study data collection program at <https://nces.ed.gov/surveys/bps/>. BPS is designed to follow a cohort of students who enroll in postsecondary education for the first time during the same academic year, irrespective of the date of high school completion. The study collects data on students' persistence in and completion of postsecondary education programs; their transition to employment; demographic characteristics; and changes over time in their goals, marital status, income, and debt, among other indicators. Data from BPS are used to help researchers and policymakers better understand how financial aid influences persistence and completion, what percentages of students complete various degree programs, what are the early employment and wage outcomes for certificate and degree attainments, and why students leave school.

The BPS:20/25 field test will include approximately 3,280 students who first began in the 2018–19 academic year. BPS:20/25 will be a nationally-representative sample of approximately 34,240 students who were first-time beginning students during the 2019–20 academic year. These students will be asked to complete a survey and administrative data will also be collected for them. Administrative data matching will be conducted with sources including the National Student Loan Data System (NSLDS), containing federal loan and grant files; the Central Processing System (CPS), which houses and processes data contained in the Free Application for Federal Student Aid (FAFSA) forms; the National Student Clearinghouse (NSC) which provides enrollment and degree verification;

vendors of national undergraduate, graduate, and professional student admission tests; and possible other administrative data sources such as the Veterans Benefits Administration (VBA). These data will be obtained through file matching/downloading.

This submission is designed to adequately justify the need for and overall practical utility of the full study, presenting the overarching plan for all phases of the data collection and providing as much detail about the measures to be used as is available at the time of this submission. As part of this submission, NCES will publish a notice in the **Federal Register** allowing first a 60- and then a 30-day public comment period. Field test materials, procedures, and results will inform the full-scale study. After completion of the field test, NCES will publish a notice in the **Federal Register** allowing an additional 30-day public comment period on the final details and materials of the BPS:20/25 full-scale study.

Dated: August 31, 2023.

Stephanie Valentine,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000–01–P

DEPARTMENT OF ENERGY

Electric Vehicle Working Group

AGENCY: Department of Energy.

ACTION: Notice of open meeting.

SUMMARY: The Department of Energy hereby publishes a notice of open meeting of the Electric Vehicle Working Group (EVWG). The Federal Advisory Committee Act requires that public notice of these meetings be announced in the **Federal Register**.

DATES: Tuesday, September 26, 2023; 1:00 p.m.–4:00 p.m. Eastern Time.

ADDRESSES: The meeting will be held virtually. Members of the public who would like to participate must register at: <https://driveelectric.gov/ev-working-group>.

FOR FURTHER INFORMATION CONTACT: Dr. Rachael Nealer, Designated Federal Officer, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585; email: evwg@ee.doe.gov; telephone: (202) 586–3916.

SUPPLEMENTARY INFORMATION:

Background: The Electric Vehicle Working Group (EVWG) was formed by the Joint Office of Energy and

Transportation to make recommendations to the Secretaries of Energy and Transportation regarding the development, adoption, and integration of light-, medium-, and heavy-duty electric vehicles (EVs) into the U.S. transportation and energy systems.

Purpose of the Meeting: This is the inaugural meeting of the EVWG.

Tentative Agenda: The meeting will start at 1:00 p.m. Eastern Time on Tuesday, September 26, 2023. The tentative meeting agenda includes: an introduction of EVWG members, a review of the role of the EVWG, and a discussion of potential report topics that the EVWG will research. Meeting materials and a link to registration can be found here: <https://driveelectric.gov/ev-working-group>.

Public Participation: This virtual meeting is open to the public. Individuals who would like to attend must register for the meeting here: <https://driveelectric.gov/ev-working-group>.

Individuals and representatives of organizations who would like to offer comments and suggestions may do so during the public comment portion of the meeting. Approximately 25 minutes will be reserved for public comments at the end of the meeting. Time allotted per speaker will depend on the number who wish to speak but will not exceed three minutes. The Designated Federal Officer is empowered to conduct the meeting in a fashion that will facilitate the orderly conduct of business. Those wishing to speak during the public comment period should indicate so within their registration.

Those not able to attend the meeting or who have insufficient time to address the committee are invited to send a

written statement to Dr. Rachael Nealer, U.S. Department of Energy, 1000 Independence Avenue SW, Washington, DC 20585, or email: evwg@ee.doe.gov.

Minutes: The minutes of the meeting will be available on <https://driveelectric.gov/ev-working-group> or by contacting Dr. Nealer. She may be reached at the above postal address or email address.

Signed in Washington, DC, on August 30, 2023.

LaTanya Butler,

Deputy Committee Management Officer.

Federal Energy Regulatory Commission

[Docket No. RM98-1-000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file associated with, but not a part of, the

decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e) (1) (v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. This filing may be viewed on the Commission's website at <http://www.ferc.gov> using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER23–2726–000]

Walnut Bend Solar LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Walnut Bend Solar LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR

part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is September 19, 2023.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>) using the "eLibrary" link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room, due to the proclamation declaring a National Emergency concerning the Novel Coronavirus Disease (COVID-19), issued by the President on March 13, 2020. For assistance, contact the Federal Energy Regulatory Commission at FERCOnlineSupport@ferc.gov or call toll-free, (886) 208-3676 or TTY, (202) 502-8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including

landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502-6595 or OPP@ferc.gov.

Dated: August 30, 2023.

BILLING CODE 6717-01-P

ENVIRONMENTAL PROTECTION AGENCY

[FRL: 11372-01-OA]

Local Government Advisory Committee (LGAC) and Small Communities Advisory Subcommittee (SCAS) Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notification of public meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), EPA hereby provides notice of a meeting for the Local Government Advisory Committee (LGAC) and its Small Communities Advisory Subcommittee (SCAS) on the date and time described below. This meeting will be open to the public. For information on public attendance and participation, please see registration details under **SUPPLEMENTARY INFORMATION**.

DATES: The SCAS will have a virtual meeting on September 29th, 2023, from 1:00 to 2:00 p.m. Eastern Daylight Time followed by an LGAC virtual meeting on September 29th, 2023, from 2:30 p.m. to 4:00 p.m. Eastern Daylight Time.

FOR FURTHER INFORMATION CONTACT:

Paige Lieberman, Designated Federal Officer (DFO), at LGAC@epa.gov or 202-564-9957.

Information on Accessibility: For information on access or services for individuals requiring accessibility accommodations, please contact Paige Lieberman by email at LGAC@epa.gov. To request accommodation, please do so five (5) business days prior to the meeting, to give EPA as much time as possible to process your request.

SUPPLEMENTARY INFORMATION:

Content

The LGAC and SCAS will discuss several priority issues at EPA, including recommendations on PFAS risk

communication and the development of a toolkit for local governments, recommendations on land use and electrifying transportation in small communities, and other topics including environmental justice. Meeting materials and recommendations will be posted closer to the meeting.

Registration

The meeting will be held virtually via Microsoft Teams. Members of the public who wish to participate should register by contacting the Designated Federal Officer (DFO) at LGAC@epa.gov by September 22nd, 2023. Once available, the agenda and other supportive meeting materials will be available online at <https://www.epa.gov/ocir/local-government-advisory-committee-lgac> and will be emailed to all registered. In the event of cancellation for unforeseen circumstances, please contact the DFO or check the website above for reschedule information.

Paige Lieberman,

Designated Federal Officer, U.S. Environmental Protection Agency.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OLEM-2019-0558, FRL-11380-01-OLEM]

Agency Information Collection Activities; Proposed Collection; Comment Request; RCRA Subtitle C Reporting Instructions and Forms, EPA ICR No. 0976.20, OMB Control No. 2050-0024

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA) is planning to submit the information collection request (ICR), "RCRA Subtitle C Reporting Instructions and Forms" (EPA ICR No. 0976.20, OMB Control No. 2050-0024) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (PRA). Before doing so, the EPA is soliciting public comments on specific aspects of the proposed information collection as described in **SUPPLEMENTARY INFORMATION**. This is a proposed extension of the ICR, which is currently approved through April 31, 2024. This notice allows for 60 days for public comments.

DATES: Comments must be submitted on or before November 6, 2023.

ADDRESSES: Submit your comments, referencing by Docket ID No. EPA-HQ-OLEM-2019-0558, at <https://www.regulations.gov> (our preferred method), or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW, Washington, DC 20460. EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

FOR FURTHER INFORMATION CONTACT: Peggy Vyas, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202-566-0453; vyas.peggy@epa.gov.

SUPPLEMENTARY INFORMATION: This is a proposed extension of the ICR, which is currently approved through April 30, 2024. An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

This notice allows 60 days for public comments. Supporting documents, which explain in detail the information that the EPA will be collecting, are available in the public docket for this ICR. The docket can be viewed online at www.regulations.gov or in person at the EPA Docket Center, WJC West, Room 3334, 1301 Constitution Ave. NW, Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Pursuant to section 3506(c)(2)(A) of the PRA, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate forms of information technology. EPA will consider the comments received and

amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

Abstract: Section 3002 of RCRA requires hazardous waste generators to report, at least every 2 years, the quantity and nature of hazardous waste generated and managed during that reporting cycle. Section 3004 requires treatment, storage, and disposal facilities (TSDFs) to report any waste received. This is mandatory reporting. The information is collected via the Hazardous Waste Report (EPA Form 8700-13 A/B). This form is also known as the "Biennial Report" form.

Section 3010 of RCRA requires any person who generates or transports regulated waste or who owns or operates a facility for the treatment, storage, or disposal of regulated waste to notify the EPA of their activities, including the location and general description of activities and the regulated wastes handled. The entity is then issued an EPA Identification number. Entities use the Notification Form (EPA Form 8700-12) to notify EPA of their hazardous waste activities. This form is also known as the "Notification" form.

Section 3005 of RCRA requires TSDFs to obtain a permit. To obtain the permit, the TSDF must submit an application describing the facility's operation. The RCRA Hazardous Waste Part A Permit Application form (EPA Form 8700-23) defines the processes to be used for treatment, storage, and disposal of hazardous wastes; the design capacity of such processes; and the specific hazardous wastes to be handled at the facility. This form is also known as the "Part A" form.

Form Numbers: EPA form numbers 8700-12, 8700-13A/B, and 8700-23.

Respondents/affected entities: Business or other for-profit as well as State, local, or Tribal governments.

Respondent's obligation to respond: Mandatory (RCRA Sections 3002, 3304, 3005, 3010).

Estimated number of respondents: 66,504.

Frequency of response: Biennially and on occasion.

Total estimated burden: 809,382 hours per year. Burden is defined at 5 CFR 1320.03(b).

Total estimated cost: \$402,545 (per year), includes \$343,016 annualized capital or operation & maintenance costs.

Changes in Estimates: The burden hours are likely to stay substantially the same.

Dated: August 31, 2023.

Carolyn Hoskinson,

Director, Office of Resource Conservation and Recovery.

BILLING CODE 6560-50-P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Savings and Loan Holding Company

The notificants listed below have applied under the Change in Bank Control Act ("Act") (12 U.S.C. 1817(j)) and of the Board's Regulation LL (12 CFR 238.31) to acquire shares of a savings and loan holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at <https://www.federalreserve.gov/foia/request.htm>. Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington, DC 20551-0001, not later than September 21, 2023.

A. Federal Reserve Bank of Kansas City Jeffrey Ingarten, Assistant Vice President, One Memorial Drive, Kansas City, Missouri 64198, Comments can also be sent electronically to KCAApplicationComments@kc.frb.org:

1. **Kathryn R. Ryan, Cherry Hills Village, Colorado, and Martha E. Records, Denver, Colorado;** to become co-trustees of the George J. and Nancy J. Records 1990 Irrevocable Trust;

Todd A. Dobson, Oklahoma City, Oklahoma; to become trustee or co-trustee of the Kathryn R. Ryan 2012 Family Trust, Kathryn R. Ryan 2020 Family Trust, and Martha E. Records 2020 Family Trust;

Raymond Kido, Paradise Valley, Arizona, and Anat Bird, Scottsdale, Arizona; to become co-trustees of the G. Jeffrey Records, Jr. 2003 Family Trust; G. Jeffrey Records, Jr. 2004 Family Trust (KRR); G. Jeffrey Records, Jr. 2004 Family Trust (MER); G. Jeffrey Records, Jr. 2008 GST Exempt Family Trust; and 2012 Dorchester Trust; and

Anat Bird; to also become co-trustee of the G. Jeffrey Records, Jr. 2020 Family Trust.

As a result, each of the above-listed individuals would indirectly acquire control of voting shares of Midland Financial Co. and thereby indirectly acquire control of voting shares of Midfirst Bank, both of Oklahoma City, Oklahoma.

Board of Governors of the Federal Reserve System.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

Agency Information Collection Activities; Proposed Collection; Comment Request

AGENCY: Federal Trade Commission.

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (“PRA”), the Federal Trade Commission (“FTC” or “Commission”) is seeking public comments on its proposal to seek Office of Management and Budget (“OMB”) clearance for information collection requirements contained in the Federal Cigarette Labeling and Advertising Act, which requires the FTC to review plans for the rotation of health warnings on cigarette packaging and advertising. The proposed clearance request will be submitted to OMB for review following this opportunity for public comment. The current clearance expires on January 31, 2024, and the FTC intends to seek OMB renewal for three years.

DATES: Comments must be received on or before November 6, 2023.

ADDRESSES: Interested parties may file a comment online or on paper, by following the instructions in the Request for Comment part of the **SUPPLEMENTARY INFORMATION** section below. Write: “Surgeon General’s Cigarette Health Warnings: Paperwork Comment, FTC File No. P854505” on your comment, and file your comment online at <https://www.regulations.gov> by following the instructions on the web-

based form. If you prefer to file your comment on paper, mail your comment to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW, Suite CC–5610 (Annex J), Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT:

Shira Modell, General Attorney, Division of Advertising Practices, Bureau of Consumer Protection, (202) 725–2162, smodell@ftc.gov.

SUPPLEMENTARY INFORMATION:

A. Background

The Federal Cigarette Labeling and Advertising Act, 15 U.S.C. 1331 *et seq.* (2006 ed.) (“FCLAA”), prohibits cigarette manufacturers and importers from manufacturing, packaging, importing for sale, or distributing cigarettes within the United States unless the packages bear one of four statutorily-prescribed Surgeon General’s health warnings. 15 U.S.C. 1333(a). Cigarette advertising by any of these entities must also bear statutorily-prescribed health warnings. *Id.* Section 1333(b) sets forth the location and format requirements for the health warnings on both packaging and advertising.

The FCLAA further provides that the health warnings “shall be rotated by each manufacturer or importer . . . quarterly in alternating sequence on packages of each brand of cigarettes manufactured by the manufacturer or importer and in the advertisements for each such brand of cigarettes in accordance with a plan submitted by the manufacturer or importer and approved by the Federal Trade Commission.” 15 U.S.C. 1333(c)(1).

The FCLAA does provide an alternative to the requirement of quarterly rotation on cigarette packaging for manufacturers and importers whose sales satisfy two criteria.¹ These manufacturers and importers can seek approval to display the Surgeon General’s warnings on a particular cigarette brand style² “an equal number of times within the twelve-month period beginning on the date of the approval by the Commission of the application” (hereinafter referred to as “equalization”). 15 U.S.C. 1333(c)(2)(C). In order to qualify for equalization, the

sales of a manufacturer or importer must meet the following two criteria:

- (i) the number of cigarettes of such brand style sold in the fiscal year of the manufacturer or importer preceding the submission of the application is less than one-fourth of 1 percent of all the cigarettes sold in the United States in such year, and
- (ii) more than one-half of the cigarettes manufactured or imported by such manufacturer or importer for sale in the United States are packaged into brand styles which meet the requirements of clause (i).

15 U.S.C. 1333(c)(2)(A). A manufacturer or importer can seek permission to equalize the display of the warnings on some of its brand styles, even if other brand styles do not qualify for equalization and are therefore subject to quarterly rotation.

Pursuant to the FCLAA, cigarette manufacturers and importers submit plans to the Commission explaining how they intend to comply with the statutory requirement to display the Surgeon General’s warnings on their packaging.³ If the company will be rotating the warnings on a quarterly basis, its plan must identify each of its brands and brand styles and include a schedule (or other explanation) showing the warning that will be assigned to each brand during each quarter of the year. The company must also specify when in the manufacturing process it will consult its rotation schedule for that particular brand in order to assign the appropriate quarterly warning.

If the company wishes to use the option provided by section 1333(c)(2) and display the four warnings an equal number of times during the year on the packaging of certain brand styles, its plan must provide information sufficient to show that its sales satisfy both of the criteria in 15 U.S.C. 1333(c)(2)(A). It must also explain how it will ensure that all four warnings will be equally displayed during the one-year period beginning on the date the plan is approved—for example, by using printing plates that produce an even number of all four warnings simultaneously on each print run. Finally, because the statute authorizes approval for equalization only for one year, *see* 15 U.S.C. 1333(c)(2)(C), the

³ Manufacturers and importers must also submit samples of actual packaging for any new cigarette brands or brand styles, or samples of new packaging for existing brands or brand styles. However, this requirement is not subject to clearance under the Paperwork Reduction Act (“PRA”). Such packaging samples do not constitute “information” for purposes of the PRA because they merely constitute “samples of . . . physical objects.” *See* 5 CFR 1320.3(h)(2). Accordingly, the burden associated with the submission of any such samples is not reflected in the Commission’s burden analysis below.

¹ There is no comparable alternative to quarterly rotation for cigarette advertising.

² The statute defines “brand style” as “a variety of cigarettes distinguished by the tobacco used, tar and nicotine content, flavoring used, size of the cigarette, filtration on the cigarette, or packaging.” 15 U.S.C. 1332(8).

manufacturer or importer must submit a new plan annually demonstrating that its sales continue to qualify for equalization.

Manufacturers and importers who intend to engage in advertising must provide the Commission with a rotation schedule for the four statutorily-prescribed warnings for each brand they intend to advertise. They also must provide an example of each of the warning statement formats they will use, which vary based on the size of their advertisement,⁴ and specify how they will determine which warnings will appear on different kinds of advertisements and how they will handle advertisements that feature more than one of the company's brands.

Since the information collection is statutorily prescribed, the need for OMB clearance was not necessarily apparent.⁵ Nonetheless, the FTC recently decided to obtain OMB clearance for this statutorily-mandated information collection. Accordingly, on July 28, 2023, the FTC obtained OMB's approval of an expedited provisional clearance for this information collection (OMB Control Number: 3084-0175, Title: Information Collection under the Federal Cigarette Labeling and Advertising Act), and, under 5 CFR 1320.13(d), a waiver of the requirement to publish a notice of the emergency clearance request. As required by section 3506(c)(2)(A) of the PRA, the FTC is providing this opportunity for public comment before submitting the information collection to OMB for its nonprovisional clearance.

B. Burden Statement

Affected Public: Private Sector: Businesses and other for-profit entities.

Estimated Annual Burden Hours: 336.
Estimated Annual Labor Costs:

\$23,382.

Estimated Annual Non-Labor Costs: \$0.

⁴ The formats and sizes of the warnings that the Commission uses to enforce the requirements for advertisements are set forth in acetate exhibits. Electronic versions of the acetates with the required warning statement formats are available on the Commission's website.

⁵ An agency's failure to obtain OMB clearance for a statutorily-mandated information collection requirement does not appear to excuse a respondent's failure to comply with the requirement. *Accord* 5 CFR 1320.6(e) (establishing that, for purposes of information collection requirements that are imposed by statute, an agency's failure to comply with the requirements of the PRA does not amount to a defense against the assessment of a penalty); *U.S. v. Ionia Management S.A.*, 498 F. Supp. 2d 477, 489 (D. Conn. 2007) (discussing that, for purposes of information collection requirements that are imposed by statute, an agency's failure to comply with the requirements of the PRA does not excuse a person's failure to comply with the requirement).

I. Estimated Burden Hours

FTC staff's estimate of the burden hours is based on the time required for an applicant to prepare a plan seeking the Commission's approval for display of the Surgeon General's health warnings on its packages and advertising (assuming it plans to engage in advertising). During the period from 2020 to 2022, the Commission approved a total of 124 plans. In 2022, all 44 of the plans approved by the Commission included a request for equalization of the warning labels on at least some brand styles, and thus, the submission of sales information for those brand styles.

Manufacturers and importers who are approved for quarterly rotation of the warnings on their packaging do not have to submit new plans unless and until they intend to add new brands or brands styles or new types of advertising to their existing plans. As explained above, manufacturers and importers that are approved to use the alternative to quarterly rotation on their packaging must refile each year so the Commission can assess whether they remain eligible to equalize the warnings. They also must file new plans if they add new brands or brand styles to their existing plans; once the company has obtained approval for its initial plan, however, it should need less time in subsequent years to prepare those updates. Moreover, the sales information required to prove eligibility for the alternative to quarterly rotation is readily available to the applicant.

FTC staff recognizes that preparation of a plan by a manufacturer or importer that has not previously submitted one will take somewhat more time than either preparation of essentially the same plan with updated sales figures in subsequent years, or preparation of a very similar plan that modifies a previously-approved plan (e.g., adding new brand styles). However, plans can be short (e.g., 2-page) letters, and numerous examples of plans already approved by the Commission are available on the Commission's website. Thus, as an approximation, FTC staff believes that, on average, each submission will take respondents 8 hours to prepare and submit. As FTC staff receives, on average, 42 responses related to the FCLAA's information collection requirements per year, this yields an annual burden of 336 hours (42 responses × 8 hours per response).

2. Estimated Annual Labor Costs

FTC staff's experience is that most of the plans it receives are submitted by, or on behalf of, relatively small

companies (as evidenced by the fact that all of the plans received in 2022 included requests for label equalization). Roughly half of the plans are submitted by non-legal company personnel, the other half by attorneys. FTC staff is assuming an average \$69.59/hour wage, based on mean hourly wages listed by the U.S. Bureau of Labor Statistics 2022 Occupational Employment and Wage Statistics for lawyers (\$80.11) and general and operations managers (\$59.07).⁶ Using this figure, this yields a burden of \$23,382 per year (336 hours × \$69.59).

3. Estimated Annual Non-Labor Costs

FTC staff believes that the capital or other non-labor costs associated with the information requests are minimal.

C. Request for Comment

Pursuant to Section 3506(c)(2)(A) of the PRA, the FTC invites comments on: (1) whether the disclosure and recordkeeping requirements are necessary, including whether the information will be practically useful; (2) the accuracy of our burden estimates, including whether the methodology and assumptions used are valid; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information.

For the FTC to consider a comment, we must receive it on or before November 6, 2023. Your comment, including your name and your state, will be placed on the public record of this proceeding, including the <https://www.regulations.gov> website.

If you file your comment on paper, write "Surgeon General's Cigarette Health Warnings: Paperwork Comment, FTC File No. P854505" on your comment and on the envelope, and mail it to the following address: Federal Trade Commission, Office of the Secretary, 600 Pennsylvania Avenue NW, Suite CC-5610 (Annex J), Washington, DC 20580.

Because your comment will become publicly available at <https://www.regulations.gov>, you are solely responsible for making sure that your comment does not include any sensitive or confidential information. In particular, your comment should not include any sensitive personal information, such as your or anyone

⁶ This is derived from the average of the U.S. Bureau of Labor Statistics Occupational Employment and Wage Statistics (May 2022) hourly wages for lawyers/legal services (\$80.11) and general and operations managers (\$59.07), as roughly half of the plans submitted to the Commission are signed by attorneys and half by non-attorneys. https://www.bls.gov/oes/current/oes_stru.htm (Tables 23-1011, 11-1021).

else's Social Security number; date of birth; driver's license number or other state identification number, or foreign country equivalent; passport number; financial account number; or credit or debit card number. You are also solely responsible for making sure that your comment does not include any sensitive health information, such as medical records or other individually identifiable health information. In addition, your comment should not include any "trade secret or any commercial or financial information which . . . is privileged or confidential"—as provided by section 6(f) of the FTC Act, 15 U.S.C. 46(f), and FTC Rule 4.10(a)(2), 16 CFR 4.10(a)(2)—including, in particular, competitively sensitive information, such as costs, sales statistics, inventories, formulas, patterns, devices, manufacturing processes, or customer names.

Comments containing material for which confidential treatment is requested must (1) be filed in paper form, (2) be clearly labeled "Confidential," and (3) comply with FTC Rule 4.9(c). In particular, the written request for confidential treatment that accompanies the comment must include the factual and legal basis for the request and must identify the specific portions of the comment to be withheld from the public record. See FTC Rule 4.9(c). Your comment will be kept confidential only if the General Counsel grants your request in accordance with the law and the public interest. Once your comment has been posted publicly at www.regulations.gov, we cannot redact or remove your comment unless you submit a confidentiality request that meets the requirements for such treatment under FTC Rule 4.9(c), and the General Counsel grants that request.

The FTC Act and other laws that the Commission administers permit the collection of public comments to consider and use in this proceeding as appropriate. The Commission will consider all timely and responsive public comments that it receives on or before November 6, 2023. For information on the Commission's privacy policy, including routine uses permitted by the Privacy Act, see <https://www.ftc.gov/site-information/privacy-policy>.

Josephine Liu,

Assistant General Counsel for Legal Counsel.

BILLING CODE 6750–01–P

DEPARTMENT OF DEFENSE

GENERAL SERVICES ADMINISTRATION

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[OMB Control No. 9000–0199; Docket No. 2023–0053; Sequence No. 5]

Submission for OMB Review; Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat Division has submitted to the Office of Management and Budget (OMB) a request to review and approve a revision of a previously approved information collection requirement regarding Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

DATES: Submit comments on or before October 6, 2023.

ADDRESSES: Written comments and recommendations for this information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under Review—Open for Public Comments" or by using the search function.

Additionally, submit a copy to GSA through <https://www.regulations.gov> and follow the instructions on the site. This website provides the ability to type short comments directly into the comment field or attach a file for lengthier comments.

Instructions: All items submitted must cite OMB Control No. 9000–0199, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment. Comments received generally will be posted without change to <https://www.regulations.gov>, including any personal and/or business confidential information provided. To confirm receipt of your comment(s), please check www.regulations.gov, approximately two-to-three days after submission to verify posting. If there are difficulties submitting comments, contact the GSA Regulatory Secretariat Division at 202–501–4755 or GSARegSec@gsa.gov.

FOR FURTHER INFORMATION CONTACT:

Malissa Jones, Procurement Analyst, at telephone 571–882–4687, or malissa.jones@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. OMB Control Number, Title, and Any Associated Form(s)

9000–0199, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

B. Needs and Uses

DoD, GSA, and NASA are combining OMB Control Nos. for the Federal Acquisition Regulation (FAR) by FAR part. This consolidation is expected to improve industry's ability to easily and efficiently identify burdens associated with a given FAR part. The review of the information collections by FAR part allows improved oversight to ensure there is no redundant or unaccounted for burden placed on industry. Lastly, combining information collections in a given FAR part is also expected to reduce the administrative burden associated with processing multiple information collections.

This justification supports the revision of OMB Control No. 9000–0199 and combines it with the previously approved information collections under OMB Control Nos. 9000–0201, with the title "Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment". Upon approval of this consolidated information collection, OMB Control Nos. 9000–0201 will be discontinued. The burden requirements previously approved under the discontinued numbers will be covered under OMB Control No. 9000–0199.

This clearance covers the information that offerors and contractors must submit to comply with the following FAR requirements listed in the order in which offerors and contractors provide the information:

- FAR 52.204–26, *Covered Telecommunications Equipment or Services—Representation*. This provision requires offerors to:

- Review the list of excluded parties in SAM for entities excluded from receiving Federal awards for "covered telecommunications equipment or services".

- Represent whether it does or does not provide covered telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument.

○ Represents whether it does, or does not *use* covered telecommunications equipment or services, or any equipment, system, or service that uses covered telecommunications equipment or services.

• *FAR 52.204–24, Representation Regarding Certain Telecommunications and Video Surveillance Services or Equipment.* This provision requires offerors to respond only if the offeror represented that it “does *provide* or *use* covered telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument” in paragraphs (c)(1) or (c)(2) of the FAR provision at 52.204–26, or in paragraphs (v)(2)(i) or (ii) of the provision at 52.212–3.

If the offeror is required to respond to this provision, offerors are required to:

○ Review the list of excluded parties in SAM for entities excluded from receiving Federal awards for “covered telecommunications equipment or services,”

○ Represent whether it “will” or “will not” *provide* the covered telecommunications equipment or services to the Government in the performance of any contract, subcontract or other contractual instrument resulting from the solicitation.

■ If the offeror responded that it “will” in the representation in paragraph (d)(1) of this provision, the offeror must provide the following additional disclosure information found at 52.204–24(e)(1) as part of its offer:

• For covered equipment—
○ The entity that produced the covered telecommunications equipment (including entity name, unique entity identifier, Commercial and Government Entity (CAGE) code, and whether the entity was the original equipment manufacturer (OEM) or a distributor, if known);

○ A description of all covered telecommunications equipment offered (including brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); and

○ An explanation of the proposed use of covered telecommunications equipment and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(1) of the provision at 52.204–24.

• For covered services—

○ If the service is related to item maintenance: A description of all covered telecommunications services offered (include on the item being

maintained: Brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); or

○ If not associated with maintenance, the Product Service Code (PSC) of the service being provided; and an explanation of the proposed use of covered telecommunications services and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(1) of the provision at 52.204–24.

○ Represent whether it “does” or “does not” *use* covered telecommunications equipment or services, or use any equipment, system, or service that uses covered telecommunications equipment or services.

■ If the offeror has responded “does” in the representation in paragraph (d)(2) of this provision, the offeror must provide the following additional disclosure information found at 52.204–24(e)(2):

• For covered equipment—

○ The entity that produced the covered telecommunications equipment (including entity name, unique entity identifier, CAGE code, and whether the entity was the OEM or a distributor, if known);

○ A description of all covered telecommunications equipment offered (including brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); and

○ An explanation of the proposed use of covered telecommunications equipment and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(2) of the provision at 52.204–24.

• For covered services—

○ If the service is related to item maintenance: A description of all covered telecommunications services offered (include on the item being maintained: Brand; model number, such as OEM number, manufacturer part number, or wholesaler number; and item description, as applicable); or

○ If not associated with maintenance, the PSC of the service being provided; and an explanation of the proposed use of covered telecommunications services and any factors relevant to determining if such use would be permissible under the prohibition in paragraph (b)(2) of the provision at 52.204–24.

• *FAR 52.204–25, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.* In the event a contractor identifies covered telecommunications equipment or

services used as a substantial or essential component of any system, or as critical technology as part of any system, during contract performance, or a contractor is notified of such by a subcontractor at any tier or by any other source, this clause requires contractors to:

○ Report the information in paragraph 52.204–25(d)(2) to the contracting officer, unless the contract has established other procedures for reporting the information; in the case of DoD, the contractor shall report to the website at <https://dibnet.dod.mil>.

○ For indefinite delivery contracts, the contractor shall report to the contracting officer for the indefinite delivery contract and the contracting officer(s) for any affected order or, in the case of DoD, identify both the indefinite delivery contract and any affected orders in the report provided at <https://dibnet.dod.mil>.

○ Report the following within one business day from the date of such identification or notification:

■ The contract number;
■ The order number(s), if applicable;
■ Supplier name;
■ Supplier unique entity identifier (if known);
■ Supplier CAGE code (if known);
■ Brand;
■ Model number (original equipment manufacturer number, manufacturer part number, or wholesaler number);
■ Item description;
■ And any readily available information about mitigation actions undertaken or recommended.

○ Report the following within 10 business days of submitting the information in paragraph(d)(2)(i) of this clause:

■ Any further available information about mitigation actions undertaken or recommended.

■ Describe efforts undertaken to prevent use or submission of covered telecommunications equipment or services, and any additional efforts that will be incorporated to prevent future use or submission of covered telecommunications equipment or services.

The information collected is used by contracting officers to identify if an offeror *provides* or *uses* any covered telecommunications equipment or services as a part of its offered products or services to the Government in the performance of any contract, subcontract, or other contractual instrument. In the event that offerors are required to disclose further information, the contracting officer uses the collected information to ensure compliance with the FAR as implemented by statute and

consult with legal counsel and the program office on next steps regarding the prohibited equipment or services.

C. Annual Burden

Respondents: 902,777.

Total Annual Responses: 905,213.

Total Burden Hours: 1,839,573.

D. Public Comment

A 60-day notice was published in the **Federal Register** at 88 FR 42367, on June 30, 2023. No comments were received.

Obtaining Copies: Requesters may obtain a copy of the information collection documents from the GSA Regulatory Secretariat Division, by calling 202-501-4755 or emailing GSARegSec@gsa.gov. Please cite OMB Control No. 9000-0199, Prohibition on Contracting for Certain Telecommunications and Video Surveillance Services or Equipment.

BILLING CODE 6820-EP-P

GENERAL SERVICES ADMINISTRATION

GSA Acquisition Policy Federal Advisory Committee; Notification of Upcoming Web-Based Public Meeting

AGENCY: Office of Government-Wide Policy (OGP), General Services Administration (GSA).

ACTION: Meeting notice.

SUMMARY: GSA is providing notice of a meeting of the GSA Acquisition Policy Federal Advisory Committee (hereinafter “the Committee” or “the GAP FAC”) in accordance with the requirements of the Federal Advisory Committee Act (FACA). This meeting will be open to the public, accessible via webcast. Information on attending and providing written public comment is under the **SUPPLEMENTARY INFORMATION** section.

DATES: The GAP FAC will hold an open public meeting on Thursday, September 21, 2023, from 3:00 p.m. to 4:00 p.m. Eastern Standard Time (EST).

ADDRESSES: The meeting will be accessible via webcast. Registrants will receive the webcast information before the meeting.

FOR FURTHER INFORMATION CONTACT:

Boris Arratia, Designated Federal Officer, OGP, 703-795-0816, or email:

boris.arratia@gsa.gov; or Stephanie Hardison, OGP, 202-258-6823, or email: stephanie.hardison@gsa.gov. Additional information about the Committee, including meeting materials and agendas, are available on-line at <https://gsa.gov/policy-regulations/policy/acquisition-policy/gsa-acquisition-policy-federal-advisory-committee>.

SUPPLEMENTARY INFORMATION:

Purpose of the Meeting

The purpose of this meeting is for the GAP FAC to propose, discuss and vote on committee comments on the Federal Acquisition Regulation (FAR) Council's Proposed Rule on Sustainable Procurement, which is available online at <https://www.federalregister.gov/documents/2023/08/03/2023-16012/federal-acquisition-regulation-sustainable-procurement>.

Meeting Agenda

- Opening Remarks
- Propose and discuss GAP FAC comments on the FAR Council's Proposed Rule on Sustainable Procurement
- Vote on GAP FAC comments
- Closing Remarks and Adjourn

Meeting Registration

This meeting is open to the public and will be accessible by webcast. Registration information is located on the GAP FAC website: <https://www.gsa.gov/policy-regulations/policy/acquisition-policy/gsa-acquisition-policy-federal-advisory-committee>. Public attendees who want to attend virtually will need to register no later than 5:00 p.m. EST, on Wednesday, September 20, 2023 to obtain the meeting webcast information. All registrants will be asked to provide their name, affiliation, and email address. After registration, individuals will receive webcast access information details via email.

Public Comments

Written public comments are being accepted via email at gapfac@gsa.gov. To submit a written public comment, please email at gapfac@gsa.gov and include your name, organization name (if applicable).

Jeffrey A. Koses,

*Senior Procurement Executive, Office of
Acquisition Policy, Office of Government-
wide Policy.*

BILLING CODE 6820-RV-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

[Docket No. CDC-2023-0076]

Advisory Committee on Immunization Practices

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice and request for comment.

SUMMARY: In accordance with regulatory provisions, the Centers for Disease Control and Prevention (CDC) announces the following meeting of the Advisory Committee on Immunization Practices (ACIP). This meeting is open to the public. Time will be available for public comment.

DATES: The meeting will be held on September 22, 2023, 10 a.m. to 5 p.m., EDT (date and times subject to change; see the ACIP website for updates: <https://www.cdc.gov/vaccines/acip/index.htm>).

Written comments will be received between September 7-21, 2023.

ADDRESSES: You may submit comments, identified by Docket No. CDC-2023-0076, by either of the methods listed below. CDC does not accept comments by email.

- *Federal eRulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments.

- *Mail:* Ms. Stephanie Thomas, ACIP Meeting, Centers for Disease Control and Prevention, 1600 Clifton Road NE, Mailstop H24-8, Atlanta, Georgia 30329-4027. Attn: Docket No. CDC-2023-0076.

Instructions: All submissions received must include the Agency name and docket number. All relevant comments received in conformance with the <https://www.regulations.gov> suitability policy will be posted without change to <https://www.regulations.gov>, including any personal information provided. For access to the docket to read background documents or comments received, go to <https://www.regulations.gov>.

The meeting will be webcast live via the World Wide Web. The webcast link can be found on the ACIP website at <https://www.cdc.gov/vaccines/acip/index.html>.

FOR FURTHER INFORMATION CONTACT:

Stephanie Thomas, Committee Management Specialist, Advisory Committee on Immunization Practices, National Center for Immunization and Respiratory Diseases, Centers for Disease Control and Prevention, 1600

Clifton Road NE, Mailstop H24-8,
Atlanta, Georgia 30329-4027.
Telephone: (404) 639-8836; Email:
ACIP@cdc.gov.

SUPPLEMENTARY INFORMATION: *Purpose:* The Advisory Committee on Immunization Practices (ACIP) is charged with advising the Director, Centers for Disease Control and Prevention (CDC), on the use of immunizing agents. In addition, under 42 U.S.C. 1396s, the Committee is mandated to establish and periodically review and, as appropriate, revise the list of vaccines for administration to vaccine-eligible children through the Vaccines for Children program, along with schedules regarding dosing interval, dosage, and contraindications to administration of vaccines. Further, under applicable provisions of the Affordable Care Act and Section 2713 of the Public Health Service Act, immunization recommendations of ACIP that have been approved by the Director, CDC, and appear on CDC immunization schedules generally must be covered by applicable health plans.

Matters to be Considered: The agenda will include discussions of maternal respiratory syncytial virus (RSV) vaccine. A recommendation vote for maternal RSV vaccine is scheduled. A Vaccines for Children vote is scheduled for maternal RSV vaccine. Agenda items are subject to change as priorities dictate. For more information on the meeting agenda, visit <https://www.cdc.gov/vaccines/acip/meetings/index.html>.

Meeting Information: The meeting will be webcast live via the World Wide Web. For more information on ACIP, please visit the ACIP website: <https://www.cdc.gov/vaccines/acip/index.html>.

Public Participation

Interested persons or organizations are invited to participate by submitting written views, recommendations, and data. Please note that comments received, including attachments and other supporting materials, are part of the public record and are subject to public disclosure. Comments will be posted on <https://www.regulations.gov>. Therefore, do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure. If you include your name, contact information, or other information that identifies you in the body of your comments, that information will be on public display. CDC will review all submissions and may choose to redact, or withhold, submissions containing private or proprietary information such as Social

Security numbers, medical information, inappropriate language, or duplicate/near-duplicate examples of a mass-mail campaign. CDC will carefully consider all comments submitted into the docket.

Written Public Comment: The docket will be opened to receive written comments on September 7, 2023. Written comments must be received by September 21, 2023.

Oral Public Comment: This meeting will include time for members of the public to make an oral comment. Priority will be given to individuals who submit a request to make an oral public comment before the meeting according to the procedures below.

Procedure for Oral Public Comment: All persons interested in making an oral public comment at the September 22, 2023, ACIP meeting must submit a request between September 7, 2023, and September 20, 2023, at <https://www.cdc.gov/vaccines/acip/meetings/index.html> no later than 11:59 p.m., EDT, September 20, 2023, according to the instructions provided.

If the number of persons requesting to speak is greater than can be reasonably accommodated during the scheduled time, CDC will conduct a lottery to determine the speakers for the scheduled public comment session. CDC staff will notify individuals regarding their request to speak by email on September 21, 2023. To accommodate the significant interest in participation in the oral public comment session of ACIP meetings, each speaker will be limited to three minutes, and each speaker may only speak once per meeting.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Lead Exposure and Prevention Advisory Committee

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, the CDC announces the following meeting for the Lead Exposure and Prevention Advisory Committee (LEPAC). This is a hybrid meeting which will occur in person and online and is open to the public. Advance registration by September 29, 2023, is needed to receive the information to attend the meeting. The registration link is provided in the addresses section below.

DATES: The meeting will be held on October 16, 2023, from 9 a.m. to 4:30 p.m., EDT and October 17, 2023, from 9 a.m. to 1 p.m., EDT.

ADDRESSES: Register in advance at <https://forms.office.com/pages/responsepage.aspx?id=eCgFR53Gc0uxesXQDXVjuPeyypfKOR5Gj2Gz6aPXBGpUREZISTBGVjczTFILRU5NUjY0SFNaQTM0UC4u&web=1&wdLOR=c61C32E80-28BF-40D7-AC2D-E113AEFDAA23> to receive information to attend the meeting.

FOR FURTHER INFORMATION CONTACT: Paul Allwood, Ph.D., M.P.H., Designated Federal Officer, National Center for Environmental Health, Centers for Disease Control and Prevention, 4770 Buford Highway, Atlanta, Georgia 30341, Telephone: 770-488-6774; Email: LEPAC@cdc.gov.

SUPPLEMENTARY INFORMATION:

Background: The Lead Exposure and Prevention Advisory Committee was established under Section 2203 of Public Law 114-322, the Water Infrastructure Improvements for the Nation Act; 42 U.S.C. 300j-21, Registry for Lead Exposure and Prevention Advisory Committee.

Purpose: The LEPAC is charged with providing advice and guidance to the Secretary, Department of Health and Human Services (HHS), and the Director, CDC and Administrator, ATSDR, on (1) reviewing Federal programs and services available to individual communities exposed to lead; (2) reviewing current research on lead exposure to identify additional

research needs; (3) reviewing and identifying best practices, or the need for best practices regarding lead screening and the prevention of lead poisoning; (4) identifying effective services, including services relating to healthcare, education, and nutrition for individuals and communities affected by lead exposure and lead poisoning, including in consultation with, as appropriate, the lead exposure registry as established in section 2203(b) of Public Law 114–322; and (5) undertaking any other review or activities that the Secretary determines to be appropriate.

Matters To Be Considered: The agenda will include presentations on the following topics: aligning HUD inspection protocols for assisted housing for the last 20 years, the environmental factors impacting lead reduction, EPA's proposal on lead dust clearance level and hazard standard, updates on blood lead testing instrument, lead related funding opportunities for community-based organizations, state policy actions related to the blood lead reference value, CDC's efforts to increase blood lead testing in children enrolled in Medicaid, and an update from the Preventing Lead Exposure in Adults workgroup. Agenda items are subject to change as priorities dictate.

Public Participation

Oral Public Comment: The public comment period is scheduled on October 16, 2023, from 1:30 p.m. until 2 p.m., and October 17, 2023, from 9:15 a.m. until 9:45 a.m. EDT. Individuals wishing to make a comment during the public comment period, please email your name, organization, and phone number by October 1, 2023, to LEPAC@cdc.gov.

The Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention, has been delegated the authority to sign **Federal Register** notices pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

Kalwant Smagh,

Director, Office of Strategic Business Initiatives, Office of the Chief Operating Officer, Centers for Disease Control and Prevention.

BILLING CODE 4163–18–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Meeting of the Community Preventive Services Task Force (CPSTF)

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice of meeting.

SUMMARY: The Centers for Disease Control and Prevention, within the Department of Health and Human Services, announces the next meeting of the Community Preventive Services Task Force (CPSTF) on October 18–19, 2023.

DATES: The meeting will be held on Wednesday, October 18, 2023, from 9:00 a.m. to 5:00 p.m. EDT, and Thursday, October 19, 2023, from 9:00 a.m. to 5:00 p.m. EDT.

ADDRESSES: The meeting will be available to the public via web conference.

FOR FURTHER INFORMATION CONTACT:

Kenya Turner, Office of Science, Office of Scientific Evidence and Recommendations, Community Guide Program; Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS–H21–10, Atlanta, GA 30329. Telephone: (404) 718–4592; Email: CPSTF@cdc.gov.

SUPPLEMENTARY INFORMATION:

Meeting Accessibility: The CPSTF meeting will be shown via web conference.

All meeting attendees must register by October 11, 2023. CDC will email web conference login information and the agenda to registrants from the CPSTF@cdc.gov mailbox approximately two weeks before the meeting start date.

To register for the meeting, individuals should send an email to CPSTF@cdc.gov and include the following information: name, title, organization name, organization address, phone, and email.

Public Comment: Individuals who would like to make public comments during the October meeting must state their desire to do so in an email to the CPSTF@cdc.gov mailbox no later than October 11, 2023. The request should include name, organizational affiliation, and topic to be addressed. Public comment must be relevant to one of the topics proposed for the meeting. The requestor will receive instructions related to the public comment process for this meeting after the request is received. A public comment period

follows the CPSTF's discussion of each systematic review and will be limited to no more than three minutes per person. Public comments may be used to inform task force discussions and will be included in the meeting summary.

Background on the CPSTF: The CPSTF is an independent, nonfederal panel whose members are appointed by the CDC Director. CPSTF members represent a broad range of research, practice, and policy expertise in prevention, wellness, health promotion, and public health. The CPSTF was convened in 1996 by HHS to identify community preventive programs, services, and policies that increase health and longevity, save lives and dollars, and improve Americans' quality of life. CDC is mandated to provide ongoing administrative, research, and technical support for the operations of the CPSTF. During its meetings, the CPSTF considers the findings of systematic reviews of existing research and practice-based evidence, and issues recommendations. CPSTF recommendations are not mandates for compliance or spending. Instead, they provide information about evidence-based options that decision makers and affected community members can consider when they are determining what best meets the specific needs, preferences, available resources, and constraints of their jurisdictions and constituents. The CPSTF's recommendations, along with the systematic reviews of the evidence on which they are based, are compiled on the Community Guide website (www.thecommunityguide.org).

Matters proposed for discussion: The agenda will consist of deliberation on systematic reviews of literature. Topics proposed for the October 2023 meeting include cancer, preparedness and response, social determinants of health, and substance use. Changes regarding the start and end times for each day, and any updates to agenda topics, will be available on the Community Guide website (www.thecommunityguide.org) closer to the date of the meeting. The meeting agenda is subject to change without notice.

Tiffany Brown,

Executive Secretary, Centers for Disease Control and Prevention.

Performance Review Board Members

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC) located within the Department of Health and Human Services (HHS) is publishing the names of the Performance Review Board Members who are reviewing performance of Senior Executive Service members, Title 42 executives, Senior Level, and Scientific Professional employees for Fiscal Year 2023.

FOR FURTHER INFORMATION CONTACT: Eva Harrison, Human Resources Office, Centers for Disease Control and Prevention, 1600 Clifton Road NE, MS US11-2, Atlanta, Georgia 30329-4027, Telephone (404) 783-7410.

SUPPLEMENTARY INFORMATION: Title 5, U.S.C. 4314(c)(4) of the Civil Service Reform Act of 1978, Public Law 95-454, requires that the appointment of Performance Review Board Members be published in the **Federal Register**. The following persons will serve on the CDC Performance Review Board, which will oversee the evaluation of performance appraisals of Senior Executive Service members for the fiscal year 2023 review period:

Bonander, Jason
Dauphin, Leslie
Dulin, Stephanie
Durst, Kelley
Ethier, Kathleen, Co-Chair
Kuhnert, Wendi
Lindsey, Ronney L.
Peeples, Amy
Perry, Terrance
Taylor, Dia, Co-Chair
Tomlinson, Hank
Wharton, Melinda

Dated: August 31, 2023.

Tiffany Brown,

Executive Secretary, Centers for Disease Control and Prevention.

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

Privacy Act of 1974; Matching Program

AGENCY: Center for Consumer Information and Insurance Oversight (CCIIO), Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Notice of a new matching program.

SUMMARY: In accordance with the Privacy Act of 1974, as amended, the Department of Health and Human Services (HHS), Centers for Medicare & Medicaid Services (CMS) is providing notice of the re-establishment of a data exchange program between CMS and the Department of Homeland Security (DHS), United States Citizenship and Immigration Services (USCIS), “Verification of United States Citizenship and Immigration Status Data for Eligibility Determinations.”

DATES: The deadline for comments on this notice is October 6, 2023. The program will commence not sooner than 30 days after publication of this notice, provided that no comments are received that warrant a change to this notice. The program will be conducted for an initial term of 18 months (from approximately October 20, 2023, to April 19, 2025) and within three months of expiration may be renewed for one additional year if the parties make no change to the program and certify that the program has been conducted in compliance with the agreement.

ADDRESSES: Interested parties may submit comments on the new program to the CMS Privacy Act Officer by mail at: Division of Security, Privacy Policy & Governance, Information Security & Privacy Group, Office of Information Technology, Centers for Medicare & Medicaid Services, 7500 Security Blvd., Baltimore, MD 21244-1850, Mailstop: N1-14-56, or by email at Barbara.Demopulos@cms.hhs.gov.

FOR FURTHER INFORMATION CONTACT: If you have questions about the program, you may contact Anne Pesto, Senior Advisor, Marketplace Eligibility and Enrollment Group, Center for Consumer Information and Insurance Oversight, Centers for Medicare & Medicaid Services, at 443-844-9966, by email at anne.pesto@cms.hhs.gov, or by mail at 7500 Security Blvd., Baltimore, MD 21244.

SUPPLEMENTARY INFORMATION: The Privacy Act of 1974, as amended (5

U.S.C. 552a) provides certain protections for individuals applying for and receiving federal benefits. The law governs the use of computer matching by federal agencies when records in a system of records (meaning, federal agency records about individuals retrieved by name or other personal identifier) are matched with records of other federal or non-federal agencies. In carrying out this Agreement, both Parties will follow requirements that apply to System of Records, and HHS will carry out all of the requirements that apply to matching programs—under the Privacy Act as amended (5 U.S.C. 552a) and the regulations and guidance promulgated thereunder, including Office of Management and Budget (OMB) Circular A-108 “Federal Agency Responsibilities for Review, Reporting, and Publication under the Privacy Act” published at 81 FR 94424 (Dec. 23, 2016) and other OMB guidelines. The DHS Data Integrity Board has not approved this program, but DHS/USCIS has approved the data exchange agreement.

The Privacy Act requires agencies involved in a program that meets the definition of a “matching program” in 5 U.S.C. 552a(a)(8) to comply with the below requirements. HHS will provide all of the required protections to:

1. Enter into a written agreement, provide a copy of the agreement to Congress and the Office of Management and Budget (OMB), and make it available to the public, as required by 5 U.S.C. 552a(o), (u)(3)(A), and (u)(4).
2. Notify the individuals whose information will be used in the matching program that the information they provide is subject to verification through matching, as required by 5 U.S.C. 552a(o)(1)(D).
3. Verify match findings before suspending, terminating, reducing, or making a final denial of an individual’s benefits or payments or taking other adverse action against the individual, as required by 5 U.S.C. 552a(p).
4. Report the matching program to Congress and the OMB, in advance and annually, as required by 5 U.S.C. 552a(o) (2)(A)(i), (r), and (u)(3)(D).
5. Publish advance notice of the matching program in the **Federal Register** as required by 5 U.S.C. 552a(e)(12).

Barbara Demopulos,

Privacy Act Officer, Division of Security, Privacy Policy and Governance, Office of Information Technology, Centers for Medicare & Medicaid Services.

Participating Agencies

The Department of Health and Human Services (HHS), Centers for Medicare &

Medicaid Services (CMS) is the recipient agency, and the Department of Homeland Security (DHS), United States Citizenship and Immigration Services (USCIS) is the source agency.

Authority for Conducting the Matching Program

The principal authority for conducting the program is 42 U.S.C. 18001 *et seq.*

Purpose(s)

The program will provide CMS with USCIS data which CMS and state-based administering entities will use to determine individuals' eligibility for:

- initial enrollment in a Qualified Health Plan through an Exchange established under the Patient Protection and Affordable Care Act as amended by the Health Care and Education Reconciliation Act (42 U.S.C. 18001 *et seq.*);
- Insurance Affordability Programs (IAPs);
- certificates of exemption from the shared responsibility payment; and
- redeterminations and renewal decisions, including appeal determinations.

IAPs include advance payments of the premium tax credit and cost sharing reductions; Medicaid; Children's Health Insurance Program; and Basic Health Program.

Categories of Individuals

The individuals whose information will be used in the program are consumers (applicants and enrollees) who receive the eligibility determinations and redeterminations described in the preceding PURPOSE(S) section.

Categories of Records

The categories of records used in the program are identity, citizenship, and immigration status records. The data elements are described below.

To request information from USCIS, CMS will query USCIS' Systematic Alien Verification for Entitlements (SAVE) system using these data elements: Last Name; First Name; Middle Name; Date of Birth; One or More Immigration Number(s) (*e.g.*, Alien Registration/USCIS Number, Arrival-Departure Record I-94 Number, SEVIS ID Number, Certificate of Naturalization Number, Certificate of Citizenship Number, or Unexpired Foreign Passport Number); and Other Information from Immigration Documentation (*e.g.* Country of Birth, Date of Entry, Employment Authorization Category).

When the above-listed data that CMS uses to query the SAVE system matches

USCIS data in SAVE, USCIS will return query results to CMS that include these additional data elements about each individual, as relevant: Verification Case Number; Citizenship or Immigration Data (*e.g.*, immigration status/category, immigration class of admission, and/or employment authorization); and Sponsorship Data (*e.g.*, name, address, and Social Security number of Form I-864/I-864EZ sponsors and Form I-864A household members, when applicable).

System(s) of Records

The records used in this program will be disclosed from the following systems of records, as authorized by routine uses published in the System of Records Notices (SORNs) cited below:

- CMS Health Insurance Exchanges System (HIX), System No. 09-70-0560, last published in full at 78 FR 63211 (Oct. 23, 2013) and amended at 83 FR 6591 (Feb. 14, 2018). Routine use 3 permits CMS' disclosures to USCIS.
- DHS/USCIS-004 Systematic Alien Verification for Entitlements Program, 85 FR 31798 (May 27, 2020). Routine use I permits USCIS' disclosures to CMS.

[FR Doc. 2023-19174 Filed 9-5-23; 8:45 am]

BILLING CODE 4120-03-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS-3438-FN]

Medicare and Medicaid Programs: Application From the Accreditation Commission for Healthcare (ACHC) for Continued CMS-Approval of Its Hospital Accreditation Program

AGENCY: Centers for Medicare & Medicaid Services, HHS.

ACTION: Notice.

SUMMARY: This notice announces our decision to approve the Accreditation Commission for Healthcare (ACHC) for continued recognition as a national accrediting organization for hospitals that wish to participate in the Medicare or Medicaid programs.

DATES: The decision announced in this notice is applicable on September 25, 2023 through September 25, 2027.

FOR FURTHER INFORMATION CONTACT: Danielle Adams, (410) 786-8818; or Lillian Williams, (410) 786-8636.

SUPPLEMENTARY INFORMATION:

I. Background

Under the Medicare program, eligible beneficiaries may receive covered services from a hospital provided that certain requirements are met. Section 1861(e) of the Social Security Act (the Act) establishes distinct criteria for facilities seeking designation as a hospital. Regulations concerning provider agreements are at 42 CFR part 489 and those pertaining to activities relating to the survey and certification of facilities are at 42 CFR part 488. The regulations at 42 CFR part 482 specify the minimum conditions that a hospital must meet to participate in the Medicare program.

Generally, to enter into an agreement, a hospital must first be certified by a state survey agency (SA) as complying with the conditions or requirements set forth in 42 CFR part 482 of our regulations. Thereafter, the hospital is subject to regular surveys by a SA to determine whether it continues to meet these requirements.

Section 1865(a)(1) of the Act provides that, if a provider entity demonstrates through accreditation by a Centers for Medicare & Medicaid Services (CMS) approved national accrediting organization (AO) that all applicable Medicare conditions are met or exceeded, we will deem those provider entities as having met the requirements. Accreditation by an AO is voluntary and is not required for Medicare participation.

If an AO is recognized by the Secretary of the Department of Health and Human Services (the Secretary) as having standards for accreditation that meet or exceed Medicare requirements, any provider entity accredited by the national accrediting body's approved program would be deemed to meet the Medicare conditions. A national AO applying for approval of its accreditation program under part 488, subpart A, must provide CMS with reasonable assurance that the AO requires the accredited provider entities to meet requirements that are at least as stringent as the Medicare conditions.

Our regulations concerning the approval of AOs are set forth at §§ 488.4, 488.5 and 488.5(e)(2)(i). The regulations at § 488.5(e)(2)(i) require an AO to reapply for continued approval of its accreditation program every 6 years or sooner as determined by CMS.

The Accreditation Commission for Healthcare's (ACHC) current term of approval for their hospital accreditation program expires September 25, 2023.

II. Application Approval Process

Section 1865(a)(3)(A) of the Act provides a statutory timetable to ensure

that our review of applications for CMS approval of an accreditation program is conducted in a timely manner. The Act provides us 210 days after the date of receipt of a complete application, with any documentation necessary to make the determination, to complete our survey activities and application process. Within 60 days after receiving a complete application, we must publish a notice in the **Federal Register** that identifies the national accrediting body making the request, describes the request, and provides no less than a 30-day public comment period. At the end of the 210-day period, we must publish a notice in the **Federal Register** approving or denying the application.

III. Provisions of the Proposed Notice

On April 14, 2023, we published a proposed notice in the **Federal Register** (88 FR 23088), announcing ACHC's request for continued approval of its Medicare hospital accreditation program. In the April 14, 2023 proposed notice, we detailed our evaluation criteria. Under section 1865(a)(2) of the Act and in our regulations at § 488.5, we conducted a review of ACHC's Medicare hospital accreditation application in accordance with the criteria specified by our regulations, which include, but are not limited to the following:

- An administrative review of ACHC's: (1) corporate policies; (2) financial and human resources available to accomplish the proposed surveys; (3) procedures for training, monitoring, and evaluation of its hospital surveyors; (4) ability to investigate and respond appropriately to complaints against accredited hospital; and (5) survey review and decision-making process for accreditation.

- The comparison of ACHC's Medicare hospital accreditation program standards to our current Medicare hospital conditions of participation (CoPs).

- A documentation review of ACHC's survey process to do the following:

- ++ Determine the composition of the survey team, surveyor qualifications, and ACHC's ability to provide continuing surveyor training.

- ++ Compare ACHC's processes to those we require of state survey agencies, including periodic resurvey and the ability to investigate and respond appropriately to complaints against ACHC accredited hospitals.

- ++ Evaluate ACHC's procedures for monitoring accredited hospitals it has found to be out of compliance with ACHC's program requirements. (This pertains only to monitoring procedures when ACHC identifies non-compliance. If noncompliance is identified by a SA

through a validation survey, the SA monitors corrections as specified at § 488.9(c)).

- ++ Assess ACHC's ability to report deficiencies to the surveyed hospitals and respond to the hospitals plans of correction in a timely manner.

- ++ Establish ACHC's ability to provide CMS with electronic data and reports necessary for effective validation and assessment of the organization's survey process.

- ++ Determine the adequacy of ACHC's staff and other resources.

- ++ Confirm ACHC's ability to provide adequate funding for performing required surveys.

- ++ Confirm ACHC's policies with respect to surveys being unannounced.

- ++ Confirm ACHC's policies and procedures to avoid conflicts of interest, including the appearance of conflicts of interest, involving individuals who conduct surveys or participate in accreditation decisions.

- ++ Obtain ACHC's agreement to provide CMS with a copy of the most current accreditation survey together with any other information related to the survey as we may require, including corrective action plans.

IV. Analysis of and Responses to Public Comments on the Proposed Notice

In accordance with section 1865(a)(3)(A) of the Act, the April 14, 2023, proposed notice also solicited public comments regarding whether ACHC's requirements met or exceeded the Medicare CoPs for hospitals. We received one comment in response to our proposed notice.

The commenter expressed concern about hospital accreditation programs overall and the responsibility of patient safety in hospitals. The comment was not specific to ACHC.

We appreciate this comment and the concern for patient safety and quality of care. We continue to prioritize patient safety and our responsibility for oversight of AOs. As described in Section III, "Provisions of the Proposed Notice" of this final notice, we take various steps when considering to approve or not approve a national AO. Each AO wishing to be recognized by Medicare as a national AO must go through a rigorous process for CMS approval. We remain steadfast in our commitment to keeping the public informed of our evaluation process for AOs seeking approval from CMS.

V. Provisions of the Final Notice

A. Differences Between ACHC's Standards and Requirements for Accreditation and Medicare Conditions and Survey Requirements

We compared ACHC's hospital accreditation requirements and survey process with the Medicare CoPs of 42 CFR part 482, and the survey and certification process requirements of parts 488 and 489. Our review and evaluation of ACHC's hospital accreditation application, which were conducted as described in section III. of this final notice, yielded the following areas where, as of the date of this final notice, ACHC has completed revising its standards and certification processes in order to—

- Meet the standard's requirements of all the following regulations:

- ++ Section 482.22(c)(5)(iii), to fully address the requirement that an assessment of the patient (in lieu of the requirements of paragraphs (c)(5)(i) and (ii) of this section) be completed and documented after registration, but prior to surgery or a procedure requiring anesthesia services, when the patient is receiving specific outpatient surgical or procedural services and when the medical staff has chosen to develop and maintain a policy that identifies, in accordance with the requirements at paragraph (c)(5)(v) of this section, specific patients as not requiring a comprehensive medical history and physical examination, or any update to it, prior to specific outpatient surgical or procedural services. The assessment must be completed and documented by a physician (as defined in section 1861(r) of the Act), an oral and maxillofacial surgeon, or other qualified licensed individual in accordance with State law and hospital policy.

- ++ Section 482.22(c)(5)(iv), to fully address the requirement that the medical staff develop and maintain a policy that identifies those patients for whom the assessment requirements of paragraph (c)(5)(iii) of this section would apply. The provisions of paragraphs (c)(5)(iii), (iv), and (v) of this section do not apply to a medical staff that chooses to maintain a policy that adheres to the requirements of paragraphs of (c)(5)(i) and (ii) of this section for all patients.

- ++ Section 482.22(c)(5)(v), to fully address the requirement that the medical staff, if it chooses to develop and maintain a policy for the identification of specific patients to whom the assessment requirements in paragraph (c)(5)(iii) of this section would apply, must demonstrate evidence that the policy applies only to

those patients receiving specific outpatient surgical or procedural services as well as evidence that the policy is based on.

++ Section 482.41(b)(2), to address the requirements regarding Life Safety Code (LSC) waivers.

++ Section 482.41(b)(7), to address the requirements regarding alcohol-based hand rub (ABHR) dispensers.

In addition to the standards review, CMS also reviewed ACHC's comparable survey processes, which were conducted as described in section III., of this notice, and yielded the following areas where, as of the date of this final notice, ACHC has completed revising its survey processes to demonstrate that it uses survey processes that are comparable to state survey agency processes by:

- Revising the complaint response policies and processes to align with the State Operations Manual, Chapter 5 guidance. ACHC revised its Administrative Review Offsite Investigation process to align with CMS' triage process to track and trend for potential focus areas during the next onsite survey or complete an onsite complaint investigation.

- Revising ACHC's hospital accreditation process policies to include the applicable sections of the Health Care Facilities Code National Fire Protection Agency (NFPA 99) in accordance with section 482.41(c).

- Ensuring that all hospital LSC surveyors have received comparable and adequate training or have sufficient experience to make them qualified to survey health care facilities for compliance with both the 2012 LSC and 2012 NFPA 99 requirements.

- Providing guidance and instruction to surveyors on determining the appropriate level of citation for LSC deficiencies.

B. Term of Approval

Based on our review and observations described in section III. and section V. of this final notice, we approve ACHC as a national accreditation organization for hospitals that request participation in the Medicare program. The decision announced in this final notice is effective September 25, 2023, through September 25, 2027 (4 years). In accordance with § 488.5(e)(2)(i) the term of the approval will not exceed 6 years.

While ACHC has taken actions based on the findings annotated in section V.A., of this final notice, (Differences Between ACHC's Standards and Requirements for Accreditation and Medicare Conditions and Survey Requirements) as authorized under § 488.8, we will continue ongoing

review of ACHC's hospital processes to ensure full implementation and sustained compliance. In keeping with CMS's initiative to increase AO oversight broadly and ensure that our requested revisions by ACHC are fully implemented, CMS expects more frequent review of ACHC's activities in the future.

VI. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

The Administrator of the Centers for Medicare & Medicaid Services (CMS), Chiquita Brooks-LaSure, having reviewed and approved this document, authorizes Evell J. Barco Holland, who is the Federal Register Liaison, to electronically sign this document for purposes of publication in the **Federal Register**.

Dated: August 31, 2023.

Evell J. Barco Holland,

Federal Register Liaison, Centers for Medicare & Medicaid Services.

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a final guidance for industry entitled "DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs." This guidance identifies the standards necessary to facilitate adoption of secure, interoperable, electronic data exchange among the pharmaceutical distribution supply chain, and clarifies the trading partners, products, and transactions subject to

such standards. This guidance finalizes the revised draft guidance of the same title, "DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs," issued in July 2022, as required by the Federal Food, Drug, and Cosmetic Act (FD&C Act).

DATES: The announcement of the guidance is published in the **Federal Register** on September 6, 2023.

ADDRESSES: You may submit either electronic or written comments on Agency guidances at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to <https://www.regulations.gov> will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on <https://www.regulations.gov>.

- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see "Written/Paper Submissions" and "Instructions").

Written/Paper Submissions

Submit written/paper submissions as follows:

- **Mail/Hand Delivery/Courier (for written/paper submissions):** Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in "Instructions."

Instructions: All submissions received must include the Docket No. FDA-2014-D-1981 for "DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain

Human, Finished, Prescription Drugs.” Received comments will be placed in the docket and, except for those submitted as “Confidential Submissions,” publicly viewable at <https://www.regulations.gov> or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

• **Confidential Submissions**—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states “THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.” The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on <https://www.regulations.gov>. Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as “confidential.” Any information marked as “confidential” will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA’s posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: <https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf>.

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to <https://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the “Search” box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of this guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002, or to the Office of Communication, Outreach and Development, Center for Biologics

Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the guidance document.

FOR FURTHER INFORMATION CONTACT:

Lysette Deshields, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993–0002, 301–796–3130, drugtrackandtrace@fda.hhs.gov; or Anne Taylor, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993–0002, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a guidance for industry entitled “DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs.” The FD&C Act, as amended by the Drug Supply Chain Security Act (DSCSA), outlines requirements for enhanced drug distribution security, which include the steps to achieve interoperable, electronic tracing of products at the package level. Section 582(g)(1) of the FD&C Act (21 U.S.C. 360eee–1(g)(1)) sets forth enhanced drug distribution security requirements for trading partners, including adherence to standards established by FDA for the exchange of transaction information and transaction statements in a secure, interoperable, electronic manner and the verification of product at the package level. Section 582(g)(1) of the FD&C Act states that these enhanced drug distribution security requirements go into effect on November 27, 2023. Additionally, section 582(h)(4)(A) of the FD&C Act specifies that FDA issue a guidance to identify and make recommendations with respect to the standards necessary for adoption in order to support the secure, interoperable, electronic data exchange among the pharmaceutical distribution supply chain that comply with a form and format developed by a widely recognized international standards development organization.

In this guidance, FDA considered the standards established pursuant to sections 505D of the FD&C Act (21 U.S.C. 355e). FDA also considered the standards established pursuant to section 582(a)(2) of the FD&C Act and

described in the July 2022 revised draft guidance entitled “DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs.” The pilot projects conducted per section 582(j) of the FD&C Act also informed this guidance.

In November 2014, FDA issued a draft guidance for industry, entitled “DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs: How to Exchange Product Tracing Information.” In July 2022, FDA issued a revised draft guidance, entitled “DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs” (87 FR 40258), that updated the policies articulated in the 2014 draft guidance. This guidance finalizes the July 2022 revised draft guidance. FDA considered comments received on the revised draft guidance as the guidance was finalized. Changes were made to the guidance to improve clarity. This guidance finalizes the policy articulated in the July 2022 revised draft guidance to reflect the enhanced drug distribution security requirements in section 582(g)(1) of the FD&C Act that will go into effect on November 27, 2023, including that only electronic methods of product tracing will be permitted and verification of product at the package level will be required, unless a waiver, exception, or exemption applies. This guidance is intended to also facilitate the creation of a uniform methodology for product tracing while ensuring the protection of confidential commercial information and trade secrets. FDA also published other guidances describing recommendations for enhanced drug distribution security, including the attributes necessary for enhanced product tracing and verification, which should be read in conjunction with this guidance (see FDA’s Drug Supply Chain Security Law and Policies web page at <https://www.fda.gov/drugs/drug-supply-chain-security-act-dscsa/drug-supply-chain-security-act-law-and-policies>).

This guidance is being issued consistent with FDA’s good guidance practices regulation (21 CFR 10.115). The guidance represents the current thinking of FDA on “DSCSA Standards for the Interoperable Exchange of Information for Tracing of Certain Human, Finished, Prescription Drugs.” It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

This guidance includes information collection provisions that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). FDA intends to solicit public comment and obtain OMB approval for any information collections recommended in this guidance that are new or that would represent substantive or material modifications to those previously approved collections of information found in FDA regulations or guidance.

III. Electronic Access

Persons with access to the internet may obtain the guidance at either <https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs>, <https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information/biologics/biologics-guidances>, <https://www.fda.gov/regulatory-information/search-fda-guidance-documents>, or <https://www.regulations.gov>.

Dated: August 31, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

[FR Doc. 2023–19182 Filed 9–5–23; 8:45 am]

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Assistant Secretary for Financial Resources; Statement of Organization, Functions, and Delegations of Authority

AGENCY: Office of the Assistant Secretary for Financial Resources (ASFR), Department of Health and Human Services.

ACTION: Notice.

SUMMARY: The Department of Health and Human Services (HHS) is making several updates within the Office of the Assistant Secretary for Financial Resources (AM), the Immediate Office (AMM), the Office of Budget (AML), the Office of Finance (AMS), the Office of Grants (AMU), and the Office of Acquisitions (AMX), to better align office titles with office activities and to clearly delineate ASFR's portfolio across its five components.

FOR FURTHER INFORMATION CONTACT:

Christine Jones, Deputy Assistant Secretary for Operations and Management, Office of the Assistant Secretary for Financial Resources, Hubert H. Humphrey Building, 200

Independence Ave. SW, Room 514–G, Washington, DC 20201, (202) 690–7542.

SUPPLEMENTARY INFORMATION: Part A (Office of the Secretary), Statement of Organization, Functions, and Delegations of Authority of the Department of Health and Human Services (HHS) is being amended at Chapter AML, Office of Budget, as last amended at 74 FR 150 (39327) dated July 30, 2009; at Chapter AM, ASFR, as last amended at 74 FR 215 dated November 9, 2009; at Chapter AMS, Office of Finance, as last amended at 81 FR 88249, dated December 7, 2016; at Chapter AMX, Office of Acquisitions, as last amended at 84 FR 20154, dated May 8, 2019; at Chapter AMU, Office of Grants, as last amended 85 FR 81935, dated December 17, 2020; and at Chapter AMM, Immediate Office, as last amended at 86 FR 6354, dated January 21, 2021.

This notice realigns the Grants Quality Service Management Office (Grants QSMO) from the Immediate Office (AMM) to the Office of Grants (AMU); and compiles the responsibilities of ASFR into one **Federal Register** notice. All notices above are superseded by the following changes:

(1) Chapter AM, Office of the Assistant Secretary for Financial Resources

Section AM.00 Mission: The mission of the Office of the Assistant Secretary for Financial Resources is to advise the Secretary on all aspects of budget, grants, financial management, acquisitions, and Enterprise Risk Management and to provide direction for these activities throughout HHS.

Section AM.10 Organization: The Office of the Assistant Secretary for Financial Resources is headed by the Assistant Secretary for Financial Resources, who reports to the Secretary, and accomplishes its work through its component offices:

- Immediate Office (AMM)
- Office of Budget (AML)
- Office of Finance (AMS)
- Office of Grants (AMU)
- Office of Acquisitions (AMX)

Section AM.20 Functions: The Assistant Secretary for Financial Resources has several formal and informal roles, including Chief Financial Officer (CFO), Chief Performance Improvement Officer (PIO), Chief Acquisition Officer (CAO), HHS audit follow-up official, and lead official for budget and Department-wide grants policy. The Assistant Secretary is also a close advisor to the Secretary on policy issues.

(2) Chapter AMM, Immediate Office

Section AMM.00 Mission: The Immediate Office is responsible for support, operations, and coordination required to execute the mission of the Office of the Assistant Secretary for Financial Resources (ASFR) and the implementation of HHS's Enterprise Risk Management (ERM) capabilities. The Immediate Office also leads strategic and workforce development initiatives across ASFR.

Section AMM.10 Organization: The Immediate Office is headed by the Deputy Assistant Secretary for Operations and Management, who reports to the Assistant Secretary for Financial Resources, and includes the following:

- Division of Administrative Operations (AMM1)
- Division of Enterprise Risk Management (AMM2)

Section AMM.20 Functions:

1. Division of Administrative Operations (AMM1): The Division:

(a) Provides operational support for the ASFR.

(b) Coordinates administrative and operational issues across ASFR.

(c) Serves as the liaison with internal and external stakeholders regarding operational matters.

(d) Leads activities that enhance ASFR's management and operations.

2. Division of Enterprise Risk Management (ERM) (AMM2): The Division:

(a) Coordinates across HHS to establish, and communicate, and sustain HHS's ERM vision, culture, strategy, and framework.

(b) Designs, implements, and matures an ERM capability across HHS, including governance and community management.

(c) Develops and shares tools, guidance, and best practices regarding ERM.

(d) Provides technical assistance and direction to HHS Operating Divisions (OPDIVs) and Staff Divisions (STAFFDIVs) on implementing ERM.

(e) Facilitates strategic initiatives across HHS's risk portfolio of existing and emerging risks and opportunities, including guiding updates of the agency's risk profile, and management's prioritization of risks and opportunities.

(f) Leads the Department's efforts to meet the ERM requirements in OMB Circular A–123, “Management's Responsibility for Enterprise Risk Management and Internal Control.”

(g) Prepares reports, briefings, and makes recommendations to senior HHS leadership, OPDIVs, STAFFDIVs and other stakeholders on ERM related activities.

(h) Leads activities that enhance HHS implementation and integration of ERM into business operations.

(3) Chapter AML, Office of Budget

Section AML.00 Mission: The Office of Budget provides advice and support to the Secretary and the ASFR on matters pertaining to the formulation of the HHS and President's Budget. The Office of Budget manages the performance budget and provides program assessment and performance reporting, along with presentation of budgets and budget-related legislation to the Office of Management and Budget (OMB), the public, media, and Congressional committees. The Office of Budget provides resolution of issues arising from the execution of final appropriations. The Office of Budget manages HHS apportionment activities, which provide funding to the HHS OPDIVs and STAFFDIVs. The Office of Budget coordinates, oversees, and convenes resource managers and financial accountability officials within the Office of the Secretary to update, share, and implement related HHS-wide policies, procedures, operations, rules, regulations, recommendations, and priorities. The Office of Budget coordinates and prepares guidelines for reprogramming execution, transfers between accounts, and other crosscutting funding methods and provides recommendations in managing and processing crosscutting funding proposals.

Section AML.10 Organization: The Office of Budget is headed by the Deputy Assistant Secretary for Budget, who reports to the Assistant Secretary for Financial Resources, and includes the following:

- Division of Discretionary Programs (AML1)
- Division of Health Benefits and Income Support (AML3)
- Division of Budget Policy, Execution, and Review (AML4)
- Division of the Office of the Secretary Budget (AML5)

Section AML.20 Functions:

1. Division of Discretionary Programs (AML1): The Division:

(a) Provides analytical services and assistance to the Secretary, the Assistant Secretary for Financial Resources, and Department OPDIV heads in their budgetary management of the Department's principal discretionary social services, health, and science programs.

(b) Reviews budgets and related requests for resources and analyzes plans and proposals for new or alternative legislation.

(c) Analyzes proposed regulations, reorganizations, or program initiatives to determine their policy, resource, and management implications.

(d) Proposes recommendations on draft regulations, proposed legislation, and reorganization proposals.

(e) Proposes budget options and policy initiatives, as necessary, to achieve program objectives established by the Secretary.

(f) Assists in the development of strategies for the presentation of the budget to the Office of Management and Budget and the Congress and develops materials for key Departmental officials who testify at hearings before these bodies.

(g) Provides guidance to OPDIVs and STAFFDIVs in the formulation of their budgets.

(h) Conducts special reviews and analyses to examine assigned OPDIV program operations and management effectiveness.

(i) Assists in the development of performance plans, reports, and program assessments under the Government Performance and Results Modernization Act (GPRAMA).

(j) Assists in the presentation of the Department's budget to the public by developing material for use by Departmental officials, and reviews press statements and other public documents for consistency with approved budgets and plans.

2. Division of Health Benefits and Income Support (AML3): The Division:

(a) Provides analytical services and assistance to the Secretary, the Assistant Secretary for Financial Resources, and the Department OPDIV heads in the budgetary management of the Department's programs including Medicare, Medicaid, Family Support Payments and other entitlements in support of children and families.

(b) Reviews budget and related requests for resources; analyzes plans and proposals for new legislation, regulations, or program initiatives to determine their resource, policy, and management implications; proposes recommendations to the Deputy Assistant Secretary for Budget on budget requests, draft regulations, proposed legislation, and reorganization proposals.

(c) Assists the Secretary, the Assistant Secretary for Financial Resources, and the OPDIV heads in evaluating programs and budgetary proposals by developing reliable cost projections for legislative and planning proposals and ensuring that proposals are consistent with approved plans and policies.

(d) Coordinates the preparation of budget estimates and forecasts of

resources required to support the programs and operations of the Department.

(e) Reviews reprogramming requests and recommends appropriate action to the Deputy Assistant Secretary for Budget.

(f) Provides guidance in budget formulation for the appropriate OPDIV.

(g) Conducts special management reviews and analyses and develops management options to ensure efficient and effective program operations and to encourage management improvements.

(h) Proposes budget options and policy initiatives, as necessary, to achieve program objectives established by the Secretary.

(i) Assists in the development of strategies for presentation of the budget to the Office of Management and Budget and the Congress and develops materials for key Departmental officials who testify at hearings before these bodies.

(j) Assists in the development of performance plans, reports, and program assessments under the GPRAMA.

(k) Manages the overall allocation of Health Care Fraud and Abuse Control (HCFAC) funds.

3. Division of Budget Policy, Execution and Review (AML4): The Division:

(a) Directs the formulation and presentation of the HHS budget by developing and promulgating to the OPDIVs and others the policies, procedures, guidance, and schedules for preparing budget submissions.

(b) Coordinates the presentation of the Department's budget and performance plan to Congress including preparation and submission of justifications, reports, significant items, and crosscutting materials; preparation of the Secretary's testimony before the Appropriations Committees; and coordination of transcripts, questions for the record, and other hearing materials.

(c) Provides advice and analysis to support Department-wide budget decision-making.

(d) Maintains active communication with Department budget officers with regard to budget events and activities with OMB, GAO, Congress and other parties.

(e) Manages a computerized budget information system reflecting HHS-wide data and coordinates OPDIV input into this system.

(f) Provides direct staff support to the Secretary in preparation for appropriation hearings and other budget-related presentations and briefings.

(g) Actively communicates with the Budget and Appropriations Committees in the Congress and provides intelligence and analyses of budget decisions to senior HHS staff and the OPDIVs.

(h) Prepares guidelines for determining funding levels under continuing resolutions.

(i) Coordinates preparation of guidelines governing reprogrammings, transfers between accounts, and other crosscutting funding methods; provides recommendations and staff support in managing and processing crosscutting funding proposals.

(j) Analyzes and prepares reports on HHS performance in managing Full Time Equivalent (FTE) levels and in implementing FTE policy and provides expert advice on Department-wide staffing.

(k) Provides leadership and direction in the Department-wide review, analysis and appraisal of financial elements of program execution and the development and execution of policies related to efficient allocation, expenditure and control of funds.

(l) Coordinates and tracks outlay projections: (1) To assist OMB in the continuing effort to monitor spending and to thereby improve the management of the Government's overall cash and debt operations; and (2) in support of formulation of the budget, including the maintenance of HHS ceiling controls and the development of outlay estimates shown in the President's Budget for controllable programs.

(m) Promulgates Departmental spending policies, especially in the event of Continuing Resolutions and possible suspension of operations due to the failure of the Congress to enact appropriations on time and works with agency budget officers and the OMB in formulating agency funding and contingency staffing plans.

(n) Maintains a system of Department-wide budget execution, including the management and control of the apportionment of funds in accordance with the requirements of the Anti-Deficiency Act and OMB regulations; and requests and monitors the receipt of Treasury warrants.

(o) Serves as principal staff advisor to the ASFR on all matters involving budget execution.

(p) Acts as liaison on behalf of HHS with OMB, the Treasury Department, the Congressional Budget Office, and other agencies on matters involving budget execution.

(q) Responsible for the development and maintenance of a system of financial information which involves the collection, organization, and

maintenance of financial data in electronic form as well as the development of reporting mechanisms for making the financial information useful and available for decision making.

(r) Represents the Department in government-wide activities to implement the development and implementation of performance measures and budget-related performance planning policies, requirements and processes. Manages program performance assessment activities.

(s) Provides special management review services for selected activities.

(t) Manages the formulation, execution, and balances of the Nonrecurring Expenses Fund.

(u) Monitoring compliance with the GPRA Modernization Act and other related legislation and guidance.

4. Division of the Office of the Secretary Budget (AML5): The Division:

(a) Reviews and analyzes the budgets of the STAFFDIVS funded by the General Departmental Management (GDM), Medicare Hearings and Appeals (MHA), Office of Inspector General (OIG), Office of the National Coordinator (ONC), Office for Civil Rights (OCR), and Public Health Social Services Emergency Fund (PHSSEF) appropriations. Prepares special analyses of these budgets for use in decision-making, particularly for evaluating capacity and determining if alternative approaches are feasible.

(b) Monitors Congressional appropriations hearings in which the GDM STAFFDIVS, OIG and OCR are participants.

(c) Reviews budgets and related requests for resources and analyzes plans and proposals for new or alternative legislation.

(d) Analyzes proposed regulations, reorganizations, or program initiatives to determine their policy, resource, and management implications.

(e) Proposes recommendations on draft regulations, proposed legislation, and reorganization proposals.

(f) Proposes budget options and policy initiatives as necessary to achieve program objectives established by the Secretary.

(g) Assists in the development of strategies for the presentation of the budget to the OMB and the Congress and develops materials for key Departmental officials who testify at hearings before these bodies.

(h) Provides guidance to STAFFDIVS in the formulation and execution of their budgets.

(i) Conducts special reviews and analyses to examine assigned

STAFFDIV program operations and management effectiveness.

(j) Provides staff assistance to the Secretary, the ASFR, the Service and Supply Funds (SSF) Board of Directors, OPDIV Budget Officers and STAFFDIV Heads in the budgetary and financial management of the SSF.

(k) Provides for budget policy management and financial integrity of the SSF in the provision of Departmental common use administrative services.

(l) Assists in the planning and preparation of the SSF budget for presentation to the SSF Board, the OMB, and Congress.

(m) Provides budget policy and technical support to the Program Support Center Director (and other activity managers) on all SSF activities.

(n) Directs and provides technical guidance to SSF activity managers in preparing annual budgets.

(o) Directs and provides technical guidance to SSF accountants in preparing annual financial statements. Assists in the planning and preparation of these statements for presentation to the SSF Board, auditors, and the Office of Management and Budget.

(p) Establishes Department policy in receiving and responding to Inspector General reports and audits.

(q) Prepares apportionment requests for the SSF.

(r) Provides Chief Financial Officer (CFO) certification on Office of the Secretary Quarterly and Annual Financial Statements.

(s) Provides oversight of the HHS OS OPDIV travel program that consists of 17 OS STAFFDIVS in assuring that processes are followed as described in the Federal Travel Regulation and manages the performance and execution of travel authorizations, vouchers, Individual Billed Accounts and Centrally Billed Accounts.

4. Chapter AMS, Office of Finance
Section AMS.00 Mission: The Office of Finance leads the HHS financial management community through responsible stewardship, financial accountability, collaboration and innovation, and enhanced program integrity.

Section AMS.10 Organization: The Office of Finance is headed by the Deputy Assistant Secretary for Finance, also the Department's Deputy Chief Financial Officer, who reports to the Assistant Secretary for Financial Resources (also the Department's Chief Financial Officer), and includes the following:

- Immediate Office of Finance (AMS)
- Office of Financial Policy and Reporting (AMS1)

- Office of Financial Systems Policy and Oversight (AMS2)
- Office of Program Audit Coordination (AMS3)

Section AMS.20 Functions:

1. Immediate Office of Finance (AMS): The Office:

(a) Advises the ASFR/CFO on all aspects of financial management matters affecting the Department including policy, workforce, and technology topics.

(b) Provides executive leadership, professional training, and strategic direction to the HHS CFO community to meet the CFO Act requirements.

(c) Leads strategic planning for the HHS CFO community and the Office of Finance.

(d) Serves as the liaison on financial management matters with internal and external stakeholders such as OMB, US Department of the Treasury (Treasury), and other Federal and non-Federal organizations.

(e) Leads the Department's efforts to meet the HHS-wide annual assessment of internal controls and develops the Department's annual assurance statement according to requirements in OMB Circular A-123, "Management's Responsibility for Enterprise Risk Management and Internal Control."

(f) Provides administrative and operational support for the Office of Finance.

(g) Leads workforce development initiatives for the Office of Finance.

(h) Leads other activities that enhance the Office of Finance's management and operations.

2. Office of Financial Policy and Reporting (AMS1): The Office:

(a) Is responsible for financial management policy and standards, internal controls over reporting, statutory financial reports and audits, and other managerial reports.

(b) Advises the Deputy Assistant Secretary for Finance on all aspects of financial management policy and reporting matters affecting the Department including statutory and managerial financial reports, financial reporting standards, OMB and Treasury transparency initiatives, proper accounting treatment, and accounting standardization.

(c) Reviews and interprets OMB, U.S. Government Accountability Office (GAO), Treasury, and Federal Accounting Standards Advisory Board (FASAB) guidance and requirements related to government-wide accounting policies and standards.

(d) Recommends, develops, and promulgates Department-wide policies, procedures, and standards for financial

management areas including OMB, GAO, Treasury, FASAB, and other agency guidance related to government-wide accounting policies and standards, cash management, credit management, debt management, payment and disbursement activities and functions, and budget execution accounting.

(e) Serves as the principal liaison with the OIG in planning the annual financial statement audit strategy under the CFO Act, as amended.

(f) Leads the Departmental process for the development of the required annual report on HHS's audited financial statements; collaborates with the OPDIVs and STAFFDIVs on the preparation of the Department's agency financial report, and coordinates with OPDIVs and STAFFDIVs to ensure timely audit deliverables.

(g) Reviews and analyzes OPDIVs' financial statements and key reconciliations and oversees the preparation and submission of consolidated Department financial statements as required by OMB and Treasury.

(h) Oversees the design, preparation, review, analysis, and submission of financial management reports for the Department, as required by legislation, regulation, OMB, Treasury, GAO, Congress, and other stakeholders.

(i) Leads the Department's efforts to establish and maintain proper internal control over reporting and ensures that requirements are met under Appendix A, OMB Circular A-123, "Management's Responsibility for Enterprise Risk Management and Internal Control."

(j) Assures OPDIVs' reporting is in accordance with internal control and reporting standards from OMB, GAO, Treasury, FASAB, and the HHS Accounting Treatment Manual (ATM).

(k) Coordinates with the OPDIVs in the preparation of corrective action plans (CAP) and oversees the mitigations of risks contributing to material weaknesses, significant deficiencies, and other reportable conditions from the annual CFO Act audit.

(l) Maintains a system for tracking and improving cash and credit management and debt collection performance throughout the Department.

(m) Serves as the liaison with OMB, Treasury, authoritative Federal agencies, intragovernmental groups, and other agencies on standard general ledger compliance matters, accounting, financial policy, and reporting issues.

(n) Collaborates with system owners and financial management offices to facilitate standardized enterprise-wide

solutions within the financial accounting reporting systems.

(o) Collaborates with the Office of Financial Systems Policy and Oversight to ensure financial system conformity with the Department's Accounting Treatment Manual (ATM) and related data standards.

(p) Provides advice and assistance to OPDIVs and STAFFDIVs on proper accounting treatments in accordance with the Department's ATM and on financial reporting and related fiscal matters.

(q) Oversees the strategic planning and maintenance of the Department-wide ATM consistent with Federal accounting concepts, standards, and HHS financial management policies.

(r) Introduces uniform business rules and data standards required to support new financial reporting requirements.

(s) Provides support to the OPDIV CFOs for financial planning and improvement initiatives.

(t) Aligns business goals with IT services, products, software, and infrastructure, identifying opportunities for process improvements through business process reengineering and automation.

3. Office of Financial Systems Policy and Oversight (AMS2): The Office:

(a) Is responsible for overseeing and managing the Department-wide financial systems.

(b) Advises the Deputy Assistant Secretary for Finance on all aspects of financial systems matters affecting the Department including strategic direction for financial management systems, innovative solutions, and workforce development.

(c) Establishes, facilitates, and supports a governance framework for Department-wide financial management.

(d) Serves as the liaison on financial systems matters with internal and external stakeholders such as OMB, Treasury, and other Federal and non-Federal organizations.

(e) Develops and promulgates policies, directives, and guidance for Department-wide financial management systems and ensures compliance.

(f) Oversees, manages, and operates Department-wide financial systems as per the CFO Act of 1990, Federal Financial Management Improvement Act (FFMIA) of 1996, Federal Managers Financial Integrity Act (FMFIA) of 1982, and other federal requirements.

(g) Facilitates the annual Department-wide financial systems Audit in accordance with GAO's Financial Information System Controls Audit Manual (FISCAM).

(h) Assesses Department-wide financial management systems for compliance with FFIA requirements, security, and internal controls and includes the evaluation results in the Department's annual assurance statement.

(i) Provides executive leadership to plan and implement innovative solutions using Business Intelligence & Data Analytics, Artificial Intelligence, and other technologies to achieve efficiencies, reduce costs, improve quality, and improve reporting and analytical capabilities for financial management.

4. Office of Program Audit Coordination (AMS3): The Office:

(a) Serves as the central point of contact for coordinating program audit support through payment accuracy and audit resolution activities across the Department.

(b) Advises the Deputy Assistant Secretary for Finance on all aspects of payment integrity-related matters affecting the Department and serves as the liaison with internal and external stakeholders, OMB, and other Federal and non-Federal entities.

(c) Leads the Department-wide efforts to implement the Payment Integrity Information Act of 2019, and payment integrity-related Executive Orders and other regulatory requirements.

(d) Provides leadership, guidance, training, and support to both HHS and non-HHS single audit stakeholders to ensure compliance with the Uniform Guidance (2 CFR part 200).

(e) Serves as ASFR's audit liaison for Government Accountability Office (GAO) engagements and serves as HHS' Office of Inspector General (OIG) audit liaison.

(f) Oversees the development, implementation, change management, and overall operations of enterprise-wide audit tracking and analytics systems.

(g) Performs analysis using grant- and audit-related data to advance the use of such data and evidence in HHS programs' management.

5. Chapter AMU, Office of Grants.

Section AMU.00 Mission: The Office of Grants provides Department-wide leadership, guidance, and oversight for HHS' grants management policies, practices, systems, and workforce development activities. The Office of Grants provides technical assistance to the Department's OPDIVs and STAFFDIVs, assesses the effectiveness of the grants programs and processes; develops pertinent HHS-wide regulatory guidance, policies, and performance standards; maintains and reports Departmental grant/financial assistance

award information; and conducts special Departmental improvement initiatives related to grants. The Office of Grants fosters collaboration, innovation, and accountability in the administration and management of the grant functions throughout the Department. The Office of Grants provides input for coordinated Department positions on proposed legislation and Government regulations specific to grant-related matters. The Office of Grants is responsible for carrying out HHS's responsibilities as the lead standards setting agency, per the Grant Reporting Efficiency and Agreements Transparency (GREAT) Act and as designated by OMB, to set government-wide data requirements for all federal grant-making agencies. The Office of Grants also manages Federal shared service initiatives, such as *Grants.gov* and *GrantSolutions*. The Office of Grants represents HHS to the OMB, GAO, other Federal agencies, and Congress in matters of Departmental grant policies and management.

Section AMU.10 Organization: The Office of Grants is headed by the Deputy Assistant Secretary for Grants, also the Department's Senior Grants Management Official, who reports to the Assistant Secretary for Financial Resources, and includes the following:

- Immediate Office of Grants (AMU)
- Division of Policy Oversight Effectiveness and Training (AMU1)
- Division of Information and Solutions (AMU2)

Section AMU.20 Functions:

1. Immediate Office of Grants (AMU): The Office:

- (a) Assists in the management and administration of the Office's functions
- (b) Facilitates and coordinates government wide initiatives and activities on behalf of the HHS and Federal grant community, as appropriate.

2. Division of Policy Oversight Effectiveness and Training (AMU1): The Division:

- (a) Formulates, oversees, and evaluates Department-wide implementation of grants policies governing the award and management of grants throughout HHS, in support of existing laws, regulations, and OMB Circulars.

(b) Develops and implements HHS grants management regulations and publishes new policies and modifications in the HHS Grants Policy Directives (GPDs), including all directives necessary to implement new intergovernmental and HHS policies.

(c) Maintains a program of continuous improvement initiatives that promote

effective and efficient grant and program management practices across the Department.

(d) Leads Departmental efforts to enhance the knowledge and skills of Departmental employees with grant management and grant program related responsibilities.

(e) Represents the Department and serves as liaison in interagency grants policy and management activities; maintains working relationships with OMB, U.S. General Services Administration (GSA), GAO and other Federal agencies to coordinate and assist in the development of proposed legislation and policy.

(f) Leads the Grants Quality Service Management and Data Standards functions with responsibility for creating and managing a government-wide marketplace offering federal agencies modern IT solutions and services to support their grants missions; advising agencies and OMB on federal grants IT investments; and driving the implementation of grants data standards.

3. The Division of Information and Solutions (AMU2): The Division:

(a) Develops, manages, and operates major, grant-shared services and solution offerings for HHS, as directed by the Secretary of HHS or delegated authority.

(b) Manages DATA act reporting for the Department's grant transactions and provides technical assistance to HHS STAFFDIVs and OPDIVs to promote data integrity.

(c) Coordinates initiatives that require cross-Departmental system development or enhancement of grant management or adjacent systems to meet Departmental goals or to comply with government wide grants policy requirements.

6. Chapter AMX, Office of Acquisitions

Section AMX.00 Mission: The Office of Acquisitions provides leadership, guidance, and oversight to constituent organizations, and coordinates long and short-range planning for HHS' acquisition practices, systems, and workforce. The Office of Acquisitions provides technical assistance to the Department's OPDIVs and STAFFDIVs; evaluates effectiveness of the acquisition programs and processes; develops pertinent HHS-wide regulatory guidance, policies, and performance standards; maintains Departmental contract award information; and conducts special Departmental initiatives related to acquisitions. The Office of Acquisitions provides input for coordinated Department positions on proposed legislation and Government regulations specific to acquisition

related matters, processes suspension and debarment cases, and manages activities associated with the training, development, and certification of—and strategic planning for—the Department's acquisition workforce.

Section AMX.10 Organization: The Office of Acquisitions is headed by the Deputy Assistant Secretary for Acquisitions, also the Department's Senior Procurement Executive (SPE) and Suspension and Debarment Official (SDO), who reports to the Assistant Secretary for Financial Resources, and includes the following:

- Immediate Office (AMX)
- Division of Strategic Programs and Business Systems (AMX1)
- Division of Acquisition Policy, Legislation, Oversight & Workforce (AMX2)
- Office of Small and Disadvantaged Business Utilization (The Office of Acquisitions provides administrative support to the Director, who reports directly to the Deputy Secretary) (AMX3)
- Office of Recipient Integrity and Compliance (AMX4)

Section AMV.20 Functions:

1. Immediate Office of Acquisitions (AMX): The Office:

- (a) Provides strategic planning, execution, oversight, and management.
- (b) Provides acquisition system performance measurement and management.
- (c) Leads customer engagement and communications efforts.
- (d) Provides SPE industry engagement support.
- (e) Provides budget planning and tracking.
- (f) Serves as human resources liaison (recruitment, security processing & onboarding support, timekeeper, and performance management support).
- (g) Provides executive administrative support and travel support.
- (h) Provides equipment inventory and support.
- (i) Leads employee engagement.
- (j) Manages executive correspondence.
- (k) Conducts small purchases.

2. The Division of Strategic Programs and Business Systems. (AMX1): The Office:

- (a) Serves as the System Owner for the HHS Consolidated Acquisition Solution (HCAS) and develops Department-wide standards that include acquisition system policies and guidance.
- (b) Manages contract data quality and analytics initiatives.
- (c) Works with the other divisions within the Office of Acquisitions to develop innovative processes and tools

acquiring, adopting, tailoring, and sharing best practices for use by the HHS acquisition workforce.

(d) Leads and implements the Department's Category Management Program, designed to increase acquisition efficiency, enhance mission performance, increase spend under management, and incorporate innovative approaches, solutions, and products to meet enterprise requirements.

(e) Manages the Government Purchase Card Program and develops pertinent HHS-wide regulatory guidance, policies, and procedures; maintains department wide spend and refund data, among other statistical data on the card program; conducts internal audits to assess the program's implementation risk.

(f) Oversees contract performance through the Contractor Performance Assessment Reporting System (CPARS) and Federal Awardee Performance and Integrity Information System (FAPIS).

(g) Leads industry engagement through its Industry Liaison function.

3. The Division of Acquisition Policy, Legislation, Oversight & Workforce (AMX2): The Office:

(a) Provides leadership in acquisitions through regulations and policy development and implementation and workforce planning, development, and training.

(b) Formulates Department-wide acquisition policies and procedures governing acquisition activities, including publishing and maintaining the HHS Acquisition Regulation (HHSAR), and providing advice and technical assistance on matters related to HHS acquisition programs.

(c) Participates in government-wide acquisition rulemaking through the Civilian Agency Acquisition Council.

(d) Manages workforce development initiatives for the Department's acquisition workforce.

(e) Provides oversight of the implementation of acquisition regulations and policies by the Department's OPDIVs and STAFFDIVs to ensure consistent policy interpretation and application.

(f) Provides advice, oversight and support regarding operational acquisition and business practices and issues and conducts procurement management reviews and promotes consistent and standardized business practices.

(g) Serves as the Department's liaison relating to acquisition issues for OMB, Congress, GAO and the OIG.

(h) Acts as the Department's Task Order Ombudsman and Advocate for Competition.

4. The Office of Recipient Integrity and Compliance (AMX3): The Office:

(a) Provides leadership, guidance, and oversight of the Department's suspension and debarment program, and coordinates long and short-range planning for HHS' suspension and debarment efforts.

(b) Provides technical assistance to the Department's OPDIVs and STAFFDIVs; evaluates effectiveness of the programs and processes; develops pertinent HHS-wide regulatory guidance, and policies; maintains Departmental suspension and debarment information; and conducts special Departmental initiatives related to recipient integrity.

5. Office of Small & Disadvantaged Business Utilization (AMX4): The Office:

(a) Is headed by a Director who reports directly to the Deputy Secretary and is administratively supported by the Office of Acquisitions.

(b) Advocates for the use of small and socioeconomic businesses as Federal contractors pursuant to Public Law 95–507 and has responsibility within the Department for policy, plans, and oversight to execute the functions under Sections 8 & 15 (k) of the Small Business Act.

(c) Provides leadership, policy, guidance, and supervision, as well as coordinating short- and long-range strategic planning to assure that small business vendors have a fair opportunity to compete for and are awarded prime and subcontracts with the Department.

(d) Provides small business technical assistance to the Department's OPDIVs and STAFFDIVs; reviews and evaluates planned procurements to ensure that small and socioeconomic businesses are given thorough consideration; evaluates effectiveness of the small business programs and processes; develops pertinent HHS-wide policies, guidance, and performance standards; drafts Federal government and Departmental small business reports; and conducts special Departmental initiatives related to small and socioeconomic business concerns.

(e) Manages the development and implementation of appropriate small business vendor engagement activities that promote the utilization of small and socioeconomic business within the HHS acquisition portfolio as prime and subcontractors.

Delegations of Authority. Pending further redelegation, directives or orders made by the Secretary or the ASFR, all delegations and redelegations of authority made to officials and employees of affected organizational

components will continue in them or their successors pending further redelegations, provided they are consistent with this reorganization.

Cheryl R. Campbell,

Assistant Secretary for Administration.

See task statements included in this notice below for specifics. The meetings will be open to the public.

DATES:

Meetings: The Committee will hold a meeting on Tuesday, September 26, 2023, from 8 a.m. until 5 p.m. Pacific Daylight Time (PDT), Wednesday, September 27, 2023, from 8 a.m. until 5 p.m. PDT, and Thursday, September 28, 2023, from 8 a.m. until 5 p.m. PDT. The

Committee meeting on Tuesday, September 26, 2023, from 8 a.m. to 9 a.m. will be dedicated to an administrative meeting (Committee members only). Please note these meetings may close early if the Committee has completed its business.

Comments and supporting documentation: To ensure your comments are received before the meeting, please submit your written comments no later than September 20, 2023.

ADDRESSES: The meeting will be held at the Federal Courthouse, 700 Stewart Street, Seattle, Washington 98101.

The National Commercial Fishing Safety Advisory Committee is committed to ensuring all participants have equal access regardless of disability status. If you require reasonable accommodation due to a disability to fully participate, please email Mr. Jonathan Wendland at Jonathan.G.Wendland@uscg.mil or call at 202–372–1245 as soon as possible.

Instructions: You are free to submit comments at any time, including orally at the meeting as time permits, but if you want your comment reviewed before the meeting, please submit your comments no later than September 20, 2023. We are particularly interested in comments regarding the topics in the “Agenda” section below. We encourage you to submit comments through Federal eRulemaking Portal at <https://www.regulations.gov>. If your material cannot be submitted using <https://www.regulations.gov>, call or email the individual in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. You must include the docket number [USCG–2023–0586]. Comments received will be posted without alteration at <https://www.regulations.gov> including any personal information provided. You may wish to review the Privacy and Security notice available on the homepage of <https://www.regulations.gov>, and DHS’s eRulemaking System of Records notice (85 FR 14226, March 11, 2020). If you encounter technical difficulties with comment submission, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice.

Docket Search: Documents mentioned in this notice as being available in the docket, and all public comments, will be in our online docket at <https://www.regulations.gov>, and can be viewed by following that website’s instructions. Additionally, if you go to the online docket and sign-up for email alerts, you will be notified when comments are posted.

FOR FURTHER INFORMATION CONTACT: Mr. Jonathan Wendland, Alternate Designated Federal Officer (ADFO) of the National Commercial Fishing Safety Advisory Committee, 2703 Martin Luther King Jr. Ave. SE, Stop 7509, Washington, DC 20593–7509, telephone 202–372–1245 or Jonathan.G.Wendland@uscg.mil.

SUPPLEMENTARY INFORMATION: Notice of this meeting is in compliance with the *Federal Advisory Committee Act*, (Pub. L. 117–286, 5 U.S.C., ch. 10). The National Commercial Fishing Safety Advisory Committee is authorized by section 601 of the *Frank LoBiondo Coast Guard Authorization Act of 2018*, (Pub. L. 115–282, 132 Stat. 4190), and is codified in 46 U.S.C. 15102. The Committee operates under the provisions of the *Federal Advisory Committee Act* and 46 U.S.C. 15109. The National Commercial Fishing Safety Advisory Committee provides advice and recommendations to the Secretary of Homeland Security through the Commandant of the U.S. Coast Guard (USCG), on matters relating to the safe operation of vessels including the matters of:

- (A) navigation safety;
- (B) safety equipment and procedures;
- (C) marine insurance;
- (D) vessel design, construction, maintenance, and operation; and
- (E) personnel qualifications and training.

Additionally, the Committee will review regulations proposed under chapter 45 of Title 46 of U.S. Code (during preparation of the regulations) and review marine casualties and investigations of vessels covered by chapter 45 of Title 46 U.S. Code and make recommendations to the Secretary of Homeland Security to improve safety and reduce vessel casualties.

Agenda

Day 1

The agenda for the National Commercial Fishing Safety Advisory Committee meeting is as follows:

- I. Opening
 - a. Call to Order and Designated Federal Officer (DFO) Remarks
 - b. Roll Call and Determination of Quorum
 - c. Swear in New Members
 - d. USCG Leadership Remarks
- II. Administration
 - a. Old Business
 - b. Review and Adoption of Meeting Agenda
 - c. Meeting Goals
 - d. Roberts Rules Simplified
- III. General Updates
 - a. Regulatory Status

IV. Information Session

- a. USCG District Presentations
- b. Office of Investigations and Casualty Analysis (CG–INV) Drug Presentation
- c. Marine Casualty Case Familiarization

V. Public Comment Period

VI. Meeting Recess

Day 2

VII. New Business

a. **Task Statement #04–23:** Review the multi-year statistics (provided by the USCG) regarding commercial fishing vessels of less than 200 gross ton accidents or losses that resulted in fatalities, injuries, or property damage. Major marine casualties such as the loss of the DESTINATION, NO LIMITS, and other fishing vessels with multiple fatalities and vessel losses should be reviewed to provide the background information necessary to other supplementary taskings in best efforts to make informed recommendations to the USCG.

b. **Task Statement #05–23:** Examine and make recommendations to the USCG on best practices to reduce and mitigate the negative consequences caused by the misalignment of state and federal regulations regarding drug laws legalizing the recreational and/or medical use for drugs also classed as dangerous drugs by federal law and applicable transportation related statutes. This is critical for the safety of operations and creating an environment for vessel personnel to work in a drug-free workplace, with special emphasis on critical safety sensitive jobs such as navigation and engineering duties to bring fishing vessels into alignment with other commercial vessels. Develop recommendations that include testing for pre-employment, routine, and reasonable cause. Submit recommendations to the Secretary of Homeland Security.

c. **Task Statement #06–23:** Examine and effectively disseminate recommendations for best practices to ensure full crew access to all parts of a vessel to allow for safe vessel operation. This task should address and examine things like a means to access all areas of the vessel and allow the crew to safely move fore and aft to remove ice, inspect the vessel, and operate critical equipment like the vessel’s anchors and similar gear that does not require the crew to climb over the pot stack (for example, in the case of a vessel carrying pots, nets or similar devices to create pathways for access). Submit recommendations to the Secretary of Homeland Security.

d. *Task Statement #07–23*: Establish best practices for standard procedures and guidance for crew standing navigation watches. This should include a detailed crew orientation for each unique vessel, including the operation of critical equipment and establish clear and easily understood watchstanding orders to protect the safety of the vessel during its applicable operations. This could be accomplished as a standardized form or checklist. Submit recommendations to the Secretary of Homeland Security.

e. *Task Statement #08–23*: Evaluate and provide a comprehensive list of recommendations to the USCG, in the form of best practices (NVICs, policies, training), or amended or new regulations, regarding stability considerations which may pose severe risk to the safety of a fishing vessel such as icing, loading, the need for stability instructions, and vessel modifications. As part of this task, review the USCG's current level of oversight, provide recommendations on its adequacy, and specify needed changes to areas of the fishing safety program that need additional attention. Submit recommendations to the Secretary of Homeland Security.

f. *Task Statement #09–23*: Evaluate and provide recommendations to the USCG for best practices to address the high degree of risk associated with fishing vessel operations and how the acceptance of risk is prevalent and accepted in the fishing industry. Specifically, the Marine Board recommends the committee focus on topics including icing, heavy weather avoidance in voyage planning, and formalizing the navigation watch duties via onboard familiarization and written standard orders to ensure the safety of vessel during its transit and during fishing operations. Submit recommendations to the Secretary of Homeland Security.

g. *Task Statement #10–23*: Evaluate and provide recommendations to the USCG to ensure the most effective means to widely disseminate critical safety information for the commercial fishing industry. Submit recommendations to the Secretary of Homeland Security.

h. *Task Statement #11–23*: Review and provide recommendations on the development of a publicly accessible website that contains all information related to fishing industry activities, including vessel safety, inspections, enforcement, hazards, training, regulations (including proposed regulations), outages of the Rescue 21 system in Alaska and similar outages, and any other fishing-related activities.

Submit recommendations to the Secretary of Homeland Security.

i. *Task Statement #12–23*: Discuss and make recommendations requiring watch alarms on specific types of commercial fishing vessels. Submit recommendations to the Secretary of Homeland Security.

j. *Task Statement #13–23*: Examine and make recommendations to the USCG on a way to widely distribute personal location beacons at minimal expense. Ensure availability and access for crewmembers of these critical lifesaving devices which could be acquired by consortiums, associations, or other organizations for distribution to vessel crews through federally funded grant programs or other programs. Submit recommendations to the Secretary of Homeland Security.

VIII. Subcommittee(s) Break Out and Discussions

a. Action Items by Task

IX. Public Comment Period

X. Committee Discussion and Actions

XI. Meeting Recess

Day 3

XII. Subcommittee Break Out and Discussions

a. Action Items by Task

XIII. Recommendations and Committee Actions

XIV. Full Committee Open Discussion

XV. Public Comment Period

XVI. Present Recommendations on Taskings to the USCG

XVII. Plans for Next Meeting

XVIII. Closing Remarks (Committee and USCG)

XIX. Adjournment of Meeting

A copy of pre-meeting documentation will be available at <https://www.dco.uscg.mil/NCFSAC2023/no> later than September 14, 2023.

Alternatively, you may contact Mr. Jonathan Wendland as noted in the **FOR FURTHER INFORMATION CONTACT** section above.

There will be a public comment period scheduled each day of the meeting. Speakers are requested to limit their comments to 3 minutes. Please note that the public comment period may end before the period allotted, following the last call for comments. Please contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section to register as a speaker.

Dated: August 30, 2023.

Amy M. Beach,

Captain, U.S. Coast Guard, Director of Inspections and Compliance.

[FR Doc. 2023–19131 Filed 9–5–23; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket Number: USCG–2023–0670]

Area Maritime Security Advisory Committee (AMSC) Sector Columbia River

AGENCY: Coast Guard, DHS.

ACTION: Solicitation for membership.

SUMMARY: The Coast Guard requests individuals interested in serving on the Area Maritime Security Advisory Committee (AMSC), Sector Columbia River submit their applications for membership to the U.S. Coast Guard Captain of the Port (COTP) Sector Columbia River. The Committee assists the Captain of the Port as the Federal Maritime Security Coordinator, Sector Columbia River, in developing, reviewing, and updating the Area Maritime Security Plan for their area of responsibility.

DATES: Requests for membership should reach the U.S. Coast Guard COTP Sector Columbia River by September 19, 2023.

ADDRESSES: Applications for membership should be submitted to the Captain of the Port at the following address: USCG Sector Columbia River, 6767 N Basin Ave., Portland, OR 97217.

FOR FURTHER INFORMATION CONTACT: For questions about submitting an application, or about the AMSC in general, contact Mr. Stuart Blanchette, 503–240–2467, stuart.h.blanchette@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Basis and Purpose

Section 102 of the Maritime Transportation Security Act (MTSA) of 2002 (Pub. L. 107–295, 116 Stat. 2064) added section 70112 of Title 46 of the U.S. Code and authorized the Secretary of the Department in which the Coast Guard is operating to establish Area Maritime Security Advisory Committees for any port area of the United States. (See 33 U.S.C. 1226; 46 U.S.C. 70112; 33 CFR 1.05–1, 6.01; DHS Delegation No. 00170.1(II)(71), Revision No. 01.3. The MTSA includes a provision exempting these AMSCs from the Federal Advisory Committee Act (FACA), Public Law 92–436, 86 Stat. 470 (5 U.S.C. App. 2).¹ The AMSCs shall assist the Federal Maritime Security Coordinator in the

¹ Public Law 117–286, section 3 placed FACA provisions in 5 U.S.C. chapter 10, and section. 7 repealed FACA “except with respect to rights and duties that matured, penalties that were incurred, or proceedings that were begun before the date of enactment of” Public Law 117–286.

development, review, update, and exercising of the Area Maritime Security Plan for their area of responsibility. Such matters may include, but are not limited to, the following:

(1) Identifying critical port infrastructure and operations; Identifying risks (threats, vulnerabilities, and consequences).

(2) Determining mitigation strategies and implementation methods.

(3) Developing strategies to facilitate the recovery of the MTS after a Transportation Security Incident.

(4) Developing and describing the process to continually evaluate overall port security by considering consequences and vulnerabilities, how they may change over time, and what additional mitigation strategies can be applied; and

(5) Providing advice to and assisting the Federal Maritime Security Coordinator in developing and maintaining the Area Maritime Security Plan.

II. AMSC Membership

Members of the AMSC should have at least five years of experience related to maritime or port security operations. The Sector Columbia River AMSC has 20 members, and we are seeking to fill additional vacancies with this solicitation.

Applicants may be required to pass an appropriate security background check prior to appointment to the committee. Applicants must register with and remain active as a Coast Guard Homeport user if appointed. Terms of office will be for five years; however, a member is eligible to serve additional terms of office. Members will not receive any salary or other compensation for their service on an AMSC. In accordance with 33 CFR 103, members may be selected from Federal, Territorial, or Tribal governments; State government and political subdivisions of the State; local public safety, crisis management, and emergency response agencies; law enforcement and security organizations; maritime industry, including labor; other port stakeholders having a special competence in maritime security; and port stakeholders affected by security practices and policies.

The Coast Guard does not discriminate in selecting committee members on the basis of race, color, religion, sex, national origin, political affiliation, sexual orientation, gender identity, marital status, disability, genetic information, age, membership in an employee organization, or any other non-merit factor. The Coast Guard strives to achieve a widely diverse

candidate pool for all its recruitment actions.

III. Request for Applications

Those seeking membership are not required to submit formal applications to the local Captain of the Port, however, because we do have an obligation to ensure that a specific number of members have the prerequisite maritime security experience, we encourage the submission of resumes highlighting experience in the maritime and security industries.

Dated: August 29, 2023.

Justin W. Noggle,

Captain, U.S. Coast Guard, Captain of the Port Sector Columbia River and Federal Maritime Security Coordinator Sector Columbia River.

BILLING CODE 4910-15-P

DEPARTMENT OF HOMELAND SECURITY

Federal Emergency Management Agency

[Docket ID: FEMA-2023-0023; OMB No. 1660-0114]

Agency Information Collection Activities: Proposed Collection, Comment Request; FEMA Preparedness Grants: Port Security Grant Program (PSGP)

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: 60-Day notice of revision and request for comments.

SUMMARY: The Federal Emergency Management Agency (FEMA), as part of its continuing effort to reduce paperwork and respondent burden, invites the general public to take this opportunity to comment on an extension, with change, of a currently approved information collection. In accordance with the requirements of the Paperwork Reduction Act of 1995, this notice seeks comments concerning the information collection activities required to administer the Port Security Grant Program (PSGP) and an additional new form to facilitate extension requests.

DATES: Comments must be submitted on or before November 6, 2023.

ADDRESSES: To avoid duplicate submissions to the docket, please submit comments at www.regulations.gov under Docket ID FEMA-2023-0023. Follow the instructions for submitting comments.

All submissions received must include the agency name and Docket ID. Regardless of the method used to submitting comments or material, all submissions will be posted, without change, to the Federal eRulemaking Portal at <http://www.regulations.gov>, and will include any personal information you provide. Therefore, submitting this information makes it public. You may wish to read the Privacy and Security Notice that is available via a link on the homepage of www.regulations.gov.

FOR FURTHER INFORMATION CONTACT:

Duane Davis, Section Chief, FEMA, Grant Programs Directorate, 202-680-4060, duane.davis@fema.dhs.gov. You may contact the Information Management Division for copies of the proposed collection of information at email address: FEMA-Information-Collections-Management@fema.dhs.gov.

SUPPLEMENTARY INFORMATION: Section 102 of the Maritime Transportation Security Act of 2002, as amended (46 U.S.C. 70107), authorizes the PSGP to provide for the risk-based allocation of funds to implement Area Maritime Transportation Security Plans and facility security plans among port authorities, facility operators, and State and local government agencies required to provide port security services and to train law enforcement personnel under 46 U.S.C. 70132. Before awarding a grant under the program, the Secretary for Homeland Security shall provide for review and comment by the appropriate Federal Maritime Security Coordinators and the Maritime Administrator. In administering the grant program, the Secretary shall consider national economic, energy, and strategic defense concerns based upon the most current risk assessments available.

Any information collected by FEMA for this program is in accordance with general reporting requirements, *for example, see* 2 CFR 200.329; or in accordance with 46 U.S.C. 70107(g), as amended by Section 112(c) of the Security and Accountability For Every (SAFE) Port Act of 2006 (Pub. L. 109-347), which provides that entities subject to an Area Maritime Transportation Security Plan may submit an application for a grant under this program at such time, in such form, and containing such information and assurances as the Secretary may require.

2 CFR 200.329 requires grant recipients to report on the status of their grant funded activities including potential or real setbacks in performance.

The GPD-Extension form, FEMA Form FF-207-FY-23-110 is newly added and

allows FEMA to ensure a consistent review process for extending the Period of Performance of existing grants per 2 CFR 200.309. This form standardizes the information collection as well as the review criteria for extension requests. Information includes the current status of the project, an explanation of delays experienced in completing the project on schedule and anticipated new milestones for completion within the newly requested Period of Performance.

Collection of Information

Title: FEMA Preparedness Grants: Port Security Grant Program (PSGP).

Type of Information Collection: Revision of a currently approved information collection.

OMB Number: 1660-0114.

FEMA Forms: FEMA Form FF-207-FY-23-108 (formerly 089-05), PSGP Investment Justification; FEMA Form FF-207-FY-23-109 (formerly 088-0-1), Grant Programs Directorate Performance Report (GPD-PR), and FEMA Form FF-207-FY-23-110, Grant Programs Directorate Extension Request (GPD-Extension).

Abstract: Section 102 of the Maritime Transportation Security Act of 2002, as amended (46 U.S.C. 70107), authorizes the PSGP to provide for the risk-based allocation of funds to implement Area Maritime Transportation Security Plans and facility security plans among port authorities, facility operators, and State and local government agencies required to provide port security services and to train law enforcement personnel under 46 U.S.C. 70132. Before awarding a grant under the program, the Secretary for Homeland Security shall provide for review and comment by the appropriate Federal Maritime Security Coordinators and the Maritime Administrator. In administering the grant program, the Secretary shall take into account national economic, energy, and strategic defense concerns based upon the most current risk assessments available.

Affected Public: State, local or Tribal government and private sector.

Estimated Number of Respondents: 966.

Estimated Number of Responses: 1,832.

Estimated Total Annual Burden Hours: 17,446.

Estimated Total Annual Respondent Cost: \$1,462,290.

Estimated Respondents' Operation and Maintenance Costs: \$0.

Estimated Respondents' Capital and Start-Up Costs: \$0.

Estimated Total Annual Cost to the Federal Government: \$1,853,355.

Comments

Comments may be submitted as indicated in the **ADDRESSES** caption above. Comments are solicited to (a) evaluate whether the proposed data collection is necessary for the proper performance of the Agency, including whether the information shall have practical utility; evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) enhance the quality, utility, and clarity of the information to be collected; and (d) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Millicent Brown Wilson,

Records Management Branch Chief, Office of the Chief Administrative Officer, Mission Support, Federal Emergency Management Agency, Department of Homeland Security.

BILLING CODE 9111-78-P

DEPARTMENT OF HOMELAND SECURITY

U.S. Immigration and Customs Enforcement

[Docket No. ICEB-2023-0005]

RIN 1653-ZA41

Employment Authorization for South Sudanese F-1 Nonimmigrant Students Experiencing Severe Economic Hardship as a Direct Result of the Current Armed Conflict and Humanitarian Crisis in South Sudan

AGENCY: U.S. Immigration and Customs Enforcement; Department of Homeland Security.

ACTION: Notice.

SUMMARY: This notice announces that the Secretary of Homeland Security (Secretary) is suspending certain regulatory requirements for F-1 nonimmigrant students whose country of citizenship is South Sudan, regardless of country of birth (or individuals having no nationality who last habitually resided in South Sudan), and who are experiencing severe economic hardship as a direct result of the current armed conflict and humanitarian crisis in South Sudan. The Secretary is taking action to provide relief to these South Sudanese students

who are in lawful F-1 nonimmigrant students status, so the students may request employment authorization, work an increased number of hours while school is in session, and reduce their course load while continuing to maintain their F-1 nonimmigrant student status. The U.S. Department of Homeland Security (DHS) will deem an F-1 nonimmigrant student granted employment authorization by means of this notice to be engaged in a "full course of study" for the duration of the employment authorization, if the nonimmigrant student satisfies the minimum course load requirement described in this notice.

DATES: This action is effective November 4, 2023, through May 3, 2025.

FOR FURTHER INFORMATION CONTACT: Sharon Snyder, Unit Chief, Policy and Response Unit, Student and Exchange Visitor Program, MS 5600, U.S. Immigration and Customs Enforcement, 500 12th Street SW, Washington, DC 20536-5600; email: sevp@ice.dhs.gov, telephone: (703) 603-3400. This is not a toll-free number. Program information can be found at <https://www.ice.gov/sevis/>.

SUPPLEMENTARY INFORMATION:

What action is DHS taking under this notice?

The Secretary is exercising authority under 8 CFR 214.2(f)(9) to temporarily suspend the applicability of certain requirements governing on-campus and off-campus employment for F-1 nonimmigrant students whose country of citizenship is South Sudan regardless of country of birth (or individuals having no nationality who last habitually resided in South Sudan), who are present in the United States in lawful F-1 nonimmigrant student status on the date of publication of this notice, and who are experiencing severe economic hardship as a direct result of current armed conflict and humanitarian crisis in South Sudan. The original notice, which suspended certain regulatory requirements for F-1 nonimmigrant students experiencing severe economic hardship as a direct result of the humanitarian crisis at that time is effective from March 3, 2022, through November 3, 2023. See 87 FR 12182 (Mar. 3, 2022). Effective with this publication, suspension of the employment limitations is available through May 3, 2025, for those who are in lawful F-1 nonimmigrant status on the date of publication of this notice. DHS will deem an F-1 nonimmigrant student granted employment authorization through this notice to be engaged in a "full course of study" for

the duration of the employment authorization, if the student satisfies the minimum course load set forth in this notice.¹ See 8 CFR 214.2(f)(6)(i)(F).

Who is covered by this notice?

This notice applies exclusively to F–1 nonimmigrant students who meet all of the following conditions:

(1) Are a citizen of South Sudan regardless of country of birth (or an individual having no nationality who last habitually resided in South Sudan);

(2) Were lawfully present in the United States on the date of publication of this notice in F–1 nonimmigrant status under section 101(a)(15)(F)(i) of the Immigration and Nationality Act (INA), 8 U.S.C. 1101(a)(15)(F)(i);

(3) Are enrolled in an academic institution that is Student and Exchange Visitor Program (SEVP)-certified for enrollment for F–1 nonimmigrant students;

(4) Are currently maintaining F–1 nonimmigrant status; and

(5) Are experiencing severe economic hardship as a direct result of the current armed conflict and humanitarian crisis in South Sudan.

This notice applies to F–1 nonimmigrant students in an approved private school in kindergarten through grade 12, public school grades 9 through 12, and undergraduate and graduate education. An F–1 nonimmigrant student covered by this notice who transfers to another SEVP-certified academic institution remains eligible for the relief provided by means of this notice.

Why is DHS taking this action?

DHS is taking action to provide relief to South Sudanese F–1 nonimmigrant students experiencing severe economic hardship due to the current armed conflict and humanitarian crisis in South Sudan. Based on its review of country conditions in South Sudan and input received from the U.S. Department of State (DOS), DHS is taking action to allow eligible F–1 nonimmigrant students from South Sudan to request employment authorization, work an increased number of hours while school is in session, and reduce their course load

while continuing to maintain F–1 nonimmigrant student status.

Despite the 2022 extension of a peace agreement by various parties, South Sudan remains plagued by conflict both among non-signatories to the peace agreement and between groups that are ostensibly at peace with one another.² Violence linked to ongoing armed conflict has resulted in civilian casualties, a dire humanitarian situation, rampant disease, frequent gender-based violence, and food insecurity, made worse by disastrous floods. All of which continues to threaten the safety of potential returnees throughout the country.

Armed Conflict

A principal driver of armed conflict in South Sudan has long been the rivalry between President Silva Kiir and First Vice President Riek Machar, as well as their various supporters and aligned armed groups.^{3,4} In spite of the 2018 peace agreement that established the current transitional government—and to which President Kiir and Vice President Machar were the main signatories—South Sudan frequently faces violent political contestations, and lacks a stable government, which has facilitated ongoing violence that is characterized by gross human rights violations that consistently target civilians and cause mass displacements in various parts of the country.⁵

Multiple parties are responsible for committing crimes and abuses across South Sudan, such as security and opposition forces, non-signatories to the

2022 peace agreement, and civilians.⁶ Government forces have reportedly engaged in collective punishment of civilians perceived to be opposition supporters, an assumption often based on ethnicity.⁷ Delays in implementing security sector reform and demobilization of armed groups have contributed to security forces and ex-combatants exploiting local communities, emboldened by a climate of impunity.⁸ Members of government and opposition forces, associated armed militia groups, and ethnic groups have reportedly committed torture and other abuses in conflict zones.⁹ Additionally, parts of South Sudan also face simmering ethnic conflict that has resulted in dire humanitarian consequences, including significant displacement and human rights abuses, including those involving the killing of civilians, arbitrary arrests and unjust detentions, looting and destruction of civilian property, physical abuse, forced recruitment, and gender-based violence.¹⁰

Gender-Based Violence and Violence Against Children

Armed conflict has had particularly dire consequences for women and children. Women and girls have faced increased cases of sexual violence and harassment, as well as risk of abductions, killings, and threats from armed forces.¹¹ Various parties use gender-based violence as a conflict tactic, including rape, gang rape, sexual slavery, and forced marriage.¹² Impunity for sexual and gender-based

¹ Because the suspension of requirements under this notice applies throughout an academic term during which the suspension is in effect, DHS considers an F–1 nonimmigrant student who engages in a reduced course load or employment (or both) after this notice is effective to be engaging in a “full course of study,” see 8 CFR 214.2(f)(6), and eligible for employment authorization, through the end of any academic term for which such student is matriculated as of May 3, 2025, provided the student satisfies the minimum course load requirements in this notice.

abuses has continued.¹³ Experts estimate that around 2.8 million people are at risk of gender-based violence in 2023, constituting a nine percent increase over the previous year.¹⁴ Children also remain at great risk of multiple types of abuse and victimization. The United Nations has documented many incidents of what the Special Representative of the Secretary-General for Children and Armed Conflict has identified as the six “grave violations” against children, including recruitment and use by armed groups; killing and maiming; rape and other forms of sexual violence; attacks on schools, hospitals, and protected persons in relation to schools and hospitals.¹⁵

Humanitarian Assistance

As a result of violence and other conditions, an estimated 9.4 million of South Sudan’s total population of more than 12 million people is in need of humanitarian assistance.¹⁶ Multiple factors complicate the provision of relief. Armed groups restrict the safe and effective delivery of assistance, in some cases even harassing or killing aid workers, engaging in looting, and destroying humanitarian assets and facilities.¹⁷ Bureaucratic obstacles and interference further undermine access.¹⁸ Additionally, flooding has prevented physical access to some locations.¹⁹

Food Insecurity and Disease

Acute food insecurity, ongoing subnational violence, poor macroeconomic conditions, and severe flooding continue to drive growing humanitarian needs across South Sudan. Approximately 7.8 million South Sudanese were projected to face “Crisis” levels of acute food insecurity, or worse, between April and July 2023.²⁰ Within this population, 2.9 million people were projected to face “Emergency” levels of acute food security (a level four on the Integrated Food Security Phase Classification (IPC)), and around 43,000 were expected to face “Catastrophe” levels (a level five on the IPC).²¹ Disruption in the agricultural sector has led to a dramatic increase in food prices, thereby exacerbating food insecurity and intensifying poverty.²² Access to food is also sometimes used as a weapon of war.²³

South Sudan is also contending with multiple disease outbreaks. Flood-affected areas have seen the spread of malaria, diarrhea, pneumonia, and skin infections, and the lack of clean water and sanitation suggests that outbreaks of cholera and Hepatitis E are likely to persist.²⁴ There also have been confirmed outbreaks of measles.²⁵ Dozens of health facilities were damaged or relocated due to flooding, further restricting access to care.²⁶

Environmental Concerns

South Sudan has experienced above normal rainfall for four consecutive

²⁰ South Sudan—Complex Emergency Fact Sheet #3. Fiscal Year 2023, U.S. Agency for International Development (USAID), Mar. 31, 2023, available at <https://reliefweb.int/report/south-sudan/south-sudan-complex-emergency-fact-sheet-3-fiscal-year-fy-2023> (last visited May 19, 2023). The “Crisis” level of food security is the third level on the five level Integrated Food Security Phase Classification (IPC) scale, which ranges from “Minimal” (IPC 1) to “Famine” or “Catastrophe” (IPC 5).

²⁵ *Id.*

²⁶ *Id.*

years.²⁷ The effects of rain and flooding are widespread, with the number of people impacted across South Sudan estimated to exceed one million.²⁸ Floods have destroyed crops, homes, schools, health care centers, and boreholes for water access, and efforts to provide relief have been stymied by violence, inaccessibility, and gaps in resources and infrastructure.²⁹

As of August 8, 2023, approximately 130 F–1 nonimmigrant students from South Sudan are enrolled at SEVP-certified academic institutions in the United States. Given the extent of the current armed conflict and humanitarian crisis in South Sudan, affected students whose primary means of financial support comes from South Sudan may need to be exempt from the normal student employment requirements to continue their studies in the United States. The current armed conflict and humanitarian crisis has made it unfeasible for many students to safely return to South Sudan for the foreseeable future. Without employment authorization, these students may lack the means to meet basic living expenses.

What is the minimum course load requirement to maintain valid F–1 nonimmigrant status under this notice?

Undergraduate F–1 nonimmigrant students who receive on-campus or off-campus employment authorization under this notice must remain registered for a minimum of six semester or quarter hours of instruction per academic term. Undergraduate F–1 nonimmigrant students enrolled in a term of different duration must register for at least one half of the credit hours normally required under a “full course of study.” See 8 CFR 214.2(f)(6)(i)(B) and (F). A graduate-level F–1 nonimmigrant student who receives on-campus or off-campus employment authorization under this notice must remain registered for a minimum of three semester or quarter hours of instruction per academic term. See 8 CFR 214.2(f)(5)(v). Nothing in this notice affects the applicability of other minimum course load requirements set by the academic institution.

In addition, an F–1 nonimmigrant student (either undergraduate or graduate) granted on-campus or off-

²⁷ *Id.*

²⁸ South Sudan: Flooding Situation Report No. 1, UNOCHA, Oct. 12, 2022, available at <https://reliefweb.int/report/south-sudan/south-sudan-flooding-situation-report-no-1-31-october-2022>, (last visited May 19, 2023).

²⁹ South Sudan: Flooding Situation Report No. 1, UNOCHA, Oct. 12, 2022, available at <https://reliefweb.int/report/south-sudan/south-sudan-flooding-situation-report-no-1-31-october-2022>, (last visited May 19, 2023).

campus employment authorization under this notice may count up to the equivalent of one class or three credits per session, term, semester, trimester, or quarter of online or distance education toward satisfying this minimum course load requirement, unless their course of study is in an English language study program. *See* 8 CFR 214.2(f)(6)(i)(G). An F–1 nonimmigrant student attending an approved private school in kindergarten through grade 12 or public school in grades 9 through 12 must maintain “class attendance for not less than the minimum number of hours a week prescribed by the school for normal progress toward graduation,” as required under 8 CFR 214.2(f)(6)(i)(E). Nothing in this notice affects the applicability of federal and state labor laws limiting the employment of minors.

May an eligible F–1 nonimmigrant student who already has on-campus or off-campus employment authorization benefit from the suspension of regulatory requirements under this notice?

Yes. An F–1 nonimmigrant student who is a South Sudanese citizen, regardless of country of birth (or an individual having no nationality who last habitually resided in South Sudan), who already has on-campus or off-campus employment authorization and is otherwise eligible may benefit under this notice, which suspends certain regulatory requirements relating to the minimum course load requirement under 8 CFR 214.2(f)(6)(i) and certain employment eligibility requirements under 8 CFR 214.2(f)(9). Such an eligible F–1 nonimmigrant student may benefit without having to apply for a new Form I–766, Employment Authorization Document (EAD). To benefit from this notice, the F–1 nonimmigrant student must request that their designated school official (DSO) enter the following statement in the remarks field of the student’s Student and Exchange Visitor Information System (SEVIS) record, which the student’s Form I–20, Certificate of Eligibility for Nonimmigrant (F–1) Student Status, will reflect:

Approved for more than 20 hours per week of [DSO must insert “on-campus” or “off-campus,” depending upon the type of employment authorization the student already has] employment authorization and reduced course load under the Special Student Relief authorization from [DSO must insert the beginning date of the notice or the beginning date of the student’s employment, whichever date is later] until [DSO must insert either the student’s program end date, the current EAD expiration date (if the student is currently authorized for off-

campus employment), or the end date of this notice, whichever date comes first].³⁰

Must the F–1 nonimmigrant student apply for reinstatement after expiration of this special employment authorization if the student reduces his or her “full course of study”?

No. DHS will deem an F–1 nonimmigrant student who receives and complies with the employment authorization permitted under this notice to be engaged in a “full course of study”³¹ for the duration of the student’s employment authorization, provided that a qualifying undergraduate level F–1 nonimmigrant student remains registered for a minimum of six semester or quarter hours of instruction per academic term, and a qualifying graduate level F–1 nonimmigrant student remains registered for a minimum of three semester or quarter hours of instruction per academic term. *See* 8 CFR 214.2(f)(5)(v) and (f)(6)(i)(F). Undergraduate F–1 nonimmigrant students enrolled in a term of different duration must register for at least one half of the credit hours normally required under a “full course of study.” *See* 8 CFR 214.2(f)(6)(i)(B) and (F). DHS will not require such students to apply for reinstatement under 8 CFR 214.2(f)(16) if they are otherwise maintaining F–1 nonimmigrant status.

Will an F–2 dependent (spouse or minor child) of an F–1 nonimmigrant student covered by this notice be eligible for employment authorization?

No. An F–2 spouse or minor child of an F–1 nonimmigrant student is not authorized to work in the United States and, therefore, may not accept employment under the F–2 nonimmigrant status, consistent with 8 CFR 214.2(f)(15)(i).

Will the suspension of the applicability of the standard student employment requirements apply to an individual who receives an initial F–1 visa and makes an initial entry into the United States after the effective date of this notice in the Federal Register?

No. The suspension of the applicability of the standard regulatory

³⁰ Because the suspension of requirements under this notice applies throughout an academic term during which the suspension is in effect, DHS considers an F–1 nonimmigrant student who engages in a reduced course load or employment (or both) after this notice is effective to be engaging in a “full course of study,” *see* 8 CFR 214.2(f)(6), and eligible for employment authorization, through the end of any academic term for which such student is matriculated as of May 3, 2025, provided the student satisfies the minimum course load requirements in this notice.

³¹ *See* 8 CFR 214.2(f)(6).

requirements only applies to certain F–1 nonimmigrant students who meet the following conditions:

- (1) Are a citizen of South Sudan regardless of country of birth (or an individual having no nationality who last habitually resided in South Sudan);
- (2) Were lawfully present in the United States on the date of publication of this notice in F–1 nonimmigrant status, under section 101(a)(15)(F)(i) of the INA, 8 U.S.C. 1101(a)(15)(F)(i);
- (3) Are enrolled in an academic institution that is SEVP-certified for enrollment of F–1 nonimmigrant students;
- (4) Are maintaining F–1 nonimmigrant status; and
- (5) Are experiencing severe economic hardship as a direct result of the current armed conflict and humanitarian crisis in South Sudan.

An F–1 nonimmigrant student who does not meet all these requirements is ineligible for the suspension of the applicability of the standard regulatory requirements (even if experiencing severe economic hardship as a direct result of the current armed conflict and humanitarian crisis in South Sudan).

Does this notice apply to a continuing F–1 nonimmigrant student who departs the United States after the effective date of this notice in the Federal Register and who needs to obtain a new F–1 visa before returning to the United States to continue an educational program?

Yes. This notice applies to such an F–1 nonimmigrant student, but only if the DSO has properly notated the student’s SEVIS record, which will then appear on the student’s Form I–20. The normal rules for visa issuance remain applicable to a nonimmigrant who needs to apply for a new F–1 visa to continue an educational program in the United States.

Does this notice apply to elementary school, middle school, and high school students in F–1 status?

Yes. However, this notice does not by itself reduce the required course load for F–1 nonimmigrant students from South Sudan enrolled in kindergarten through grade 12 at a private school, or grades 9 through 12 at a public high school. Such students must maintain the minimum number of hours of class attendance per week prescribed by the academic institution for normal progress toward graduation, as required under 8 CFR 214.2(f)(6)(i)(E). The suspension of certain regulatory requirements related to employment through this notice is applicable to all eligible F–1 nonimmigrant students regardless of educational level. Eligible F–1

nonimmigrant students from South Sudan enrolled in an elementary school, middle school, or high school may benefit from the suspension of the requirement in 8 CFR 214.2(f)(9)(i) that limits on-campus employment to 20 hours per week while school is in session.

On-Campus Employment Authorization

Will an F–1 nonimmigrant student who receives on-campus employment authorization under this notice be authorized to work more than 20 hours per week while school is in session?

Yes. For an F–1 nonimmigrant student covered in this notice, the Secretary is suspending the applicability of the requirement in 8 CFR 214.2(f)(9)(i) that limits an F–1 nonimmigrant student's on-campus employment to 20 hours per week while school is in session. An eligible F–1 nonimmigrant student has authorization to work more than 20 hours per week while school is in session if the DSO has entered the following statement in the remarks field of the student's SEVIS record, which will be reflected on the student's Form I–20:

Approved for more than 20 hours per week of on-campus employment and reduced course load, under the Special Student Relief authorization from [DSO must insert the beginning date of this notice or the beginning date of the student's employment, whichever date is later] until [DSO must insert the student's program end date or the end date of this notice, whichever date comes first].³²

To obtain on-campus employment authorization, the F–1 nonimmigrant student must demonstrate to the DSO that the employment is necessary to avoid severe economic hardship directly resulting from the current armed conflict and humanitarian crisis in South Sudan. An F–1 nonimmigrant student authorized by the DSO to engage in on-campus employment by means of this notice does not need to file any applications with U.S. Citizenship and Immigration Services (USCIS). The standard rules permitting full-time on-campus employment when school is not in session or during school vacations apply, as described in 8 CFR 214.2(f)(9)(i).

³² Because the suspension of requirements under this notice applies throughout an academic term during which the suspension is in effect, DHS considers an F–1 nonimmigrant student who engages in a reduced course load or employment (or both) after this notice is effective to be engaging in a "full course of study," see 8 CFR 214.2(f)(6), and eligible for employment authorization, through the end of any academic term for which such student is matriculated as of May 3, 2025, provided the student satisfies the minimum course load requirements in this notice.

Will an F–1 nonimmigrant student who receives on-campus employment authorization under this notice have authorization to reduce the normal course load and still maintain his or her F–1 nonimmigrant student status?

Yes. DHS will deem an F–1 nonimmigrant student who receives on-campus employment authorization under this notice to be engaged in a "full course of study"³³ for the purpose of maintaining their F–1 nonimmigrant student status for the duration of the on-campus employment, if the student satisfies the minimum course load requirement described in this notice, consistent with 8 CFR 214.2(f)(6)(i)(F). However, the authorization to reduce the normal course load is solely for DHS purposes of determining valid F–1 nonimmigrant student status. Nothing in this notice mandates that school officials allow an F–1 nonimmigrant student to take a reduced course load if the reduction would not meet the academic institution's minimum course load requirement for continued enrollment.³⁴

Off-Campus Employment Authorization

What regulatory requirements does this notice temporarily suspend relating to off-campus employment?

For an F–1 nonimmigrant student covered by this notice, as provided under 8 CFR 214.2(f)(9)(ii)(A), the Secretary is suspending the following regulatory requirements relating to off-campus employment:

- (a) The requirement that a student must have been in F–1 nonimmigrant student status for one full academic year to be eligible for off-campus employment;
- (b) The requirement that an F–1 nonimmigrant student must demonstrate that acceptance of employment will not interfere with the student's carrying a full course of study;
- (c) The requirement that limits an F–1 nonimmigrant student's employment authorization to no more than 20 hours per week of off-campus employment while the school is in session; and
- (d) The requirement that the student demonstrate that employment under 8 CFR 214.2(f)(9)(i) is unavailable or otherwise insufficient to meet the needs that have arisen as a result of the unforeseen circumstances.

³³ See 8 CFR 214.2(f)(6).

³⁴ Minimum course load requirement for enrollment in a school must be established in a publicly available document (e.g., catalog, website, or operating procedure), and it must be a standard applicable to all students (U.S. citizens and foreign students) enrolled at the school.

Will an F–1 nonimmigrant student who receives off-campus employment authorization under this notice have authorization to reduce the normal course load and still maintain F–1 nonimmigrant status?

Yes. DHS will deem an F–1 nonimmigrant student who receives off-campus employment authorization by means of this notice to be engaged in a "full course of study"³⁵ for the purpose of maintaining F–1 nonimmigrant student status for the duration of the student's employment authorization if the student satisfies the minimum course load requirement described in this notice, consistent with 8 CFR 214.2(f)(6)(i)(F). However, the authorization for a reduced course load is solely for DHS purposes of determining valid F–1 nonimmigrant student status. Nothing in this notice mandates that school officials allow an F–1 nonimmigrant student to take a reduced course load if such reduced course load would not meet the school's minimum course load requirement.³⁶

How may an eligible F–1 nonimmigrant student obtain employment authorization for off-campus employment with a reduced course load under this notice?

An F–1 nonimmigrant student must file a Form I–765, Application for Employment Authorization, with USCIS to apply for off-campus employment authorization based on severe economic hardship directly resulting from the current armed conflict and humanitarian crisis in South Sudan.³⁷ Filing instructions are located at <https://www.uscis.gov/i-765>.

Fee considerations. Submission of a Form I–765 currently requires payment of a \$410 fee. An applicant who is unable to pay the fee may submit a completed Form I–912, Request for Fee Waiver, along with the Form I–765, Application for Employment Authorization. See <https://www.uscis.gov/forms/filing-fees/additional-information-on-filing-a-fee-waiver>. The submission must include an explanation about why USCIS should grant the fee waiver and the reason(s) for the inability to pay, and any evidence to support the reason(s). See 8 CFR 103.7(c) (Oct. 1, 2020).

Supporting documentation. An F–1 nonimmigrant student seeking off-

³⁵ See 8 CFR 214.2(f)(6).

³⁶ Minimum course load requirement for enrollment in a school must be established in a publicly available document (e.g., catalog, website, or operating procedure), and it must be a standard applicable to all students (U.S. citizens and foreign students) enrolled at the school.

³⁷ See 8 CFR 274a.12(c)(3)(iii).

campus employment authorization due to severe economic hardship must demonstrate the following to their DSO:

(1) This employment is necessary to avoid severe economic hardship; and

(2) The hardship is a direct result of the current armed conflict and humanitarian crisis in South Sudan.

If the DSO agrees that the F–1 nonimmigrant student is entitled to receive such employment authorization, the DSO must recommend application approval to USCIS by entering the following statement in the remarks field of the student's SEVIS record, which will then appear on that student's Form I–20:

Recommended for off-campus employment authorization in excess of 20 hours per week and reduced course load under the Special Student Relief authorization from the date of the USCIS authorization noted on Form I–766 until [DSO must insert the program end date or the end date of this notice, whichever date comes first].³⁸

The F–1 nonimmigrant student must then file the properly endorsed Form I–20 and Form I–765 according to the instructions for the Form I–765. The F–1 nonimmigrant student may begin working off campus only upon receipt of the EAD from USCIS.

DSO recommendation. In making a recommendation that an F–1 nonimmigrant student be approved for Special Student Relief, the DSO certifies that:

(a) The F–1 nonimmigrant student is in good academic standing and is carrying a “full course of study”³⁹ at the time of the request for employment authorization;

(b) The F–1 nonimmigrant student is a citizen of South Sudan, regardless of country of birth (or an individual having no nationality who last habitually resided in South Sudan), and is experiencing severe economic hardship as a direct result of the current armed conflict and humanitarian crisis in South Sudan, as documented on the Form I–20;

(c) The F–1 nonimmigrant student has confirmed that the student will comply with the reduced course load requirements of this notice and register for the duration of the authorized

employment for a minimum of six semester or quarter hours of instruction per academic term if at the undergraduate level, or for a minimum of three semester or quarter hours of instruction per academic term if the student is at the graduate level;⁴⁰ and

(d) The off-campus employment is necessary to alleviate severe economic hardship to the individual as a direct result of the current armed conflict and humanitarian crisis in South Sudan.

Processing. To facilitate prompt adjudication of the student's application for off-campus employment authorization under 8 CFR

214.2(f)(9)(ii)(C), the F–1 nonimmigrant student should do both of the following:

(a) Ensure that the application package includes the following documents:

(1) A completed Form I–765 with all applicable supporting evidence;

(2) The required fee or properly documented fee waiver request as defined in 8 CFR 103.7(c) (Oct. 1, 2020); and

(3) A signed and dated copy of the student's Form I–20 with the appropriate DSO recommendation, as previously described in this notice; and

(b) Send the application in an envelope which is clearly marked on the front of the envelope, bottom right-hand side, with the phrase “SPECIAL STUDENT RELIEF.”⁴¹ Failure to include this notation may result in significant processing delays.

If USCIS approves the student's Form I–765, USCIS will send the student a Form I–766 EAD as evidence of employment authorization. The EAD will contain an expiration date that does not exceed the end of the granted temporary relief.

Temporary Protected Status (TPS) Considerations

Can an F–1 nonimmigrant student apply for TPS and for benefits under this notice at the same time?

Yes. An F–1 nonimmigrant student who has not yet applied for TPS or for other relief that reduces the student's course load per term and permits an increased number of work hours per week, such as Special Student Relief,⁴² under this notice has two options.

Under the first option, the F–1 nonimmigrant student may apply for TPS according to the instructions in the USCIS notice designating South Sudan

for TPS elsewhere in this issue of the **Federal Register**. All TPS applicants must file a Form I–821, Application for Temporary Protected Status, with the appropriate fee (or request a fee waiver). Although not required to do so, if F–1 nonimmigrant students want to obtain a new TPS-related EAD that is valid through May 3, 2025, and to be eligible for automatic EAD extensions that may be available to certain EADs with an A–12 or C–19 category code, they must file Form I–765 and pay the Form I–765 fee (or request a fee waiver). After receiving the TPS-related EAD, an F–1 nonimmigrant student may request that their DSO make the required entry in SEVIS and issue an updated Form I–20, which notates that the nonimmigrant student has been authorized to carry a reduced course load, as described in this notice. As long as the F–1 nonimmigrant student maintains the minimum course load described in this notice, does not otherwise violate their nonimmigrant status, including as provided under 8 CFR 214.1(g), and maintains TPS, then the student maintains F–1 status and TPS concurrently.

Under the second option, the F–1 nonimmigrant student may apply for an EAD under Special Student Relief by filing Form I–765 with the location specified in the filing instructions. At the same time, the F–1 nonimmigrant student may file a separate TPS application but must submit the Form I–821 according to the instructions provided in the **Federal Register** notice designating South Sudan for TPS. If the F–1 nonimmigrant student has already applied for employment authorization under Special Student Relief, they are not required to submit the Form I–765 as part of the TPS application. However, some nonimmigrant students may wish to obtain a TPS-related EAD in light of certain extensions that may be available to EADs with an A–12 or C–19 category code that are not available to the C–3 category under which Special Student Relief falls. The F–1 nonimmigrant student should check the appropriate box when filling out Form I–821 to indicate whether a TPS-related EAD is being requested. Again, so long as the F–1 nonimmigrant student maintains the minimum course load described in this notice and does not otherwise violate the student's nonimmigrant status, included as provided under 8 CFR 214.1(g), the nonimmigrant will be able to maintain compliance requirements for F–1 nonimmigrant student status while having TPS.

³⁸ Because the suspension of requirements under this notice applies throughout an academic term during which the suspension is in effect, DHS considers an F–1 nonimmigrant student who engages in a reduced course load or employment (or both) after this notice is effective to be engaging in a “full course of study,” see 8 CFR 214.2(f)(6), and eligible for employment authorization, through the end of any academic term for which such student is matriculated as of May 3, 2025, provided the student satisfies the minimum course load requirements in this notice.

³⁹ See 8 CFR 214.2(f)(6).

⁴⁰ 8 CFR 214.2(f)(5)(v).

⁴¹ Guidance for direct filing addresses can be found here: <https://www.uscis.gov/i-765-addresses>.

⁴² See DHS Study in the States, Special Student Relief, <https://studyinthestates.dhs.gov/students/special-student-relief> (last visited May 10, 2023).

When a student applies simultaneously for TPS and benefits under this notice, what is the minimum course load requirement while an application for employment authorization is pending?

The F–1 nonimmigrant student must maintain normal course load requirements for a “full course of study”⁴³ unless or until the nonimmigrant student receives employment authorization under this notice. TPS-related employment authorization, by itself, does not authorize a nonimmigrant student to drop below twelve credit hours, or otherwise applicable minimum requirements (e.g., clock hours for non-traditional academic programs). Once approved for a TPS-related EAD and Special Student Relief employment authorization, as indicated by the DSO’s required entry in SEVIS and issuance of an updated Form I–20, the F–1 nonimmigrant student may drop below twelve credit hours, or otherwise applicable minimum requirements (with a minimum of six semester or quarter hours of instruction per academic term if at the undergraduate level, or for a minimum of three semester or quarter hours of instruction per academic term if at the graduate level). See 8 CFR 214.2(f)(5)(v), (f)(6), and (f)(9)(i) and (ii).

How does a student who has received a TPS-related EAD then apply for authorization to take a reduced course load under this notice?

There is no further application process with USCIS if a student has been approved for a TPS-related EAD. The F–1 nonimmigrant student must demonstrate and provide documentation to the DSO of the direct economic hardship resulting from the current armed conflict and humanitarian crisis in South Sudan. The DSO will then verify and update the student’s record in SEVIS to enable the F–1 nonimmigrant student with TPS to reduce the course load without any further action or application. No other EAD needs to be issued for the F–1 nonimmigrant student to have employment authorization.

Can a noncitizen who has been granted TPS apply for reinstatement of F–1 nonimmigrant student status after the noncitizen’s F–1 nonimmigrant student status has lapsed?

Yes. Regulations permit certain students who fall out of F–1 nonimmigrant student status to apply for reinstatement. See 8 CFR 214.2(f)(16). This provision may apply to students who worked on a TPS-

related EAD or dropped their course load before publication of this notice, and therefore fell out of student status. These students must satisfy the criteria set forth in the F–1 nonimmigrant student status reinstatement regulations.

How long will this notice remain in effect?

This notice grants temporary relief until May 3, 2025,⁴⁴ to eligible F–1 nonimmigrant students. DHS will continue to monitor the situation in South Sudan. Should the special provisions authorized by this notice need modification or extension, DHS will announce such changes in the **Federal Register**.

Paperwork Reduction Act (PRA)

An F–1 nonimmigrant student seeking off-campus employment authorization due to severe economic hardship resulting from the current armed conflict and humanitarian crisis in South Sudan must demonstrate to the DSO that this employment is necessary to avoid severe economic hardship. A DSO who agrees that a nonimmigrant student should receive such employment authorization must recommend an application approval to USCIS by entering information in the remarks field of the student’s SEVIS record. The authority to collect this information is in the SEVIS collection of information currently approved by the Office of Management and Budget (OMB) under OMB Control Number 1653–0038.

This notice also allows an eligible F–1 nonimmigrant student to request employment authorization, work an increased number of hours while the academic institution is in session, and reduce their course load while continuing to maintain F–1 nonimmigrant student status.

To apply for employment authorization, certain F–1 nonimmigrant students must complete and submit a currently approved Form I–765 according to the instructions on the form. OMB has previously approved the collection of information contained on the current Form I–765, consistent with the PRA (OMB Control No. 1615–0040). Although there will be a slight

increase in the number of Form I–765 filings because of this notice, the number of filings currently contained in the OMB annual inventory for Form I–765 is sufficient to cover the additional filings. Accordingly, there is no further action required under the PRA.

Alejandro Mayorkas,

Secretary, U.S. Department of Homeland Security.

Extension and Redesignation of South Sudan for Temporary Protected Status

AGENCY: U.S. Citizenship and Immigration Services (USCIS), Department of Homeland Security (DHS).

ACTION: Notice of Temporary Protected Status (TPS) extension and redesignation.

SUMMARY: Through this notice, the Department of Homeland Security (DHS) announces that the Secretary of Homeland Security (Secretary) is extending the designation of South Sudan for Temporary Protected Status (TPS) for 18 months, beginning on November 4, 2023, and ending on May 3, 2025. This extension allows existing TPS beneficiaries to retain TPS through May 3, 2025, so long as they otherwise continue to meet the eligibility requirements for TPS. Existing TPS beneficiaries who wish to extend their status through May 3, 2025, must re-register during the 60-day re-registration period described in this notice. The Secretary is also redesignating South Sudan for TPS. The redesignation of South Sudan allows additional South Sudanese nationals (and individuals having no nationality who last habitually resided in South Sudan) who have been continuously residing in the United States since September 4, 2023, to apply for TPS for the first time during the initial registration period described under the redesignation information in this notice. In addition to demonstrating continuous residence in the United States since September 4, 2023, and meeting other eligibility criteria, initial applicants for TPS under this designation must demonstrate that they

⁴³ See 8 CFR 214.2(f)(6).

⁴⁴ Because the suspension of requirements under this notice applies throughout an academic term during which the suspension is in effect, DHS considers an F–1 nonimmigrant student who engages in a reduced course load or employment (or both) after this notice is effective to be engaging in a “full course of study,” see 8 CFR 214.2(f)(6), and eligible for employment authorization, through the end of any academic term for which such student is matriculated as of May 3, 2025, provided the student satisfies the minimum course load requirements in this notice.

have been continuously physically present in the United States since November 4, 2023, the effective date of this redesignation of South Sudan for TPS.

DATES:

Extension of Designation of South Sudan for TPS: The 18-month designation of South Sudan for TPS begins on November 4, 2023, and will remain in effect for 18 months, ending on May 3, 2025. The extension impacts existing beneficiaries of TPS.

Re-registration: The 60-day re-registration period for existing beneficiaries runs from September 6, 2023 through November 6, 2023. (Note: It is important for re-registrants to timely re-register during the registration period and not to wait until their Employment Authorization Documents (EADs) expire, as delaying re-registration could result in gaps in their employment authorization documentation.)

Redesignation of South Sudan for TPS: The 18-month redesignation of South Sudan for TPS begins on November 4, 2023, and will remain in effect for 18 months, ending on May 3, 2025. The redesignation impacts potential first-time applicants and others who do not currently have TPS.

First-time Registration: The initial registration period for new applicants under the South Sudan TPS redesignation begins on September 6, 2023 and will remain in effect through May 3, 2025.

FOR FURTHER INFORMATION CONTACT:

- You may contact Rená Cutlip-Mason, Chief, Humanitarian Affairs Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, by mail at 5900 Capital Gateway Drive, Camp Springs, MD 20746, or by phone at 800-375-5283.
- For further information on TPS, including guidance on the registration process and additional information on eligibility, please visit the USCIS TPS web page at <https://www.uscis.gov/tps>. You can find specific information about South Sudan's TPS designation by selecting "South Sudan" from the menu on the left side of the TPS web page.
- If you have additional questions about TPS, please visit uscis.gov/tools. Our online virtual assistant, Emma, can answer many of your questions and point you to additional information on our website. If you are unable to find your answers there, you may also call our USCIS Contact Center at 800-375-5283 (TTY 800-767-1833).
- Applicants seeking information about the status of their individual cases

may check Case Status Online, available on the USCIS website at uscis.gov, or visit the USCIS Contact Center at <https://www.uscis.gov/contactcenter>.

- Further information will also be available at local USCIS offices upon publication of this notice.

Purpose of this Action (TPS)

Through this notice, DHS sets forth procedures necessary for nationals of South Sudan (or individuals having no nationality who last habitually resided in South Sudan) to (1) re-register for TPS and to apply for renewal of their EADs with USCIS or (2) submit an initial registration application under the redesignation and apply for an EAD.

Re-registration is limited to individuals who have previously registered for TPS under the prior designation of South Sudan and whose applications have been granted. Failure to re-register properly within the 60-day re-registration period may result in the withdrawal of your TPS following appropriate procedures. *See* 8 CFR 244.14.

For individuals who have already been granted TPS under South Sudan's designation, the 60-day re-registration period runs from September 6, 2023 through November 6, 2023. USCIS will issue new EADs with a May 3, 2025 expiration date to eligible South Sudanese TPS beneficiaries who timely

re-register and apply for EADs. Given the time frames involved with processing TPS re-registration applications, DHS recognizes that not all re-registrants may receive new EADs before their current EADs expire. Accordingly, through this **Federal Register** notice, DHS automatically extends the validity of certain EADs previously issued under the TPS designation of South Sudan through November 3, 2024. Therefore, as proof of continued employment authorization through November 3, 2024, TPS beneficiaries can show their EADs that have the notation A-12 or C-19 under Category and a "Card Expires" date of November 3, 2023. This notice explains how TPS beneficiaries and their employers may determine which EADs are automatically extended and how this affects the Form I-9, Employment Eligibility Verification, E-Verify, and USCIS Systematic Alien Verification for Entitlements (SAVE) processes.

Individuals who have a South Sudan TPS application (Form I-821) and/or Application for Employment Authorization (Form I-765) that was still pending as of September 6, 2023 do not need to file either application again. If USCIS approves an individual's pending Form I-821, USCIS will grant the individual TPS through May 3, 2025. Similarly, if USCIS approves a pending TPS-related Form I-765, USCIS will issue the individual a new EAD that will be valid through the same date. There are currently approximately 133 beneficiaries under South Sudan's TPS designation.

Under the redesignation, individuals who currently do not have TPS may submit an initial application during the initial registration period that runs from September 6, 2023 through the full length of the redesignation period ending May 3, 2025. In addition to demonstrating continuous residence in the United States since September 4, 2023, and meeting other eligibility criteria, initial applicants for TPS under this redesignation must demonstrate that they have been continuously physically present in the United States since November 4, 2023,¹ the effective date of this redesignation of South Sudan, before USCIS may grant them

¹ The "continuous physical presence date" (CPP) is the effective date of the most recent TPS designation of the country, which is either the publication date of the designation announcement in the **Federal Register** or such later date as the Secretary may establish. The "continuous residence date" (CR) is any date established by the Secretary when a country is designated (or sometimes redesignated) for TPS. *See* INA sec. 244(b)(2)(A) (effective date of designation); 244(c)(1)(A)(i-ii) (CR and CPP date requirements); 8 U.S.C. 1254a(b)(2)(A); 1254a(c)(1)(A)(i-ii).

TPS. DHS estimates that approximately 140 individuals may become newly eligible for TPS under the redesignation of South Sudan.

What is Temporary Protected Status (TPS)?

- TPS is a temporary immigration status granted to eligible nationals of a foreign state designated for TPS under the INA, or to eligible individuals without nationality who last habitually resided in the designated foreign state, regardless of their country of birth.
- During the TPS designation period, TPS beneficiaries are eligible to remain in the United States, may not be removed, and are authorized to obtain EADs so long as they continue to meet the requirements of TPS.
- TPS beneficiaries may also apply for and be granted travel authorization as a matter of DHS discretion.
- To qualify for TPS, beneficiaries must meet the eligibility standards at INA section 244(c)(1)–(2), 8 U.S.C. 1254a(c)(1)–(2).
- When the Secretary terminates a foreign state's TPS designation, beneficiaries return to one of the following:
 - The same immigration status or category that they maintained before TPS, if any (unless that status or category has since expired or terminated); or
 - Any other lawfully obtained immigration status or category they received while registered for TPS, as long as it is still valid beyond the date TPS terminates.

When was South Sudan designated for TPS?

South Sudan was initially designated for TPS on October 13, 2011, on the dual bases of ongoing armed conflict and extraordinary and temporary conditions that prevented nationals of South Sudan from safely returning.² Following the initial designation, DHS extended and redesignated South Sudan for TPS in 2013, 2014, and 2016.³ In 2017, 2019, and 2020, DHS extended TPS for South Sudan, based on ongoing armed conflict and extraordinary and temporary conditions.⁴ Most recently, in

March 2022, DHS extended and redesignated South Sudan for TPS for 18 months based on ongoing armed conflict and extraordinary and temporary conditions, from May 3, 2022, to November 3, 2023.⁵

What authority does the Secretary have to extend the designation South Sudan for TPS?

Section 244(b)(1) of the INA, 8 U.S.C. 1254a(b)(1), authorizes the Secretary, after consultation with appropriate agencies of the U.S. Government, to designate a foreign state (or part thereof) for TPS if the Secretary determines that certain country conditions exist.⁶ The decision to designate any foreign state (or part thereof) is a discretionary decision, and there is no judicial review of any determination with respect to the designation, termination, or extension of a designation. *See* INA sec. 244(b)(5)(A), 8 U.S.C. 1254a(b)(5)(A). The Secretary, in his or her discretion, may then grant TPS to eligible nationals of that foreign state (or individuals having no nationality who last habitually resided in the designated foreign state). *See* INA sec. 244(a)(1)(A), 8 U.S.C. 1254a(a)(1)(A).

At least 60 days before the expiration of a foreign state's TPS designation or extension, the Secretary, after consultation with appropriate U.S. Government agencies, must review the conditions in the foreign state designated for TPS to determine whether they continue to meet the conditions for the TPS designation. *See* INA sec. 244(b)(3)(A), 8 U.S.C. 1254a(b)(3)(A). If the Secretary determines that the foreign state continues to meet the conditions for

Temporary Protected Status, 84 FR 13688 (Apr. 5, 2019); and *Extension of the Designation of South Sudan for Temporary Protected Status*, 85 FR 69344 (Nov. 2, 2020).

⁵ *See Extension and Redesignation of South Sudan for Temporary Protected Status*, 87 FR 12190 (Mar. 3, 2022).

⁶ INA sec. 244(b)(1) ascribes this power to the Attorney General. Congress transferred this authority from the Attorney General to the Secretary of Homeland Security. *See* Homeland Security Act of 2002, Public Law 107–296, 116 Stat. 2135 (2002). The Secretary may designate a country (or part of a country) for TPS on the basis of ongoing armed conflict such that returning would pose a serious threat to the personal safety of the country's nationals and habitual residents, environmental disaster (including an epidemic), or extraordinary and temporary conditions in the country that prevent the safe return of the country's nationals. For environmental disaster-based designations, certain other statutory requirements must be met, including that the foreign government must request TPS. A designation based on extraordinary and temporary conditions cannot be made if the Secretary finds that allowing the country's nationals to remain temporarily in the United States is contrary to the U.S. national interest. INA sec. 244(b)(1); 8 U.S.C. 1254a(b)(1).

TPS designation, the designation will be extended for an additional period of 6 months or, in the Secretary's discretion, 12 or 18 months. *See* INA sec.

244(b)(3)(A), (C), 8 U.S.C.

1254a(b)(3)(A), (C). If the Secretary determines that the foreign state no longer meets the conditions for TPS designation, the Secretary must terminate the designation. *See* INA sec. 244(b)(3)(B), 8 U.S.C. 1254a(b)(3)(B).

What is the Secretary's authority to redesignate South Sudan for TPS?

In addition to extending an existing TPS designation, the Secretary, after consultation with appropriate Government agencies, may redesignate a country (or part thereof) for TPS. *See* INA sec. 244(b)(1), 8 U.S.C. 1254a(b)(1); *see also* INA sec. 244(c)(1)(A)(i), 8 U.S.C. 1254a(c)(1)(A)(i) (requiring that “the alien has been continuously physically present since the effective date of the most recent designation of the state”) (emphasis added).⁷

When the Secretary designates or redesignates a country for TPS, the Secretary also has the discretion to establish the date from which TPS applicants must demonstrate that they have been “continuously resid[ing]” in the United States. *See* INA sec. 244(c)(1)(A)(ii), 8 U.S.C. 1254a(c)(1)(A)(ii). The Secretary has determined that the “continuous residence” date for applicants for TPS under the redesignation of South Sudan shall be September 4, 2023. Initial applicants for TPS under this redesignation must also show they have been “continuously physically present” in the United States since November 4, 2023, which is the effective date of the Secretary's redesignation, of South Sudan. *See* INA sec. 244(c)(1)(A)(i), 8 U.S.C. 1254a(c)(1)(A)(i). For each initial TPS application filed under the redesignation, the final determination of whether the applicant has met the “continuous physical presence” requirement cannot be made until November 4, 2023, the effective date of this redesignation for South Sudan. USCIS, however, will issue employment authorization documentation, as appropriate, during the registration

⁷ The extension and redesignation of TPS for South Sudan is one of several instances in which the Secretary and, prior to the establishment of DHS, the Attorney General, have simultaneously extended a country's TPS designation and redesignated the country for TPS. *See, e.g., Extension and Redesignation of Haiti for Temporary Protected Status*, 76 FR 29000 (May 19, 2011); *Extension and Re-designation of Temporary Protected Status for Sudan*, 69 FR 60168 (Oct. 7, 2004); *Extension of Designation and Redesignation of Liberia Under Temporary Protected Status Program*, 62 FR 16608 (Apr. 7, 1997).

² *See Designation of Republic of South Sudan for Temporary Protected Status*, 76 FR 63629 (Oct. 13, 2011).

³ *See Extension and Redesignation of South Sudan for Temporary Protected Status*, 78 FR 1866 (Jan. 9, 2013); *Extension and Redesignation of South Sudan for Temporary Protected Status*, 79 FR 52019 (Sept. 2, 2014); and *Extension and Redesignation of South Sudan for Temporary Protected Status*, 81 FR 4051 (Jan. 25, 2016).

⁴ *See Extension of South Sudan for Temporary Protected Status*, 82 FR 44205 (Sept. 21, 2017); *Extension of the Designation of South Sudan for*

period in accordance with 8 CFR 244.5(b).

Why is the Secretary extending the TPS designation for South Sudan and simultaneously redesignating South Sudan for TPS through May 3, 2025?

DHS has reviewed country conditions in South Sudan. Based on the review, including input received from the Department of State (DOS), the Secretary has determined that an 18-month TPS extension is warranted because ongoing armed conflict and extraordinary and temporary conditions supporting South Sudan's TPS designation remain. The Secretary has further determined that redesignating South Sudan for TPS under INA section 244(b)(3)(C), 8 U.S.C. 1254a(b)(3)(C) is warranted and is changing the "continuous residence" and "continuous physical presence" dates that applicants must meet to be eligible for TPS.

Armed Conflict

As in prior years, the armed conflicts in South Sudan consist of fighting among various factions associated with the government, as well as between government forces and militant groups, such as the National Salvation Front (also known as the NAS).⁸ A principal driver of armed conflict within the government has long been the rivalry between President Salva Kiir Mayardit and First Vice President Riek Machar, as well as their various supporters and aligned armed groups.^{9 10} In spite of the 2018 peace agreement that established the current transitional government—and to which President Kiir and Vice President Machar were signatories—South Sudan faces "often violent political contestations," and the lack of stable government has facilitated ongoing violence that is "nearly always characterized by gross human rights violations that [have] targeted civilians and caused mass displacements" in parts of the country.¹¹ Conflict among

armed actors, including the South Sudan People's Defence Force (SSPDF), the Sudan People's Liberation Movement—In Opposition (SPLM–IO), and the NAS have continued in 2023.¹² In March 2023, media reported mobilization of forces allied to the government and the SPLM–IO as the groups prepared to "return to war" with one another.¹³

Multiple parties are responsible for committing crimes and human rights abuses across South Sudan, with reports that "security forces, opposition forces, armed militias affiliated with the government and the opposition, nonsignatories to the peace agreement, and civilians were responsible for a significant range of conflict-related abuses around the country."¹⁴ Government forces have reportedly engaged in collective punishment of civilians perceived to be opposition supporters, an assumption often based on ethnicity.¹⁵ Delays in implementing security sector reform and demobilization of armed groups have contributed to security forces and ex-combatants exploiting local communities, emboldened by a climate of impunity.¹⁶ Members of government and opposition forces, associated armed militia groups, and ethnic groups are reported to have committed torture and other ill-treatment in conflict zones.¹⁷ The "simmering ethnic conflict" in parts of South Sudan has resulted in dire humanitarian consequences, including significant displacement and reports of human rights violations and

abuses, including those involving the killing of civilians, arbitrary arrests or unjust detentions, looting and destruction of civilian property, physical abuse, forced recruitment, and gender-based violence.¹⁸

Armed conflict has had particularly dire consequences for women and children. Women and girls have faced increased cases of sexual violence and harassment, as well as risk of abductions, killings, and threats from armed forces.¹⁹ Various parties use gender-based violence as a conflict tactic, including rape, gang rape, sexual slavery, and forced marriage.²⁰ Impunity for gender-based abuses, including sexual abuses, has continued.²¹ Experts estimate that around 2.8 million people are at risk of gender-based violence in 2023, constituting a nine percent increase over the previous year.²² Children also remain at great risk of multiple types of abuse and victimization. The United Nations has documented many incidences of what the Special Representative of the Secretary-General for Children and Armed Conflict has identified as the six "grave violations against children," including recruitment and use by armed groups; killing and maiming; rape and other forms of sexual violence; attacks on schools, hospitals, and protected persons in relation to schools and/or hospitals; abduction; and denial of humanitarian access.²³

Environmental and Health Concerns

South Sudan has experienced above normal rainfall for four consecutive years.²⁴ The effects of rain and flooding

are widespread, with the number of people impacted across South Sudan estimated to exceed one million.²⁵ Floods have destroyed crops, homes, schools, health care centers, and boreholes for water access, and efforts to provide relief have been stymied by violence, inaccessibility, and gaps in resources and infrastructure.²⁶

South Sudan is also contending with multiple disease outbreaks. Flood-affected areas have seen the spread of malaria, diarrhea, pneumonia, and skin infections, and the lack of clean water and sanitation suggests that outbreaks of cholera and Hepatitis E are likely to persist.²⁷ There also have been confirmed outbreaks of measles.²⁸ Dozens of health facilities were damaged or relocated due to flooding, furthering restricting access to care.²⁹

Food Insecurity

Approximately 7.8 million South Sudanese were projected to face “Crisis” levels of acute food insecurity, or worse, between April and July 2023.³⁰ Within this population, 2.9 million people were projected to face “Emergency” levels of acute food security, and around 43,000 were expected to face “Catastrophe.”³¹ Disruption in the agricultural sector has led to a dramatic increase in food prices, thereby exacerbating food insecurity and intensifying poverty.³² Access to

food is also sometimes used as a weapon of war.³³

Barriers to Humanitarian Access

An estimated 9.4 million of South Sudan's total population of more than 12 million people is in need of humanitarian assistance.³⁴ Multiple factors complicate the provision of relief. Armed groups restrict the safe and effective delivery of assistance, in some cases even harassing or killing aid workers, engaging in looting, and destroying humanitarian assets and facilities.³⁵ Bureaucratic obstacles and interference further undermine access.³⁶ Additionally, flooding has prevented physical access to some locations.³⁷

Based upon this review and after consultation with appropriate U.S. Government agencies, the Secretary has determined that:

- The conditions supporting South Sudan's designation for TPS continue to be met. *See* INA sec. 244(b)(3)(A) and (C), 8 U.S.C. 1254a(b)(3)(A) and (C).
- There continues to be an ongoing armed conflict in South Sudan and, due to such conflict, requiring the return to South Sudan of South Sudanese nationals (or individuals having no nationality who last habitually resided in South Sudan) would pose a serious threat to their personal safety. *See* INA sec. 244(b)(1)(A), 8 U.S.C. 1254a(b)(1)(A).
- There continue to be extraordinary and temporary conditions in South Sudan that prevent South Sudanese nationals (or individuals having no nationality who last habitually resided in South Sudan) from returning in safety, and it is not contrary to the national interest of the United States to permit South Sudanese TPS beneficiaries to remain in the United States temporarily. *See* INA sec. 244(b)(1)(C), 8 U.S.C. 1254a(b)(1)(C).

- The designation of South Sudan for TPS should be extended for an 18-month period, beginning on November 4, 2023, and ending on May 3, 2025. *See* INA sec. 244(b)(3)(C), 8 U.S.C. 1254a(b)(3)(C).

- Due to the conditions described above, South Sudan should be simultaneously extended and redesignated for TPS beginning on November 4, 2023 and ending on May 3, 2025. *See* INA sec. 244(b)(1)(A), (C), and (b)(2), 8 U.S.C. 1254a(b)(1)(A), (C), and (b)(2).

- For the redesignation, the Secretary has determined that TPS applicants must demonstrate that they have continuously resided in the United States since September 4, 2023.

- Initial TPS applicants under the redesignation must demonstrate that they have been continuously physically present in the United States since November 4, 2023, the effective date of the redesignation of South Sudan for TPS.

- There are approximately 133 current South Sudan TPS beneficiaries who are eligible to re-register for TPS under the extension.

- It is estimated that approximately 140 additional individuals may be eligible for TPS under the redesignation of South Sudan. This population includes South Sudanese nationals in the United States in nonimmigrant status or without immigration status.

Notice of the Designation of South Sudan for TPS

By the authority vested in me as Secretary under INA section 244, 8 U.S.C. 1254a, I have determined, after consultation with the appropriate U.S. Government agencies, the statutory conditions supporting South Sudan's designation for TPS on the basis of ongoing armed conflict and extraordinary and temporary conditions are met and it is not contrary to the national interest of the United States to permit South Sudanese TPS beneficiaries to remain in the United States temporarily. *See* INA sec. 244(b)(1)(A), 8 U.S.C. 1254a(b)(1)(A) and INA sec. 244(b)(1)(C), 8 U.S.C. 1254a(b)(1)(C). On the basis of this determination, I am simultaneously extending the existing designation of South Sudan for TPS for 18 months, beginning on November 4, 2023, and ending on May 3, 2025, and redesignating South Sudan for TPS for the same 18-month period. *See* INA sec. 244(b)(1)(A), (b)(1)(C) and (b)(2); 8

Eligibility and Employment Authorization for TPS Required Application Forms and Application Fees to Register or Re-Register for TPS

To register for TPS based on the designation of South Sudan, you must submit a Form I-821, Application for Temporary Protected Status, and pay the filing fee (or request a fee waiver, which you may submit on Form I-912, Request for Fee Waiver). You may be required to pay the biometric services fee. If you can demonstrate an inability to pay the biometric services fee, you may request to have the fee waived. Please see additional information under the “Biometric Services Fee” section of this notice.

TPS beneficiaries are eligible for an Employment Authorization Document (EAD), which proves their authorization to work in the United States. You are not required to submit Form I-765, Application for Employment Authorization, or have an EAD to be granted TPS, but see below for more information if you want an EAD to use as proof that you can work in the United States.

Individuals who have a South Sudan TPS application (Form I-821) that was still pending as of September 6, 2023 do not need to file the application again. If USCIS approves an individual's Form I-821, USCIS will grant the individual TPS through May 3, 2025.

For more information on the application forms and fees for TPS, please visit the USCIS TPS web page at <https://www.uscis.gov/tps>. Fees for the Form I-821, the Form I-765, and biometric services are also described in 8 CFR 103.7(b)(1) (Oct. 1, 2020). In addition, the form instructions for the Form I-821 and Form I-765 provide further information on requirements and fees for both initial TPS applicants and existing TPS beneficiaries who are re-registering.

How can TPS beneficiaries obtain an Employment Authorization Document (EAD)?

Everyone must provide their employer with documentation showing that they have the legal right to work in the United States. TPS beneficiaries are eligible to obtain an EAD, which proves their legal right to work. Those who want to obtain an EAD must file a Form I-765 and pay the Form I-765 fee (or request a fee waiver, which you may

submit on Form I-912, Request for Fee Waiver). TPS applicants may file this form along with their TPS application, or at a later date, provided their TPS application is still pending or has been approved. Beneficiaries with a South Sudanese TPS-related Form I-765 that was still pending as of September 6, 2023 do not need to file the application again. If USCIS approves a pending TPS-related Form I-765, USCIS will issue the individual a new EAD that will be valid through May 3, 2025.

Refiling an Initial TPS Registration Application After Receiving a Denial of a Fee Waiver Request

If USCIS denies your fee waiver request, you can resubmit your TPS application. The fee waiver denial notice will contain specific instructions about resubmitting your application.

Filing Information

USCIS offers the option to applicants for TPS under South Sudan's designation to file Form I-821 and related requests for EADs online or by mail. However, if you request a fee waiver, you must submit your application by mail. When filing a TPS application, applicants can also request an EAD by submitting a completed Form I-765, with their Form I-821.

Online filing: Forms I-821 and I-765 are available for concurrent filing online.³⁸ To file these forms online, you must first create a USCIS online account.³⁹

Mail filing: Mail your application for TPS to the proper address in Table 1.

Table 1—Mailing Addresses

Mail your completed Form I-821, Application for Temporary Protected Status; Form I-765, Application for Employment Authorization, if applicable; Form I-912, Request for Fee Waiver (if applicable); and supporting documentation to the proper address in Table 1.

TABLE 1—MAILING ADDRESSES

All states	Mail your application to:
U.S. Postal Service USPS:	USCIS, Attn: TPS South Sudan, P.O. Box 6943, Chicago, IL 60680–6943.

³⁸ Find information about online filing at “Forms Available to File Online,” <https://www.uscis.gov/file-online/forms-available-to-file-online>.

³⁹ https://myaccount.uscis.gov/users/sign_up.

TABLE 1—MAILING ADDRESSES—
Continued

All states	Mail your application to:
FedEx, UPS, and DHL deliveries:	USCIS, Attn: TPS South Sudan (Box 6943), 131 S Dear- born 3rd Floor, Chi- cago, IL 60603– 5517.

If you were granted TPS by an immigration judge (IJ) or the Board of Immigration Appeals (BIA) and you wish to request an EAD, please file online or mail your Form I-765 application to the appropriate mailing address in Table 1. If filing online, please include the fee. If filing by mail, please include the fee or fee waiver request. When you are requesting an EAD based on an IJ/BIA grant of TPS, please include a copy of the IJ or BIA order granting you TPS with your application. This will help us verify your grant of TPS and process your application.

Supporting Documents

The filing instructions on the Form I-821 list all the documents needed to establish eligibility for TPS. You may also find information on the acceptable documentation and other requirements for applying (*i.e.*, registering) for TPS on the USCIS website at <https://www.uscis.gov/tps> under “South Sudan.”

Travel

TPS beneficiaries may also apply for and be granted travel authorization as a matter of discretion. You must file for travel authorization if you wish to travel outside of the United States. If granted, travel authorization gives you permission to leave the United States and return during a specific period. To request travel authorization, you must file Form I-131, Application for Travel Document, available at <https://www.uscis.gov/i-131>. You may file Form I-131 together with your Form I-821 or separately. When filing Form I-131, you must:

- Select Item Number 1.d. in Part 2 on the Form I-131; and
- Submit the fee for Form I-131, or request a fee waiver, which you may submit on Form I-912, Request for Fee Waiver.

If you are filing Form I-131 together with Form I-821, send your forms to the address listed in Table 1. If you are filing Form I-131 separately based on a pending or approved Form I-821, send your form to the address listed in Table

2 and include a copy of Form I-797 for the approved or pending Form I-821.

TABLE 2—MAILING ADDRESSES

If you are . . .	Mail to . . .
Filing Form I-131 together with a Form I-821, Application for Temporary Protected Status.	The address provided in Table 1.
Filing Form I-131 based on a pending or approved Form I-821, and you are using the U.S. Postal Service (USPS): You must include a copy of the receipt notice (Form I-797 or I-797C) showing we accepted or approved your Form I-821.	USCIS, Attn: I-131 TPS, P.O. Box 660167, Dallas, TX 75266–0867.
Filing Form I-131 based on a pending or approved Form I-821, and you are using FedEx, UPS, or DHL: You must include a copy of the receipt notice (Form I-797 or I-797C) showing we accepted or approved your Form I-821.	USCIS, Attn: I-131 TPS, 2501 S State Hwy. 121 Business, Ste. 400, Lewisville, TX 75067.

Biometric Services Fee for TPS

Biometrics (such as fingerprints) are required for all applicants 14 years of age and older. Those applicants must submit a biometric services fee. As previously stated, if you are unable to pay the biometric services fee, you may request a fee waiver, which you may submit on Form I-912, Request for Fee Waiver. For more information on the application forms and fees for TPS, please visit the USCIS TPS web page at <https://www.uscis.gov/tps>. If necessary, you may be required to visit an Application Support Center to have your biometrics captured. For additional information on the USCIS biometric screening process, please see the USCIS Customer Profile Management Service Privacy Impact Assessment, available at <https://www.dhs.gov/publication/dhsuscispia-060-customer-profile-management-service-cpms>.

General Employment-Related Information for TPS Applicants and Their Employers

How can I obtain information on the status of my TPS application and EAD request?

To get case status information about your TPS application, as well as the status of your TPS-based EAD request, you can check Case Status Online at uscis.gov, or visit the USCIS Contact Center at <https://www.uscis.gov/contactcenter>. If your Form I-765 has been pending for more than 90 days, and you still need assistance, you may ask a question about your case online at <https://egov.uscis.gov/e-request/Intro.do> or call the USCIS Contact Center at 800-375-5283 (TTY 800-767-1833).

Am I eligible to receive an automatic extension of my current EAD through November 3, 2024, through this Federal Register notice?

Yes. Regardless of your country of birth, provided that you currently have

a South Sudan TPS-based EAD that has the notation A-12 or C-19 under Category and a “Card Expires” date of November 3, 2023, this **Federal Register** notice automatically extends your EAD through November 3, 2024. Although this **Federal Register** notice automatically extends your EAD through November 3, 2024, you must re-register timely for TPS in accordance with the procedures described in this **Federal Register** notice to maintain your TPS and employment authorization.

When hired, what documentation may I show to my employer as evidence of identity and employment authorization when completing Form I-9?

You can find the Lists of Acceptable Documents on Form I-9, Employment Eligibility Verification, as well as the Acceptable Documents web page at <https://www.uscis.gov/i-9-central/acceptable-documents>. Employers must complete Form I-9 to verify the identity and employment authorization of all new employees. Within three days of hire, employees must present acceptable documents to their employers as evidence of identity and employment authorization to satisfy Form I-9 requirements.

You may present any document from List A (which provides evidence of both identity and employment authorization) or one document from List B (which provides evidence of your identity) together with one document from List C (which provides evidence of employment authorization), or you may present an acceptable receipt as described in the Form I-9 Instructions. Employers may not reject a document based on a future expiration date. You can find additional information about Form I-9 on the I-9 Central web page at <https://www.uscis.gov/I-9Central>. An EAD is an acceptable document under List A. See the section “How do my employer and I complete Form I-9 using my automatically extended EAD for a

new job?” of this **Federal Register** notice for further information. If your EAD states A-12 or C-19 under Category and has a “Card Expires” date of November 3, 2023 it has been extended automatically by virtue of this **Federal Register** notice and you may choose to present your EAD to your employer as proof of identity and employment eligibility for Form I-9 through November 3, 2024, unless your TPS has been withdrawn or your request for TPS has been denied. Your country of birth notated on the EAD does not have to reflect the TPS designated country of South Sudan for you to be eligible for this extension.

What documentation may I present to my employer for Form I-9 if I am already employed but my current TPS-related EAD is set to expire?

Even though we have automatically extended your EAD, your employer is required by law to ask you about your continued employment authorization. Your employer may need to examine your automatically extended EAD to check the “Card Expires” date and Category code if your employer did not keep a copy of your EAD when you initially presented it. Once your employer has reviewed the Card Expiration date and Category code, your employer should update the EAD expiration date in Section 2 of Form I-9. See the section “What updates should my current employer make to Form I-9 if my EAD has been automatically extended?” of this **Federal Register** notice for further information. You may show this **Federal Register** notice to your employer to explain what to do for Form I-9 and to show that USCIS has automatically extended your EAD through November 3, 2024, but you are not required to do so. The last day of the automatic EAD extension is November 3, 2024. Before you start work on November 4, 2024, your employer is required by law to reverify your

employment authorization on Form I-9. By that time, you must present any document from List A or any document from List C on Form I-9 Lists of Acceptable Documents, or an acceptable List A or List C receipt described in the Form I-9 instructions to reverifi employment authorization.

Your employer may not specify which List A or List C document you must present and cannot reject an acceptable receipt.

If I have an EAD based on another immigration status, can I obtain a new TPS-based EAD?

Yes, if you are eligible for TPS, you can obtain a new TPS-based EAD, regardless of whether you have an EAD or work authorization based on another immigration status. If you want to obtain a new TPS-based EAD valid through May 3, 2025, then you must file Form I-765, Application for Employment Authorization, and pay the associated fee (unless USCIS grants your fee waiver request).

Can my employer require that I provide any other documentation such as evidence of my status, proof of my South Sudanese citizenship, or a Form I-797C showing that I registered for TPS for Form I-9 completion?

No. When completing Form I-9, employers must accept any documentation you choose to present from the Form I-9 Lists of Acceptable Documents that reasonably appears to be genuine and that relates to you, or an acceptable List A, List B, or List C receipt. Employers may not request proof of South Sudanese citizenship or proof of registration for TPS when completing Form I-9 for new hires or reverifying the employment authorization of current employees. If you present an EAD that USCIS has automatically extended, employers should accept it as a valid List A document so long as the EAD reasonably appears to be genuine and to relate to you. Refer to the “Note to Employees” section of this **Federal Register** notice for important information about your rights if your employer rejects lawful documentation, requires additional documentation, or otherwise discriminates against you based on your citizenship or immigration status, or your national origin.

How do my employer and I complete Form I-9 using my automatically extended EAD for a new job?

When using an automatically extended EAD to complete Form I-9 for a new job before November 4, 2024:

1. For Section 1, you should:
 - a. Check “A noncitizen authorized to work until” and enter November 3, 2024, as the “expiration date”; and
 - b. Enter your USCIS number or A-Number where indicated. (Your EAD or other document from DHS will have your USCIS number or A-Number printed on it; the USCIS number is the same as your A-Number without the A prefix.)
2. For Section 2, employers should:
 - a. Determine if the EAD is auto-extended by ensuring it is in category A-12 or C-19 and has a “Card Expires” date of November 3, 2023;
 - b. Write in the document title;
 - c. Enter the issuing authority;
 - d. Provide the document number; and
 - e. Write November 3, 2024, as the expiration date.

Before the start of work on November 4, 2024, employers must reverifi the employee’s employment authorization on Form I-9.

What updates should my current employer make to Form I-9 if my EAD has been automatically extended?

If you presented a TPS-related EAD that was valid when you first started your job and USCIS has now automatically extended your EAD, your employer may need to examine your current EAD if they do not have a copy of the EAD on file. Your employer should determine if your EAD is automatically extended by ensuring that it contains Category A-12 or C-19 and has a “Card Expires” date of November 3, 2023. Your employer may not rely on the country of birth listed on the card to determine whether you are eligible for this extension.

If your employer determines that USCIS has automatically extended your EAD, your employer should update Section 2 of your previously completed Form I-9 as follows:

1. Write EAD EXT and November 3, 2024, as the last day of the automatic extension in the Additional Information field; and
2. Initial and date the correction.

Note: This is not considered a reverification. Employers do not reverifi the employee until either the automatic extension has ended, or the employee presents a new document to show continued employment authorization, whichever is sooner. By November 4, 2024, when the employee’s automatically extended EAD has expired, employers are required by law to reverifi the employee’s employment authorization on Form I-9.

If I am an employer enrolled in E-Verify, how do I verify a new employee whose EAD has been automatically extended?

Employers may create a case in E-Verify for a new employee by entering the number from the Document Number field on Form I-9 into the document number field in E-Verify. Employers should enter November 3, 2024, as the expiration date for an EAD that has been extended under this **Federal Register** notice.

If I am an employer enrolled in E-Verify, what do I do when I receive a “Work Authorization Documents Expiring” alert for an automatically extended EAD?

E-Verify automated the verification process for TPS-related EADs that are automatically extended. If you have employees who provided a TPS-related EAD when they first started working for you, you will receive a “Work Authorization Documents Expiring” case alert when the auto-extension period for this EAD is about to expire. Before this employee starts work on November 4, 2024, you must reverifi their employment authorization on Form I-9. Employers may not use E-Verify for reverification.

Note to All Employers

Employers are reminded that the laws requiring proper employment eligibility verification and prohibiting unfair immigration-related employment practices remain in full force. This **Federal Register** notice does not supersede or in any way limit applicable employment verification rules and policy guidance, including those rules setting forth reverification requirements. For general questions about the employment eligibility verification process, employers may call USCIS at 888-464-4218 (TTY 877-875-6028) or email USCIS at I-9Central@uscis.dhs.gov. USCIS accepts calls and emails in English and many other languages. For questions about avoiding discrimination during the employment eligibility verification process (Form I-9 and E-Verify), employers may call the U.S. Department of Justice, Civil Rights Division, Immigrant and Employee Rights Section (IER) Employer Hotline at 800-255-8155 (TTY 800-237-2515). IER offers language interpretation in numerous languages. Employers may also email IER at IER@usdoj.gov or get more information online at www.justice.gov/ier.

Note to Employees

For general questions about the employment eligibility verification process, employees may call USCIS at

888-897-7781 (TTY 877-875-6028) or email USCIS at I-9Central@uscis.dhs.gov. USCIS accepts calls in English, Spanish and many other languages. Employees or job applicants may also call the U.S. Department of Justice, Civil Rights Division, Immigrant and Employee Rights Section (IER) Worker Hotline at 800-255-7688 (TTY 800-237-2515) for information regarding employment discrimination based on citizenship, immigration status, or national origin, including discrimination related to Form I-9 and E-Verify. The IER Worker Hotline provides language interpretation in numerous languages.

To comply with the law, employers must accept any document or combination of documents from the Lists of Acceptable Documents if the documentation reasonably appears to be genuine and to relate to the employee, or an acceptable List A, List B, or List C receipt as described in the Form I-9 Instructions. Employers may not require extra or additional documentation beyond what is required for Form I-9 completion. Further, employers participating in E-Verify who receive an E-Verify case result of "Tentative Nonconfirmation" (mismatch) must promptly inform employees of the mismatch and give such employees an opportunity to take action to resolve the mismatch. A mismatch means that the information entered into E-Verify from Form I-9 differs from records available to DHS.

Employers may not terminate, suspend, delay training, withhold or lower pay, or take any adverse action against an employee because of a mismatch while the case is still pending with E-Verify. A Final Nonconfirmation (FNC) case result is received when E-Verify cannot confirm an employee's employment eligibility. An employer may terminate employment based on a case result of FNC. Work-authorized employees who receive an FNC may call USCIS for assistance at 888-897-7781 (TTY 877-875-6028). For more information about E-Verify-related discrimination or to report an employer for discrimination in the E-Verify process based on citizenship, immigration status, or national origin, contact IER's Worker Hotline at 800-255-7688 (TTY 800-237-2515). Additional information about proper nondiscriminatory Form I-9 and E-Verify procedures is available on the IER website at <https://www.justice.gov/ier> and the USCIS and E-Verify websites at <https://www.uscis.gov/i-9-central> and <https://www.e-verify.gov>.

Note Regarding Federal, State, and Local Government Agencies (Such as Departments of Motor Vehicles)

For Federal purposes, if you present an automatically extended EAD referenced in this **Federal Register** notice, you do not need to show any other document, such as a Form I-797C, Notice of Action reflecting receipt of a Form I-765 EAD renewal application or this **Federal Register** notice, to prove that you qualify for this extension. While Federal Government agencies must follow the guidelines laid out by the Federal Government, State and local government agencies establish their own rules and guidelines when granting certain benefits. Each state may have different laws, requirements, and determinations about what documents you need to provide to prove eligibility for certain benefits. Whether you are applying for a Federal, State, or local government benefit, you may need to provide the government agency with documents that show you are a TPS beneficiary, show you are authorized to work based on TPS or other status, or that may be used by DHS to determine if you have TPS or another immigration status. Examples of such documents are:

- Your current EAD with a TPS category code of A-12 or C-19, even if your country of birth noted on the EAD does not reflect the TPS designated country of South Sudan;
- Your Form I-94, Arrival/Departure Record;
- Your Form I-797, Notice of Action, reflecting approval of your Form I-765; or
- Form I-797 or Form I-797C, Notice of Action, reflecting approval or receipt of a past or current Form I-821, if you received one from USCIS.

Check with the government agency requesting documentation regarding which document(s) the agency will accept. Some state and local government agencies use the SAVE program to confirm the current immigration status of applicants for public benefits.

While SAVE can verify that an individual has TPS, each agency's procedures govern whether they will accept an unexpired EAD, Form I-797, Form I-797C, or Form I-94, Arrival/Departure Record. If an agency accepts the type of TPS-related document you present, such as an EAD, the agency should accept your automatically extended EAD, regardless of the country of birth listed on the EAD. It may assist the agency if you:

- a. Give the agency a copy of the relevant **Federal Register** notice showing the extension of TPS-related documentation in addition to your

recent TPS-related document with your A-number, USCIS number, or Form I-94 number;

- b. Explain that SAVE will be able to verify the continuation of your TPS using this information; and

- c. Ask the agency to initiate a SAVE query with your information and follow through with additional verification steps, if necessary, to get a final SAVE response verifying your TPS.

You can also ask the agency to look for SAVE notices or contact SAVE if they have any questions about your immigration status or automatic extension of TPS-related documentation. In most cases, SAVE provides an automated electronic response to benefit-granting agencies within seconds, but occasionally verification can be delayed.

You can check the status of your SAVE verification by using CaseCheck at <https://save.uscis.gov/casecheck/>. CaseCheck is a free service that lets you follow the progress of your SAVE verification case using your date of birth and one immigration identifier number (such as A-number, USCIS number or Form I-94 number) or Verification Case Number. If an agency has denied your application based solely or in part on a SAVE response, the agency must offer you the opportunity to appeal the decision in accordance with the agency's procedures. If the agency has received and acted on or will act on a SAVE verification and you do not believe the SAVE response is correct, the SAVE website, <https://www.uscis.gov/save>, has detailed information on how to make corrections or update your immigration record, make an appointment, or submit a written request to correct records.

BILLING CODE 9111-97-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-6414-N-01]

Announcement of Tenant Protection Voucher Funding Awards for Fiscal Year 2022 for the Housing Choice Voucher Program

AGENCY: Office of the Assistant Secretary for Public and Indian Housing, HUD.

ACTION: Announcement of fiscal year 2022 awards.

SUMMARY: In accordance with the Department of Housing and Urban Development (HUD) Reform Act of 1989, this document notifies the public of Tenant Protection Voucher (TPV)

funding awards for fiscal year (FY) 2022 to public housing agencies (PHAs) under the Section 8 Housing Choice Voucher Program (HCVP). The purpose of this notice is to publish the names, addresses of awardees, and the amount of their non-competitive funding awards for assisting households affected by housing conversion actions, public housing relocations and replacements, and moderate rehabilitation replacements. This notice also includes a link to the TPV Dashboard Log for awards issued since FY 2020, which will provide project identification name and numbers to the reader. The log can be sorted by HUD Network, Region, Field Office, PHA code and name, and by categories of TPV under the offices of Multifamily or Public Housing.

FOR FURTHER INFORMATION CONTACT:

Danielle L. Bastarache, Deputy Assistant Secretary, Office of Public Housing and Voucher Programs, Office of Public and Indian Housing, Department of Housing and Urban Development, 451 Seventh Street SW, Room 4204, Washington, DC 20410-5000, telephone (202) 402-1380. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit <https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs>.

SUPPLEMENTARY INFORMATION: The regulations governing the HCVP are published at 24 CFR part 982. The purpose of the rental assistance program is to assist eligible families to pay their rent for decent, safe, and sanitary housing in the private rental market. The FY 2022 awardees announced in this notice were provided HCVP TPV funds on an as-needed, non-competitive basis. TPV awards made to PHAs for

program actions that displace families living in public housing were made on a first-come, first-served basis in accordance with PIH Notice 2018-04, "Voucher Funding in Connection with the Demolition or Disposition of Occupied Public Housing Units," and PIH Notice 2021-10, "Implementation of the Federal Fiscal Year (FFY) 2021 Funding Provisions for the Housing Choice Voucher Program, and Availability of FFY 2020 Housing Assistance Payments (HAP) Set-Aside Funds for Second Round Per Unit Cost (PUC) Increases due to Unforeseen Circumstances."

By this notice, HUD also is making the public aware that TPV awards for the Rental Assistance Demonstration (RAD) were provided for certain projects under the Second Component of RAD consistent with PIH Notice H-2020-09 PIH-2020-23(HA), REV-4, "Rental Assistance Demonstration—Final Implementation, Revision 4."

Awards published under this notice were provided (1) to assist families living in HUD-owned properties that are being sold; (2) to assist families affected by the expiration or termination of their Project-based Section 8 and Moderate Rehabilitation contracts; (3) to assist families in properties where the owner has prepaid the HUD mortgage; (4) to assist families in projects where the Rental Supplement and Rental Assistance Payments contracts are expiring (RAD—Second Component); (5) to provide relocation housing assistance in connection with the demolition of public housing; (6) to provide replacement housing assistance for single room occupancy (SRO) units that fail housing quality standards (HQS); (7) to assist families in public housing developments that are scheduled for demolition in connection with a HUD-approved HOPE VI

revitalization or demolition grant, and (8) to assist families consistent with PIH Notice 2019-01, "Funding Availability for Set-Aside Tenant Protection Vouchers."

A special administrative fee of \$200 per occupied unit was provided to PHAs to compensate for any extraordinary HCVP administrative costs associated with the Multifamily Housing conversion actions. The Department awarded total new budget authority of \$132,870,875 to recipients under all the above-mentioned categories for 13,847 housing choice vouchers. Additional details related to TPV awards made since FY 2020, including project name and identification number, are available at the following TPV Dashboard link: Housing Voucher Financial Management Division (FMD) | [HUD.gov](https://www.hud.gov)/ U.S. Department of Housing and Urban Development (HUD).

In accordance with section 102(a)(4)(C) of the Department of Housing and Urban Development Reform Act of 1989 (103 Stat. 1987, 42 U.S.C. 3545), the Department is publishing the names, addresses of awardees, and their award amounts in Appendix A. The awardees are listed alphabetically by State for each type of TPV award.

Principal Deputy Assistant Secretary for Public and Indian Housing, Richard Monocchio, having reviewed and approved this document, is delegating the authority to electronically sign this document to submitter, Aaron Santa Anna, who is the **Federal Register** Liaison for HUD, for purposes of publication in the **Federal Register**.

Aaron Santa Anna,

Federal Register Liaison for the Department of Housing and Urban Development.

DEPARTMENT OF THE INTERIOR**Bureau of Reclamation**

[RR83550000, 234R5065C6,
RX.59389832.1009676]

**Quarterly Status Report of Water
Service, Repayment, and Other Water-
Related Contract Actions**

AGENCY: Bureau of Reclamation,
Interior.

ACTION: Notice of contract actions.

SUMMARY: Notice is hereby given of contractual actions that have been proposed to the Bureau of Reclamation (Reclamation) and are new, discontinued, or completed since the last publication of this notice. This notice is one of a variety of means used to inform the public about proposed contractual actions for capital recovery and management of project resources and facilities consistent with section 9(f) of the Reclamation Project Act of 1939. Additional announcements of individual contract actions may be published in the **Federal Register** and in newspapers of general circulation in the areas determined by Reclamation to be affected by the proposed action.

ADDRESSES: The identity of the approving officer and other information pertaining to a specific contract proposal may be obtained by calling or writing the appropriate regional office at the address and telephone number given for each region in the **SUPPLEMENTARY INFORMATION** section of this notice.

FOR FURTHER INFORMATION CONTACT: Michelle Kelly, Reclamation Law Administration Division, Bureau of Reclamation, P.O. Box 25007, Denver, Colorado 80225-0007; mkelly@usbr.gov; telephone 303-445-2888.

SUPPLEMENTARY INFORMATION: Consistent with section 9(f) of the Reclamation Project Act of 1939, and the rules and regulations published in 52 FR 11954, April 13, 1987 (43 CFR 426.22), Reclamation will publish notice of proposed or amendatory contract actions for any contract for the delivery of project water for authorized uses in newspapers of general circulation in the affected area at least 60 days prior to contract execution. Announcements may be in the form of news releases, legal notices, official letters, memorandums, or other forms of written material. Meetings, workshops, and/or hearings may also be used, as appropriate, to provide local publicity. The public participation procedures do not apply to proposed contracts for the sale of surplus or interim irrigation water for a term of 1 year or less. Either

of the contracting parties may invite the public to observe contract proceedings. All public participation procedures will be coordinated with those involved in complying with the National Environmental Policy Act. Pursuant to the "Final Revised Public Participation Procedures" for water resource-related contract negotiations, published in 47 FR 7763, February 22, 1982, a tabulation is provided of all proposed contractual actions in each of the five Reclamation regions. When contract negotiations are completed, and prior to execution, each proposed contract form must be approved by the Secretary of the Interior, or pursuant to delegated or redelegated authority, the Commissioner of Reclamation or one of the regional directors. In some instances, congressional review and approval of a report, water rate, or other terms and conditions of the contract may be involved.

Public participation in and receipt of comments on contract proposals will be facilitated by adherence to the following procedures:

1. Only persons authorized to act on behalf of the contracting entities may negotiate the terms and conditions of a specific contract proposal.
2. Advance notice of meetings or hearings will be furnished to those parties that have made a timely written request for such notice to the appropriate regional or project office of Reclamation.
3. Written correspondence regarding proposed contracts may be made available to the general public pursuant to the terms and procedures of the Freedom of Information Act, as amended.
4. Written comments on a proposed contract or contract action must be submitted to the appropriate regional officials at the locations and within the time limits set forth in the advance public notices.
5. All written comments received and testimony presented at any public hearings will be reviewed and summarized by the appropriate regional office for use by the contract approving authority.
6. Copies of specific proposed contracts may be obtained from the appropriate regional director or his or her designated public contact as they become available for review and comment.
7. In the event modifications are made in the form of a proposed contract, the appropriate regional director shall determine whether republication of the notice and/or extension of the comment period is necessary.

Factors considered in making such a determination shall include, but are not limited to, (i) the significance of the modification, and (ii) the degree of public interest which has been expressed over the course of the negotiations. At a minimum, the regional director will furnish revised contracts to all parties who requested the contract in response to the initial public notice.

MISSOURI BASIN—INTERIOR REGION 5: Bureau of Reclamation, P.O. Box 36900, Federal Building, 2021 4th Avenue North, Billings, Montana 59101, telephone 406-247-7752.

New contract action:

30. Greenfields ID, Sun River Project, Montana: Consideration for a preliminary lease of power privilege for Pishkun Inlet. Consideration for additional sites is ongoing.

Completed contract action:

28. PacifiCorps; Glendo Unit, P-SMBP; Wyoming: Consideration for a 5-year excess capacity contract. Contract executed on June 6, 2023.

UPPER COLORADO BASIN—INTERIOR REGION 7: Bureau of Reclamation, 125 South State Street, Room 8100, Salt Lake City, Utah 84138-1102, telephone 801-524-3864.

New contract actions:

40. Weber Basin Water Conservancy District, Weber Basin Project, Utah: Amendment to contract No. 22-WC-40-940 to increase repayment from approximately \$8M to \$23M.

41. The Jordanelle Special Service District; Bonneville Unit, CUP; Utah:

The District desires to enter into a Section 14 of the Reclamation Projects Act of 1939 contract for Reclamation to dedicate a water right in order for the Utah State Parks to receive water at the Rock Cliff Recreation Area for recreational purposes.

42. Los Ranchitos Estates, Florida Project, Colorado: Reclamation received a request for a long-term water service contract (25 years) to augment depletions from residential water uses within the subdivision. The proposed contract will be for 36 acre-feet of water annually.

43. Forrest Groves Estates, Florida Project, Colorado: Reclamation received a request for a long-term water service contract (25 years) to augment depletions from residential water uses within the subdivision. The proposed contract will be for 43 acre-feet of water annually.

44. Country Aire Estates, Florida Project, Colorado: Reclamation received a request for a long-term water service contract (25 years) to augment depletions from residential water uses within the subdivision. The proposed contract will be for 7 acre-feet of water annually.

LOWER COLORADO BASIN—
INTERIOR REGION 8: Bureau of Reclamation, P.O. Box 61470 (Nevada Highway and Park Street), Boulder City, Nevada 89006–1470, telephone 702–293–8192.

Completed contract actions:

16. GSC Farm, LLC, and the Town of Queen Creek, Arizona; BCP, Arizona: Enter into a proposed partial assignment and transfer of Arizona fourth-priority Colorado River water in the amount of 2,033.01 acre-feet per year from GSC to Queen Creek, amend GSC's Colorado River water delivery contract No. 13–XX–30–W0571 to decrease their Colorado River water entitlement from 2,913.3 to 69.93 acre-feet per year, enter into Colorado River water delivery contract No. 20–XX–30–W0689 with Queen Creek for 2,033.01 acre-feet per year of Arizona fourth-priority Colorado River water entitlement, and enter into a wheeling agreement between the United States and Queen Creek for the wheeling of non-project water to be transported through the CAP for the use or benefit of Queen Creek. Contracts executed on April 28, 2023.

19. Western Water, LLC and Cibola Valley IDD, BCP, Arizona: Approve an amendment of Western's contract service area under their contract No. 16–XX–30–W0619, as amended (Western Contract), to include the previously excluded parcels of land; namely, the eastern halves of Assessor Parcel Nos. 301–08–003C and 301–08–003D. The

inclusion of these lands within the Western Contract service area will make these lands eligible to receive Arizona fourth-priority Colorado River water from Western. Western has an Arizona fourth-priority Colorado River water entitlement under the Western Contract for an annual diversion of 536.48 acre-feet of Colorado River water for irrigation use within the Western Contract service area. Additionally, Reclamation will amend the District's contract service area under their contract to exclude Western lands. The exclusion of the Western lands from the District's contract service area will make the Western lands ineligible to receive Arizona fourth-, fifth-, and/or sixth-priority water from the District. The District's boundary will remain the same. Contracts executed on April 18, 2023.

COLUMBIA–PACIFIC
NORTHWEST—INTERIOR REGION 9: Bureau of Reclamation, 1150 North Curtis Road, Suite 100, Boise, Idaho 83706–1234, telephone 208–378–5344.

Modified contract action:

16. Storage Division, Yakima Project, Washington: Contracts with water user entities for the repayment of reimbursable shares of the costs of the SOD program modification for Kachess Dam.

CALIFORNIA–GREAT BASIN—
INTERIOR REGION 10: Bureau of Reclamation, 2800 Cottage Way, Sacramento, California 95825–1898, telephone 916–978–5250.

Completed contract action:

9. San Luis WD, CVP, California: Proposed partial assignment of 4,449 acre-feet of the District's CVP supply to Santa Nella County WD for M&I use. Contract executed on January 24, 2023.

Christopher Beardsley,

Director, Policy and Programs.

BILLING CODE 4332–90–P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1176]

Bulk Manufacturer of Controlled Substances Application: SpecGx LLC; Correction

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice; correction.

SUMMARY: The Drug Enforcement Administration (DEA) published a document in the **Federal Register** of April 4, 2023, concerning a notice of

application for bulk manufacturer of Controlled Substances. That document listed a drug code/controlled substance in error as it was not requested by the registrant (2270—Pentobarbital). Additionally, the document listed duplicates of 7 other drug codes in error (1100, 1105, 1205, 1724, 8333, 9780, 9801).

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of April 4, 2023, in FR Doc. 2023–06952 (88 FR 19990), on page 19990, in columns 1 and 2, under the requested controlled substances/drug codes, it should read as such:

Controlled substance	Drug code	Schedule
Gamma Hydroxybutyric Acid.	2010	I
Tetrahydrocannabinols ...	7370	I

BILLING CODE P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1252]

Importer of Controlled Substances Application: Catalent Greenville, Inc.

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Catalent Greenville, Inc. has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before October 6, 2023. Such persons may also file a written request for a hearing on the application on or before October 6, 2023.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to <https://www.regulations.gov> and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on <https://www.regulations.gov>. If you have received a Comment Tracking

Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrisette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on August 10, 2023, Catalent Greenville, Inc., 1240 Sugg Parkway, Greenville, North Carolina 27834–9006, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Lysergic Acid Diethylamide.	7315	I

The company plans to import the above listed controlled substance for internal research and to support customers research and clinical studies. No other activities for this drug codes are authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Claude Redd,

Acting Deputy Assistant Administrator.

BILLING CODE

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. DEA–1257]

Importer of Controlled Substances Application: Lipomed

AGENCY: Drug Enforcement Administration, Justice.

ACTION: Notice of application.

SUMMARY: Lipomed has applied to be registered as an importer of basic class(es) of controlled substance(s). Refer to **SUPPLEMENTARY INFORMATION** listed below for further drug information.

DATES: Registered bulk manufacturers of the affected basic class(es), and applicants therefore, may submit electronic comments on or objections to the issuance of the proposed registration on or before October 6, 2023. Such persons may also file a written request for a hearing on the application on or before October 6, 2023.

ADDRESSES: The Drug Enforcement Administration requires that all comments be submitted electronically through the Federal eRulemaking Portal, which provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Please go to <https://www.regulations.gov> and follow the online instructions at that site for submitting comments. Upon submission of your comment, you will receive a Comment Tracking Number. Please be aware that submitted comments are not instantaneously available for public view on <https://www.regulations.gov>. If you have received a Comment Tracking Number, your comment has been successfully submitted and there is no need to resubmit the same comment. All requests for a hearing must be sent to: (1) Drug Enforcement Administration, Attn: Hearing Clerk/OALJ, 8701 Morrisette Drive, Springfield, Virginia 22152; and (2) Drug Enforcement Administration, Attn: DEA Federal Register Representative/DPW, 8701 Morrisette Drive, Springfield, Virginia 22152. All requests for a hearing should also be sent to: Drug Enforcement Administration, Attn: Administrator, 8701 Morrisette Drive, Springfield, Virginia 22152.

SUPPLEMENTARY INFORMATION: In accordance with 21 CFR 1301.34(a), this is notice that on July 28, 2023, Lipomed, 150 Cambridgepark Drive, Suite 705, Cambridge, Massachusetts 02140–2300, applied to be registered as an importer of the following basic class(es) of controlled substance(s):

Controlled substance	Drug code	Schedule
Etizolam (4-(2-chlorophenyl)-2-ethyl-9-methyl-6H-N thieno[3,2-f][1,2,4]triazolo[4,3-a][1,4]diazepine	2780	I
Flualprazolam (8-chloro-6-(2-fluorophenyl)-1-methyl-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine)	2785	I
Clonazolam (6-(2-chlorophenyl)-1-methyl-8-nitro-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine	2786	I
Flubromazolam (8-bromo-6-(2-fluorophenyl)-1-methyl-4H-benzo[f][1,2,4]triazolo[4,3-a][1,4]diazepine	2788	I

Controlled substance	Drug code	Schedule
Diclazepam (7-chloro-5-(2-chloro-5-(2-chlorophenyl)-1-methyl-1,3-dihydro-2H-benzo[e][1,4]diazepin-2-one	2789	I

The company plans to import the above listed controlled substances as analytical reference standards for distribution to its customers for research and analytics purposes. Placement of these drug codes onto the company's registration does not translate into automatic approval of subsequent permit applications to import controlled substances. No other activities for these drug codes are authorized for this registration.

Approval of permit applications will occur only when the registrant's business activity is consistent with what is authorized under 21 U.S.C. 952(a)(2). Authorization will not extend to the import of Food and Drug Administration-approved or non-approved finished dosage forms for commercial sale.

Claude Redd,

Acting Deputy Assistant Administrator.

BILLING CODE P

DEPARTMENT OF LABOR

Employee Benefits Security Administration

Advisory Council on Employee Welfare and Pension Benefit Plans; Nominations for Vacancies

Section 512 of the Employee Retirement Income Security Act of 1974 (ERISA), 88 Stat. 895, 29 U.S.C. 1142, provides for the establishment of an Advisory Council on Employee Welfare and Pension Benefit Plans (the Council), consisting of 15 members appointed by the Secretary of Labor (the Secretary) as follows:

- Three representatives of employee organizations (at least one of whom shall be a representative of an organization whose members are participants in a multiemployer plan);
- three representatives of employers (at least one of whom shall be a representative of employers maintaining or contributing to multiemployer plans);
- three representatives from the general public (one of whom shall be a person representing those receiving benefits from a pension plan); and
- one representative each from the fields of insurance, corporate trust, actuarial counseling, investment counseling, investment management, and accounting.

No more than eight members of the Council shall be members of the same political party.

Council members must be qualified to appraise the programs instituted under ERISA. Appointments are for three-year terms. The Council's prescribed duties are to advise the Secretary with respect to carrying out their functions under ERISA, and to submit to the Secretary, or their designee, related recommendations. The Council will meet at least four times each year.

The terms of five Council members expire at the end of this year. The groups or fields they represent are as follows:

- (1) Employee organizations;
- (2) employers;
- (3) the general public;
- (4) corporate trust; and
- (5) investment management.

The Department of Labor is committed to equal opportunity in the workplace and seeks a broad-based and diverse Council. Selection of Council membership will be consistent with achieving the greatest impact, scope, and credibility among diverse stakeholders. The diversity in such membership includes, but is not limited to, race, gender, disability, sexual orientation, and gender identity.

If you or your organization wants to nominate one or more people for appointment to the Council to represent one of the groups or fields specified above, submit nominations to Christine Donahue, Council Executive Secretary, as email attachments to donahue.christine@dol.gov or by mail to U.S. Department of Labor, 200 Constitution Ave. NW, Suite N-5623, Washington, DC 20210. Nominations must be received on or before October 23, 2023. If sending electronically, please use an attachment in rich text, Word, or pdf format. If sending by regular mail, please allow three weeks for mail delivery to the Department of Labor. Nominations may be in the form of a letter, resolution, or petition signed by the person making the nomination or, in the case of a nomination by an organization, by an authorized representative of the organization. The Department of Labor encourages you to include additional supporting letters of nomination. The Department of Labor will not consider self-nominees who have no supporting letters.

Nominations, including supporting letters, should:

- State the person's qualifications to serve on the Council (including any particular specialized knowledge or experience relevant to the nominee's proposed Council position);

- state that the candidate will accept appointment to the Council if offered;
- include which of the five positions (representing groups or fields) you are nominating the candidate to fill;
- include the nominee's full name, work affiliation, mailing address, phone number, and email address;
- include the nominator's full name, work affiliation, mailing address, phone number, and email address;
- include the nominator's signature, whether sent by email or otherwise.

Please do not include any information that you do not want publicly disclosed.

The Department of Labor will contact nominees for information on their political affiliation and their status as registered lobbyists. Anyone currently subject to federal registration requirements as a lobbyist is not eligible for appointment. Nominees should be aware of the time commitment for attending meetings and actively participating in the work of the Council. Historically, this has meant a commitment of at least 20 days per year. The Department of Labor has a process for vetting nominees under consideration for appointment.

Signed at Washington, DC, this 30th day of August, 2023.

Lisa M. Gomez,

Assistant Secretary, Employee Benefits Security Administration.

BILLING CODE 4510-29-P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Institute of Museum and Library Services

Notice of Proposed Information Collection Requests: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

AGENCY: Institute of Museum and Library Services, National Foundation on the Arts and the Humanities.

ACTION: Notice, request for comments, collection of information.

SUMMARY: The Institute of Museum and Library Services (IMLS), as part of its

continuing effort to reduce paperwork and respondent burden, conducts a pre-clearance consultation program to provide the general public and federal agencies with an opportunity to comment on proposed and/or continuing collections of information in accordance with the Paperwork Reduction Act. This pre-clearance consultation program helps to ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The purpose of this Notice is to solicit comments concerning the renewal of the Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery. A copy of the proposed information collection request can be obtained by contacting the individual listed below in the **ADDRESSES** section of this Notice.

DATES: Written comments must be submitted to the office listed in the **ADDRESSES** section below on or before November 4, 2023.

ADDRESSES: Send comments to Connie Bodner, Ph.D., Director of Grants Policy and Management, Office of Grants Policy and Management, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington, DC 20024-2135. Dr. Bodner can be reached by telephone: 202-653-4636, or by email at cbodner@imls.gov. Office hours are from 8:30 a.m. to 5 p.m., E.T., Monday through Friday, except federal holidays. Persons who are deaf or hard of hearing (TTY users) can contact IMLS at 202-207-7858 via 711 for TTY-Based Telecommunications Relay Service.

FOR FURTHER INFORMATION CONTACT: Jake Soffronoff, Survey Methodologist, Office of Research and Evaluation, Institute of Museum and Library Services, 955 L'Enfant Plaza North SW, Suite 4000, Washington DC 20024-2135. Mr. Soffronoff can be reached by telephone at 202-653-4648, or by email at jsoffronoff@imls.gov. Persons who are deaf or hard of hearing (TTY users) can contact IMLS at 202-207-7858 via 711 for TTY-Based Telecommunications Relay Service.

SUPPLEMENTARY INFORMATION: IMLS is particularly interested in public comments that help the agency to:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques, or other forms of information technology, e.g., permitting electronic submissions of responses.

I. Background

The Institute of Museum and Library Services is the primary source of federal support for the Nation's libraries and museums. We advance, support, and empower America's museums, libraries, and related organizations through grant making, research, and policy development. To learn more, visit www.imls.gov.

II. Current Actions

This proposed request is to renew IMLS's Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery. This data collection activity provides a means to garner qualitative customer and stakeholder feedback in an efficient and timely manner in accordance with the Administration's commitment to improving service delivery. By qualitative feedback, IMLS means information that provides useful insights on perceptions and opinions, but whose collection does not yield results that can be generalized to the population of study. The Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery has been conducted by the Institute of Museum and Library Services under the clearance number 3137-0081, which expires December 31, 2023.

Agency: Institute of Museum and Library Services.

Title: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

OMB Control Number: 3137-0081.

Agency Number: 3137.

Respondents/Affected Public: Museum staff; library staff; IMLS awardees; State, Local and Tribal Governments; State Library Administrative Agencies.

Total Estimated Number of Annual Respondents: 9,975.

Frequency of Response: Once per request.

Average Minutes per Response: 18.

Total Estimated Number of Annual Burden Hours: 2,975.

Cost Burden (dollars): \$90,619.

Public Comments Invited: Comments submitted in response to this Notice will be summarized and/or included in the request for OMB's clearance of this information collection.

Dated: August 30, 2023.

Suzanne Mbollo,

Grants Management Specialist, Institute of Museum and Library Services.

BILLING CODE 7036-01-P

OFFICE OF PERSONNEL MANAGEMENT

[Docket ID: OPM-2023-0029]

Submission for Review: 3206-0190, Application for Deferred or Postponed Retirement: Federal Employees Retirement System, RI 92-19

AGENCY: Office of Personnel Management.

ACTION: 60-Day notice and request for comments.

SUMMARY: The Office of Personnel Management (OPM), Retirement Services, offers the general public and other Federal agencies the opportunity to comment on the review of the following expiring information collection request (ICR) with change: Application for Deferred or Postponed Retirement: Federal Employees Retirement System, RI 92-19.

DATES: Comments are encouraged and will be accepted until November 6, 2023.

ADDRESSES: You may submit comments, identified by docket number and title, by the following method:

- *Federal Rulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments.

All submissions received must include the agency name and docket number for this document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing at <https://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: A copy of this ICR with applicable supporting documentation may be obtained by contacting the Retirement Services Publications Team, Office of Personnel Management, 1900 E Street NW, Room 3316-L, Washington, DC

20415, Attention: Cyrus S. Benson, or sent by email to Cyrus.Benson@opm.gov or faxed to (202) 606–0910 or reached via telephone at (202) 936–0401.

SUPPLEMENTARY INFORMATION: Form RI 92–19 is used by separated employees to apply for either a Federal Employees' Retirement System (FERS) deferred or a postponed retirement annuity benefit. As required by the Paperwork Reduction Act of 1995 (Pub. L. 104–13), as amended (44 U.S.C. chapter 35), OPM is soliciting comments for this collection (OMB No. 3206–0190). OPM is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submissions of responses.

BILLING CODE 6325–38–P

OFFICE OF PERSONNEL MANAGEMENT

[Docket ID: OPM–2023–0031]

Submission for Review: 3206–0194, Annuity Supplement Earnings Report, RI 92–22

AGENCY: Office of Personnel Management.

ACTION: 60-Day notice and request for comments.

SUMMARY: The Office of Personnel Management (OPM), Retirement Services, offers the general public and other Federal agencies the opportunity to comment on the review of the following expiring information collection request (ICR) with change: Annuity Supplement Earnings Report, RI 92–22.

DATES: Comments are encouraged and will be accepted until November 6, 2023.

ADDRESSES: You may submit comments, identified by docket number and title, by the following method:

- *Federal Rulemaking Portal:* <https://www.regulations.gov>. Follow the instructions for submitting comments.

All submissions received must include the agency name and docket number for this document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing at <https://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: A copy of this ICR with applicable supporting documentation may be obtained by contacting the Retirement Services Publications Team, Office of Personnel Management, 1900 E Street NW, Room 3316–L, Washington, DC 20415, Attention: Cyrus S. Benson, or sent by email to Cyrus.Benson@opm.gov or faxed to (202) 606–0910 or reached via telephone at (202) 936–0401.

SUPPLEMENTARY INFORMATION: Federal Employees' Retirement System (FERS) annuitants who are not retired on disability and are not yet age 62 may be eligible for a supplement to the FERS annuity. The supplement approximates the portion of full career Social Security benefits earned while under FERS and ends at age 62. Like Social Security benefits, the annuity supplement is subject to an earnings limitation. Accordingly, RI 92–22 is used to obtain the annual earned income of certain FERS annuitants to determine each

annuitant's eligibility to continue receiving an annuity supplement.

As required by the Paperwork Reduction Act of 1995 (Pub. L. 104–13) as amended (44 U.S.C. chapter 35), OPM is soliciting comments for this collection (OMB No. 3206–0194). OPM is particularly interested in comments that:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

POSTAL REGULATORY COMMISSION

[Docket Nos. CP2022–74; CP2022–77; CP2022–92; MC2023–250 and CP2023–253]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* September 7, 2023.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related

to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (<http://www.prc.gov>). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.¹

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s):* CP2022–74; *Filing Title:* USPS Notice of Amendment to Priority Mail Express, Priority Mail, First-Class Package Service & Parcel Select Contract 11, Filed Under Seal; *Filing Acceptance Date:* August 29, 2023; *Filing Authority:* 39 CFR 3035.105; *Public Representative:* Philip T. Abraham; *Comments Due:* September 7, 2023.

BILLING CODE 7710–FW–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98253; File No. SR–MEMX–2023–17]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Rule 19.3 (Criteria for Underlying Securities) To Accelerate the Listing of Options on Certain IPOs

August 30, 2023.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (the “Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on August 22, 2023, MEMX LLC (“MEMX” or the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend MEMX Rule 19.3 (Criteria for Underlying Securities) to permit an underlying security having a market capitalization of at least \$3 billion based upon the offering price of its initial public offering, to be listed and traded starting on or after the second business day following the initial public offering day. The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

In August 2022, the Commission approved the Exchange’s adoption of rules to govern the trading of options on the Exchange by MEMX Options,³ which will be a facility of the Exchange. The Exchange plans to launch MEMX Options in September 2023, and in advance of that launch, the Exchange is proposing a listings rule change applicable to options that is substantially similar in all material respects to the proposal approved from NYSE American LLC (“NYSE American”).⁴ Specifically, the Exchange proposes to amend Rule 19.3 (Criteria for Underlying Securities) to permit an underlying security having a market capitalization of at least \$3 billion based upon the offering price of its initial public offering, to be listed and traded starting on or after the second business day following the initial public offering day. This is a competitive filing that is based on a proposal recently submitted

by NYSE American and approved by the Commission.⁵

The purpose of the proposed rule change is to amend Rule 19.3 (Criteria for Underlying Securities) (the “Rule”) as set forth below. Following discussions with other exchanges and a cross-section of industry participants and in coordination with the Listed Options Market Structure Working Group (“LOMSWG”) (collectively, the “Industry Working Group”), the Exchange proposes to modify the standard set forth in the Rule for the listing and trading of options on “covered securities” to reduce the time to market.

Rule 19.3(b)(5)(A) sets forth the guidelines to be considered in evaluating for option transactions underlying securities that are “covered securities,” as defined in section 18(b)(1)(A) of the Securities Act of 1933 (hereinafter “covered security” or “covered securities”).⁶ Currently, the Exchange permits the listing of an option on an underlying covered security that, amongst other things, has a market price of at least \$3.00 per share for the previous three consecutive business days preceding the date on which the Exchange submits a certificate to The Options Clearing Corporation (“OCC”) to list and trade options on the underlying security (the “three-day lookback period”).⁷ Under the current rule, if an initial public offering (“IPO”) occurs on a Monday, the earliest date the Exchange could submit its listing certificate to OCC would be on Thursday, with the market price determined by the closing price over the three-day lookback period from Monday through Wednesday. The option on the IPO’d security would then be eligible for trading on the Exchange on Friday (*i.e.*, within four business days of the IPO inclusive of the day the listing certificate is submitted to OCC).

The Exchange notes that the three-day look back period helps ensure that options on underlying securities may be listed and traded in a timely manner while also allowing time for OCC to accommodate the certification request. However, there are certain large IPOs that issue high-priced securities—well

⁵ *Id.*

⁶ Rule 19.3(a) requires that, for underlying securities to be eligible for option transactions, such securities must be duly registered and be an “NMS stock” as defined in Rule 600 of Regulation NMS under the Act and will be characterized by a substantial number of outstanding shares which are widely held and actively traded. See MEMX Rule 19.3(a)(1) and (2).

⁷ See MEMX Rule 19.3(b)(5)(A). The Exchange is not proposing to make any changes to the guidelines for listing securities that are not a “covered security”. See MEMX Rule 19.3(b)(5)(B).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

³ See Securities Exchange Act Release No. 95445 (August 9, 2022), 87 FR 49884 (August 12, 2022) (SR–MEMX–2022–010).

⁴ See Securities Exchange Act Release No. 98013 (July 27, 2013) (Order Approving SR–NYSEAMER–2023–27).

above the \$3.00 per share threshold—that would obviate the need for the three-day lookback period. In this regard, the Industry Working Group has recently identified proposed changes to Rule 19.3(b)(5)(A) that would help options on covered securities that have a market capitalization of at least \$3 billion based upon the offering price of its IPO come to market earlier.⁸ The proposed change, which is intended to be harmonized across options exchanges, is designed to provide investors the opportunity to hedge their interest in IPO investments in a shorter amount of time than what is currently permitted.⁹ The Exchange believes that options serve a valuable tool to the trading community and help markets function efficiently by mitigating risk. To that end, the Exchange believes that the absence of options in the early days after an IPO may heighten volatility in the trading of IPO'd securities.

Accordingly, the Exchange proposes to modify Rule 19.3 to waive the three-day lookback period for covered securities that have a market capitalization of at least \$3 billion based upon the offering price of the IPO of such securities and to allow options on such securities to be listed and traded starting on or after the second business day following the initial public offering day (*i.e.*, not inclusive of the day of the IPO).¹⁰ NYSE American has reviewed trading data for IPO'd securities dating back to 2017 and stated that it is unaware of any such security that achieved a market capitalization of \$3 billion based upon the offering price of its IPO that would not have also qualified for listing options based on the three-day lookback requirement. Specifically, NYSE American determined that 202 of the 1,179 IPOs that took place between January 1, 2017,

and October 21, 2022, met the \$3 billion market capitalization/IPO offering price threshold. Options on all 202 of those IPO shares subsequently satisfied the three-day lookback requirement for listing and trading, *i.e.*, none of these large IPOs closed below the \$3.00/share threshold during its first three days of its trading. As such, the Exchange believes the proposed capitalization threshold of \$3 billion based upon the offering price of its IPO is appropriate.

Under the proposed rule, if an IPO for a company with a market capitalization of \$3 billion based upon the offering price of its IPO occurs on a Monday, the Exchange could submit its listing certificate to OCC (to list and trade options on the IPO'd security) as soon as all the other requirements for listing are satisfied. If, on Tuesday, all requirements are deemed satisfied, the IPO'd security could then be eligible for trading on the Exchange on Wednesday (*i.e.*, starting on or after the second business day following the IPO day). Thus, the proposal could potentially accelerate the listing of options on IPO'd securities by two days. The Exchange believes the proposed change would allow options on IPO'd securities to come to market sooner without sacrificing investor protection. The Exchange represents that trading in IPO'd securities—like all other securities traded on the Exchange—is subject to surveillances administered by the Exchange and to cross-market surveillances administered by FINRA on behalf of the Exchange. Those surveillances are designed to detect violations of Exchange rules and applicable federal securities laws.¹¹ The Exchange represents that those surveillances are adequate to reasonably monitor Exchange trading of IPO'd securities in all trading sessions and to reasonably deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.¹² As such, the Exchange believes that its existing surveillance technologies and procedures, coupled with NYSE American's findings related to the IPOs reviewed as described herein, adequately address potential concerns regarding possible manipulation or price stability.

Implementation Date

The Exchange will announce the effective date of the proposed change by

Notice distributed to all Members.¹³ The Exchange will coordinate the effective date to coincide with the implementation of the proposed change on the other options exchanges.

2. Statutory Basis

The Exchange believes that its proposal is consistent with section 6(b) of the Act,¹⁴ in general, and furthers the objectives of section 6(b)(5) of the Act,¹⁵ in particular, in that it is designed to prevent fraudulent and manipulative practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest. In particular, the Exchange believes the proposed change would facilitate options transactions and would remove impediments to and perfect the mechanism of a free and open market and a national market system, which would, in turn, protect investors and the public interest by providing an avenue for options on IPO'd securities to come to market earlier. The Exchange notes that the three-day look back period helps ensure that options on underlying securities may be listed and traded in a timely manner while also allowing time for OCC to accommodate the certification request. However, there are certain large IPOs that issue high-priced securities—well above the \$3.00 per share threshold—that would obviate the need for the three-day lookback period. As noted above, NYSE American has reviewed trading data for IPO'd securities dating back to 2017 and it is unaware of an IPO'd security with a market capitalization of \$3 billion or more (based upon the offering price of its IPO) that subsequently would have failed to qualify for listing and trading as options under the three-day lookback requirement. The Exchange believes that the proposed amendment, which would be harmonized across options exchanges, would remove impediments to and perfect the mechanism of a free and open market and a national market system by providing an avenue for investors to hedge their interest in IPO investments in a shorter amount of time than what is currently permitted. The

⁸ See proposed Rule 19.3(b)(5)(A)(2). The Exchange proposes a non-substantive change to number the existing and proposed criteria for covered securities as (1) and (2) of paragraph (5)(A). See proposed Rule 19.3(b)(5)(A).

⁹ While the Exchange acknowledges that market participants may utilize options for speculative purposes (in addition to as a hedging tool), the Exchange believes (as set forth below) that its surveillance technologies and procedures adequately address potential violations of Exchange rules and federal securities laws applicable to trading on the Exchange.

¹⁰ The Exchange acknowledges that the Options Listing Procedures Plan (or "OLPP") requires that the listing certificate be provided to OCC no earlier than 12:01 a.m. and no later than 11:00 a.m. (Chicago time) on the trading day prior to the day on which trading is to begin. See the OLPP, at p. 3., available here: https://www.theocc.com/getmedia/198bfc93-5d51-443c-9e5bfd575a0a7d0f/options_listing_procedures_plan.pdf. The OLPP is a national market system plan that, among other things, sets forth procedures governing the listing of new options series.

¹¹ FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a Regulatory Services Agreement. The Exchange is responsible for FINRA's performance under this Regulatory Services Agreement.

¹² See *supra* note 10.

¹³ The term "Member" shall mean any registered broker or dealer that has been admitted to membership in the Exchange. See Rule 1.5(p).

¹⁴ 15 U.S.C. 78f(b).

¹⁵ 15 U.S.C. 78f(b)(5).

Exchange believes that options serve a valuable tool to the trading community and help markets function efficiently by mitigating risk. To that end, the Exchange believes that the absence of options in the early days after an IPO may heighten volatility to IPO'd securities.¹⁶

Further, as noted herein, the Exchange believes the proposed change would allow options on IPO'd securities to come to market sooner (*i.e.*, at least two business days post-IPO not inclusive of the day of the IPO) without sacrificing investor protection. The Exchange represents that trading in IPO'd securities—like all other securities traded on the Exchange—is subject to surveillances administered by the Exchange and to cross-market surveillances administered by FINRA on behalf of the Exchange. Those surveillances are designed to detect violations of Exchange rules and applicable federal securities laws.¹⁷ The Exchange represents that those surveillances are adequate to reasonably monitor Exchange trading of IPO'd securities in all trading sessions and to reasonably deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange, including wrongful efforts to manipulate the prices of those securities in order to bring them in compliance with the \$3.00/share threshold for the listing of options. As such, the Exchange believes that its existing surveillance technologies and procedures, coupled with NYSE American's findings related to the IPOs reviewed as described herein, would adequately address potential concerns regarding possible manipulation or price stability.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In this regard and as indicated above, the Exchange notes that the rule change is being proposed as a competitive response to a filing submitted by NYSE American that was recently approved by the Commission.¹⁸ The Exchange anticipates that the other options exchanges will adopt substantively similar proposals,¹⁹ such that there would be no burden on intermarket

competition from the Exchange's proposal. Accordingly, the proposed change is not meant to affect competition among the options exchanges. For these reasons, the Exchange believes that the proposed rule change reflects this competitive environment and does not impose any undue burden on intermarket competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to section 19(b)(3)(A) of the Act²⁰ and Rule 19b-4(f)(6) thereunder.²¹

A proposed rule change filed under Rule 19b-4(f)(6)²² normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²³ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposed rule change may become operative upon filing. The Exchange requested the waiver, stating that it would ensure fair competition among the exchanges by allowing the Exchange to allow options on IPO'd securities to come to market sooner (*i.e.*, at least two business days post-IPO not inclusive of the day of the IPO) without sacrificing investor protection. For these reasons, and because the proposed rule change does not raise any novel legal or regulatory issues, the Commission believes that waiving the 30-day operative delay is consistent with the protection of

investors and the public interest. Therefore, the Commission hereby waives the 30-day operative delay and designates the proposal operative upon filing.²⁴

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-MEMX-2023-17 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to file number SR-MEMX-2023-17. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and

²⁰ 15 U.S.C. 78s(b)(3)(A).

²¹ 17 CFR 240.19b-4(f)(6)(iii). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²² 17 CFR 240.19b-4(f)(6).

²³ 17 CFR 240.19b-4(f)(6)(iii).

²⁴ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

¹⁶ See *supra* note 10.

¹⁷ See *supra* note 11.

¹⁸ See *supra* note 4.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-98249; File No. SR-MIAX-2023-32]

Self-Regulatory Organizations; Miami International Securities Exchange, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 402 (Criteria for Underlying Securities) To Accelerate the Listing of Options on Certain IPOs

August 30, 2023.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 23, 2023, Miami International Securities Exchange LLC ("MIAX" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend Exchange Rule 402. The text of the proposed rule change is available on the Exchange's website at [https://](https://www.miaxglobal.com/markets/us-options/miax-options/rule-filings)

www.miaxglobal.com/markets/us-options/miax-options/rule-filings, at MIAX's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Exchange Rule 402, Criteria for Underlying Securities, to permit an underlying security having a market capitalization of at least \$3 billion based upon the offering price of its initial public offering, to be listed and traded starting on or after the second business day following the initial public offering day. The Exchange is proposing a listing rule change that is substantially similar in all material respects to the proposal approved for NYSE American LLC ("NYSE American").³ Following discussions with other exchanges and a cross-section of industry participants and in coordination with the Listed Options Market Structure Working Group ("LOMSWG") (collectively, the "Industry Working Group"), NYSE American filed a proposed rule change,⁴ which was recently approved, to modify the standard for the listing and trading of options on "covered securities" to reduce the time to market. At this time, the Exchange proposes to adopt an identical rule.

Rule 402 sets forth the guidelines to be considered in evaluating for option transactions underlying securities that are "covered securities," as defined in section 18(b)(1)(A) of the Securities Act of 1933 (hereinafter "covered security"

or "covered securities").⁵ Currently, the Exchange permits the listing of an option on an underlying covered security that, amongst other things, has a market price of at least \$3.00 per share for the previous three consecutive business days preceding the date on which the Exchange submits a certificate to The Options Clearing Corporation ("OCC") to list and trade options on the underlying security (the "three-day lookback period").⁶ Under the current rule, if an initial public offering ("IPO") occurs on a Monday, the earliest date the Exchange could submit its listing certificate to OCC would be on Thursday, with the market price determined by the closing price over the three-day lookback period from Monday through Wednesday. The option on the IPO'd security would then be eligible for trading on the Exchange on Friday (i.e., within four business days of the IPO inclusive of the day the listing certificate is submitted to OCC).⁷

The Exchange notes that the three-day look back period helps ensure that options on underlying securities may be listed and traded in a timely manner while also allowing time for OCC to accommodate the certification request. However, there are certain large IPOs that issue high-priced securities—well above the \$3.00 per share threshold—that would obviate the need for the three-day lookback period. In this regard, the Industry Working Group has recently identified proposed changes to Rule 402(b)(5)(i) that would help options on covered securities that have a market capitalization of at least \$3 billion based upon the offering price of its IPO come to market earlier. The proposed change, which is intended to be harmonized across options exchanges, is designed to provide investors the opportunity to hedge their interest in IPO investments in a shorter amount of time than what is currently permitted.⁸ The Exchange believes that

⁵ Rule 402(a) requires that, for underlying securities to be eligible for option transactions, such securities must be duly registered and be an "NMS stock" as defined in Rule 600 of Regulation NMS under the Act and will be characterized by a substantial number of outstanding shares which are widely held and actively traded. See Rule 402(a)(1) and (2).

⁶ See Rule 402(b)(5)(i). The Exchange is not proposing to make any changes to the guidelines for listing securities that are not a "covered security." See Rule 402(b)(5)(ii).

⁷ See proposed Rule 402(b)(5)(i). The Exchange proposes a non-substantive change to number the existing and proposed criteria for covered securities as (A) and (B) of paragraph (5)(i). See proposed Rule 402(b)(5)(i).

⁸ While the Exchange acknowledges that market participants may utilize options for speculative purposes (in addition to as a hedging tool), the Exchange believes (as set forth below) that its

²⁵ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 98013 (July 27, 2023) 88 FR 50927 (August 2, 2023)(SR-NYSEAMER-2023-27)(Order Granting Approval of a Proposed Rule Change to Amend Rule 915 (Criteria for Underlying Securities) to Accelerate the Listing of Options on Certain IPOs).

⁴ *Id.*

options serve a valuable tool to the trading community and help markets function efficiently by mitigating risk. To that end, the Exchange believes that the absence of options in the early days after an IPO may heighten volatility in the trading of IPO'd securities.

Accordingly, the Exchange proposes to modify Rule 402 to waive the three-day lookback period for covered securities that have a market capitalization of at least \$3 billion based upon the offering price of the IPO of such securities and to allow options on such securities to be listed and traded starting on or after the second business day following the initial public offering day (*i.e.*, not inclusive of the day of the IPO).⁹ NYSE American has stated that it has reviewed trading data for IPO'd securities dating back to 2017 and is unaware of any such security that achieved a market capitalization of \$3 billion based upon the offering price of its IPO that would not have also qualified for listing options based on the three-day lookback requirement. Specifically, NYSE American has determined that 202 of the 1,179 IPOs that took place between January 1, 2017, and October 21, 2022, met the \$3 billion market capitalization/IPO offering price threshold. Options on all 202 of those IPO shares subsequently satisfied the three-day lookback requirement for listing and trading, *i.e.*, none of these large IPOs closed below the \$3.00/share threshold during its first three days of its trading. As such, the Exchange believes the proposed capitalization threshold of \$3 billion based upon the offering price of its IPO is appropriate.

Under the proposed rule, if an IPO for a company with a market capitalization of \$3 billion based upon the offering price of its IPO occurs on a Monday, the Exchange could submit its listing certificate to OCC (to list and trade options on the IPO'd security) as soon as all the other requirements for listing are satisfied. If, on Tuesday, all requirements are deemed satisfied, the IPO'd security could then be eligible for trading on the Exchange on Wednesday

existing surveillance technologies and procedures adequately address potential violations of exchange rules and federal securities laws applicable to trading on the Exchange.

⁹ The Exchange acknowledges that the Options Listing Procedures Plan ("OLPP") requires that the listing certificate be provided to OCC no earlier than 12:01 a.m. and no later than 11:00 a.m. (Chicago time) on the trading day prior to the day on which trading is to begin. *See* the OLPP, at p. 3., available here: https://ncuoccblobdev.blob.core.windows.net/media/theocc/media/clearing-services/services/options_listing_procedures_plan.pdf. The OLPP is a national market system plan that, among other things, sets forth procedures governing the listing of new options series.

(*i.e.*, starting on or after the second business day following the IPO day). Thus, the proposal could potentially accelerate the listing of options on IPO'd securities by two days.

The Exchange believes the proposed change would allow options on IPO'd securities to come to market sooner without sacrificing investor protection. The Exchange represents that trading in IPO'd securities—like all other securities traded on the Exchange—is subject to surveillances administered by the Exchange and to cross-market surveillances administered by FINRA on behalf of the Exchange. Those surveillances are designed to detect violations of Exchange rules and applicable federal securities laws.¹⁰ The Exchange represents that those surveillances are adequate to reasonably monitor Exchange trading of IPO'd securities in all trading sessions and to reasonably deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange.¹¹ As such, the Exchange believes that its existing surveillance technologies and procedures, coupled with NYSE American's findings related to the IPOs reviewed as described herein, adequately address potential concerns regarding possible manipulation or price stability.

Implementation Date

The Exchange will announce the effective date of the proposed change by Notice distributed to all Members.¹² The Exchange will coordinate the effective date to coincide with the implementation of the proposed change on the other options exchanges.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of section 6(b) of the Act.¹³ Specifically, the Exchange believes the proposed rule change is consistent with the section 6(b)(5)¹⁴ requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable

principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

In particular, the Exchange believes the proposed change would facilitate options transactions and would remove impediments to and perfect the mechanism of a free and open market and a national market system, which would, in turn, protect investors and the public interest by providing an avenue for options on IPO'd securities to come to market earlier. The Exchange notes that the three-day look back period helps ensure that options on underlying securities may be listed and traded in a timely manner while also allowing time for OCC to accommodate the certification request. However, there are certain large IPOs that issue high-priced securities—well above the \$3.00 per share threshold—that would obviate the need for the three-day lookback period. As noted above, NYSE American has reviewed trading data for IPO'd securities dating back to 2017 and is unaware of an IPO'd security with a market capitalization of \$3 billion or more (based upon the offering price of its IPO) that subsequently would have failed to qualify for listing and trading as options under the three-day lookback requirement. The Exchange believes that the proposed amendment, which would be harmonized across options exchanges, would remove impediments to and perfect the mechanism of a free and open market and a national market system by providing an avenue for investors to hedge their interest in IPO investments in a shorter amount of time than what is currently permitted. The Exchange believes that options serve a valuable tool to the trading community and help markets function efficiently by mitigating risk. To that end, the Exchange believes that the absence of options in the early days after an IPO may heighten volatility to IPO'd securities.¹⁵

Further, as noted herein, the Exchange believes the proposed change would allow options on IPO'd securities to come to market sooner (*i.e.*, at least two business days post-IPO not inclusive of the day of the IPO) without sacrificing investor protection. The Exchange represents that trading in IPO'd securities—like all other securities traded on the Exchange—is

¹⁰ FINRA conducts cross-market surveillances on behalf of the Exchange pursuant to a regulatory services agreement. The Exchange is responsible for FINRA's performance under this regulatory services agreement.

¹³ 15 U.S.C. 78f(b).

¹⁴ 15 U.S.C. 78f(b)(5).

¹⁵ *See supra* note 8.

subject to surveillances administered by the Exchange and to cross-market surveillances administered by FINRA on behalf of the Exchange. Those surveillances are designed to detect violations of Exchange rules and applicable federal securities laws.¹⁶ The Exchange represents that those surveillances are adequate to reasonably monitor Exchange trading of IPO'd securities in all trading sessions and to reasonably deter and detect violations of Exchange rules and federal securities laws applicable to trading on the Exchange, including wrongful efforts to manipulate the prices of those securities in order to bring them in compliance with the \$3.00/share threshold for the listing of options. As such, the Exchange believes that its existing surveillance technologies and procedures, coupled with NYSE American's findings related to the IPOs reviewed as described herein, would adequately address potential concerns regarding possible manipulation or price stability.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. In this regard and as indicated above, the Exchange notes that the rule change is being proposed as a competitive response to a filing submitted by NYSE American that was recently approved by the Commission.¹⁷ The Exchange anticipates that the other options exchanges will adopt substantively similar proposals, such that there would be no burden on intermarket competition from the Exchange's proposal.

Accordingly, the proposed change is not meant to affect competition among the options exchanges. For these reasons, the Exchange believes that the proposed rule change reflects this competitive environment and does not impose any undue burden on intermarket competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing of Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, it has become effective pursuant to section 19(b)(3)(A) of the Act¹⁸ and Rule 19b-4(f)(6)¹⁹ thereunder.

A proposed rule change filed under Rule 19b-4(f)(6)²⁰ normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),²¹ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange states that a waiver of the operative delay is consistent with the protection of investors and the public interest because it will ensure fair competition among the exchanges by allowing the Exchange to allow options on IPO'd securities to come to market sooner (*i.e.*, at least two business days post-IPO not inclusive of the day of the IPO) without sacrificing investor protection. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest because the proposed rule change does not raise any new or novel issues. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.²²

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such

action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-MIAX-2023-32 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to file number SR-MIAX-2023-32. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number

¹⁸ 15 U.S.C. 78s(b)(3)(A).

¹⁹ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²⁰ 17 CFR 240.19b-4(f)(6).

²¹ 17 CFR 240.19b-4(f)(6)(iii).

²² For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98252; File No. SR–PEARL–2023–39]

Self-Regulatory Organizations; MIAx PEARL, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Exchange Rule 2614 of the MIAx Pearl Equities Rulebook

August 30, 2023.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on August 25, 2023, MIAx PEARL, LLC (“MIAx Pearl” or the “Exchange”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the description of Limit Orders under Exchange Rule 2614(a)(1) to provide optional functionality that would cancel displayed Limit Orders³ on the Exchange’s equity trading platform (referred to herein as “MIAx Pearl Equities”) that do not establish a new National Best Bid or Offer (“NBBO”), as described below.

The text of the proposed rule change is available on the Exchange’s website at <http://www.miaxoptions.com/rule-filings/pearl> at MIAx Pearl’s principal office, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the description of Limit Orders under Exchange Rule 2614(a)(1) to provide optional functionality that cancel a displayed Limit Order to buy (sell) on MIAx Pearl Equities that does not establish a new NBB (NBO), as described herein. The Exchange intends to begin to notify Users⁴ whether their displayed Limit Order established a new NBBO upon entry or when modified via a Cancel/Replace message and such modification causes the order to lose time priority.⁵ This functionality is related to a separate proposal to adopt a fee program to be known as NBBO Setter Plus on September 1, 2023 that would provide an enhanced rebate to those displayed Limit Orders that establish the NBBO.⁶ Users that are

⁴ The term “User” means any Member or Sponsored Participant who is authorized to obtain access to the System pursuant to Exchange Rule 2602. See Exchange Rule 1901.

⁵ The Exchange intends to implement this proposed rule change and begin to notify Users whether their displayed Limit Order established a new NBBO upon entry or when modified via a Cancel/Replace message on August 31, 2023 (if waiver of the operative delay is granted) or on the effective date of this filing. See, e.g., MIAx Pearl Equities—Updated Interface Specifications Published for Future Enhancements—New NBBO Setter Flag and Cancellation Feature if Order is Not Setting the NBBO, dated July 26, 2023, available at <https://www.miaxglobal.com/alert/2023/07/26/miax-pearl-equities-updated-interface-specifications-published-future>, and MIAx Pearl Equities—Previously Announced New NBBO Setter Flag and Cancellation Feature will be available on Thursday, August 31, 2023; Corresponding Updated Risk Protections Guide and Order Type Combinations Guide Now on website, dated August 11, 2023, available at <https://www.miaxglobal.com/alert/2023/08/11/miax-pearl-equities-previously-announced-new-nbbo-setter-flag-and>. This functionality is limited to displayed Limit Orders because that is the only order type offered by the Exchange that may establish a new NBBO.

⁶ The Exchange intends to submit a separate filing with the Commission for immediate effectiveness

notified that their displayed Limit Order or modification of such order did not establish a new NBBO may then submit a new displayed Limit Order in an attempt to then establish a new NBBO and qualify for the upcoming NBBO Setter Plus program.

In connection with the above initiatives, Users requested the ability to instruct the Exchange to cancel their displayed Limit Order where it does not establish a new NBBO. Therefore, the Exchange proposes to allow Users to instruct the Exchange, on an order-by-order basis, to cancel their displayed Limit Order to buy (sell) when that order does not establish a new NBB (NBO) upon entry or when modified via a Cancel/Replace message in accordance with Exchange Rule 2614(e) and such modification results in the order losing time priority in accordance with Exchange Rule 2616(a)(5). The proposed functionality would be set forth under Exchange Rule 2614(a)(1)(j). For the avoidance of doubt, the default behavior would be for the Exchange to not cancel the order under this proposal, unless otherwise instructed to do so upon entry on an order-by-order basis.

The following example illustrates the proposed functionality upon entry. Assume the NBBO is \$10.00 by \$10.05. A User submits a displayed Limit Order to buy with a limit price of \$10.01 and instructs the Exchange to cancel such order should it not establish a new NBB. The order does establish a new NBB upon entry and is posted to the MIAx Pearl Equities Book,⁷ resulting in a new NBBO of \$10.01 by \$10.05. However, such order would have been cancelled by the Exchange if its limit price was \$10.00 or lower.

The Exchange also proposes to allow Users to instruct the Exchange to cancel a displayed Limit Order when that order does not establish a new NBB (NBO) after being modified via a Cancel/Replace message in accordance with Exchange Rule 2614(e) and such modification results in the order losing time priority in accordance with Exchange Rule 2616(a)(5). In sum, Exchange Rule 2614(e) provides that

pursuant to section 19(b)(1) of the Exchange Act and Rule 19b–4(f)(2) thereunder a proposal to establish the NBBO Setter Plus Program. The Exchange notes that other exchanges have adopted similar programs. See Securities Exchange Act Release Nos. 95124 (June 17, 2022) 87 FR 37894 (June 24, 2022) (SR–CboeBZX–2022–034); 14923 (March 10, 2022) 87 FR 14923 (March 16, 2022) (SR–MEMX–2022–01); 68209 (November 9, 2012) 77 FR 69519 (November 19, 2012) (SR–NASDAQ–2012–126); and 89754 (September 2, 2020), 85 FR 55550 (September 8, 2020) (SR–NYSE–2020–71).

⁷ The term “MIAx Pearl Equities Book” means the electronic book of orders in equity securities maintained by the System. See Exchange Rule 1901.

²³ 17 CFR 200.30–3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

³ See Exchange Rule 2614(a)(1) for a description of Limit Orders.

only the price, sell long, sell short, or short exempt indicator, and size terms of the order may be changed by a Cancel/Replace Message. Exchange Rule 2616(a)(5) provides that in the event an order has been modified via a Cancel/Replace message in accordance with Exchange Rule 2614(e) above, such order only retains its timestamp if such modification involves a decrease in the size of the order, a change to the Max Floor of an order with a Reserve Quantity, or when a Short Sale Period, as defined in Exchange Rule 2614(g)(3)(A), is not in effect, a change in position from (A) sell to sell short; (B) sell to sell short exempt; (C) sell short to sell; (D) sell short to sell short exempt; (E) sell short exempt to sell; and (F) sell short exempt to sell short.⁸ Any other modification to an order, including an increase in the size of the order and/or price change, will result in such order losing time priority as compared to other orders in the MIAX Pearl Equities Book and the timestamp for such order being revised to reflect the time of the modification.

The following illustrates how the order from the above example would be handled if later modified via a Cancel/Replace message that results in a loss in time priority. As illustrated in the above example, the displayed Limit Order to buy established a new NBBO of \$10.01 by \$10.05 upon entry and now continues to rest on the MIAX Pearl Equities Book at \$10.01. Assume the away BBO is \$10.00 by \$10.05 and a User submit a Cancel/Replace message to change the order's limit price to \$9.99. This would result in the away BBO of \$10.00 by \$10.05 becoming the new NBBO. The displayed Limit Order resting on the MIAX Pearl Equities Book would, therefore, be cancelled because its price is inferior to the new NBB of \$10.00 and would no longer set the NBB.⁹

Users would need to instruct the Exchange upon entry on an order-by-order basis to cancel their order as proposed herein. The proposed functionality would be entirely optional and, absent an instruction from the User on entry to the contrary, a displayed Limit Order that does not establish a new NBBO as described above would not be cancelled by the Exchange. Users may choose to use the proposed functionality based on their own business needs and trading behavior.

All Users would be notified that their displayed Limit Order or modification to such order did not establish a new NBBO, regardless of whether a User instructs the Exchange to cancel a displayed Limit Order when it does not establish a new NBBO as described herein. Users that do not inform the Exchange upon entry to cancel such order may choose to cancel that order on their own and submit a new order in an attempt to then establish a new NBBO and qualify for the upcoming NBBO Setter Plus program.

2. Statutory Basis

The Exchange believes that its proposal is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of section 6(b) of the Act.¹⁰ Specifically, the proposal is consistent with section 6(b)(5) of the Act¹¹ because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest because it would provide Users optional functionality to assist them in managing their order flow and attempts to establish a new NBBO. The proposal further remove impediments to, and perfect the mechanism of, a free and open market and a national market system because Users may instruct the Exchange upon entry to cancel their displayed Limit Order or modification to such order that did not establish a new NBBO so that they may then submit a new order to again attempt to establish a new NBBO and qualify for the upcoming NBBO Setter Plus program. The proposal would also promote just and equitable principles of trade because it would facilitate a User's ability to enter orders that establish a new NBBO by enabling them to enter a new order in a timelier manner and not submit a separate cancellation message prior to entering the new order. The proposed optional functionality should encourage more aggressively priced displayed liquidity on the Exchange, thereby, improving price discovery and potentially attracting additional contra-side order flow.

As stated above, the proposed functionality would be entirely optional and, absent an instruction from the User to the contrary, a displayed Limit Order that does not establish a new NBBO as described above would not be cancelled

by the Exchange. Users may choose to not use the proposed functionality and make their own decision whether to cancel the order on their own based on their business needs and trading behavior.

Lastly, the exchange notes that at least one other exchange that currently offers a similar NBBO Setter Plus program also provides for the ability to instruct the exchange to cancel an order if it does not establish the NBBO.¹²

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change would result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. The proposed rule change would not have any impact on intramarket competition because it would be available to all Users and Users may choose to use the proposed functionality based on their own business needs or trading behavior. The proposal may enhance intermarket competition because it would allow the Exchange to better compete with at least one other exchange that currently offers the ability to instruct the exchange to cancel an order if it does not establish the NBBO as part of its own NBBO Setter Plus program.¹³ The proposal may also improve the Exchange's competitive position by encouraging the entry of displayed orders priced more aggressively than the NBBO, improving the Exchange's market quality, and attracting additional liquidity. The proposal responds to the current competitive environment where order flow providers have a choice of where to direct liquidity-providing orders by providing optional functionality to facilitate the entry of aggressively priced displayed liquidity on the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

⁸ See, e.g., Securities Exchange Act Release No. 93506 (November 2, 2021), 86 FR 61796 (November 8, 2021) (SR-PEARL-2021-35).

⁹ However, such order would not have been cancelled by the Exchange if its new limit price was \$10.02.

¹⁰ 15 U.S.C. 78f(b).

¹¹ 15 U.S.C. 78f(b)(5).

¹² See reason code 240 on page 110 of the NYSE Pillar Gateway Binary Protocol Specifications, dated June 27, 2023, available at [NYSE_Pillar_Gateway_Binary_Protocol_Specification.pdf](#). See also Securities Exchange Act Release No. 89754 (September 2, 2020), 85 FR 55550 (September 8, 2020) (SR-NYSE-2020-71). Functionality to cancel the order if it does not set the NBBO was not included in SR-NYSE-2020-71.

¹³ *Id.*

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to section 19(b)(3)(A)(iii) of the Act¹⁴ and Rule 19b-4(f)(6) thereunder.¹⁵

A proposed rule change filed under Rule 19b-4(f)(6)¹⁶ normally does not become operative prior to 30 days after the date of the filing. However, Rule 19b-4(f)(6)(iii)¹⁷ permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange states that this proposal provides Users optional functionality to manage their order flow and is designed to facilitate their ability to enter aggressively priced displayed Limit Orders that establish a new NBBO. The Exchange represents that a waiver of the operative delay would permit the Exchange to offer the proposed cancellation and connected NBBO notification functionality by September 1, 2023, the date that it intends to begin to offer an NBBO Setter Plus program and allow it to better compete with other exchanges that offer similar programs and functionality. The Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest because the proposed functionality is optional and could encourage more aggressively priced displayed liquidity on the Exchange. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change as operative upon filing.¹⁸

¹⁴ 15 U.S.C. 78s(b)(3)(A)(iii).

¹⁵ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6) requires the Exchange to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁶ *Id.*

¹⁷ 17 CFR 240.19b-4(f)(6)(iii).

¹⁸ For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-PEARL-2023-39 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to file number SR-PEARL-2023-39. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available

publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-PEARL-2023-39 and should be submitted on or before September 27, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-98247; File No. SR-NYSEAMER-2023-42]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Change To Modify Rule 900.3NYP

August 30, 2023.

Pursuant to section 19(b)(1)¹ of the Securities Exchange Act of 1934 ("Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on August 23, 2023, NYSE American LLC ("NYSE American" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to modify Rule 900.3NYP (Orders and Modifiers) regarding the handling of certain Market Orders subject to Trading Collars and conforming changes to Rule 952NYP (Auction Process). The proposed rule change is available on the Exchange's website at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to modify Rule 900.3NYP (Orders and Modifiers) regarding the handling of certain Market Orders subject to Trading Collars and conforming changes to Rule 952NYP (Auction Process).⁴ The Exchange notes that an identical rule change was recently adopted on its affiliated exchange, NYSE Arca, Inc. ("NYSE Arca") and therefore this proposal raises no new or novel issues not previously considered by the Commission.⁵

The Exchange employs Trading Collar functionality that is designed to provide ATP Holders price protection for Market Orders and Limit Orders traded on the Exchange.⁶ In particular, the Trading Collar applies a static ceiling price (for a buy order) or floor price (for a sell order) at which such order may be traded or routed that is determined at the time of entry (or after a series opens or reopens) and which is applicable until the order is traded or cancelled.⁷ As described below, the Exchange

proposes to modify the application of Trading Collars to Market Orders.

Currently, Rule 900.3NYP(a)(4)(D) describes how the Trading Collar is applied and provides that if an order to buy (sell) would trade or route above (below) the Trading Collar or would have its working price repriced to a Trading Collar that is below (above) its limit price, the order will be added to the Consolidated Book at the Trading Collar for 500 milliseconds and if not traded within that period, will be cancelled (each a "collared" order).⁸ Further, once the 500-millisecond timer begins for a collared order (the "collar timer"), such order will be cancelled at the end of the timer even if it repriced or was routed to an Away Market during that period, in which case any portion of the collared order that is returned unexecuted is cancelled.

Pursuant to the proposed rule change, Market Orders that are collared would no longer be held for the duration of the collar time (*i.e.*, for 500 milliseconds). Instead, as proposed, if a Market Order to buy (sell) would trade or route above (below) the Trading Collar, such Market Orders would be cancelled.⁹ Thus, a collared Market Order that can trade within the Trading Collar will trade on the Exchange or route. Collared Market Orders will no longer be held and displayed on the Consolidated Book for the duration of the collar timer.

The Exchange is not proposing to modify the handling of Limit Orders and such collared orders would continue to be subject to the above-described handling, per Rule 900.3NYP(a)(4)(D)(i).¹⁰ The current rule treats collared Market Orders and collared Limit Orders the same whereas the Exchange proposes to alter only the handling of collared Market Orders. Unlike Market Orders, Limit Orders include a specific price at which an ATP Holder is willing to trade (*i.e.*, the limit price). Market Orders do not include a price and tend to be utilized to access liquidity. As such, the Exchange believes that the proposal to cancel back those Market Orders that

have been collared would benefit ATP Holders because it would enable the order sender to reevaluate, on a timelier basis how best to handle this trading interest.

The Exchange notes that it proposes to make this change in response to ATP Holders' preference to have Market Orders for which they are agent immediately cancel back for handling—rather than have such collared Market Orders first post at aggressive prices for 500 milliseconds.

Conforming Changes

Consistent with the proposed change to the handling of collared Market Orders—*i.e.*, that such orders will not be held and displayed on the Consolidated Book for the duration of the collar timer, the Exchange proposes the following conforming changes.

- First, the Exchange proposes to modify Rule 900.3NYP(a)(1)(A)(ii), which provides, in relevant part, that "[a] Market Order to sell will be cancelled if it was assigned a Trading Collar, routed, and when it returns unexecuted, it has no resting portion to join and there is no NBB, regardless of the price of the NBO." The Exchange proposes to modify this provision to instead provide that "[a] Market Order to sell that was assigned a Trading Collar, routed, and returned unexecuted, will be cancelled if there is no NBB, regardless of the price of the NBO."¹¹

- Next, the Exchange proposes to modify Rule 900.3NYP(a)(1)(B), which provides, in relevant part, that "[a]fter trading or routing, or both, the Market Order will be displayed at the Trading Collar, subject to paragraph (a)(1)(C)," which provision provides that a Market Order will be cancelled before being displayed if there are no remaining contra-side Market Maker quotes on the Exchange or contra-side ABBO.¹² Proposed Rule 900.3NYP(a)(1)(B) would provide that "[a]fter trading or routing, or both, the Market Order will be cancelled."

- In addition, the Exchange also proposes to delete as inapplicable Rule 900.3NYP(a)(1)(C).¹³ The Exchange proposes to modify Rule

⁴ The Exchange notes that this proposed change modifies a Pillar rule (*i.e.*, with a "P" modifier) that has not yet been implemented. The Exchange anticipates migrating to its Pillar trading platform beginning on October 23, 2023. As is the case with all Pillar rules, this proposed rule change (as well as the entire Rule 900.3NYP) will not be implemented until all other Pillar-related rule filings are approved or operative, as applicable, and the Exchange announces the migration of underlying symbols to Pillar by Trader Update.

⁵ See Securities Exchange Act Release No. 98113 (August 11, 2023), 88 FR 55791 (August 16, 2023) (SR-NYSEARCA-2023-54) (immediately effective rule change to allow market participants to reduce the time at which Market Orders are "collared" from 500 milliseconds to zero, per Rule 6.62P-O).

⁶ See Rules 900.3NYP(a)(1) (defining Market Order), (a)(2) (defining Limit Order).

⁷ See Rule 900.3NYP(a)(4)(A)–(C) (describing Trading Collar functionality, including how such Collars are assigned and calculated).

⁸ See Rule 964NYP(a)(3) (providing that the "working price" of an order or quote means the price at which it is eligible to trade at any given time, which may be different from the limit price or display price of the order or quote). The "display price" means the price at which an order or quote ranked Priority 2—Display Orders or Market Order is displayed, which may be different from the limit price or working price of the order. See Rule 964NYP(a)(1).

⁹ See proposed Rule 900.3NYP(a)(4)(D)(i). The Exchange notes that once an order has been cancelled, the Exchange will likewise cancel any unexecuted portion of the cancelled order that returns to the Exchange after having been routed away.

¹⁰ See proposed Rule 900.3NYP(a)(4)(D)(i).

¹¹ See proposed Rule 900.3NYP(a)(1)(A)(ii). See also Rule 900.3NYP(a)(1)(A)(i)–(iv) (setting forth pricing validations that a Market Order that arrives during continuous trading or that was routed, returns unexecuted, and has no resting quantity to join must pass to prevent being rejected or cancelled, as applicable).

¹² See Rule 900.3NYP(a)(1)(C).

¹³ See Rule 900.3NYP(a)(1)(C) (providing that a Market Order will be cancelled before being displayed if there are no remaining contra-side Market Maker quotes on the Exchange or contra-side ABBO).

952NYP(f)(3)(A)(vi), which cross references the to-be-deleted provision, and to provide that “[u]nexecuted Market Orders will be cancelled.”¹⁴

• Finally, the Exchange also proposes to delete as inapplicable Rule 900.3NYP(a)(1)(D).¹⁵

The Exchange believes that the proposed functionality would provide greater determinism for Market Orders that have been collared, which would provide ATP Holders that send Market Orders as agent greater control over, and more certainty regarding, the Exchange’s handling of such orders.

Implementation

This proposed change modifies a Pillar rule (*i.e.*, with a “P” modifier). As is the case with all Pillar rules, this proposed rule change (as well as the entire Rule 900.3NYP) will not be implemented until all other Pillar-related rule filings are approved or operative, as applicable, and the Exchange announces the migration of underlying symbols to Pillar by Trader Update.

2. Statutory Basis

The proposed rule change is consistent with section 6(b) of the Securities Exchange Act of 1934 (the “Act”),¹⁶ in general, and furthers the objectives of section 6(b)(5),¹⁷ in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, to remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, to protect investors and the public interest.

The Exchange believes the proposed change to modify the handling of collared Market Orders, which is being made in response to ATP Holders’ preference to have Market Orders for which they are agent immediately cancel back for handling—rather than have such collared Market Orders first

post at aggressive prices for 500 milliseconds, would remove impediments to and perfect the mechanism of a free and open market and a national market system because the proposed handling would refine the Trading Collar functionality in a manner that would enable ATP Holders to have more certainty regarding, and more control over, the handling of their Market Orders.¹⁸

The proposed conforming changes would remove impediments to, and perfect the mechanism of, a free and open market and a national market system and, in general, would protect investors and the public interest because such changes would add clarity, transparency, and internal consistency to Exchange rules.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange is proposing a market enhancement that would provide ATP Holders with greater control over, and more certainty regarding, collared Market Orders that such ATP Holders have submitted as agent. The proposal would apply to all similarly-situated ATP Holders and would not impose a competitive burden on any participant. The Exchange does not believe that the proposed change to the Trading Collar functionality would impose a burden on competing options exchanges. Rather, the availability of the modified Trading Collar functionality may foster more competition. Specifically, the Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues. When an exchange offers enhanced functionality that distinguishes it from the competition and participants find it useful, it has been the Exchange’s experience that competing exchanges will move to adopt similar functionality. Thus, the Exchange believes that this type of competition amongst exchanges is beneficial to the marketplace as it can result in enhanced processes, functionality, and technologies.

¹⁸ As discussed *supra*, the proposal would alter the handling of collared Market Orders (but not collared Limit Orders) because Market Orders (unlike Limit Orders) do not include a price and tend to be utilized to access liquidity. Thus, the proposal to cancel back collared Market Orders would benefit ATP Holders because it would enable the order sender to reevaluate, on a timelier basis how best to handle this trading interest.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to section 19(b)(3)(A)(iii) of the Act¹⁹ and Rule 19b-4(f)(6) thereunder.²⁰ Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to section 19(b)(3)(A) of the Act and Rule 19b-4(f)(6)(iii) thereunder.²¹

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under section 19(b)(2)(B)²² of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (<https://www.sec.gov/rules/sro.shtml>); or

¹⁹ 15 U.S.C. 78s(b)(3)(A)(iii).

²⁰ 17 CFR 240.19b-4(f)(6).

²¹ 17 CFR 240.19b-4(f)(6)(iii). In addition, Rule 19b-4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

²² 15 U.S.C. 78s(b)(2)(B).

¹⁴ Compare proposed Rule 952NYP(f)(3)(A)(vi) with Rule 952NYP(f)(3)(A)(vi) (providing that Market Orders received during a pre-open state will be subject to the validation specified in Rule 900.3NYP(a)(1)(C)).

¹⁵ See Rule 900.3NYP(a)(1)(D) (providing that after being displayed at its Trading Collar, a Market Order will be cancelled if there ceases to be a contra-side NBBO). The Exchange proposes the non-substantive change to re-number current paragraph (a)(1)(E) of the Rule to new paragraph (a)(1)(C) to account for the aforementioned deletions.

¹⁶ 15 U.S.C. 78f(b).

¹⁷ 15 U.S.C. 78f(b)(5).

• Send an email to rule-comments@sec.gov. Please include file number SR-NYSEAMER-2023-42 on the subject line.

Paper Comments

• Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-NYSEAMER-2023-42. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-NYSEAMER-2023-42 and should be submitted on or before September 27, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²³

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011-01-P

SMALL BUSINESS ADMINISTRATION

Data Collection Available for Public Comments

ACTION: 60-Day notice and request for comments.

SUMMARY: The Small Business Administration (SBA) intends to request approval, from the Office of Management and Budget (OMB) for the collection of information described below. The Paperwork Reduction Act (PRA) requires federal agencies to publish a notice in the **Federal Register** concerning each proposed collection of information before submission to OMB, and to allow 60 days for public comment in response to the notice. This notice complies with that requirement.

DATES: Submit comments on or before November 6, 2023.

ADDRESSES: Send all comments to Marybeth Kerrigan, Financial Analyst, Secondary Markets Division, Office of Financial Assistance, Small Business Administration, Washington, DC 20416.

FOR FURTHER INFORMATION CONTACT: Marybeth Kerrigan, Financial Analyst, Secondary Markets Division, Office of Financial Assistance, mary.kerrigan@sba.gov 202-205-7552, or Curtis B. Rich, Agency Clearance Officer, 202-205-7030, curtis.rich@sba.gov;

SUPPLEMENTARY INFORMATION: Small Business Administration collects this information from lenders who participate in the secondary market program. The information is used to facilitate and administer secondary market transactions in accordance with 15 U.S.C. 634(f)3 and to monitor the program for compliance with 15 U.S.C. 639(h).

Solicitation of Public Comments

SBA is removing duplicate sale data, reformatting sale data for ease of use, and amending sections for clarity. SBA is requesting comments on (a) Whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

Summary of Information Collection

OMB Control Number: 3245-0185.

Title: Secondary Participation

Guaranty Agreement.

Description of Respondents: Small Business Lenders.

Form Number: SBA Forms 1502, 1086.

Total Estimated Annual Responses: 4,000.

Total Estimated Annual Hour Burden: 60,000.

Curtis Rich,

Agency Clearance Officer.

BILLING CODE 8026-09-P

SURFACE TRANSPORTATION BOARD

[Docket No. EP 552 (Sub-No. 27)]

Railroad Revenue Adequacy—2022 Determination

AGENCY: Surface Transportation Board.

ACTION: Notice of decision.

SUMMARY: On September 5, 2023, the Board served a decision announcing the 2022 revenue adequacy determinations for the nation's Class I railroads. Five Class I railroads (BNSF Railway Company, CSX Transportation, Inc., Norfolk Southern Combined Railroad Subsidiaries, Soo Line Corporation, and Union Pacific Railroad Company) were found to be revenue adequate.

DATES: This decision is effective on September 5, 2023.

FOR FURTHER INFORMATION CONTACT: Pedro Ramirez, (202) 245-0333. If you require an accommodation under the Americans with Disabilities Act, please call (202) 245-0245.

SUPPLEMENTARY INFORMATION: Under 49 U.S.C. 10704(a)(3), the Board is required to make an annual determination of railroad revenue adequacy. A railroad is considered revenue adequate under 49 U.S.C. 10704(a) if it achieves a rate of return on net investment (ROI) equal to at least the current cost of capital for the railroad industry. For 2022, this number was determined to be 10.58% in *Railroad Cost of Capital—2022*, EP 558 (Sub-No. 26) (STB served Aug. 3, 2023). The Board then applied this revenue adequacy standard to each Class I railroad. Five Class I carriers (BNSF Railway Company, CSX Transportation, Inc., Norfolk Southern Combined Railroad Subsidiaries, Soo Line Corporation, and Union Pacific Railroad Company) were found to be revenue adequate for 2022.

The decision in this proceeding is posted at www.stb.gov.

Decided: August 30, 2023.

²³ 17 CFR 200.30-3(a)(12).

By the Board, Board Members Fuchs, Hedlund, Oberman, Primus, and Schultz.
Kenyatta Clay,
Clearance Clerk.

BILLING CODE 4915–01–P

DEPARTMENT OF TRANSPORTATION

Federal Highway Administration

[Docket No. FHWA–2023–0026]

Agency Information Collection Activities: Request for Comments for a New Information Collection

AGENCY: Federal Highway Administration (FHWA), DOT.

ACTION: Notice and request for comments.

SUMMARY: The FHWA invites public comments about our intention to request the Office of Management and Budget's (OMB) approval for an information collection, which is summarized below under **SUPPLEMENTARY INFORMATION**. We are required to publish this notice in the **Federal Register** by the Paperwork Reduction Act of 1995.

DATES: Please submit comments by November 6, 2023.

ADDRESSES: You may submit comments identified by DOT Docket ID Number 0026 by any of the following methods:

Website: For access to the docket to read background documents or comments received go to the Federal eRulemaking Portal: Go to <http://www.regulations.gov>.

Follow the online instructions for submitting comments.

Fax: 1–202–493–2251.

Mail: Docket Management Facility, U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE., Washington, DC 20590–0001.

Hand Delivery or Courier: U.S. Department of Transportation, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Spencer Stevens 202–366–6221, Office of Planning, Environment and Realty Federal Highway Administration, Department of Transportation, 1200 New Jersey Avenue SE, Washington, DC 20590.

SUPPLEMENTARY INFORMATION:

Title: Planning and Research Program Administration.

Background: Planning and Research Program Administration is covered

under 23 CFR part 420. 23 CFR part 420 regulation includes administrative requirements and procedures for PL funds (23 U.S.C. 104(b)(5)) provided for Metropolitan Planning Organizations (MPOs) to carry out metropolitan planning, and SPR funds (provided under the provisions of 23 U.S.C. 505) for State Departments of Transportation (State DOTs) to implement statewide transportation planning and research, development and technology (RD&T) work activities. Also, at a State DOT's option, other Title 23 funds as identified in the definition of FHWA planning and research funds in 23 U.S.C. 505 and 23 CFR 420.103 may be used to perform planning activities. Different from this request, the information collection requirement for work performed by MPOs is a joint Federal Highway Administration/Federal Transit Administration requirement, and is covered under OMB Control Number 2132–0529.

In accordance with government-wide grant management procedures, a grant application must be submitted for these funds. In addition, recipients must submit periodic progress and financial reports. The content and frequency of submission of progress and financial reports specified in 23 CFR part 420 is as specified in 2 CFR 200 grant management regulations. With the implementation of 2 CFR 200, the focus will be more on using data to determine the grant's achievement outcomes and less on accountability compliance. FHWA and the State DOTs are called upon to identify clear performance goals, indicators and milestones for the grants.

This information collection supports the DOT's Strategic Objective of "Organizational Excellence" by providing an ongoing mechanism to review applications and approve Federal grants to States for their transportation planning and research, development and technology work programs.

Respondents: Each State, the District of Columbia and the Commonwealth of Puerto Rico are required to provide information. The annual number of burden hours (professional and clerical staff) per respondent for preparation of work programs and progress and financial reports is estimated to be 720 (18 weeks × 40 hours per week). The total annual burden for all respondents is estimated to be 37,440 burden hours (720 burden hours per respondent times 52 respondents).

Frequency: This annual burden consists of staff time of each respondent for preparation of the work programs, and progress and financial reports. For

those respondents that elect to use biennial work programs, the burden for preparation of work programs would be significantly less for the second year.

Estimated Average Burden per Response:

Professional staff time for preparation of work programs: 400 hours/respondent.

Professional staff time for preparation of progress and financial reports: 120 hours/respondent.

Clerical staff time: 200 hours/respondent.

Estimated Total Annual Burden

Hours: 720 hours/respondent × 52 respondents = 37,400 hours.

Public Comments Invited: You are asked to comment on any aspect of this information collection, including: (1) Whether the proposed collection is necessary for the FHWA's performance; (2) the accuracy of the estimated burdens; (3) ways for the FHWA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized, including the use of electronic technology, without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1.48.

Issued on: August 31, 2023.

Jazmyne Lewis,

Information Collection Officer.

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA–2010–0060]

Norfolk Southern Railway's Request To Operate During a Temporary Outage of Its Positive Train Control System; Withdrawal of Filing and Notice

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice; withdrawal.

SUMMARY: On September 1, 2023, the Federal Railroad Administration (FRA) published a notice in the **Federal Register** announcing the availability of the Norfolk Southern Railway's (NS) request for amendment (RFA), dated August 28, 2023, to its FRA-certified positive train control (PTC) system. This

document withdraws that notice, FR Doc. 2023–18996. On August 30, 2023, NS withdrew its RFA.

DATES: As of September 6, 2023, FR Doc. 2023–18996, published on September 1, 2023, is withdrawn.

FOR FURTHER INFORMATION CONTACT: For further information, please contact Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, telephone: 816–516–7168, email: Gabe.Neal@dot.gov.

SUPPLEMENTARY INFORMATION: FR Doc. 2023–18996, published on September 1, 2023, is withdrawn by this notice.

Issued in Washington, DC.

Carolyn R. Hayward-Williams,

Director, Office of Railroad Systems and Technology.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2021–0038; Notice 2]

Porsche Cars North America, Inc., Grant of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Grant of petition.

SUMMARY: Porsche Cars North America, Inc., (“Porsche”), has determined that certain model year (MY) 2017–2021 Porsche Panamera, MY 2019–2021 Porsche Cayenne, and MY 2020–2021 Porsche Taycan motor vehicles do not fully comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 135, *Light Vehicle Brake Systems*. Porsche filed an original noncompliance report dated March 10, 2021. Subsequently, Porsche petitioned NHTSA on April 1, 2021, for a decision that the subject noncompliance is inconsequential as it relates to motor vehicle safety. This notice announces the grant of Porsche’s petition.

FOR FURTHER INFORMATION CONTACT: Vince Williams, General Engineer, NHTSA, Office of Vehicle Safety Compliance, (202) 366–2319, vince.williams@dot.gov.

SUPPLEMENTARY INFORMATION:

I. Overview

Porsche has determined that certain MY 2017–2021 Porsche Panamera, MY 2019–2021 Porsche Cayenne, and MY 2020–2021 Porsche Taycan motor vehicles do not fully comply with the

requirements of paragraphs S5.5.5(a) and S5.5.5(d)(5) of FMVSS No. 135, *Light Vehicle Brake Systems* (49 CFR 571.135). Porsche filed a noncompliance report dated March 10, 2021, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*. Porsche subsequently petitioned NHTSA on April 1, 2021, for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential as it relates to motor vehicle safety, pursuant to 49 U.S.C. 30118(d) and 30120(h) and 49 CFR part 556, *Exemption for Inconsequential Defect or Noncompliance*.

Notice of receipt of Porsche’s petition was published with a 30-day public comment period, on August 16, 2021, in the **Federal Register** (86 FR 45817). No comments were received. To view the petition and all supporting documents log onto the Federal Docket Management System (FDMS) website at <https://www.regulations.gov/>. Then follow the online search instructions to locate docket number “NHTSA–2021–0038.”

II. Vehicles Involved

Approximately 80,666 of the following MY 2017–2021 Porsche motor vehicles manufactured between October 23, 2016, and February 9, 2021, are potentially involved:

- MY 2017–2021 Panamera 4
- MY 2017–2021 Panamera
- MY 2017–2021 Panamera 4 S
- MY 2017–2020 Panamera Turbo
- MY 2017–2020 Panamera 4 S Executive
- MY 2017–2020 Panamera Turbo Executive
- MY 2018–2021 Panamera 4 Hybrid
- MY 2018–2020 Panamera Turbo S Hybrid
- MY 2018–2021 Panamera 4 Executive
- MY 2018–2020 Panamera 4 Hybrid Executive
- MY 2018–2020 Panamera Turbo S Hybrid Executive
- MY 2018–2020 Panamera 4 Sport Turismo
- MY 2018–2020 Panamera 4 S Sport Turismo
- MY 2018–2020 Panamera 4 Hybrid Sport Turismo
- MY 2018–2020 Panamera Turbo Sport Turismo
- MY 2018–2020 Panamera Turbo S Hybrid Sport Turismo
- MY 2019–2021 Panamera GTS
- MY 2020 Panamera GTS Sport Turismo
- MY 2019–2021 Cayenne
- MY 2019–2021 Cayenne S
- MY 2019–2021 Cayenne Hybrid

- MY 2019–2021 Cayenne Turbo
- MY 2020 Panamera 10 Year Special Model
- MY 2020 Panamera 4 10 Year Special Model
- MY 2020–2021 Taycan 4S
- MY 2020 Taycan Top S
- MY 2020 Taycan Top
- MY 2020 Panamera 4 Hybrid 10 Year Special Model
- MY 2020 Cayenne Turbo S Hybrid
- MY 2020–2021 Cayenne Coupe
- MY 2020–2021 Cayenne S Coupe
- MY 2020–2021 Cayenne Hybrid Coupe
- MY 2020–2021 Cayenne Turbo Coupe
- MY 2020 Cayenne Turbo S Hybrid Coupe
- MY 2021 Taycan
- MY 2021 Taycan Turbo S
- MY 2021 Taycan Turbo
- MY 2021 Panamera Turbo S
- MY 2021 Panamera 4S Hybrid
- MY 2021 Cayenne GTS
- MY 2021 Cayenne GTS Coupe

III. Noncompliance

Porsche explains that the noncompliance is that the subject vehicles are equipped with brake wear indicators that do not meet the minimum lettering height requirements, as specified in paragraph S5.5.5(d)(5) of FMVSS No. 135. Specifically, the lettering height for the brake wear indicators ranges in height from 1.7 mm to 2.2 mm, when the required minimum height is 3.2 mm.

IV. Rule Requirements

Paragraphs S5.5.5(a) and S5.5.5(d)(5) of FMVSS No. 135 include the requirements relevant to this petition. Each visual indicator shall display a word or words in accordance with the requirements of FMVSS No. 101 (49 CFR 571.101) and FMVSS No. 135, which shall be legible to the driver under all daytime and nighttime conditions when activated. Unless otherwise specified, the words shall have letters not less than 3.2 mm ($\frac{1}{8}$ inch) high and the letters and background shall be of contrasting colors, one of which is red. Words or symbols in addition to those required by FMVSS No. 101 and FMVSS No. 135 may be provided for purposes of clarity. If a separate indicator is provided to indicate brake lining wear-out as specified in S5.5.1(d), the words “Brake Wear” shall be used.

V. Summary of Porsche’s Petition

The following views and arguments presented in this section, “V. Summary of Porsche’s Petition,” are the views and arguments provided by Porsche and do not reflect the views of the Agency.

Porsche describes the subject noncompliance and contends that the noncompliance is inconsequential as it relates to motor vehicle safety.

Porsche believes that the subject noncompliance is inconsequential to vehicle safety. Porsche explains that, in addition to the required brake wear indicator, the affected vehicles have a multi-functional display that provides brake wear information and is readily visible to the driver. Porsche states that the brake wear message can be confirmed and then suppressed at the next ignition cycle, however, the operator would need to read and understand the message in order to do so. Porsche states that the brake wear indicator text is red, which is compliant and a contrasting color to the background of the text. Porsche believes that along with the color, the position of the text makes the brake wear indicator symbol conspicuous to the driver. The symbol is located adjacent to the fuel, temperature, and other vehicle data displays. Furthermore, Porsche states that the brake wear detection is functional and not affected by the noncompliant size of the text. Porsche adds that each letter of the text is capitalized, making it more easily seen and read by the driver due to the uniform height.

Porsche states that owners of the subject vehicles would understand the symbol despite the noncompliant text size because the owner's manual provided with the vehicle contains information about the brake wear warning symbol. Porsche notes that the subject noncompliance has been corrected in production vehicles.

Porsche contends that NHTSA has granted the prior petitions for similar noncompliances.¹ Furthermore, Porsche says that NHTSA has stated in previous determinations that it generally finds labeling noncompliances like the subject noncompliance to be "more appropriate for a determination of inconsequentiality."²

Porsche concludes that the subject noncompliance is inconsequential as it relates to motor vehicle safety and that its petition to be exempted from providing notification of the noncompliance, as required by 49 U.S.C. 30118, and a remedy for the noncompliance, as required by 49 U.S.C. 30120, should be granted.

VII. NHTSA's Analysis

In determining inconsequentiality of a noncompliance, NHTSA focuses on the safety risk to individuals who experience the type of event against which a recall would otherwise protect.³ In general, NHTSA does not consider the absence of complaints or injuries when determining if a noncompliance is inconsequential to safety. The absence of complaints does not mean vehicle occupants have not experienced a safety issue, nor does it mean that there will not be safety issues in the future.⁴

The Agency concurs with Porsche that this noncompliance will not have an adverse effect on vehicle safety. Despite the letter height of the brake wear indicators being smaller than the 3.2 mm requirement, the affected vehicles include a multi-functional display which provides supplementary brake wear information that is located within the driver's direct field of vision, immediately adjacent to the fuel, temperature, other critical vehicle data displays. Although the additional brake warnings can be suppressed by the vehicle operator, the information is presented at every new ignition cycle and informs the driver of the need to change the brake pads while also recommending if continued driving is possible/advised. For as long as the brake warnings exist, the driver will be required to make a deliberate action after every new key cycle in order to suppress the additional brake warning messages. Finally, the additional brake warning symbols are accurately depicted and displayed in the correct colors, consistent with Table 1 of FMVSS No. 101, minimizing any confusion about the meaning of the indicators. Due to the aforementioned factors, the Agency concurs with Porsche that the subject noncompliance will have an adverse effect on vehicle

³ See *Gen. Motors, LLC; Grant of Petition for Decision of Inconsequential Noncompliance*, 78 FR 35355 (June 12, 2013) (finding noncompliance had no effect on occupant safety because it had no effect on the proper operation of the occupant classification system and the correct deployment of an air bag); *Osram Sylvania Prods. Inc.; Grant of Petition for Decision of Inconsequential Noncompliance*, 78 FR 46000 (July 30, 2013) (finding occupant using noncompliant light source would not be exposed to significantly greater risk than occupant using similar compliant light source).

⁴ See *Morgan 3 Wheeler Limited; Denial of Petition for Decision of Inconsequential Noncompliance*, 81 FR 21663, 21666 (Apr. 12, 2016); see also *United States v. Gen. Motors Corp.*, 565 F.2d 754, 759 (D.C. Cir. 1977) (finding defect poses an unreasonable risk when it "results in hazards as potentially dangerous as sudden engine fire, and where there is no dispute that at least some such hazards, in this case fires, can definitely be expected to occur in the future").

safety and therefore recommends that this petition be granted.

VII. NHTSA's Decision

In consideration of the foregoing, NHTSA finds that Porsche has met its burden of persuasion that the subject FMVSS No. 135 noncompliance in the affected vehicles is inconsequential to motor vehicle safety. Accordingly, Porsche's petition is hereby granted, and Porsche is consequently exempted from the obligation of providing notification of, and a free remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this decision only applies to the subject vehicles that Porsche no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after Porsche notified them that the subject noncompliance existed.

(Authority: 49 U.S.C. 30118, 30120; delegations of authority at 49 CFR 1.95 and 501.8)

Otto G. Matheke, III,

Director, Office of Vehicle Safety Compliance.

DEPARTMENT OF TRANSPORTATION

Office of the Secretary

[Docket No. DOT–OST–2023–0063]

Agency Information Collection Activities: Approval of Information Collection

AGENCY: Office of the Secretary (OST), DOT.

ACTION: 60-Day notice and request for comments.

SUMMARY: The Department of Transportation (DOT) invites public comments on our intention to request Office of Management and Budget (OMB) approval for an information collection in accordance with the

¹ See 81 FR 92964 (Dec. 20, 2016); see also 67 FR 72026 (Dec. 3, 2002).

² See, *Porsche Cars North America, Inc., Grant of Petition for Decision of Inconsequential Noncompliance*, 85 FR 62365, 62366 (Oct. 2, 2020).

requirements of the Paperwork Reduction Act of 1995. This collection is necessary for administration of the Reconnecting Communities (RCP) and Neighborhood Access and Equity (NAE) Discretionary Grant Programs and funding opportunities. Together, these programs are known as “Reconnecting Communities and Neighborhoods (RCN)” in the combined NOFO. RCN provides federal financial assistance for surface transportation infrastructure projects. Through RCP, this includes removing, retrofitting, or mitigating transportation facilities such as highways and rail lines that create barriers to community connectivity including to mobility, access, or economic development. Through NAE, this includes the RCP eligibilities, with the further ability to reduce burdens such as GHG emissions, hot spot areas, gaps in tree canopy coverage, and other natural environment concerns.

DATES: Written comments should be submitted by November 6, 2023.

ADDRESSES: To ensure that you do not duplicate your docket submissions, please submit them by only one of the following means:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov> and follow the online instructions for submitting comments.
- *Mail:* Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Ave. SE, West Building Ground Floor, Room W12-140, Washington, DC 20590-0001.
- *Hand Delivery:* West Building Ground Floor, Room W-12-140, 1200 New Jersey Ave. SE, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202-366-9329.

Instructions: To ensure proper docketing of your comment, please include the agency name and docket number [DOT-OST-2023-0063] at the beginning of your comments. All comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided.

FOR FURTHER INFORMATION CONTACT: For further information regarding this notice, please contact the Office of the Secretary via email at ReconnectingCommunities@dot.gov or contact Andrew Emanuele at andrew.emanuele@dot.gov or 202-366-0622. A TDD is available for individuals who are deaf or hard of hearing at 202-366-3993.

SUPPLEMENTARY INFORMATION: New Collection. OMB number will be issued after the collection is approved.

Title: Reconnecting Communities Pilot Program and Neighborhood Access and Equity Program (Reconnecting Communities and Neighborhoods (RCN) Discretionary Grants.

Form Numbers: None.

Type of Review: New Information Collection Request (ICR).

Background: The Office of the Secretary (“OST”) within the Department of Transportation (DOT) provides financial assistance for surface transportation infrastructure projects—including removing, retrofitting, or mitigating transportation facilities such as highways and rail lines that create barriers to community connectivity including to mobility, access, or economic development. The Infrastructure Investment and Jobs Act (Pub. L. 117-58, November 15, 2021) (Bipartisan Infrastructure Law, or BIL) provided funds to the Department to invest in planning and capital construction grants to reduce transportation barriers: the Reconnecting Communities Pilot Program, found under section 11509 of division A. The Inflation Reduction Act (Pub. L. 117-169, August 16, 2022) (IRA) provided funds to the Department for the NAE to invest in planning and construction grants to improve the walkability, safety, and provide affordable access: the Neighborhood Access & Equity grant program, found at 23 U.S.C. 177: To help streamline the process for applicants, the Department has combined the applications for the RCP and NAE programs into the RCN common application.

The DOT combined these two programs into one single Notice of Funding Opportunity (NOFO) to provide a more efficient application process for project sponsors. While they remain separate programs for the purposes of award, the programs share many common characteristics. Because of these shared characteristics, it is possible for many projects to be eligible and considered for multiple programs using a single application.

This notice seeks comments on the proposed information collection, which will collect information necessary to support the ongoing oversight and administration of previous awards, a Letter of Intent screening tool, the evaluation and selection of new applications, the funding agreement negotiation stage for new awards, and the evaluation of the programs. The reporting requirements for the program is as follows:

Prior to applying, a project sponsor may fill out a “Letter of Intent” screening tool to help determine eligibility for one or both programs

within the RCN NOFO or help direct them to a more appropriate grant program.

To be considered to receive an RCN grant, a project sponsor must submit an application to DOT containing a project narrative, as detailed in the NOFO. The project narrative should include the information necessary for the Department to determine that the project satisfies eligibility requirements as warranted by law.

After the award announcement the Department will send out a voluntary survey to all applicants and webinar participants to help evaluate the application process.

Following the announcement of a funding award, the recipient and DOT will negotiate and sign a funding agreement with awardees. In the agreement, the recipient must describe the project that DOT agreed to fund, which is the project that was described in the RCN application or a reduced-scope version of that project. The agreement also includes project schedule milestones, a budget, and project-related climate change, equity, and workforce planning and policies.

During the project monitoring stage, grantees will submit reports on the financial condition of the project and the project’s progress. Grantees will submit progress and monitoring reports to the Government on a quarterly basis until completion of the project. The progress reports will include an SF-425, Federal Financial Report, and other information determined by the administering DOT Operating Administration. This information will be used to monitor grantees’ use of Federal funds, ensuring accountability and financial transparency in the RCN programs.

For Post Construction Reporting, the DOT will evaluate the program for recipients of capital construction grants and include the outcomes and impacts of the highway removal project. The report will document any changes in the overall level of mobility, congestion, access, and safety in the project area, and environmental impacts and economic development opportunities in the project area. Performance reporting continues for several years after project construction is completed in which DOT will not provide grant funding specifically for performance reporting.

For the purposes of estimating the information collection burden below for new applicants and awardees, the Department is assuming that for each year 2023–2025, the Department will review approximately 1,000 applications and negotiate 100 funding agreements. Quarterly project

monitoring will also exist for the 45 RCP breakdown of burden hours, please see projects awarded in FY22. For a detailed Table 1.

TABLE 1

Respondent	Year 1 (2023)			Year 2 (2024)			Year 3 (2025)			Total hrs.
	#	Hrs.	Freq.	#	Hrs.	Freq.	#	Hrs.	Freq.	
Letter of Intent ...	600	0.5	1							300
Applicants	1,000	100	1							100,000
Survey	700	0.5	1							350
Awardee Fund- ing Agree- ments				100	6	1				600
Quarterly Moni- toring (2022) ..	45	5	4							900
Letter of Intent ...				600	0.5	1				300
Applicants				1,000	100	1				100,000
Survey				700	0.5	1				350
Awardee Fund- ing Agree- ments							100	6	1	600
Quarterly Moni- toring (2022 & 2023)				145	5	4				2,900
Letter of Intent ...							250	0.5	1	125
Applicants							435	100	1	43,500
Survey							300	0.5	1	150
Awardee Fund- ing Agree- ments										
Quarterly Moni- toring (2022, 2023, 2024) ...							245	5	4	4,900
Grand Total										254,975

The Department's estimated burden for this information collection is the following:

For Letter of Intent Screening Tool

Expected Number of Respondents:
Approximately 600 in Year 1 and 2. DOT expects 250 in Year 3 with depletion of NAE funding by then, reducing those using the tool.

Frequency: Once.
Estimated Average Burden per Response: .5 hours.

For New Applications

Expected Number of Respondents:
Approximately 1,000 in Year 1 and 2. 435 are expected for Year 3 with depletion of NAE funding.

Frequency: Once.
Estimated Average Burden per Response: 100 hours for each new Application;

For Program Evaluation (Survey)

Expected Number of Respondents:
Approximately 700 in Year 1 and 2. 300 in Year 3.

Frequency: Once.
Estimated Average Burden per Response: 0.5 hours for each application;

For Funding Agreements

Expected Number of Respondents:
Approximately 100 in Year 1 and 2.

Frequency: Once.
Estimated Average Burden per Response: 6 hours for each new Funding Agreement;

For Quarterly Project Monitoring

Expected Number of Respondents:
Approximately 45 in Year 1. 100 in Year 2 and Year 3.

Frequency: Quarterly.
Estimated Average Burden per Response: 5 hours for each request for Quarterly Progress and Monitoring Report;

For Post-Construction Project Monitoring

Because RCN expect no projects to complete construction by 2025, post-construction monitoring hours and cost are not computed in this document.

Estimated Total 3-Year Burden on Respondents: 254,975 Hours

- Letter of Intent [825 hrs]
- New Applicants [242,000 hrs]
- Survey [850 hrs]
- New Awardee Funding Agreements [1,200 hrs]
- Prior Awardee Quarterly Project Monitoring [8,700]

The following is detailed information and instructions regarding the specific reporting requirements for each report identified above:

Letter of Intent Screening Stage

To help applicants determine their eligibility for the RCN combined grant opportunity, OST will develop and use the "Letter of Intent" tool to help applicants determine eligibility for the programs or what application materials they may be missing. The Letter of Intent screening tool will save potential applicants hundreds of hours of application development time if the project has a "fatal flaw" that would render it ineligible. The Letter of Intent tool will consist of 10–20 questions and takes .5 hrs to fill out.

Application Stage

To be considered to receive a RCN grant, a project sponsor must apply to DOT containing a project narrative, as detailed in the NOFO. The project narrative should include the information necessary for the Department to determine that the project satisfies eligibility requirements.

Applications must be submitted through www.valideval.com. Instructions for submitting Planning or Capital applications can be found at https://usg.valideval.com/teams/rcn_planning/signup or https://usg.valideval.com/teams/rcn_capitalconstruction/signup, respectively. The application must

include the Standard Form 424 (Application for Federal Assistance), Standard Form 424C (Budget Information for Construction Programs), cover page, and the Project Narrative.

The application should include a table of contents, maps, and graphics, as appropriate, to make the information easier to review. The Department recommends that the application be prepared with standard formatting preferences (*i.e.*, a single-spaced document, using a standard 12-point font such as Times New Roman, with 1-inch margins). The only substantive portions that may exceed the page limit are documents supporting assertions or conclusions made in the project narrative. If possible, website links to supporting documentation should be provided rather than copies of these supporting materials. If supporting documents are submitted, applicants should clearly identify within the project narrative the relevant portion of the project narrative that each supporting document supports. At the applicant's discretion, relevant materials provided previously to a modal administration in support of a different USDOT financial assistance program may be referenced and described as unchanged.

OST estimates that it takes approximately 100 person-hours to compile an application package for a RCN application. Since OST expects to receive 1000 applications per funding round, the total hours required are estimated to be 50,000 hours (100 hours $\times$ 1,000 applications = 100,000 hours) on a one-time basis, per funding round.

Program Evaluation Stage (Survey)

To understand the RCN grant process from the applicant's point of view, OST plans to send out a survey after all award decisions have been made. This survey will go to all applicants, both successful and unsuccessful, and will take approximately .5 hours to complete.

Funding Agreement Stage

DOT enters a funding agreement with each recipient. In the agreement, the recipient describes the project that DOT agreed to fund, which is typically the project that was described in the RCN application or a reduced-scope version of that project. The agreement also includes a project schedule, budget, and project related climate change and equity planning and policies.

OST estimates that it takes approximately 6 person-hours to respond to provide the information necessary for funding agreements. Based on previous rounds of RCN awards, OST

estimates that there will likely be 100 agreements negotiated per additional funding round. The total hours required are estimated to be 600 (6 hours $\times$ 100 agreements = 600 hours) on a one-time basis, per funding round.

Project Monitoring Stage

OST requires each recipient to submit quarterly reports during the project to ensure the proper and timely expenditure of federal funds under the grant.

The requirements comply with 2 CFR part 200 and are restated in the funding agreement. During the project monitoring stage, the grantee will complete Quarterly Progress Reports to allow DOT to monitor the project budget and schedule.

OST estimates that it takes approximately 5 person-hours to develop and submit a quarterly progress report. OST awarded 45 recipients and awardees in 2022. OST expects approximately 100 projects to be awarded per funding round.

Post Construction Monitoring Stage

For Post Construction Reporting, the DOT will evaluate the program for recipients of capital construction grants and include the outcomes and impacts of the highway removal project. The report will document any changes in the overall level of mobility, congestion, access, and safety in the project area, and environmental impacts and economic development opportunities in the project area. Because RCN expect no projects to complete construction by 2025, post-construction monitoring hours and cost are not computed in this document.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; and 49 CFR 1:48.

Issued in Washington, DC, on August 31st, 2023.

John Augustine,

Director of the Office of Infrastructure Finance and Innovation, Office of the Under Secretary for Transportation Policy.

BILLING CODE 4910-9X-P

DEPARTMENT OF THE TREASURY

Bureau of the Fiscal Service

Proposed Collection of Information: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995. Currently the Bureau of the Fiscal Service within the Department of the Treasury is soliciting comments concerning the Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

DATES: Written comments should be received on or before November 6, 2023 to be assured of consideration.

ADDRESSES: Direct all written comments and requests for additional information to Bureau of the Fiscal Service, Bruce A. Sharp, Room #4006-A, P.O. Box 1328, Parkersburg, WV 26106-1328, or bruce.sharp@fiscal.treasury.gov.

SUPPLEMENTARY INFORMATION:

Title: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

OMB Number: 1530-0023.

Abstract: The Bureau of the Fiscal Service conducts various surveys, focus groups, and interviews to assess the effectiveness and efficiency of existing products and services; to obtain knowledge about the potential public audiences attracted to new products being introduced; and to measure awareness and appeal of efforts to reach audiences and customers.

Current Actions: Extension of a currently approved collection.

Type of Review: Regular.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 75,000.

Estimated Time per Respondent: 8 minutes.

Estimated Total Annual Burden Hours: 10,000.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: 1. Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; 2. the accuracy of the agency's estimate of the burden of the collection of information; 3. ways to enhance the quality, utility, and clarity of the information to be collected; 4. ways to minimize the burden of the collection of information on respondents, including through the use

of automated collection techniques or other forms of information technology; and 5. estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Dated: August 30, 2023.

No. 171

September 6, 2023

Part II

Department of Energy

Federal Energy Regulatory Commission

18 CFR Part 35

Improvements to Generator Interconnection Procedures and Agreements;
Final Rule

DEPARTMENT OF ENERGY

Federal Energy Regulatory
Commission

18 CFR Part 35

[Docket No. RM22–14–000; Order No. 2023]

Improvements to Generator
Interconnection Procedures and
AgreementsAGENCY: Federal Energy Regulatory
Commission, Department of Energy.

ACTION: Final rule.

SUMMARY: The Federal Energy Regulatory Commission (Commission or FERC) is adopting reforms to its *pro forma* Large Generator Interconnection Procedures, *pro forma* Small Generator Interconnection Procedures, *pro forma* Large Generator Interconnection Agreement, and *pro forma* Small Generator Interconnection Agreement to address interconnection queue backlogs, improve certainty, and prevent undue discrimination for new technologies. The reforms are intended to ensure that the generator interconnection process is just, reasonable, and not unduly discriminatory or preferential.

DATES: This final rule is effective November 6, 2023.

I. Introduction

1. This final rule requires all public utility transmission providers to adopt revised *pro forma* Large Generator Interconnection Procedures (LGIP), *pro forma* Small Generator Interconnection Procedures (SGIP), *pro forma* Large Generator Interconnection Agreements (LGIA), and *pro forma* Small Generator Interconnection Agreements (SGIA).¹

¹ Section 201(e) of the Federal Power Act (FPA) defines “public utility” to mean “any person who owns or operates facilities subject to the jurisdiction of the Commission under this subchapter.” 16 U.S.C. 824(e). A non-public utility that seeks voluntary compliance with the reciprocity condition of a tariff may satisfy that condition by filing a tariff, which includes the *pro forma* LGIP, the *pro forma* SGIP, the *pro forma* LGIA, and the *pro forma* SGIA. See *Standardization of Generator Interconnection Agreements & Procs.*, Order No. 2003, 68 FR 49846 (Aug. 19, 2003), 104 FERC ¶ 61,103, at PP 1, 616 (2003), *order on reh’g*, Order No. 2003–A, 69 FR 15932 (Mar. 5, 2004), 106 FERC ¶ 61,220, *order on reh’g*, Order No. 2003–B, 70 FR 265 (Jan. 19, 2005), 109 FERC ¶ 61,287 (2004), *order on reh’g*, Order No. 2003–C, 70 FR 37661 (July 18, 2005), 111 FERC ¶ 61,401 (2005), *aff’d sub nom.*

These revisions will ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, and will prevent undue discrimination.

2. Twenty years ago the Commission issued Order No. 2003, in which the Commission required all public utilities that own, control, or operate facilities used for transmitting electric energy in interstate commerce to have on file standard procedures and a standard agreement for interconnecting generating facilities larger than 20 megawatts (MW) (called the *pro forma* LGIP and the *pro forma* LGIA).² The Commission stated its expectation that the changes would prevent undue discrimination, preserve reliability, increase energy supply, and lower wholesale prices for customers by increasing the amount and variety of new generation that would compete in the wholesale electricity market.³ The Commission further stated that the standard procedures would facilitate market entry for generation competitors by reducing interconnection costs and time.⁴ In Order No. 2006, the Commission adopted standard procedures and a standard agreement for interconnecting generating facilities no larger than 20 MW (called the *pro forma* SGIP and the *pro forma* SGIA), citing the same purposes outlined in Order No. 2003.⁵

3. The electricity sector has transformed significantly since the issuance of Order Nos. 2003 and 2006. The growth of new resources seeking to interconnect to the transmission system and the differing characteristics of those resources have created new challenges for the generator interconnection process. These new challenges are creating large interconnection queue

Nat’l Ass’n of Regul. Util. Comm’rs v. FERC, 475 F.3d 1277 (D.C. Cir. 2007) (*NARUC v. FERC*). As stated in the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIA, transmission provider “shall mean the public utility (or its designated agent) that owns, controls, or operates transmission or distribution facilities used for the transmission of electric energy in interstate commerce and provides transmission service under the [Transmission Provider’s Tariff]. The term . . . should be read to include the Transmission Owner when the Transmission Owner is separate from the Transmission Provider.” *Pro forma* LGIP section 1; *pro forma* LGIA art. 1; *pro forma* SGIP attach. 1; *pro forma* SGIA attach. 1.

² Order No. 2003, 104 FERC ¶ 61,103 at P 2.

³ *Id.* P 1.

⁴ *Id.* P 12.

⁵ *Standardization of Small Generator Interconnection Agreements & Procs.*, Order No. 2006, 111 FERC ¶ 61,220, at PP 15, 35–36, *order on reh’g*, Order No. 2006–A, 70 FR 71760 (Dec. 30, 2005), 113 FERC ¶ 61,195 (2005), *order granting clarification*, Order No. 2006–B, 71 FR 42587 (July 27, 2006), 116 FERC ¶ 61,046 (2006).

backlogs and uncertainty regarding the cost and timing of interconnecting to the transmission system, increasing costs for consumers. Backlogs in the generator interconnection process, in turn, can create reliability issues as needed new generating facilities are unable to come online in an efficient and timely manner. While the Commission recognized these issues and sought to address them in Order No. 845,⁶ it is clear that further action is needed. Therefore, we believe that it is necessary to reform the Commission's standard interconnection procedures and agreements to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, thereby ensuring that rates, terms, and conditions for Commission-jurisdictional services are just, reasonable, and not unduly discriminatory or preferential.

4. Accordingly, we adopt reforms to the Commission's *pro forma* LGIP and *pro forma* LGIA. Specifically, as explained in detail in this final rule, we adopt reforms to: (1) implement a first-ready, first-served cluster study process;⁷ (2) increase the speed of interconnection queue processing; and (3) incorporate technological advancements into the interconnection process.

5. First, in order to implement a first-ready, first-served cluster study process, this final rule requires: (1) transmission providers to publicly post available information pertaining to generator interconnection; (2) transmission providers to use cluster studies as the interconnection study method; (3) transmission providers to allocate cluster study costs on a pro rata and per capita basis; (4) transmission providers to allocate network upgrade costs based on a proportional impact method; (5) interconnection customers to pay study

and commercial readiness deposits as part of the cluster study process; (6) interconnection customers to demonstrate site control at the time of submission of the interconnection request; and (7) transmission providers to impose withdrawal penalties on interconnection customers for withdrawing from the interconnection queue, with certain exceptions. We also require transmission providers to adopt a transition process to move from the existing serial interconnection process to the new cluster study process.

6. Second, in order to increase the speed of interconnection queue processing, this final rule: (1) eliminates the reasonable efforts standard for conducting interconnection studies and imposes a financial penalty on transmission providers that fail to meet interconnection study deadlines; and (2) establishes an affected system study process and associated *pro forma* affected system agreements.

7. Third, in order to incorporate technological advancements into the interconnection process, this final rule requires transmission providers to: (1) allow more than one generating facility to co-locate on a shared site behind a single point of interconnection and share a single interconnection request; (2) evaluate the proposed addition of a generating facility at the same point of interconnection prior to deeming such an addition a material modification if the addition does not change the originally requested interconnection service level; (3) allow interconnection customers to access the surplus interconnection service process once the original interconnection customer has an executed LGIA or requests the filing of an unexecuted LGIA; (4) use operating assumptions in interconnection studies that reflect the proposed charging behavior of an electric storage resource; and (5) evaluate the list of alternative transmission technologies enumerated in this final rule during the generator interconnection study process. This final rule also requires interconnection customers requesting to interconnect a non-synchronous generating facility to: (1) provide the transmission provider with the models needed for accurate interconnection studies; and (2) have the ability to maintain power production at pre-disturbance levels and provide dynamic reactive power to maintain system voltage during transmission system disturbances and within physical limits. Finally, this final rule requires that all newly interconnecting large generating facilities provide ride through capability consistent with any standards and

guidelines that are applied to other generating facilities in the balancing authority area on a comparable basis.

8. We also adopt reforms to the *pro forma* SGIP and *pro forma* SGIA. Specifically, as explained in detail in this final rule, for small generating facilities we propose reforms to incorporate the enumerated alternative transmission technologies into the interconnection process, and to provide modeling and ride through requirements for non-synchronous generating facilities.

9. Many of the reforms adopted in this final rule track the notice of proposed rulemaking's⁸ (NOPR) proposed reforms closely. However, as discussed more fully below, we have revised aspects of the reforms pertaining to the cluster study process, allocation of cluster study and network upgrade costs, increased financial commitments and readiness requirements, financial penalties for delayed interconnection studies, the affected system study process, *pro forma* affected system agreements, the material modification process, operating assumptions for interconnection studies, incorporating the enumerated alternative transmission technologies, and ride through requirements. Additionally, as discussed more fully below, we decline to adopt the NOPR proposals pertaining to informational interconnection studies, shared network upgrades, the optional resource solicitation study, and the alternative transmission technologies annual report.

10. We recognize that transmission providers have undertaken efforts to address interconnection queue management issues. This final rule is not intended to divert or slow the potential progress represented by those efforts, and we encourage transmission providers to continue to innovate to remedy their identified interconnection queue management issues. We note that the compliance obligations that result from this final rule will be evaluated in light of the independent entity variation standard for regional transmission organizations (RTO) and independent system operators (ISO) and the consistent with or superior to standard for non-RTO/ISO transmission providers.⁹

A. Historical Framework: Order Nos. 2003, 2006, and 845

11. In Order No. 2003, the Commission recognized a need for a

⁸ *Improvements to Generator Interconnection Procs. & Agreements*, 87 FR 39934 (July 5, 2022), 179 FERC ¶ 61,194 (2022) (NOPR).

⁹ Order No. 2003, 104 FERC ¶ 61,103 at P 26; see *infra* section IV.

⁶ See *Reform of Generator Interconnection Procs. & Agreements*, Order No. 845, 83 FR 21342 (May 9, 2018), 163 FERC ¶ 61,043, at P 24 (2018), *order on reh'g*, Order No. 845-A, 84 FR 8156 (Mar. 6, 2019) 166 FERC ¶ 61,137, *order on reh'g*, Order No. 845-B, 168 FERC ¶ 61,092 (2019).

⁷ A first-ready, first-served cluster study process improves efficiency in the interconnection study process by including the following elements: increased access to information prior to entering the queue; a mechanism to study interconnection requests in groups where all interconnection requests in the group are equally queued and of equal study priority; and increased financial commitments and readiness requirements to enter and proceed through the queue. In contrast, the existing first-come, first-served serial study process in the *pro forma* LGIA and LGIP provides limited information to interconnection customers prior to entering the queue, assigns interconnection requests an individual queue position based solely on the date of entry into the queue, and contains limited financial and readiness requirements.

standard set of interconnection procedures for transmission providers and a single, uniformly applicable interconnection agreement for large generating facilities.¹⁰ The Commission noted that generator interconnection is a “critical component of open access transmission service and thus is subject to the requirement that utilities offer comparable service under the [*pro forma* open access transmission tariff (tariff)].”¹¹ The Commission found that it was appropriate to establish a standard set of generator interconnection procedures to “minimize opportunities for undue discrimination and expedite the development of new generation, while protecting reliability and ensuring that rates are just and reasonable.”¹² To this end, the Commission adopted the *pro forma* LGIP and *pro forma* LGIA and amended its regulations to require all transmission providers to incorporate these standard procedures and agreement into their tariffs.¹³

12. To initiate the generator interconnection process set forth in the Commission’s *pro forma* LGIP,¹⁴ the interconnection customer submits an interconnection request for its proposed generating facility that includes preliminary documentation of the site of the proposed generating facility, certain technical information about the proposed generating facility, and the expected commercial operation date of the proposed generating facility, along with a refundable deposit of \$10,000.¹⁵ After the transmission provider determines that the interconnection request is complete, the interconnection request enters the transmission provider’s interconnection queue with other pending interconnection requests and is assigned a queue position based on the time and date of its receipt.¹⁶ The queue position determines the order in which the transmission provider studies

the interconnection requests in its interconnection queue.¹⁷

13. Transmission providers must schedule a scoping meeting with the interconnection customer to discuss possible points of interconnection for the proposed generating facility and exchange technical information, which is followed by a series of interconnection studies to evaluate the proposed interconnection in detail.¹⁸ Transmission providers study interconnection requests in three phases: (1) the interconnection feasibility study (feasibility study);¹⁹ (2) the interconnection system impact study (system impact study);²⁰ and (3) the interconnection facilities study (facilities study).²¹ These studies contain the power flow, short circuit, and stability analyses necessary to: (1) identify any adverse impacts on the transmission providers’ transmission system or any affected systems;²² (2) determine the interconnection facilities and network upgrades²³ needed to

reliably interconnect the generating facility; and (3) estimate the interconnection customer’s cost responsibility for these facilities.²⁴ The *pro forma* LGIP requires that transmission providers use reasonable efforts to complete: (1) feasibility studies within 45 calendar days; (2) system impact studies within 90 calendar days; and (3) facilities studies within 90 or 180 calendar days, depending on the interconnection customer’s requested accuracy margin.²⁵

14. At the completion of the facilities study, the *pro forma* LGIP requires the transmission provider to issue a report on the best estimate of the costs to effectuate the requested interconnection and provide a draft generator interconnection agreement to the interconnection customer.²⁶ If the interconnection customer wishes to proceed, after negotiations, the interconnection customer enters into a generator interconnection agreement with the transmission provider or, in specific circumstances, requests that the transmission provider file the agreement with the Commission unexecuted.²⁷ The transmission provider is responsible for the construction of all network upgrades, but, as further discussed below, the interconnection customer has the option to build these facilities in certain circumstances.²⁸

15. Similar to Order No. 2003, in Order No. 2006, the Commission recognized the need for standardized

interconnection of the Large Generating Facility to the Transmission Provider’s Transmission System.” *Pro forma* LGIP section 1; *pro forma* LGIA art. 1.

²⁴ Order No. 2003, 104 FERC ¶ 61,103 at PP 35–37; *pro forma* LGIP sections 6–8. The interconnection customer is responsible for the actual costs of interconnection studies and any necessary restudies. *Pro forma* LGIP section 13.3.

²⁵ *Pro forma* LGIP sections 6.3, 7.4, 8.3.

²⁶ Order No. 2003, 104 FERC ¶ 61,103 at P 38. Section 11.1 of the *pro forma* LGIP requires the transmission provider to tender a draft LGIA to the interconnection customer “in the form of Transmission Provider’s FERC-approved standard form LGIA.”

²⁷ If the transmission provider and interconnection customer execute an LGIA that conforms to the transmission provider’s Commission-approved standard form LGIA, the agreement does not need to be filed with the Commission (if the transmission provider has such a standard form LGIA on file and submits an Electronic Quarterly Report). Alternatively, the transmission provider must file an LGIA with the Commission for review and approval if: (1) the interconnection customer determines that negotiations with the transmission provider over the terms of an LGIA are at an impasse and requests submission of the unexecuted LGIA with the Commission; or (2) the LGIA does not conform to the transmission provider’s Commission-approved standard form LGIA. See Order No. 2003–A, 106 FERC ¶ 61,220 at P 201; *pro forma* LGIP sections 11.2–11.3.

²⁸ Order No. 2003, 104 FERC ¶ 61,103 at PP 351–354; *pro forma* LGIA art. 5.1.3.

¹⁷ *Id.*

¹⁸ Order No. 2003, 104 FERC ¶ 61,103 at P 36; *pro forma* LGIP sections 3.4.4, 6–8.

¹⁹ The *pro forma* LGIP defines a feasibility study as “a preliminary evaluation of the system impact and cost of interconnecting the Generating Facility to the Transmission Provider’s Transmission System.” The scope of a feasibility study is described in section 6 of the *pro forma* LGIP. *Pro forma* LGIP sections 1, 6.

²⁰ The *pro forma* LGIP defines a system impact study as “an engineering study that evaluates the impact of the proposed interconnection on the safety and reliability of Transmission Provider’s Transmission System and, if applicable, an Affected System.” In particular, a system impact study identifies and details “the system impacts that would result if the Generating Facility were interconnected without project modifications or system modifications, focusing on the Adverse System Impacts identified in the [feasibility study], or to study potential impacts, including but not limited to those identified in the Scoping Meeting.” *Id.* section 1.

²¹ The *pro forma* LGIP defines a facilities study as “a study conducted by the Transmission Provider or a third-party consultant for the Interconnection Customer to determine a list of facilities (including Transmission Provider’s Interconnection Facilities and Network Upgrades as identified in the [system impact study]), the cost of those facilities, and the time required to interconnect the Generating Facility with the Transmission Provider’s Transmission System.” The scope of a facilities study is described in section 8 of the *pro forma* LGIP. *Id.* sections 1, 8.

²² The *pro forma* LGIP defines an affected system as an electric system other than the transmission provider’s transmission system that may be affected by the proposed interconnection. *Id.* section 1; *pro forma* LGIA art. 1.

²³ For purposes of this final rule, unless otherwise noted, “network upgrades” refer to interconnection-related network upgrades. More specifically, the *pro forma* LGIP and *pro forma* LGIA provide that, “Network Upgrades shall mean the additions, modifications, and upgrades to the Transmission Provider’s Transmission System required at or beyond the point at which the Interconnection Facilities connect to the Transmission Provider’s Transmission System to accommodate the

¹⁰ Order No. 2003, 104 FERC ¶ 61,103 at P 11. Large generating facilities are defined to mean “a Generating Facility having a Generating Facility Capacity of more than 20 MW.” *Pro forma* LGIP section 1.

¹¹ Order No. 2003, 104 FERC ¶ 61,103 at P 9 (citing *Tenn. Power Co.*, 90 FERC ¶ 61,238 (2000)).

¹² *Id.* P 11.

¹³ 18 CFR 35.28(f)(1) (2022).

¹⁴ While we provide a broad description of the process in the Commission’s *pro forma* LGIP as background here, we recognize that many transmission providers have adopted (and the Commission has accepted) variations to many of the terms in the Commission’s *pro forma* LGIP and *pro forma* LGIA. Consequently, some or many of the details of a particular transmission provider’s generator interconnection procedures may vary considerably from the broad description provided here.

¹⁵ Order No. 2003, 104 FERC ¶ 61,103 at P 35; *pro forma* LGIP sections 3.1, 3.4.

¹⁶ *Pro forma* LGIP section 4.1.

interconnection procedures and agreements for small generating facilities with a capacity of 20 MW or less.²⁹ In addition to establishing a *pro forma* interconnection study process for small generating facilities similar to the process for large generating facilities established in Order No. 2003, the Commission included: (1) a “fast track process”³⁰ that uses technical screens to evaluate a certified small generating facility no larger than 2 MW; and (2) a “10 [kilowatt (kW)] inverter process”³¹ that uses the same technical screens to evaluate a certified inverter-based small generating facility no larger than 10 kW.³² The Commission later issued Order No. 792,³³ in which the Commission revised the *pro forma* SGIP and *pro forma* SGIA to provide for interconnection customers to receive point of interconnection information in advance of submitting an interconnection request, increase the threshold for participation in the fast track process to five MW, and to specifically include electric storage devices.³⁴

16. In response to concerns voiced to the Commission about interconnection queue management, in 2007, the Commission held a technical conference,³⁵ and later issued an order³⁶ addressing interconnection queue issues in RTOs/ISOs. In the order, the Commission noted that some transmission providers were not processing their interconnection queues within the timelines established in the *pro forma* LGIP, and in certain cases, were greatly exceeding them.³⁷ The Commission stated that, although it “may need to [impose solutions] if the RTOs and ISOs do not act themselves,” each RTO/ISO would have an opportunity to work with its stakeholders to develop its own solutions.³⁸ As further discussed below, following the order, multiple RTOs/ISOs submitted queue reform proposals to the Commission, some of which moved away from a so-called “first-come, first-served” approach (whereby

interconnection requests are processed in the order they are received) to a so-called “first-ready, first-served” approach (whereby interconnection requests are processed based on when interconnection customers meet certain project development milestones).³⁹ The reason for this move was to allow interconnection customers with interconnection requests for generating facilities more likely to achieve commercial operation to move faster instead of being delayed by interconnection requests that were higher in the interconnection queue but making limited or no progress towards commercial operation and creating unreasonable queue delays.

17. In 2018, the Commission issued Order No. 845, in which the Commission made the most comprehensive revisions to the *pro forma* LGIP and *pro forma* LGIA since their adoption in Order No. 2003. In Order No. 845, the Commission concluded that reforms to the *pro forma* LGIP and *pro forma* LGIA were needed to mitigate concerns regarding systemic inefficiencies, remedy discriminatory practices, and address recent developments, including changes in the resource mix and emergence of new technologies.⁴⁰ The Commission therefore adopted reforms designed to improve certainty for interconnection customers, promote more informed interconnection decisions, and enhance the generator interconnection process.⁴¹

B. Regional Transmission Planning and Cost Allocation and Generator Interconnection Advance Notice of Proposed Rulemaking

18. On July 15, 2021, the Commission issued an advance notice of proposed rulemaking (ANOPR) in Docket No. RM21–17–000, presenting potential reforms to the Commission’s requirements governing the regional transmission planning and cost allocation and generator interconnection processes.⁴² Specific to the generator interconnection process, the Commission sought comment on whether and which reforms may be necessary to ensure a more purposeful integration of the generator interconnection process with the regional transmission planning and cost

allocation processes, establish a faster and more efficient interconnection queueing process, and promote a more efficient and cost-effective allocation of network upgrade costs.⁴³ For instance, the Commission noted that the cost of network upgrades can depend largely on both the timing of when the interconnection customer enters the interconnection queue and where the interconnection customer proposes to interconnect its generating facility. Therefore, the Commission noted, interconnection customers may submit multiple interconnection requests in an effort to determine the most favorable point of interconnection⁴⁴ that minimizes their network upgrade costs.⁴⁵ The Commission stated that this practice, in turn, may lead to late-stage withdrawals of the excess interconnection requests, which can then impede the transmission provider’s ability to process its interconnection queue in an efficient manner. As a result, the Commission stated that it may be time to consider reforms to the generator interconnection process that would make it more efficient and ensure that generating facilities that are more “ready” than others are not unduly delayed in the interconnection queue.

19. On April 21, 2022, the Commission issued a notice of proposed rulemaking (Transmission Planning and Cost Allocation NOPR) proposing reforms to its existing regional transmission planning and cost allocation requirements in the same proceeding as it issued the ANOPR.⁴⁶ While the Transmission Planning and Cost Allocation NOPR did not address many of the concerns raised by the Commission in the ANOPR with respect to the generator interconnection queue process, the Commission noted in the Transmission Planning and Cost Allocation NOPR that it would continue to review the record and that it expected to address possible inadequacies through subsequent proceedings that propose reforms, as warranted, related to that topic.⁴⁷ The Commission took that next step with the reforms proposed

in the NOPR in this proceeding, many of which we adopt in this final rule.

C. Notice of Proposed Rulemaking

20. On June 16, 2022, the Commission issued the NOPR, proposing reforms focused on improving aspects of the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIA. The Commission also sought comment on, but did not propose, tariff revisions on other issues.

21. First, the Commission proposed reforms focused on improving interconnection processes to ensure interconnection customers can proceed in an efficient and timely manner.⁴⁸ Among those, the Commission proposed to: (1) require transmission providers to offer an optional informational interconnection study to serve as additional information for prospective interconnection customers in deciding whether to submit an interconnection request and set minimum requirements for transmission providers to publicly post available information pertaining to generator interconnection;⁴⁹ (2) require transmission providers to implement a first-ready, first-served cluster study process that allocates costs associated with cluster studies and identified network upgrades consistent with the discussion below;⁵⁰ and (3) impose more stringent financial commitments and readiness requirements on interconnection customers, including increased study deposits, more stringent site control requirements, a commercial readiness framework, and higher withdrawal penalties.⁵¹ To implement these reforms, the Commission also proposed to require transmission providers to establish a transition process.⁵²

22. Second, the Commission proposed three reforms to increase the speed of interconnection queue processing, including: (1) revisions to eliminate the reasonable efforts standard for interconnection study processing;⁵³ (2) revisions to establish an affected system study process, along with necessary *pro forma* affected system agreements;⁵⁴ and (3) revisions to establish an optional resource solicitation study.⁵⁵

23. Finally, the Commission proposed three reforms to incorporate technological advancements into the interconnection study process. With these reforms, the Commission

proposed to require transmission providers to: (1) increase flexibility in the generator interconnection process by allowing generating facilities to co-locate, allow the interconnection customer to request the addition of a generating facility to an existing interconnection request, increase the availability of surplus interconnection service, and allow interconnection customers to propose operating assumptions for their generating facilities;⁵⁶ (2) incorporate the enumerated alternative transmission technologies into the interconnection study process at the request of the interconnection customer;⁵⁷ and (3) list required modeling standards for inclusion in all interconnection requests that include inverter-based resources (IBRs), as well as require certain performance standards from IBRs during system disturbances.⁵⁸

24. In response to the NOPR, 189 comments were filed.⁵⁹ These comments have informed our determinations in this final rule.

D. Joint Federal-State Task Force on Electric Transmission

25. On June 17, 2021, the Commission established a Joint Federal-State Task Force on Electric Transmission (Task Force) to formally explore broad categories of transmission-related topics.⁶⁰ The Commission explained that the development of new transmission infrastructure implicated a host of different issues, including generator interconnection. The Task Force is comprised of all FERC Commissioners as well as representatives from 10 state commissions nominated by the National Association of Regulatory Utility Commissioners (NARUC), with two originating from each NARUC region.⁶¹ The Task Force convenes for multiple formal meetings annually, which are open to the public. Since its creation and as of the date of issuance of this final rule, the Task Force has met seven times.

26. The discussion at the May 2022 meeting focused on interconnection

issues, including generator interconnection queue processes and backlogs. The Task Force members discussed: the primary challenges preventing more efficient processing of interconnection queues; specific improvements to interconnection processes (such as tighter applicant requirements to enter and remain in the queue, clustering, fast tracking, tighter deadlines on transmission providers completing studies, and minimizing reiterative studies); and how to balance near-term improvements to the interconnection procedures with longer-term regional transmission planning and development.⁶²

II. Overall Need for Reform

A. NOPR

27. In the NOPR, the Commission noted that the serial first-come, first-served study process was adopted at a time when most interconnection requests were for large traditional generating facilities that would use readily available transmission capacity.⁶³ The Commission stated that the continued use of this process in the face of dramatic changes to the electric power industry, principally the surge in interconnection requests, the rapidly changing resource mix, evolving market forces, and the emergence of new technologies, has led to a growing backlog of interconnection requests and study delays for many transmission providers.⁶⁴ The Commission also stated that these interconnection queue backlogs and study delays create uncertainty and inhibit project developers' ability to interconnect generating facilities to the transmission system.⁶⁵ The Commission preliminarily found that the existing *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIA may be insufficient to ensure that new generating facilities are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner and to thereby ensure that rates, terms, and conditions for Commission-jurisdictional services are just, reasonable, and not unduly

⁶³ NOPR, 179 FERC ¶ 61,194 at P 18.

⁶⁴ *Id.* PP 18–20.

⁶⁵ *Id.* P 19 (citing *Joint Fed.-State Task Force on Elec. Transmission*, Technical Conference, Docket No. AD21–15–000, Tr. 15:21–16:1 (Ted Thomas) (May 6, 2022) (May Joint Task Force Tr.) (“Houston, we have a problem. As stated in the NARUC ANOPR comments, existing methods for interconnecting new resources to the transmission grid are inadequate and inefficient because of the time necessary to interconnect new resources and the corresponding network upgrade costs.”)).

discriminatory or preferential.⁶⁶ Further, because the interconnection queue backlogs and study delays afflicting generator interconnection service nationwide hinder the timely development of new generation and thereby stifle competition in the wholesale electric markets, the Commission also preliminarily found that the Commission's *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIA result in rates, terms, and conditions in the wholesale electric markets that are unjust, unreasonable, and unduly discriminatory or preferential.

28. The Commission stated that its preliminary findings were based on several features of the Commission's existing generator interconnection procedures and agreements that are of concern, specifically: (1) the information (or lack thereof) available to prospective interconnection customers and the commitments required of them to enter and progress through the interconnection queue; (2) the reliance on a serial first-come, first-served study process and the standard to which transmission providers are held for meeting interconnection study deadlines; (3) the protocols for affected systems studies; (4) the provisions for studying new or hybrid generation technologies and considering alternative transmission technologies; and (5) the performance requirements for non-synchronous generating facilities, including wind, solar, and electric storage facilities.⁶⁷

29. The Commission found that some of the same issues persist in the small generating facility context and, therefore, proposed limited reforms to the *pro forma* SGIP and *pro forma* SGIA to incorporate alternative transmission technologies into the interconnection process and to provide modeling and performance requirements for non-synchronous generating facilities.⁶⁸

B. Comments

30. The vast majority of commenters overwhelmingly agree with the

Commission's preliminary conclusion that there is a need to reform the Commission's *pro forma* interconnection procedures and agreements to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, thereby ensuring that rates, terms, and conditions for Commission-jurisdictional services are just, reasonable, and not unduly discriminatory or preferential.⁶⁹ These commenters generally agree that the unprecedented volume of generation in the interconnection queue, which is almost equal to the current U.S. generation fleet, has resulted in severe backlogs in interconnection processes across the country.⁷⁰ For example, the Ohio Commission Consumer Advocate states that "there is an urgent need to clear the current generator

interconnection queue backlog and to facilitate timely and economic interconnection of new resources in a way that responds to current and future market conditions."⁷¹ EEI recognizes that, despite many efforts underway across the country to fix individual transmission provider interconnection queue processes, there is still a need for the Commission to address backlogs and improve certainty in the interconnection queue process.⁷² Several commenters assert that these interconnection backlogs have resulted in commercial uncertainty regarding both the magnitude of identified upgrade costs and the timeline for completion of interconnection studies, delayed project development, increased costs for consumers due to the prevention of new supply from reaching the market, and impaired reliability.⁷³ Senators Hickenlooper and King note that, in the past decade, 23% of proposed generating facilities reached commercial operation, while 72% were withdrawn.⁷⁴ ELCON and APPA-LPPC both argue that uncertainty, on the part of both transmission provider and generator project developer, inevitably leads to an increase in costs to consumers.⁷⁵ U.S. DOE submits a recent report published by the Lawrence Berkeley National Laboratory, which finds that interconnection costs in MISO have escalated as the number of interconnection requests has increased.⁷⁶ Specifically, the report finds that interconnection costs in MISO doubled for projects completed between 2019–2021 compared to projects completed prior to 2018, and cost estimates tripled for projects still active in the queue between the same time periods. Some commenters agree that the existing interconnection rules in the *pro forma* LGIP and *pro forma* LGIA create an incentive for interconnection customers to submit interconnection requests even if they are not prepared to

⁷⁰ AEE Initial Comments at 3; Apple Initial Comments at 1; Bonneville Initial Comments at 3; Clean Energy Buyers Initial Comments at 3; Colorado Commission Initial Comments at 2, 8–11; EDF Renewables Initial Comments at 2; Evergreen Action Initial Comments at 1; Eversource Initial Comments at 2; Interwest Initial Comments at 1–2; NV Energy Initial Comments at 2–3; Ohio Commission Consumer Advocate Initial Comments at 3–4; Ørsted Initial Comments at 2; Senators Hickenlooper and King Initial Comments at 1–2; U.S. Chamber of Commerce Initial Comments at 5; UMPA Initial Comments at 1.

move forward with their projects, in order to secure a favorable position in the interconnection queue or in an attempt to obtain locations with available transmission capacity.⁷⁷ They assert that the withdrawal of each speculative interconnection request triggers reassessments and possible restudies by the transmission provider that can increase the timing and interconnection cost for lower-queued interconnection requests. Several commenters point to ambitious climate goals (such as the United States' commitment to reducing net greenhouse gas emissions by 50–52% by 2030 under the Paris Climate Agreement) and argue that: (1) these changes will likely spur greater investment in new generation and exacerbate the delays in processing interconnection requests; and/or (2) without an efficient and transparent interconnection process, none of the clean energy generating facilities intended to meet these goals can be effectively deployed.⁷⁸ Consumers Energy argues that delays in processing interconnection requests will exacerbate resource adequacy challenges.⁷⁹

31. A small subset of commenters, while supporting an overall need for reform, disagree with some of the Commission's preliminary conclusions about the need for reform.⁸⁰ A few other

commenters claim that there is no basis for the Commission's preliminary conclusion that speculative projects that enter the interconnection queue and later withdraw, causing cascading restudies, are responsible for interconnection queue backlogs.⁸¹ A few commenters assert that the Commission did not take into account pertinent factors affecting interconnection queue sizes, such as an increase in the development of smaller, more diverse generating facilities.⁸²

32. Three comments note that various transmission providers use vastly different interconnection procedures from the *pro forma* procedures established in Order No. 2003 and argue that there is an insufficient legal foundation under FPA section 206 to demonstrate that all of these approved interconnection procedures are unjust, unreasonable, and unduly discriminatory or preferential.⁸³ Southern disagrees entirely with the Commission's preliminary conclusion that there is a need for reform.⁸⁴ Southern argues that the Commission based its proposed actions in the NOPR on conjecture and thus failed to provide substantial evidence or engage in reasoned decision-making to demonstrate that the current interconnection processes are unjust and unreasonable.⁸⁵ In addition, Southern contends that the Commission's proposals are arbitrary and capricious because they impose a broadly applicable remedy to a problem that does not exist uniformly.⁸⁶

33. Southern further asserts that the Commission failed to provide any actual evidence that its proposals will reduce interconnection queue backlogs or increase certainty for interconnection customers.⁸⁷

34. Some commenters argue that the sum of the NOPR may actually slow

study processes, increase backlogs, and may unintentionally increase costs to ratepayers.⁸⁸ For example, CAISO asserts that shortening study timelines results in rushed, unreliable studies which would ultimately require more iteration and longer interconnection queue processing times.⁸⁹ Additionally, NextEra argues that the NOPR provides few, if any, solutions relevant to those regions that have already implemented cluster studies yet continue to experience significant study delays.⁹⁰ Further, some commenters oppose any generic one-size-fits-all reform, arguing that queue reform is best left to the regional level.⁹¹

35. Several commenters generally support the suite of proposed reforms in their entirety.⁹² As discussed in detail in each section below discussing individual reforms, most commenters either support specific proposals or suggest that the Commission prioritize certain proposed reforms. For instance, Consumers Energy supports reforms that increase the speed of interconnection queue processing because it claims that the reforms provide clarity for resource planners and interconnection customers as well as improve the reliability of the bulk electric system and the clean energy resource transformation.⁹³ Google urges the Commission to prioritize reforms that provide a level playing field for both utility-backed resources and independent power producer-developed resources.⁹⁴ Google also expresses concern that the layering of increased study deposits, more stringent site control requirements, the proposed commercial readiness requirements, and withdrawal penalties may place undue burden on interconnection customers if the Commission does not also adopt proposals for more publicly available interconnection information, firm study deadlines, and penalties for missed study deadlines.⁹⁵

36. Some commenters support adopting most or all of the limited

reforms to the *pro forma* SGIP and *pro forma* SGIA proposed in the NOPR.⁹⁶ For instance, Microgrid Resources asserts that including the proposed reforms in the *pro forma* SGIP is necessary to reflect the operating assumptions of, and to provide equitable treatment for, microgrids and other behind-the-meter resources.⁹⁷ Microgrid Resources asserts that, if the Commission succeeds in expediting interconnections for large generating facilities, while small generating facility interconnections languish, it will bias the system against smaller local generating facilities that are the backbone of community resilience.

C. Commission Determination

37. Based on the record, including comments submitted in response to the NOPR, as discussed below, we find that there is substantial evidence to support the conclusion that the existing *pro forma* generator interconnection procedures and agreements are unjust, unreasonable, and unduly discriminatory or preferential.⁹⁸ We therefore adopt the preliminary findings in the NOPR concerning the need for reform⁹⁹ and, pursuant to FPA section 206, conclude that certain revisions to the *pro forma* open access transmission tariff and the Commission's regulations are necessary to ensure rates that are just, reasonable, and not unduly discriminatory or preferential. Specifically, we find that the existing *pro forma* generator interconnection procedures and agreements are insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, thereby ensuring that rates, terms, and conditions for Commission-jurisdictional services are just, reasonable, and not unduly discriminatory or preferential. Absent reform, the current interconnection process will continue to cause interconnection queue backlogs, longer

development timelines, and increased uncertainty regarding the cost¹⁰⁰ and timing of interconnecting to the transmission system. These backlogs and delays, and the resulting timing and cost uncertainty,¹⁰¹ hinder the timely development of new generation and thereby stifle competition in the wholesale electric markets resulting in rates, terms, and conditions that are unjust, unreasonable, and unduly discriminatory or preferential.

38. Indeed, recent data support the Commission's preliminary findings in the NOPR that the dramatic increase in the number of interconnection requests and limited transmission capacity are increasing interconnection queue backlogs across all regions of the country.¹⁰² As of the end of 2022, there were over 10,000 active interconnection requests in interconnection queues throughout the United States, representing over 2,000 gigawatts (GW) of potential generation and storage capacity.¹⁰³ This potential generation is the largest interconnection queue size on record, more than four times the total volume (in GW) of the interconnection queues in 2010, and a 40% increase over the interconnection queue size from just the year prior.¹⁰⁴ These trends are not exclusive to any one region of the country. Instead, every single region has faced an increase in both interconnection queue size and the length of time interconnection customers are spending in the interconnection queue prior to commercial operation in recent years.¹⁰⁵ This is true for RTO/ISO and non-RTO/ISO regions alike. The non-RTO/ISO west and southeast regions both have faced queue size increases ranging from

tripling to a 12-fold increase while also seeing longer timelines between interconnection requests and commercial operation dates.¹⁰⁶ Furthermore, the uncertainty and delays in the interconnection queues have resulted in fewer than 25% of interconnection requests, by capacity, reaching commercial operation between 2000 and 2017 in any region of the country—with some regions as low as 8%.¹⁰⁷

39. Additionally, recent data continue to show that interconnection customers are waiting longer in the interconnection queue before withdrawing their interconnection requests,¹⁰⁸ even as overall interconnection study timelines are increasing in many regions.¹⁰⁹ For example, AEE states that, as of February 2022, all 2,274 projects waiting for an interconnection agreement in the PJM interconnection queue had been waiting for a year or more; 33% (758 projects) had been waiting more than 500 days, 22% (497 projects) have been stuck for more than two years, and 7% (166 projects) have been waiting more than three years.¹¹⁰ NV Energy explains that several western utilities that are not currently part of an RTO/ISO are experiencing an unprecedented high volume of requests in excess of the utility's peak load.¹¹¹ AEE notes that wait times for generating facilities in interconnection queues nationwide have increased from 2.1 years for generating facilities built in 2000–2010 to 3.7 years for those built in 2011–2021.¹¹² And despite efforts to address

¹⁰⁶ *Id.* at 9, 32.

¹⁰⁷ *Id.* at 3, 21.

¹⁰⁸ *Id.* at 25 (reporting that, although the median withdrawal duration has been relatively consistent over time, the mean withdrawal duration and distributions have edged higher in recent years).

¹¹⁰ AEE Initial Comments at 4 (citing Advanced Energy Economy, "In PJM, Renewable Energy Projects Are Getting Stuck" (February 2022), <https://blog.aee.net/in-pjm-renewable-energy-projects-are-getting-stuck>).

¹¹¹ NV Energy Initial Comments at 2–3. NV Energy explains that it has a peak load of 9,400 MW with an interconnection queue backlog for projects totaling more than 27,000 MW; Idaho Power has a peak load of 3,751 MW with an interconnection queue backlog of over 18,000 MW; PacifiCorp has a peak load of 13,000 MW with an interconnection queue backlog of over 45,000 MW; and APS has a peak load of 7,600 MW with an interconnection queue backlog of over 50,000 MW.

¹¹² AEE Initial Comments at 4 (citing Queued Up 2022); see also ACE–NY Initial Comments at 2 (arguing that the ability of New York to meet its clean energy goals is threatened by an interconnection process that is too slow); Affected System Interconnection Customers Initial Comments at 2 (stating that Affected System Interconnection Customers have navigated the generator interconnection queues of various

⁹⁶ Bonneville Initial Comments at 24 (supporting applying some of the Commission's proposed reforms to the *pro forma* SGIP and *pro forma* SGIA (e.g., commercial readiness requirements), but asking that transmission providers be granted flexibility to determine which reforms should be applicable to small generator procedures and agreements); IREC Initial Comments at 3 (stating that the *pro forma* SGIP lacks the necessary provisions to safely and reliably interconnect storage to the electric grid while enabling its unique operating characteristics); Microgrid Resources Initial Comments at 8–9; Xcel Initial Comments at 19 (supporting applying reforms to small generating facilities requesting energy only interconnection service).

⁹⁷ Microgrid Resources Initial Comments at 8–9.

⁹⁸ 16 U.S.C. 824e(a); 18 CFR 385.206 (2022).

⁹⁹ NOPR, 179 FERC ¶ 61,194 at PP 18–36.

¹⁰⁰ See May Joint Task Force Tr. 74:9–21 (Andrew French) (stating that generator developers complain principally about cost certainty and cost sharing and that "cost certainty is the much bigger issue" given that "an essential element of being able to sell a product is to know what your inputs are so you can market it").

¹⁰¹ See May Joint Task Force Tr. 23:18–25 (Jason Stanek) (expressing frustration with the status quo and agreement that it is "no longer tenable" considering the inability of generators to interconnect in a timely manner, e.g., there are "2,500 projects under study [in the MACRUC region] and about a half of them have been in the queue since at least 2001").

¹⁰² Joseph Rand et al., Lawrence Berkeley Nat'l Lab., *Queued Up: Characteristics of Power Plants Seeking Transmission Interconnection*, at 7–8 (Apr. 2023) (Queued Up 2023), https://emp.lbl.gov/sites/default/files/queued_up_2022_04-06-2023.pdf; see also Order No. 845, 163 FERC ¶ 61,043 at P 305 (requiring transmission providers to post interconnection study metrics). See appendix B to this final rule, which provides an overview of recent data based on reporting by transmission providers in compliance with Order No. 845.

¹⁰³ Queued Up 2023 at 7–8.

¹⁰⁴ *Id.* at 10.

¹⁰⁵ *Id.* at 9, 32.

these challenges,¹¹³ interconnection queue backlogs and delays have persisted and worsened. For generating facilities built in 2022, wait times in the interconnection queue saw a marked increase to now roughly five years.¹¹⁴

40. Delays in the interconnection study process are an important contributor to interconnection queue backlogs nationwide. For instance, based on the recent interconnection study metrics transmission providers posted in compliance with Order No. 845, of the 2,179 interconnection studies completed in 2022, 68% were issued late.¹¹⁵ Furthermore, at the end of 2022, an additional 2,544 studies were delayed (*i.e.*, ongoing and past their deadline).¹¹⁶ All of the RTOs/ISOs except CAISO and 14 non-RTO/ISO transmission providers reported delayed studies at the end of 2022.¹¹⁷

41. Consistent with the NOPR, we find that numerous factors have contributed to the increasing volume of interconnection requests, including a rapidly changing resource mix, market forces, and emerging technologies. For example, the interconnection queues in all parts of the country are now predominantly made up of comparatively new technologies that have operating characteristics and generally shorter construction cycles that were not taken into account when the Commission issued Order No. 2003, such as solar, battery storage, and

transmission providers around the country and experienced firsthand the inefficiencies and delays, which represent the greatest obstacle to achieving commercial operation of a new energy project); GSCE Initial Comments at 5–6 (contending that an average of 6,000 MW of new solar, wind, and batteries must be added each year until 2045 to reach California's electric sector carbon-neutrality requirement, but that over the past decade California has only succeeded with adding an average of 1,000 MW of utility-scale solar and 300 MW of wind to the transmission system each year).

¹¹³ Order No. 845, 163 FERC ¶ 61,043 at P 24.

¹¹⁴ Queued Up 2023 at 31; *see also* Shell Initial Comments at 6 (describing multiple instances of five to six years until execution of an interconnection agreement, four years waiting for an initial “kick-off” call, two years waiting for a feasibility study, three years waiting for a system impact study, and over two years waiting for a facilities study).

¹¹⁵ This is based on data provided by transmission providers in compliance with Order No. 845. See appendix B to this final rule for the underlying data. Note that data from SPP is omitted here and in follow-on references to Order No. 845 data in this determination. This is because during 2022, SPP was transitioning to a new interconnection study process, and thus its data is not comparable to the other transmission providers.

¹¹⁶ *Id.* Note that the vast majority of these studies (2,211) were in PJM.

¹¹⁷ *Id.* CAISO revised the interconnection study deadlines of their queue cluster 14 to account for the unprecedented increase in interconnection requests. *Cal. Indep. Sys. Operator Corp.*, 176 FERC ¶ 61,207 (2021).

hybrid resources, as older, larger generating facilities retire.¹¹⁸ The Colorado Commission notes that solar projects account for roughly half of the cumulative requests in the five RTO/ISO queues and likely an even greater percentage of the most recent requests.¹¹⁹ In addition to the drastic increase in the number of interconnection requests in all regions of the country, evidence shows that interconnection studies have increased in complexity since the Commission issued Order No. 2003, potentially straining transmission provider resources.¹²⁰ At the same time, we find that available transmission capacity has been largely or fully utilized in many regions, creating situations where interconnection customers face significant network upgrade cost assignments to interconnect their proposed generating facilities.¹²¹ For example, as referenced by the U.S. DOE, a recent report finds that interconnection costs in MISO doubled for generating facilities for which the interconnection studies were completed between 2019 and 2021 as compared to those completed prior to 2019, and cost estimates tripled for proposed generating facilities still active in the interconnection queue between the same time periods.¹²² These cost increases are similar to those being faced in NYISO and PJM, where interconnection costs, per kW, have doubled (or more) for recently completed generating facilities.¹²³ As a

¹¹⁸ Queued Up 2023 at 9; *see also* Colorado Commission Comments at 9 (stating that the growth of solar project interconnection requests is a significant cause of the overall supply and demand imbalance across all RTOs/ISOs as well as other regions).

result, we find that this combination of increased volume of diverse interconnection requests and insufficient transmission capacity leading to higher costs to interconnect, which can result in interconnection request withdrawals, has resulted in longer interconnection queue processing times and larger, more delayed interconnection queues.

42. In response to comments asserting that the Commission did not take into account other factors affecting interconnection queue sizes, such as the development of smaller, more diverse generating facilities, in its preliminary findings on the need for reform in the NOPR,¹²⁴ we find that the record shows that interconnection queue sizes are increasing in both number of interconnection requests and in total MW capacity in all regions of the country and such increases are not due to an influx of any particular size of proposed generating facility. Moreover, data show that the median duration for all generating facilities that enter the interconnection queue hovers around 30 months, independent of the size of the interconnection request.¹²⁵

43. Interconnection queue backlogs and delays have created uncertainty for interconnection customers regarding the timing and cost of ultimately interconnecting to the transmission system. We agree with commenters that such uncertainty, on the part of both transmission provider and interconnection customer, may lead to an increase in costs to consumers.¹²⁶ First, delayed interconnection study results or unexpected cost increases can disrupt numerous aspects of generating facility development.¹²⁷ Cost

from 2006 to 2016); Joachim Seel et al., *Interconnection Cost Analysis in the PJM Territory* (2023), <https://emp.lbl.gov/publications/interconnection-cost-analysis-pjm> (showing that costs for recent “complete” generating facilities have doubled on average relative to costs from 2000–2019).

¹²⁴ *See, e.g.*, Pine Gate Reply Comments at 4 (stating that “the days of . . . large, conventional resources are waning as the majority of interconnection requests are now comprised of smaller, more diverse resource” and that “[l]arger interconnection queues are, to a certain extent, a natural byproduct of this change”); SEIA Reply Comments at 1 (contending that interconnection requests have increased in number “because newer projects are smaller and have less capacity” and “[m]ore interconnection requests are needed to integrate the same amount of generation capacity into the grid”).

¹²⁵ Queued Up 2023 at 29.

¹²⁶ *See, e.g.*, Ameren Initial Comments at 2; ELCON Initial Comments at 2; Xcel Initial Comments at 8.

¹²⁷ *See, e.g.*, Interwest Initial Comments at 8 (contending that “[t]he harm to interconnection customers associated with interconnection study delays can be significant and costly, including

uncertainty poses an especially significant obstacle because interconnection customers may not be able to finance substantial increases in unexpected interconnection costs. Second, transmission providers may face uncertainty regarding the size and makeup of the interconnection queue and the commercial viability of the project in the interconnection queue, creating inefficiencies in the study process, increasing interconnection study costs, and delayed study results. Such uncertainty, either on the part of transmission providers or interconnection customers, are ultimately passed through to consumers through higher transmission or energy rates.¹²⁸ Increases in energy rates may result from wholesale customers having limited access to new and more competitive supplies of generation. Conversely, efficient interconnection queues and well-functioning wholesale markets deliver benefits to consumers by driving down wholesale electricity costs.

44. As the interconnection queue backlogs and study delays continue and even increase, we find that the Commission's existing rules contained in the *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIA result in rates, terms, and conditions for Commission-jurisdictional services that are unjust, unreasonable, and unduly discriminatory or preferential. Not only do the problems described above lead to an inability of interconnection customers to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner, they also hinder the timely development of new generation, thereby stifling competition in the wholesale electric markets. We, therefore, find that reform to the Commission's existing *pro forma* generator interconnection procedures and agreements is necessary.

45. Our findings that the existing *pro forma* LGIP, *pro forma* LGIA, *pro forma* SGIP, and *pro forma* SGIA must be reformed are based on the following features of these existing rules: (1) the information (or lack thereof) available to prospective interconnection customers and the commitments required of them to enter and progress through the interconnection queue; (2) the reliance on a serial first-come, first-served study process and the "reasonable efforts" standard that transmission providers are held to for meeting interconnection study deadlines; (3) the protocols (or lack thereof) for affected system studies;

(4) the provisions for studying new generating facility technologies and evaluating the list of alternative transmission technologies enumerated in this final rule; and (5) the modeling or performance requirements (or lack thereof) for non-synchronous generating facilities, including wind, solar, and electric storage facilities. We discuss each of these five features below.

46. First, we find that existing *pro forma* generator interconnection procedures and agreements fail to contain a process by which an interconnection customer can obtain information about potential interconnection costs at a specific location or point of interconnection prior to submitting an interconnection request. Without this information, it is difficult for interconnection customers to assess the commercial viability of a specific proposed generating facility prior to entering the interconnection queue.¹²⁹ Furthermore, we find that for interconnection customers, the *pro forma* interconnection procedures and agreements fail to include meaningful financial commitment requirements to enter and stay in the interconnection queue and lack of stringent requirements to establish the commercial viability of proposed generating facilities.¹³⁰ As a result, interconnection customers often submit multiple interconnection requests for proposed generating facilities at various points of interconnection, knowing that not all of the proposed generating facilities will reach commercial operation, as an exploratory mechanism to obtain information to allow the interconnection customer to choose to proceed with the interconnection request representing the most favorable site in terms of potential interconnection-related costs.¹³¹ For

¹²⁹ See, e.g., Fervo Energy Initial Comments at 2–3 (stating that "the incidence of interconnection applications simply intended to solicit information discovery from the transmission provider . . . is a significant defect in today's queue process"); Google Initial Comments at 4 (asserting that "there is extreme information asymmetry in the interconnection process," with transmission owners and their affiliates having greater access than independent power producers to information on the relative cost of interconnection at different points).

¹³⁰ See, e.g., Dominion Initial Comments at 4 (stating that "owners of speculative projects remain in the queue process for as long as they possibly can in the hopes that their project somehow becomes viable"); U.S. Chamber of Commerce Initial Comments at 5 (concurring with the NOPR that there is a "lack of stringent financial commitments and readiness requirements on interconnection customers").

¹³¹ See, e.g., Clean Energy Associations Initial Comments at 11 (stating that "[i]n most cases, customers must actually enter the queue to ascertain what upgrade costs they will be responsible for"); Clean Energy Buyers Initial

instance, recent interconnection study metrics posted by transmission providers continue to show that some interconnection customers are withdrawing interconnection requests before any studies are completed.¹³² While interconnection customers may withdraw at any stage of the interconnection process, to do so before any study is completed indicates that interconnection customers may lack information prior to entering the interconnection queue and are entering to obtain valuable information about the commercial viability of their proposed projects vis-à-vis other interconnection customers in the queue or cluster.

47. Second, the existing serial first-come, first-served study process in the *pro forma* LGIP requires transmission providers to process interconnection requests in the order in which the transmission provider receives them. This approach creates incentives for interconnection customers to submit exploratory or speculative interconnection requests pursuant to which interconnection customers seek to secure valuable queue positions as early as possible, even if they are not prepared to move forward with the proposed generating facility. Such generating facilities are often not commercially viable and, thus, the interconnection customers ultimately withdraw from the interconnection queue. We agree with commenters that the withdrawal of speculative interconnection requests that trigger reassessments and possible restudies by the transmission provider can delay the timing and increase the cost to interconnect for lower-queued interconnection requests.

48. In summary, we find that the lack of (1) access of information about a specific location or point of interconnection prior to submitting an interconnection request and (2) meaningful financial commitments in the *pro forma* interconnection procedures and agreements for interconnection customers to enter and stay in the interconnection queue, as well as the existing serial first-come,

Comments at 3 (stating that inefficiencies in the serial study queue are "compounded by exploratory interconnection requests that are based on developers' attempts to obtain locations with available transmission capacity"); NY Commission and NYSERDA Initial Comments at 6–7 (stating that "increased access to valuable information . . . could deter developers from submitting multiple, speculative [interconnection requests]").

¹³² Based on data provided by transmission providers in compliance with Order No. 845 (showing that 35% of withdrawals in 2022 took place before any studies had been completed). See appendix B to this final rule for the underlying data.

liquidated damages if compliance with a commercial operation deadline is at risk").

¹²⁸ Ameren Initial Comments at 2.

first-served study process, all incentivize interconnection customers to submit speculative interconnection requests that contribute to interconnection study backlogs, delays, and uncertainty, and, in turn, unjust and unreasonable Commission-jurisdictional rates.

49. We disagree with commenters' assertions that there is no basis to find that speculative interconnection requests are responsible for interconnection queue backlog and delays. We highlight that more than 70% of interconnection requests were withdrawn from the interconnection queue between 2000 and 2017.¹³³ Although we recognize that there are various reasons an interconnection customer may withdraw its request from the interconnection queue, a withdrawal indicates an inability to reach commercial operation. Because a withdrawal can trigger costly restudies and create uncertainty in the interconnection process for interconnection customers and transmission providers alike, withdrawals of commercially non-viable interconnection requests from the interconnection queue is a significant contributing factor to interconnection queue backlogs and delays.¹³⁴ Late-stage withdrawals of interconnection requests are also increasing.¹³⁵ Late-stage withdrawals present a significant problem, as they can trigger restudies for other interconnection customers that can result in significant increases to the interconnection costs attributed to those customers and the timeline for completion of interconnection studies, which can result in further late-stage withdrawals, thus exacerbating the interconnection queue backlogs and delays.¹³⁶

50. We also find that interconnection queue backlogs and delays, and the accompanying uncertainty, are further compounded because transmission providers have limited incentive to perform interconnection studies in a timely manner. Under the *pro forma* LGIP, transmission providers are held to a "reasonable efforts" standard in completing interconnection studies consistent with their tariff-imposed deadlines. However, this standard offers

significant discretion to the transmission providers in extending their own deadlines. The record demonstrates that a majority of transmission providers across the country regularly fail to meet interconnection study deadlines.¹³⁷ Despite pervasive delays in completing interconnection studies by transmission providers, we acknowledge that transmission providers have faced few, if any, consequences for failing to meet their tariff-imposed study deadlines under the reasonable efforts standard.¹³⁸ This outcome stands in stark contrast to interconnection customers that face financial and commercial consequences due to late interconnection study results and may be considered withdrawn from the interconnection queue for failing to meet their tariff-imposed deadlines.¹³⁹ For these reasons, we find that the existing *pro forma* LGIP requirement for transmission providers to make a reasonable effort to meet interconnection study deadlines contributes to the interconnection study backlogs, delays, and uncertainty that erects barriers to new generation.¹⁴⁰ Therefore, we find that the use of a reasonable efforts standard in the existing *pro forma* LGIP results in Commission-jurisdictional rates that are unjust and unreasonable.

51. Third, the *pro forma* LGIP includes no requirements regarding how or when transmission providers should complete affected system studies. Without requirements, affected system studies often lag behind those completed by the transmission provider to whose transmission system the interconnection customer proposes to interconnect (the so-called host transmission provider) and are sometimes completed very late in the interconnection process, causing an

additional round of delays and cost uncertainty for interconnection customers.¹⁴¹ Additionally, for transmission providers that have procedures for how to complete affected system studies in their tariffs or other documents (e.g., business practice manuals or joint operating agreements), the procedures are not consistent, may be hard for interconnection customers to locate, and may not represent the actual practices in use by the transmission provider, thus still creating uncertainty for interconnection customers. As a result, we find that the lack of consistent requirements for affected system modeling and procedures results in Commission-jurisdictional rates that are unjust, unreasonable, and unduly discriminatory or preferential.

52. Fourth, we find that the Commission's *pro forma* LGIP fails to accommodate the operating characteristics and technical capabilities of electric storage resources when it comes to specific interconnection procedures and modeling. As stated above, the interconnection queues predominantly consist of new technologies which have operating characteristics that differ from synchronous resources and were not anticipated when the Commission established the *pro forma* generator interconnection procedures and agreements in Order Nos. 2003 and 2006. Specifically, electric storage resources can be charged and dispatched on a flexible, as-available basis, and are less likely than synchronous generating facilities to withdraw energy from the transmission system during peak load conditions or discharge during light load conditions.¹⁴² However, the existing *pro forma* generator interconnection procedures and agreements do not contemplate these operating characteristics or technical capabilities of electric storage resources. As a result, we find that electric storage resources

¹³⁷ For example, based on data submitted by transmission providers in compliance with Order No. 845, 80% of transmission providers had delayed studies in at least one of the past three years (2020–2022) and 57% had delayed studies in at least two. *b See also* NARUC Initial Comments at 13 (stating "nearly all transmission providers across the country, including many transmission providers that have implemented queue reforms, regularly fail to meet interconnection study deadlines").

¹³⁸ *See, e.g.,* Clean Energy Associations Initial Comments at 43–44 (stating that "[a]t present, there is no specific incentive for delivering on-time and accurate studies, and late or inaccurate studies bring few if any consequences").

¹³⁹ *See, e.g.,* ACE–NY Initial Comments at 3 ("Project developers have strict deadlines they must adhere to in the interconnection process, with penalties that include the forced withdrawal of the project from the queue.").

¹⁴⁰ *See, e.g.,* NARUC Initial Comments at 13–14 (contending that "the tendency to miss deadlines introduces uncertainty in a process that is important to bringing new generation online in a timely and cost-effective manner").

¹⁴¹ *See, e.g.,* MISO Initial Comments at 72 (stating that "the need to wait for affected systems studies is the cause of the majority of delays in the MISO study process"); May Joint Task Force Tr. 65:2–8 (Dan Scripps) (citing affected systems studies as "a growing source of delay and cost uncertainty for interconnection customers, both in terms of just the timelines involved and the difficulty in pinning those down").

¹⁴² *See, e.g.,* Bonneville Initial Comments at 22–23 (stating that "storage resources are less likely to charge during peak load conditions or discharge during light load conditions, and . . . those considerations can be factored into assumptions used in interconnection studies"); NARUC Initial Comments at 37 (stating that "assuming that an energy storage device will withdraw energy during peak demand . . . fails to recognize that those resources are likely to be highly responsive to price signals from the transmission provider and can improve reliability").

¹³³ Queued Up 2023 at 18 (reporting that 72% of all interconnection requests submitted from 2000–2017 were withdrawn).

¹³⁴ *See, e.g.,* Ohio Commission Consumer Advocate Initial Comments at 8 (stating that "[e]ach withdrawn project entails PJM restudy on lower-queued projects, which delays the processing of new service queues and may have the consequence of a cascade of withdrawals").

¹³⁵ Queued Up 2023 at 22.

¹³⁶ *See, e.g.,* AEE Initial Comments at 4–5; Queued Up 2023 at 22.

(whether standalone, co-located generating facilities, or part of a hybrid generating facility), may be studied under inappropriate operating assumptions (e.g., charging at full capacity during peak load conditions) that result in assigning unnecessary network upgrades and increased costs to interconnection customers. Therefore, we find that the Commission's *pro forma* LGIP's lack of ability to modify operating assumptions for electric storage resources results in Commission-jurisdictional rates that are unjust, unreasonable, and unduly discriminatory or preferential.

53. Additionally, the record supports a finding that the existing *pro forma* interconnection procedures regarding material modifications do not provide for consistent evaluation of technology additions to an existing interconnection request.¹⁴³ We find that the record demonstrates that automatically deeming a request to add a generating facility to an existing interconnection request to be a material modification creates a significant barrier to access to the transmission system.¹⁴⁴ As a result, we find the existing *pro forma* LGIP and *pro forma* LGIA results in Commission-jurisdictional rates that are unjust and unreasonable.

54. Finally, the record supports a finding that the Commission's *pro forma* LGIP and *pro forma* SGIP fail to require the consideration of alternative transmission technologies that can be deployed more quickly to be used as network upgrades in place of, and at a lower cost than, traditional network upgrades.¹⁴⁵ In addition, commenters contend that some alternative transmission technologies could provide substantial benefits by resolving thermal overloads and avoiding voltage collapse, allowing for better use of the existing transmission system, improving reliability, and reducing interconnection request withdrawals, restudies, and overall interconnection delays.¹⁴⁶ We

find that failing to require transmission providers to evaluate the list of alternative transmission technologies enumerated in this final rule results in interconnection customers paying more than is just and reasonable to reliably interconnect new generating facilities, resulting in Commission-jurisdictional rates that are unjust, unreasonable, and unduly discriminatory or preferential. Because the benefits of the enumerated alternative transmission technologies identified above are present across all interconnection processes, regardless of the size of the interconnection request, we find that the failure to evaluate the enumerated alternative transmission technologies results in both the *pro forma* LGIP and *pro forma* SGIP being unjust, unreasonable, and unduly discriminatory or preferential.

55. Fifth, we find that the Commission's existing *pro forma* LGIP and *pro forma* SGIP do not include a modeling requirement for non-synchronous generating facilities, which is necessary to enable the transmission provider to assess and model the facility's ability to respond appropriately to transmission system disturbances. These modeling requirements include: (1) a validated, user-defined root mean square (RMS) positive sequence dynamic model; (2) an appropriately parameterized, generic library RMS positive sequence dynamic model; and (3) a validated electromagnetic transient (EMT) model, if the transmission provider performs an EMT study as part of the interconnection study process. Additionally, we find that accurate and validated models are necessary to address study delays and to ensure that transmission providers identify the necessary interconnection facilities and network upgrades to accommodate the interconnection request and appropriate assignment of interconnection costs. As a result, we find that the lack of a modeling requirement for non-synchronous generating facilities in the

pro forma LGIP and *pro forma* SGIP results in rates that are unjust, unreasonable, and unduly discriminatory or preferential.

56. Furthermore, the physical characteristics of synchronous generating facilities allow them to continue to inject electric current during transmission system disturbances, as required by the *pro forma* LGIA and *pro forma* SGIA.¹⁴⁷ However, non-synchronous generating facilities do not face a comparable requirement and many cease injecting current through "momentary cessation," which creates reliability issues on the transmission system.¹⁴⁸ Moreover, without requirements for non-synchronous generating facilities to remain connected to and synchronized with the transmission system, interconnection studies may not accurately model expected behavior and identify the appropriate interconnection facilities and network upgrades to accommodate the interconnection request, skewing the assignment of interconnection costs. As a result, we find that the lack of comparable requirements for non-synchronous generating facilities to remain "connected to and synchronized with the [t]ransmission [s]ystem" in the *pro forma* LGIA and *pro forma* SGIA results in rates that are unjust, unreasonable, and unduly discriminatory or preferential.

57. In response to commenters that express broad opposition to the need for reform, we disagree with assertions that the existence of regional variation in interconnection procedures across the country creates an insufficient legal foundation under FPA section 206 to demonstrate that rates are unjust, unreasonable, and unduly discriminatory or preferential. Similarly, we disagree with assertions that reforms to the *pro forma* generator interconnection procedures and agreements are arbitrary and capricious because the problems identified herein do not exist uniformly. As an initial matter, the "Commission may rely on 'generic' or 'general' findings of a systemic problem to support imposition

¹⁴³ See, e.g., NARUC Initial Comments at 35 (stating that the "loss of queue position as a result of adding a generating facility that does not increase the requested service level or cause reliability issues . . . is an inefficient and discriminatory outcome").

¹⁴⁴ See, e.g., AEE Initial Comments at 40–41; Public Interest Organizations Initial Comments at 45–47; SEIA Initial Comments at 38–39.

¹⁴⁵ See, e.g., NARUC Initial Comments at 38 (stating that "failing to consider alternative transmission technologies that can be deployed both more quickly and at lower costs than network upgrades may render Commission-jurisdictional rates unjust and unreasonable"); OMS Initial Comments at 19 (agreeing that "failing to consider these alternative transmission technologies runs the risk of implementing longer lead-time network upgrades at a higher cost").

¹⁴⁶ See, e.g., AEE Initial Comments at 42 (stating that alternative transmission technologies "provide

benefits beyond potential costs savings, including maximizing limited rights-of-way and potentially avoiding or minimizing environmental and property impacts that can bog down siting and permitting proceedings"); Ohio Commission Consumer Advocate Initial Comments at 15 (stating that "[t]hese grid-enhancing technologies ('GETs') can improve operations, enhance system reliability, contribute to capacity, and more" and "[s]ome [grid-enhancing technologies] could provide substantial benefits by resolving thermal overloads and avoiding voltage collapse, among other things"); WATT Coalition Initial Comments at 2 (referring to the report *Unlocking the Queue with Grid Enhancing Technologies* that showed that application of the three grid-enhancing technologies in the Kansas and Oklahoma transmission systems would enable twice as much renewable energy to interconnect out of the queues without any traditional transmission upgrades.).

¹⁴⁷ *Pro forma* LGIA art. 9.7.3 and *pro forma* SGIA art. 1.5.7 require synchronous generating facilities to remain "connected to and synchronized with" the transmission system during system disturbances.

¹⁴⁸ See, e.g., NERC Initial Comments at 9 (stating that "improper planning and operation of [non-synchronous resources] can pose a significant risk to . . . reliability" and adding that "risk mitigation measures . . . have been inconsistently adopted by industry"); MISO TOs Initial Comments at 32–33 (concurring with the Commission that "with more and more non-synchronous generation facilities entering the interconnection queue, the lack of a requirement for such resources to respond to system disturbances becomes 'more consequential'").

of an industry-wide solution.”¹⁴⁹ That some interconnection processes may fare better in the face of industry-wide challenges would be “as unastonishing as it is irrelevant.”¹⁵⁰ The Commission may reasonably rely on rulemaking to address the systemic drivers leading to widespread interconnection queue backlogs and delays, notwithstanding regional variation among interconnection procedures.

58. Moreover, as noted above, every region of the country is seeing an increase in both interconnection queue size and the length of time interconnection customers are spending in the interconnection queue prior to commercial operation in recent years.¹⁵¹ Furthermore, the uncertainty and delays in the interconnection queues have resulted in fewer than 25% of interconnection requests, by capacity, reaching commercial operation between 2000 and 2017 in any region of the country—with some regions as low as 8%.¹⁵² For example, only 10% of interconnection requests, by capacity, have reached commercial operation in the non-RTO/ISO southeast region between 2000 and 2017.¹⁵³

Additionally, the challenges being faced across the country will be further compounded in the future given the recent spikes in interconnection queue sizes. In the non-RTO/ISO southeast region, the interconnection queue size has more than tripled between 2014 and 2022, with the increase predominantly made up of solar, storage, and hybrid generating facilities, adding potential complexity to future interconnection queue study processes.¹⁵⁴ To the extent existing *pro forma* interconnection procedures, such as first-come, first-served study processes, have worked in the past for smaller or less complex queues, such experience is not indicative of what will be necessary in the future to ensure that a growing number of interconnection requests are processed in a reliable, efficient, transparent, and timely manner.¹⁵⁵ Finally, as recognized in Order No. 2003, interconnection queue delays may “provide[] an unfair advantage to utilities that own both transmission and generation facilities,”¹⁵⁶ making it

exceedingly necessary that interconnection delays are addressed in all regions of the country, especially those where transmission providers continue to own both transmission and generation.¹⁵⁷ As discussed above, because interconnection queue backlogs and delays afflict generator interconnection service nationwide, which hinders the timely development of new generation and thereby stifles competition in the wholesale electric markets, reforms are necessary to ensure Commission-jurisdictional rates are just, reasonable, and not unduly discriminatory or preferential.

59. We are not persuaded by commenters’ concerns that the reforms proposed in the NOPR, many of which we adopt in this final rule, will be counterproductive in addressing the need for reform. As discussed in more detail throughout this final rule, we believe that the reforms adopted herein, as a whole, will improve the efficiency of study processes, reduce interconnection queue backlogs, and thereby ensure just, reasonable, and not unduly discriminatory or preferential rates. We believe that, on balance, the reforms will produce efficiencies by, for example, reducing speculative interconnection requests and interconnection request withdrawals, which in turn will reduce the time and resources spent in interconnection studies and restudies thereby decreasing interconnection queue backlogs and delays. Additionally, the majority of the individual reforms that the Commission proposed in the NOPR and we adopt in this final rule have already been implemented in one or more regions in order to improve the interconnection process, demonstrating incremental improvements. This final rule uses some of these individual and incremental improvements as a basis for a broad suite of reforms that, in their entirety, have not yet been adopted by any region and we believe will ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. In some cases, such as for the commercial readiness reforms adopted in this final rule, we have significantly modified the NOPR proposal based on comments received.

60. Having concluded that the existing *pro forma* generator interconnection procedures and agreements are unjust, unreasonable, and unduly discriminatory or preferential, we turn, as we are required

to do under FPA section 206,¹⁵⁸ to determining the replacement rate, described—at some length—below.

III. Reforms

A. Reforms To Implement a First-Ready, First-Served Cluster Study Process

1. Interconnection Information Access

a. Need for Reform

i. NOPR

61. The Commission noted its concern regarding the lack of information available to prospective interconnection customers regarding potential interconnection costs prior to submitting an interconnection request.¹⁵⁹ The Commission stated that, without this information, it is difficult for interconnection customers to assess the viability of a specific proposed generating facility. Subsequently, interconnection customers submit multiple speculative interconnection requests in an attempt to obtain information through the system impact study process about the costs associated with various project configurations. The Commission preliminarily found that the Commission’s *pro forma* LGIP and *pro forma* LGIA are unjust, unreasonable, and unduly discriminatory or preferential and that reforms are needed to allow interconnection customers to interconnect in a reliable, efficient, transparent, and timely manner, thereby ensuring that rates, terms, and conditions for Commission-jurisdictional services are just, reasonable, and not unduly discriminatory or preferential.¹⁶⁰

ii. Comments

62. Several commenters contend that it is a rational response to a lack of pre-interconnection queue information for interconnection customers to submit multiple interconnection requests to gain information on which interconnection sites are favorable and hedge risks, which leads to withdrawals that exacerbate unmanageable interconnection queue backlogs.¹⁶¹ ELCON and Environmental Defense

¹⁶¹ AES Initial Comments at 3; Affected Interconnection Customers Initial Comments at 30; Clean Energy Buyers Initial Comments at 5–6; CREA and NewSun Initial Comments at 45; Environmental Defense Fund Initial Comments at 3; ELCON Initial Comments at 3; Northwest and Intermountain Initial Comments at 5; Public Interest Organizations Initial Comments at 18.

Fund argue that the lack of sufficient information and unexpected cost escalation are the primary reasons interconnection requests are withdrawn, leading to delays and inefficiencies.¹⁶²

63. Many commenters agree with the goal of providing additional information prior to entering the interconnection queue.¹⁶³ Some commenters state that additional information prior to entering the interconnection queue is beneficial,¹⁶⁴ in particular access to information on potential network upgrades and the cost and time to interconnect.¹⁶⁵ Many commenters expect that potential interconnection customers' access to additional information prior to entering the interconnection queue will reduce speculative interconnection requests, thus promoting reliability and cost savings by encouraging more optimal interconnection requests that can be processed more efficiently and at lower overall cost.¹⁶⁶

64. Several commenters note the importance of additional interconnection information access in light of the other reforms proposed in the NOPR. AES contends that it would be inequitable for the Commission to increase security deposits to stay in the interconnection queue under the NOPR proposal to increase study and LGIA deposits without requiring transmission providers to provide sufficient information to interconnection

customers.¹⁶⁷ Vistra asserts that the proposals to provide additional information will complement the exclusive site control proposals and provide an avenue for prospective interconnection customers to select the most viable sites on which to obtain rights and develop a location, which is a costly and time-consuming process, before entering the interconnection queue.¹⁶⁸ Northwest and Intermountain argue that, in order for the other proposed reforms in the NOPR to be effective, potential interconnection customers must have a solution to the problem of identifying optimal interconnection locations and configurations that is timely, cost-effective, and accurate.¹⁶⁹

65. Google contends that pre-queue information is necessary because there is an extreme information asymmetry between independent power producers and transmission owners and their generating affiliates, which have greater access to planning information, including load growth, relative cost of interconnecting at different points, points of chronic congestion where upgrades might be needed, and planned local upgrades.¹⁷⁰ Google asserts that this information asymmetry is particularly pronounced in the non-RTO/ISO regions, and allows transmission owners and their affiliates to identify the best locations for interconnection more quickly than independent power producers.

66. On the other hand, Dominion argues that there is no evidence in the record that a lack of information is slowing down the interconnection queue process or that transmission providers are not engaged in good faith reviews of interconnection requests.¹⁷¹ According to Dominion, the Commission should focus on making the interconnection process more efficient and speedier, and the best way to achieve these goals is through the first-ready, first-served cluster study reform. While APPA-LPPC support transparency in the generator interconnection process and share the Commission's view that the availability of transmission system information should reduce the incentive to submit speculative interconnection requests, they argue that sufficient information is currently publicly available.¹⁷²

iii. Commission Determination

67. We find that, absent reforms to require transmission providers to provide additional interconnection information, which can be used by interconnection customers prior to submitting an interconnection request, speculative interconnection requests will likely remain at current levels and continue to contribute to interconnection study delays and add costs to the interconnection process. Although submitting multiple interconnection requests to gain information may be a rational response to a lack of pre-interconnection queue information, this practice increases interconnection study delays.¹⁷³ We also agree with commenters that additional access to interconnection information is a valuable goal¹⁷⁴ as it can increase the likelihood that an interconnection request is viable when submitted. We disagree with commenters that current information requirements are sufficient.¹⁷⁵ While certain information is currently available through the feasibility study process, as part of our reforms discussed below, we eliminate the feasibility study. Therefore, we find it necessary to provide a means for interconnection customers to obtain additional information prior to entering the interconnection queue. We concur with comments that additional access to interconnection information prior to entering the interconnection queue is important for interconnection customers to make informed decisions, particularly given the increased requirements for interconnection customers adopted in this final rule, such as increased study deposits and site control, as discussed

below.¹⁷⁶ We also agree that commenters raise a valid concern that an information asymmetry exists between independent power producers and transmission owner affiliates, in particular in non-RTO/ISO regions.¹⁷⁷

b. Informational Interconnection Study

i. NOPR Proposal

68. In the NOPR, the Commission proposed to revise the Commission's *pro forma* LGIP to require transmission providers to offer an informational interconnection study for prospective interconnection customers.¹⁷⁸ The Commission proposed that the informational interconnection study would provide cost estimates for the transmission provider's interconnection facilities and network upgrade costs specific to the interconnection scenario detailed in the study agreement. The Commission also proposed to include new definitions for an informational interconnection study and informational interconnection study agreement.

69. Under the Commission's proposal, prospective interconnection customers could request up to five separate informational interconnection studies at a time.¹⁷⁹ The Commission explained that each configuration of an interconnection request would require a separate informational interconnection study. The Commission proposed that the informational interconnection study would be at the interconnection customer's expense, and each study would require a \$10,000 deposit, subject to a true-up based on actual study costs.

70. The Commission proposed that, within seven business days of the receipt of a prospective interconnection customer's request for an informational interconnection study, the transmission provider would have to provide the prospective interconnection customer with an informational interconnection study agreement.¹⁸⁰ The Commission explained that the informational interconnection study agreement would specify the technical data that the prospective interconnection customer must provide and an estimate of the expected costs of the study, including, to the extent known by the transmission provider, an estimate of the study costs expected to be incurred by any relevant affected systems. Under the proposal, the prospective interconnection customer would have 10 business days

to execute the agreement and deliver it to the transmission provider, along with the relevant technical data and study deposit, after which the transmission provider would have 45 calendar days to complete the study.

71. The Commission proposed that the informational interconnection study would consist of a sensitivity analysis based on the assumptions specified in the informational interconnection study agreement.¹⁸¹ Under the proposal, the informational interconnection study would identify potential interconnection facilities and network upgrades that may be required to interconnect the prospective interconnection customer's proposed generating facility, including an approximation of the costs of such interconnection facilities and network upgrades. The Commission noted that the transmission provider would also coordinate with affected systems that may be impacted by the prospective interconnection customer's request to provide information on affected systems-related issues.

72. The Commission proposed an informational interconnection study agreement form, which explains that the informational interconnection study is performed solely for informational purposes and is not binding on either party.¹⁸² The proposed agreement also requires the study report to provide specific information, including, at a minimum: (1) preliminary identification of any circuit breaker short circuit capability limits exceeded; (2) preliminary identification of any thermal overload or voltage limit violations; and (3) estimated network upgrade costs related to the identified overloads and violations.

73. The Commission sought comment on: (1) whether the informational interconnection study, as proposed, would provide prospective interconnection customers with sufficient and timely information to inform decision-making prior to submitting an interconnection request; (2) whether transmission providers should be required to establish a request window of a limited number of days each year in which potential interconnection customers can request an optional informational interconnection study; and (3) the burdens on transmission providers of conducting informational studies and whether other options, such as the proposal discussed below for public interconnection information, might strike a better balance of providing

interconnection customers with useful information while making efficient use of transmission provider resources.¹⁸³

74. Additionally, the Commission proposed to add new section 3.1.2 to the *pro forma* LGIP, which provides that interconnection customers evaluating different options (such as different sizes, sites, or voltages) are encouraged but not required to use the new informational interconnection study proposed in the NOPR before entering the cluster study.¹⁸⁴

ii. Comments

(a) Comments in Support

75. Several commenters support the NOPR proposal to require transmission providers to offer an informational interconnection study to prospective interconnection customers.¹⁸⁵ Several commenters agree that the informational interconnection study proposal could reduce the number of speculative or other interconnection requests¹⁸⁶ and improve the efficiency of siting decisions.¹⁸⁷ Some commenters expect that these changes will have other benefits for the interconnection process, including cost savings from fewer and more viable interconnection requests,¹⁸⁸ a reduced need for project withdrawals and queue restudies,¹⁸⁹ and reduced burden on transmission providers, which will result in fewer interconnection study delays.¹⁹⁰

76. MISO and Fervo Energy state that it is helpful for a prospective interconnection customer to compare how various MW sizes, points of interconnection, or other scenarios could affect costs, especially for prospective interconnection customers that cannot perform such analysis in house, and that the NOPR's

informational interconnection study proposal would assist in these goals.¹⁹¹ Pacific Northwest Organizations argue that, without upfront interconnection cost information, independent power producers may be discouraged from entering the interconnection queue if they are subjected to higher withdrawal fees, which may result in preventing them from being considered in request for proposals (RFPs) in the Pacific Northwest.¹⁹²

77. Some commenters stress the importance of the informational interconnection study in light of the other reforms proposed in the NOPR. For instance, Northwest and Intermountain aver that the informational study will be the primary resource for interconnection customers to demonstrate the feasibility and cost effectiveness of their interconnection plan and will serve as the foundation for subsequent negotiations for the documents that will establish commercial readiness of their project for the cluster study process.¹⁹³ Pacific Northwest Organizations assert that the NOPR's proposed commercial readiness framework would be problematic in the region without something like the informational interconnection study to discover costs before entering the queue.¹⁹⁴

78. Several commenters are generally supportive of the NOPR proposal but either (1) offer qualifications to that support¹⁹⁵ or (2) request specific changes to the proposal.¹⁹⁶

(b) Comments in Opposition

79. Many commenters oppose the NOPR proposal to require transmission providers to offer an informational interconnection study to prospective

interconnection customers.¹⁹⁷ Many commenters argue that the informational interconnection study proposal could be a burden or divert resources,¹⁹⁸ which they contend would increase delays for the interconnection queue and other studies.¹⁹⁹ Dominion

insists that the decision as to whether to offer informational interconnection studies should be the transmission provider's and must have limits.²⁰⁰ Longroad Energy states that transmission-interconnected generating facilities are typically complex facilities with unique operating characteristics which would be poorly approximated in simplified studies.²⁰¹ Environmental Defense Fund states that, while it supported the informational interconnection studies proposal in its initial comments, after review of the other comments submitted, it recommends that the Commission reconsider the proposal and ensure that any informational interconnection study reform not delay other interconnection processes.²⁰²

80. Several commenters contend that the informational interconnection study proposal would not likely be valuable.²⁰³ Clean Energy Associations assert that the proposed informational interconnection study would provide no information related to stability-driven network upgrades, rendering it near-useless in areas where stability limits are most typically the driver of network upgrades.²⁰⁴ APPA-LPPC warn that informational interconnection studies could engender controversy because prospective interconnection customers would, notwithstanding the informational nature of the studies, likely rely upon the study results in

¹⁹⁶ ACE-NY Initial Comments at 10; Avangrid Initial Comments at 21; Clean Energy Buyers Initial Comments at 7; ELCON Initial Comments at 4–5; NY Commission and NYSEDA Initial Comments at 6–7; Pattern Energy Initial Comments at 20; Pine Gate Initial Comments at 11–13; Southern Initial Comments at 28.

making investment decisions, even though the informational study results would inevitably diverge from the actual interconnection study results.²⁰⁵

81. Several commenters argue that the proposal is not an improvement over the status quo.²⁰⁶ National Grid and NextEra assert that it is unclear how the proposal would save any time compared to the status quo, and that the best way for an interconnection customer to obtain the necessary information is by entering and proceeding through the interconnection queue with transmission providers focusing on actual studies.²⁰⁷ NextEra adds that the proposed informational interconnection study is only informative in extreme cases, such as very limited capacity available on a transmission line, which the interconnection customer should be able to identify themselves.²⁰⁸

82. CREA and NewSun express concern that the NOPR proposal places too much reliance on the usefulness of the informational interconnection study in order to justify the financial readiness and commitment NOPR proposals.²⁰⁹ They assert that the informational interconnection study is not a useful replacement for the feasibility study, which takes into account the impact of other interconnection customers in the interconnection queue cluster. Therefore, CREA and NewSun ask the Commission to instead retain the feasibility study as part of the cluster study process to allow interconnection customers to obtain cluster-level information on likely costs and network upgrades before proceeding further with major deposits and irretrievable commitments.

83. Several commenters point to the experience with similar studies in SPP and MISO as evidence that the optional informational interconnection study proposal will be little-used in practice.²¹⁰ SPP reports that its interconnection customers explained

that their time could be more effectively spent working on the more definitive system impact studies, that the feasibility and preliminary impact studies did not provide results that could be relied on in making business decisions, and that this same outcome would be true of the proposed informational interconnection study.²¹¹

84. Several commenters point to the inability of the informational interconnection studies to provide reliable cost estimates²¹² and believe that the information provided in these studies will be quickly outdated.²¹³ The New Jersey Commission is concerned that this approach may not materially reduce the uncertainty interconnection customers currently face.²¹⁴ In particular, many commenters contend that the informational interconnection study is not meaningful in the context of a cluster interconnection process.²¹⁵ Commenters argue that, because the informational interconnection study does not provide information on other interconnection customers that would enter the interconnection queue at the same time, there is no guarantee that the study results will even approximate the actual network upgrade costs determined by the cluster results.²¹⁶

85. Some commenters expect the proposal will work against the Commission's goal of faster interconnection queue processing.²¹⁷ Some commenters state that any reduction in speculative interconnection requests will be offset by an increase in speculative informational interconnection requests, which would require transmission providers to shift their focus from the actual interconnection queue to this more burdensome informational interconnection process, which is outside of their interconnection study process.²¹⁸ NRECA states that, if the proposal is included in the final rule, the Commission should ensure that it is limited and is not expanded into an elaborate serial study process prior to the cluster study process.²¹⁹ Avangrid notes that some transmission providers have recently eliminated interconnection studies to reduce interconnection queue processing time.²²⁰ Pennsylvania Commission asserts that the Commission should assess the results of the NOPR's proposed reforms before requiring any new study processes that may further slow the interconnection queue process.²²¹

86. Several commenters note the challenge of staffing to fulfill the informational interconnection study requirements given the limited number of qualified planners and engineers.²²²

87. Several commenters urge the Commission to weigh the benefits against the burdens to determine whether to adopt the informational interconnection study proposal.²²³

NextEra argues that transmission providers with large numbers of interconnection requests have tried optional interconnection studies and have not found them to be useful. NextEra Reply Comments at 10.

WAPA states that, while it agrees that it is important to provide prospective interconnection customers with additional information, it has concerns about the proposed timelines and penalties, the potential amount of informational interconnection study requests it could receive, and its ability to process up to five simultaneous informational interconnection study requests per interconnection customer.²²⁴ According to Vermont Electric and Vermont Transco, even if the informational interconnection studies envisioned by the NOPR provide interconnection customer benefits, the burdens of providing informational interconnection studies with cost estimates under the NOPR's short proposed time frames and low deposit amounts would be considerable especially for smaller companies such as Vermont Electric and Vermont Transco.²²⁵ Other commenters contend that the informational interconnection study proposal has insufficient benefits.²²⁶

88. Given PJM's opposition to the informational interconnect study, it recommends modifying the proposed new section 3.1.2 to the *pro forma* LGIP to encourage, but not require, interconnection customers evaluating different project characteristics to use a prescreening tool, such as the queue scope tool PJM is developing, prior to submitting an interconnection request.²²⁷

iii. Commission Determination

89. We decline to adopt the NOPR proposal to modify the *pro forma* LGIP to require transmission providers to offer an informational interconnection study for prospective interconnection customers. We are persuaded by commenters' concerns that requiring an informational interconnection study could divert the transmission provider's resources away from the cluster studies we require in this final rule and

undermine the benefits of those reforms that seek to reduce interconnection study delays, costs, and burden on constrained engineering labor. Moreover, we agree with commenters that highlight the various limitations of an informational interconnection study. Notably, an informational interconnection study, as proposed in the NOPR, would have provided a serial, snapshot-in-time analysis on the impact of a single interconnection request, but, in the context of the subsequent cluster study, the actual impact of an interconnection request within a larger cluster would reflect different assumptions and differ from the informational interconnection study, providing minimal or no value to interconnection customers. The cost estimates that result from such an informational interconnection study would bear little correspondence to costs determined during a cluster study process and thus provide minimal value to interconnection customers.

90. We also find persuasive comments that the informational interconnection study requirement proposed in the NOPR is not the most effective way to provide interconnection customers with the needed pre-interconnection queue information. At the same time, we continue to believe that there is a lack of information available to prospective interconnection customers prior to entering the interconnection queue, especially given other interconnection customer-related reforms adopted in this final rule.²²⁸ Therefore, as discussed below, we adopt the NOPR proposal to set minimum requirements for transmission providers to publicly post available information pertaining to generator interconnection.²²⁹ We find that the posting of this information provides a better balance between the benefits of additional information for prospective interconnection customers and the burdens on transmission providers.

91. In response to commenters that support the informational interconnection study NOPR proposal, below we explain how several of the NOPR proposals that we adopt in this final rule address their specific concerns. To address commenters' concerns with the number of speculative interconnection requests,²³⁰ we adopt more stringent site control requirements and increased commercial

readiness deposit requirements,²³¹ which we believe will better address these concerns than the informational interconnection study proposal. Additionally, we find that the minimum requirements for transmission providers to publicly post available information pertaining to generator interconnection²³² and the existing requirements in section 2.3 of the *pro forma* LGIP for transmission providers to post up-to-date base case study models on their Open Access Same-time Information System (OASIS) or other password-protected websites will improve the efficiency of siting decisions²³³ and will provide interconnection customers with information about the feasibility of their interconnection plans.²³⁴

92. We are not persuaded that the informational interconnection study proposal would benefit the interconnection process through: (1) cost savings from fewer, more feasible interconnection requests;²³⁵ (2) a reduced need for interconnection request withdrawals and restudies;²³⁶ and (3) accurate upfront interconnection cost information.²³⁷ On the contrary, the Commission's adoption of the cluster study reforms in this final rule²³⁸ means that the serial nature of the informational interconnection study would fail to reflect the outcome of the cluster study, and thus would provide minimal, if any, benefits to interconnection customers.²³⁹ We also no longer believe that adopting the informational interconnection study

proposal would reduce burdens on transmission providers.²⁴⁰ This is because the record overwhelmingly demonstrates that the proposal would result in additional burdens on transmission providers and would likely cause transmission providers to divert resources from their cluster study process to conduct informational interconnection studies,²⁴¹ thus increasing study delays and costs. Similarly, we decline CREA and NewSun's request that the Commission retain the feasibility study instead of the informational interconnection study. As we discuss below, the feasibility study was required for the serial study process but is no longer relevant for the cluster study process.²⁴² We believe that our requirement for transmission providers to publicly post certain interconnection information will provide interconnection customers with the information they need prior to entering the interconnection queue, and therefore decline to adopt CREA and NewSun's request to maintain the feasibility study.

93. Because we do not adopt the NOPR proposal to require transmission providers to offer an informational interconnection study, we decline to adopt the proposal to add new section 3.1.2 to the *pro forma* LGIP to encourage interconnection customers to use the informational interconnection study.

²⁴⁰ See Google Initial Comments at 5 (arguing that the informational interconnection study requirement alone would likely increase the burden on transmission providers in a way that would lengthen delays).

c. Public Interconnection Information

i. NOPR Proposal

94. In the NOPR, the Commission proposed to require transmission providers to maintain and make publicly available an interactive visual representation of available interconnection capacity (commonly known as a “heatmap”) as well as a table of relevant interconnection metrics that allow prospective interconnection customers to see certain estimates of a potential generating facility's effect on the transmission provider's transmission system.²⁴³ Specifically, the Commission proposed to revise section 6.4 of the *pro forma* LGIP to require transmission providers to post on their public website a heatmap of estimated incremental injection capacity (in MW) available at each bus in the transmission provider's footprint under N–1 conditions, as well as provide a table of results showing the estimated impact of the addition of a proposed project (based on the user-specified MW amount, voltage level, and point of interconnection) for each monitored facility impacted by the proposed project on: (1) the distribution factor; (2) the MW impact (based on the proposed project size and the distribution factor); (3) the percentage impact on the monitored facility (based on the MW values of the proposed project and the monitored facility rating); (4) the percentage of power flow on the monitored facility before the proposed project; and (5) the percentage power flow on the monitored facility after the injection of the proposed project. The Commission explained that these metrics would be calculated based on the power flow model of the cluster study or restudy with the transfer simulated from each bus to the whole transmission provider's footprint (to approximate Network Resource Interconnection Service (NRIS)), and with the incremental capacity at each bus decremented by the existing and queued generation in the cluster (based on the existing or requested interconnection service limit of the generation). The Commission proposed to require transmission providers to update this information within 30 days after the completion of each cluster study and restudy.

95. The Commission sought comment on whether: (1) there are any security concerns with this proposed requirement; and (2) the assumptions specified for the analysis are the right set of assumptions.²⁴⁴

ii. Comments

(a) Comments in Support

96. Many commenters express support for the NOPR's proposal to require transmission providers to provide public interconnection information.²⁴⁵ Several commenters agree that the NOPR proposal will provide valuable information to interconnection customers before they enter the interconnection queue.²⁴⁶ Several commenters aver that the proposal could reduce the number of interconnection requests withdrawn²⁴⁷ and therefore could reduce costs for all parties.²⁴⁸ Alliant Energy and Clean Energy Associations also see value in the standardized format of the proposed

public interconnection information.²⁴⁹ R Street states that a properly done visual representation of interconnection capacity can be a “powerful decentralized self-screening tool.”²⁵⁰ R Street states that better information and simpler deliverability requirements shift congestion performance risk to generating facilities while reducing barriers to entry.²⁵¹ The Ohio Commission Consumer Advocate states that the visual map of available interconnection capacity would be useful both to transmission providers and interconnection customers and would encourage information sharing on transmission system congestion during the interconnection process.²⁵² Google argues that making these data publicly available to consumers would allow buyers to make informed choices regarding power procurement.²⁵³ Additionally, Google asserts that there needs to be a standard of reasonable care applied to ensure that the publicly available information is reasonably current and useful to avoid exploratory interconnection requests.²⁵⁴ SEIA argues that greater transparency will increase competition between merchant and utility developed generating facilities, benefiting consumers.²⁵⁵ Illinois Commission contends that, if properly implemented, the NOPR proposal will increase the pace at which new generating facilities can connect to the transmission system, furthering state policy objectives.²⁵⁶

97. Some commenters contend that the proposal to provide public interconnection information is not overly burdensome.²⁵⁷ APPA–LPPC members report that the information posting and interactive capability described in the NOPR could be feasibly implemented with available industry system simulation tools.²⁵⁸ Clean Energy Associations state that heatmaps should be as automated as possible, without significant commitments of staff or resources.²⁵⁹

²⁵⁸ APPA–LPPC Initial Comments at 16.

²⁵⁹ Clean Energy Associations Initial Comments at 13.

98. Several commenters point to the fact that some transmission providers are already developing such tools as evidence that these tools are unlikely to cause further delays to stressed interconnection queues or additional burden on transmission providers.²⁶⁰ For instance, some commenters note that MISO already offers a heatmap that represents geographically advantageous siting locations.²⁶¹ Several commenters also note that PJM is developing such a tool.²⁶² PJM states that in 2023 its queue scope tool will provide a congestion map with colors or symbols indicating the worst flowgate loading at each point of interconnection.²⁶³ SPP states that it is also developing a tool to be implemented by 2025 that would provide much of the functionality described in the Commission’s public information proposal to new interconnections.²⁶⁴

99. Several commenters contend that the public information proposal is a more reasonable balance of costs and benefits relative to the informational interconnection study proposal.²⁶⁵ Pennsylvania Commission states that, once a public information tool is established, it may require fewer ongoing resources, continuing to inform interconnection customers while freeing those resources for additional interconnection studies as compared to the proposed informational interconnection study.²⁶⁶

(b) Comments in Opposition

100. A few commenters oppose the NOPR proposal to require transmission providers to provide public interconnection information.²⁶⁷ A larger number of commenters express

reservations about the proposal,²⁶⁸ in particular regarding its usefulness²⁶⁹ or the burden it creates.²⁷⁰ Other commenters request that the Commission make public interconnection information posting optional.²⁷¹

101. Several commenters argue that the proposal to require transmission providers to provide public interconnection information is not useful,²⁷² particularly because it might not provide sufficient detail²⁷³ or commercially actionable information for interconnection customers.²⁷⁴ Commenters explain that heatmaps are specific to a moment in time and thus not representative of actual available injection across the transmission system, which is ever-changing.²⁷⁵ NextEra observes that heatmaps do not contain actionable information for interconnection and instead focus on energy prices and congestion.²⁷⁶ ISO–NE, MISO, and Omaha Public Power note that a visual representation of interconnection capacity cannot account for all of the conditions identified in a system impact study, including different system stresses, operability issues (*e.g.*, N–1–1), stability and voltage issues, and weak transmission system issues.²⁷⁷

Longroad Energy asserts that generator interconnection heatmaps or hosting capacity maps can be of some use for interconnections to the distribution system but are unlikely to be beneficial for projects interconnecting at transmission voltages.²⁷⁸

102. Some commenters do not believe that the heatmap proposal will appreciably reduce speculative interconnection requests.²⁷⁹ MISO explains that, in its experience, few interconnection customers use its interconnection heatmap tool and instead tend to use their own tools.²⁸⁰ Puget Sound states that, even with a heatmap, if an interconnection customer has a request that would require energy transfer across balancing authorities, it would have to submit an interconnection request to get information on the scope of necessary network upgrades.²⁸¹ NV Energy asserts that a heatmap of its transmission system would be of little value, appearing as though there is no available transfer capacity, because the generation in its interconnection queue is more than five times the level of NV Energy load.²⁸² Meanwhile, Puget Sound states that a heatmap of its territory would only account for generation and interconnection capacity in its balancing authority footprint even though its transmission goes beyond this footprint.²⁸³

103. Several commenters contend that a heatmap tool as proposed would be less useful in a cluster study than it is in a serial process because it cannot include similarly queued generation.²⁸⁴ Ohio Commission Consumer Advocate questions whether it will capture the “dynamic elements” of cluster studies and restudies.²⁸⁵ PacifiCorp and AEP state that the mere fact that an area is not shown as congested on a heatmap does not mean that it will be a suitable interconnection location, particularly if multiple interconnection customers seek to interconnect there.²⁸⁶

104. Longroad Energy and PacifiCorp express concern that the heatmap tools

would not be restricted to prospective interconnection customers and could instead be used by third-party consultants for their own business interests; for instance, real estate speculators could use the information to secure exclusive site control for locations that show significant generator interconnection capacity.²⁸⁷ According to Longroad Energy, such risk is particularly harmful to wind and solar generation interconnection customers’ needs for large tracts of land to accommodate their generation equipment.²⁸⁸

105. Some commenters assert that maintaining the heatmap and posting required information on available interconnection capacity would be burdensome for transmission providers, especially in non-RTO/ISO regions.²⁸⁹ Similarly, NV Energy states that it participates in the CAISO energy imbalance market and its energy management system does not currently have the technical functionality to build an interactive map that shows information like the available interconnection capacity.²⁹⁰ Some commenters argue that the heatmaps may provide insufficient benefit to justify cost, resources, and time it would take to produce them.²⁹¹ Omaha Public Power further asserts that interconnection customers will likely find it more valuable for a transmission provider invest in more reliable and consequential studies.²⁹² Pacific Northwest Utilities assert that the Commission should present additional data regarding the benefits of requiring a heatmap before mandating their use.²⁹³ Clean Energy Associations recommend that the Commission consider other means of increasing information to prospective interconnection customers, such as public scoping meetings prior to the prospective interconnection customers entering the interconnection queue.²⁹⁴

106. Some commenters express concern that the public information proposal will impose new costs on ratepayers and market participants.²⁹⁵ WAPA states that, given its defined appropriations and budgets, it is difficult to create new programs, unlike for larger investor-owned utilities or RTOs/ISOs.²⁹⁶ Dominion estimates that implementation would require a large up-front financial commitment, potentially for third-party software and personnel hours, and longer-term financial commitment to maintain such a site.²⁹⁷ NV Energy contends that creating such a heatmap showing interconnection capabilities would require finding an eligible software, an ongoing expense.²⁹⁸

107. Several commenters speak to the burden of additional staffing needs to provide public interconnection information. National Grid states that the interactive visual representation tool, even if contracted from a third party, would require significant time commitments from numerous personnel with relevant and advanced expertise in transmission and interconnection engineering.²⁹⁹ Tri-State notes that the Commission has recognized the lack of available engineers and that imposing a heatmap requirement would exacerbate the problem.³⁰⁰ Dominion and Duke Southeast Utilities state that any additional process would require additional financial and personnel resources, and also burden the same personnel that are already engaged in managing the interconnection queue.³⁰¹ El Paso Electric argues that transmission providers should not be required to allocate human resources from interconnection studies to monthly transmission line capacity estimates because the staff reallocation could cause interconnection study backlogs.³⁰² PacifiCorp states that this burden will be particularly onerous to transmission providers outside RTO/ISO regions, which have comparatively few transmission staff available.³⁰³

108. Several commenters suggest that interconnection customers, on their own or with consultants, can perform studies with the available information that would provide estimates on available capacity similar to that produced under

the NOPR proposal.³⁰⁴ PPL states that interconnection customers can make their own such maps using transmission planning models the Commission makes available following a Freedom of Information Act request.³⁰⁵ APPA–LPPC argue that the Commission fails to establish that the information already available to prospective interconnection customers under the existing *pro forma* LGIP, along with the substantial supplement implemented with Order No. 845, is inadequate.³⁰⁶ SoCal Edison states that the information included in the NOPR proposal and more is already available if interconnection customers request it from the Commission for their own studies or use studies developed by transmission providers.³⁰⁷ The Ohio Commission Consumer Advocate states that the determination of a suitable site depends largely on the location and geography of the resources, which is publicly available from national labs and the U.S. Energy Information Administration.³⁰⁸

109. Several commenters state that sufficient data are already required to be posted on OASIS.³⁰⁹ According to Idaho Power, Order No. 2003–A required interconnection study reports to be publicly available and provide locational and cost information for previously studied interconnections, but this has not reduced the amount of interconnection requests at congested locations.³¹⁰ SoCal Edison and NYISO state that this information is already available in FERC Form 715, where it is protected with a non-disclosure agreement as critical energy infrastructure information (CEII) and has the benefit of being available in one centralized location.³¹¹ On the other hand, ACE–NY disagrees with the assertion that FERC Form 715 provides sufficient information for interconnection customers to do their own analysis, asserting that the FERC Form 715 database base cases do not contain sufficient data about the generation interconnection queue and study assumptions and are therefore

inadequate.³¹² Rather, ACE–NY argues that more detailed base cases such as those currently being made available by MISO and PJM, should be required.

110. Several commenters state that the usefulness of public interconnection information proposal will depend on the implementation details.³¹³ For example, Illinois Commission and CESA recognize that the accuracy of the heatmaps is an important part of how useful they will be.³¹⁴ Puget Sound states that it has considered creating such a heatmap but has concerns about its effectiveness given implementation challenges.³¹⁵ SPP states that technology, information, and tools are quickly evolving and that a standardization tool might be obsolete before it is implemented.³¹⁶ CESA explains that currently CAISO provides static, snapshot-in-time transmission capability estimates that are helpful but do not capture locational granularity or other projects already in the interconnection queue, making it difficult to make an informed project siting decision and at times requiring data requests of CAISO.³¹⁷ For this reason, CESA stresses that the heatmaps and associated data must be made available in a user-friendly format. CREA and NewSun argue that the Commission should be careful not to overestimate the ability to forecast interconnection costs and project viability that will ultimately result from a cluster study.³¹⁸ Several commenters stress that any potential increase in transparency and interconnection process performance resulting from this proposal must outweigh the additional burden imposed on transmission providers.³¹⁹

(c) Comments on Specific Proposal

(1) Metrics

111. While some commenters agree with the Commission's proposed table of metrics,³²⁰ multiple commenters suggest additional metrics that should be posted.³²¹ For instance, Public

Interest Organizations request information on the available interconnection capacity (including, at a minimum, a snapshot of existing available interconnection capacity and associated transmission during high load conditions for each substation) including projects already in the interconnection queue, and the capacity those projects are requesting,³²² as well as metrics on whether power flows from a point of interconnection are likely to serve low income and people of color communities (which would be consistent with Executive Order 13985).³²³ Other commenters suggest that the posted metrics should also include: circuit strength and the harmonics of transmission system elements;³²⁴ limiting elements at a substation or associated transmission infrastructure;³²⁵ the level of congestion and resource curtailment by location (historic, current, and/or expected);³²⁶ overload conditions;³²⁷ contingencies that drive the impacts to the monitored facility;³²⁸ for a given transmission line, information on the circuit (e.g., single or double), the conductor type, pole types, the ratings of the equipment, and the age of the equipment;³²⁹ flowgate data, such as disconnect switches, breakers, transformers, conductors, series reactors, and ground clearances of lines;³³⁰ change file models of network upgrades for deliverability in advance of providing study results;³³¹ base case models paired with contingencies including local contingencies (below

Comments at 7–8; MISO Initial Comments at 25 (agreeing that the five data points are sufficient but adding that, if the first is provided, then prospective interconnection customers can calculate the other four).

200 kV);³³² incremental injection capacity available at each bus in the transmission provider's footprint under N-1 conditions with a five-year outlook;³³³ the rating of the monitored facility;³³⁴ estimated costs of interconnection or transmission service, including where interconnection is likely to be costly and not costly;³³⁵ proposed upgrades in the region that could affect interconnection requests;³³⁶ lists of potential upgrades that would be needed to export power to other regions or that would allow the transmission provider to increase injection capacity at each substation;³³⁷ more granular load growth data, defined by region, which could be combined with existing and planned generation and congestion to view anticipated system changes;³³⁸ and the share that all generating facilities contribute to a network upgrade along with their share of allocated costs.³³⁹ Tesla requests information that would particularly developers of non-synchronous generating facilities to decide what project controls might be best suited for a given point of interconnection, including: the number of generating facilities and power control devices (including series compensation systems, static synchronous compensator devices and other power control devices) that are two busses away from the given point of interconnection; the circuit breaker short circuit ratings of the nearest substation; and the maximum and minimum fault current in megavolt amperes (MVA) at the given point of interconnection.³⁴⁰

112. Several commenters highlight that additional information regarding transmission system conditions, such as previous cluster studies and models, posted in a secure way subject to CEII processes, would allow interconnection customers to conduct their own initial analyses of system conditions and desirable points of interconnection.³⁴¹

SoCal Edison states that, alternatively, the transmission providers could identify areas where new generation is desired, guided by state processes identifying the locations that can accommodate additional generation currently or locations intended for types of generation sought state policy.³⁴²

113. Some commenters oppose these requests for additional metrics. Dominion notes that tracking and providing the information requested by Public Interest Organizations, including documenting the study process, providing enhanced interconnection queue tracking, and metrics on constraints that cause bottlenecks, would be burdensome, taking engineers' time, slowing down the cluster study process, and diverting resources.³⁴³ EEI and WIRES contend that certain information on transmission line design, such as circuit type, conductor type, and pole type, would be overly burdensome and offer little benefit, adding that this information could invite potential disputes or be used to threaten to the reliability of the transmission system or for commercial gain if the information is not subject to confidentiality protections.³⁴⁴ EEI also asserts that any additional information beyond that proposed in the NOPR would complicate the interconnection process by adding another potential area of dispute and risks potential "backseat driving" by the interconnection customer, while the transmission provider is responsible for performing and standing by its study results.³⁴⁵

114. Some commenters disagree as to the appropriate level of granularity of the required metrics. SEIA and ENGIE support the NOPR proposal to require transmission providers to post bus-level interconnection capacity constraints.³⁴⁶ Dominion disagrees, arguing that requiring capacity constraint information to be provided at the bus-level is outside the scope of the NOPR and would not necessarily be useful in a networked system where injection at one bus will affect the capability at other buses and significant additional power flow analysis would be required to determine these values at each bus.³⁴⁷ According to Dominion, information

about bus-level interconnection capacity constraints makes more sense where the system is radial in nature and injection capability at one bus is not dependent on contingencies or injections at another bus. Eversource adds that bus level information will not provide significant benefits because it may be too simplistic if it is not based on N-1 conditions or if it fails to incorporate stability considerations.³⁴⁸ Public Interest Organizations state that many utilities provide hosting capacity information on their websites at the distribution level in heatmaps or tables, in particular to help distributed solar interconnection customers, and this information is required by states and updated regularly.³⁴⁹ Public Interest Organizations ask the Commission to require analogous hosting capacity information to be provided by transmission providers for all potential generation locations with exemptions for urban substations where there is limited potential for generation development. PJM requests that, rather than requiring that all buses be made available in a large RTO/ISO, a transmission provider should be allowed to screen and only present the majority of the feasible points of interconnection.³⁵⁰ As an alternative to providing information at every bus, Tri-State states that a transmission provider could post the most recent cluster study to provide information for the buses that were studied as opposed to studying all buses on the system, while also making clear that the heatmap does not reflect interconnection requests in neighboring systems.³⁵¹ Similarly, Bonneville argues that cluster studies would not provide the incremental injection capacity at each bus on the transmission provider's system, which would warrant a separate study, and therefore, transmission providers should be afforded flexibility to provide this capacity information as it becomes available.³⁵²

115. Some commenters argue that the proposed heatmap is not an ideal way to present public interconnection information. For instance, Illinois Commission states that it is not immediately evident what information maps posted to an RTO/ISO website would reflect.³⁵³ For example, Illinois Commission questions whether

³⁴⁸ Eversource Initial Comments at 11.

³⁵³ Illinois Commission Initial Comments at 6.

congestion maps would reflect present congestion or congestion that might arise after generating facilities interconnect. Fervo Energy states that additional research might be needed to determine the most useful informational suite.³⁵⁴ Clean Energy Associations proposes, and SEIA supports, that two maps, one for Energy Resource Interconnection Service (ERIS) and one for capacity or NRIS, should be made available where appropriate, and notes that in ISO-NE overlapping impact analysis is used to determine eligibility for capacity NRIS.³⁵⁵ Finally, Clean Energy Associations and ISO-NE recommend that the Commission consider allowing information to be qualitative, such that, rather than a “hosting map,” transmission providers could post a map and accompanying report regarding system conditions at various points on the transmission system.³⁵⁶

(2) Security of Critical Information

116. Several commenters express concern that the NOPR’s proposed heatmap and/or metrics may create a security risk³⁵⁷ by, among other things, indicating areas where transmission is heavily loaded and more vulnerable to interference.³⁵⁸ In particular, LADWP and Bonneville express concerns over sharing distribution factor and MW impact, which they believe could identify highly stressed transmission lines, as well as concerns with identifying the line locations, which are not currently provided publicly.³⁵⁹ LADWP further expresses concern with CEII issues that may arise from publicly releasing a table of metrics regarding the estimated impact of a potential generating facility.³⁶⁰

117. Other commenters counter that the security risks associated with the NOPR proposal are reasonable or non-existent. For example, Pacific Northwest Utilities and Puget Sound states that the purpose of the heatmap is to provide an overview of interconnection capacity, which is unlikely to implicate CEII, and thus the risk of unrestricted critical

infrastructure information should be low.³⁶¹ Indicated PJM TOs and PPL state that a visual map with limited information, excluding reliability constraints or other particular information that could be used to identify vulnerabilities, could be made public without security concerns and highlight PJM as a good example of this.³⁶² Xcel states that it does not have security concerns about posting estimated injection capacity but that some of the more detailed information should be limited.³⁶³ MISO states that it is currently unaware of any security concerns associated with the proposal.³⁶⁴

118. While SoCal Edison and Southern assert that there should be no requirement on transmission providers to make public or display any CEII or confidential information,³⁶⁵ other commenters contend that the CEII label should not be used to unreasonably impede interconnection customers’ access to interconnection information necessary to understand the cost and other impacts of locating their projects in different areas of the transmission system.³⁶⁶ Some commenters recommend that the Commission require transmission providers to make CEII data available only to interconnection customers who meet restricted access requirements, such as through a secure portal or subject to a confidentiality agreement.³⁶⁷ Pattern Energy asks that this information be made available through a cost-free process that takes no longer than two weeks,³⁶⁸ and Pine Gate adds that the retrieval of this information should not require background checks, as required by certain transmission providers.³⁶⁹ EEI suggests that transmission providers should have the discretion to identify sensitive information that should be withheld.³⁷⁰ Clean Energy States add that the Commission may want to limit access to permitted users, controlling

the copying and dissemination of data, or take other security measures.³⁷¹

(3) Miscellaneous

119. SEIA requests that the Commission require transmission providers to use the most recent available study models as well as the most recently completed system impact study in creating their data results.³⁷²

120. A few commenters express concern with the proposal to require updated information 30 days after the completion of each cluster study and restudy and instead request that the Commission allow for regional flexibility on the timing of updates.³⁷³ MISO states that, as written, the NOPR proposal would require it to update the tool available to help interconnection customers pre-screen for potential points of interconnection each time a regional system impact study is issued, which would be numerous times during a calendar year due to the configuration of MISO’s transmission system.³⁷⁴ PJM states that it is not feasible for an RTO/ISO as large as PJM to update an interactive public interconnection information tool within 30 days after completing a cluster restudy.³⁷⁵ PJM states that, once the tool includes light load results, it will be uploading four to six datasets a year with each dataset including millions of points of interconnection flowgate records, which may eventually not be feasible to maintain from a storage perspective. According to El Paso Electric, the interconnection queue changes often as interconnection customers withdraw their requests and therefore transmission providers should not be required to update capacity line estimates monthly because the burden on staff could increase interconnection study delays.³⁷⁶ Tri-State explains that only a subset of buses and lines are studied in each cluster study, so to require an estimate of the injection capacity at every bus in each cluster study to be posted within 30 days would greatly increase the scope and cost and would likely have a negative impact on the time to complete the study and cause rates to increase.³⁷⁷

121. On the other hand, Ørsted notes that any system representation needs to

be frequently updated to be useful and avoid the risk of becoming out-of-date,³⁷⁸ and Public Interest Organizations state that hosting capacity data should be updated at least quarterly.³⁷⁹ Environmental Defense Fund argues that the public interconnection information should be updated immediately at the end of each cluster request window so that interconnection customers using that information are informed of generating facilities being studied that may impact transmission capacity.³⁸⁰

(4) Requests for Flexibility

122. Several commenters request flexibility from the Commission with respect to the particular information included in a potential heatmap.³⁸¹ Dominion asserts that the proposal is overly prescriptive and that the Commission should focus on the goal itself rather than uniformity.³⁸² Clean Energy Associations state that the heatmaps may need to be tailored to the services offered by a particular transmission provider, because their services are not uniform.³⁸³ Several commenters claim that flexibility will help ensure that the information provided is useful and understandable, and will place a reasonable level of burden on transmission providers.³⁸⁴ MISO states that flexibility is reasonable given the burden on transmission providers of maintaining a heatmap tool relative to the limited value of frequent updates given that few interconnection customers use this tool and its inability to include future queued projects that will be relevant to the prospective interconnection customer.³⁸⁵ Bonneville also argues that flexibility is needed to ensure consistency with security

requirements.³⁸⁶ On the other hand, Cypress Creek asserts that, as a broad consideration, the particular types of information to be made transparent that are valuable should be determined by the Commission in consultation with market participants who are best positioned to identify information relevant to financing and constructing new projects.³⁸⁷

123. Several commenters ask for flexibility in the way information is shared. SEIA states that whether the data are in a map or other format is not as important as the product itself.³⁸⁸ NYTOs expect that flexibility would allow regions to adopt some form of the virtual tool as long as it is clear that the information is illustrative, non-binding, and subject to change.³⁸⁹ NRECA states that smaller generation and transmission cooperatives may be able to just post a table with bus names and injection capability and present the same useful information in a more economical way.³⁹⁰ NV Energy states that, if it were to post to its OASIS the CAISO locational marginal price map with a link to CAISO's OASIS to provide a list of interchange limits and interchange schedules, this would be just as valuable as a map for its own transmission system.³⁹¹

124. Some commenters argue that transmission providers that already provide public interconnection information should have flexibility to use their existing systems to comply.³⁹² However, Environmental Defense Fund avers that this flexibility should not extend to transmission providers who, prior to the NOPR, were without a substantial public interconnection information system, because they have no sunk costs related to public interconnection information systems.³⁹³

125. Several commenters express concern that heatmaps would be technically difficult to implement outside of RTOs/ISOs and ask the Commission to provide non-RTO/ISO regions with flexibility in how they comply with the mapping tool.³⁹⁴ Tri-State states that, in non-RTO/ISO regions, it is common for multiple

transmission providers to use a single substation, making injection capacity dependent on interconnection requests in neighboring interconnection queues and their associated study assumptions.³⁹⁵ Tri-State, therefore, encourages the Commission to permit variations among heatmaps, adding that entities in non-RTOs/ISOs should not be required to study every bus.³⁹⁶

126. Xcel recommends that the Commission consider applying the requirement only in RTO/ISO regions or granting non-RTO/ISO transmission providers sufficient time, such as two years, to comply.³⁹⁷ WAPA asks the Commission to first require data visualization by larger utilities, wait approximately 18 months after implementation, and then measure the benefits of interactive tools produced by larger utilities, giving stakeholders a chance to comment before extending the heatmap requirement.³⁹⁸

127. On the other hand, some commenters expressly argue that uniformity should be required inside and outside of RTO/ISO regions.³⁹⁹ Google states that such publicly available information would begin to address the critical information advantage that transmission owners have over independent power producers, particularly in non-RTO/ISO regions.⁴⁰⁰ R Street notes that non-RTO/ISO regions may have additional challenges in implementing such a tool but states that this should not eliminate their requirement to do so and those regions could be granted extra implementation time.⁴⁰¹

(d) Requests for Clarification or Technical Conference

128. Several commenters seek clarification on the information transmission providers are required to present in the heatmap, use of that information, who has the responsibility of presenting the information, timing of updating that information and recovery of costs for providing this information. PJM asks that the Commission clarify that an interactive visual congestion map could comply, instead of requiring its specific form.⁴⁰²

129. APPA-LPPC ask the Commission to clarify that it is not proposing that

transmission providers be required to conduct any individualized analyses or take any action in response to particular prospective interconnection customers' use of the interactive tools.⁴⁰³

130. Some commenters request that the Commission make clear that the public information is published only as a guide and not as a binding or definitive statement of available interconnection capacity or costs.⁴⁰⁴ Xcel asks the Commission to clarify that transmission providers have no liability associated with the posting of public information.⁴⁰⁵ EEI urges the Commission to make clear that interconnection customers that rely exclusively on this information, including these maps, do so at their own risk.⁴⁰⁶

131. Eversource asks that the Commission clarify that "no information would be required to be made available before the conclusion of the first cluster study."⁴⁰⁷

132. Dominion seeks clarification that, in an RTO/ISO context, the proposed requirements to maintain a visual representation would apply to the RTO/ISO, and not additionally to individual transmission owners.⁴⁰⁸

133. Several commenters request clarification on how the public information proposal will be funded.⁴⁰⁹ Some commenters assert that a user-pays model is the only appropriate funding mechanism because not all interconnection customers will use the public information tools, and the transmission provider or their customers should not be required to pay for work that only benefits some.⁴¹⁰ Tri-State asserts that it might increase the \$5,000 application fee to cover the significant heatmap costs.⁴¹¹

134. AEP, Tesla, and ACORE ask the Commission to initiate a proceeding and hold a technical conference to, among other things, identify useful information tools that could be feasibly developed, establish uniform and transparent study

assumptions, share best practices, and help less sophisticated interconnection customers learn to use available tools and information to lessen their own risk before entering an interconnection queue.⁴¹²

iii. Commission Determination

135. We adopt, without modification, the NOPR proposal to revise *pro forma* LGIP section 6.4, now section 6.1, to require transmission providers to publicly post available information pertaining to generator interconnection (*i.e.*, public interconnection information or a heatmap). We require transmission providers to update the heatmap within 30 calendar days after the completion of each cluster study and cluster restudy. Such heatmaps must be calculated under N-1 conditions and studied based on the power flow model of the transmission system with the transfer simulated from each point of interconnection to the whole transmission provider's footprint (to approximate NRIS), and with the incremental capacity at each point of interconnection decremented by the existing and queued generation at that location (based on the existing or requested interconnection service limit of such generation). We require transmission providers to provide the following information as outputs at each point of interconnection: (1) the distribution factor; (2) the MW impact (based on the proposed project size and the distribution factor); (3) the percentage impact on each impacted transmission facility (based on the MW values of the proposed project and the facility rating); (4) the percentage of power flow on each impacted transmission facility before the proposed project; and (5) the percentage power flow on each impacted transmission facility after the injection of the proposed project.

136. We find that the benefit of providing further transparency to interconnection customers about potential points of interconnection outweighs the added administrative burden to transmission providers. Commenters generally support supplementing the existing publicly available interconnection information and note their broad support for the NOPR proposal.⁴¹³ Many commenters

further assert that the heatmap will provide valuable information to interconnection customers before they enter the interconnection queue,⁴¹⁴ and as SEIA explains, interconnection customers currently lack substantial information prior to entering the interconnection queue, which is valuable in determining whether to proceed with a proposed generating facility.⁴¹⁵ In particular, the information that we require transmission providers to provide to prospective interconnection customers will allow such interconnection customers to learn about available interconnection capacity as well as other metrics that reflect the impact of the addition of a proposed generating facility to the transmission provider's transmission system at a particular point of interconnection. Such information may allow a prospective interconnection customer to estimate expected congestion,⁴¹⁶ and, in turn, to assess likely network upgrades triggered by a proposed generating facility or the possibility of curtailment of a proposed generating facility.

137. With access to this type of information, a prospective interconnection customer will be able to better assess the viability of a proposed generating facility before it submits an interconnection request and therefore may be able to submit fewer exploratory

and unviable interconnection requests. We believe that, by reducing the number of speculative interconnection requests, this reform will reduce the delays caused by restudies triggered by interconnection request withdrawals and overcrowded interconnection queues.⁴¹⁷ We believe that this information is also beneficial in the cluster study context, contrary to some commenters' concerns regarding the availability of information about the composition of the cluster and the effect of the other proposed generating facilities in the cluster. In fact, interconnection customers will be able to evaluate the viability of their proposed generating facility in the context of a cluster by using the publicly posted information as a baseline and incorporating the cluster information that transmission providers are required to post, during the customer engagement window, per new *pro forma* LGIP section 3.4.5 (Customer Engagement Window). Further, the heatmap requirement will standardize the information available to interconnection customers across regions and such standardization will provide interconnection customers with consistency as they assess the viability of proposed generating facilities, including where to site them, across regions.⁴¹⁸ Despite MISO's assertion that interconnection customers typically use their own tools to conduct analyses, as opposed to MISO's heatmap, several commenters identify MISO's heatmap tool as an example of a transmission provider posting generator interconnection information that is useful for prospective interconnection customers.⁴¹⁹ Therefore, we continue to

find that it is important to make similar information available to prospective interconnection customers across the country to ensure comparable access to information and the above mentioned resultant benefits of such information for the interconnection process.

138. Some commenters assert that the NOPR proposal is not useful⁴²⁰ in part because it does not provide sufficient detail and may not correspond with future study conditions,⁴²¹ its usefulness depends on its implementation,⁴²² and it is unlikely to address cost uncertainty challenges.⁴²³ In response to such objections, we find that the public interconnection information requirements we adopt in this final rule will provide further transparency of interconnection conditions, but, as we have acknowledged above, will remain non-binding and therefore cannot provide cost certainty. We recognize that this requirement does not provide real-time transmission system information, but we find that this information is valuable to prospective interconnection customers before they enter the interconnection queue.

139. We disagree with commenters that assert that the NOPR proposal is overly burdensome.⁴²⁴ By moving the *pro forma* LGIP from a serial to a cluster study process, the reforms adopted in this final rule will reduce the number of studies and restudies performed by

transmission providers, therefore reducing the burden on both transmission providers and their staff. In addition, as commenters assert, and we agree, the information posting and interactive capability we require in this final rule could feasibly be implemented with available industry system simulation tools.⁴²⁵ We also agree with Clean Energy Associations that providing these data in a standardized format should be a “relatively low-impact” requirement for transmission providers.⁴²⁶ This appears to be consistent with comments from Dominion that suggests that the majority of the burden associated with complying with this reform will be through an up-front financial commitment in new software, rather than ongoing costs.⁴²⁷ Having made such software commitments, though, transmission providers should be able to automate much of the heatmap development, without significant commitments of staff or resources. In doing so, we expect the ongoing costs of maintaining such a heatmap to be relatively low. Moreover, because transmission providers must use the most recent cluster study or cluster restudy to populate the heatmap, they will not face the burden of individualized analyses, which addresses the concern raised by some commenters.⁴²⁸

140. We adopt the requirement for transmission providers to update the heatmaps within 30 calendar days after the completion of each cluster study and cluster restudy. We recognize the need to balance the burden of a specific update frequency with the value of ensuring uniform, up-to-date information that can inform prospective interconnection customers evaluating whether to enter the next cluster. While some commenters support the timeline proposed in the NOPR,⁴²⁹ others argue that it is overly burdensome or, given the division of their footprint into regions that have different timelines, would trigger frequent updates. We find that the requirements we adopt here

⁴²⁵ APPA–LPPC Initial Comments at 13; Pennsylvania Commission Initial Comments at 13, which explains that transmission providers are already implementing these tools further illustrates the point: heatmaps will not likely cause further delay in already-stressed queues.

establish an appropriate period of time because, as discussed above, once the necessary software is in place, updating the heatmap after the completion of a study is expected to be largely automated without significant commitments of staff or resources. As the record demonstrates, such heatmaps can be implemented with available industry system simulation tools⁴³⁰ and with a standardized format that causes the burden to be a “relatively low-impact” requirement for transmission providers,⁴³¹ once transmission providers have invested in new software.⁴³²

141. In response to Eversource, which asks the Commission to clarify that the heatmap would not be required to be made available before the first cluster study concludes,⁴³³ we agree and further clarify that the heatmap would not be required to be made available until after the transition period. In response to El Paso Electric’s comments regarding the burden of a monthly update,⁴³⁴ we clarify that the heatmaps must be updated within 30 calendar days after the completion of each cluster study and cluster restudy, not on a cycle of every 30 calendar days.

142. In response to comments from PJM, Bonneville, and Tri-State requesting flexibility for the posting of information for points of interconnection that have yet to be studied,⁴³⁵ we clarify that transmission providers need to provide updates only for anything that has changed in the most recent cluster study or restudy after the first cluster study after the Commission-approved effective date of the transmission provider’s filing in compliance with this final rule. Requiring transmission providers to study each potential point of interconnection, rather than just those requested in each cluster, would expand the scope of this requirement. In turn, requiring such expanded studies would be inconsistent with ensuring that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner. In response to PJM, which states that transmission providers should be allowed to use prescreened datasets that

capture a majority of the feasible points of interconnection that remove existing generator buses on the low side of the generator step-up unit, rather than using all buses to populate the heatmap,⁴³⁶ we agree that the heatmap may not differ significantly between the existing generating facility’s point of interconnection on the low voltage side of the generating facility’s step-up unit and the high voltage side of the step-up unit. If that is the case, this final rule provides transmission providers with the flexibility to populate the heatmap with only the high side of the step-up unit.

143. In response to comments arguing that the Commission has failed to demonstrate that information already made available is inadequate,⁴³⁷ we disagree. The heatmap requirement is distinct from information that transmission providers are already required to provide. The existing *pro forma* LGIP requires transmission providers to post the interconnection models and assumptions on OASIS or a password-protected website. But the information that we require to be posted in compliance with this final rule is the output of such models and assumptions. We believe that publicly posting such resulting output is necessary to aid prospective interconnection customers in their decision-making prior to entering the interconnection queue. While interconnection customers, on their own or through the hiring of consultants, may be capable of performing studies with information already published by transmission providers to arrive at information similar to that required as part of this final rule, we believe that making high-level information more easily accessible to all prospective interconnection customers is needed to remedy unjust and unreasonable Commission-jurisdictional rates. While Order No. 845 and FERC Form 715 do require certain, more detailed information to be filed with the Commission and/or posted on OASIS or a password-protected website,⁴³⁸ access to this information has not addressed the problem of speculative interconnection requests that we aim to remedy with

several reforms adopted in this final rule.

144. We recognize the need to balance security concerns with the benefits of additional transparency. While some commenters express security-related concerns with the NOPR proposal,⁴³⁹ as discussed below, we are not modifying the Commission’s CEII procedures,⁴⁴⁰ which we believe are sufficient to address security concerns raised in comments. Some commenters state that publicly posting information that indicates areas of transmission congestion or constraints is a risk as these areas are more vulnerable. We are not persuaded by these concerns and note that location-specific congestion information is already publicly available in RTO/ISO markets. Moreover, the Commission’s regulations already provide that, upon request, transmission providers must make available all data used to calculate available transfer capability, total transfer capability, capacity benefit margin, and transmission reliability margin for any constrained posted paths publicly available (including the limiting element(s) and the cause of the limit (e.g., thermal, voltage, stability)).⁴⁴¹ Additionally, we find these concerns to be speculative, particularly in light of the fact that MISO already provides similar information over a large area. Rather, we agree with those commenters that do not believe that the NOPR proposal introduces additional security concerns.⁴⁴²

145. In response to concerns from PPL and LADWP regarding the distribution factor analysis being made public,⁴⁴³ we are not persuaded and find these concerns to be speculative as well. MISO has long made distribution factors publicly available and states it is currently unaware of any security concerns associated with the proposal.⁴⁴⁴ As such, there is no evidence in the record to suggest this posting has raised any concerns in the past. Moreover, we observe that the distribution factor analyses informing the heatmaps are the result of multi-year forward projections that inevitably

diverge from actual, real-time conditions, mitigating any potential concerns with publicly posting this information.

146. We are similarly unpersuaded by potential data confidentiality concerns.⁴⁴⁵ As with distribution factors, we find such concerns to be speculative and contrary to the experience of MISO, which, for the last several years, has already provided this information publicly,⁴⁴⁶ as well as contrary to the statements of commenters that support the NOPR proposal and do not raise data confidentiality concerns.⁴⁴⁷

147. We provide further clarification in response to comments regarding the scope of analysis and assumptions which must provide the basis for the heatmaps. In response to comments from Public Interest Organizations,⁴⁴⁸ we decline to specifically require the heatmap to be studied at high load conditions. Instead, we reiterate that such heatmap should be based on the power flow model of the cluster study or restudy. While such cluster studies are often simulated at high load conditions, we understand that transmission providers typically conduct interconnection studies by studying a variety of situations. As such, we clarify that the information posted, for consistency and actionability, must not only be based on the cluster studies, but also must reflect the most limiting

result of each of these situations studied.

148. We find that it is necessary for the heatmaps to reflect N–1 conditions because transmission systems are operated to withstand N–1 contingencies. To the extent that such information was not calculated under N–1 conditions, the results would not be useful or sufficiently actionable to potential interconnection customers. As Eversource asserts, point of interconnection level information would be too simplistic if it is based only on N–0 conditions and would not provide prospective interconnection customers with the information necessary to select viable points of interconnection.⁴⁴⁹ Similarly, we find that it is necessary for such posted information to approximate NRIS because such level of interconnection service is generally subject to more stringent requirements and therefore, reflecting this type of service will cover both types of interconnection requests, whether they are NRIS or ERIS.⁴⁵⁰ Similar to information calculated under only N–0 conditions, to the extent such a heatmap was not calculated to approximate NRIS, the results would not be useful or sufficiently actionable to a significant portion of interconnection customers.

149. In response to comments from AES,⁴⁵¹ we decline to require the heatmaps to include a five-year outlook of available interconnection capacity. The purpose of the heatmaps is to provide potential interconnection customers an idea of the amount of interconnection capacity available at the conclusion of each cluster study or restudy. Because we are requiring transmission providers to consider pending generating facilities when collating the information to make

public, interconnection customers will be aware of some of the future conditions on the transmission system. Further, any requirement to produce forecasts would place an additional burden on transmission providers that we find would outweigh its usefulness to interconnection customers.

150. In response to comments from Alliant Energy and Clean Energy Associations arguing that the assumptions used to produce the heatmap should be made clear to users,⁴⁵² we find that the assumptions used to produce the heatmap should be consistent with those used in the interconnection cluster studies. As those assumptions are already required to be publicly posted, along with the models themselves,⁴⁵³ the assumptions used to produce the heatmap will be publicly posted via these preexisting requirements.

151. Tri-State describes difficulties associated with multiple transmission providers that inhabit a single substation. In such situations, we clarify that transmission providers must populate the required heatmaps using the results from their interconnection studies. In response to the Illinois Commission, we clarify that the heatmaps must represent potential congestion that might result after a generating facility interconnects, not present congestion values. The heatmap must reflect the base case assumptions from the most recent cluster study or cluster restudy. Such studies are not intended to analyze current operational conditions.

152. We next respond to specific objections raised regarding the heatmaps' required level of granularity and scope, requested flexibilities regarding alternatives to the adopted reform, and clarifications regarding which transmission providers are required to provide heatmaps, whether heatmaps are non-binding, and how costs related to the heatmaps requirement are to be recovered. We decline to alter the level of granularity of the heatmaps from that proposed in the NOPR. As Ameren and MISO attest,⁴⁵⁴ the five data points proposed in the NOPR are reasonable and sufficient to provide a high-level comparison between several points of interconnection, and therefore to satisfy the goals of this reform.

153. Similarly, consistent with support from ENGIE and SEIA,⁴⁵⁵ we adopt the scope of the heatmap requirement proposed in the NOPR, which is the amount of point of interconnection-level interconnection capacity available to be injected at each point of interconnection. We decline to expand the scope of the reporting. We believe that the scope of information that we require transmission providers to publicly post appropriately balances the burdens on transmission providers associated with providing this information with the benefits that might be realized by prospective interconnection customers of having ready access to this information. In response to Dominion, which argues that point of interconnection-level information may not necessarily be useful because, in a networked system, injection at one point of interconnection will affect the capability at other points of interconnection,⁴⁵⁶ we agree that injections at one location affect capabilities at other locations. Because the information provided by the transmission provider accounts for full transmission system conditions, interconnection customers should have the information they need to approximate the impact of their potential generating facility on the transmission system. For example, interconnection customers will know if they are proposing to interconnect near constrained regions even if those constraints are not necessarily at the proposed point of interconnection.

154. We decline to require transmission providers to provide additional interconnection information metrics, as requested by some commenters.⁴⁵⁷ While we are supportive of increased transparency, we are not persuaded that the benefits of such information would outweigh the burden of tabulating and posting such information.

155. In response to ISO-NE, we decline to require that the heatmap be qualitative only.⁴⁵⁸ We find that providing information only qualitatively

would not provide interconnection customers information they could use to adequately mitigate risks such as obtaining site control and providing significant deposits to the transmission provider in order to enter the interconnection queue. Thus, providing only qualitative information would be insufficient to address the lack of information available to interconnection customers prior to entering the interconnection queue, which leads to speculative interconnection requests and the problems identified in the need for reform section above.

156. In response to requests for flexibility for transmission providers to identify and post alternative heatmaps,⁴⁵⁹ we decline to grant such additional flexibility. In this final rule, we establish a set of required information that transmission providers must publicly provide. We believe that this level of information is what is needed to address the lack of information available to interconnection customers prior to entering the interconnection queue, and therefore remedy the unjust and unreasonable Commission-jurisdictional rates discussed in section II of this final rule. We therefore disagree that the proposal is overly prescriptive,⁴⁶⁰ as we believe that the required information is necessary to adequately inform prospective interconnection customers. While we establish a set of required information, in response to comments from Clean Energy Associations that the heatmap may need to be tailored to the services offered by a particular transmission provider,⁴⁶¹ and comments from Bonneville that flexibility would allow transmission providers to determine whether a different methodology would more clearly identify interconnection capability for interconnection customers,⁴⁶² we note that if transmission providers find value in providing additional or different information, they may propose such variations on compliance.

157. While we acknowledge that, as a result of the relative interconnection queue sizes and load levels, many

transmission providers may have heatmaps that indicate negative interconnection capacity and thereby would simply be “red,”⁴⁶³ we agree with R Street that providing a visual representation of available interconnection capacity is a best practice and should be required nationwide.⁴⁶⁴ Moreover, we find that there is value in providing an all “red” heatmap, as such information will demonstrate to prospective interconnection customers the potential and likely network upgrade-related consequences associated with interconnecting. In other words, an all “red” heatmap sends a valuable signal to interconnection customers regarding where proposed generating facilities may be more or less economic to interconnect prior to entering the interconnection queue.

158. Not only is there value in requiring this information from all transmission providers, we are not persuaded that the burden is so great as to outweigh the benefits for non-RTO/ISO transmission providers and for smaller transmission providers.⁴⁶⁵ We acknowledge that RTOs/ISOs are operationally different from their non-RTO/ISO counterparts and that RTOs/ISOs are often more technologically advanced, but the requirement is to reproduce interconnection studies and publish the results in a heatmap. No commenter attests that existing interconnection studies in non-RTO/ISO regions fail to evaluate point of interconnection-level interconnection injection capability. Moreover, we find that by publicly reproducing the results of existing interconnection studies, the heatmaps will address the need for additional interconnection information that exists in both RTOs/ISOs and non-RTOs/ISOs. In other words, we find that there are unjust and unreasonable Commission-jurisdictional rates stemming from the lack of this information for prospective interconnection customers both within and outside of RTOs/ISOs and that this problem must be remedied.

Additionally, as Environmental Defense Fund comments, at least one other relatively small transmission owner posts an interactive capacity heatmap for its distribution system comparable to

that required by this final rule.⁴⁶⁶ Thus, contrary to comments from PPL,⁴⁶⁷ we find that smaller transmission providers are able to provide this information to prospective interconnection customers and that the benefits outweigh the burdens.

159. In response to comments from the NY Commission and NYSERDA asking for flexibility to ensure that the information is accessible and understandable,⁴⁶⁸ we do not think that such flexibility is needed—we specifically require the information to be contained within an interactive map and posted on transmission providers' websites for this purpose. Contrary to comments from NV Energy,⁴⁶⁹ we find that the interactive map is necessary to ensure accessibility and understandability. Absent the map, potential interconnection customers would need to separately map injection points of interconnection to specific locations.

160. In response to comments from PJM and NV Energy requesting flexibility for transmission providers, in lieu of the heatmap, to post congestion information and a link to OASIS with interchange limits and schedules, we decline to grant such flexibility. We find that there are meaningful differences between the results of planning studies, such as those used in the interconnection process, and operational data, like congestion and interchange schedules. Interconnection studies are generally conducted at a specific high-stress point in time for injection at a specific point of interconnection to determine flows across the whole transmission system, while operational data are simply the accumulation of real-time and/or day-ahead results. Thus, posting such operational data would only introduce timing differences and could not substitute for the deliverability analyses conducted in the interconnection processes.

161. In response to NYTOs, we clarify that the information displayed in the heatmap will be illustrative, non-binding, and subject to change.⁴⁷⁰ We agree with Tri-State's statement that transmission providers must also caveat that the results do not account for affected system impacts. As we have

acknowledged, one primary driver of the available interconnection capacity is the composition of the interconnection customer's cluster, and the heatmap cannot reflect those additional interconnection requests prior to the end of the customer request window.

162. In response to requests to clarify the funding mechanism associated with the heatmap requirement,⁴⁷¹ we clarify that transmission providers, not interconnection customers, are responsible for paying for costs associated with posting the relevant heatmaps required in *pro forma* LGIP section 6.1. However, we note that, to the extent such costs are properly recoverable in transmission rates consistent with existing Commission accounting and ratemaking policy, such rate treatment is appropriate, and this final rule does not preclude such treatment. We find that this reform will improve overall interconnection queue efficiency to the benefit of transmission customers, consistent with Commission policy.⁴⁷²

163. In response to Dominion, which requests clarification in the RTO/ISO context,⁴⁷³ we clarify that within an RTO/ISO, the heatmap requirement applies to the RTO/ISO, rather than to an individual transmission owner in an RTO/ISO. Thus, transmission owners in RTOs/ISOs are not required to separately post their own visual representations and results.

164. Finally, in response to concerns from WAPA about Federal power marketing agencies having defined budgets and appropriations,⁴⁷⁴ we note that transmission providers may explain specific circumstances on compliance and justify why any deviations are either "consistent with or superior to" the *pro forma* LGIP or merit an independent entity variation in the context of RTOs/ISOs.

2. Cluster Study Process

a. Need for Reform and Interconnection Study Procedures

i. NOPR Proposal

165. To remedy what may now be an unjust and unreasonable interconnection process, the Commission proposed to eliminate the serial first-come, first-served study process in the *pro forma* LGIP and instead require transmission providers to use a first-ready, first-served cluster

study process.⁴⁷⁵ The Commission explained that under a first-ready, first-served cluster study process, transmission providers would perform larger interconnection studies encompassing numerous proposed generating facilities, rather than separate studies for each individual interconnection request. Under the NOPR proposal, transmission providers would perform a single cluster study and cluster restudy each year, the particulars of which are further discussed below.

ii. Comments

166. Many commenters support the elimination of the serial study process and the use of the proposed cluster study process.⁴⁷⁶ Several commenters assert that the proposed cluster study process will increase efficiency in the interconnection process by diminishing delays and backlogs in processing

⁴⁷⁵ NOPR, 179 FERC ¶ 61,194 at P 64.

⁴⁷⁴ WAPA Initial Comments at 7–8.

interconnection queues.⁴⁷⁷ Several commenters also believe that the proposed cluster study process will result in fewer interconnection request withdrawals⁴⁷⁸ and will discourage speculative interconnection requests.⁴⁷⁹ Some commenters assert that, from the interconnection customer's perspective, the proposed cluster study process provides more certainty on timing and cost.⁴⁸⁰ Several commenters state that they have already implemented some of the proposed cluster study process reforms.⁴⁸¹

167. Dominion states that another benefit of moving to the proposed cluster study process is that, if a proposed generating facility is not ready for its cluster study, it can join the next cluster rather than losing its interconnection queue position as occurs in a serial study process.⁴⁸² Dominion asserts that, as a result, the proposed cluster study process removes the incentive for an interconnection customer to "reserve a spot in line" for a proposed generating facility is not yet viable. Ohio Commission Consumer Advocate believes that larger interconnection studies encompassing numerous proposed generating facilities would be especially beneficial for interconnection customers with multiple proposed generating facilities in close geographical proximity.⁴⁸³ Avangrid believes that applying this concept to more regions will lead to a more guided and proactive build-out of new generation and required transmission upgrades.⁴⁸⁴

168. Several commenters argue that the proposed cluster study process will

foster renewable resource development and aid in meeting national and/or state clean energy and carbon emissions reduction goals.⁴⁸⁵ Puget Sound states that over the past year, it has seen unprecedented numbers of interconnection requests in response to the resource solicitation process and a demand for new renewable energy sources.⁴⁸⁶ Puget Sound adds that it has experienced a backlogged interconnection queue, entry of speculative interconnection requests, and uncertainty for interconnection customers relying on higher-queued interconnection requests to complete the interconnection process for their proposed generating facilities to be feasible. Clean Energy States assert that, because wind and solar projects can be relatively small, clustering should help smaller projects share the cost of interconnection studies and upgrades, thereby providing them a viable path through the interconnection process.⁴⁸⁷

169. Some commenters support the use of the proposed cluster study process, so long as it is coupled with additional requirements, some of which the Commission proposed in the NOPR.⁴⁸⁸ AEE recommends that the Commission consider further reforms to harmonize study assumptions and more closely link generator interconnection and long-term regional transmission planning processes.⁴⁸⁹ R Street states that the Commission should consider an interconnection study approach that uses transparent, realistic study assumptions.⁴⁹⁰ Clean Energy Associations argue that certain conservative assumptions—such as NERC standard TPL-001's extreme contingency cases—can lead to the identification of unreasonably large and costly upgrades.⁴⁹¹ Clean Energy Associations also assert that the Commission should make clear in its final rule whether moving from a serial study process to a cluster study process should or should not be accompanied by any change in the interconnection

standards and assumptions used in those studies.⁴⁹² Ameren generally supports the proposal to move to a first-ready, first-served cluster study process, but argues that this move without other reforms is unlikely to clear the interconnection queue backlog.⁴⁹³ NERC states that its support for cluster studies is predicated on parallel enhancements for model validation with actual installed equipment and a true-up prior to interconnection.⁴⁹⁴

170. Other commenters express some concern with the move to the proposed cluster study process. For example, Enel states that cluster studies increase interdependence between interconnection requests, with a greater likelihood that multiple interconnection customers are responsible for a single network upgrade, which creates a paradigm where one interconnection customer's actions, such as withdrawing from the interconnection queue, can have drastic impacts on many other interconnection customers.⁴⁹⁵ Enel also asserts that, while the proposed cluster study process has some benefits, recent cluster studies are resulting in significant regional transmission constraints with very high associated network upgrade costs and long construction schedules. Enel contends that the proposed cluster study process can still reduce interdependency and succeed if there are much smaller, more local, regional groupings of interconnection requests in cluster studies and lower minimum impact thresholds for determining network upgrades. Enel says the Commission should adopt these two practices if it adopts the proposed cluster study process.

171. Some commenters note that, where the demand for generator interconnection significantly exceeds the available supply of interconnection access, the NOPR's proposed cluster study process and interconnection queue management reforms alone may be insufficient to address the backlog of interconnection requests.⁴⁹⁶ Other commenters assert that under these circumstances, some form of interconnection request prioritization may be needed to effectively allocate scarce interconnection access to the lowest-cost or highest-value proposed generating facilities.⁴⁹⁷

172. Several commenters state that, while they support the use of the proposed cluster study process, the Commission should allow variation among transmission providers in the makeup of the study process.⁴⁹⁸ Some commenters argue that regional variations should be permitted, especially where transmission providers have already implemented a first-ready, first-served cluster study process.⁴⁹⁹ Environmental Defense Fund, on the other hand, argues that the Commission should provide limited flexibility for transmission providers to demonstrate in their compliance filing that a preexisting cluster study process is substantially similar to the process established in the Commission's final rule.⁵⁰⁰

173. Pacific Northwest Utilities and CREA and NewSun urge the Commission to allow flexibility for transmission providers to design the cluster study process to implement either a single-phase or two-phase cluster study process.⁵⁰¹ Pacific Northwest Utilities contend that requiring full commercial readiness in a single-phase study process, as proposed in the NOPR, significantly restricts an interconnection customer's ability to enter the interconnection queue.⁵⁰² Pacific Northwest Utilities argue that a two-phase approach provides greater accessibility to some interconnection customers by not requiring commercial readiness for entry into the first phase. According to Pacific Northwest Utilities, this is because all interconnection customers who have attained site control will have information about the network upgrades needed to meet the interconnection requirements of the cluster and the expected cost responsibility for each interconnection customer in the cluster. Pacific Northwest Utilities aver that this

information reduces the potential for interconnection customers to withdraw from phase two and, therefore, should reduce the need for additional restudies that might slow or stall the interconnection process.

174. Some commenters argue that it may not be appropriate to mandate the proposed cluster study process for every transmission provider as cluster studies can be complex, expensive, and not the most efficient or necessary approach for all proposed generating facilities or circumstances.⁵⁰³ Some commenters generally support the use of cluster studies if transmission providers retain discretion to use the existing serial study process.⁵⁰⁴ Vermont Electric and Vermont Transco notes that not all interconnection requests need to be studied in a cluster format, and that this has frequently been the situation in New England, where interconnection queue bottlenecks have historically been locational and driven by state clean energy procurement efforts.⁵⁰⁵ ISO-NE requests that the Commission consider a more targeted approach for clusters triggered by geographic or electric proximity among interconnection requests, rather than a blanket clustering process for all interconnection requests.⁵⁰⁶ Instead of mandating a clustering in all regions, ISO-NE contends that the Commission consider the expanded use of clustering in areas with larger concentrations of proposed generating facilities, while allowing use of serial studies for customers seeking to interconnect in areas with low activity, where serial studies could proceed relatively quickly.

175. National Grid asks for clarification as to whether the proposed cluster study process encompasses energy or capacity interconnection service requests, or both.⁵⁰⁷

176. Some commenters contend that the Commission should encourage relevant state entities to consider the efficient coordination of their state-jurisdictional interconnection process with Commission-jurisdictional interconnection processes.⁵⁰⁸ Avangrid argues that sizable distributed energy resources should be aggregated and included in the broader cluster study of

large and small Commission-jurisdictional generating facilities. Pine Gate suggests the Commission require transmission providers, on compliance, to "document how they will ensure that any serial processes for state-jurisdictional interconnection agreements will interact with the required cluster study process" and explain how the interconnection queue position of qualifying facilities (QFs) will not be prejudiced by the transition to a cluster study process.⁵⁰⁹

iii. Commission Determination

177. We adopt the NOPR proposal to revise the *pro forma* LGIP and *pro forma* LGIA to make cluster studies the required interconnection study method. We find that the move from the serial study process in the *pro forma* LGIP to the proposed cluster study process, alongside the other reforms adopted in the final rule, will remedy the unjust and unreasonable rates discussed in section II of this final rule. Specifically, we believe that this reform will help remedy the problems of the existing interconnection process for large generating facilities in several ways. First, the cluster study process will increase efficiency because transmission providers can perform larger interconnection studies encompassing many proposed generating facilities, rather than separate studies for each individual interconnection customer.⁵¹⁰ The cluster study process will provide greater certainty to interconnection customers, regarding both the timing of studies and the magnitude of network upgrade costs. Coupled with the increased financial commitments and requirements to enter the interconnection queue, such as a demonstration of site control, as discussed further below, the cluster study process will also disincentivize interconnection customers from submitting interconnection requests for speculative generating facilities and ensure that ready, more viable proposed

⁵¹⁰ NOPR, 179 FERC ¶ 61,194 at P64; May Joint Task Force Tr. 46:15–19 (Clifford Rechtschaffen) (stating that CAISO's cluster process has been helpful and important for improving interconnection queue processing and that clustering "is a best practice and should be promoted"); EEI Initial Comments at 2,5; ELCON Initial Comments at 2,8; EPSA Initial Comments at 6; Idaho Power Initial Comments at 4; Indicated PJM TOs Initial Comments at 10; Pennsylvania Commission Initial Comments at 5–6; *see also* May Joint Task Force Tr. 43:25–44:4 (Riley Allen) ("Clustering helps the system to the benefit ultimately of ratepayers. New England has been relying on (explaining that clustering has two goals: minimizing the study time and minimizing the first mover disadvantage by sharing costs among those resources that need the same upgrades).

generating facilities can proceed through the study process.⁵¹¹ We also expect that the cluster study process will result in fewer withdrawals because conducting a single cluster study and cluster restudy will minimize delays that arise from proposed generating facility interdependencies under the existing serial study process, in which lower-queued interconnection customers can strategically and monetarily benefit from network upgrades and associated costs borne earlier in the interconnection process by higher-queued interconnection customers. We further expect that the cluster study process will minimize the risk of cascading restudies when an interconnection customer withdraws.⁵¹²

178. We are not persuaded by Enel's request that the Commission adopt smaller, more local regional groupings of proposed generating facilities in interconnection studies and lower minimum impact thresholds for determining upgrades.⁵¹³ We find the record insufficient to support these additional requirements. We also decline requests to allow transmission providers to either continue to use a serial study process or to create a parallel serial study process⁵¹⁴ because, as discussed further below, we find that establishing in the *pro forma* LGIP a separate interconnection process outside the cluster study process could detract from transmission providers' efforts to efficiently process cluster studies, and would be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

179. In response to requests to allow variation in how clusters are formed,⁵¹⁵ we emphasize that the reforms to the *pro forma* LGIP adopted in this final rule do not prescribe how transmission providers should form clusters.

180. In response to National Grid,⁵¹⁶ we decline to clarify whether the proposed cluster study process encompasses energy or capacity interconnection service requests. "Energy interconnection requests" and "capacity interconnection requests" are not defined terms in the *pro forma* LGIP, and we decline to define them here. We do not believe that such detail is needed for transmission providers to implement the reforms adopted herein.

181. In response to Avangrid,⁵¹⁷ we encourage relevant state entities to consider the efficient coordination of their state-jurisdictional interconnection processes with Commission-jurisdictional interconnection processes.

182. In response to requests to create some form of generating facility prioritization,⁵¹⁸ we are neither persuaded that such prioritization is needed, nor do we have an adequate record to dictate how generating facility prioritization should be implemented in a just, reasonable, and not unduly discriminatory or preferential manner.

183. Finally, we decline to adopt the following proposals advocated by some commenters because they are outside the scope of this proceeding: (1) AEE's request that the Commission consider further reforms to more closely link generator interconnection and long-term regional transmission planning process;⁵¹⁹ (2) Cypress Creek's request to require transmission providers to allow interconnection customers to seek energy-only injection as a default and provide a subsequent process (needed to address capacity-market constructs) by which an interconnection customer can add firm rights;⁵²⁰ (3) Pine Gate's suggestion for the Commission to require transmission providers to document on compliance how they will ensure that any serial study processes for state-jurisdictional interconnection agreements will interact with the required cluster study process and explain how the interconnection queue position of QFs will not be prejudiced by the transition to a cluster study process;⁵²¹ and (4) AEE's and Clean Energy Associations' request that the Commission also harmonize study standards and assumptions.⁵²² We find that these proposals are outside the scope of this proceeding as the

Commission did not propose specific reforms on these issues, and we find an inadequate record to fully consider or adopt these requested changes.

b. Defined Terms in the Pro Forma LGIP and Pro Forma LGIA

i. NOPR Proposal

184. In the NOPR, the Commission proposed to add several new defined terms (such as cluster, cluster study process, and cluster request window) and to revise several defined terms (such as stand alone network upgrade and material modification) in section 1 of the *pro forma* LGIP and article 1 of the *pro forma* LGIA.⁵²³

ii. Comments

185. Starting with the proposed definition of stand alone network upgrade, a few commenters support the Commission's proposal.⁵²⁴ Tri-State suggests adding to the definition of stand alone network upgrade that a transmission provider's interconnection facilities may be shared by more than one generating facility in a given cluster study, including a co-located resource.⁵²⁵

186. Other commenters oppose the proposed revisions to the definition of stand alone network upgrade. Clean Energy Associations argue that the proposal to modify the definition of stand alone network upgrade to restrict it to those needed only for a single interconnection customer is problematic and counterproductive.⁵²⁶ Clean Energy Associations contend that allowing interconnection customers the right to self-build interconnection facilities and stand alone network upgrades since Order No. 845 has served as a welcome relief valve to transmission providers' lengthy construction timelines, giving customers increased control of both the time and cost for building these upgrades. As an alternative, Clean Energy Associations suggest an approach similar to ISO-NE's for network upgrades that are needed for multiple interconnections where an independently developed elective network upgrade, if selected by all of the interconnection customers in the cluster that require the network upgrade, can take the place of the incumbent-built cluster enabling network upgrade.

187. Pine Gate states that in its experience, after Order No. 845,

⁵²⁴ Ameren Initial Comments at 9; MISO Initial Comments at 32.

⁵²⁵ Tri-State Initial Comments at 25.

⁵²⁶ Clean Energy Associations Initial Comments at 22–23.

transmission providers have taken a very narrow view of the facilities that constitute stand alone network upgrades, and thus the potential for interconnection customers to exercise the option to build has not been fully realized.⁵²⁷ Pine Gate asserts that the proposed change would further restrict the opportunity for interconnection customers to exercise the option to build, exacerbate construction delays, and result in a lack of competition to construct stand alone network upgrades, ultimately harming consumers. Pine Gate therefore recommends that the Commission not modify the definition of stand alone network upgrade as proposed and instead grant the interconnection customer with the largest projected impact on a potential stand alone network upgrade facility the ability to elect the option to build with priority falling to each interconnection customer based on the next largest impact on the stand alone network upgrades.

188. Enel argues that the Commission should not adopt the proposed substantive revisions to the definition of stand alone network upgrades and should instead expand the definition of stand alone network upgrades to include upgrades to an existing transmission facility which involves a transmission line or substation being entirely rebuilt.⁵²⁸ Enel offers suggestions for implementing a third-party option that would give interconnection customers more control over the cost and schedule of larger network upgrades, resolving a frequent barrier to bringing needed generating facilities online. To that end, Enel states that *pro forma* LGIA article 5.1 could be modified to specify that the option to build is only eligible for stand alone network upgrades funded by a single interconnection customer, while the proposed third-party option could be used for all stand alone network upgrades, including line and substation rebuilds.

189. Moving to the proposed definition of material modification, some commenters support the Commission's proposal.⁵²⁹ Ørsted urges the Commission to ensure that under the newly proposed definition of material modification, any changes to a proposed generating facility that occur on the generating facility side of the point of interconnection that do not

result in changes to the electrical output at the point of interconnection or the electrical characteristics of the generating facility's interconnection: (1) will not be deemed to be a material modification; and (2) will not result in the termination of the interconnection customer's queue position.⁵³⁰

190. Ameren suggests that the Commission consider clarifying the proposed definition of material modification, so that cost and timing are factors to be considered in addition to when the transmission provider determines changes to the point of interconnection are otherwise material (e.g., from an electrical standpoint).⁵³¹ Ameren states that the Commission may want to consider whether the change should only be triggered by a change to the point of interconnection or whether a change to the inverters or other pieces of equipment in the interconnecting generating facility, which could require other upgrades, should also result in the determination of a material modification.

191. EPSA asks the Commission to be clearer in determining a standard definition of a material modification.⁵³² EPSA argues that, at minimum, the Commission should direct each RTO/ISO or each NERC region to establish clear criteria for the evaluation of material modifications.

iii. Commission Determination

192. We adopt the proposed revisions to section 1 of the *pro forma* LGIP and article 1 of the *pro forma* LGIA to revise and add several defined terms. Specifically, we adopt the proposed revisions to the definition of stand alone network upgrade to clarify that, for a network upgrade to be eligible for treatment as a stand alone network upgrade, the network upgrade must be required for only one interconnection customer and must meet the other existing requirements in the definition of stand alone network upgrade. We address further modifications to the definition of stand alone network upgrade below where discussing network upgrade cost allocation (section III.A.4.c of this final rule). We also adopt the proposed revisions to the definition of material modification, which account for the equal interconnection queue position of proposed generating facilities that are part of the same cluster. We also modify the NOPR proposal to define interconnection facilities study report.

193. With respect to the definition of stand alone network upgrade, in response to Clean Energy Associations' concerns, we note that we do not remove the right to self-build interconnection facilities and stand alone network upgrades established in Order No. 845. Rather, we are explicitly maintaining the status quo, which is to say that, under the existing *pro forma* LGIP, there is no potential for a stand alone network upgrade to be shared by more than one interconnection customer. With the revision proposed in the NOPR and adopted here, we are ensuring that within the structure of a cluster study process adopted in this final rule, stand alone network upgrades continue to be defined as only those required for a single interconnection customer, and therefore the option to build is only available for a single interconnection customer. Were we to not adopt this revision, multiple interconnection customers could potentially attempt to construct the same stand alone network upgrades, leading to confusion and potentially lengthy negotiations and/or disputes regarding which interconnection customer had the right to construct the stand alone network upgrade. Additionally, with regard to Clean Energy Associations' request that the Commission consider an approach similar to ISO-NE's for certain upgrades that are needed for multiple interconnections, we decline to adopt this approach because it is outside the scope of this proceeding. We are not proposing in this proceeding to modify the *pro forma* LGIP to address the cost responsibility and division of work between interconnection customers that may share cost allocation for stand alone network upgrades.

194. Similarly, Tri-State, Pine Gate, and Enel argue that the Commission should expand the definition of stand alone network upgrade, thereby expanding the right of interconnection customers to build certain network upgrades. These requests are outside the scope of this proceeding, which is not proposing to modify the scope of interconnection customers' option to build certain stand alone network upgrades but rather is only revising definitions insofar as is necessary to implement reforms adopted elsewhere in this final rule. For the same reason, we decline to expand the definition of material modification, as Ørsted, Ameren, and EPSA request.⁵³³

⁵²⁷ Pine Gate Initial Comments at 63–64 (citing Comments of Pine Gate, Docket No. RM21–17–000, at 9–10 (filed Oct. 12, 2021); Order No. 2003, 104 FERC ¶ 61,103 at PP 85, 353).

c. Definitive Point of Interconnection

i. NOPR Proposal

195. In the NOPR, the Commission proposed to add new section 3.1.2 to the *pro forma* LGIP and therein to require interconnection customers to select a definitive point of interconnection to be studied no later than the execution of the cluster study agreement. The Commission also proposed that, upon mutual agreement, the transmission provider may make reasonable changes to the requested point of interconnection to facilitate efficient generator interconnection of clustered interconnection requests at common points of interconnection.⁵³⁴

ii. Comments

196. MISO supports the Commission requiring the selection of a definitive point of interconnection when executing the cluster study agreement; however, MISO encourages the Commission to require the selection of a definitive point of interconnection even earlier, as part of the interconnection request.⁵³⁵ MISO notes that requiring an earlier selection of the definitive point of interconnection will assist in interconnection queue processing, as a transmission provider would not be able to begin modeling work if the interconnection customer is permitted to wait until a later point in time to select its definitive point of interconnection. MISO further argues that the definitive point of interconnection (even if subject to change) should be selected prior to any scoping meeting. MISO also supports the proposed language that limits the ability of the interconnection customer to change its point of interconnection after the submission of interconnection request.

197. Other commenters do not support the Commission's proposal to require a definitive point of interconnection when executing the cluster study agreement.⁵³⁶ ACE–NY supports making the demonstration of a feasible point of interconnection a requirement for a generating facility to move into the facilities study phase of the generator interconnection process.⁵³⁷

198. Pine Gate and CREA and NewSun assert that the Commission should modify its proposal to permit interconnection customers to request

alternative points of interconnection.⁵³⁸ Pine Gate argues that the Commission should permit interconnection customers to request a study of a primary and secondary point of interconnection within one or two electrical buses, then select a point of interconnection restudy after receiving initial cluster study results.⁵³⁹ Similarly, CREA and NewSun assert that the Commission should permit alternative points of interconnection, and collective points of interconnection for proposed generating facilities in a cluster (e.g., those that could connect to a single substation), to be proposed and studied, at least through the system impact study in order to obtain more complete cost information.⁵⁴⁰

199. Enel suggests that, in the second paragraph of proposed section 3.1.2 of the *pro forma* LGIP, the Commission should change the word “make” to “propose” in the following quoted language: “For purposes of clustering Interconnection Requests, Transmission Provider may make reasonable changes to the requested Point of Interconnection.”⁵⁴¹ Enel explains that this would clarify that any such changes can only be made with the consent of the interconnection customer, as specified in the proposed new final sentence to that paragraph.

iii. Commission Determination

200. We adopt the proposed section 3.1.2 of the *pro forma* LGIP insofar as it requires an interconnection customer to select a definitive point of interconnection to be studied when executing the cluster study agreement, with one modification discussed below.

201. Requiring interconnection customers to select a definitive point of interconnection when executing the cluster study agreement allows the interconnection customer to submit its interconnection request with a proposed point of interconnection, participate in the scoping meeting during the customer engagement window, and receive feedback on its proposed point of interconnection. We believe that this strikes the right balance between allowing for flexibility and potential adjustments to the point of interconnection, based on discussion with the transmission provider and the transmission provider's detailed knowledge of its transmission system, and providing transmission providers with the information necessary to

conduct the cluster study, thus reducing the potential for restudies that would be required if interconnection customers could change their points of interconnection later in the process.

202. We decline to: (1) require that the definitive point of interconnection be selected earlier (e.g., as part of the interconnection request);⁵⁴² (2) only require that the definitive point of interconnection be selected later (e.g., at the facilities study phase);⁵⁴³ or (3) permit interconnection customers to submit multiple alternative points of interconnection for study in a single interconnection request.⁵⁴⁴ We believe that requiring the selection of a definitive point of interconnection earlier in the cluster study process, as suggested by MISO, would deprive interconnection customers of information that could aid in their selection. Similarly, we believe that requiring the selection of a definitive point of interconnection after the cluster study, as suggested by ACE–NY, or allowing multiple points of interconnection to be studied before the interconnection customer is required to select the definitive point of interconnection, as suggested by Pine Gate and CREA and NewSun, fails to take into account the fact that, if an interconnection customer changes the definitive point of interconnection after the cluster study, it will likely impact the study results of the other interconnection customers in the cluster and could lead to restudies and delays. We do not believe that the alternatives suggested by commenters would remedy the unjust and unreasonable status quo described in section II of this final rule.

203. Finally, we agree with Enel's suggestion to change the word “make” to “propose” in *pro forma* LGIP section 3.1.2. We modify that section to state: “For purposes of clustering Interconnection Requests, Transmission Provider may propose reasonable changes to the requested Point of Interconnection.”⁵⁴⁵ We agree that this clarifies that any such changes can only be made with the consent of the interconnection customer.

d. Cluster Request Window and Customer Engagement Window

i. NOPR Proposal

204. In the NOPR, the Commission proposed to add new section 3.4.1 (Cluster Request Window) to the *pro forma* LGIP to require interconnection

⁵⁴⁵ Enel Initial Comments at 82.

customers to submit an interconnection request during the cluster request window—a 45-calendar day period with the start date to be determined by each transmission provider (with the annual start date for the transmission provider's cluster request window included in its LGIP).⁵⁴⁶ The transmission provider would consider all interconnection requests accepted during this period to have equal queue priority for purposes of the cluster study. The Commission also proposed to add in *pro forma* LGIP section 3.1.1 (Initial Study Deposit) a non-refundable application fee of \$5,000 to be submitted with the interconnection request. The Commission further proposed that interconnection customers must cure deficient interconnection requests within 10 business days after receipt of notice from the transmission provider, but no later than the close of the cluster request window.

205. The Commission also proposed to add new *pro forma* LGIP section 3.4.5 (Customer Engagement Window), which provides that, following the close of the cluster request window, the transmission provider begins a 30-calendar day customer engagement window.⁵⁴⁷ New *pro forma* LGIP section 3.4.5 also requires the transmission provider to post within the first 10 business days following the close of the cluster request window a list of interconnection requests for that cluster.

ii. Comments

206. Clean Energy Associations support the proposal to require interconnection customers to submit interconnection requests during the cluster request window.⁵⁴⁸ MISO supports the Commission requiring a definitive application deadline as part of the implementation of cluster studies, and equal interconnection queue priority for all interconnection requests submitted prior to that deadline, but does not see an intrinsic value in a defined application start time.⁵⁴⁹ MISO supports granting interconnection customers flexibility to submit an interconnection request earlier than the beginning of a cluster request window. Noting that, under proposed *pro forma* LGIP section 3.4.5, interconnection requests that are deemed valid during

the customer engagement window are placed into the cluster study, Southern proposes that if an interconnection request is not deemed valid, the interconnection request should be withdrawn from the interconnection queue.⁵⁵⁰

207. MISO expresses concern that the timelines listed in the customer engagement window for posting information are impractical.⁵⁵¹ MISO asserts that the Commission should not require a posting so near to the close of the cluster request window because the transmission provider must devote its resources to reviewing the interconnection requests for deficiencies.⁵⁵² MISO contends that this information would only be useful at this time to interconnection customers with speculative interconnection requests that may be trying to determine if their proposed generating facility is economically viable and that may be trying to identify a point of interconnection change to increase the viability of their interconnection requests.

208. MISO argues that the Commission should not require any informational posting pertaining to an interconnection request prior to the interconnection customer's finalization of the interconnection request because a definitive point of interconnection has not yet been selected.⁵⁵³ MISO highlights that the proposed *pro forma* LGIP section 3.4.5 requires the transmission provider's OASIS posting to include "(3) the station or transmission line where the interconnection will be made." ⁵⁵⁴ However, MISO notes that an interconnection customer is not required to select a definitive point of interconnection until the end of the customer engagement window. As such, MISO contends that the posting requirement is impossible if the transmission provider is required to post the point of interconnection. MISO argues that the Commission should not require any posting until a reasonable period after the interconnection customer is required to select its definitive point of interconnection and the information is complete, such as when the customer engagement window is completed and cluster studies are about to begin.

209. Regarding the makeup of the cluster, Clean Energy States assert that the cluster study process should allow for changes in the makeup of the cluster, and that the study process may identify ways to improve a cluster to provide better performance for the transmission system, such as by adding or subtracting certain interconnection requests from the cluster.⁵⁵⁵ Clean Energy States assert that a transmission provider should be able to modify the cluster in response to interconnection customer changes or study findings without threatening the interconnection customer's queue priority or paying penalties.

210. EPSA argues that the final rule should specify that transmission providers are required to work with interconnection customers during the customer engagement window and study agreement negotiation in a manner that is fair and equitable regarding the study models to be used, data verification, and stakeholder engagement—regardless of the planning or procurement method used by the prospective interconnection customer.⁵⁵⁶

211. Enel recommends that the Commission consolidate the interconnection request and cluster and facilities study agreements into a single study agreement to be submitted at the time of application.⁵⁵⁷ Enel also recommends that the Commission include language in the *pro forma* LGIP that provides that transmission providers will not post information about interconnection requests proceeding through or withdrawing from the interconnection queue until all interconnection requests submitted within a cluster request window successfully meet their milestone requirements to proceed, withdraw, or fail to cure their breach within the specific cure period.⁵⁵⁸

212. Regarding the length of the cluster request window, some commenters support the proposed 45-calendar day time frame for the cluster request window.⁵⁵⁹ Although it supports the 45-calendar day time frame, Eversource suggests the Commission add more structure to this element of its proposal by establishing rules that enable potential interconnection customers to be informed of when the request windows

will be open and how to prepare to apply.⁵⁶⁰

213. Other commenters argue that the proposed 45-calendar day time frame for the cluster request window is too short and should be increased to 60 calendar days.⁵⁶¹ ISO-NE states that, based on its experience implementing its forward capacity market process, each of the cluster study windows proposed in the NOPR should be extended to help ensure an efficient cluster study process.⁵⁶² Pine Gate also argues that a longer cluster request window would reduce the burden on transmission providers by providing more time to administer their deficiency notice processes.⁵⁶³ Pine Gate explains that, for larger interconnection customers that may be developing numerous interconnection requests for multiple transmission providers, overlapping cluster request windows are likely. Additionally, Pine Gate contends that, as contemplated by the NOPR, it is likely that increased requirements and additional information for interconnection customers will be due at the time of interconnection queue entry (e.g., the complex modeling required to be submitted) and burdensome to accommodate in the proposed time frame.

214. On the other hand, some commenters argue that a shorter cluster request window is appropriate. CAISO argues that longer cluster request windows result in low quality requests because interconnection customers have more time within the window to fix their submissions.⁵⁶⁴ CAISO contends that its use of a shorter 15-day interconnection request completeness window followed by a longer validation and scoping meeting window have significantly improved interconnection request quality and the speed with which CAISO processes requests.⁵⁶⁵ Similarly, Tri-State recommends that the cluster request window be shortened because, based on its experience, most interconnection requests submitted in the cluster request window are received

the last two days of the request window.⁵⁶⁶

215. Regarding the requirement for correcting deficiencies in the proposed *pro forma* LGIP section 3.4.4 (Deficiencies in Interconnection Request), Tri-State argues that requiring interconnection customers to provide any requested information within 10 business days after receiving notice of deficiencies in the interconnection request, but no later than the close of the cluster request window, does not take into account that most requests are not submitted until the last day of the cluster request window.⁵⁶⁷

216. Regarding the number of cluster request windows opened each year, a couple of commenters argue that there should be more than one cluster request window per year.⁵⁶⁸ Clean Energy States assert that, because presumably there will be fewer generator interconnection studies to be done, transmission providers should provide opportunities more frequently (e.g., quarterly) for interconnection customers to submit interconnection requests.⁵⁶⁹ Environmental Defense Fund argues that the Commission should require that the cluster request windows occur bi-annually, rather than once a year, to reduce the delay caused by missing a cluster request window while still covering a large enough time period that a number of interconnection requests will be included in each cluster.⁵⁷⁰

217. Southern generally agrees with the Commission that a cluster study process, including the individual facilities study, should be completed within a year, but recommends eliminating unnecessary delays, such as multiple, overlapping clusters, by only permitting one cluster study at a time (i.e., that a new cluster should not commence until the previous cluster has been completed).⁵⁷¹ According to Southern, under this format, an annual cluster study can be performed because the previous cluster study process has been completed. Southern asserts that overlapping cluster study processes will not help end interconnection queue

backlogs and uncertainty, but rather add to them.

218. Regarding the length of the customer engagement window, Clean Energy Associations support the proposed 30-calendar day time frame for the customer engagement window as a baseline.⁵⁷² A number of commenters argue that the proposed 30-calendar day customer engagement window is too short and recommend a longer window.⁵⁷³ Duke Southeast Utilities argue that, based on experience with Duke Carolinas Utilities' cluster study process, which includes a 60-calendar day customer engagement window, the proposed 30-calendar day customer engagement window may not provide sufficient time to facilitate robust engagement.⁵⁷⁴ Duke Southeast Utilities therefore urge the Commission to adopt a 60-calendar day customer engagement window. Xcel describes PSCo's recent interconnection queue reform, which extended the customer engagement window to 95 calendar days to allow interconnection customers additional time to reevaluate their readiness in a way that includes other customers.⁵⁷⁵

219. ISO-NE suggests a 90-calendar day customer engagement window.⁵⁷⁶ In addition, ISO-NE suggests that the Commission clarify that transmission providers may withdraw interconnection requests for which the models and data do not meet the requirements following the customer engagement window in order to improve efficiency. ISO-NE further asks that the Commission recognize the role of the participating transmission owners in performance of interconnection studies and build time into the cluster study time frames that accounts for this coordination.

220. Indicated PJM TOs argue that there should be a 30-calendar day window after the date that the cluster request window closes, and between the time the transmission provider posts the interconnection cases for the cluster study and the cluster study commences, during which interconnection customers qualified to receive CEII information have the opportunity to conduct their own studies with the transmission provider's base case and

the new interconnection service requests. Indicated PJM TOs assert that during this time, interconnection customers should be able to withdraw their interconnection request with minimal financial impact.⁵⁷⁷

221. APS states that multiple customers requesting individual scoping meetings could place a significant burden on the transmission provider to schedule several meetings under a condensed time frame if the customer engagement window remains 30 calendar days.⁵⁷⁸ For example, APS states that, assuming all notifications of valid interconnection requests are made by the time the customer engagement window starts, the interconnection customer has 15 business days to request an individual meeting and, if an interconnection customer uses all 15 business days, that is a minimum 21 calendar days out of the total 30 calendar days of the overall customer engagement window. APS contends that this leaves nine calendar days at most (*i.e.*, no more than seven business days) to schedule an individual customer meeting, which could be less if there are holidays occurring within the customer engagement window.

222. Similarly, Tri-State argues that the proposed 30-day customer engagement window is not sufficient to meet the purpose of the customer engagement window and recommends it be extended to allow adequate time to cure deficiencies and hold individual scoping meetings.⁵⁷⁹ Tri-State argues that a 75-day customer engagement window would give interconnection customers an opportunity to: (1) assess the viability of their proposed generating facilities before committing to the interconnection process and subjecting themselves to a withdrawal penalty; and (2) cure deficiencies in their interconnection requests.⁵⁸⁰

iii. Commission Determination

223. We adopt the proposed new *pro forma* LGIP section 3.4.1 (Cluster Request Window), which provides that interconnection customers must submit an interconnection request during a specified period—the cluster request window—a 45-calendar day period with the start date to be determined by each transmission provider. We also adopt the non-refundable \$5,000 application fee required to be submitted with the interconnection request.⁵⁸¹ We also

adopt the requirement that interconnection customers provide requested information within 10 business days of receiving an interconnection request deficiency notice but no later than the close of the cluster request window, as proposed and adopted in new *pro forma* LGIP section 3.4.4 (Deficiencies in Interconnection Request), but we modify that section to clarify the timeline for curing deficiencies. We modify the proposed new *pro forma* LGIP section 3.4.5 (Customer Engagement Window) and extend the customer engagement window from 30 days to 60 calendar days.

224. To ensure clarity for both interconnection customers and transmission providers, based on the record, we believe that 45 calendar days is a sufficient window to adequately notify prospective interconnection customers of the formation of a new cluster but not so long as to delay the processing of the interconnection queue.

225. Contrary to commenters' assertions, we are not persuaded to extend the cluster request window. We do not believe that more time is needed for transmission providers to work with interconnection customers that submitted invalid interconnection requests to cure deficiencies, particularly given the limit we adopt on the time for such additional information to be submitted by interconnection customers, and because the start date of the cluster request window will be included in the transmission provider's LGIP for prospective interconnection customers. We similarly do not believe that shortening the cluster request window would result in fewer "low quality" interconnection requests, as CAISO argues. Given the package of reforms adopted in this final rule, we expect fewer speculative interconnection requests and that interconnection customers will be more likely as a result of this final rule to submit interconnection requests for proposed generating facilities that they believe are viable and ready to move forward in the interconnection process.

226. As for Tri-State's concern about the requirement for correcting deficiencies in new *pro forma* LGIP section 3.4.4 (Deficiencies in Interconnection Request),⁵⁸² we clarify that the 10-business day window is the maximum time allowed to submit a response. This means that an interconnection customer that submits its interconnection request more than 10 business days before the close of the cluster request window will have a full

10 business days to submit a response, whereas an interconnection customer that does not submit its interconnection request until less than 10 business days before the close of the cluster request window will have however many days remain in the cluster request window to respond to any deficiencies.

Accordingly, we modify *pro forma* LGIP section 3.4.4 to provide that if the interconnection customer does not respond before the deadline: (1) the interconnection request is immediately deemed withdrawn (without the cure period provided under *pro forma* LGIP section 3.7); (2) the application fee is forfeited to the transmission provider; and (3) because the cluster study has not commenced, the study deposit and commercial readiness deposit are returned to the interconnection customer.

227. We decline to adopt revisions to the *pro forma* LGIP to require biannual or quarterly cluster study windows, as suggested by Clean Energy States and Environmental Defense Fund. Based on the record, we are not convinced that mandating multiple cluster request windows per year will result in a more efficient cluster study process, especially considering the various sizes of transmission provider footprints and interconnection queues. As we adopt an annual cluster study process, an annual cluster request window will allow transmission providers to dedicate resources to the cluster request window only once per year, dedicating their resources to the remainder of the cluster study process for the rest of the year. We also are not convinced by Environmental Defense Fund's concern with interconnection customers missing a cluster request window, as the date of the start of the cluster request window will be in each transmission provider's LGIP, providing sufficient notice for prospective interconnection customers to prepare required application materials accordingly. We do not believe that additional rules are needed to govern how transmission providers will inform interconnection customers about the cluster request window.

228. We disagree with Southern's suggestion that the cluster study process should only permit transmission providers to conduct one cluster study at a time (*i.e.*, eliminating the possibility of conducting multiple cluster studies at any time). Prohibiting the transmission provider from conducting overlapping cluster studies, in the instance where it is necessary to process cluster subgroups or to process delayed studies, would delay the interconnection process for interconnection customers. We therefore find that this suggestion

⁵⁷⁷ Indicated PJM TOs Reply Comments at 6–7.

⁵⁷⁸ APS Initial Comments at 10.

⁵⁸¹ We note that the application fee is separate from the initial study deposit, commercial readiness deposit, and deposit in lieu of site control.

⁵⁸² Tri-State Initial Comments at 27.

would contribute to more backlogs and uncertainty, as delays to any cluster study would significantly delay cluster studies for all remaining interconnection requests in an interconnection queue and would be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. Transmission providers with the capacity to conduct multiple cluster studies at a given time should be permitted to do so to facilitate more effective and efficient interconnection processes.

229. In response to MISO's concern about posting requirements close to the conclusion of the cluster request window, we reiterate that we are extending the length of the customer engagement window from the proposed 30 calendar days to 60 calendar days, which will allow transmission providers a total of 60 calendar days from the close of the cluster request window to post the list of interconnection requests for that cluster.

230. MISO argues that the Commission should not require any OASIS posting prior to the interconnection customer's finalization of the interconnection request because a definitive point of interconnection would have not yet been selected.⁵⁸³ While we recognize MISO's concern about transmission providers posting interconnection request information on OASIS that may later change, we find that providing as much information as possible to interconnection customers early in the customer engagement window provides important transparency to improve interconnection queue processing. Providing information about other interconnection requests that may be studied within the same cluster to interconnection customers considering whether to execute a cluster study agreement and to continue with the cluster, may help them determine the viability of their proposed generating facilities, making it less likely that interconnection customers will withdraw later in the cluster study process, triggering delays and restudies and the associated problems discussed in section II of this final rule.

231. We disagree with Clean Energy States' assertion that a cluster should be able to be modified in response to interconnection customer changes or study findings without threatening the interconnection customer's relative queue priority or paying penalties.⁵⁸⁴

Any interconnection customer that submits a valid interconnection request during the customer request window will become part of the cluster, if the interconnection customer chooses to execute a cluster study agreement by the end of the customer engagement window. The transmission provider may not modify the makeup of the cluster or pick and choose which interconnection customers to keep in the cluster in the way Clean Energy States describes. We also note that interconnection customers can request a modification assessment pursuant to section 4.4 of the *pro forma* LGIP.

232. Regarding the customer engagement window, we adopt the NOPR proposal to add a new section 3.4.5 (Customer Engagement Window) to the *pro forma* LGIP, which provides that, following the close of the cluster request window, the transmission provider begins a customer engagement window. Additionally, we modify the proposal to extend the customer engagement window from 30 calendar days, as proposed, to 60 calendar days. Under this provision, the transmission provider must post new cluster information on OASIS with details of each interconnection request for that cluster, including information on the amount of interconnection service and the location of the proposed generating facility, within the first 10 business days of the customer engagement window. While we extend the customer engagement window from 30 calendar to 60 calendar days, we retain the proposed 10 business day deadline by which the transmission provider must post new cluster information on OASIS. We find that it is more beneficial for interconnection customers to have this information as early as possible, such that they are able to assess the composition of the cluster and make informed choices moving forward with their interconnection requests earlier rather than later in the customer engagement window. Further, during the customer engagement window, an interconnection customer may withdraw its interconnection request without penalty.

233. We extend the customer engagement window to 60 calendar days in response to numerous commenters' arguments that 30 calendar days is insufficient to adequately engage with interconnection customers in a cluster, including based on experience implementing a similar cluster study process to that we require as part of this final rule.⁵⁸⁵ By extending the customer

engagement window, we provide transmission providers with additional time to conduct individual meetings with interconnection customers that submitted interconnection requests within the cluster request window, lessening the burden on transmission providers, particularly larger transmission providers such as RTOs/ISOs.⁵⁸⁶ At the same time, we provide interconnection customers with more time to consider information collected during this period of engagement with the transmission provider—including the makeup of the cluster—and assess the continued viability of their proposed generating facilities before withdrawal of the interconnection request will incur a penalty. For example, the interconnection customer can assess the expected costs of potential network upgrades and the impact of those costs on the viability of its proposed generating facility in the context of the size and location of other interconnection requests in the cluster. Interconnection customers will have 46 calendar days to consider the posted information (which must be posted within 10 business days after the start of the customer engagement window). Not only will this longer time period for interconnection customers to consider whether to withdraw their interconnection requests prior to the start of the cluster study save interconnection customers' resources by avoiding future penalties, but it will also result in more efficient interconnection queue processing with fewer withdrawals later in the cluster study process—withdrawals that can trigger restudies and cause the problems discussed in section II of this final rule.

234. We reject Southern's suggestion that if an interconnection request is not deemed valid,⁵⁸⁷ the interconnection request should be withdrawn from the interconnection queue. Under new section 3.4.5 of the *pro forma* LGIP, any interconnection requests not deemed valid at the close of the customer engagement window will not be included in the cluster. This provision is designed to ensure that interconnection customers and transmission providers have sufficient time to conduct scoping meetings and to discuss and comprehensively evaluate whether interconnection requests are fully valid during the customer engagement window. We find that

Comments at 21 (citing *Pub. Serv. Co. of Colo.*, Docket No. ER22-2087-000 (Aug. 9, 2022) (delegated order)).

⁵⁸⁶ PJM Initial Comments at 20; ISO-NE Initial Comments at 23.

⁵⁸⁷ Southern Initial Comments at 37.

forced withdrawals prior to the close of the customer engagement window could result in potentially valid interconnection requests being rejected prior to allowing for interconnection customers and transmission providers to discuss alternative interconnection options, exchange information that could impact such options, and conduct due diligence informed by information discussed during the customer engagement window per the provisions set forth in new *pro forma* LGIP section 3.4.6 detailing scoping meetings.

235. In response to EPSA,⁵⁸⁸ we note that transmission providers and interconnection customers should always work in a manner that is fair and nondiscriminatory, including during the customer engagement window and study agreement negotiation.

236. We decline to adopt MISO's suggestion that transmission providers allow interconnection customers to submit an interconnection request prior to the beginning of the cluster request window. We note that the cluster request window is specifically designed to structure when transmission providers should expect interconnection customers to submit interconnection requests for assessment. We find that allowing interconnection request submission prior to the cluster request window may be burdensome to transmission providers, who would have to dedicate staff and resources towards assessing the viability of interconnection requests before the designated request window opening, instead of concentrating their resources towards the prior stage of the interconnection process.

237. We agree with Enel's recommendation that the Commission include language in the *pro forma* LGIP that, in the cluster study process, the transmission provider will not post detailed information about interconnection requests proceeding or withdrawing until all interconnection requests successfully meet their milestone requirements to proceed, withdraw, or fail to cure their breach within the specific cure period. We note that transmission providers are required to post this information at the conclusion of the cluster request window, at which point interconnection customers must provide significant requirements to proceed. We find that maintaining confidentiality early in the customer engagement window stage is appropriate to reduce opportunities for developers to gain competitive advantage over others before interconnection requests have been

finalized and accepted by the transmission provider. We therefore adopt the following modification to section 3.4.5 of the *pro forma* LGIP (addition in italics): "Within ten (10) Business Days after the close of the Cluster Request Window, Transmission Provider shall post on its OASIS site a list of Interconnection Requests for that Cluster. The list shall identify, for each *anonymized* Interconnection Request[s]: (1) the requested amount of Interconnection Service; (2) the location by county and state; (3) the station or transmission line or lines where the interconnection will be made; (4) the projected In-Service Date; (5) the type of Interconnection Service requested; and (6) the type of Generating Facility or Facilities to be constructed, including fuel types, such as wind, natural gas, coal, or solar. *The transmission provider must ensure that project information is anonymized and does not reveal the identity or commercial information of interconnection customers with submitted requests.*" Further, as discussed below, we modify section 3.4.6 of the *pro forma* LGIP to require that transmission providers exercise the use of non-disclosure agreements to maintain confidentiality of identifying or commercially sensitive information for all other interconnection customers in a group scoping meeting.

e. Scoping Meeting

i. NOPR Proposal

238. In the NOPR, the Commission proposed to renumber and revise section 3.4.4 of the *pro forma* LGIP as section 3.4.6 to provide that, during the proposed customer engagement window, transmission providers must hold a scoping meeting with all interconnection customers whose valid interconnection requests were received in that cluster request window.⁵⁸⁹ Revised section 3.4.6 of the *pro forma* LGIP would also require transmission providers to hold individual customer-specific scoping meetings, at the interconnection customer's request, which must be requested by no later than 15 business days after the close of the cluster request window.

ii. Comments

239. MISO supports the Commission requiring individual customer-specific scoping meetings only when requested by interconnection customers.⁵⁹⁰ APS agrees that a single scoping meeting with all interconnection customers in the cluster during the customer engagement window is beneficial to

transmission providers and eases the burden of scheduling individual meetings with all parties. However, APS has concerns about security and confidentiality.⁵⁹¹ APS notes that, currently, each interconnection customer in the interconnection queue is provided a queue number that becomes the only identifying information posted publicly. APS requests that the Commission provide clarity on whether the requirements to treat additional information as confidential no longer apply or if there is a form of good utility practice as it pertains to holding a single scoping meeting without revealing the identities of the other interconnection customers involved and some examples thereof.

240. MISO expresses concern that the timelines listed in the customer engagement window for posting information are impractical. MISO asserts that the Commission should not require a posting so near the close of the request window because the transmission provider must devote its resources to reviewing the interconnection requests for deficiencies.⁵⁹²

241. Enel and AEE argue that the Commission should also require transmission providers and transmission owners to hold individual, customer-specific scoping meetings at the request of the interconnection customer *before* the customer commits to entering the cluster.⁵⁹³ Enel states that an individual pre-interconnection queue scoping meeting would be an opportunity for the interconnection customer to ask basic questions that can help inform economically significant decisions an interconnection customer faces in deciding to enter the interconnection queue.⁵⁹⁴ As an alternative to requiring a pre-interconnection queue meeting, Enel suggests that the Commission could require transmission providers to maintain an electronic inbox where prospective interconnection customers could submit interconnection-related questions and be guaranteed a response in time to inform decisions on entering the interconnection queue.

242. PJM believes that "grouping kick off meetings" will reduce the burden on transmission owners and providers of scheduling and participating in hundreds of meetings, and the burden on interconnection customers of waiting

⁵⁹¹ APS Initial Comments at 10.

⁵⁹² MISO Initial Comments at 36.

⁵⁹⁰ MISO Initial Comments at 35–36.

for their meeting to be scheduled.⁵⁹⁵ PJM requests clarification that a transmission provider may group requests for this customer engagement window unless an interconnection customer requests otherwise.

243. Tri-State asks the Commission to consider providing only one week to schedule the requested individual customer-specific scoping meeting if the interconnection customer does not request a scoping meeting until the fifteenth business day.⁵⁹⁶

244. Noting the difficulty of coordinating in-person scoping meetings, SEIA requests that the Commission clarify that both generating facility-specific and cluster scoping meetings must provide the option for interconnection customers to attend via teleconference, which is currently not available in all regions.⁵⁹⁷ Enel suggests that, for all scoping meetings, the Commission should require transmission owners, not just interconnection customers and transmission providers, to attend; otherwise, Enel continues, there could be crucial questions that the transmission provider may not be able to answer.⁵⁹⁸

iii. Commission Determination

245. We adopt, in part, the proposed revisions to section 3.4.6 of the *pro forma* LGIP, and therefore require that, during the customer engagement window, transmission providers hold a scoping meeting with all interconnection customers whose interconnection requests were received in that cluster request window. We decline to adopt the NOPR proposal to require transmission providers to hold individual customer-specific scoping meetings at the interconnection customer's request.

246. These revisions to the *pro forma* LGIP align the timing and purpose of scoping meetings between transmission providers and interconnection customers with the adoption of the cluster study process in this final rule. We do not believe that providing the option for interconnection customers to request an individual customer-specific scoping meeting is necessary to ensure that interconnection customer-specific questions are answered as interconnection customers consider whether to remain in the interconnection queue for the cluster study or to withdraw their interconnection request. We find that

this requirement would be comparatively inefficient and burdensome for transmission providers, leading to potentially significant interconnection delays. We thus find that this requirement would be inconsistent with the goal to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. We find that the cluster-wide scoping meeting is an appropriate forum in which all interconnection customers can direct questions to transmission providers in an efficient manner without delaying the cluster process with unnecessarily time-consuming individual scoping meetings.

247. We agree with APS' concerns pertaining to good utility practices⁵⁹⁹ for security and confidentiality regarding the disclosure of potentially sensitive commercial information during the cluster scoping meeting that will include numerous interconnection customers in the cluster.⁶⁰⁰ We therefore modify section 3.4.6 of the *pro forma* LGIP to require that transmission providers use non-disclosure agreements to maintain confidentiality of identifying or commercially sensitive information for all other interconnection customers in a group scoping meeting until the close of the customer engagement window.

248. In response to Enel and AEE,⁶⁰¹ we will not modify the *pro forma* LGIP to require transmission providers to hold individual interconnection customer-specific scoping meetings at the request of the interconnection customer before the interconnection customer commits to entering the cluster. As discussed above, we decline to adopt a requirement that transmission providers conduct individual interconnection customer scoping meetings. Additionally, as discussed above,⁶⁰² we adopt the heatmap requirement, which will assist interconnection customers prior to entering the interconnection queue in

evaluating the viability of their proposed generating facilities, and we are also permitting interconnection customers to withdraw from the interconnection queue without penalty prior to the close of the customer engagement window. With these reforms, we do not believe that pre-interconnection queue scoping meetings should be required to ensure just and reasonable rates.

249. In response to MISO's concern about posting requirements close to the conclusion of the cluster request window,⁶⁰³ we find that allowing transmission providers a total of 10 business days from the close of the cluster request window to post the required list of interconnection requests for that cluster is a reasonable amount of time.

250. In response to SEIA,⁶⁰⁴ we decline to modify the *pro forma* LGIP to require transmission providers to include an option for interconnection customers to attend via teleconference for cluster-wide scoping meetings. We do not believe that such level of logistical specification governing how transmission providers choose to conduct scoping meetings with interconnection customers is needed in the *pro forma* LGIP.

251. In response to Enel,⁶⁰⁵ we decline to modify the *pro forma* LGIP to require transmission owners, not just interconnection customers and transmission providers, to attend scoping meetings. The *pro forma* LGIP contemplates that the transmission owner and transmission provider may be the same entity, except in the case of an RTO/ISO, in which case the transmission owner does not have operational control of the facilities and does not perform cluster studies. In the case of an RTO/ISO, only the entity that independently administers the cluster study is required to attend the scoping meeting.

f. Posting of Metrics for Cluster Study Processing Time and Restudy Processing Time

i. NOPR Proposal

252. In the NOPR, the Commission proposed to revise the requirements included in section 3.5.2 of the *pro forma* LGIP to post metrics for interconnection feasibility study processing time and system impact study processing time, to instead require transmission providers to post metrics for cluster study processing time and

⁶⁰⁵ Enel Initial Comments at 11.

cluster restudy processing time.⁶⁰⁶ The Commission also proposed to require transmission providers to post the time from when the transmission provider received a valid interconnection request to the completion of the cluster study, cluster restudy, and facilities study.

253. Specifically, in section 3.5.2.1 of the *pro forma* LGIP, the Commission proposed requiring that transmission providers must post the number of interconnection requests that had cluster studies completed within the transmission provider's coordinated region during the reporting quarter that were completed more than 150 calendar days after the close of the customer engagement window. Similarly, in section 3.5.2.2 of the *pro forma* LGIP, the Commission proposed requiring that transmission providers must post the number of interconnection requests that had cluster restudies completed within the transmission provider's coordinated region during the reporting quarter that were completed more than 150 calendar days after the transmission provider's receipt of the interconnection customer's executed cluster restudy agreement.

254. In section 6.4 of the *pro forma* LGIP, the Commission proposed that transmission providers publicly post new metrics requirements on their websites pertaining to various technical specifications for, and impacts of, potential generating facilities on the transmission provider's transmission system, requiring that these metrics must be updated on the transmission provider's website "within 30 days after the completion of each Cluster Study and Cluster Restudy period."⁶⁰⁷

ii. Comments

255. Clean Energy Associations support the proposal to require the posting of metrics for cluster study processing time and cluster restudy processing time, starting from when the transmission provider received a valid interconnection request.⁶⁰⁸ Clean Energy Associations further argue that these reports should also identify the level of accuracy of these studies relative to final costs.

256. While supportive of the use of metrics that reflect cluster study and cluster restudy processing time, some commenters do not support measuring these metrics from the date that the transmission provider received the interconnection request.⁶⁰⁹ APS argues

that this seems contradictory to the NOPR proposal that the 150-day timeline to process cluster study requests begins at the end of the customer engagement window.⁶¹⁰ MISO asserts that for study metrics to be a useful measurement of whether a transmission provider is meeting its tariff deadlines, the start date used in the metrics must reflect when studies actually commence.⁶¹¹ MISO notes that an interconnection customer may choose to submit its interconnection request weeks ahead of the cluster request window deadline and that the time between that deadline and study commencement is variable.⁶¹² MISO urges the Commission to allow RTOs/ISOs flexibility to maintain metrics that reflect their tariff deadlines, especially where the RTO/ISO already has a Commission-approved cluster study process.

257. Ameren contends that if the Commission retains the proposal to require the posting of the time from when the transmission provider received a valid interconnection request to the completion of the cluster study, cluster restudy, and facilities study, it should clarify that in the context of an RTO/ISO, "complete" refers to the final sign-off by the RTO/ISO.⁶¹³ Ameren asserts that transmission owners within an RTO/ISO may act on behalf of the RTO/ISO transmission provider for purposes of certain studies; however, it is the RTO/ISO and not the transmission owner that decides when a study is complete.

258. In section 6.4 of the *pro forma* LGIP, regarding the proposed requirement that "[t]hese metrics must be updated within 30 days after the completion of each Cluster Study and Cluster Re-study period[.]" Enel recommends that the word "period" should be deleted. Enel argues that the trigger should be the completion of the studies themselves.⁶¹⁴

iii. Commission Determination

259. We adopt the proposed revisions to section 3.5.2 of the *pro forma* LGIP to require transmission providers to post metrics for cluster study processing time and cluster restudy processing time, including the number of cluster studies completed within 150 calendar days of the close of the customer engagement window. We modify section 3.5.2.2 of the *pro forma* LGIP as proposed in the NOPR to be consistent with the new

requirement adopted in section 7.5 of the *pro forma* LGIP that cluster restudies should be completed within 150 calendar days of the transmission provider notifying interconnection customers in the cluster and that a cluster restudy is required. The requirement to post these metrics replaces the existing requirement to post metrics for interconnection feasibility study processing time and system impact study processing time, which were relevant for the serial study process but are no longer relevant for the cluster study process required by this final rule. We therefore believe that these revisions are necessary to implement the change from a serial study process to the cluster study process.

260. As for the point at which to begin measuring the metrics, several commenters argue against using the date on which the transmission provider received the interconnection requests. We clarify that sections 3.5.2.1 and 3.5.2.2 of the *pro forma* LGIP adopted in this final rule establish that these metrics must be measured from the close of the customer engagement window for the cluster study processing time metric and from when transmission provider notifies interconnection customers in the cluster that a cluster restudy is needed for the cluster restudy processing time metric. We find that these are appropriate start dates from which to calculate the metrics because they reflect when the respective studies are to actually commence.⁶¹⁵ We decline to grant additional flexibility to maintain metrics and associated timelines for those metrics, as urged by MISO.⁶¹⁶

261. Regarding Clean Energy Associations' suggestion that the metrics also identify the level of accuracy of studies relative to final costs,⁶¹⁷ we decline to adopt this suggestion. For one, it is unclear to what final costs Clean Energy Associations is referring to. Additionally, the metrics that we require transmission providers to post as part of this final rule focus on the timing of interconnection studies and not on the accuracy of cost estimates. The metrics are intended, as described in Order No. 845, to provide needed transparency "to allow interconnection customers to develop informed expectations about how long the

interconnection study portion of the process actually takes.”⁶¹⁸

262. We decline to adopt Ameren’s suggestion to base the 150-calendar day cluster study deadline on the RTO/ISO’s completion of the cluster study rather than the transmission owner’s completion because the deadlines are applicable to the transmission provider and such a clarification is unnecessary to be added to the *pro forma* LGIP.

263. We agree with Enel’s suggestion to modify proposed *pro forma* LGIP section 6.4—now *pro forma* LGIP section 6.1—by deleting “period” because, as Enel explains, this would more concisely convey that the metrics should be updated following the completion of the studies themselves.⁶¹⁹

g. Interconnection Request Evaluation Process

i. NOPR Proposal

264. In the NOPR, the Commission proposed several changes to *pro forma* LGIP section 4, renamed “interconnection request evaluation process” from “queue position.” First, the Commission proposed to rename and revise section 4.1 of the *pro forma* LGIP as “queue position” and added two new proposed sections: (1) section 4.1.1 (Assignment of Queue Position), which provides that queue position will be based on the time and date that the transmission provider receives all items required under section 3.4 (Valid Interconnection Request) and that there is no queue priority for interconnection customers that opted for informational interconnection studies; and (2) section 4.1.2 (Higher Queue Position), which provides that all interconnection requests studied in a single cluster shall be considered to have equal queue priority, but clusters initiated earlier in time shall be considered to have a higher queue position than clusters initiated later in time.⁶²⁰

265. The Commission also proposed to remove from section 4.2 of the *pro forma* LGIP the provisions allowing transmission providers to study interconnection requests serially and the requirement for transmission providers to provide 180 calendar days’ advance notice before opening a cluster window.⁶²¹ The Commission also proposed to rename section 4.2 of the *pro forma* LGIP “general study process,” and revise it to require transmission providers to perform interconnection studies within the cluster study process.

266. In the NOPR, the Commission also proposed changes to the material modification provisions in section 4.4 (Modification) of the *pro forma* LGIP to provide that moving a point of interconnection shall result in a loss of interconnection queue position if it is deemed a material modification by the transmission provider. Additionally, proposed additions to *pro forma* LGIP section 4.4 require that any identified changes to a planned interconnection, proposed by an interconnection customer or the transmission provider, must be acceptable to any impacted interconnection customer in the same cluster, and such acceptance is not to be unreasonably withheld.⁶²² The Commission noted that the interconnection customer may decide to forego the requested change that constitutes a material modification and retain its existing queue position.⁶²³

267. Further, the Commission proposed to revise section 4.4.1 of the *pro forma* LGIP to make clear that: (1) the modifications previously permitted prior to return of the executed system impact study agreement are now permitted to be made prior to return of the executed cluster study agreement; and (2) for generating plant increases, the incremental increase will be studied with the next cluster study for purposes of cost allocation and study analysis.⁶²⁴ *Pro forma* LGIP section 4.4.1 also explicitly permits specific modifications prior to the interconnection customer’s return of the executed cluster study agreement to the transmission provider, including: (a) a decrease of up to 60 percent of electrical output (MW) of the proposed project, through either a decrease in plant size or a decrease in interconnection service level; (b) modifying the technical parameters associated with the generating facility technology or step up transformer; and (c) modifying the interconnection configuration.

ii. Comments

268. With regards to the proposed changes to section 4.1 (Queue Position), Tri-State questions whether the proposed definition of queue position includes surplus interconnection requests.⁶²⁵ Xcel argues, and EEI agrees, that the Commission should modify the proposal to clarify that queue position or queue priority is based on interconnection request readiness and

not on the date and time the interconnection request is submitted.⁶²⁶

269. CAISO asserts that it is unclear what losing a queue position means in a cluster-based study (e.g., being withdrawn from the interconnection queue or moving to a lower interconnection queue position), but also contends that no specification or reform is necessary because interconnection customers will simply withdraw the modification every time if it is found to be material.⁶²⁷ CAISO argues that the Commission should either remove the “option” to lose an interconnection queue position when a proposed modification is found to be material, or clarify what replaces the interconnection queue position when it is lost.

270. Clean Energy States argue that, in addition to the “signs of commercial progress” proposed by the Commission, clusters should be prioritized for study based on a number of other transparent and quantifiable factors, such as alignment with state policy (e.g., participation in procurement actions), and benefits to low-income, environmentally impacted, and “energy communities” as defined under the Inflation Reduction Act, state policies, and the Justice40 Initiative.⁶²⁸ Clean Energy States assert that clusters could further be prioritized for development by how well the combined cluster meets transmission system needs, with preference for interconnection agreements given to those that result in the lowest cost upgrades, have the most attractive operational profile, or deliver the best reliability improvements.

271. Regarding the proposed changes to *pro forma* LGIP section 4.4 (Modifications), Enel argues that the Commission should remove the proposed language requiring the acceptance of “any impacted Interconnection Customer in the same Cluster” to modify an interconnection request.⁶²⁹ Enel asserts that this requirement not only will be challenging to facilitate (especially in large clusters) but is also a redundant and unnecessary hurdle that could result in anticompetitive behavior. If the Commission keeps this language, to avoid uncertainty regarding the application of this provision, Enel proposes to replace this language with “any Interconnection Customer in the same Cluster whose interconnection would be delayed or whose

interconnection-related costs would be increased as a result of the identified changes.”⁶³⁰

272. A few commenters argue that the Commission should consider changes to the material modification process such that only certain modifications trigger a restudy.⁶³¹ Clean Energy Associations recommend that the Commission modify the current material modification definition to clearly state that certain changes are presumptively immaterial, such as changing solar modules or turbines, adding storage capacity, or making minor adjustments to inverter performance. Clean Energy Associations argue that this presumption should be in place so long as planned export and import capacity remains the same.⁶³² Clean Energy Associations also support the concept of expedited, limited studies for project modifications, provided that: (1) an expedited approach does not change the level of interconnection service; (2) there is no impact on cost or timing of an interconnection request that is lower- or equally queued; and (3) it does not cause any reliability concern. Additionally, Pattern Energy asserts that, in its experience, transmission providers apply widely disparate standards where even de minimis impacts—timing or financial—can be determined to be material, which Pattern Energy believes is unreasonable and unduly discriminatory in light of the dynamic nature of the generator interconnection processes.⁶³³ Pattern Energy argues that, absent severe delay, timing delay should not be factored into materiality. Pattern Energy suggests instead that materiality be tied to financial impact on a proposed generating facility (or group of proposed generating facilities).

273. With regard to modifications under proposed *pro forma* LGIP section 4.4.1, MISO supports the proposed revisions to avoid proposed project service level increasing⁶³⁴ and other changes disrupting cluster studies that are in progress or delaying the negotiation and execution timelines for the LGIA.⁶³⁵

274. Enel recommends that the Commission modify the proposed *pro*

forma LGIP section 4.4.1 language to give interconnection customers flexibility in the initial stages of interconnection studies, otherwise, it argues that, interconnection customers are more likely to work around the rules by submitting multiple smaller interconnection requests to retain size flexibility after seeing their initial results, which is more administratively burdensome for transmission providers and leads to its own form of inefficiency as size reductions come in the form of withdrawals at any point in the process rather than being limited to partial reductions prior to entering the cluster restudy.⁶³⁶

275. CREA and NewSun argue that the Commission should explicitly permit interconnection customers to modify their interconnection requests to reduce or eliminate the assignment of network upgrade or stand alone network upgrade costs associated with a proposed generating facility after receipt of the first cluster-level interconnection study.⁶³⁷ CREA and NewSun argue that interconnection customers should be permitted to modify their proposed generating facilities to avoid impacts on the transmission system that trigger network upgrades by, for example, reducing their capacity or installing devices that will limit their output during critical periods.⁶³⁸ CREA and NewSun state that the existing *pro forma* LGIP allows an interconnection customer to downsize its interconnection capacity up to 60% upon receipt of the first interconnection study (*i.e.*, the feasibility study) and before progressing to the second study (*i.e.*, the system impact study).⁶³⁹ CREA and NewSun state that, in contrast, the NOPR proposes to only allow downsizing to occur before receipt of the first cluster system impact study and, as a result, the opportunity to downsize the interconnection request to tailor the facility to the available capacity identified in the first useful interconnection study would be lost. Therefore, CREA and NewSun argue that the Commission should revise the NOPR proposal to ensure that a reasonable amount of downsizing (*e.g.*, 60%) is permitted after receipt of the

first cluster-level interconnection study.⁶⁴⁰

iii. Commission Determination

276. We adopt the proposed revisions to *pro forma* LGIP section 4.1 (Queue Position), section 4.2 (General Study Process), and section 4.4.1, and we modify the proposed definition of queue position and the proposed revisions to the material modification provisions in section 4.4 (Modification). These are discussed below.

277. First, we adopt the proposed revisions to section 4.1 of the *pro forma* LGIP (Queue Position), which reflect the impact of the adoption of the proposed cluster study process in this final rule on queue position assignments. These revisions provide that transmission providers must assign queue positions based on the date and time of receipt of a valid interconnection request, but all interconnection customers that submit interconnection requests within a cluster request window must be considered equally queued. Clusters initiated earlier in time must have a higher queue position than clusters initiated later in time. Under the existing serial study process in the *pro forma* LGIP, queue position had a greater effect on an interconnection customer, for instance, in the allocation of network upgrade costs. By contrast, network upgrade costs within a cluster will not be allocated by queue position; rather, as discussed below, network upgrade costs within a cluster must be allocated generally through a proportional impact method among the interconnection customers in the cluster. Given the nature of the cluster study process, including the nature of the cost allocation for network upgrades, it is appropriate for all interconnection customers in a cluster to be considered equally queued.

278. Second, we adopt the proposal to remove from section 4.2 of the *pro forma* LGIP the provisions allowing transmission providers to study interconnection requests serially and the requirement for transmission providers to provide 180 days' advance notice before opening a cluster window. We also adopt the proposal to rename section 4.2 of the *pro forma* LGIP “General Study Process” and revise it to require transmission providers to perform interconnection studies within the cluster study process. These revisions are necessary to implement the cluster study process required by this final rule.

279. As requested by Tri-State, we clarify that the definition of queue

⁶³⁹ *Id.* (citing NOPR, 179 FERC ¶ 61,194 at app. B (proposed *pro forma* LGIP section 4.4.1)).

⁶⁴⁰ *Id.* at 47.

position is not relevant to surplus interconnection requests, which are processed outside of the normal interconnection queue, as further discussed in section III.A.2.n below.

280. We also maintain the language in the *pro forma* LGIP that moving a point of interconnection in a way that is deemed a material modification will impact an interconnection customer's queue position, but we clarify the meaning of this in the context of the cluster study process. Specifically, if moving a point of interconnection is deemed by the transmission provider to be a material modification to the interconnection request, and the interconnection customer chooses to proceed with the proposed modification, the interconnection request will be deemed withdrawn and the interconnection customer must re-enter the interconnection queue with a new interconnection request, if it desires to proceed to interconnect. To avoid being deemed withdrawn, the interconnection customer may choose not to move its point of interconnection and to instead remain in the same cluster with the original interconnection request, and, thus, in the same queue position.

281. In response to CREA and NewSun, we do not opine on whether moving a point of interconnection within a cluster will be a material modification. Instead, we leave the determination as to whether it is deemed a material modification to the transmission provider, as in the existing process for determining whether a proposed modification is material.

282. We decline to adopt Clean Energy States' suggestion that, in addition to the "signs of commercial progress" proposed by the Commission, clusters should be prioritized for study based on other transparent and quantifiable factors.⁶⁴¹ Clean Energy States neither provides sufficient rationale or detail regarding such factors by which clusters would be prioritized by transmission providers, nor explains how such prioritization criteria would be determined. We note that the Commission did not propose alternative factors for consideration. Additionally, we note that the record lacks adequate discussion in favor of such prioritization mechanisms or such "factors" for the Commission to consider adopting in this final rule.

283. Third, we modify the proposed definition of queue position in the *pro forma* LGIP and LGIA to provide that queue position is established pursuant to section 4.1 of the *pro forma* LGIP.

Fourth, we modify the proposed revisions to the material modification provisions in section 4.4 (Modification) of the *pro forma* LGIP. We adopt the language that provides that moving a point of interconnection shall result in a loss of queue position if it is deemed a material modification by the transmission provider, for the reasons discussed above. At the same time, we modify the proposed revisions to remove the requirement to obtain the approval of "any impacted Interconnection Customer in the same Cluster."⁶⁴² We are persuaded by Enel's argument that this proposed language in *pro forma* LGIP section 4.4 should be struck for two reasons. First, we find this language unnecessary because the point of interconnection could be changed only if the transmission provider had deemed it to not be a material modification to the interconnection request. Through this requirement, the transmission provider's analysis ensures that the change will not have a material impact on the cost or timing of another interconnection request in the cluster. Second, although the proposal included the language "such acceptance not to be unreasonably withheld," we are still concerned about the potential for anticompetitive behavior to the extent that other interconnection customers in the cluster could refuse to accept the point of interconnection change to limit competition. The interconnection customers within a cluster will be competitors in the wholesale markets in many, if not all, respects. To ensure competitive market outcomes, they should not be provided an undue opportunity to affect the advancement or the costs for a proposed generating facility of one of their competitors.

284. A number of commenters argue that the Commission should consider changes to the material modification process such that only certain modifications trigger a restudy.⁶⁴³ We decline to adopt any of the suggested revisions to the material modification provisions and restudy triggers in the *pro forma* LGIP. We did not propose changes suggested by commenters and do not find the need to adopt such changes to the material modification provisions to ensure just and reasonable rates. We believe that the list of permitted modifications in section 4.4 of the *pro forma* LGIP is appropriate because they allow interconnection customers a degree of flexibility with

respect to generating facility size, interconnection service level, and specific generating facility technology that appropriately balances the high burden to enter the interconnection queue and the lengthy duration of the interconnection queue, during which external factors may change, including the introduction of new technology that interconnection customers may wish to incorporate into their generating facility design.

285. Finally, we adopt the proposed revisions to section 4.4.1 of the *pro forma* LGIP to make clear that: (1) the modifications previously permitted prior to the return of the executed system impact study agreement are now permitted to be made prior to return of the executed cluster study agreement; and (2) for plant increases, the incremental increase will be studied with the next cluster study for purposes of cost allocation and study analysis. We believe that these revisions are needed to implement the cluster study process adopted to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. Notably, we believe that prior to the return of the executed cluster study agreement is the appropriate time to permit the modifications previously permitted prior to the return of the executed system impact study agreement because these represent approximately the same point of the interconnection process in a serial study process versus a cluster study process. For plant increases, we find that it is appropriate to exclude increases to proposed generating facility size from the cluster study that is ongoing as any increase to size may create the need for restudies. By moving the increase to the subsequent cluster, the interconnection customer can still pursue its requested addition, albeit on a delayed schedule.

286. We decline to adopt Enel's alternative proposed language that would allow the same modifications permitted to be made prior to the executed cluster study agreement to also be permitted before a cluster restudy. This would not only represent a significant change from the existing modification language in *pro forma* LGIP section 4.4.1, but allowing such modifications at the cluster restudy stage could negatively affect the integrity of the cluster and cause further restudies, which would not ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

⁶⁴² Proposed *pro forma* LGIP section 4.4.

⁶⁴³ AEP Initial Comments at 18; Clean Energy Associations Initial Comments at 42; Pattern Energy Initial Comments at 17; PPL Initial Comments at 11.

⁶⁴¹ Clean Energy States Initial Comments at 8.

287. We also decline to adopt the revisions suggested by CREA and NewSun that would explicitly permit interconnection customers to modify their interconnection requests to reduce or eliminate the assignment of network upgrade or stand alone network upgrade costs associated with a proposed generating facility after receipt of the first cluster-level interconnection study. The “loss” of the opportunity for interconnection customers to downsize the interconnection request to tailor the facility to the available capacity identified in the first useful interconnection study⁶⁴⁴ reflects the nature of moving from a serial study process, with an initial, high-level feasibility study, to a cluster study process, with the benefit of a customer engagement window, potential for shared cost allocation, and lower likelihood of cascading restudies. Moreover, providing interconnection customers an opportunity to reduce the size of their proposed generating facilities after the cluster study would undercut the increased certainty and efficiency that are key benefits of the shift to a cluster study process. With the adoption of clusters, a reduction in size that may eliminate one interconnection customer’s cost responsibility for a network upgrade could affect other interconnection customers in the cluster, either by increasing their costs or requiring a different network upgrade. This type of uncertainty could lead to further reductions, withdrawals, and restudies, and would be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. We note, however, that interconnection customers may request a material modification assessment under section 4.4 of the *pro forma* LGIP for reductions and that if those reductions are found to not be material, the interconnection customer may proceed with them without a loss of queue position.

h. Fewer Than Three Year Extension to Commercial Operation Date

i. NOPR Proposal

288. Currently, if an interconnection customer’s generating facility is delayed by fewer than three years, the *pro forma* LGIP states that such extensions are not material and shall be handled through construction sequencing. However, the *pro forma* LGIP does not state the starting point for this fewer than three-year period. In the NOPR, the

Commission proposed to revise section 4.4.5 of the *pro forma* LGIP, which currently allows an extension of less than three cumulative years of the generating facility’s commercial operation date, to require that the commercial operation date reflected in the initial interconnection request be used in calculating the permissible fewer than three-year extension.⁶⁴⁵

ii. Comments

289. Several commenters contend that the commercial operation dates set out in the executed LGIA, rather than the date in the initial interconnection request, are generally more accurate⁶⁴⁶ and provide more certainty when established at the end of the interconnection study process as they would include the schedule estimates for network upgrades,⁶⁴⁷ and the interconnection customer may have greater control over pursuing its development timeline.⁶⁴⁸

290. Invenergy argues that, because assigned upgrades necessary for interconnection can require more than three years for construction, it would be reasonable to permit a greater extension right of five years from the date set out in the LGIA.⁶⁴⁹ Enel also argues that the Commission should grant a longer extension of time if the transmission provider’s studies are delayed or if more time is required to build network upgrades because these circumstances are beyond the interconnection customer’s control.⁶⁵⁰ Enel also recommends requiring the transmission provider to grant a day-for-day delay to the originally requested commercial operation date for any delays in the study process relative to the LGIP deadlines as well as due consideration for network upgrades that require more than 18 months to design, procure, and construct.

291. Ameren and PPL assert that continuing to provide a three-year extension of the commercial operation date would allow projects to move forward when they are not ready or viable.⁶⁵¹ APS believes that limiting the ability to suspend interconnection requests or extend the commercial operation date to instances of *force majeure*, including where a customer demonstrates specific timeline

obstructions such as permit issuance or supply chain delays, is more in line with the proposals in the NOPR.⁶⁵²

292. NV Energy seeks clarification on how long an interconnection customer may extend its commercial operation date because the *pro forma* LGIP allows seven to 10 years from the initial interconnection request to construct.⁶⁵³ NV Energy requests clarification on how the three-year suspension clause in the *pro forma* LGIA plays into the timeline for the commercial operation date. Pine Gate argues that any extension period from the commercial operation date be subject to the overall seven-year time period for achieving commercial operation.⁶⁵⁴ Invenergy argues that the Commission should also make clear that the limits on the initial proposed in-service date that can be specified in an interconnection request to no more than seven years beyond the interconnection request date, does not limit the ability to take advantage of commercial operation date extensions that are otherwise provided under the *pro forma* LGIP or an LGIA.⁶⁵⁵ For example, some transmission owners have taken the position that, when exercising a suspension right, if the suspension would result in an in-service date greater than seven years after the date specified in the interconnection request, the interconnection customer cannot use its full suspension period. Invenergy asserts that the Commission has already clarified that the interconnection request limitation on proposed in-service dates is applicable only for the purpose of limiting the date requested at the application stage, and does not limit in-service dates that extend beyond that period as a result of other factors, which would include transmission owner delay, exercise of suspension, and here, additional commercial operation date extensions.⁶⁵⁶ Invenergy also states that the Commission should clarify that its revisions to *pro forma* LGIP section

4.4.5 are in addition to, and do not limit, an interconnection customer's suspension rights under its interconnection agreement.⁶⁵⁷

iii. Commission Determination

293. We adopt the proposed revisions to section 4.4.5 of the *pro forma* LGIP that require that interconnection customers receive an extension of fewer than three cumulative years of the generating facility's commercial operation date without requiring them to request such an extension from the transmission provider. In response to commenters' concerns, however, we modify our proposal to clarify that the commercial operation date reflected in the initial interconnection request shall be used in calculating the permissible fewer than three-year extension until the interconnection customer executes, or requests the unexecuted filing of, an LGIA. Once the interconnection customer has executed an LGIA or requested that the LGIA be filed unexecuted, the commercial operation date established in the LGIA shall be the date from which the up to three cumulative years is calculated.

294. At the time the *pro forma* LGIP was adopted, the interconnection process was considerably shorter than it is now; the delays and sizeable interconnection queues facing transmission providers create a situation where many interconnection customers use this up to three-year period to ensure that their proposed generating facilities reach commercial operation. Furthermore, the length of the interconnection queues is such that at the time an interconnection customer enters the queue, it may have little idea of how long it will spend in the interconnection queue before commencement of the construction of its generating facility and required interconnection facilities and network upgrades. Thus, we agree with Invenergy, Ørsted, and Pine Gate, and we modify our proposal to require the up to three-year period to commence from the commercial operation date established in the interconnection customer's LGIA once the LGIA is executed or the interconnection customer has requested that it be filed unexecuted with the Commission.

295. We decline commenters' requests to revise the actual length of the permissible extension of a proposed generating facility's commercial operation date. The Commission did not propose to change the length of the permissible extension in the NOPR, and we lack an adequate record that the

existing up to three-year extension is unjust and unreasonable.

296. Commenters request clarification⁶⁵⁸ of how the changes to *pro forma* LGIP section 4.4.5 adopted in this final rule affect other provisions such as *pro forma* LGIP section 3.4.2 and *pro forma* LGIA article 5.16, which provide for extensions of the in-service date or suspension of construction.⁶⁵⁹ We reiterate that the revisions to section 4.4.5 of the *pro forma* LGIP adopted in this final rule establish only the starting point for the less than three-year extension to the commercial operation date. The Commission did not propose in the NOPR, and we do not adopt in this final rule, changes to the extension of in-service date provisions in *pro forma* LGIP section 3.4.2, or to the suspension provision in *pro forma* LGIA article 5.16.

i. Cluster Study Provisions (Pro Forma LGIP Sections 6, 7)

i. NOPR Proposal

297. As part of the proposed revisions to the *pro forma* LGIP, the NOPR proposed to replace section 6 (Interconnection Feasibility Study) with the new requirements to publicly post interconnection information, *i.e.*, the "heatmap" as discussed above in section III.A.1.c, thereby removing the entirety of the feasibility study from the *pro forma* LGIP.⁶⁶⁰ Furthermore, in the NOPR, the Commission proposed to rename *pro forma* LGIP section 7 from "interconnection system impact study" to "cluster study."⁶⁶¹ The Commission proposed revisions to *pro forma* LGIP section 7.1 (Cluster Study Agreement) to state that the transmission provider must tender to each interconnection customer that submitted a valid interconnection request a cluster study agreement no later than five business days after the close of the cluster request window.⁶⁶² The Commission proposed revisions to *pro forma* LGIP section 7.2 (Execution of Cluster Study Agreement) to state that if the interconnection

customer does not provide technical data when it delivers the cluster study agreement, the transmission provider must notify the interconnection customer of the deficiency within five business days, and the interconnection customer must cure the deficiency within 10 business days of receipt of the notice.⁶⁶³ The Commission proposed revisions to *pro forma* LGIP section 7.3 (Scope of Cluster Study Agreement) to make clear that the stability analysis, power flow analysis, and short circuit analysis previously conducted under the feasibility and system impact studies would be conducted on a clustered basis.⁶⁶⁴ The Commission also proposed changes to *pro forma* LGIP section 7.3 to make clear that, for purposes of determining necessary interconnection facilities and network upgrades, the cluster study shall use the level of interconnection service requested by interconnection customers in the cluster, except where the transmission provider otherwise determines that it must study the full generating facility capacity due to safety or reliability concerns. The Commission proposed revisions to *pro forma* LGIP section 7.4 (Cluster Study Procedures) to state that, within 10 business days of simultaneously furnishing a cluster study report and a draft facilities study agreement to each interconnection customer within the cluster and posting such report on OASIS, the transmission provider shall convene an open meeting to discuss the study results and shall, upon request, make itself available to meet with individual interconnection customers after the report is provided.⁶⁶⁵ *Pro forma* LGIP section 7.4 also states that the transmission provider must complete the cluster study within 150 calendar days. The Commission proposed revisions to *pro forma* LGIP section 7.5 (Cluster Study Restudies) to state that the interconnection customer must provide, within 20 calendar days after the cluster study report meeting, a study deposit, demonstration of site control, and a commercial readiness demonstration. *Pro forma* LGIP section 7.5 also states that the transmission provider must complete the cluster restudy within 150 calendar days and delineates the steps the transmission provider must take when a restudy is required or not required.⁶⁶⁶

⁶⁵⁸ Invenergy Initial Comments at 35; NV Energy Initial Comments at 5–6.

⁶⁵⁹ Specifically, *pro forma* LGIP section 3.4.2 (previously *pro forma* LGIP section 3.4.1) provides that the expected in-service date of the new generating facility or increase in capacity of the existing generating facility shall not exceed seven years, but may be extended up to 10 years upon mutual agreement of the transmission provider and interconnection customer. *Pro forma* LGIA article 5.16 provides the interconnection customer the right to suspend work by the transmission provider associated with the construction and installation of transmission provider's interconnection facilities and/or network upgrades for up to three years, at which time the LGIA would be deemed terminated.

ii. Comments

298. MISO supports the deletion of section 6 of the *pro forma* LGIP and the removal of the feasibility study from the *pro forma* LGIP.⁶⁶⁷

299. In reference to the proposed revisions to section 7.1 (Cluster Study Agreement) of the *pro forma* LGIP, Tri-State stresses that five business days is a tight time frame to tender a valid cluster study agreement to each interconnection customer that submitted a valid interconnection request and argues that this timeline is not feasible for transmission providers with greater than 50 interconnection requests submitted in a cluster request window.⁶⁶⁸

300. In reference to the proposed revisions to section 7.2 of the *pro forma* LGIP, Tri-State asserts that the Commission needs to confirm or reiterate that the interconnection request is considered withdrawn if the interconnection customer does not cure a deficiency identified by the transmission provider.⁶⁶⁹

301. In reference to the proposed revisions to section 7.3 (Scope of Cluster Study) of the *pro forma* LGIP, Tri-State asks the Commission to add language to address situations with studies pending completion of higher-queued project cluster studies.⁶⁷⁰

302. Enel proposes an alternative method for performing the cluster study and restudy to the NOPR proposal.⁶⁷¹ Enel states that if the Commission wants to retain the full scope of analyses in the cluster study, the Commission could require draft power flow analyses to be provided to interconnection customers part way through the cluster study. Enel explains that interconnection customers could be granted the right to reduce interconnection service amounts and make other changes pursuant to *pro forma* LGIP section 4.4.1 following receipt of these results. Enel states that the transmission provider would repeat the power flow analyses until the queue stabilized, with the motivation for interconnection customers to make changes in a timely way being driven by knowledge that once the latter portion of the studies started, the interconnection customer would lose this flexibility.

303. In the list of requirements to proceed to the cluster restudy in proposed revisions to section 7.5 of the *pro forma* LGIP, Enel proposes to add

“(d) election of project changes as permitted by LGIP section 4.4.1.”⁶⁷²

304. In the proposed revisions to section 7.5 of the *pro forma* LGIP, Enel suggests removing item (2), which states that if there are no changes to the composition of the cluster, a cluster restudy is not required, because it claims that the cluster restudy would always be required, at least in part, to add short circuit and stability analyses.

305. With regard to the 150-day cluster study deadline, some commenters generally support the proposed 150-day deadline to complete the cluster study.⁶⁷³ Enel recommends a reduction in the scope and schedule of the cluster study to only include power flow analysis and a short circuit ratio test (to test grid strength and flag potential inverter instability issues) and suggests that this initial cluster study be completed in 90 days instead of 150 days.⁶⁷⁴ Enel contends that, the availability of some information from this first study, interconnection customers retain more flexibility up to the point of committing to the initial cluster restudy, which allows interconnection customers to optimize the characteristics of their proposed generating facilities, most notably the amount of ERIS and NRIS interconnection service requested, in response to the results of the study. Enel argues that early flexibility for optimization of proposed generating facilities is better than forcing interconnection customers to withdraw and re-enter the interconnection queue, is less disruptive, and does not add a year of delay to an interconnection customer completing the interconnection process.

306. A number of commenters argue that the proposed 150-day deadline to complete the initial cluster study may be, or is, too short and recommend a longer study window.⁶⁷⁵ A few commenters also argue that the study timelines are too short, given the proposal to eliminate the reasonable efforts standard and impose penalties on transmission providers that miss those deadlines.⁶⁷⁶ National Grid asserts that the proposed 150-day deadline may be “unreasonably condensed” and could result in a decline in the quality of the

studies, which could lead to delays.⁶⁷⁷ Specifically, National Grid claims that rushing the issuance of the cluster study could lead to later amendments or corrections to certain engineering requirements or cost estimates, that in turn may lead to later-stage interconnection request withdrawals.

307. Tri-State notes that it currently implements a 270-day system impact study period, specifically 150 days for phase 1 (power flow, short circuit, reactive capability) and 120 days for phase 2 (short circuit, transient stability), and has yet to miss a study deadline.⁶⁷⁸ Tri-State argues that this time frame allows for a thorough study process, including coordination with neighboring systems and the correction of errors found in interconnection customers’ modeling data.

308. AES contends that cluster study timelines should be tailored to the types of studies being completed at each stage of the respective cluster.⁶⁷⁹ For example, AES states that steady state analysis takes less time to complete than dynamic analysis, meaning that a longer time frame should be afforded for dynamic analysis in the cluster study process. Accordingly, AES recommends that the Commission adopt a 150-day general study timeline for cluster studies and restudies (system impact study-steady state, and short-circuit analysis performed) and a 200-day timeline for facilities studies (dynamic analysis performed).

309. APS requests that the Commission extend the initial study time frame to 180 days to provide meaningful studies identifying feasible proposed generating facilities, explaining that the APS transmission system is situated in such a way that many interconnections are at jointly owned facilities that require reviews and sign-off from multiple owners, including non-jurisdictional entities.⁶⁸⁰ APS argues that 180 days is more prudent for initial studies, with the exception of specific criteria such as jointly owned facilities, Western Electricity Coordinating Council (WECC) rated paths, and federally owned and Tribal lands, for which studies take significantly longer despite good faith efforts.

310. NYTOs and National Grid argue that the proposal is not clear on which specific steps would be included in the 150-day time frame for the initial cluster study and argue that certain additional special studies that a transmission

provider may need to perform should not be subject to a 150-day time frame.⁶⁸¹ NYTOs state that it is unclear when the clock starts for the proposed 150-day cluster study deadline and how the scope of the work can be reasonably limited to comply with the 150-day deadline.⁶⁸² NYTOs argue that transmission providers and transmission owners should be afforded the flexibility to provide clarifications and supporting details on compliance.

311. Similarly, National Grid notes that certain RTO/ISO interconnection processes require special supplemental studies in addition to general system impact studies and that, while the NOPR recognizes that these studies may be required to ensure reliable interconnection of new generating facilities, it does not address whether such studies must be conducted within the proposed 150-day cluster study window or could be conducted outside of this window.⁶⁸³ National Grid argues that the time to complete such special studies should not be included in the NOPR's proposed 150-day cluster study window and that the final rule should allow regions to adjust their overall interconnection timelines to accommodate such region-specific studies and take into consideration the time required to develop system models. Finally, National Grid states that the NOPR does not address whether the 150-day cluster study window includes the time required to develop system models and base case data for the cluster study.

312. Several commenters recommend that the Commission provide transmission providers with flexibility to specify study timelines.⁶⁸⁴

313. Regarding the 150-day cluster restudy deadline, several commenters agree that the 150-day deadline is reasonable for a cluster restudy.⁶⁸⁵ Other commenters oppose the 150-day deadline. Bonneville argues that the proposed requirement to conduct a cluster restudy within 150 days is unworkable because the complexity of the cluster restudy would vary and directly impact the completion

timeline.⁶⁸⁶ Therefore, Bonneville seeks a longer time frame.

314. On the other hand, several commenters argue that the deadline to conduct a cluster restudy should be shorter.⁶⁸⁷ AES recommends that the Commission instead require transmission providers to include restudies and model rebuilds between cluster study phases, and to require that the timeline for such model rebuilds and restudies cannot be greater than 90 days.⁶⁸⁸ Enel similarly asserts that if the Commission leaves the cluster study timeline at 150 days and does not change the study scope, the timeline for cluster restudies should be 90 days.⁶⁸⁹

315. A few commenters argue that a 30-day window per restudy is more reasonable because network models are already built, and therefore substantially fewer staff resources should be required than for the initial study.⁶⁹⁰ Cypress Creek adds that a shorter restudy window will also help avoid potential delays in a cluster study process in which multiple restudies are required.⁶⁹¹ AEE also recommends that the Commission limit interconnection restudy timelines to 30 days, arguing that this will encourage transmission providers to treat customers in interconnection restudy with the same urgency as customers in the initial interconnection study, eliminating the possibility of asymmetric treatment of interconnection customers and alleviating interconnection queue congestion by moving those interconnection customers that have been in the interconnection queue the longest to study completion.⁶⁹²

iii. Commission Determination

316. We adopt the proposed deletion of the feasibility study as effectuated by the replacement of the current section 6 (Interconnection Feasibility Study) of the *pro forma* LGIP with the new heatmap requirements, as discussed in section III.A.1.c. The move from a serial interconnection process to the new cluster study process, coupled with the Commission's heatmap requirements, render the feasibility study redundant at best and an unnecessary burden on transmission provider resources. As

discussed in section III.A.1.c, above, we find that the publicly available information required by this final rule will provide the appropriate level of pre-interconnection queue information for interconnection customers to make informed choices.

317. We also adopt, with one modification, the proposed revisions to section 7 of the *pro forma* LGIP that rename it "cluster study" instead of "interconnection system impact study," which set out the requirements and scope of the cluster study agreement, as well as the cluster study and restudy procedures. These revisions reflect the adoption of the cluster study process set forth in this final rule by making clear that the interconnection studies that transmission providers previously performed as part of the serial system impact studies (*i.e.*, stability analysis, power flow analysis, and short circuit analysis) must now be conducted on a clustered basis. As discussed further in section III.A.6 of this final rule, *pro forma* LGIP section 7.5 is modified to remove the requirement to provide an initial study deposit that would have been applied towards the cost of the cluster study process.

318. We are not persuaded by Tri-State's concern that five business days after the close of the cluster request window is too short a time frame for a transmission provider to tender a cluster study agreement to each interconnection customer. Transmission providers may start to prepare cluster study agreements before the close of the cluster request window, as the overall terms and conditions of the cluster study agreement are standardized so that a transmission provider need not engage in rewriting each agreement before tendering a draft to the interconnection customer.

319. In response to Tri-State's comments concerning section 7.2 of the *pro forma* LGIP, we confirm that an interconnection request is considered withdrawn if the interconnection customer does not cure deficiencies identified by the transmission provider. We note that under new section 3.4.4 of the *pro forma* LGIP, if a transmission provider identifies that an interconnection customer's technical data are incomplete or contain errors, both parties must "work expeditiously and in good faith to remedy such issues," but the failure by the interconnection customer to provide the missing data or correct data errors will be treated as a withdrawal and dealt with under *pro forma* LGIP section 3.7 (Withdrawal).

320. In reference to Tri-State's comments on the proposed revisions to

⁶⁹² AEE Initial Comments at 33.

section 7.3 of the *pro forma* LGIP, we decline to add language to address situations with studies pending completion of higher-queued project cluster studies because Tri-State's comments are unclear as to what additional language may be needed.

321. We decline to adopt the alternative methods to perform cluster studies and restudies suggested by Enel. The current *pro forma* LGIP does not prescribe particular study methods and instead provides discretion to transmission providers to determine the particular methods of study appropriate for their transmission systems. We do not, based on the record in this proceeding, find a basis to determine that existing study methods are unjust, unreasonable, and unduly discriminatory or preferential. We also decline to add Enel's suggested section (d) to section 7.5 of the *pro forma* LGIP. *Pro forma* LGIP section 4.4.1 contains the modifications permitted to an interconnection request prior to the return of an executed cluster study agreement, which predates any potential cluster restudy. We further note that the record does not support Enel's modification request.

322. We decline to adopt the provision requiring transmission providers to hold cluster study report meetings with individual customers as proposed in section 7.4 of the *pro forma* LGIP. We find that the individual meetings would be unnecessary, and that individual customers should utilize the group cluster study report meeting as a more efficient forum in which to address any questions or concerns pertaining to the cluster study report. We also find that requiring transmission providers to conduct individual meetings would impose unnecessarily burdensome additional requirements on transmission providers and would be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

323. Also, we decline to remove proposed section 7.5(2) of the *pro forma* LGIP, as suggested by Enel. Contrary to Enel's claim, *pro forma* LGIP section 7.3 establishes that the cluster study will consist of short circuit and stability analyses; therefore, we disagree with Enel that a cluster restudy will be needed in all cases to perform the short circuit and stability analyses. Section 7.5(2) states that if there are no changes to the composition of the cluster, a cluster restudy is not required. We find that this is appropriate as it prevents the transmission provider from performing an unnecessary restudy if no conditions

have changed after the first cluster study. This will increase efficiency, free up the transmission provider's resources to perform other studies, and increase the speed of interconnection, ensuring that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

324. Based on the record, we find that a 150-calendar day cluster study deadline provides a sufficient time to allow transmission providers to perform the stability analyses, power flow analyses, and short circuit analyses required in the cluster study process for complex clusters consisting of numerous interconnection requests. We find that the 150-calendar day time frame balances providing transmission providers with sufficient time to perform these technical cluster studies while providing certainty about the timeline for the interconnection process and ensuring that cluster studies progress in a timely manner. We note that depending on the cluster size, cluster studies may not always consume the entire 150 calendar days, and if a cluster study is complete prior to this deadline, transmission providers have flexibility to provide the cluster study report at that time prior to the deadline indicated in its LGIP and commence any necessary restudies or move to the facilities study phase. We also note that if a transmission provider progresses to the next study phase prior to the deadline indicated in its LGIP, the transmission provider must post any changes on its website or OASIS.

325. We disagree with Enel's suggestion to reduce the scope and schedule of the cluster study in the proposed *pro forma* LGIP. The cluster study represents the first time the interconnection customer will obtain information about its potential interconnection costs. At this point, interconnection customers will have to make significant financial decisions about whether to remain in the interconnection queue. The information provided in the cluster study report will likely dictate that decision, and we find that the scope of the study is appropriate to allow interconnection customers to make these types of decisions and evaluate whether they will face significant risk. Given that we decline to reduce the scope of the study, we find Enel's request to reduce the timeline overly restrictive. Enel's proposal would create significant burden on transmission providers to perform complex studies in an even shorter timeline, and we therefore decline to adopt it.

326. We also disagree with commenters that argue that the 150-calendar day time frame to complete the cluster study is too short. As discussed above, numerous commenters agree with the Commission's conclusion that the significant interconnection queue backlogs create uncertainty and risk in bringing new generating facilities online, rendering Commission-jurisdictional rates unjust and unreasonable. While we have extended the timeline from that provided in the individual serial study process, we believe that 150 calendar days is a reasonable extension to account for the more complex study. We also note that transmission providers will be conducting only one interconnection study, or at most a small number of interconnection studies, at a time, allowing them to devote more resources to completing the studies in a timely manner. Thus, on balance, we believe that 150 calendar days represents an appropriate and reasonable timeline on which transmission providers must complete initial cluster studies.

327. We disagree with NYTOs that it is not clear as to when the clock starts for the proposed 150-calendar day cluster study deadline, as proposed *pro forma* LGIP section 7.3 contains this information (150 calendar days from the close of the customer engagement window). We also disagree with NYTOs' statement that it is not clear how the scope of the work can be reasonably limited to comply with the 150-calendar day deadline, as we are not proposing to limit the scope of work necessary to effectively run a cluster study. As discussed above, we find that the 150-calendar day cluster study deadline, combined with the fewer necessary studies, provides a reasonable amount of time to allow transmission providers to perform the required studies.

328. In response to National Grid's concern that some RTO/ISO interconnection processes require supplemental studies and that these studies should not be required to be conducted within the 150-calendar day cluster study window, we decline to modify the *pro forma* LGIP to provide for more time for such studies. We also clarify for National Grid that the 150-calendar day deadline includes the time required to develop system models and base case data for the cluster study.

329. Regarding the 150-calendar day cluster restudy deadline, we agree with commenters that the proposed 150-calendar day deadline is reasonable for a cluster restudy. We acknowledge that some commenters argue that 150 calendar days is too short, while others argue that it is too long. On balance, we

find that 150 calendar days is a just and reasonable time frame for purposes of the *pro forma* LGIP that allows transmission providers to conduct potentially complex restudies for instances in which larger clusters experience multiple withdrawals and/or modifications.

330. In response to commenters' arguments that a 150-calendar day restudy deadline is too long, we note that if transmission providers complete the cluster restudy prior to the full 150-calendar day period elapsing, transmission providers may move to the facilities study stage at that time. As such, the adopted 150-calendar day cluster restudy time frame accommodates more complex instances of cluster restudies while still allowing flexibility for transmission providers to move forward without waiting for the deadline to pass if the restudy does not take the full 150 calendar days.

331. Additionally, we decline to adopt suggestions to allow transmission providers flexibility to set their own study deadlines,⁶⁹³ which would undermine the purpose of ensuring that transmission providers complete interconnection studies by standard deadlines prescribed by their tariffs and would thus be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

j. Restudies Triggered by Higher- or Equally Queued Generating Facility

i. NOPR Proposal

332. In the NOPR, the Commission proposed to revise section 8.5 (Restudy) of the *pro forma* LGIP to make clear that restudies can be triggered by a higher- or equally queued interconnection request withdrawing from the interconnection queue or modification of a higher- or equally queued interconnection request pursuant to section 4.4 (Modifications) of the *pro forma* LGIP.⁶⁹⁴

ii. Comments

333. Shell argues the withdrawal of an interconnection request should not automatically trigger a cluster restudy, and instead the Commission should consider a process and cost allocation

method that creates a "secondary market" to replace a proposed generating facility that withdraws with another generating facility in the same location or nearby.⁶⁹⁵ CREA and NewSun agree with Shell's suggestion to allow interconnection customers to step in and assume the rights of any interconnection customer that withdraws its interconnection request.⁶⁹⁶ Similarly, R Street argues that the cluster study process should not impede the transfer of interconnection request "ownership," as, according to R Street, allowing parties to trade will help ensure an efficient balance between generation additions and transmission interconnection costs.⁶⁹⁷

334. MISO seeks clarification on the trigger for restudies. MISO states that its understanding is that any modification during its study process that is found to be material would not be allowed.⁶⁹⁸ Further, MISO contends that allowing a material modification to impact an equally queued interconnection customer seems to be inconsistent with the Commission's proposal to modify the definition of material modification.⁶⁹⁹ Therefore, MISO argues that there should not be a need for a restudy due to such modification. MISO asserts that the Commission should not allow modifications during the study process that materially impact other interconnection customers and may require restudies.

iii. Commission Determination

335. We adopt the proposed revisions to section 8.5 of the *pro forma* LGIP to make clear that restudies can be triggered by a withdrawal or modification by a higher- or equally queued interconnection request. First, we clarify that the "modification" we refer to in this section must be explicitly permitted under *pro forma* LGIP section 4.4. Any other modification that triggered a restudy would be found to be material and would not be allowed, as it would affect the cost and/or timing of the other customers in the interconnection queue by necessitating a restudy. Next, we find that restudies may be triggered if there is either a withdrawal or a modification explicitly permitted under *pro forma* LGIP section 4.4. Changes to the composition of the cluster often require the transmission provider to restudy the entire cluster to ensure that all network upgrades and

the associated costs are still needed. Finally, we find that stating that restudy may be required due to the withdrawal or modification of a higher- or equally queued interconnection request, rather than requiring that a restudy must occur, provides the transmission provider with flexibility to assess whether the restudy is necessary. If the transmission provider is able to move forward without performing a full restudy, that is a preferable outcome in terms of interconnection queue efficiency, as the transmission provider can maintain the study milestones already achieved and maintain progress towards completion and operation for generating facilities in the cluster, as opposed to dedicating significant additional time required to restart and conduct the study process over again when it may not be necessary or beneficial to do so.

336. In response to Shell, CREA and NewSun, and R Street, we decline to consider modifications to the *pro forma* LGIP to create a "secondary market" process that would allow one generating facility to replace a similarly situated one that withdraws from the interconnection queue, where that withdrawal would otherwise trigger a restudy. The Commission did not propose such a process in the NOPR, and we do not have a sufficient record to consider adopting such a process in this final rule.

337. In response to MISO, we clarify that material modifications are defined in section 1 of the *pro forma* LGIP as modifications that have a material impact on the cost or timing of any interconnection request with an equal or later queue position. Under section 4.4.3 of the *pro forma* LGIP, if an interconnection customer chooses to move forward with the modification that has been deemed material by the transmission provider, the interconnection customer will lose its queue position and must proceed with a new interconnection request if desired. However, we note that certain modifications as listed in *pro forma* LGIP sections 4.4.1, 4.4.2, and 4.4.5 are permitted regardless of their impact on other interconnection customers.

k. Timing of LGIA Tender, Execution, and Filing

i. NOPR Proposal

338. In the NOPR, the Commission proposed to revise sections 11.1 (Tender) and 11.3 (Execution and Filing) of the *pro forma* LGIP, which include provisions related to the tender, execution, and filing of the LGIA, to incorporate a 60 calendar-day

negotiation period and to incorporate the site control demonstrations and LGIA deposit provisions included in proposed section 3 of the *pro forma* LGIP.⁷⁰⁰

ii. Comments

339. Enel states that many transmission providers and interconnection customers are confused as to how to interpret *pro forma* LGIP sections 11.1 and 11.2 in relation to each other, and Enel thus recommends that the Commission revise and simplify sections 11.1 and 11.2 of the *pro forma* LGIP to provide more clarity.⁷⁰¹ Enel argues that additional changes are needed to address common delays in completion of the final facilities study report; delays in a transmission provider issuing the draft LGIA; and delays in the transmission provider executing the LGIA after receiving the interconnection customer's signature and milestones, and subsequently proposes targeted revisions to *pro forma* LGIP sections 11.1 and 11.2 to provide additional time for interconnection customers to review and negotiate LGIAs.⁷⁰²

340. Tri-State notes that section 11.3 of the *pro forma* LGIP is unclear when it states that the "Transmission Provider must not suspend the LGIA" until the interconnection customer meets the tariff requirements because it is the interconnection customer that has the ability to suspend a proposed generating facility.⁷⁰³

341. APS requests that the Commission be more prescriptive on what is considered reasonable evidence of achieving development milestones when executing an LGIA in the same manner that the Commission defines commercial readiness milestones in order to avoid subjectivity and potential disagreements regarding what is considered "reasonable."⁷⁰⁴ APS also asserts that the reference to simultaneous submission of the interconnection customer-executed LGIA and the continued demonstration of site control is duplicative and unnecessary if an interconnection customer demonstrates site control at the time an interconnection request is made.

342. Hydropower Commenters contend that the Commission should provide additional time for payment of interconnection costs after the interconnection process is complete.⁷⁰⁵

Hydropower Commenters assert that once a transmission provider delivers the interconnection agreement and construction agreement to the interconnection customer, the interconnection customer has only 60 days to execute the agreements and 15 business days after receipt of the signed agreements to demonstrate site control or post a non-refundable additional security deposit to cover the interconnection costs. Hydropower Commenters argue that, because the end of the study process may occur long before a proposed generating facility is fully funded, and the interconnection customer risks losing its queue position if it does not execute the agreements, the Commission should extend this period to at least one year so the interconnection customer has time to secure funding and avoids having to restart the interconnection process.

343. NV Energy similarly suggests changes to the NOPR proposal to allow interconnection customers that request a transmission provider to file an unexecuted LGIA to satisfy these requirements within 15 days of the Commission issuing an order. NV Energy states that the proposed extra time between receiving a draft LGIA and having to satisfy these requirements creates an undue preferential advantage for those interconnection customers that request unexecuted LGIAs to be filed at the Commission and could delay the interconnection process for others.⁷⁰⁶ To address this issue, NV Energy suggests that interconnection customers who choose to have their unexecuted LGIAs filed with the Commission should be required to submit their data to the transmission provider by the day after the filing of the LGIA.

iii. Commission Determination

344. We adopt, in part, and modify, in part, the proposal to revise sections 11.1 and 11.3 of the *pro forma* LGIP, regarding the tendering, execution, and filing of the LGIA, to incorporate a 60-calendar day negotiation period and to incorporate the site control demonstrations and LGIA deposit provisions included in proposed section 3 of the *pro forma* LGIP. We find that the revisions to section 11.1 of the *pro forma* LGIP that we adopt herein clarify the process of tendering an LGIA and the revisions to section 11.3 of the *pro forma* LGIP that we adopt herein incorporate the site control and LGIA deposit provisions adopted elsewhere in this final rule.

345. We do not adopt the proposed revisions to *pro forma* LGIP section 11.3

that reference the commercial readiness demonstration provisions of proposed section 8.1 of the *pro forma* LGIP because we are not adopting those provisions, as discussed below in section III.A.6.

346. We modify the proposed revisions to *pro forma* LGIP section 11.3, as requested by Tri-State, because we agree that the proposal was unclear when it stated that "Transmission Provider must not suspend the LGIA under LGIA article 5.16" until the interconnection customer meets certain tariff requirements. We modify *pro forma* LGIP section 11.3 to instead state: "Interconnection Customer may not request to suspend its LGIA under LGIA Article 5.16 until Interconnection Customer" meets certain tariff requirements. This reflects the fact that it is the interconnection customer, not the transmission provider, that has the right to suspend the LGIA.

347. We also modify proposed section 11.3 of the *pro forma* LGIP in response to NV Energy's concerns about favoring interconnection customers that request a transmission provider to file an unexecuted LGIA. We agree that the proposal has the potential to encourage more filings of unexecuted LGIAs simply to delay the due date for submission of deposits, evidence of site control, and milestone progress data. We therefore modify the proposal such that interconnection customers that request a transmission provider to file an unexecuted LGIA must satisfy these submission requirements within 10 business days after the date of the filing of the unexecuted LGIA with the Commission.

348. We decline to make further modifications to the proposal beyond those discussed above. Enel has neither explained why *pro forma* LGIP sections 11.1, as revised by this final rule, and 11.2, cause an unjust and unreasonable result for interconnection customers, nor has it explained why changes to the negotiation process between transmission providers and interconnection customers are needed at this time.

349. Similarly, we decline APS' request that the Commission be "more prescriptive" on what is considered reasonable evidence of achieving development milestones when executing an LGIA. We believe that the requirement that interconnection customers provide reasonable evidence is sufficient to ensure just and reasonable rates without imposing detailed requirements surrounding the meaning of "reasonable." There is inadequate record to demonstrate a more prescriptive approach is needed.

⁷⁰⁴ ASP Initial Comments at 7.

⁷⁰⁵ Hydropower Commenters Initial Comments at 18.

⁷⁰⁶ NV Energy Initial Comments at 20.

For example, development milestones generally involve the execution of contracts or applications for permits.

350. We also decline to adopt Hydropower Commenters' request to modify the *pro forma* LGIP to provide additional time for payment of interconnection costs after the conclusion of the interconnection study process. The *pro forma* LGIP, as modified by this final rule, requires transmission providers to give interconnection customers ample notice of costs and the timing that costs are due as part of the interconnection process so that interconnection customers can secure funding for a proposed generating facility. We are unpersuaded that interconnection customers should have additional time beyond that already provided, especially given the number of generating facilities that have been developed using the existing process and the added transparency that we adopt in this final rule that will only serve to improve the ability of interconnection customers to secure financing.

l. Cluster Subgroups

i. NOPR Proposal

351. In the NOPR, the Commission sought comment on whether to require transmission providers to conduct cluster studies on subgroups of interconnection customers based on areas of geographic and electric relevance, and, if so, whether to adopt provisions governing how cluster areas should be formed to ensure that cluster areas are formed in a transparent and not unduly discriminatory manner.⁷⁰⁷

ii. Comments

352. A number of commenters support permitting transmission providers to study clusters in subgroups based on geographic or electrical relevance,⁷⁰⁸ but some argue that clustering projects in subgroups should not be required.⁷⁰⁹

353. Several entities argue that clustering around subgroups of geographic or electrical relevance is a reasonable approach, particularly for transmission providers with a large or fragmented footprint.⁷¹⁰ Some

commenters argue that creating sub-clusters may not make sense for transmission providers with small footprints.⁷¹¹ Several commenters argue that transmission providers should have flexibility in deciding whether to form subgroups of interconnection customers because geographic and electric relevance will vary with each cluster study.⁷¹² Similarly, some commenters contend that the Commission should not mandate studying subgroups based on geographic and electric relevance, and that the efficacy of this approach should instead first be evaluated through experience.⁷¹³

354. PacifiCorp notes that using cluster study areas allows it to assess and more efficiently allocate the costs of network upgrades to requesters triggering the improvements and protect interconnection customers in different clusters from bearing the cost of network upgrades triggered by interconnection customers in different parts of PacifiCorp's system, thereby facilitating more expedient processing of all the cluster studies.⁷¹⁴ PacifiCorp asserts that its ability to create cluster areas where appropriate is a critical feature of its cluster study process, adding that cluster areas can facilitate expedient processing of interconnection requests that might otherwise be delayed due to restudies or other study complications.⁷¹⁵

355. On the other hand, Pattern Energy asserts that designating subregions may result in separate geographic regions bearing a disproportionate share of network upgrade costs that provide regional benefits and should be subject to regional cost allocations.⁷¹⁶ Pattern Energy notes that it is also important for the transmission provider to review subregional cluster study results and determine whether inter-cluster network upgrades would better serve the needs of the subregional clusters during each planning cycle. Illinois Commission asserts that interconnection requests that are near one another might have a greater impact on each other, and subgroups could ease the study process, but any subgroup process should not

compromise cost or timing efficiency gains that the clustering process is meant to address.⁷¹⁷ OPSI argues that to reduce the "first mover disadvantage" most effectively, the Commission should continue to analyze and further explain in any final rule whether a region-wide, annual cluster in a large region like PJM could benefit from better defined subclusters.⁷¹⁸ OPSI asserts that the Commission should further evaluate methods to ensure that clusters facilitate identification of shared network upgrades by grouping generating facilities based on areas of geographic and electrical relevance.

356. Avangrid contends that the open call cluster request window should have geographic distinctions, but that if the open call results in only one interconnection request in a particular area of the system electrically, this interconnection should be able to undergo a process reminiscent of current serial study processes in a parallel track if it will influence, or be influenced by, the broader cluster study process.⁷¹⁹

357. Some commenters argue that the Commission should set forth specific mandates to transmission providers on how cluster areas should be formed.⁷²⁰ CREA and NewSun argue that clear mandates would prevent transmission providers from subgrouping as a means to engage in anti-competitive conduct (e.g., assigning the utility's own generation to subgroups with lower congestion or network upgrade costs).⁷²¹ Similarly, Fervo Energy contends that the Commission should adopt provisions governing how cluster areas should be formed to ensure that clusters are formed in a transparent and not unduly discriminatory manner.⁷²²

358. Other commenters argue that the Commission should provide flexibility by creating a general framework for defining cluster study subgroups appropriate for their own regions, rather than a specific set of requirements.⁷²³

⁷¹⁶ Pattern Energy Initial Comments at 16.

Some commenters further contend that transmission providers have extensive knowledge of their own transmission systems,⁷²⁴ and the particular interconnection requests that should and should not be included within a cluster based on their system's geography, electric configuration, or other relevant factors.⁷²⁵

A number of commenters suggest that transmission providers develop subgroup criteria with stakeholder input.⁷²⁶

359. Other commenters argue that the Commission should allow variation in how transmission providers form clusters. For example, R Street argues that the Commission should refrain from being too prescriptive regarding how cluster areas are defined, and instead require that transmission providers publish their cluster definitions well in advance of the request window for interconnection requests.⁷²⁷ Clean Energy States believe that allowing interconnection customers to create their own clusters would result in an internal vetting of proposed generating facilities in the cluster and negotiation about how costs and penalties will be managed.⁷²⁸ Regarding how clusters should be defined, several commenters provide suggestions for subgroup criteria beyond geographic proximity or electrical relevance.⁷²⁹ PPL suggests cluster formation be based on geographic or electrical proximity only and that interconnection customers should not be separated based on fuel type.⁷³⁰ Energy Keepers asserts that, when utilities are considering cluster studies on subgroups of interconnection customers, those clusters should be based on location.⁷³¹ Clean Energy Associations, Vistra, and ENGIE assert that cluster studies should evaluate subgroups of projects based on electric

proximity to one another.⁷³² Further, ENGIE agrees that distribution factors should not be the sole indicator of electrical proximity as there are other factors around which subgroups might appropriately be grouped.⁷³³

360. Xcel argues that it is not necessary to create "separate" clusters for electrically distinct regions, noting that PSCo separates interconnection requests into "study pockets" based on geographic/electrical separation but studies all the interconnection requests in a single cluster.⁷³⁴

361. Clean Energy Associations assert that the Commission should make clear whether a cluster study must identify the upgrades required in order to interconnect every interconnection request in whole, or whether it might identify upgrades that would be sufficient for only a subset of the interconnection requests; if the latter, Clean Energy Associations continue, the Commission should establish a *pro forma* process for determining which requests might proceed with those initial upgrades.⁷³⁵ Clean Energy Associations claim that transmission development is a "lumpy" process, and in some cases there can be "breakpoints" where adding one more generating facility can result in a significant per-unit cost increase compared to the interconnection costs that could have been achieved for a subset of the interconnection requests up to that point. Clean Energy Associations state that, in the current ISO-NE cluster study process, ISO-NE attempts to identify such breakpoints and fills each cluster up to that level, with remaining requests able to either withdraw or proceed into the next cluster study. Some commenters contend that studies should include or consider including breakpoints, which can provide helpful information to inform interconnection customers' next steps.⁷³⁶

362. Finally, several commenters encourage transparency and request that any subgrouping criteria be publicly posted or filed by transmission providers or RTOs/ISOs.⁷³⁷

iii. Commission Determination

363. We will neither require transmission providers to conduct cluster studies on subgroups of interconnection customers based on areas of geographic and electric relevance, nor adopt provisions governing how cluster subgroup areas should be formed. However, we adopt revisions to section 7.4 of the *pro forma* LGIP to permit transmission providers to use subgroups in their cluster study process if they so choose. To the extent a transmission provider chooses to use subgroups, it must include provisions in its *pro forma* LGIP in its tariff that state that it will use subgroups. We further modify section 7.4 of the *pro forma* LGIP to require that the criteria used to define subgroups be publicly posted on a publicly accessible website. We believe that publicly sharing these criteria is important to ensure adequate transparency and to safeguard against the potential for undue discrimination in the design and implementation of cluster subgroups.

364. We agree with commenters that support permitting transmission providers to study clusters in subgroups based on geographic or electrical relevance but argue that clustering projects in subgroups should not be required. We believe that there may be benefits to studying clusters in subgroups in certain circumstances, and therefore we do not want to preclude transmission providers from proposing such a process on compliance. At the same time, based on the record, we do not believe that requiring subgroups for all transmission providers is appropriate. In some instances, the administrative burden of defining and separately studying subgroups may not outweigh the benefits.

365. Consistent with our decision to not require transmission providers to conduct cluster studies on subgroups of interconnection customers, we decline to adopt provisions governing how clusters should be formed. Rather, we believe it more appropriate to allow transmission providers to determine how to define subclusters appropriate for their regions, taking into consideration their system geography, electrical configuration, and other relevant factors.⁷³⁸

366. Regarding concerns raised by Pattern Energy and others about the use of subgroups resulting in a disproportionate allocation of network upgrade costs, we note that if a transmission provider opts to study in subgroups, it cannot change how it allocates network upgrade costs. That is, it must follow the requirement adopted in this final rule to use a proportional impact method to allocate system network upgrade costs among all interconnection customers in the cluster regardless of subgroup, as discussed further below. Because transmission providers will be using a proportional impact method to allocate system network upgrade costs, regardless of whether interconnection customers are studied in subgroups, we believe subgroups would not change an interconnection customer's potential cost allocation. An interconnection customer with an impact on a network upgrade would be allocated its portion of the cost of that network upgrade regardless of whether its request was studied in a subgroup with another interconnection customer allocated a different portion of that network upgrade.

m. Restudy

i. NOPR Proposal

367. In the NOPR, the Commission sought comment on whether to specify in the *pro forma* LGIP how cluster studies must be rerun after restudy is triggered or whether there are provisions the Commission could adopt to improve the efficacy of the restudy process, such as preventing excessive restudy by limiting the transmission provider to two restudies per month within the 150-calendar day cluster restudy period.⁷³⁹

ii. Comments

368. Eversource recommends that the Commission adopt detailed restudy rules.⁷⁴⁰ Pine Gate suggests that the Commission provide guidance on when the need for a restudy is triggered, as even minimal changes can trigger long and costly restudies.⁷⁴¹ Pine Gate recommends that the Commission: (1) furnish criteria to be used by transmission providers in determining whether a restudy is required; (2) require transmission providers to limit the scope of restudies if only a local impact is anticipated; (3) require transmission providers to publish

restudy criteria, determinations, and scoping as resources for interconnection customers; (4) permit interconnection customers to send engineering analyses applying the transmission provider's published criteria, which could be used by the transmission provider to help decide whether to conduct a restudy, thereby reducing the transmission providers' burden; and (5) not require every cluster participant to submit additional study deposits until the transmission provider determines the need for and scope of any restudy and affected cluster participants are notified. Pattern Energy believes that transmission providers should be required to develop expedited modeling processes to evaluate whether the withdrawal of an interconnection request or other allowed modification may cause a full restudy.⁷⁴² Pattern Energy argues that such a requirement would allow interconnection customers to make better informed decisions about withdrawing or modifying interconnection requests.

369. Conversely, a number of commenters recommend that the Commission provide flexibility to transmission providers and not adopt overly prescriptive requirements specifying how cluster studies must be rerun after a restudy is triggered.⁷⁴³ MISO encourages the Commission to grant maximum flexibility to transmission providers regarding the necessity of restudies and the scope of restudies as the situations that give rise to restudies are varied and unique.⁷⁴⁴ PJM states that it finds acceptable the NOPR's proposal requiring transmission providers to specify in their tariffs how cluster studies must be rerun, but suggests the Commission avoid being overly prescriptive regarding restudies.⁷⁴⁵ Xcel recommends that the Commission not propose additional prescriptive requirements on how restudies must be performed, but suggests that if there are multiple clusters impacted, where each cluster only has "ready" projects, the transmission provider may combine the clusters into a single cluster for a single restudy instead of restudying multiple clusters.⁷⁴⁶

370. Some commenters support limiting the number of restudies a

transmission provider may perform within a restudy period.⁷⁴⁷ Ameren states that limiting the number of restudies to two within the 150-day cluster restudy period seems reasonable, given the size of the many interconnection queues and the reported uncertainty of interconnection customers in the queue.⁷⁴⁸ Ohio Commission Consumer Advocate concurs that conducting a single cluster study and cluster restudy annually may reduce the risk of cascading restudies occurring if an interconnection customer withdraws from the interconnection queue.⁷⁴⁹

371. A few commenters argue that the Commission should address the lack of any limit on restudy requests, stating that this issue is a known shortcoming that results in essentially unlimited time and resource obligations for interconnection customers.⁷⁵⁰ Southern expresses concern that the proposed *pro forma* LGIP language allows for multiple restudies, which would interfere with a one-year timeline maximum.⁷⁵¹

372. A number of commenters do not support a set limit on the number of restudies a transmission provider may perform.⁷⁵² Bonneville asserts that efforts to prevent excessive restudies (e.g., limit of two per month) could be overly prescriptive.⁷⁵³ Bonneville argues that transmission providers should be afforded the flexibility to determine and publish the timing of any restudy, and limits thereto, on their OASIS sites to help to facilitate transparency and ensure timelines are attainable. NextEra states that experience has shown that having a defined and limited number of restudies, such as in MISO's three-phase process, can help limit the duration of the study process.⁷⁵⁴ However, NextEra contends that it would be too restrictive for the Commission to dictate exactly how transmission providers should limit the number of restudies, and argues that the final rule should instead require that each transmission provider

propose to the Commission on compliance what rules or processes it will use to ensure there is not an undefined and unpredictable number of restudies, *e.g.*, whether it will have a fixed number of scheduled restudies or some other method to limit the number of restudies and associated potential delays. PacifiCorp notes that, because restudies are typically triggered through a withdrawal or modification of an interconnection request, the transmission provider is responding to changes, typically outside of its control, that warrant a restudy and undertaking efforts to complete the restudy as efficiently as possible.⁷⁵⁵

373. Idaho Power requests clarification surrounding the single cluster and cluster restudy process and the suggested limitation of allowing only two restudies per month within the 150-day cluster restudy period.⁷⁵⁶ Idaho Power states, for example, an entity may have three cluster areas requiring three cluster studies, and withdrawals from those studies may require more than two simultaneous cluster restudies in the same month to prevent delay of any one cluster restudy.

iii. Commission Determination

374. We decline to modify the *pro forma* LGIP to specify how a transmission provider conducts cluster restudies and when it must conduct a cluster restudy. We find persuasive the arguments of several commenters that the Commission allow transmission providers flexibility on how and whether to conduct a restudy and the scope and frequency of any restudies. The transmission provider is best positioned to determine when and how to conduct a restudy, including the scope and frequency of restudies, because it determines the need for the restudies to maintain the reliability of the transmission system.⁷⁵⁷ We agree with commenters like MISO and Xcel that different events can trigger restudies, and transmission providers are in the best position to determine whether an event warrants a restudy, and if so, what the scope of that restudy should be (for example, whether a new study is required, or whether only a modification as to certain model data and a reanalysis is required).⁷⁵⁸

375. As to frequency of restudies, we also agree with PacifiCorp that because

restudies are typically triggered through a withdrawal of an interconnection request, the transmission provider is responding to changes, typically outside of its control, that warrant a restudy, and thus limiting the number of restudies could hinder the ability of a transmission provider to undertake efforts to complete a restudy as efficiently as possible.⁷⁵⁹ Because we are not modifying the *pro forma* LGIP to specify how cluster studies must be rerun after restudy is triggered, we will also not limit the transmission provider to two restudies per month within the 150-calendar day cluster restudy period. We agree with commenters like Bonneville, NextEra, and PacifiCorp that it would be too restrictive for the Commission to dictate exactly how transmission providers should limit the number of restudies.⁷⁶⁰

376. Regarding Idaho Power's request for clarification on the suggested limitation of allowing only two restudies per month within the 150-calendar day cluster restudy period,⁷⁶¹ because we are not adopting a limit of two restudies per month within the restudy period, Idaho Power's clarification request is moot.

n. Exceptions to the Cluster Study Process

i. NOPR Proposal

377. In the NOPR, the Commission sought comment on whether there should be an option in the *pro forma* LGIP for transmission providers to process some interconnection requests outside of the annual cluster study process, and if so, in what circumstances and on what time frame (for completion of the study), and on what priority compared to any active clusters.⁷⁶²

ii. Comments

378. Several parties generally support an option in the *pro forma* LGIP for some interconnection requests to be processed outside of the annual cluster study process,⁷⁶³ with some commenters supporting such an option only under specific circumstances.⁷⁶⁴

For example, Ørsted argues that such an option could be beneficial in the case of a stand alone network upgrade built to serve a single interconnection customer that will not impact the cluster.⁷⁶⁵ Some commenters suggest establishing a separate process outside of the cluster study process to expedite certain interconnection requests.⁷⁶⁶ Several commenters contend that an option to study interconnection requests outside of clusters would be particularly beneficial as more renewable generating facilities are added to the resource mix.⁷⁶⁷ Two commenters support exceptions for replacement resources specifically.⁷⁶⁸ A few commenters argue that the Commission should allow transmission providers to separately or individually study certain interconnection requests that are not geographically or electrically relevant to other interconnection requests in the interconnection queue.⁷⁶⁹

379. Additionally, APPA-LPPC request that the Commission recognize that there are transmission providers, principally in rural communities or where the transmission system provides limited opportunities for advantageous interconnections, where there are too few interconnection requests to justify a cluster study approach.⁷⁷⁰ In these cases, APPA-LPPC recommend that the Commission provide for a self-executing “opt out,” permitting the transmission providers to continue to study interconnection requests on a serial basis.

380. Northwest and Intermountain recommend a limited exception to the cluster study process requirement to allow existing interconnection customers seeking to make changes to their proposed generating facilities to be processed outside of the cluster study process where the proposed change had no demonstrable incremental impact on the transmission system.⁷⁷¹

381. Xcel argues that proposed generating facilities needed to serve load should be allowed to be processed

⁷⁵⁸ MISO Initial Comments at 43; Xcel Initial Comments at 24.

outside of the annual cluster study process.⁷⁷² AEP argues that transmission providers with a reserve margin obligation must have the ability to prioritize the interconnection of needed capacity in the interconnection process.⁷⁷³

382. Iowa Commission argues that state commissions should have the ability to require studies outside of annual cluster studies, which would help increase the availability of needed generation for resource adequacy and maintain local reliability needs, particularly as large intermittent generating facilities are interconnecting to the system at a rapid pace.⁷⁷⁴ Iowa Commission explains that such studies could potentially address increased transmission system stability and also minimize future transmission costs because of the “transient nature” of some load and resource changes.

383. Similarly, UMPA contends that the Commission should require a process outside of the annual cluster study process to expedite interconnection requests that are beyond the exploration phase and ready for development.⁷⁷⁵ UMPA explains that some load serving entities search for potential resources to meet their integrated resource plan based on a request for proposal or certain competitive criteria, but are then confronted with a choice among proposed generating facilities that meet the criteria but are lower in the interconnection queue, or proposed generating facilities that do not satisfy the criteria, but are higher in the interconnection queue. Therefore, UMPA argues that it would be helpful to a load serving entity with a development-ready generating facility to be able to enter into a parallel process outside of the annual cluster study process in order to expedite an interconnection request.

384. AEP also suggests that RTOs/ISOs that have consolidated their small and large generator interconnection procedures into a single generator interconnection procedure should be permitted to propose that all or some smaller-sized generating facilities, such as 20 MW or smaller generating facilities, would be “too small” to need to be included in the cluster.⁷⁷⁶

385. Other commenters believe that any exceptions to the cluster study process requirement should be very

limited.⁷⁷⁷ NRECA asserts that if the final rule provides for any interconnection requests to be processed outside the annual cluster study process, it should be limited to a narrow category of interconnection requests, such as emergency replacements of failed equipment driven by near-term reliability needs.⁷⁷⁸ MISO asserts that there should be very limited exceptions, explaining that it has limited its non-queue interconnection requests to those that are associated with existing generating facilities that do not seek to add new or additional interconnection service, or small interconnection requests.⁷⁷⁹ Outside of those limited exceptions, MISO states that it does not support processing any other interconnection requests outside of the interconnection queue.⁷⁸⁰

386. ENGIE recommends that exceptions be limited to requests that “need[] to be studied outside of the cluster process, e.g., transmission planning and state or public policy issues.”⁷⁸¹ ENGIE states that it is possible that there may be other exceptions made in emergency situations, in which case, the granting of exceptions should be very limited in scope, subject to transparent criteria, and the rationale made publicly available. ENGIE further recommends that every interconnection request, including emergency requests, enter through the cluster request window, but that an emergency request be accelerated if it meets the pre-determined and publicly available requirements.

387. A number of commenters oppose an option to process interconnection requests outside of the annual cluster study process.⁷⁸² A few parties argue that maintaining an option to process interconnection requests outside of the annual cluster study process would likely create an administrative burden for transmission providers without a

clear benefit.⁷⁸³ Some commenters assert that processing certain interconnection requests outside of the interconnection queue could increase the time needed to complete the cluster studies or could increase restudies.⁷⁸⁴

388. Some commenters express concern that such an option could become overly used or abused.⁷⁸⁵ Enel asserts that if interconnection requests could be accepted for processing outside the annual cluster study process, especially on an individual basis, there would be a high degree of interest because this would allow interconnection customers to avoid being allocated the costs of regional upgrades that result from many cluster studies.⁷⁸⁶ Bonneville asserts that permitting an interconnection request to be processed outside of the annual cluster study process would create a “perverse incentive” for some interconnection customers to forgo the cluster study process to avoid cluster study requirements.⁷⁸⁷

389. OMS states that it has considered the benefits of some sort of a “fast-lane process” for resources that are more “certain,” like those that have received all necessary permits and regulatory approvals.⁷⁸⁸ OMS states that use of such a mechanism may be important or necessary in the future to address reliability concerns, but OMS explains that it is neutral on the proposal because bypassing the interconnection queue invites a myriad of potential unintended consequences that might not outweigh the value OMS otherwise envisions in this type of mechanism.

390. PacifiCorp states that the Commission’s proposal on this topic is not clear.⁷⁸⁹ PacifiCorp states that, if the NOPR refers to an interconnection customer’s ability to request surplus or provisional interconnection service or an informational interconnection study, PacifiCorp supports maintaining these options. However, PacifiCorp requests the Commission clarify that requests for such service will be evaluated in the order that completed interconnection requests are received. PacifiCorp states that it does not currently support expanding non-cluster service and study offerings.

391. Regarding under what time frame and at what priority interconnection requests should be studied outside of the cluster study process, as compared to any active clusters, Fervo Energy recommends a 270-day time frame for completion of the study with secondary priority to the active cluster studies.⁷⁹⁰

iii. Commission Determination

392. We decline to include an additional option in the *pro forma* LGIP for transmission providers to process some interconnection requests outside the annual cluster study process adopted in this final rule. We find that establishing in the *pro forma* LGIP a separate interconnection process outside the cluster study process could detract from transmission providers' efforts to efficiently process cluster studies—a point persuasively argued by commenters.⁷⁹¹ A separate set of interconnection studies outside of the cluster study process could cause transmission providers to divert resources away from cluster studies and cluster restudies. Such diversion could hinder the transmission provider from meeting the cluster study and cluster restudy deadlines adopted in this final rule, which would be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. We also find that such an option in the *pro forma* LGIP would be too open-ended, as it would leave a significant amount of discretion to the transmission provider to create new study processes for processing any types of interconnection requests it chooses outside the cluster study process and could therefore result in a separate but unduly discriminatory interconnection process. We further find that establishing such an open-ended option in the *pro forma* LGIP could create an incentive for some interconnection customers to forgo the cluster study process, which could increase the time and resources needed for transmission providers to complete the cluster studies or could increase restudies.⁷⁹²

393. A number of commenters see benefits to establishing an option in the *pro forma* LGIP for particular types of interconnection requests to be processed outside of the annual cluster study

process, such as for generator replacement, projects ready for development, emergency replacements, for certain special circumstances, or for transmission providers who have too few interconnection requests to justify a cluster study approach.⁷⁹³ However, we are not persuaded that establishing such processes in the *pro forma* LGIP is necessary to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. We believe that processing such one-off interconnection requests will be needed less often under the cluster study process adopted in this final rule, and therefore, any benefits that exist to processing some interconnection requests outside a transmission provider's interconnection process may be outweighed by the benefit of allowing transmission providers to conduct cluster studies efficiently without diverting resources to a separate set of studies.

394. In response to the Iowa Commission's argument that state commissions should be able to require studies outside of annual cluster studies, we similarly find that any such studies would divert a transmission provider's resources away from conducting the cluster studies and cluster restudies.

395. Regarding AEP's suggestion that those RTOs/ISOs that have consolidated their small and large generator interconnection procedures should be permitted to propose that all or some smaller-sized generating facilities would be "too small" to be included in the cluster, we note that the Commission did not propose the cluster study process for small generating facilities subject to the *pro forma* SGIP.

396. Finally, because we are not revising the *pro forma* LGIP to add a new option for some interconnection requests to be processed outside of the annual cluster study process, we find moot those comments on the time frame and priority of interconnection requests studied outside of the cluster study process.⁷⁹⁴ In response to PacifiCorp,⁷⁹⁵ we clarify that requests for surplus interconnection service, or an optional interconnection study, will continue to be processed as received and outside of

the cluster study process, and that this does not entail an expansion of non-cluster service and study offerings.

o. Other Comments

i. Comments

397. Some entities recommend automation or standardization of the interconnection queue process and studies.⁷⁹⁶ NextEra states that the proposed cluster study process time frame requires significant information technology and personnel resources.⁷⁹⁷ NextEra argues that, despite the lack of such a proposal in the NOPR, automation of the interconnection queue process and studies is likely the key to compressing interconnection process timelines. NextEra encourages the Commission to convene a technical conference or other process to focus on the root causes of interconnection study delays as well as the potential to accelerate the interconnection queue process through enhanced automation.

398. Several commenters argue that the Commission should require transmission providers to provide more cost information to interconnection customers throughout the interconnection process.⁷⁹⁸ Clean Energy Associations and SEIA argue that cluster studies should also ensure that interim cost information is made available to interconnection customers so that they can make more informed decisions earlier in the interconnection process, which will in turn lead to a more efficient interconnection process overall.⁷⁹⁹ Clean Energy Associations argue that as part of the cluster studies provided to interconnection customers prior to their receiving facilities studies, the Commission should require transmission providers to provide interconnection customers with cost estimates for the upgrades required if they were to request ERIS or NRIS (or long-term firm transmission service), respectively—and coupled with minimum thresholds for materiality (such as distribution factor) and transparency regarding how these costs are derived (detailing the assumptions and criteria that will be used).⁸⁰⁰ Clean Energy Associations also suggest that the Commission should provide concrete direction regarding how

⁷⁹⁴ Fervo Energy Initial Comments at 3; Tri-State Initial Comments at 12; Xcel Initial Comments at 24–25.

⁷⁹⁵ PacifiCorp Initial Comments at 21.

differing service types should be studied, and what outcome an interconnection customer should receive for making the necessary transmission system improvements to obtain that interconnection service.⁸⁰¹ AEE similarly believes that additional reforms are needed to bring more transparency and predictability to interconnection costs, and without this transparency and predictability, interconnection customers face continued risks of unjust and unreasonable interconnection study results that derail or delay interconnection requests and cause increased costs.⁸⁰²

399. Affected Interconnection Customers state that the Commission should permit interconnection customers to use independent studies to demonstrate whether the request for limited interconnection service would result in stability, short circuit, thermal, and/or voltage issues, if the transmission provider or transmission owner is unable to complete the studies on time.⁸⁰³ Affected Interconnection Customers argue that allowing interconnection customers to use any available resources to conduct these studies would enable already built interconnection facilities to flow power onto the system, as long as studies show that such interim services will not harm the system.

400. Clean Energy Associations ask that in a final rule, the Commission adopt a cost threshold (in terms of the anticipated upgrade cost relative to distribution factor) beyond which upgrades should be evaluated in the next near-term transmission planning process. Similarly, Clean Energy Associations argue that cumulative congestion issues should also be addressed via the transmission planning process.⁸⁰⁴

ii. Commission Determination

401. We decline to adopt the remainder of the proposals advocated for in the comments regarding our requirement for transmission providers to use a cluster study process. We decline to adopt three of these proposals because they are outside the scope of the NOPR: (1) NextEra's request to require or standardize automated processing of interconnection requests;⁸⁰⁵ (2) Clean Energy

Associations' argument that the Commission should adopt a cost threshold beyond which upgrades should be evaluated in the next near-term transmission planning process;⁸⁰⁶ and (3) Clean Energy Associations' argument that the Commission should provide concrete direction regarding how differing service types should be studied, and what outcome an interconnection customer should receive for making the necessary transmission system improvements to obtain that interconnection service.⁸⁰⁷

402. Regarding Affected Interconnection Customers' arguments discussing the use of independent studies, we note that interconnection customers can use independent resources during the interconnection process. However, the results of independent studies will not be binding on transmission providers, as the use of studies conducted by an interconnection customer cannot ensure that the cluster study process results in a just, reasonable, and not unduly discriminatory or preferential outcome for all interconnection customers in the cluster. In addition, transmission providers must be able to conduct the necessary studies to maintain the reliability of their transmission system.

403. We will not require transmission providers to provide additional cost information to interconnection customers that is not already required to be provided pursuant to the *pro forma* LGIP, as modified by this final rule. For example, revised *pro forma* LGIP sections 3.4.5 (Customer Engagement Window) and 8.1 (Interconnection Facilities Study Agreement) require the transmission provider to provide the interconnection customer with a good faith estimate of the costs of the cluster study and the interconnection facility study, respectively. Similarly, revised *pro forma* LGIP sections 7.3 (Scope of Cluster Study) and 8.2 (Scope of Interconnection Facilities Study) require the transmission provider to provide cost estimates for interconnection facilities and network upgrades. It is unclear what other "interim cost information" ⁸⁰⁸ Clean Energy Associations want transmission providers to provide, nor the value of

explore the causes of interconnection study delays and the potential to accelerate the interconnection queue process through enhanced automation. As discussed above, we have adequate record of the causes of interconnection study delays to fashion a remedy with the combination of reforms we adopt in this final rule.

⁸⁰⁶ Clean Energy Associations Initial Comments at 29.

⁸⁰⁷ *Id.*

⁸⁰⁸ *Id.* at 20.

such information vis-à-vis the burden on transmission providers to develop it.

404. Clean Energy Associations argue that as part of the cluster studies provided to interconnection customers prior to receiving facilities studies, the Commission should require transmission providers to provide interconnection customers with cost estimates for the upgrades required if they were to request ERIS or NRIS. Section 3.2 of the *pro forma* LGIP provides that an interconnection customer requesting NRIS may also request that it be concurrently studied for ERIS, up to the point when the facility study agreement is executed. As the *pro forma* LGIP already provides interconnection customers the ability to have both ERIS and NRIS studied concurrently, we find Clean Energy Associations' request moot.

3. Allocation of Cluster Study Costs

a. NOPR Proposal

405. In the NOPR, the Commission proposed to require transmission providers to allocate the shared costs of cluster studies as follows: 90% of the applicable study costs allocated pro rata to interconnection customers based on requested MWs included in the applicable cluster, and 10% of the applicable study costs allocated per capita to interconnection customers based on the number of interconnection requests included in the applicable cluster.⁸⁰⁹ The Commission preliminarily found that this allocation of the costs of cluster studies would result in just and reasonable Commission-jurisdictional rates because it appropriately recognizes that the MW size of a cluster has a dramatic impact on the cost of studying the cluster, while also recognizing that the number of interconnection requests included in the cluster also impacts the cost of studying the cluster, but to a lesser degree. The Commission sought comment on whether a different cost allocation approach may be appropriate or whether each transmission provider should be provided additional flexibility to propose a cost allocation approach on compliance with any final rule.⁸¹⁰

b. Comments

i. Comments in Support

406. Multiple commenters support the proposal.⁸¹¹ Clean Energy Buyers note

⁸⁰² AEE Initial Comments at 12.

⁸⁰³ Affected Interconnection Customers Initial Comments at 21.

⁸⁰⁴ Clean Energy Associations Initial Comments at 29.

⁸⁰⁵ NextEra Initial Comments at 14. We also decline to convene a technical conference to

that certainty and consistency in cost allocation for interconnection studies will be helpful for interconnection customers that site generating facilities in more than one region.⁸¹² Idaho Power adds that a uniform cost allocation would prevent interconnection customers from “shopping around” for the best price for larger generating facility locations.⁸¹³ Duke Southeast Utilities note that Duke Carolinas Utilities’ currently effective LGIP/LGIA contains the same 90/10 cost allocation, which it states provides a balanced and equitable study cost allocation based on the Commission’s cost causation principle.⁸¹⁴ Duke Southeast Utilities assert that the proposed allocation aligns with study deposits that would be submitted based on varying assumptions around the number and size of interconnection requests submitted into the cluster study process.

ii. Comments in Opposition

407. Several commenters oppose the proposal. For instance, National Grid and NRECA argue that any predetermined study cost allocation method will produce results that do not comport with cost causation.⁸¹⁵ National Grid gives the example of a 20 MW generating facility that has unique or complex engineering features at a particular point of interconnection that may require considerably more time to conduct a study than a much larger 100 MW generating facility; in this situation, according to National Grid, the 90/10 cost allocation methodology proposed in the NOPR would not align with cost causation, a problem that would be exacerbated if the interconnection customer withdraws the interconnection request.⁸¹⁶ National Grid asserts that a predetermined cost allocation risks undermining competitive pressures in the interconnection process, which it states should be retained to the maximum extent possible consistent with revisions to mitigate the existing interconnection queue inefficiencies. Similarly, Xcel and NextEra argue that the size of the interconnection request does not impact the study costs by a 9:1 ratio compared to the number of interconnection requests, noting that the

size of the interconnection request does not materially impact the time to add the generating facility to the model or time to design the interconnecting substation.⁸¹⁷ NRECA adds that the Commission has not produced data showing the fixed costs of processing an interconnection request or a precise linear correlation between generating facility size and study costs.⁸¹⁸ rPlus argues that the proposed 90/10 cost allocation is “unduly discriminatory toward pumped storage, and wholly disincentivizes large capacity projects.”⁸¹⁹ rPlus argues that the assertion that the MW size of a cluster study is significantly more impactful on the cost and effort required to perform the study is incorrect. rPlus states that the number of interconnection requests and the cluster size are both burdensome for the study process, as each generating facility requires its own project management, technical review, study implementation, and deliverability assessment.⁸²⁰ SDG&E and SoCal Edison agree that a 90/10 cost allocation would inappropriately burden larger generating facilities with higher study costs, as the level of effort to study an interconnection request is driven more by complexity around the point of interconnection and is not strongly correlated to the size of the generating facility.⁸²¹

iii. Alternatives and Requests for Flexibility

408. Several commenters put forth alternatives to the NOPR proposal. For instance, some commenters generally contend that transmission providers should allocate study costs based on the proposed generating facility’s impact on the overall study, measured by the time and resources expended on a particular generating facility within the study.⁸²² National Grid asserts that this process would be consistent with the current serial study approach, which directly correlates cost responsibility to cost causation.⁸²³ AES argues that the final rule’s cost allocation framework should reflect the reality that study costs are not only a function of generating facility size, but also the location of the

generating facility and the degree to which that location is constrained.⁸²⁴

409. Several commenters argue that the Commission should allocate cluster study costs based solely on the number of interconnection requests in the cluster.⁸²⁵ Ameren and SDG&E state that, in their experience, study costs are not based on the size of the proposed generating facilities.⁸²⁶ In contrast, Fervo Energy argues against allocating study costs evenly to all interconnection customers within a cluster, asserting that it is “not at all clear” how this proposal is just and reasonable, as it strays away from allocating costs on a pro rata basis based on requested MWs.⁸²⁷

410. CAISO argues that the proposal appears arbitrary and capricious because the Commission does not adequately explain the basis for the 90% to 10% ratio.⁸²⁸ CAISO asserts that the 10% allocation is so small as to be de minimis, yet it still increases the administrative burden to allocate the cluster study costs. CAISO argues that it would be much simpler and easier if transmission providers simply allocated all cluster study costs based on the MW capacity alone.

411. Enel argues that there are study phases where it would be more appropriate to assign study costs to individual interconnection requests, “such as the [f]acilities [s]tudy for upgrades assigned to only a single customer.”⁸²⁹ Enel argues that a 90/10 study cost split may disproportionately exclude very small generating facilities which still require modeling from study cost responsibility, and suggests that a minimum MW size be assumed, such as was used to set the minimum study deposit in proposed *pro forma* LGIP section 3.1.1.1.

412. Several commenters argue for a cost allocation of 50% of the study costs based on requested MW and 50% based on the number of interconnection requests in the cluster.⁸³⁰ NextEra states that, based on its experience, it takes comparable time and effort to study a small proposed generating facility as a large one.⁸³¹ NextEra and SoCal Edison argue that allocating study costs based

mostly on the MW size would likely cause some cross-subsidies from interconnection customers submitting large proposed generating facilities to those submitting smaller ones.⁸³² SEIA notes that the MW size of the cluster may be artificially inflated when certain interconnection customers submit multiple exploratory requests, and recommends a 50/50 cost allocation to deter such requests.⁸³³ SEIA argues that, similar to CAISO's study cost allocation, the Commission should structure the cost allocation so that interconnection customers with multiple interconnection requests are responsible for a greater share of the study costs.⁸³⁴

413. Clean Energy Associations add that cluster studies should be conducted in subgroups based on electrical relevance, and that study costs related to each subgroup should be tracked independently and allocated only among those interconnection customers within that subgroup.⁸³⁵

414. Multiple commenters argue that the Commission should not impose a specific cluster study cost allocation, but instead allow transmission providers flexibility in proposing their own cost allocation methods.⁸³⁶ For example, APPA-LPPC argue that the use of a "one-size-fits-all" approach may result in unreasonable results in certain circumstances.⁸³⁷ APPA-LPPC assert that weighting the allocation of cluster study costs based on MWs may unfairly burden interconnection customers proposing large generating facilities in regions where a cluster is likely to include a large number of relatively small proposed generating facilities and a small number of large proposed generating facilities because study costs do not necessarily track linearly with generating facility size.

415. Several commenters argue that RTOs/ISOs should be able to retain their existing cluster study cost allocations,

where applicable, because those cost allocations accomplish the purpose of the Commission's proposal to equitably allocate study costs among interconnection customers.⁸³⁸

c. Commission Determination

416. We adopt the NOPR proposal, with modification, to revise section 13.3 (Obligation for Study Costs) of the *pro forma* LGIP to allow each transmission provider to propose its own study cost allocation ratio for allocating the shared costs of cluster studies between a per capita basis and pro rata by MW, provided that: between 10% and 50% of study costs must be allocated on a per capita basis, with the remainder (between 90% and 50%) allocated pro rata by MW. Under this revised provision, a transmission provider may propose to retain its existing study cost allocation ratio if it falls within this range and meets the requirements of this final rule.

417. We are persuaded by comments arguing that it is appropriate to allow transmission providers a degree of flexibility in proposing on compliance the method for allocating study costs in their tariff to adapt to their specific regional circumstances and help avoid unreasonable outcomes. Some commenters assert that the NOPR-proposed 90%–10% allocation could in some instances unduly burden larger generating facilities, such as when a cluster includes a large number of interconnection requests representing relatively small generating facilities and a small number of large generating facilities.⁸³⁹ Conversely, other commenters caution that straying too far from the NOPR proposal for a 90%–10% allocation could disproportionately burden smaller generating facilities, given the role that size may play in determining study costs.⁸⁴⁰ Accordingly, we believe that granting transmission providers the flexibility to propose in their tariff the study cost allocation appropriate to their region, within the limits detailed above, strikes a better balance than the NOPR proposal.

418. The revised study cost allocation requirements that we adopt in this final

rule recognize that cluster study costs are impacted by both the number of interconnection requests in a cluster and the size of the proposed generating facilities in each cluster. We find that requiring transmission providers to allocate between 10% and 50% of cluster study costs on a per capita basis is just and reasonable because it ensures that interconnection customers that propose smaller generating facilities or submit multiple interconnection requests to explore different interconnection scenarios for a single proposed generator adequately contribute to study costs, particularly given that some study costs are incurred independent of the MW size of a specific proposed generating facility in a cluster.⁸⁴¹ Further, we agree with commenters that observe that not all study costs track linearly with generating facility size because there are other factors, such as the point of interconnection selected, that can lead to increasingly complex studies and correspondingly higher study costs.⁸⁴² We believe that the per capita component of the study cost allocation requirements addresses this fact. Requiring a per capita component also ensures that an interconnection customer that proposes a large generating facility in a cluster of many smaller generating facilities will not bear a disproportionate amount of the study costs. We likewise find that requiring transmission providers to allocate between 50% and 90% of study costs on a pro rata by MW basis prevents a disproportionate amount of study costs from being allocated to interconnection customers that propose smaller generating facilities in the cluster. The pro rata by MW component reflects the fact that, to a significant extent, study costs correlate to the total MW size of the cluster. In general, even if the number of interconnection requests in each cluster remains constant, we expect that a cluster of 10,000 MW will be significantly more costly to study than a cluster of 100 MW.⁸⁴³ Accordingly, requiring that a substantial share of study costs is allocated based on each generating facility's contribution to the total MW size of the cluster study ensures consistency with cost causation principles.

419. We disagree with CAISO that the Commission should require the

allocation of all cluster study costs based on the MW capacity because allocating 10% of study costs on a per capita basis is *de minimis* and not worth the administrative burden. First, this final rule now allows transmission providers to allocate up to 50% of costs on a per capita basis. Even if a transmission provider chooses to allocate only 10% of study costs on a per capita basis, as explained above, we believe that this is an important component that is needed to ensure that study costs are allocated in a manner that is at least roughly commensurate with estimated benefits (*i.e.*, consistent with cost causation). We are unpersuaded that the administrative burden associated with allocating a potentially small fraction of the study costs among interconnection customers in a cluster outweighs the benefits, particularly given that nothing in the record demonstrates that those administrative costs are significant.

420. In response to commenters' arguments in favor of a uniform study cost allocation method across regions, we find that the benefits of allowing transmission providers flexibility to tailor their study cost allocation to the specific circumstances of their region outweigh the benefits of uniformity cited by commenters, such as consistency and preventing "shopping around." We believe that the guardrails that we provide in this final rule will ensure just, reasonable, and not unduly discriminatory or preferential rates while at the same time addressing concerns with the different characteristics of regions. We urge stakeholders to engage with transmission providers as part of the compliance process as the transmission providers develop their proposed study cost allocations.

421. In response to National Grid, AES, and Clean Energy Associations' comments arguing that costs should be allocated based on individual calculations of the actual time and resources expended on a particular interconnection request, we find that such individual calculations would not only increase the administrative burden on transmission providers, but also would offer little benefit given the cluster study context, which requires transmission providers to evaluate multiple interconnection requests simultaneously.⁸⁴⁴ We are also unconvinced that a transmission provider could accurately perform such calculations because, as explained

above, some study costs are unrelated to an individual interconnection request and are instead incurred as a matter of course as part of studying a cluster of interconnection requests.

4. Allocation of Cluster Network Upgrade Costs

a. NOPR Proposal

422. In the NOPR, the Commission proposed to require transmission providers to allocate network upgrade costs to interconnection customers within a cluster using a proportional impact method.⁸⁴⁵ The Commission also proposed to add the defined term proportional impact method to the *pro forma* LGIP and require transmission providers to revise their LGIPs to include the specific technical parameters and thresholds of their method for cost allocation. The Commission also proposed to require transmission providers to allocate the costs of transmission provider's interconnection facilities equally among all interconnection customers sharing use of the transmission provider's interconnection facilities. The Commission sought comment on: (1) whether there are specific types of analyses that the Commission should require transmission providers to use to determine the proportional impact attributed to an interconnection request, including the benefits and drawbacks of any proposed approach; (2) whether there are specific types of analyses that the Commission should prohibit because they are known to be inaccurate, provide undue discretion to the transmission provider, or could otherwise be problematic; (3) whether alternative methods to allocate the costs of network upgrades within a cluster, such as the proportional capacity method, can be sufficiently accurate in certain instances, in a manner consistent with or superior to the proposed method; and (4) whether there are some circumstances where the proportional capacity method would not be appropriate, such as circumstances where there may be potential for discriminatory treatment.⁸⁴⁶

b. Comments

i. General Comments

423. Several commenters support the proposal.⁸⁴⁷ These commenters state

⁸⁴⁵ NOPR, 179 FERC ¶ 61,194 at P 88.

⁸⁴⁶ *Id.* P 89.

⁸⁴⁷ ACORE Initial Comments at 8; Ameren Initial Comments at 12; Avangrid Initial Comments at 31; Cypress Creek Initial Comments at 19; Eversource Initial Comments at 15; Fervo Energy Initial Comments at 3; Interwest Initial Comments at 16–17; Invenery Initial Comments at 21; NEPOOL

that the proposed proportional impact cost allocation method is widely used, both by RTOs/ISOs and non-RTO/ISO transmission providers,⁸⁴⁸ and ensures that each interconnection customer contributes to the cost of network upgrades in proportion to its impact on the transmission system.⁸⁴⁹ These commenters assert that other options (such as a proportional capacity or a pro rata allocation per interconnection request) would be more likely to shift a disproportionate share of network upgrade costs to smaller generating facilities, which may have less impact on the transmission system.⁸⁵⁰ Bonneville and Interwest argue that the proportional impact method could also reduce the incentive for interconnection customers to submit multiple speculative requests and reduce the amount of cascading withdrawals and restudies.⁸⁵¹ ELCON contends that, should any one proposed generating facility in the cluster have an outsized impact on the transmission system compared to other proposed generating facilities in the cluster, those other proposed generating facilities should be protected from exorbitant network upgrade costs to accommodate a proposed generating facility that may not be suitably located.⁸⁵² CAISO adds

that it has used distribution factor analysis without controversy.⁸⁵³

424. NRECA states that it interprets this proposal to implement—and not modify, weaken, or permit deviations from—the Commission’s established policy that transmission costs, including network upgrade costs, must be allocated in a manner at least reasonably commensurate with estimated benefits.⁸⁵⁴ NRECA states that, based on that interpretation of the NOPR’s proposal, NRECA believes this method is fair to both interconnection customers and transmission providers and helps ensure that the costs to implement an interconnection request are allocated reasonably commensurate with cost causation and expected benefits. NRECA states that the proportional impact method is also reasonably transparent and relatively easy for transmission providers to implement, explain, and defend.

425. In response to the Commission’s request for comment on whether there are circumstances in which the proportional capacity method would be appropriate, some commenters argue that the proportional capacity method is never appropriate and should be expressly prohibited for clusters.⁸⁵⁵ MISO argues that network upgrade cost allocation methods that only consider installed capacity without considering the network topology do not consider the full picture of what an interconnection customer’s responsibility for the network upgrade costs should be.⁸⁵⁶ Pennsylvania Commission asserts that large generating facilities would continue to bear high network upgrade costs and would have an incentive to interconnect wisely, while small generating facilities, which are becoming the norm in interconnection queues, would not.⁸⁵⁷ Pennsylvania Commission contends that this would create a subsidy whereby large generating facilities pay a share of unnecessary network upgrade costs caused by poor siting of smaller generating facilities.⁸⁵⁸ Longroad Energy illustrates this point by noting that one of its generating facilities was recently allocated nearly \$10 million under the proportional capacity method based solely on the generating facility’s size, despite the fact that relevant

interconnection studies firmly established that its generating facility, while large, actually reduced the identified overload.⁸⁵⁹

426. NV Energy urges the Commission to reconsider the application of pro rata allocation of network upgrade costs over using the proportional impact method.⁸⁶⁰ NV Energy contends that the proportional impact method could negatively impact interconnection customers due to the time and risk of reallocations required by restudies.⁸⁶¹ NV Energy argues that assigned network upgrade costs could change dramatically if a cluster participant withdraws from the interconnection queue and requires a restudy, potentially resulting in each participant’s cost allocation changing.⁸⁶² NV Energy asserts that in addition to disintegrating cost reassurance for the interconnection customer, performing studies using the proportional impact method defeats the purpose of completing cluster studies where each interconnection customer in the cluster has the same interconnection queue position and that this method will require the transmission provider to review each interconnection request within the cluster individually to assign the proportional impact.

427. NV Energy contends that using the proportional impact method to allocate the costs of network upgrades resulting from cluster studies will be burdensome in application because of the volume of interconnection requests being studied and the large number of network upgrades identified in each study.⁸⁶³ NV Energy states that, under a proportional capacity method, when an interconnection customer withdraws and the same network upgrades are deemed necessary, the transmission provider could simply reallocate a pro rata share to the remaining interconnection customers and expedite the study; however, in the case of the proportional impact method, the transmission provider would need to complete a full restudy to review each generating facility’s impact on the system.

428. According to NV Energy, this issue is further exacerbated when a network upgrade becomes a shared network upgrade with another cluster and the proportional impact is expanded to include additional interconnection customers.⁸⁶⁴ NV

Energy states that, not only would the restudy be required for the lower-queued cluster based on the withdrawal, but also the concurrently queued cluster to modify the network upgrade cost allocation. NV Energy also argues that, without a consistent proportional impact cost allocation amongst transmission providers, there is risk that this could lead to disputes at the Commission from interconnection customers, which would lead to increased costs and delays.

429. PacifiCorp strongly opposes the proportional impact method to allocate network upgrade costs.⁸⁶⁵ PacifiCorp argues that the Commission has not made a transmission provider-specific finding that the proportional capacity method, approved for PacifiCorp by the Commission in May 2020,⁸⁶⁶ is no longer just and reasonable. PacifiCorp contends that transmission providers should be permitted to use proportional capacity-based network upgrade cost allocation methods.⁸⁶⁷ PacifiCorp claims that the proportional capacity method it uses is informed by three additional mechanisms within the cluster study process, all of which work in tandem to ensure that costs are appropriately allocated: (1) the use of electrically or geographically relevant subregions; (2) iterative studies that consider ERI network upgrades prior to NRIS requests; and (3) a floor of 1% of total MW within a cluster, under which interconnection requests will be deemed not to contribute to the network upgrades identified in the cluster study.⁸⁶⁸

430. PacifiCorp states that the proportional capacity method also assists it in completing cluster studies and restudies on a timely basis, and minimizes disputes.⁸⁶⁹ PacifiCorp argues that, in sharp contrast, the proportional impact method involves a complex analysis that, in addition to being excessively time consuming, will result in disputes, both of which will put substantial pressure on PacifiCorp’s ability to meet study deadlines.⁸⁷⁰ Therefore, according to PacifiCorp, requiring use of the proportional impact method will be counterproductive to the Commission’s intent of making processing of interconnection requests more efficient.

431. PacifiCorp explains that the degree of contribution to a needed network upgrade can be very difficult to

determine depending on the size, number of interconnection requests, and location of proposed generating facilities in a cluster.⁸⁷¹ PacifiCorp adds that a proportional impact method analysis is complicated further by the fact that all interconnection requests within a single cluster are considered equally queued. In addition, PacifiCorp argues that, given the size of its multi-state system and the thousands of MWs of interconnection requests entering the cluster study process each year,⁸⁷² it is simply not possible to both perform a proportional impact method analysis on each interconnection request and complete the cluster study process within 150 calendar days.⁸⁷³

ii. Comments on Specific Proposal

(a) Specificity Regarding Technical Parameters and Thresholds

432. Several commenters state that, if the Commission adopts its proposal for each transmission provider to revise its tariff to include its specific technical parameters and thresholds for the proportional impact method for network upgrade cost allocation, the Commission should at least consider guidance or principles for those technical parameters and thresholds.⁸⁷⁴ The same commenters ask that the Commission also require sufficient specificity to provide transparency and certainty for potential interconnection customers and to avoid disputes over cost allocation.

433. EPSA and Vistra argue that the Commission should provide an opportunity for comments prior to moving to a final rule with more detailed parameters.⁸⁷⁵ Vistra contends that without such an opportunity, the Commission will have not provided sufficient notice.⁸⁷⁶ Vistra argues that adopting a final rule that contains only the very high-level requirement to allocate costs based on proportional impact method simply defers the Commission's determination on important implementation details to litigation over the individual compliance filings that will be submitted. Without sufficient detail, Vistra continues, the Commission will arguably need to accept any set of

technical details as in compliance with the requirement to allocate network upgrade costs based on proportional impact.

434. PPL states that the NOPR did not address the allocation of network upgrade costs within a cluster after an interconnection customer withdraws.⁸⁷⁷ PPL states that, prior to the execution of an interconnection agreement by the interconnection customer(s), the Commission should provide that any interconnection facility and network upgrade costs previously allocated to the withdrawing interconnection customer be reallocated among the remaining interconnection customers in the cluster to prevent delays and allow the study process to proceed. PPL states that the Commission should allow for withdrawal to be treated as an event that allows the transmission provider to retain or call on the security provided by the withdrawing interconnection customer. PPL adds that the Commission should allow for an increase in the cost allocated to remaining interconnection customers in a cluster to account for the amount previously allocated to the withdrawing interconnection customer.

(b) Tariff Requirement for Technical Details

435. PJM states that, while it generally supports the requirement to describe the cost allocation method in the applicable tariff, the Commission should clarify that transmission providers may provide the detailed and specific technical information in business practice manuals rather than in tariffs.⁸⁷⁸ PJM states that these types of implementation details change from time to time and, consistent with Commission precedent, are appropriately addressed in the transmission provider's manuals. PJM asserts that mandating that these procedures be placed in the transmission provider's tariff, on the other hand, would require a transmission provider to submit an FPA section 205 filing every time the implementation details changed, which would be inefficient and burdensome.

436. In contrast, other commenters argue that these thresholds, and any associated procedures, should be codified in transmission providers' tariffs.⁸⁷⁹ AES explains that the thresholds used as part of the proportional impact method are important planning criteria, and

constitute "practices that affect rates and services significantly, that are realistically susceptible of specification and that are not so generally understood as to render recitation superfluous;" accordingly, AES continues, they should be included in transmission providers' filed rates, and subject to review and approval by the Commission pursuant to section 205 of the FPA.⁸⁸⁰ Union of Concerned Scientists contends that the combination of issues that are expressed through network upgrade decisions and cost allocations for interconnection customers are arguably central to this rulemaking and the fulfillment of the competition amongst interconnection customers as a regulatory approach to setting wholesale energy prices and must be subject to notice and review, both initially and for any subsequent changes, through filings with the Commission.⁸⁸¹

437. Xcel states that the Commission should make clear that there are several just and reasonable approaches to allocating network upgrade costs to interconnection customers within a cluster.⁸⁸² For example, states Xcel, if two generating facilities are connecting to a new a transmission line, a substation must be constructed. Xcel explains that, using some analysis, a larger generating facility might be considered to have a larger impact, but the respective size of the interconnection request did not have any impact on the cost or size of the substation needed. Xcel states that, for example, the cost of the substation is not different for a 100 MW and 500 MW generating facility or for two 300 MW generating facilities if they are interconnecting at the same voltage, and as a result, the cost of that substation should be allocated equally to both generating facilities. Xcel states that there could be a third generating facility (not directly connected to the substation) from which the power flows through the new substation, but it is not clear if the Commission is proposing that the interconnection customer proposing that third generating facility pays for a portion of the substation costs because its flows "impact" the substation. Xcel states that it does not generally support allocating network upgrade costs to interconnection customers simply because their proposed generating facilities have a flow impact if they are not causing the

⁸⁷¹ *Id.* at 25.

⁸⁷² PacifiCorp states that during the most recent cluster study, which commenced in May 2022, PacifiCorp received around 40 GW-worth of interconnection requests, which is more than three times PacifiCorp's peak system load.

⁸⁸¹ Union of Concerned Scientists Reply Comments at 20–21.

⁸⁸² Xcel Initial Comments at 26.

need for the network upgrade under a “but for” evaluation.

438. Invenergy states that, in the occasional circumstance where a point of interconnection is shared among more than one interconnection request within a cluster, which could involve new equipment that does not vary based on proportional impact, the associated costs at the point of interconnection (e.g., the substation) could be allocated on a pro rata basis.⁸⁸³ PacifiCorp states that the proportional impact method would not be necessary to account for costs that are agnostic to interconnection customer impacts, such as the need to construct a new substation to connect to a new transmission line regardless of whether one or several generating facilities are interconnecting.⁸⁸⁴

439. Invenergy states that the NOPR could be read to permit each transmission provider to adopt different and possibly inconsistent analyses and that the Commission should be clear that it is requiring a proportional impact method for allocating network upgrade costs, just as the NOPR proposes to do with respect to shared network upgrades.⁸⁸⁵

440. Several commenters state that the final rule should require transmission providers to submit compliance filings that propose minimum distribution factor thresholds that will be used to evaluate NRIS and ERIS requests.⁸⁸⁶

(c) Requests for Flexibility

441. Some commenters support the proportional capacity method only for certain network upgrades or limited circumstances.

442. Tri-State states that it does not apply a proportional impact method to transient-stability-driven network upgrades, which cannot be measured using a proportional impact approach; rather, Tri-State uses a MW pro rata method approach when allocating the costs of transient-stability-driven network upgrades.⁸⁸⁷ Longroad Energy states that, to the extent the Commission allows a transmission provider to use some method other than a flow-based

proportional impact allocation for transient stability constraints, the transmission provider should be required to demonstrate that the alternative cost allocation method is based on sound engineering principles for the specific transient stability constraint observed in the studies.⁸⁸⁸

443. R Street states that allocating network upgrade costs based on proportional capacity is appropriate in situations where clusters are composed of similar types of generation.⁸⁸⁹ R Street asserts that the default should be that all thermal network upgrade cost allocations are based on proportional capacity. R Street states that this leaves open the possibility for transmission providers to allocate other types of network upgrade costs (voltage, transient stability, short circuit) using a different but predefined method.

444. Several commenters ask the Commission to provide flexibility for transmission providers to establish a cost allocation method for network upgrades, rather than mandating a prescriptive approach.⁸⁹⁰ PPL claims that such region-specific cost allocations are necessary to keep disputes from overwhelming the reform process the Commission anticipates.⁸⁹¹ New York State Department asserts that any strict or limiting requirement for a specific cost allocation method may undermine and replace existing processes that work well.⁸⁹² National Grid recommends that the Commission allow for consideration of the unique circumstances of a region, input from relevant stakeholders in the region, including the potential for regions to propose cost allocation methods that allow for broader allocation to load or transmission customers in addition to interconnection customers.⁸⁹³

445. Dominion points out that courts and the Commission have long recognized that there is not one single just and reasonable method for establishing cost allocation.⁸⁹⁴ Dominion states that rather, cost allocation proposals are reviewed to

determine whether they meet certain principles, chiefly that costs are allocated in a manner that is at least “roughly commensurate” with estimated benefits received.⁸⁹⁵ Accordingly, Dominion recommends that if the Commission imposes any requirements related to cost allocation, it simply retains a general definition of proportional impact method and is not overly prescriptive.⁸⁹⁶

iii. Requests for Clarification or Technical Conference

446. Pattern Energy generally supports the application of the proportional impact method, subject to clarification on which form of distribution factor analysis the Commission is contemplating.⁸⁹⁷ Pattern Energy states that there are two types of distribution factors used to determine the impact of given power injection flows over a monitored facility: (1) power transfer distribution factor, which is the percentage of power that will flow on a specific monitored facility and does not consider outage/contingent facilities; and (2) outage transfer distribution factor, which is the percentage of power that will flow on a specific facility that does consider outage/contingent facilities. Pattern Energy states that the difference between the two distribution factors (i.e., the consideration of the outage/contingent facility) is important because power transfer distribution factor is usually more relevant for evaluating “local impacts” (e.g., generating facilities that are connecting in very close electrical proximity to a given monitored element), compared to outage transfer distribution factor, which captures impacts that may be more geographically and electrically distant from a given monitored facility. Pattern Energy asserts that the Commission should require outage transfer distribution factor to be the required distribution factor utilized in the proportional impact method for identifying impacts to constrained facilities and resultant cost allocation for network upgrades. Pattern Energy argues that outage transfer distribution factor is a better measure of power flows on the bulk-power system, and, in turn, its use ensures that impacts to constrained facilities are properly mitigated by, and cost allocated to, the actual, full set of contributors and not just the nearby highest contributors.

447. Pine Gate contends that certain proposed enhancements to the NOPR

⁸⁸³ Invenergy Initial Comments at 21–22.

⁸⁸⁴ PacifiCorp Reply Comments at 2 (citing Xcel Initial Comments at 26 (describing how a proportional impact analysis is not necessary to allocate costs for a new station connecting to a transmission line, as “[t]he cost of the station is not different for a 100 MW and 500 MW generator or for two 300 MW generators if they are interconnecting at the same voltage”).

⁸⁹⁷ Pattern Energy Initial Comments at 11–12.

proposal would provide much needed certainty to interconnection customers and mitigate the systematic problem of interconnection queues being the primary mechanism by which needed transmission infrastructure is identified, developed, and constructed.⁸⁹⁸ Specifically, Pine Gate requests that the Commission make the following clarifications: (1) transmission providers are not permitted to allocate to interconnection customers network upgrade costs associated with preexisting operating conditions (such as overloads); (2) transmission providers are not permitted to allocate network upgrade costs to interconnection customers for loading that results from the simulation of conditions that do not reflect typical operating conditions; (3) transmission providers are required to use consistent, uniform thresholds to measure the impact on a specific transmission facility caused by an interconnection request and publish these thresholds, along with the corresponding scope of the resulting network upgrades; and (4) establish a 4% impact threshold for NRIS and a 20% impact threshold for ERIS, unless there is preexisting loading on the facility.⁸⁹⁹ Pine Gate further requests that the Commission provide transmission providers guidance on the scope of the network upgrade required to accommodate an interconnection request. Pine Gate states that, if a network upgrade benefits other types of customers, interconnection customers should receive transmission credits or other compensation if the additional transmission capacity created is used for market dispatch or by wholesale transmission customers.⁹⁰⁰ Pine Gate states that, if the Commission does not adopt Pine Gate's proposed enhancements as part of a final rule in this proceeding, then the Commission should establish a technical conference to explore these issues.

iv. Miscellaneous

448. Pennsylvania Commission states that limiting the scope of each cluster to those interconnection customers most likely to share the same network upgrades may reduce the need for the proportional impact network upgrade cost allocation method.⁹⁰¹ According to Pennsylvania Commission, instead of determining the degree to which interconnection requests cause specific network upgrades on the back end

through cost allocation, clustering by electrical relevance may accomplish the same goal, making sure that interconnection customers are sharing the costs of network upgrades that they cause and from which they benefit. Pennsylvania Commission contends that the Commission should examine whether limiting the scope of a cluster or cost allocation, or a combination of both, is the best method to share costs among interconnection customers causing the same network upgrades.

449. Several commenters state that the NOPR leaves unresolved the fundamental question of more equitably sharing network upgrade costs across all beneficiaries, including load.⁹⁰² They argue, for example, that policies requiring interconnection customers to pay for 100% of network upgrade costs when the benefits of those upgrades are distributed among other system users (*i.e.*, participant funding) causes interconnection customers to pay more than their appropriate share of the costs.⁹⁰³ In contrast, Ameren claims that it is appropriate for interconnection customers to bear responsibility for the cost of network upgrades required for their interconnection requests.⁹⁰⁴ Ameren argues that, to ensure the full costs of interconnection are identified and allocated, network upgrade costs associated with affected systems must also be included in cluster network upgrade cost allocation, and interconnection customers should be required to accept the assigned costs. Ohio Commission Consumer Advocate emphasizes that the Commission should not change the participant funding mechanisms in RTO/ISO markets,⁹⁰⁵ while PPL argues that the Commission should allow non-RTO/ISO transmission providers the option to propose allocating the costs of network upgrades to interconnection customers without credits as RTOs/ISOs do.⁹⁰⁶

450. New York State Department and Shell argue that the Commission should discontinue the historical practice of allowing interconnection customers essentially free use of headroom on

ratepayer-funded network facilities.⁹⁰⁷ New York State Department states that this occurs when transmission ratepayers fund upgrades to the transmission system that create headroom, from which interconnection customers later benefit without having to pay for access or use.⁹⁰⁸ In contrast, Invenergy asserts that the Commission needs to ensure that the transmission planning and interconnection models are consistent, so that interconnection customers are not required to pay for the cost of resolving overloads and other transmission system issues that exist without the proposed interconnection.⁹⁰⁹

451. AEE encourages the Commission to ensure that its proposal increases cost transparency and establishes a pathway for interconnection customers to access accurate information about their network upgrade costs in a timely manner.⁹¹⁰ For instance, AEE asks that the Commission also provide guidance regarding which party must pay if network upgrade costs significantly exceed estimates. AEE states that one approach to minimizing the construction time and cost of network upgrades, and consequently the interconnection process as a whole, is to provide a third-party construction option in the *pro forma* LGIA that would allow the interconnection customer to elect for stand alone network upgrades to be bid out and potentially built by third parties.⁹¹¹

452. Pine Gate recommends that the Commission require transmission providers to analyze more holistically the other underlying needs driving identified network upgrades to the transmission system.⁹¹² Pine Gate states that the Commission should require transmission providers to only allocate to interconnection customers the costs associated with accelerating the construction of the upgrade to accommodate the interconnection customer's anticipated commercial operation date.⁹¹³

c. Commission Determination

453. We adopt the NOPR proposal, with modifications, to add new proposed section 4.2.3, now section 4.2.1, to the *pro forma* LGIP to require transmission providers to allocate

network upgrade costs based on a proportional impact method.⁹¹⁴ Based on the record, we modify the NOPR proposal and add definitions for substation network upgrades and system network upgrades in the *pro forma* LGIP and *pro forma* LGIA. In addition, we modify the definitions of proportional impact method and stand alone network upgrades proposed in the NOPR. We also modify proposed section 4.2.1 of the *pro forma* LGIP to require transmission providers to allocate the costs of network upgrades located at substations equally among each generating facility interconnecting to the same substation (*i.e.*, on a per capita basis), and to revise the information that a transmission provider's tariff must include regarding the proportional impact method.

454. We also modify the requirement in proposed section 4.2.1 of the *pro forma* LGIP for transmission providers to directly assign the cost of shared transmission provider's interconnection facilities to interconnection customers on a per capita basis (*i.e.*, on a per generating facility basis). Specifically, we modify proposed section 4.2.1 of the *pro forma* LGIP to make the new provisions applicable to the interconnection customer's interconnection facilities as well as to the transmission provider's interconnection facilities. We also modify this section to provide that interconnection customers may agree to share interconnection facilities, and that the per capita allocation will apply only where interconnection customers agree to share interconnection facilities. We also modify this section to allow the interconnection customers that share interconnection facilities to choose a different cost sharing arrangement upon mutual agreement.

455. We find that adopting the modified NOPR proposal will ensure just and reasonable rates as transmission providers transition to the cluster study process required by this final rule. We find that the cost allocation method adopted herein will allow transmission providers to allocate network upgrade costs among several interconnection customers that may benefit from (and cause the need for) certain network upgrades. We also find that allocating shared network upgrade costs among a cluster of interconnection customers will reduce the frequency of an individual interconnection customer

being allocated the costs of a large network upgrade that benefits subsequent interconnection customers; reduce the incentive of interconnection customers to submit multiple speculative interconnection requests to avoid shouldering the cost of large network upgrades that may be triggered by a single interconnection customer in the existing serial study process; and reduce the number of cascading withdrawals and restudies, thereby improving the efficiency of the interconnection process and reducing interconnection queue processing delays.

456. We conclude that a proportional impact method appropriately reflects the Commission's interconnection pricing policy for facilities designated as network upgrades needed for the interconnection of the cluster. However, we are persuaded to adopt a different cost allocation method for substations at the point of interconnection that are designated as network upgrades and needed only to facilitate the interconnection of certain generating facilities within the cluster seeking interconnection to the specific substation, as demonstrated by commenters.⁹¹⁵

457. In Order No. 2003, the Commission reasoned that "it is appropriate for the Interconnection Customer to pay the initial full cost for Interconnection Facilities and Network Upgrades that would not be needed but for the interconnection" (*i.e.*, "but for" policy).⁹¹⁶ Hence, under the serial study process in the existing *pro forma* LGIP, the transmission provider allocates network upgrade costs by assigning the initial full cost responsibility for all network upgrades identified in a study to a single interconnection customer that causes those upgrades. However, in transitioning to a cluster study process in this final rule, the Commission must establish a method for allocating network upgrade costs among all interconnection customers within a cluster. Based on the record in this proceeding, we find that a proportional impact method is the appropriate application of the Commission's interconnection pricing policy when allocating the costs of network upgrades needed for an entire cluster of proposed generating facilities because a proportional impact method allows transmission providers to assess a

generating facility's individual contribution to the need for the network upgrades identified for the cluster. However, the need for substation network upgrades is only generated by a specific generating facility seeking interconnection at a specific substation and not by all the generating facilities in the cluster. It would be inconsistent with the Commission's interconnection pricing policy to allocate the costs of the substation network upgrades to interconnection customers in the cluster that are interconnecting at other substations because, in the case of a cluster of new interconnection requests, only the generating facilities interconnecting to the same substation generate the need for network upgrades at that substation.

458. As explained above, the cost of substation network upgrades must be initially allocated only to those interconnection customers seeking to interconnect at the same substation,⁹¹⁷ while the cost of system network upgrades for all interconnection customers in a cluster must be initially allocated based on the technical analyses to be specified under the transmission provider's proportional impact method. To facilitate these differing cost allocation methods, we modify the definitions in section 1 of the *pro forma* LGIP and article 1 of the *pro forma* LGIA to distinguish substation network upgrades (including all switching stations)⁹¹⁸ from system network upgrades.⁹¹⁹ Using these definitions, we further modify the *pro forma* LGIP and *pro forma* LGIA to draw this distinction and to ensure that the costs for the two types of network upgrades are allocated consistent with the Commission's interconnection pricing policy, which establishes the principles for allocating the costs of network upgrades.

459. We note that we are not modifying the *pro forma* LGIP's definition of facilities needed beyond the point of interconnection as network upgrades; rather, we are providing greater specificity with regard to how the costs of the two distinct types of network upgrades identified within a

⁹¹⁷ For clarity, we note that we are referring to the transmission provider's substation immediately beyond the point of interconnection as defined in section 1 of the *pro forma* LGIP: "Point of Interconnection shall mean the point . . . where the interconnection facilities connect to the transmission provider's transmission system." *Pro forma* LGIP section 1 (Definitions).

⁹¹⁸ Substation network upgrades shall mean the network upgrades required at the substation located at the point of interconnection.

⁹¹⁹ System network upgrades shall mean the network upgrades required beyond the substation located at the point of interconnection.

⁹¹⁴ "Proportional Impact Method shall mean a technical analysis conducted by Transmission Provider to determine the degree to which each Generating Facility in the Cluster Study contributes to the need for a specific System Network Upgrade." *Pro forma* LGIP section 1.

⁹¹⁵ Xcel Initial Comments at 26; Invenenergy Initial Comments at 21–22.

⁹¹⁶ See *id.* P 694; *Nev. Power Co.*, 182 FERC ¶ 61,048, at PP 50–51 (2023) (describing the cost allocation requirements for network upgrades as the Commission's Order No. 2003 "but for requirements").

cluster study should be initially allocated. We find that this approach will also lead to greater transparency and ease of administering the cluster study process by establishing distinct guidelines for how the costs of the two types of network upgrades will be initially allocated within a cluster. Also, as commenters note, in instances where a point of interconnection is shared among more than one interconnection request within a cluster, the cost of the substation network upgrades is more directly impacted by the number of generating facilities proposing to interconnect there because the cost of the equipment used to interconnect generating facilities to substations does not vary based on the electrical characteristics of the interconnecting generating facilities (e.g., the MW size of the generating facility, fuel type, or services provided).

460. To further implement this modification of the NOPR proposal, we modify the definition of stand alone network upgrades proposed in the NOPR to recognize that (1) a substation network upgrade may only be considered a stand alone network upgrade if it is needed to interconnect only one generating facility in the cluster and no other interconnection customer in that cluster is required to interconnect to the same substation network upgrades, and (2) the proportional impact analysis will be used in determining whether a system network upgrade is only needed for one generating facility in the cluster and can be considered a stand alone network upgrade. Our revisions also seek to prevent lengthy disputes over which interconnection customer has the right to exercise the option to build in instances where a network upgrade could qualify under the existing definition of a stand alone network upgrade, but the network upgrade is needed for multiple interconnection customers' generating facilities.

461. Several commenters request that the Commission provide more specificity and guidance regarding the specific thresholds and metrics that transmission providers are expected to submit on compliance.⁹²⁰ In this final rule, we modify the proposed requirement in *pro forma* LGIP section 4.2.1 for transmission providers to revise their LGIPs on compliance to include specific thresholds and metrics. Instead, we direct transmission providers on compliance to provide

tariff provisions that describe, for each type of system network upgrade that a transmission provider would identify in the cluster study process (e.g., voltage support network upgrades or short circuit network upgrades), how the costs of each system network upgrade type will be allocated among the interconnection customers within the cluster. Transmission providers' revisions on compliance must provide that costs for a discrete network upgrade identified in the cluster study process (e.g., reconductoring a portion of a transmission line to accommodate the interconnection of several generating facilities in the cluster) are allocated to only the interconnection customers in the cluster that are shown through technical analyses to contribute to the need for the discrete network upgrade. For example, the transmission provider must propose tariff provisions similar to the following: (1) voltage support related network upgrades shall be allocated using a voltage impact analysis, which will identify each generating facility's contribution to the voltage violation; (2) short circuit network upgrade costs within a cluster will be allocated based on the impact from each generating facility within the cluster, on the constrained facilities under the most constraining fault in the relevant study case(s); or (3) the estimated costs of short circuit related general reliability network upgrades identified through a cluster study shall be assigned to all interconnection requests in that group study pro rata on the basis of the short circuit duty contribution of each generating facility.

462. PJM requests that the Commission clarify that transmission providers may provide the detailed and specific technical information in business practice manuals rather than in tariffs.⁹²¹ In response, we find that, as noted above, transmission providers must provide tariff provisions that describe the method they will use for allocating costs of each type of network upgrade, but specific metrics and thresholds for implementing the allocation, or other specific technical information, may be included in business practice manuals, or publicly posted on the transmission provider's website. We agree with PJM that such details are appropriate for business practice manuals, consistent with Commission precedent applying the "rule of reason" to determine whether a detail should be included in a tariff or business practice manual. In particular, the technical information surrounding implementation of the proportional

impact method by a particular transmission provider does not need to be included in the transmission provider's tariff under the rule of reason because these provisions are properly classified as implementation details that do not significantly affect rates, terms, and conditions of service.⁹²²

463. Several commenters request that the Commission direct transmission providers to use a specific type of proportional impact method or distribution factor analysis and apply minimum distribution factor thresholds that will be used to evaluate NRIS and ERIS requests.⁹²³ We are unpersuaded that such level of prescription is needed to ensure just, reasonable, and not unduly discriminatory or preferential rates. Instead, we believe that flexibility for transmission providers to develop such details as part of their compliance filings—and in their business practice manuals, where consistent with the rule of reason, as discussed above—is important to ensure that the proportional impact method used by each transmission provider reflects the characteristics of its region (e.g., types of network upgrade facilities identified in the region, or preferred analyses in the region for determining the share of the need for the specific network upgrade type). For the same reason, we decline to require transmission providers to use consistent, uniform thresholds to measure impact, as requested by Pine Gate.⁹²⁴

464. Based on the record, we decline to require transmission providers to use the proportional capacity method to allocate the costs of all system network upgrades, given our decision to instead opt for the proportional impact method and because it reflects the Commission's interconnection pricing policy for facilities designated as network upgrades needed for the interconnection of the cluster. Nonetheless, we recognize that there may be a tradeoff between simplicity and accuracy when considering proportional capacity versus proportional impact for cost allocation for network upgrades. While we require transmission providers to allocate network upgrade costs based on a proportional impact method based on the record in this final rule, we

acknowledge that other allocation methods could potentially meet the consistent with or superior to standard or the independent entity variation standard if, among other things, they allocate network upgrade costs in a manner consistent with the Commission's interconnection pricing policy.

465. We disagree with NV Energy and PacifiCorp's arguments that the proportional impact method carries unmanageable time, restudy, and reallocation risks.⁹²⁵ In response to concerns about restudy risk resulting from withdrawals, we note that the Commission's new cluster study process requires transmission providers to complete the process within 150 calendar days, which we believe is sufficiently long for transmission providers to be able to conduct the rounds of restudy and reallocation that are needed to achieve a stable interconnection queue and reduce the risk of further withdrawals before moving to the individual facilities studies. Further, the proportional impact method is currently used by most transmission providers that conduct cluster studies, and several of these transmission providers have adopted study timelines similar to what we adopt in this final rule.⁹²⁶

466. We disagree with claims from NV Energy and PacifiCorp that the proportional impact method must be conducted as if it were a serial study in that each interconnection request must be studied individually. When proposing a proportional impact method on compliance, transmission providers have many methods to choose from and should adopt a method that allows them to meet the timelines designated in the cluster study process. In response to PPL,⁹²⁷ we confirm that within the cluster study process, any network upgrade costs previously allocated to a withdrawing interconnection customer that are still required after the withdrawal may be reallocated among the remaining interconnection customers in the cluster based on the relevant cost allocation method applied to the network upgrade facility type.

467. Finally, several commenters suggest alternative reforms to the Commission's network upgrade cost allocation policies: (1) limit the use of

cluster areas as an alternative to the proposed cost allocation method within a cluster;⁹²⁸ (2) change the interconnection pricing policy or participant funding regime (as allowed in certain RTOs/ISOs) to limit participant funding and/or require assessment of whether transmission customers benefit from and should pay for network upgrades;⁹²⁹ (3) establish a process to eliminate the use of headroom on network transmission facilities;⁹³⁰ and/or (4) provide a third-party construction option.⁹³¹ We find these requests to be outside the scope of this proceeding and lacking in record support to adequately consider whether to adopt them in this final rule.

5. Shared Network Upgrades

a. NOPR Proposal

468. In the NOPR, the Commission preliminarily found that the absence of network upgrade cost sharing provisions in the *pro forma* LGIP may pose a barrier to entry to generation development.⁹³² The Commission stated that absent cost sharing provisions among clusters, interconnection customers may significantly benefit from earlier-in-time network upgrades but not share in the cost of those network upgrades in a manner that is roughly commensurate with benefits. The Commission therefore proposed to require transmission providers to allocate the costs of network upgrades between interconnection customers in an earlier cluster and interconnection customers in a subsequent cluster that benefit from the same network upgrade in a manner that is roughly commensurate with the benefits received.⁹³³ Specifically, the Commission proposed that when the transmission provider analyzes the network upgrades identified through its cluster study process, if a generating facility of an interconnection customer in a later cluster directly connects either to (1) a network upgrade in service for less than five years or (2) a substation where the network upgrade in service for less than five years terminates, then the transmission provider would be required to designate the network

upgrade a shared network upgrade. Upon such a designation, the interconnection customer in the later cluster would be required to contribute a pro rata portion of the shared network upgrade's remaining undepreciated capital cost based on the impact the interconnection customer in the later cluster has on the network upgrade, as measured using the same method the transmission provider used to determine the impact of the interconnection customer(s) in the earlier cluster.

469. The Commission proposed that if the new generating facility does not directly connect to the network upgrade, then the transmission provider would perform a power flow analysis with a two-step test to measure the lower-queued interconnection customer's use of and benefit from the network upgrade funded by interconnection customers from an earlier cluster. Under the first step, the transmission provider would determine if the impact of the interconnection customer in the later cluster exceeds five MW and exceeds one percent of the network upgrade's rating. Then, if those criteria are met, the transmission provider would determine if the lower-queued interconnection customer's impact either exceeds more than 5% of the network upgrade's facility rating or if the transmission distribution factor is greater than 20%. Finally, if either of these criteria were met, the transmission provider would be required to designate that network upgrade a shared network upgrade, and the interconnection customer in the later cluster would be responsible for a pro rata share of the network upgrade's remaining undepreciated capital cost based on the impact the interconnection customer in the later cluster has on the network upgrade, as measured using the same method the transmission provider used to determine the impact of the interconnection customer(s) from the earlier cluster.

470. The Commission proposed to require the interconnection customer in the later cluster to pay the transmission provider for the interconnection customer's share of the shared network upgrade costs through a one-time lump sum, which the transmission provider would disburse to the appropriate interconnection customer(s) from the earlier cluster.⁹³⁴ The Commission also proposed that, where applicable, the interconnection customer from the earlier cluster or the relevant transmission provider would be required to assign transmission credits for the portion of the shared network

upgrade that the interconnection customer in the later cluster funded to the interconnection customer in the later cluster. Additionally, the Commission proposed to require that the interconnection customer in the later cluster not be required to pay for its share of the cost of the shared network upgrade until that shared network upgrade is in service. The Commission also proposed to require transmission providers to provide the list of shared network upgrades to interconnection customers in subsequent clusters at the conclusion of the cluster study and to list those network upgrades in the appendix of the relevant interconnection customer's LGIA. The Commission acknowledged that there could be scenarios where the network upgrade may be identified as both a shared network upgrade and a contingent facility; and, thus a designation of a network upgrade as a contingent facility does not preclude it from also being a shared network upgrade if the network upgrade meets the aforementioned criteria and passes the screens.⁹³⁵

b. Comments

i. Comments in Support

471. Multiple commenters support the proposal.⁹³⁶ OMS states that, while cost sharing arrangements can be resource intensive and contentious, they can be crucial to facilitating an equitable interconnection process.⁹³⁷ NARUC states that the proposal is a logical extension of the cluster cost sharing concept and could spread costs over even more interconnection customers benefitting from network upgrades.⁹³⁸ A couple of commenters contend that the proposal will provide more certainty and result in fewer withdrawals, thus reducing associated restudies and study processing delays.⁹³⁹

472. Several commenters believe that the proposal will address the issue of “first movers/free riders” when interconnection customers in a later cluster study benefit from network

upgrades assigned to interconnection customers in earlier clusters.⁹⁴⁰ Shell claims that avoiding first mover subsidization of free riders is particularly important for offshore wind interconnections because of the potential lack of onshore access points and, therefore, argues that the Commission should be open to non-traditional cost allocation methods when contemplating methods to mitigate first mover risk.⁹⁴¹

473. Additionally, some commenters believe that the proposal is consistent with the Commission's cost causation policy.⁹⁴² Avangrid asserts that, when surplus transmission capacity created by a recent network upgrade is used by a later generating facility, the lower-queued interconnection customer should share the costs in a way that is commensurate with benefits like those allocated using the original proportional impact method assessment.⁹⁴³

474. Xcel does not believe the proposal will have a significant impact on the number of interconnection requests submitted but believes that it will reduce barriers to entry for all interconnection customers.⁹⁴⁴ Xcel believes that the proposal is appropriate where there is participant funding.

ii. Comments in Opposition

475. Some commenters oppose the proposal.⁹⁴⁵ Several commenters assert that it will not yield many benefits and that the Commission should focus on other reforms that are more likely to reduce network upgrade costs and improve the equity of allocating them among beneficiaries.⁹⁴⁶ Dominion and

Fervo Energy argue that interconnection customers in subsequent clusters do not “cause” the costs to be incurred, and to the extent the interconnection customers will benefit, they will contribute through their payment for transmission service.⁹⁴⁷

476. Other commenters believe that the implementation of the proposal will be administratively burdensome for transmission providers.⁹⁴⁸ A few commenters believe that the proposal will lead to increased disputes and FPA section 206 complaints at the Commission over cost allocation assignments.⁹⁴⁹

477. Several commenters express concern that the proposal will lead to interconnection study delays and/or restudies, which would undermine the NOPR's goal to reduce interconnection study processing timelines.⁹⁵⁰ A few commenters state that the proposal would require transmission providers to track all in-service network upgrades on the transmission system across all cluster studies over a five-year period, which they contend would be onerous or nearly impossible.⁹⁵¹ The U.S. Chamber of Commerce claims that power flow studies conducted up to five years after the in-service date of non-adjacent network upgrades will inevitably fail to accurately divide the relevant interconnection costs among disparate-in-time interconnection customers due to the many coinciding yet unrelated system changes that will affect the outcomes of such analyses.⁹⁵² PacifiCorp contends that this requirement would require transmission providers to track multiple requests for

each network upgrade on different timelines, the suspension or withdrawal of which could trigger cascading revaluations and corresponding LGIA amendments.⁹⁵³ Dominion contends that the NOPR's proposal would complicate reviews and require additional time-consuming analysis, which would only worsen for transmission providers with a high volume of interconnection requests, such as RTOs/ISOs.⁹⁵⁴

478. Some commenters argue that the proposal will not create cost certainty for interconnection customers in earlier clusters when deciding whether to move forward with a generating facility because there would be no guarantee that an interconnection customer in a subsequent cluster would provide reimbursement.⁹⁵⁵ NextEra and PJM argue that a benefit of not sharing costs between clusters is that all the interconnection customers within a cluster simultaneously learn their network upgrade costs and associated cost responsibility, creating greater cost certainty.⁹⁵⁶

iii. Alternatives and Requests for Flexibility

479. Several commenters recommend modifications to the proposal.⁹⁵⁷ A few recommend that the Commission implement a minimum threshold before a network upgrade would be evaluated as a potential shared network upgrade.⁹⁵⁸ MISO and Xcel state that changes will be necessary in RTO/ISO regions where a transmission owner may unilaterally provide upfront funding for network upgrades to integrate the cost allocation for such a funding mechanism with the shared network upgrade proposal.⁹⁵⁹ ENGIE recommends that the Commission set requirements in the interconnection process to identify interconnection facilities and network upgrades that are

necessary to interconnect the generating facility, as well as network upgrades needed to mitigate local transmission constraints, and asserts that interconnection customers should not be responsible for the costs of distant and minimally impacted network upgrades.⁹⁶⁰ Xcel also contends that the interconnection customer in the subsequent cluster should enter into a multiparty facilities service agreement to reimburse the interconnection customers in the earlier cluster, rather than pay the proposed lump sum payment to the transmission provider.⁹⁶¹ Pattern Energy recommends that the interconnection customer in the later cluster be required to repay the earlier interconnection customer at the time of execution of the subsequent interconnection customer's interconnection agreement, and not when the relevant shared network upgrades go into service.⁹⁶²

480. A few commenters propose alternative methods for cost allocation for shared network upgrades.⁹⁶³ For instance, Xcel argues that the Commission should be clear that it will accept other proposals to determine if a network upgrade is shareable to subsequent interconnection requests.⁹⁶⁴

481. Some commenters support regional flexibility for transmission providers to implement any shared network upgrade mechanism.⁹⁶⁵ For example, NESCOE suggests that allowing transmission providers, especially RTOs/ISOs, some flexibility in coordinating with their states on developing proposed approaches to sharing the costs associated with network upgrades funded by interconnection customers in earlier clusters could minimize the contentious nature of developing cost sharing arrangements.⁹⁶⁶

482. Other commenters recommend that the Commission not adopt the shared network upgrade proposal in non-RTO/ISO regions where interconnection customers provide upfront funds for the network upgrades

and receive reimbursement through transmission credits from the transmission provider, plus interest (*i.e.*, the interconnection pricing policy established in Order No. 2003).⁹⁶⁷ Pine Gate states that under the NOPR proposal, interconnection customers in later clusters would potentially reimburse interconnection customers in earlier clusters sooner than the transmission provider would have via transmission credits, but with the same result.⁹⁶⁸ Enel asserts that coupling shared network upgrades with transmission credits creates even more administrative complexity, as an interconnection customer in a later cluster providing funds to an interconnection customer in an earlier cluster would necessitate a partial transfer of transmission credits, potentially on a partially depreciated asset, which creates an extremely complex payment, reimbursement, and multiparty crediting system that would be administratively burdensome.⁹⁶⁹ Similarly, APS and Duke Southeast Utilities express concern over an additional complication in the event the earlier interconnection customer has already been fully reimbursed for the network upgrades through transmission credits.⁹⁷⁰ In contrast, Vistra contends that the shared network upgrade proposal will be beneficial in regions with transmission crediting as it will speed reimbursement relative to the status quo.⁹⁷¹ Vistra claims that, when an overlap exists between the reimbursement of an interconnection customer through transmission credits and the reimbursement mechanism in this proposal, this proposal will appropriately charge interconnection customers in subsequent clusters.

483. Other commenters raise additional cost allocation concerns with the shared network upgrade proposal. Enel argues that, in markets where transmission credits do not apply, reimbursement for funding network upgrades is often granted in the form of congestion hedging mechanisms, and the repayment of network upgrade costs from a lower-queued interconnection customer to a higher-queued interconnection customer could create the need for a partial transfer of these

congestion hedging rights.⁹⁷² SDG&E cautions against allowing scenarios where an higher-queued interconnection customer with cost responsibility terminates an executed LGIA but the network upgrades are still needed for later interconnection customers, thus leaving the transmission provider as the backstop for financing the network upgrade.⁹⁷³ A few commenters argue that the Commission should limit its proposal to share network upgrade costs between clusters to areas whether interconnection customers are not already reimbursed for network upgrade costs.⁹⁷⁴

484. Several commenters note that some RTOs/ISOs have similar existing cost allocation mechanisms to the NOPR proposal and request that, in those instances, the Commission defer to those transmission providers when the existing mechanisms are accomplishing the final rule's objectives.⁹⁷⁵ On a similar note, PJM and Indicated PJM TOs request that the Commission not require PJM to implement cost sharing between its clusters.⁹⁷⁶

485. Several commenters request various clarifications of the proposal and provide their thoughts on specific aspects.⁹⁷⁷

c. Commission Determination

486. We decline to adopt the NOPR proposal to revise the *pro forma* LGIP and *pro forma* LGIA to implement shared network upgrades between interconnection customers in an earlier cluster and interconnection customers in a subsequent cluster. We find that the reforms adopted in this final rule that require transmission providers to allocate network upgrade costs to interconnection customers within the same cluster using a proportional impact method, as discussed above, will provide interconnection customers with more cost certainty during the interconnection process and will allow

for sharing of network upgrade costs between interconnection customers that benefit from those network upgrades within the same cluster.

487. The record demonstrates the complexity of the NOPR proposal and potentially significant administrative burdens associated with implementing it for at least some transmission providers, especially under the Commission's interconnection pricing policy. We agree with some commenters that adopting the proposal would not provide cost certainty to interconnection customers in earlier clusters at the point that they have to proceed in the interconnection process because they would lack certainty about potential reimbursement for network upgrades from interconnection customers in subsequent clusters.⁹⁷⁸ Thus, the NOPR proposal is unlikely to reduce barriers to generation development due to the absence of network upgrade cost sharing provisions. Further, the proposal may introduce burdens for lower-queued interconnection customers that could be faced with reimbursing a higher-queued interconnection customer for a new shared network upgrade cost late in the interconnection process. For these reasons, we decline to adopt this NOPR proposal.⁹⁷⁹

488. We find that the final rule's reforms to conduct cluster studies and to allocate the costs of any assigned network upgrades to the cluster's interconnection customers on a proportional basis address the "first mover/free rider" issue.⁹⁸⁰ Under this final rule, a transmission provider must study interconnection customers in an earlier cluster study based on the transmission system at that time, and those interconnection customers will be assigned network upgrades that would not be needed but for their

interconnection to the transmission system; then, the transmission provider will study interconnection customers in a subsequent cluster study based on the transmission system at that point in time, and those interconnection customers will be assigned any necessary network upgrades that would not be needed but for their interconnection to the transmission system. Further, we note that under the Commission's interconnection pricing policy, interconnection customers receive reimbursement for network upgrade costs, which helps to mitigate any "first mover/free rider" concerns because interconnection customers are reimbursed through transmission credits. In addition, we find that the aforementioned reforms to conduct cluster studies and use a proportional impact method to allocate the costs of network upgrades within a cluster will also address "first mover/free rider" concerns in regions with independent entity variations to the interconnection pricing policy.

489. Because we decline to adopt this proposal, we do not respond to the requests for clarification or the requests for modifications to the NOPR proposal that would not address the reasons provided above for declining to adopt the NOPR proposal as a general matter.

6. Increased Financial Commitments and Readiness Requirements

490. In the NOPR, the Commission stated that the *pro forma* LGIP allows an interconnection customer to proceed through the generator interconnection process without having shown evidence to the transmission provider of meaningful progress toward achieving commercial viability.⁹⁸¹ The Commission stated its concern that, without requiring this type of evidence, interconnection customers will continue to submit multiple speculative interconnection requests and later withdraw those requests, triggering rounds of restudies. The Commission therefore proposed a set of reforms to adopt more stringent financial commitments and readiness requirements for interconnection customers to remain in the interconnection queue to discourage speculative interconnection requests and allow transmission providers to focus on processing viable interconnection requests and to better approximate the cost of the interconnection study process.⁹⁸²

a. Increased Study Deposits

i. NOPR Proposal

491. In the NOPR, the Commission proposed to adopt the following study deposit framework in the *pro forma* LGIP:⁹⁸³

Size of proposed generating facility associated with interconnection request	Amount of deposit
> 20 MW < 80 MW	\$35,000 + \$1,000/MW.
≥ 80 MW < 200 MW	\$150,000.
≥ 200 MW	\$250,000.

492. The Commission proposed to require transmission providers to collect this study deposit before each phase of the new first-ready, first-served cluster study process (*i.e.*, cluster study, cluster restudy, and facilities study).⁹⁸⁴ The Commission proposed to require the interconnection customer to provide: (1) an initial study deposit along with its interconnection request, which will be used to pay for the cluster study; (2) the second study deposit of the same amount within 20 days of receiving the cluster study report from the transmission provider to cover the cost of any clustered restudies; and (3) the third study deposit of the same amount along with its executed facilities study agreement. The Commission explained that study deposits would be refundable, and that the transmission provider would refund any portion of the study deposits above the applicable study costs and withdrawal penalties once the interconnection customer executes the LGIA, requests the filing of an unexecuted LGIA and submits the corresponding payment discussed below, or withdraws from the interconnection queue. The Commission also proposed to delete section 8.1.1 of the *pro forma* LGIP to remove the requirement for transmission providers to invoice interconnection customers on a monthly basis for the work conducted on the facilities study.

493. The Commission sought comment on whether: (1) the proposed study deposit amounts accurately estimate the cost of conducting cluster studies; and (2) to adopt additional provisions or a different framework that would require larger proposed generating facilities to provide a higher deposit amount—such as a per MW framework.⁹⁸⁵

ii. Comments

494. Several commenters fully support the NOPR proposal to increase

study deposits in order to support more effective interconnection queue management and reduce speculative interconnection requests.⁹⁸⁶

495. Other commenters express qualified support for the proposal.⁹⁸⁷ For example, ELCON, New York Commission and NYSERDA, and NextEra contend that it is important that such measures be carefully balanced so that they are not overly burdensome or discouraging to interconnection customers with legitimate proposed generating facilities that may be delayed for reasons out of their control.⁹⁸⁸ Clean Energy Associations do not oppose the heightened study deposit requirements, provided that they are paired with real predictability on the timing of studies and real certainty on the costs of network upgrades.⁹⁸⁹ CAISO argues that the Commission must raise study deposits significantly, and contends that it is illusory to argue that interconnection customers without significant capital can progress to commercial operation in today's hyper-competitive climate.⁹⁹⁰ PPL asserts that the Commission's proposed study deposits are likely on the low end of what is required to ensure proper "skin in the game," but should work for many regions, including New England.⁹⁹¹ Tri-

⁹⁹⁰ CAISO Initial Comments at 15–16.

⁹⁹¹ PPL Initial Comments at 15 (noting that PJM's interconnection queue reform proposal includes

State overall supports the proposed study deposit amounts but notes that interconnection customers proposing smaller generating facilities will end up paying a lower study deposit than what Tri-State is currently charging.⁹⁹² ENGIE, MISO, and SPP would prefer to collect study deposits only once upon entry into the cluster, rather than at each stage of the cluster study process, to reduce administrative burden on them and the interconnection customers.⁹⁹³ MISO and Shell argue that limiting speculative interconnection requests and ensuring more concrete financial readiness would be better achieved by requiring a single study deposit at the initiation of the generator interconnection process.⁹⁹⁴ Shell urges the Commission to base that deposit on the generating facility's size.

496. Several commenters argue that the final rule should provide each region with flexibility concerning the scope and application of any modifications to increased study deposits.⁹⁹⁵ Indicated PJM TOs contend that the transmission provider should be entitled to adjust the study deposit value if it observes that the actual cost of studies tends to be materially higher or lower.⁹⁹⁶ Dominion adds that the Commission should respect the previously accepted reforms made by transmission providers like Dominion and PJM with regard to study deposits.⁹⁹⁷

497. APS suggests that any refundable deposits should not include the Commission interest rate and argues that, by requiring additional funds to be deposited as described in the NOPR, the Commission's proposal would lead to an exorbitant increase in the amount of Commission interest paid back to an interconnection customer as it moves along through the process at the transmission provider's expense.⁹⁹⁸

498. Other commenters mostly oppose the NOPR proposal to increase study

higher deposits, ranging from \$75,000 to \$400,000 and a 10% nonrefundable component).

deposits.⁹⁹⁹ CREA and NewSun agree that a tiered study deposit level tied to interconnection capacity requested may be warranted and at most study deposits should be increased to more accurately cover the cost of the studies, but comment that the rest of the NOPR’s proposal appears to increase the study deposit levels solely to deter interconnection customers from entering the interconnection queue, not because the current level of study deposits is insufficient to cover the costs of the studies.¹⁰⁰⁰ CREA and NewSun argue that, if this rulemaking generates evidence that the current study deposit levels are insufficient to cover the typical costs of studies, an increase may be justified, but until then, study deposits should not be increased. Eversource recommends that the Commission consider making the rate of increase per MW more gradual, and that based on the current proposed figures, the deposits may increase too quickly relative to generating facility size.¹⁰⁰¹ rPlus argues that study deposit requirements are unduly discriminatory or punitive to pumped storage as compared to other renewable technologies because a large capacity pumped storage facility would expect to hit the maximum deposit and/or penalty in every stage of the interconnection study process, LGIA, and potential withdrawal.¹⁰⁰² RWE Renewables fully supports allocating some risk for each generating facility entered into the interconnection queue to interconnection customers, but argues that increased financial deposits have unfortunately not been an adequate deterrent to a high volume of non-viable generating facilities entering into the interconnection queues.¹⁰⁰³

499. In response to the Commission’s request for comment on whether the proposed study deposit amounts accurately estimate the cost of conducting cluster studies, Ameren states that, based on its experience, the proposed study deposits are in line with the cost of conducting the cluster studies.¹⁰⁰⁴ Xcel contends that the proposed study deposits are more than the cost of studies in its experience, but as studies will need to be accelerated under the Commission’s proposal (to meet timelines) and may involve more

actions, the proposed study cost may be appropriate.¹⁰⁰⁵ NV Energy states that, on average, it spends between \$80,000 and \$100,000 between the cluster system impact study and facilities studies and refunds the remaining deposits with interest.¹⁰⁰⁶ Cypress Creek comments that in its experience, study costs can vary widely depending on the transmission provider, the staff resources it has available to conduct the study, and whether it needs to contract with external resources to conduct the study.¹⁰⁰⁷

500. CREA and NewSun urge the Commission to maintain a lower study deposit prior to obtaining the initial cluster study. They argue that larger study deposits are only justified once the interconnection customer can realistically assess the commercial viability of its proposed generating facility within the cluster after obtaining the potential interconnection costs.¹⁰⁰⁸ Fervo Energy contends that more information is needed before one can conclude that the proposed study deposit amount framework would not result in deposits that far exceed the actual cost of the studies, particularly in light of the withdrawal penalty proposal.¹⁰⁰⁹ Cypress Creek suggests that the Commission should provide additional justification and argues that the NOPR fails to provide any further justification for study costs (*i.e.*, based on a market analysis or other method), stating only that the proposed amounts “better approximate the cost of the interconnection study process.”¹⁰¹⁰

501. In response to the Commission’s request for comment on whether the Commission should adopt additional provisions or a different framework that would require larger proposed generating facilities to provide a higher study deposit amount, such as a per MW framework, PJM contends that the Commission should adopt readiness payments or study deposits based on the costs of the network upgrades necessary to interconnect the generating facilities in the cluster, which also contain “at-risk” non-refundable provisions.¹⁰¹¹

iii. Commission Determination

502. We adopt, with modification, the NOPR proposal to require interconnection customers to pay, and transmission providers to collect, study deposits as part of the cluster study

process.¹⁰¹² Specifically, we adopt the NOPR proposal to require the following study deposit framework in section 3.1.1.1 of the *pro forma* LGIP:

Size of proposed generating facility associated with interconnection request	Amount of deposit
> 20 MW < 80 MW	\$35,000 + \$1,000/MW.
≥ 80 MW < 200 MW	\$150,000.
≥ 200 MW	\$250,000.

503. However, we modify the NOPR proposal to require transmission providers to collect a single study deposit only once upon entry into the cluster (initial study deposit), rather than requiring transmission providers to collect a study deposit at each phase of the cluster study process, as proposed in the NOPR. Therefore, we decline to adopt the proposed revisions to sections 3.1.1.2, 7.5, and 8.1 of the *pro forma* LGIP that would have implemented the phased study deposit approach. As a result of this modification to the NOPR proposal, the initial study deposit will be required only at the time the interconnection customer submits an interconnection request. The amount of the initial study deposit will be calculated using the tiered approach proposed in the NOPR based on the proposed MW size of the generating facility, as shown in the chart above.

504. We adopt the tiered approach based on the proposed MW size of the generating facility for determining the amount of the initial study deposit because larger proposed generating facilities within a cluster generally cost more to study than smaller proposed generating facilities within a cluster. Further, although we acknowledge that this approach does not perfectly approximate study costs, we find it appropriate to require the transmission provider to collect a study deposit based on a tiered approach because study costs will be trued up and any excess deposit refunded once the interconnection customer executes the LGIA or requests the filing of an unexecuted LGIA and submits the corresponding payment discussed below or withdraws from the interconnection queue.

505. We modify the NOPR proposal to require only a single initial study deposit, rather than multiple deposits at

¹⁰⁰⁵ Xcel Energy Initial Comments at 29–30.

¹⁰⁰⁶ NV Energy Initial Comments at 14.

¹⁰⁰⁷ Cypress Creek Initial Comments at 20–21.

¹⁰⁰⁸ CREA and NewSun Initial Comments at 53.

¹⁰⁰⁹ Fervo Energy Initial Comments at 4.

¹⁰¹⁰ Cypress Creek Initial Comments at 20 (quoting NOPR, 179 FERC ¶ 61,194 at P 103).

¹⁰¹¹ PJM Initial Comments at 24.

¹⁰¹² Here, we refer to initial study deposits separately from the LGIA deposit. We discuss the latter in section III.A.6.d below. In the NOPR, the Commission discussed the deposits together, NOPR, 179 FERC ¶ 61,194 at P 109, although the proposed *pro forma* LGIP treated the initial study deposit, proposed *pro forma* LGIP section 3.1.1.1 (Initial Study Deposit), separate from the LGIA deposit, proposed *pro forma* LGIP section 3.1.1.3 (LGIA Deposit).

different stages of the cluster study process, as proposed in the NOPR. We believe that this modification will appropriately reduce the administrative burden for transmission providers to collect and manage the deposits.¹⁰¹³ We recognize that the amount of the study deposit for interconnection customers will be lower than that proposed in the NOPR because of this modification. We are persuaded by commenters' arguments that initial study deposits are best used to provide transmission providers with funds to cover the costs of studies performed for interconnection customers rather than to serve as a disincentive against speculative interconnection requests.¹⁰¹⁴ We therefore adopt an initial study deposit framework that better reflects the costs of the interconnection studies. For example, NV Energy states that, on average, it spends between \$80,000 and \$100,000 between the cluster system impact study and facilities studies and refunds the remaining deposits with interest.¹⁰¹⁵ Under the study deposit framework we adopt, study deposits range between \$55,000 and \$250,000 for the smallest and largest proposed generating facilities, respectively, and thus reasonably track likely study costs based on the record. We believe that other reforms adopted in this final rule—notably, the commercial readiness deposits and the site control requirements—will adequately serve as a disincentive against speculative interconnection requests without unnecessarily duplicating those efforts through increased study deposits.

506. Additionally, we adopt the NOPR proposal to delete section 8.1.1 of the *pro forma* LGIP to remove the requirement for transmission providers to invoice interconnection customers on a monthly basis for the work conducted on the facilities study. We find that this monthly invoicing requirement is burdensome to the transmission provider and unnecessary given that section 13.3 of the *pro forma* LGIP includes policies for invoicing and establishes that interconnection customers are responsible for the actual costs of interconnection studies. Accordingly, we also delete from *pro forma* LGIP Appendix 3 (Interconnection Facilities Study Agreement), the portion of article 5.0 that includes the monthly invoicing requirement.

507. We disagree with rPlus' argument that study deposit requirements are unduly discriminatory or punitive to pumped storage because of its large capacity.¹⁰¹⁶ We note that the initial study deposit reforms we adopt in this final rule are agnostic to the type of generating facility. Rather, the initial study deposits are based on the MW size of the proposed generating facility, regardless of the type of generating facility, such that interconnection customers proposing larger generating facilities will pay a larger deposit. As explained above, this reflects the fact that the expected costs to study those generating facilities are generally higher. Nonetheless, the modification we adopt here has the effect of lowering the required study deposit for all interconnection customers relative to the NOPR proposal, a finding which may partially allay rPlus' concern.

b. Demonstration of Site Control

i. NOPR Proposal

508. In the NOPR, the Commission stated that it believed that more stringent site control requirements will help prevent interconnection customers from submitting interconnection requests for speculative, commercially non-viable proposed generating facilities.¹⁰¹⁷ The Commission preliminarily found that an interconnection customer securing the exclusive land right necessary to construct its proposed generating facility (or for co-located resources, demonstration of shared land use) is sufficient evidence of the interconnection customer's commitment to construct the generating facility.

509. The Commission proposed to revise the *pro forma* LGIP to require interconnection customers to demonstrate 100% site control for their proposed generating facilities when they submit their interconnection request.¹⁰¹⁸ The Commission proposed

to have transmission providers include in their tariff specific acreage requirements for each generating facility technology type to demonstrate site control.

510. To cut down on multiple interconnection customers leasing the same site in order to remain in the interconnection queue, the Commission proposed to revise the *pro forma* LGIP to require interconnection customers to demonstrate the exclusive land right (where the land rights are exclusive to the interconnection customer, not necessarily the individual generating facility) to develop, construct, operate, and maintain its generating facility or, where facilities are co-located, to demonstrate a shared land use right to develop, construct, operate, and maintain co-located facilities.¹⁰¹⁹

511. Additionally, the Commission proposed to include a limited option for interconnection customers to submit a deposit in lieu of site control when they submit their interconnection request only when regulatory limitations prohibit the interconnection customer from obtaining site control.¹⁰²⁰ The Commission explained that in such instances, the interconnection customer would submit an initial deposit in lieu of site control of \$10,000 per MW, subject to a floor of \$500,000 and a ceiling of \$2 million, which would be applied toward any interconnection studies or a withdrawal penalty, if applicable. The Commission specified that such an interconnection customer must demonstrate 100% site control prior to the facilities study. The Commission further proposed that, after the interconnection customer notifies the transmission provider of a change to its site control demonstration, the transmission provider must give the interconnection customer 10 business days to demonstrate that the site control demonstration meets the applicable requirement after notification.¹⁰²¹

512. The Commission sought comment on: (1) whether there are other specific situations in which the Commission should accept a deposit in lieu of site control; (2) whether the definition of site control, including the requirement to obtain an exclusive land right (or, for co-located resources, a shared land right), should be broadened or refined to account for circumstances that may arise in, for example, the siting

Generating Facility. Site Control for any Co-Located Resource is demonstrated by a contract or other agreement demonstrating shared land use for all Co-Located Resources that meet the aforementioned provisions of the Site Control definition.

¹⁰¹⁷ NOPR, 179 FERC ¶ 61,194 at P. 115.

¹⁰¹⁸ *Id.* P. 116. In the NOPR, the Commission proposed to define "site control" as "the exclusive land right to develop, construct, operate, and maintain the Generating Facility over the term of expected operation of the Generating Facility." Specifically, the NOPR definition explained that site control may be demonstrated by documentation establishing: (1) ownership of, a leasehold interest in, or a right to develop a site of sufficient size to construct and operate the Generating Facility or multiple Generating Facilities on a shared site behind one Point of Interconnection; (2) an option to purchase or acquire a leasehold site for such purpose; (3) site of sufficient size to construct and operate the Generating Facility; or (4) any other documentation that clearly demonstrates the right of Interconnection Customer to exclusively occupy a site of sufficient size to construct and operate the

and permitting of offshore resources in bodies of water and/or submerged land; (3) whether and how the definition of site control should be adjusted for interconnection customers to account for any regulatory requirements they may have associated with proposed generating facilities developed on sites owned or physically controlled by a state government entity and/or a Federal Government entity; (4) the appropriate stage in developing such sites when the Commission should view completion of such stage as indicative of an interconnection customer's request being non-speculative and whether there are substantive differences among interconnection customers developing sites owned or physically controlled by a state government entity and/or a Federal Government entity; (5) whether the Commission should allow transmission providers to accept demonstrations of less than 100% site control in the initial phases of the interconnection study process, outside of when regulatory limitations prohibit the interconnection customer from obtaining site control; and (6) whether the Commission should instead adopt site control provisions that allow a deposit in lieu of site control to enter the generator interconnection process and be evaluated under the first-ready, first-served cluster study process described above but require interconnection customers to demonstrate site control to enter the facilities study.¹⁰²²

ii. Comments

(a) General Comments

513. Several parties generally support the proposal to increase site control requirements.¹⁰²³ These commenters generally agree that the proposal is

reasonable and that these measures can reduce speculative interconnection requests, represent a reasonable financial burden, help ensure that the interconnection customer is ready to enter the interconnection queue,¹⁰²⁴ help load serving entities have generating facilities interconnected as quickly and efficiently as possible,¹⁰²⁵ and reduce harm to other interconnection customers that have successfully secured site control for their proposed generating facility.¹⁰²⁶

514. CREA and NewSun, on the other hand, argue that the Commission's proposed site control requirements are anti-competitive because they allow utilities to erect market barriers to competitors' generating facilities and because the requirements bar investment by companies seeking to develop generating facilities using a merchant generation model.¹⁰²⁷

(b) Comments on Specific Proposal

(1) Definition and Reasonable Evidence of Site Control

515. Some commenters support the proposed definition of site control.¹⁰²⁸ MISO notes that the proposed requirement for exclusivity or the demonstration of a right to co-locate generating facilities is in MISO's current tariff and that these requirements have proven to be successful at preventing speculative interconnection requests from entering or continuing in the interconnection queue.¹⁰²⁹

516. Some commenters suggest modifications to the definition of site control. ENGIE and Tri-State recommend that the Commission consider requirements similar to MISO's requirements to identify when and whether an interconnection request is non-speculative.¹⁰³⁰ Xcel supports modifying the definition of site control to ensure exclusivity and allow for co-ownership.¹⁰³¹

517. PJM requests that the Commission clarify that interconnection customers are prohibited from submitting evidence of site control that uses the same land for multiple interconnection requests, unless the site is large enough to host multiple generating facilities.¹⁰³²

518. Enel supports the proposal to require land rights that are exclusive to one development company, but not necessarily to the individual generating facility.¹⁰³³ According to Enel, when used regarding land rights, "exclusive" means that only the owner of those land rights can possess the property, and this interpretation could prevent co-located resources from being built if one parent company was using two separate special purpose vehicles for two different generating facilities sharing land. Enel therefore recommends that the Commission clarify the intent of this word so that it does not artificially restrict multi-use applications.

519. Cypress Creek believes that, to the extent the Commission intends that a "land right" should involve zoning approval, such a proposal would be unreasonable because interconnection customers do not typically initiate local permitting until the system impact study's impact to overall generating facility commercial viability.¹⁰³⁴

520. Southern requests that the Commission clarify subpart (3) of the proposed site control definition, arguing that, as written, it appears to be an incomplete statement that may authorize an interconnection customer to simply provide evidence that a site is big enough to host a proposed generating facility rather than evidence that the interconnection customer actually has any rights to that property.¹⁰³⁵ Enel argues that subpart (3) to the definition should be deleted, because as modified, that item is duplicative of and a subset of the materials covered under subpart (1).¹⁰³⁶

521. Other parties request that the Commission clarify the definition of site control to specify what constitutes reasonable evidence to demonstrate 100% site control¹⁰³⁷ or provide suggestions for what should be considered reasonable evidence of site control.¹⁰³⁸ NYISO requests that the final rule establish uniform requirements across regions for making the 100% site control determination.¹⁰³⁹ APS requests that the Commission specify what is considered reasonable evidence in the same manner that the

Commission defines commercial readiness milestones and argues that clarification is needed in order to avoid subjectivity regarding what is considered “reasonable” evidence to the transmission provider.¹⁰⁴⁰

522. Omaha Public Power requests that the Commission clarify whether transmission providers will be able to accept lease options, instead of executed leases, as sufficient evidence of site control.¹⁰⁴¹ Omaha Public Power notes that it has become industry standard to use lease options and argues that the Commission should not enact a rule that conflicts with current industry standard practices. SoCal Edison supports the NOPR proposal, provided that 100% site control includes an option to lease up to, and including, the commercial operation date or acquire the land when the interconnection request is submitted.¹⁰⁴²

523. EPSA advises the Commission to consider options to demonstrate site control, including requiring attestations that a lessee or potential owner is in exclusive negotiations to establish site control, though it generally supports the development of clearer demonstrations.¹⁰⁴³ Interwest Energy Alliance recommends that the Commission consider evidence of active negotiations as potentially a sufficient demonstration of site control before the closing of the cluster request window.¹⁰⁴⁴

524. SoCal Edison recommends that the Commission consider requiring that site control agreements be between the site owner and the same legal entity that is submitting the interconnection request.¹⁰⁴⁵ SoCal Edison explains that it has run into challenges when trying to determine whether interconnection customers have exclusive site control, in part due to the fact that companies change over time with renaming and/or mergers.

525. NRECA suggests that demonstration of site control with exclusive land rights should be allowed to include provisions that such rights are contingent upon favorable interconnection study results, inclusive of cost and schedule.¹⁰⁴⁶ NRECA notes that site control land options on many occasions come with a caveat that the lessee or purchaser has the ability to terminate within a due diligence period

if interconnection results are unfavorable due to cost or schedule.¹⁰⁴⁷

526. NV Energy requests clarification on whether an interconnection request should be deemed withdrawn if the interconnection customer does not provide demonstration of site control by the execution of the facilities study agreement.¹⁰⁴⁸

527. Ørsted urges the Commission to clarify that, for offshore wind projects, the definition of “exclusive site control of the entire generating facility” means exclusive control of the Bureau of Ocean Energy Management (BOEM) issued offshore wind lease area, not cable routes on state submerged land or onshore cable routes to the point of interconnection.¹⁰⁴⁹ Ørsted reasons that, due to the extensive state and Federal permitting process, offshore wind developers may not have authorization in the form of permits or other land use rights for portions of the offshore wind project on state submerged land or for the offshore and onshore cable routes during the interconnection process.

528. NYTOs and Pacific Northwest Utilities argue that it is unclear what would constitute 100% site control and therefore regions should be allowed to implement appropriate definitions for their regions on compliance to address their specific circumstances.¹⁰⁵⁰

529. ISO–NE states that its existing LGIP and SGIP provisions, which are consistent with those proposed in the NOPR, have proven to be effective, and that the Commission should extend flexibility so that they may be maintained.¹⁰⁵¹ Similarly, Indicated PJM TOs argue that the final rule should permit PJM to implement its 2022 interconnection queue reform proposal for demonstrating site control, which is more rigorous than the NOPR proposal.¹⁰⁵²

530. Several parties support the NOPR proposal to define 100% site control as an acreage requirement specific to the generating facility type and to require these acreage requirements in the

tariff.¹⁰⁵³ Enel states that inclusion of acreage requirements in the tariff gives the Commission visibility into regional requirements to ensure that no transmission provider is significantly out of line with national assumptions.¹⁰⁵⁴

531. Several commenters request that the Commission create a process by which an interconnection customer can demonstrate that its generating facility requires a different amount of acreage than the default value listed in the tariff.¹⁰⁵⁵ AES predicts that this approach will help ensure viable generating facilities are not inadvertently removed from the interconnection queue.¹⁰⁵⁶ MISO states that its tariff also allows an interconnection customer to demonstrate that it can operate the proposed generating facility with fewer acres.¹⁰⁵⁷ National Grid believes that regional flexibility would certainly be required for each transmission provider’s proposed acreage requirements and requests clarification accordingly.¹⁰⁵⁸ Some commenters suggest that transmission providers be required to update the acreage requirements periodically to reflect technological advancements.¹⁰⁵⁹

532. Other parties oppose the NOPR proposal to require specific acreage requirements in the tariff¹⁰⁶⁰ or suggest that these requirements should be included in business practice manuals rather than tariffs.¹⁰⁶¹ Some commenters argue that these acreage requirements will likely change with technology advances, and it would be burdensome if transmission providers are required to submit an FPA section 205 filing every time they need to change acreage requirements.¹⁰⁶² Fervo Energy argues that the risk in this proposal is that the acreage requirements may understate the energy

The Commission conditionally accepted PJM’s filing on November 29, 2022 and accepted PJM’s associated compliance filing on February 2, 2023. *See PJM Interconnection, L.L.C.*, 181 FERC ¶ 61,162 (2022), order on reh’g, 184 FERC ¶ 61,006 (2023); *PJM Interconnection, L.L.C.*, Docket No. ER22–2110–003 (Feb. 2, 2023) (delegated letter order).

density of a generating facility and thus overstate the number of acres required for a given number of MW, resulting in discriminatory treatment between competing generation technologies.¹⁰⁶³

533. Ørsted recommends that transmission providers use the most recent estimates of power density from BOEM when establishing acreage requirements for offshore wind projects.¹⁰⁶⁴ Ørsted notes that offshore wind turbines have grown much larger in recent years, which allows significantly more power production from the same amount of acreage, and they argue that if transmission providers' tariffs were not updated frequently enough, the acreage requirements may become unreasonable.

534. Pine Gate recommends that acreage requirements specifically address how the requirements will be applied to hybrid and co-located generating facilities.¹⁰⁶⁵

535. Some commenters request that the Commission clarify whether the site control requirement is limited to the generating facility or whether it also applies to transmission system elements like interconnection facilities or other upgrades that may be identified through the interconnection study process.¹⁰⁶⁶ Several parties argue that, for the initial request and study phase, 100% site control should not apply to land required to finalize routes for generator ties lines.¹⁰⁶⁷ AES argues that interconnection customers require flexibility when siting generator tie lines, which usually occurs near the very end of the interconnection process.¹⁰⁶⁸ Enel notes that there are sometimes crossings of railroads, streams, or other circumstances that require considerable time to complete and are outside the interconnection customer's control.¹⁰⁶⁹ AEE explains that issues can occur when interconnection customers have all but one small parcel on the route of their generating facility secured, with only one small piece of connectivity missing due to permitting delays or other issues.¹⁰⁷⁰ Similarly, Invenery argues

that it is unreasonable and impractical to predict and obtain rights to land for facilities that have not yet been identified.¹⁰⁷¹ Invenery also states that the point of interconnection can change during the study process, thus changing the land needs for the interconnection customer's interconnection facilities, and this change may be driven by a number of different factors, including the transmission provider's preference, which may be outside the interconnection customer's control.

536. Ørsted, ACE–NY, and Equinor Wind note a myriad of challenges for obtaining site control for interconnection facilities for offshore wind projects, such as conflicts between Federal and state permitting entity requirements for project flexibility and adaptability.¹⁰⁷² Ørsted argues that site control for interconnection facilities for offshore wind developers is only obtainable very late in the interconnection process.¹⁰⁷³

537. Other commenters argue that the Commission should expand the proposed definition of site control to apply some degree of site control requirements to interconnection facilities, such as a requirement to demonstrate 50% site control for interconnection facilities when submitting the interconnection request.¹⁰⁷⁴ MISO encourages the Commission to require site control for interconnection facilities at the same time that it requires site control for the generating facilities.¹⁰⁷⁵ AEP explains that some interconnection customers submit interconnection requests that are not feasible given where interconnection customer interconnection facilities would have to be sited to connect the generating facility to the transmission system at the selected point of interconnection.¹⁰⁷⁶ Additionally, AEP explains that, even if a generation site is suitable, there may not be "room" at certain locations for a substation or switchyard due to a variety of issues, including abandoned mines, surrounding wetlands, or other geographic impediments.¹⁰⁷⁷ According to AEP, site control for generating facilities can be far less important than

feasible control over the land needed to connect the generating facility to the transmission system.

538. Enel argues that the addition of a generator tie line site control requirement will increase the quality of interconnection study results and increase certainty for interconnection customers as the interconnection process becomes more costly and risky to navigate.¹⁰⁷⁸ Enel states that it has observed or heard of interconnection customers submitting existing site control from very remote locations to secure interconnection queue positions, and later submitting a modification request to move the generating facility site close to the point of interconnection after the generating facility's actual intended site control has been obtained. Enel states that this is done by interconnection customers to reduce the duration and subsequently the cost of maintaining site control, as a failed distant asset can be used for a new interconnection queue position elsewhere until site control for the new generating facility area is complete. In addition, Enel states that it supports SPP's approach, which also requires 75% of generator tie line site control after the first cluster restudy, to ensure interconnection customers are making reasonable progress.

539. National Grid argues that demonstrating site control for interconnection facilities is crucial for generating facility development and interconnection queue management particularly in cases where numerous interconnection requests in the interconnection queue are reliant on the construction of certain network upgrades.¹⁰⁷⁹ National Grid argues that the payment of cash or the provision of other security in lieu of demonstration of site control of transmission owner interconnection facilities or network upgrades built by an interconnection customer does not further the goals of the NOPR.

(2) Site Control Demonstration

540. Several commenters support the NOPR proposal to require interconnection customers to demonstrate 100% site control for their proposed generating facilities when they submit their interconnection request.¹⁰⁸⁰ MISO argues that obtaining site control is consistent with the "first-ready, first-served" model and that delaying site control for interconnection

requests until later in the interconnection process just increases the instances of late-stage withdrawals that leads to uncertainty, unplanned restudies, and delays for the remaining interconnection requests.¹⁰⁸¹ National Grid asserts that the demonstration of complete and exclusive site control is necessary at the interconnection request stage to avoid submission of interconnection requests prematurely, potential conflicts with other interconnection requests, and delays in issuing cluster studies.¹⁰⁸² GSCE contends that there should be few exceptions to a site exclusivity requirement to enter the cluster study process so leniency is not granted to the type of interconnection requests that linger in the interconnection queue while they struggle to secure difficult land rights and permitting.¹⁰⁸³

541. PJM opposes any requirement on transmission providers to accept demonstrations of less than 100% site control at the time of an interconnection request, except for accommodations for interconnection requests for proposed generating facilities to be sited offshore or on government owned land.¹⁰⁸⁴

542. MISO notes that its tariff requires redemonstrations of site control.¹⁰⁸⁵ Similarly, Indicated PJM TOs support requiring 100% site control at more than one decision point,¹⁰⁸⁶ and assert that transmission providers should be allowed to confirm site control throughout the interconnection process.¹⁰⁸⁷ Indicated PJM TOs and Longroad Energy argue that the Commission should strengthen the proposed site control requirements to ensure that interconnection customers are maintaining site control throughout the interconnection process.¹⁰⁸⁸

543. On the other hand, APS believes that simultaneous submission of the interconnection customer-executed LGIA and the continued demonstration of site control is duplicative and unnecessary if an interconnection customer demonstrates site control at the time an interconnection request is made.¹⁰⁸⁹

544. Several commenters oppose the NOPR proposal to require an

interconnection customer to demonstrate 100% site control at the time of the interconnection request and/or propose alternative site control requirements.¹⁰⁹⁰ A number of commenters express concern that the NOPR proposal is not compatible with the generating facility development cycle.¹⁰⁹¹ EPSA argues that a 100% exclusive site control requirement in advance of the processing of the facilities study is not reasonable because it overlooks the complicated and extensive process of negotiating for land leases or purchases.¹⁰⁹² Similarly, Cypress Creek and AEE argue that the NOPR proposal does not reflect realities of development, which include stringent permitting requirements, and may disadvantage certain interconnection customers despite being on a path to full site control and commercial readiness.¹⁰⁹³ CESA and Clean Energy Associations argue that the requirement for 100% site control at the interconnection request stage is excessively stringent and would significantly favor utility-owned projects.¹⁰⁹⁴

545. CREA and NewSun argue that the NOPR proposal is not adequately supported and urge the Commission to maintain the existing site control requirements.¹⁰⁹⁵ CREA and NewSun argue that the proposal is unreasonable and “creates a Catch-22”: specifically, that without reliable visibility as to the interconnection costs and viability for its proposed generating facility within the specific cluster, the interconnection customer will not be able to attract investment needed to secure site control. CREA and NewSun also argue that a landowner hoping to see property developed may not agree to permanently tie up land in a lease before the interconnection customer can show interconnection is viable. CREA and NewSun argue that interconnection requests may prove uneconomic after receipt of initial interconnection studies and thereafter cannot finalize site

control due to uneconomic interconnection costs. CREA and NewSun also assert that the Commission made no effort in the NOPR to ascertain the impact on the market of the “draconian” site control rules for such transmission providers that have been allowed to adopt them.

546. R Street argues that requiring even partial site control at the time of the interconnection request may create delays and increase project development costs because it would require more options contracts to be in place with landowners.¹⁰⁹⁶ NextEra argues that site control is a limited indicator of generating facility viability.¹⁰⁹⁷ rPlus argues that requiring 100% site control at the interconnection request stage will inhibit the flexibility for interconnection request design changes that is needed to develop pumped storage projects.¹⁰⁹⁸

547. Several commenters recommend that the Commission modify the site control requirements in the final rule to require less than 100% site control at the time of the interconnection request. For example, Clean Energy Associations, SEIA, and Cypress Creek argue that no more than 75% site control is appropriate at the time of the interconnection request.¹⁰⁹⁹ Shell argues that the Commission should only require partial site control when the interconnection request is made.¹¹⁰⁰ Clean Energy Associations supports an escalating schedule of site control through the interconnection process and suggests that the Commission should modify the NOPR proposal to also require 90% site control at the post-cluster study decision point and 100% site control at the post-facilities study decision point.¹¹⁰¹

548. AEE argues that 90% site control at the time of the interconnection request provides interconnection customers sufficient flexibility.¹¹⁰² Additionally, several commenters state that 100% site control at the post-facilities study decision point would be appropriate.¹¹⁰³ AEE argues that these altered requirements will reduce speculative interconnection requests while also providing incentive for

interconnection customers to pursue remaining land rights after entering the interconnection queue.¹¹⁰⁴

549. Some commenters note that less than 100% site control at the interconnection request stage would allow interconnection customers flexibility to address the results of interconnection studies or other regulatory processes, which may lead to changes in the size or design of a generating facility.¹¹⁰⁵ Additionally, SEIA requests that the Commission require transmission providers to allow interconnection customers to change site boundaries or reduce the size of a proposed generating facility, as long as the point of interconnection remains the same, in order to accommodate changes resulting from interconnection studies or regulatory changes.¹¹⁰⁶ Pine Gate notes that sometimes interconnection customers are still actively negotiating with landowners close to the deadline for a cluster review window and requests the Commission to permit interconnection customers to demonstrate to the transmission provider that they are in active negotiations to meet the heightened site control requirements.¹¹⁰⁷

550. Some commenters highlight that the NOPR proposal may be problematic or challenging for interconnection customers of certain technology types or other circumstances where obtaining site control is difficult. Hydropower Commenters argue that most new hydropower facilities are sited at existing non-powered dams and therefore hydropower interconnection customers face unique challenges when it comes to obtaining site control.¹¹⁰⁸ The Ohio Commission Consumer Advocate asserts that the proposal may be problematic for interconnection customers in Ohio because a recent Ohio law permits Ohio counties to designate unincorporated areas in a county as an area in which the development of a renewable energy project is prohibited.¹¹⁰⁹

551. According to Enel, some states limit the duration of site control.¹¹¹⁰

Enel asserts that, if site control is near to expiring for any reason, whether due to state restriction or simply because the interconnection customer did not anticipate the length of interconnection or permitting processes, landowners can demand higher payments than agreed to in the original site control contract. Enel states that this can change the economics of a proposed generating facility and even make a proposed generating facility unprofitable, potentially leading to a late-stage interconnection request withdrawal.

552. Several commenters argue that the Commission should reject proposals to weaken the site control requirements proposed in the NOPR.¹¹¹¹ APPA–LPPC argue that EPSA’s and SEIA’s generalized complaints do not identify a specific obstacle created by the Commission’s proposal, and APPA–LPPC argue that SEIA’s proposal to scale back the site control requirement to not more than 75% was considered and rejected by MISO’s management and stakeholders over concerns that it may not be rigorous enough to mitigate the entry of speculative interconnection requests in the queue.¹¹¹²

(3) Deposits in Lieu of Site Control

553. Several commenters support the NOPR proposal to eliminate the option for interconnection customers to submit a deposit in lieu of site control except in limited circumstances for regulatory limitations.¹¹¹³ These commenters express that allowing deposits in lieu of site control is not sufficient to demonstrate readiness or deter speculative interconnection requests.¹¹¹⁴ PJM notes that, in its experience, the option to provide money in lieu of actual site control is easily abused by interconnection customers with speculative interconnection

requests.¹¹¹⁵ CAISO notes that its most recent cluster study was inundated by interconnection requests without site control because even a \$250,000 deposit in lieu of site control has not proven to be a deterrent for interconnection customers.¹¹¹⁶

554. Some commenters oppose the NOPR proposal and argue that the option to make deposits in lieu of site control should be available for all interconnection customers, not just those that demonstrate regulatory limitations.¹¹¹⁷ Avangrid believes that an at-risk deposit in lieu of site control that is set at a reasonable magnitude may be a good alternative to ensure that an interconnection customer is rigorously pursuing completion of a proposed generating facility.¹¹¹⁸ Pacific Northwest Utilities suggest that the Commission should allow transmission providers the flexibility to determine whether deposits in lieu of site control are applicable.¹¹¹⁹

(4) Site Control Considerations for Interconnection Customers With Regulatory Limitations

555. Some commenters contend that the Commission should modify the proposed definition of site control to reasonably accommodate interconnection customers developing generating facilities on sites owned or controlled by a government entity.¹¹²⁰ Several commenters highlight unique circumstances and challenges for obtaining site control on certain public lands and other regulatory issues that may affect an interconnection customer’s ability to demonstrate site control under the NOPR definition.¹¹²¹

556. Several commenters argue that the Commission should provide flexibility to allow transmission providers to establish site control requirements for generating facilities sited on Federal and public land.¹¹²²

¹¹⁰⁸ Hydropower Commenters Initial Comments at 13.

¹¹⁰⁹ Ohio Commission Consumer Advocate Initial Comments at 11.

¹¹¹⁰ Enel Initial Comments at 40.

Shell notes that securing site control can often be complicated by fast-changing local, county, and state regulations, and encourages the Commission to provide sufficient flexibility to enable transmission providers to make accommodations for local site control challenges.¹¹²³

557. Some commenters provide recommendations on how the Commission could clarify what may constitute a sufficient demonstration of site control for generating facilities being developed on land owned or controlled by a government entity.¹¹²⁴ Pattern Energy argues that interconnection customers proposing to develop generating facilities on land owned or managed by state, Federal, or Tribal government entities should be required to provide evidence that they submitted any required applications to the relevant government entity or entities in order to advance the development of their proposed generating facility. Pattern Energy states that such an interconnection request should provide for an exclusive right to advance the development of a generating facility, provided that the relevant government entity or entities allow for such an exclusive right.¹¹²⁵

558. PJM notes that the proposed site control requirements that PJM included in its interconnection queue reform filing with the Commission provide some leeway for generating facilities constructed on Federal or state lands or water, such as offshore wind projects.¹¹²⁶ Alternatively, Dominion requests that the Commission clarify that the deposit in lieu of site control exception would apply to offshore wind projects, in addition to other proposed generating facilities subject to similar government control that may prevent timely demonstration of site control.¹¹²⁷

559. Several commenters note that certain interconnection customers with generating facilities and interconnection facilities on land controlled by the Bureau of Land Management (BLM) face extended time frames for obtaining firm

site control.¹¹²⁸ For example, NV Energy states that the BLM permitting process can take between 18 months and 5 years.¹¹²⁹ Idaho Power states that BLM goes through various stages of review, but there is no specific stage that is indicative of an interconnection customer's request having firm site control until the permit is in hand, which can take up to three years to obtain.¹¹³⁰ Idaho Power states that, currently, interconnection customers with generating facilities on BLM lands typically reference the section of the site control definition that allows for "an exclusivity or other business relationship between interconnection customer and the entity having the right to sell, lease or grant interconnection customer the right to possess or occupy a site for such purpose."¹¹³¹ Idaho Power argues that generating facilities on land managed by BLM should have the same site control requirements as all other generating facilities, but that they would support an expanded and/or clarified definition of site control to capture the limitations of these generating facilities. Idaho Power states that, for example, site control evidence may include evidence that the necessary application has been received by the agency, is in process, and the agency has indicated the generating facility is permissible.

560. NV Energy proposes that the deposit in lieu of site control be used for lands that are federally managed, and that those deposits be held until the decision record, record of decision, notice to proceed, or right-of-way grant is issued for a generating facility, which NV Energy notes may not be until after the facilities study due to timing of the BLM process.¹¹³² To ensure the generating facility is progressing in the BLM process, NV Energy also proposes that the interconnection customer be required to submit with its interconnection request a schedule of the land rights and permitting as well as documentation from BLM that the draft environmental assessment or draft environmental impact statement is expected to be completed by issuance of the system impact study. NV Energy also proposes that interconnection customers be required to provide the administrative draft environmental assessment or draft environmental impact statement to the transmission

provider for review and comment once BLM has issued it to ensure its interconnection facilities are included in the right-of-way that BLM will issue.

561. CREA and NewSun encourage the Commission to modify its proposed site control requirements, such that an interconnection customer developing generating facilities on public lands is allowed to proceed with the interconnection process if it can demonstrate that the relevant public agency has received and has agreed to process the necessary permits to develop the interconnection customer's proposed generating facility.¹¹³³

562. For generating facilities on Bureau of Reclamation lands, Hydropower Commenters argue that a lease of power privilege should be considered a sufficient demonstration of site control.¹¹³⁴ Additionally, Hydropower Commenters note that generating facilities under a certain size can obtain an exemption from Commission licensing requirements, and they argue that an exemption from licensing should also be considered a sufficient demonstration of site control. Similarly, Hydropower Commenters argue that developers of pumped storage projects on U.S. Forest Service or BLM lands should not be required to complete the required Federal Land Policy and Management Act process before they can be considered to have demonstrated sufficient evidence of site control.¹¹³⁵ Hydropower Commenters contend that such generating facilities should be allowed to demonstrate site control by submitting evidence that they have a permit application pending with U.S. Forest Service or BLM.

563. Some commenters argue that the 100% site control requirement should not apply to generating facilities being developed on Tribal lands.¹¹³⁶ OSPA claims that development on Tribal land is more challenging than other kinds of development because Tribes have three different classes of land that have different ownership structures and regulatory restrictions, including "Trust" land, which is held by the Federal Government on behalf of Tribes and regulated by the Bureau of Indian Affairs.¹¹³⁷ OSPA notes that Tribes' Reservations are often "checker-boarded" with the three different classes of land, and that large wind generating facilities will necessarily be sited on all three classes of land. OSPA argues that

securing Bureau of Indian Affairs regulatory approvals can take years and that the ownership structure of “Allotted” lands can make it even difficult to expediently obtain consent from all owners to lease certain tracts, which is required as part of the Bureau of Indian Affairs process.¹¹³⁸

564. OSPA proposes that, for Tribes and Tribal Energy Development Organizations, the Commission clarify that interconnection queue positions may be secured if the Tribe has signed a lease, even if the Bureau of Indian Affairs has not issued a final approval.¹¹³⁹ Similarly, rPlus recommends that the filing of a valid preliminary permit application with the Commission satisfy the site control requirement for a pumped storage project and for generating facilities on Tribal lands.¹¹⁴⁰ rPlus notes that suitable pumped storage sites are limited in availability and are increasingly located on public or Tribal lands, which involve significant environmental review. rPlus notes that pumped storage projects located on Federal and Tribal lands generally cannot achieve full site control until Federal environmental reviews are complete and the Commission issues a license. For circumstances where a pumped storage project does not require a Commission license, rPlus requests that the site control requirement be only 50% of the land needed for the core generating facility.¹¹⁴¹

565. Several commenters state that the proposed site control requirements may present challenges for offshore wind projects, which face extensive permitting timelines.¹¹⁴² Clean Energy Associations argue that the formal issuance of a public lease often requires multiple preliminary stages and major financial commitments from interconnection customers and that requiring a lease prior to entering the interconnection queue would unduly delay generating facilities on public lands.¹¹⁴³ Ørsted and Clean Energy Associations further explain that the permitting process for an offshore wind farm often involves multiple Federal and state agencies and runs concurrently with the interconnection process. Ørsted and Clean Energy Associations note that the permitting

process can lead to changes in the generating facility layout within a lease area, routing of offshore cables, siting of onshore cable landing, routing of onshore cables, and siting of the interconnection switchyard.¹¹⁴⁴

566. Shell, Dominion, and CREA and NewSun argue that the high cost of market entry for offshore wind projects is a substantial financial commitment and that such generating facilities are by their very nature not speculative.¹¹⁴⁵ Shell argues that offshore wind generation should be able to demonstrate site control by showing evidence of commitments to purchase offshore lease areas from BOEM, as commitments often demand hundreds of millions of dollars.¹¹⁴⁶

567. CREA and NewSun contend that the site control requirements in the NOPR would require an offshore developer to win a competitive solicitation or obtain a term sheet from an off-taker before entering the interconnection queue, which at best will add years of delay to developing these generating facilities and at worst will kill the proposals outright due to a lack of information on interconnection feasibility and cost.¹¹⁴⁷

568. MISO notes that it has not interpreted its tariff to mean that a BOEM-administered Wind Energy Area auction that an offshore wind interconnection customer can participate in, but which will occur after the close of an application window, is a regulatory restriction.¹¹⁴⁸ MISO is concerned that broadening the regulatory restriction interpretation to allow for offshore wind to submit an interconnection request in such instances would enable speculative interconnection requests, which will result in withdrawals, restudies, uncertainty, and study delays. MISO states that interconnection customers that seek to develop a generating facility on government owned lands that are awarded to the winner of an auction, and interconnection customers that seek to develop a generating facility on private land, are held to the same standard in the MISO process.

569. Some commenters request that “regulatory limitations” be more clearly defined.¹¹⁴⁹ CAISO expresses concern

that, absent clarification, the regulatory limitation provision will leave transmission provider staff as adjudicators of whether obtaining site control is possible for each proposed generating facility, and interconnection staff are not experts on real property law or public permitting requirements.¹¹⁵⁰ CAISO and Indicated PJM TOs argue that without further clarification, the regulatory limitation provision may be interpreted too broadly and interconnection customers could argue site control was impossible where it was simply impractical or expensive.¹¹⁵¹ CAISO suggests, as an example, that the Commission could limit “regulatory limitations” only to apply to interconnection customers sited in offshore areas, public lands, and Tribal lands.¹¹⁵²

570. Several parties support the NOPR proposal to allow interconnection customers with regulatory limitations to submit a deposit in lieu of site control.¹¹⁵³ For projects on government lands, Indicated PJM TOs argue that the interconnection customer should be allowed to enter and remain in the interconnection queue, with a deposit in lieu of site control, if they identify the steps needed to achieve site control and show how they are exercising due diligence to obtain a final government determination.¹¹⁵⁴ Indicated PJM TOs argue that the regulatory limitations exception should be limited to just government lands.

571. MISO supports such an option specifically when the interconnection customer is prevented from obtaining site control by a regulatory restriction that the passage of time itself will not cure (e.g., while participating in an auction that occurs after the interconnection request deadline can be cured by time, a requirement to obtain an LGIA to participate in an auction cannot be cured by time).¹¹⁵⁵

572. Tri-State suggests modifying section 3.4.[1]2 of the *pro forma* LGIP so that the site control for state or federally controlled land must still be fully attained at the time of LGIA execution.¹¹⁵⁶ For example, Tri-State states that in Colorado, a state land planning lease (which does not meet the Commission’s proposed definition of

site control) could be used with a financial deposit during the cluster study process, and a state land production lease (which does meet the Commission's proposed definition of site control) would be needed prior to LGIA execution.¹¹⁵⁷

573. APPA–LPPC argue that, if the NOPR proposal is adopted, at a minimum, the interconnection customer should be required to provide an affidavit from a company officer, a detailed explanation, and documentation justifying the proposed regulatory limitation exception and to demonstrate 100% site control as soon as possible after the generator interconnection request is submitted, and certainly prior to the facilities study stage, as the NOPR proposes.¹¹⁵⁸ PPL contends that, while additional flexibility for interconnection customers that face regulatory limitation may be appropriate in the early stages of review, the Commission should require that full site control be demonstrated before proceeding to an LGIA.¹¹⁵⁹

574. A number of commenters oppose the NOPR's proposed option to allow deposits in lieu of site control where Federal or state regulatory limitations prohibit the interconnection customer from obtaining site control.¹¹⁶⁰ Idaho Power argues that any allowance of a deposit must be accompanied by some evidence of achieving site control.¹¹⁶¹ APS asserts that speculative interconnection requests do not necessarily have financial limitations and extra deposits would not act as the same deterrent as requiring 100% site control; therefore, APS requests that the Commission not allow an exception for regulatory restrictions.¹¹⁶²

575. OSPA argues that requiring interconnection customers that face regulatory barriers to submit any deposits, including deposits in lieu of site control, will create insuperable barriers to renewable energy development by Native American Tribes and Tribal Energy Development Organizations on Tribal lands,¹¹⁶³ stating that Tribes have limited access to

capital and face other challenges that large developers do not share.¹¹⁶⁴

576. A few commenters support the proposed amounts for the deposit in lieu of site control.¹¹⁶⁵ MISO agrees that the proposed deposit thresholds are sufficient, noting that the amount of the deposits under MISO's tariff are the same amounts the Commission proposed in the NOPR.¹¹⁶⁶ Tri-State contends that the proposed deposit amounts would be sufficient to ensure advanced-stage interconnection requests are able to continue to move toward interconnection.¹¹⁶⁷

577. Several parties support a deposit in lieu of site control high enough to deter speculative interconnection requests that are unlikely to achieve site control.¹¹⁶⁸ Avangrid argues that any deposit in lieu of site control should be proportionate to the size of the interconnection request, and “reflect collateral” while an interconnection customer works through site control agreements.¹¹⁶⁹ Eversource similarly argues that the Commission should set the deposit so that the interconnection customer fully internalizes the risk of failing to obtain site control.¹¹⁷⁰ Tri-State also argues that the deposit should not apply to interconnection study costs.¹¹⁷¹

578. Some commenters provide alternative suggestions for the deposit in lieu of site control amounts.¹¹⁷² Longroad Energy argues that the Commission should consider requiring that such deposits be set as a multiple of the interconnection study deposit (such as three times the deposit amount), rather than as a dollar amount per MW of generating facility size, as proposed in the NOPR.¹¹⁷³ NYTOs argue that the MW capacity of a generating facility is not necessarily relevant to determining the appropriate deposit requirement and that deposits should be more closely tied to the generating facility's potential impact on the interconnection process.¹¹⁷⁴

579. A number of entities argue that any deposits in lieu of site control should be non-refundable.¹¹⁷⁵ Avangrid suggests that the deposit be non-refundable to avoid gaming by prospective interconnection customers.¹¹⁷⁶ National Grid argues that absent circumstances outside the control of the interconnection customer, any deposit should be non-refundable, and any security should be able to be drawn upon in the event the interconnection customer withdraws or fails to demonstrate site control at the required time.¹¹⁷⁷ National Grid contends that if the Commission intends to permit refunds or returns of a deposit in lieu of site control, such deposits should be provided only after deducting the actual costs and fees, *e.g.*, escrow account initiation and maintenance fees, incurred by the transmission provider or RTOs/ISOs prior to the time of the withdrawal request or the demonstration of site control. National Grid also requests that the Commission clarify that withdrawal penalties are separate and may be deducted from the deposit amount.

580. Similarly, Longroad Energy suggests that to ensure that the proper incentives exist, the Commission may wish to evaluate if a security deposit in lieu of site control should become non-refundable if an interconnection customer withdraws at any point in the interconnection process or fails to achieve commercial operation.¹¹⁷⁸ EEI argues that the Commission can further reduce potential risks by making deposits non-refundable, or if the Commission declines to do so, it should ensure that withdrawal penalties are significant enough to discourage speculative interconnection requests.¹¹⁷⁹ On the other hand, NYTOs argue that regions should have the flexibility to determine whether, under certain circumstances, deposits should become fully non-refundable.¹¹⁸⁰

581. Xcel argues that in addition to requiring a deposit, interconnection customers facing regulatory limitations should be required to provide status updates to the transmission provider, and there should be sufficient penalties to ensure interconnection customers provide accurate information on the

status of regulatory proceedings.¹¹⁸¹ Xcel contends that, if regulatory limitations prohibit an interconnection customer from obtaining site control, transmission providers should be allowed to propose constructs that facilitate interconnection, including the ultimate achievement of site control.

(c) Miscellaneous

582. Public Interest Organizations argue that it is unreasonable that the *pro forma* LGIP allows interconnection customers to propose a decrease to the generating facility's output of up to 60% without losing queue position while also requiring a demonstration of 100% site control upon entering the interconnection queue.¹¹⁸² Public Interest Organizations also argue that the NOPR proposal to require interconnection customers to remedy any change in site control within 10 days or have their interconnection request withdrawn is unreasonable. In addition, Public Interest Organizations argue that it is unduly discriminatory to allow interconnection customers proposing a thermal project to keep their queue position by downsizing the generating facility's turbines but not allow interconnection customers proposing wind generating facilities to keep their queue position if they lose part of a lease. Public Interest Organizations argue that the cure period should be long enough to allow for routine events that affect site control, such as the death of a landowner or the change of ownership at a commercial facility hosting a proposed generating facility.

iii. Commission Determination

583. As discussed herein, we adopt in part and modify in part the NOPR proposal to revise sections 1, 3.4.2, 7.5, 8.1, and 11.3 of the *pro forma* LGIP and Appendix B of the *pro forma* LGIA to add more stringency to the site control requirements and to help prevent speculative interconnection requests from entering the interconnection queue. We believe that, taken together, these reforms will help ensure that commercially viable interconnection requests with demonstrated site control or with demonstrated regulatory limitations will be able to enter the interconnection queue, thereby reducing the negative impacts of speculative interconnection requests.

(a) Definition and Reasonable Evidence of Site Control

584. We adopt the NOPR proposal to revise the definition of site control in section 1 of the *pro forma* LGIP with several modifications. As modified, the definition states that site control may be demonstrated by documentation establishing: “(1) ownership of, a leasehold interest in, or a right to develop a site of sufficient size to construct and operate the Generating Facility; (2) an option to purchase or acquire a leasehold site of sufficient size to construct and operate the Generating Facility; or (3) any other documentation that clearly demonstrates the right of Interconnection Customer to exclusively occupy a site of sufficient size to construct and operate the Generating Facility.” Additionally, we agree with commenters' observations¹¹⁸³ that subpart (3) of the *pro forma* LGIP definition of site control proposed in the NOPR, which stated “site of sufficient size to construct and operate the Generating Facility,” was duplicative; therefore, we modify the NOPR proposal to delete this subpart and provide clarification that all three remaining, enumerated options to demonstrate site control require control of a site of sufficient size to construct and operate the generating facility or multiple generating facilities on a shared site.

585. To prevent multiple interconnection customers from leasing the same site in order to remain in the interconnection queue, we adopt the NOPR's proposed revisions to the *pro forma* LGIP that require an interconnection customer to demonstrate the exclusive land right to develop, construct, operate, and maintain its generating facility or, where facilities are co-located, to demonstrate a shared land use right to develop, construct, operate, and maintain co-located facilities. We further clarify that the right to “exclusively” occupy the site to develop, construct, operate, or maintain a generating facility means both that the right belongs solely to the interconnection customer (no other entity shares the right to use the site for those purposes), as well as that the right is solely for purposes of a single interconnection request. We find that an interconnection customer securing the exclusive land right necessary to construct its proposed generating facility (or for co-located generating facilities, demonstration of shared land use) is sufficient evidence of the

interconnection customer's commitment to construct the generating facility.

586. We also modify section 3.4.2 of the *pro forma* LGIP to provide that site control for a generating facility that is co-located with one or more generating facilities on the same site and behind the same point of interconnection must be demonstrated by a contract or other agreement that allows for shared land use for all generating facilities that are co-located that meet the provisions of the site control definition. We clarify that interconnection customers are prohibited from submitting evidence of site control that uses the same land for multiple interconnection requests, unless the site is large enough to host multiple generating facilities. We note that section 3.4.2 of the *pro forma* LGIP that we adopt in this final rule permits shared land use for co-located generating facilities on the same site and behind the same point of interconnection, and we clarify below that transmission providers have flexibility to establish appropriate technology-specific acreage requirements for generating facilities.¹¹⁸⁴ Permitting multiple interconnection requests to use the same land to demonstrate exclusive site control would inherently result in at least one commercially non-viable interconnection request entering the interconnection queue and thus would be insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. We also clarify that the interconnection customer is required to meet the technology-specific acreage requirement for its generating facility that is publicly posted by the transmission provider at the time it submits its interconnection request.

587. Likewise, in response to Enel, we clarify that the term “exclusive land rights” in the definition of site control applies only to the exclusivity required to develop, construct, operate, and maintain the interconnection customer's proposed generating facility; the term “exclusive land rights” does not restrict multi-use applications of the site in addition to its use for the generating facility, such as agriculture, ranching, etc.¹¹⁸⁵ Similarly, in response to Cypress Creek, we clarify that a land right does not involve zoning approval.

¹¹⁸⁴ This is consistent with the practice that several transmission providers currently follow. See *Midcontinent Indep. Sys. Operator, Inc.*, 169 FERC ¶ 61,173 at P 48; *Sw. Power Pool, Inc.*, 128 FERC ¶ 61,114 at P 48; *PJM Interconnection, L.L.C.*, 181 FERC ¶ 61,162 at P 102.

¹¹⁸⁵ See Enel Initial Comments at 42.

¹¹⁸¹ Xcel Initial Comments at 30–31.

¹¹⁸² Public Interest Organizations Initial Comments at 27–28.

¹¹⁸³ See Enel Initial Comments at 82; Southern Initial Comments at 34–35.

588. In response to commenters,¹¹⁸⁶ we further clarify that the adopted definition of site control permits an interconnection customer to demonstrate site control with lease options, instead of executed leases, provided that the interconnection customer is the exclusive holder of such a lease option(s). The adopted definition explicitly provides for such a lease option, by including the phrase, “an option to purchase or acquire a leasehold site.” However, evidence of active negotiations for a lease is not a sufficient demonstration of site control at any time during the interconnection process. Allowing active negotiations for a lease to serve as a demonstration of site control, as some commenters suggest,¹¹⁸⁷ would allow speculative, commercially non-viable interconnection requests to proceed through the interconnection queue, which would be inconsistent with ensuring that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. Likewise, with respect to NRECA’s request,¹¹⁸⁸ we clarify that this final rule permits leases and lease options as sufficient evidence of site control as discussed above, and transmission providers have discretion to evaluate the content of such leases and lease options and any conditions contained therein to determine whether they sufficiently demonstrate site control.

589. Several commenters seek clarification as to whether the proposed *pro forma* LGIP definition of site control would allow certain types of generating facilities developed on lands owned or controlled by a government entity to demonstrate site control. We agree with commenters that offshore wind interconnection customers must make a substantial financial commitment to win a competitive auction and secure a lease from BOEM, and such generating facilities that have secured a lease agreement are not speculative.¹¹⁸⁹ We therefore clarify that a lease agreement with BOEM to pursue development of an offshore wind generating facility can serve as a sufficient demonstration of site control under the site control definition adopted in this final rule. This clarification is consistent with our finding above that a variety of lease

options satisfy the site control requirement. In response to MISO’s concerns about allowing multiple offshore wind interconnection customers to submit an interconnection request for the same “Wind Energy Area” before it has been auctioned by BOEM, we find that the *pro forma* LGIP site control definition that we adopt herein appropriately limits such potentially speculative interconnection requests by requiring offshore wind interconnection customers to provide evidence of an exclusive right to develop a lease area to satisfy the site control requirements.

590. With respect to OSPA’s concerns regarding the challenges of demonstrating site control on Tribal lands due to the nature of land ownership on Reservations and the need for the Bureau of Indian Affairs to approve certain leases, we clarify that under the site control definition, interconnection customers developing generating facilities on Tribal lands can demonstrate site control with a signed lease agreement with the applicable Tribe-owner.¹¹⁹⁰ As discussed below in section III.A.6.b.iii.b, an interconnection customer with a demonstrated regulatory limitation, including those associated with obtaining a lease on Tribal lands, may submit a deposit in lieu of site control.

591. Similarly, in response to commenters’ concerns about demonstrating site control for hydropower projects on sites owned or controlled by a government entity, we clarify that certain documentation can be used to demonstrate site control under the *pro forma* LGIP definition of site control. For interconnection customers developing generating facilities at non-powered dams, we clarify that a FERC license¹¹⁹¹ can serve as a demonstration of site control under subpart (3). However, we also clarify that neither a Memorandum of Agreement with the U.S. Army Corps of Engineers regarding a proposed hydropower project at a U.S. Army Corps of Engineers dam nor a preliminary permit for a pumped storage project or other hydropower generating facility to be located on Tribal lands would be sufficient to demonstrate site control because we do not have enough information in this record to determine that such

documentation provides sufficient evidence of the interconnection customer’s exclusive right to occupy a site of sufficient size to construct and operate a generating facility.

592. For hydropower projects that are not subject to the Commission’s hydropower permitting jurisdiction, such as projects on Bureau of Reclamation lands, we clarify that a lease of power privilege can serve as a demonstration of site control under the site control definition. Finally, for hydropower projects that are small enough to be exempted from FERC licensing requirements, Hydropower Commenters explain that an exemption from FERC licensing provides an exclusive right to the recipient to develop a project at the site and the exemption is issued in perpetuity.¹¹⁹² Because such an exemption includes an exclusive right to develop, we clarify that providing a written statement as evidence of an exemption from licensing under the FPA can serve as a demonstration of site control under subpart (3) of the site control definition.

593. We note NV Energy’s explanation that its previous efforts to allow interconnection customers to demonstrate site control by showing a draft preliminary plan of development, one of the earlier required documents in the BLM permitting process, have led to speculative interconnection requests that slow down the interconnection process.¹¹⁹³ We agree, and we therefore decline to adopt commenters’ proposal to modify the proposed *pro forma* LGIP definition of site control to allow interconnection customers to demonstrate site control by providing documentation indicating that they are pursuing the necessary permits with the appropriate government entity or entities.¹¹⁹⁴ As with our finding that active negotiations for lease agreements are not sufficient to demonstrate site control, discussed above, we find that such an expansion of the site control definition could weaken the site control requirements included in the *pro forma* LGIP and could undermine the effectiveness of this reform in helping to prevent speculative interconnection requests.

(b) Site Control Demonstration and Deposits in Lieu of Site Control

594. We adopt the NOPR proposal, with modification, to revise section 3.4.2 of the *pro forma* LGIP to require

¹¹⁹⁴ See CREA and NewSun Reply Comments at 50; Pattern Energy Initial Comments at 30.

interconnection customers to demonstrate site control at the time of submission of the interconnection request. However, we modify the proposal and require interconnection customers to provide evidence of 90% site control for the generating facility at the time of submission of the interconnection request and, pursuant to revised sections 8.1 and 11.3 of the *pro forma* LGIP, provide evidence of 100% site control for the generating facility at the time of execution of the facilities study agreement and when executing, or requesting the unexecuted filing of, the LGIA.

595. We decline to adopt the NOPR proposal to require technology-specific acreages to be listed in the transmission provider's tariff. As discussed below, instead, we require transmission providers to establish acreage requirements for each generating facility technology type and to publicly post these acreage requirements. We adopt the following aspects of the NOPR proposal to revise sections 3.4.2 and 11.3 of the *pro forma* LGIP to: (1) eliminate the option to provide a deposit in lieu of site control demonstration except in limited circumstances where an interconnection customer demonstrates a regulatory limitation to obtaining site control, as discussed below, and eliminate the option to post \$250,000 of non-refundable security in lieu of site control at LGIA execution; and (2) require that interconnection customers that could not demonstrate the requisite level of site control at the relevant milestone of the interconnection process (i.e., 90% for the cluster study and cluster restudy, and 100% for the interconnection facilities study and when executing, or requesting the unexecuted filing of, the LGIA) would have their interconnection request deemed withdrawn and could be subject to withdrawal penalties under certain circumstances, as discussed below.

596. We adopt the NOPR proposal to revise sections 3.4.2, 7.5 and 8.1 of the *pro forma* LGIP such that, after notifying the transmission provider of any change to the interconnection customer's site control demonstration, the transmission provider must give the interconnection customer 10 business days to demonstrate satisfaction with the applicable requirement. We find the adopted approach to require 90% site control at the time of the interconnection request and 100% site control at the time of the facilities study and when executing, or requesting the unexecuted filing of, the LGIA appropriately balances the concerns identified in the record. In particular,

we find that it will provide sufficiently stringent site control requirements to help prevent interconnection customers from submitting interconnection requests for speculative, commercially non-viable proposed generating facilities, while accommodating development challenges faced by interconnection customers that may otherwise present unjust and unreasonable barriers to entering the interconnection queue. We believe that this approach appropriately recognizes that issues often arise in developing a generating facility, such that requiring a demonstration of 90% site control at the time of the interconnection request, rather than 100%, provides valuable flexibility for interconnection customers with viable prospective generating facilities to resolve those issues and continue through the interconnection process.

597. We are persuaded by commenters that contend that there are significant benefits to allowing interconnection customers to enter the cluster study process and potentially use the interconnection study results to better understand their generating facility configuration before obtaining 100% site control. We agree with commenters that allowing less than 100% site control at the interconnection request stage would provide interconnection customers flexibility to address the results of interconnection studies or other regulatory processes¹¹⁹⁵ and afford flexibility for interconnection customers that are still actively negotiating with landowners close to the deadline for a cluster request window.¹¹⁹⁶ Establishing a requirement for 90% site control at the time of an interconnection request allows an interconnection request to be submitted even if a few parcels of land are still in negotiation or where a different site configuration arises based on the scoping meeting with the transmission provider. Moreover, the adopted approach provides flexibility for interconnection customers to sign certain leases for particularly challenging parcels at a later point in time, reducing the exposure to risk of expiration of those leases.¹¹⁹⁷ Additionally, we agree with commenters that shifting the 100% site control requirement until the execution of a facilities study agreement allows the interconnection customer to put less money at risk for obtaining particularly challenging land rights and to obtain a

more meaningful understanding of what upgrade costs its generating facility may be assigned, for instance, from the cluster study report that is provided before the execution of the facilities study agreement.¹¹⁹⁸

598. At the same time, we believe that the approach adopted in this final rule, along with the other reforms adopted herein, is sufficiently stringent to help prevent speculative, commercially non-viable proposed generating facilities from entering and continuing through the interconnection queue. As an initial matter, we establish a more stringent requirement for site control at the time of submission of an interconnection request than required by the *pro forma* LGIP prior to this final rule. In particular, obtaining nearly all of the land rights necessary to develop a proposed generating facility prior to submitting the interconnection request entails a significant commitment, both financial and in terms of the time and resources required to negotiate with landowners. Moreover, the 100% site control requirement at the time of the execution of the facilities study agreement adds further stringency to ensure generating facilities that proceed through the interconnection queue are the most likely to be commercially viable.

599. We agree with commenters that requiring 100% site control at the time of submission of an interconnection request may not be compatible with the project development cycle,¹¹⁹⁹ which includes stringent permitting requirements, and may disadvantage certain interconnection customers despite there being a path to full site control and commercial readiness.¹²⁰⁰ Further, requiring 100% site control at submission of the interconnection request would not allow for minor revisions to the generating facility plan if, upon meeting with the transmission provider at the scoping meeting, such revisions would facilitate an improved generating facility design. This could present a barrier to entry for interconnection customers with viable proposed generating facilities.

600. We decline to adopt commenters' suggestions that transmission providers be allowed to confirm site control

¹¹⁹⁷ Enel Initial Comments at 40.

throughout the interconnection process.¹²⁰¹ The adopted site control requirements require site control demonstrations at three specific points in the interconnection process—submission of the interconnection request; at the time of execution of the facilities study agreement; and when executing, or requesting the unexecuted filing of, an LGIA. We find that these points are sufficient to help prevent interconnection customers with commercially non-viable interconnection requests from entering and proceeding through the interconnection queue.

601. With respect to eliminating the option for any interconnection customer to submit a deposit in lieu of site control, except in limited circumstances where an interconnection customer demonstrates a regulatory limitation, we find that, because a deposit in lieu of site control does not demonstrate that an interconnection customer has the exclusive right to develop a site, it does not indicate that an interconnection customer is ready to proceed with construction and commercial operation of the generating facility. As a result, we believe that allowing deposits in lieu of site control for all interconnection customers, as requested by some commenters, would not help to prevent speculative, commercially non-viable interconnection requests from entering the interconnection queue. Thus, we decline to include such an option in the *pro forma* LGIP.

602. We are persuaded by commenters that requiring transmission providers to publicly maintain per MW acreage requirements for each generating facility technology type is necessary to afford adequate transparency and certainty to interconnection customers. At the same time, we do not believe that such acreage requirements must be contained within transmission providers' tariffs; rather, we find that, consistent with the rule of reason, transmission providers may choose to maintain acreage requirements in their business practice manuals or may otherwise post them on a publicly accessible website. We find that acreage requirements are properly classified as implementation details that do not significantly affect rates, terms, and conditions of service,¹²⁰² and we therefore do not require their inclusion in tariffs. This is consistent with previous Commission orders approving transmission providers' proposals to

specify technology-specific acreage requirements for site control in their business practice manuals.¹²⁰³ This will also afford transmission providers more flexibility in updating acreage requirements to account for technological advancements without being required to make FPA section 205 filings each time they seek to modify the acreage requirements. On the other hand, to give the interconnection customer certainty, as noted above, we clarify that the interconnection customer is required to meet the technology-specific acreage requirement for its generating facility publicly posted by the transmission provider at the time it submits its interconnection request.

603. To provide clarity for interconnection customers and transmission providers, we modify the *pro forma* LGIP definition of "Generating Facility" to replace "device" with "device(s)" to clarify that this definition includes hybrid generating facilities.¹²⁰⁴ We believe this clarification is necessary to ensure that hybrid generating facilities have the same rights and responsibilities as other types of generating facilities under the *pro forma* LGIP and *pro forma* LGIA. In response to commenters and consistent with the modified definition of "Generating Facility," we clarify that the transmission providers' per MW acreage requirements for each generating facility technology-type must include specific requirements for hybrid generating facilities. We also clarify that generating facilities that are co-located on the same site and behind the same point of interconnection are subject to the technology-specific acreage requirements based on the generating facilities' technology-type.

604. In response to requests for clarification as to whether the site control demonstration at the time of submission of the interconnection request applies to interconnection facilities as well as generating facilities, we clarify that the site control demonstration requirements apply only to the land needed for the generating facility. In the NOPR, the Commission

did not propose site control requirements for interconnection facilities.¹²⁰⁵ Based on this clarification, we decline to address comments suggesting alternative site control requirements for interconnection facilities or network upgrades.

(c) Site Control Considerations for Interconnection Customers With Regulatory Limitations

605. We adopt the NOPR proposal, with modification, to revise section 3.4.2 of the *pro forma* LGIP to include a limited option for interconnection customers to submit a deposit in lieu of site control when they submit their interconnection request—only if qualifying regulatory limitations prohibit the interconnection customer from obtaining site control. We adopt the NOPR proposal to provide that interconnection customers with regulatory limitations may submit an initial deposit in lieu of site control of \$10,000 per MW, subject to a floor of \$500,000 and a ceiling of \$2 million. As discussed below, this deposit shall be refundable but may not be applied toward interconnection studies or withdrawal penalties, if applicable. However, we decline to adopt the proposed requirement in the NOPR that an interconnection customer facing regulatory limitations must demonstrate 100% site control prior to the execution of a facilities study agreement. Instead, we modify the proposed requirement for an interconnection customer facing regulatory limitations to provide that a deposit in lieu of site control will be accepted and held by the transmission provider until the interconnection customer can demonstrate 90% site control prior to execution of the facilities study agreement or 100% site control at execution of the facilities study agreement or thereafter. Additionally, we modify the NOPR proposal to specify in Appendix B of the *pro forma* LGIA that interconnection customers facing qualifying regulatory limitations must demonstrate 100% site control within 180 calendar days of the effective date of the LGIA or the LGIA may be terminated per article 17

¹²⁰³ See *Midcontinent Indep. Sys. Operator, Inc.*, 169 FERC ¶ 61,173 at P 48 (finding MISO's proposal to place resource-specific acreage requirements in its business practice manuals to be appropriate because "these requirements include technical calculations that may require updates from time to time"); *Sw. Power Pool, Inc.*, 128 FERC ¶ 61,114 at P 48; *PJM Interconnection, L.L.C.*, 181 FERC ¶ 61,162 at P 102.

¹²⁰⁴ A hybrid generating facility is a generating facility composed of more than one device of different technology types for the production and/or storage for later injection of electricity that are located on the same site and are operated and dispatched as a single integrated generating facility.

¹²⁰⁵ Under the *pro forma* LGIP, interconnection facilities shall mean the transmission provider's interconnection facilities and the interconnection customer's interconnection facilities. Collectively, interconnection facilities include all facilities and equipment between the generating facility and the point of interconnection, including any modification, additions or upgrades that are necessary to physically and electrically interconnect the generating facility to the transmission provider's transmission system. Interconnection facilities are sole use facilities and shall not include distribution upgrades, stand alone network upgrades or network upgrades.

¹²⁰¹ See Indicated PJM TOs Initial Comments at 26; MISO Initial Comments at 53.

¹²⁰² See, e.g., *N.Y. Indep. Sys. Operator, Inc.*, 179 FERC ¶ 61,102 at PP 105–114.

(Default) of the *pro forma* LGIA and the interconnection customer may be subject to withdrawal penalties per new *pro forma* LGIP section 3.7.1.1 (Calculation of the Withdrawal Penalty).

606. We adopt the NOPR proposal to revise section 3.4.2 of the *pro forma* LGIP to provide how interconnection customers may demonstrate regulatory limitations. Specifically interconnection customers must provide to the transmission provider: (1) a signed affidavit from an officer of the company indicating that site control is unobtainable due to regulatory limitations as such term is defined by the transmission provider; and (2) documentation sufficiently describing and explaining the source and effects of such regulatory limitations, including a description of any conditions that must be met to satisfy the regulatory limitations and the anticipated time by which the interconnection customer expects to satisfy the regulatory restrictions.

607. With respect to what qualifies as a regulatory limitation, we require transmission providers to define regulatory limitations relevant to their service territory, to publicly post the definition, and to provide a narrative description of how they define regulatory limitations as part of their compliance filings. While we decline to require a uniform definition of regulatory limitations for all transmission providers, we clarify that a regulatory limitation is generally a Federal, state, Tribal, or local law that makes it practically infeasible to obtain site control within the time frame detailed in the *pro forma* LGIP. We allow transmission providers flexibility on how to publicly post the definition, such as by including it in business practice manuals or posting on a publicly accessible website. We consider the definition of regulatory limitations to be an implementation detail appropriately housed outside of transmission providers' tariffs, consistent with the rule of reason. We expect that the appropriate scope of regulatory limitations may vary by region and is likely to need to be updated over time as relevant Federal, state, Tribal, or local laws change. For these reasons, we do not require transmission providers to include their definitions of regulatory limitations in their tariffs.

608. We believe that these requirements will ensure a transparent, consistent, and orderly process to facilitate demonstration of regulatory limitations by interconnection customers and will establish minimum requirements to provide transmission

providers sufficient information to evaluate such demonstrations. We agree with commenters that transmission providers are best positioned to develop appropriate definitions of regulatory limitations to address the specific circumstances and unique regulatory limitations that interconnection customers in their regions may face. We believe that this approach preserves flexibility for transmission providers to account for regional diversity.

609. As noted above, we decline to adopt the proposed requirement in the NOPR that an interconnection customer facing regulatory limitations must demonstrate 100% site control prior to commencement of the facilities study. We agree with commenters that the requirement to demonstrate site control at the facilities study stage could act as a barrier for generating facilities faced with regulatory limitations in demonstrating site control because the permitting process may still be underway at the facilities study stage.¹²⁰⁶ To account for these barriers, we clarify that, in such circumstances, interconnection customers are permitted to proceed through the interconnection process and execute, or request the unexecuted filing of, an LGIA before obtaining site control, by providing documentation that demonstrates they are taking identifiable steps to secure the necessary regulatory approvals from the applicable Federal, state, and/or Tribal entities, as described above. Such interconnection customers must provide this documentation at the time of execution of the facilities study agreement and when executing, or requesting the unexecuted filing of, the LGIA, or alternatively, demonstrate site control in accordance with the requirements of the *pro forma* LGIP.

610. We acknowledge that certain interconnection customers developing generating facilities on sites owned or controlled by a government entity, such as those who site generating facilities on BLM lands, may not be able to demonstrate site control under the *pro forma* LGIP definition even by the later stages of the interconnection process because final permitting approval from BLM may not occur until after the facilities study stage.¹²⁰⁷ We believe the site control requirements included in the *pro forma* LGIP strike an appropriate balance between disincentivizing speculative interconnection requests and accommodating interconnection customers facing extensive permitting requirements by allowing such customers to submit a deposit in lieu of

site control where they demonstrate a qualifying regulatory limitation.

611. In response to commenters' concerns that, without clarification, the regulatory limitations exception to the site control requirement may be interpreted broadly to allow interconnection customers to claim regulatory limitations when obtaining site control is simply impractical or expensive, we reiterate that transmission providers may exercise discretion when defining regulatory limitations—generally a Federal, state, Tribal, or local law that makes it practically infeasible to obtain site control within the time frame detailed in the *pro forma* LGIP—as appropriate for interconnection customers in their regions. We believe that allowing flexibility in defining regulatory limitations will enable transmission providers to account for any local, county, Tribal and state regulations in their respective region that may delay an interconnection customer's efforts to obtain site control.

612. With respect to the amount of the deposit in lieu of site control for interconnection customers with regulatory limitations, we find that the amounts that we adopt in this final rule will help prevent speculative interconnection requests without placing an undue burden on interconnection customers. We are not persuaded by commenters that argue that the deposit amounts in lieu of site control for interconnection customers with regulatory limitations need to be even higher to deter interconnection requests that are not likely to achieve site control, particularly when considered in conjunction with the commercial readiness deposits and withdrawal penalties adopted in this final rule, discussed below. We also find that deposits in lieu of site control for interconnection customers with regulatory limitations should be refundable, but may not be applied toward interconnection studies or withdrawal penalties. We find that making these deposits in lieu of site control for interconnection customers with regulatory limitations non-refundable, as some commenters argue, may unduly burden certain interconnection customers facing regulatory limitations where certain regulatory constraints may be beyond their control.

c. Commercial Readiness

i. NOPR Proposal

613. In the NOPR, the Commission proposed to revise the *pro forma* LGIP to include a commercial readiness

¹²⁰⁶ See, e.g., NV Energy Initial Comments at 17.

¹²⁰⁷ See, e.g., *id.*

framework, which included commercial readiness demonstration options and commercial readiness deposits.¹²⁰⁸ The Commission explained that such a framework would encourage interconnection customers that are not ready to proceed to withdraw from the interconnection queue earlier in the study process while also providing them the flexibility to enter and remain in the interconnection queue without an off-take agreement; reduce the number of times an interconnection customer executes and suspends an LGIA for a speculative interconnection request, only to later withdraw the request, leading to the shifting of network upgrade costs to lower-queued interconnection customers; and reduce the strain on transmission providers and enable viable interconnection requests to progress more quickly through a less congested interconnection queue, thereby remedying the unjust and unreasonable Commission-jurisdictional rates discussed in section II of this final rule.

614. Therefore, the Commission proposed to establish the defined terms “commercial readiness demonstration”¹²⁰⁹ and “commercial readiness deposit”¹²¹⁰ in the *pro forma* LGIP.¹²¹¹ The Commission also proposed to add to sections 3.4.2, 7.5, and 8.1 of the *pro forma* LGIP the following options as acceptable forms of commercial readiness demonstration to enter into the cluster study and cluster restudy:

- An executed term sheet (or comparable evidence) related to a contract, binding upon the parties to the contract, for sale of (1) the constructed generating facility, (2) the generating facility’s energy or capacity, or (3) the generating facility’s ancillary services; where the term of sale is not less than five years;
- Reasonable evidence that the generating facility has been selected in a resource plan or resource solicitation process by or for a load-serving entity (LSE), is being developed by an LSE, or is being developed for purposes of a sale to a commercial, industrial, or other large end-use customer; or

- A provisional LGIA which has been filed at the Commission (executed or unexecuted), which is not suspended and includes a commitment to construct the generating facility.

615. The Commission also proposed to add to section 8.1 of the *pro forma* LGIP the following options to serve as forms of commercial readiness demonstration to enter the facilities study, to be provided with the executed facilities study agreement:

- An executed contract (as opposed to a term sheet), binding upon the parties to the contract, for sale of (1) the constructed generating facility, (2) the generating facility’s energy or capacity, or (3) the generating facility’s ancillary services; where the term of sale is not less than five years;
- Reasonable evidence that the generating facility has been selected in a resource plan or resource solicitation process by or for an LSE, is being developed by an LSE, or is being developed for purposes of a sale to a commercial, industrial, or other large end-use customer; or
- A provisional LGIA accepted for filing by the Commission, which is not suspended, with reasonable evidence that the generating facility and interconnection facilities have commenced design and engineering.¹²¹²

616. The Commission also proposed to require the interconnection customer to inform the transmission provider of any material change to its commercial readiness demonstration. The Commission proposed to require the transmission provider to give the interconnection customer 10 business days to demonstrate satisfaction with the applicable requirement after notification of a change to the interconnection request’s commercial readiness demonstration.¹²¹³ The Commission explained that the interconnection customer would have the option to submit a commercial readiness deposit within the 10-day cure period if the change to the commercial readiness demonstration meant that the interconnection request no longer satisfied the criteria.

617. The Commission preliminarily concluded that this approach was appropriate for all transmission providers and therefore proposed to allow interconnection customers the option to submit a commercial readiness deposit, in lieu of demonstrating commercial readiness through the commercial readiness demonstration options required to enter a cluster study,

cluster restudy, and facilities study.¹²¹⁴ The Commission noted that, outside of RTOs/ISOs, transmission providers may be able to provide certain contractual arrangements to their own generating facilities or other preferred interconnection customers, such as the term sheet option noted above, which could lead to unduly discriminatory behavior. The Commission stated that this deposit in lieu of demonstrating commercial readiness may potentially prevent any undue discrimination in the generator interconnection process, consistent with the adoption of a standard set of procedures in the first instance.¹²¹⁵

618. The Commission proposed to revise the *pro forma* LGIP to include a framework to allow interconnection customers to provide a commercial readiness deposit in lieu of meeting commercial readiness requirements in the following amounts:

- Two times the study deposit amount to enter the initial cluster study phase;
- Five times the study deposit amount after the initial cluster study phase and before the system impact restudy phase; and
- Seven times the study deposit amount after receipt of the facilities study agreement.¹²¹⁶

619. The Commission clarified that the proposed commercial readiness deposit is separate from the study deposit.¹²¹⁷ The Commission stated that the commercial readiness deposit would be returned if the interconnection customer later makes a commercial readiness demonstration. If the interconnection customer withdraws from the interconnection queue, the Commission proposed that the commercial readiness deposit would be applied toward any incurred withdrawal penalties.

620. Additionally, the Commission proposed revisions to the list of development milestones in section 11.3 of the *pro forma* LGIP to clarify the following:

- A contract for the supply or transportation of fuel and a contract for the supply of cooling water will not be accepted for wind, storage, or solar photovoltaic resources;
- Comparable evidence of a contract for the sale of energy or capacity will be accepted; and
- Any of the commercial readiness demonstration options accepted to enter

¹²⁰⁸ NOPR, 179 FERC ¶ 61,194 at P 128.

¹²⁰⁹ The Commission proposed to revise section 1 of the *pro forma* LGIP to provide that commercial readiness demonstration shall have the meaning set forth in sections 3.4.2, 7.5, and 8.1 of the *pro forma* LGIP. *Id.* P 129 n.204.

¹²¹⁰ The Commission proposed to revise section 1 of the *pro forma* LGIP to provide that commercial readiness deposit shall mean a deposit paid in lieu of submitting a commercial readiness demonstration, as set forth in sections 3.4.2, 7.5, and 8.1 of the *pro forma* LGIP. *Id.* P 129 n.205.

¹²¹¹ *Id.* P 129.

¹²¹³ *Id.* P 131.

¹²¹⁴ *Id.* P 132.

¹²¹⁵ *Id.* (citing Order No. 2003, 104 FERC ¶ 61,103 at PP 1–2).

¹²¹⁶ *Id.* P 133.

¹²¹⁷ *Id.* P 134.

the facilities study will be accepted along with the executed LGIA or within 15 days of the Commission issuing an order on the unexecuted LGIA filing, while a commercial readiness deposit will not be accepted.¹²¹⁸

621. The Commission preliminarily found that this framework would allow interconnection customers to calculate the exact deposit that would be required prior to entering the interconnection queue, as it is based on multiples of the study deposit, and the study deposit is based on the size of the proposed generating facility, as chosen by the interconnection customer, leading to predictability in the deposit amount.¹²¹⁹ The Commission explained that this increased transparency in the deposit amount early in the interconnection process would discourage speculative interconnection requests from entering the interconnection queue.

622. The Commission sought comment on whether the Commission should also establish, as other alternative demonstrations of commercial readiness, evidence of a commitment to participate in RTO/ISO markets, a site-specific purchase order for generating equipment specific to the interconnection request, or a statement signed by an officer or authorized agent of the interconnection customer attesting that the generating facility is to be supplied with major electric generating components (such as wind turbines) with a manufacturer's blanket purchase agreement to which the interconnection customer is a party.¹²²⁰

ii. Comments

(a) Comments in Support

623. Several commenters support the commercial readiness framework because they believe that it will reduce the submission of exploratory or speculative interconnection requests.¹²²¹ These commenters argue that requiring financial commitments and commercial readiness requirements early in the interconnection process, as

the Commission proposed, is important to more efficiently allocate transmission provider resources to generating facilities that are more likely to achieve commercial operation and to enhance the certainty of interconnection study results, benefiting all interconnection customers. Pacific Northwest Utilities similarly assert that requiring commercial readiness at an appropriate point in the cluster study process minimizes the cost and inefficiency risk of restudies and increases the probability that planned network upgrades will be funded and constructed.¹²²² Navajo Utility also supports the Commission's use of the commercial readiness requirements to discourage speculative interconnection requests from slowing the interconnection process.¹²²³

624. Navajo Utility explains that, as an LSE that constructs generating facilities for the benefit of the Navajo Nation and to export clean energy to surrounding LSEs, it specifically supports the second criterion related to generating facilities developed by an LSE.¹²²⁴ NRECA contends that the proposed commercial readiness demonstration requirements protect generating facilities that have been committed to serve load from being hindered by interconnection requests for generating facilities that are still looking for off-takers, thereby helping reduce the pressure on transmission provider interconnection queues.¹²²⁵

625. APPA-LPPC note that there may be power purchase agreements, asset sales agreements and competitive procurement programs that currently contemplate full knowledge of interconnection costs before deals may be finalized.¹²²⁶ However, APPA-LPPC argue that there is nothing inevitable about the structure and sequencing of these arrangements. APPA-LPPC state that, assuming the Commission moves ahead with a commercial readiness requirement, it is not hard to envision revisions to standard form power purchase agreements, asset sales agreements, and bids into power procurement programs that are contingent on specified assumptions regarding interconnection costs. APPA-LPPC contend that with improvements in the availability of interconnection costs, along with much-needed stability in the interconnection queues, it is reasonable to expect that

interconnection costs will be substantially more predictable than is now the case.

626. SoCal Edison supports the proposals to require the interconnection customer to notify the transmission provider of any material change to its commercial readiness demonstration and to require the transmission provider to give the interconnection customer 10 business days to cure the commercial readiness deficiency.¹²²⁷

(b) Comments in Opposition

627. Several commenters argue that the NOPR proposal is inconsistent with prevailing commercial practices (especially those in RTOs/ISOs), sets unreasonable standards for off-take agreements, and ignores the commercial reality of the competitive solicitation process, which could create an undue preference for self-build options in areas that rely on competitive solicitations and undue discrimination against merchant developers, thereby subverting competition in wholesale power markets.¹²²⁸ Some commenters contend that the proposed commercial readiness demonstration options are heavily weighted in favor of incumbent utility practices, such as evidence of a power purchase agreement or executed term sheet or evidence that a project has been selected in a resource plan or resource solicitation process by an LSE.¹²²⁹

628. Enel argues that ratepayers and off-takers benefit from generating facilities being selected in competitive processes that consider both a generating facility's inherent characteristics and its interconnection costs and schedule, which cannot be done if off-take arrangements are made prior to applying for interconnection service.¹²³⁰ NextEra asserts that being part of the interconnection queue is an essential step in the competitive

¹²²⁷ SoCal Edison Initial Comments at 9.

process,¹²³¹ and Public Interest Organizations note that utilities conducting RFPs for their resource plans often require at least a position in an interconnection queue as a precondition of offering.¹²³² Cypress Creek argues that commercial readiness demonstrations should not apply until an interconnection customer receives the results from the proposed initial cluster study, which may be required to bid into a resource solicitation.¹²³³ Cypress Creek contends that it is impractical to include the proposed demonstration requirements at early stages in the interconnection study process and that this construct is not workable in markets where merchant sales are common.

629. Enel, NextEra, and Public Interest Organizations argue that precluding entry into the interconnection queue due to lack of a demonstration of commercial readiness would be an anticompetitive measure favoring entities, such as incumbent transmission providers, that could favor their own proposed generating facilities ahead of others because of their enhanced ability to demonstrate their proposed generating facilities as commercially ready.¹²³⁴ For instance, CREA and NewSun assert that, unlike independent power producers, an incumbent, vertically integrated utility can easily meet the second prong of the readiness criteria to enter the interconnection queue and proceed to the facilities study by simply identifying its preferred resource in its own resource plan, selecting it as the winning bid in its own utility-run RFP, or just attesting that the utility is “developing” the generating facility.¹²³⁵

630. CREA and NewSun claim that the commercial readiness proposal would drive most, if not all, independent power producers from the market, which would raise costs to consumers by eliminating competition and innovation.¹²³⁶ SEIA asserts that by proposing a commercial readiness demonstration framework that is nearly impossible for independent power producers to meet, the Commission is incorrectly implying that generating facilities developed by independent power producers are inherently not

commercially viable.¹²³⁷ SEIA emphasizes that independent power producers play a critical role in bringing robust competition to markets by driving innovation and decreasing the cost of providing power.¹²³⁸

631. Alliant Energy claims that requiring demonstration of commercial readiness prior to an interconnection customer entering the interconnection queue may do more harm than good.¹²³⁹ Alliant Energy argues that the commercial viability of a proposed generating facility depends heavily on the costs of network upgrades and interconnection facilities required to accommodate a generating facility’s interconnection, which cannot be known prior to a generating facility receiving cost estimates that are dependable and enable interconnection customers to make decisions during the interconnection process.

632. Vistra argues that the proposed increase in study deposits, withdrawal penalties, and exclusive site control requirements will significantly reduce the number of speculative interconnection requests entering the interconnection queue, making the commercial readiness proposal redundant.¹²⁴⁰ Vistra notes that the Commission has relied on fact-specific showings to accept requirements to demonstrate commercial readiness thus far, and Vistra argues that the fact that the Commission has accepted a transmission provider’s revised LGIP under FPA section 205 does not establish that the *pro forma* LGIP is unjust and unreasonable without the commercial readiness proposal.¹²⁴¹

633. Vistra states that, beyond simple timing concerns, procurement decisions and eligibility to enter the interconnection queue are interrelated in a way that creates a chicken-and-egg problem.¹²⁴² Vistra explains that it is difficult for a generating facility to be shortlisted for procurement without line of sight to obtaining a signed interconnection agreement because the signed interconnection agreement brings more certainty to the generating facility’s commercial operation date. Vistra expresses concern that the Commission’s proposal to require an executed term sheet to enter the interconnection queue and an executed contract to enter the facilities study process will simply shift the burden of this chicken-and-egg problem to the

procurement process. Vistra asserts that the status quo appropriately balances the inherent difficulty of coordinating procurement and interconnection.

634. Invenergy argues that the proposed requirements are inappropriate and should not be applied nationally because they are based on a small subset of transmission providers that have adopted “readiness” requirements with little evidence that they are effective, given the continuing interconnection queue reform efforts in some of those same regions.¹²⁴³ Invenergy adds that, if additional assurance of an interconnection customer’s intent to pursue its interconnection request is needed, the Commission should consider a requirement to post a certain amount of security that becomes increasingly at risk to move through the interconnection queue, as is done in some RTO/ISO regions.

635. NextEra asserts that generating facilities may be fully viable based on criteria that are different from what the NOPR proposes. For example, NextEra states that it is possible that storage or other types of generating facilities entering the market will not require power purchase agreements or designation as network resources to be commercially viable.¹²⁴⁴

636. R Street argues that a key to efficient generating facility development is to enable parallel work flows.¹²⁴⁵ R Street claims that, by imposing extensive prerequisites to advance in the interconnection process, commercial readiness requirements would introduce greater process dependencies in generating facility development. R Street adds that granting non-RTO/ISO transmission providers discretion over commercial readiness requirements could lead to discriminatory behavior (e.g., non-RTO/ISO transmission providers withholding off-take contracts to discriminate against other potential suppliers).

637. MISO states that it is concerned about the utility and impacts of the proposed commercial readiness framework.¹²⁴⁶ MISO explains that interconnection customers with commitments from off-takers can be commercially unready and often cause the greatest interconnection queue disruption by lingering the longest in the queue. As an example, MISO posits a proposed generating facility that would be commercially viable provided it does not incur network upgrade costs

in excess of \$5 million dollars. MISO argues that such a generating facility is likely to remain in the interconnection queue despite not having a viable business case, in the hopes that other interconnection customers will withdraw their requests and costs will decrease. MISO asserts that, to indicate commercial readiness, a term sheet or contract would need to show not only that there was an off-taker but also that the projected income for the proposed generating facility is sufficient to render the generating facility commercially viable, given estimated study and network upgrade costs, which would be exceedingly difficult to require from interconnection customers and nearly impossible for a transmission provider to evaluate and verify.

638. Anbaric claims that the proposed core readiness requirements do not align with the development trajectory of planned transmission projects for offshore wind generation.¹²⁴⁷

639. NextEra asserts that commercial readiness requirements at the interconnection request stage are inappropriate.¹²⁴⁸ NextEra explains that interconnection customers do not have a simple test for distinguishing speculative interconnection requests from other interconnection requests. Rather, NextEra continues, successful generating facility development depends on whether the interconnection customer concludes that the interconnection arrangement is acceptable and whether the generating facility's location and costs are agreeable to its customers.

640. NextEra also argues that meeting any readiness milestones after the submission of an interconnection request (*e.g.*, when entering the facilities study phase) should be premised on the interconnection customer having received timely and accurate study results, including from affected systems.¹²⁴⁹ NextEra asserts that it is not just and reasonable to impose increasingly strict requirements on interconnection customers without devising means of accelerating interconnection queue processing by transmission providers and ensuring transmission providers comply with their tariffs.

641. Longroad recommends that the Commission clearly tie the interconnection customer's commitment to pay for network upgrades to a security deposit applied toward the costs thereof during the cluster study phases, and that the security deposits

for network upgrades progressively increase at each stage of the cluster study process.¹²⁵⁰ Longroad asserts that in the initial cluster study, the security deposit should be a modest percentage of the allocated network upgrade cost and increase to, for example, 25% of the network upgrade cost allocation to enter the facilities study. Longroad contends that the interconnection customer should have the option to either fully fund the network upgrade as a milestone in the LGIA or to fund in advance the transmission provider's estimated quarterly spending towards engineering, procurement, and construction of the network upgrades.

(c) Comments on Specific Proposals

(1) Proposed Readiness Demonstrations

642. Commenters raise significant issues with the readiness demonstration options proposed in the NOPR. With respect to the first proposed readiness demonstration option,¹²⁵¹ commenters argue that providing power purchase agreements or term sheets will be unworkable for most interconnection customers, particularly merchant developers, because: (1) developers do not have sufficient information about interconnection costs to move forward with a term sheet or power purchase agreement at the time they enter into the interconnection study process; and (2) the proposals to make more information available to interconnection customers prior to submitting an interconnection request will not provide sufficiently granular or certain information to overcome this barrier.¹²⁵²

643. Commenters further note that the vast majority of power purchasers seek generating facilities with advanced interconnection queue positions (with

preference for a finalized LGIA or SGIA) before signing a power purchase agreement or finalizing a state procurement.¹²⁵³ CREA and NewSun, as well as SEIA, argue that a contract for provision of ancillary services, is almost entirely foreclosed to many non-synchronous generating facilities because nearly every transmission provider bars non-synchronous generating facilities from providing ancillary services, either explicitly or through operating requirements.¹²⁵⁴

644. Commenters also assert that, if independent power producers are forced to enter into contracts before costs are certain, then they would need to incorporate that uncertainty into the power purchase agreement offer, which would drive up the costs of these contracts, resulting in higher consumer costs.¹²⁵⁵ Commenters contend that, if the independent power producer does not reflect the costs of the network upgrades in its power purchase agreement price, either the independent power producer or the consumer may attempt to break the contract, which would lead to increased contractual litigation.¹²⁵⁶ Vistra adds that the purchaser will then need to start the procurement process over or choose to over-procure as insurance against potential contract termination, to the detriment of reliability and cost.¹²⁵⁷

645. SoCal Edison argues that, in some regions, an executed contract option for entering the facilities study could unintentionally encourage LSEs to sign contracts with developers for more energy or capacity than they need to secure resources to meet their procurement targets.¹²⁵⁸ SoCal Edison contends that competition in certain areas for particular generation resources may be high, which may force other LSEs to prematurely enter into contracts with developers to secure generation without the benefit of the facilities study, which is currently relied on by LSEs to assess commercial viability of a generating facility before contracts are signed. AEE asserts that customers may ultimately bear the cost of the selection of generating facilities that may not be the least cost options in the market but

are able to execute a term sheet or power purchase agreement regardless of the ultimate level of interconnection costs.¹²⁵⁹

646. Commenters also assert that it is unreasonable to expect that a buyer and seller will be able to finalize negotiation of a contract between the time of the cluster restudy (or amendment of the restudy if additional interconnection customers withdraw upon receipt of the restudy results) and the time the facilities study agreement must be executed.¹²⁶⁰

647. CAISO requests that the Commission describe in detail what would constitute a term sheet.¹²⁶¹ CAISO states that in its experience with similar tariff provisions, interconnection customers frequently try to submit questionable or even misleading documentation to meet the tariff requirements.

648. Invenergy argues that, to the extent an off-take agreement or term sheet remains an option to demonstrate readiness, the Commission should clarify that transmission providers are not entitled or even permitted to review the commercial terms of the term sheet or agreement, which may be confidential and is not subject to the transmission provider's discretion.¹²⁶²

649. GSCE does not dispute that readiness requirements are important but argues that basing them on contracting status is misguided for the following reasons: (1) it does not focus on early-stage developmental steps that drive generating facility viability and indicate true commercial readiness; (2) it provides incentives for interconnection customers that have not taken concrete steps toward readiness to bid low in competitive solicitations, creating fictional "contracted" capacity that may never prove viable; (3) the contracting landscape is evolving, and long-term contracting is no longer required for successful project financing or the emerging realities of capital markets, and with the inflationary environment, long-term contracts may currently be harder to finance than short-term contracts; and (4) a focus on contracting to enter the interconnection study process forces commercial negotiations to occur before generating facilities are studied and have sufficient cost certainty or development timeline assurances.¹²⁶³

650. Commenters also point to significant issues with the second proposed readiness demonstration option.¹²⁶⁴ They argue that requiring evidence that a proposed generating facility is "selected in a resource plan or resource solicitation plan by or for [an LSE], is being developed by [an LSE], or is being developed for purposes of a sale to a commercial, industrial, or other a large end-use customer" is discriminatory and preferential without cause or reasonable support.¹²⁶⁵

651. Several commenters argue that the option for interconnection customers to demonstrate commercial readiness by showing that the generating facility is being developed for purposes of a sale to an end-use customer suffers a timing challenge because it is nearly impossible for the independent power producer to price a sales contract to a retail customer, or the customer having much interest in discussing the transaction, without having reasonable certainty as to the generating facility's likely interconnection costs.¹²⁶⁶

652. SoCal Edison recommends that the Commission clarify or give additional examples of reasonable evidence that a proposed generating facility has been selected in an LSE's resource solicitation process or allow a transmission provider to determine how this option can be met.¹²⁶⁷ SoCal Edison states that evidence that a proposed generating facility has been short-listed in an LSE request for offer should be considered reasonable evidence for moving into the facilities study.

653. Several commenters argue that the third readiness demonstration option, a provisional LGIA,¹²⁶⁸ is likely unworkable as well because it would require independent power producers to assume almost all the risk of the network upgrade costs without knowing

those costs.¹²⁶⁹ On the other hand, CAISO asserts that interconnection customers could escape financial consequences and bypass the NOPR's requirements through the provisional LGIA option.¹²⁷⁰ CAISO argues that, at a minimum, the Commission should allow transmission providers to provide the provisional LGIA option where they believe it will work, but not require all transmission providers to enable interconnection customers to bypass commercial readiness through provisional LGIAs.

654. SoCal Edison and CAISO recommend that the Commission provide additional guidance on, or more clearly define, the term "provisional LGIA."¹²⁷¹ CAISO also states that it is unclear how interconnection customers that have yet to be studied could submit provisional LGIAs because LGIAs describe the network upgrades and facilities from interconnection studies.¹²⁷² CAISO states that interconnection customers are likely to request provisional LGIAs because demonstrating commercial readiness in RTOs/ISOs is generally impossible until after studies are complete.

655. Commenters claim that the record does not support adopting the proposed commercial readiness framework within RTOs/ISOs, arguing that it would be unreasonable and unduly discriminatory.¹²⁷³ These commenters argue that the record in RTOs/ISOs does not support the NOPR's assertion that generating facilities are generally not constructed without some form of off-take agreement. They assert that the commercial readiness criteria should not be required *at all* in RTO/ISO regions (with locational marginal price-based markets), where generating facilities can move forward in many cases without a specific off-taker. Some commenters also argue that an RTO/ISO should not have to evaluate contracts for the sale of a generating facility's output or determine whether the generating facility has been selected in a resource plan or resource solicitation process in

¹²⁶⁴ Reasonable evidence that the generating facility has been selected in a resource plan or resource solicitation process by or for an LSE, is being developed by an LSE, or is being developed for purposes of a sale to a commercial, industrial, or other large end-use customer.

any of the potentially multiple states within its footprint.¹²⁷⁴

656. Commenters argue that the proposed 10-business day cure period to resolve potential commercial readiness deficiencies is insufficient given the complicated business and technical decisions involved.¹²⁷⁵ Invenergy states the interconnection process often extends for several years and it is entirely possible that commercial arrangements may change during that time.¹²⁷⁶ Invenergy states that these changes may require additional negotiations, but should not call into question the customer's commitment to developing its project and risk being withdrawn from the interconnection queue. Ørsted requests a 30-business day cure period instead.¹²⁷⁷

(2) Alternative Commercial Readiness Demonstrations

657. Some commenters argue that the Commission should consider expanding this list of proposed criteria to include other demonstrations of commercial readiness, such as completion of environmental, local, state, or Federal permitting processes.¹²⁷⁸ CREA and NewSun, as well as Northwest and Intermountain, ask the Commission to provide QFs a more relaxed readiness option than a fully executed power purchase agreement, especially when a transmission provider requires qualifying facilities to have a completed interconnection study result to obtain a draft power purchase agreement under its state Public Utility Regulatory Policies Act (PURPA) implementation programs (*e.g.*, PacifiCorp).¹²⁷⁹ CREA and NewSun suggest that the Commission could allow QFs to submit an affidavit from the interconnection customer, stating that the avoided cost rates offered are sufficient to finance and bring the QF into commercial operation if interconnection can be obtained.¹²⁸⁰ CREA and NewSun contend that this option is consistent with the Commission's obligation to adopt regulations that encourage development of QFs.

658. Comments are mixed on the potential additional demonstrations of commercial readiness on which the Commission requested comment in the NOPR. Several commenters support the three potential other readiness options suggested in the NOPR, or a combination thereof.¹²⁸¹

659. Other commenters oppose the various alternative demonstration options. With regard to the first—evidence of a commitment to participate in RTO/ISO markets—several commenters argue that the proposal would be essentially meaningless because practically all interconnection requests would qualify.¹²⁸²

660. As for the second and third potential alternative demonstration options—a site specific purchase order for generating equipment specific to the interconnection request, or a statement signed by an officer or authorized agent of the interconnection customer attesting that the generating facility is to be supplied with major electric generating components (such as wind turbines) with a manufacturer's blanket purchase agreement to which the interconnection customer is a party—PacifiCorp and Ameren oppose these options.¹²⁸³ PacifiCorp argues that, although it originally adopted a similar provision in its initial interconnection queue reform process, in the course of administering its first two cluster studies, it determined that this readiness option set a low hurdle that speculative interconnection requests could easily overcome.¹²⁸⁴ Similarly, SPP does not support site-specific purchase orders or statements attesting to supply of major components as evidence of commercial readiness.¹²⁸⁵ Enel asserts that it is inappropriate to require procurement of major power equipment prior to an interconnection request or, in many cases, even before executing an LGIA.¹²⁸⁶ Enel contends that requiring procurement of specific generating equipment prior to applying for interconnection is detrimental to reliability because newer technologies procured after the execution of an LGIA

often have advanced features that did not exist a few years earlier. Enel explains that it procures major wind, solar, and battery generation equipment between 12 and 24 months prior to energizing a new generating facility to the transmission system, typically after execution of an LGIA and a full investment review (including knowledge of interconnection costs and schedules) are complete. Enel adds that a generating facility without interconnection results carries too much risk for interconnection customers and investors to risk significant financial deposits to reserve site specific generation equipment. Similarly, Xcel states that interconnection customers want the flexibility to wait until the last minute to order equipment and start construction, which results in different equipment being ordered than initially expected.¹²⁸⁷

661. Some commenters argue that the proposed commercial readiness requirements unduly discriminate against pumped storage projects, which often do not have the commercial pathways and timelines associated with other types of generating facilities.¹²⁸⁸ Those commenters explain that the development of a pumped storage project is an iterative process of assessment and de-risking that takes several years to complete, at a cost of tens of millions of dollars. They suggest that achieving one of the following three criteria would be sufficient evidence of commercial readiness for a pumped storage project: (1) a filing of notice of intent to apply for an original license and pre-application document with the Commission; (2) an executed memorandum of understanding, letter of intent, or an equivalent term sheet with a utility; or (3) selection of the project in an integrated resource plan (IRP) process. They add that, in lieu of having achieved one of these, a commercial readiness deposit of \$2,000 per MW is appropriate. These commenters ask the Commission to add the receipt of a Commission license to the list of milestone developments in section 11.3 of the *pro forma* LGIP.

662. Commenters recommend several alternative bases to determine commercial readiness, including: (1) a 50% generator tie line site control requirement;¹²⁸⁹ (2) a project development plan to determine readiness;¹²⁹⁰ (3) documentation of developer due diligence, including

available transmission capacity and modeling;¹²⁹¹ (4) participating in and meeting the eligibility requirements for a state-mandated procurement program;¹²⁹² and (5) an executed firm point-to-point transmission service agreement from the proposed point of interconnection to a point of consumption for the generating facility's output.¹²⁹³

663. To address the Commission's concerns while maintaining the commercial viability of planned transmission projects for offshore wind, Anbaric asks the Commission to consider requiring such projects to make the following demonstrations to satisfy the commercial readiness requirements: (1) site control of property near the point of interconnection suitable for a converter station of a specified size (expressed in MWs) needed to enable high voltage direct current (HVDC) lines carrying offshore wind energy to be put onto the regional transmission system; (2) site control of a property at a coastline location suitable for the transition from seabed to terrestrial routes sufficient to move the specified amount of MWs identified in interconnection requests; and (3) a state procurement policy or goal to procure a defined amount of offshore wind generation associated with a planned transmission project within a defined time frame.¹²⁹⁴

664. Eversource supports the Commission's proposed commercial readiness framework but asks the Commission to strengthen it by requiring the interconnection customer to demonstrate project financing (along with the current proposed requirements).¹²⁹⁵ Eversource also asks the Commission to require interconnection customers to provide a preliminary project schedule that identifies all key milestones and timelines.

665. Fervo Energy argues that, for cluster study and restudy processes, the proposed framework should allow the interconnection customer to demonstrate readiness by using a combination of options, such as executed term sheets for a portion of the facility plus deposits on a \$/MW basis calculated from the quotient of the study deposit amount and the proposed generating facility size.¹²⁹⁶

666. ENGIE and SEIA ask the Commission to make the commercial

readiness demonstration a requirement for entering into an LGIA.¹²⁹⁷ ENGIE and SEIA assert that a later-stage commercial readiness demonstration will allow independent power producers to make rational business decisions based on reasonably certain network upgrade costs.

(3) Deposit in Lieu of Readiness

667. Some commenters contend that the proposal to allow interconnection customers to provide a deposit in lieu of demonstrating commercial readiness does not cure the potential for undue discrimination that results from retaining commercial readiness options that are easily attained by incumbent, vertically integrated utilities but infeasible for independent power producers.¹²⁹⁸ These commenters claim that, because it is nearly impossible for an independent power producer to make any of the commercial readiness demonstrations currently proposed, the deposit in lieu of meeting the commercial readiness requirements would not be an "option" for independent power producers but rather would be the *only* path forward in the interconnection process.

668. Some commenters support the deposit in lieu of readiness option, as proposed. For instance, SoCal Edison asserts that an increased financial requirement via a deposit in lieu of demonstrating commercial readiness should help to identify those interconnection requests that are economically viable and to which the transmission provider should focus its resources.¹²⁹⁹ Northwest and Intermountain state that providing interconnection customers with an option to demonstrate commercial readiness through a deposit is essential to ensuring a competitive market for generation by providing a way for independent power producers to enter the interconnection queue.¹³⁰⁰ MISO supports the concept of commercial readiness deposits, with the first one due at the time of submission of an interconnection request, which would then be forfeited if the interconnection request does not result in an LGIA, and a second, higher deposit due at the time of execution of an LGIA, to be refunded upon a generating facility achieving

commercial operation.¹³⁰¹ MISO also supports the Commission's proposal to make these deposits separate from, and in addition to, study deposits, as well as MISO's existing milestone requirements in its interconnection study process. MISO believes that these proposals could be a useful deterrent to speculative or unviable interconnection requests entering into or lingering in MISO's interconnection queue.

669. MISO TOs argue that, in keeping with the overall theme of flexibility and respect for regional differences, the Commission should afford transmission providers flexibility to adopt readiness requirements and deposit amounts that are appropriate for their regions.¹³⁰² MISO suggests deposits could consist of two components: (1) a minimum amount per interconnection request, regardless of proposed service levels, and (2) a per MW amount.¹³⁰³ MISO asks that the commercial readiness deposit increase the pool of money available to offset cost shifts, and any additional monies be utilized to defray the study costs of interconnection customers that actually reach commercial operation.

670. Some commenters argue that allowing deposits and security to be posted in lieu of demonstrating commercial readiness may not be sufficient to accomplish the NOPR's goals,¹³⁰⁴ and may, in fact, hinder the NOPR's goals.¹³⁰⁵ APPA-LPPC assert that the financial commitments proposed in the NOPR, while not insignificant, do not reflect the potentially substantial cost of continuing to tolerate the ongoing uncertainty.¹³⁰⁶ APS claims that, in its experience, speculative interconnection requests are well-funded but may not be commercially viable.¹³⁰⁷ Tri-State asserts that the fact that all 53 applicants in its 2022 interconnection queue elected to provide additional financial security at phase 1 in its study process, instead of one of three readiness milestones, demonstrates that deposits are not effective at deterring unready interconnection requests from entering the interconnection queue.¹³⁰⁸

671. Other commenters recommend changes to the Commission's proposal.

For instance, North Dakota Commission recommends either removing the deposits in lieu of demonstrating readiness or increasing readiness deposit amounts to an amount that provides a quantifiable, evidence-based reduction in speculative interconnection requests.¹³⁰⁹

672. PacifiCorp states that its interconnection process also allows an interconnection customer to make a payment of \$3,000/MW in lieu of meeting commercial readiness demonstration requirements.¹³¹⁰ PacifiCorp expresses concern that the NOPR proposal would reduce the payment obligation (in comparison to what is required today under PacifiCorp's LGIP), thus lowering the bar for more speculative interconnection requests to enter the interconnection queue and increasing risks for further study delays.

673. CAISO contends that the Commission's proposed deposit requirements are low, such that any modern interconnection customer could meet them.¹³¹¹ CAISO questions whether the deposit requirements (or any deposit requirements) would deter uncompetitive interconnection requests or reduce interconnection queue sizes. CAISO argues that using arbitrary figures to set deposit requirements is unlikely to yield meaningful results. CAISO urges the Commission to gather more data or hold a technical conference to develop meaningful deposit amounts, based on data provided by transmission providers.

674. EEI and NRECA suggest further reducing potential risks of speculative interconnection requests by making deposits non-refundable.¹³¹² NRECA argues that the deposit in lieu of readiness should only be refunded when the interconnection customer has provided an appropriate commercial readiness demonstration or achieves commercial operation, adding that allowing any other refund of this deposit dilutes the effectiveness of this readiness requirement.¹³¹³ EEI and NYTOs assert that a deposit in lieu of readiness should only be allowed in limited circumstances.¹³¹⁴

675. Commenters urge the Commission to decline to adopt a commercial readiness standard that is tied to the status of an interconnection

customer's off-take arrangements and instead to adopt an increasingly "at-risk" readiness deposit framework, similar to what has been accepted in various RTOs/ISOs.¹³¹⁵ They contend that more directly associating readiness deposits to the estimated costs and likely impact to other interconnection customers if an interconnection customer withdraws would provide greater accountability for interconnection customers and transmission providers.¹³¹⁶

676. PJM and Omaha Public Power assert that the Commission should consider basing the readiness deposit amount on an average cost of network upgrades in the region determined during previous studies, as this method would be based on a less arbitrary valuation than as proposed.¹³¹⁷ SEIA urges the Commission to set the value of the deposit amount as a percentage of the estimated network upgrade costs, which should be capped at \$2 million.¹³¹⁸ rPlus recommends a commercial readiness deposit of \$2,000/MW, noting that this figure is common in industry practice.¹³¹⁹

677. Some commenters contend that the level of the proposed readiness deposits is too high and should be significantly revised.¹³²⁰ Pattern Energy requests that the Commission clarify if these deposits are additive or whether they would require an interconnection customer to have available seven times the study deposit amount by the time the interconnection request reaches the facilities study phase. Pattern Energy states that if the payments are additive, then the Commission would be requiring an interconnection customer to have 14 times its initial study deposit on hand by the time the interconnection customer reaches the LGIA milestone, which Pattern Energy contends would be unreasonable.¹³²¹

678. Invenergy argues that depositing as much as \$3.5 million before learning

how much must be spent on network upgrades is not reasonable.¹³²² ACE-NY argues that the deposit values for the second cluster and beyond should be limited to just two times the study deposit amount.¹³²³ CREA and NewSun contend that the hefty deposits will bar smaller companies with less access to capital from competing and entering the interconnection study process.¹³²⁴ CREA and NewSun argue that the NOPR's deposit levels are purely arbitrary and appear aimed at driving interconnection customers out of the interconnection process rather than measurably improving the process.

679. National Grid requests clarification that transmission providers may deduct from a to-be-retained deposit any expenses incurred by the transmission provider in administering the respective escrow account.¹³²⁵

680. Pattern Energy contends that the Commission must clarify that deposits will be applied toward future security obligations if a generating facility reduces its size as it progresses through the interconnection process.¹³²⁶ Pattern Energy states that if the size of an interconnection request is reduced, in accordance with allowable reduction amounts, then: (1) future deposits should be based on the *new* generating facility size; and (2) previous deposits should be credited toward future deposits based on the portion of those previous deposits that are associated with the reduced MW quantity.

(d) Requests for Flexibility

681. Several commenters generally support the proposed commercial readiness requirements but ask the Commission to provide flexibility to allow transmission providers to determine the detailed readiness and deposit criteria for their footprint.¹³²⁷ These commenters argue that such measures need to be carefully balanced to avoid overly burdening interconnection customers with legitimate interconnection requests that are delayed for reasons out of their control. For example, NY Commission

and NYSERDA explain that, in New York, renewable energy certificates procured by NYSERDA could demonstrate commercial readiness, and a similar state agency certificate could be used in a different state.¹³²⁸

682. Pacific Northwest Utilities claim that it would be difficult for transmission providers to implement the commercial readiness proposal in regions such as the Northwest without reforming RFP processes and coordinating amongst multiple transmission owners and LSEs.¹³²⁹ Pacific Northwest Utilities explain that many generating facilities in the Pacific Northwest use interconnection and transmission services crossing multiple balancing authority areas, which require coordination of timelines, milestones, and off-ramps in both the RFPs and interconnection queues.

(e) Miscellaneous

683. Enel supports the proposed modification to *pro forma* LGIP section 11.3 to require submission of the development milestones concurrently with returning the executed LGIA so that the interconnection customer cannot avoid the demonstration required by *pro forma* LGIP section 11.3 by suspending its LGIA.¹³³⁰ However, Enel notes that it is important for the Commission to retain (and reinstitute where removed by specific transmission providers) the ability for interconnection customers to suspend work under their LGIAs for up to three years.

684. Arizona Commission generally supports the prioritization of commercially ready projects and agrees with the proposed readiness criteria, but also encourages the Commission to consider the possibility of allowing market forces to provide discipline to the interconnection process, such as by allowing transmission owners to prioritize generation projects through the use of competitive solicitations.¹³³¹

685. The Colorado Commission generally supports prioritizing commercially ready interconnection requests and agrees with the proposed readiness criteria.¹³³² However, the Colorado Commission emphasizes that the NOPR does not include a mechanism to prioritize among the many viable, and competing, interconnection requests when interconnection service capacity is

scarce.¹³³³ The Colorado Commission argues that, under existing RTO/ISO interconnection processes as well as the proposed revised *pro forma* LGIP, there is limited ability in the interconnection process to consider the generating facility's broader attributes from a system perspective, including cost, timing, location, and resource type.¹³³⁴ The Colorado Commission asserts that new proposed generating facilities would likely be stuck in cluster studies with no clear or timely prioritization that ensures that the lowest cost or highest value generating facilities come online quickly and at a reasonable cost. The Colorado Commission contends that prioritizing native load and end-use customers and third-party owned generating facilities through competitive bid processes is the most logical criteria to maintain a reliable system at reasonable cost.¹³³⁵ To accomplish this, and help the system rationally move forward in a timely manner, the Colorado Commission suggests adding the following additional language to the commercial readiness section: "RTOs and Transmission Providers shall have the ability to create a separate cluster study process or other mechanisms to prioritize executed contracts that serve and benefit native load in accordance with local load-serving resources needs and priorities as determined through equitable competitive bid processes."¹³³⁶

686. AEE, on the other hand, responds to the Colorado Commission by arguing that allowing transmission providers to prioritize generating facilities that are selected through IRP processes or utility procurements and that benefit native load could allow vertically integrated utilities to push preferred generating facilities through the interconnection process and therefore comes with a risk of discrimination.¹³³⁷

687. CESA argues that proposals to prioritize and favor certain generating facilities and interconnection customers must be rejected as violating the Commission's long-standing policies on open access and non-discriminatory interconnection procedures.¹³³⁸ CESA contends that the Colorado Commission's proposal is therefore unduly discriminatory and also goes

well beyond what the Commission contemplated in the NOPR.

688. Clean Energy Associations state that they support the Commission's instead accepting regionally specific proposals that would align the interconnection process with competitive procurements associated with resource planning, rather than placing them at odds.¹³³⁹ Clean Energy Associations state that projects selected through competitive procurement processes are ready projects, and these processes attempt to consider the transmission (interconnection service and transmission service) costs and the production-related costs. Clean Energy Associations state that one way to accomplish this might be to grant resource solicitation clusters a queue position distinct from other clustered projects, but that concept could be extended to ensure more certainty to the bidder and the resource planning entity of the interconnection and delivery requirements and associated rights.

689. Bonneville sees value in applying commercial readiness requirements to the *pro forma* SGIP and SGIA and contends that failing to do so could create a perverse incentive for interconnection customers to break up large projects into smaller projects to avoid stringent commercial readiness requirements under the *pro forma* LGIP.¹³⁴⁰

iii. Commission Determination

690. We adopt a modified NOPR proposal to revise sections 3.4.2, 7.5, 8.1, and 11.3 of the *pro forma* LGIP, insofar as they require interconnection customers to submit commercial readiness deposits, and we do not adopt the NOPR proposal insofar as it included non-financial commercial readiness demonstrations in the *pro forma* LGIP. To effectuate the requirements that we adopt in this final rule, we modify the proposed revisions to sections 3.4.2, 7.5, and 8.1 to remove the proposed readiness demonstrations and to require that the interconnection customer submit the commercial readiness deposit at the beginning of each study in the cluster study process (*i.e.*, the initial cluster study, the cluster restudy, and the facilities study). For the commercial readiness deposit submitted to enter the cluster restudy and the commercial readiness deposit to enter the facilities study, we also modify the NOPR proposal to move from commercial readiness deposits based on study deposit amounts to commercial

readiness deposits based on percentages of the interconnection customer's identified network upgrade costs. We also modify proposed section 11.3 of the *pro forma* LGIP to remove the language providing that one of the proposed readiness demonstrations can be provided when the interconnection customer returns the executed LGIA or requests that the LGIA be filed unexecuted. We also adopt the definition of commercial readiness deposit but do not adopt the definition of commercial readiness demonstration. We discuss each in turn.

691. We believe that, along with the other reforms adopted in this final rule, the commercial readiness deposits we require will address the need for reform underlying this section by helping reduce the submission of speculative, commercially non-viable interconnection requests into interconnection queues.¹³⁴¹ Further, because the interconnection customer's total commercial readiness deposit held by the transmission provider increases as the interconnection process proceeds, we find that this approach will encourage interconnection customers not ready to proceed through the interconnection process—or whose projects become commercially non-viable during the interconnection process—to withdraw earlier in the process, thereby lessening the incidence of late-stage withdrawals that result in delays and restudies. Similarly, by basing the cluster restudy and the facilities study commercial readiness deposits on the interconnection customer's identified network upgrade cost assignment, an interconnection customer will be subject to the cost consequences of its estimated network upgrades *earlier*. As a result, this approach will encourage interconnection customers to withdraw *earlier* in the interconnection process if they face large network upgrade initial cost assignments or encounter other concerns that cause their interconnection request to be uneconomic. By reducing the number of speculative interconnection requests submitted into the interconnection queue and the number of late-stage withdrawals of interconnection requests, we believe that the commercial readiness deposit requirements that we adopt herein will also enable commercially viable interconnection requests to progress more quickly through the interconnection process.

Transmission providers will be able to focus their resources on those interconnection requests most likely to achieve commercial operation, to the benefit of all interconnection customers.¹³⁴²

692. The commercial readiness deposit amounts proposed in the NOPR are tied to generating facility size, as they are based on the initial study deposit, which is likewise tied to generating facility size. We adopt the NOPR proposal for the initial commercial readiness deposit, where the interconnection customer pays a deposit of two times the study deposit to enter the cluster study. Basing the initial commercial readiness deposit on the size of the generating facility aligns the size of the deposit roughly with any impact from a withdrawal of the interconnection request, as generally, all else equal, increasing the size of the generating facility increases the likelihood of larger, more costly network upgrades and a greater change in interconnection study inputs.

693. However, we are persuaded by several commenters that commercial readiness deposits should be based on assigned network upgrade costs.¹³⁴³ Therefore, we modify the remaining commercial readiness deposits (*i.e.*, the second and third commercial readiness deposits) such that, rather than relying on multiples of the initial study deposit, once estimates of network upgrade costs are available, the commercial readiness deposits equate to increasing percentages of the interconnection customer's identified network upgrade cost assignment. Specifically, we adopt a deposit structure where the commercial readiness deposit to enter

the cluster restudy is the amount required to bring the total amount of the interconnection customer's commercial readiness deposit to 5% of the interconnection customer's network upgrade cost assignment identified in the cluster study, and the commercial readiness deposit to enter the facilities study is the amount required to bring the total amount of the interconnection customer's commercial readiness deposit to 10% of the interconnection customer's network upgrade cost assignment identified in the cluster study or restudy, as applicable.¹³⁴⁴ We find that tying the commercial readiness deposits to the network upgrade cost estimate requires the interconnection customer to deposit an amount that corresponds to its network upgrade cost estimates earlier and, thereby, can incentivize interconnection customers with large network upgrade cost estimates to withdraw at earlier points in the interconnection process to the extent the network upgrade cost assignment causes the interconnection request to no longer be viable. This approach achieves the Commission's goals of ensuring that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner.

694. We decline to adopt the non-financial commercial readiness demonstrations proposed in the NOPR. We find that the non-financial commercial readiness demonstrations are not necessary to address the subject of these reforms—providing additional deterrence of speculative, commercially non-viable interconnection requests—given the significant, increasing commercial readiness deposits we adopt instead.¹³⁴⁵

695. We are also persuaded by commenters who express concerns that the non-financial commercial readiness demonstrations in the NOPR proposal may not necessarily serve as appropriate indicators of a proposed generating facility's commercial viability on a national basis. In some instances, the proposed non-financial commercial readiness demonstrations may be unavailable to interconnection customers with commercially viable projects. For example, this may be true as a result of a misalignment of the timing between resource procurement

¹³⁴³ For assertions that more directly associating commercial readiness deposits to the estimated costs and likely impact to other interconnection customers in the case of withdrawal would provide greater accountability for interconnection customers and transmission providers, see AEE Initial Comments at 24–25; AES Clean Energy Initial Comments at 16–19; CAISO Initial Comments at 23–24; Clean Energy Associations Initial Comments at 39; EPSA Initial Comments at 10; Indicated PJM TOs Initial Comments at 30–31; Invenergy Initial Comments at 16; MISO Initial Comments at 64–65; R Street Initial Comments at 13; Shell Initial Comments at 15–16.

¹³⁴⁴ See SEIA Initial Comments at 25 (urging the Commission to set the value of the commercial readiness deposit as a percentage of the estimated network upgrade costs).

¹³⁴⁵ See *N.Y. v. FERC*, 535 U.S. 1, 27 (2002) (declining to require reforms where “FERC determined that the remedy it ordered constituted a sufficient response to the problems FERC had identified”).

¹³⁴¹ SoCal Edison Initial Comments at 9, Northwest and Intermountain Initial Comments at 12, MISO Initial Comments at 60, PJM Initial Comments at 35.

decisions and interconnection study processes or inconsistency with a relevant local commercial practice, rather than because the proposed generating facilities lack commercial viability.

696. As commenters note, resource procurement efforts across the country all have different timelines, and the timeline to demonstrate commercial readiness proposed in the NOPR was not tailored to meet the timelines of multiple state procurement efforts.¹³⁴⁶ As commenters explain, an interconnection queue position is often a precondition of offering into a resource solicitation.¹³⁴⁷ We agree that, absent a regionally tailored tariff process pursuant to which commercial readiness criteria could be aligned with applicable resource solicitation processes, the commercial readiness criteria proposed in the NOPR may not be workable in markets where merchant sales are common, and this generally applicable final rule is not an appropriate forum to dictate regionally tailored solutions.

697. We are further concerned that there may be trade-offs entailed in requiring the proposed non-financial commercial readiness demonstrations, which are more appropriately assessed on a regional, rather than national basis. We agree with Enel that ratepayers may benefit from generating facilities being selected in competitive processes that consider the facilities' interconnection costs and schedule, which cannot be done if off-take arrangements are made prior to applying for interconnection service.

698. In addition, we are concerned that the proposed non-financial commercial readiness demonstrations could incentivize power purchasers in some regions to execute purchase contracts with interconnection customers whose generating facilities will later be determined to be commercially non-viable. As commenters note, this could lead to purchasers having to start the procurement process over or choose to over-procure as insurance against potential contract termination, to the detriment of reliability and cost.

699. Therefore, we are persuaded to adopt a framework that requires a commercial readiness deposit for all interconnection customers, similar to what the Commission has accepted in

various RTO/ISO regions.¹³⁴⁸ We find that requiring deposits in amounts substantial enough to demonstrate commitment to reaching commercial operation at progressive milestones throughout the interconnection process will be a sufficient deterrent to speculative behavior—especially when considered as part of the comprehensive package of reform, including increased site control requirements, increased study deposits, and withdrawal penalties, established by this final rule.

700. In the NOPR, the Commission acknowledged the potential that certain non-financial commercial readiness demonstrations *could* provide an unduly discriminatory or preferential advantage to projects being developed by transmission providers or their affiliates.¹³⁴⁹ As summarized above, several commenters have raised—and elaborated on—those concerns. Because we find that the commercial readiness deposits that we adopt in this final rule are sufficient to address the relevant need for reform, and therefore do not adopt the proposed non-financial commercial readiness demonstrations, we need not further address those concerns in this final rule.

701. We recognize that the Commission has previously accepted proposals that include commercial readiness demonstration requirements similar to those proposed in the NOPR. Although we find that commercial readiness deposits are sufficient to address the need for reform in this proceeding, this finding does not preclude transmission providers from adopting non-financial commercial readiness demonstrations, provided they meet the relevant standards when requesting a variation, as discussed above.

702. Some commenters suggest that the Commission could add government and environmental permits as commercial readiness demonstrations as an indicator of commercial readiness that is viable both for independent power producers and for transmission providers and their affiliates.¹³⁵⁰ Although the record provides some support for this, we are concerned that permits and studies may expire due to the length of the interconnection process, and those re-permitting and restudy efforts are still at risk of

rejection or failure, which could lead to late-stage withdrawals.¹³⁵¹ We are also concerned about the possible administrative burden placed on transmission providers, as they must determine which types of permits should be accepted as commercial readiness demonstrations and evaluate the validity of different permits submitted by interconnection customers.

703. Pattern Energy requests that the Commission clarify whether the commercial readiness deposits are additive, meaning that, as each phase of the interconnection process is reached, the full amount of each new readiness deposit must be added on top of the full amounts of earlier readiness deposits (as opposed to merely increasing the total amount of the aggregate readiness deposit to match the level specified for that phase). In response, we clarify that, as modified, the commercial readiness deposits in sections 7.5 and 8.1 of the *pro forma* LGIP make clear that for the second and third commercial readiness deposits, the interconnection customer is only required to submit an additional deposit that brings the total commercial readiness deposit to the amount specified in sections 7.5 and 8.1 of the *pro forma* LGIP (5% of the interconnection customer's identified network upgrade cost estimate and 10% of the interconnection customer's identified network upgrade cost estimate, respectively).

704. In response to comments on the magnitude of commercial readiness deposits (e.g., too high or too low), we reiterate that the commercial readiness deposits are part of a package of reforms meant to deter speculative behavior that also includes site control requirements and withdrawal penalties. Thus, the commercial readiness deposits are not intended to be of such magnitude to alone prevent speculative behavior as they are intended to work together with other reforms adopted in this final rule, such as site control and withdrawal penalties. We believe that the deposits should not be so high that viable projects from smaller developers are unable to enter the queue. At the same time, they will only achieve the aims if they are sufficiently high to serve as some deterrent, in concert with the other relevant reforms adopted in this final rule. In response to National Grid's request that the final rule provide for the deduction from a to-be-retained deposit of any expenses incurred by the transmission provider or RTO/ISO in administering the respective escrow account, we note that Order No. 2003

¹³⁴⁸ See, e.g., *Midcontinent Indep. Sys. Operator, Inc.*, 158 FERC ¶ 61,003 (2017); *Sw. Power Pool, Inc.*, 178 FERC ¶ 61,015 (2022).

¹³⁴⁹ NOPR, 179 FERC ¶ 61,194 at P 132.

¹³⁵¹ Enel Initial Comments at 47.

required the collection of various deposits without addressing this type of administrative expense.¹³⁵² We find, in this instance, that there is no need to deviate from Order No. 2003, and we decline to adopt tariff revisions to address the management of an escrow account.

705. In response to Pattern Energy's request for clarification of the commercial readiness deposit amounts in the event that an interconnection customer reduces the size of a proposed generating facility, we clarify that because the modified commercial readiness deposit structure is based on network upgrade cost estimates, a size reduction to a proposed generating facility may or may not impact the remaining commercial readiness deposits, depending on whether the size reduction reduces the interconnection customer's assigned network upgrade costs. This is consistent with the requirements for entering the cluster restudy and facilities study adopted in *pro forma* LGIP sections 7.5 and 8.1, respectively, which require commercial readiness deposits based on percentages of the interconnection customer's identified network upgrade costs.

706. Pattern Energy's request to require that previous deposits be credited towards future deposits based on the portion of those previous deposits that are associated with the reduced MW quantity therefore represents the modified commercial readiness deposit framework we adopt. Under this modified framework, an interconnection customer's previous commercial readiness deposits are effectively credited when it pays later commercial readiness deposits (*i.e.*, the second and third commercial readiness deposits); it pays the required amount of a commercial readiness deposit less the amounts paid for through earlier commercial readiness deposits.

707. We also decline to adopt Bonneville's suggestion to add the commercial readiness provisions to the SGIP because the record does not demonstrate a need for such reform at this time. Because we are not adopting the proposed non-financial commercial readiness demonstrations, we do not address comments proposing revisions or clarifications to those demonstrations. Additionally, several commenters provide additional suggestions for the NOPR proposal, including: (1) addressing the Commission's rules for suspending an

LGIA;¹³⁵³ (2) addressing queue priority;¹³⁵⁴ and (3) better supporting competitive procurement processes.¹³⁵⁵ We find these comments to be outside the scope of the NOPR.

d. LGIA Deposit

i. NOPR Proposal

708. In the NOPR, the Commission proposed to require interconnection customers to submit a deposit equal to nine times the amount of its study deposit when executing the LGIA or requesting the filing of an unexecuted LGIA. The Commission explained that this deposit would be fully refunded once the generating facility achieves commercial operation, but if the interconnection customer withdraws after executing the LGIA or after requesting the filing of an unexecuted LGIA, this deposit would be refunded subject to the withdrawal penalty.¹³⁵⁶ The Commission also sought comment on whether to adopt additional provisions or a different framework that would require larger proposed generating facilities to provide a higher deposit amount—such as a per MW framework.¹³⁵⁷

ii. Comments

709. MISO supports the proposal to require interconnection customers to submit a deposit equal to nine times the amount of its study deposit at LGIA execution because MISO believes it is necessary to continue the commercial readiness deposit and withdrawal penalty framework until the interconnection request achieves commercial operation.¹³⁵⁸ Shell supports the security deposit obligations used in MISO's and SPP's generator interconnection processes, which include a deposit at LGIA execution.¹³⁵⁹

710. Invenergy argues that requiring more security at LGIA execution, in addition to the other proposed burdens on interconnection customers in the NOPR, goes beyond the goal of disincentivizing speculative interconnection requests to creating potentially prohibitive burdens on all interconnection customers, including those with commercially viable proposed generating facilities.¹³⁶⁰

Invenergy contends that, while a deposit based on study costs may make sense in earlier stages of the study process when assigned network upgrade costs are not yet known, it is not appropriate after an LGIA is executed and assigned network upgrade costs are known and memorialized. ACE–NY and AES oppose any additional deposits due from an interconnection customer at the signing of the LGIA that are not tied to network upgrade costs.¹³⁶¹ AES asserts that in many RTOs/ISOs, interconnection customers have to post security for a portion, if not all, of the assigned network upgrade costs associated with an interconnection request, and such posted security is a sufficient incentive to keep an interconnection customer engaged so that they will complete a generating facility after the LGIA is executed.¹³⁶²

711. Several commenters argue that the Commission's LGIA deposit proposal is excessive and potentially exposes ratepayers to unjust and unreasonable costs.¹³⁶³ Ørsted would support a lower amount, such as two times the study deposit, because it believes that the current proposal would not necessarily accurately estimate the costs of required network upgrades.¹³⁶⁴ PJM contends that the Commission should allow transmission providers to adopt security amounts and structures that are rationally related to relevant costs.¹³⁶⁵ Cypress Creek asks the Commission to provide a non-arbitrary basis for its proposed security deposit of nine times the study deposit.¹³⁶⁶ Shell argues that the LGIA deposit appears to be a security deposit and adds that MISO and SPP use a separate security deposit obligation that the Commission should consider.¹³⁶⁷

712. Several commenters argue that study deposits should be refunded in certain circumstances.¹³⁶⁸ Invenergy argues that any deposit due at LGIA execution should be subject to a \$2 million cap and that deposit should be released dollar for dollar as the interconnection customer posts security or makes required payments under the LGIA.¹³⁶⁹ Invenergy asks that the

Commission also clarify that, in the event a proposed generating facility does not achieve commercial operation, any deposit forfeited under this proposal offsets, and is not in addition to, any withdrawal penalties that may be imposed. Invenenergy adds that it is unreasonable to require that additional deposits be provided when an interconnection customer asks that the LGIA be filed unexecuted, and if the Commission does nonetheless require interconnection customers to post the deposit as a condition of having the LGIA filed unexecuted, the deposit should be refundable if the interconnection customer elects to withdraw within 30 days of the date of the Commission's order in the applicable docket. Ørsted and Shell assert that, for interconnection customers withdrawing after executing the LGIA, all deposits should be refunded in the event that the interconnection customer withdraws as a result of circumstances outside of its control and the withdrawal does not harm any other entity.¹³⁷⁰ AES argues that all study deposits should be refunded at the time of LGIA execution, and opposes any additional deposits not tied to network upgrade costs.¹³⁷¹

713. Southern, on the other hand, argues that making deposits refundable may not be stringent enough and therefore may not accomplish the goals set forth in the NOPR.¹³⁷² NRECA also believes that the Commission should consider whether to make these study deposits non-refundable in the case of withdrawal, as a further disincentive for speculative interconnection requests to enter the interconnection queue.¹³⁷³

iii. Commission Determination

714. We adopt, with modification, the NOPR proposal to revise new section 11.3 of the *pro forma* LGIP to require interconnection customers to submit a deposit when executing the LGIA, or requesting the filing of an unexecuted LGIA, and add the new term "LGIA deposit" to section 1 of the *pro forma* LGIP.¹³⁷⁴ Specifically, we modify the NOPR proposal to require interconnection customers to provide a deposit that will increase the total commercial readiness deposit paid to be

equal to 20% of the estimated network upgrade costs identified in the LGIA, rather than providing a deposit equal to nine times the amount of the interconnection customer's study deposit, as proposed in the NOPR.¹³⁷⁵ Additionally, revised section 11.3 of the *pro forma* LGIP requires that interconnection customers submit the LGIA deposit when returning the executed LGIA to the transmission provider, or within 10 business days of the interconnection customer requesting that the LGIA be filed unexecuted at the Commission.

715. In the NOPR, the Commission sought comment on whether to adopt additional provisions or a different framework for deposits, including the LGIA deposit.¹³⁷⁶ In response, commenters provided suggestions, including suggestions to base deposits on network upgrade costs.¹³⁷⁷ We agree that tying the LGIA deposit to the network upgrade cost estimate sends a more accurate cost signal to the interconnection customer and better aligns the LGIA deposit to its function of ensuring that network upgrades are paid for and constructed than the NOPR proposal. We also agree with commenters that a deposit based on the study deposit amount may make sense in the early stage of the cluster study process when assigned network upgrade costs are not yet estimated, but later in the process, when network upgrade cost estimates are available, the use of percentages of network upgrade cost estimates more closely indicates interconnection request viability.¹³⁷⁸ This approach also addresses comments that the LGIA deposit, as proposed, may have been arbitrary, excessive, and unreasonable.¹³⁷⁹

716. The NOPR proposed that this deposit would be fully refunded once the generating facility achieves commercial operation, but we are modifying the NOPR proposal to remove that statement from *pro forma* LGIP section 11.3, and as explained further below, this deposit will be used as part of the security the interconnection

customer must provide for the construction of network upgrades and transmission provider's interconnection facilities. However, this LGIA deposit could be refunded, subject to the withdrawal penalty, if the interconnection customer withdraws after executing the LGIA or after requesting the filing of an unexecuted LGIA.

717. We also revise the *pro forma* LGIP and *pro forma* LGIA, as suggested by Invenenergy,¹³⁸⁰ to treat the LGIA deposit as part of the security the interconnection customer must provide for the construction of network upgrades and transmission provider's interconnection facilities. Article 11.5 (Provision of Security) of the *pro forma* LGIA requires that, 30 calendar days prior to the commencement of construction under its LGIA, the interconnection customer must provide security for a discrete portion of network upgrades and transmission provider's interconnection facilities, as specified in its LGIA. We revise section 11.3 of the *pro forma* LGIP and article 11.5 of the *pro forma* LGIA to require the transmission provider to use the LGIA deposit, in its entirety, before requiring the interconnection customer to submit additional security for construction of network upgrades and transmission provider's interconnection facilities. By allowing the transmission provider to draw down this LGIA deposit as construction proceeds, the construction of network upgrades and transmission provider's interconnection facilities can commence quickly thereby streamlining the interconnection process. With this revision, requiring the LGIA deposit to be returned at commercial operation is now unnecessary as there will be no deposit remaining to return; therefore, we decline to adopt the NOPR proposal to do so.¹³⁸¹

718. We also revise article 11.5 of the *pro forma* LGIA to require transmission providers to draft Appendix B (Milestones) of the interconnection customer's LGIA to clearly explain and estimate at which point of construction the interconnection customer's LGIA deposit will be depleted, and the interconnection customer must provide additional financial security. In the event the interconnection customer requests suspension of the LGIA under article 5.16 of its LGIA prior to the commencement of construction, the transmission provider is prohibited from using the LGIA deposit to commence construction until the

interconnection customer requests to exit suspension and resume construction, unless there is a need for the transmission provider to use a portion of the LGIA deposit to ensure its system is left in a reliable condition during the period of suspension.

719. We do not adopt the suggestion of Ørsted and Shell that, for interconnection customers withdrawing their interconnection requests after executing an LGIA, all deposits should be refunded if withdrawal is the result of circumstances outside the interconnection customer's control and the withdrawal does not harm other entities.¹³⁸² We believe that the exceptions to the application of withdrawal penalties discussed in the section III.A.6.e below appropriately balance the need to deter withdrawals with the reality that withdrawal is not always due to circumstances within interconnection customers' control.

720. In response to Southern's comments that making both study and LGIA deposits refundable may not be stringent enough and therefore may not disincentivize speculative interconnection requests,¹³⁸³ we reiterate that, as adopted, the deposits serve different functions. In this instance, the LGIA deposit serves as a credit towards the security the interconnection customer must provide for network upgrades and transmission provider's interconnection facilities. To the extent the LGIA deposit pays for the construction of network upgrades, such a deposit would be refunded through transmission credits in regions that follow the *pro forma* LGIA provisions on crediting.

e. Withdrawal Penalties

i. NOPR Proposal

721. The Commission preliminarily found that withdrawal penalties are

needed to account for the harms that can occur when interconnection customers withdraw from the interconnection queue.¹³⁸⁴ The Commission proposed to revise the *pro forma* LGIP to require transmission providers to assess withdrawal penalties to interconnection customers in certain circumstances. Specifically, the Commission proposed to revise the *pro forma* LGIP to require transmission providers to assess withdrawal penalties to interconnection customers that choose to withdraw at any point in the interconnection process or do not otherwise reach commercial operation, unless: (1) the withdrawal does not delay the timing of other proposed generating facilities in the same cluster; (2) the withdrawal does not increase the cost of network upgrades for other proposed generating facilities in the same cluster; (3) the interconnection customer withdraws after receiving the most recent cluster study report and the costs assigned to the interconnection customer have increased 25% compared to the previous cluster study report; or (4) the interconnection customer withdraws after receiving the individual facilities study report and the costs assigned to the interconnection customer have increased by more than 100% compared to costs identified in the cluster study report.¹³⁸⁵ Thus, the Commission proposed that interconnection customers would be exempt from a withdrawal penalty if the withdrawal does not harm other interconnection customers or if the withdrawal follows a significant unanticipated increase in network upgrade cost estimates.

722. The Commission proposed that the withdrawal penalty would increase as the interconnection customer moves through the study process and would also increase if an interconnection

customer provides a commercial readiness deposit in lieu of a demonstration of commercial readiness.¹³⁸⁶ For an interconnection customer that provides a commercial readiness deposit in lieu of a demonstration of commercial readiness, the Commission proposed that its withdrawal penalty would be higher and increase as the interconnection customer progresses in the interconnection process.

723. The Commission proposed that the withdrawal penalty for an interconnection customer that provides a commercial readiness deposit in lieu of a demonstration of commercial readiness will be the greater of the study deposit or: (1) two times the study cost if the customer withdraws during the cluster study or after receipt of a cluster study report, capped at \$1 million; (2) three times the study cost if the customer withdraws during the cluster restudy or after receipt of any applicable restudy reports, capped at \$1.5 million; (3) five times the study cost if the customer withdraws during the facilities study, after receipt of the individual facilities study report, or after receipt of the draft LGIA, capped at \$2 million; or (4) nine times the study costs if the customer withdraws before achieving commercial operation and after executing the LGIA or filing an unexecuted LGIA.¹³⁸⁷ The Commission also proposed that the withdrawal penalty revenues be used to fund studies conducted under the cluster study process.

724. The table below summarizes the proposed withdrawal penalty structure for both interconnection requests that have demonstrated commercial readiness and those that have not (by instead submitting a deposit in lieu of demonstrating commercial readiness).¹³⁸⁸

Phase of withdrawal	Commercial readiness demonstration provided?	Total withdrawal penalty (if greater than study deposit)	Withdrawal penalty cap
1	Yes	1 times study costs	No Cap.
2	Yes	1 times study costs	No Cap.
3	Yes	1 times study costs	No Cap.
LGIA	Yes	9 times study costs	No Cap.
1	No	2 times study costs	\$1 million.
2	No	3 times study costs	\$1.5 million.
3	No	5 times study costs	\$2 million.
LGIA	No	9 times study costs	No Cap.

penalties as the interconnection moves through the process.”)).

¹³⁸⁷ *Id.* P 143.

¹³⁸⁸ *Id.* P 144.

725. The Commission also proposed to add the defined term “withdrawal penalty” to the *pro forma* LGIP.¹³⁸⁹ The Commission sought comment on: (1) how to define the circumstances in which a withdrawal is deemed to have delayed the timing or increased the cost of network upgrades for other proposed generating facilities in the same cluster, including what criteria should be used to determine whether the withdrawal caused the delay or increased cost, and whether to establish a threshold for when a delay or increase in cost will trigger a withdrawal penalty (and if so, what that threshold should be); (2) whether the Commission should consider exceptions to the proposed withdrawal penalties beyond those proposed in the NOPR; (3) whether withdrawal penalties that increase with proposed generating facility size (as measured by MW) would more effectively deter withdrawals that cause the greatest harm; and (4) whether a correlation exists between the size of a withdrawing proposed generating facility and the relative level of harm (in terms of delays and increased cost) to other interconnection customers as a result of the withdrawal.¹³⁹⁰

ii. Comments

(a) Comments in Support

726. Multiple commenters generally support the Commission’s proposed withdrawal penalties and view the proposal as appropriate to reduce the volume of speculative interconnection requests.¹³⁹¹ Environmental Defense Fund states that, if adopted with certain of the other NOPR proposals, the Commission’s proposed withdrawal penalties are appropriate to address the delays and costs caused by speculative interconnection requests.¹³⁹² Eversource states that properly calibrated withdrawal penalties are essential to dissuade withdrawals and reduce study process delays.¹³⁹³

¹³⁹³ Eversource Initial Comments at 18.

727. MISO supports the Commission’s proposal to impose a withdrawal penalty on withdrawing interconnection customers, a penalty that MISO suggests should be secured by the commercial readiness deposit.¹³⁹⁴ That said, MISO asserts that the study cost for interconnection requests is not that substantial, and MISO does not believe that paying a withdrawal penalty in the amount of only the study costs would be a sufficient deterrent to prevent speculative interconnection requests from entering or remaining in the interconnection queue.

(b) Comments in Opposition

728. Many commenters oppose the withdrawal penalty proposal.¹³⁹⁵ CREA and NewSun encourage instead better cost certainty for interconnection customers earlier in the study process.¹³⁹⁶ CREA and NewSun suggest that the Commission incorrectly assumes that the interconnection customer has adequate visibility into likely interconnection costs, and thus the financial viability of its proposed generating facility before entering the interconnection queue and becoming liable for these penalties. CREA and NewSun state that the NOPR provides no realistic path to know likely interconnection costs prior to entering the interconnection queue.¹³⁹⁷

729. ENGIE does not support the implementation of withdrawal penalties and notes that withdrawal penalties without meaningful opportunity for interconnection customers to exit the interconnection process are unlikely to incentivize withdrawal.¹³⁹⁸ New York State Department is skeptical that a withdrawal penalty program will be beneficial to ratepayers.¹³⁹⁹

730. Pacific Northwest Organizations claim that, without access to interconnection cost information and with larger withdrawal penalties, independent power producers may be discouraged from entering the

interconnection queue.¹⁴⁰⁰ Some commenters claim that withdrawal penalties (including in a transitional cluster study process) can result in the potential for discrimination against independent power producers.¹⁴⁰¹ These commenters assert that LSEs can recover withdrawal penalties they incur from their retail ratepayers, whereas independent power producers must absorb these costs and risks in their solicitation process bids. Interwest also suggests that the proposed withdrawal penalties are less likely to apply to LSEs than to independent power producers because LSEs will likely be able to use the proposed commercial readiness demonstration path, as opposed to paying the deposits in lieu of demonstrating commercial readiness, and would thus not be subject to the harsher withdrawal penalties.¹⁴⁰² Interwest urges the Commission to require waiver of, or a substantial reduction in, withdrawal penalties from the transition cluster or resource solicitation cluster if the interconnection customer participated in an RFP or other competitive solicitation process but was not ultimately selected, or if a permit becomes unavailable due to some regulatory or regime change.¹⁴⁰³

731. R Street claims that the proposal risks imposing severe anti-competitive barriers to entry.¹⁴⁰⁴ New York State Department makes similar anti-competitive impact arguments.¹⁴⁰⁵ R Street asserts that imposing financial commitments and readiness requirements can create regulatory barriers to entry if they deter interconnection requests for commercially viable generating facilities or increase financing costs.¹⁴⁰⁶ R Street argues that the proposal is misguided because it would add another administrative process that increases implementation complications and costs.¹⁴⁰⁷ R Street suggests that the Commission should instead use a simple loss of deposit as its financial lever.

732. rPlus argues that withdrawal penalties, particularly when coupled with the proposed study deposit requirements and study cost allocations, are unduly discriminatory or punitive to

pumped storage as compared to other renewable technologies.¹⁴⁰⁸ rPlus and Hydropower Commenters claim that, under these proposals, a large capacity pumped storage project (ranging from 400 MW to over 1,000 MW in size, according to rPlus) would expect to hit the maximum deposit and/or penalty in every stage of the interconnection process.¹⁴⁰⁹ rPlus claims that the high cost of entry and the liability associated with withdrawal may give large utilities an unfair advantage in commercial negotiations.¹⁴¹⁰

733. Shell calls for a reconsideration of the withdrawal penalties proposed in the NOPR, claiming that the proposal could disrupt project development when paired with the proposed commercial readiness requirements and financial commitments (for deposits and site control).¹⁴¹¹ Shell suggests that the Commission adopt withdrawal penalties modeled on MISO's framework, which encourages interconnection customers to withdraw from the interconnection queue with refunded deposits rather than penalizing interconnection customers for making justifiable decisions. Shell contends that there should only be a large penalty for late-stage withdrawals.¹⁴¹² Shell contends that, otherwise, the Commission is sending the wrong signal and driving out competition without linking the underlying issue of unexpected network upgrade costs that typically come from affected system studies that are provided very late in the study process.

734. Some commenters contend that increasing the amount of money at stake for an interconnection customer without providing off-ramps from the interconnection process at reasonable decision points where previously unavailable information is supplied does not necessarily incentivize interconnection customers to exit the interconnection queue.¹⁴¹³ CREA and NewSun suggest that the proposed withdrawal penalties may incentivize an interconnection customer to remain in the interconnection queue waiting for other interconnection customers to withdraw, and the penalty those interconnection customers pay will eventually be distributed to the remaining interconnection customers in the cluster, or interconnection

customers may elect to remain in the interconnection queue in the hopes that others in the cluster withdraw to the point where the cost of network upgrades become more palatable.¹⁴¹⁴

(c) Comments on Specific Proposal

(1) Withdrawal Penalty Amounts

735. Several commenters oppose the proposed withdrawal penalty amounts.¹⁴¹⁵ AEE argues that the Commission's proposed withdrawal penalty amounts are overly punitive, especially for those interconnection customers that submit a deposit in lieu of demonstrating commercial readiness, which many interconnection customers will be forced to do under the Commission's proposed commercial readiness requirements.¹⁴¹⁶ AEE and Clean Energy Associations assert that the Commission's proposed withdrawal penalty amounts also appear arbitrary, with no basis in the costs of conducting studies or other relevant factors.¹⁴¹⁷ AEE argues that the Commission should reduce these amounts and tie them more closely to its objectives and to the study costs that transmission providers are expected to incur, which it asserts will avoid turning the penalties into a punitive measure that provides a profit opportunity for transmission providers.¹⁴¹⁸ AEE contends that the withdrawal penalty frameworks and time frames should be designed to discipline the decisions of interconnection customers rather than being punitive. Google does not support the proposal to impose higher withdrawal penalties on interconnection customers that submit a deposit in lieu of demonstrating commercial readiness.¹⁴¹⁹

736. Interwest argues that some of the proposed withdrawal penalties—those in the range of five to nine times the study costs—far exceed reasonableness, especially in the face of the potential for a myriad of ways in which an LSE can bias the bid review process and slow the cluster study process under existing rules without stringent oversight.¹⁴²⁰ Interwest argues that the NOPR does not sufficiently acknowledge the need to reform study processes to prevent inaccurate studies, which create widely different results from one study to

another.¹⁴²¹ Interwest suggests that these inaccurate studies, along with delayed affected system study results, lead to withdrawals, strengthening the case that withdrawal penalties should not increase dramatically toward the end of the study process and around execution of an LGIA without appropriate recourse for the interconnection customer. Interwest argues that a 25% increase in study costs from one study to another should be a sufficient basis for withdrawal without incurring withdrawal penalties, as part of a tariff with incentives for transmission providers to provide accurate estimates of network upgrade costs. Interwest argues that, for these reasons, withdrawal penalties are redundant and punitive when combined with increasingly large at-risk deposits as proof of commercial readiness.

737. SDG&E asserts that a withdrawal penalty of nine times the study deposit amount will provide a disincentive for late-stage withdrawals in certain cases, but that a penalty alone should not be relied on in lieu of other financial security mechanisms.¹⁴²² SDG&E maintains that a more reasonable amount for a withdrawal penalty may be the greater of nine times the study deposit and a CAISO-style financial security posting that is based on factors such as network upgrade and interconnection facilities costs.

738. Some commenters argue that the Commission should adopt the RTO/ISO model of financial readiness milestones that are tied to network upgrade costs.¹⁴²³ Clean Energy Associations submit that tying deposits and penalties to network upgrade costs allocated to the interconnection customer is superior because network upgrade costs are a better indicator of the harm that may be caused by a withdrawal than generating facility size.¹⁴²⁴

739. AES contends that tying the withdrawal penalty to the percentage of network upgrade deposit at risk provides a better incentive for interconnection customers with proposed generating facilities with high network upgrade costs to withdraw earlier in the interconnection process, rather than risk losing their posted security.¹⁴²⁵ Invenergy suggests that any withdrawal penalty imposed after LGIA execution should be tied to assigned

network upgrade costs and should be subject to a \$2 million cap to avoid unnecessarily punitive penalties, as the LGIA may impose additional financial obligations for construction of the assigned upgrades.¹⁴²⁶ CAISO argues that network upgrade-based financial requirements are far more effective than the withdrawal penalties proposed in the NOPR because network upgrade-based requirements are tied to the project's actual interconnection costs, which correlate with its competitiveness to obtain a power purchase agreement and therefore its likelihood to remain in the queue.¹⁴²⁷

740. NYISO argues that the withdrawal penalty amounts proposed in the NOPR, which are tied to study costs, are unlikely to provide sufficient capital to cover the costs of constructing the network upgrades of withdrawn generating facilities on which other interconnection customers are relying.¹⁴²⁸ SoCal Edison suggests that, instead of using study costs as the basis for the withdrawal penalty amount, which would not be known until completion of the interconnection studies, the Commission should require that withdrawal penalties be calculated based on increasing multiples of the study deposits, which are known and serve as a proxy of the study costs.¹⁴²⁹

(2) Proposed Withdrawal Penalty Exemptions

741. Some commenters support the NOPR proposal to exempt interconnection customers from withdrawal penalties in certain instances, stating that the proposal achieves a workable balance between the needs of interconnection customers and transmission providers.¹⁴³⁰ For example, MISO agrees that interconnection requests that experience significant cost increases should be able to withdraw without a penalty.¹⁴³¹ Omaha Public Power states that the four scenarios proposed in the NOPR for interconnection customers to qualify for exemptions to withdrawal penalties seem to properly acknowledge instances where other interconnection customers are not negatively impacted by a withdrawal, or when it is no longer economically viable for the interconnection customer to move forward with the generating facility due

to drastically increased network upgrade costs.¹⁴³²

742. On the other hand, SEIA contends that, although the NOPR proposal exempts interconnection customers from withdrawal penalties if there is no impact to other generating facilities in the same cluster, withdrawals almost always impact other generating facilities in the cluster, such that withdrawal penalties are likely unavoidable.¹⁴³³ Pine Gate states that the proposed list of withdrawal penalty exemptions is not reflective of an appropriate balance between interconnection customer and transmission provider accountability because it increases the burden on interconnection customers without any increase to accountability for transmission providers.¹⁴³⁴ Pattern Energy disagrees with a standard tied to a potential delay of a lower-queued interconnection customer, given the Commission's proposed transition to a cluster study approach.¹⁴³⁵ Pattern Energy contends that the only impact that should be relevant to granting an exemption is a financial impact.

743. NRECA supports including the 100% cost increase exemption in the final rule, which would apply where there is a large late-stage cost increase, making the interconnection request's success economically challenging.¹⁴³⁶ Pattern Energy, on the other hand, claims that the Commission's proposal incentivizes transmission providers to overestimate costs in cluster studies for fear that there will be later, unexpected cost increases in the facilities study, which Pattern Energy argues presents a barrier to entry.¹⁴³⁷ Pine Gate also claims that requiring a 100% increase in costs between the facilities study phase and the previous cluster study phase in order to allow for penalty-free withdrawal exposes interconnection customers to withdrawal penalties in instances where costs increase dramatically due to no fault of the interconnection customer.¹⁴³⁸ Several commenters recommend that the Commission ensure that any penalties for withdrawal account for unanticipated cost increases.¹⁴³⁹

¹⁴³⁹ Clean Energy Associations Initial Comments at 40 (arguing that the Commission should allow interconnection customers to withdraw without penalty if costs in a restudy increase by over 25% relative to prior study results); CREA and NewSun

744. Xcel recommends that the Commission allow an interconnection request, submitted by a resource planning entity as agent for an interconnection customer, that is withdrawn by the resource planning entity because it was not picked in a resource solicitation process, to be exempt from withdrawal penalties, as the withdrawal was due to no fault of the interconnection customer.¹⁴⁴⁰ Xcel states that, other than this exemption, the Commission should not expand the exemptions from withdrawal penalties beyond those proposed in the NOPR.

745. NextEra and Northwest and Intermountain argue that interconnection customers should be exempt from withdrawal penalties if the transmission provider's or affected system operator's studies or posted information are untimely.¹⁴⁴¹

746. NextEra contends that the NOPR does not explain why there are different withdrawal penalty levels for interconnection customers demonstrating commercial readiness via the proposed non-financial demonstration options and those submitting a deposit in lieu of demonstrating commercial readiness.¹⁴⁴²

747. Several commenters argue that the proposed exemptions require

Initial Comments at 78 (suggesting that withdrawal penalties should not apply anytime an interconnection customer withdraws after receipt of a system impact study, facilities study, or restudy that contains a 25% cost increase over the prior study or a 50% cumulative increase over the initial study); ENGIE Initial Comments at 7; Invenergy Initial Comments at 25 (arguing that the Commission should allow interconnection customers to withdraw without penalty if affected system study results cause an interconnection customer's costs to increase by more than 25% compared to costs allocated to it by the host transmission provider in a prior study); Longroad Energy Initial Comments at 18 (recommending that the Commission reduce the penalty exemption threshold to a cost-increase of only 20% from the initial cluster study to the restudy and a cost increase of only 10% from the final restudy to the individual cluster facilities study); NextEra Initial Comments at 26 (suggesting that a more reasonable withdrawal penalty exemption threshold for cost increases for late-stage withdrawals would be in the range of 30%); Ørsted Initial Comments at 15 (arguing that the Commission should allow interconnection customers to withdraw without penalty if costs in a restudy increase by over 25% relative to prior study results); Pattern Energy Initial Comments at 33 (suggesting that, if costs increase by 15% from the first to the second study report, but a restudy results in an additional 20% increase compared to the second study report, then the total increase from the first study report to the restudy report would be 35%, and this total additive percentage increase should be deemed sufficient to constitute an excusable withdrawal event); Pine Gate Initial Comments at 35.

clarification.¹⁴⁴³ For one, CAISO claims that the exemption criteria, as written in the NOPR, are not workable.¹⁴⁴⁴ CAISO argues that the Commission's description of the exemptions is problematic due to the use of "or," which suggests meeting any criterion would relieve the interconnection customer of withdrawal penalties. CAISO posits that, under the Commission's criteria, a withdrawal could not affect the timing of other generating facilities but still increase their costs; however, the interconnection customer would meet the first exemption and not be subject to withdrawal penalties. CAISO argues that withdrawals would never delay the timing of generating facilities in the same cluster. CAISO states that a cluster's upgrades are a package, and the construction schedule would not change simply because one interconnection customer that is sharing upgrades withdraws. CAISO suggests that the Commission clarify that, to be exempt from withdrawal penalties, each interconnection customer must meet (1) both criterion one and two, and (2) criterion three or four.

748. Invenery proposes that the list of exemptions to withdrawal penalties be revised to include: (1) the withdrawal does not directly cause material delays in the timing of other interconnection requests within the same cluster, as determined at the time of withdrawal by the transmission provider; or (2) the withdrawal does not directly cause a material increase in the costs assigned to other interconnection requests within the same cluster, as determined at the time of withdrawal by the transmission provider.

749. Omaha Public Power contends that the exemption to withdrawal penalties cannot be applied to the interconnection process as it currently functions for those transmission providers that allow for overlapping studies (e.g., when a cluster study is being studied prior to the conclusion of the preceding cluster study).¹⁴⁴⁵ Omaha Public Power claims that overlapping studies lead to baseline costs in the subsequent cluster studies that are inherently wrong and do not factor in the previously existing unfinished cluster studies. Omaha Public Power claims that this inaccurate starting point for costs is likely higher than what is accurate, and any subsequent restudy

will likely lead to identification of network upgrades that fall below the exemption threshold, subjecting interconnection customers to wrongful withdrawal penalties. Omaha Public Power argues that, until an interconnection process can be conducted without overlapping studies, these exemptions will be woefully misapplied. Southern raises similar concerns.¹⁴⁴⁶

750. Yet other commenters believe that the NOPR proposal is too lenient.¹⁴⁴⁷ NRECA suggests that transmission providers should be afforded flexibility whether to adopt exemptions to withdrawal penalties related to: (1) not delaying the timing of other interconnection requests in the same cluster; (2) not increasing the cost of network upgrades for other interconnection requests in the same cluster; and (3) withdrawing if the most recent cluster study report shows a cost increase of at least 25% compared to the previous cluster study report.¹⁴⁴⁸ NRECA asserts that these exemptions may or may not be needed for a particular transmission provider and potentially may allow withdrawals that trigger time-consuming restudy processes. SDG&E generally opposes exemptions to withdrawal penalties and claims that material modification provisions in the *pro forma* LGIP already address impacts to other interconnection customers.¹⁴⁴⁹ SDG&E argues that, regardless of the impact to other interconnection customers, there are still costs and resources committed between all entities to study and assess proposed generating facilities. SDG&E believes that withdrawal penalties should apply for all generating facilities, and any exemptions should be sparing.

(3) How To Determine if a Withdrawal Has Delayed or Increased the Cost of Network Upgrades for Other Generating Facilities in the Same Cluster

751. Some commenters argue that it would be difficult to define the circumstances under which a withdrawal is deemed to have delayed the timing or increased the cost of network upgrades for other interconnection requests in the same cluster.¹⁴⁵⁰ APS and Bonneville argue that attempting to do so would create an undue burden on transmission providers, and that the withdrawal of an

interconnection request could have an impact on generating facilities in a subsequent cluster.¹⁴⁵¹ NextEra suggests that one test to determine whether a withdrawal delays other interconnection requests could be whether the withdrawal delays the planned in-service date of other interconnection requests in the same cluster.¹⁴⁵² However, NextEra acknowledges that even this assessment could be difficult to calculate, as delays could not manifest themselves for months or years, other factors could cause delays, and interconnection customers could seek to delay their generating facilities for commercial reasons. Pattern Energy asserts that the Commission must clearly define the standard for timing delays and increasing the cost of network upgrades for other interconnection customers.¹⁴⁵³

752. Bonneville suggests that, similar to the method used to assess a material modification under the *pro forma* LGIP and *pro forma* SGIP, the Commission could provide a non-exhaustive list of examples that would be deemed as delaying the timing or increasing the costs of network upgrades.¹⁴⁵⁴ Bonneville suggests that transmission providers could be given discretion to determine whether other withdrawal situations that are not listed should fall under this category by considering whether the withdrawal has delayed the timing or increased the cost of network upgrades for other interconnection requests in a cluster.

753. Invenery argues that transmission providers should not be permitted to simply assume that withdrawals cause some harm to other interconnection requests and that there should be a requirement for transmission providers to perform an analysis to determine whether a withdrawal results in material harm to other interconnection requests, which interconnection customers could review.¹⁴⁵⁵ Invenery states that the analysis of whether a withdrawal causes a cost increase or delays the timing for other interconnection requests should be performed at each phase of the study process.

754. Invenery requests that the Commission clarify that a withdrawal will not delay the timing of another interconnection request or increase its network upgrade costs if the withdrawal simply requires the transmission

provider to account for the withdrawal. Invenenergy requests that the Commission clarify that any delay or cost increase analysis must be based on a reasonable analysis and show a direct relationship between the withdrawal and the asserted impact on another interconnection request.

755. MISO encourages the Commission to impose the withdrawal penalty whenever an interconnection request withdraws from the interconnection queue.¹⁴⁵⁶ MISO argues that even if after restudy it turns out that the withdrawal of an interconnection request did not actually increase network upgrade costs to other interconnection customers in the cluster, the withdrawal still negatively impacts the interconnection queue by increasing uncertainty for other interconnection customers, prompting further withdrawals and adding administrative cost and burden that impede efficient interconnection queue processing. Pattern Energy likewise argues that the withdrawal of any interconnection request from the interconnection queue results in some form of delay, such as the time taken by a transmission provider to perform a review of the potential impacts of the withdrawal, which could be interpreted as causing a delay because the withdrawal impact analysis could delay the receipt of final study results and agreements.¹⁴⁵⁷ PJM makes similar arguments.¹⁴⁵⁸

756. Xcel contends that, if a withdrawal results in a restudy of a cluster or subsequent clusters, that restudy will delay the receipt of study results, LGIA execution, and the construction of required network upgrades.¹⁴⁵⁹ Therefore, Xcel argues that any withdrawal that results in a restudy should not be exempt from a withdrawal penalty unless the commercial operation dates of other impacted interconnection requests in the same or subsequent cluster are not impacted. Xcel asserts that delaying LGIA execution may negatively impact off-take agreements and should also be considered harm to equally or lower-queued interconnection customers. Xcel notes that harm is not limited to the reallocation of interconnection costs to equally or lower-queued interconnection requests. Xcel contends that delays, resulting in clogged interconnection queues, can impact resource decisions and thus harm interconnection requests not yet in the

interconnection queue. Xcel argues that, if the withdrawal causes restudy, but the restudy does not impact the timing discussed above, then the restudy results should be used to determine the impact on costs allocated to equally or lower-queued interconnection requests.

757. Xcel notes that it may be difficult to determine if a single withdrawal would have caused harm when multiple interconnection requests are withdrawn in the same time frame.¹⁴⁶⁰ Xcel generally supports penalizing withdrawals if they have a combined impact, as it would be difficult, if not impossible and time consuming, to determine each individual withdrawal's impact. According to Xcel, if the withdrawal penalty was determined on an individual basis, some interconnection customers may wait for others to withdraw, then argue that their secondary withdrawals did not have an impact because all delays and cost impacts were caused by the first withdrawal.

758. Indicated PJM TOs state that a withdrawal can impose costs on other interconnection customers even if it does not delay the timing of other proposed generating facilities. Indicated PJM TOs argue that if withdrawals impose more network upgrade costs on other interconnection customers, it would be unfair to excuse withdrawing interconnection customers just because the transmission provider can keep to its original timelines.¹⁴⁶¹ Indicated PJM TOs further claim that, particularly in a large RTO/ISO, it is not clear how the transmission provider would determine that a particular withdrawal did or did not delay the processing of other interconnection requests. Indicated PJM TOs argue that this criterion for being excused from penalties or forfeitures should be eliminated.

(4) Withdrawal Penalty Collection and Distribution

759. APS seeks clarification on the mechanism the Commission proposes for transmission providers to collect withdrawal penalties from interconnection customers.¹⁴⁶² APS and MISO express concerns that, under the withdrawal penalty collection proposal, a transmission provider would have to act as a collection agency, which is likely unworkable.¹⁴⁶³ EEI suggests that the Commission institute financial assurance requirements for interconnection customers to reduce the

likelihood that penalized entities are unable to pay the penalties they are assessed.¹⁴⁶⁴ Eversource asserts that the Commission should set clear rules that include policies governing how RTOs/ISOs will collect penalties and address potential scenarios in which interconnection customers refuse to pay or declare bankruptcy.¹⁴⁶⁵ MISO claims that interconnection customers can structure the businesses behind the interconnection request in such a way so that the legal entity would be very difficult to collect from.¹⁴⁶⁶

760. Some commenters do not support the Commission's proposal to require withdrawal penalty revenues to be used to fund studies conducted under the cluster study process.¹⁴⁶⁷ CAISO states that transmission providers already have provisions specifying where non-refundable funds go, and using them for interconnection studies would require careful accounting without relieving study burdens.¹⁴⁶⁸ NextEra and PJM suggest that transmission providers should be allowed to use forfeited funds to help pay for increased network upgrade costs incurred by other interconnection customers due to a withdrawal.¹⁴⁶⁹ Invenenergy asserts that excess funds should be applied to offset network upgrade costs assigned through that cluster study process in proportion to any upgrade costs that were directly shifted from a withdrawn interconnection customer.¹⁴⁷⁰ RWE Renewables assert that withdrawal penalties should be used to create meaningful decision points for interconnection customers, to discern whether they are willing to commit resources to each particular generating facility.¹⁴⁷¹ RWE Renewables and Interwest contend that withdrawal penalties should be allocated between and among different clusters for transmission expansion, so that they benefit load and interconnection customers, rather than restudies, which they believe will not be needed as frequently in the proposed cluster study process.¹⁴⁷²

761. CAISO opposes the NOPR proposal to cap withdrawal

penalties.¹⁴⁷³ CAISO contends that larger projects create the most churn in queue, and projects that cannot demonstrate commercial readiness should be the most likely to withdraw. CAISO argues that withdrawal penalty caps will disproportionately affect smaller and more competitive interconnection requests more than larger and less competitive interconnection requests and suggests that the Commission remove the withdrawal penalty caps so the withdrawal penalties affect interconnection customers equally.

762. Pattern Energy suggests that, in addition to the Commission's proposed use of withdrawal penalties to defray future study costs, the Commission should designate a portion of any withdrawal penalties to be used for recruitment, retention, and performance bonuses for engineers, administrators, and/or consultants, who can then be deployed to help alleviate queue backlogs.¹⁴⁷⁴

763. Other commenters request clarification of the proposal for distribution of withdrawal penalty funds. AES and EDF Renewables argue that it is critical that the Commission clarify that transmission providers do not receive any benefits from withdrawal fee and non-refundable deposit proceeds; otherwise, they argue, transmission providers would be financially incentivized to force interconnection customers to withdraw.¹⁴⁷⁵ Several commenters request clarification of the Commission's intent for excess money that remains after funding any appropriate restudies for the current cluster, and some of these commenters have suggested uses for this excess.¹⁴⁷⁶ AES asserts that any withdrawal fees and non-refundable deposits collected should go towards improving the interconnection process.¹⁴⁷⁷ EDF Renewables suggests that any remainder should be refunded to the interconnection customer.¹⁴⁷⁸ On the other hand, Southern opposes refunding excess penalty amounts to the interconnection customer and proposes that any remaining amounts be applied to network upgrades needed in the same cluster or treated as a revenue credit

against the revenue requirement in the determination of transmission rates.¹⁴⁷⁹ APS suggests that the remainder act as a credit towards the transmission provider's transmission rates, as this method would guarantee that all transmission customers benefit from the penalties.¹⁴⁸⁰

764. Shell claims that withdrawal penalties will accumulate faster than they may be spent by the relevant transmission provider.¹⁴⁸¹ Therefore, Shell asserts that the Commission must address the following: (1) the system of independent checks and balances that transmission providers will employ to ensure that only specific individuals have access to the withdrawal penalty account; (2) the average cost of a cluster study from start to finish so that, if a withdrawal penalty is forfeited, it can be determined how many future cluster studies the transmission provider could expect to perform with forfeited funds; (3) if funds from a withdrawal penalty are used to pay for future study costs, whether future interconnection customers must still post a study deposit; and (4) if a withdrawal penalty account balance accumulates faster than funds can be spent, what independent system of checks and balances transmission providers will use to ensure that their staff and/or consultants do not overcharge for their services related to studies.

(d) Requests for Flexibility, Clarification, or Technical Conference

765. Some commenters would prefer that the Commission allow for transmission providers to craft and use their own withdrawal penalty structure instead of having a standardized approach for all transmission providers.¹⁴⁸² AEP supports the adoption of withdrawal penalties with reasonable penalty-free off ramps but asserts that this is an area in which flexibility should be permitted, particularly where alternative approaches already have been through robust stakeholder processes.¹⁴⁸³ NYTOs suggest that there should be

flexibility regarding the amount of the withdrawal penalties, which NYTOs argue should be tied to each transmission provider's and associated transmission owners' interconnection processes.¹⁴⁸⁴ Pacific Northwest Utilities argue that the Commission should allow flexibility as to the timing of the penalties.¹⁴⁸⁵ Pacific Northwest Utilities also request flexibility to define their own requirements for withdrawal penalties to limit interconnection queue overcrowding.¹⁴⁸⁶ Interwest contends that the Commission should not attempt to predetermine the amount of withdrawal penalties in a rulemaking proceeding with limited evidence; rather, the Commission should require that transmission providers develop appropriate mechanisms and determine appropriate monetary amounts to substantially reduce the risk that the efforts of interconnection customers are not thwarted or delayed by others' overly speculative interconnection requests.¹⁴⁸⁷

766. Some commenters seek general clarification on several of the withdrawal penalty proposals. For example, NV Energy requests clarification on whether, if a withdrawal penalty is deemed appropriate at the time an interconnection customer withdraws its interconnection request, that the interconnection customer is charged both the actual costs incurred to perform studies and the applicable withdrawal penalty (*i.e.*, two separate charges).¹⁴⁸⁸

767. NV Energy seeks clarification, if an interconnection customer's generating facility does not achieve commercial operation, whether the nine times the actual study cost deposit would be applied toward its withdrawal penalties, and whether the interconnection customer would be charged nine times the actual study costs.

768. Southern suggests that, in the NOPR's proposed definition of "withdrawal penalty" and in the exemptions to that penalty, the phrase "the commercial operation date in the interconnection request" should replace the phrase "commercial operation," such that the definition would read "the penalty assessed by Transmission Provider to an Interconnection Customer that chooses to withdraw from the queue or does not otherwise reach the Commercial Operation Date in the

Interconnection Request.”¹⁴⁸⁹ Southern argues that to be consistent and clear with *pro forma* LGIP section 3.7.1.1, the definition of withdrawal penalty must be revised to reflect that the withdrawal penalty is applicable if the interconnection customer is deemed withdrawn.

769. Invenergy requests that the Commission clarify that, to the extent withdrawal penalty amounts are used to fund some portion of an interconnection study, that it does not reduce the transmission provider’s potential exposure for penalties in the event that study is not timely completed.¹⁴⁹⁰

770. Invenergy requests that the Commission clarify that, to the extent any post-LGIA withdrawal penalty is imposed, it is offset by the deposit posted at LGIA execution and not additional to that deposit, which would be unreasonable and unnecessarily punitive.¹⁴⁹¹

771. MISO encourages the Commission to bolster the definitions of “commercial readiness deposit,” “study deposit,” and “withdrawal penalty” to clearly enable the transmission provider to apply those deposits toward the withdrawal penalty.¹⁴⁹²

772. CAISO seeks clarification that the NOPR’s proposed withdrawal penalties would not displace transmission providers’ other existing procedures and penalties that incentivize interconnection customers to withdraw earlier rather than later and cites its own requirement that interconnection customers post financial security based on their allocated network upgrade costs.¹⁴⁹³

773. NV Energy requests that the Commission clarify what happens if only a portion of an interconnection request is brought to commercial operation, as it relates to withdrawal penalties and the construction of network upgrades.¹⁴⁹⁴

774. Tri-State requests clarification on the meaning of “previous withdrawal penalty revenue received” in section 3.7.1.1 of the *pro forma* LGIP¹⁴⁹⁵ and requests clarification on whether section 3.7.1.2 of the *pro forma* LGIP includes the paragraph after (c) regarding commercial operation.

(e) Alternatives and Miscellaneous

775. Some commenters provide comments in response to the

Commission’s query on whether a correlation exists between the size of a withdrawing proposed generating facility and the relative level of harm, in terms of delays and increased cost, to other interconnection customers as a result of the withdrawal.¹⁴⁹⁶ Some commenters indicate that there can be a correlation between the size of a withdrawing proposed generating facility and the relative level of harm caused by the withdrawal and encourage withdrawal penalties that increase with the proposed generating facility size.¹⁴⁹⁷ For example, Idaho Power contends that large generating facilities typically trigger more expensive network upgrades which, when withdrawn, are more likely to trigger restudies.¹⁴⁹⁸ Other commenters do not support withdrawal penalties that increase based on the size of a generating facility.¹⁴⁹⁹ APS argues that the determinant of “relative level of harm” is entirely subjective to the transmission provider and could lead to litigation.¹⁵⁰⁰ APS argues that the location of the interconnection request is more closely correlated with the effect on other interconnection customers than is the size of a proposed generating facility. Xcel states that, although larger generating facilities tend to have a larger impact, if the total impact to other projects is calculated as a combined impact, then the size of the project should not impact the withdrawal penalty calculation.¹⁵⁰¹

776. Ørsted expresses concern that relatively small generating facilities (by MW) that fail to demonstrate commercial readiness and are forced to withdraw from the interconnection queue pose significant threats to the efficient management of the cluster study process and recommends that withdrawal penalties be correlated to an interconnection customer’s commercial readiness.¹⁵⁰²

777. AEP supports the idea of off-ramp opportunities at specific times in the cluster study process rather than having to analyze individual withdrawal impacts throughout a cluster study process.¹⁵⁰³ AEP contends that such an approach should limit restudies and minimize delays to

remaining interconnection customers. Similarly, PJM asserts that only allowing withdrawals during certain decision points ensures that studies start and finish at the same time and that the cluster status is maintained during the duration of the study.¹⁵⁰⁴ According to PJM, allowing withdrawals at any point in the study process, as proposed in the NOPR, even with relevant penalties assessed, will cause cascading restudies and negative impacts on other interconnection customers in a cluster.

778. SPP states that, under its current LGIP, interconnection customers provide progressively increasing financial security deposits at each stage of the study process, and the amounts of the financial security deposits required to enter into later stages of the study process are based on the amount of network upgrade costs assigned in the previous stage, which it asserts is better related to the risk and harm of a withdrawal than the NOPR proposal.¹⁵⁰⁵

779. Rather than being assessed withdrawal penalties, CREA and NewSun assert that interconnection customers should be refunded any unused study deposits.¹⁵⁰⁶ CREA and NewSun argue that penalties should apply only to deter wrongful conduct that the interconnection customer can avoid committing and should not be used as an arbitrary barrier to market entry.¹⁵⁰⁷

iii. Commission Determination

780. We adopt, with modifications, the NOPR proposal to impose withdrawal penalties on interconnection customers for withdrawing their interconnection requests from the interconnection queue, absent qualification for one of the limited exemptions, as discussed below. We add the defined term “withdrawal penalty,” as modified below, to the *pro forma* LGIP; revise section 3.7 of the *pro forma* LGIP; and add sections 3.7.1, 3.7.1.1, and 3.7.1.2 to the *pro forma* LGIP, with the modifications to the NOPR proposal discussed below. However, we decline to adopt the withdrawal penalty caps proposed in the NOPR.

781. We find that, along with the other reforms adopted in this final rule, adopting a withdrawal penalty framework is needed to remedy the issues regarding speculative interconnection requests, including

study delays from overcrowded interconnection queues and the harms to the function of the interconnection queue that occur when interconnection customers withdraw from the interconnection queue at various stages of the study process. We believe that withdrawal penalties—as adopted herein—will encourage interconnection customers to ensure that their proposed generating facilities are likely commercially viable when they submit their interconnection requests because withdrawal, in most instances, will incur a penalty. We adopt withdrawal penalties that increase in amount as interconnection customers proceed through the interconnection process in order to ensure that interconnection customers continue to evaluate whether their proposed generating facilities are commercially viable, thereby reducing the number of late-stage withdrawals and accompanying restudies.¹⁵⁰⁸ We additionally modify the proposal, as discussed below, regarding how the withdrawal penalty funds are distributed. Specifically, after withdrawal penalty funds are used to fund studies conducted under the cluster study process in the same cluster, as proposed in the NOPR, we modify the proposal to require any remaining withdrawal penalty funds be used to offset net increases to network upgrade cost assignments experienced by interconnection customers from the same cluster that remain in the interconnection queue and are directly affected by the withdrawal of an interconnection request because they previously shared an obligation to fund a network upgrade¹⁵⁰⁹ with the withdrawn interconnection request in the same cluster.¹⁵¹⁰ If the

interconnection customer withdraws before it executes its LGIA or requests to file its LGIA unexecuted and after the interconnection customers in the same cluster that the withdrawn interconnection customer participated in have executed LGIAs, requested their LGIAs to be filed unexecuted, or withdrawn (or have been deemed withdrawn), any remaining withdrawal penalty funds not applied to study costs or net increases in network upgrade cost assignments must be returned to the withdrawn interconnection customer.¹⁵¹¹

782. As explained in section II of this final rule, we find that Commission-jurisdictional rates have been rendered unjust and unreasonable due to speculative interconnection requests that enter and remain in the interconnection queue. By incentivizing interconnection customers to submit interconnection requests only for proposed generating facilities that they believe will be commercially viable and to remain in the interconnection queue only as long as that continues to be true, and by offsetting increases in network upgrade cost responsibility experienced by interconnection customers directly affected by a withdrawal because they share an obligation to fund a network upgrade with the withdrawn interconnection request in the same cluster, we believe that the withdrawal penalty requirements will work in tandem with the other reforms adopted in this final rule to remedy those unjust and unreasonable rates.

783. Specifically, we adopt the NOPR proposal, with modification, to revise the *pro forma* LGIP to require the transmission provider to assess withdrawal penalties, unless an exemption applies at any point in the interconnection process. The withdrawal penalties will be applied to an interconnection customer if: (1) the interconnection customer withdraws its interconnection request at any point in the interconnection process; (2) the interconnection customer's interconnection request has been deemed withdrawn by the transmission provider at any point in the interconnection process; or (3) the interconnection customer's generating facility does not reach commercial operation (such as when an interconnection customer's LGIA is terminated prior to reaching commercial operation). We note that a withdrawal could trigger minor adjustments to the study results of the remaining equally-

or lower-queued interconnection requests that do not represent a significant harm to those remaining in the queue. Therefore, we are modifying the NOPR proposal to require the transmission provider to assess a withdrawal penalty only if the withdrawal has a material impact on the cost or timing of any interconnection requests with an equal or lower queue position. If the transmission provider determines that the impact of the withdrawal is immaterial, the transmission provider must not assess a withdrawal penalty.

784. We adopt this provision in place of the NOPR proposal to exempt interconnection customers from withdrawal penalties if: (1) the withdrawal does not delay the timing of other proposed generating facilities in the same cluster; or (2) the withdrawal does not increase the cost of network upgrades for other proposed generating facilities. We adopt the NOPR proposal that the interconnection customer will also be exempt from paying a withdrawal penalty if (1) the interconnection customer withdraws its interconnection request after receiving the most recent cluster study report and the network upgrade costs assigned to the interconnection customer's request have increased 25% compared to the previous cluster study report, or (2) the interconnection customer withdraws its interconnection request after receiving the individual facilities study report and the network upgrade costs assigned to the interconnection customer's request have increased by more than 100% compared to costs identified in the cluster study report. Accordingly, with these exemptions from the withdrawal penalty, the required withdrawal penalty approach adopted herein does not allow for penalties if the impact of the withdrawal is immaterial to other interconnection customers or if the withdrawal follows significant, unanticipated increases in network upgrade cost estimates.

785. For the withdrawal penalty exemptions, we clarify that the relevant cost increases are network upgrade cost estimate increases, and we adopt revisions to the *pro forma* LGIP accordingly. This clarification is consistent with the Commission's description of these exemptions in the NOPR: "Thus, under this proposal, interconnection customers would be exempt from a withdrawal penalty . . . if the withdrawal follows a significant unanticipated increase in *network upgrade* cost estimates."¹⁵¹²

¹⁵⁰⁸ See RWE Renewables Initial Comments at 2 (asserting that withdrawal penalties should be used to create meaningful decision points for interconnection customers to demonstrate project commitment through the interconnection process).

¹⁵⁰⁹ Sharing an obligation means (1) interconnecting to the same substation network upgrade, or (2) in the case of a system network upgrade, where interconnection customers are identified through the proportional impact method, as contributing to the need for the same system network upgrade.

¹⁵¹⁰ See Invenery Initial Comments at 27–28; NextEra Initial Comments at 27–28; PJM Initial Comments at 39; Southern Initial Comments at 22 (suggesting that transmission providers should be allowed to use forfeited funds to help pay for increased network upgrade costs incurred by other interconnection customers in the same cluster due to a withdrawal). We disagree with RWE Renewables and Interwest that withdrawal penalties should be allocated between and among different clusters because we find that withdrawal penalties should only be allocated to interconnection customers that are directly affected by a withdrawal because they share an obligation to fund a network upgrade. See RWE Renewables

Initial Comments at 2; Interwest Reply Comments at 14.

¹⁵¹¹ See EDF Renewables Initial Comments at 7.

¹⁵¹² NOPR, 179 FERC ¶ 61,194 at P 141 (emphasis added).

786. We disagree with commenters that the thresholds to trigger the exemptions—a 25% increase in estimated network upgrade costs above the cluster study report estimate or a 100% increase in estimated network upgrade costs in the facilities study report—are too high. As an initial matter, the potential interconnection customer will have access to heatmap information, as required in this final rule, that will allow it to evaluate project feasibility without a financial commitment and thereby avoid potential withdrawal penalty risk. As stated by Omaha Public Power and Southern, upon entering the interconnection queue and receiving the estimates provided in the cluster study report, the interconnection customer is aware that the estimates may change. Additionally, we find that the trigger thresholds are set at an amount that provides sufficient room for estimates to change as the cluster evolves while limiting interconnection customer exposure to withdrawal penalties when such estimates change by a significant amount. Moreover, the increasing threshold triggers reflect the fact that estimates should improve in accuracy as interconnection customers move through the interconnection process and should increasingly disincentivize commercially non-viable generating facilities from staying in the interconnection queue. An interconnection customer will know to factor in both the cost estimates and the potential withdrawal penalty but also the exemption trigger thresholds as it proceeds through the interconnection queue.

787. We do not believe that interconnection customers will be subject to “wrongful withdrawal penalties” as suggested by some commenters. In addition, the withdrawal penalty exemptions are designed to allow penalty-free withdrawal if the withdrawal does not materially harm other interconnection customers or if the withdrawal follows a significant unanticipated increase in network upgrade cost estimates. The withdrawal penalty exemptions are not designed to mitigate all business risk associated with interconnecting a new generating facility. The withdrawal penalty structure adopted herein, where the withdrawal penalty at the earlier stages of the interconnection process is generally lower than the withdrawal penalty at later stages also lessens the cost exposure for an interconnection customer that withdraws at an earlier stage, when the impact of the withdrawal is less disruptive to the

administration of the interconnection queue and other interconnection customers. We find that, by increasing the withdrawal penalty amounts as the interconnection customer proceeds through the interconnection queue, interconnection customers will be incentivized to withdraw non-viable interconnection requests earlier in the process, leading to fewer late-stage withdrawals.

788. We also disagree with commenters that request additional exemptions to the withdrawal penalty structure. We believe that the withdrawal penalty exemptions and withdrawal penalty structure, as modified by this final rule, will deter unwarranted assessments of withdrawal penalties.

789. Regarding commenters’ requests for clarification concerning how to determine whether a withdrawal impacts other interconnection requests with the same or lower queue positions for purposes of assessing qualification for an exemption to a withdrawal penalty, we defer to the transmission provider’s discretion because the transmission provider is best suited to determine whether a withdrawal has a material impact on the cost or timing of any interconnection customer with the same or lower queue position.

790. We do not adopt the NOPR proposal regarding withdrawal penalty calculations for interconnection customers that provide demonstrations of commercial readiness because we do not adopt the non-financial commercial readiness demonstration options in this final rule, as discussed above in section III.A.6.c.iii. Instead, we modify the proposed penalty structure to base the withdrawal penalty calculation on an increasing percentage of the cost of the identified network upgrades assigned to the interconnection customer as the interconnection customer moves through the interconnection queue.¹⁵¹³ We also decline to adopt the withdrawal penalty caps proposed in the NOPR. We believe that this structure will provide better financial incentives for interconnection customers to avoid late-stage withdrawals that cause the greatest disruption to interconnection queue processing via restudies and delays because interconnection customers will be subject to higher withdrawal

penalties late in the interconnection process.

791. With regard to the withdrawal penalty calculation structure more specifically, we modify the NOPR proposal and require that, unless an interconnection customer qualifies for one of the stated exemptions discussed above, the transmission provider must assess a withdrawal penalty on an interconnection customer with a proposed generating facility that does not reach commercial operation based either on the actual study costs or on a percentage of the interconnection customer’s assigned network upgrade costs, depending on what phase the interconnection customer withdraws its interconnection request. Thus, the withdrawal penalty for an interconnection customer will be calculated as the greater of the study deposit or: (1) two times the study cost if the interconnection customer withdraws during the cluster study or after receipt of a cluster study report; (2) 5% of the interconnection customer’s identified network upgrade costs if the interconnection customer withdraws during the cluster restudy or after receipt of any applicable restudy reports; (3) 10% of the interconnection customer’s identified network upgrade costs if the interconnection customer withdraws during the facilities study, after receipt of the individual facilities study report, or after receipt of the draft LGIA; or (4) 20% of the interconnection customer’s identified network upgrade costs if, after executing, or requesting to file unexecuted, the LGIA, the interconnection customer’s LGIA is terminated before its generating facility achieves commercial operation. The table below summarizes the withdrawal penalty structure adopted herein.

Phase of withdrawal	Total withdrawal penalty (if greater than study deposit)
Initial Cluster Study ...	2 times study costs.
Cluster Restudy	5% of network upgrade costs.
Facilities Study	10% of network upgrade costs.
After Execution of, or After the Request to File Unexecuted, the LGIA.	20% of network upgrade costs.

792. We find that the withdrawal penalty structure adopted herein, which requires larger withdrawal penalties as the interconnection customer progresses through the interconnection process, combined with the exemptions, strikes the proper balance between enabling interconnection customers that possess

¹⁵¹³ See Invenenergy Initial Comments at 27–28; NextEra Initial Comments at 27–28; PJM Initial Comments at 39; Southern Initial Comments at 22 (suggesting that transmission providers should be allowed to use forfeited funds to help pay for increased network upgrade costs incurred by other interconnection customers in the same cluster due to a withdrawal).

imperfect information when entering into and remaining in the interconnection queue to make withdrawal decisions and deterring speculative interconnection requests from entering into and remaining in the queue when they are unlikely to be completed, to the detriment of other interconnection customers, especially when these interconnection requests are withdrawn at later stages of the interconnection process.

793. We decline to adopt the withdrawal penalty caps proposed in the NOPR because such caps would mute the economic signals that withdrawal penalties are intended to send to interconnection customers in the interconnection queue. The withdrawal penalty structure is meant to incentivize interconnection customers to withdraw from the interconnection queue upon receipt of network upgrade cost assignments that make the interconnection request commercially non-viable. However, withdrawal penalty caps would shield interconnection customers that withdraw due to higher-cost network upgrades from consequences proportional to the impact of that withdrawal, which can drive cascading withdrawals, creating the need for restudies and leading to delays. We accordingly agree with CAISO that the withdrawal penalty caps proposed in the NOPR would disproportionately benefit interconnection requests for larger generating facilities.¹⁵¹⁴ We find that, while withdrawal penalty caps protect interconnection customers that are allocated relatively high network upgrade costs, they offer no such commensurate protection for interconnection customers with lower network upgrade cost assignments, reflecting an imbalanced withdrawal penalty structure.

794. We also adopt and modify the proposed definition of “withdrawal penalty” in section 1 of the *pro forma* LGIP to address situations in which it may be unclear what it means to be withdrawn from the interconnection queue. Specifically, we clarify that a withdrawal penalty applies when an interconnection customer actively chooses to withdraw its interconnection request but also when its interconnection request is deemed to have been withdrawn from the interconnection queue for one reason or another, or if it otherwise does not reach commercial operation, per the terms of the *pro forma* LGIP.

795. Commenters observe that, under the NOPR proposal, interconnection

customers with large projects (in terms of MW) would be subject to large withdrawal penalties.¹⁵¹⁵ While this is true for the initial withdrawal penalty, which continues to be based on project size because it is tied to study costs, the modification to the NOPR proposal described above, where later withdrawal penalties are based on percentages of identified network upgrade costs, reflects the potential impact of a withdrawal on the remaining interconnection customers in a cluster. Additionally, as some commenters point out, there is typically a correlation between the size of the proposed generating facility and the relative harm to other interconnection customers from the withdrawal of the interconnection request, so we believe that basing the initial withdrawal penalty on project size is appropriate.¹⁵¹⁶

796. Because we modify the process for distributing withdrawal penalty funds in response to comments, as described below, transmission providers will not accumulate large amounts of funds from withdrawal penalties, and therefore Shell’s concerns are moot.¹⁵¹⁷

797. Furthermore, we believe the proposed *pro forma* LGIP section 3.7.1.2 requirement that transmission providers post on their OASIS site, and update quarterly, the balance of withdrawal penalty revenue held by them but not yet dispersed, and the instructions of how to distribute withdrawal penalty funds contained in this provision provide sufficient transparency to help interested parties understand, monitor, and review withdrawal penalty funds. Transmission providers have substantial experience collecting and accounting for fees assessed to customers, and we will not mandate here what accounting method they should use for the collection and tracking of withdrawal penalties.

798. With respect to the distribution of withdrawal penalty funds, we adopt the NOPR proposal to require transmission providers to use withdrawal penalty funds to fund studies and restudies conducted under the cluster study process, with modification. Specifically, we adopt a structure whereby, if interconnection customers withdraw and are subject to withdrawal penalties, the transmission provider must use the withdrawal penalty funds as follows: (1) to fund studies and restudies in the same

cluster; (2) if withdrawal penalty funds remain, to offset net increases in costs borne by other remaining interconnection customers from the same cluster for network upgrades shared by both the withdrawing and non-withdrawing interconnection customers prior to the withdrawal; and (3) if any withdrawal penalty funds remain, they will be returned to the withdrawing interconnection customer.

799. We believe that using withdrawal penalty funds to reduce network upgrade cost shifts caused by withdrawals will reduce the risk that the shifted costs are so large as to cause cascading withdrawals, thus ensuring that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner. We agree with Invenergy that it is appropriate for there to be a relationship between the impact caused by the withdrawal of an interconnection request and how the withdrawal penalty funds are distributed. We also are persuaded by Invenergy, PJM, NextEra, and Southern that there are benefits to distributing withdrawal penalty funds to other interconnection customers remaining in the cluster to offset increased network upgrade costs resulting from the withdrawal.¹⁵¹⁸ We therefore modify the NOPR proposal and revise section 3.7.1 of the *pro forma* LGIP consistent with the discussion below.

800. In the paragraphs that follow we summarize the steps a transmission provider must follow in distributing withdrawal penalty funds, as fully detailed in section 3.7.1.2 of the *pro forma* LGIP, and we present an illustrative example.

801. Section 3.7.1.2.1 of the *pro forma* LGIP describes the transmission provider’s handling of withdrawal penalty funds and the first step of distributing them to fund studies and restudies. For a single cluster, the transmission provider shall hold all withdrawal penalty funds until all interconnection customers in that cluster have: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted. Any withdrawal penalty funds collected shall first be used to fund studies for interconnection customers in the same cluster that have executed an LGIA or requested an LGIA to be filed unexecuted. Distribution of the withdrawal penalty funds for such

¹⁵¹⁴ See CAISO Initial Comments at 23–24.

study costs shall not exceed the total actual study costs.

802. Section 3.7.1.2.2 of the *pro forma* LGIP provides that if, after the first distribution step is complete, withdrawal penalty funds remain, the transmission provider must proceed to the second step of distributing them to offset net increases in network upgrade cost assignments driven by the withdrawal. The transmission provider will determine if the withdrawn interconnection customers, at any point in the cluster study process, shared cost assignment for one or more network upgrades with any remaining interconnection customers in the same cluster based on the cluster study report, cluster restudy report(s), interconnection facilities study report, and any subsequent issued restudy report for the cluster.

803. If the transmission provider determines that withdrawn interconnection customers shared cost assignment for network upgrades with remaining interconnection customers in the same cluster, the transmission provider will calculate the remaining interconnection customers' net increase in costs (*i.e.*, financial impact) due to a shared cost assignment for network upgrades with the withdrawn interconnection customer. It will then distribute withdrawal penalty funds as described in section 3.7.1.2.3 of the *pro forma* LGIP, depending on whether the withdrawal occurred before the withdrawing interconnection customer executed an LGIA (*i.e.*, during the cluster study process) or after.

804. If the transmission provider determines that more than one interconnection customer in the same cluster was financially impacted by the same withdrawn interconnection customer, the transmission provider will apply the relevant withdrawn interconnection customer's withdrawal penalty to reduce the financial impact to each impacted interconnection customer based on each withdrawn interconnection customer's proportional share of the financial impact. Each interconnection customer's proportional share will be determined by either the proportional impact method if the net cost increase is related to a system network upgrade or on a per capita basis if the net cost increase is related to a substation network upgrade.

805. Section 3.7.1.2.4 of the *pro forma* LGIP details the process by which the transmission provider will provide amended LGIAs to any interconnection customers in the cluster that qualify for distribution of withdrawal penalty funds under this framework. To account for withdrawals that occurred *during*

the cluster study process, the transmission provider must do the following: Within 30 calendar days of all interconnection customers in the same cluster having: (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted, determine if, and to what extent, any interconnection customers qualify to have their increased network upgrade costs offset by withdrawal penalty funds and provide such interconnection customers with an amended LGIA that provides the reduction in network upgrade cost assignment and associated reduction to the interconnection customer's financial security requirements.

806. To account for withdrawals that occurred in the same cluster *after the withdrawing interconnection customer executed an LGIA, or requests the filing of an unexecuted LGIA*, the transmission provider must do the following: Within 30 calendar days of such withdrawal or termination, determine if, and to what extent, any interconnection customers qualify to have their increased network upgrade costs offset by withdrawal penalty funds and provide such interconnection customers with an amended LGIA that provides the reduction in network upgrade cost assignment and associated reduction to the interconnection customer's financial security requirements.

807. For any given withdrawal, if the transmission provider determines that there are no network upgrade cost assignments in the withdrawn interconnection customer's cluster shared with the withdrawn interconnection customer, or if the transmission provider determines that the withdrawn interconnection customer's withdrawal did not cause a net increase in the shared cost assignment for any remaining interconnection customers in the cluster, the transmission provider must return the remaining withdrawal penalty to the withdrawn interconnection customer. Such remaining withdrawal penalties will be returned to withdrawn interconnection customers based on the proportion of each withdrawn interconnection customer's contribution to the total amount of withdrawal penalty funds collected for the cluster. The transmission provider must make such disbursement within 60 calendar days of the date on which all interconnection customers in the same cluster have either (1) withdrawn or been deemed withdrawn; (2) executed an LGIA; or (3) requested an LGIA to be filed unexecuted.

808. By way of example, assume that the transmission provider's proportional impact method identifies that interconnection customers A, B, and C in the same cluster all contribute to the need for system network upgrade A, estimated at \$40 million, in the proportions of 50%, 25% and 25%, respectively. Interconnection customer C withdraws from the interconnection queue after the facilities study, but before executing, or requesting the unexecuted filing of, the LGIA and pays a withdrawal penalty of \$1 million.¹⁵¹⁹ System network upgrade A is still required for interconnection customers A and B, and when the transmission provider conducts the proportional impact method in the cluster restudy for the same cluster, it now determines that interconnection customer A's revised network upgrade cost allocation for system network upgrade A would increase to 67% and interconnection customer B's revised network upgrade cost allocation for system network upgrade A would increase to approximately 33%. The transmission provider would base the distribution of this interconnection customer's withdrawal penalty on the proportional impact analysis and credit 67% of the \$1 million to interconnection customer A and 33% to interconnection customer B.

809. Finally, section 3.7.1.2.5 of the *pro forma* LGIP provides that if, after the first and second distribution steps are complete, some or all of an interconnection customer's withdrawal penalty remains, the transmission provider must return the balance of the withdrawn interconnection customer's withdrawal penalty funds to the withdrawn interconnection customer.

810. In response to commenter's concerns regarding the ability of transmission providers to collect withdrawal penalties from interconnection customers,¹⁵²⁰ we further clarify that, in addition to study deposits, transmission providers must apply commercial readiness deposits received from the interconnection customer that exceed the costs that the transmission provider has incurred, including interest calculated in accordance with § 35.19a(a)(2) of the Commission's regulations, toward any

¹⁵¹⁹ In this example, interconnection customer C paid a \$1 million withdrawal penalty because it was allocated \$10 million in network upgrade cost (*i.e.*, 25% of \$40 million) and withdrew after receiving the facilities study report, at which point the withdrawal penalty is 10% of the amount of network upgrades allocated to the interconnection customer.

¹⁵²⁰ APS Initial Comments at 16; EEI Initial Comments at 8; Eversource Initial Comments at 19; MISO Initial Comments at 69.

withdrawal penalties assessed to the interconnection customer, in accordance with *pro forma* LGIP section 3.7.

811. In response to NV Energy and Invenergy, we clarify that an interconnection customer that withdraws during any time in the interconnection process is responsible for the applicable withdrawal penalty as well as the costs incurred to perform studies up to that point, and withdrawal penalty amounts will not be applied toward incurred study costs. Additionally, in response to NV Energy, we clarify that if any portion of a generating facility proposed in an interconnection request achieves commercial operation, even if less than the original requested MW amount, the interconnection customer will not be subject to withdrawal penalties.

812. In response to Tri-State, we clarify that the phrase “regardless of any previous Withdrawal Penalty revenues received” in *pro forma* LGIP section 3.7.1.1 means that the withdrawal penalty will be calculated based on actual study costs and will exclude any credits to the study costs from penalties assessed to and received from other interconnection customers.

813. We disagree with commenters that assert that a technical conference is needed to further develop the record on withdrawal penalties before finalizing requirements in this final rule. For the reasons explained above, we believe that the record supports the reforms that we adopt herein and that their adoption is needed to ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner.

7. Transition Process

a. NOPR Proposal

814. In the NOPR, the Commission proposed to revise the *pro forma* LGIP to require transmission providers to establish a transition process for moving to a first-ready, first-served cluster study process.¹⁵²¹ Specifically, the Commission proposed to require transmission providers to offer existing, eligible interconnection customers the options to either enter a transitional serial interconnection facilities study or a transitional cluster study,¹⁵²² with commercial readiness requirements, or

withdraw from the interconnection queue without penalty.

815. To proceed to the transitional serial study, the Commission proposed that eligible interconnection customers (*i.e.*, interconnection customers that have executed a facilities study agreement before the effective date of the transmission provider’s compliance filing) would execute a transitional serial interconnection facilities study agreement to codify their choice.¹⁵²³ The Commission proposed that at the time of execution of such agreement, the interconnection customer would be required to provide a deposit equal to 100% of the interconnection facility and network upgrade costs allocated to the interconnection customer in the system impact study report. The Commission explained that if the interconnection customer’s proposed generating facility reaches commercial operation, this deposit would be used toward construction costs of the same facilities.

816. The Commission further explained that if the interconnection customer withdraws, the deposit would be refunded after the final invoice for study costs and the withdrawal penalty are settled. The Commission proposed that the transitional serial study withdrawal penalty would equal nine times the study cost. The Commission also proposed that transitional serial generating facilities would be required to provide evidence of exclusive site control for the entire generating facility and any interconnection customer’s interconnection facilities, as well as demonstrate commercial readiness through one of the following: (1) an executed term sheet (or comparable evidence) related to a contract for the sale of the generating facility’s output or its energy/ancillary services; (2) reasonable evidence that the generating facility is included in a resource planning entity’s resource plan, has received a contract via a resource solicitation process, or is being developed for a large end-use customer; or (3) a provisional LGIA that is not suspended and includes a commitment to build the generating facility. The Commission proposed that the deadline for the interconnection customer to meet all the provisions above would be 60 calendar days after the effective date of a transmission provider’s compliance filing to the final rule. Finally, the Commission proposed that the transmission provider complete transitional serial studies within 90 calendar days after the deadline for

eligibility requirements to be satisfied.¹⁵²⁴

817. The Commission proposed that existing interconnection customers that opt for the transitional cluster study would execute a transitional cluster study agreement to codify their choice.¹⁵²⁵ The Commission proposed that interconnection customers may make a one-time extension of their requested commercial operation date upon entry into the transitional cluster study, where any such extension shall not result in a commercial operation date later than December 31, 2027. The Commission proposed that the costs of this study and the identified facilities would be allocated as the costs are allocated for future cluster studies, as set forth in this final rule. The Commission also proposed that the transitional cluster would be subject to an expedited combined system impact and interconnection facilities study. The Commission explained that transitional cluster study generating facilities would be required to select ERIIS or NRIS. The Commission proposed to require interconnection customers opting for a transitional cluster study to make a \$5 million deposit. The Commission proposed to subject this deposit to the same conditions as the transitional serial study deposit.

818. The Commission also proposed to require interconnection customers with interconnection requests in the transitional cluster to produce evidence of exclusive site control for their entire generating facilities and demonstrate commercial readiness through one of the same three options described above for transitional serial studies.¹⁵²⁶ The Commission proposed that the deadline to satisfy these requirements would be 60 calendar days after the effective date of a transmission provider’s compliance filing to the final rule. Finally, the Commission proposed that the transitional cluster study be completed by the transmission provider within 300 calendar days after the deadline for eligibility requirements to be satisfied.

819. The Commission sought comment on: (1) whether certain interconnection customers with pending interconnection requests submitted prior to the issuance of a final rule should be allowed to proceed to LGIA execution without entering the transition process; (2) whether the Commission should require transmission providers to accept any additional commercial readiness demonstrations for entry into the

¹⁵²¹ NOPR, 179 FERC ¶ 61,194 at P 156.

¹⁵²² In the NOPR, the Commission explained that the transmission provider would consider all interconnection requests accepted within a standard cluster study request period have equal queue priority for purposes of the cluster study. *See id.* P 67. This would be true for all interconnection requests accepted for the transitional cluster study as well, per the NOPR.

¹⁵²³ *Id.* P 158.

¹⁵²⁴ NOPR, 179 FERC ¶ 61,194 at P 158.

¹⁵²⁵ *Id.* P 159.

¹⁵²⁶ *Id.* P 159.

transition process, and whether existing interconnection customers should be permitted to enter their interconnection requests into the transitional cluster study process by posting a deposit in lieu of demonstrating commercial readiness; and (3) whether \$5 million is a reasonable estimate of the costs that would be allocated to the interconnection customer via the transitional cluster study.¹⁵²⁷

b. Comments

i. Comments in Support

820. A few commenters fully support the proposed transition process.¹⁵²⁸ For example, NRECA states that it strongly supports the proposed transition process because it fulfills the Commission's goal of ensuring an efficient way to prioritize and process interconnection requests, based on how far they have advanced through the interconnection process and their commercial readiness.¹⁵²⁹

821. More commenters support the NOPR's core proposal to require transmission providers to offer interconnection customers with existing interconnection requests three options for moving forward (*i.e.*, entering a transitional serial study, entering a transitional cluster study, or withdrawing without penalty).¹⁵³⁰ For example, Pine Gate asserts that, given the current interconnection queue backlogs in multiple regions, it is essential that the Commission craft a transition process that permits late-stage interconnection requests to finish the interconnection process under the existing rules, while transitioning most interconnection requests to the new cluster study process.¹⁵³¹

822. With respect to the transitional serial study,¹⁵³² many commenters, predominantly interconnection customers, support the proposal to

provide this option to interconnection customers that have executed a facilities study agreement.¹⁵³³ AEE and Pine Gate state that this provision respects the investments made by interconnection customers based on current interconnection procedures.¹⁵³⁴ Similarly, Pattern Energy argues that, at the facilities study stage, an interconnection customer has relatively concrete economic expectations about its potential network upgrade obligations and should not be required to start the interconnection process over again.¹⁵³⁵

823. Other commenters express qualified support for the proposal. Noting that significant investments have been made and that generating facility contracting and financing patterns have been developed based on existing tariffs, Interwest calls for a structured, well-noticed transition period, to allow the market sufficient time to adjust to new processes, especially if the new process dramatically alters interconnection and cost allocation principles.¹⁵³⁶ Similarly, the Pennsylvania Commission agrees that a transition process is necessary to integrate the Commission's proposed interconnection queue reforms to allow individual interconnection customers the opportunity to decide, based on the newly adopted minimum interconnection parameters, whether to remain in the interconnection queue.¹⁵³⁷

ii. Comments in Opposition

824. CREA and NewSun argue that the proposed transition process is unnecessary, as a first-ready, first-served cluster study process places the decision to enter a cluster in the hands of the interconnection customer regardless of whether there are previously queued interconnection requests.¹⁵³⁸ In a similar vein, EEI contends that it would be reasonable to require transmission providers to establish their own transition processes or to allow existing interconnection customers to proceed to LGIA execution

without entering the transition process.¹⁵³⁹

825. CREA and NewSun also fault the proposal to treat all interconnection requests in a transitional cluster as having a single queue priority because it fails to protect the investment expectations of interconnection customers with interconnection requests that have entered the interconnection queue.¹⁵⁴⁰ CREA and NewSun argue that the Commission has previously recognized that queue positions should be respected and either grandfathered or otherwise transitioned into a cluster study process that avoids devaluing the existing queue position. CREA and NewSun urge the Commission to modify its proposed cluster study process so that higher-queued interconnection requests are given a higher-priority than lower-queued interconnection requests. CREA and NewSun explain that this has worked in CAISO and Bonneville, which they assert uses a similar mechanism to respect queue positions in its transmission planning expansion process.

826. Shell requests that the Commission let existing processes continue for all interconnection customers that have executed a system impact study agreement or cluster study agreement because such processes, while not perfect, are functioning "well enough."¹⁵⁴¹ Illinois Commission expresses more general concern about the time required for a transition process to be completed, noting that PJM's transition process for a recent set of interconnection queue reforms is expected to result in significant delays.¹⁵⁴² Such delays, Illinois Commission contends, could prompt withdrawals and less-than-optimal use of potential new resources, which in turn would undermine state public policy goals and potentially threaten reliability. Longroad Energy similarly recommends that the Commission seek to avoid creating a situation whereby a transmission provider is forced to institute a pause on reviewing interconnection requests, similar to PJM's recent proposal to halt its review of interconnection requests for a two-year period.¹⁵⁴³

iii. Comments on Specific Proposal

(a) Serial Study Eligibility and Transition Process Exceptions

827. Numerous commenters express support for one or more of the eligibility

¹⁵²⁷ *Id.* P 160.

requirements proposed in the NOPR. To proceed with a transitional serial study, Affected Interconnection Customers agree that interconnection customers should provide evidence of exclusive site control, demonstrate commercial readiness, and fund 100% of their interconnection facility and network upgrade costs upfront.¹⁵⁴⁴ Affected Interconnection Customers reason that delays in processing interconnection requests occur if speculative interconnection requests without adequate funding are allowed to enter and clog the serial study process, only to drop out later and cause the need for restudies.

828. However, Bonneville, PJM, OPSI, RWE Renewables, and NextEra express concern that offering interconnection customers a serial study option may be inefficient.¹⁵⁴⁵ Bonneville states that it has received 52 interconnection requests, totaling 33 GW, in the 90 days since the NOPR's issuance, and that completing existing studies under the current process could delay Bonneville's ability to implement a new cluster study process, thus diminishing its near-term benefits.¹⁵⁴⁶ OPSI calls for the Commission to analyze whether this option could materially delay the transition process, and if so, consider using a cluster study process as soon as feasible in the transition.¹⁵⁴⁷ Similarly, RWE Renewables assert that all parties should already be on notice about the pending changes, allowing for swifter movement to new processes, particularly for those that have not yet had any studies completed.¹⁵⁴⁸ NextEra argues that it is best for all interconnection customers at the same stage in the interconnection process to abide by the same transition rules rather than giving them a choice between a serial or cluster study process.¹⁵⁴⁹

829. Several commenters suggest broadening opportunities for a transitional serial study and/or exempting certain interconnection requests from transitional study. AEE, Clean Energy Associations, and Pine Gate support allowing interconnection requests with an executed or unexecuted facilities study agreement to proceed with a serial study.¹⁵⁵⁰ Clean

Energy Associations propose serial study eligibility for any interconnection request that has a system impact study underway, provided the interconnection customer can meet commercial readiness demonstration and deposit requirements on par with what would be required at the equivalent stage of the standard cluster study process.¹⁵⁵¹ ENGIE supports a process that exempts interconnection requests with interconnection costs of \$5 million or less from a transitional study.¹⁵⁵² ENGIE also proposes that interconnection requests that do not contribute to the need for network upgrades and/or do not need facilities studies be permitted to proceed to an LGIA early.

830. Cypress Creek suggests that eligibility for a transitional serial study¹⁵⁵³ be based on: (1) a specified interconnection queue window developed through a stakeholder process that extends to late stage interconnection requests; and (2) an objective assessment of the plotted distribution of total network upgrades (in terms of millions of dollars) to which the candidate interconnection request contributes, such that the total number of interconnection requests eligible for transitional serial and transitional cluster studies is known so transitional studies can be completed by a reasonable deadline.¹⁵⁵⁴ Cypress Creek states that the distribution curve of network upgrades will help support eligibility to those interconnection requests on the lower half of impacts. Finally, Cypress Creek suggests that the Commission establish a date by which the transitional serial process would conclude, and by which the transitional cluster process would begin. Following these transitional studies, Cypress Creek recommends that the new cluster study process commence, in lieu of the second transitional cluster proposed by the Commission. Cypress Creek argues that this more rapid transition process better balances interconnection rights of late-stage interconnection requests with the need to move to the new process compared to the proposed transition process.

(b) New Requirements on Existing Interconnection Customers

831. AEE, Invenery, NESCOE, and Shell argue that it is wrong, or could be unfairly burdensome, to impose significant new requirements on

interconnection customers that have entered and proceeded through the interconnection queue in good faith.¹⁵⁵⁵ Invenery adds that this is especially true of interconnection customers that may have entered the interconnection queue years before the NOPR was issued.¹⁵⁵⁶ Other commenters make similar points.¹⁵⁵⁷

832. AEE and EDF Renewables stress the importance of not disrupting or further delaying interconnection requests that are well along in the interconnection process.¹⁵⁵⁸ ACE-NY states, more broadly, that interconnection requests currently in serial interconnection queues should not be unduly harmed, adding that any transition process should not delay the commercial operation date of existing and future generating facilities.¹⁵⁵⁹

833. Clean Energy Associations argue that transition interconnection customers, whether they be in the serial or cluster study process, should not be held to higher standards than those interconnection customers that would proceed with the regular cluster study process unless the transition process leads to an LGIA and includes only ready interconnection requests that have been delayed in the existing interconnection queue.¹⁵⁶⁰ Invenery concurs with this principle, if the Commission elects to impose requirements on existing interconnection customers.¹⁵⁶¹

(c) Deposits

834. Several commenters object to the proposal to require that interconnection customers, at the time of execution of the transitional serial study agreement, provide a deposit equal to 100% of the interconnection facility and network upgrade costs allocated to them in the system impact study report.¹⁵⁶² AEE and EDF Renewables argue that the costs assigned at the system impact study stage often vary significantly from the network upgrade costs provided at

the facilities study stage.¹⁵⁶³ EDF Renewables also argue that the NOPR proposal is inconsistent with Order No. 2003, which specifically rejected such a proposal in favor of requiring security for discrete portions of these costs.¹⁵⁶⁴ EDF Renewables adds that requiring a full deposit imposes a real cost on interconnection customers, which typically obtain a letter of credit from a bank.

835. Likewise, several commenters object to the proposal to require a \$5 million deposit to proceed to the transitional cluster study.¹⁵⁶⁵ Most of these commenters claim that \$5 million dollars is excessive and/or arbitrary;¹⁵⁶⁶ fails to reflect the relative impact of smaller proposed generating facilities;¹⁵⁶⁷ likely is not indicative of costs across all markets;¹⁵⁶⁸ and will prompt otherwise viable interconnection requests to withdraw.¹⁵⁶⁹ With respect to the NOPR's reliance on PSCo's claim that \$5 million is within the range of interconnection costs on its system, CREA and NewSun question whether PSCo intended the deposit to serve as a barrier to its competitors in the generation market.¹⁵⁷⁰ CREA and NewSun note that the three orders cited by the Commission in the NOPR mention a \$5 million deposit, but none provide a reasoned decision for acceptance of this deposit amount.¹⁵⁷¹ Conversely, Xcel asserts that \$5 million dollars is a low estimate of costs that may ultimately be allocated to interconnection customers.¹⁵⁷²

836. AEE, Invenergy, and Pine Gate recommend that the deposit for either the transitional serial facilities study agreement or transitional cluster study

agreement reflect a percentage of the network upgrade costs allocated to the interconnection customer, with Invenergy recommending 20%.¹⁵⁷³ Northwest and Intermountain and Xcel recommend that the final rule require transmission providers to propose a deposit amount for transitional studies that is appropriate to their interconnection queue and their specific system configurations.¹⁵⁷⁴ Xcel suggests that the Commission should accept proposals that use an average of actual historical estimates of costs allocated to interconnection customers with executed LGIAs to determine the security required to enter the transitional cluster.¹⁵⁷⁵

(d) Commercial Readiness and Site Control

837. Idaho Power and Xcel emphasize the importance of requiring a commercial readiness demonstration to enter the transition process.¹⁵⁷⁶ Xcel argues that if a readiness demonstration is not required, unready interconnection requests may be in the study models for more than three years after they execute an LGIA and when they ultimately withdraw, which will cause delays and cascading restudies.¹⁵⁷⁷ Idaho Power asserts that commercial readiness demonstrations for interconnection customers with executed LGIAs are also critical, as their resource and network upgrades will need to be modeled in the transitional cluster study.¹⁵⁷⁸ NRECA proposes that interconnection customers that show requisite site control and commercial readiness proceed to the "front of the line" as "first-ready" in the transition cluster process without additional evaluation.¹⁵⁷⁹ Both Idaho Power and EEI recommend that interconnection customers with LGIAs, but that have suspended interconnection-related construction, be required to meet the commercial readiness requirements, with EEI also recommending that they be required to demonstrate site control.¹⁵⁸⁰

838. In addition to the proposed commercial readiness demonstration requirements, Affected Interconnection Customers recommend that interconnection customers also be

allowed to provide evidence of (1) major equipment either contracted to purchase or owned as part of an existing equipment fleet or (2) a completed engineering package under provisional LGIAs.¹⁵⁸¹ SEIA recommends that interconnection customers be allowed to demonstrate commercial readiness by providing a commitment to participate in RTO/ISO markets or an application for a site permit.¹⁵⁸²

839. A number of commenters oppose the NOPR's proposed commercial readiness requirements, as applied to the transition process.¹⁵⁸³ SEIA states that the proposed requirements will be nearly impossible for an independent power producer to meet and ignore the very nature of a capacity market, which is to allow independent power producers to sell capacity into a market.¹⁵⁸⁴

840. Several commenters support allowing a deposit in lieu of demonstrating commercial readiness, as applied to the transition process.¹⁵⁸⁵ Pattern Energy argues for this option to be available specifically for the transitional cluster study and recommends a \$5 million deposit value.¹⁵⁸⁶ Pattern Energy claims that this would balance the need for interconnection customers that may have been waiting for years to have their interconnection requests studied with the need to transition to a new process. SEIA and Pine Gate recommend that a commercial readiness deposit should be the norm, not the exception, with SEIA also recommending that interconnection customers be required to provide evidence of site control.¹⁵⁸⁷ Pine Gate recommends a readiness deposit framework that requires interconnection customers to make incrementally at-risk payments throughout the interconnection process.¹⁵⁸⁸

841. At the same time, several commenters oppose permitting deposits in lieu of demonstrating commercial readiness, as applied to the transition process.¹⁵⁸⁹ Ameren calls such deposits "opportunities for delay" that will not facilitate the interconnection of

interconnection requests for which the interconnection customer has demonstrated commercial readiness.¹⁵⁹⁰ Idaho Power opposes the option because the transitional cluster study is an expedited, combined system impact and interconnection facilities study.¹⁵⁹¹ If the Commission does allow a deposit, EEI argues that the option should apply only in specific circumstances, and should be sufficiently high to deter interconnection requests that are not ready from entering the transitional cluster.¹⁵⁹²

(e) Withdrawal Penalties

842. Many commenters oppose the NOPR's proposed transition process withdrawal penalties.¹⁵⁹³ CREA and NewSun, Pine Gate, and Ørsted call the penalties harsh or draconian.¹⁵⁹⁴ Ørsted notes that offshore wind project interconnection customers with contracts awarded via a state-sponsored resource solicitation process have already spent tens of millions of dollars to secure leaseholds, conduct extensive geotechnical studies of these lease areas, and engineering studies.¹⁵⁹⁵ Given these investments, Ørsted contends that the decision to withdraw from the interconnection queue is most likely going to be based on some issue outside of the control of the interconnection customer, such as supply chain constraints, and not because the interconnection request will not go forward at some point.

843. AES states that withdrawal should be penalty-free if an interconnection customer decides not to move forward with a proposed generating facility during the transition.¹⁵⁹⁶ EDF Renewables asserts that a transition process should offer existing interconnection customers an opportunity to exit the interconnection queue in line with what they expected when entering.¹⁵⁹⁷ SEIA recommends that the withdrawal penalty for interconnection customers in the transitional cluster study be capped at the withdrawing interconnection request's allocation of network upgrade costs.¹⁵⁹⁸

(f) Compliance Timeline

844. NRECA supports the NOPR's proposed timeline for compliance.¹⁵⁹⁹ NRECA states that the 180-day¹⁶⁰⁰ period proposed in the NOPR would be sufficient to allow interconnection customers to get their deposits, site control, and commercial readiness demonstrations in order.¹⁶⁰¹ PPL states that transmission providers should continue moving requests to the LGIA execution stage and have interconnection customers demonstrate commercial readiness as normal until the effective date of the transition process.¹⁶⁰²

845. AES, CREA and NewSun, and Invenery assert that the NOPR's proposed 60-day deadline for compliance is difficult or impossible to meet for most interconnection customers.¹⁶⁰³ Invenery adds that the fact of the rulemaking's existence is insufficient to put interconnection customers on notice of potential reforms, given that any aspect of the NOPR could be modified in the final rule and be subject to variations in compliance filings.¹⁶⁰⁴ AES states that it does not oppose requiring interconnection customers to demonstrate site control and meet commercial readiness criteria but recommends that at least six months be given for compliance.¹⁶⁰⁵

(g) Alternatives

846. Shell argues that the final rule should allow an opt-out provision for the transition process under which transmission providers can demonstrate their existing processes' efficiencies by detailing their prior performance on certain measures, such as the average duration of each interconnection study and the average length of time from submission of an interconnection request to execution of an LGIA or filing of an unexecuted LGIA.¹⁶⁰⁶

847. In cases where the transition process is slow due to the sheer scale of

change, Illinois Commission calls for an accelerated process for interconnection requests that allow states to ensure reliability and meet statutory obligations and public policy objectives.¹⁶⁰⁷ Illinois Commission adds that such a process could be accomplished in a narrowly tailored manner and would be more efficient than allowing RTOs/ISOs an extended period to clear out prior interconnection queue backlogs.

848. CREA and NewSun propose, and SEIA supports, a transitional cluster study process for transmission providers facing an otherwise unmanageable volume of interconnection requests.¹⁶⁰⁸ CREA and NewSun assert that such a process would expedite interconnection study, eliminate excessive deposits and penalties, permit withdrawals without penalty if no burden is imposed on other interconnection customers, respect queue positions and associated investment expectations of queued interconnection requests, and avoid "years of bottlenecks and market distorting problems" associated with solutions based on readiness requirements.¹⁶⁰⁹ CREA and NewSun state that this proposed process draws on Bonneville, CAISO, and MISO's current practices as examples and would take an estimated 460 days to complete, incorporating four milestones with increasing deposits and two off-ramps (or decision points).¹⁶¹⁰

849. CREA and NewSun further propose to respect queue positions by providing a separate cluster study for existing interconnection customers that have advanced to the system impact study stage and having interconnection requests retain queue position even as they are studied in a cluster.¹⁶¹¹ CREA and NewSun also propose to allow interconnection customers to trade queue positions.¹⁶¹²

(h) Tariff Language

850. Southern notes that under proposed section 5.1.1.2(2) of the *pro forma* LGIP, the true-up of actual construction costs must be completed within 30 days of a generating facility achieving commercial operation, which appears to conflict with the true-up provisions in *pro forma* LGIA article 12.2 (Final Invoice), which, Southern states, provides that the true-up is due within six months.¹⁶¹³ Southern requests that the Commission make

these provisions consistent at six months.

iv. Requests for Flexibility and Clarification

851. Several commenters argue that a one-size-fits-all transition plan is not appropriate, given the diversity of processes currently used by transmission providers and the varying volumes of interconnection requests in their interconnection queues.¹⁶¹⁴ For instance, Duke Southeast Utilities references the Commission's recognition that transmission providers that already have a Commission-approved LGIP and LGIA based on a first-ready, first-served cluster study process may not need another transition process. Duke adds that requiring a second transition process would likely add confusion and potentially result in waiver requests filed with the Commission.¹⁶¹⁵ ISO-NE states that New England does not currently suffer interconnection queue backlogs to the same extent as other regions, and transition provisions could have a significant impact on interconnection requests that are currently proceeding through the existing interconnection process.¹⁶¹⁶ WAPA claims that it needs sufficient flexibility to develop new programs within its existing appropriations (or to seek additional appropriations or spending authority) and to accommodate Federal contracting timelines (because it hires contractors to conduct facilities studies).¹⁶¹⁷

852. CAISO, Duke Southeast Utilities, and Invenery call on the Commission to permit transmission providers in regions that already use a first-ready, first-served cluster study process to minimize or omit a transition process.¹⁶¹⁸ CAISO recommends that transmission providers be permitted to propose just and reasonable effective

dates for each reform.¹⁶¹⁹ CAISO adds that it anticipates that most reforms should be effective with the beginning of the next cluster study after a compliance filing is approved, but some reforms could be implemented for existing interconnection requests in the queue, especially for interconnection customers that may not have executed an LGIA. Conversely, Tri-State states that a transition period will be necessary, even for those transmission providers already employing a first-ready, first-served cluster study process, due to changes beyond the overarching structure of the interconnection queue, such as a requirement for 100% site control.¹⁶²⁰

853. Several commenters ask the Commission to let transmission providers establish their own transition plans.¹⁶²¹ MISO notes that this previously occurred after the 2008 interconnection queue technical conference, where transmission providers were able to propose their own transition plan in adopting a first-ready, first-served model.¹⁶²² Ameren, National Grid, and NEPOOL call for RTOs/ISOs, in particular, to be allowed flexibility to develop a transition process with input from stakeholders.¹⁶²³ Avangrid notes that determining an equitable and achievable transition plan was among the most challenging aspects of the stakeholder process that led to PJM's recent interconnection queue reform filing and asserts that other regions should have the chance for similar deliberations.¹⁶²⁴ NYTOs argue that transmission providers should be allowed to propose: (1) setting an effective date for new interconnection requests that will be subject to the new cluster study process; (2) establishing an approach for the existing interconnection queue to be seen through to completion; and (3) determining a high-level process, including a high-level time frame for updating tariffs, if the proposed reforms are approved.¹⁶²⁵

854. Several commenters request that the Commission clarify how the NOPR's proposed transition process relates to PJM's transition process accepted as

part of its recent interconnection queue reforms.¹⁶²⁶ OPSI requests that the final rule not extend any transition process beyond what PJM proposed.¹⁶²⁷ Indicated PJM TOs request that the Commission allow PJM to implement its carefully negotiated transition process to a first-ready, first-served cluster study process.¹⁶²⁸ PJM suggests that the Commission hold in abeyance any compliance filing obligations in this proceeding until PJM has completed its proposed transition process.¹⁶²⁹ PJM argues that this would be in keeping with the Commission's statement that it will review any filings that result from transmission provider interconnection queue reform efforts "based on the record before us in those proceedings and not based on whether they comply with the proposed reforms in this NOPR." ¹⁶³⁰ PJM also asserts that, given the size of its interconnection queue backlog, allowing interconnection customers the option of a transitional serial study process will delay implementation of PJM's cluster study process by several years and create uncertainty regarding that process.¹⁶³¹ PJM emphasizes that elsewhere in the NOPR, the Commission acknowledges the importance of allowing transmission providers to clear their interconnection queue backlogs quickly.¹⁶³²

c. Commission Determination

855. We adopt the NOPR proposal to modify section 5 of the *pro forma* LGIP to establish a transition process for moving to the first-ready, first-served cluster study process adopted in this final rule from the existing first-come, first-served serial study process. Specifically, we adopt the NOPR proposal to require transmission providers to offer existing interconnection customers up to three transition options, depending on which phase of the serial study process their interconnection requests are in: (1) a transitional serial study comprised of a facilities study (*i.e.*, a transitional serial interconnection facilities study), (2) a transitional cluster study comprised of a clustered system impact study and individual facilities studies, or (3) withdrawal from the interconnection

queue without penalty. We also adopt definitions for the reports issued in association with options (1) and (2), respectively (*i.e.*, a transitional serial interconnection facilities study report and a transitional cluster study report). As discussed below, regarding eligibility for the transitional serial study, we modify the NOPR proposal to require transmission providers to offer the transitional serial study option to interconnection customers that have been tendered a facilities study agreement, even if they have not yet executed that agreement, as of 30 calendar days after the filing date of the transmission provider's initial filing to comply with this final rule. Similarly, regarding eligibility for the transitional cluster study, we modify the NOPR proposal to require transmission providers to offer the transitional cluster study option to interconnection customers with an assigned queue position as of 30 calendar days after the filing date of the transmission provider's initial filing to comply with this final rule. We also adopt the NOPR proposals for transition process deposits, withdrawal penalties, and deadlines. We decline to adopt the proposal to impose a commercial readiness demonstration requirement and adopt, with modification, the NOPR proposal for site control requirements.

856. We concur with commenters that, given current interconnection queue backlogs in multiple regions, it is essential that the Commission craft a transition process. Doing so will give interconnection customers, along with other market participants, time to adjust to new processes and requirements. We note that many responsive commenters support the proposed three options and, in particular, support providing interconnection customers at the facilities study stage the option for a transitional serial study.¹⁶³³ We concur with NRECA that the NOPR's proposed transition process will create an efficient way to prioritize and process interconnection requests, based on how far they have advanced through the interconnection process and their level of commercial readiness. We further find that the transition process, as adopted herein, appropriately balances the need to move expeditiously to the new cluster study process with the need to respect the investments and expectations of interconnection

customers at an advanced stage in the existing interconnection process.¹⁶³⁴

857. We disagree with commenters that contend that the NOPR's proposed transition process is unnecessary, should be optional, or poses an undue risk of delay. As stated in the NOPR and affirmed in our findings in section II of this final rule, we believe that interconnection queue backlogs exist throughout the country, in part, because the *pro forma* LGIP creates an incentive for interconnection customers to submit multiple interconnection requests for a given potential generating facility and remain in the interconnection queue to determine which of those interconnection requests has the lowest costs to interconnect.¹⁶³⁵ Given this, simply moving to the new cluster study process, as CREA and NewSun suggest, risks creating large initial clusters, which may prevent interconnection customers from being able to interconnect in a reliable, efficient, transparent, and timely manner. Similarly, if transmission providers only used serial study processes to transition, it could put existing interconnection requests at greater risk of cascading withdrawals that would delay the adoption of standard cluster study processes. With respect to concerns that a transition process could introduce delays, we note that the serial study portion of the transition process is limited to 90 calendar days, after which point the transitional cluster study commences.

858. We decline requests to modify the proposed transitional cluster study process to give higher-queued interconnection requests a higher queue position than lower-queued interconnection requests. As stated above, to address the interconnection queue backlogs that currently exist, it is necessary to move the bulk of existing interconnection requests to the cluster study process, and as such, interconnection requests studied in the same cluster have equal queue priority to avoid undue discrimination.

859. We also decline calls to modify the NOPR proposal to require that: (1) interconnection customers electing the transitional serial study must provide a deposit equal to 100% of the interconnection facility and network upgrade costs allocated to the interconnection customer in the system impact study; and (2) interconnection customers electing the transitional cluster study must provide a deposit equal to \$5 million. As noted earlier, the

transition process is anticipated to involve more interconnection customers than standard annual clusters (due to existing interconnection queue backlogs), which greatly increases the risk of late-stage withdrawals. Adopting deposit requirements for the transitional studies higher than those adopted for the cluster study process will help to ensure that the transitional process is used by interconnection customers that intend to proceed with their proposed generating facilities. In response to arguments that the proposed deposit amounts are arbitrary and/or excessive, we note that they are based on expected costs to the extent practicable and that only a portion of these deposits are ultimately at-risk. That is, the withdrawal penalty is set at nine times the study cost, as discussed below, with the remainder of deposits to be refunded.¹⁶³⁶ We also note that existing interconnection customers that are currently in an interconnection queue can opt to withdraw their interconnection requests without penalty and wait for the first standard cluster study with associated lower deposit requirements. Finally, with respect to EDF Renewable's claim that the transitional serial study deposit conflicts with the Commission's intentions in Order No. 2003, we find that the heightened need to avoid late-stage withdrawals during the transition process—a need that the Commission could not have anticipated in Order No. 2003—warrants the transitional use of this requirement for the transitional serial study.

860. We adopt the NOPR proposal that the transitional study withdrawal penalty should equal nine times the study cost. The withdrawal penalty plays an important role in deterring speculative interconnection requests in both the standard cluster study and the transition process. We disagree with commenters that call for a lower penalty to apply during the transition process, given that the risk of withdrawals is heightened during the transition process. With respect to Ørsted's contention that offshore wind developers will likely withdraw interconnection requests solely due to circumstances beyond their control, we note that, regardless of the cause, a withdrawal may cause harm to other interconnection customers in the transition process. Thus, we find it appropriate to impose penalties on

¹⁶³⁵ NOPR, 179 FERC ¶ 61,194 at PP 24–35.

¹⁶³⁶ See *supra* section III.A.7.a. Also, as one indicator of study costs, NV Energy states that, on average, it spends between \$80,000 and \$100,000 between the clustered system impact study and facilities studies. See *supra* section III.A.6.a.

those that choose to withdraw notwithstanding that withdrawal may at times be due to circumstances beyond the interconnection customer's control. Interconnection customers will bear the risk of withdrawal penalties and consider that risk in deciding whether to elect to join a transition process.

861. We recognize that some transmission providers have existing cluster studies in progress and others have Commission-approved transition plans in progress. We emphasize that the provisions of this final rule are not intended to interfere with the timely completion of those in-progress cluster studies and transition processes. With respect to concerns about duplicative transition processes, we clarify that transmission providers that have already adopted a cluster study process or are currently undergoing a transition to a cluster study process will not be required to implement a new transition process.

862. We are not persuaded by commenters' requests to permit transmission providers to establish their own transition plans. Transmission providers would likely require months-to-years to develop and execute their own transition plans, given the need for stakeholder dialogue and internal approval, followed by Commission review and approval. We find that the benefits of moving forward with an efficient, standardized transition process outweigh the potential benefits of relying on tailor-made transition processes developed by each transmission provider and its stakeholders.

863. Likewise, we decline to adopt any of the alternatives put forth by commenters. We are not persuaded by Shell's proposal to allow transmission providers to "opt-out" of the transition process based on their prior performance. We view the existing serial study process as inherently more prone to cascading withdrawals and delays, and thus ill-suited to a transition period intended to set the stage for a standard cluster study process. We view the Illinois Commission's proposal for an accelerated process (for interconnection requests related to states' objectives) in regions that may propose a lengthier transition process timeline, as more appropriately addressed by transmission providers in individual compliance filings. And, given the need for even more stringent requirements in a transition process discussed earlier, we view CREA and NewSun's proposal to use progressively increasing deposits, during a transition process, as inherently ill-suited to

address major interconnection queue backlogs.

864. Finally, we decline calls to modify the NOPR proposal to require interconnection customers to meet transitional serial study eligibility requirements in 60 days after the Commission-approved effective date of a transmission provider's filing in compliance with this final rule. Given that we do not adopt the proposed commercial readiness demonstration requirements, we find that the 60-calendar day deadline provides interconnection customers with sufficient time to adjust to the new requirements, *i.e.*, to choose a transition option and, depending on the option chosen, demonstrate site control and provide a deposit. Furthermore, we concur with NRECA that this period will be augmented, in practice, by the 90-calendar day period afforded to transmission providers to submit their compliance filings.¹⁶³⁷

i. Transition Process Eligibility and Exceptions

865. As stated above, we modify the NOPR proposal regarding the eligibility for the transitional serial study and transitional cluster study.¹⁶³⁸ Any interconnection customer that has been tendered a facilities study agreement as of 30 calendar days after the filing date of the transmission provider's initial filing to comply with this final rule (even if it has not yet executed that agreement) may opt to proceed with a transitional serial study or withdraw its interconnection request without penalty. Transmission providers are required to tender an LGIA, pursuant to the requirements of section 11 of the *pro forma* LGIP, to any interconnection customer that has received a final facilities study report before the transmission provider commences transitional serial studies. Any interconnection customer that has an assigned queue position as of 30 calendar days after the filing date of the transmission provider's initial filing to comply with this final rule may opt to proceed with a transitional cluster study or withdraw its interconnection request without penalty.

866. We find that an earlier eligibility cut-off for the transitional studies will allow the transitional studies to begin sooner, which in turn, will allow transmission providers and interconnection customers to benefit from the Commission's new cluster study process sooner. Further, we consider this modification appropriate

because interconnection customers will have 120 calendar days after the publication of this final rule in the **Federal Register** to achieve eligibility for the transition process (90 calendar days for transmission providers to submit compliance filings, plus the 30-calendar day eligibility cut-off).

867. Additionally, we modify the NOPR proposal to require the transmission provider to tender the appropriate transitional study agreements (serial and/or cluster as applicable) to eligible interconnection customers no later than the Commission-approved effective date of the transmission provider's compliance filing with this final rule. We find that this requirement will help ensure that interconnection customers are informed about their eligibility for the transitional studies (including the associated requirements and deadlines) in a timely manner.

868. Transmission providers are not required to tender transitional study agreements to interconnection customers that submit an interconnection request after the 30-calendar day eligibility cut-off described above. Interconnection customers that submit an interconnection request after the 30-calendar day eligibility cut-off will be required to pay for any studies conducted by the transmission provider under its existing tariff (as required by *pro forma* LGIP section 13.3), and their interconnection requests will not be allowed to enter the transition process, although they may enter their interconnection requests in the transmission provider's first standard cluster study, provided that they meet the new requirements for interconnection requests by the close of the first cluster request window.

869. We are persuaded by commenters' suggestion to require transmission providers to offer the transitional serial study option to interconnection customers that have been tendered a facilities study agreement, even if they have not yet executed that agreement, as of 30 calendar days after the filing date of the transmission provider's initial filing to comply with this final rule, and we modify the NOPR proposal accordingly. We find that interconnection requests at this point in the interconnection process are at an equivalent point as those interconnection requests for which interconnection customers have executed a facilities study agreement, as in both cases, the transmission provider has completed the system impact study but has not yet commenced the facilities study. We are not persuaded by commenters to extend the option for

¹⁶³⁷ See *infra* section IV.C.

¹⁶³⁸ See *supra* section III.A.7.c.

transitional serial study to interconnection requests at earlier stages in the interconnection process, as such modifications may undermine the ability of the proposed reforms to accelerate interconnection queue processing and could delay the transition to the new, more efficient cluster study process. We disagree with the proposal to exempt from the transition process interconnection requests that appear, based on a feasibility study, to require limited or no network upgrades. The results of this feasibility study may no longer be accurate depending on which higher-queued interconnection customers remain in the interconnection queue after the transition date.

ii. Commercial Readiness and Site Control

870. We decline to adopt the proposed commercial readiness demonstration options for transitional studies for the same reasons that we are not adopting those options for cluster studies going forward, as discussed above. We adopt with modification the NOPR's proposed site control requirements. Specifically, we require interconnection customers electing a transitional study, regardless of whether they select the transitional serial study or the transitional cluster study, to demonstrate 100% site control for their proposed generating facilities. We find that such a requirement will provide further assurance that such interconnection customers are ready to proceed to construction. We modify the NOPR proposal by declining to require that interconnection customers that choose to proceed with a transitional serial interconnection facilities study must also demonstrate 100% site control for any interconnection customer's interconnection facilities because such a requirement would be overly burdensome for interconnection customers, in addition to the other requirements we are adopting elsewhere in this final rule. Further, we find that this requirement is not needed to ensure that such interconnection customers are ready to proceed to construction.

iii. Tariff Language

871. We agree with Southern's recommendation to align timelines for truing up construction costs in the proposed *pro forma* LGIP section 5.1.1.2(2) and current, unmodified by this final rule, *pro forma* LGIA article 12.2 (Final Invoice) by making these provisions consistent at six months, and we modify the NOPR proposal accordingly. We agree with Southern that consistent timelines for truing up

construction costs will provide clarity and certainty for interconnection customers.

B. Reforms To Increase the Speed of Interconnection Queue Processing

1. Elimination of the Reasonable Efforts Standard

a. Need for Reform and NOPR Proposal

872. As the Commission explained in the NOPR, the *pro forma* LGIP does not require transmission providers to meet deadlines for conducting interconnection studies.¹⁶³⁹ Rather, transmission providers are only required to use "reasonable efforts" to complete interconnection studies on time.¹⁶⁴⁰ "Reasonable efforts" are defined as "actions that are timely and consistent with Good Utility Practice and are substantially equivalent to those a Party would use to protect its own interests."¹⁶⁴¹ There are no explicit consequences in the *pro forma* LGIP for transmission providers that fail to meet their study deadlines.

873. In the NOPR, the Commission preliminarily found that the use of the reasonable efforts standard for transmission providers to complete interconnection studies resulted in Commission-jurisdictional rates that were unjust and unreasonable because: (1) the timely provision of interconnection service was critical to maintaining just and reasonable rates; (2) the data collected pursuant to Order No. 845 demonstrated that the failure to timely complete interconnection studies was a significant nationwide problem, even for transmission providers that had implemented other interconnection reforms; and (3) the reasonable efforts standard did not provide a meaningful incentive for transmission providers to complete their interconnection studies within the deadlines established in their tariffs.¹⁶⁴²

874. The Commission proposed to revise the *pro forma* LGIP to eliminate the reasonable efforts standard for transmission providers completing interconnection studies and instead impose firm study deadlines and establish penalties that would apply when transmission providers fail to meet study deadlines.¹⁶⁴³ Specifically, the Commission proposed to require

transmission providers that do not complete a cluster study, cluster restudy, facilities study, or affected system study by the deadline specified in the *pro forma* LGIP to pay a penalty of \$500 per each business day that the study is late, except in situations where *force majeure* applies. The Commission proposed that those penalties would be distributed to the delayed interconnection customers on a pro rata basis to offset their study costs. Consistent with other penalties, the Commission proposed that such penalties would not be recoverable in transmission rates.¹⁶⁴⁴

875. The Commission also proposed to cap penalties at 100% of the total study deposit received for the late study to provide a safeguard against overly large penalties that may be considered punitive.¹⁶⁴⁵ The Commission further proposed that no financial penalties on transmission providers that fail to meet study deadlines would be assessed until one cluster study cycle (that is not a transitional study cycle) after the Commission-approved effective date for implementing the reforms proposed in the NOPR. Additionally, the Commission proposed a 10-business day grace period such that no penalties would be assessed for a study that is delayed by 10 business days or less; for studies that are delayed by more than 10 business days, the penalty would be calculated based on the first business day the study was late. Further, the Commission proposed to permit the transmission provider to extend the deadline for a particular study by 30 business days by mutual agreement of the transmission provider and all interconnection customers in the relevant study. Finally, the Commission proposed to require transmission providers to post to their OASIS or a public website on a quarterly basis the total amount of such penalties from the previous quarter and the highest amount of such penalties paid to a single interconnection request from the previous quarter.

876. The Commission acknowledged that the application of penalties for late interconnection studies in the context of RTOs/ISOs may raise several unique issues.¹⁶⁴⁶ However, consistent with the Commission's findings in Order No. 890,¹⁶⁴⁷ the Commission explained that

penalties are appropriate in certain circumstances to incentivize compliance with tariff deadlines, notwithstanding the RTO's/ISO's status as a not-for-profit entity. To ensure that RTOs/ISOs would be able to pay any such penalties, the Commission proposed to require RTOs/ISOs to propose tariff provisions that would require the RTO/ISO to submit requests to recover the costs of specific interconnection study penalties under FPA section 205. The Commission explained that, similar to the ability of RTOs/ISOs to seek to directly assign monetary penalties for violations of reliability standards to other responsible entities, RTOs/ISOs could include a provision that the RTO/ISO may make an FPA section 205 filing seeking to allocate such penalties to the appropriate transmission owner that is responsible for, or contributed to, the delay.¹⁶⁴⁸ However, the Commission sought comment on whether there was a more appropriate method for assigning such penalties in RTOs/ISOs. More generally, the Commission sought comment on whether penalties would effectively incentivize more timely completion of interconnection studies in RTOs/ISOs, and/or whether monetary penalties could have adverse consequences (e.g., compromising accuracy or increasing waiver requests as transmission providers strive to meet deadlines).

877. Additionally, the Commission sought comment on: (1) the proposed penalty structure, including whether the penalty amount for a cluster study should be \$500 per business day or whether an approach that accounts for the number of interconnection customers affected, such as \$100 per business day per customer in the delayed study, would be more appropriate; (2) how and when the Commission should require transmission providers to communicate to interconnection customers the status of studies that may be delayed; (3) whether to include exceptions to the penalty other than *force majeure*, and if so, what those exceptions should be; and (4) whether Commission staff should issue periodic reports summarizing the status of transmission providers' interconnection queues and timeliness of interconnection studies based on information collected through existing reporting requirements, and whether this periodic report should be in addition to or a substitute for the

proposed monetary penalties discussed above.¹⁶⁴⁹

b. Comments

i. Comments in Support

878. Many commenters support the NOPR proposal to eliminate the reasonable efforts standard and establish firm interconnection study deadlines by imposing financial penalties when transmission providers fail to meet study deadlines.¹⁶⁵⁰ Multiple commenters explain that interconnection studies are often substantially delayed, which creates uncertainty and risk in the process of bringing new generating facilities online,¹⁶⁵¹ and ultimately results in an unreasonable market barrier for new generating facilities.¹⁶⁵² NARUC contends that the timely provision of interconnection service is critical to maintaining just and reasonable rates.¹⁶⁵³

879. Some commenters argue that the interconnection queue backlogs indicate that the reasonable efforts standard has not been effective in ensuring timely access to the transmission system for new generating facilities¹⁶⁵⁴ nor in

imposing consequences when transmission providers fail to meet study deadlines.¹⁶⁵⁵ Some commenters argue that the Order No. 845 reporting data supports the conclusion that the reasonable efforts standard has failed to ensure transmission providers complete interconnection studies on time.¹⁶⁵⁶ AEE argues that the broad definition of "reasonable efforts" presents a high bar to prove that interconnection study delays were unreasonable.¹⁶⁵⁷

880. Some commenters assert that the reasonable efforts standard results in an insufficient allocation of transmission provider resources to process the interconnection queue¹⁶⁵⁸ and that the risk of penalties will provide a needed incentive for transmission providers to complete interconnection studies on time.¹⁶⁵⁹ Some commenters argue that penalizing transmission providers is appropriate because they control the staffing and study process and are in the best position to ensure that studies are timely and accurate.¹⁶⁶⁰ CREA and NewSun assert that the volume of interconnection requests is unlikely to decrease, so transmission providers need to ensure that they hire adequate staff to meet this need.¹⁶⁶¹ Google cautions against taking "implicit threats of reduced cooperation or assertions that transmission providers cannot do any better" seriously, noting that any major reform to interconnection processes will entail growing pains.¹⁶⁶²

¶ 61,228, *order on clarification*, Order No. 890–D, 129 FERC ¶ 61,126 (2009).

¹⁶⁴⁸ NOPR, 179 FERC ¶ 61,194 at P 172.

AEE argues that some transmission providers have improved their generator interconnection process, which underscores that it is feasible to hold all transmission providers to higher standards.¹⁶⁶³

881. Some commenters point out that the NOPR proposal resolves an imbalance between interconnection customers, which are held to strict deadlines, and transmission providers, which are currently not required to meet study deadlines.¹⁶⁶⁴ Some commenters assert that the proposed penalties complement the stricter financial and readiness requirements that the NOPR proposed to apply to interconnection customers¹⁶⁶⁵ or that the firm study deadlines and penalty structure are necessary to ensure that the other NOPR proposals are successful.¹⁶⁶⁶

882. Multiple commenters note that long interconnection delays have economic costs for consumers, so transmission providers should also face economic costs for failing to meet deadlines.¹⁶⁶⁷ Navajo Utility asserts that interconnection delays prevent it from using 100 MW of transmission rights that it was granted through settlement, which leaves it with an obligation to pay for transmission rights without the ability to use them.¹⁶⁶⁸

ii. Comments in Opposition

883. Many commenters, particularly transmission providers, oppose the NOPR proposal to eliminate the reasonable efforts standard and impose

financial penalties on transmission providers for late studies.¹⁶⁶⁹ Further, some commenters assert that the Commission cannot support a statutory finding under FPA section 206 to justify the NOPR proposal¹⁶⁷⁰ or that the NOPR proposal is not based on substantial evidence and fails to consider important aspects of the problem.¹⁶⁷¹

884. Many commenters argue that it is inequitable to penalize transmission providers for study delays because those delays are largely due to factors outside the transmission provider's control, including high volumes of speculative interconnection requests, a shortage of qualified engineers, delayed data from interconnection customers, affected system coordination, cascading restudies caused by withdrawals, and the increasing complexity of studies due to new types of generating facilities.¹⁶⁷² Some commenters contend that the record supports retaining the reasonable efforts standard because third-party

forces are common to most study delays.¹⁶⁷³

885. Some commenters argue that data from reports required by Order No. 845 does not support the NOPR proposal.¹⁶⁷⁴ AEP notes that the data referenced in the NOPR represents only one year and does not support the conclusion that transmission providers are intentionally slow in interconnection queue processing.¹⁶⁷⁵ MISO notes that its Order No. 845 reports show that the majority of delays are caused by the need to wait for affected systems studies.¹⁶⁷⁶ NYISO states that its August 2022 Order No. 845 report, and other recent RTO/ISO reports, detail the various drivers of delays, which are typically outside their control.¹⁶⁷⁷ NYISO argues that it would not be reasonable decision-making for the Commission to ignore these reports and draw an overly simplistic conclusion that the reasonable efforts standard is to blame for study delays. PG&E and Southern note that their Order No. 845 data indicates that they have no delayed studies.¹⁶⁷⁸

886. Conversely, AEE and Public Interest Organizations respond that commenters that claim that study delays are caused by factors beyond transmission providers' control fail to acknowledge the availability of potential solutions, such as increasing expenditures to attract and retain staff and policy and process improvements.¹⁶⁷⁹ ACE-NY asserts that, while other parties can cause delays, transmission providers are also responsible for delays.¹⁶⁸⁰ SEIA argues that interconnection request withdrawals are often similarly outside interconnection customers' control.¹⁶⁸¹ AEE contends that accepting high interconnection queue volumes as a legitimate cause for delays would amount to providing a permanent free pass to transmission providers to exceed study deadlines.¹⁶⁸²

887. Several commenters who oppose the NOPR proposal assert that transmission providers engage in good

¹⁶⁸¹ SEIA Reply Comments at 16.

¹⁶⁸² AEE Reply Comments at 27.

faith efforts to process the interconnection queue in a timely manner¹⁶⁸³ and that there is no evidence to the contrary.¹⁶⁸⁴ Commenters argue that transmission providers already have sufficient motivation to process the interconnection queue in a timely manner because: (1) their own interconnection requests are processed in the exact same manner as third parties; (2) they need to ensure an adequate amount of generation to meet load and reserve margin requirements; and (3) they have to file reports with the Commission and can face complaints or enforcement action for poor performance.¹⁶⁸⁵ Commenters assert that penalties will be ineffective in speeding interconnection queue processing time because the main causes of study delays will remain.¹⁶⁸⁶ MISO TOs contend that the Commission proposes to compound the problem of study delays by requiring transmission owners and providers to manage delays that are out of their control, while simultaneously proposing to require transmission providers to offer additional studies.¹⁶⁸⁷

888. NextEra argues that penalties will be counterproductive if not paired with constructive guidance to transmission providers on how to perform interconnection studies in a timelier manner because penalties could either divert resources away from interconnection studies and lead to

conflict about allocating penalties in RTOs/ISOs or be accepted as a cost of doing business.¹⁶⁸⁸

889. Indicated PJM TOs contest the NOPR's citation to testimony provided by Utah Public Service Commission Chairman Thad LeVar, noting that Chairman LeVar also acknowledged that best practices vary between RTO/ISO and non-RTO/ISO regions and that penalties do not always result in the best consequences.¹⁶⁸⁹

890. Some commenters argue that the NOPR proposal is an unsupported shift from recent precedent.¹⁶⁹⁰ Commenters note that the Commission expressly declined to impose penalties for study delays in Order No. 845 and argue that there is no change in circumstance or concrete evidence to justify reversal of that prior finding.¹⁶⁹¹

891. Commenters also note that, although the Commission based its penalty proposal on Order No. 890, there are significant differences.¹⁶⁹² First, commenters explain that the Order No. 890 penalties only apply when a transmission provider fails to meet multiple study deadlines, whereas the NOPR proposes to impose penalties each time a study deadline is missed.¹⁶⁹³ Second, commenters point out that the Order No. 890 penalty structure protects due process through an opportunity to present evidence that delays were outside the transmission provider's control or due to extenuating circumstances, whereas the NOPR proposal does not.¹⁶⁹⁴ Third, PacifiCorp explains that interconnection studies are more complex, numerous, and susceptible to delays than the transmission service studies at issue in Order No. 890.¹⁶⁹⁵ Affected Interconnection Customers argue that the Commission's comparison to Order No. 890's penalty structure for transmission service requests is misplaced because the size and scale of the current interconnection queue backlog is significantly different than transmission queues when Order No.

890 was issued.¹⁶⁹⁶ Similarly, Invenergy notes that the reference to transmission service requests is inapplicable because the interconnection process uses a cluster study.¹⁶⁹⁷

892. EEI and Eversource state that the NOPR proposal represents a departure from the good utility practice standard, which the Commission uses in many other contexts and is part of the definition of reasonable efforts.¹⁶⁹⁸ EEI and Eversource assert that the Commission has not adequately explained why reliance on good utility practice remains sufficient in other situations, but not for interconnection studies.

893. Commenters contend that firm study deadlines are not reasonable or feasible because interconnection studies are complex and each study is different in scope, size, and needed coordination.¹⁶⁹⁹ Some commenters also note that the current deadlines were established almost 20 years ago, when the transmission providers had significantly fewer interconnection requests to study.¹⁷⁰⁰ SPP contends that cluster studies are more prone to study delays given the interdependencies between interconnection requests and number of parties that need to cooperate.¹⁷⁰¹ Commenters also assert that the other NOPR proposals, including the optional resource solicitation study, informational studies, and evaluation of advanced transmission technologies, add significant burdens to the study process that will make it even more challenging to comply with strict deadlines.¹⁷⁰²

894. Some commenters express concern that the penalties could reduce coordination between transmission providers, interconnection customers, and affected systems.¹⁷⁰³ Commenters

note that the enforcement of deadlines could be expensive, involve contentious disputes, and disrupt ongoing studies.¹⁷⁰⁴ Commenters state that transmission providers will also likely provide less flexibility to interconnection customers to remedy deficiencies or modify interconnection requests.¹⁷⁰⁵ MISO TOs assert that this could threaten reliability.¹⁷⁰⁶ NESCOE points out that firm penalties may impede the interconnection of emerging technologies by limiting flexibility to work on modeling and data requirements.¹⁷⁰⁷

895. PJM argues that using penalties to offset study costs for interconnection customers introduces perverse incentives for the interconnection customer to dispute and thereby delay its study reports to receive the penalty money.¹⁷⁰⁸ In response, however, AEE notes that interconnection customers bear greater costs due to delays, which creates an incentive to move forward as quickly as possible.¹⁷⁰⁹

896. Commenters note that the same engineers that conduct interconnection studies also have other responsibilities such as transmission planning¹⁷¹⁰ and responding to extreme weather events.¹⁷¹¹ Ameren states that penalties could motivate transmission providers to redirect resources towards interconnection studies to the detriment of other necessary functions.¹⁷¹² Some commenters argue that penalties will deprive transmission providers of financial resources or harm work environments and employee morale, making it more difficult to recruit and retain personnel qualified to perform the studies.¹⁷¹³

897. A number of commenters express concern that the NOPR proposal may result in less accurate studies because transmission providers may prioritize

meeting deadlines over accuracy and identification of the most efficient solutions.¹⁷¹⁴ Some commenters further assert that penalties may impair system reliability because the study timelines are too short to carry out sufficient analysis.¹⁷¹⁵ Some commenters argue that the penalties could force transmission providers to complete studies without necessary data, which could also lead to inaccurate results and cause restudy.¹⁷¹⁶ Some commenters state that less accurate studies would harm interconnection customers because interconnection customers cannot rely on them to make sound business decisions.¹⁷¹⁷ Avangrid states that transmission providers could use more conservative assumptions and “stock solutions” to streamline studies, which could increase interconnection costs.¹⁷¹⁸ However, in response to these comments, AEE states that the implementation of timelines and penalties does not inherently determine the evaluation process for clusters.¹⁷¹⁹ AEE notes that inaccurate study results occur today without firm deadlines and that accuracy can be improved even with deadlines.¹⁷²⁰ New Jersey Commission disagrees that there is an inherent tradeoff between system reliability and holding transmission providers accountable, arguing that failing to bring sufficient new generating facilities online can create considerable reliability and economic risks.¹⁷²¹

898. Commenters express concern that the cost of penalties and compliance mechanisms may be passed

down to customers and increase transmission costs.¹⁷²² Clean Energy Buyers argue that the penalties, if they flow through to interconnection customers, could outweigh the benefits gained from other reforms and lead to disputes over the allocation of penalty amounts.¹⁷²³ R Street points out that the Commission will have to ensure that transmission providers cannot translate penalties into cost recovery at either the Federal or retail level.¹⁷²⁴

899. Some commenters characterize the NOPR proposal as a strict liability approach to penalties and argue that it is unjust and unreasonable, arbitrary and capricious, and a violation of due process rights and the Administrative Procedures Act to impose penalties without a fact-based finding of fault.¹⁷²⁵ Some commenters emphasize that the NOPR proposal provides no possibility for the transmission provider to explain the circumstances for the delay, even though the delay is often outside of the transmission provider’s control.¹⁷²⁶ Dominion argues that there are three practical concerns with the NOPR proposal: (1) how disputes about who is at fault will be resolved; (2) who decides fault; and (3) whether the interconnection study should be delayed while the dispute is resolved.¹⁷²⁷

900. Some commenters argue that the reasonable efforts standard is the right approach considering the complex dynamics of the interconnection study process and constantly changing circumstances.¹⁷²⁸ EEI asserts that the reasonable efforts standard is the best approach to govern the interconnection process, which is flexible to allow for the optimum exercise of engineering judgement while ensuring

accountability for egregious delays or what is not consistent with good utility practice.¹⁷²⁹ MISO TOs note that, in Order No. 2003, the Commission explained that the reasonable efforts standard was a high standard because parties use it when protecting their own interests and applying this standard to all parties would “ensure comparable treatment.”¹⁷³⁰

901. NYISO contends that the reasonable efforts standard and Order No. 845 reporting requirements provide the Commission and stakeholders with information to evaluate the length of time taken by RTOs/ISOs to finish studies, compare their performance, and identify and investigate when a particular entity is systematically delaying studies, which will allow the Commission and stakeholders to take appropriate action.¹⁷³¹ SPP proposes that the Commission retain the reasonable efforts standard and make improvements to it or enforce it more strictly.¹⁷³²

902. WAPA notes that, as a Federal power marketing administration, it has statutory duties that take precedence over deliverables established by the Commission and cannot be subject to monetary penalties without a waiver of sovereign immunity.¹⁷³³ Avangrid notes that many transmission providers and transmission owners do not earn rates of return for interconnection facilities or network upgrades and do not profit from interconnection studies, so penalties would reduce shareholder return on equity.¹⁷³⁴

iii. Comments on Specific Proposal

903. Some commenters support eliminating the reasonable efforts standard but do not support the proposed financial penalties.¹⁷³⁵ CAISO argues that the Commission should simply prohibit late studies and mandate firm study deadlines because the proposed penalties will enable transmission providers to continue completing studies late if they are willing to pay the price.¹⁷³⁶ CAISO explains that, if a transmission provider cannot meet its study deadlines, it should be required to amend its

tariff.¹⁷³⁷ Other commenters, as described below, have various comments on the specific penalty proposal.

(a) Penalty Amount

904. Some commenters advocate for larger penalties than the NOPR proposal.¹⁷³⁸ Some commenters contend that the proposed penalty amount is *de minimis*¹⁷³⁹ or that a \$500 per business day penalty is likely too small to prompt a change in behavior.¹⁷⁴⁰ Cypress Creek argues that penalties should be commensurate with the magnitude of liquidated damages that interconnection customers face if they do not meet their contractual deadlines.¹⁷⁴¹ ACE–NY proposes a penalty of \$5,000 to \$25,000 per day, depending on cluster size, if the Commission chooses a per-cluster-per-day penalty structure.¹⁷⁴² Affected Interconnection Customers propose that the Commission adopt a penalty of \$2,500 per day capped at \$2 million.¹⁷⁴³ Public Interest Organizations state that there is not sufficient consensus in the record to move forward with the \$500 per day penalty amount and suggest that the Commission hold a technical conference to determine the final amount.¹⁷⁴⁴

905. Some commenters argue that the penalties should increase through the study process because later-stage study delays have greater impacts on interconnection customers, which are required to make increasing commitments throughout the study process.¹⁷⁴⁵ Invenery recommends penalty amounts of \$5,000 per day for cluster studies, \$6,000 per day for

cluster restudies, and \$7,000 per day for facilities studies.¹⁷⁴⁶

906. Pine Gate expresses concern that the proposed penalty amounts do not correspond to the costs imposed on interconnection customers as a result of the late study results, explaining that the penalty amount is dwarfed by the overall cluster study cost and that the low daily rate would require an interconnection study to be delayed years before the amounts would approach the study deposit amounts.¹⁷⁴⁷ As an example, Pine Gate refers to the most recent MISO interconnection queue submissions: MISO received 956 interconnection requests, totaling 170.8 GW of new generation, and collected \$687,980,000 in study deposits. Pine Gate notes that, under a late study fee of \$500 per day, a study would have to be delayed 1,375,960 days—or 3,770 years—before equaling the cost of study deposits. Further, Pine Gate explains that the daily carrying cost on the study deposit cost at the prevailing development loan interest rate of 10% is approximately \$188,487.67. Thus, Pine Gate states that, before the proposed 10-day grace period has elapsed, interconnection customers will have spent \$1,884,876 in additional interest costs.

907. In response to requests for higher penalties, some commenters argue that there is no legal or policy justification for making the proposed penalty scheme harsher and more inequitable.¹⁷⁴⁸ MISO argues that NERC reliability penalties are typically assessed at under \$500 per day, if at all, and NERC non-critical infrastructure protection penalties are also assessed at far lower values. MISO contends that, because these “moderate risk” violations merit such low penalties, there is no support for \$500 per day penalties for delayed interconnection studies.¹⁷⁴⁹

908. NARUC supports the proposal to cap the penalty amount at 100% of the total study deposit received.¹⁷⁵⁰ Several commenters argue that the penalty amount should be capped at an amount greater than 100% of the total study deposit received.¹⁷⁵¹ Invenery requests that the Commission clarify that the cap is not reduced by any withdrawal penalties.¹⁷⁵² Public Interest

Organizations propose that transmission providers that reach the cap issue a compliance statement explaining in detail the source of the delay and use penalty amounts above the cap to hire third-party consultants to conduct interconnection studies.¹⁷⁵³

909. Several commenters argue that the penalty amount should not be capped.¹⁷⁵⁴ Some commenters note that financial penalties for interconnection customers are not capped at their study deposits.¹⁷⁵⁵ Other commenters argue that the study deposit amount cap is not commensurate with the harm late studies cause interconnection customers.¹⁷⁵⁶

(b) Penalty Structure

910. Some commenters suggest a per-customer per-day penalty structure, rather than the NOPR proposal for a per-cluster per-day structure.¹⁷⁵⁷ AEE suggests that the Commission assess penalties based on the higher value of \$500 per day or \$100 per customer per day.¹⁷⁵⁸ Multiple commenters oppose a penalty structure based on the number of interconnection customers because transmission providers have no control over the number of interconnection requests they receive and higher request volumes lead to more complex studies with more potential for delay.¹⁷⁵⁹

911. Some commenters suggest a penalty structure based on the cluster's characteristics.¹⁷⁶⁰ Public Interest Organizations suggest a penalty structure set as a percentage of the total study deposit received per day.¹⁷⁶¹ Google recommends the penalty structure take into account both the size of the interconnection request and the magnitude of a study delay's impact on other interconnection requests in the interconnection queue, which would focus penalties on delays that have the most impact on overall processing of the

interconnection queue.¹⁷⁶² NARUC explains that the penalty should not be targeted at the number of interconnection customers in a cluster that are delayed but at the desirable characteristics of the generating facilities being delayed.¹⁷⁶³

912. Some commenters suggest that the Commission require transmission providers to discount study costs for delayed studies by the percentage of time they are delayed in completing such study, subject to a maximum discount set by the Commission.¹⁷⁶⁴ Clean Energy States propose that, if an interconnection study is late, the transmission provider could not charge the interconnection customers for the cost of the study, providing the interconnection customer a modest amount of compensation for the delay.¹⁷⁶⁵ PacifiCorp argues that neither the host transmission provider nor affected system operator should be penalized if either party delays the work of the other, especially if the delays are caused by transmission providers that are not public utilities.¹⁷⁶⁶

913. NRECA and Tri-State assert that the final rule should allow transmission providers to stop or reset the clock in the event of interconnection customer-initiated delays.¹⁷⁶⁷ Similarly, APPA-LPPC state that the clock should not start running on study deadlines until after the interconnection customer submits all necessary information, including curing any deficiencies.¹⁷⁶⁸ Tri-State asserts that a delay should not be penalized if it is caused by a higher-queued cluster going through a restudy.¹⁷⁶⁹ Tri-State also suggests that, if the Commission moves forward with penalties for late studies, additional language should be added requiring interconnection customers to provide needed information within a specified time frame in order to complete the studies. R Street claims that transmission providers can game requirements that trigger penalties, such as by forcing requesting parties to

resubmit specifications to restart the processing clock.¹⁷⁷⁰

(c) Penalty Allocation and Distribution

914. Many commenters agree that transmission providers, including RTOs/ISOs, must not pass on penalty costs to ratepayers.¹⁷⁷¹ Public Interest Organizations support enabling transmission providers to allocate penalty costs to responsible parties but recommend maintaining presumption of fault with the transmission providers themselves and disallowing transmission providers from recovering penalty amounts.¹⁷⁷²

915. Several commenters support distributing the penalties collected from transmission providers to the impacted interconnection customers.¹⁷⁷³ PG&E seeks clarification on how the penalty would be distributed (*i.e.*, equal distribution to each interconnection customers, equal distribution among interconnection requests, or distributed based on project size).¹⁷⁷⁴ Fervo Energy supports the proposal to require transmission providers to provide quarterly public reports on total amounts of penalties and the highest penalty for a single interconnection request.¹⁷⁷⁵ Google argues that transmission providers should make such a report available annually to state commissions to ensure penalties are not paid by consumers.¹⁷⁷⁶

916. National Grid argues that the Commission should allow transmission providers to recover penalties from an interconnection customer if the customer is responsible for the delay.¹⁷⁷⁷

(d) Penalty Recovery in RTOs/ISOs

917. Some commenters support the proposal to allow RTOs/ISOs to recover the cost of specific interconnection study penalties from transmission owners responsible for study delays through FPA section 205 filings.¹⁷⁷⁸ ACORE recommends that RTOs/ISOs provide explicit criteria for how they will determine which parties are responsible for or contributed to study delays.¹⁷⁷⁹ AEE suggests that the Commission assign RTO/ISO penalties to transmission owners by default.¹⁷⁸⁰ In response to AEE's proposal, MISO TOs assert that imposing penalties on transmission owners that did not have control over the causes of study delays does not follow cost causation principles.¹⁷⁸¹

918. Some commenters express concerns about how RTOs/ISOs will pay penalties if no member is found responsible.¹⁷⁸² OPSI contends that, because RTOs/ISOs rely on transmission owners to process interconnection queues, they may be reluctant to seek penalty recovery from them.¹⁷⁸³

919. Several commenters oppose the proposal to allow RTOs/ISOs to recover the cost of specific interconnection study penalties from transmission owners responsible for study delays through FPA section 205 filings.¹⁷⁸⁴ Such commenters assert that the proposal does not provide sufficient detail on how penalties will work in RTO/ISO regions.¹⁷⁸⁵ Some commenters contend that imposing penalties on RTOs/ISOs will not expedite interconnection studies because the penalties will not address the actual source of study delays and will disrupt processing of interconnection queues.¹⁷⁸⁶ ISO-NE and MISO note that delays may not be the fault of the RTO/

ISO because transmission owners often conduct the studies.¹⁷⁸⁷

920. Commenters argue that the proposed penalty system would impose administrative and litigative burden on RTOs/ISOs and the Commission.¹⁷⁸⁸ Indicated PJM TOs argue that the process before the Commission will need to be a complete *de novo* review.¹⁷⁸⁹ SoCal Edison and New York State Department note that the penalty system would likely require additional resources to track and allocate penalties, which could increase the cost of administering interconnection queues.¹⁷⁹⁰ The ISO/RTO Council claims that, under the NOPR proposal, RTOs/ISOs will need to act as fact-finding tribunals to fairly assign penalties before making an FPA section 205 filing, which would be a time- and resource-consuming process at odds with the goal of reducing interconnection study delays.¹⁷⁹¹ TAPS avers that RTOs/ISOs would need precise and well-supported cases to successfully assign penalties to responsible transmission owners.¹⁷⁹²

921. Commenters contend that having RTOs/ISOs assign penalties to responsible entities would harm coordination or create tension between RTOs/ISOs, transmission owners, interconnection customers, and other parties.¹⁷⁹³ AEP and TAPS assert that the proposal could discourage RTO/ISO participation.¹⁷⁹⁴

922. Commenters express concern around imposing penalties on non-profit RTOs/ISOs, which have no ability to pay fines without collecting them from another party.¹⁷⁹⁵ MISO contends that, for RTOs/ISOs, penalties without

specified payees are effectively a tax on LSEs.¹⁷⁹⁶

923. NYISO contends that penalties would threaten RTOs'/ISOs' financial viability.¹⁷⁹⁷ NYISO explains that RTO/ISO penalties and challenges to penalty recovery have been rare. NYISO claims that there are no examples of Commission denials of penalty cost recovery, so RTOs/ISOs would be subject to considerable uncertainty about their ability to recover study penalties.¹⁷⁹⁸ NYISO argues that, if the Commission is likely to accept RTO/ISO penalty recovery proposals, then the penalties would serve no purpose because they would be passed to customers and fail to incentivize RTOs/ISOs to complete studies in a more timely manner.

924. NYISO argues that it is unjust and unreasonable and unduly discriminatory to apply the same level of penalties to RTOs/ISOs as other transmission providers because they are differently situated than other transmission providers.¹⁷⁹⁹ NYISO states that an identical penalty would be much more punitive on RTOs/ISOs than other transmission providers, so any financial penalties imposed on RTOs/ISOs should be smaller in size and slower to trigger. NYISO requests that, if the Commission requires penalties, it allow RTOs/ISOs to propose in their compliance filings appropriate rules for their own regions.

925. NYISO further argues that Order Nos. 672¹⁸⁰⁰ and 890 do not support subjecting RTOs/ISOs to the same penalties as non-independent transmission providers.¹⁸⁰¹ NYISO argues that the proposed penalties pose a greater risk to RTOs/ISOs than reliability penalties, which have been assessed in rare circumstances and are subject to the Commission's close scrutiny.¹⁸⁰² NYISO also notes that it does not conduct the kinds of transmission studies addressed in Order No. 890, so the formal applicability of the Order No. 890 penalty regime to RTOs/ISOs does not mean that application of penalties to RTOs/ISOs is practicable.¹⁸⁰³

926. Many commenters express concerns that RTOs/ISOs may pass

penalty costs through to transmission owners or ratepayers who did not contribute to study delays, which they claim is unjust and unreasonable.¹⁸⁰⁴ New York State Department does not support penalties unless they can be recovered from RTO/ISO bonuses or shareholder profits.¹⁸⁰⁵

927. Some commenters also argue that the proposal to allow RTOs/ISOs to recover penalties from transmission owners ignores that other entities may be responsible for study delays.¹⁸⁰⁶ MISO explains, for example, that it has no mechanism to recover penalties from affected systems and that, even for entities subject to MISO's tariff, consensus on a penalty pass through mechanism is likely to be elusive.¹⁸⁰⁷ Several commenters argue that, because RTOs/ISOs will have to pass through the penalty, it will not accomplish the Commission's goals.¹⁸⁰⁸ NESCOE, however, disagrees that RTOs/ISOs will have to pass through penalty costs but notes that the Commission required RTOs/ISOs to file proposals to recover penalties incurred for reliability standard violations case-by-case.¹⁸⁰⁹

928. TAPS distinguishes NERC reliability penalties as part of a congressionally mandated regimen, whereas the proposed penalties are not.¹⁸¹⁰ TAPS notes that, while NERC reliability penalty amounts are used to offset operational costs of NERC or other relevant entities, the NOPR proposes to distribute penalty costs back to interconnection customers, who are not required to use those funds to offset costs for consumers or ratepayers.

929. TAPS also seeks clarification because the NOPR proposal provided

that penalties should not be recoverable in transmission rates but also noted that penalties imposed on RTOs/ISOs could be handled similarly to NERC reliability penalties, which the Commission has previously allowed RTOs/ISOs to recover from ratepayers.¹⁸¹¹ TAPS contends that the Commission should not allow RTOs/ISOs to pass penalties through to ratepayers or LSEs; to the extent the Commission allows RTOs/ISOs to recover costs through FPA section 205 proceedings, TAPS recommends that the Commission automatically waive any penalty amount the RTO/ISO would otherwise pass to ratepayers.¹⁸¹²

930. Commenters argue that the proposed penalty structure lacks the due process and fact finding associated with the RTO/ISO recovery of NERC reliability penalties.¹⁸¹³ MISO and ISO/RTO Council explain that NERC uses a fact-finding tribunal, which avoids the potential conflicts of interest and process disruptions that would stem from requiring the transmission provider to judge disputes.¹⁸¹⁴ Indicated PJM TOs explain that RTOs/ISOs can only recover NERC reliability penalties from another entity if that entity was identified and allowed to participate in the NERC process.¹⁸¹⁵ Commenters note that NERC reliability penalty amounts are calculated based on specific circumstances and that financial penalties are not always imposed.¹⁸¹⁶ Further, the ISO/RTO Council argues that the NOPR proposal to allow FPA section 205 filings to allocate penalties is unworkable because it assumes the RTO/ISO will be able to identify a transmission owner that is responsible for the delay.¹⁸¹⁷

931. ISO-NE and MISO explain that transmission providers are in no position to perform fact-finding, which would require a time- and resource-consuming process to hear from all involved parties.¹⁸¹⁸ MISO states that it has no procedures beyond its alternative dispute resolution process for adjudicating disputes and even these procedures call for multi-month

processes.¹⁸¹⁹ MISO notes that it is unclear who would make the findings and how penalties would be assigned if multiple parties contribute to a delay.¹⁸²⁰ MISO and ISO/RTO Council note that the personnel able to determine the cause of a delay are the interconnection study engineers, who would need to divert their resources from performing studies to provide evidence.¹⁸²¹

932. MISO TOs state that, if the Commission adopts penalties, it should also adopt the requirement that RTOs/ISOs make an FPA section 205 filing before allocating any penalties to a transmission owner in order to provide due process to the transmission owner and to be consistent with the Commission's approach to RTO/ISO recovery of NERC reliability penalty costs.¹⁸²²

933. Indicated PJM TOs argue that it is unclear whether PJM has the authority to recover penalty costs from transmission owners.¹⁸²³ Indicated PJM TOs state that the consolidated transmission owners agreement (CTOA) specifies that PJM has the right to file "charges for recovery of PJM costs" under FPA section 205, but they argue that penalties are not a cost of operation. Indicated PJM TOs explain that the CTOA reserves rights not specifically transferred to PJM to transmission owners. Therefore, Indicated PJM TOs conclude that the right to recover penalties was not conferred on PJM and that PJM lacks the contractual authority to seek recovery of penalties from transmission owners under FPA section 205. Indicated PJM TOs add that modifying the CTOA would implicate the *Mobile-Sierra* presumption.¹⁸²⁴

934. Further, Indicated PJM TOs argue that the Commission lacks the authority under FPA section 205 to require RTOs/ISOs to seek cost recovery of interconnection study penalties.¹⁸²⁵ SEIA disagrees and asks the Commission to establish a regime in which it can recover penalties for late studies in Order No. 890.¹⁸²⁶

(e) Study Deadline Extension

935. Several commenters support the NOPR proposal to allow for the

extension of a study deadline by mutual agreement.¹⁸²⁷ Some commenters argue that this extension will promote cooperation between interconnection customers and transmission providers.¹⁸²⁸ Further, AEE argues that the extension option will provide a buffer for studies that warrant more time and that the two study cycle transition will give transmission providers time to adjust to the cluster model and deadlines, to understand possible variability in each cluster, and to develop strategies for times when extra bandwidth is needed, such as hiring third-party assistance.¹⁸²⁹ AEE suggests that the Commission require that the mutual agreements be publicly available.¹⁸³⁰

936. NARUC supports the proposal so long as the transmission provider certifies to the Commission that the extension will not delay unrelated interconnection requests outside the cluster.¹⁸³¹

937. Several commenters propose modifications to the NOPR deadline extension proposal. NYISO states that it is unreasonable to allow individual interconnection customers to veto extensions and instead proposes that 30-day extensions should be available if the RTO/ISO notifies the Commission that there is good cause to take additional time to complete the study.¹⁸³² Indicated PJM TOs argue that it will be virtually impossible to obtain mutual agreement in a region with a large number of interconnection customers and instead propose that the transmission provider determine the appropriate extension on compliance.¹⁸³³ Tri-State notes that there is no incentive for interconnection customers who have agreed to a study deadline to re-negotiate and mutually agree upon an extended deadline.¹⁸³⁴ SoCal Edison suggests that the Commission allow transmission providers to extend study deadlines in the event of a larger than usual cluster.¹⁸³⁵

(f) Transition

938. Duke Southeast Utilities request that the Commission clarify that transmission providers already using a cluster study process will not be subject

to penalties until after the completion of two study cycles, which will encourage transmission providers not to employ an unnecessary transition process.¹⁸³⁶ Other commenters argue that financial penalties should be in effect during the first transitional cluster study.¹⁸³⁷

(g) Force Majeure Exception

939. Several commenters support the NOPR proposal to only permit exceptions to the penalty in instances of *force majeure*, arguing that additional exceptions make the penalty less effective.¹⁸³⁸ Invenergy argues that there should be a process for transmission providers to declare *force majeure* to prevent the overuse of this exception.¹⁸³⁹ CREA and NewSun argue that any *force majeure* exception should also apply to interconnection customers when they fail to meet deadlines.¹⁸⁴⁰

940. Many commenters argue that the Commission should extend exemptions beyond *force majeure*, such as to events outside the transmission provider's control or for good cause.¹⁸⁴¹ NARUC and National Grid argue that transmission providers should have an opportunity to request a penalty exemption on a case-by-case basis.¹⁸⁴² NESCOE argues that the Commission should provide a list of presumptive no-fault delays.¹⁸⁴³

(h) Requests for Alternatives, Clarification, or Technical Conference

941. A number of commenters suggest that the Commission evaluate whether the other reforms are successful before implementing a penalty regime.¹⁸⁴⁴

NYTOs and Eversource similarly ask that the Commission allow the changes in the ANOPR to take effect before imposing penalties.¹⁸⁴⁵ Some commenters suggest that the Commission hold a technical conference prior to penalties becoming effective to discuss experiences with the new cluster study process and focus the penalties on the causes of delays.¹⁸⁴⁶ SPP and NYISO also note that some transmission providers are undergoing their own interconnection queue reform efforts; therefore, the Commission should focus on ensuring those efforts are successful instead of imposing automatic penalties.¹⁸⁴⁷ TAPS suggests that the Commission delay implementation of penalties by at least five years from the effective date of compliance filings to the final rule.¹⁸⁴⁸

942. NARUC argues that any penalty structure should be applied equally to transmission providers delaying interregional affected system studies and seeks clarification on how penalties will be assessed when delays are caused by affected systems.¹⁸⁴⁹

943. Some commenters suggest that, instead of or in addition to penalties, the Commission could improve reporting by issuing Commission staff reports or requiring additional reporting from transmission providers.¹⁸⁵⁰ Indicated PJM TOs explain that the Commission or an interested party could initiate an FPA section 206 proceeding if it believes PJM is not exercising due diligence in performing studies based on its reporting.¹⁸⁵¹ In response to arguments that entities could pursue FPA section 206 filings before the Commission if they believe

reasonable efforts have been violated, New Jersey Commission argues that study delays result from systemic failures, so it is inappropriate to address such issues through individual FPA section 206 filings.¹⁸⁵²

944. MISO proposes that, if a transmission provider misses a deadline by more than a threshold grace period, the transmission provider should be required to self-report the circumstances around the delay to the Commission, and, in response to that self-report, the Commission could issue a show cause order to require the transmission provider and any other relevant entities to respond with specific information about the causes for the delays and propose a mitigation plan.¹⁸⁵³ MISO states that, at the conclusion of the show cause proceeding, the Commission would issue an order that could require transmission providers, transmission owners, or other entities to take specific actions to mitigate the delay, require process changes, and/or impose penalties.¹⁸⁵⁴ MISO argues that its proposal has several advantages over the NOPR penalty proposal, including providing accountability tied to entities actually causing the delay, as determined by the Commission. Public Interest Organizations support the self-reporting concept but do not support conditioning penalty assignment on a show cause proceeding, arguing that this would be administratively burdensome.¹⁸⁵⁵ AEE also states that MISO's approach could be helpful if paired with binding timelines and a clear penalty structure.¹⁸⁵⁶

945. Clean Energy Associations suggest that, if the Commission does not adopt penalties, it should consider requiring remedial action plans, including specific staffing plans, for transmission providers with persistently late or inaccurate studies.¹⁸⁵⁷

946. Some commenters argue that the Commission should incentivize transmission providers to meet deadlines rather than penalize them for failing to do so.¹⁸⁵⁸ Shell proposes that

the Commission provide favorable rate treatment for transmission providers that meet study timeliness conditions; specifically, Shell suggests that the Commission create a rebuttable presumption that transmission providers can recover their investments in interconnection queue processing resources if the transmission provider satisfies deadlines at least 90% of the time over two years.¹⁸⁵⁹ Shell further suggests that these costs can be eligible for inclusion in transmission rate base, with corresponding return on equity, if the transmission provider meets study deadlines at least 95% of the time over two calendar years.¹⁸⁶⁰ Affected Interconnection Customers propose that the Commission allow RTOs/ISOs to create a monetary incentive for transmission owners that complete their interconnection studies on time.¹⁸⁶¹

947. However, R Street notes that rate incentives, like bonuses on returns on equity, would induce financial motivation but would require a performance baseline that transmission owners could game.¹⁸⁶² MISO TOs argue that incentives would fail because study delays are caused by factors beyond transmission providers' control.¹⁸⁶³

948. ACE-NY requests that the Commission clarify whether a failure to meet the *pro forma* LGIP study deadlines would constitute a tariff violation, which could have implications for executive and staff compensation.¹⁸⁶⁴ MISO TOs argue that such a proposal has no basis and would constitute an even stricter standard because penalties for tariff violations can amount to over \$1 million per day, exceeding the proposed \$500 per day proposal.¹⁸⁶⁵

949. Clean Energy States and TAPS recommend tying executive compensation to interconnection queue deadlines,¹⁸⁶⁶ noting that SPP and MISO currently tie compensation to reliability performance.¹⁸⁶⁷ However, MISO TOs note that the Commission

has previously found that it lacks such jurisdiction.¹⁸⁶⁸

950. Some commenters argue that the Commission should allow transmission providers to set their own deadlines for interconnection studies because the current deadlines are not reasonable or advocate for regional flexibility.¹⁸⁶⁹ Some commenters recommend allowing transmission providers to adjust study deadlines based on interconnection queue size.¹⁸⁷⁰ Public Interest Organizations and Google support such proposals to the extent that the deadlines are subject to Commission review.¹⁸⁷¹ AEE does not oppose giving transmission providers flexibility to set their study timelines but requests that the Commission set a maximum allowable study timeline.¹⁸⁷²

951. National Grid suggests that the Commission adopt a minimum time frame approach, which would start the overall interconnection study timeline upon finalizing the base case study models and provide minimum study time frames for scope and result reviews.¹⁸⁷³

952. PJM suggests that the transmission provider develop a targeted study completion date based on an analysis of that particular interconnection queue, with the target completion date available for public comment.¹⁸⁷⁴ PJM states that, under this approach, as studies become delayed further and further past the target date, the transmission provider would be required to meet increasing burdens (e.g., public posting of the missed date, filing a report with the Commission, being subject to FPA section 206 action). PJM states that if, despite the FPA section 206 action, the transmission provider misses a subsequent study deadline at the same level, then the Commission could impose penalties for any proven malfeasance by the transmission provider. PJM also suggests that the Commission could allow transmission providers to cap the number of interconnection requests in a given cluster to an amount commensurate with available resources. In response, AEE argues that PJM's

proposed approach would cause unnecessary administrative burden, which could further harm interconnection customers.¹⁸⁷⁵

953. Some commenters claim that the NOPR proposal is vague and raises profound implementation issues (e.g., how or whether the penalty structure will accommodate different cluster sizes, study complexities, or restudies).¹⁸⁷⁶ R Street suggests, and ISO/RTO Council agrees, that the Commission and stakeholders would benefit from a root cause analysis to identify the cause of study delays, which could inform more reasonable performance expectations.¹⁸⁷⁷

954. Some commenters seek clarity regarding who bears financial penalties for late affected system studies and related affected system obligations.¹⁸⁷⁸ ENGIE states that it is unclear who bears the financial penalties for late affected system studies.¹⁸⁷⁹ In contrast, MISO interprets the NOPR proposal to apply penalties only to the affected system operator, though MISO also recommends that the Commission recognize that some delays may be beyond the control of the affected system operator and recommends that affected system operators not be penalized for third-party delays.¹⁸⁸⁰ Similarly, Duke Southeast Utilities express concern that penalties could be levied against affected system operators for delays beyond their control and further argue that, instead of unilaterally imposing financial penalties on one entity, which, to Duke Southeast Utilities, seems arbitrary and unfounded, the Commission should consider imposing multilateral penalties on all entities in accordance with their individual obligations set forth in the proposed process.¹⁸⁸¹

955. Cypress Creek suggests that, in addition to financial penalties for missed study deadlines, the Commission should also impose penalties for inaccurate study results.¹⁸⁸² AEE and Clean Energy Associations argue that the Commission should provide guidelines and reporting requirements regarding acceptable study accuracy.¹⁸⁸³

956. CREA and NewSun propose an overall “reasonableness” standard to ensure the quality of the studies and that there is no ongoing failure to provide adequate staffing or to employ reasonable study assumptions.¹⁸⁸⁴

957. National Grid argues that the Commission should permit transmission providers to assign a dedicated person to monitor the progress of each entity (i.e., interconnection customer, transmission owner, and RTO/ISO) during the interconnection process.¹⁸⁸⁵ National Grid argues that the cost of this person and any other additional costs needed to satisfy the NOPR proposal should be recoverable in rates so that transmission providers would be able to recover costs incurred to reduce penalty risk.

958. Some commenters suggest that the Commission allow third-party consultants to complete studies, which would conserve transmission provider resources and provide a pathway for interconnection customers to move forward.¹⁸⁸⁶ Dominion argues in response that there is a general lack of qualified professionals to perform interconnection studies, so a third party will not have access to the personnel, knowledge, or resources to perform them.¹⁸⁸⁷

959. Pacific Northwest Utilities argue that the reasonable efforts standard should not be eliminated for facilities studies, which require an individual study, noting that the number of facilities studies needed can vary greatly between clusters.¹⁸⁸⁸

960. NYISO suggests that the Commission adopt features of the NERC model, including the use of non-financial sanctions for minor or excusable violations and penalty reductions for cooperative and remedial actions.¹⁸⁸⁹

961. Tri-State supports the NOPR proposal not to assess financial penalties until one cluster study cycle (that is not a transitional study cycle) after the compliance effective date. Tri-State seeks clarification on when penalties would be imposed for transmission providers already using a cluster study process.¹⁸⁹⁰

c. Commission Determination

962. We adopt the NOPR proposal to eliminate the reasonable efforts standard set forth in sections 2.2, 3.5.4(i), 7.4, 8.3, and Attachment A to Appendix 4 of the *pro forma* LGIP. In its place, we adopt the NOPR proposal, with modification, to add new section 3.9 to the *pro forma* LGIP that imposes study delay penalties, as further discussed below: delays of cluster studies beyond the tariff-specified deadline will incur a penalty of \$1,000 per business day; delays of cluster restudies beyond the tariff-specified deadline will incur a penalty of \$2,000 per business day; delays of affected system studies beyond the tariff-specified deadline will incur a penalty of \$2,000 per business day; and delays of facilities studies beyond the tariff-specified deadline will incur a penalty of \$2,500 per business day.¹⁸⁹¹

963. As explained in greater detail in this section, we adopt the following features of the study delay penalty structure for late interconnection studies: (1) no study delay penalties will be assessed until the third cluster study cycles (including any transitional cluster study cycle, but not transitional serial studies) after the Commission-approved effective date of the transmission provider's filing in compliance with this final rule; (2) there will be a 10-business day grace period, such that no study delay penalties will be assessed for a study that is delayed by 10 business days or fewer; (3) deadlines may be extended for a particular study by 30 business days by mutual agreement of the transmission provider and all interconnection customers with interconnection requests in the relevant study; (4) study delay penalties will be capped at 100% of the initial study deposits received for all of the interconnection requests in the cluster for cluster studies and cluster restudies, 100% of the initial study deposit received for the single interconnection request in the study for facilities studies, and 100% of the study deposit(s) that the transmission provider acting as an affected system operator

¹⁸⁷⁵ AEE Reply Comments at 38–39.

¹⁸⁹¹ The penalties that we adopt in this final rule in section 3.9 of the *pro forma* LGIP for late affected system studies only apply to affected system operators that are public utilities.

(affected system transmission provider) collects for conducting the affected system study; (5) transmission providers will have the ability to appeal any study delay penalties to the Commission, with the Commission determining whether good cause exists to grant the relief requested on appeal; (6) transmission providers must distribute study delay penalties to interconnection customers in the relevant study on a pro rata per interconnection request basis to offset their study costs; (7) non-RTO/ISO transmission providers and transmission-owning members of RTOs/ISOs may not recover study delay penalties through transmission rates; (8) RTOs/ISOs may submit an FPA section 205 filing to propose a default structure for recovering study delay penalties and/or to recover the costs of any specific study delay penalties;¹⁸⁹² (9) transmission providers must pay the penalty for each late study on a pro rata basis per interconnection request to all interconnection customers or affected system interconnection customers included in the relevant study that did not withdraw, or were not deemed withdrawn, from the interconnection queue before the missed study deadline; and (10) transmission providers must post quarterly on their OASIS or other publicly accessible website (a) the total amount of study delay penalties from the previous reporting quarter and (b) the highest study delay penalty paid to a single interconnection customer in the previous reporting quarter. We also add new paragraph (f)(1)(ii) to 18 CFR 35.28 to specify that any public utility that conducts interconnection studies shall be liable for and eligible to appeal penalties following that public utility's failure to complete an interconnection study by the appropriate deadline. We also decline to adopt the NOPR's proposed *force majeure* penalty exception. We first discuss our overarching rationale for this set of reforms, and then discuss each of these reforms in greater detail and our rationale for each.

964. We adopt these reforms to remedy the unjust and unreasonable rates stemming from interconnection queue backlogs and to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. Specifically, these reforms will help ensure more timely processing of interconnection requests

by incentivizing transmission providers to meet interconnection study deadlines.¹⁸⁹³

i. Eliminating the Reasonable Efforts Standard

965. We adopt the NOPR proposal to eliminate the reasonable efforts standard set forth in sections 2.2, 3.5.4(i), 7.4, 8.3, and Attachment A to Appendix 4 of the *pro forma* LGIP. In these revised sections, we specifically eliminate the reasonable efforts standard for conducting cluster studies, cluster restudies, facilities studies, and affected system studies.

966. The lengthy interconnection study delays and interconnection queue backlogs throughout the country support our conclusion that the reasonable efforts standard does not provide an adequate incentive for transmission providers to complete interconnection studies on time. As discussed in section II above, transmission providers are experiencing significant interconnection queue backlogs, as evidenced, for example, by their Order No. 845 reports.¹⁸⁹⁴ There is every reason to believe that many of the factors contributing to significant interconnection queue backlogs and delay—including the rapidly changing resource mix, market forces, and emerging technologies—will persist. In response to those ongoing challenges, we find that it is just, reasonable, and not unduly discriminatory or preferential to eliminate the reasonable efforts standard and adopt a penalty structure that reasonably incentivizes transmission providers to ensure the timely processing of interconnection requests. We note that we are not finding that transmission providers have

necessarily acted in bad faith or that their actions are the sole reason for the queue delays. Indeed, throughout this final rule, we adopt numerous reforms to appropriately incentivize interconnection customers to help reduce interconnection delays that may result from their conduct. Nevertheless, we find that the elimination of the reasonable efforts standard and the adoption of penalties for late studies are needed to create an incentive for transmission providers, which will help reduce interconnection delays and ensure that Commission-jurisdictional rates are just, reasonable, and not unduly discriminatory or preferential.

967. The reasonable efforts standard worsens current-day challenges, as it fails to ensure that transmission providers are keeping pace with the changing and complex dynamics of today's interconnection queues. Contrary to the assertions of some commenters, we believe that there are steps within transmission providers' control, from deploying transmission providers' resources to exploring administrative efficiencies and innovative study approaches,¹⁸⁹⁵ to better ensure timely processing of interconnection studies to remedy existing deficiencies.

968. As discussed above, we adopt several reforms to address speculative interconnection requests by imposing stricter requirements on interconnection customers for entering and remaining in the interconnection queue (e.g., site control requirements, commercial readiness deposits, and withdrawal penalties). We also adopt reforms to improve the efficiency of interconnection studies and interconnection queue processing for all transmission providers (e.g., first-ready, first-served cluster study process). In this section, we adopt reforms to ensure that transmission providers are doing their part as well by eliminating the reasonable efforts standard and imposing study delay penalties on transmission providers when they fail to meet the interconnection study deadlines we adopt in this final rule. Based on the record, we find that the elimination of the reasonable efforts standard and its replacement with firm deadlines and penalties are needed to remedy unjust and unreasonable rates

¹⁸⁹³ Invenergy Initial Comments at 30; Iowa Commission Initial Comments at 5–6 (“RTOs/ISOs need to prioritize interconnection studies and need to hold their employees and/or outside entities responsible for delays”); SEIA Initial Comments at 32.

¹⁸⁹⁴ See appendix B to this final rule (showing that over 2,800 interconnection studies were delayed as of the end of the fourth quarter (Q4) 2022 and that over 1,900 interconnection studies were delayed as of the end of Q4 2021); see also Queued Up 2023 at 6 (showing growth in number of interconnection requests from 2013 to 2022) and Queued Up 2023 at 3 (noting that generating facilities built in 2008 spent, on average, less than two years in interconnection queues, whereas generating facilities built in 2022 spent, on average, five years in interconnection queues). Although some commenters argue that Order No. 845 data do not provide sufficient support (AEP Initial Comments at 25–26; MISO Initial Comments at 72), the data demonstrate that interconnection queue delays have continued to worsen over recent years and industry reports have similarly concluded that interconnection queues are seeing increasingly severe delays. We cite evidence that contradicts such comments and that, instead, supports our findings. See, e.g., *supra* section II.C.

¹⁸⁹² We note that the typical standard of review under FPA section 205 would apply to these filings: i.e., the filer must show that any proposal to recover study delay penalties is just, reasonable, and not unduly discriminatory or preferential. See 16 U.S.C. 824d.

¹⁸⁹⁵ See Public Interest Organizations Reply Comments at 4 (“any claim that an individual transmission provider has done absolutely everything in its power to improve the processing rate of interconnection requests . . . almost certainly comes from a lack of imagination”); R Street Initial Comments at 14 (explaining that advances in computing fields have the potential to reduce queue processing times).

and ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. Thus, we disagree with commenters that contend that the reasonable efforts standard continues to be appropriate or that the Commission's past orders, including Order No. 845, mean that the reasonable efforts standard continues to ensure just and reasonable rates.¹⁸⁹⁶

969. We similarly disagree with commenters that support eliminating the reasonable efforts standard but that do not support imposing study delay penalties on transmission providers for failing to meet interconnection study deadlines.¹⁸⁹⁷ We do not believe that this result would remedy the unjust and unreasonable rates, nor would it ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner by aligning incentives properly.

970. As we are eliminating the reasonable efforts standard, we also must adopt a replacement rate that remedies the problems just described. The sections below set forth a study delay penalty structure and why we believe it is justified. In short, we adopt provisions in the *pro forma* LGIP that impose firm interconnection study deadlines and corresponding study delay penalties on transmission providers that fail to meet those deadlines.

971. Interconnection customers face financial harm when study deadlines are not met, ultimately inhibiting their ability to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner. We find that holding transmission providers to firm interconnection study deadlines is likely to accelerate the interconnection study process and provide greater certainty to interconnection customers, allowing them to make more informed business decisions around whether to proceed with or withdraw from the interconnection queue, which will also ultimately improve interconnection

queue management and remedy the unjust and unreasonable rates otherwise created by study delays.

972. At the same time, we do not believe that the study delay penalty structure that we adopt in this final rule is unduly harsh for transmission providers, either in penalty amount or the form of its application. The study delay penalty structure adopted in this final rule balances the harm to interconnection customers of interconnection study delays and the associated need to incentivize transmission providers to timely complete interconnection studies with the burdens on transmission providers of conducting interconnection studies and potentially facing penalties for delays, including those that may be caused or exacerbated by factors beyond their control. In particular, we adopt the following safeguards for transmission providers: (1) a transition period rather than imposing study delay penalties as soon as transmission providers begin implementing the reforms in this final rule; (2) a 10-business day grace period where no study delay penalties will be assessed; (3) a provision that allows a 30-business day deadline extension upon mutual agreement of the transmission provider and interconnection customers; (4) caps on study delay penalties; and (5) a transmission provider ability to appeal. We also adopt provisions governing distribution of study delay penalties to interconnection customers and prohibiting recovery of study delay penalties through transmission rates, along with transparency-related posting requirements to the benefit of interconnection customers and consumers alike. We believe that the study delay penalty structure adopted herein aligns transmission provider and interconnection customer incentives while providing appropriate built-in flexibility and safeguards for transmission providers, thereby achieving a balance that ensures just and reasonable rates and ensures that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.

ii. Penalty Amount

973. We modify the *pro forma* LGIP to adopt a study delay penalty structure whereby penalties increase through the interconnection study process. Delays of cluster studies beyond the tariff-specified deadline will incur a penalty of \$1,000 per business day; delays of cluster restudies beyond the tariff-specified deadline will incur a penalty of \$2,000 per business day; delays of

affected system studies beyond the tariff-specified deadline will incur a penalty of \$2,000 per business day; and delays of facilities studies beyond the tariff-specified deadline will incur a penalty of \$2,500 per business day.

974. We agree with the numerous commenters who argue that the NOPR penalty proposal of \$500 per business day is too low to create an incentive for transmission providers to meet study deadlines.¹⁸⁹⁸ We find it necessary to modify the NOPR proposal to establish a higher penalty amount and a structure of increasing penalties that reflects the greater harm caused by delayed studies at later interconnection stages.

975. We reach this conclusion for several reasons. First, we find persuasive the comments asserting that a penalty of \$500 per business day is insufficient to incentivize transmission provider actions that will reduce the incidence of study delays.¹⁸⁹⁹ At \$500 per business day, a study that is delayed by six months—or roughly 126 business days—would produce a penalty of only \$63,000. We view such a penalty as insufficient considering that the purpose of the penalty is to incentivize timely study completion that may be achieved, for example, by hiring additional personnel or investing in new software.

976. Some commenters advocate for penalty amounts that more closely approximate the costs that delays impose in interconnection

¹⁸⁹⁶ ACE–NY Initial Comments at 12; Affected Interconnection Customers Initial Comments at 24–26; CESA Initial Comments at 11; CESA Reply Comments at 8–9; Clean Energy Associations Initial Comments at 44; Consumers Energy Initial Comments at 6; CREA and NewSun Reply Comments at 56; Cypress Creek Initial Comments at 24; ELCON Initial Comments at 7–8; EPSA Initial Comments at 11; Fervo Energy Initial Comments at 6; Invenery Initial Comments at 29; NARUC Initial Comments at 14; Pine Gate Initial Comments at 39.

¹⁸⁹⁹ See, e.g., Invenery Initial Comments at 29–30 (“[T]he proposed penalty amount is woefully insufficient to create any real incentive” . . . “While a study that is six months late may severely impact an interconnection customer’s development efforts, it would amount to only a \$90,000 penalty, which is *de minimis* for transmission providers which may have annual revenues of \$25 billion if not more”); Affected Interconnection Customers Initial Comments at 24–25 (“[A] \$500 per day penalty imposed upon transmission providers with hundreds of millions, if not billions of dollars of transmission assets, is a drop in the bucket that will be highly unlikely to deter continued missed interconnection study deadlines”); Cypress Creek Initial Comments at 24 (“[P]enalties should . . . be substantially larger so that they serve as meaningful deterrents to delayed and inaccurate study results”); Pine Gate Initial Comments at 39 (“A daily penalty rate that is too low will do little to incentivize transmission providers to complete studies in a timely manner, even in a situation where the penalty equals the full 100 percent of total study deposits received”).

¹⁸⁹⁶ See, e.g., Avangrid Initial Comments at 10, 30–31; Bonneville Initial Comments at 16; EEI Reply Comments at 16; Indicated PJM TOs Initial Comments at 36; MISO TOs Reply Comments at 6–7; NYISO Initial Comments at 30–31; PG&E Reply Comments at 3–4; WIRES Initial Comments at 10.

¹⁸⁹⁷ CAISO Initial Comments at 25–26; Clean Energy Buyers Initial Comment at 9–10; MISO Initial Comments at 13, 71, 79; Shell Initial Comments at 10; see also NARUC Initial Comments at 13–14, 20; Pennsylvania Commission Initial Comments at 2–3 (supporting the proposal to eliminate the reasonable efforts standard but taking no position on the need for monetary penalties).

customers,¹⁹⁰⁰ while others propose penalty amounts ranging from \$2,500 per day to \$7,000 per day.¹⁹⁰¹ Based on the record before us, we believe the \$1,000/\$2,000/\$2,500 per business day penalty structure, combined with the transition, grace period, cap on penalties, and ability to appeal that we adopt below, strikes an appropriate balance because it creates an incentive for transmission providers to meet study deadlines while not being overly punitive.

977. Second, adopting progressively higher penalty amounts for delayed cluster restudies and facilities studies reflects the progressively greater harm to interconnection customers of delayed studies at those later stages—at which they will have made greater investments in advancing their projects toward commercial development through steps such as obtaining site control, securing permits, and contracting for equipment. This is especially true given the new site control requirements, commercial readiness deposits, and withdrawal penalties we adopt in this final rule, which also become increasingly stringent as the study process progresses. These reforms will require that interconnection customers have greater capital at risk at each stage to affirm their commitment to reaching commercial operation. We find it appropriate that transmission providers face study delay penalties structured in a similar manner to provide adequate incentives to complete interconnection studies on time.

978. Third, the penalty structure we adopt here will impose more stringent study delay penalties at later stages when reasons for study delays should be fewest. That is, we expect the volume of interconnection requests to decrease as they progress through the study process, with fewer interconnection requests reaching the cluster restudy and facilities study stages. This reduction in volume will reduce the likelihood transmission providers are unable to complete those studies on time. We find it reasonable to hold transmission providers most accountable for timely study completion in the stages where delays should be most avoidable.

iii. Transition

979. We modify proposed section 3.9(6) of the *pro forma* LGIP, which provided that no study delay penalties shall be assessed until one cluster study

cycle (that is not a transitional study cycle) after the Commission-approved effective date of the transmission provider's filing in compliance with this final rule. Instead, we modify that section to provide that no study delay penalties shall be assessed until the third cluster study cycle after the Commission-approved effective date of the compliance filing (including any transitional cluster study cycle, but not transitional serial studies).¹⁹⁰² We believe that giving transmission providers time to adapt to the new processes without imposing study delay penalties immediately will help ensure that transmission providers' implementation of this final rule has begun to reduce backlogged interconnection queues: *i.e.*, we expect transmission providers to meet the interconnection study deadlines once they are implementing the cluster study process, with the increased requirements on interconnection customers (*e.g.*, site control requirements, commercial readiness deposits, and withdrawal penalties) to help prevent speculative interconnection requests from entering and remaining in the interconnection queue.

980. We adopt Duke Southeast Utilities' request to specify that transmission providers already using a cluster study process will not be subject to penalties until the third cluster study cycle after the Commission-approved effective date of the transmission provider's filing in compliance with this final rule.¹⁹⁰³ We agree that transmission providers that already use a cluster study process should not be incentivized to employ an unnecessary transition process in response to this final rule simply to delay the possibility of study delay penalties. Accordingly, we modify the NOPR proposal such that no transmission providers will be assessed study delay penalties until the third cluster study cycle after the Commission-approved effective date of the compliance filing.

iv. Grace Period

981. In addition to adopting a study delay penalty amount that we believe balances incentivizing transmission providers while not being overly punitive, we adopt in *pro forma* LGIP section 3.9(4) a 10-business day grace period, such that no study delay penalties will be assessed for a study that is delayed by 10 business days or

fewer, and if the study is delayed by more than 10 business days, the penalty amount will be calculated from the first business day the transmission provider exceeds the applicable study deadline. We believe that this 10-business day grace period will provide an appropriate level of flexibility for transmission providers to address unforeseen circumstances or complexities that arise in the study process. We also believe that this grace period will lessen any administrative burden associated with the appeals process or RTO/ISO recovery of study delay penalty costs, as studies with short delays will not incur study delay penalties that may trigger appeals filings or the need for RTO/ISO penalty recovery.

v. Study Deadline Extension

982. We adopt the NOPR proposal in *pro forma* LGIP section 3.9(5) to allow extensions of the deadline for a particular study by 30 business days by mutual agreement of the transmission provider and all interconnection customers with interconnection requests in the relevant study. We believe that this reform will promote cooperation between transmission providers and interconnection customers and incentivize transmission providers to keep interconnection customers informed of the status of study processes.

983. We decline to adopt AEE's suggestion to require transmission providers to publicly post when a study deadline is extended by mutual agreement.¹⁹⁰⁴ We do not find it necessary to require such public posting because transmission providers are being given sufficient incentive to minimize delays and manage all interconnection studies fairly. We also decline to adopt NARUC's suggestion to require transmission providers to certify that extensions will not delay unrelated interconnection requests outside the cluster.¹⁹⁰⁵ Transmission providers will be sufficiently incentivized to ensure that such extensions do not delay other studies because any such delays may incur study delay penalties, as described in this section. In response to commenters that argue that it will be difficult to obtain mutual agreement in large regions, we do not view that as a reason to decline to adopt or to modify the proposal.¹⁹⁰⁶ If an interconnection study is delayed, and mutual agreement cannot be obtained, the transmission provider will be assessed the

¹⁹⁰⁰ Cypress Creek Initial Comments at 24; Pine Gate Initial Comments at 39–40.

¹⁹⁰⁵ NARUC Initial Comments at 15.

¹⁹⁰⁶ Indicated PJM TOs Initial Comments at 42; Tri-State Initial Comments at 19.

corresponding study delay penalties and may file an appeal with the Commission to explain any relevant circumstances.

vi. Cap on Penalties

984. We modify proposed section 3.9(2) of the *pro forma* LGIP, which capped study delay penalties at 100% of the total study deposit received for the late interconnection study, to instead cap penalties at: (1) 100% of the initial study deposits received for all of the interconnection requests in the cluster for cluster studies and cluster restudies;¹⁹⁰⁷ (2) 100% of the initial study deposit received for the single interconnection request in the study for facilities studies; and (3) 100% of the study deposit(s) that the affected system transmission provider collects for conducting the affected system study. As discussed in the section III.A.2.6.a above, we modify the NOPR proposal and require transmission providers to collect a single study deposit from interconnection customers only upon entry into the cluster (initial study deposit), rather than a study deposit at each phase of the study process, as proposed in the NOPR. Accordingly, we modify the study delay penalty cap to reflect this change in the study deposit requirements. By tying the study delay penalty cap to the study deposits, we ensure that the maximum penalty bears a relationship to the costs of the study that was late and is not unnecessarily punitive.

985. In response to commenters who argue that study delay penalties should not be capped,¹⁹⁰⁸ or that the cap should be higher than 100% of the study deposits for the late interconnection study,¹⁹⁰⁹ we believe that imposing study delay penalties that exceed the amount of the study deposit collected for the late interconnection study will be unnecessarily punitive to transmission providers.

986. In response to Invenenergy's request for clarification, we confirm that the cap will not be impacted by any withdrawal penalties.¹⁹¹⁰

¹⁹⁰⁷ Under section 3.1.1.1 of the *pro forma* LGIP, initial study deposits will range from \$25,000 to \$250,000, depending on the size of the proposed generating facility.

¹⁹⁰⁸ ACE-NE Initial Comments at 13; AEE Reply Comments at 37; Consumers Energy Initial Comments at 6; CREA and NewSun Initial Comments at 84; Cypress Creek Initial Comments at 23–24; Public Interest Organizations Initial Comments at 35–36; SEIA Initial Comments at 34.

¹⁹⁰⁹ Interwest Initial Comments at 8; Invenenergy Initial Comments at 31; Northwest and Intermountain Initial Comments at 14.

¹⁹¹⁰ Invenenergy Initial Comments at 31.

vii. Ability To Appeal

987. We further modify the NOPR proposal to include, in section 3.9(3) of the *pro forma* LGIP, the ability for transmission providers to appeal any study delay penalties to the Commission.¹⁹¹¹ Any such appeal must be filed no later than 45 calendar days after the late study has been completed. The Commission will evaluate whether good cause exists to grant relief from the study delay penalty and will issue an order granting or denying relief. In evaluating whether there is good cause to grant such relief, the Commission may consider, among other factors: (1) extenuating circumstances outside the transmission provider's control, such as delays in affected system study results; (2) efforts of the transmission provider to mitigate delays; and (3) the extent to which the transmission provider has proposed process enhancements either in the stakeholder process or at the Commission to prevent future delays. The filing of an appeal will stay the transmission providers' obligation to distribute the study delay penalty funds to interconnection customers until 45 calendar days after (1) the deadline for filing a rehearing request has ended, if no requests for rehearing of the Commission's decision on the appeal have been filed, or (2) the date that any requests for rehearing of the Commission's decision on the appeal are no longer pending before the Commission.

988. By providing an appeal process, we balance the need to ensure that transmission providers have an incentive to meet interconnection study deadlines with protections to ensure that any such penalties are fair and not triggered if good cause justifies the delay. The protections embedded in this appeal process address commenters' concerns that there be adequate due process and/or fact-finding before imposing a study delay penalty on transmission providers.¹⁹¹²

989. In response to commenters that oppose study delay penalties because

¹⁹¹¹ We note that these appeals should not be filed under FPA section 206. *Contra Hanwha Q-CELLS USA Corp.*, 174 FERC ¶ 61,013, at PP 9–10 (2021) (interpreting CAISO's open access transmission tariff provision, which allows market participants that receive specific CAISO-imposed sanctions to obtain immediate review of CAISO's determination by directly appealing to the Commission "in accordance with [the Commission's] rules and procedures," as a reference to 18 CFR 385.206 and 385.218); *Mission Solar LLC*, 174 FERC ¶ 61,014, at PP 10–11 (2021); *Cal. Indep. Sys. Operator Corp.*, 184 FERC ¶ 61,009, at P 24 (2023).

¹⁹¹² Indicated PJM TOs Initial Comments at 43–44; ISO/RTO Council Initial Comments at 2; MISO Initial Comments at 15, 76; NYISO Initial Comments at 35–36.

interconnection study delays are often caused by factors outside transmission providers' control,¹⁹¹³ we note that the penalties adopted herein are an integral element of a just and reasonable replacement rate to ensure that transmission providers are properly incentivized to address these factors. We do not find it appropriate to impose penalties only where a factor can be conclusively demonstrated to be within a transmission provider's control, as this would impose significant administrative burden. It may be difficult to precisely determine the cause of any given delay, especially where delay occurs due to multiple factors. Further, transmission providers' concerns are addressed to some extent through the ability to appeal described above, which provides an opportunity for relief from any study delay penalties. Further, we note that many of the reforms adopted in this final rule will help to mitigate factors that may prolong the study process, such as the submission of speculative interconnection requests. In addition, the reforms adopted regarding affected system coordination—discussed later in this final rule—will address delays resulting from affected system studies. We disagree with Indicated PJM TOs that a complete *de novo* review is needed to assess study delay penalties.¹⁹¹⁴ We find that the good cause standard adopted in this final rule¹⁹¹⁵ provides an adequate framework through which the Commission can evaluate whether it is appropriate to grant relief from any applicable penalties.

viii. Distribution of Study Delay Penalties to Interconnection Customers

990. We adopt the NOPR proposal, with modification, set forth in *pro forma* LGIP section 3.9(1), to require transmission providers to distribute study delay penalties on a pro rata basis per interconnection request to the

¹⁹¹³ AEP Initial Comments at 25–26; Ameren Initial Comments at 20; Avangrid Initial Comments at 9–10, 29; Dominion Reply Comments at 19; Indicated PJM TOs Reply Comments at 22–24; ISO-NE Initial Comments at 35–36; ISO/RTO Council Initial Comments at 3–4; MISO Initial Comments at 73–74; MISO TOs Initial Comments at 15–16, 23–24; National Grid Initial Comments at 30; NESCOE Reply Comments at 11–12; NRECA Initial Comments at 9, 33–34; NYISO Initial Comments at 26–27; OMS Initial Comments at 15; Pacific Northwest Utilities Initial Comments at 9–10; PacifiCorp Initial Comments at 32–35; PG&E Initial Comments at 7; PG&E Reply Comments at 3–4; Puget Sound Initial Comments at 9; SDG&E Reply Comments at 1; Southern Initial Comments at 5, 30; State Agencies Initial Comments at 12–14; Tri-State Initial Comments at 17–18; U.S. Chamber of Commerce Initial Comments at 10; WIRES Initial Comments at 9; Xcel Initial Comments at 38.

¹⁹¹⁴ Indicated PJM TOs Initial Comments at 44.

¹⁹¹⁵ See *supra* PP 987–988.

interconnection customers and affected system interconnection customers included in the relevant study that did not withdraw, or were not deemed withdrawn, from the interconnection queue before the missed study deadline. Unless the transmission provider files an appeal to the study penalty, the study delay penalty must be distributed no later than 45 calendar days after the late study has been completed. Specifically, a study delay penalty for a delayed cluster study or cluster restudy must be distributed on a pro rata basis per interconnection request to all interconnection customers in the cluster, per the requirements above. A study delay penalty for a delayed facilities study must be distributed to the interconnection customer whose facilities were being studied, per the requirements above. Further, a study delay penalty for a delayed affected system study must be distributed to the affected system interconnection customer(s) whose generating facility was being studied by an affected system transmission provider, per the requirements above. In response to PG&E's request for clarification,¹⁹¹⁶ the study delay penalties are on a per business day basis and will be distributed equally to each delayed interconnection customer per the requirements above.

991. We find the distribution of the study delay penalties imposed due to a delay in the study, which defray the study costs of the interconnection customers affected by that delay, to be just and reasonable, as they will ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner.

ix. No Recovery in Transmission Rates or From Interconnection Customers

992. Regarding recovery of study delay penalties, we modify the NOPR proposal to prohibit non-RTO/ISO transmission providers and transmission-owning members of RTOs/ISOs from recovering study delay penalty amounts through transmission rates. This treatment of study delay penalties is consistent with the treatment of penalties imposed pursuant to Order No. 890¹⁹¹⁷ and will ensure that the study delay penalties have the incentivizing effect discussed above. Because the at-fault transmission provider's shareholders will pay the penalty, this prohibition addresses

commenters' concerns¹⁹¹⁸ that study delay penalty costs will ultimately be borne by customers and ratepayers through increased transmission costs.¹⁹¹⁹

993. Additionally, we decline to allow any transmission provider to recover study delay penalties from interconnection customers to the extent the interconnection customers cause delays. If a study delay is caused by an interconnection customer, and not the transmission provider, that would represent a potentially compelling basis for the Commission to find that good cause exists to waive the study delay penalties. Further, we note that, in the event that an interconnection request is incomplete or an interconnection customer misses a deadline, those interconnection requests are subject to the withdrawal provisions of *pro forma* LGIP section 3.7.

x. Penalty Recovery in RTOs/ISOs

994. We decline to adopt the NOPR proposal to require RTOs/ISOs to submit requests to recover the costs of specific study delay penalties under FPA section 205. RTOs/ISOs may instead submit an FPA section 205 filing to propose a default structure for recovering study delay penalties and/or make individual FPA section 205 filings to recover the costs of any specific study delay penalties. We believe that this discretion for RTOs/ISOs will reduce the administrative burden associated with study delay penalty cost recovery and will allow RTOs/ISOs the flexibility to craft rules that work for their region. In response to ACORE's recommendation that RTOs/ISOs provide criteria for how they will assign study delay penalties, we note that RTOs/ISOs may file FPA section 205 proposals to explain how they will recover study delay penalties.¹⁹²⁰

995. We modify the NOPR proposal to adopt 18 CFR 35.28(f)(1)(ii) to specify that, for RTOs/ISOs in which the transmission-owning members perform certain interconnection studies, the study delay penalties imposed under the new *pro forma* LGIP will be imposed directly on the transmission-

owning member(s) that conducted the late study, thereby mooted the issue of how RTOs/ISOs recover those specific penalties. We believe that this change will also reduce the administrative burden, as RTOs/ISOs will typically not need to seek cost recovery for late facilities studies because those studies are often conducted by transmission-owning members. This change will also ensure that the study delay penalties are imposed on the public utility with the most control over whether the study deadline is met, *i.e.*, the public utility conducting the study. Doing so aligns the incentive created by the study delay penalty with the entity most in control of the study timeline. This change also responds to AEE's suggestion to assign RTO/ISO study delay penalties directly to transmission owners, OPSI's contention that RTOs/ISOs may be reluctant to seek cost recovery from transmission owners, and TAPS' concern that RTOs/ISOs would need well-supported cases to assign study delay penalties to transmission owners.¹⁹²¹

996. In response to commenters concerned about how study delay penalties will be assigned if no fault is found among RTO/ISO members,¹⁹²² the study delay penalties are imposed automatically on the RTO/ISO under the *pro forma* LGIP. As explained above, RTOs/ISOs may file an FPA section 205 proposal to recover the costs of study delay penalties. Concerns about any such proposals are best addressed in the relevant FPA section 205 proceedings. For the same reason, we decline to adopt TAPS' recommendation that the Commission provide an automatic waiver of any study delay penalty amount the RTO/ISO would otherwise pass to ratepayers,¹⁹²³ as such determinations are best made on a case-by-case basis. In response to Indicated PJM TOs argument that PJM lacks the contractual authority to seek recovery of study delay penalties from transmission owners,¹⁹²⁴ PJM's authority to recover costs from its transmission-owning members can be properly addressed in any future FPA section 205 proceeding.

997. We acknowledge commenters' concerns that the study delay penalty structure may impose an administrative and litigative burden on RTOs/ISOs and

the Commission,¹⁹²⁵ and that RTOs/ISOs may be in a fact-finding position in order to be able to assign study delay penalties not attributable to an RTO/ISO transmission owning member.¹⁹²⁶ As an initial matter, we believe that any such burden is outweighed by the need to create an incentive to ensure that transmission providers timely complete interconnection studies. Also, we find that RTOs/ISOs do not face differing or greater burdens that warrant different treatment than non-RTO/ISO transmission providers. The *pro forma* LGIP applies to all transmission providers, RTO/ISO and non-RTO/ISO alike. To the extent that RTOs/ISOs elect to create a tariff mechanism for recovering study delay penalties, rather than relying on individual filings, as noted above, the RTO/ISO may submit an FPA section 205 filing to propose such a default structure. Finally, where the transmission-owning members of an RTO/ISO perform interconnection studies, there is little-to-no “fact-finding” to be done to determine to which public utility to assign study delay penalties, as the transmission owner will be automatically assigned the penalty pursuant 18 CFR 35.28(f)(1)(ii).

998. In response to concerns that RTOs/ISOs have no ability to pay study delay penalties without collecting them from another party,¹⁹²⁷ we note that RTOs/ISOs have several options under this final rule for collecting study delay penalties. As discussed above, RTOs/ISOs may submit FPA section 205 filings to seek recovery for study delay penalties from public utilities contributing to study delays. The FPA section 205 filing could propose either to establish a tariff mechanism for assigning costs generally or for assigning costs for specific study delay penalties.

RTOs/ISOs also have other ways to fund study delay penalties beyond the revenue they collect for sales of transmission service: for example, RTOs/ISOs collect administrative fees from market participants.¹⁹²⁸

999. We disagree with NYISO that study delay penalties would threaten the financial viability of RTOs/ISOs or fail to incentivize RTOs/ISOs to complete studies by the required deadlines. The evidence in this record does not demonstrate that the study delay penalty structure that we adopt in this final rule, combined with the multiple adopted safeguards, including a total cap on study delay penalty amounts, would threaten the financial viability of an RTO/ISO, particularly given that RTOs/ISOs may submit FPA section 205 filings to recover study delay penalties. Additionally, as noted, we find that it is appropriate to incentivize RTOs/ISOs to meet study deadlines in the same manner as non-RTO/ISO transmission providers. Thus, we also disagree with NYISO that the study delay penalties for RTOs/ISOs should be smaller in size and slower to trigger.¹⁹²⁹ As discussed above, we believe that the study delay penalty structure strikes a reasonable balance by providing an adequate incentive without being punitive.

1000. AEP and TAPS assert that the imposition of study delay penalties will disincentivize RTO/ISO participation.¹⁹³⁰ We are not persuaded that any such disincentive outweighs the benefits of adopting study delay penalties. We expect that an incentive for transmission providers to meet interconnection study deadlines will result in more efficient interconnection queue processing, which will benefit competition and, in the long run, customers within a transmission provider’s region, including within RTO/ISO regions. We continue to believe that customers are more likely to experience lower overall costs if the

industry relies on robust wholesale competition to determine the appropriate level of generation and related transmission development.¹⁹³¹

1001. We find that applying study delay penalties to RTOs/ISOs for failing to meet interconnection study deadlines is consistent with Commission precedent and continues to be appropriate, particularly given the extent of interconnection queue backlogs in RTOs/ISOs. We disagree with NYISO that, because RTOs/ISOs may be at greater risk of being assessed study delay penalties than reliability penalties, this meaningfully distinguishes study delay penalties from the Commission’s findings in Order Nos. 672–A and 890 related to reliability penalties.¹⁹³² In response to NYISO’s comment that reliability penalties receive the Commission’s close scrutiny, we note that transmission providers will have an opportunity to seek relief from a penalty by filing an appeal, which the Commission will closely scrutinize and in response to which the Commission will issue an order.¹⁹³³

xi. Posting Requirements

1002. For transparency purposes, we adopt the proposed requirements in *pro forma* LGIP section 3.9(7) that transmission providers must post on their OASIS or other publicly accessible website on a quarterly basis, within 30 calendar days of the end of the calendar quarter, (1) the total amount of study delay penalties from the previous reporting quarter, and (2) the highest amount of such study delay penalties repaid to a single interconnection customer during the previous reporting quarter. We also adopt the proposed requirements in *pro forma* LGIP section 3.9(7) that transmission providers must maintain the quarterly measures posted on their OASIS or website for three calendar years, with the first required posting to be the third cluster study cycle (including any transitional cluster study cycle, but not transitional serial studies) after the transmission provider transitions to the cluster study process. We believe that this additional

Non-profit transmission providers have other sources of money to pay penalties beyond the revenue they collect for sales of transmission service.”).

¹⁹³³ NYISO Initial Comments at 33–34.

information will be helpful to the public and the Commission in tracking the status of interconnection queue delays and that the burden on transmission providers of posting this information will be minimal.

xii. Force Majeure Exception

1003. We decline to adopt the NOPR proposal to exempt transmission providers from study delay penalties where *force majeure* applies. We believe that this exemption is unwarranted: transmission providers may explain in any appeal to the Commission any circumstances that caused the delay, including any events that qualify as *force majeure*, and the Commission will consider such circumstances as part of its evaluation of whether good cause exists to grant relief from the otherwise applicable study delay penalties.

xiii. Transmission Provider Resources

1004. In response to commenters that raise concerns about transmission provider resources to complete studies on time, we first emphasize that the overall set of reforms in this final rule should significantly streamline and reduce the number of interconnection studies that a transmission provider must conduct, easing the burden on transmission providers. With the benefit of fewer studies and fewer speculative generating facilities in the interconnection queue, we expect that a transmission provider that faces the potential of a study delay penalty for failing to meet interconnection study deadlines will be able to allocate sufficient resources to conduct interconnection studies, in addition to implementing reforms to ensure that its study process is efficient. In this final rule, we adopt interconnection study deadlines for a transmission provider to complete cluster studies, cluster restudies, facilities studies, and affected system studies. As discussed above, we believe that the interconnection study deadlines will give transmission providers sufficient time to conduct the relevant studies, e.g., 150 calendar days for the completion of the cluster study, and we have demonstrated that the existing *pro forma* generator interconnection procedures and agreements are insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner.¹⁹³⁴ We therefore believe that the record supports the imposition of study delay

penalties for failure to meet those deadlines.

1005. Some commenters argue that other NOPR proposals, such as the optional resource solicitation studies, optional informational interconnection studies, and evaluation of advanced transmission technologies, will consume transmission provider resources otherwise dedicated to interconnection studies.¹⁹³⁵ Similarly, other commenters argue that imposing firm study deadlines will force transmission providers to redirect resources and personnel away from other necessary functions such as transmission planning or deprive them of financial resources and make it harder to retain qualified personnel.¹⁹³⁶ We note that we do not adopt the NOPR proposals to implement optional informational interconnection studies or optional resource solicitation studies and adopt a modified version of the NOPR proposal to require evaluation of certain enumerated advanced transmission technologies, which should reduce the burden on transmission providers as compared to that under the NOPR. Further, to these arguments, we note that it is the transmission provider's responsibility to manage its organizational resources—including attracting and retaining sufficient qualified personnel to meet its responsibilities—and that it is within the transmission provider's ability to improve how it manages its internal resources. If, for whatever reason, the transmission provider is not able to meet firm study deadlines, that is an issue the transmission provider is free to raise in appealing any penalties it incurs. While we are not persuaded that transmission providers will necessarily need to reassess their organizational needs to meet study deadlines, given the suite of reforms adopted in the final rule, to the extent that such steps are required, they are warranted to fulfill our responsibility under the FPA to ensure just and reasonable rates and to ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner.

1006. We disagree with SoCal Edison and New York State Department that transmission providers will require additional resources to track and

allocate study delay penalties, potentially increasing the cost of administering interconnection queues.¹⁹³⁷ We note that transmission providers already track the progress of their interconnection queues and should be aware of study deadlines, especially as their tariffs currently require reasonable efforts to meet such deadlines. As a result, determining when study delay penalties apply will be as straightforward as determining how many studies are late and past the 10-business day grace period from the applicable study deadline. As explained above, we anticipate that other provisions of this final rule will result in improved interconnection queue management and processing, which should ease the burden on transmission providers over time.

1007. We also disagree with commenters that firm study deadlines with study delay penalties will necessarily reduce interconnection study flexibility¹⁹³⁸ and accuracy,¹⁹³⁹ as well as system reliability.¹⁹⁴⁰ We reiterate that it is within transmission providers' ability to improve interconnection study processes and policies and take other measures, such as hiring additional staff, to efficiently process interconnection queues without sacrificing accuracy, flexibility, or reliability. Study delay penalties will incentivize these actions, especially given transmission providers' independent responsibilities to deliver accurate studies and to ensure system reliability. Thus, we agree with the New Jersey Commission that there is not an inherent tradeoff between holding

¹⁹³⁴ See *supra* section II.C.

transmission providers accountable and transmission system reliability. In addition, we further agree that the failure to bring new generating facilities online in a timely manner can also create reliability and economic risk.¹⁹⁴¹ Moreover, interconnection customers, rather than transmission providers, ultimately bear the costs of interconnection studies. To the extent that it is more costly to complete studies in a timely and accurate fashion, these interconnection study costs will be passed on to interconnection customers. Further, as noted above, the study delay penalty structure includes significant safeguards for the transmission provider, such as the transition period, the 10-business day grace period, the penalty cap, the ability to extend deadlines by mutual agreement, and the ability to appeal any study delay penalties to the Commission.

xiv. Coordination Among Transmission Providers, Interconnection Customers, and Affected Systems

1008. Several commenters raise concerns related to affected systems, and coordination among transmission providers, interconnection customers, and affected systems. In response to NARUC's request for clarification regarding affected system studies, we note that new *pro forma* LGIP section 3.9 will apply to all transmission providers when they are acting as an affected system operator (affected system transmission providers).¹⁹⁴² As a result, affected system transmission providers are also subject to a study delay penalty for a late affected system study. Thus, contrary to commenters' arguments that the NOPR proposal ignores that other entities, such as affected systems, may be responsible for study delays,¹⁹⁴³ affected system transmission providers will face the same incentive as the host transmission provider to timely complete their studies. In addition, where a delay for a host transmission provider's cluster or facilities studies is caused by affected system study delays, the host transmission provider can file an appeal of any applicable study delay penalty with the Commission and include such details in its claim of good cause for relief.

1009. We disagree with commenters' concerns that the study delay penalty structure would decrease or harm coordination between transmission

providers, interconnection customers, and affected systems,¹⁹⁴⁴ and/or create tension between RTOs/ISOs, transmission owners, developers, or other parties.¹⁹⁴⁵ The incentive for transmission providers to timely complete interconnection studies created by the study delay penalty structure should improve coordination among transmission providers and interconnection customers to ensure that transmission providers have the information needed to complete the studies and, if there is an issue, to pursue a potential extension of the deadline via mutual agreement. We note that other reforms adopted in this final rule will improve clarity and efficiency around affected system studies, which should improve coordination with affected systems. In addition, affected system transmission providers are also subject to study delay penalties for delayed affected system studies, which should encourage better coordination. We also believe that an ability to appeal study delay penalties will provide a structured forum for parties to dispute claims, placing the Commission in the position of decisionmaker when it comes to determining whether to excuse study delay penalties.

1010. We disagree with AECI that there is no benefit to imposing penalties on affected system transmission providers for failure to timely complete affected system studies. These studies equally affect interconnection customer certainty and interconnection process efficiency, and as such, we believe that the penalty structure enumerated above will also incentivize transmission providers to complete affected system studies in a timely manner. Indeed, the Commission has addressed several instances where affected system studies have delayed or otherwise affected interconnection study timelines and processes,¹⁹⁴⁶ and therefore, without imposing a penalty structure, we are not convinced that transmission providers will timely complete their affected system studies. In the same vein, we agree with Interwest that monetary penalties for failure to meet the affected system study deadline will incentivize discipline and support investment

needed to meet affected system study timelines.

1011. In response to ENGIE, MISO, and Duke Southeast Utilities' comments on the distribution of study delay penalties for failure to timely complete affected system studies, we note that any study delay penalties will be distributed on a pro rata basis per interconnection request to the affected system interconnection customers included in the relevant study that did not withdraw, or were not deemed withdrawn, from the interconnection queue before the missed study deadline.

xv. Commission Authority and Precedent

1012. Some commenters argue that the proposed study delay penalty structure is an unjustified shift from precedent established in Order No. 845, in which the Commission expressly declined to impose penalties.¹⁹⁴⁷ We disagree. As we explain above, interconnection queue delays in many parts of the country have worsened since Order No. 845, and the record indicates that the failure of transmission providers to timely complete studies is a significant part of the reason why. For example, in the single year between 2021 and 2022, there was marked increase in the average length of time customers have been waiting in the interconnection queue, increasing from roughly 4 to 5 years, while at the same time seeing the total interconnection queue size increased from 1,400 GW to more than 2,000 GW.¹⁹⁴⁸ Based on the recent interconnection study metrics transmission providers posted in compliance with Order No. 845, of the 2,179 interconnection studies completed in 2022, 68% were issued late.¹⁹⁴⁹ Furthermore, at the end of 2022, an additional 2,544 studies were delayed (*i.e.*, ongoing and past their deadline).¹⁹⁵⁰ All of the RTOs/ISOs except CAISO and 14 non-RTO/ISO transmission providers reported delayed studies at the end of 2022.¹⁹⁵¹ We believe that this large number of delayed studies is a significant part of

the explanation for the extensive delays and growing interconnection queues documented above and in the Overall Need for Reform section. Accordingly, based on the evidence in *this* record, we find that study delay penalties are an appropriate component of a just, reasonable, and not unduly discriminatory or preferential replacement rate to remedy these interconnection delays and the consequences they have for Commission-jurisdictional rates.¹⁹⁵²

1013. Similarly, in response to commenters who argue that the proposed study delay penalty structure differs from the penalty structure implemented in Order No. 890 for transmission service studies,¹⁹⁵³ we believe that such differences are warranted by the significant and growing interconnection queue backlogs. We agree with PacifiCorp that, compared to transmission service requests, interconnection studies are more numerous, complex, and susceptible to delays.¹⁹⁵⁴ Further, as noted above, there is a growing number of interconnection customers affected by study delays. We believe that these factors underscore the need for transmission providers to meet study deadlines and the need to provide an incentive, in the form of study delay penalties. We find that the other reforms adopted in this final rule will streamline interconnection processes: for example, the cluster study process will reduce the number of interconnection studies that any transmission provider must conduct at a given time, thus reducing the potential for study delay penalties to accumulate relative to the serial study process in place today. We find that the elimination of the reasonable efforts standard and adoption of the study delay penalty structure will incentivize transmission providers to take appropriate steps to meet the study deadlines in their tariffs.

1014. We also disagree with TAPS' assertion that reliability penalties are permissible because they are part of a congressionally mandated regime, whereas the study delay penalties are not.¹⁹⁵⁵ We find that FPA section 206 provides us with the authority to establish a structure to impose study

delay penalties because such delays render Commission-jurisdictional rates unjust and unreasonable, as explained in the Overall Need for Reform section, and we believe that this structure reflects a just and reasonable replacement rate.¹⁹⁵⁶ As discussed above, an RTO/ISO has different options for recovering those penalties, and we are not in this final rule dictating which option an RTO/ISO must choose. Further, TAPS' argument that reliability penalties are used to offset NERC's operation costs but the interconnection study delay penalties will not be used to offset costs for consumers or ratepayers does not change our conclusion.¹⁹⁵⁷ We do not believe that our authority to require study delay penalties as part of a just and reasonable replacement rate turns on the entity whose costs are offset by the penalties collected, and as discussed above, we find it appropriate in this circumstance to use study penalties to offset the interconnection study costs for interconnection customers that are affected by the study delays.

1015. Moreover, automatic tariff-based penalty mechanisms similar to that which we adopt in this final rule exist in a variety of other contexts. For example, RTO/ISO tariffs include penalties for "traffic ticket" violations that are penalized without referral to the Commission.¹⁹⁵⁸ In that context, the Commission has approved such automatic penalties where (1) the activity is expressly set forth in the tariff, (2) the activity involves objectively identifiable behavior, and (3) the activity does not subject the actor to sanctions or consequences other than those expressly approved by the Commission and set forth in the tariff, with the ability to appeal.¹⁹⁵⁹ to the Commission.¹⁹⁶⁰ That is the same structure we are adopting here: the study delay penalties (1) will be expressly set forth in the tariff, (2) will be based on objectively identifiable

behavior (*i.e.*, whether a study is late), and (3) will only trigger consequences expressly approved by the Commission (*i.e.*, the \$1,000/\$2,000/\$2,500 per business day penalties with the ability to appeal to the Commission).

1016. In response to Indicated PJM TOs' argument that the Commission lacks the authority to require RTOs/ISOs to seek cost recovery of study delay penalties from transmission owners within the RTO/ISO,¹⁹⁶¹ we note that this concern is moot because we are declining to adopt the NOPR proposal to require RTOs/ISOs to submit requests to recover the costs of specific study delay penalties. Further, we modify our proposal to adopt revisions to 18 CFR 35.28(f)(1)(ii) to automatically apply study delay penalties to transmission owners within RTOs/ISOs when those transmission owners have conducted the delayed studies. Finally, as discussed above, RTOs/ISOs *may* submit an FPA section 205 filing to propose a default structure for recovering study delay penalties or make individual FPA section 205 filings to recover the costs of any specific study delay penalties.

xvi. Miscellaneous

1017. We also decline to adopt alternative proposals for study delay penalty structures. We find the penalty structure that we adopt in this final rule to be a just and reasonable replacement rate, which is all that the Commission is required to show under FPA section 206.¹⁹⁶²

1018. In response to EEI's and Eversource's comments concerning why the good utility practice standard, which is contained within the text of the definition of the reasonable efforts standard in the *pro forma* LGIP, would no longer apply to interconnection processes,¹⁹⁶³ we clarify that the elimination of the reasonable efforts standard does not eliminate the requirement that transmission providers act consistent with good utility practice when conducting interconnection studies. Therefore, we adopt revisions to section 4.2 of the *pro forma* LGIP to indicate that transmission providers must continue to conduct interconnection studies consistent with good utility practice.

¹⁹⁵⁵ TAPS Initial Comments at 5 (citing 16 U.S.C. 824o).

1019. Some commenters argue that interconnection study deadlines should be extended in cases of interconnection customer-caused delays and that the timeline for completing such studies should not restart until after an interconnection customer submits all necessary information and cures any deficiencies; they also argue that transmission providers should not be penalized if study delays are caused by a higher-queued cluster being restudied.¹⁹⁶⁴ We decline to adopt these modifications. As an initial matter, we note that if an interconnection customer fails to adhere to all requirements in the *pro forma* LGIP, except in the case of disputes, the transmission provider shall deem the interconnection customer's interconnection request to be withdrawn pursuant to section 3.7 of the *pro forma* LGIP. To the extent that study delays result from an interconnection customer's actions or higher-queued cluster restudies, transmission providers may record the length of those delays and report that information in any appeal of study delay penalties filed with the Commission.

1020. We disagree with PJM that interconnection customers will be incentivized to delay studies of their interconnection requests in order to offset their study costs via study delay penalties being allocated to them from the transmission provider.¹⁹⁶⁵ We agree with AEE that the economic harms of delaying the interconnection process for an interconnection customer with a commercially viable interconnection request, especially given the reforms adopted in this final rule (e.g., increased study deposits, commercial readiness deposits, and withdrawal penalties) significantly outweigh any economic incentive for interconnection customers to delay the interconnection process in hopes of a study delay penalty to offset study costs.¹⁹⁶⁶ For example, a cluster study delayed by 100 business days would generate \$100,000 in study delay penalties to be distributed among all interconnection customers in the cluster, yet such a lengthy delay could force an interconnection customer to withdraw from the interconnection queue due to commercial obligations and carries an interconnection customer withdrawal penalty risk of two times the study cost.

1021. We decline requests to delay implementation of the study delay

penalty reforms until other reforms in this rulemaking and related rulemakings, such as those in Docket No. RM22-17, take effect.¹⁹⁶⁷ As explained above, our modification to the NOPR's proposed transition mechanism for study delay penalties, which will allow transmission providers to complete two cluster study cycles before being subject to study delay penalties, will provide sufficient time for transmission providers to implement the other reforms adopted in this final rule. This transition mechanism will also give transmission providers currently undergoing their own interconnection queue reform efforts, as SPP and NYISO explain they are, time to implement those reforms.¹⁹⁶⁸ In addition, we find that the study delay penalties are just and reasonable based on the record in this proceeding and that it would not be appropriate to delay their effect until action is taken in other proceedings. To the extent the Commission finalizes the proposed reforms in separate proceedings, the Commission will consider how to address potential interactions between the reforms adopted in this final rule and elsewhere.

1022. In response to WAPA's comment that Federal agencies should not be subject to study delay penalties absent a specific congressional waiver of sovereign immunity,¹⁹⁶⁹ we clarify that the penalties will apply to the extent that a non-public utility has adopted the proposed penalty provisions as a part of its reciprocity tariff.¹⁹⁷⁰ Under the safe harbor procedure set out in Order No. 888, non-public utilities may voluntarily submit to the Commission

an open access transmission tariff; if the Commission finds that the tariff contains terms and conditions that substantially conform or are superior to those in the *pro forma* open access transmission tariff, the Commission will deem it an acceptable reciprocity tariff and will require public utilities to provide open access transmission service to that particular non-public utility (safe harbor treatment).¹⁹⁷¹ We find that, where such non-public utilities voluntarily file a reciprocity tariff, they consent to abide by the Commission's open access principles and the various provisions of the *pro forma* tariff, which would include the penalties we are adopting in this final rule (unless the Commission were to find that a safe harbor tariff without those penalty provisions substantially conforms or is superior to the *pro forma* tariff).¹⁹⁷²

1023. WAPA cites to *Southwestern Power Admin. v. FERC*¹⁹⁷³ for its proposition that, absent a specific waiver of sovereign immunity, Federal agencies are not subject to monetary penalties.¹⁹⁷⁴ We find that case inapposite because the penalties adopted here are not civil monetary penalties imposed by the Commission and paid to the U.S. Treasury. Instead, they would be penalties imposed pursuant to a voluntarily submitted reciprocity tariff and would be distributed to the delayed interconnection customer(s) in the relevant study that remained in the interconnection queue at the time the penalty would be distributed. WAPA and other Federal agencies, if they file reciprocity tariffs, would voluntarily choose to abide by the terms of those tariffs and thus would consent to any penalty structures contained in them.

1024. We decline to adopt commenters' suggestions to create generic exceptions to study delay penalties.¹⁹⁷⁵ Not only do we lack record support for some of the suggestions, but we also believe that

¹⁹⁷¹ Order No. 888, FERC Stats. & Regs. ¶ 31,036, at 31,761.

¹⁹⁷² Where, as here, the Commission makes changes to the *pro forma* tariff, a non-public utility that already has a reciprocity tariff and wishes to maintain its safe harbor treatment must amend its tariff so that its provisions substantially conform or are superior to the revised *pro forma* tariff. See Order No. 2003, 104 FERC ¶ 61,103 at P 842.

transmission provider requests for an exception to a study delay penalty are best addressed on a case-by-case basis via the appeal process outlined above.

1025. We decline to adopt alternative proposals suggested by various commenters. For example, we do not believe that imposing only a reporting requirement on study delays is sufficient to resolve the problem of interconnection queue backlogs and repeatedly delayed interconnection studies. Similarly, we decline to condition study delay penalties on the outcome of a show cause proceeding conducted by the Commission, as suggested by MISO,¹⁹⁷⁶ because it would be administratively burdensome and may not create a sufficient incentive for transmission providers to meet interconnection study deadlines. We also decline to adopt suggestions such as creation of favorable rate treatment for transmission providers that meet interconnection study deadlines¹⁹⁷⁷ or tying interconnection study performance to executive compensation,¹⁹⁷⁸ which we do not believe would ensure that interconnection customers are able to interconnect in a reliable, efficient, transparent, and timely manner as effectively as the study delay penalty structure that we adopt instead.

2. Affected Systems

a. Need for Reform

i. NOPR Proposal

1026. In the NOPR, the Commission preliminarily found that the affected system study process lacks consistency between transmission providers.¹⁹⁷⁹ The Commission stated that, without any requirement for a timely cost determination, affected system operators may not return study results in time for interconnection customers to make informed decisions to facilitate interconnection of their generating facilities. The Commission added that, due to this lack of information, there may continue to be late-stage withdrawals resulting from unexpected high costs for affected system network upgrades that create restudies and

delays.¹⁹⁸⁰ The Commission also noted that interconnection customers recommended standardization of the affected system study process in both the technical conference in Docket No. AD18–8–000 and in comments on the ANOPR in Docket No. RM21–17–000, specifically asking for standardization of the timing of study results, the amount of study costs, and modeling criteria used in affected system studies.¹⁹⁸¹

1027. The Commission noted that, currently, detailed information about any two transmission providers' affected system study processes is found in multiple transmission provider documents and is not necessarily cohesive, which appears to create confusion and uncertainty.¹⁹⁸² The Commission further preliminarily found that, despite these documents, much of the affected system study process is ad hoc and, therefore, unclear to interconnection customers. In addition, the Commission explained that affected system study processes are highly variable based on region and transmission provider, and they may not be uniform even across a single transmission provider's footprint.

1028. The Commission preliminarily found that the lack of an affected system study process results in Commission-jurisdictional rates that are unjust and unreasonable because an interconnection customer cannot evaluate its costs in a timely manner, which increases uncertainty and may result in late-stage withdrawals and subsequent restudies, delays, and increased costs to the remaining interconnection customers in the interconnection queue.¹⁹⁸³ The Commission stated that, without a transparent affected system study process, it appears that neither an interconnection customer nor the Commission can evaluate whether the affected system operator has acted in an unduly discriminatory manner. The Commission further stated that reforms to improve transparency and coordination, therefore, may be necessary to establish a just, reasonable, and not unduly discriminatory or

preferential affected system study process.

ii. Comments

1029. Multiple commenters generally support action to address the Commission's identified need to reform affected system study processes.¹⁹⁸⁴ For example, AEE asserts that existing affected system study processes are plagued by uncertainty and a lack of transparency, which, in turn, create delays, interconnection queue withdrawals, and cost increases.¹⁹⁸⁵ Invenergy, Enel, and SEIA assert that current misalignments in and lack of coordination of affected system study processes can lead to uncertain, duplicative, or unexpected study results.¹⁹⁸⁶ Some commenters support synchronization and harmonization of affected system study processes, with NextEra alleging that study processes across several regions lack transparency, consistency, coordination, and accountability, which results in errors and delays.¹⁹⁸⁷ Similarly, Google contends that current affected system study processes lack deadlines or structure, which exacerbates anticipating interconnection costs and, in turn, stifles investments.¹⁹⁸⁸ National Grid asserts that host transmission system and affected system study processes can be significantly misaligned with project development, investment, and financing timelines and decision points, resulting in unmanageable risk for interconnection customers.¹⁹⁸⁹

1030. Several commenters highlight the shortcomings of current *pro forma* LGIP requirements and their contribution to affected system study process problems.¹⁹⁹⁰ ACE–NY emphasizes that nothing in the *pro forma* LGIP binds the affected system
