

FEDERAL REGISTER

Vol. 89

Tuesday,

No. 113

June 11, 2024

Pages 49081–49796

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

Proclamation 10774 of June 5, 2024

The President

National Day of Remembrance of the 80th Anniversary of D-Day

By the President of the United States of America

A Proclamation

On the evening of June 6, 1944, President Franklin D. Roosevelt broadcast a prayer for the Nation. At the time, war was raging in Europe, and Hitler controlled most of it. Freedom and democracy were under assault around the world. But on that day, hope had landed on the beaches of Normandy when 73,000 Americans joined the Allied forces to carry out one of the greatest military missions of all time—a mission that would become known as D-Day. Knowing the fate of the free world rested in their hands, President Roosevelt asked our Nation to pray for these courageous service members' strength as they "set upon a mighty endeavor, a struggle to preserve our Republic, our religion, and our civilization, and to set free a suffering humanity." On the 80th anniversary of D-Day, may we thank these service members for their bravery and sacrifice. May we honor their heroism, which liberated a continent and saved the world. And may we recommit to the future they fought and which many died for.

The brave Airmen, Coast Guardsmen, Sailors, Soldiers, and Marines who fought on D-Day faced unparalleled resistance. Nazi Germany had reinforced the Atlantic Wall, lining miles of dangerous cliffs and rocky coastlines with landmines, beach and water obstacles, and machine gunners while also reinforcing its bunkers. So, when 7,000 vessels carrying nearly 160,000 service members from eight Allied countries approached Normandy, victory was never guaranteed. Our paratroopers that jumped behind enemy lines in the night and other military forces had to endure barrages of gunfire, trek through barbed wire, and climb steep sea walls. Over 2,500 Americans made the ultimate sacrifice, giving their lives so that the whole world might know freedom.

Today, we remember all the Americans who laid down their lives on D-Day to help end the tyranny of fascism across Europe, liberate oppressed peoples, and ensure the flame of liberty would burn bright around the world. Their success marked the beginning of the end of Nazi brutality, World War II, and the Holocaust—one of the darkest chapters in human history. It set the foundations of an enduring peace that still helps guide international cooperation and affairs today. We owe these service members, who represent the greatest of the Greatest Generation, as well as their families a debt of gratitude that we can never fully repay.

As we reflect on the sacrifices made on D-Day, we are reminded that freedom is not free and it has never been guaranteed. Every generation has to earn it, fight for it, and defend it in the battle between autocracy and democracy—between the greed of a few and the rights of many. Eighty years after our Nation's brave Airmen, Coast Guardsmen, Sailors, Soldiers, and Marines embarked on D-Day—and as Americans everywhere answered the call to prayer and filled their hearts and homes with hope—may we honor the faith they kept in our Nation and their legacy by upholding the future that they died for—one grounded in freedom, democracy, opportunity, and equality for all.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim June 6, 2024, as a National Day of Remembrance of the 80th Anniversary of D-Day. I call upon all Americans to observe this day with programs, ceremonies, and activities that honor those who fought and died so that men and women they had never met might know what it is to be free.

IN WITNESS WHEREOF, I have hereunto set my hand this fifth day of June, in the year of our Lord two thousand twenty-four, and of the Independence of the United States of America the two hundred and forty-eighth.

A handwritten signature in black ink, appearing to read "J. R. Biden Jr.", with a long, sweeping horizontal line extending to the left.

Rules and Regulations

Federal Register

Vol. 89, No. 113

Tuesday, June 11, 2024

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 50 and 52

[NRC–2022–0151]

Regulatory Guide: Qualification of Class 1E Battery Chargers, Inverters, and Uninterruptible Power Supply Systems for Production and Utilization Facilities

AGENCY: Nuclear Regulatory Commission.

ACTION: Final guide; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing Revision 1 to Regulatory Guide (RG), 1.210, “Qualification of Class 1E Battery Chargers, Inverters, and Uninterruptible Power Supply Systems for Production and Utilization Facilities.” This RG describes an approach that is acceptable to the staff of the NRC to meet regulatory requirements for the qualification of safety related or Class 1E battery chargers, inverters, and uninterruptible power supply systems for production and utilization facilities.

DATES: Revision 1 to RG 1.210 is available on June 11, 2024.

ADDRESSES: Please refer to Docket ID NRC–2022–0151 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC–2022–0151. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: Stacy.Schumann@nrc.gov. For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION**

CONTACT section of this document.

- *NRC’s Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the

ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to PDR.Resource@nrc.gov. The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

- *NRC’s PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to PDR.Resource@nrc.gov or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

Revision 1 to RG 1.210 and the regulatory analysis may be found in ADAMS under Accession Nos. ML23202A242 and ML22160A589, respectively.

Regulatory guides are not copyrighted, and NRC approval is not required to reproduce them.

FOR FURTHER INFORMATION CONTACT:

Michael A. Eudy, Office of Nuclear Regulatory Research, telephone: 301–415–3104; email: Michael.Eudy@nrc.gov and Adakou Foli, Office of Nuclear Reactor Regulation, telephone: 301–415–1984; email: Adakou.Foli@nrc.gov. Both are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Discussion

The NRC is issuing a revision in the NRC’s “Regulatory Guide” series. This series was developed to describe methods that are acceptable to the NRC staff for implementing specific parts of the agency’s regulations, to explain techniques that the staff uses in evaluating specific issues or postulated events, and to describe information that the staff needs in its review of applications for permits and licenses.

The proposed Revision 1 to RG 1.210 was issued with a temporary identification of Draft Regulatory Guide, DG–1412. This revision endorses, with clarifications, the Institute of Electrical and Electronic Engineers (IEEE) Standard (Std.) 650–2017, “IEEE

Standard for Qualification of Class 1E Static Battery Chargers, Inverters, and Uninterruptible Power Supply Systems for Nuclear Power Generating Stations.”

II. Additional Information

The NRC published notice of the availability of DG–1412 in the **Federal Register** on February 1, 2023 (88 FR 6672) for a 30-day public comment period. The public comment period closed on March 3, 2023. Public comments on DG–1412 and the staff responses to the public comments are available in ADAMS under Accession No. ML23202A244.

As noted in the **Federal Register** on December 9, 2022 (87 FR 75671), this document is being published in the “Rules” section of the **Federal Register** to comply with publication requirements under chapter I of title 1 the *Code of the Federal Register* (CFR).

III. Congressional Review Act

This RG is a rule as defined in the Congressional Review Act (5 U.S.C. 801–808). However, the Office of Management and Budget has not found it to be a major rule as defined in the Congressional Review Act.

IV. Backfitting, Forward Fitting, and Issue Finality

RG 1.210, Revision 1, does not constitute backfitting as defined in 10 CFR 50.109, “Backfitting,” and as described in NRC Management Directive (MD) 8.4, “Management of Backfitting, Forward Fitting, Issue Finality, and Information Requests”; does not constitute forward fitting as that term is defined and described in MD 8.4; and does not affect the issue finality of an approval issued under 10 CFR part 52. As explained in RG 1.210, applicants and licensees are not required to comply with the positions set forth in this RG.

V. Submitting Suggestions for Improvement of Regulatory Guides

A member of the public may, at any time, submit suggestions to the NRC for improvement of existing RGs or for the development of new RGs. Suggestions can be submitted on the NRC’s public website at <https://www.nrc.gov/reading-rm/doc-collections/reg-guides/contactus.html>. Suggestions will be considered in future updates and enhancements to the “Regulatory Guide” series.

Dated: June 6, 2024.

CONSUMER FINANCIAL PROTECTION BUREAU

12 CFR Part 1033

[Docket No. CFPB-2023-0052]

RIN 3170-AA78

Required Rulemaking on Personal Financial Data Rights; Industry Standard-Setting

AGENCY: Consumer Financial Protection Bureau.

ACTION: Final rule.

SUMMARY: The Consumer Financial Protection Bureau (CFPB) is finalizing in part its proposed rule on consumer data rights under section 1033 of the Consumer Financial Protection Act. This final rule establishes minimum attributes a standard-setting body must possess to receive CFPB recognition and to issue consensus standards when the full rule is finalized. The CFPB is also releasing its process for how standard setters apply for CFPB recognition.

DATES: This final rule is effective July 11, 2024.

FOR FURTHER INFORMATION CONTACT:

George Karithanom, Regulatory Implementation and Guidance Program Analyst, Office of Regulations, at 202-435-7700 or <https://reginquiries.consumerfinance.gov/>. If you require this document in an alternative electronic format, please contact CFPB_Accessibility@cfpb.gov.

SUPPLEMENTARY INFORMATION:

I. Summary

The CFPB is finalizing certain provisions of its Required Rulemaking on Personal Financial Data Rights (Personal Financial Data Rights rule),¹ which, among other proposed provisions in the rule, sought to promote fair, open, and inclusive industry standard-setting. The CFPB proposed that standards adopted by CFPB-recognized standard setters might be used to facilitate implementation of a final Personal Financial Data Rights rule. Today's rule revises and finalizes part of proposed § 1033.131 (definitions) and all of proposed § 1033.141 (attributes a standard-setting body must

demonstrate in order to be recognized by the CFPB). Included with this rule is a step-by-step guide for how standard setters apply for recognition and how the CFPB will evaluate applications.

II. Background

A. Introduction

Consumer electronic access to personal financial data, including and especially open banking,² holds the potential to intensify consumer-friendly competition and innovation. Fair, open, and inclusive industry standard-setting play a critical role in ensuring the open banking system reaches its full potential to benefit consumers and competition.

By including section 1033 in the Consumer Financial Protection Act of 2010 (CFPA),³ Congress explicitly recognized the importance of personal financial data rights, and section 1033(d) recognizes the importance of standardized formats, especially with regard to data formats. In 2023, the CFPB issued a proposed rule to begin implementing section 1033, with the goal of accelerating the shift to a more open and decentralized system of consumer data access.

The proposed rule reflected the CFPB's preliminary determination that conformance with industry standards would constitute certain evidence of compliance with various substantive provisions of the proposed rule (or, in the case of data formats, would be sufficient for a data provider to be deemed compliant), provided that such standards were issued by a body recognized by the CFPB as possessing certain attributes. The proposed rule set forth the CFPB's view that industry standard setters that operate in a fair, open, and inclusive manner have a critical role to play in ensuring a safe, secure, reliable, and competitive data access framework. In the proposed rule, the CFPB noted that Federal regulations with very granular technical requirements could rapidly become obsolete, while industry-led standard-setting would be better able to keep pace with changes in the market and technology, as long as that standard-setting was fair, open, and inclusive.

U.S. government agencies have been historically involved in the

development and use of standards to meet agency missions and priorities. Office of Management and Budget (OMB) Circular A-119⁴ reflects the U.S. government's commitment to a U.S. industry-led, voluntary consensus standards system. Broad use of such standards enhances the safety and security of products, reduces consumer costs, and expands consumers' options in the marketplace. Additionally, voluntary consensus standards ensure that no faction of industry can use its market power to impose its preferences on the entire market. Further, the use of consensus standards significantly reduces costs to agencies that would otherwise be incurred if agencies had to develop and maintain agency-unique standards.

B. Summary of the Rulemaking Process Outreach and Engagement

The CFPB published its proposed rule on October 31, 2023.⁵ The public comment period on the proposed rule closed on December 29, 2023, and the CFPB received comments from individuals and entities representing various diverse interests. In addition, the CFPB also considered comments received after the comment period closed via ex parte submissions and meetings.⁶ Materials on the record, including all ex parte submissions and summaries of ex parte meetings, are available on the public docket for this rulemaking.⁷

This final rule discusses those substantive comments relevant to the attributes of standard-setting bodies or the process by which the CFPB will recognize standard-setting bodies. For the most part, commenters that addressed the issues discussed in this final rule and in the appended application procedures supported the CFPB's plan to recognize standard setters that are fair, open, and inclusive, and generally agreed with the attributes the CFPB proposed to use to determine whether a standard-setting body was

⁴ OMB Circular A-119 was originally published in 1996; see <https://www.govinfo.gov/content/pkg/FR-1996-12-27/html/96-32917.htm>. The current Circular, effective January 27, 2016, is available at https://www.whitehouse.gov/wp-content/uploads/2020/07/revised_circular_a-119_as_of_1_22.pdf.

⁵ 88 FR 74796 (Oct. 31, 2023). A description of the CFPB's outreach and engagement before issuing the proposed rule, including the CFPB's convening of a small business advisory review panel pursuant to the Small Business Regulatory Enforcement Fairness Act of 1996, is included in the proposal at 74801-02.

¹ 88 FR 74796 (Oct. 31, 2023).

² This **Federal Register** document generally uses the term "open banking" to refer to the network of entities sharing personal financial data with consumer authorization. Some stakeholders use the term "open finance" because of the role of nondepositories as important data sources. The CFPB views the two terms as interchangeable, but generally uses "open banking" because that term is more commonly used in the United States.

³ The CFPA is title X of the Dodd-Frank Wall Street Reform and Consumer Protection Act, Public Law 111-203, 124 Stat. 1376, 2008 (2010).

fair, open, and inclusive. Some commenters requested that the CFPB alter, clarify, or remove specific provisions of the proposed attributes, or made suggestions for how the CFPB should make its determination as to whether to recognize a given standard-setting body. Other commenters argued that the CFPB does not have legal authority to recognize standard-setting bodies, or critiqued how the proposed rule described a potential recognition process. The CFPB has considered these comments in adopting this final rule. The CFPB will discuss and address all other substantive comments when it finalizes the remainder of the Personal Financial Data Rights rule, including the many comments received concerning the role that adherence to a consensus standard should or should not play in evaluating compliance with the particular underlying provisions of the final rule.⁸ Comments focused on the application procedures described in the appendix are discussed in section IV.C.

Prior to issuing this final rule, in accordance with CFPA sections 1033(e) and 1022(b)(2)(B), the CFPB consulted on several occasions with staff from the prudential regulators⁹ and the Federal Trade Commission to discuss various aspects of the proposed rule, including criteria for and processes with respect to standard-setting bodies.

III. Legal Authority

The CFPB is issuing this final rule pursuant to its authority under the CFPA. As set forth in section 1021 of the CFPA, Congress established the CFPB to ensure that “all consumers have access to markets for consumer financial products and services and that markets for consumer financial products and services are fair, transparent, and competitive.” Congress also authorized the CFPB to exercise its authorities under Federal consumer financial law, including the CFPA, to ensure that, with respect to consumer financial products and services, consumers have “timely and understandable information to make responsible decisions about financial transactions,” “consumers are protected from unfair, deceptive, or abusive acts and practices and from discrimination,” that “markets for consumer financial products and

services operate transparently and efficiently to facilitate access and innovation,” and that “Federal consumer financial law is enforced consistently without regard to the status of a person as a depository institution in order to promote fair competition.”

A. CFPA Section 1033

CFPA section 1033(a) and (b) provide that, subject to rules prescribed by the CFPB, a covered person shall make available to a consumer, upon request, information in the control or possession of the covered person concerning the consumer financial product or service that the consumer obtained from such covered person, subject to certain exceptions. The information must be made available in an electronic form usable by consumers. In addition, CFPA section 1033(d) provides that the CFPB, by rule, shall prescribe standards applicable to covered persons to promote the development and use of standardized formats for information, including through the use of machine-readable files, to be made available to consumers under this section. Recognition of standard-setting bodies that are fair, open, and inclusive can facilitate implementation of these authorities. Further, CFPA section 1033(e) requires that the CFPB consult with the prudential regulators and the FTC to ensure, to the extent appropriate, that certain objectives are met.

B. CFPA Section 1022(b)

CFPA section 1022(b)(1) authorizes the CFPB to, among other things, prescribe rules and issue orders “as may be necessary or appropriate to enable the CFPB to administer and carry out the purposes and objectives of the Federal consumer financial laws, and to prevent evasions thereof.” The CFPA is a Federal consumer financial law. This rule carries out the purposes and objectives of the CFPA and prevents evasions thereof, by requiring standard-setting bodies to apply through the CFPB for recognition to adopt consensus¹⁰ standards.

IV. Discussion of the Final Rule

A. Overview

This final rule identifies the attributes that a standard-setting body must demonstrate in order to be recognized

by the CFPB. It also includes procedures for standard setters to apply for recognition by the CFPB. The following addresses comments on the proposed rule relevant to each topic.

B. Consensus Standards and Recognized Standard Setters

Definitions for Recognized Standard Setter and Consensus Standard

The CFPB proposed in § 1033.131 to define a “qualified industry standard” as a standard issued by a standard-setting body that is fair, open, and inclusive in accordance with proposed § 1033.141(a). The CFPB proposed in § 1033.141 that a standard-setting body is fair, open and inclusive when it satisfies seven requisite attributes: openness, balance, due process, appeals, consensus, transparency, and that the standard-setting body have been recognized by the CFPB as an issuer of qualified industry standards within the last three years.

Some commenters asked the CFPB to clarify when a standard issued by a recognized standard-setting body becomes a consensus standard, and, conversely, when a consensus standard ceases to have consensus status. A trade group commenter suggested that the CFPB remove the language in proposed § 1033.141(a)(7) that a standard-setting body must have been recognized by the CFPB within the last three years, suggesting that this recognition period would make it difficult for industry to use such standards or, appropriate, switch away from them. One commenter expressed concern that the loss of a standard’s status as a consensus standard could cause market uncertainty, because the covered financial institutions would need to identify a different recognized standard setter and possibly have to modify its practices to conform with the consensus standards of that recognized standard setter.

After considering these comments, the CFPB is making several changes to §§ 1033.131 and 1033.141 relating to both standard setters and the standards they issue. First, this final rule replaces the term “qualified industry standard” with “consensus standard,” and adds a definition of “recognized standard setter,” a term not defined in the proposed rule. These editorial changes are intended to better organize the structure of these key terms, enhance readability of the final rule, and adopt terminology that more clearly describes the defined terms.

The definition of “consensus standard” in final § 1033.131 provides additional specificity regarding when a

⁸ Accordingly, the CFPB does not expect its finalization of the remainder of the Personal Financial Data Rights rule to affect the content of this rule. If in finalizing the remainder of the rule the CFPB concludes that this rule should be amended, the CFPB would do so.

⁹ Prudential regulators refer to the Board of Governors of the Federal Reserve System, Federal Deposit Insurance Corporation, National Credit Union Association, and Office of the Comptroller of the Currency.

¹⁰ The proposed rule referred to standards issued by a recognized standard-setting body as “qualified industry standards.” This final rule instead uses the term “consensus standards,” to reflect better the intent of ensuring that the standards are the product of fair, open, and inclusive standard-setting. In addition, in this final rule a standard-setting body recognized by the CFPB will be referred to as a “recognized standard setter.”

given standard is a consensus standard. Final § 1033.131 provides that to be a “consensus standard” the standard must be one that is adopted by a recognized standard setter, and that continues to be maintained by that recognized standard setter. Regarding the commenters’ concern about market uncertainty, the CFPB expects revocation of recognition for a standard setter to be a rare occurrence, and in that event the CFPB would issue guidance to help manage a transition.

The CFPB has determined that it is appropriate to require a recognized standard setter to seek renewal of its recognition on a periodic basis. However, in § 1033.141(a), this final rule extends the maximum duration of the CFPB’s recognition of a standard-setting body from the proposed duration of three years to five years. Periodic review and re-recognition mitigate the risk of outdated standards, which the CFPB’s approach to industry standards was intended in part to avoid. Additionally, periodic review by the CFPB will ensure standard setters carefully mind their governance and procedures and keep them in conformance with the attributes. However, extending the maximum recognition period to five years in this final rule is warranted, for two main reasons. First, a five-year recognition period will mean that, should one or more standard-setting body receive early recognition from the CFPB, such recognition—and by extension their standards’ status as consensus standards—would last further into the period during which industry is initially coming into compliance with the forthcoming Personal Financial Data Rights rule, providing additional certainty to smaller data providers covered by the rule. Additionally, the CFPB expects that reducing the frequency of periodic review and re-recognition by the CFPB will encourage standard-setting bodies to obtain recognition because their standards will retain consensus status for a longer period without the burden of seeking re-recognition.

The CFPB’s Authority To Recognize Standard-Setting Bodies

Several industry commenters disputed the Bureau’s legal authority to recognize standard-setting bodies that would then issue consensus standards for purposes of facilitating implementation of a final Personal Financial Data Rights rule. In response, the CFPB notes that, as discussed above in this final rule, establishing a framework for standard setting is authorized by CFPA section 1033(a) and

(d) and the CFPB’s authority to issue rules under CFPA section 1022(b)(1). The CFPB expects that individual recognition decisions will be authorized by this final rule, by the CFPB’s authority to issue orders under CFPA section 1022(b)(1), and additionally by the CFPB’s authority to issue declaratory orders to “to terminate a controversy or remove uncertainty” under section 554(e) of the Administrative Procedure Act.¹¹

Attributes of Standard-Setting Bodies

Openness

The CFPB proposed to include “openness” as a necessary attribute for CFPB recognition, and that a standard-setting body’s openness would be evaluated by reviewing whether the standard-setting body’s sources, procedures, and processes are open to all interested parties, and whether those interested parties can meaningfully participate in standards development on a non-discriminatory basis.

A few commenters addressed the proposed openness attribute. Consumer advocate commenters supported the explicit inclusion of consumer groups as an interested party for an open standard-setting body. A small number of commenters recommended alterations to the attribute. One industry trade group called for the CFPB to clarify that only the members of the standard-setting body would need to meaningfully participate in the standards development. Additionally, some third-party industry commenters asked the CFPB to clarify that a standard-setting body that is “open” for purposes of the attribute includes all types of financial institutions, including financial technology companies. In support of this consideration, one commenter highlighted what it described as the undue influence of banks in another country’s standard-setting body due to the other country’s exclusion of financial technology voices in the standard-setting body.

This final rule adopts § 1033.141(a)(1) mostly as proposed, with some additional clarifying text. In response to commenter concern that certain financial technology sectors might be excluded if not explicitly mentioned, the CFPB has added explicit reference to “data recipients” as an interested party in this final rule. The inclusion of data recipients also helps ensure that data providers and recipients are not forever compelled to rely on intermediaries with commercial interests that may not consistently align with the advancement

of open banking standards. This final rule does not adopt commenters’ request to limit “openness” to only members of the standard-setting body. As stated in this final rule, the sources of the standard-setting body must be available to all interested parties. This language reiterates that the CFPB expects an “open” standard-setting body to utilize open-source materials that interested parties can reference. Such open-source materials would not truly be open unless they were made available outside the standard-setting body’s membership.

Balance

The CFPB proposed to include “balance” as a necessary attribute for CFPB recognition. The CFPB proposed that a standard-setting body’s balance would be evaluated by the CFPB reviewing whether the standard-setting body’s decision-making power is balanced across all interested parties at all levels of the standard-setting body. Further, the proposed attribute clarifies that balance could be impacted by entities playing multiple roles, such as data provider and third party. Additionally, the CFPB proposed that it could consider the ownership of an entity when reviewing a standard setter’s balance. Finally, the CFPB proposed that balance would include meaningful representation of small and large commercial entities.

A number of commenters addressed this attribute. One consumer advocate commenter expressed their support for the proposed rule’s inclusion of consumer advocates as interested parties in an open standard-setting body. Another consumer advocate commenter noted that some current standards bodies do not provide the same voting rights across categories of membership. A few commenters asked for clarification as to what the CFPB will consider “meaningful representation,” noting the importance of including small entity voices in the decision-making processes. Additionally, one consumer advocate commenter and one industry commenter recommended that a final rule extend balanced representation considerations to any committee or sub-committee involved in the standard setters decision-making processes.

After considering these comments, the CFPB is finalizing the requirement in § 1033.141(a)(2) largely as proposed, with some modifications. To address commenters’ concerns about representation at the committee and sub-committee level, the CFPB has revised this final rule to state that balanced representation must be *reflected* at all levels of the standard-

¹¹ 5 U.S.C. 554(e).

setting body. The additional “reflected” language provides a standard-setting body with some flexibility to arrange adequate committee and sub-committee representation, while also mitigating the possibility that a particular committee or sub-committee’s representation become so unbalanced that it hinders the overall decision-making of the standard-setting body. This final rule does not further define “meaningful representation” because after consideration the CFPB concludes that the additional language reading “[n]o single interest or set of interests dominates decision-making” sufficiently describes the scope of meaningful representation. Finally, to address concerns about weighting of voting rights, this final rule clarifies that if a participant plays multiple roles, the weight of that participant’s role will be factored into the balance consideration. As such, if a participant has a vote as a data provider but their primary business is as a third party, this could suggest that the standard-setting body is not balanced. Similarly, the CFPB can look at the ownership of a participant to determine to what degree the role and form of that entity’s participation in the standard-setting body furthers or hinders the body’s balance.

Due Process and Appeals

The CFPB proposed to include “due process” and “appeals” as necessary attributes for CFPB recognition. The proposed due process attribute would consider whether a standard-setting body uses documented and publicly available policies and procedures and provides a fair and impartial process for resolving conflicting views. The proposed appeals attribute would consider whether the standard-setting body provides an appeals process for the impartial handling of appeals.

A small number of commenters addressed these attributes. A few industry trade groups recommended that a final due process attribute should protect the anonymity of participant dialogue to encourage open dialogue among the members of the standard-setting body. One consumer advocate commenter recommended that a final appeals attribute focus on the process of creating standards, rather than on the standards themselves.

The CFPB is finalizing the proposed due process and appeals attributes with minimal change and a non-substantive structural modification. The structural modification is to combine the appeals and due process attributes into one attribute (now at § 1033.141(a)(3)), because both address similar issues of procedural fairness. Additionally, the

CFPB is finalizing a modification to the appeals attribute that clarifies that the appeals process is available for the impartial handling of *procedural* appeals. The CFPB is finalizing the remainder of the attribute as proposed. Specifically, this final rule does not add requested language about anonymity within the standard-setting body. While anonymity may in some circumstances help create open dialogue, the CFPB is not including in this final rule the explicit availability of participant viewpoint anonymity because such protection is already provided by this final rule. Standard-setting bodies are not precluded from making viewpoints anonymous, so long as such anonymity policies do not have the potential to undermine a final openness, transparency, or due process attribute.

Consensus

The CFPB proposed to include “consensus” as a necessary attribute for CFPB recognition. Specifically, the proposed attribute looks at whether the standards development processes would proceed by consensus, defined as general agreement but not unanimity.

The CFPB received little commenter input concerning the consensus attribute. One third-party trade group recommended that a final rule consider consensus to be when there is consensus within a particular sector. The commenter suggested that if all third parties or all data providers oppose a standard, then that standard should not be adopted. Additionally, one data provider commenter recommended that a final rule consider that the majority of the standards proposed in the Personal Financial Data Rights rulemaking are obligations on data providers, and, as such, consensus should require data providers to be in agreement with a particular decision-making process of the standard-setting body.

The CFPB is finalizing the attribute largely as proposed, and adding language stating that consensus does not *necessarily* require unanimity. This modification is to clarify that general agreement can include unanimous decisions by the members of the standard-setting body. This final rule does not include language stating that a single class of standard-setting group members (like data providers or third parties) could have unilateral power in a standard-setting body. While consensus is important, privileging one group of members would inappropriately give that group unwarranted influence. The provision is also renumbered to § 1033.141(a)(4) to reflect organizational changes.

Transparency

The CFPB proposed to include “transparency” as an attribute for CFPB recognition consideration. Specifically, the proposed attribute would look at whether the procedures or processes for participating in standards development and for developing standards are transparent to participants and publicly available.

Several industry trade groups recommended that a final transparency attribute protect the anonymity of participant dialogue to encourage open dialogue among the participants in the setting of consensus standards. As stated above in the discussion of the proposed due process provision, standard-setting bodies are not precluded from making viewpoints anonymous, so long as such anonymity policies do not have the potential to undermine a final openness, transparency, or due process attribute. Accordingly, for the reasons discussed in the proposal, the CFPB is finalizing the transparency attribute as proposed. The provision is also renumbered to § 1033.141(a)(5) to reflect organizational changes.

Additional Attributes

In response to the CFPB’s request for comment on whether it should include additional attributes when evaluating a standard setter for recognition, at least one commenter suggested that a final rule should adjust the attribute list to account for the relevance of standards that a standard-setting body adopts.

This final rule does not include an additional “relevance” attribute. However, demonstrating the attributes in this final rule is the minimum requirement for recognition; accordingly, the CFPB may consider other information when reviewing an application for recognition, including whether the standard-setting body will adopt and maintain standards relevant to open banking.

C. Procedures for CFPB Recognition of Standard-Setting Bodies

High-Level Comment Summary

A number of commenters on the proposed rule encouraged the CFPB to establish a process for recognizing standard setters as soon as possible. Their comments generally focused on seeking clarity and transparency from the CFPB about this process. Some industry commenters requested that the CFPB publish its recognition procedures for comment.

In response to comments that the CFPB quickly establish a process for recognizing standard-setting bodies, the

CFPB is publishing the procedures included at appendix A. These constitute a rule of agency organization, procedure, or practice, and thus do not require notice and comment under the Administrative Procedure Act.¹² As published, these procedures take account of comments received on the proposed rule regarding procedures for recognizing standard-setting bodies. The CFPB may publish amendments to the procedures from time-to-time as it develops experience with this recognition process and receives stakeholder feedback on them.

Discussion of Procedures for Recognition

The CFPB is providing a plain language guide for how standard setters should apply for recognition, how the CFPB evaluates applications, and what standard setters can expect once recognized. When submitting a request for recognition, the applicant should provide information sufficient to enable a determination by the CFPB of whether the applicant satisfies the requirements for recognition articulated in § 1033.141(a)(1) through (5). Other information provided, such as a description of how the applicant's current and/or anticipated standards relate to open banking, will help the CFPB understand the relevance of the standard setter to open banking.

The procedures also allow for a pre-filing meeting with the CFPB prior to submission of an application, so that the Bureau can provide information about the application process and assist organizations with submitting a complete application. During its review and discussions with the applicant, the CFPB may request additional information from the applicant necessary for the submission to be complete. Once it receives a complete application, the CFPB may publish the application, so as to enable stakeholders who believe the application is deficient to bring the CFPB's attention to any evidence that might substantiate such claims of deficiency.¹³ In this event, the CFPB expects to ask the applicant to provide written responses to any such claims, which the CFPB can then consider as part of its review and assessment of the application. This procedure addresses comments requesting greater public participation in the recognition process.

The CFPB will consider the complete application, including any adverse

evidence provided to the CFPB, to evaluate whether the applicant satisfies the recognition requirements articulated in § 1033.141(a)(1) through (5). The CFPB will also evaluate whether the information provided in the application is accurate and complete, including regarding the applicant's policies and actual practices.

As part of its evaluation of an application, the CFPB will consider how granting a recognition request might support its own role in open banking pursuant to its CFPA section 1033 authority. However, the CFPB is not adopting the recommendation of one trade association commenter that a standard-setting body should not be eligible for CFPB recognition unless it had already promulgated standards central to the safe and efficient operation of open banking. Rather, the CFPB is retaining the flexibility suggested by other commenters that will enable the CFPB to recognize an organization at earlier stages of standards development in a given area. The CFPB emphasizes, however, that a recognition request from an entity that has not adopted, and does not intend to adopt, standards relevant to the CFPB's statutorily-authorized objectives for open banking is unlikely to be prioritized and may not be approved.

In acting on an application, in addition to either recognizing or not recognizing an applicant, the CFPB may provide contingent recognition to an applicant that has presented a satisfactory written plan specifying how and when it will address contingencies that the CFPB has identified. Once the applicant presents sufficient evidence that it has addressed such contingencies, the CFPB may recognize the applicant. The CFPB expects to use contingent recognition, which is not formal recognition under 12 CFR 1033.131, when it determines that an applicant is close to realizing, but has not yet realized, recognition requirements. The availability of contingent recognition responds to a trade association comment on the proposed rule that advocated for a phased approach to recognition, during which the CFPB would—before granting full recognition—offer feedback on steps to full recognition and support standard setters with garnering necessary stakeholder participation for recognition.

Consistent with trade association comments requesting that the CFPB publish a list of standard setters it recognizes, the CFPB will publicly disclose on its website each recognition and contingent recognition, along with the applicable terms and conditions of

each. Some terms and conditions may be tailored to the circumstances of the applicant. For example, if the CFPB grants recognition based on the intention of a standard setter to develop and publish a consensus standard on a given subject matter, the CFPB may condition recognition on good faith efforts to develop a consensus standard in the given area.

Some commenters requested that the CFPB publish denials and include in its procedures a process to appeal such denials. The CFPB will publish denials as required by law, but applicants may also withdraw a pending application at any time for any reason. The CFPB is not providing a specialized appeals process. Consistent with the suggestion of one industry trade association, the CFPB may permit consultation with agency officials to help remedy issues after a submitted application is denied—although the agency intends pre-decisional consultation to minimize recourse to this option.

Next, the procedures describe the interaction between the CFPB and a standard setter once it is recognized. As noted above, each recognized standard setter must agree to a set of applicable terms and conditions. The procedures highlight terms and conditions related to CFPB observation or participation in standard-setting activities, notification requirements on the part of the standard setter, and monitoring of the standard setter by the CFPB. They also explain how a standard setter may request re-recognition.

In view of a trade association comment noting the need for market participants to have adequate time to transition from a consensus standard if the associated standard setter's recognition expires, the procedures state that recognized standard setters intending to apply for re-recognition should do so at least 180 days before their recognition expires. The CFPB may temporarily extend a recognition while a re-recognition application is pending. Both provisions related to re-recognition are intended to reduce the likelihood that a consensus standard loses its status due to a recognition expiring before re-recognition is granted.

Finally, the procedures describe the circumstances under which the CFPB may modify or revoke recognition. One advocacy organization indicated that the CFPB should revoke recognition when requirements of recognition are no longer met. Other industry commenters stated that the CFPB should clarify the circumstances under which recognition may be revoked, and also allow for the standard setter to cure deficiencies.

¹² 5 U.S.C. 553(b).

¹³ If an applicant believes that portions of its application should be treated as confidential, it should consult the CFPB before submitting its application.

The CFPB expects to base a modification or revocation decision, which it would publish on its website, on whether the standard-setting body has failed to comply with applicable terms and conditions, otherwise no longer meets the required attributes, or otherwise no longer warrants recognition. The CFPB also expects to inform the standard setter of reasons for modification or revocation, and to provide the standard setter with an opportunity to address concerns.

V. Effective Date

The CFPB is adopting an effective date of 30 days after the publication of this final rule in the **Federal Register**, consistent with section 553(d) of the Administrative Procedure Act.¹⁴ No later effective date is necessary because this final rule does not impose any obligations on any party other than an applicant for recognition, which can choose when to submit its own application. Separately, the CFPB notes that an applicant may request that a pre-filing meeting, consistent with appendix A, be held before the effective date.

VI. CFPA Section 1022(b) Analysis

In developing this final rule, the CFPB has considered the potential benefits, costs, and impacts as required by section 1022(b)(2)(A) of the CFPA. Specifically, section 1022(b)(2)(A) of the CFPA requires the CFPB to consider the potential benefits and costs of a regulation to consumers and covered persons, including the potential reduction of access by consumers to consumer financial products or services, the impact on depository institutions and credit unions with \$10 billion or less in total assets as described in section 1026 of the CFPA, and the impact on consumers in rural areas. The Bureau consulted with appropriate prudential regulators and other Federal agencies regarding the consistency of this final rule with prudential, market, or systemic objectives administered by such agencies as required by section 1022(b)(2)(B) of the CFPA.¹⁵

This final rule creates an application and recognition process for industry standard setters but does not impose any compliance requirements based on the standards set by recognized standard setters. There are also no existing laws

or rules that reference such standards. The CFPB anticipates finalizing the proposed rule of which this current rule was a part. If such a future rule were to reference industry standards set by recognized standard setters in connection with compliance requirements, the impacts of such requirements would be attributed to and assessed as part of that rule. Absent such a future rule, the CFPB does not anticipate changes in industry standards attributable to this final rule. As a result, relative to the baseline of current law used for this analysis, this final rule does not have impacts on consumers or industry participants other than standard setters that choose to apply for recognition.

In response to the proposal, one industry commenter stated that additional guidelines for recognized standard setters should be published, including a full cost-benefit analysis. The analysis in this part reflects the full consideration of benefits and costs attributable to this final rule. As noted, only a limited number of provisions from the proposal are being finalized in this rule, none of which impose substantive compliance requirements. As a result, any analysis of the benefits and costs of substantive compliance requirements based on industry standards prior to the finalization of such requirements would be speculative and would not be accurate absent a future rule finalizing those provisions.

Impacts on Consumers

The CFPB does not anticipate changes in industry standards attributable to this final rule and, thus, no benefits or costs to consumers. The CFPB is finalizing this rule to ease compliance with potential future rulemakings.

Impacts on Covered Persons¹⁶

This final rule will impact standard setters that choose to apply for recognition. The CFPB expects such standard setters may incur costs associated with assembling and submitting application materials and responding to any follow up requests or clarifications in the application process. The submitted materials and follow up requests would differ across applicants, so the cost estimates in this analysis reflect an estimated average.

Standard setters may have members that are covered persons and members that are not covered persons. The CFPB

expects any costs incurred by standard setters would be spread across their membership.

Based on industry outreach and responses to the CFPB's proposed rule, few standard setters exist that maintain standards directly relevant to the Personal Financial Data Rights rule. As a result, the CFPB expects nine or fewer standard setters to apply for recognition.

Those standard setters that apply may incur an estimated \$10,604 in labor costs, on average. This estimate assumes 120 staff labor hours at an average total hourly compensation of \$88.37. This total hourly compensation reflects an average of May 2023 wages from the Bureau of Labor Statistics for compliance officers (\$38.55), lawyers (\$84.84), and general and operations managers (\$62.18), adjusted for non-wage compensation (30 percent of all compensation for private industry workers).¹⁷ If nine standard setters apply, the estimated total costs to industry would be \$95,436.

Consideration of Alternatives

The CFPB considered potential alternatives to this rule, including waiting to finalize provisions related to standard setter recognition until such time as substantive compliance requirements such as those in the full proposed rule were finalized.

In comments on the proposal related to standard setting, industry commenters generally noted that a lack of clarity on industry standards would make compliance with the proposal more costly and difficult. The comments indicated that having a standard setter recognized early relative to the compliance date for the proposal's substantive requirements could reduce industry costs. Based on these comments, the CFPB expects that the alternative of waiting to finalize the provisions in this final rule would have increased costs to industry of complying with any substantive compliance requirements finalized in a potential future rulemaking.

Potential Impacts on Depository Institutions and Credit Unions With \$10 Billion or Less in Total Assets, as Described in Section 1026

The only impacts attributable to this final rule on depository institutions and credit unions with \$10 billion or less in total assets would be through their roles

¹⁴ 5 U.S.C. 553(d). Because appendix A is not a substantive rule, appendix A is not subject to this requirement, but the CFPB is aligning its effective date with the effective date of §§ 1033.131 and 1033.141. *Id.*

¹⁵ Whether section 1022(b)(2)(A) and section 1022(b)(2)(B) are applicable to appendix A is unclear, but in order to inform the rulemaking more fully the Bureau performed the described analysis and consultations.

¹⁶ This analysis does not address whether or not standard setters satisfy the statutory definition of a covered person under the CFPA. 12 U.S.C. 5481(6). To the extent standard setters may not satisfy that standard, the CFPB elects to include them in its analysis.

¹⁷ These data reflect the mean hourly wages by occupation according to the 2023 Occupational Employment Statistics compiled by the Bureau of Labor Statistics. See U.S. Bureau of Labor Stat., U.S. Dep't of Labor, *Occupational Employment and Wages* (May 2023), https://www.bls.gov/oes/current/oes_stru.htm.

as members of standard setters that choose to apply for recognition. The CFPB expects these costs would be the same as the costs faced by any members of such standard setters, as described earlier in this part.

Potential Impacts on Consumers in Rural Areas, as Described in Section 1026

The CFPB does not anticipate changes in industry standards attributable to this final rule and, thus, no impacts on consumers in rural areas.

VII. Regulatory Flexibility Act Analysis

The Regulatory Flexibility Act (RFA), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, requires each agency to consider the potential impact of its regulations on small entities, including small businesses, small governmental units, and small not-for-profit organizations. The RFA defines a “small business” as a business that meets the size standard developed by the Small Business Administration pursuant to the Small Business Act.

The RFA generally requires an agency to conduct an initial regulatory flexibility analysis (IRFA) and a final regulatory flexibility analysis (FRFA) of any rule subject to notice-and-comment rulemaking requirements, unless the agency certifies that the rule would not have a significant economic impact on a substantial number of small entities. The Bureau also is subject to certain additional procedures under the RFA involving the convening of a panel to consult with small business representatives before proposing a rule for which an IRFA is required.

The CFPB convened a panel of small business representatives and conducted an IRFA as part of the proposal. However, this final rule includes only a limited number of provisions from that proposal, and none of the provisions being finalized impose significant compliance costs on small entities. As a result, the CFPB is not conducting a FRFA as part of this final rule. The CFPB would satisfy the requirements of the RFA by conducting a FRFA when it finalizes any provisions imposing significant compliance costs on small entities.

Some standard setters may be small entities, or may have members that are small entities. However, the CFPB expects nine or fewer standard setters to apply for recognition, which is not a substantial number of entities relative to all industry standard setters.

From a cost perspective, the CFPB expects any costs incurred by standard

setters to be spread across all members, including both small entities and larger entities. This implies per-member costs substantially lower than the \$10,604 in per-standard setter costs estimated above. Such costs will not be a significant economic impact on small entity members of standard setters.

Accordingly, the Director certifies that this final rule will not have a significant economic impact on a substantial number of small entities.

VIII. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA), Federal agencies are generally required to seek, prior to implementation, approval from the Office of Management and Budget (OMB) for information collection requirements. Under the PRA, the Bureau may not conduct or sponsor, and, notwithstanding any other provision of law, a person is not required to respond to, an information collection unless the information collection displays a valid control number assigned by OMB.

The Bureau has determined that this final rule does not contain any new or substantively revised information collection requirements.

IX. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the CFPB will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to the rule taking effect. The Office of Information and Regulatory Affairs has designated this rule as not a “major rule” as defined by 5 U.S.C. 804(2).

X. Severability

If any provision in §§ 1033.101, 1033.131, 1033.141, or appendix A, or any application of a provision, is stayed or determined to be invalid, the remaining provisions or applications are severable and shall continue in effect.

List of Subjects 12 CFR Part 1033

Banks, banking, Consumer protection, Credit, Credit unions, Electronic funds transfers, National banks, Privacy, Reporting and recordkeeping requirements, Savings associations, Voluntary standards.

Authority and Issuance

■ For the reasons set forth in the preamble, the CFPB adds 12 CFR part 1033, as follows:

PART 1033—PERSONAL FINANCIAL DATA RIGHTS

Subpart A—General

Sec.

1033.101 Authority, purpose, and organization.

1033.111 [Reserved].

1033.121 [Reserved].

1033.131 Definitions.

1033.141 Standard-setting bodies.

Subpart B—[Reserved]

Subpart C—[Reserved] Subpart D—[Reserved]

Appendix A—How To Apply for Recognition as a Standard Setter

Authority: 12 U.S.C. 5512; 12 U.S.C. 5514; 12 U.S.C. 5532; 12 U.S.C. 5533.

Subpart A—General

§ 1033.101 Authority, purpose, and organization.

(a) *Authority.* The regulation in this part is issued by the Consumer Financial Protection Bureau (CFPB) pursuant to the Consumer Financial Protection Act of 2010 (CFPA), Public Law 111–203, tit. X, 124 Stat. 1955.

(b) *Purpose.* This part implements the provisions of section 1033 of the CFPA, in part, by utilizing industry standards developed by standard-setting bodies recognized by the CFPB.

(c) *Organization.* This part is organized as follows:

(1) Subpart A establishes the authority, purpose, organization, and definitions applicable to this part, and is reserved for other purposes.

(2) Subpart B is reserved.

(3) Subpart C is reserved.

(4) Subpart D is reserved.

(5) Appendix A provides instructions for how a standard-setting body would apply for CFPB recognition.

§ 1033.111 [Reserved].

§ 1033.121 [Reserved].

§ 1033.131 Definitions.

For purposes of this part, the following definitions apply:

Consensus standard means a standard that is adopted by a recognized standard setter and that continues to be maintained by that recognized standard setter.

Recognized standard setter means a standard-setting body that has been recognized by the CFPB under § 1033.141.

§ 1033.141 Standard-setting bodies.

(a) *Recognition of a standard-setting body.* A standard-setting body may request CFPB recognition. Recognition will last up to five years, absent revocation. The CFPB will not recognize a standard-setting body unless it demonstrates that it satisfies the following attributes:

(1) *Openness:* The sources, procedures, and processes used are open to all interested parties, including: consumer and other public interest groups with expertise in consumer protection, financial services, community development, fair lending, and civil rights; authorized third parties; data providers; data recipients; data aggregators and other providers of services to authorized third parties; and relevant trade associations. Parties can meaningfully participate in standards development on a non-discriminatory basis.

(2) *Balance:* The decision-making power is balanced across all interested parties, including consumer and other public interest groups, and is reflected at all levels of the standard-setting body. There is meaningful representation for large and small commercial entities within these categories. No single interest or set of interests dominates decision-making. Achieving balance requires recognition that, even when a participant may play multiple roles, such as data provider and authorized third party, the weight of that participant's commercial concerns may align primarily with one set of interests. The ownership of participants is considered in achieving balance.

(3) *Due process and appeals:* The standard-setting body uses documented and publicly available policies and procedures, and it provides adequate notice of meetings and standards development, sufficient time to review drafts and prepare views and objections, access to views and objections of other participants, and a fair and impartial process for resolving conflicting views. An appeals process is available for the impartial handling of procedural appeals.

(4) *Consensus:* Standards development proceeds by consensus, which is defined as general agreement, though not necessarily unanimity. During the development of consensus, comments and objections are considered using fair, impartial, open, and transparent processes.

(5) *Transparency:* Procedures or processes for participating in standards development and for developing standards are transparent to participants and publicly available.

Subpart B—[Reserved]**Subpart C—[Reserved]****Subpart D—[Reserved]****Appendix A to Part 1033—Personal Financial Data Rights Rule: How To Apply for Recognition as a Standard Setter**

If you want the CFPB to designate your organization as a recognized standard setter, you should follow the steps described below.

We may amend this process from time to time.

Step One: Requesting Recognition

Submit a written request for recognition.¹

This should include key contact information, evidence of your organization's policies and practices,² and an explanation of how your organization satisfies each of the requirements in the Personal Financial Data Rights rule to be a recognized standard setter.³ Your request should also describe how current and/or anticipated standards issued by your organization relate to open banking.

In advance of filing your request, you can seek a pre-filing meeting with us. We can walk you through the application process and help you make a complete submission.

Send formal submissions, as well as requests for pre-filing meetings, to: openbankingstandards@cfpb.gov.

Step Two: Additional Information and Public Comment

After reviewing your submission, we may request additional information to ensure that your application is complete.

We may publish your application.

We may also seek public input on your application and invite your responses to any information we receive on that basis.

Step Three: Our Review

When reviewing your application, we consider whether your policies and practices meet all the requirements for recognition. We also evaluate whether your application is accurate and complete.

We prioritize and review applications based on the extent to which recognizing your organization helps us to implement open banking.⁴

Step Four: Application Decision

CFPB recognition will be publicly disclosed on our website, along with the

¹ Sensitive personal information should not be provided.

² Evidence may include (but is not limited to) charters, bylaws, policies, procedures, fee schedules, meeting minutes, membership lists, financial statements/disclosures, publicly available materials, and issued standards.

³ Relevant legal requirements are described at 12 CFR 1033.141. When explaining how your organization meets these requirements, you should reference relevant elements of the evidence you submit in support of your application.

⁴ Section 1033 of the Consumer Financial Protection Act, 12 U.S.C. 5533, describes the CFPB's role in implementing open banking.

applicable terms and conditions of such recognition, such as its duration.

If the CFPB declines to recognize your organization, we will notify you.

You may withdraw your application at any time or for any reason.

If we determine that your organization is close to meeting, but does not yet meet, the requirements for CFPB recognition, we may ask you to provide a written plan specifying how and when you will take the steps required for full recognition. If that plan is satisfactory, we may state on our website that your organization has received contingent recognition. Once you provide us with evidence that you have successfully executed on that plan (or otherwise addressed the relevant contingencies), the CFPB may extend full recognition.

Step Five: Recognition

There are several points to keep in mind about recognition.

As a recognized standard setter, you agree that the CFPB may monitor your organization and that you will provide information that we request.

You must also provide us, within 10 days, written explanation of any material change to information that was submitted with your application or during recognition, as well as any reason your organization may no longer meet underlying requirements for recognition.

In addition, you must meet any other specified terms and conditions of your recognition, which may include our reserving the right to observe or participate in standard setting.

If your recognition is set to expire, you can apply for re-recognition by re-starting at Step One at least 180 days before expiration. We may temporarily extend your recognition while we consider your request for re-recognition.

We may modify or revoke your recognition. The CFPB expects to notify you of the reasons it intends to revoke or modify recognition, and to provide your organization with an opportunity to address the CFPB's concerns.

Rohit Chopra,

Director, Consumer Financial Protection Bureau.

[FR Doc. 2024-12658 Filed 6-10-24; 8:45 am]

BILLING CODE 4810-am-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2024-0234; Project Identifier MCAI-2023-01215-A; Amendment 39-22742; AD 2024-08-09]

RIN 2120-AA64

Airworthiness Directives; GA8 Airvan (Pty) Ltd Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain GA8 Airvan (Pty) Ltd Model GA8 and GA8-TC320 airplanes. This AD is prompted by reports of insufficient electrical bonding of the solenoid (relay) box assembly that could result in degraded performance, errors, or intermittent failures of equipment connected to electrical Bus 1, Bus 2, associated electrical control, and protective devices fitted within or attached to the solenoid box. This AD requires inspecting for an existing wire connecting the relay box earth point to the ground power socket, and if one is not present, installing a mechanical connection. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective July 16, 2024.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of July 16, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA-2024-0234; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For service information, contact GA8 Airvan (Pty) Ltd, GippsAero Technical Services, P.O. Box 881, Morwell, Victoria 3840, Australia; phone: +61 (0)3 5172 1200; email: *TECHPUBS@gippsaero.com.au*; website: *gippsaero.com.au*.

- You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222-5110. It is also available at *regulations.gov* under Docket No. FAA-2024-0234.

FOR FURTHER INFORMATION CONTACT:

Doug Rudolph, Aviation Safety Engineer, FAA, 1600 Stewart Avenue,

Suite 410, Westbury, NY 11590; phone: (816) 329-4059; email: *doug.rudolph@faa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain GA8 Airvan (Pty) Ltd Model GA8 and GA8-TC320 airplanes. The NPRM published in the **Federal Register** on February 23, 2024 (89 FR 13620). The NPRM was prompted by AD GA8/11, dated November 21, 2023 (also referred to as the MCAI), issued by Civil Aviation Safety Authority, which is the aviation authority for Australia. The MCAI states that operators made two reports and a few anecdotal reports of intermittent system discrepancies attributed to insufficient electrical bonding of the solenoid (relay) box assembly. Without a dedicated solenoid box electrical bonding connection, these airplanes may suffer degraded performance, errors, or intermittent failures of equipment connected to electrical Bus 1, Bus 2, associated electrical control, and protective devices fitted within or attached to the solenoid box. The majority of Model GA8 and GA8-TC320 airplanes were produced with the relay box electrically bonded to the airframe via the relay box lid and the hardware (screws) holding it in place. The relay box did not have a dedicated bonding point or mechanical connection.

The MCAI requires doing the actions specified in GippsAero Service Bulletin SB-GA8-2023-216, Issue 1, dated February 24, 2023 (GippsAero SB-GA8-2023-216, Issue 1). These actions include inspecting for an existing wire connecting the relay box earth point to the ground power socket, and if one is not present, installing a mechanical connection.

In the NPRM, the FAA proposed to require inspecting for an existing wire connecting the relay box earth point to the ground power socket, and if one is not present, installing a mechanical connection. The FAA is issuing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA-2024-0234.

Discussion of Final Airworthiness Directive

Comments

The FAA received no comments on the NPRM or on the determination of the costs.

Conclusion

These products have been approved by the aviation authority of another country and are approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. This AD is adopted as proposed in the NPRM.

Related Service Information Under 1 CFR Part 51

The FAA reviewed GippsAero SB-GA8-2023-216, Issue 1. This service information specifies procedures for inspecting for an existing wire connecting the relay box earth point to the ground power socket, and if one is not present, installing a mechanical connection.

This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in **ADDRESSES**.

Differences Between This AD and the MCAI

The MCAI applicability is Gippsland Aeronautics Model GA8 Series airplanes. The applicability in this AD are GA8 Airvan (Pty) Ltd Model GA8 and GA8-TC320 airplanes because that is what is on the FAA type certificate.

Part A, step 4. of the Accomplishment Instructions in GippsAero SB-GA8-2023-216, Issue 1, specifies to proceed to the Documentation section to update the airplane logbook, but that action is not specifically required by this AD as current FAA regulations already require a logbook entry for compliance with AD actions.

Costs of Compliance

The FAA estimates that this AD affects 62 airplanes of U.S. registry.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
Inspect for mechanical connection	1 work-hour × \$85 per hour = \$85	\$0	\$85	\$5,270

The FAA estimates the following costs to do any necessary actions that

would be required based on the results of the inspection. The agency has no

way of determining the number of airplanes that might need these actions:

ON-CONDITION COSTS

Action	Labor cost	Parts cost	Cost per product
Install mechanical connection	1 work-hour × \$85 per hour = \$85	\$170	\$255

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Will not affect intrastate aviation in Alaska, and
- (3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities

under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024-08-09 GA 8 Airvan (Pty) Ltd:
Amendment 39-22742; Docket No. FAA-2024-0234; Project Identifier MCAI-2023-01215-A.

(a) Effective Date

This airworthiness directive (AD) is effective July 16, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to GA8 Airvan (Pty) Ltd Model GA8 airplanes, all serial numbers up to and including GA8-20-262; and Model GA8-TC320 airplanes, all serial numbers up to and including GA8-TC 320-20-261; certificated in any category.

(d) Subject

Joint Aircraft System Component (JASC) Code 2497, Electrical Power System Wiring.

(e) Unsafe Condition

This AD was prompted by reports of insufficient electrical bonding of the solenoid (relay) box assembly. The FAA is issuing this AD to address possible missing mechanical

connections. The unsafe condition, if not addressed, could result in degraded electrical equipment performance, errors, or intermittent failures of equipment connected to electrical Bus 1, Bus 2, associated electrical control and protective devices fitted within or attached to the solenoid box, which could lead to loss of equipment essential for safe flight.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 100 hours time-in-service (TIS) after the effective date of this AD, inspect for a mechanical connection between the relay box earth point to the ground power socket in accordance with Part A, steps 1. through 4. of the Accomplishment Instructions in GippsAero Service Bulletin SB-GA8-2023-216, Issue 1, dated February 24, 2023 (GippsAero SB-GA8-2023-216, Issue 1), except where step 4. specifies to proceed to the Documentation section to update the airplane logbook, that action is not specifically required by this AD.

(2) If no mechanical connection between the relay box earth point to the ground power socket is found during the inspection required by paragraph (g)(1) of this AD, before further flight, install a mechanical connection in accordance with Part B, steps 1. through 3. of the Accomplishment Instructions in GippsAero SB-GA8-2023-216, Issue 1.

(h) Alternative Methods of Compliance (AMOCs)

The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (i) of this AD or email to: 9-AVS-AIR-730-AMOC@faa.gov. If mailing information, also submit information by email. Before using any approved AMOC, notify your appropriate principal inspector,

or lacking a principal inspector, the manager of the local Flight Standards District Office/certificate holding district office.

(i) Additional Information

For more information about this AD, contact Doug Rudolph, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: (816) 329-4059; email: doug.rudolph@faa.gov.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) GippsAero Service Bulletin SB-GA8-2023-216, Issue 1, dated February 24, 2023.

Note 1 to paragraph (j)(2)(i): The date on the first page of this document is February 24, 2023, and the date on the subsequent pages is February 25, 2023.

(ii) [Reserved]

(3) For service information identified in this AD, contact GA8 Airvan (Pty) Ltd, GippsAero Technical Services, P.O. Box 881, Morwell, Victoria 3840, Australia; phone: +61 (0)3 5172 1200; email: TECHPUBS@gippsaero.com.au; website: gippsaero.com.au.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 901 Locust, Kansas City, MO 64106. For information on the availability of this material at the FAA, call (817) 222-5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov.

Issued on May 22, 2024.

James D. Foltz,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

Airworthiness Directives; International Aero Engines, AG Engines

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is adopting a new airworthiness directive (AD) for certain

International Aero Engines, AG (IAE AG) Model V2500 engines. This AD was prompted by an analysis of an event involving an International Aero Engines, LLC (IAE LLC) Model PW1127GA-JM engine, which experienced a high-pressure compressor (HPC) 7th-stage integrally bladed rotor (IBR-7) separation that resulted in an aborted takeoff. This AD requires performing an angled ultrasonic inspection (AUSI) of certain high-pressure turbine (HPT) 1st-stage hubs and HPT 2nd-stage hubs for cracks and replacing if necessary. This AD also requires accelerated replacement of certain HPT 1st-stage hubs and HPT 2nd-stage hubs. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective June 26, 2024.

The Director of the Federal Register approved the incorporation by reference of certain publications listed in this AD as of June 26, 2024.

ADDRESSES:

AD Docket: You may examine the AD docket at regulations.gov under Docket No. FAA-2024-0041; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 by adding an AD that would apply to certain IAE AG Model V2500 engines. The NPRM published in the **Federal Register** on February 5, 2024

(89 FR 7636). The NPRM was prompted by an event on December 24, 2022, when an Airbus Model A320neo airplane, powered by IAE LLC Model PW1127GA-JM engines, experienced a failure of the HPC IBR-7 that resulted in an engine shutdown and aborted take-off. Following this event, the manufacturer conducted a records review of production and field-returned parts and re-evaluated their engineering analysis methodology. The new analysis found that the failure of the HPC IBR-7 was caused by a nickel powdered metal anomaly, similar in nature to an anomaly previously observed on March 18, 2020, when an Airbus Model A321-231 airplane, powered by IAE AG Model V2533-A5 engines, experienced an uncontained HPT 1st-stage hub failure that resulted in high-energy debris penetrating the engine cowling. The analysis also concluded that there is an increased risk of failure for a subpopulation of HPT 1st-stage hubs and HPT 2nd-stage hubs that were manufactured from the same production campaign (a batch of nickel powdered metal) as the HPT 1st-stage hub that failed on March 18, 2020; these parts have a higher likelihood of containing the nickel powdered metal anomaly and are susceptible to failure much earlier than previously determined. In the NPRM, the FAA proposed to require performing an AUSI of certain HPT 1st-stage hubs and HPT 2nd-stage hubs and, depending on the results of the inspections, replacing the HPT 1st-stage hubs or HPT 2nd-stage hubs. The FAA also proposed to require accelerated replacement of certain HPT 1st-stage hubs and HPT 2nd-stage hubs. The FAA is issuing this AD to address the unsafe condition on these products.

Discussion of Final Airworthiness Directive

Comments

The FAA received comments from 14 commenters, including the Air Line Pilots Association, International (ALPA); JetBlue Airways (JetBlue); Lufthansa Technik AG (Lufthansa); MTU Maintenance Hannover GmbH; MTU Maintenance Zhuhai Co. Ltd; Pratt & Whitney (PW); Turkish Engine Center (TEC); United Airlines; five anonymous commenters; and an individual commenter. ALPA, United Airlines, the individual commenter, and one anonymous commenter supported the proposed AD without change. Ten commenters requested changes to the proposed AD. The following presents the comments received on the NPRM and the FAA's response to each comment.

Request To Clarify Affected Parts

Two anonymous commenters requested that the FAA clarify if HPT hubs that were produced before 2020 are part of the affected subpopulation if they were installed in January of 2019 or February of 2019 and had not accumulated more than 1,200 flight cycles (FCs).

The FAA clarifies that the affected population was manufactured from the same production campaign (a batch of nickel powdered metal) as the HPT 1st-stage hub that failed on March 18, 2020. The FAA notes that those affected parts are defined by serial number within the service information documents that are incorporated by reference in this AD. The FAA did not change this AD as a result of these comments.

Request To Clarify AUSI for Parts Removed From Service

An anonymous commenter requested that the FAA change the proposed AD to clarify if removal of the affected part from service and replacement with a part eligible for installation is an acceptable alternative to performing the AUSI required by paragraph (g)(1) of the proposed AD. The commenter noted that affected parts may be proactively replaced or found unserviceable before the AUSI is required.

The FAA disagrees with the request to change the AD because the AUSI required by paragraph (g)(1) of the proposed AD only applies to “affected parts.” If the part has been replaced with a part “eligible for installation,” then it is not an “affected part” and the AUSI is not required. The FAA did not change this AD as a result of this comment.

Request To Clarify Start Date for FC Accumulation

An anonymous commenter requested that the FAA clarify the point or date from which FCs should be counted in order to remain compliant with the proposed AD. The commenter noted that in Table 1 to Paragraph (g)(1) of the proposed AD, the AUSI compliance times are specified in terms of FCs, and for the HPT 1st-stage hub with Part Number (P/N) 2A5001, the compliance requirement is based on 100 FCs from a specific reference point.

The FAA clarifies that the FC count for AUSI compliance times begins on the effective date of this AD. The FAA has also changed the fourth column header of Table 1 to Paragraph (g)(1), Table 2 to Paragraph (g)(4), and Table 3 to Paragraph (g)(5) of this AD to read as follows: “Flight cycle (FC) limit from the effective date of this AD.”

Request To Account for Inability To Obtain Special Instruction

JetBlue requested that the FAA do one of the following:

(1) remove the reference to PW Special Instruction No. 189F–23, dated November 20, 2023 (PW SI No. 189F–23), from the effectivity of the affected parts listed in Table 1 to Paragraph (g)(1) and Table 2 to Paragraph (g)(4) of this AD; or

(2) have IAE LLC revise IAE AG Non-Modification Service Bulletin (NMSB) V2500–ENG–72–0720, dated November 20, 2023 (V2500–ENG–72–0720) to provide the list of the affected P/Ns and serial numbers of the hubs mentioned in PW SI No. 189F–23; or

(3) list all affected hubs within the AD.

JetBlue noted that they were unable to obtain PW SI No. 189F–23 from IAE LLC because it relates to a military program and there are concerns about the inadvertent release of data.

The FAA disagrees with the request because PW SI No. 189F–23 applies to the V2531–E5 engine model only, and therefore IAE only provides PW SI No. 189F–23 to those owning or operating the product. The FAA notes that material that is incorporated by reference in airworthiness directives can be accessed by the means identified in the ADDRESSES section. For clarity, the FAA added the phrase “which only applies to the IAE AG V2531–E5 Model engine” at the end of each reference to the service bulletin, except for paragraph (l), Material Incorporated by Reference, of the final rule.

Request To Adjust Compliance Times

JetBlue requested that the FAA adjust the compliance times for Table 1 to Paragraph (g)(1), Table 2 to Paragraph (g)(4), and Table 3 to Paragraph (g)(5) of this AD to match the drawdown period of IAE AG NMSB V2500–ENG–72–0720. JetBlue noted that IAE AG NMSB V2500–ENG–72–0720 provides an additional 200 FCs and is based on an effective date of January 1, 2024, while the proposed AD provides 200 FCs less and is based on the effective date of the AD. JetBlue also noted that it planned the engine removal schedule based on the drawdown of IAE AG NMSB V2500–ENG–72–0720, including working with the engine shops for induction slots and spare engines (including obtaining lease engines).

The FAA disagrees with the request because the drawdown times for IAE AG NMSB V2500–ENG–72–0720 started on January 1, 2024, and the FAA reduced the compliance time for the AUSIs required by this AD in order to better

align with the control program. The FAA did not change this AD as a result of this comment.

Comment Regarding Low Cost Estimate

JetBlue commented that the estimated cost of compliance provided in the proposed AD is not realistic and would be only achievable for a new engine or engine just returning to the shop. JetBlue also noted that the estimated cost would have great financial impact on operators, and the manufacturer is not providing a support program to address this.

The FAA disagrees that the estimated cost in the AD is unrealistic. The FAA based its estimated cost of compliance on the work-hours and parts costs from the manufacturer to perform the required actions. The commenter did not provide specifics on which cost estimates were incorrect and what would be considered realistic. The FAA did not change this AD as a result of this comment.

Comment Regarding Parts Eligible for Installation

Lufthansa commented that parts considered eligible for installation should not be limited to the disk S/Ns that are not listed in V2500–ENG–72–0720 or PW SI No. 189F–23. Lufthansa noted that disk S/Ns listed in those documents that have passed AUSI are also eligible for installation and need to be removed within 4,000 FCs from accomplishment of the AUSI or at the next HPT module removal after the AUSI.

The FAA agrees to change paragraph (h)(1) of this AD to include parts that were not removed from service as a result of the required actions of this AD as “parts eligible for installation.”

Request To Redefine AUSI Inspected Part Installation Date

TEC requested that the FAA change the definition of the date that an AUSI inspected part was installed in paragraph (h)(5) of the proposed AD from “the date of the authorized release certification for the shop visit at which the part was first installed after the AUSI was performed” to “the HPT hub release certificate date.” TEC noted that it is possible for two HPT hubs to be inspected on the same date and be installed on different engines. Since release dates of these engines can differ, it is possible for different replacement compliance times to apply to parts that were inspected on the same day.

The FAA disagrees with the request to change the definition of the date that an AUSI inspected part was installed. The FAA acknowledges that AUSI

compliance times will vary depending on when the AUSI inspected part was installed, and this was taken into consideration in order to manage shop visit capacity. The FAA did not change this AD as a result of this comment.

Request To Revise Paragraph (g)(1) of the Proposed AD

MTU Maintenance Hannover GmbH and PW requested that the FAA revise paragraph (g)(1) of the proposed AD to remove mention of AUSI inspected parts installed on or after November 1, 2023. MTU Maintenance Hannover GmbH requested that the phrase “or the AUSI inspected part was installed on or after November 1, 2023” be removed from paragraph (g)(1) of the proposed AD entirely, and PW requested that the FAA change the language from “or the AUSI inspected part was installed on or after November 1, 2023” to “before November 1, 2023.” JetBlue, MTU Maintenance Hannover GmbH, and PW all noted that the current language in paragraph (g)(1) of the proposed AD could cause an early engine removal by requiring a second AUSI inspection on hubs that had been previously AUSI inspected.

The FAA agrees to revise paragraph (g)(1) of this AD to prevent the potential requirement of performing a second AUSI on hubs that had an AUSI performed on or after November 1, 2023.

Request To Revise Paragraph (g)(2) of the AD

MTU Maintenance Hannover GmbH and PW requested that the FAA revise paragraph (g)(2) of the proposed AD to clarify the required actions for engines with AUSI inspected parts that were installed on or after November 1, 2023. MTU Maintenance Hannover GmbH requested that the FAA revise paragraph (g)(2) to read as follows: “For engines with an AUSI inspected part installed on or after November 1, 2023 or for parts inspected in accordance with paragraph (g)(1) of this AD, within 4,000 FCs from accomplishment of the AUSI required by paragraph (g)(1) of this AD or at the next HPT module removal after the AUSI required by paragraph (g)(1) of this AD, whichever occurs first, remove the part from service and replace with a part eligible for installation.” PW requested that the FAA revise paragraph (g)(2) of the proposed AD to read as follows: “For parts inspected in accordance with paragraph (g)(1) of this AD, or for parts previously AUSI inspected and installed on or after November 1, 2023, within 4,000 FCs from accomplishment of the AUSI

required by paragraph (g)(1) of this AD or at the next HPT module removal after the AUSI required by paragraph (g)(1) of this AD, whichever occurs first, remove the part from service and replace with a part eligible for installation.” PW noted that the intent is to inspect everything, and any part inspected after November 1, 2023 will be removed at 4,000 FCs.

The FAA agrees to revise paragraph (g)(2) of this AD to clarify the required actions for engines with AUSI inspected parts that were installed on or after November 1, 2023.

Request To Clarify Compliance Time for High-Thrust Engines

MTU Maintenance Zhuhai Co. Ltd requested that the FAA clarify the part replacement compliance time in Table 2 to Paragraph (g)(4) of the proposed AD for a part not previously operated in a high-thrust engine model that has its engine rating changed to a high-thrust rating without any disassembly or removal of the HPT module.

The FAA clarifies that after the initial flight in the newly rated high-thrust engine, the part is considered to have previously operated in a high-thrust engine and it will be required to use the lower cycle limits. For example, the HPT 1st-stage hub will need to be removed at 1,800 FCs after the effective date of the AD because it is now operating in a high-thrust engine. The FAA notes that the removal or non-removal of the HPT module at shop visit would not have an effect on this scenario as these are considered the new replacement cycle limits for the affected parts on the effective date of the AD. The FAA has revised paragraph (h)(3) of this AD by removing the second instance of the word “previously” from the definition in order to avoid potential misinterpretation.

Conclusion

The FAA reviewed the relevant data, considered any comments received, and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on these products. Except for minor editorial changes, and any other changes described previously, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

The FAA reviewed IAE AG NMSB V2500–ENG–72–0720, dated November

20, 2023; and PW Special Instruction No. 189F–23, dated November 20, 2023, which only applies to the IAE AG V2531–E5 Model engine. This service information specifies procedures for performing an AUSI for cracks on affected HPT 1st-stage hubs and HPT 2nd-stage hubs. This service information also specifies the list of affected HPT 1st-stage hubs and HPT 2nd-stage hubs, identified by part number and serial number, installed on certain IAE AG engines. This service information is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Interim Action

The FAA considers this AD to be an interim action. The unsafe condition is still under investigation by the manufacturer and, depending on the results of that investigation, the FAA may consider further rulemaking action.

Justification for Determination of the Effective Date

Section 553(d) of the Administrative Procedure Act (APA) (5 U.S.C. 551 *et seq.*) authorizes agencies to make rules effective in less than thirty days, upon a finding of “good cause.” The FAA has found that the risk to the flying public justifies a shortened effective date for this rule due to powdered metal anomalies in HPT 1st-stage hubs and HPT 2nd-stage hubs that could lead to premature fracture and uncontained failure, which could lead to the release of high-energy debris, damage to the engine, damage to the airplane, and loss of the airplane. The longer these parts remain in service, the higher the probability of failure. Accordingly, the FAA finds that good cause exists pursuant to 5 U.S.C. 553(d) for making this amendment effective in less than 30 days.

Costs of Compliance

The FAA estimates that this AD affects 116 engines installed on airplanes of U.S. registry. The FAA estimates that 40 engines need an AUSI of the HPT 1st-stage hub; 40 engines need an AUSI of the HPT 2nd-stage hub; 67 engines need replacement of the HPT 1st-stage hub; and 49 engines need replacement of the HPT 2nd-stage hub.

The FAA estimates the following costs to comply with this AD:

ESTIMATED COSTS

Action	Labor cost	Parts cost	Cost per product	Cost on U.S. operators
AUSI of HPT 1st-stage hub	5 work-hours × \$85 per hour = \$425	\$0	\$425	\$17,000
AUSI of HPT 2nd-stage hub	5 work-hours × \$85 per hour = \$8,500	0	425	17,000
Replace HPT 1st-stage hub	100 work-hours × \$85 per hour = \$8,500	460,000	468,500	31,389,500
Replace HPT 2nd-stage hub	100 work-hours × \$85 per hour = \$8,500	360,000	368,500	18,056,500

The FAA has included all known costs in its cost estimate. According to the manufacturer, however, some of the costs of this AD may be covered under warranty, thereby reducing the cost impact on affected operators.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a "significant regulatory action" under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

2024–11–03 International Aero Engines, AG: Amendment 39–22764; Docket No. FAA–2024–0041; Project Identifier AD–2024–00032–E.

(a) Effective Date

This airworthiness directive (AD) is effective June 26, 2024.

(b) Affected ADs

This AD is related to AD 2022–02–09, Amendment 39–21906 (87 FR 7029, February 8, 2022) (AD 2022–02–09).

(c) Applicability

This AD applies to International Aero Engines, AG (IAE AG) Model V2522–A5, V2524–A5, V2525–D5, V2527–A5, V2527E–A5, V2527M–A5, V2528–D5, V2530–A5, V2531–E5, and V2533–A5 engines.

(d) Subject

Joint Aircraft System Component (JASC) Code 7230, Turbine Engine.

(e) Unsafe Condition

This AD was prompted by an analysis of an event involving an International Aero Engines, LLC Model PW1127GA–JM engine, which experienced failure of a high-pressure compressor 7th-stage integrally bladed rotor that resulted in an engine shutdown and aborted takeoff. The FAA is issuing this AD to prevent failure of the high-pressure turbine (HPT) 1st-stage hub and HPT 2nd-stage hub. The unsafe condition, if not addressed, could result in uncontained hub failure, release of high-energy debris, damage to the engine, damage to the airplane, and loss of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) For engines with an installed part, part number (P/N), and serial number (S/N) listed in Table 1 to paragraph (g)(1) of this AD, with no angled ultrasonic inspection (AUSI) performed, at the next engine shop visit after the effective date of this AD before exceeding the applicable cycle limit specified in Table 1 to paragraph (g)(1) of this AD, perform an AUSI of the affected parts for cracks in accordance with the applicable service information listed in Table 1 to paragraph (g)(1) of this AD.

TABLE 1 TO PARAGRAPH (g)(1)—AUSI COMPLIANCE TIMES

Part	Table S/N is listed in	Previously operated in high-thrust model engine	Flight cycle (FC) limit from the effective date of this AD	Applicable service information (see paragraph (l)(2) of this AD)
HPT 1st-stage hub P/N 2A5001.	Table 1 of IAE AG Non-Modification Service Bulletin V2500–ENG–72–0720, dated November 20, 2023 (IAE AG NMSB V2500–ENG–72–0720).	Yes	100 FCs	Accomplishment Instructions, paragraph 5., of IAE AG NMSB V2500–ENG–72–0720.
HPT 1st-stage hub P/N 2A5001.	Table 1 of Pratt & Whitney (PW) Special Instruction No. 189F–23, dated November 20, 2023 (PW SI No. 189F–23), which only applies to the IAE AG V2531–E5 Model engine.	Yes	100 FCs	Accomplishment Instructions, paragraph 5., of PW SI No. 189F–23, which only applies to the IAE AG V2531–E5 Model engine.
HPT 1st-stage hub P/N 2A5001.	Table 1 of IAE AG NMSB V2500–ENG–72–0720.	No	700 FCs	Accomplishment Instructions, paragraph 5., of IAE AG NMSB V2500–ENG–72–0720.
HPT 2nd-stage hub P/N 2A4802.	Table 2 of IAE AG NMSB V2500–ENG–72–0720.	Yes	800 FCs	Accomplishment Instructions, paragraph 6., of IAE AG NMSB V2500–ENG–72–0720.
HPT 2nd-stage hub P/N 2A4802.	Table 2 PW SI No. 189F–23, which only applies to the IAE AG V2531–E5 Model engine.	Yes	800 FCs	Accomplishment Instructions, paragraph 6., of PW SI No. 189F–23, which only applies to the IAE AG V2531–E5 Model engine.
HPT 2nd-stage hub P/N 2A4802.	Table 2 of IAE AG NMSB V2500–ENG–72–0720.	No	1100 FCs	Accomplishment Instructions, paragraph 6., of IAE AG NMSB V2500–ENG–72–0720.

(2) For parts inspected in accordance with paragraph (g)(1) of this AD, or for AUSI inspected parts installed on or after November 1, 2023, within 4,000 FCs from accomplishment of the AUSI or at the next HPT module removal after the AUSI, whichever occurs first, remove the part from service and replace with a part eligible for installation.

(3) If any crack is found during the inspections required by paragraphs (g)(1) of this AD, before further flight, remove the affected part from service and replace with a part eligible for installation.

(4) For engines with an AUSI inspected part installed prior to November 1, 2023, having a P/N and S/N listed in Table 2 to paragraph (g)(4) of this AD, at the next HPT

module removal after the effective date of this AD, but before exceeding the applicable cycle limit specified in Table 2 to paragraph (g)(4) of this AD, remove the affected part from service and replace with a part eligible for installation.

TABLE 2 TO PARAGRAPH (g)(4)—PART REPLACEMENT COMPLIANCE TIMES

Part	Table S/N is listed in	Previously operated in high-thrust model engine	Flight cycle limit from the effective date of this AD
HPT 1st-stage hub P/N 2A5001.	Table 1 of IAE AG NMSB V2500–ENG–72–0720	Yes	1,800 FCs.
HPT 1st-stage hub P/N 2A5001.	Table 1 of PW SI No. 189F–23, which only applies to the IAE AG V2531–E5 Model engine.	Yes	1,800 FCs.
HPT 1st-stage hub P/N 2A5001.	Table 1 of IAE AG NMSB V2500–ENG–72–0720	No	2,800 FCs.
HPT 2nd-stage hub P/N 2A4802.	Table 2 of IAE AG NMSB V2500–ENG–72–0720	Yes	3,400 FCs.
HPT 2nd-stage hub P/N 2A4802.	Table 2 of PW SI No. 189F–23, which only applies to the IAE AG V2531–E5 Model engine.	Yes	3,400 FCs.
HPT 2nd-stage hub P/N 2A4802.	Table 2 of IAE AG NMSB V2500–ENG–72–0720	No	3,800 FCs.

(5) For engines with an installed part that has a P/N and S/N listed in Table 3 to paragraph (g)(5) of this AD, at the next HPT module removal after the effective date of

this AD, but before exceeding the applicable cycle limit specified in Table 3 to paragraph (g)(5) of this AD, remove the affected part

from service and replace with a part eligible for installation.

TABLE 3 TO PARAGRAPH (g)(5)—PART REPLACEMENT COMPLIANCE TIMES

Part	Table S/N is listed in	Previously operated in high-thrust model engine	Flight cycle limit from the effective date of this AD
HPT 1st-stage hub P/N 2A5001.	Table 3 of IAE AG NMSB V2500–ENG–72–0720	Yes	1,800 FCs.
HPT 1st-stage hub P/N 2A5001.	Table 3 of IAE AG NMSB V2500–ENG–72–0720	No	2,800 FCs.
HPT 2nd-stage hub P/N 2A4802.	Table 4 of IAE AG NMSB V2500–ENG–72–0720	Yes	3,400 FCs.
HPT 2nd-stage hub P/N 2A4802.	Table 4 of IAE AG NMSB V2500–ENG–72–0720	No	3,800 FCs.

(h) Definitions

(1) For the purposes of this AD, a “part eligible for installation” is an HPT 1st-stage disk or HPT 2nd-stage disk having an S/N that is not listed in IAE AG NMSB V2500–ENG–72–0720 or PW SI No. 189F–23, or an HPT 1st-stage disk or HPT 2nd-stage disk that was not removed from service per the requirements of this AD.

(2) For the purposes of this AD, an “HPT module removal” is when the HPT rotor and stator assembly are removed from the engine.

(3) For the purposes of this AD, “Previously operated in high-thrust model engine” refers to HPT 1st-stage hubs or HPT 2nd-stage hubs that have operated in an IAE AG Model V2527E–A5, V2527M–A5, V2528–D5, V2530–A5, V2531–E5, or V2533–A5 engine for any duration.

(4) For the purposes of this AD, an “engine shop visit” is the induction of an engine into the shop for maintenance involving the separation of pairs of major mating engine flanges, H–P, except for the following situations, which do not constitute an engine shop visit:

(i) Separation of engine flanges solely for the purposes of transportation without subsequent engine maintenance.

(ii) Engine removal for the purpose of performing field maintenance activities at a maintenance facility in lieu of performing them on-wing.

(5) For the purposes of this AD, the date that an AUI inspected part was installed is the date of the authorized release certification for the shop visit at which the part was first installed after the AUI was performed.

(i) Terminating Action to AD 2022–02–09

Compliance with paragraph (g)(1) of this AD satisfies the requirements of AD 2022–02–09.

(j) Alternative Methods of Compliance (AMOCs)

(1) The Manager, AIR–520 Continued Operational Safety Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the AIR–520 Continued Operational Safety Branch, send it to the attention of the person identified in paragraph (k) of this AD.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(k) Additional Information

For more information about this AD, contact Carol Nguyen, Aviation Safety Engineer, FAA, 2200 South 216th Street, Des Moines, WA 98198; phone: (781) 238–7655; email: carol.nguyen@faa.gov.

(l) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) International Aero Engines AG (IAE AG) Non-Modification Service Bulletin V2500–ENG–72–0720, dated November 20, 2023.

(ii) Pratt & Whitney (PW) Special Instruction No. 189F–23, dated November 20, 2023.

(3) For IAE AG and PW service information, contact International Aero Engines, AG, 400 Main Street, East Hartford, CT 06118; phone: (860) 565–0140; email: help24@pw.utc.com; website: connect.prattwhitney.com.

(4) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 1200 District Avenue, Burlington, MA 01803. For information on the availability of this material at the FAA, call (817) 222–5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov.

Issued on May 31, 2024.

Suzanne Masterson,

Deputy Director, Integrated Certificate Management Division, Aircraft Certification Service.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT**24 CFR Part 236**

[Docket No. FR–6439–C–02]

RIN 2502–AJ74

Removal of Obsolete Regulations for Section 236 of the National Housing Act; Correction

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, U.S. Department of Housing and Urban Development (HUD).

ACTION: Final rule; correction.

SUMMARY: HUD is correcting a final rule entitled, “Removal of Obsolete Regulations for Section 236 of the National Housing Act” that published on June 4, 2024, to include the rule’s Regulation Identifier Number (RIN).

DATES: Effective July 5, 2024.

FOR FURTHER INFORMATION CONTACT: Aaron Santa Anna, Associate General Counsel for Legislation and Regulations, Department of Housing and Urban Development, 451 7th Street SW, Room 10238, Washington, DC 20410; telephone number 202–708–1793 (this is not a toll-free number). HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech and communication disabilities. To learn more about how to make an accessible telephone call, please visit <https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs>.

SUPPLEMENTARY INFORMATION: On June 4, 2024 (89 FR 47849), HUD published a final rule titled “Removal of Obsolete Regulations for Section 236 of the National Housing Act.” The rule did not contain a RIN. This document corrects the final rule to include the RIN.

Correction

In the final rule titled “Removal of Obsolete Regulations for Section 236 of the National Housing Act” (89 FR 47849), FR Doc. 2024–12199, beginning on page 47849, in the **Federal Register** issue of June 4, 2024, make the following correction. On page 47849, in the first column, add the RIN in the document heading after the docket number [FR–6439–F–01] to read RIN 2502–A]74.

Aaron Santa Anna,

Associate General Counsel for Legislation and Regulations.

BILLING CODE P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R05–OAR–2024–0120; FRL–11915–01–R5]

Air Plan Approval; Michigan; Definitions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is approving a request submitted by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) on February 28, 2024, to revise the Michigan state implementation plan (SIP). The revision is updating the SIP for clarity by removing a redundant definition for “used oil.”

DATES: This direct final rule will be effective August 12, 2024, unless EPA receives adverse comments by July 11, 2024. If adverse comments are received, EPA will publish a timely withdrawal of the direct final rule in the **Federal Register** informing the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R05–OAR–2024–0120 at <https://www.regulations.gov> or via email to langman.michael@epa.gov. For comments submitted at [Regulations.gov](https://www.regulations.gov), follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit to EPA’s docket at <https://www.regulations.gov> any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI),

or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.* on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI, PBI, or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT: Charles Hatten, Air and Radiation Division (AR18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886–6031, hatten.charles@epa.gov. The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION: Throughout this document whenever “we,” “us,” or “our” is used, we mean EPA.

I. General Information

On February 28, 2024, EGLE submitted a request to EPA that the definition for the term “used oil” as specified in R 299.9109(p), adopted into the SIP from Michigan’s Hazardous Waste Management Rules, be removed from the SIP. Michigan’s SIP contains an identical definition of “used oil” at R 336.1121(c).

II. What is EPA’s analysis of Michigan’s submission?

In 2015, EPA approved rule R299.9109(p) with a definition for the term “used oil” in Michigan’s SIP. (80 FR 21183, April 17, 2015). However, Michigan EGLE later revised Michigan’s Air Pollution Control Rule in Chapter 336, Part 1, “Definitions”, to include the definition of “used oil” in the general air provisions rule at R336.1121(c) to define the term “used oil” for all the air rules. EPA approved this revision into the Michigan SIP on April 11, 2019 (84 FR 8809). Michigan EGLE eliminated the redundant “used oil” definition by removing R299.9109(p), effective at the state level on October 24, 2019.

Clean Air Act (CAA) Section 110(l) prohibits EPA from approving a SIP

revision if it would interfere with any applicable requirement concerning attainment, reasonable further progress, or any other CAA requirement. The removal of this definition does not interfere with any applicable requirement concerning attainment or any other applicable requirement of the CAA because this definition of “used oil” has also been approved into the SIP in R 336.1121(c). This revision removes a duplicative definition. Further, the removal of a redundant definition of used oil in R 299.9109(p) of Michigan’s Hazardous Waste Management Regulations improves the clarity of Michigan’s Air Pollution Control Rule definition of the term “used oil” for all air rules.

III. What action is EPA taking?

EPA is approving a revision to the Michigan SIP as submitted on February 28, 2024. The revision is updating the SIP for clarity by removing a redundant definition for used oil from Michigan’s SIP.

We are publishing this action without prior proposal because we view this as a noncontroversial amendment and anticipate no adverse comments. However, in the proposed rules section of this **Federal Register** publication, we are publishing a separate document that will serve as the proposal to approve the state plan if relevant adverse written comments are filed. This rule will be effective August 12, 2024 without further notice unless we receive relevant adverse written comments by July 11, 2024. If we receive such comments, we will withdraw this action before the effective date by publishing a subsequent document that will withdraw the final action. All public comments received will then be addressed in a subsequent final rule based on the proposed action. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. If we do not receive any comments, this action will be effective August 12, 2024.

IV. Incorporation by Reference

In this rule, EPA is amending regulatory text that includes incorporation by reference. As described in the amendments to 40 CFR part 52 set forth below, EPA is removing provisions of the EPA-Approved Michigan

Regulations from the Michigan SIP, which is incorporated by reference in accordance with the requirements of 1 CFR 51.5.

V. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this action:

- Is not a significant regulatory action subject to review by the Office of Management and Budget under Executive Orders 12866 (58 FR 51735, October 4, 1993), 13563 (76 FR 3821, January 21, 2011), and 14094 (88 FR 21879, April 11, 2023);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997) because it approves a state program;
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, the SIP is not approved to apply on any Indian reservation land or in any other area where EPA or an Indian tribe has demonstrated that a

tribe has jurisdiction. In those areas of Indian country, the rule does not have tribal implications and will not impose substantial direct costs on tribal governments or preempt tribal law as specified by Executive Order 13175 (65 FR 67249, November 9, 2000).

Executive Order 12898 (Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations, 59 FR 7629, February 16, 1994) directs Federal agencies to identify and address “disproportionately high and adverse human health or environmental effects” of their actions on minority populations and low-income populations to the greatest extent practicable and permitted by law. EPA defines environmental justice (EJ) as “the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies.” EPA further defines the term fair treatment to mean that “no group of people should bear a disproportionate burden of environmental harms and risks, including those resulting from the negative environmental consequences of industrial, governmental, and commercial operations or programs and policies.”

EGLÉ did not evaluate EJ considerations as part of its SIP submittal; the CAA and applicable implementing regulations neither prohibit nor require such an evaluation. EPA did not perform an EJ analysis and did not consider EJ in this action. Due to the nature of the action being taken here, this action is expected to have a neutral to positive impact on the air quality of the affected area. Consideration of EJ is not required as part of this action, and there is no information in the record inconsistent with the stated goal of E.O. 12898 of achieving EJ for people of color, low-income populations, and Indigenous peoples.

This action is subject to the Congressional Review Act, and EPA will submit a rule report to each House of the Congress and to the Comptroller General of the United States. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by August 12, 2024. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it

extend the time within which a petition for judicial review may be filed and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the proposed rules section of this **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference.

Dated: June 3, 2024.

Debra Shore,

Regional Administrator, Region 5.

For the reasons stated in the preamble, 40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

- 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

§ 52.1170 [Amended]

- 2. In § 52.1170, the table in paragraph (c) is amended by removing the section heading entitled, “Hazardous Waste Management” and the entry for “R 299.9109(p)”.

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 141

[EPA–HQ–OW–2022–0114; FRL 8543–04–OW]

RIN 2040–AG18

PFAS National Primary Drinking Water Regulation; Correction

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule; correction.

SUMMARY: The U.S. Environmental Protection Agency (EPA) is correcting formatting and entry designations in a final rule that was published in the **Federal Register** on April 26, 2024. The

rule finalized National Primary Drinking Water Regulations under the Safe Drinking Water Act for five individual per- and polyfluoroalkyl substances (PFAS): perfluorooctanoic acid (PFOA), perfluorooctane sulfonic acid (PFOS), perfluorohexane sulfonic acid (PFHxS), perfluorononanoic acid (PFNA), hexafluoropropylene oxide dimer acid (HFPO-DA, commonly known as GenX Chemicals). The rule finalized a NPDWR for two or more mixtures of PFNA, PFHxS, HFPO-DA and perfluorobutane sulfonic acid (PFBS). This document corrects formatting and entry designations in the final regulation.

DATES: Effective on June 25, 2024.

ADDRESSES: The EPA has established a docket for this action under Docket ID No. EPA-HQ-OW-2022-0114. All documents in the docket are listed on the <https://www.regulations.gov> website. Although listed in the index, some information is not publicly available, *e.g.*, Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the internet and will be publicly available only in hard copy form. Publicly available docket materials are available electronically through <https://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Alexis Lan, Office of Ground Water and Drinking Water, Standards and Risk Management Division (Mail Code 4607M), Environmental Protection Agency, 1200 Pennsylvania Avenue NW, Washington, DC 20460; telephone number 202-564-0841; email address: PFASNPDWR@epa.gov.

SUPPLEMENTARY INFORMATION: The EPA is making several corrections for inadvertent errors in the regulatory text for the final rule:

I. Does this action apply to me?

This action makes formatting changes for the incorporation of the April 26, 2024, final PFAS National Primary Drinking Water Regulation into the Code of Federal Regulations. The agency included in the April 26, 2024, final rule a list of those entities that may be potentially affected by the final PFAS National Primary Drinking Water Regulation.

II. What does this correction do?

The EPA issued a final rule in the **Federal Register** on April 26, 2024 (89 CFR 32532) (FRL 8543-02-OW), finalizing National Primary Drinking Water Regulations under the Safe Drinking Water Act for PFAS: PFOA, PFOS, PFHxS, PFNA, HFPO-DA, and as well as two or more mixtures of PFNA, PFHxS, HFPO-DA and PFBS. The EPA inadvertently listed incorrect entry designations in § 141.61. This document corrects the designation of entries in the tables in § 141.61(c)(1) and § 141.61(c)(2). With the corrections to § 141.61(c)(1) and § 141.61(c)(2), the subsequent tables in § 141.61(c) are also renumbered; tables 5 and 6 are changed to tables 3 and 4. These corrections to § 141.61 are also now reflected appropriately in amendatory instructions 7 and 8. This document corrects the final regulation.

III. Why is this correction issued as final rule?

Section 553 of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)(3)(B)) provides that, when an agency for good cause finds that notice and public procedure are impracticable, unnecessary, or contrary to the public interest, the agency may issue a final rule without providing notice and an opportunity for public comment. The EPA has determined that there is a good cause for making this correction final without prior proposal and opportunity for comment, because the EPA inadvertently listed the designation of entries incorrectly in § 141.61 in the document published in the **Federal Register**. The EPA finds that this constitutes good cause under 5 U.S.C. 553(b)(3)(B).

Corrections

In FR Doc. 2024-07773 beginning on page 32532 in the **Federal Register** of April 26, 2024, the EPA is making the following corrections:

§ 141.60 [Corrected]

■ 1. On page 32744, in the third column, in § 141.60, in paragraph (a)(4), “The effective date for paragraphs (c)(34) through (40) of § 141.61 (listed in table 4 to paragraph (c)) is April 26, 2029.” is corrected to read “The effective date for § 141.61(c)(2)(i) through (vii) is April 26, 2029.”

■ 2. On page 32744, starting in the third column, amendatory instruction 8 for § 141.61 and the accompanying regulatory text are corrected to read as follows:

8. Amend § 141.61 by:

- a. In paragraph (a), revising the introductory text and adding a table heading;
- b. In paragraph (b), revising the introductory text and the table heading;
- c. Revising and republishing paragraph (c); and
- d. Adding paragraphs (d) and (e).

The revisions and additions read as follows:

§ 141.61 Maximum contaminant levels for organic contaminants.

(a) The following maximum contaminant levels for volatile organic contaminants apply to community and non-transient, non-community water systems.

Table 1 to Paragraph (a)—Maximum Contaminant Levels for Volatile Organic Contaminants

* * * * *

(b) The Administrator, pursuant to section 1412 of the Act, hereby identifies as indicated in table 2 to this paragraph (b) granular activated carbon (GAC), packed tower aeration (PTA), or oxidation (OX) as the best technology, treatment technique, or other means available for achieving compliance with the maximum contaminant level for organic contaminants identified in paragraphs (a) and (c) of this section, except for per- and polyfluoroalkyl substances (PFAS).

Table 2 to Paragraph (b)—BAT for Organic Contaminants in Paragraphs (a) and (c) of This Section, Except for PFAS

* * * * *

(c) The following maximum contaminant levels (MCLs) in paragraphs (c)(1) and (2) of this section for synthetic organic contaminants apply to community water systems and non-transient, non-community water systems; paragraph (c)(2) of this section also contains health-based water concentrations (HBWCs) for selected per- and poly-fluoroalkyl substances (PFAS) used in calculating the Hazard Index.

(1) *MCLs for Synthetic Organic Contaminants, Except for PFAS.*

(2) MCLs and HBWCs for PFAS.

CAS. No.	Contaminant	MCL (mg/l) (unless otherwise noted)	HBWC (mg/l) for Hazard Index calculation
(i) Not applicable	Hazard Index PFAS (HFPO-DA, PFBS, PFHxS, and PFNA).	1 (unitless) ¹	Not applicable.
(ii) 122499-17-6	HFPO-DA	0.00001	0.00001.
(iii) 45187-15-3	PFBS	No individual MCL	0.002.
(iv) 108427-53-8	PFHxS	0.00001	0.00001.
(v) 72007-68-2	PFNA	0.00001	0.00001.
(vi) 45285-51-6	PFOA	0.0000040	Not applicable.
(vii) 45298-90-6	PFOS	0.0000040	Not applicable.

¹ The PFAS Mixture Hazard Index (HI) is the sum of component hazard quotients (HQs), which are calculated by dividing the measured component PFAS concentration in water by the relevant health-based water concentration when expressed in the same units (shown in ng/l for simplification). The HBWC for PFHxS is 10 ng/l; the HBWC for HFPO-DA is 10 ng/l; the HBWC for PFNA is 10 ng/l; and the HBWC for PFBS is 2000 ng/l.

Hazard Index = $\frac{[HFPO-DA_{\text{water}} \text{ ng/l}]/[10 \text{ ng/l}] + ([PFBS_{\text{water}} \text{ ng/l}]/[2000 \text{ ng/l}] + ([PFNA_{\text{water}} \text{ ng/l}]/[10 \text{ ng/l}]) + ([PFHxS_{\text{water}} \text{ ng/l}]/[10 \text{ ng/l}])}{\text{concentration}}$

HBWC = health-based water concentration

HQ = hazard quotient

ng/l = nanograms per liter

PFAS_{water} = the concentration of a specific PFAS in water

(d) The Administrator, pursuant to section 1412 of the Act, hereby identifies in table 3 to this paragraph (d)

the best technology, treatment technique, or other means available for achieving compliance with the maximum contaminant levels for all regulated PFAS identified in paragraph (c) of this section:

TABLE 3 TO PARAGRAPH (d)—BEST AVAILABLE TECHNOLOGIES FOR PFAS LISTED IN PARAGRAPH (c) OF THIS SECTION

Contaminant	BAT
Hazard Index PFAS (HFPO-DA, PFBS, PFHxS, and PFNA)	Anion exchange, GAC, reverse osmosis, nanofiltration.
HFPO-DA	Anion exchange, GAC, reverse osmosis, nanofiltration.
PFHxS	Anion exchange, GAC, reverse osmosis, nanofiltration.
PFNA	Anion exchange, GAC, reverse osmosis, nanofiltration.

TABLE 3 TO PARAGRAPH (d)—BEST AVAILABLE TECHNOLOGIES FOR PFAS LISTED IN PARAGRAPH (c) OF THIS SECTION—Continued

Contaminant	BAT
PFOA	Anion exchange, GAC, reverse osmosis, nanofiltration.
PFOS	Anion exchange, GAC, reverse osmosis, nanofiltration.

(e) The Administrator, pursuant to section 1412 of the Act, hereby identifies in table 4 to this paragraph (e) the affordable technology, treatment technique, or other means available to systems serving 10,000 persons or fewer for achieving compliance with the maximum contaminant levels for all regulated PFAS identified in paragraph (c) of this section:

TABLE 4 TO PARAGRAPH (e)—SMALL SYSTEM COMPLIANCE TECHNOLOGIES (SSCTs) FOR PFAS

Small system compliance technology ¹	Affordable for listed small system categories ²
Granular Activated Carbon.	All size categories.
Anion Exchange	All size categories.
Reverse Osmosis, Nanofiltration ³ .	3,301–10,000.

¹ Section 1412(b)(4)(E)(ii) of SDWA specifies that SSCTs must be affordable and technically feasible for small systems.
² The Act (ibid.) specifies three categories of small systems: (i) those serving 25 or more, but fewer than 501, (ii) those serving more than 500, but fewer than 3,301, and (iii) those serving more than 3,300, but fewer than 10,001.
³ “Technologies reject a large volume of water and may not be appropriate for areas where water quantity may be an issue.

Bruno Pigott,
Assistant Administrator.

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE
National Oceanic and Atmospheric Administration
50 CFR Part 622
[Docket No. 200124–0029; RTID 0648–XD967]
Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Reef Fish Fishery of the Gulf of Mexico; 2024 Red Snapper Private Angling Component Accountability Measure in Federal Waters Off Alabama, Florida, and Mississippi
AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and

Atmospheric Administration (NOAA), Commerce.
ACTION: Temporary rule, accountability measure.
SUMMARY: Through this temporary rule, NMFS implements accountability measures for the red snapper recreational sector private angling component in the Gulf of Mexico (Gulf off Alabama, Florida, and Mississippi for the 2024 fishing year. Based on information provided by the Alabama Department of Conservation and Natural Resources (ADCNR), the Florida Fish and Wildlife Conservation Commission (FWC), and the Mississippi Department of Marine Resources (MDMR), NMFS has determined that landings in each of these States exceeded the State’s 2023 regional management area private angling component annual catch limits (ACL) for Gulf red snapper. Therefore, NMFS reduces the Alabama, Florida, and Mississippi 2024 private angling component ACLs. This reduction will remain in effect through the remainder of the current fishing year on December 31, 2024.
DATES: This temporary rule is effective from 12:01 a.m., local time, on June 13, 2024, until 12:01 a.m., local time, on January 1, 2025.
FOR FURTHER INFORMATION CONTACT: Frank Helies, NMFS Southeast Regional Office, 727–824–5305, frank.helies@noaa.gov.
SUPPLEMENTARY INFORMATION: NMFS manages the Gulf reef fish fishery, which includes red snapper, under the Fishery Management Plan for the Reef Fish Resources of the Gulf of Mexico (FMP). The Gulf of Mexico Fishery Management Council prepared the FMP, which was approved by the Secretary of Commerce, and NMFS implements the FMP through regulations at 50 CFR part 622 under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). All red snapper weights discussed in this temporary rule are in round weight.
In 2015, Amendment 40 to the FMP established two components within the recreational sector fishing for red snapper: the private angling component, and the Federal charter vessel and headboat (for-hire) component (80 FR

22422, April 22, 2015). In 2020, NMFS implemented Amendments 50 A–F to the FMP, which delegated authority to the Gulf States (Alabama, Florida, Louisiana, Mississippi, and Texas) to establish specific management measures for the harvest of red snapper in Federal waters of the Gulf by the private angling component of the recreational sector (85 FR 6819, February 6, 2020). These amendments allocated a portion of the private angling ACL to each State, and each State is required to constrain landings to its allocation as part of State management.
As described at 50 CFR 622.39(a)(2)(i), the Gulf red snapper recreational sector quota (ACL) is 7,991,900 pounds (lb) (3,625,065 kilograms(kg)) and the recreational private angling component quota (ACL) is 4,611,326 lb (2,091,662 kg). These catch limits are based, in part, on landings estimates generated by the Marine Recreational Information Program (MRIP) and, prior to the 2023 fishing year, the State-specific ACLs for Alabama, Florida, Louisiana, Mississippi were also MRIP-based. These MRIP-based State ACLs are not directly comparable to the landings estimates produced by each State’s survey. Therefore, in 2023, NMFS implemented a framework action under the FMP to calibrate the red snapper ACLs for Alabama, Florida, Louisiana, and Mississippi so they could be directly compared to the landings estimates produced by each of those State’s data collection program (Calibration Framework)(87 FR 74014, December 2, 2022). This framework action established State-specific calibration ratios that NMFS applied to the MRIP-based ACLs to establish State-survey based ACLs, which allow a direct comparison to the landings estimates produced by each State.
On May 14, 2024, NMFS published a final rule for a framework action to the FMP that modified the State-specific ratios for Alabama, Florida, and Mississippi and modified each of these State’s private angling component ACL based on the new ratios (89 FR 41896). That final rule will be effective on June 13, 2024, and adjusts the State-survey based ACLs as follows: the Alabama regional management area private angling component ACL will be 664,552

lb (301,436 kg) (50 CFR 622.23(a)(1)(ii)(A)); the Florida regional management area private angling component ACL will be 2,769,631 lb (1,256,283 kg) (50 CFR 622.23(a)(1)(ii)(B)), and the Mississippi regional management area private angling component ACL will be 82,342 lb (37,350 kg) (50 CFR 622.23(a)(1)(ii)(D)). The MRIP-based State ACLs, described in the regulations as the Federal equivalent, will remain the same.

Regulations at 50 CFR 622.23(b) require that if a State's red snapper private angling component landings exceed the applicable State's component ACL, then in the following fishing year, that State's private angling ACL will be reduced by the amount of that ACL overage in the prior fishing year. Based on data provided by the ADCNR, NMFS has determined that 2023 landings of red snapper in Alabama for the private angling component, which includes landings for State charter vessels, were 596,083 lb (270,379 kg); which is 4,898 lb (2,222 kg) greater than the 2023 Alabama State-survey based ACL. Based on data provided by the FWC, NMFS has determined that 2023 landings of red snapper in Florida for the private angling component, which includes landings for State charter vessels, were 2,204,136 lb (999,779 kg); which is 12,821 lb (5,816 kg) greater than the 2023 Florida State-survey based ACL. Based on data provided by the MDMR, NMFS has determined that 2023 landings of red snapper in Mississippi for the private angling component, which includes landings for State charter vessels, were 80,675 lb (36,594 kg); which is 17,813 lb (8,080 kg) greater than the 2023 Mississippi State-survey based ACL. Accordingly, for the 2024 fishing year, this temporary rule reduces the Alabama, Florida, and Mississippi 2024 State-survey based ACLs by the amount of the overages. These reductions results in a revised 2024 private angling ACL for Alabama of 659,654 lb (299,214 kg), a revised 2024 private angling ACL for Florida of 2,756,810 lb (1,250,468 kg), and a revised 2024 private angling ACL for Mississippi of 64,529 lb (29,270 kg).

The recreational private angling component ACLs for the other Gulf State management areas (Louisiana and Texas) for 2024 are unaffected by this temporary rule. The reductions in the 2024 red snapper private angling component ACLs for the Alabama, Florida, and Mississippi regional management areas are effective at 12:01 a.m., local time, on June 13, 2024, and will remain in effect until 12:01 a.m., local time, on January 1, 2025.

The ADCNR, FWC, and MDMR are responsible for ensuring that 2024 private angling component landings in each applicable State's regional management area do not exceed the adjusted 2024 Alabama, Florida, and Mississippi ACLs. NMFS notes that after the ADCNR, FWC, and MDMR identified that ACL overages had occurred in 2023, they adjusted their respective 2024 red snapper private angling fishing seasons to account for the reduction in the ACLs as required by the regulations at 50 CFR 622.23(b) and implemented through this temporary rule.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required under 50 CFR 622.23(b) which was issued pursuant to section 304(b) of the Magnuson-Stevens Act, and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and opportunity for public comment on this action. Such procedures are unnecessary because the rule implementing the post-season ACL adjustment authority has already been subject to notice and comment, and all that remains is to notify the public of the ACL overage adjustment to reduce the private angling component ACLs for the Alabama, Florida, and Mississippi regional management areas. Such procedures are contrary to the public interest because a failure to implement the ACL overage adjustments immediately may result in confusion among the public about what ACL is in effect for Alabama, Florida, and Mississippi for the 2024 fishing year. This action is based on the best scientific information available.

For the aforementioned reasons, there is also good cause to waive the 30-day delay in the effectiveness of the action under 5 U.S.C. 553(d)(3).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: June 5, 2024.

Karen H. Abrams,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

50 CFR Part 648

[Docket No. 231215-0305; RTID 0648-XE028]

Fisheries of the Northeastern United States; Summer Flounder Fishery; Quota Transfer From North Carolina to Virginia

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; quota transfer.

SUMMARY: NMFS announces that the State of North Carolina is transferring a portion of its 2024 commercial summer flounder quota to the Commonwealth of Virginia. This adjustment to the 2024 fishing year quota is necessary to comply with the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan (FMP) quota transfer provisions. This announcement informs the public of the revised 2024 commercial quotas for North Carolina and Virginia.

DATES: Effective June 10, 2024 through December 31, 2024.

FOR FURTHER INFORMATION CONTACT: Laura Deighan, Fishery Management Specialist, (978) 281-9184.

SUPPLEMENTARY INFORMATION:

Regulations governing the summer flounder fishery are found in 50 CFR 648.100 through 648.111. These regulations require annual specification of a commercial quota that is apportioned among the coastal states from Maine through North Carolina. The process to set the annual commercial quota and the percent allocated to each state is described in § 648.102, and the final 2024 allocations were published on December 21, 2023 (88 FR 88266).

The final rule implementing amendment 5 to the Summer Flounder FMP, as published in the **Federal Register** on December 17, 1993 (58 FR 65936), provided a mechanism for transferring summer flounder commercial quota from one state to another. Two or more states, under mutual agreement and with the concurrence of the NMFS Greater Atlantic Regional Administrator, can transfer or combine summer flounder commercial quota under § 648.102(c)(2). The Regional Administrator is required to consider three criteria in the evaluation of requests for quota transfers or combinations: (1) the transfers or

combinations would not preclude the overall annual quota from being fully harvested; (2) the transfers address an unforeseen variation or contingency in the fishery; and (3) the transfers are consistent with the objectives of the FMP and the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). The Regional Administrator has determined these three criteria have been met for the transfer approved in this notification.

North Carolina is transferring 15,576 pounds (lb; 7,065 kilograms (kg)) to

Virginia through a mutual agreement between the states. This transfer was requested to repay landings made by an out-of-state permitted vessel under a safe harbor agreement. The revised summer flounder quotas for 2024 are: North Carolina, 2,355,548 lb (1,068,459 kg); and Virginia, 1,899,556 lb (861,624 kg).

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR

648.102(c)(2)(i) through (iv), which was issued pursuant to section 304(b), and is exempted from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

[Docket No. APHIS–2022–0056]

RIN 0579–AE74

National Poultry Improvement Plan and Auxiliary Provisions

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: We are proposing to amend the regulations governing the National Poultry Improvement Plan (NPIP). These amendments would, among other things, condition indemnity for low pathogenicity avian influenza on adherence to biosecurity plans, clarify existing provisions of the regulations, fix editorial errors, and align the regulations more closely with current producer practices. These proposed changes were voted on and approved by the voting delegates at the NPIP's 2022 National Plan Conference.

DATES: We will consider all comments that we receive on or before August 12, 2024.

ADDRESSES: You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to www.regulations.gov. Enter APHIS–2022–0056 in the Search field. Select the Documents tab, then select the Comment button in the list of documents.

- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS–2022–0056, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road, Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at www.regulations.gov or in our reading room, which is located in room 1620 of the USDA South Building, 14th Street and Independence Avenue SW, Washington, DC. Normal

reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 7997039 before coming.

FOR FURTHER INFORMATION CONTACT: Dr. Elena Behnke, DVM, Senior Coordinator, National Poultry Improvement Plan, VS, APHIS, USDA, 1506 Klondike Road, Suite 301, Conyers, GA 30094–5104; (770) 922–3496.

SUPPLEMENTARY INFORMATION:

Background

The National Poultry Improvement Plan (NPIP, also referred to below as “the Plan”) is a cooperative Federal-State-industry mechanism for controlling certain poultry diseases. The Plan consists of a variety of programs intended to prevent and control poultry diseases. Participation in all Plan programs is voluntary, but breeding flocks, hatcheries, and dealers must first qualify as “U.S. Pullorum-Typhoid Clean” as a condition for participating in the other Plan programs.

The Plan identifies States, independent flocks, hatcheries, dealers, and slaughter plants that meet certain disease control standards specified in the Plan's various programs. As a result, customers can buy poultry that has tested clean of certain diseases or that has been produced under disease-prevention conditions.

The regulations in 9 CFR parts 56, 145, 146, and 147 (referred to below as the regulations) contain the provisions of the Plan. The Animal and Plant Health Inspection Service (APHIS) amends these provisions from time to time to incorporate new scientific information and technologies within the Plan, and to ensure the plan reflects changes to the poultry industry itself. The changes we are proposing, which are discussed below, were approved by the voting delegates at the Plan's 2022 Biennial Conference. Participants and voting delegates at the Biennial Conference represented the poultry industry, flock owners, breeders, hatchery men, slaughter plants, poultry veterinarians, diagnostic laboratory personnel, Official State Agencies from cooperating States, and other poultry industry affiliates.

In this document, we first discuss editorial oversights from the last rulemaking to update the NPIP

regulations that we are proposing to correct in this proposed rule. Then, we address the other proposals, in the order in which they would appear in the regulations. Finally, we discuss proposed changes to the Program Standards document that accompanies the regulations and provides guidance on their application.

Editorial Oversights From the Previous Rulemaking

On October 5, 2020, we published a final rule in the *Federal Register* (85 FR 62559–62572, Docket No. APHIS–2018–0062)¹ that codified changes to the regulations that were voted on and approved by the voting delegates at the NPIP's 2018 National Plan Conference.

Among the changes to the regulations in that October 2020 final rule were revisions to the regulations in part 56, which govern the payment of indemnity for low pathogenicity avian influenza (LPAI). As one of these revisions, we intended to revise references to cleaning and disinfection for LPAI to “virus elimination” throughout part 56, or otherwise add the term “virus elimination” after references to cleaning and disinfection. As we stated in the proposed rule on which the October 2020 final rule was based, “virus elimination” is the term used in many foreign countries for cleaning and disinfection measures conducted to destroy or eliminate all LPAI virus on an affected premises, and we wished to underscore the restrictive sense in which cleaning and disinfection was being used in the regulations in part 56.

However, while we updated the terminology in several sections in part 56, we inadvertently overlooked instances in §§ 56.3 and 56.5 in which the terminology was not updated. We propose to add references to virus elimination in these two sections.

In the October 2020 final rule, we added provisions throughout the regulations for a U.S. Newcastle Disease Clean classification. Our intent was to indicate that, for that classification, a minimum of 30 birds per flock must test negative using an approved test at intervals of 90 days, or, alternatively, a sample of fewer than 30 birds may be tested, and found negative, at any one time if all pens are equally represented

¹ To view the final rule, go to www.regulations.gov and enter APHIS–2018–0062 in the Search field.

and a total of 30 birds is tested within each 90-day period, and, regardless of which of the two foregoing testing options is chosen, during each 90-day period, all primary spent fowl, up to a maximum of 30, must test negative within 21 days prior to movement. However, due to the punctuation used for these provisions, they could be construed to mean that primary spent fowl testing is optional depending on the flock testing protocol used. This was not our intent, and we are revising the Newcastle Disease Clean classification provisions throughout the NPIP regulations to align them with our intent.

In the October 2020 final rule, we added a subpart J to part 145 of the regulations, which added testing regimes, terminology, and programs specifically designed for the game bird industry. However, in several instances where sections or subparts are listed within the regulations, we inadvertently neglected to update the lists to include references to this new subpart J. We are correcting this oversight throughout part 145.

In adding subpart J to part 145, we stated, in paragraph (e) of § 145.102, that it was recommended that gallinaceous flocks that participate in the plan and waterfowl be kept separate. However, our definition of the term *game bird* in § 145.101 indicated that it was limited to domesticated fowl; this would preclude a producer who has waterfowl on the same premises from participating under the regulations in subpart J. We are revising paragraph (e) to clarify that gallinaceous flocks and waterfowl may not be raised on the same premises, and, if they are, they must be registered under subpart E of part 145 instead. This subpart contains provisions of the plan specifically designed for producers of hobbyist poultry, exhibition poultry, and raised-for-release waterfowl.

In § 145.103 of subpart J, we included a typographical error in which the word “Typhoid” was misspelled “Typhid.” We are correcting this misspelling.

Subpart E of part 146 of the regulations contains definitions and requirements for Plan participants within the game bird, commercial waterfowl, and raised-for-release waterfowl industries who produce meat- or egg-type flocks. In the proposed rule on which the October 2020 final rule was based, we proposed to update the terminology in subpart E to match other subparts within part 146 by replacing the term “commercial” with “egg/meat-type.” However, we neglected to make corresponding changes to §§ 146.3, 146.6, and 146.9, which contain references to the types of commercial

flocks that may participate in the plan under the provisions in part 146. We also neglected to make a similar harmonizing change in paragraph (a)(9) of § 147.46. We are correcting these oversights by harmonizing the language accordingly.

Proposed Revisions to Part 56

As we mentioned above, the regulations in part 56 govern the payment of indemnity for LPAI. Section 56.1 contains definitions of terms used within that part. We are proposing several revisions to this section. First, we are proposing to add a definition of the *National Poultry Improvement Plan (NPIP) Program Standards*. As we do in § 145.1 of the NPIP regulations, we propose to define the term as “A document that contains tests and sanitation procedures approved by the Administrator pursuant to § 147.53 of this chapter.” Also consistent with that definition in § 145.1, the proposed definition would further specify how the Program Standards may be obtained. The regulations in part 56 currently do not refer to the NPIP Program Standards, however, as discussed below, we are proposing to add references to them and consider a definition warranted in light of those proposed additions.

Currently, § 56.1 defines *Virus elimination* (VE) as “Cleaning and disinfection measures conducted to destroy or eliminate all AI virus on an affected premises.” However, virus elimination may also include methods such as fallowing for premises with dirt floors. To reflect this, we are proposing that virus elimination be defined as “Cleaning and disinfection or other measures conducted to destroy or eliminate all AI virus on the premises.”

Currently, paragraph (b) of § 56.3 provides that the Administrator of APHIS is authorized to pay 100 percent of costs and/or compensation for activities listed in paragraphs (a)(1) through (3) of the section, except for poultry that are described by the categories in the subparagraphs of paragraph (b). The section further specifies that the Administrator may only pay 25 percent of costs for infected or exposed poultry described in any of those categories.

However, the categories in these subparagraphs, in certain instances, currently contain double negatives, which could make it difficult for producers to ascertain whether they qualified for 100 percent or 25 percent of the listed activities for which cost or compensation may be paid. To assist in readability, we are restructuring the introductory text of paragraph (b) so that it provides that producers meeting the

conditions in paragraphs (b)(1) or (2) would be eligible for 100 percent of costs and/or compensation, and we are restructuring these subparagraphs so that they contain positive conditions that must be met in order to be eligible for 100 percent indemnification. Finally, we are adding paragraph (b)(3) which would articulate the categories that are eligible for 25 percent, rather than 100 percent. Again, it is not our intent in these revisions to change the eligibility requirements, but simply to make them easier to interpret. To that end, in the regulatory text at the end of this document, we lay out our proposed revision to paragraph (b) in its entirety for ease of readability and public comment. We also request specific public comment regarding whether there is a different structure for the section that would be clearer and more readable than our proposed revisions.

Section 56.5 contains provisions regarding destruction and disposal of poultry, as well as cleaning and disinfection (virus elimination) of premises, conveyances, and materials. Within that section, paragraph (c) contains provisions regarding the conditions under which infected or exposed poultry for H5/H7 LPAI may be controlled marketed, rather than depopulated, at the discretion of the cooperating State agency and APHIS. The requirements provide that:

- Poultry infected with or exposed to H5/H7 LPAI must not be transported to a market for controlled marketing until approved by the Cooperating State Agency in accordance with the initial State response and containment plan, which is described in § 56.10 of the regulations.

- Within 7 days prior to slaughter, each flock to be moved for controlled marketing must be tested for H5/H7 LPAI using a test approved by the Cooperating State Agency and found to be free of the virus.

- Routes to slaughter must avoid other commercial poultry operations whenever possible. All load-out equipment, trailers, and trucks used on the premises that have housed poultry must undergo virus elimination procedures and not enter other poultry premises or facilities for 48 hours after the virus elimination procedures have been completed.

- Flocks moved for controlled marketing must be the last poultry marketed during the week they are marketed.

We are proposing to add an additional requirement, that the poultry must be monitored daily for the development of additional and/or increased severity of clinical signs with scheduled flock

observation, tracking, and recording flock(s) mortality, taking action as directed by the Official State Agency. We consider this provision necessary because controlled marketing permits the movement of birds known to be infected with or exposed to disease, and because poultry that initially present symptoms consistent with LPAI may subsequently present symptoms associated with a disease with more acute morbidity, such as HPAI. Daily monitoring and coordination with the Official State Agency is therefore appropriate to address this possible risk. To that end, in the regulatory text at the end of this document, we lay out this new provision in its entirety as proposed paragraph (c)(1)(ii) of § 56.5.

Section 56.10 sets forth requirements for initial State response and containment plans for LPAI. Among the current requirements for initial State response and containment plans is that a minimum biosecurity plan must be followed by all poultry producers in the State as indicated in paragraph (a)(2). We are proposing to revise this requirement in several manners. First, as articulated in § 56.3, a biosecurity plan is not required of all producers as a condition for LPAI indemnity, but rather those meeting certain size thresholds. As a result, we would clarify that the initial State response and containment plan must require biosecurity plans for poultry producers based on their flock size as articulated in § 56.3, and, if applicable, contracting parties with such producers.

Second, our experience with avian influenza outbreaks, most notably the highly pathogenic avian influenza (HPAI) outbreak of 2022 and 2023, has suggested that the requirement needs a mechanism to ensure that the biosecurity plans are in fact being followed. As a result, we would amend the requirement for biosecurity plans to specify that the Official State Agency must determine that they are in place and being followed within the State. Likewise, we would specify that the Official State Agency must audit the plans for compliance with the biosecurity principles approved by the Administrator. These revisions would, in turn, authorize Official State Agencies to take on a role of greater oversight within their State regarding the implementation and maintenance of biosecurity plans. Finally, we would provide that the Program Standards document, particularly Standard E, contains the biosecurity principles approved by the Administrator. To that end, in the regulatory text at the end of this document, we lay out our proposed

revision to § 56.10 in its entirety for ease of readability and public comment.

Proposed Revisions to Part 145

Section 145.1 of the regulations provides general definitions of terms used within the NPIP regulations. We are proposing several revisions to this section.

Currently, the definition for *Fowl typhoid or typhoid* is “a disease of poultry caused by *Salmonella gallinarum*,” and the definition for *Pullorum disease or pullorum* is “A disease of poultry caused by *Salmonella pullorum*.” However, since these definitions were added to the regulations, the accepted nomenclature for *Salmonella* spp. has changed, and *Salmonella* is now classified with greater specificity: Not only by species, but also by subspecies, serovar, and biovar. Moreover, it is that specific pathogenic biovar that the NPIP regulations refer to, rather than *Salmonella* species in the broad sense. We are proposing to update the definitions for *Fowl typhoid or typhoid* and *Pullorum disease or pullorum* accordingly.

The definition for *Hatchery* currently is “Hatchery equipment on one premises operated or controlled by any person for the production of baby poultry.” However, hatcheries, such as incubation facilities, may be devoted solely to the production of embryonated eggs. We are updating the definition accordingly.

Likewise, the definition for *Multiplier breeding stock* is “A flock that is intended for the production of hatching eggs used for the purpose of producing progeny for commercial egg or meat production or for other nonbreeding purposes.” However, breeding stock may include fertile eggs, even if the eggs are not yet hatching. We would remove the word “hatching” and add the word “fertile” in its place.

The definition for *Reactor* currently provides that a reactor is a bird that has a positive reaction to a test, required or recommended in this part or in accordance with the NPIP regulations in 9 CFR part 147, for any poultry disease for which a program has been established within the NPIP. Currently, § 145.14 of the regulations specifies that reactors are considered suspects under the regulations until additional confirmatory testing has been conducted in accordance with the regulations; however, the definition of *Reactor* does not refer to this provision. As a result, we are proposing to amend the definition of *Reactor* to include the provision that confirmatory testing must

be conducted before a suspect is reclassified as a reactor.

Finally, we are proposing to add a definition of *Salmonella Enteritidis*. Provisions for a Clean program for *Salmonella Enteritidis* exist within the regulations, but the term is not currently defined. We are proposing to define it as “A bacteria found in poultry caused by *Salmonella enterica* subspecies *enterica* serovar *Enteritidis* (*Salmonella Enteritidis*).”

Section 145.10 of the regulations contains illustrative designs of emblems that flocks and products may be designated with based on their participation in various provisions of the Plan. While the regulations currently provide for a U.S. Newcastle Clean program, U.S. Avian influenza clean compartments, and U.S. Newcastle clean compartments, there are not currently corresponding illustrative designs for this program and these compartments in § 145.10. We propose to add illustrative designs for them.

Section 145.14 contains poultry testing requirements within the NPIP. We are proposing a number of revisions to the section.

The introductory text to the section currently indicates that, for plan programs in which a representative sample may be tested in lieu of an entire flock, the minimum number tested shall be 30 birds per house, unless otherwise specified within the Plan program, with at least 1 bird taken from each pen and unit in the house testing. The sentence further specifies that this does not apply for the ostrich emu, rhea, and cassowary program set forth in § 145.63(a) of the regulations.

The intent of the sentence is to direct producers, including those ostrich, emu, rhea, and cassowary producers enrolled in the program set forth in § 145.63, to the relevant testing requirements for their program(s), and then provides general requirements for test samples within the context of those specific program testing requirements. However, the sentence could be read to indicate that it is of general applicability except in certain outlying situations when program testing requirements indicate otherwise. Moreover, the sentence could be construed to mean either that it sets forth minimum testing requirements for ostrich, emu, rhea, and cassowary producers enrolled in the program set forth in § 145.63(a), while all other producers should follow program testing requirements, or that it does not apply to ostrich, emu, rhea, and cassowary producers at all, who should instead follow the requirements of

§ 145.63. We are proposing to revise the sentence to clarify its intent.

Paragraph (a)(1) provides the official blood tests that may be used for Pullorum-Typhoid within the program, and specifies that the tests must be conducted in accordance with part 147 of the regulations. Guidance and policy related to testing is also found within Program Standards document, in Program Standard A, however. We would indicate that Program Standard A is also operative when conducting testing.

Paragraph (a)(6) specifies the manner in which poultry from flocks undergoing qualification testing for participation in the NPIP that have a positive reaction to an official blood test must be subsequently evaluated. Among other provisions, it specifies that, when reactors are submitted to an authorized laboratory within 10 days of the date of reading of the official blood test, and the bacteriological examination fails to demonstrate pullorum-typhoid infection, the Official State Agency shall presume that the flock has no pullorum-typhoid reactors. However, if poultry from the flock has had a non-negative reaction to an official blood test for pullorum-typhoid, by definition it is a reactor for pullorum-typhoid, and the culture from the bacteriological examination is intended to ascertain whether the poultry is affected with *Salmonella* Pullorum or *Salmonella* Gallinarum, not whether it has reacted to a pullorum-typhoid test. It already has so reacted by the time of the culture.

As a result, we would clarify that if the bacteriological examination and culture fails to demonstrate pullorum-typhoid infection, the Official State Agency may determine that the flock is not infected with *Salmonella* Pullorum or *Salmonella* Gallinarum, but the poultry are still pullorum-typhoid reactors.

Section 145.33 sets forth terminology and classification provisions for multiplier meat-type chicken breeding flocks and their products, while § 145.43 sets forth terminology and classification provisions for turkey breeding flocks and their products. Both sections currently contain provisions for a U.S. Sanitation monitored program for the prevention and control of Salmonellosis. In both sections, the relevant programs allow owners of flocks found infected with paratyphoid *Salmonella* to vaccinate the flocks with an autogenous bacterin with a potentiating agent. However, the testing for *Salmonella* specified in the programs is environmental testing, rather than flock testing; if the environmental testing in the section has a non-negative

test for *Salmonella* spp. it does not necessarily mean the flock itself is infected, and the flock may, accordingly, be vaccinated for *Salmonella* typhoid irrespective of the environmental testing. We are proposing to delete the current vaccination allowance because it is not germane to the programs; producers may choose to vaccinate their flocks for *Salmonella* typhoid or not with no bearing on the programs' provisions.

Paragraph (l) of § 145.33 sets forth a U.S. Avian Influenza clean program for multiplier meat-type chicken breeding flocks and their products. Paragraph (l)(1) currently requires either a sample of at least 15 birds to be tested negative at intervals of 90 days; or a sample of fewer than 15 birds to be tested, and found to be negative, at any one time if all pens are equally represented and a total of 15 birds is tested within each 90-day period; or the flock to be tested at intervals of 30 days or less and found to be negative, and a total of 15 samples are collected and tested within each 90-day period. Paragraph (l)(2) of the section currently specifies that, during each 90-day period, all multiplier spent fowl, up to a maximum of 30, must be tested and found negative for avian influenza within 21 days prior to movement to slaughter. As written, paragraph (l)(2) could be construed to allow one multiplier spent fowl to be tested within 21 days prior to movement, and to allow this testing to count towards the requisite testing in paragraph (l)(1). This would constitute insufficient testing for avian influenza to provide assurances that a flock is "clean," however. Accordingly, we are proposing to remove paragraph (l)(2) and require instead that 15 birds are tested and found negative for avian influenza within 21 days prior to movement to slaughter regardless of the date of the previous test. This would align the minimum testing sample for multiplier spent fowl with the minimum test sample requirements for the flock as a whole.

Paragraph (m) of § 145.33 sets forth a U.S. *Salmonella* Enteritidis Monitored program for multiplier meat-type breeders wishing to monitor their flocks. Paragraph (m)(2) provides actions that must be taken with respect to test results generated from the monitoring program. When the program was first added to § 145.33, the section pertained to both primary meat-type breeders and multiplier meat-type breeders, and the provisions in paragraph (m)(2) specifically addressed primary breeders. However, primary breeders now have their own subpart, subpart H, within the regulations. For multiplier meat-type

breeders, because the offspring of the breeders rather than the breeders themselves enter commercial production, it is sufficient for the participating breeder to have a monitoring and testing program in place for *Salmonella enteritidis*, with the appropriate actions following test results determined by the breeders themselves. In other words, it is the existence of the monitoring program, rather than the results of testing conducted under the auspices of the monitoring program, that results in the classification for multiplier meat-type breeders. We propose to amend paragraph (m)(2) accordingly.

As we mentioned above, § 145.43 sets forth terminology and classification provisions for turkey breeding flocks and their products. Paragraph (c) of the section contains provisions for U.S. *M. Gallisepticum* Clean status for such flocks and products, while paragraph (d) contains provisions for U.S. *M. Meleagridis* Clean status, and paragraph (e) contains provisions for

M. Synoviae Clean status. All three paragraphs contain separate testing protocols for male flocks and female flocks, but no protocols for mixed flocks of male and female turkeys. We propose to add such protocols.

Paragraph (c)(1) of § 145.43 also indicates that testing must find no *M. Gallisepticum* reactors as one of the conditions for clean status. However, as noted previously, a reactor is, by definition, not necessarily a positive sample, but rather a suspect that has been sent for additional confirmatory testing by an authorized laboratory or Federal Reference laboratory. If the confirmatory testing comes back negative, the sample is cleared. We propose to amend paragraph (c)(1) so that the testing would instead have to find no *M. Gallisepticum* infected birds.

Paragraph (d)(5) of § 145.43 contains a typo that we would correct; it refers to "block" when contextually "flock" is meant.

Section 145.53 sets forth terminology and classification provisions for hobbyist and exhibition poultry, as well as raised-for-release waterfowl, breeding flocks and their products. Within the section, paragraph (e) contains provisions for a U.S. H5/H7 Avian Influenza Clean classification for such poultry and products. That paragraph currently states that the classification pertains to hobbyist or exhibition waterfowl, exhibition poultry, and game bird poultry and products. However, as noted above, the section does not pertain to exhibition waterfowl or game birds. We propose to amend paragraph

(e) accordingly to remove such references.

Section 145.73 sets forth terminology and classification provisions for egg-type chicken breeding flocks and their products. Paragraph (d) contains provisions for U.S. *S. Enteritidis* Clean classification for such flocks and products. Within paragraph (d), paragraph (d)(1)(i) currently requires either that a flock originates from a U.S. *S. Enteritidis* Clean flock, or meconium from the chick boxes and a sample of chicks that died within 7 days after hatching are examined bacteriologically for salmonella at an authorized laboratory, and cultures from positive samples are serotyped, as a condition of classification. Contextually, the paragraph is referring to samples that are positive for serogroup D of salmonella. We propose to revise the paragraph to make it clear that this was the relevant serogroup being referenced.

Paragraph (g) of § 145.73 contains provisions for U.S. *Salmonella* Monitored status for egg-type chicken breeding flocks and their products, while paragraph (f) of § 145.83 contains provisions for primary meat-type breeding flocks and their products. In both sections of the regulations, we currently require, among other things, that an Authorized Agent take environmental samples from each flock at 4 months of age and every 30 days thereafter; that an authorized laboratory for *Salmonella* examine the environmental samples bacteriologically; and that all *Salmonella* isolates from a flock be serogrouped and be reported to the Official State Agency on a monthly basis. As we mentioned previously in this document, environmental testing is not the same as flock testing, and positive samples within the environment do not necessarily mean the flock itself is infected. For those reasons, reporting the results of all testing to the Official State Agency on a monthly basis is not warranted. For a monitoring program, the Official State Agency need only know whether the *Salmonella* is present or absent in the flocks themselves. We would amend the two sections accordingly. We would also remove references in paragraph (g) of § 145.73 and paragraph (f) of § 145.83 which could be read to suggest that the above testing is flock testing, rather than environmental testing.

Paragraph (f) of § 145.83 also provides that any flock entering the production period that is in compliance with all the paragraph, and with no history of *Salmonella* isolations, shall be considered “*Salmonella* negative” and may retain this definition as long as no

environmental or bird *Salmonella* isolations are identified and confirmed from the flock or flock environment by sampling on four separate collection dates over a minimum of a 2-week period. We are proposing to revise the minimum 2-week period to a maximum 4-week period.

For flocks in production, it is common to have hatching eggs set aside in hatcheries for customer orders. If salmonella isolation occurs, confirmatory testing must be timely so that a business decision can be made regarding the disposition of the eggs. Allowing four sets of confirmatory samples over a four-week period provides sufficient time for sampling to occur while not allowing the sampling interval to be open-ended, as is currently the case.

Proposed Revisions to Part 147

In § 147.52, the regulations state the minimum requirements for an APHIS authorized laboratory evaluation to ensure that they are in compliance with NPIP regulations. Paragraph (f) of that section contains reporting requires for authorized laboratories. Within that paragraph, paragraph (f)(2) currently requires *Salmonella pullorum* and *Mycoplasma* Plan disease reactors to be reported to the Official State Agency within 48 hours. However, as noted above, a reactor, by definition, is not an infected sample. Rather, it is a sample that is sent to an authorized laboratory for confirmatory testing to determine whether it is infected with disease. Accordingly, we would revise paragraph (f)(2) to require reporting of infected flocks, rather than reactors.

Proposed Revisions to NPIP Program Standards

We have also prepared updates to the NPIP Program Standards document. The proposed updates would amend several sections of the document.

We would revise the definitions section in the Program Standards document by:

- Amending the definition of *hatchery and multiplier breeding flock*;
- Clarifying the definition of *reactor*;
- Revising the *Salmonella Pullorum*, *Gallinarum* and *Enteritidis* nomenclature.

These changes would help ensure that the Program Standards are aligned with our proposed revisions to the regulations themselves.

We would revise section A, “Blood Testing Procedures,” by removing the description of how standard tube agglutination test containers should be constructed in order to be used; the current language is overly prescriptive

in a manner that is not necessary for purposes of ensuring the containers can validly be used for blood testing procedures.

We would revise section B, “Bacteriological Examination Procedures,” by:

- Clarifying environmental samples are not for use to qualify or test flocks for PT Clean classification. As discussed previously in this document, environmental sampling and flock testing are distinct activities.

- Clarifying dilutions and volume of enrichment broth for the isolation and identification of *Salmonella*. The current language is overly prescriptive depending on the method of dilution used.

- Allowing a temperature range for incubation and enrichment broth and pre-enrichment broth for isolation and identification of *Salmonella*. The current standard specifies a specific temperature but a range in tolerance of temperatures is scientifically justified and consistent with international standards.

- Clarifying isolation and identification procedures for *Salmonella* by adding molecular procedures to Illustration 2. The proposed change to Illustration 2 provides visualization of the confirmation procedures.

- Removing the Hajna or Muller-Kauffmann reference for selective enrichment broth for lab procedure for bacteriological examination of cull chicks and poults for *Salmonella*. This change is being proposed to establish a more generalized protocol rather than confining laboratories to using just two specific types of Tetrathionate broth selective enrichment.

We would revise section D, “Molecular Examination Procedures,” by:

- Clarifying the PCR grade water to use for re-suspension of the pellet before boiling in the lab procedures for PCR testing for MG and MS.

- Adding *Salmonella* spp. qPCR to the list of approved molecular examination procedures
- Adding new diagnostic tests to the approved molecular examination procedures.

We would revise section E, “Biosecurity Principles,” to include provisions referenced in our above discussion of the proposed revisions to § 56.10.

In addition, in § 147.53 of the regulations, we set forth the process for updating the approved tests and sanitation procedures located in the Program Standards document. In that section, we indicate that when the Administrator approves a new test or

sanitation procedure or a change to an existing test or sanitation procedure, APHIS will publish a notice in the **Federal Register** making available the test or sanitation procedure, and that this notice will take public comment. With regard to proposed changes to an existing test or sanitation procedure, it is our intent that in the future we would only seek public comment through a **Federal Register** notice when the change would be a substantive change to the test or sanitation procedure that materially changes how the existing test or sanitation procedure is to be conducted. If the changes are non-substantive clarifications or remove strictures to allow for additional means of conducting the procedure, this change would not follow the process set forth in § 147.53 of the regulations and would be communicated to the public through other means available to the Agency. We feel public comment through a **Federal Register** notice is not warranted in these situations because parties following the existing procedures would be able to continue to do so.

Updates to Control Numbers

Finally, we are updating the Office of Management and Budget (OMB) control numbers for certain sections to reflect that OMB control number 0579–0474 expired and the associated paperwork burden (the reporting, recordkeeping, and third-party disclosure requirements) was added to OMB control number 0579–0007. In addition, where necessary, we are also adding reference to OMB control number 0579–0440.

Executive Orders 12866 and Regulatory Flexibility Act

This proposed rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

This rulemaking would result in various changes to regulations in 9 CFR parts 56, and 145 through 147, modifying provisions of the NPIP. The modifications are recommended by the NPIP General Conference Committee (GCC), which represents cooperating State agencies and poultry industry members and advises the Secretary on issues pertaining to poultry health. These amendments would, among other things, condition indemnity for low pathogenicity avian influenza on adherence to biosecurity plans, clarify existing provisions of the regulations, fix editorial errors, and align the regulations more closely with current producer practices.

These changes would align the regulations with international standards and make them more transparent to APHIS stakeholders and the general public. The changes included in this proposed rule were voted on and approved by the voting delegates at the Plan's 2022 Biennial Conference.

The establishments that would be affected by this rulemaking—principally entities engaged in poultry production and processing—are predominantly small by Small Business Administration standards. In those instances in which an addition or modification could potentially result in a cost to certain entities, we do not expect the costs to be significant. This proposed rule embodies changes decided upon by the NPIP GCC on behalf of Plan members, that is, changes recognized by the poultry industry as in their interest. We note that NPIP membership is voluntary.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action, if promulgated, will not have a significant economic impact on a substantial number of small entities.

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 2 CFR chapter IV.)

Executive Order 12988

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. If this proposed rule is adopted: (1) All State and local laws and regulations that are in conflict with this rule will be preempted; (2) no retroactive effect will be given to this rule; and (3) administrative proceedings will not be required before parties may file suit in court challenging this rule.

Paperwork Reduction Act

In accordance with section 3507(d) of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the reporting, recordkeeping, and third-party disclosure requirements described in this proposed rule are currently approved by the Office of Management and Budget (OMB) under OMB control numbers 0579–0007 and 0579–0440.

E-Government Act Compliance

The Animal and Plant Health Inspection Service is committed to compliance with the E-Government Act to promote the use of the internet and

other information technologies, to provide increased opportunities for citizen access to Government information and services, and for other purposes. For information pertinent to E-Government Act compliance related to this proposed rule, please contact Mr. Joseph Moxey, APHIS' Information Collection Coordinator, at (301) 851–2533.

List of Subjects

9 CFR Part 56

Animal diseases, Indemnity payments, Low pathogenic avian influenza, Poultry.

9 CFR Parts 145, 146, and 147

Animal diseases, Poultry and poultry products, Reporting and recordkeeping requirements.

Accordingly, we propose to amend 9 CFR parts 56, 145, 146, and 147 as follows:

PART 56—CONTROL OF H5/H7 LOW PATHOGENIC AVIAN INFLUENZA

- 1. The authority citation for part 56 continues to read as follows:

Authority: 7 U.S.C. 8301–8317; 7 CFR 2.22, 2.80, and 371.4.

- 2. Amend § 56.1 by:

- a. Adding in alphabetical order a definition for “National Poultry Improvement Plan (NPIP) Program Standards”; and

- b. Revising the definition for “Virus elimination (VE)”.

The addition and revision read as follows:

§ 56.1 Definitions.

* * * * *

National Poultry Improvement Plant (NPIP) Program Standards. A document that contains tests and sanitation procedures approved by the Administrator pursuant to § 147.53 of this chapter. This document may be obtained from the National Poultry Improvement Plan website at <http://www.poultryimprovement.org/> or by writing to the Service at National Poultry Improvement Plan, APHIS, USDA, 1506 Klondike Road, Suite 301, Conyers, GA 30094.

* * * * *

Virus elimination (VE). Cleaning and disinfection or other measures conducted to destroy or eliminate all AI virus on the premises.

- 3. Amend § 56.2 by adding an OMB citation at the end of the section to read as follows:

§ 56.2 Cooperation with States.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0440)

■ 4. Amend § 56.3 by revising paragraphs (a)(3) and (b) and adding an OMB citation at the end of the section to read as follows:

§ 56.3 Payment of indemnity and/or compensation.

(a) * * *

(3) Virus elimination (VE) measures taken on premises, conveyances, and materials that came into contact with poultry that were infected with or exposed to H5/H7 LPAI; or, in the case of materials, if the cost of the VE measures would exceed the value of the materials or the VE measures would be impracticable for any reason, the destruction and the disposal of the materials.

(b) *Percentage of costs eligible for indemnity and/or compensation.* The Administrator is authorized to pay 100 percent of the costs and/or compensation, as determined in accordance with § 56.4, of the activities described in paragraphs (a)(1) through (3) of this section, provided that the conditions in paragraph (b)(1) or (2) of this section apply. For infected or exposed poultry that are not described in the categories below, the Administrator is authorized to pay 25 percent of the costs of the activities described in paragraphs (a)(1) through (3) of this section:

(1)(i) The poultry are from:

(A) A commercial table-egg laying premises with at least 75,000 birds; or

(B) A meat-type chicken slaughter plant that slaughters at least 200,000 meat-type chickens in an operating week; or

(C) A meat-type turkey slaughter plant that slaughters at least 2 million meat-type turkeys in a 12-month period; or

(D) A meat-type game bird and waterfowl slaughter plant that slaughters at least 50,000 birds annually; or

(E) A raised-for-release game bird premises, raised-for-release waterfowl premises, and egg-type game bird or waterfowl producing eggs for human consumption premises that raise at least 25,000 birds annually and have at least 5,000 birds onsite; or

(F) A breeder flock premises with at least 5,000 birds; and

(ii) The breeding flock, commercial flock, or slaughter plant participates in the U.S. Avian Influenza Clean, H5/H7 Avian Influenza Clean, or U.S. H5/H7 Avian Influenza Monitored program of the Plan available to the flock in part 145 or 146 of this chapter; and

(iii) The owner of the poultry or eggs, and, if applicable, any party that enters

into a contract with the owner to grow or care for the poultry or eggs had in place and was following a biosecurity plan that is in compliance with biosecurity principles approved by the Administrator (within the National Poultry Improvement Plan (NPIP) Program Standards, Standard E pertains to Biosecurity Principles) and has been audited for the Official State Agency to ensure that the biosecurity plan is in compliance at the time of detection of H5/H7 LPAI.

(2) The flock does not meet the size requirements as described in paragraph (b)(1) of this section, regardless of whether the infected or exposed poultry participate in the Plan.

(3) The Administrator is authorized to pay 25 percent of the costs and/or compensation, as determined in accordance with § 56.4, of the activities described in paragraphs (a)(1) through (3) of this section, for flocks that:

(i) Do not meet the conditions described in paragraph (b)(1) or (2) of this section; or

(ii) The poultry are located in a State that does not participate in the diagnostic surveillance program for H5/H7 LPAI, as described in § 146.14 of this chapter, or that does not have an initial State response and containment plan for H5/H7 LPAI that is approved by APHIS under § 56.10, unless such poultry participate in the Plan with another State that does participate in the diagnostic surveillance program for H5/H7 LPAI, as described in § 146.14 of this chapter, and has an initial State response and containment plan for H5/H7 LPAI that is approved by APHIS under § 56.10, unless such poultry participate in the Plan with another State that does participate in the diagnostic surveillance program for H5/H7 LPAI, as described in § 146.14 of this chapter, and has an initial State response and containment plan for H5/H7 LPAI that is approved by APHIS under § 56.10.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0440)

■ 5. Amend § 56.4 by revising the OMB citation at the end of the section to read as follows:

§ 56.4 Determination of indemnity and/or compensation amounts.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007 and 0579–0440)

■ 6. Amend § 56.5 by:

■ a. Redesignating paragraphs (c)(1)(ii) through (iv) as paragraphs (c)(1)(iii) through (v), respectively, and adding a new paragraph (c)(1)(ii);

■ b. Revising newly redesignated paragraph (c)(1)(iv); and

■ c. Adding an OMB citation at the end of the section.

The additions and revision read as follows:

§ 56.5 Destruction and disposal of poultry and cleaning and disinfection (virus elimination) of premises, conveyances, and materials.

* * * * *

(c) * * *

(1) * * *

(ii) Poultry will be monitored daily for the development of additional and/or increased severity of clinical signs with scheduled flock observation, tracking, and recording flock(s) mortality, taking action as directed by the Official State Agency.

* * * * *

(iv) Routes to slaughter must avoid other commercial poultry operations whenever possible. All load-out equipment, trailers, and trucks used on the premises that have housed poultry that were infected with or exposed to H5/H7 LPAI must undergo virus elimination procedures and not enter other poultry premises or facilities for 48 hours after the virus elimination procedures have been completed.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0440)

■ 7. Amend § 56.6 by revising the OMB citation at the end of the section to read as follows:

§ 56.6 Presentation of claims for indemnity and/or compensation.

* * * * *

(Approved by the Office of Management and Budget under control numbers 0579–0007 and 0579–0440)

■ 8. Section 56.10 is revised and republished to read as follows:

§ 56.10 Initial State response and containment plan.

(a) In order for poultry owners within a State to be eligible for indemnity and/or compensation for 100 percent of eligible costs under § 56.3(b), the State in which the poultry participate in the Plan must have in place an initial State response and containment plan that has been approved by APHIS. The initial State response and containment plan must be developed by the Official State Agency. In States where the Official State Agency is different than the Cooperating State Agency, the

Cooperating State Agency must also participate in the development of the plan. The plan must be administered by the Cooperating State Agency of the relevant State. This plan must include:

(1) Provisions for a standing emergency disease management committee, regular meetings, and exercises, including coordination with any Tribal governments that may be affected;

(2) A biosecurity plan for poultry owners based on their flock size as stated in § 56.3 and, if applicable, any party that enters into a contract with the owner to grow or care for the poultry or eggs that had in place and was following a biosecurity plan that was audited by the Official State Agency to ensure that the biosecurity plan was in compliance according to the Program Standards, Standard E pertaining to the Biosecurity Principles as approved by the Administrator;

(3) Provisions for adequate diagnostic resources;

(4) Detailed, specific procedures for initial handling and investigation of suspected cases of H5/H7 LP AI;

(5) Detailed, specific procedures for reporting test results to APHIS. These procedures must be developed after appropriate consultation with poultry producers in the State and must provide for the reporting only of confirmed cases of H5/H7 LP AI in accordance with § 146.13 of this chapter;

(6) Detailed, strict quarantine measures for presumptive and confirmed index cases;

(7) Provisions for developing flock plans for infected and exposed flocks;

(8) Detailed plans for disposal of infected flocks, including preexisting agreements with regulatory agencies and detailed plans for carcass disposal, disposal sites, and resources for conducting disposal, and detailed plans for disposal of materials that come into contact with poultry infected with or exposed to H5/H7 LP AI;

(9) Detailed plans for cleaning and disinfection of premises, repopulation, and monitoring after repopulation;

(10) Provisions for appropriate control/monitoring zones, contact surveys, and movement restrictions;

(11) Provisions for monitoring activities in control zones;

(12) If vaccination is considered as an option, a written plan for use in place with proper controls and provisions for APHIS approval of any use of vaccine;

(13) Plans for H5/H7 LP AI-negative flocks that provide for quarantine, testing, and controlled marketing; and

(14) Public awareness and education programs regarding avian influenza.

(b) If a State is designated a U.S. Avian Influenza Monitored State, Layers under § 146.24(a) of this chapter or a U.S. Avian Influenza Monitored State, Turkeys under § 146.44(a) of this chapter, it will lose that status during any outbreak of H5/H7 LP AI and for 90 days after the destruction and disposal of all infected or exposed birds and cleaning and disinfection of all affected premises are completed.

(Approved by the Office of Management and Budget under control numbers 0579-0007 and 0579-0440)

PART 145—NATIONAL POULTRY IMPROVEMENT PLAN FOR BREEDING POULTRY

■ 9. The authority citation for part 145 continues to read as follows:

Authority: 7 U.S.C. 8301–8317; 7 CFR 2.22, 2.80, and 371.4.

■ 10. Amend part 145 by:

■ a. Removing “*S. gallinarum*” wherever it appears and adding “*Salmonella Gallinarum*” in its place;

■ b. Removing “*S. pullorum*” wherever it appears and adding “*Salmonella Pullorum*” in its place;

■ c. Removing “*S. enteritidis*” and “*Salmonella enteritidis ser enteritidis*” wherever they appear and adding “*Salmonella Enteritidis*” in its place.

■ 11. Amend § 145.1 by:

■ a. Revising the definition of “Fowl typhoid or typhoid”;

■ b. In the definition for “Hatchery”, adding the words “and/or embryonated eggs” after the words “baby poultry”;

■ c. In the definition for “Multiplier breeding flock”, removing the word “hatching” and adding the word “fertile” in its place;

■ d. Revising the definition of “Pullorum disease or pullorum”;

■ e. In the definition for “Reactor”, adding a sentence after the last sentence; and

■ f. Adding in alphabetical order a definition for “*Salmonella Enteritidis*”.

The revisions and additions read as follows:

§ 145.1 Definitions.

* * * * *

Fowl typhoid or typhoid. A disease of poultry caused by *Salmonella enterica*

subspecies *enterica* serovar *Gallinarum* biovar *Gallinarum* (*Salmonella Gallinarum*).

* * * * *

Pullorum disease or pullorum. A disease of poultry caused by *Salmonella enterica* subspecies *enterica* serovar *Gallinarum* biovar *Pullorum* (*Salmonella Pullorum*).

Reactor. * * * A reactor is considered suspect until additional confirmatory testing has been conducted by an authorized laboratory or Federal Reference Laboratory as outlined in § 145.14.

* * * * *

Salmonella Enteritidis. A bacteria found in poultry caused by *Salmonella enterica* subspecies *enterica* serovar *Enteritidis* (*Salmonella Enteritidis*).

* * * * *

§ 145.2 [Amended]

■ 12. Amend § 145.2 in paragraph (d) by removing the citation “§ 145.3(e)” and adding the citation “§ 145.3(f)” in its place.

§ 145.5 [Amended]

■ 13. Amend § 145.5 in paragraph (c) by removing the text “Subparts B, C, D, E, F, G, H, or I” and adding the text “Subpart B, C, D, E, F, G, H, I or J” in its place.

■ 14. Amend § 145.10 by:

■ a. In paragraph (b) introductory text, removing the text “and 145.93(b)” and adding the text “145.93(b), and 145.103(b)” in its place;

■ b. In paragraph (g) introductory text, removing the text “and 145.94(a)” and adding the text “145.94(a), and 145.104(a)” in its place;

■ c. In paragraph (o) introductory text, removing the text “and 145.93(d)” and adding the text “145.93(d), and 145.103(d)” in its place;

■ d. In paragraph (t) introductory text, removing the text “and 145.93(c)” and adding the text “145.93(c), and 145.103(c)” in its place; and

■ e. Adding paragraphs (u), (v), and (w).

The additions read as follows:

§ 145.10 Terminology and classification; flocks, products, and States.

BILLING CODE 3410-34-C

■ 15. Amend § 145.14 by:

- a. Revising the introductory text;
- b. In paragraph (a)(1), adding the text “(within the Program Standards document, Program Standard A applies to blood testing; alternatives to the program standards may also be approved by the Administrator under § 145.73 of this chapter)” after the word “subchapter” in the second sentence;
- c. In paragraph (a)(5), removing the text “and 145.93” and adding the text “145.93, and 145.103” in its place; and
- d. Revising paragraph (a)(6)(ii).

The revisions read as follows:

§ 145.14 Testing.

Poultry must be more than 4 months of age when tested for an official classification: *Provided*, That turkey candidates under subpart D of this part may be tested at more than 12 weeks of age; game bird candidates under subpart E or subpart J of this part may be tested when more than 4 months of age or upon reaching sexual maturity, whichever comes first; and ostrich, emu, rhea, and cassowary candidates under subpart F of this part may be tested when more than 12 months of age. Samples for official tests shall be collected by an Authorized Agent, Authorized Testing Agent, or State Inspector and tested by an authorized laboratory, except that the stained antigen, rapid whole-blood test for pullorum-typhoid may be conducted by an Authorized Testing Agent or State Inspector. Testing must be conducted as specified within the Subpart Plan program, with at least 1 bird tested from each pen and unit in the house and a minimum of 30 birds tested per house. The ratio of samples collected from male and female birds must be representative of birds throughout the house and flock. In houses containing fewer than 30 birds other than ostriches, emus, rheas, and cassowaries, all birds in the house must be tested, unless otherwise specified within the Plan program.

- (a) * * *
- (6) * * *

(ii) Reactors to the standard tube agglutination test (in dilutions of 1:50 or greater) or the microagglutination test (in dilutions of 1:40 or greater) shall be submitted to an authorized laboratory for bacteriological examination. If there are more than four reactors in a flock, a minimum of four reactors shall be submitted to the authorized laboratory; if the flock has four or fewer reactors, all of the reactors must be submitted. Bacteriological examination must be conducted in accordance with part 147 of this subchapter (within the Program

Standards document, Program Standard B addresses bacteriological examination procedures; alternatives to the program standards may also be approved by the Administrator under § 145.73). When reactors are submitted to the authorized laboratory within 10 days of the date of reading an official blood test named in paragraph (a)(6)(i) of this section, and the bacteriological examination fails to demonstrate pullorum-typhoid infection, the Official State Agency shall presume that the flock is determined not to be infected with *Salmonella* Pullorum or *Salmonella* Gallinarum.

* * * * *

■ 16. Amend § 145.33 by:

- a. Removing the semicolon after paragraph (d)(1)(vii) and adding a period in its place;
- b. Removing paragraph (d)(1)(viii);
- c. Adding paragraph (l)(1)(iv);
- d. Removing and reserving paragraph (l)(2);
- e. In paragraph (m)(2)(i), adding the words “by the company” after the words “shall be conducted”; and
- f. Removing and reserving paragraphs (m)(2)(ii) through (iv).

The addition reads as follows:

§ 145.33 Terminology and classification; flocks and products.

* * * * *

(l) * * *

(1) * * *

(iv) Fifteen (15) birds are tested and found negative for avian influenza within 21 days prior to movement to slaughter regardless of the date of the previous test.

* * * * *

■ 17. Amend § 145.43 by:

- a. Revising paragraph (c)(1);
- b. In paragraph (d)(1)(i), adding the words “or 60 samples, from mixed male and female flocks, (the ratio of samples collected from male and female birds must be representative of birds throughout the house)” after the words “from female flocks”;
- c. Adding a reserved paragraph (d)(1)(ii);
- d. In paragraph (d)(5), removing the word “block” and adding the word “flock” in its place;
- e. In paragraph (e)(1), adding the words “or 60 samples, from mixed male and female flocks, (the ratio of samples collected from male and female birds must be representative of birds throughout the house)” after the words “from female flocks” in the first sentence;
- f. Removing paragraph (f)(5) and redesignating paragraphs (f)(6) and (7) as paragraphs (f)(5) and (6);
- g. Revising paragraph (h)(3)(i);

- h. Removing paragraph (h)(3)(ii) and redesignating paragraph (h)(3)(iii) as paragraph (h)(3)(ii); and
- i. Revising the OMB citation at the end of the section.

The revisions and addition read as follows:

§ 145.43 Terminology and classification; flocks and products.

* * * * *

(c) * * *

(1) A flock maintained in accordance with part 147 of this subchapter with respect to Mycoplasma isolation, sanitation, and management, and in which no *M. Gallisepticum* infected birds are found when a random sample of at least 10 percent of the birds in the flock, or 300 birds in flocks of more than 300 and each bird in flocks of 300 or less, is tested when more than 12 weeks of age, in accordance with the procedures described in § 145.14(b); *Provided*, that to retain this classification, a minimum of 30 samples from male flocks and 60 samples from female flocks or 60 samples from mixed, male and female flocks, (the ratio of samples collected from male and female birds must be representative of birds throughout the house), shall be retested at 28–30 weeks of age and at 4–6 week intervals thereafter.

* * * * *

(d) * * *

(1) * * *

(ii) [Reserved]

* * * * *

(h) * * *

(3) * * *

(i) A minimum of 30 birds per flock must test negative using an approved test in § 145.14 at intervals of 90 days or a sample of fewer than 30 birds may be tested, and found negative, at any one time if all pens are equally represented and a total of 30 birds is tested within each 90-day period; and

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007)

- 18. Amend § 145.45 by revising the OMB citation at the end of the section to read as follows:

§ 145.45 Terminology and classification; compartments.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007)

§ 145.53 [Amended]

- 19. Amend § 145.53 in paragraph (e) introductory text by removing the words “hobbyist or exhibition waterfowl, exhibition poultry, and game bird” and adding the words “hobbyist and exhibition poultry, and raised-for-

release waterfowl” in their place in the second sentence.

■ 20. Amend § 145.73 by:

- a. In paragraph (d)(1)(i), adding the words “serogroup D” after the words “Cultures from” in the last sentence;
- b. In paragraph (g)(1)(v), removing the words “and shall be reported to the Official State Agency on a monthly basis” and adding a sentence at the end of the paragraph;
- c. In paragraph (g)(1)(vi), removing the words “to allow for the serological testing required under paragraph (g)(1)(iv) of this section” and adding the words “to allow for serological testing” in their place;
- d. Revising paragraph (h)(3)(i);
- e. Removing paragraph (h)(3)(ii) and redesignating paragraph (h)(3)(iii) as paragraph (h)(3)(ii); and
- f. Revising the OMB citation at the end of the section.

The addition and revisions read as follows:

§ 145.73 Terminology and classification; flocks and products.

* * * * *

(g) * * *

(1) * * *

(v) * * * Owners of flocks shall report the presence or absence of *Salmonella* in their flocks on a monthly basis to the Official State Agency.

* * * * *

(h) * * *

(3) * * *

(i) A minimum of 30 birds per flock must test negative using an approved test in § 145.14 at intervals of 90 days or a sample of fewer than 30 birds may be tested, and found negative, at any one time if all pens are equally represented and a total of 30 birds is tested within each 90-day period; and

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007)

■ 21. Amend § 145.74 by revising the OMB citation at the end of the section to read as follows:

§ 145.74 Terminology and classification; compartments.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007)

■ 22. Amend § 145.83 by:

- a. In paragraph (e)(6)(i)(C), removing the words “*Salmonella pullorum*” and adding the words “*Salmonella Pullorum*” in their place in the first sentence;
- b. In paragraph (f)(1)(iv), revising the third sentence and adding a sentence at the end of the paragraph;
- c. In paragraph (f)(1)(v), removing the words “to allow for the serological

testing required under paragraph (f)(1)(iv) of this section” and adding the words “to allow for serological testing” in their place;

■ d. In paragraph (f)(1)(vi), removing the words “minimum of a 2-week period” and adding the words “maximum of a 4-week period” in their place in the first sentence;

■ e. Revising paragraph (h)(3)(i);

■ f. Removing paragraph (h)(3)(ii) and redesignating paragraph (h)(3)(iii) as paragraph (h)(3)(ii); and

■ g. Revising the OMB citation at the end of the section.

The addition and revisions read as follows:

§ 145.83 Terminology and classification; flocks and products.

* * * * *

(f) * * *

(1) * * *

(iv) * * * All *Salmonella* isolates from a flock shall be serogrouped.

Owners of flocks shall report the presence or absence of *Salmonella* in their flocks on a monthly basis to the Official State Agency;

* * * * *

(h) * * *

(3) * * *

(i) A minimum of 30 birds per flock must test negative using an approved test in § 145.14 at intervals of 90 days or a sample of fewer than 30 birds may be tested, and found negative, at any one time if all pens are equally represented and a total of 30 birds is tested within each 90-day period; and

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007)

■ 23. Amend § 145.84 by:

■ a. In paragraph (a)(3)(iii), adding the words “and/or ND Clean” after the words “Influenza Clean”; and

■ b. Revising the OMB citation at the end of section.

The revision reads as follows:

§ 145.84 Terminology and classification; compartments.

* * * * *

(Approved by the Office of Management and Budget under control number 0579–0007)

■ 24. Amend § 145.102 by revising paragraph (e) to read as follows:

§ 145.102 Participation.

* * * * *

(e) Under this subpart, gallinaceous flocks and waterfowl flocks may not be raised on the same premises. If they are on the same premises, they must be registered under subpart E of this part.

* * * * *

§ 145.103 [Amended]

■ 25. Amend § 145.103 in paragraph (b)(3) introductory text by removing the words “to reveal Pullorum-Typhid” and adding the words “to reveal Pullorum-Typhoid” in their place.

PART 146—NATIONAL POULTRY IMPROVEMENT PLAN FOR COMMERCIAL POULTRY

■ 26. The authority citation for part 146 continues to read as follows:

Authority: 7 U.S.C. 8301–8317; 7 CFR 2.22, 2.80, and 371.4.

■ 27. Amend part 146 by:

- a. Removing “*S. gallinarum*” wherever it appears and adding “*Salmonella Gallinarum*” in its place;
- b. Removing “*S. pullorum*” wherever it appears and adding “*Salmonella Pullorum*” in its place;
- c. Removing “*S. enteritidis*” and “*Salmonella enteritidis ser enteritidis*” wherever they appear and adding “*Salmonella Enteritidis*” in its place.

§ 146.3 [Amended]

■ 28. Amend § 146.3 by:

- a. In paragraph (a), removing the words “raised-for-release upland game bird premises, and raised-for-release waterfowl premises and any commercial upland game bird, commercial waterfowl” and adding the words “egg/meat-type game bird, egg/meat-type waterfowl” in their place; and
- b. In paragraph (c), removing the words “commercial upland gamebird, commercial waterfowl” and adding the words “egg/meat-type game bird, egg/meat-type waterfowl” in their place in the first sentence.

§ 146.6 [Amended]

■ 29. Amend § 146.6 by:

- a. In paragraph (a), removing the words “commercial upland game bird, commercial waterfowl” and adding the words “meat-type game bird, meat-type waterfowl” in their place; and
- b. In paragraph (b), removing the words “commercial upland game bird and commercial waterfowl” and adding the words “meat-type game bird and meat-type waterfowl” in their place.

§ 146.9 [Amended]

■ 30. In § 146.9 in paragraph (a) introductory text by removing the text “and (b)”.

Subpart E—Special Provisions for Egg/Meat-Type Game Birds, Egg/Meat-Type Waterfowl, Meat-Type Game Bird Slaughter Plants, and Meat-Type Waterfowl Slaughter Plants

■ 31. Revise the subpart E heading to read as set forth above.

PART 147—AUXILIARY PROVISIONS ON NATIONAL POULTRY IMPROVEMENT PLAN

■ 32. The authority citation for part 147 continues to read as follows:

Authority: 7 U.S.C. 8301–8317; 7 CFR 2.22, 2.80, and 371.4.

■ 33. Amend part 147 by:

- a. Removing “*S. gallinarum*” wherever it appears and adding “*Salmonella Gallinarum*” in its place;
 - b. Removing “*S. pullorum*” wherever it appears and adding “*Salmonella Pullorum*” in its place;
 - c. Removing “*S. enteritidis*” and “*Salmonella enteritidis* ser *enteritidis*” wherever they appear and adding “*Salmonella Enteritidis*” in its place.
- 34. Amend § 147.46 by revising paragraph (a)(9) to read as follows:

§ 147.46 Committee consideration of proposed changes.

(a) * * *

(9) Egg/meat-type game birds and waterfowl.

* * * * *

■ 35. Amend § 147.52 by revising paragraph (f)(2) to read as follows:

§ 147.52 Authorized laboratories.

* * * * *

(f) * * *

(2) All *Salmonella Pullorum* and *Mycoplasma Plan* disease infected flocks as confirmed by testing in accordance with § 145.14 must be reported to the Official State Agency within 48 hours.

* * * * *

Done in Washington, DC, this 3rd day of June 2024.

Michael Watson,

Administrator, Animal and Plant Health Inspection Service.

BILLING CODE 3410–34–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA–2024–1650; Airspace Docket No. 24–ANE–6]

RIN 2120–AA66

Amendment of Class E Airspace; Claremont, NH

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This action proposes to amend Class E airspace extending

upward from 700 feet above the surface for Claremont Municipal Airport, Claremont, NH, as the Claremont Non-directional Beacon (NDB) has been decommissioned and associated instrument approaches canceled. Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations at this airport.

DATES: Comments must be received on or before July 26, 2024.

ADDRESSES: Send comments identified by FAA Docket No. FAA–2024–1650 and Airspace Docket No. 24–ANE–06 using any of the following methods:

* *Federal eRulemaking Portal:* Go to www.regulations.gov and follow the online instructions for sending your comments electronically.

* *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation, 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

* *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except for Federal holidays.

* *Fax:* Fax comments to Docket Operations at (202) 493–2251.

Docket: Background documents or comments received may be read at www.regulations.gov at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except for Federal holidays.

FAA Order JO 7400.11H Airspace Designations and Reporting Points and subsequent amendments can be viewed online at www.faa.gov/air_traffic/publications/. You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington, DC 20591; telephone: (202) 267–8783.

FOR FURTHER INFORMATION CONTACT: John Fornito, Operations Support Group, Eastern Service Center, Federal Aviation Administration, 1701 Columbia Ave., College Park, GA 30337; telephone (404) 305–6364.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA’s authority to issue rules regarding aviation safety is found in Title 49 of the United States Code.

Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency’s authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority, as it would amend Class E airspace extending upward from 700 feet above the surface at Claremont Municipal Airport, Claremont, NH, to support standard instrument approach procedures for IFR operations at this airport.

Comments Invited

The FAA invites interested persons to participate in this rulemaking by submitting written comments, data, or views. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. To ensure the docket does not contain duplicate comments, commenters should submit only one time if comments are filed electronically, or commenters should send only one copy of written comments if comments are filed in writing.

The FAA will file in the docket all comments it receives, as well as a report summarizing each substantive public contact with FAA personnel concerning this proposed rulemaking. Before acting on this proposal, the FAA will consider all comments it receives on or before the closing date for comments. The FAA will consider comments filed after the comment period has closed if it is possible to do so without incurring expense or delay. The FAA may change this proposal in light of the comments it receives.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at www.dot.gov/privacy.

Availability of Rulemaking Documents

An electronic copy of this document may be downloaded through the

internet at www.regulations.gov. Recently published rulemaking documents can also be accessed through the FAA's web page at www.faa.gov/air-traffic/publications/airspace_amendments/.

You may review the public docket containing the proposal, any comments received, and any final disposition in person in the Dockets Operations office (see **ADDRESSES** section for address, phone number, and hours of operations). An informal docket may also be examined during regular business hours at the office of the Eastern Service Center, Federal Aviation Administration, Room 210, 1701 Columbia Ave., College Park, GA 30337.

Incorporation by Reference

Class E airspace designations are published in Paragraphs 6005 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document proposes to amend the current version of that order, FAA Order JO 7400.11H, dated August 11, 2023, and effective September 15, 2023. These updates will be published in the next update to FAA Order JO 7400.11. That order is publicly available as listed in the **ADDRESSES** section of this document.

FAA Order JO 7400.11H lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Proposal

The FAA proposes an amendment to 14 CFR part 71 to amend Class E airspace extending upward from 700 feet above the surface within a 7.3-mile radius (previously 5.5 miles) of Claremont Municipal Airport, Claremont, NH, and within 2 miles on each side of the 093° bearing of the airport, extending from the 7.3-mile radius to 15.1 miles east of the airport. An airspace evaluation caused this action due to the decommissioning of the Claremont NDB. The increased radius would encompass the remaining instrument approaches into this airport. Controlled airspace is necessary for the safety and management of instrument flight rules (IFR) operations in the area.

Regulatory Notices and Analyses

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore, (1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under Department of

Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

This proposal would be subject to an environmental analysis in accordance with FAA Order 1050.1F, “Environmental Impacts: Policies and Procedures,” prior to any FAA final regulatory action.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g); 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

- 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11H, Airspace Designations and Reporting Points, dated August 11, 2023, and effective September 15, 2023, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ANE NH E5 Claremont, NH [Amended]

Claremont Municipal Airport, NH
(Lat. 43°22'14" N, long. 72°22'6" W)

That airspace extending upward from 700 feet above the surface within a 7.3-mile radius of the Claremont Municipal Airport and 2 miles each side of the 093° bearing from the airport, extending from the 7.3-mile radius to 15.1 miles east of the airport.

* * * * *

Issued in College Park, Georgia, on June 6, 2024.

Patrick Young,

Manager, Airspace & Procedures Team North, Eastern Service Center, Air Traffic Organization.

BILLING CODE 4910–13–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1910

[Docket No. OSHA–2007–0073]

RIN 1218–AC91

Emergency Response Standard

AGENCY: Occupational Safety and Health Administration (OSHA), DOL.

ACTION: Notice of proposed rulemaking (NPRM); extension of comment period.

SUMMARY: OSHA is extending the period for submitting comments by 30 days to allow stakeholders interested in the NPRM on Emergency Response additional time to review the NPRM and collect information and data necessary for comment.

DATES: The comment period for the NPRM that was published at 89 FR 7774 on February 5, 2024, is extended. Comments on any aspect of the NPRM must be submitted by July 22, 2024.

ADDRESSES:

Written comments: You may submit comments and attachments, identified by Docket No. OSHA–2007–0073, electronically at www.regulations.gov, which is the Federal e-Rulemaking Portal. Follow the online instructions for making electronic submissions. The Federal e-Rulemaking Portal at www.regulations.gov is the only way to submit comments on this NPRM.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2007–0073). All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at www.regulations.gov. Therefore, OSHA cautions commenters about submitting information they do not want made available to the public or submitting materials that contain personal information (either about themselves or others), such as Social Security Numbers and birthdates.

Docket: To read or download comments or other material in the docket, go to Docket No. OSHA–2007–

0073 at www.regulations.gov. All comments and submissions are listed in the www.regulations.gov index; however, some information (e.g., copyrighted material) is not publicly available to read or download through that website. All comments and submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Documents submitted to the docket by OSHA or stakeholders are assigned document identification numbers (Document ID) for easy identification and retrieval. The full Document ID is the docket number plus a unique four-digit code. OSHA is identifying supporting information in this NPRM by author name and publication year, when appropriate. This information can be used to search for a supporting document in the docket at www.regulations.gov. Contact the OSHA Docket Office at 202-693-2350 (TTY number: 877-889-5627) for assistance in locating docket submissions.

FOR FURTHER INFORMATION CONTACT:

Press inquiries: Contact Frank Meilinger, Director, Office of Communications, U.S. Department of Labor; telephone: (202) 693-1999; email: meilinger.francis2@dol.gov.

General and technical information: Contact Mark Hagemann, Director, Office of Safety Systems, Directorate of Standards and Guidance, Occupational Safety and Health Administration, U.S. Department of Labor; telephone (202) 693-1950; email: osha.dsg@dol.gov.

SUPPLEMENTARY INFORMATION: On February 5, 2024, OSHA issued an NPRM to initiate rulemaking to update the existing Fire Brigades standard. The proposed rule would expand the scope of OSHA's standard to include a broad range of hazards emergency responders encounter during emergency response activities and would bring the standard in line with the Federal Emergency Management Agency's (FEMA) National Response Framework. It would also modernize the standard to align with the current industry consensus standards issued by the National Fire Protection Association (NFPA) on the safe conduct of emergency response activities.

The public comment period for the NPRM was to close on May 6, 2024, 90 days after publication of the NPRM. However, OSHA received requests from stakeholders to extend the comment period, and on March 28, 2024, published a notice announcing a 45-day extension of the comment period to June 21, 2024. OSHA has since received requests for an additional extension, (see, e.g., Document ID 1051, 1073,

1096, 1185). Stakeholders explained that they need additional time to carefully review the questions in the NPRM and gather data.

OSHA agrees to an additional extension of the public comment period and believes a 30-day extension is sufficient and appropriate in order to balance the agency's need for stakeholder input with the agency's desire to proceed with the rulemaking in a timely manner. Therefore, OSHA is extending the public comment period until July 22, 2024.

Additionally, several commenters submitted requests for a public hearing on the NPRM (see, e.g., Document ID 0435, 0444, 0456, 0459, 0463). OSHA plans to hold a virtual public hearing after the close of the comment period to allow stakeholders from all over the country to participate. OSHA will publish a separate notice at a future date to announce the details of the public hearing.

Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, 200 Constitution Avenue NW, Washington, DC 20210, authorized the preparation of this document pursuant to the following authorities: Sections 4, 6, and 8 of the Occupational Safety and Health Act of 1970 (29 U.S.C. 653, 655, 657); Secretary of Labor's Order 8-2020 (85 FR 58393 (Sept. 18, 2020)); 29 CFR part 1911; and 5 U.S.C. 553.

Signed at Washington, DC, on June 5, 2024.

James S. Frederick,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 52**

[EPA-R05-OAR-2024-0120; FRL-11915-02-R5]

Air Plan Approval; Michigan; Definitions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a request submitted by the Michigan Department of Environment, Great Lakes, and Energy (EGLE) on February 28, 2024, to revise the Michigan state implementation plan (SIP). The revision

is updating the SIP for clarity by removing a redundant definition for "used oil."

DATES: Comments must be received on or before July 11, 2024.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R05-OAR-2024-0120 at <https://www.regulations.gov> or via email to langman.michael@epa.gov. For comments submitted at Regulations.gov, follow the online instructions for submitting comments. Once submitted, comments cannot be edited or removed from the docket. EPA may publish any comment received to its public docket. Do not submit electronically any information you consider to be Confidential Business Information (CBI), Proprietary Business Information (PBI), or other information whose disclosure is restricted by statute. Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. EPA will generally not consider comments or comment contents located outside of the primary submission (i.e., on the web, cloud, or other file sharing system). For additional submission methods, please contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section. For the full EPA public comment policy, information about CBI, PBI, or multimedia submissions, and general guidance on making effective comments, please visit <https://www.epa.gov/dockets/commenting-epa-dockets>.

FOR FURTHER INFORMATION CONTACT:

Charles Hatten, Air and Radiation Division (AR18J), Environmental Protection Agency, Region 5, 77 West Jackson Boulevard, Chicago, Illinois 60604, (312) 886-6031, hatten.charles@epa.gov. The EPA Region 5 office is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding Federal holidays.

SUPPLEMENTARY INFORMATION: In the Final Rules section of this **Federal Register**, EPA is approving the state's SIP submittal as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this rule, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule

based on this proposed rule. EPA will not institute a second comment period. Any parties interested in commenting on this action should do so at this time. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment. For additional information, see the direct final rule which is located in the Rules section of this **Federal Register**.

Dated: June 3, 2024.

Debra Shore,

Regional Administrator, Region 5.

RIN 2070–AB27

Significant New Use Rules on Certain Chemical Substances (22–4.5e)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for chemical substances that were the subject of premanufacture notices (PMNs) and are also subject to a TSCA Order. The SNURs require persons who intend to manufacture (defined by statute to include import) or process any of these chemical substances for an activity that is proposed as a significant new use by this rule to notify EPA at least 90 days before commencing that activity. The required notification initiates EPA's evaluation of the conditions of use for that chemical substance. In addition, the manufacture or processing for the significant new use may not commence until EPA has conducted a review of the required notification, made an appropriate determination regarding that notification, and taken such actions as required by that determination.

DATES: Comments must be received on or before July 11, 2024.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2022–0771, at <https://www.regulations.gov>. Follow the online instructions for submitting

comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For technical information contact: William Wyson, New Chemicals Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–4163; email address: wysong.william@epa.gov.

For general information contact: The TSCA–Hotline, ABVI–Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. What is the Agency's authority for taking this action?

TSCA section 5(a)(2) (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a “significant new use.” EPA must make this determination by rule after considering all relevant factors, including the factors in TSCA section 5(a)(2) (see also the discussion in Unit II.).

B. What action is the Agency taking?

EPA is proposing SNURs for the chemical substances discussed in Unit III. These SNURs, if finalized as proposed, would require persons who intend to manufacture or process any of these chemical substances for an activity that is designated as a significant new use to notify EPA at least 90 days before commencing that activity.

C. Does this action apply to me?

1. General Applicability

This action applies to you if you manufacture, process, or use the chemical substances identified in Unit III. This may include entities in North American Industrial Classification System (NAICS) codes 325 and 324110, e.g., chemical manufacturing and petroleum refineries.

2. Applicability to Importers and Exporters

This action may also apply to certain entities through pre-existing import certification and export notification

requirements under TSCA (<https://www.epa.gov/tsc-import-export-requirements>).

Chemical importers are subject to TSCA section 13 (15 U.S.C. 2612), the requirements promulgated at 19 CFR 12.118 through 12.127 (see also 19 CFR 127.28), and the EPA policy in support of import certification at 40 CFR part 707, subpart B. Chemical importers must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA, including regulations issued under TSCA sections 5, 6, 7 and Title IV.

Pursuant to 40 CFR 721.20, any persons who export or intend to export a chemical substance that is the subject of this proposed rule on or after July 11, 2024 are subject to TSCA section 12(b) (15 U.S.C. 2611(b)) and must comply with the export notification requirements in 40 CFR part 707, subpart D.

D. What are the incremental economic impacts of this action?

EPA has evaluated the potential costs of establishing SNUN reporting requirements for potential manufacturers (including importers) and processors of the chemical substances subject to these proposed SNURs. This analysis, which is available in the docket, is briefly summarized here.

1. Estimated Costs for SNUN Submissions

If a SNUN is submitted, costs are an estimated \$45,000 per SNUN submission for large business submitters and \$14,500 for small business submitters. These estimates include the cost to prepare and submit the SNUN (including registration for EPA's Central Data Exchange (CDX)), and the payment of a user fee. Businesses that submit a SNUN would be subject to either a \$37,000 user fee required by 40 CFR 700.45(c)(2)(ii) and (d), or, if they are a small business as defined at 13 CFR 121.201, a reduced user fee of \$6,480 (40 CFR 700.45(c)(1)(ii) and (d)) per fiscal year 2022. The costs of submission for SNUNs will not be incurred by any company unless a company decides to pursue a significant new use as defined in these SNURs. Additionally, these estimates reflect the costs and fees as they are known at the time of this rulemaking.

2. Estimated Costs for Export Notifications

EPA has also evaluated the potential costs associated with the export notification requirements under TSCA

section 12(b) and the implementing regulations at 40 CFR part 707, subpart D. For persons exporting a substance that is the subject of a SNUR, a one-time notice to EPA must be provided for the first export or intended export to a particular country. The total costs of export notification will vary by chemical, depending on the number of required notifications (*i.e.*, the number of countries to which the chemical is exported). While EPA is unable to make any estimate of the likely number of export notifications for the chemical substances covered by these SNURs, as stated in the accompanying economic analysis, the estimated cost of the export notification requirement on a per unit basis is approximately \$106.

E. What should I consider as I prepare my comments for EPA?

1. Submitting CBI

Do not submit CBI to EPA through email or <https://www.regulations.gov>. If you wish to include CBI in your comment, please follow the applicable instructions at <https://www.epa.gov/dockets/commenting-epa-dockets#rules> and clearly mark the information that you claim to be CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR parts 2 and 703.

2. Tips for Preparing Your Comments

When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets>.

II. Background

This unit provides general information about SNURs. For additional information about EPA's new chemical program go to <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca>.

A. Significant New Use Determination Factors

TSCA section 5(a)(2) states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors, including:

- The projected volume of manufacturing and processing of a chemical substance.
- The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance.
- The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.
- The reasonably anticipated manner and methods of manufacturing,

processing, distribution in commerce, and disposal of a chemical substance.

In determining what would constitute a significant new use for the chemical substances that are the subject of these SNURs, EPA considered relevant information about the toxicity of the chemical substances, and potential human exposures and environmental releases that may be associated with the substances, in the context of the four bulleted TSCA section 5(a)(2) factors listed in this unit and discussed in Unit III.

These proposed SNURs include PMN substances that are subject to Orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). The TSCA Orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

B. Rationale and Objectives of the SNURs

1. Rationale

Under TSCA, no person may manufacture a new chemical substance or manufacture or process a chemical substance for a significant new use until EPA makes a determination as described in TSCA section 5(a) and takes any required action. The issuance of a SNUR is not a risk determination itself, only a notification requirement for "significant new uses," so that the Agency has the opportunity to review the SNUN for the significant new use and make a TSCA section 5(a)(3) risk determination.

During review of the PMNs submitted for these chemical substances, EPA concluded that regulation was warranted under TSCA section 5(e), pending the development of information sufficient to make reasoned evaluations of the health or environmental effects of these chemical substances. The basis for such findings is outlined in Unit IV. Based on these findings, TSCA Orders requiring the use of appropriate exposure controls were negotiated with the PMN submitters. As a general matter, EPA believes it is necessary to follow the TSCA Orders with a SNUR that identifies the absence of those protective measures as significant new uses to ensure that all manufacturers and processors—not just the original submitter—are held to the same standard.

2. Objectives

EPA is proposing these SNURs because the Agency wants:

- To identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

- To have an opportunity to review and evaluate data submitted in a SNUN before the submitter begins manufacturing or processing a listed chemical substance for the described significant new use.

- To be obligated to make a determination under TSCA section 5(a)(3) regarding the use described in the SNUN, under the conditions of use. The Agency will either determine under TSCA section 5(a)(3)(C) that the significant new use is not likely to present an unreasonable risk, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by the Administrator under the conditions of use, or make a determination under TSCA section 5(a)(3)(A) or (B) and take the required regulatory action associated with the determination, before manufacture or processing for the significant new use of the chemical substance can occur.

Issuance of a proposed SNUR for a chemical substance does not signify that the chemical substance is listed on the TSCA Chemical Substance Inventory (TSCA Inventory). Guidance on how to determine if a chemical substance is on the TSCA Inventory is available at <https://www.epa.gov/tsca-inventory>.

C. Significant New Uses Claimed as CBI

EPA is proposing to establish certain significant new uses which have been claimed as CBI subject to Agency confidentiality regulations at 40 CFR part 2 and 40 CFR part 720, subpart E. Absent a final determination or other disposition of the confidentiality claim under 40 CFR part 2 procedures, EPA is required to keep this information confidential. EPA promulgated a procedure at 40 CFR 721.11 to deal with the situation where a specific significant new use is CBI.

Under these procedures a manufacturer or processor may request EPA to determine whether a specific use would be a significant new use under the rule. The manufacturer or processor must show that it has a *bona fide* intent to manufacture or process the chemical substance and must identify the specific use for which it intends to manufacture or process the chemical substance. If

EPA concludes that the person has shown a *bona fide* intent to manufacture or process the chemical substance, EPA will tell the person whether the use identified in the *bona fide* submission would be a significant new use under the rule. Since most of the chemical identities of the chemical substances subject to these SNURs are also CBI, manufacturers and processors can combine the *bona fide* submission under the procedure in 40 CFR 721.11 into a single step.

If EPA determines that the use identified in the *bona fide* submission would not be a significant new use, *i.e.*, the use does not meet the criteria specified in the rule for a significant new use, that person can manufacture or process the chemical substance so long as the significant new use trigger is not met. In the case of a production volume trigger, this means that the aggregate annual production volume does not exceed that identified in the *bona fide* submission to EPA. Because of confidentiality concerns, EPA does not typically disclose the actual production volume that constitutes the use trigger. Thus, if the person later intends to exceed that volume, a new *bona fide* submission would be necessary to determine whether that higher volume would be a significant new use.

D. Applicability of General Provisions

General provisions for SNURs appear in 40 CFR part 721, subpart A. These provisions describe persons subject to SNURs, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the rule.

Pursuant to 40 CFR 721.1(c), persons subject to SNURs must comply with the same requirements and EPA regulatory procedures as submitters of PMNs under TSCA section 5(a)(1)(A). In particular, these requirements include the information submission requirements of TSCA sections 5(b) and 5(d)(1), the exemptions authorized by TSCA sections 5(h)(1), 5(h)(2), 5(h)(3), and 5(h)(5) and the regulations at 40 CFR part 720. In addition, provisions relating to user fees appear at 40 CFR part 700.

Once EPA receives a SNUN, EPA must either determine that the significant new use is not likely to present an unreasonable risk of injury under the conditions of use for the chemical substance or take such regulatory action as is associated with an alternative determination under TSCA section 5 before the manufacture (including import) or processing for the significant new use can commence. If EPA determines that the conditions of

use of the chemical substance is not likely to present an unreasonable risk, EPA is required under TSCA section 5(g) to publish a statement of EPA's findings in the **Federal Register**.

As discussed in Unit I.C.2., persons who export or intend to export a chemical substance identified in a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b), and persons who import a chemical substance identified in a final SNUR are subject to the TSCA section 13 import certification requirements. See also <https://www.epa.gov/tsca-import-export-requirements>.

E. Applicability of the Proposed SNURs to Uses Occurring Before the Effective Date of the Final Rule

To establish a significant new use, EPA must determine that the use is not ongoing. The chemical substances subject to this proposed rule have undergone premanufacture review and received determinations under TSCA section 5(a)(3)(C). TSCA Orders have been issued for these chemical substances and the PMN submitters are required by the TSCA Orders to submit a SNUN before undertaking activities that would be designated as significant new uses in these SNURs. Additionally, the identities of many of the chemical substances subject to this proposed rule have been claimed as confidential per 40 CFR 720.85, further reducing the likelihood that another party would manufacture or process the substances for an activity that would be designated as a significant new use. Based on this, the Agency believes that it is highly unlikely that any of the significant new uses identified in Unit III. are ongoing.

When the chemical substances identified in Unit III. are added to the TSCA Inventory, EPA recognizes that, before the rule is effective, other persons might engage in a use that has been identified as a significant new use. Persons who begin manufacture or processing of the chemical substances for a significant new use identified on or after the designated cutoff date specified in Unit III.A. would have to cease any such activity upon the effective date of the final rule. To resume their activities, these persons would have to first comply with all applicable SNUR notification requirements and EPA would have to take action under TSCA section 5 allowing manufacture or processing to proceed.

F. Important Information About SNUN Submissions

1. SNUN Submissions

SNUNs must be submitted on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 720.40 and 721.25. E-PMN software is available at <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca>.

2. Development and Submission of Information

EPA recognizes that TSCA section 5 does not require development of any particular new information (*e.g.*, generating test data) before submission of a SNUN. There is an exception: If a person is required to submit information for a chemical substance pursuant to a rule, order or consent agreement under TSCA section 4, then TSCA section 5(b)(1)(A) requires such information to be submitted to EPA at the time of submission of the SNUN.

In the absence of a rule, TSCA Order, or consent agreement under TSCA section 4 covering the chemical substance, persons are required only to submit information in their possession or control and to describe any other information known to or reasonably ascertainable by them (see 40 CFR 720.50). However, upon review of PMNs and SNUNs, the Agency has the authority to require appropriate testing. To assist with EPA's analysis of the SNUN, submitters are encouraged, but not required, to provide the potentially useful information identified for the chemical substance in Unit III.C.

EPA strongly encourages persons, before performing any testing, to consult with the Agency pertaining to protocol selection. Furthermore, pursuant to TSCA section 4(h), which pertains to reduction of testing in vertebrate animals, EPA encourages consultation with the Agency on the use of alternative test methods and strategies (also called New Approach Methodologies, or NAMs), if available, to generate the recommended test data. EPA encourages dialog with Agency representatives to help determine how best the submitter can meet both the data needs and the objective of TSCA section 4(h). For more information on alternative test methods and strategies to reduce vertebrate animal testing, visit <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/alternative-test-methods-and-strategies-reduce>.

The potentially useful information described in Unit III.C. for these

chemical substances may not be the only means of providing information to evaluate the chemical substance associated with the significant new uses. However, submitting a SNUN without any information may increase the likelihood that EPA will take action under TSCA sections 5(e) or 5(f). EPA recommends that potential SNUN submitters contact EPA early enough so that they will be able to conduct the appropriate tests to provide useful information with their SNUN submission.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs which provide detailed information on the following:

- Human exposure and environmental release that may result from the significant new use of the chemical substances.

III. Chemical Substances Subject to These Proposed SNURs

A. What is the designated cutoff date for ongoing uses?

EPA designates June 11, 2024, as the cutoff date for determining whether the new use is ongoing. This designation is explained in more detail in Unit II.E.

B. What information is provided for each chemical substance?

For each chemical substance identified in Unit III.C., EPA provides the following information:

- PMN number (the proposed CFR citation assigned in the regulatory text section of this document).
- Chemical name (generic name, if the specific name is claimed as CBI).
- Chemical Abstracts Service Registry Number (CASRN) (if assigned for non-confidential chemical identities).
- Basis for the action or, as applicable, the effective date of and basis for the TSCA Order.
- Potentially useful information.

The regulatory text section of the proposed rule specifies the activities designated as significant new uses. Certain new uses, including production volume limits and other uses designated in the proposed rules, may be claimed as CBI.

These proposed rules include PMN substances that are subject to orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). Those TSCA Orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal

that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

Where EPA determined that the PMN substance may present an unreasonable risk of injury to human health via inhalation exposure, the underlying TSCA Order usually requires that potentially exposed employees wear specified respirators unless actual measurements of the workplace air show that air-borne concentrations of the PMN substance are below a New Chemical Exposure Limit (NCEL). The Comprehensive NCELS provisions in TSCA Orders include requirements addressing performance criteria for sampling and analytical methods, periodic monitoring, respiratory protection, and recordkeeping. No comparable NCEL provisions for SNURs currently exist in 40 CFR part 721, subpart B. Therefore, for these cases, the individual SNURs in 40 CFR part 721, subpart E, will state that persons subject to the SNUR who wish to pursue NCELS as an alternative to the 40 CFR 721.63 respirator requirements may request to do so under 40 CFR 721.30. EPA expects that persons whose 40 CFR 721.30 requests to use the NCELS approach for SNURs are approved by EPA, will be required to comply with NCELS provisions that are comparable to those contained in the corresponding TSCA Order.

C. Which chemical substances are subject to this proposed rule?

The substances subject to the proposed rules in this document are as follows:

PMN Number: P-18-398 (40 CFR 721.11860)

Chemical Name: 1,2-Ethanediamine, N-(1-methylethyl)-N-[2-[(1-methylethyl)amino]ethyl]-.

CASRN: 10507-06-9.

Effective Date of TSCA Order: April 13, 2022.

Basis for TSCA Order: The PMN states that the use will be as an intermediate. Based on comparison to analogous substances, EPA has identified concerns for acute toxicity, skin sensitization, eyes, skin, and respiratory tract corrosion, and systemic, reproductive, and developmental effects. Based on comparison to analogous aliphatic amines, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 210 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may

present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified full facepiece gas/vapor respirator with an APF of at least 50 where there is a potential for inhalation exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS; and
- No use of the PMN substance other than for the confidential use allowed in the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity and skin sensitization testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-19-49 (40 CFR 721.11861)

Chemical Name: Fatty acids, polymers with substituted carbomonocycles, dialkanolamine, alkyl substituted alkanediamine and halo-substituted heteromonocycle, formates (salts) (generic).

CASRN: Not available.

Effective Date of Modified TSCA Order: May 19, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an isolated intermediate coating resin. Based on the amine content and the surfactant properties of the PMN substance, EPA has identified concerns for irritation to all tissues. Based on formic acid, EPA has also identified concerns for neurotoxicity, blood toxicity, and developmental toxicity. Based on test data on the PMN substance, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 114 ppb. EPA issued an Order under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information

to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. The Order, effective October 27, 2020, required the submitter of P-19-49 to submit to EPA the results of certain toxicity testing before any manufacturing (which includes import), processing, or use of the PMN substance. On September 17, 2021, the PMN submitter provided the results of three environmental toxicity studies in accordance with the requirements of the Order. EPA reviewed those studies and determined the studies to be valid. EPA subsequently modified the terms of the Order to mitigate any unreasonable risks to human health and the environment and issued a modified Order, effective May 19, 2022. To protect against these potential risks, the modified Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No manufacture or processing of the PMN substance in a manner that generates a vapor, mist, or aerosol;
- No use of the PMN substance in a manner that generates a vapor, mist, or aerosol that results in inhalation to industrial or commercial workers;
- No manufacture the PMN substance to contain the confidential residual identified in the Order at greater than 0.1%; and
- No release of the PMN substance resulting in surface water concentrations that exceed 114 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye irritation, developmental/reproductive toxicity, pulmonary effects, and neurotoxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-19-160 (40 CFR 721.11862)

Chemical Name: Alkanesulfonic acid, 2-[(2-aminoethyl)heteroatom-substituted]-, sodium salt (1:1), polymer with .alpha.-[2,2-bis(hydroxymethyl)butyl]-.omega.-methoxypoly(oxy-1,2-ethanediyl) and 1,1'-methylenebis[4-isocyanatocyclohexane], acrylic acid-dipentaerythritol reaction products-and polypropylene glycol ether with pentaerythritol (4:1) triacrylate-blocked (generic).

CASRN: Not available.

Effective Date of TSCA Order: July 27, 2022.

Basis for TSCA Order: The PMN states that the use will be as a component of a UV curable printing ink. Based on analogue data and information provided in the SDS, EPA has identified concerns for skin irritation and dermal and respiratory sensitization. Based on analogue data and data on a component of the PMN substance, EPA has identified concerns for eye irritation/corrosion and genotoxicity. Based on analogue data, EPA has also identified concerns for systemic toxicity, developmental toxicity, and neurotoxicity. Based on comparison to analogous polyanionic polymers, EPA predicts that the PMN substance has low environmental hazard. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure; and
- No release of the PMN substance resulting in surface water concentrations that exceed 302 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a

SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, pulmonary effects, reproductive toxicity (developmental effects), skin sensitization, skin irritation, eye damage, carcinogenicity, and genetic toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-20-101 (40 CFR 721.11863)

Chemical Name: Alkanoic acid, hydroxy-(hydroxyalkyl)-alkyl-, polymer with .alpha.-[(hydroxyalkyl)alkyl]-.omega.-alkoxypoly(oxy-alkanediyl), (haloalkyl)oxiane polymer (alkylalkylidene)bis[hydroxycarbomonocycle] alkenoate and isocyanate-alkyl-carbomonocycle, hydroxyalkyl acrylate-blocked (generic).

CASRN: Not available.

Effective Date of TSCA Order: July 27, 2022.

Basis for TSCA Order: The PMN states that the use will be as a coating resin. Based on structural alerts and test data for an analogue and feedstock component, EPA has identified concerns for skin, eye, and respiratory tract irritation; skin and respiratory sensitization; acute neurotoxicity; and systemic and reproductive effects. Based on test data for a metabolite of the PMN substance, as well as analogues of the LMW fraction, EPA has identified concerns for eye and respiratory tract irritation; skin sensitization; portal-of-entry effects; and systemic, reproductive, and developmental effects. Based on hazard data for an analogous chemical and comparison to analogous polyanionic polymers (and monomers), EPA predicts that the substance has moderate environmental toxicity. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified combination particulate and gas/vapor respirator with an APF of at least 50 where there is a potential for inhalation exposure;

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;

- No manufacture or processing of the PMN substance with greater than 20% (by weight) oligomer content below 1,000 daltons (*i.e.*, low molecular weight species);

- No processing or use of the PMN substance for manual spray application;

- No processing of the PMN substance for use in a consumer product; and

- No use of the PMN substance in a consumer product.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require this test, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P–20–182 (40 CFR 721.11864)

Chemical Name: 1,4-Benzenedicarboxylic acid, bis[2-(2-butoxyethoxy)ethyl] ester (9CI).

CASRN: 90430–63–0.

Effective Date of TSCA Order: April 21, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a plasticizer for PVC formulations. Based on the structural alert for ethylene glycol ethers, EPA has identified concerns for neurotoxicity, kidney effects, immunotoxicity, and blood effects. Based on test data on the PMN substance, EPA has identified concerns for skin sensitization and mutagenicity. Based on test data for an analogue, EPA has identified concerns for skin sensitization. Based on test data on potential metabolites, EPA has also identified concerns for acute toxicity (mortality), lung toxicity, systemic effects, and developmental effects. Based on test data on the PMN substance and comparison to analogous chemical substances, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 4 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I),

based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;

- Use of a NIOSH-certified particulate respirator with an APF of at least 1,000 where there is a potential for inhalation exposure, or compliance with an NCEL of 0.01 mg/m³ as an 8-hour time-weighted average to prevent inhalation exposure;

- No release of the PMN substance resulting in surface water

- concentrations that exceed 4 ppb; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of metabolism or pharmacokinetics, skin sensitization, reproductive toxicity, developmental toxicity, immunotoxicity, neurotoxicity, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P–21–56 (40 CFR 721.11865)

Chemical Name: Isocyanic acid, polyalkylenepolyarylene ester, polymer with alkyl-hydroxyalkyl-alkanediol, alkoxyalcohol and alkoxyalkoxyalcohol-blocked (generic).

CASRN: Not available.

Effective Date of TSCA Order: May 11, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a component of coatings. Based on data on an analogous chemical substance, EPA has identified concerns for acute neurotoxicity and skin sensitization. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and

5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;

- Use of a NIOSH-certified particulate, gas/vapor, or combination particulate and gas/vapor (as appropriate to the conditions) respirator with an APF of at least 50, or 1,000 if spray applied, where there is a potential for inhalation exposure;

- No manufacture of the PMN substance beyond 24 months without submittal to EPA of the results of certain testing described in the Testing section of the Order;

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS; and

- No use of the PMN substance in a consumer product.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of neurotoxicity and acute toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information. In addition, the submitter has agreed not to exceed the time limit specified in the Order without performing the required testing outlined in the Testing section of the Order.

PMN Numbers: P–21–58 (40 CFR 721.11866), P–21–60 (40 CFR 721.11867), and P–21–61 (40 CFR 721.11868)

Chemical Names: Substituted alkanolic acid, compound with aminoalkylalkyl-aminoalkylalkoxy-polyoxyalkylalkanediyl, polymer with haloalkyl-epoxide and alkylalkylidene-cycloarylalcohol (generic) (P–21–58); Bisphenol A epichlorohydrin polymer with alkylpolyalkene-polyarylene-hydroxypolyoxyalkyldiyl reaction products with alkylalkylidenealkylalkylidene-

aminoalkyl-alkanepolyamine and alkylaminoalkanol (generic) (P-21-60); and Sulfur based acid, compds. with modified bisphenol A-epichlorohydrin-polyalkylene polyol ether with bisphenol A polymer-N-dialkylalkylidene-N-(dialkylalkylidene)aminoalkyl-alkanepolyamine-alkylaminoalkanol reaction products (generic) (P-21-61).

*CASRN*s: Not available.

Effective Date of TSCA Order: May 9, 2022.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use will be as a component in coatings (P-21-58 and P-21-61) and as an isolated intermediate (P-21-60). Based on the surfactant-like properties of P-21-58, EPA has identified concerns for lung effects and irritation to the skin, eyes, and respiratory tract. Based on data for an analogue of the lower molecular weight fraction of P-21-58, EPA has also identified concerns for neurotoxicity, cardiovascular effects, and systemic effects. Based on a structural alert for aliphatic amines and data for the expected hydrolysis product, EPA has identified concerns for irritation to the skin, eyes, and respiratory tract; neurotoxicity; mortality; systemic effects; developmental effects; and carcinogenicity for P-21-60 and P-21-61. Based on comparison to analogous polycationic polymers, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 50 ppb for P-21-58. Based on comparison to analogous aliphatic amines and polycationic polymers, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 11 ppb for P-21-60. Based on comparison to analogous aliphatic amines, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 11 ppb for P-21-61. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No manufacture, processing, or use of the PMN substances in any manner that results in inhalation exposure;

- No use of the PMN substances in a consumer product;
- No release of P-21-58 resulting in surface water concentrations that exceed 50 ppb;
- No release of P-21-60, or any waste stream containing P-21-60, into water; and
- No release of P-21-61 resulting in surface water concentrations that exceed 11 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, neurotoxicity, skin irritation, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substances. EPA has also determined that the results of eye irritation, pulmonary effects, developmental toxicity, and carcinogenicity testing may be potentially useful to characterize the health effects of P-21-60 and P-21-61. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-21-66 (40 CFR 721.11869)

Chemical Name: 1,2-Alkanediol, 3-aryloxy, mono phosphate ester (generic).
CASRN: Not available.

Effective Date of TSCA Order: June 10, 2022.

Basis for TSCA Order: The PMN states that the use will be as a blended or standalone epoxy curative (hardener) and foaming agent when blended with certain ingredients. Based on information provided in the SDS and the low pH of the PMN substance when neat, EPA has identified concerns for skin, eye, and respiratory tract corrosion. Based on release of the free phosphate, EPA has also identified concerns for blood effects and irritation to the skin, eyes, and respiratory tract. Based on analogue data and the structural alert for phosphate esters, EPA has identified concerns for acute toxicity, acute neurotoxicity, corrosion to skin and eyes, and delayed neurotoxicity. Based on test data for an analogue of the hydrolysis product, EPA has also identified concerns for acute

toxicity, eye irritation, systemic effects, and developmental effects. Based on comparison to an analogous chemical substance, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 3 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No use of the PMN substance in a consumer product;
- No use of the PMN substance other than as an epoxy curative;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure or that results in fugitive air emissions; and
- No release of the PMN substance, or any waste stream containing the PMN substance, into water.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, eye irritation/corrosion, skin corrosion, specific target organ toxicity, pulmonary effects, developmental toxicity, neurotoxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-21-68 (40 CFR 721.11870)

Chemical Name: Metalloxanes, alkyl, alkyl group-terminated, reaction products with dihalo-dialkylalkylaryl-alkyl-polycyclic-ylidene(dialkylsilylene)-dialkylalkylaryl-alkylalkyl-polycyclic-

ylidene, metal oxide and nonmetallic oxide (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 27, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a polymerization catalyst. Based on the reactivity of the PMN substance and the release of hydrochloric acid, EPA has identified concerns for an acute handling hazard; irritation and corrosion to the skin, eyes, and respiratory tract; and lung overload (if respirable, poorly soluble particulates are inhaled). Based on analogue data, EPA has identified concerns for irritation to skin, eyes, and respiratory tract; lung effects; serious eye damage and ocular corrosion; portal-of-entry effects; mutagenicity; acute neurotoxicity; systemic effects; reproductive/developmental effects; and dermal and respiratory sensitization. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No manufacture, processing, or use of the PMN substance other than in an enclosed process;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation or dermal exposure to the PMN substance; and
- No release of the PMN substance resulting in surface water concentrations that exceed 50 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, skin sensitization, skin corrosion, specific target organ toxicity, pulmonary effects, reproductive toxicity, and mutagenicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require

these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-21-83 (40 CFR 721.11871)

Chemical Name: Alkenoic acid, reaction products with pentaerythritol, polymers with diisocyanatoalkane and heteromonocycle homopolymer esters with alkenoic acid-pentaerythritol reaction products (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 6, 2022.

Basis for TSCA Order: The PMN states that the use will be as a UV curable resin. Based on information provided in the SDS and a structural alert for acrylates, EPA has identified concerns for irritation to the skin, eyes, and respiratory tract. Based on a structural alert for acrylates for the low molecular weight fraction, OECD QSAR Toolbox results for the feedstock present as a residual, and information provided in the SDS, EPA has also identified concerns for skin and respiratory sensitization. Based on multifunctional reactive groups, EPA has identified respiratory sensitization. Based on test data for the feedstock residual, EPA has identified concerns for skin irritation, clinical signs, systemic effects, and irritation in the GI tract. Based on comparison to analogous acrylates/methacrylates and esters, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 1 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified Combination Particulate and Gas/Vapor respirator with an APF of 1,000 where there is a potential for inhalation exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No use of the PMN substance in a consumer product; and
- No release of the PMN substance resulting in surface water concentrations that exceed 1 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye damage, specific target organ toxicity, and skin sensitization testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-21-84 (40 CFR 721.11872)

Chemical Name: Carbopolycycle octa-alkene, halo (generic).

CASRN: Not available.

Effective Date of TSCA Order: May 27, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a chemical intermediate. Based on test data for an analogue, EPA has identified concerns for severe irritation/corrosion to the skin, eyes, and respiratory tract, acute toxicity, and mutagenicity. Based on OECD Toolbox results, EPA has also identified concerns for skin sensitization. Based on comparison to analogous benzyl halides, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 7 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified Gas/Vapor respirator with an APF of at least 50 where there is a potential for inhalation exposure;
- No release of the PMN substance resulting in surface water concentrations that exceed 7 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, specific target organ toxicity, skin corrosion, eye damage, skin sensitization, genetic toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P–21–92 (40 CFR 721.11873)

Chemical Name: 2-Propenoic acid, (polyhydro-1,3-dioxo-2H-isoindol-2-yl)alkyl ester (generic).

CASRN: Not available.

Effective Date of TSCA Order: April 5, 2022.

Basis for TSCA Order: The PMN states that the uses of the PMN substance will be for thermoset composites, 3D printing, and industrial coatings. Based on test data for the PMN substance, EPA has identified concerns for skin irritation. Based on information provided in the SDS, EPA has also identified concerns for skin irritation and eye irritation. Based on test data for a hydrolysis product, EPA has identified concerns for developmental, body weight, and portal-of-entry (inhalation and oral) effects. Based on test data for an analogue, EPA has also identified concerns for clinical signs, skin irritation, eye irritation, and developmental, body weight, and lung effects. Based on test data for an analogue, EPA identified concerns for portal-of-entry (inhalation) and liver effects. Based on comparison to analogous acrylates/methacrylates and imides, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 13 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to

human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified combination particulate and gas/vapor respirator with an APF of at least 10 to prevent inhalation exposure where there is a potential for inhalation exposure;
- Disposal of the PMN substance only by incineration or by RCRA Subtitle C landfill;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No use of the PMN substance in a consumer product;
- No use of the PMN substance where the concentration of the PMN substance exceeds 40% in formulation when inhalation exposure is expected; and
- No release of the PMN substance, or any waste stream containing the PMN substance, into water.

The proposed SNUR designates as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that would be designated by this SNUR. EPA has determined that the results of developmental toxicity, specific target organ toxicity, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the environmental and human health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P–21–102 (40 CFR 721.11874)

Chemical Name: Heteromonocycle, polymer, [2-[(1-oxo-2-propen-1-yl)oxy]alkyl]ester (generic).

CASRN: Not available.

Effective Date of TSCA Order: May 20, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a raw material for industrial additive manufacturing, UV-curable inks, coatings and adhesives. Based on

TSCA New Chemical Category document for acrylates, EPA has identified concerns for skin sensitization and irritation to the skin, eyes, and respiratory tract. Based on test data for an analogue of the low molecular weight fraction, EPA has also identified concerns for systemic and developmental effects. Based on comparison to analogous acrylates/methacrylates and esters, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 337 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified Combination Particulate and Gas/Vapor respirator with an APF of at least 10 where there is a potential for inhalation exposure;
- No use of the PMN substance in a consumer product;
- No release of the PMN substance resulting in surface water concentrations that exceed 337 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, skin sensitization, eye damage, developmental toxicity, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers: P-21-109 (40 CFR 721.11875), P-21-110 (40 CFR 721.11876), P-21-111 (40 CFR 721.11877), P-21-112 (40 CFR 721.11878), P-21-113 (40 CFR 721.11879), P-21-114 (40 CFR 721.11880), P-21-116 (40 CFR 721.11881), P-21-117 (40 CFR 721.11882), P-21-118 (40 CFR 721.11883), P-21-119 (40 CFR 721.11884), P-21-121 (40 CFR 721.11885), P-21-122 (40 CFR 721.11886), and P-21-123 (40 CFR 721.11887)

Chemical Names: Hydrocarbons linear and branched, light alkylate (generic) (P-21-109), Hydrocarbons linear and branched, light catalytic cracked (generic) (P-21-110), Hydrocarbons linear and branched, heavy catalytic cracked (generic) (P-21-111), Hydrocarbons linear and branched, light hydrocracked (generic) (P-21-112), Hydrocarbons linear and branched, isomerization (generic) (P-21-113), Hydrocarbons linear and branched, heavy catalytic reformed (generic) (P-21-114), Hydrocarbons linear and branched, hydrotreated light (generic) (P-21-116), Hydrocarbons linear and branched, hydrotreated light paraffinic (generic) (P-21-117), Hydrocarbons linear and branched, light catalytic cracked (generic) (P-21-118), Hydrocarbons linear and branched, heavy hydrocracked (generic) (P-21-119), Hydrocarbons linear and branched, heavy catalytic cracked (generic) (P-21-121), Hydrocarbons linear and branched, heavy hydrocracked (generic) (P-21-122), and Hydrocarbons linear and branched, light hydrocracked (generic) (P-21-123).

CASRNs: Not available.

Effective Date of TSCA Order: July 14, 2022.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use will be as a component in fuels (P-21-109, P-21-110, P-21-111, P-21-112, P-21-113, P-21-114, P-21-116, P-21-117, P-21-121, and P-21-123) or as a chemical intermediate (P-21-118, P-21-119, and P-21-122). Based on available information on compositionally analogous mixtures and on constituents of the PMN substances, EPA has identified concerns for skin and eye irritation, acute toxicity, systemic toxicity (neurotoxicity, body weight effects, and liver, kidney, blood, spleen, and other organ effects), reproductive and developmental toxicity, oral and inhalation portal entry effects, genetic toxicity, and carcinogenicity. Based on the chemical composition (petroleum) of the PMN substances, EPA has also identified

concerns for hydrocarbon pneumonia/aspiration hazard. EPA assumes that respiratory tract irritation is possible from exposure to the PMN substances. Based on comparison to analogous chemical substances and data on constituents of the PMN substances, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 0.3 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substances other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye irritation, respiratory depression/irritation, hydrocarbon developmental toxicity, systemic toxicity, genetic toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substances. Additionally, the results of consumer inhalation exposure testing/monitoring at gas stations may be potentially useful to characterize the degree of exposure to the PMN substances. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number: P-21-197 (40 CFR 721.11888)

Chemical Name: Imidazole-carboxylic acid, substituted (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 20, 2022.

Basis for TSCA Order: The PMN states that the use will be as an additive for use in battery electrolyte formulations. Based on analogue data, EPA has identified concerns for acute neurotoxicity and skin sensitization. Based on test data for potential metabolites, EPA has also identified concerns for acute toxicity, skin corrosion, eye irritation, and systemic, respiratory tract, reproductive, and developmental effects. Based on acute hazard data for an analogous chemical substance, EPA predicts that toxicity to aquatic organisms may occur at concentrations that exceed 380 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified Combination Particulate and Gas/Vapor respirator with an APF of 50 where there is a potential for inhalation exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No domestic manufacture of the PMN substance (i.e., import only);
- No processing or use of the PMN substance other than in an enclosed process, except that sampling and equipment cleaning operations need not occur in an enclosed process; and
- No disposal of the PMN substance or waste streams containing the PMN substance other than by incineration with 99.9% efficiency.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity, acute toxicity, metabolism/pharmacokinetics, specific target organ toxicity, skin corrosion, eye damage, skin sensitization, pulmonary effects, reproductive toxicity, and developmental toxicity testing may be potentially useful to characterize the

health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers: P-21-216 (40 CFR 721.11889) and P-21-217 (40 CFR 721.11890)

Chemical Names: Multi-walled carbon nanotubes (generic) (P-21-216 and P-21-217).

CASRNs: Not available.

Effective Date of TSCA Order: May 31, 2022.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use will be as an additive in electrode materials and plastics (P-21-216) or as an additive in electrode materials and thermoplastics, and a component in electrodes (P-21-217). Based on comparison to analogous carbon-based nanomaterials, EPA has identified concerns for lung toxicity, lung fibrosis, lung cancer, pleural toxicity (inflammation), pleural fibrosis, and pleural cancer (mesothelioma). Based on hazard data for a residual and test data for multi-walled carbon nanotube analogues, EPA has also identified concerns acute neurotoxicity, skin and respiratory sensitization, reproductive and developmental toxicity, lung effects, systemic effects, immunotoxicity, eye and skin irritation, mutagenicity, genotoxicity, and carcinogenicity. EPA was unable to estimate the environmental hazard of the PMN substances. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified particulate respirator with an APF of at least 1,000 if the capture and reduction rate is at least 99.5% but not 99.975% or greater, or an APF of at least 50 if the capture and reduction rate is at least 99.975%, where there is a potential for inhalation exposure;
- No domestic manufacture of the PMN substances (i.e., import only);
- No manufacture of the PMN substances to contain the confidential impurity listed in the Order at greater than 1% (by weight);

- No use of the PMN substances other than for the confidential use allowed in the Order;

- No processing or use of the PMN substances other than in application methods that do not generate a vapor, mist, dust, or aerosol unless such application method occurs in an enclosed process;

- No disposal of the PMN substances or waste streams containing the PMN substances other than by landfill or incineration;

- No release of the PMN substances directly, either by point (stack) or non-point (fugitive) sources, to air;

- No release of the PMN substances, or any waste stream containing the PMN substances, into water; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of carcinogenicity, eye irritation, skin irritation, genetic toxicity, developmental toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substances. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

IV. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at <https://www.epa.gov/laws-regulations-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action proposes to establish SNURs for new chemical substances that were the subject of PMNs. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023).

B. Paperwork Reduction Act (PRA)

According to the PRA (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument or form, if applicable.

The information collection requirements related to SNURs have already been approved by OMB pursuant to PRA under OMB control number 2070-0038 (EPA ICR No. 1188). This action does not impose any burden requiring additional OMB approval. If an entity were to submit a SNUN to the Agency, the annual burden is estimated to average between 30 and 170 hours per submission. This burden estimate includes the time needed to review instructions, search existing data sources, gather and maintain the data needed, and complete, review, and submit the required SNUN.

EPA always welcomes your feedback on the burden estimates. Send any comments about the accuracy of the burden estimate, and any suggested methods for improving the collection instruments or instruction or minimizing respondent burden, including through the use of automated collection techniques.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). The requirement to submit a SNUN applies to any person (including small or large entities) who intends to engage in any activity described in the final rule as a "significant new use." Because these uses are "new," based on all information currently available to EPA, EPA has concluded that no small or large entities presently engage in such activities.

A SNUR requires that any person who intends to engage in such activity in the future must first notify EPA by submitting a SNUN. Although some small entities may decide to pursue a significant new use in the future, EPA cannot presently determine how many, if any, there may be. However, EPA's experience to date is that, in response to the promulgation of SNURs covering over 1,000 chemicals, the Agency receives only a small number of notices

per year. For example, the number of SNUNs received was 16 in Federal Fiscal Year (FY) FY2018, five in FY2019, seven in FY2020, 13 in FY2021, 11 in FY2022, and 15 in FY 2023, and only a fraction of these submissions were from small businesses.

In addition, the Agency currently offers relief to qualifying small businesses by reducing the SNUN submission fee from \$37,000 to \$6,480. This lower fee reduces the total reporting and recordkeeping cost of submitting a SNUN to about \$14,500 per SNUN submission for qualifying small firms. Therefore, the potential economic impacts of complying with these proposed SNURs are not expected to be significant or adversely impact a substantial number of small entities. In a SNUR that published in the **Federal Register** of June 2, 1997 (62 FR 29684) (FRL-5597-1), the Agency presented its general determination that SNURs are not expected to have a significant economic impact on a substantial number of small entities, which was provided to the Chief Counsel for Advocacy of the Small Business Administration.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million or more in any one year (in 1995 dollars) as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. Based on EPA's experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by SNURs. In addition, the estimated costs of this action to the private sector do not exceed \$183 million or more in any one year (the 1995 dollars are adjusted to 2023 dollars for inflation using the GDP implicit price deflator). The estimated costs for this action are discussed in Unit I.D.

E. Executive Order 13132: Federalism

This action will not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it is not expected to have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the requirements of Executive Order 13132 do not apply to this action.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action will not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it is not expected to have substantial direct effects on Indian Tribes, significantly or uniquely affect the communities of Indian Tribal governments and does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of Executive Order 13175 do not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it does not concern an environmental health or safety risk. Since this action does not concern human health, EPA's 2021 Policy on Children's Health also does not apply. Although the establishment of these SNURs do not address an existing children's environmental health concern because the chemical uses involved are not ongoing uses, SNURs require that persons notify EPA at least 90 days before commencing manufacture (defined by statute to include import) or processing of any of these chemical substances for an activity that is designated as a significant new use by this rulemaking. This notification allows EPA to assess the conditions of use to identify potential risks and take appropriate actions before the activities commence.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a "significant energy action" as defined in Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act (NTTAA)

This action does not involve any technical standards subject to NTTAA section 12(d) (15 U.S.C. 272 note).

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

This action does not concern human health or environmental conditions and

therefore cannot be evaluated with respect to the potential for disproportionate impacts on non-white and low-income populations in accordance with Executive Order 12898 (59 FR 7629, February 16, 1994) and Executive Order 14096 (88 FR 25251, April 26, 2023). Although this action does not concern human health or environmental conditions, the premanufacture notifications required by these SNURs allow EPA to assess the conditions of use to identify potential disproportionate risks and take appropriate actions before the activities commence.

List of Subjects in 40 CFR Part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: June 6, 2024.

Mary Elissa Reaves,

Director, Office of Pollution Prevention and Toxics.

Therefore, for the reasons stated in the preamble, EPA proposes to amend 40 CFR chapter 1 as follows:

PART 721—SIGNIFICANT NEW USES OF CHEMICAL SUBSTANCES

■ 1. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c)

■ 2. Add §§ 721.11860 through 721.11890 to subpart E to read as follows:

Subpart E—Significant New Uses for Specific Chemical Substances

Sec.

* * * * *

721.11860 1,2-Ethanediamine, N-(1-methylethyl)-N-[2-[(1-methylethyl)amino]ethyl]-.

721.11861 Fatty acids, polymers with substituted carbomonocycles, dialkanolamine, alkyl substituted alkanediamine and halo-substituted heteromonocycle, formates (salts) (generic).

721.11862 Alkanesulfonic acid, 2-[(2-aminoethyl)heteroatom-substituted]-, sodium salt (1:1), polymer with .alpha.-[2,2-bis(hydroxymethyl)butyl]-.omega.-methoxypoly(oxy-1,2-ethanediyl) and 1,1'-methylenebis[4-isocyanatocyclohexane], acrylic acid-dipentaerythritol reaction products- and polypropylene glycol ether with pentaerythritol (4:1) triacrylate-blocked (generic).

721.11863 Alkanoic acid, hydroxy-(hydroxyalkyl)-alkyl-, polymer with .alpha.-[(hydroxyalkyl)alkyl]-.omega.-alkoxypoly(oxy-alkanediyl), (haloalkyl)oxiane polymer (alkylalkylidene)bis[hydroxy-

- carbomonocycle] alkenoate and isocyanate-alkyl-carbomonocycle, hydroxyalkyl acrylate-blocked (generic).
- 721.11864 1,4-Benzenedicarboxylic acid, bis[2-(2-butoxyethoxy)ethyl] ester (9CI).
- 721.11865 Isocyanic acid, polyalkylenepolyarylene ester, polymer with alkyl-hydroxyalkyl-alkanediol, alkoxyalcohol and alkoxyalkoxyalcohol-blocked (generic).
- 721.11866 Substituted alkanolic acid, compound with aminoalkylalkyl-aminoalkylalkoxy-polyoxyalkylalkanediyl, polymer with haloalkyl-epoxide and alkylalkylidene-cycloarylalcohol (generic).
- 721.11867 Bisphenol A epichlorohydrin polymer with alkylpolyalkene-polyarylene-hydroxypolyoxyalkyldiyl reaction products with alkylalkylidenealkylalkylidene-aminoalkyl-alkanepolyamine and alkylaminoalkanol (generic).
- 721.11868 Sulfur based acid, compds. with modified bisphenol A-epichlorohydrin-polyalkylene polyol ether with bisphenol A polymer-N-dialkylalkylidene-N-(dialkylalkylidene)aminoalkyl-alkanepolyamine and heteromonocycle reaction products (generic).
- 721.11869 2-Alkanediol, 3-aryloxy, mono phosphate ester (generic).
- 721.11870 Metalloxanes, alkyl, alkyl group-terminated, reaction products with dihalo-dialkylalkylaryl-alkyl-polycyclic-ylidene(dialkylsilylene)-dialkylalkylaryl-alkylalkyl-polycyclic-ylidene, metal oxide and nonmetallic oxide (generic).
- 721.11871 Alkenoic acid, reaction products with pentaerythritol, polymers with diisocyanatoalkane and heteromonocycle homopolymer esters with alkanolic acid-pentaerythritol reaction products (generic).
- 721.11872 Carbopolycycle octa-alkene, halo (generic).
- 721.11873 2-Propenoic acid, (polyhydro-1,3-dioxo-2H-isoindol-2-yl)alkyl ester (generic).
- 721.11874 Heteromonocycle, polymer, [2-[(1-oxo-2-propen-1-yl)oxy]alkyl]ester (generic).
- 721.11875 Hydrocarbons linear and branched, light alkylate (generic).
- 721.11876 Hydrocarbons linear and branched, light catalytic cracked (generic).
- 721.11877 Hydrocarbons linear and branched, heavy catalytic cracked (generic).
- 721.11878 Hydrocarbons linear and branched, light hydrocracked (generic).
- 721.11879 Hydrocarbons linear and branched, isomerization (generic).
- 721.11880 Hydrocarbons linear and branched, heavy catalytic reformed (generic).
- 721.11881 Hydrocarbons linear and branched, hydrotreated light (generic).
- 721.11882 Hydrocarbons linear and branched, hydrotreated light paraffinic (generic).
- 721.11883 Hydrocarbons linear and branched, light catalytic cracked (generic).
- 721.11884 Hydrocarbons linear and branched, heavy hydrocracked (generic).

- 721.11885 Hydrocarbons linear and branched, heavy catalytic cracked (generic).
- 721.11886 Hydrocarbons linear and branched, heavy hydrocracked (generic).
- 721.11887 Hydrocarbons linear and branched, light hydrocracked (generic).
- 721.11888 Imidazole-carboxylic acid, substituted (generic).
- 721.11889 Multi-walled carbon nanotubes (generic).
- 721.11890 Multi-walled carbon nanotubes (generic).

* * * * *

§ 721.11860 1,2-Ethanediamine, N-(1-methylethyl)-N-[2-[(1-methylethyl)amino]ethyl]-.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,2-ethanediamine, N-(1-methylethyl)-N-[2-[(1-methylethyl)amino]ethyl]- (PMN P-18-398; CASRN 10507-06-9) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; specific target organ toxicity; reproductive toxicity; skin corrosion; serious eye damage; skin sensitization. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(k).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in

§ 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11861 Fatty acids, polymers with substituted carbomonocycles, dialkanolamine, alkyl substituted alkanediamine and halo-substituted heteromonocycle, formates (salts) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as fatty acids, polymers with substituted carbomonocycles, dialkanolamine, alkyl substituted alkanediamine and halo-substituted heteromonocycle, formates (salts) (PMN P-19-49) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For purposes of § 721.72(e), the concentration is set at 1%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; reproductive toxicity; specific organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture or process the substance in any manner that generates a vapor, mist, or aerosol. It is a significant new use to use the substance in any manner that generates a vapor, mist, or aerosol that results in inhalation to industrial or commercial workers. It

is a significant new use to manufacture the substance to contain the confidential residual identified in the TSCA Order for this substance at greater than 0.1%.

(iv) *Release to Water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=114.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11862 Alkanesulfonic acid, 2-[(2-aminoethyl)heteroatom-substituted]-, sodium salt (1:1), polymer with .alpha.-[2,2-bis(hydroxymethyl)butyl]-.omega.-methoxypoly(oxy-1,2-ethanediyl) and 1,1'-methylenebis[4-isocyanatocyclohexane], acrylic acid-dipentaerythritol reaction products- and polypropylene glycol ether with pentaerythritol (4:1) triacrylate-blocked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkanesulfonic acid, 2-[(2-aminoethyl)heteroatom-substituted]-, sodium salt (1:1), polymer with .alpha.-[2,2-bis(hydroxymethyl)butyl]-.omega.-methoxypoly(oxy-1,2-ethanediyl) and 1,1'-methylenebis[4-isocyanatocyclohexane], acrylic acid-dipentaerythritol reaction products- and polypropylene glycol ether with pentaerythritol (4:1) triacrylate-blocked (PMN P-19-160) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; serious eye damage; skin sensitization; respiratory sensitization; reproductive toxicity; specific organ

toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to Water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=302.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11863 Alkanoic acid, hydroxy-(hydroxyalkyl)-alkyl-, polymer with .alpha.-[(hydroxyalkyl)alkyl]-.omega.-alkoxypoly(oxy-alkanediyl), (haloalkyl)oxiane polymer (alkylalkylidene)bis[hydroxy-carbomonocycle] alkenoate and isocyanate-alkyl-carbomonocycle, hydroxyalkyl acrylate-blocked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance generically identified as alkanoic acid, hydroxy-(hydroxyalkyl)-alkyl-, polymer with .alpha.-[(hydroxyalkyl)alkyl]-.omega.-alkoxypoly(oxy-alkanediyl), (haloalkyl)oxiane polymer (alkylalkylidene)bis[hydroxy-carbomonocycle] alkenoate and isocyanate-alkyl-carbomonocycle, hydroxyalkyl acrylate-blocked (PMN P-20-101) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely cured.

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to

prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; skin irritation; eye irritation; respiratory sensitization; skin sensitization; reproductive toxicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture or process the substance with greater than 20% (by weight) oligomer content below 1,000 daltons (i.e., low molecular weight species). It is a significant new use to use the substance in a manual spray application.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11864 1,4-Benzenedicarboxylic acid, bis[2-(2-butoxyethoxy)ethyl] ester (9CI).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,4-benzenedicarboxylic acid, bis[2-(2-butoxyethoxy)ethyl] ester (9CI) (PMN P-20-182; CASRN 90430-63-0) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the

operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000.

(A) As an alternative to the respirator requirements in paragraph (a)(2)(i) of this section, a manufacturer or processor may choose to follow the new chemical exposure limit (NCEL) provision listed in the TSCA section 5(e) Order for this substance. The NCEL is 0.01 mg/m³ as an 8-hour time weighted average. Persons who wish to pursue NCELs as an alternative to § 721.63 respirator requirements may request to do so under § 721.30. Persons whose § 721.30 requests to use the NCELs approach are approved by EPA will be required to follow NCELs provisions comparable to those contained in the corresponding TSCA section 5(e) Order.

(B) [Reserved]

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5).

For purposes of § 721.72(g)(1), this substance may cause: skin sensitization; reproductive toxicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=4.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (h), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11865 Isocyanic acid, polyalkylenepolyarylene ester, polymer with alkyl-hydroxyalkyl-alkanediol, alkoxyalcohol and alkoxyalkoxyalcohol-blocked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as isocyanic acid, polyalkylenepolyarylene ester, polymer with alkyl-hydroxyalkyl-alkanediol,

alkoxyalcohol and alkoxyalkoxyalcohol-blocked (PMN P-21-56) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i)

Protection in the workplace.

Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50 or 1,000 if spray applied.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; skin sensitization. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture the substance beyond 24 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11866 Substituted alkanolic acid, compound with aminoalkylalkyl-aminoalkylalkoxy-polyoxyalkylalkanedyl, polymer with haloalkyl-epoxide and alkylalkylidene-cycloarylalcohol (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as substituted alkanolic acid, compound with aminoalkylalkyl-aminoalkylalkoxy-

polyoxyalkylalkanedyl, polymer with haloalkyl-epoxide and alkylalkylidene-cycloarylalcohol (PMN P-21-58) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i)

Protection in the workplace.

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For purposes of § 721.72(e), the concentration is set at 1%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=50.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11867 Bisphenol A epichlorohydrin polymer with alkylpolyalkene-polyarylene-hydroxypolyoxyalkyldiyl reaction products with alkylalkylidenealkylalkylidene-aminoalkyl-alkanepolyamine and alkylaminoalkanol (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as bisphenol A epichlorohydrin polymer with alkylpolyalkene-polyarylene-hydroxypolyoxyalkyldiyl reaction products with alkylalkylidenealkylalkylidene-aminoalkyl-alkanepolyamine and alkylaminoalkanol (PMN P-21-60) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For purposes of § 721.72(e), the concentration is set at 0.1%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; carcinogenicity; reproductive toxicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part

apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11868 Sulfur based acid, compds. with modified bisphenol A-epichlorohydrin-polyalkylene polyol ether with bisphenol A polymer-N-dialkylalkylidene-N-(dialkylalkylidene)aminoalkyl-alkanepolyamine-alkylaminoalkanol reaction products (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfur based acid, compds. with modified bisphenol A-epichlorohydrin-polyalkylene polyol ether with bisphenol A polymer-N-dialkylalkylidene-N-(dialkylalkylidene)aminoalkyl-alkanepolyamine-alkylaminoalkanol reaction products (PMN P-21-61) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For purposes of § 721.72(e), the concentration is set at 0.1%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; carcinogenicity; reproductive toxicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=11.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11869 1,2-Alkanediol, 3-aryloxy, mono phosphate ester (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as 1,2-alkanediol, 3-aryloxy, mono phosphate ester (PMN P-21-66) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely destroyed.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For the purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; skin corrosion; skin irritation; serious eye damage; eye irritation; reproductive toxicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA

Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure or that results in fugitive air emissions. It is a significant new use to use the substance other than as an epoxy curative.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11870 Metalloxanes, alkyl, alkyl group-terminated, reaction products with dihalo-dialkylalkylaryl-alkyl-polycyclic-ylidene(dialkylsilylene)-dialkylalkylaryl-alkylalkyl-polycyclic-ylidene, metal oxide and nonmetallic oxide (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as metalloxanes, alkyl, alkyl group-terminated, reaction products with dihalo-dialkylalkylaryl-alkyl-polycyclic-ylidene(dialkylsilylene)-dialkylalkylaryl-alkylalkyl-polycyclic-ylidene, metal oxide and nonmetallic oxide (PMN P-21-68) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; skin corrosion; skin irritation; serious eye damage; eye irritation; respiratory

sensitization; skin sensitization; germ cell mutagenicity; reproductive toxicity; specific target organ toxicity.

Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(a) through (c). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation or dermal exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=50.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11871 Alkenoic acid, reaction products with pentaerythritol, polymers with diisocyanatoalkane and heteromonocycle homopolymer esters with alkenoic acid-pentaerythritol reaction products (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkenoic acid, reaction products with pentaerythritol, polymers with diisocyanatoalkane and heteromonocycle homopolymer esters with alkenoic acid-pentaerythritol reaction products (PMN P-21-83) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators

must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5).

For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; respiratory sensitization; skin sensitization; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=1.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11872 Carbopolycycle octa-alkene, halo (generic).

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance identified generically as carbopolycycle octa-alkene, halo (PMN P-21-84) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a)

through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; skin corrosion; serious eye damage; skin sensitization; genetic toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=7.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (h), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11873 2-Propenoic acid, (polyhydro-1,3-dioxo-2H-isoindol-2-yl)alkyl ester (generic).

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance identified generically as 2-propenoic acid, (polyhydro-1,3-dioxo-2H-isoindol-2-yl)alkyl ester (PMN P-21-92) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the PMN substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (a)(4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1) and (3). For

purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; specific target organ toxicity; reproductive toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. For purposes of § 721.72(e), the concentration is set at 1.0%. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to use the substance at a concentration of greater than 40% in formulation when inhalation exposure is expected.

(iv) *Disposal.* It is a significant new use to dispose of the substance or waste streams containing the substance other than by incineration or RCRA subtitle C landfill.

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11874 Heteromonocycle, polymer, [2-[(1-oxo-2-propen-1-yl)oxy]alkyl]ester (generic).

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance identified generically as heteromonocycle, polymer, [2-[(1-oxo-2-propen-1-yl)oxy]alkyl]ester (PMN P-21-102) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures)

shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: skin irritation; eye irritation; specific target organ toxicity; developmental toxicity; skin sensitization. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=337.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11875 Hydrocarbons linear and branched, light alkylate (generic).

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance identified generically as hydrocarbons linear and branched, light alkylate (PMN P-21-109) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative

control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11876 Hydrocarbons linear and branched, light catalytic cracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, light catalytic cracked (PMN P-21-110) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11877 Hydrocarbons linear and branched, heavy catalytic cracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, heavy catalytic cracked (PMN P-21-111) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel

blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11878 Hydrocarbons linear and branched, light hydrocracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, light hydrocracked (PMN P-21-112) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part

apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11879 Hydrocarbons linear and branched, isomerization (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, isomerization (PMN P-21-113) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11880 Hydrocarbons linear and branched, heavy catalytic reformed (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, heavy catalytic reformed (PMN P-21-114) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11881 Hydrocarbons linear and branched, hydrotreated light (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, hydrotreated light (PMN P-21-116) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11882 Hydrocarbons linear and branched, hydrotreated light paraffinic (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, hydrotreated light paraffinic

(PMN P-21-117) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11883 Hydrocarbons linear and branched, light catalytic cracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance generically identified as hydrocarbons linear and branched, light catalytic cracked (PMN P-21-118) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery

feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11884 Hydrocarbons linear and branched, heavy hydrocracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, heavy hydrocracked (PMN P-21-119) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are

reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11885 Hydrocarbons linear and branched, heavy catalytic cracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, heavy catalytic cracked (PMN P-21-121) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent

exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11886 Hydrocarbons linear and branched, heavy hydrocracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, heavy hydrocracked (PMN P-21-122) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant

new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11887 Hydrocarbons linear and branched, light hydrocracked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as hydrocarbons linear and branched, light hydrocracked (PMN P-21-123) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel, fuel additive, fuel blending stock, or used as a refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting).

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture, process, or use the substance other than for processing and use as a fuel, fuel additive, fuel blending stock, or refinery feedstock (including, but not limited to cracking, coking, hydroprocessing, distillation, or deasphalting) subject to 40 CFR parts 79 or 1090.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11888 Imidazole-carboxylic acid, substituted (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as imidazole-carboxylic acid, substituted (P-21-197) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into an article.

(2) The significant new uses are: (i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity; skin corrosion; eye irritation; serious eye damage; skin sensitization; reproductive toxicity; specific target organ toxicity. For purposes of § 721.72(g)(3) this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f). It is a significant new use to process or use the substance other than in an enclosed process, except that sampling and equipment

cleaning operations need not occur in an enclosed process.

(iv) *Disposal*. It is a significant new use to dispose of the substance or waste streams containing the substance other than by incineration with 99.9% efficiency.

(b) *Specific requirements*. The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping*. Recordkeeping requirements as specified in § 721.125(a) through (j) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements*. The provisions of § 721.185 apply to this section.

§ 721.11889 Multi-walled carbon nanotubes (generic).

(a) *Chemical substance and significant new uses subject to reporting*.

(1) The chemical substance identified generically as multi-walled carbon nanotubes (PMN P-21-216) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted (cured), entrained in a polymer, or incorporated into an article.

(2) The significant new uses are: (i) *Protection in the workplace*. Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000 if the capture and reduction rate is at least 99.5% but not 99.975% or greater, or at least 50 if the capture and reduction rate is at least 99.975%.

(ii) *Hazard communication*. Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: eye irritation; skin

irritation; respiratory sensitization; skin sensitization; genetic toxicity; reproductive toxicity; carcinogenicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities*. Requirements as specified in § 721.80(f). It is a significant new use to manufacture the substance to contain the confidential impurity listed in the Order at greater than 1% (by weight). It is a significant new use to process or use the substance other than for the confidential use allowed in the Order. It is a significant new use to process or use the substance other than in application methods that do not generate a vapor, mist, dust, or aerosol, unless such application method occurs in an enclosed process.

(iv) *Disposal*. Requirements as specified in § 721.85 (a)(1) and (2), (b)(1) and (2), and (c)(1) and (2). It is a significant new use to release the substance directly, whether by point (stack) or non-point (fugitive) sources, to air.

(v) *Release to water*. Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements*. The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping*. Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements*. The provisions of § 721.185 apply to this section.

§ 721.11890 Multi-walled carbon nanotubes (generic).

(a) *Chemical substance and significant new uses subject to reporting*.

(1) The chemical substance identified generically as multi-walled carbon nanotubes (PMN P-21-217) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted

(cured), entrained in a polymer, or incorporated into an article.

(2) The significant new uses are:

(i) *Protection in the workplace*.

Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000 if the capture and reduction rate is at least 99.5% but not 99.975% or greater or of at least 50 if the capture and reduction rate is at least 99.975%.

(ii) *Hazard communication*.

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: eye irritation; skin irritation; respiratory sensitization; skin sensitization; genetic toxicity; reproductive toxicity; carcinogenicity; specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities*. Requirements as specified in § 721.80(f). It is a significant new use to manufacture the substance to contain the confidential impurity listed in the Order at greater than 1% (by weight). It is a significant new use to process or use the substance other than for the confidential use allowed in the Order. It is a significant new use to process or use the substance other than in application methods that do not generate a vapor, mist, dust, or aerosol, unless such application method occurs in an enclosed process.

(iv) *Disposal*. Requirements as specified in § 721.85 (a)(1) and (2), (b)(1) and (2), and (c)(1) and (2). It is a significant new use to release the substance directly, either by point (stack) or non-point (fugitive) sources, to air.

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The

provisions of § 721.185 apply to this section.

Notices

Federal Register

Vol. 89, No. 113

Tuesday, June 11, 2024

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Agricultural Marketing Service

[Doc. No. AMS–SC–24–0005]

Notice of Request for Extension and Revision of a Currently Approved Information Collection

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, this notice announces the Agricultural Marketing Service's (AMS) intention to request approval from the Office of Management and Budget (OMB) for an extension of and revision to the currently approved information collection 0581–0328 for the Pecan Promotion, Research, and Information Program.

DATES: Comments must be received by August 12, 2024 to be assured of consideration.

ADDRESSES: Interested persons are invited to submit written comments concerning this notice. Comments may be mailed to the Docket Clerk, Market Development Division, Specialty Crops Program, AMS, USDA, 1400 Independence Avenue SW, STOP 0237, Washington, DC 20250–0237; Fax: (202) 720–8938; or submitted electronically by Email: SM.USDA.MRP.AMS.MDDComment@usda.gov; or via internet at <https://www.regulations.gov>. Comments should reference the document number and the date and page number of this issue of the **Federal Register**. All comments will be made available for public inspection in the Office of the Docket Clerk during regular business hours or can be viewed at <https://www.regulations.gov>. Comments submitted in response to this notice will be included in the rulemaking record and will be made

available to the public. Please be advised that the identity of the individuals or entities submitting the comments will be made public.

FOR FURTHER INFORMATION CONTACT:

Katie Cook, Marketing Specialist at telephone: (202) 617–4760, or electronic mail: Katie.Cook@usda.gov, or Sarah Richardson, Marketing Specialist at telephone: (202) 720–8085 electronic mail: Sarah.Richardson@usda.gov, Market Development Division, Specialty Crops Program, AMS, USDA, Stop 0244, Room 1406–S, 1400 Independence Avenue SW, Washington, DC 20250–0244.

SUPPLEMENTARY INFORMATION:

Title: Pecan Promotion, Research, and Information Program.

OMB Number: 0581–0328.

Expiration Date of Approval: October 31, 2024.

Type of Request: Extension and revision of a currently approved information collection.

Abstract: The Pecan Promotion, Research, and Information program was created to help strengthen the position of pecans in the marketplace, maintain and expand markets for pecans, and develop new uses for pecans. The Pecan Promotion, Research, and Information Order (Order) (7 CFR part 1223) is authorized under the Commodity Promotion, Research, and Information Act of 1996 (1996 Act) (7 U.S.C. 7411–7425).

The Order became effective on February 12, 2021. Currently, the Pecan program is administered by the American Pecan Promotion Board (Board) which is appointed by the Secretary of Agriculture and financed by a mandatory assessment on producers and importers of inshell and shelled pecans. The assessment rate is levied at \$0.02 per pound on all inshell pecans and \$0.04 per pound on all shelled pecans. The program provides an exemption for producers and importers that produce or import fewer than 50,000 pounds of inshell pecans (25,000 pounds of shelled pecans) on average for four fiscal periods (the fiscal period for which the exemption is claimed and the previous three fiscal periods).

The information collection requirements in this request are essential to carry out the intent of the 1996 Act and the Order. The objective in carrying out this responsibility includes assuring the following: (1)

funds are collected and properly accounted for; (2) expenditures of all funds are for the purposes authorized by the 1996 Act and Order; and (3) the board's administration of the programs conforms to USDA policy. Such information can be supplied without data processing equipment or outside technical expertise. In addition, there are no additional training requirements for individuals filling out reports and remitting assessments to the Board.

The Board utilizes a variety of forms including: first handler and importer reports, application for exemption, nomination form and ballot, reimbursement of assessments, and recordkeeping requirements and prefers electronic versions of the forms for easier access and submission.

The information collected is used only by authorized representatives of the USDA's regional and headquarters staff, and authorized Board employees. Authorized Board employees and the industry are the primary users of the information, and AMS is the secondary user.

Estimate of Burden: Public recordkeeping burden for this collection of information is estimated to average 0.43 hour per response.

Respondents: Producers and importers.

Estimated Number of Respondents: 725.

Estimated Total Annual Responses: 10,718.

Estimated Number of Responses per Respondent: 2.

Estimated Total Annual Burden on Respondents: 2,873 hours.

Comments: Comments are invited on: (1) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of the burden of the proposed collection of information including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

All responses to this notice will be summarized and included in the request

for OMB approval. All comments will also become a matter of public record.
Authority: 44 U.S.C. chapter 35.

Erin Morris,

Associate Administrator, Agriculture Marketing Service.

BILLING CODE P

DEPARTMENT OF AGRICULTURE

Forest Service

Modoc Resource Advisory Committee

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice of meeting.

SUMMARY: The Modoc Resource Advisory Committee will hold a public meeting according to the details shown below. The committee is authorized under the Secure Rural Schools and Community Self-Determination Act (the Act) and operates in compliance with the Federal Advisory Committee Act. The purpose of the committee is to improve collaborative relationships and to provide advice and recommendations to the Forest Service concerning projects and funding consistent with title II of the Act, as well as make recommendations on recreation fee proposals for sites on the Modoc National Forest within Modoc County, consistent with the Federal Lands Recreation Enhancement Act.

DATES: An in-person and virtual meeting will be held on June 26, 2024, at 3 p.m. Pacific daylight time (PDT).

Written and Oral Comments: Anyone wishing to provide in-person or virtual oral comments must pre-register by 11:59 p.m. (PDT) on June 12, 2024. Written public comments will be accepted by 11:59 p.m. (PDT) on June 12, 2024. Comments submitted after this date will be provided by the Forest Service to the committee, but the committee may not have adequate time to consider those comments prior to the meeting.

All committee meetings are subject to cancellation. For status of the meeting prior to attendance, please contact the person listed under **FOR FURTHER INFORMATION CONTACT**.

ADDRESSES: This meeting will be held in-person at the Modoc National Forest Supervisor's Office conference room, located at 225 West 8th Street, Alturas, California 96101. The public may also join the meeting virtually via webcast, teleconference, videoconference, or the Homeland Security Information Network. Resource advisory committee information and meeting details can be

found on the advisory committee website at www.fs.usda.gov/main/modoc/workingtogether/advisorycommittees or by contacting the person listed under **FOR FURTHER INFORMATION CONTACT**.

Written Comments: Written comments must be sent by email to samantha.jager@usda.gov or via mail (postmarked) to Resource Advisory Committee Coordinator, 225 West 8th Street, Alturas, California 96101. The Forest Service strongly prefers comments be submitted electronically.

Oral Comments: Persons or organizations wishing to make oral comments must pre-register by 11:59 p.m. PDT, June 12, 2024, and speakers can only register for one speaking slot. Oral comments must be sent by email to samantha.jager@usda.gov or via mail (postmarked) to Resource Advisory Committee Coordinator, 225 West 8th Street, Alturas, California 96101.

FOR FURTHER INFORMATION CONTACT: Chris Christofferson, Designated Federal Officer, at 530-233-5811 or email at chris.christofferson@usda.gov; or Samantha Jager, Resource Advisory Committee Coordinator, at 530-708-7291 or email at samantha.jager@usda.gov.

SUPPLEMENTARY INFORMATION: The purpose of the meeting is to:

1. Discuss any old business from last year;
2. Hear from Title II project proponents and discuss Title II project proposals;
3. Make funding recommendations on Title II projects;
4. Discuss committee vacancies;
5. Approve meeting minutes;
6. Schedule the next meeting.

The agenda will include time for individuals to make oral statements of three minutes or less. To be scheduled on the agenda, individuals wishing to make an oral statement should make a request in writing at least three days prior to the meeting date. Written comments may be submitted to the Forest Service up to 14 days after the meeting date listed under **DATES**.

Please contact the person listed under **FOR FURTHER INFORMATION CONTACT**, by or before the deadline, for all questions related to the meeting. All comments, including names and addresses when provided, are placed in the record and are available for public inspection and copying. The public may inspect comments received upon request.

Meeting Accommodations: The meeting location is compliant with the Americans with Disabilities Act, and the USDA provides reasonable accommodation to individuals with

disabilities where appropriate. If you are a person requiring reasonable accommodation, please make requests in advance for sign language interpretation, assistive listening devices, or other reasonable accommodation to the person listed under the **FOR FURTHER INFORMATION CONTACT** section or contact USDA's TARGET Center at 202-720-2600 (voice and TTY) or USDA through the Federal Relay Service at 800-877-8339. Additionally, program information may be made available in languages other than English.

USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Equal opportunity practices in accordance with USDA's policies will be followed in all appointments to the committee. To ensure that the recommendations of the Committee have taken into account the needs of the diverse groups served by the Department, membership shall include, to the extent practicable, individuals with demonstrated ability to represent the many communities, identities, races, ethnicities, backgrounds, abilities, cultures, and beliefs of the American people, including underserved communities. USDA is an equal opportunity provider, employer, and lender.

Dated: May 29, 2024.

Cikena Reid,

USDA Committee Management Officer.

BILLING CODE 3411-15-P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the North Carolina Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: U.S. Commission on Civil Rights.

ACTION: Notice of Public Meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act, that

the North Carolina Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a public community forum via Zoom at 6:00 p.m. ET on Thursday, June 27, 2024. The purpose of this forum is to hear from members of the public regarding their experience with the child welfare system in North Carolina. Members of the public who would like to participate in the forum should complete this form by Wednesday, June 26, 2024, to ensure they are added to the list of interested speakers: <https://forms.monday.com/forms/d1617eeebc0e76fcbcf803289c4b5757?r=use1>.

DATES: Thursday, June 27, 2024, from 6:00 p.m.–8:00 p.m. Eastern Time.

ADDRESSES: The meeting will be held via Zoom Webinar.

Registration Link (Audio/Visual):
https://www.zoomgov.com/webinar/register/WN_92khkxC1SFS_dfikVHfwDg.

Join by Phone (Audio Only): (833) 435–1820 USA Toll-Free; Meeting ID: 161 265 0808.

FOR FURTHER INFORMATION CONTACT:

Victoria Moreno, Designated Federal Officer, at vmoreno@usccr.gov or (434) 515–0204.

SUPPLEMENTARY INFORMATION: This committee meeting is available to the public through the registration link above. Any interested member of the public may listen to the meeting. An open comment period will be provided to allow members of the public to make a statement as time allows. Per the Federal Advisory Committee Act, public minutes of the meeting will include a list of persons who are present at the meeting. If joining via phone, callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Closed captioning will be available for individuals who are deaf, hard of hearing, or who have certain cognitive or learning impairments. To request additional accommodations, please email Liliana Schiller, Support Services Specialist, at lschiller@usccr.gov at least 10 business days prior to the meeting.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meeting. Written comments may be emailed to Victoria Moreno at vmoreno@usccr.gov. Persons who desire additional information may contact the

Regional Programs Coordination Unit at (312) 353–8311.

Records generated from this meeting may be inspected and reproduced at the Regional Programs Coordination Unit Office, as they become available, both before and after the meeting. Records of the meetings will be available via www.facadatabase.gov under the Commission on Civil Rights, North Carolina Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, <http://www.usccr.gov>, or may contact the Regional Programs Coordination Unit at lschiller@usccr.gov.

Agenda

- I. Welcome & Roll Call
- II. Community Forum
- III. Next Steps
- IV. Adjournment

Dated: June 6, 2024.

BILLING CODE P

DEPARTMENT OF COMMERCE

Economic Development Administration

Submission for OMB Review; Comment Request; Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Indigenous Communities Survey & Interview Collection Instruments

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on March 29, 2024 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: Economic Development Administration (EDA), Commerce.

Title: Indigenous Communities Survey & Interview Collection Instruments.

OMB Control Number: New information collection.

Form Number(s): None yet determined; new information collection.

Type of Request: Regular submission.

Estimated Number of Respondents and Frequency: A total of 150 respondents will complete a survey. Additional phone interviews will be conducted with a subset of 20 survey respondents. The proposed information collection will be conducted once. As the Community of Practice and Research Challenge to Support Indigenous Communities is a new cooperative agreement, EDA anticipates that these estimates will be further refined based on data generated completed survey respondents.

Estimated Average Hours per Response: Half an hour (30 minutes) for the electronic survey and 1 hour for each phone interview.

Estimated Burden Hours: 75 hours for the electronic survey and 20 hours for the phone interviews.

Needs and Uses: To effectively administer and monitor its economic development assistance programs, EDA collects certain information from applications for, and recipients of, EDA investment assistance. The purpose of this notice is to seek comments from the public and other Federal agencies on a request for a new information collection for recipients of awards under the EDA American Rescue Plan Act (ARPA) Statewide Planning, Research, and Networks, and Economic Development Research and Evaluation (R&E) and National Technical Assistance (NTA) programs.

The proposed information collection will employ an innovative mixed methods approach to gather traditional metrics in addition to qualitative data on Indigenous or Indigenous-serving projects. An annual survey will be sent to Indigenous or Indigenous-serving grantees from 2019–2023 resulting in factsheets and reports that will help inform economic development policy, economic decision-making, and economic best practices.

The collection will explore several thematic areas for Indigenous communities, each based on the following research questions:

1. How has EDA funded Indigenous-serving projects and what are the characteristics of these projects relative to applications from Indigenous entities;
2. What factors relate to project implementation and outputs for awards to Indigenous applicants and for Indigenous-serving projects;
3. How did the structure of the Indigenous Communities funding program influence applicants and award

decisions relative to Indigenous applicants to other funding programs; and

4. How do grant rates influence applications from Indigenous entities and applications from Indigenous-serving organizations with projects benefitting Indigenous communities;

With each of these categories of questions, organized by thematic area and noted above, there will be a focus on learning about the economic development needs, planning, and priorities of Indigenous communities.

Respondents will answer questions related to the following:

- Community characteristics;
- Economic development characteristics, priorities, challenges;
- Economic development funding sources;
- Match funding; and
- If applicable, the Indigenous Communities grant program.

The collection instrument also includes questions related to the overall programmatic experience.

Affected Public: This survey will specifically target EDA applicants for projects that are Indigenous and Indigenous serving. Entities may include (i) District Organization of an EDA-designated Economic Development District (EDD); (ii) Indian Tribe or a consortium of Indian Tribes; (iii) State, county, city, or other political subdivision of a State, including a special purpose unit of a State or local government engaged in economic or infrastructure development activities, or a consortium of political subdivisions; (iv) institution of higher education or a consortium of institutions of higher education; or (v) public or private non-profit organization or association acting in cooperation with officials of a general purpose political subdivision of a State.

Respondent's Obligation: Voluntary.

Legal Authority: The Public Works and Economic Development Act of 1965 (42 U.S.C. 3121 *et seq.*).

This information collection request may be viewed at [reginfo.gov](https://www.reginfo.gov). Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by

selecting “Currently under 30-day Review—Open for Public Comments.”

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–34–P

DEPARTMENT OF COMMERCE

International Trade Administration

[A–570–954]

Certain Magnesia Carbon Bricks From the People's Republic of China: Rescission of Antidumping Duty Administrative Review; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) is rescinding the administrative review of the antidumping duty order on certain magnesia carbon bricks (bricks) from the People's Republic of China (China) for the period of review (POR) September 1, 2022, through August 31, 2023.

DATES: Applicable June 11, 2024.

FOR FURTHER INFORMATION CONTACT: Nathan James, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–5305.

SUPPLEMENTARY INFORMATION:

Background

On September 20, 2010, Commerce published in the **Federal Register** the antidumping duty order on bricks from China.¹ On September 28, 2023, the Magnesia Carbon Bricks Fair Trade Committee (the petitioner) submitted a timely request that Commerce conduct an administrative review.²

On November 15, 2023, Commerce published in the **Federal Register** a notice of initiation of administrative review with respect to imports of bricks from China in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.221(c)(1)(i).³ This review covers subject merchandise exported by 42

exporters.⁴ On December 20, 2023, we placed on the record U.S. Customs and Border Protection (CBP) data for entries of bricks from China during the POR, showing no reviewable POR entries and invited interested parties to comment.⁵ No party filed comments with respect to the CBP data.

On February 7, 2024, Commerce notified all interested parties of its intent to rescind the instant review because there were no reviewable, suspended entries of subject merchandise by any of the companies subject to this review during the POR and invited interested parties to comment.⁶ Commerce did not receive any comments.

Rescission of Review

Pursuant to 19 CFR 351.213(d)(3), it is Commerce's practice to rescind an administrative review of an antidumping duty order when there are no reviewable entries of subject merchandise during the POR for which liquidation is suspended.⁷ Normally, upon completion of an administrative review, the suspended entries are liquidated at the antidumping duty assessment rate calculated for the review period.⁸ Therefore, for an administrative review to be conducted, there must be a reviewable, suspended entry that Commerce can instruct CBP to liquidate at the antidumping duty assessment rate calculated for the review period.⁹ As noted above, there were no entries of subject merchandise for the companies subject to this review during the POR. Accordingly, in the absence of suspended entries of subject merchandise during the POR, we are hereby rescinding this administrative review, in its entirety, in accordance with 19 CFR 351.213(d)(3).

Assessment

Commerce will instruct CBP to assess antidumping duties on all appropriate entries. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or

withdrawal from warehouse, for consumption in the United States, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of this rescission notice in the **Federal Register**.

Administrative Protective Order

This notice serves as the only reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO, in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

This notice is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(d)(4).

Dated: May 29, 2024.

Chlorinated Isocyanurates From the People's Republic of China: Final Results of Countervailing Duty Administrative Review; 2021

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies are being provided to the producers and exporters subject to the administrative review of chlorinated isocyanurates (chlorinated isos) from the People's Republic of China (China) during the period of review (POR) January 1, 2021, through December 31, 2021.

DATES: Applicable June 11, 2024.

FOR FURTHER INFORMATION CONTACT: Miranda Bourdeau or Eliza DeLong, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone:

(202) 482–2021 or (202) 482–3878, respectively.

SUPPLEMENTARY INFORMATION:

Background

On December 7, 2023, Commerce published the preliminary results of the 2021 administrative review of the countervailing duty order on chlorinated isos from China.¹ This review covers two companies, Heze Huayi Chemical Co., Ltd. (Heze Huayi) and Juancheng Kangtai Chemical Co., Ltd. We invited interested parties to comment on the *Preliminary Results*.² On March 27, 2024, we extended the deadline for these final results until June 4, 2024, in accordance with section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act).³ For a complete description of the events that occurred since the *Preliminary Results*, see the Issues and Decision Memorandum.⁴

Scope of the Order⁵

The products covered by the *Order* are chlorinated isos from China. A full description of the scope of the *Order* is provided in the Issues and Decision Memorandum.

Analysis of Comments Received

A list of the issues that parties raised, to which we responded in the Issues and Decision Memorandum, is attached as an appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

¹ See *Chlorinated Isocyanurates from the People's Republic of China: Preliminary Results of the Countervailing Duty Administrative Review and Rescission of Review in Part; 2021*, 88 FR 85214 (December 7, 2023) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum (PDM).

² See *Preliminary Results*, 88 FR at 85216.

³ See Memorandum, “Extension of Deadline for Final Results of Countervailing Duty Administrative Review,” dated March 27, 2024.

⁴ See Memorandum, “Decision Memorandum for the Final Results of the Countervailing Duty Administrative Review of Chlorinated Isocyanurates from the People's Republic of China; 2021,” dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

⁵ See *Chlorinated Isocyanurates from the People's Republic of China: Countervailing Duty Order*, 79 FR 67424 (November 13, 2014) (*Order*).

Changes Since the Preliminary Results

Based on arguments raised and a review of the record and all supporting documentation, we made certain changes to the *Preliminary Results* with respect to the subsidy rate calculation for the provision of land-use rights for less than adequate remuneration for the chemical industry program. For a discussion of the comments, see the Issues and Decision Memorandum.

Methodology

Commerce conducted this administrative review in accordance with section 751(a)(1)(A) of the Act. For each subsidy program found to be countervailable, Commerce finds that there is a subsidy, *i.e.*, a financial contribution from a government or public entity that gives rise to a benefit to the recipient, and that the subsidy is specific.⁶ For a full description of the methodology underlying all of Commerce's conclusions, including any determination that relied upon the use of adverse facts available pursuant to sections 776(a) and (b) of the Act, see the Issues and Decision Memorandum.

Company Not Selected for Individual Review

We made no changes to the methodology for determining the rate assigned to Sincere Cooperation Material, the company not selected for individual examination, from the *Preliminary Results*.⁷ However, we revised this rate to reflect the changes to Heze Huayi's rate.⁸

Final Results of Administrative Review

In accordance with 19 CFR 351.221(b)(5), Commerce calculated the following net countervailable subsidy rates for the period January 1, 2021, through December 31, 2021:

Company	Subsidy rate (percent <i>ad valorem</i>)
Heze Huayi Chemical Co., Ltd.	3.12
Juancheng Kangtai Chemical Co., Ltd.	3.96
Review-Specific Average Rate Applicable to the Following Company	
Sincere Cooperation Material	3.26

⁶ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

⁷ See *Preliminary Results* PDM at 5.

⁸ See Memorandum, “Calculation of Subsidy Rate for Non-Selected Companies Under Review,” dated concurrently with this notice.

Disclosure

Commerce will disclose to interested parties the calculations performed for these final results within five days of public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final results in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b)(2), Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, countervailing duties on all appropriate entries of subject merchandise in accordance with the final results of this review, for the above-listed companies at the applicable *ad valorem* assessment rates listed. We intend to issue assessment instructions to CBP no earlier than 35 days after the date of publication of these final results of review. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, Commerce intends to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts shown for each of the respective companies listed above on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. For all non-reviewed firms subject to the *Order*, we will instruct CBP to continue to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposit requirements, effective upon publication of the final results of this review, shall remain in effect until further notice.

Administrative Protective Order

This notice also serves as a final reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply

with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

Commerce is issuing and publishing the final results of review in accordance with sections 751(a)(1) and 777(i)(1) of the Act and 19 CFR 351.221(b)(5).

Dated: June 4, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

Certain Steel Nails From the United Arab Emirates: Preliminary Results of Antidumping Duty Administrative Review, and Partial Rescission; 2022–2023

AGENCY: Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily finds that sales of certain steel nails (steel nails) from the United Arab Emirates (UAE) were not made at less than normal value (NV). The period of review (POR) is May 1, 2022, through April 30, 2023. Additionally, Commerce is rescinding this administrative review, in part, with respect to 19 companies because the requests for administrative review were timely withdrawn. We invite interested parties to comment on these preliminary results.

DATES: Applicable June 11, 2024.

FOR FURTHER INFORMATION CONTACT:

Robert Galantucci or Brittany Bauer, AD/CVD Operations, Office V, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-2923 or (202) 482-3860, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 12, 2023, Commerce initiated an administrative review of the antidumping duty order on steel nails from the UAE,¹ in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act), with respect to 21 producers/exporters of the subject merchandise.² Commerce selected two mandatory respondents for individual examination: Master Nails and Pins Manufacturing, LLC (Master Nails)/ Middle East Manufacturing Steel LLC (MEM) (collectively, Master);³ and Rich Well Steel Industries LLC (Rich Well).⁴ On January 17, 2024, Commerce extended the deadline for the preliminary results of this administrative review until May 30, 2024.⁵

For details regarding the events that occurred subsequent to the initiation of the review, see the Preliminary Decision Memorandum.⁶ A list of topics included in the Preliminary Decision Memorandum is included as an appendix to this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Preliminary Decision

³ Commerce previously determined that Master Nails and MEM comprise a single entity. See *Certain Steel Nails from the United Arab Emirates: Final Results of Antidumping Duty Administrative Review; 2020–2021*, 87 FR 61566 (October 12, 2022).

⁴ See Memorandum “Respondent Selection,” dated August 10, 2023.

⁵ See Memorandum, “Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review,” dated January 17, 2024.

⁶ See Memorandum, “Decision Memorandum for the Preliminary Results of the Administrative Review of the Antidumping Duty Order on Certain Steel Nails from the United Arab Emirates; 2022–2023,” dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

Memorandum is available at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

Scope of the Order

The products covered by the *Order* are steel nails from the UAE. For a full description of the scope, see the Preliminary Decision Memorandum.

Rescission of Administrative Review, In Part

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if a party who requested the review withdraws the request within 90 days of the date of publication of the notice of initiation. Commerce received a timely-filed withdrawal request from Mid Continent Steel & Wire, Inc. (the petitioner) relating to 19 companies.⁷ Because the withdrawal request was timely filed, and no other party requested a review of these companies, in accordance with 19 CFR 351.213(d)(1), Commerce is rescinding this review with respect to the following companies: (1) Al Falaq Building Materials; (2) Al Khashab Building Materials Co., LLC.; (3) Al Rafaa Star Building Materials Est.; (4) Al Sabbah Trading and Importing, Est.; (5) Al-Khatib Est. (6) All Ferro Building Materials, LLC.; (7) Asgarali Yousuf Trading Co., LLC.; (8) Azymuth Consulting, LLC.; (9) Burj Al Tasmeem, Tr.; (10) Gheewala Hardware Trading Company, LLC; (11) Madar UAE; (12) Mustafa Building Materials Co. (LLC); (13) New World International, LLC.; (14) Okzeela Star Building Materials Trading, LLC.; (15) Rishi International, FZCO; (16) Samrat Wire Industry, LLC.; (17) Sea Lan Contracting; (18) SK Metal International DMCC.; and (19) Trade Circle Enterprises, LLC.

Methodology

Commerce is conducting this review in accordance with section 751(a) of the Act. We calculated export price in accordance with section 772(a) of the Act. We calculated NV in accordance with section 773 of the Act. For a full description of the methodology underlying these preliminary results, see the Preliminary Decision Memorandum.

Preliminary Results of Review

We preliminarily determine that the following weighted-average dumping margins exist for the period May 1, 2022, through April 30, 2023:

Exporter/producer	Weighted-average dumping margin (percent)
Master Nails and Pins Manufacturing, LLC/Middle East Manufacturing Steel, LLC	0.00
Rich Well Steel Industries LLC	0.00

Disclosure and Public Comment

We intend to disclose the calculations performed to parties within five days after public announcement of the preliminary results or, if there is no public announcement, within five days of the date of publication of this notice.⁸

Interested parties may submit case briefs no later than 30 days after the date of publication of this notice.⁹ Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.¹⁰ Interested parties who submit case or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.¹¹

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.¹² Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results in this administrative review. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).¹³

⁸ See 19 CFR 351.224(b).

⁹ See 19 CFR 351.309(c)(1)(ii); see also 19 CFR 351.303 (for general filing requirements).

¹⁰ See 19 CFR 351.309(d); see also *Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings*, 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Final Rule*).

¹¹ See 19 CFR 351.309(c)(2) and (d)(2).

¹² We use the term “issue” here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

¹³ See *APO and Service Final Rule*.

Interested parties who wish to request a hearing must submit a written request to the Assistant Secretary for Enforcement and Compliance, filed electronically via ACCESS.¹⁴ Requests should contain: (1) the party’s name, address, and telephone number; (2) the number of participants and whether any participant is a foreign national; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in case and rebuttal briefs.¹⁵ If a request for a hearing is made, Commerce intends to hold the hearing at a time and date to be determined. A hearing request must be filed electronically using ACCESS and received in its entirety by 5:00 p.m. Eastern Time within 30 days after the publication of this notice.

Assessment Rates

Upon completion of this administrative review, Commerce shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review.¹⁶ Pursuant to 19 CFR 351.212(b)(1) if the weighted-average dumping margin for Master or Rich Well is not zero or *de minimis* (i.e., less than 0.5 percent) in the final results of this review, we will calculate importer-specific *ad valorem* antidumping duty assessment rates based on the ratio of the total amount of dumping calculated for the importer’s examined sales to the total entered value of those same sales. If either respondent’s weighted-average dumping margin is zero or *de minimis*, we intend to instruct CBP to liquidate the appropriate entries without regard to antidumping duties. The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by this review and for future deposits of estimated duties, where applicable.¹⁷

In accordance with Commerce’s “automatic assessment” practice, for entries of subject merchandise during the POR produced by Master or Rich Well for which the respondent did not know that the merchandise was destined for the United States, we will instruct CBP to liquidate those entries at the all-others rate established in the original less-than-fair-value (LTFV)¹⁸ if there is no rate for the intermediate

¹⁴ See 19 CFR 351.310(c).

¹⁵ See 19 CFR 351.310.

¹⁶ See 19 CFR 351.212(b)(1).

¹⁷ See section 751(a)(2)(C) of the Act.

¹⁸ See *Order*, 77 FR at 27422.

⁷ See Petitioner’s Letter, “Withdrawal of Request for Administrative Review,” dated October 10, 2023.

company(ies) involved in the transaction.¹⁹

Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the companies listed above will be equal to the weighted-average dumping margin established in the final results of this administrative review, except if the rate is less than 0.50 percent and, therefore, *de minimis* within the meaning of 19 CFR 351.106(c)(1), in which case the cash deposit rate will be zero; (2) for merchandise exported by a company not covered in this review, but covered in a prior segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published for the most recently-completed segment of this proceeding in which it was reviewed; (3) if the exporter is not a firm covered by this review, a prior review, or the original LTFV investigation, but the producer is, then the cash deposit rate will be the rate established for the most recently-completed segment of this proceeding for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be 4.30 percent,²⁰ the all-others rate established in the LTFV investigation. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Final Results of Review

Unless otherwise extended, Commerce intends to issue the final results of this administrative review, including the results of its analysis of the issues raised in any written briefs, not later than 120 days after the date of publication of this notice, pursuant to

section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(1).

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification to Interested Parties

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213 and 19 CFR 351.221(b)(4).

Dated: May 30, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A-533-823]

Silicomanganese From India: Preliminary Results of Antidumping Duty Administrative Review and Intent To Rescind, in Part; 2022-2023

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that silicomanganese from India was sold in the United States at less than normal value during the period of review (POR) May 1, 2022, through April 30, 2023. Interested parties are invited to comment on these preliminary results.

DATES: Applicable June 11, 2024.

FOR FURTHER INFORMATION CONTACT: Mark Hoadley, AD/CVD Operations, Office VII, Enforcement and

Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-3148.

SUPPLEMENTARY INFORMATION:

Background

On May 23, 2002, Commerce published the antidumping duty order on silicomanganese from India.¹ On May 19, 2023, Commerce received a timely request to conduct an administrative review of the *Order* from Maithan Alloys Limited (MAL),² and on May 31, 2023, Eramet Marietta, Inc. (the petitioner) requested a review of MAL and Rajadhiraj Tirupani Vinayak Natraj Pvt. Ltd. (RTVN).³ On July 12, 2023, in accordance with 19 CFR 351.221(c)(i), Commerce initiated an administrative review of MAL and RTVN.⁴ Pursuant to section 751(a)(3)(A) of the Tariff Act of 1930, as amended (the Act), on January 26, 2024, Commerce extended the deadline for the preliminary results of this review until May 23, 2024.⁵

For a detailed description of the events that followed the initiation of this review, see the Preliminary Decision Memorandum.⁶ A list of topics discussed in the Preliminary Decision Memorandum is attached as an appendix to this notice. The Preliminary Decision Memorandum is a public document and is available via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

¹ See Notice of Amended Final Determination of Sales at Less than Fair Value and Antidumping Duty Orders: Silicomanganese from India, Kazakhstan, and Venezuela, 67 FR 36149 (May 23, 2002) (*Order*).

² See MAL's Letter, "Request for Administrative Review of Antidumping Order on behalf of Maithan Alloys Limited," dated May 19, 2023.

³ See Petitioner's Letter, "Request for Administrative Review of Antidumping Duty Order," dated May 31, 2023.

⁴ See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 87 FR 42144 (July 14, 2022).

⁵ See Memorandum, "Extension of Deadline for Preliminary Results of Antidumping Duty Administrative Review," dated January 26, 2024.

⁶ See Memorandum, "Decision Memorandum for the Preliminary Results of the Antidumping Duty Administrative Review: Silicomanganese from India; 2022-2023," dated concurrently with, and hereby adopted by, this notice (Preliminary Decision Memorandum).

¹⁹ For a full discussion of this practice, see *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties*, 68 FR 23954 (May 6, 2003).

²⁰ See *Order*, 77 FR at 27422.

Scope of the Order

The products covered by this *Order* are all forms, sizes and compositions of silicomanganese, except low-carbon silicomanganese. For a full description of the scope of the *Order*, see the Preliminary Decision Memorandum.

Intent To Rescind, in Part

As explained in the Preliminary Decision Memorandum, Commerce finds that RTVN had no suspended entries of subject merchandise and, therefore, pursuant to 19 CFR 351.213(d)(3), we intend to rescind the review with respect to RTVN.

Methodology

Commerce is conducting this review in accordance with sections 751(a)(1)(B) and (2) of the Act. For a full description of the methodology underlying these preliminary results, see the Preliminary Decision Memorandum.

Preliminary Results of the Review

We preliminarily determine the following estimated weighted-average dumping margin for the period May 1, 2022, through April 30, 2023:

Exporter or producer	Weighted-average dumping margin (percent)
Maithan Alloys Limited	1.71

Disclosure and Public Comment

Commerce intends to disclose its calculations performed to interested parties for these preliminary results within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Case briefs or other written comments may be submitted to the Assistant Secretary for Enforcement and Compliance.⁷ Commerce will notify interested parties of the deadline for submission of case briefs. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.⁸ Interested parties who submit case briefs or rebuttal briefs in this

proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.⁹

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this review, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.¹⁰ Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final determination in this investigation. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue. Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).¹¹

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, limited to issues raised in the case and rebuttal briefs, must submit a written request to the Assistant Secretary for Enforcement and Compliance, U.S. Department of Commerce, filed electronically, using ACCESS. Hearing requests should contain the party's name, address, and telephone number, the number of participants, and a list of the issues to be discussed. Issues raised in the hearing will be limited to those raised in the case and rebuttal briefs. An electronically filed request must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time, within 30 days of the publication date of this notice. If a request for a hearing is made, parties will be notified of the time and date of the hearing.¹²

Final Results of Review

Unless the deadline is extended pursuant to section 751(a)(3)(A) of the Act and 19 CFR 351.213(h)(2), Commerce intends to issue the final results of this administrative review, including the results of its analysis of the issues raised by the parties in any written briefs, no later than 120 days

after the date of publication of these preliminary results.

Assessment Rates

Pursuant to section 751(a)(2)(A) of the Act and 19 CFR 351.212(b)(1), Commerce will determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with the final results of this review. Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this administrative review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

If MAL's weighted-average dumping margin is not zero or *de minimis* (*i.e.*, less than 0.50 percent) in the final results of this review, Commerce intends to calculate importer-specific assessment rates on the basis of the ratio of the total amount of dumping calculated for each importer's examined sales to the total entered value of those sales. Where we do not have entered values for all U.S. sales to a particular importer, we will calculate an importer-specific, per-unit assessment rate on the basis of the ratio of the total amount of dumping calculated for the importer's examined sales to the total quantity of those sales.¹³ To determine whether an importer-specific, per-unit assessment rate is *de minimis*, in accordance with 19 CFR 351.106(c)(2), we also will calculate an importer-specific *ad valorem* ratio based on estimated entered values. If MAL's weighted-average dumping margin is zero or *de minimis* or where an importer-specific *ad valorem* assessment rate is zero or *de minimis*, we will instruct CBP to liquidate appropriate entries without regard to antidumping duties.¹⁴

In accordance with Commerce's "automatic assessment" practice, for entries of subject merchandise during the POR produced by MAL for which it did not know that the merchandise was destined for the United States, we intend to instruct CBP to liquidate those entries at the all-others rate in the original less-than-fair-value

⁷ See 19 CFR 351.309(c)(1)(ii); see also 19 CFR 351.303 for general filing requirements.

⁸ See 19 CFR 351.309(d); see also *Administrative Protective Order, Service, and Other Procedures in Antidumping and Countervailing Duty Proceedings*, 88 FR 67069, 67077 (September 29, 2023) (*APO and Service Procedures*).

⁹ See 19 CFR 351.309(c)(2) and (d)(2).

¹⁰ We use the term "issue" here to describe an argument that Commerce would normally address in a comment of the Issues and Decision Memorandum.

¹¹ See *APO and Service Procedures*.

¹² See 19 CFR 351.310(d).

¹³ See 19 CFR 351.212(b)(1).

investigation (*i.e.*, 17.74 percent) if there is no rate for the intermediate company(ies) involved in the transaction.¹⁵

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review, as provided for by section 751(a)(2)(C) of the Act: (1) the company-specific cash deposit rate for MAL will be equal to the weighted-average dumping margin established in the final results of this review (except, if that rate is *de minimis* within the meaning of 19 CFR 351.106(c)(1), then the cash deposit rate will be zero); (2) for producers or exporters not covered in this review but covered in a prior segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published for the most recently-completed segment of this proceeding in which they were reviewed; (3) if the exporter is not a firm covered in this review or a prior segment of the proceeding but the producer is, then the cash deposit rate will be the rate established for the most recently completed segment of this proceeding for the producer of the merchandise; and (4) the cash deposit rate for all other producers or exporters will continue to be 17.74 percent, the all-others rate established in the less-than-fair-value investigation.¹⁶ These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Notification to Interested Parties

We are issuing and publishing these preliminary results in accordance with sections 751(a)(1) and 777(i) of the Act,

and 19 CFR 351.213(h)(2) and 351.221(b)(4).

Dated: May 23, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

International Trade Administration

[A-570-067]

Forged Steel Fittings From the People's Republic of China: Final Results of Antidumping Duty Administrative Review and Final Determination of No Shipments; 2021–2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that Qingdao Bestflow Industrial Co., Ltd. (Bestflow), the sole participating mandatory respondent in this review and an exporter of forged steel fittings from the People's Republic of China (China), and Both-Well Taizhou Steel Fittings Co., Ltd. (Both-Well), a non-individually-examined exporter of forged steel fittings from China, sold subject merchandise in the United States at prices below normal value (NV) during the period of review (POR) November 1, 2021, through October 31, 2022. Further, Commerce determines that Xin Yi International Trade Co., Limited (Xin Yi) had no shipments of subject merchandise during the POR. Lastly, Commerce determines that 23 companies for which this review was initiated are not eligible for a separate rate and are, thus, part of the China-wide entity.

DATES: Applicable June 11, 2024.

FOR FURTHER INFORMATION CONTACT: Jinny Ahn, AD/CVD Operations, Office VI, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401

Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-0968.

SUPPLEMENTARY INFORMATION:

Background

Commerce published the *Preliminary Results*¹ on December 7, 2023, and invited interested parties to comment. On March 22, 2024, we extended the deadline for the final results of this review until June 4, 2024.² For a complete description of the events that occurred since the *Preliminary Results*, see the Issues and Decision Memorandum.³

Scope of the Order⁴

The merchandise covered by the *Order* is forged steel fittings from China. Subject carbon and alloy forged steel fittings are normally entered under Harmonized Tariff Schedule of the United States (HTSUS) subheadings 7307.99.1000, 7307.99.3000, 7307.99.5045, and 7307.99.5060. They also may be entered under HTSUS subheadings 7307.92.3010, 7307.92.3030, 7307.92.9000, and 7326.19.0010. The HTSUS subheadings are provided for convenience and customs purposes; the written description of the scope is dispositive. For a complete description of the scope of the *Order*, see the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised in the parties' briefs are addressed in the Issues and Decision Memorandum. A list of the issues addressed is included as Appendix I to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Issues and Decision Memorandum can be accessed

¹ See *Forged Steel Fittings from the People's Republic of China: Preliminary Results of Antidumping Duty Administrative Review, Preliminary Determination of No Shipments; 2021–2022*, 88 FR 85221 (December 7, 2023) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum (PDM).

² See Memorandum, "Extension of Deadline for Final Results of Antidumping Duty Administrative Review," dated March 22, 2024.

³ See Memorandum, "Decision Memorandum for the Final Results of the Administrative Review of the Antidumping Duty Order on Forged Steel Fittings from the People's Republic of China; 2021–2022," dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

Changes Since the Preliminary Results

Based on our review of the record and comments received from interested parties regarding the *Preliminary Results*, we made certain revisions to the margin calculations for Bestflow.⁵ Further, we have assigned Bestflow's revised final weighted-average dumping margin to the non-examined separate rate respondent, Both-Well. For a discussion of these changes, see the Issues and Decision Memorandum.

Final Determination of No Shipments

In the *Preliminary Results*, we preliminarily determined that Xin Yi had no shipments of subject merchandise to the United States during the POR.⁶ No party filed comments with respect to this preliminary determination and we received no information to contradict the preliminary finding. Therefore, we continue to find that Xin Yi had no shipments of subject merchandise during the POR and will issue appropriate liquidation instructions that are consistent with our "automatic assessment" clarification for these final results.⁷

Separate Rate

In our *Preliminary Results*, we determined that Bestflow and Both-Well demonstrated their eligibility for separate rates.⁸ We received no arguments since the issuance of the *Preliminary Results* that provide a basis for reconsideration of these determinations. Therefore, for these final results, we continue to find that the two companies listed in the table in the "Final Results of Review" section of this notice are each eligible for a separate rate.

The China-Wide Entity

In the *Preliminary Results*, Commerce found that 23 companies for which a review was initiated did not establish their eligibility for a separate rate.⁹ No parties contested this finding. As such, we continue to determine these 23 companies identified in Appendix II are part of the China-wide entity. Because no party requested a review of the China-wide entity, and Commerce no

longer considers the China-wide entity as an exporter conditionally subject to administrative reviews,¹⁰ we did not conduct a review of the China-wide entity. Thus, the weighted-average dumping margin for the China-wide entity rate (*i.e.*, 142.72 percent) is not subject to change.¹¹

Rate for Non-Examined Separate Rate Respondent

The statute and Commerce's regulations do not address what weighted-average dumping margin to apply to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Tariff Act of 1930, as amended (the Act). Generally, Commerce looks to section 735(c)(5) of the Act, which provides instructions for calculating the all-others rate in an investigation, for guidance when calculating the weighted-average dumping margin for respondents that are not individually examined in an administrative review. Section 735(c)(5)(A) of the Act states that the all-others rate should be calculated by averaging the weighted-average dumping margins determined for individually-examined respondents, excluding rates that are zero, *de minimis*, or based entirely on facts available.

In the *Preliminary Results*,¹² and consistent with Commerce's practice,¹³ we assigned the non-examined, separate rate company (*i.e.*, Both-Well) a weighted-average dumping margin equal to the calculated weighted-average dumping margin for the mandatory respondent whose rate was not zero, *de minimis* (*i.e.*, less than 0.5 percent), or based entirely on facts available (*i.e.*, the weighted-average dumping margin for Bestflow). Both-Well and the Bonney Forge Corporation, a domestic interested party, commented on the methodology for calculating this separate rate. See Issues and Decision Memorandum at Comment 5. For the final results, we continue to apply this approach and assign Both-Well the weighted-average dumping margin calculated for Bestflow which is not zero, *de minimis*, or based entirely on facts available, as it is

consistent with the intent of, and our use of, section 735(c)(5)(A) of the Act.¹⁴

Final Results of Review

Commerce determines that the following weighted-average dumping margins exist for the period November 1, 2021, through October 31, 2022:

Exporter	Weighted-average dumping margin (percent)
Qingdao Bestflow Industrial Co., Ltd	118.97
Review-Specific Rate Applicable to the Following Company	
Both-Well (Taizhou) Steel Fittings Co., Ltd	118.97

Disclosure

We intend to disclose the calculations performed in connection with these final results to interested parties in this review under an administrative protective order (APO) within five days of the date of publication of this notice in the **Federal Register** in accordance with 19 CFR 351.224(b).

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b), Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries covered by this review. Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

We will instruct CBP to assess antidumping duties on all appropriate entries covered by this review, when the company-specific weighted-average dumping margin is not zero or *de minimis* (*i.e.*, less than 0.50 percent), or when the importer-specific assessment rate calculated in the final results of this review is not zero or *de minimis*.¹⁵ Where either a company's weighted-average dumping margin is zero or *de*

⁸ See *Preliminary Results* PDM at 7–8.

⁹ *Id.* at 9.

¹⁰ See *Antidumping Proceedings: Announcement of Change in Department Practice for Respondent Selection in Antidumping Duty Proceedings and Conditional Review of the Nonmarket Economy Entity in NME Antidumping Duty Proceedings*, 78 FR 65963, 65969–70 (November 4, 2013).

¹¹ See *Order*, 83 FR at 60397.

¹² See *Preliminary Results* PDM at 9.

¹³ See, e.g., *Certain Kitchen Appliance Shelving and Racks from the People's Republic of China: Final Determination of Sales at Less Than Fair Value*, 74 FR 36656, 36660 (July 24, 2009).

¹⁴ See *Certain Frozen Warmwater Shrimp from the Socialist Republic of Vietnam: Final Results and Final Partial Rescission of Antidumping Duty Administrative Review*, 76 FR 56158, 56160 (September 12, 2011).

¹⁵ See 19 CFR 351.106(c)(2).

minimis, or an importer-specific assessment rate is zero or *de minimis*, we will instruct CBP to liquidate the appropriate entries without regard to antidumping duties.

For Bestflow, which has a final weighted-average dumping margin that is not zero or *de minimis* (*i.e.*, less than 0.5 percent), we will instruct CBP to assess antidumping duties at the time of liquidation, in accordance with 19 CFR 351.212(b)(1).¹⁶ Because Bestflow did not report entered value for its U.S. sales, we intend to calculate importer- or customer-specific per-unit assessment rates by dividing the total amount of dumping calculated for all reviewed sales to the importer or customer by the total quantity of the same sales. Commerce will also calculate (estimated) *ad valorem* importer- or customer-specific assessment rates with which to assess whether the per-unit assessment rates are *de minimis*. We intend to calculate estimated importer- (or customer-specific *ad valorem* assessment rates by dividing the total amount of dumping calculated for all reviewed U.S. sales to the importer or customer by the total estimated entered value of the same sales.¹⁷

For the respondent that was not selected for individual examination in this administrative review, and which qualified for a separate rate (*i.e.*, Both-Well), the assessment rate will be equal to the weighted-average dumping margin from the final results (*i.e.*, 118.97 percent). For the companies who are not eligible for a separate rate, and, thus, are part of the China-wide entity, we will instruct CBP to apply an *ad valorem* assessment rate of 142.72 percent to all POR entries of subject merchandise which was exported by those companies.

Pursuant to a refinement in our non-market economy practice, for sales that were not reported in the U.S. sales data submitted by Bestflow during this review, we will instruct CBP to liquidate entries associated with those sales at the rate for the China-wide entity.¹⁸ Additionally, any suspended entries that entered under Xin Yi's case number (*i.e.*, at Xin Yi's cash deposit rate) will be liquidated at the

antidumping duty assessment rate for the China-wide entity.¹⁹

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication of the final results of this administrative review for shipments of the subject merchandise from China entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) for companies listed in the table above, the cash deposit rate will be 118.97 percent; (2) for previously examined Chinese and non-Chinese exporters not listed above that have separate rates, the cash deposit rate will continue to be the exporter's existing cash deposit rate; (3) for all Chinese exporters of subject merchandise that have not been found to be entitled to a separate rate, the cash deposit rate will be the rate for the China-wide entity (*i.e.*, 142.72 percent); and (4) for all non-Chinese exporters of subject merchandise which have not received their own separate rate, the cash deposit rate will be the rate applicable to the Chinese exporter that supplied that non-Chinese exporter. These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice also serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties occurred and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of the countervailing duties.

Administrative Protective Order

This notice also serves as a reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the

regulations and terms of an APO is a violation subject to sanction.

Notification to Interested Parties

These final results and notice are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act, and 19 CFR 351.213(h) and 19 CFR 351.221(b)(5).

Dated: June 4, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

International Trade Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Application for Export Trade Certificate of Review

AGENCY: International Trade Administration, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before August 12, 2024.

ADDRESSES: Interested persons are invited to submit written comments by mail to Amanda Reynolds, Team Lead, International Trade Administration (ITA) by email to ETCA@trade.gov or PRA@trade.gov. Please reference OMB Control Number 0625–0125 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Amanda Reynolds, Team Lead, (202) 482–5131 and email ETCA@trade.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

Title III of the Export Trading Company Act (hereinafter “the Act”) of 1982 (Pub. L. 97–290, 15 U.S.C. 4001 *et seq.*), authorizes the Secretary of Commerce to issue, with the concurrence of the Attorney General, an Export Trade Certificate of Review to any person that establishes that its proposed export trade, export trade

activities, and methods of operation meet the four standards found in section 303 (a) of the Act, 15 U.S.C. 4001 *et seq.* An Export Trade Certificate of Review provides the certificate holder and its members with limited antitrust immunity for specified export-related activities. Application for an Export Trade Certificate of Review is voluntary. The information to be collected is found at 15 CFR part 325.3—Export Trade Certificates of Review. The collection of information is necessary for both the Departments of Commerce and Justice to conduct an analysis, in order to determine whether the applicant and its members are eligible to receive the protection of an Export Trade Certificate of Review and whether the applicant's proposed export-related conduct meets the standards in Section 303(a) of the Act. The collection of information constitutes the essential basis of the statutory determinations to be made by the Secretary of Commerce and the Attorney General.

The Department of Commerce conducts its economic and legal analysis of the information supplied by applicants through the Office of Trade and Economic Analysis and the Office of the General Counsel. In the Department of Justice, analysis is conducted by the Antitrust Division.

Title III was enacted to reduce uncertainty regarding the application of U.S. antitrust laws to export activities. An Export Trade Certificate of Review provides its holder and members named in the Certificate with (a) protection from government actions under state and federal antitrust laws for the export conduct specified in the Certificate, and (b) certain protection from private suits, by limiting liability in private actions to actual damages when the challenged activities are covered by an Export Trade Certificate of Review.

II. Method of Collection

The form is sent by request to U.S. firms.

III. Data

OMB Control Number: 0625–0125.
Form Number(s): ITA–4093P.

Type of Review: Regular submission, extension of a current information collection.

Affected Public: Business or other for-profit organizations; not-for-profit institutions, and state, local or tribal government.

Estimated Number of Respondents: 9.

Estimated Time per Response: 32 hours (application); 2 hours (annual report).

Estimated Total Annual Burden Hours: 426 hours.

Estimated Total Annual Cost to Public: \$0.

Respondent's Obligation: Voluntary.

Legal Authority: Title III of the Export Trading Company Act of 1982, 15 U.S.C. 4011–4021.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–DR–P

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Generic Clearance for Decision Science Data Collections

AGENCY: National Institute of Standards and Technology (NIST), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before August 12, 2024.

ADDRESSES: Interested persons are invited to submit written comments by mail to Maureen O'Reilly, Management Analyst, NIST at PRANIST@nist.gov. Please reference OMB Control Number 0693-0089 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Maureen O'Reilly, Management Analyst, NIST, 100 Bureau Drive, Gaithersburg, MD 20899, 301-975-3189 or maureen.oreilly@nist.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

The core mission of the National Institute of Standards and Technology (NIST) is to promote U.S. innovation and industrial competitiveness by advancing measurement science, standards, and technology in ways that enhance economic security and improve our quality of life. NIST's operating units across the agency increasingly recognize that the built environment is meant to serve social and economic functions. With this in mind, NIST proposes to conduct a number of data collection efforts directly related to decision-making across individuals, institutions, and communities relevant to key research areas of the agency. The use of decision and information science is critical to further the mission of NIST to promote U.S. innovation and industrial competitiveness. NIST proposes to conduct a number of data collection efforts in decision and information science to include: decision analysis, risk analysis, cost-benefit and cost-effectiveness analysis, constrained optimization, simulation modeling, and application of perception, information processing, and decision models and theories; and drawing on parts of operations research, microeconomics,

statistical inference, management control, cognitive and social psychology, and computer science. By focusing on decisions as the unit of analysis, decision science provides a unique framework for understanding interactions across technologies, socio-economic networks, organizations (e.g., institutions, firms), elements of the built environment, and a range of ecological problems and perceptions that influence these decisions.

Data may be collected through a variety of modes, including but not limited to electronic or social media, direct or indirect observation (i.e., in-person, video and audio collections), interviews, structured questionnaires, and focus groups.

II. Method of Collection

NIST will collect this information by electronic means, when possible, as well as by mail, fax, telephone, technical discussions, and in-person interviews. NIST may also utilize observational techniques to collect this information.

Furthermore, remuneration will be offered to respondents when deemed appropriate. Remuneration is justified due to:

(1) The complex study design of many collections requires ongoing participation of various respondents, each of whom is important to achieving study goals. In such studies, should attrition occur at a higher rate than expected, the study goals will not be met.

(2) There is burden on the respondent to take time out of their workday in many cases. There will be equity in the use of remuneration: all respondents will be treated equally with regard to incentives.

III. Data

OMB Control Number: 0693-0089.

Form Number(s): None.

Type of Review: Regular submission, extension of a current information collection.

Affected Public: Individuals or households; first responders; businesses or other for-profit organizations; not-for-profit institutions; State, local or tribal government; Federal government; Standards-making bodies; Universities.

Estimated Number of Respondents: 30,000.

Estimated Time per Response: Varied, dependent upon the data collection method used. The possible response time may be 15 minutes to complete a questionnaire or 2 hours to participate in an interview.

Estimated Total Annual Burden Hours: 15,000.

Estimated Total Annual Cost to Public: \$125,000.

Respondent's Obligation: Voluntary.
Legal Authority:

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

the Endangered Species Act (ESA), as applicable.

ADDRESSES: The permits and related documents are available for review upon written request via email to NMFS.Pr1Comments@noaa.gov.

FOR FURTHER INFORMATION CONTACT: Shasta McClenahan, Ph.D. (Permit No. 27342) and Malcolm Mohead (Permit No. 27830); at (301) 427–8401.

SUPPLEMENTARY INFORMATION: Notices were published in the **Federal Register** on the dates listed below that requests for a permit or permit amendment had

been submitted by the below-named applicants. To locate the **Federal Register** notice that announced our receipt of the application and a complete description of the activities, go to <https://www.federalregister.gov> and search on the permit number provided in table 1 below.

TABLE 1—ISSUED PERMITS

Permit No.	RTID	Applicant	Previous Federal Register notice	Issuance date
27342	0648–XD819	Heidi Pearson, Ph.D., University of Alaska Southeast, 11066 Auke Lake Way, Juneau, AK 99801.	89 FR 20182, March 21, 2024	May 7, 2024.
27830	0648–XD822	Gregory Lewbart, V.M.D., North Carolina State University, 1060 William Moore Drive, Raleigh, NC 27607.	89 FR 22683, April 2, 2024	May 13, 2024.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), a final determination has been made that the activities proposed are categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

As required by the ESA, as applicable, issuance of these permits was based on a finding that such permits: (1) were applied for in good faith; (2) will not operate to the disadvantage of such endangered species; and (3) are consistent with the purposes and policies set forth in section 2 of the ESA.

Authority: The requested permits have been issued under the MMPA of 1972, as amended (16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), the ESA of 1973, as amended (16 U.S.C. 1531 *et seq.*), and the regulations governing the taking, importing, and exporting of endangered and threatened species (50 CFR parts 222–226), as applicable.

Dated: June 5, 2024.

Julia M. Harrison,
Chief, Permits and Conservation Division,
Office of Protected Resources, National
Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Sanctuary System Business Advisory Council: Public Meeting

AGENCY: Office of National Marine Sanctuaries (ONMS), National Ocean Service, National Oceanic and

Atmospheric Administration,
Department of Commerce.

ACTION: Notice of open public meeting.

SUMMARY: Notice is hereby given of a meeting of the Sanctuary System Business Advisory Council (council). The meeting is open to the public, and an opportunity for oral and written comments will be provided.

DATES: The meeting will be held on Wednesday, June 26, 2024 from 12 p.m. to 1 p.m. eastern time (ET), and an opportunity for public comment will be provided around 12:50 p.m. ET. Both times and agenda topics are subject to change.

ADDRESSES: The meeting will be held virtually using Google Meet. To participate, please use the weblink provided below. If you are unable to participate online, you can also connect to the public meeting using the phone number provided.

- **Weblink:** meet.google.com/cio-obgn-ye
- **Phone:** (US) +1 352–612–1066 PIN: 470 410 197#

To provide an oral public comment during the virtual meeting, please sign up prior to or during the meeting by contacting Sage Riddick by phone (240–560–3365) or email (sage.riddick@noaa.gov). To provide written public comment, please send the comment to Sage Riddick prior to or during the meeting via email (sage.riddick@noaa.gov). Please note, the meeting will not be recorded. However, public comments, including any associated names, will be captured in the minutes of the meeting, will be maintained by ONMS as part of its administrative record, and may be subject to release pursuant to the Freedom of Information Act. The entirety of the comment, including the name of the commenter,

email address, attachments, and other supporting materials, will be publicly accessible. Sensitive personally identifiable information, such as account numbers and Social Security numbers, should not be included with the comment. By signing up to provide a public comment, you agree that these communications, including your name and comment, will be maintained as described here.

FOR FURTHER INFORMATION CONTACT: Sage Riddick, Office of National Marine Sanctuaries, 1305 East West Highway, Silver Spring, Maryland 20910 (Phone: 240–560–3365; Email: sage.riddick@noaa.gov).

SUPPLEMENTARY INFORMATION: ONMS serves as the trustee for a network of underwater parks encompassing more than 620,000 square miles of marine and Great Lakes waters from Washington State to the Florida Keys, and from Lake Huron to American Samoa. The network includes a system of 15 national marine sanctuaries and Papahānaumokuākea and Rose Atoll marine national monuments. National marine sanctuaries protect our Nation's most vital coastal and marine natural and cultural resources, and through active research, management, and public engagement, sustain healthy environments that are the foundation for thriving communities and stable economies.

One of the many ways ONMS ensures public participation in the designation and management of national marine sanctuaries is through the formation of advisory councils. The Sanctuary System Business Advisory Council (council) provides advice and recommendations to the ONMS Director regarding the relationship of ONMS with the business community. Additional information on this council

can be found at <https://sanctuaries.noaa.gov/management/bac/>.

Matters to be discussed: The meeting will include updates from Capitol Hill Ocean Week, member updates, and voting on amendments to the council's charter. For a complete agenda, including times and topics, please visit <http://sanctuaries.noaa.gov/management/bac/meetings.html>.

Authority: 16 U.S.C. 1431, *et seq.*

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Notice of Availability of Draft Guidance on Designation of New Regional Ocean Partnerships

AGENCY: Office for Coastal Management, National Ocean Service, National Oceanic and Atmospheric Administration, U.S. Department of Commerce.

ACTION: Notice of availability of draft guidance regarding the designation of new regional ocean partnerships; request for comments.

SUMMARY: Under the James M. Inhofe National Defense Authorization Act for Fiscal Year 2023 (NDAA), Coastal States (including Puerto Rico, the United States Virgin Islands, Guam, the Commonwealth of the Northern Mariana Islands, the Trust Territories of the Pacific Islands, and American Samoa), federally-recognized Indian Tribes (including Alaska native villages), and other entities may form new partnerships and apply to the National Oceanic and Atmospheric Administration (NOAA) (as delegated) for designation as a regional ocean partnership. Regional ocean partnerships coordinate the management of ocean, coastal, and Great Lakes resources. NOAA invites public comment on draft guidance on designating new regional ocean partnerships under the NDAA.

DATES: Comments are due by July 11, 2024.

ADDRESSES: Copies of the draft designation guidance document may be found on www.regulations.gov (search for NOAA-NOS-2024-0066) and NOAA's Office for Coastal Management website at <https://coast.noaa.gov/data/>

coasthome/funding/_pdf/bil-rop-designation-guidance.pdf. Comments may be submitted by:

- **Electronic Submission:** Submit all electronic public comments via the Federal eRulemaking Portal. Go to www.regulations.gov and enter NOAA-NOS-2024-0066 in the search box, then click the "comment" icon, complete the required fields, and enter or attach your comments.

- **Mail:** Submit written comments to Joshua Lott, Office for Coastal Management, NOS, NOAA, 1305 East-West Highway, Silver Spring, Maryland 20910; ATTN: Regional Ocean Partnership Designation Guidance.

Instructions: All comments received are a part of the public record and generally will be posted for public viewing on www.regulations.gov without change. All personally identifiable information (name, address, etc.), confidential business information, or otherwise sensitive information submitted voluntarily by the commenter will be publicly accessible. The Federal agencies will accept anonymous comments (enter "N/A" in the required fields you wish to remain anonymous). Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The Federal agencies will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing system). Comments that are not responsive or contain profanity, vulgarity, threats, or other inappropriate language will not be considered.

FOR FURTHER INFORMATION CONTACT:

Joshua Lott, Office for Coastal Management, NOS, NOAA, 1305 East-West Highway, Silver Spring, Maryland 20910; ATTN: Regional Ocean Partnership Designation Guidance. Phone: (202) 670-3826; or Email: rop.iija@noaa.gov.

SUPPLEMENTARY INFORMATION: Regional ocean partnerships are regional organizations, voluntarily convened by coastal States and Indian Tribes and designated by NOAA (as delegated, per the NDAA) to coordinate the management of ocean, coastal, and Great Lakes resources. These partnerships work in collaboration with other governments (including Tribal, Federal, and local) and stakeholders to address ocean and coastal issues of common concern in that region.

There are four existing regional ocean partnerships: the Gulf of Mexico Alliance, the Northeast Regional Ocean

Council, the Mid-Atlantic Regional Council on the Ocean, and the West Coast Ocean Alliance. Section 10102(b)(3) of the NDAA, codified at 16 U.S.C. 1468(b)(3), designates these four entities as regional ocean partnerships; as such, this draft designation guidance and application process for new partnerships does not apply to them.

This draft designation guidance has been developed to address the membership, organization, and required elements of new partnerships. NOAA proposes to include the following information in the guidance: introduction and background; instructions on submitting a new partnership application to NOAA; requirements for new regional ocean partnerships; and eligibility for funding as a partnership. Applications to NOAA for new regional ocean partnerships must identify: the members of the new partnership, the governing body of the new partnership, and the purposes and functions of the new partnership.

The draft designation guidance document may be found on www.regulations.gov (search for NOAA-NOS-2024-0066) and NOAA's Office for Coastal Management website at https://coast.noaa.gov/data/coasthome/funding/_pdf/bil-rop-designation-guidance.pdf.

Authority: 16 U.S.C. 1468

Jeffrey L. Payne,

Director, Office for Coastal Management, National Ocean Service, National Oceanic and Atmospheric Administration.

BILLING CODE 3510-08-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Listening Sessions on Draft Environmental Justice Strategy Approach

AGENCY: Office of the Undersecretary of Defense for Acquisition and Sustainment, Department of Defense (DoD).

ACTION: Notice; listening sessions and notice of availability.

SUMMARY: Pursuant to an Executive order (E.O.), the DoD is updating its EJ Strategy. DoD is soliciting feedback on its draft goals and overall approach to addressing EJ. This draft information is included in the **SUPPLEMENTARY INFORMATION** section.

DATES: Interested individuals are invited to provide verbal and written feedback on DoD's draft goals and overall

approach to addressing EJ throughout the Department.

DoD is offering the following two public, virtual listening sessions:

Tuesday, June 25, 2024 10:00 a.m.–12:00 p.m. Eastern Standard Time (EST), Virtual, Registration link: <https://bahmeet.webex.com/weblink/register/r2f51bca3daf05861f65172223990d09>

Thursday, June 27, 2024 4:00 p.m.–6:00 p.m. EST Virtual, Registration link: <https://bahmeet.webex.com/weblink/register/r14abbe7c9b79eed68e43d6baa288ab07>

Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services.

DoD will consider all comments received during the public listening sessions. Please clarify whether feedback is intended for the Department's draft EJ goals or overall approach to addressing EJ. DoD also plans to record these listening sessions to accurately capture inputs on the draft EJ goals and implementation approach. DoD plans to only use the recordings for this purpose. All feedback, including personal information, provided during the listening sessions may be made public. The Department cautions commenters from including personal or other identifying information they do not want made publicly available when submitting their feedback.

ADDRESSES: Individuals may also provide written feedback. DoD will consider all comments postmarked by 07/09/2024. Please clarify whether feedback is intended for the Department's draft EJ goals or overall approach to addressing EJ.

Submitting Comments: Individuals may submit written comments via one of the following methods:

- Email to: terry.l.bowers14.civ@mail.mil; osd.ejstrategy@mail.mil or
- Mail hard copy to: Terry Bowers, Office of the Assistant Secretary of Defense for Energy, Installations, and Environment, 3400 Defense Pentagon, Washington, DC 20301–3400.

Written comments must include the commenter's name and reference the Department's EJ Strategy. All feedback, including personal information, provided via written comment may be made public. The Department cautions commenters from including personal or other identifying information they do not want made publicly available when submitting their feedback.

Accessing Documents and Additional Information: Individuals may access additional information on the

Department's EJ efforts through the following link: <https://www.denix.osd.mil/ej/>.

FOR FURTHER INFORMATION CONTACT: Mr. Terry Bowers, 571–232–2482, terry.l.bowers14.civ@mail.mil and osd.ejstrategy@mail.mil.

SUPPLEMENTARY INFORMATION:

Background: E.O. 14096 directs Federal agencies to develop an EJ Strategy that will “set forth the agency's vision, goals, priority actions, and metrics to address and advance environmental justice and to fulfill the directives of the E.O., including through the identification of new staffing, policies, regulations, or guidance documents”, as well as “identify and address opportunities through regulations, policies, permits, or other means to improve accountability and compliance with any statute the agency administers that affects the health and environment of communities with environmental justice concerns.”

To advance its EJ efforts, the Department is updating its EJ Strategy in accordance with E.O. 14096. DoD will evaluate all verbal and written feedback received on the draft goals and overall approach to advancing EJ across the Department.

Listening Session Format: The listening sessions listed above will be two hours. Each session will start with an overview and then participants will have an opportunity to provide feedback through a variety of engagement tools. If you require a reasonable accommodation to attend one of the listening sessions, please email: terry.l.bowers14.civ@mail.mil, orosd.ejstrategy@mail.mil.

Draft Goals and Overall Approach to Addressing EJ: DoD would appreciate feedback on the following questions:

1. Do the drafted EJ goals and overall implementation approach address your concerns regarding the advancement of EJ throughout the Department? Why or why not? Note: the drafted items are included below.
2. Are there any concerns with the Department's drafted overall approach to addressing EJ?
3. Are there any concerns not currently reflected in the drafted materials included below?

DoD drafted the following Goals in response to E.O. 14096:

- Regularly assess EJ-related plans, policies, programs, and actions across all DoD programs after first educating and expanding EJ awareness of actions disproportionately impacting low income, minority, Tribal, disabled, and/or descendant populations across all DoD programs.

- Identify, characterize, and assess effects of DoD plans, programs, policies, and activities disproportionately impacting communities and stakeholders, including whether effects are chronic or acute.

- Investigate methods to mitigate impacts of DoD plans, programs, policies, and activities after first identifying potentially affected communities and stakeholders.

- Provide tools to improve DoD's capacity to conduct meaningful and effective work supporting EJ.
- Strengthen outreach to communities and stakeholders that may be disproportionately affected by high and adverse environmental, human health, or cultural impacts from DoD programs, policies, and activities through appropriate public engagement.

DoD also drafted the following overall approach to addressing EJ:

DoD anticipates that it will need to execute a considerable amount of work to effectively integrate EJ across the enterprise to meet E.O. 14096. Historically, DoD has used compliance with the National Environmental Policy Act, National Historic Preservation Act, and Comprehensive Environmental Response, Compensation, and Liability Act processes to address EJ. The Department may take a more proactive approach by incorporating EJ into Office of the Secretary of Defense (OSD), Military Department (MILDEP), and installation-level planning processes. These plans may include or discuss installation master planning, climate change, cultural and natural resources conservation, integrated installation resilience, and others. Integrating EJ into the Department's policies and programs will require consistent coordination across OSD, the MILDEPs, individual installations, and other DoD equities.

The Department may investigate methods to streamline EJ implementation, including:

- Issuing a Secretary of Defense or Deputy Secretary of Defense message, discussing the importance of EJ and explaining CEQ's EJ guidance;
- Designating a Chief EJ Officer for each MILDEP;
- Coordinating with the MILDEPs and DoD Components on the best methods to integrate EJ into existing programming, planning, acquisition, and other actions;
- Issuing a DoD Directive, Instruction, and/or Manual, describing consistent EJ implementation across all programs and services and identifying actions better managed at the OSD-level versus the MILDEP- and installation-levels;

- Developing EJ training and communication materials for DoD leadership; and
- Beginning integration of available EJ tools into planning documents.

Dated: June 6, 2024.
Patricia L. Toppings,
OSD Federal Register Liaison Officer,
Department of Defense.
[FR Doc. 2024–12775 Filed 6–10–24; 8:45 am]
BILLING CODE 6001–FR–P

DENALI COMMISSION

Denali Commission Fiscal Year 2025 Draft Work Plan

AGENCY: Denali Commission.
ACTION: Notice.

SUMMARY: The Denali Commission (Commission) is an independent Federal agency based on an innovative Federal-State partnership designed to provide critical utilities, infrastructure and support for economic development and training in Alaska by delivering federal services in the most cost-effective manner possible. The Commission is required to develop an annual work plan for future spending which will be published in the **Federal Register**, providing an opportunity for a 30-day period of public review and written comment. This **Federal Register** notice serves to announce the 30-day opportunity for public comment on the Denali Commission Draft Work Plan for Federal Fiscal Year 2025 (FY 2025).

DATES: Comments and related material to be received by, July 11, 2024.

ADDRESSES: Submit comments to the Denali Commission, Attention: Elinda Hetemi, 550 W 7th Avenue, Suite 1230, Anchorage, AK 99501.

FOR FURTHER INFORMATION CONTACT: Elinda Hetemi, Denali Commission, 550 W 7th Avenue, Suite 1230, Anchorage, AK 99501. Telephone: 907–271–3415. Email: ehetemi@denali.gov.

SUPPLEMENTARY INFORMATION:
Background: The Denali Commission’s mission is to partner with Tribal, Federal, State, and local governments and collaborate with all Alaskans to improve the effectiveness and efficiency of government services, to build and ensure the operation and maintenance of Alaska’s basic infrastructure, and to develop a well-trained labor force employed in a diversified and sustainable economy.

By creating the Commission, Congress mandated that all parties involved partner together to find new and innovative solutions to the unique infrastructure and economic

development challenges in America’s most remote communities. Pursuant to the Denali Commission Act, the Commission determines its own basic operating principles and funding criteria on an annual federal fiscal year (October 1 to September 30) basis. The Commission outlines these priorities and funding recommendations in an annual work plan. The FY 2025 Work Plan was developed in the following manner.

- At a meeting of the Denali Commissioners the Commissioners voted to adopt the FY 2025 Workplan.
- The work plan was published on *Denali.gov* for review by the public in advance of public testimony.
- A public hearing was held to record public comments and recommendations on the preliminary draft work plan.
- No public comments were received.
- The Federal Co-Chair prepared the draft work plan for publication in the **Federal Register** providing a 30-day period for public review and written comment. During this time, the draft work plan will also be disseminated to Commission program partners including, but not limited to, the Bureau of Indian Affairs (BIA), the Economic Development Administration (EDA), Department of Agriculture—Rural Utilities Service (USDA/RUS), and the State of Alaska.
- At the conclusion of the **Federal Register** public comment period Commission staff will provide the Federal Co-Chair with a summary of public comments and recommendations, if any, on the draft work plan.
- If no revisions are made to the draft, the Federal Co-Chair will provide notice of approval of the work plan to the Commissioners, and forwards the work plan to the Secretary of Commerce for approval; or, if there are revisions the Federal Co-Chair provides notice of modifications to the Commissioners for their consideration and approval, and upon receipt of approval from Commissioners, forwards the work plan to the Secretary of Commerce for approval.
- The Secretary of Commerce approves the work plan.
- The Federal Co-Chair then approves grants and contracts based upon the approved work plan.

FY 2025 Appropriations Summary

The Commission has historically received federal funding from several sources. The two primary sources at this time include the Energy & Water Appropriation Bill (“base” or “discretionary” funds), Transportation Housing and Urban Development

(THUD) and an annual allocation from the Trans-Alaska Pipeline Liability (TAPL) fund. The proposed FY 2025 Work Plan assumes the Commission will receive \$15,000,000 of base funds, which is the amount referenced in the reauthorization of the Commission passed by Congress in 2016 (ref: Pub. L. 114–322), \$18,000,000 from THUD, less administrative expenses, and a \$2,917,000 TAPL allocation based on discussions with the Office of Management and Budget (OMB). Approximately \$4,000,000 of the base funds will be used for administrative expenses and non-project program support. The total base funding shown in the Work Plan also includes an amount typically available from project closeouts and other de-obligations that occur in any given year. Approximately \$117,000 of the TAPL funds will be utilized for administrative expenses and non-project program support, leaving \$2,800,000 available for program activities. Absent any new specific direction or limitations provided by Congress these funding sources are governed by the following general principles, either by statute or by language in the Work Plan itself:

- Funds from the Energy & Water Appropriation are eligible for use in all programs.
- TAPL funds can only be used for bulk fuel related projects and activities while THUD funds can only be used for Transportation.
- Appropriated funds may be reduced due to Congressional action, rescissions by OMB, and other federal agency actions.
- All investment amounts identified in the work plan, are “up to” amounts, and may be reassigned to other programs included in the current year work plan, if they are not fully expended in a program component area or a specific project.
- Funds set aside for administrative expenses that subsequently become available, may be used for program activities included in the current year work plan.

DENALI COMMISSION FY 2025 FUNDING SUMMARY

Source	Available for program activities
Energy and Water Funds	\$13,000,000
TAPL Funds	2,800,000
THUD Funds	17,800,000
Grand Total	33,600,000

Notes:

¹ If the final appropriation is less than indicated the Federal Co-Chair shall reduce investments to balance the FY 2025 Work Plan.

	Base	TAPL	THUD	Total
<i>Energy Reliability and Security:</i>				
Diesel Power Plants and Interties	\$3,700,000			\$3,700,000
Wind, Hydro, Biomass, Other Proven Renewables and Emerging Technologies	800,000			800,000
Audits, TA, & Community Energy Efficiency Improvements	400,000			400,000
RPSU Maintenance and Improvement Projects	1,000,000			1,000,000

BILLING CODE 3300–01–P

DEPARTMENT OF EDUCATION

[Docket No.: ED–2024–SCC–0080]

Agency Information Collection Activities; Comment Request; Evaluation of the REL Southeast Early Literacy Toolkit

AGENCY: Institute of Education Sciences (IES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a new information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before August 12, 2024.

ADDRESSES: To access and review all the documents related to the information collection listed in this notice, please use <http://www.regulations.gov> by searching the Docket ID number ED–2024–SCC–0080. Comments submitted in response to this notice should be submitted electronically through the Federal eRulemaking Portal at <http://www.regulations.gov> by selecting the Docket ID number or via postal mail, commercial delivery, or hand delivery. If the www.regulations.gov site is not available to the public for any reason, the Department will temporarily accept comments at ICDocketMgr@ed.gov. Please include the docket ID number and the title of the information collection request when requesting documents or submitting comments. Please note that comments submitted after the comment period will not be accepted. Written requests for

information or comments submitted by postal mail or delivery should be addressed to the Manager of the Strategic Collections and Clearance Governance and Strategy Division, U.S. Department of Education, 400 Maryland Ave. SW, LBJ, Room 6W203, Washington, DC 20202–8240.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Janelle Sands, 202–245–6786.

SUPPLEMENTARY INFORMATION: The Department, in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)), provides the general public and Federal agencies with an opportunity to comment on proposed, revised, and continuing collections of information. This helps the Department assess the impact of its information collection requirements and minimize the public's reporting burden. It also helps the public understand the Department's information collection requirements and provide the requested

data in the desired format. The Department is soliciting comments on the proposed information collection request (ICR) that is described below. The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Evaluation of the REL Southeast Early Literacy Toolkit.

OMB Control Number: 1850–NEW.

Type of Review: A new ICR.

Respondents/Affected Public: Individuals and Households.

Total Estimated Number of Annual Responses: 1,330.

Total Estimated Number of Annual Burden Hours: 322.

Abstract: The U.S. Department of Education is supporting the development and evaluation of a toolkit that will support the implementation of effectively differentiated reading instruction for students in grades K–3. This toolkit is based on evidence-based recommendation in the Assisting Students Struggling with Reading: Response to Intervention (RtI) and Multi-Tier Intervention in the Primary Grades practice guide. The evaluation will rigorously test the efficacy of the toolkit in improving explicit instruction, classroom management, and use of student data as well as student learning outcomes in grades K–3 English language arts. The evaluation will use a blocked randomized control trial design in which districts are blocks and schools are randomly assigned to receive the toolkit or not. The evaluation will be conducted in 20 Florida schools during the 2025/26 school year.

The evaluation will focus on measuring the toolkit's impact on three teacher-level outcomes: explicit instruction, classroom management, and data use to inform instruction during small group time. The evaluation also will examine the impact of the toolkit on students' foundational reading skills.

In addition to collecting data to measure teacher and student outcomes, the evaluation team will collect data to document the implementation of the toolkit in treatment schools and the

service contrast between treatment and control schools, and to describe the characteristics of participating schools, teachers, and students at baseline.

The evaluation will produce a publicly available report that summarizes evaluation findings. The findings from the evaluation will inform further refinement of the toolkit, to be released to the public after the evaluation.

Dated: June 6, 2024.

Juliana Pearson,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

AGENCY: Federal Student Aid (FSA), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing an extension without change of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before July 11, 2024.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link www.reginfo.gov/public/do/PRAMain to access the site. Find this information collection request (ICR) by selecting “Department of Education” under “Currently Under Review,” then check the “Only Show ICR for Public Comment” checkbox. *Reginfo.gov* provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the “View Information Collection (IC) List” link. Supporting statements and other supporting documentation may be found by clicking on the “View Supporting Statement and Other Documents” link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection

activities, please contact Beth Grebeldinger, 202–570–8414.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Reaffirmation Agreement.

OMB Control Number: 1845–0133.

Type of Review: An extension without change of a currently approved ICR.

Respondents/Affected Public: Individuals and Households; Private Sector; State, Local, and Tribal Governments.

Total Estimated Number of Annual Responses: 8,594.

Total Estimated Number of Annual Burden Hours: 1,032.

Abstract: The Higher Education Act of 1965, as amended (HEA), established the Federal Family Education Loan (FFEL) Program, and the William D. Ford Federal Direct Loan (Direct Loan) Program under Title IV, Parts B and D respectively. The HEA provides for a maximum loan amount that a borrower can receive per year and in total. If a borrower receives more than the maximum amount, the borrower becomes ineligible for further Title IV aid (including Federal Pell Grants, Federal Supplemental Educational Opportunity Grants, Federal Work-Study, and Teacher Education Assistance for Higher Education (TEACH) Grants, Iraq and Afghanistan Service Grants) unless the borrower repays the excess amount or agrees to repay the excess amount according to the terms and conditions of the promissory note that the borrower signed. Agreeing to repay the excess amount according to the terms and conditions of the promissory note that the borrower signed is called reaffirmation, which is the subject of this collection. This renewal without change of the information collection is necessary for the Department of Education (the Department), as a holder of some FFEL Program loans and all Direct Loans, and all FFEL Program lenders to capture the borrowers formal

agreement to repay any excess amount of FFEL or Direct Loan program loans that the borrower received according to the terms and conditions of the promissory note the borrower signed. The form has not been changed since its last update.

Dated: June 5, 2024.

Kun Mullan,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings #1

Take notice that the Commission received the following electric corporate filings:

Docket Numbers: EC24-82-000.

Applicants: SR Ailey, LLC.

Description: Application for authorization under Section 203 of the Federal Power Act of SR Ailey, LLC.

Filed Date: 6/4/24.

Accession Number: 20240604-5289.

Comment Date: 5 p.m. ET 6/25/24.

Docket Numbers: EC24-83-000.

Applicants: SR Toombs, LLC.

Description: Application for authorization under Section 203 of the Federal Power Act of SR Toombs, LLC.

Filed Date: 6/4/24.

Accession Number: 20240604-5294.

Comment Date: 5 p.m. ET 6/25/24.

Docket Numbers: EC24-84-000.

Applicants: Avangrid, Inc., Iberdrola, S.A.

Description: Joint application for authorization under Section 203 of the Federal Power Act of Iberdrola, S.A., et al. under.

Filed Date: 6/3/24.

Accession Number: 20240603-5276.

Comment Date: 5 p.m. ET 6/24/24.

Take notice that the Commission received the following exempt wholesale generator filings:*Docket Numbers:* EG24-199-000.

Applicants: Callisto I Energy Center LLC.

Description: Callisto I Energy Center LLC submits notice of self-certification of exempt wholesale generator status.

Filed Date: 6/5/24.

Accession Number: 20240605-5149.

Comment Date: 5 p.m. ET 6/26/24.

Take notice that the Commission received the following Complaints and

Compliance filings in EL Dockets:*Docket Numbers:* EL24-115-000.

Applicants: California Public Utilities Commission, et al. v. San Diego Gas & Electric Company.

Description: Complaint of California Public Utilities Commission, et al. v. San Diego Gas & Electric Company.

Filed Date: 5/31/24.

Accession Number: 20240531-5455.

Comment Date: 5 p.m. ET 7/1/24.

Take notice that the Commission received the following electric rate filings:*Docket Numbers:* ER22-290-007.

Applicants: Oakland Power Company LLC.

Description: Compliance filing: Tariff Record Priority Order Adjustment Compliance Filing to be effective 1/1/2022.

Filed Date: 6/5/24.

Accession Number: 20240605-5089.

Comment Date: 5 p.m. ET 6/26/24.

Docket Numbers: ER22-290-008.

Applicants: Oakland Power Company LLC.

Description: Compliance filing: Errata to Hourly Capital Item Charge Update Filing to be effective 8/1/2023.

Filed Date: 6/5/24.

Accession Number: 20240605-5092.

Comment Date: 5 p.m. ET 6/26/24.

Docket Numbers: ER23-254-003.

Applicants: Oakland Power Company LLC.

Description: Compliance filing: Compliance Filing Pursuant to Order Approving Settlement to be effective 1/1/2023.

Filed Date: 6/5/24.

Accession Number: 20240605-5104.

Comment Date: 5 p.m. ET 6/26/24.

Docket Numbers: ER24-1431-001.

Applicants: Southwestern Public Service Company.

Description: Tariff Amendment: 2024.06.05 SPS Responded to Deficiency Letter in ER24-1431 to be effective 5/8/2024.

Filed Date: 6/5/24.

Accession Number: 20240605-5157.

Comment Date: 5 p.m. ET 6/26/24.

Docket Numbers: ER24-1434-001.

Applicants: Central Hudson Gas & Electric Corporation, New York Independent System Operator, Inc.

Description: Tariff Amendment: Central Hudson Gas & Electric Corporation submits tariff filing per 35.17(b): Central Hudson Deficiency Response re: Rate Schedule 21 Formula Rate Filing to be effective 8/5/2024.

Filed Date: 6/5/24.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 1889–085; Project No. 2485–071]

FirstLight MA Hydro LLC; Northfield Mountain LLC; Notice of Intent To Prepare an Environmental Impact Statement

On April 29, 2016, and materially amended on December 4, 2020, FirstLight MA Hydro LLC and Northfield Mountain LLC, respectively, filed applications for new major licenses to operate the 62.0-megawatt (MW) Turners Falls Hydroelectric Project (Turners Falls Project; FERC No. 1889) and 1,166.8–MW Northfield Mountain Pumped Storage Project (Northfield Mountain Project; FERC No. 2485) (collectively, projects). The projects are located on the Connecticut River in Windham County, Vermont; Cheshire County, New Hampshire; and Franklin County, Massachusetts. The Turners Falls Project boundary includes the approximately 20-acre Silvio Conte Anadromous Fish Laboratory, which is administered by the U.S. Geological Survey.

During the application pre-filing process, on December 21, 2012, Commission staff issued Scoping Document 1, initiating the scoping process for the projects in accordance with the National Environmental Policy Act (NEPA) and Commission regulations. On April 15, 2013, Commission staff issued a revised scoping document (Scoping Document 2). In accordance with the Commission’s regulations, on February 22, 2024, Commission staff issued notices that the

projects were ready for environmental analysis (REA Notice). Based on the information in the record, including comments filed during scoping and in response to the REA Notices, staff has determined that relicensing the project may constitute a major Federal action significantly affecting the quality of the human environment. Therefore, staff intends to prepare an Environmental Impact Statement (EIS) for the above-captioned projects.

A draft EIS will be issued and circulated for review by all interested parties. All comments filed in response to the REA notices, and on the draft EIS will be analyzed by staff in a final EIS. Staff’s conclusions and recommendations will be available for the Commission’s consideration in reaching its final licensing decision.

The application will be processed according to the following schedule. Revisions to the schedule may be made as appropriate.

Milestone	Target date
Issue draft EIS	December 2024.
Draft EIS Public Meeting.	January 2025.
Comments on draft EIS due.	February 2025.
Commission issues final EIS.	August 2025. ¹

Any questions regarding this notice may be directed to Steve Kartalia at (202) 502–6131 or *stephen.kartalia@ferc.gov*.

Dated: June 5, 2024.

[Project No. 2600–000]

**Bangor-Pacific Hydro Associates;
Notice of Authorization for Continued
Project Operation**

The license for the West Enfield Hydroelectric Project No. 2600 was issued for a period ending May 31, 2024.

Section 15(a)(1) of the FPA, 16 U.S.C. 808(a)(1), requires the Commission, at the expiration of a license term, to issue from year-to-year an annual license to the then licensee(s) under the terms and conditions of the prior license until a new license is issued, or the project is otherwise disposed of as provided in section 15 or any other applicable section of the FPA. If the project’s prior license waived the applicability of section 15 of the FPA, then, based on section 9(b) of the Administrative Procedure Act, 5 U.S.C. 558(c), and as set forth at 18 CFR 16.21(a), if the licensee of such project has filed an application for a subsequent license, the licensee may continue to operate the project in accordance with the terms and conditions of the license after the minor or minor part license expires, until the Commission acts on its application. If the licensee of such a project has not filed an application for a subsequent license, then it may be required, pursuant to 18 CFR 16.21(b), to continue project operations until the Commission issues someone else a license for the project or otherwise orders disposition of the project.

If the project is subject to section 15 of the FPA, notice is hereby given that an annual license for Project No. 2600 is issued to Bangor-Pacific Hydro Associates for a period effective June 1, 2024, through May 31, 2025, or until the issuance of a new license for the project or other disposition under the FPA, whichever comes first.

If issuance of a new license (or other disposition) does not take place on or before May 31, 2025, notice is hereby given that, pursuant to 18 CFR 16.18(c), an annual license under section 15(a)(1) of the FPA is renewed automatically without further order or notice by the Commission, unless the Commission orders otherwise.

If the project is not subject to section 15 of the FPA, notice is hereby given that Bangor-Pacific Hydro Associates is authorized to continue operation of the West Enfield Hydroelectric Project under the terms and conditions of the prior license until the issuance of a subsequent license for the project or other disposition under the FPA, whichever comes first.

Dated: June 5, 2024.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 7189–015]

**Green Lake Water Power Company;
Notice of Revised Procedural Schedule
for Environmental Assessment for the
Proposed Project Relicense**

On March 31, 2022, Green Lake Water Power Company filed an application for a subsequent license to continue to operate and maintain the 424-kilowatt Green Lake Hydroelectric Project No. 7189 (Green Lake Project). On May 31, 2023, Commission staff issued a notice of intent to prepare an environmental assessment (EA) to evaluate the effects of relicensing the Green Lake Project. The notice included an anticipated schedule for issuing the EA. By notice issued April 11, 2024, the schedule for completing the EA was revised. The revised due date for the EA was to be May 2024.

On May 28, 2024, the Maine Department of Environmental Protection filed its Clean Water Act section 401 water quality certification (certification) for the Green Lake Project with the Commission. In order for staff to fully consider the certification, the procedural schedule for completing the EA is being revised as follows. Further revisions to the schedule may be made as appropriate.

Milestone	Target date
Issue EA	September 2024.

Any questions regarding this notice may be directed to Amanda Gill at (202) 502-6773, or by email at amanda.gill@ferc.gov.

Dated: June 4, 2024.

[Project No. 1922-052]

Ketchikan Public Utilities; Notice of Revised Procedural Schedule for Draft and Final Environmental Assessment for the Proposed Project Relicense

On October 27, 2022, Ketchikan Public Utilities (KPU) filed an application for a new major license for the 7.1-megawatt Beaver Falls Hydroelectric Project (Beaver Falls Project; FERC No. 1922). On January 5, 2024, Commission staff issued a notice of intent to prepare a draft and final Environmental Assessment (EA) to evaluate the effects of relicensing the Beaver Falls Project. The notice of intent included an anticipated schedule for issuing the draft and final EA. By this notice, Commission staff is updating the procedural schedule for completing the draft and final EAs. The revised schedule is shown below. Further revisions to the schedule may be made as appropriate.

Milestone	Target date
Commission issues draft EA.	August 2024.
Comments on draft EA.	September 2024.
Commission issues final EA.	January 2025. ¹

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. RM98-1-000]

Records Governing Off-the-Record Communications; Public Notice

This constitutes notice, in accordance with 18 CFR 385.2201(b), of the receipt of prohibited and exempt off-the-record communications.

Order No. 607 (64 FR 51222, September 22, 1999) requires Commission decisional employees, who make or receive a prohibited or exempt off-the-record communication relevant to the merits of a contested proceeding, to deliver to the Secretary of the Commission, a copy of the communication, if written, or a summary of the substance of any oral communication.

Prohibited communications are included in a public, non-decisional file

associated with, but not a part of, the decisional record of the proceeding. Unless the Commission determines that the prohibited communication and any responses thereto should become a part of the decisional record, the prohibited off-the-record communication will not be considered by the Commission in reaching its decision. Parties to a proceeding may seek the opportunity to respond to any facts or contentions made in a prohibited off-the-record communication and may request that the Commission place the prohibited communication and responses thereto in the decisional record. The Commission will grant such a request only when it determines that fairness so requires. Any person identified below as having made a prohibited off-the-record communication shall serve the document on all parties listed on the official service list for the applicable proceeding in accordance with Rule 2010, 18 CFR 385.2010.

Exempt off-the-record communications are included in the decisional record of the proceeding, unless the communication was with a cooperating agency as described by 40 CFR 1501.6, made under 18 CFR 385.2201(e)(1)(v).

The following is a list of off-the-record communications recently received by the Secretary of the Commission. Each filing may be viewed on the Commission's website at <http://www.ferc.gov> using the eLibrary link. Enter the docket number, excluding the last three digits, in the docket number field to access the document. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–473–000]

Cheniere Corpus Christi Pipeline, LP; Notice of Request Under Blanket Authorization and Establishing Intervention and Protest Deadline

Take notice that on May 31, 2024, Cheniere Corpus Christi Pipeline, L.P. (CCPL), 845 Texas Avenue, Suite 1250, Houston, Texas 77002, filed in the above-referenced docket a prior notice request, pursuant to sections 157.205 and 157.216(b) of the Commission's regulations under the Natural Gas Act (NGA) and CCPL's blanket certificate issued in Docket No. CP12–508–000, for authorization to abandon by transfer to Corpus Christi Liquefaction, LLC approximately 3,700 linear feet of 36- and 48-inch-diameter pipeline segments and ancillary facilities in San Patricio County, Texas, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at ferconlinesupport@ferc.gov, or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at public.referenceroom@ferc.gov.

Any questions concerning this request should be directed to Joseph Moake, Director, Regulatory Project Strategy, Cheniere Corpus Christi Pipeline, L.P.,

845 Texas Avenue, Suite 1250, Houston, Texas 77002, by telephone at (832) 870–9956, or by email at joseph.moake@cheniere.com.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file a protest to the project, you can file a motion to intervene in the proceeding, and you can file comments on the project. There is no fee or cost for filing protests, motions to intervene, or comments. The deadline for filing protests, motions to intervene, and comments is 5:00 p.m. Eastern Time on August 5, 2024. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or OPP@ferc.gov.

Protests

Pursuant to section 157.205 of the Commission's regulations under the NGA,¹ any person² or the Commission's staff may file a protest to the request. If no protest is filed within the time allowed or if a protest is filed and then withdrawn within 30 days after the allowed time for filing a protest, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request for authorization will be considered by the Commission.

Protests must comply with the requirements specified in section 157.205(e) of the Commission's regulations,³ and must be submitted by the protest deadline, which is August 5, 2024. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

¹ 18 CFR 157.205.

² Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

³ 18 CFR 157.205(e).

Interventions

Any person has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure⁴ and the regulations under the NGA⁵ by the intervention deadline for the project, which is August 5, 2024. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at <https://www.ferc.gov/resources/guides/how-to/intervene.asp>.

All timely, unopposed motions to intervene are automatically granted by operation of Rule 214(c)(1). Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations. A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Comments

Any person wishing to comment on the project may do so. The Commission considers all comments received about the project in determining the appropriate action to be taken. To ensure that your comments are timely and properly recorded, please submit your comments on or before August 5, 2024. The filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding.

⁴ 18 CFR 385.214.

⁵ 18 CFR 157.10.

How To File Protests, Interventions, and Comments

There are two ways to submit protests, motions to intervene, and comments. In both instances, please reference the Project docket number CP24-473-000 in your submission.

(1) You may file your protest, motion to intervene, and comments by using the Commission's eFiling feature, which is located on the Commission's website (www.ferc.gov) under the link to Documents and Filings. New eFiling users must first create an account by clicking on "eRegister." You will be asked to select the type of filing you are making; first select "General" and then select "Protest", "Intervention", or "Comment on a Filing"; or⁶

(2) You can file a paper copy of your submission by mailing it to the address below. Your submission must reference the Project docket number CP24-473-000.

To file via USPS: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426

To file via any other method: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852

The Commission encourages electronic filing of submissions (option 1 above) and has eFiling staff available to assist you at (202) 502-8258 or FercOnlineSupport@ferc.gov.

Protests and motions to intervene must be served on the applicant either by mail or email (with a link to the document) at: Joseph Moake, Director, Regulatory Project Strategy, Cheniere Corpus Christi Pipeline, L.P., 845 Texas Avenue, Suite 1250, Houston, Texas 77002 or by joseph.moake@cheniere.com. Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC website at www.ferc.gov using the "eLibrary" link

as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to www.ferc.gov/docs-filing/esubscription.asp.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER24-2139-000]

Capon Bridge Solar, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Capon Bridge Solar, LLC's application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is June 25, 2024.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with internet access

who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>). BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission****[Project No. 4678–000]****New York Power Authority; Notice of Authorization for Continued Project Operation**

The license for the Crescent Hydroelectric Project No. 4678 was issued for a period ending May 31, 2024.

Section 15(a)(1) of the FPA, 16 U.S.C. 808(a)(1), requires the Commission, at

the expiration of a license term, to issue from year-to-year an annual license to the then licensee(s) under the terms and conditions of the prior license until a new license is issued, or the project is otherwise disposed of as provided in section 15 or any other applicable section of the FPA. If the project's prior license waived the applicability of section 15 of the FPA, then, based on section 9(b) of the Administrative Procedure Act, 5 U.S.C. 558(c), and as set forth at 18 CFR 16.21(a), if the licensee of such project has filed an application for a subsequent license, the licensee may continue to operate the project in accordance with the terms and conditions of the license after the minor or minor part license expires, until the Commission acts on its application. If the licensee of such a project has not filed an application for a subsequent license, then it may be required, pursuant to 18 CFR 16.21(b), to continue project operations until the Commission issues someone else a license for the project or otherwise orders disposition of the project.

If the project is subject to section 15 of the FPA, notice is hereby given that an annual license for Project No. 4678 is issued to the New York Power Authority for a period effective June 1, 2024, through May 31, 2025, or until the issuance of a new license for the project or other disposition under the FPA, whichever comes first.

If issuance of a new license (or other disposition) does not take place on or before May 31, 2025, notice is hereby given that, pursuant to 18 CFR 16.18(c), an annual license under section 15(a)(1) of the FPA is renewed automatically without further order or notice by the Commission, unless the Commission orders otherwise.

If the project is not subject to section 15 of the FPA, notice is hereby given that New York Power Authority is authorized to continue operation of the Crescent Hydroelectric Project under the terms and conditions of the prior license until the issuance of a subsequent license for the project or other disposition under the FPA, whichever comes first.

Dated: June 5, 2024.

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission**

[Docket No. EF24–6–000]

Western Area Power Administration; Notice of Filing

Take notice that on May 31, 2024, Western Area Power Administration submitted a tariff filing per 10 CFR 903.23: RMR CRSPLAPWACM_WAPA214–20240529 to be effective 10/1/2024.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using

the “eFiling” link at <http://www.ferc.gov>. Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission’s Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or OPP@ferc.gov.

Comment Date: 5:00 p.m. Eastern Time on July 1, 2024.

Dated: June 4, 2024.

Debbie-Anne A. Reese,
Acting Secretary.

[Project No. 4679–000]

New York Power Authority; Notice of Authorization for Continued Project Operation

The license for the Vischer Ferry Hydroelectric Project No. 4679 was issued for a period ending May 31, 2024.

Section 15(a)(1) of the FPA, 16 U.S.C. 808(a)(1), requires the Commission, at the expiration of a license term, to issue from year-to-year an annual license to the then licensee(s) under the terms and conditions of the prior license until a new license is issued, or the project is otherwise disposed of as provided in section 15 or any other applicable section of the FPA. If the project’s prior license waived the applicability of section 15 of the FPA, then, based on section 9(b) of the Administrative Procedure Act, 5 U.S.C. 558(c), and as set forth at 18 CFR 16.21(a), if the licensee of such project has filed an application for a subsequent license, the licensee may continue to operate the project in accordance with the terms

and conditions of the license after the minor or minor part license expires, until the Commission acts on its application. If the licensee of such a project has not filed an application for a subsequent license, then it may be required, pursuant to 18 CFR 16.21(b), to continue project operations until the Commission issues someone else a license for the project or otherwise orders disposition of the project.

If the project is subject to section 15 of the FPA, notice is hereby given that an annual license for Project No. 4679 is issued to the New York Power Authority for a period effective June 1, 2024, through May 31, 2025, or until the issuance of a new license for the project or other disposition under the FPA, whichever comes first.

If issuance of a new license (or other disposition) does not take place on or before May 31, 2025, notice is hereby given that, pursuant to 18 CFR 16.18(c), an annual license under section 15(a)(1) of the FPA is renewed automatically without further order or notice by the Commission, unless the Commission orders otherwise.

If the project is not subject to section 15 of the FPA, notice is hereby given that New York Power Authority is authorized to continue operation of the Vischer Ferry Hydroelectric Project under the terms and conditions of the prior license until the issuance of a subsequent license for the project or other disposition under the FPA, whichever comes first.

Dated: June 5, 2024.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 14861–002]

FFP Project 101, LLC; Notice of Meeting

a. *Project Name and Number:* Goldendale Energy Storage Project No. 14861–002.

b. *Applicant:* FFP Project 101, LLC.

c. *Date and Time of Meeting:* Monday, June 17, 2024 from 10:00 a.m. to 12:00 p.m. Pacific Standard Time (1:00 p.m. to 3:00 p.m. Eastern Standard Time).

d. *FERC Contact:* Michael Tust, (202) 502–6522, michael.tust@ferc.gov.

e. *Purpose of Meeting:* Commission staff will hold a meeting with representatives from the Washington

State Historic Preservation Office (Washington SHPO), Advisory Council on Historic Preservation (Advisory Council), and affected Tribes to discuss revisions to Commission staff’s draft Programmatic Agreement and discuss mitigation for unavoidable adverse impacts to cultural resources for the proposed Goldendale Energy Storage Project pursuant to section 106 of the National Historic Preservation Act. The meeting will be held virtually via Microsoft Teams.

f. Intervenor in the referenced proceeding may attend the meeting as observers; however, participation will be limited to representatives from the Washington SHPO, Advisory Council, Tribes, and Commission staff. If meeting attendees decide to disclose information about a specific location which could create a risk or harm to an archaeological site or Native American cultural resource, attendees other than Washington SHPO, Advisory Council, Tribal representatives and Commission staff will be excused for that portion of the meeting.

A summary of the meeting will be placed in the public record of this proceeding. As appropriate, the meeting summary will include both a public, redacted version that excludes any information about the specific location of the archeological site or Native American cultural resource and an unredacted privileged version. Intervenor planning to attend the meeting should notify Michael Tust at (202) 502–6522 or michael.tust@ferc.gov by Friday, June 14, 2024 to RSVP and to receive specific instructions for logging in to the meeting.

Dated: June 5, 2024.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER24–2179–000]

Bayou Galion Solar Project, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding of Bayou Galion Solar Project, LLC’s application for market-based rate authority, with an accompanying rate tariff, noting that such application includes a request for

blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability, is June 24, 2024.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>). ENVIRONMENTAL PROTECTION AGENCY

[CERCLA-04-2024-7011; FRL-11975-01-R4]

Aberdeen Contaminated Groundwater Site, Aberdeen, North Carolina; Cashout Settlement Agreement

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of cashout settlement agreement.

SUMMARY: Under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), the United States Environmental Protection Agency has entered into a settlement with LPC Holdings, Inc., concerning the Aberdeen Contaminated Groundwater Superfund Site located in Aberdeen, North Carolina. The settlement addresses recovery of CERCLA costs for cleanup response actions performed at the Site and costs incurred by EPA.

DATES: The Agency will consider public comments on the proposed settlement until July 11, 2024. The Agency will consider all comments received and may modify or withdraw its consent to the proposed settlement if comments received disclose facts or considerations which indicate that the proposed settlement is inappropriate, improper, or inadequate.

ADDRESSES: Copies of the settlement are available from the Agency by contacting Ms. Paula V. Painter, Program Analyst, using the contact information provided in this notice. Comments may also be submitted by referencing the Site's

name through one of the following methods:

Bennett Landfill Fire Superfund Site, Chester, South Carolina; Proposed Settlements

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of proposed settlements.

SUMMARY: Under the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), the United States Environmental Protection Agency is proposing to enter into individual settlements with seven additional parties concerning the Bennett Landfill Fire Site located in Chester, South Carolina. The proposed settlements address recovery of EPA's costs incurred performing a CERCLA cleanup at the Site.

DATES: The Agency will consider public comments on the proposed settlements until July 11, 2024. The Agency will consider all comments received and may modify or withdraw its consent to the proposed settlements if comments received disclose facts or considerations which indicate that the proposed settlements are inappropriate, improper, or inadequate.

ADDRESSES: Copies of the proposed settlements are available from the Agency by contacting Ms. Paula V. Painter, Program Analyst, using the contact information provided in this notice. Comments may also be submitted by referencing the Site's name through one of the following methods:

Clean Air Act Advisory Committee (CAAAC): Notice of Meeting

AGENCY: Environmental Protection
Agency (EPA).

ACTION: Notice of meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), the Environmental Protection Agency (EPA) is announcing a public meeting of the Clean Air Act Advisory Committee (CAAAC). The EPA renewed the CAAAC charter on October 31, 2022, to provide independent advice and counsel to EPA on economic, environmental, technical, scientific and enforcement policy issues associated with implementation of the Clean Air Act of 1990.

DATES: The CAAAC will hold its next virtual public meeting on Tuesday, June 25, 2024, from 1:00 p.m. to 3:00 p.m. (EDT). Members of the public may register to listen to the meeting or provide comments, by emailing caaac@epa.gov by 5:00 p.m. (EST) June 24, 2024.

FOR FURTHER INFORMATION CONTACT:

Lorraine Reddick, Designated Federal Officer, Clean Air Act Advisory Committee (6103A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202–564–1293; email address: redrick.lorraine@epa.gov. Additional information about this meeting, the CAAAC, and its subcommittees and workgroups can be found on the CAAAC website: <http://www.epa.gov/caaac>.

SUPPLEMENTARY INFORMATION: Pursuant to 5 U.S.C. App. 2 section 10(a)(2), notice is hereby given that the Clean Air Act Advisory Committee will hold its next virtual public meeting on Tuesday,

June 25, 2024, from 1:00 p.m. to 3:00 p.m. (EDT).

The committee agenda and any documents prepared for the meeting will be publicly available on the CAAAC website at <http://www.epa.gov/caaac> prior to the meeting. Thereafter, these documents, together with CAAAC meeting minutes, will be available on the CAAAC website or by contacting the Office of Air and Radiation Docket and requesting information under docket EPA–HQ–OAR–2023–0014. The docket office can be reached by email at: a-and-r-Docket@epa.gov or FAX: 202–566–9744.

For information on access or services for individuals with disabilities, please contact Lorraine Reddick at redrick.lorraine@epa.gov, preferably at least 7 days prior to the meeting to give EPA as much time as possible to process your request.

Lorraine Reddick,

*Designated Federal Officer, Office of Air
Policy and Program Support.*

BILLING CODE 6560–50–P

FEDERAL ACCOUNTING STANDARDS ADVISORY BOARD

Notice of Appointments Panel Meeting

AGENCY: Federal Accounting Standards
Advisory Board.

ACTION: Notice.

SUMMARY: Notice is hereby given that the Appointments Panel, a subcommittee of the Federal Accounting Standards Advisory Board (FASAB), will hold a meeting on June 28, 2024. The Appointments Panel makes recommendations regarding appointments for non-Federal member positions.

FOR FURTHER INFORMATION CONTACT: Ms. Monica R. Valentine, Executive Director, 441 G Street NW, Suite 1155, Washington, DC 20548, or call (202) 512–7350.

SUPPLEMENTARY INFORMATION: The meetings are closed to the public. The reason for the closure is that matters covered by 5 U.S.C. 552b(c)(2) and (6) will be discussed. Any such discussions will involve matters that relate solely to internal personnel rules and practices of the sponsor agencies and the disclosure of information of a personal nature where disclosure would constitute a clearly unwarranted invasion of personal privacy.

Pursuant to section 10(d) of the Federal Advisory Committee Act (FACA), 5 U.S.C. 1009(d), portions of

advisory committee meetings may be closed to the public where the head of the agency to which the advisory committee reports determines that such portion of such meeting may be closed to the public in accordance with subsection (c) of section 552b of title 5, United States Code. The determination shall be in writing and shall contain the reasons for the determination. A determination has been made in writing by the U.S. Government Accountability Office, the U.S. Department of the Treasury, and the Office of Management and Budget, as required by section 10(d) of FACA, that such portions of the meetings may be closed to the public in accordance with subsection (c) of section 552b of title 5, United States Code.

Authority: 31 U.S.C. 3511(d); Federal Advisory Committee Act, 5 U.S.C. 1001–1014).

Dated: June 5, 2024.

Monica R. Valentine,
Executive Director.

BILLING CODE 1610–02–P

FEDERAL MARITIME COMMISSION **[DOCKET NO. 24–23]**

Samsung Electronics America, Inc., Complainant v. HMM Co., Ltd. f/k/a Hyundai Merchant Marine Co., Ltd., Respondent. Notice of Filing of Complaint and Assignment

Served: June 5, 2024.

Notice is given that a complaint has been filed with the Federal Maritime Commission (the “Commission”) by Samsung Electronics America, Inc. (the “Complainant”) against HMM Co., Ltd. f/k/a Hyundai Merchant Marine Co., Ltd. (the “Respondent”). Complainant states that the Commission has subject matter jurisdiction over the complaint pursuant to the Shipping Act of 1984, as amended, 46 U.S.C. 40101 *et seq.* and personal jurisdiction over the Respondent as a common carrier and vessel-operating ocean common carrier, as these terms are defined in 46 U.S.C. 40102.

Complainant is a corporation organized and existing under the laws of the State of New York with a principal place of business in Ridgefield Park, New Jersey.

Complainant identifies Respondent as a global ocean carrier with its corporate office in Seoul, Korea, that does business in the United States through HMM America Shipping Agency, Inc. with its principal place of business in Ridgefield Park, New Jersey.

Complainant alleges that Respondent violated 46 U.S.C. 41102(c) and (d), and 41104(a)(3), (10), (14), and (15); and 46 CFR 545.4 and 545.5. Complainant alleges these violations arose from assessment of detention and demurrage charges on “store door” shipments for reasons not within the control of Complainant, issuance of invoices for detention and demurrage charges that did not contain the information required, threats to refuse and refusals of available cargo space accommodation, and other acts and omissions of the Respondents.

An answer to the complaint must be filed with the Commission within 25 days after the date of service.

The full text of the complaint can be found in the Commission’s electronic Reading Room at <https://www2.fmc.gov/readingroom/proceeding/24-23/>. This proceeding has been assigned to the Office of Administrative Law Judges. The initial decision of the presiding judge shall be issued by June 5, 2025, and the final decision of the Commission shall be issued by December 19, 2025.

David Eng,
Secretary.

GENERAL SERVICES ADMINISTRATION

[Notice—PBS—2024-06; Docket No. 2024-0002; Sequence No. 27]

Notice of Availability for the Record of Decision on the Supplemental Environmental Impact Statement for the International Falls Land Port of Entry Modernization and Expansion Project in International Falls, Minnesota

AGENCY: Great Lakes Region 5, Public Buildings Service (PBS), General Services Administration (GSA).

ACTION: Notice.

SUMMARY: GSA issued a Record of Decision (ROD) on the Supplemental Environmental Impact Statement (SEIS) for the International Falls Land Port of Entry (LPOE) Modernization and Expansion Project in International Falls, Minnesota (MN), on May 30, 2024. The ROD was prepared in accordance with the National Environmental Policy Act (NEPA) of 1969, the Council on Environmental Quality Regulations, and the GSA PBS NEPA Desk Guide.

DATES: *Applicable:* Thursday, May 30, 2024.

ADDRESSES: The ROD may be found online at the following website: <https://www.gsa.gov/about-us/gsa-regions/region-5-great-lakes/buildings-and-facilities/minnesota/international-falls-land-port-of-entry>.

FOR FURTHER INFORMATION CONTACT: Michael Gonczar, NEPA Program Manager, GSA, at 312-810-2326, or via email to michael.gonczar@gsa.gov.

SUPPLEMENTARY INFORMATION:

Background

The International Falls LPOE is a port of entry for vehicles and pedestrians crossing the U.S.-Canada border between International Falls, MN and the town of Fort Frances, Ontario, Canada. The port is operated by the U.S. Department of Homeland Security’s Customs and Border Protection (CBP) and is a full-service, multi-modal facility where CBP officers inspect commercially owned vehicles (COVs), privately owned vehicles (POVs), and pedestrians.

The *International Falls LPOE Improvements Study Final EIS*, released in 2011, assessed the potential environmental impacts associated with the proposed action of replacing the International Falls LPOE with a new LPOE facility “to improve safety, security, and functionality.” A total of ten build alternatives were considered, and a preferred action alternative was identified in the 2011 Final EIS as best satisfying the purpose and need of the project with the least overall adverse impacts to the environment. The 2011 preferred alternative consisted of demolishing the existing building, constructing new facilities at the existing LPOE, and expanding the LPOE to meet the required space standards and increased security requirements of the Federal Inspection Services. The 2011 preferred alternative proposed to move the majority of the LPOE improvements and operations to an approximately 20-acre site southeast of the existing site. Since 2011, GSA identified changes to the project, which differed from the preferred alternative described in the 2011 EIS. As such, GSA prepared a Final SEIS to assess the potential impacts of project updates, which were not assessed in the 2011 EIS.

The purpose of the Proposed Action is for GSA to support CBP’s mission by bringing the International Falls LPOE operations in line with current land port design standards and operational requirements of CBP while addressing existing deficiencies identified with the ongoing port operations. In order to bring the International Falls LPOE

operations in line with CBP’s design standards and operational requirements, the Proposed Action is needed to (1) improve the capacity and functionality of the International Falls LPOE to meet future demand, while maintaining the capability to meet border security initiatives; (2) address spatial and layout constraints that lead to traffic congestion and safety issues for the employees and users of the LPOE; and (3) provide adequate space and facilities for the Federal agencies to accomplish their missions.

On December 9, 2022, GSA published a Notice of Intent for the SEIS and underwent a 35-day scoping period. A Draft SEIS and Draft Floodplain Assessment and Statement of Findings were issued over a 45-day public comment period on October 27, 2023; and a Final SEIS and Floodplain Assessment and Statement of Findings were issued over a 30-day waiting period on April 19, 2024.

Comments received, along with GSA’s responses, during the Final SEIS waiting period are provided in Appendix A and B of the ROD.

Preferred Alternative

GSA has chosen to implement Alternative 1: Full Build as defined in the Final SEIS (GSA, April 2024). This decision is based on the Final SEIS issued in April 2024; associated technical reports; comments from Federal and State agencies, stakeholders, members of the public, and elected officials; and miscellaneous resources contained in the administrative record.

Alternative 1 (Full Build) includes the project as generally assessed under the 2011 preferred alternative but modified by project updates. Similar to the 2011 preferred alternative, Alternative 1 proposed expansion area encompasses an approximately 20-acre area that stretches east from the LPOE along the Rainy River shoreline to an area just west of a U.S. Border Patrol Station and primarily bordered by State Route 11 (SR-11) on the south. Approximately 16 and 4 acres are owned by the Packing Corporation of America (PCA) and Recreational Land Development, LLC, respectively. Most of the LPOE functions will be relocated in the expanded portion of the parcel between the Rainy River and SR-11. A construction phasing plan will be developed during design and implemented during demolition and construction to ensure continuity of operations of the LPOE, as well as minimize disruptions to PCA and other neighboring operations.

To prepare the proposed expansion area for development, some existing utilities and PCA infrastructure will need to be accommodated in a new way, either within the LPOE via easements or moved off site to the west or south on PCA-owned land. Project changes have triggered the reconfiguration of some of the existing PCA operations on PCA lands and will require relocation of some infrastructure associated with PCA, the MD&W Railway, and OfficeMax. Relocation of utilities and infrastructure may be conducted by either GSA or PCA, depending on final acquisition negotiations. Actions taken by PCA are considered as connected actions to the Proposed Action.

Alternative 1 also considers the implementation of renewable energy technologies within the expanded and modernized LPOE. These technologies were not considered in the 2011 Final EIS but have since been proposed for inclusion in future site plans. Renewable technologies that may be incorporated into the facility design include solar and geothermal technologies, depending on the final design.

GSA is currently undergoing formal consultation with the State Historic Preservation Officer (SHPO) and consulting parties to follow coordination procedures as required under Section 106 of the National Historic Preservation Act. GSA intends on implementing and complying with all mitigation measures resulting from section 106 consultation as detailed in the ROD.

William Renner,

Director, Facilities Management and Services Programs Division, Great Lakes Region 5, U.S. General Services Administration.

BILLING CODE 6820-CF-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifiers: CMS-381 and CMS-R-38]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing

an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (PRA), Federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding the burden estimate or any other aspect of this collection of information, including the necessity and utility of the proposed information collection for the proper performance of the agency's functions, the accuracy of the estimated burden, ways to enhance the quality, utility, and clarity of the information to be collected, and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments on the collection(s) of information must be received by the OMB desk officer by July 11, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: <https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing>.

FOR FURTHER INFORMATION CONTACT:

William Parham at (410) 786-4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501-3520), Federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term "collection of information" is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal agencies to publish a 30-day notice in the

Federal Register concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection* Request: Revision of a currently approved collection; *Title of Information Collection:* Identification of Extension Units of Medicare Approved Outpatient Physical Therapy/Outpatient Speech Pathology (OPT/OSP) Providers and Supporting Regulations; *Use:* Form CMS-381 was developed to ensure that each OPT/OSP extension location at which OPT/OSP providers furnish services, must be reported by the providers to the State Survey Agencies (SAs). Form CMS-381 is completed when: (1) new OPT/OSP providers enter the Medicare program; (2) when existing OPT/OSP providers delete or add a service, or close or add an extension location; or, (3) when existing OPT/OSP providers are recertified by the State Survey Agency every 6 years.

In 2022, CMS transitioned some of the certification processes to the Center for Program Integrity (CPI) and the Medicare Administrative Contractor (MAC). Prior to the transition, the CMS Survey Operations Group was involved in the processing of the extension location requests. As a result of the new processing instructions, CMS is now reconciling the Form CMS-381 with updates to the instructions.

Additionally, CMS has revised the Form CMS-381 to incorporate the initial enrollment of OPT/OSPs which was previously completed on the Form CMS-1856 (0938-0065). CMS has combined the forms into one form in order to further align with the transitioned processes and streamline the requests from the provider community. This change will decrease the burden on both the provider community as well as CMS.

Furthermore, this change will also allow for OPTs who wish to initially enroll in the Medicare program to submit an extension location request with the initial enrollment. The State Survey Agency or Accrediting Organization (for those OPTs requesting deemed status) will survey the extension location during the initial survey to verify compliance with the Medicare conditions. *Form Number:* CMS-381 (OMB control number: 0938-0273); *Frequency:* Occasionally; *Affected Public:* Private Sector; Business or other for-profit and not-for-profit institutions;

Number of Respondents: 506; *Total Annual Responses:* 506; *Total Annual Hours:* 253. (For policy questions regarding this collection contact Caecilia Andrews at 410-786-2190.)

2. *Type of Information Collection Request:* Reinstatement of a previously approved collection; *Title of Information Collection:* Conditions for Certification for Rural Health Clinics and Conditions for Coverage for Federally Qualified Health Centers in 42 CFR 491; *Use:* The Conditions for Medicare Certification (CfCs) for Rural Health Clinics (RHCs) are based on criteria prescribed in law and designed to ensure that each RHC has properly trained staff to provide appropriate care and to assure a safe physical environment for patients. The information collection requirements described herein are needed to implement the Medicare and Medicaid CfCs for a total of 5,349 RHCs. These requirements are similar in intent to standards developed by industry organizations such as the Joint Commission on Accreditation of Hospitals, and the National League of Nursing/American Public Association, and merely reflect accepted standards of management and care to which rural health clinics must adhere.

Federally Qualified Health Centers (FQHCs) are also subject to Conditions for Certification to participate in the Medicare and Medicaid programs. These health and safety standards are the foundation for improving quality and protecting the health and safety of Medicare and Medicaid beneficiaries. The information collection requirements described herein affect approximately 11,252 FQHCs. The current information collection requirements at 42 CFR 491.9(b) and 491.11 are applicable to both RHCs and FQHCs. *Form Number:* CMS-R-38 (OMB control number: 0938-0334); *Frequency:* Recordkeeping and Reporting—Annually; *Affected Public:* Business or other for-profits; *Number of Respondents:* 17,663; *Total Annual Responses:* 17,663; *Total Annual Hours:* 104,245. (For policy questions regarding this collection contact Claudia Molinar at 410-786-8445.)

William N. Parham, III,

Director, Division of Information Collections and Regulatory Impacts, Office of Strategic Operations and Regulatory Affairs.

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2024-N-2332]

Emerging Drug Safety Technology Meetings; Program Announcement

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Center for Drug Evaluation and Research (CDER) within the Food and Drug Administration (FDA or we) is announcing a meeting program, the Emerging Drug Safety Technology Meeting (EDSTM) program. These meetings will be administered by staff in the newly established CDER Emerging Drug Safety Technology Program (EDSTP). EDSTMs provide applicants with an approved application and/or other relevant parties supporting industry's pharmacovigilance (PV) activities (e.g., academia, contract research organizations (CROs), pharmacovigilance vendors, software developers) who meet the eligibility and selection criteria for participation with an opportunity to meet with CDER staff to discuss their research, development, and use of Artificial Intelligence (AI) and other emerging technologies in PV. The goals of the meeting program in its initial phase are to facilitate mutual learning and discussion of the pharmaceutical industry's application of these technologies to PV, including efforts to validate and verify relevant models. While the EDSTP is specifically focused on the use of AI in PV for postmarket activities, it is part of CDER's multifaceted approach to enhance mutual learning of where and how specific innovations, such as AI, can best be used across the drug product life cycle.

DATES: Applicants and other relevant parties may submit meeting requests under the program beginning June 11, 2024.

ADDRESSES: For additional information about the EDSTM program, please refer to FDA's web page at <https://www.fda.gov/drugs/science-and-research-drugs/cder-emerging-drug-safety-technology-program-edstp>.

FOR FURTHER INFORMATION CONTACT:

Ricardo Hernandez, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Silver Spring, MD 20993-0002, 240-402-9526, or email AIMLforDrugDevelopment@fda.hhs.gov with the subject line "EDSTM—General Inquiry".

SUPPLEMENTARY INFORMATION:

I. Background

The pharmaceutical industry is expanding its use of AI and other emerging technology across the drug product life cycle. FDA is interested in accelerating its understanding of the research, development, and use of AI and other emerging technology in the area of pharmacovigilance, including their performance characteristics. The EDSTM is a means by which applicants and other relevant parties who meet the eligibility and selection criteria for participation, can meet with CDER to share information about their use of AI and other emerging technology, and its potential application in PV, including efforts to validate and verify relevant models.

The goal of the EDSTM is to facilitate mutual learning and discussion on the opportunities and challenges with using such technologies in PV. If selected for a meeting, application holders and/or other relevant parties will meet with CDER staff to discuss their research, development, and/or use of AI and other emerging technologies in PV. FDA plans to leverage these learnings to help inform potential regulatory and policy approaches, within the use of emerging technology in PV. The EDSTM program is not an avenue to seek regulatory advice on compliance with pharmacovigilance regulations. Rather, we expect that the information gained during this program will help CDER consider providing regulatory advice on specific technologies to facilitate their adoption when appropriate. The discussions and background information submitted through the EDSTMs are nonbinding on both FDA and EDSTM requesters.

EDSTMs may be requested by applicants with at least one approved application regulated by CDER, including new drug applications, abbreviated new drug applications, or biologics license applications, and/or by other relevant parties supporting industry's PV activities (e.g., academia, CROs/PV vendors, software developers) who develop, leverage, or intend to leverage AI or other emerging technology that can be used to satisfy the postmarketing reporting requirements in 21 CFR 314.80, 314.98, and 600.80. Eligible parties, such as an applicant or an applicant's PV vendor, may request meetings separately or in partnership. Requests may be submitted on a rolling basis and will be reviewed quarterly each calendar year. Please refer to the EDSTM program web page for details on submission deadlines for quarterly review. CDER will select up to

nine participants whose submissions meet the eligibility and selection criteria in a 12-month period for the initial phase of the EDSTM.

FDA has a longstanding commitment to ensure medicines marketed in the United States are safe through continued surveillance and research following approval. In the postmarket setting, regulated industry is obligated to review all adverse drug experience information received or otherwise obtained and submit timely reports to FDA. Both industry and regulatory authorities face challenges with timely and efficient collection, processing, and evaluation of single and aggregate patient safety data compounded by ever-increasing case volumes. Advances in emerging technology have the potential to address some of these challenges by creating more efficiencies within a PV system. For example, early adopters of AI are leveraging these emerging technologies to automate fundamental tasks (e.g., adverse event intake, data entry, and processing) with the intention to drive down associated administrative burden and costs. These technologies can also make safety surveillance more efficient and effective by capturing, aggregating, and analyzing larger and more diverse data sets.

FDA recognizes industry’s interest in dialogue around AI capabilities that advance PV. Knowledge and awareness of emerging technology tools, such as AI, and how they are used to advance PV will help inform CDER’s regulatory approaches and policies. FDA expects that increased communication with industry and/or other relevant parties during EDSTMs will accelerate FDA’s understanding of how AI enabled tools are being used for PV, their associated risks and benefits, and barriers to implementation.

FDA has established an EDSTP website that includes EDSTM eligibility and selection criteria, instructions for submission of a meeting request, meeting request and package content descriptions, and submission timelines. The program’s website address is <https://www.fda.gov/drugs/science-and-research-drugs/cder-emerging-drug-safety-technology-program-edstp>.

II. Paperwork Reduction Act of 1995

Collections of information from fewer than 10 respondents within any 12-month period are not subject to the Paperwork Reduction Act of 1995 (PRA) (5 CFR 1320.3(c)(4)). For the initial phase of this program, FDA will request information from no more than nine sponsors. Initial requests from sponsors interested in participation in the program are not “information” in accordance with 5 CFR 1320.3(h)(1). Therefore, clearance by the Office of Management and Budget under the PRA is not required.

Dated: June 6, 2024.
Lauren K. Roth,
Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES
[Document Identifier: 0937–0191–60D]
Agency Information Collection Request; 60-Day Public Comment Request
AGENCY: Office of the Secretary, HHS.
ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human Services, is publishing the following summary of a proposed collection for public comment. The ICR is for extending the use of the approved information collection assigned OMB control number 0937–0191, which expires on June 30, 2024. Prior to submitting the ICR to OMB, OS seeks comments from the public regarding the burden estimate, below, or any other aspect of the ICR.

DATES: Comments on the ICR must be received on or before August 12, 2024.

ADDRESSES: Submit your comments to Sherrette.Funn@hhs.gov or by calling (202) 264–0041 and PRA@HHS.GOV.

FOR FURTHER INFORMATION CONTACT: When submitting comments or requesting information, please include the document identifier 0937–0191–60D

and project title for reference, to Sherrette A. Funn, email: Sherrette.Funn@hhs.gov, PRA@HHS.GOV or call (202) 264–0041 the Reports Clearance Officer.

SUPPLEMENTARY INFORMATION: Interested persons are invited to send comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency’s functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Application Packets for Real Property for Public Health Purposes

Type of Collection: Reinstatement, with no change.
OMB No.: 0937–0191.
Abstract: The Office of Assistant Secretary for Administration, Program Support Center, Federal Real Property Assistance Program is requesting OMB approval on a previously approved information collection, 0937–0191. 40 U.S.C. 550 (the “Act”), as amended, provides authority to the Secretary of Health and Human Services to convey or lease surplus real property to States and their political subdivisions and instrumentalities, to tax-supported institutions, and to nonprofit institutions which (except for institutions which lease property to assist the homeless) have been held exempt from taxation under section 501(c)(3) of the 1954 Internal Revenue Code, and 501(c)(19) for veterans organizations, for public health and homeless assistance purposes. Transfers are made to transferees at little or no cost.

Type of respondent: Responses are dependent on when Federal surplus real property is made available and is desired by a respondent/applicant for acquisition. Likely respondents include State, local, or Tribal units of government or instrumentalities thereof, and not-for-profit organizations.

ANNUALIZED BURDEN HOUR TABLE

Forms (if necessary)	Respondents (if necessary)	Number of respondents	Number of responses per respondents	Average burden per response	Total burden hours
Applications for surplus Federal real property		10	1	200	2,000
Total		10	1	200	2,000

Sherrette A. Funn,

Paperwork Reduction Act Reports Clearance Officer, Office of the Secretary.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Cancer Institute; Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Cancer Institute Council of Research Advocates.

The meeting will be held as a virtual meeting and will be open to the public as indicated below. Individuals who plan to view the virtual meeting and need special assistance or other reasonable accommodations to view the meeting, should notify the Contact Person listed below in advance of the meeting. The meeting can be accessed from the NIH Videocast at the following link: <https://videocast.nih.gov/>.

Name of Committee: National Cancer Institute Council of Research Advocates (NCRA).

Date: June 26, 2024.

Time: 12:00 p.m. to 3:00 p.m.

Agenda: Welcome and Chairwoman's Remarks, NCI Director's Update, NCI Updates, and Legislative Update.

Place: National Institutes of Health, Building 31, 9000 Rockville Pike, Bethesda, MD 20892 (Virtual Meeting).

Contact Person: Amy Williams, Director, NCI Office of Advocacy Relations, National Cancer Institute, NIH, 31 Center Drive, Building 31, Room 10A28, Bethesda, MD 20892, (301) 496–9723, william@mail.nih.gov.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

Information is also available on the Institute's/Center's home page: <https://deainfo.nci.nih.gov/advisory/ncra/ncra.htm>, where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140-01-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-7084-N-04]

60-Day Notice of Proposed Information Collection: Semi-Annual Labor Standards Enforcement Report—Local Contracting Agencies (HUD Program); OMB Control No.: 2501-0019

AGENCY: Office of Field Policy and Management, Housing and Urban Development (HUD).

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* August 12, 2024.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection can be sent within 60 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 60-day Review—Open for Public Comments” or by using the search function. Interested persons are also invited to submit comments regarding this proposal and comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Jennifer A. Dupont, Program Analyst, Office of Field Policy and Management, Department of Housing and Urban Development, 40 Marietta Street, 10th Floor, Atlanta, GA 30303 or the number (678) 732-2034 this is not a toll free number or email at Jennifer.A.Dupont@hud.gov for a copy of the proposed forms or other available information.

FOR FURTHER INFORMATION CONTACT: Colette Pollards, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410, telephone (202) 402-3400 (this is not a toll free number) or email Colette Pollard at

Colette.Pollard@hud.gov for copies of the proposed forms and other available information. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit <https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs>.

SUPPLEMENTARY INFORMATION: The Department is submitting the proposed information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35, as amended).

This Notice is soliciting comments from members of the public and affected agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information; (3) Enhance the quality, utility, and clarity of the information to be collected; and (4) Minimize the burden of the collection of information on those who are to respond; including the use of appropriate automated collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

This Notice also lists the following information:

Title of Information Collection: Semi-Annual Labor Standards Enforcement Report—Local Contracting Agencies (HUD Programs).

OMB Control Number, if applicable: 2501-0019.

Description of the need for the information and proposed use: The Department of Labor (DOL) requires all Federal agencies administering programs subject to Davis-Bacon wage requirements covered by 29 CFR 5.7(b) to submit a semi-annual report of all new covered contracts/projects and all enforcement activities during the six-month reporting period. For HUD to comply, HUD collects data from state and local agencies that administer HUD-assisted programs subject to Davis-Bacon requirements. HUD requires these agencies to complete and submit a Semi-annual Labor Standards Enforcement Report every six months. Respondents and HUD must retain a copy of the Semi-annual Labor Standards Enforcement Report files at least three years.

Agency form numbers, if applicable: HUD FORM 4710.

Estimation of the total numbers of respondents, frequency of response, and hours needed to prepare the information collection including number of hours of response:

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM HQ MO4500180135; OMB Control No. 1004–0204]

Agency Information Collection Activities; Bureau of Land Management Resource Advisory Council Application

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Bureau of Land Management (BLM) is proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before August 12, 2024.

ADDRESSES: Send your written comments on this information collection request (ICR) by mail to Darrin King, Information Collection Clearance Officer, U.S. Department of the Interior, Bureau of Land Management, Attention PRA Office, 440 W 200 S #500, Salt Lake City, UT 84101; or by email to BLM_HQ_PRA_Comments@blm.gov. Please reference Office of Management and Budget (OMB) Control Number 1004–0204 in the subject line of your comments. Please note that the electronic submission of comments is recommended.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Carrie M. Richardson,

BLM National Advisory Council Coordinator, by telephone at 202–742–0657; or email at crichardson@blm.gov. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct, or sponsor and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

- (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) How might the agency minimize the burden of the collection of

information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BLM collections the information on the Resource Advisory Council Application (Form No. 1120–19) to determine education, training, and experience related to possible service on advisory committees established under the authority of Section 309 of the Federal Land Policy and Management Act (43 U.S.C. 1739) and the Federal Advisory Committee Act, 5 U.S.C. ch. 10. This information is necessary to ensure that each advisory council is structured to provide fair membership balance, both geographic and interest-specific, in terms of the functions to be performed and points of view to be represented, as prescribed by its charter. OMB's approval for the collection of information under this OMB control number is scheduled to expire on April 30, 2025. This request is for OMB to renewal for this OMB control number for an additional three (3) years.

Title of Collection: Bureau of Land Management Resource Advisory Council Application (43 CFR Subpart 1784).

OMB Control Number: 1004–0204.
Form Number: 1120–19.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Persons who apply for positions on Resource Advisory Councils.

Total Estimated Number of Annual Respondents: 200.

Total Estimated Number of Annual Responses: 200.

Estimated Completion Time per Response: 4 hours.

Total Estimated Number of Annual Burden Hours: 800.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: None.

An agency may not conduct, or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin A. King,

Information Collection Clearance Officer.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS-WASO-NAGPRA-NPS0038071; PPWOCRADN0-PCU00RP14.R50000]

Notice of Intended Repatriation: School for Advanced Research, Santa Fe, NM

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the School for Advanced Research (SAR), intends to repatriate certain cultural items that meet the definition of objects of cultural patrimony and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after July 11, 2024.

ADDRESSES: Elysia Poon, School for Advanced Research, 660 Garcia Street, Santa Fe, NM 87505, telephone (505) 954-7205, email poon@sarsf.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the School for

Advanced Research, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of 11 cultural items have been requested for repatriation. The 11 objects of cultural patrimony are bowls, jars, container, pot rings, tablita, and offering set.

1. Pueblo of Acoma, Storage Jar, 1800-1840, clay and paints. Donated by Andrew Dasburg, Santa Fe, NM, in 1931.

2. Pueblo of Acoma, Water Jar, clay and paints. Indian Arts Fund purchase from the Spanish and Indian Trading Company, Santa Fe, NM, in 1943.

3. Pueblo of Acoma, Pot Ring, corn husk and willow. Indian Arts Fund purchase from unknown source at Acoma Pueblo, NM, in 1928.

4. Pueblo of Acoma, Pot Ring, yucca and dyes. Indian Arts Fund purchase from Maria Chino at Acoma Pueblo, January 29, 1931.

5. Pueblo of Acoma, Pot Ring, yucca and dyes. Indian Arts Fund purchase from Maria Cimarron, Acoma Pueblo, NM, in 1932.

6. Pueblo of Acoma, Bowl, wood and rawhide. Donated by Kenneth M. Chapman, Santa Fe, NM, in 1934; donor purchased it from an unknown source at Acoma Pueblo, NM, in 1928.

7. Unknown (Pueblo), Container, rawhide. Bequeathed by Mary Austin, Santa Fe, NM; received by the Indian Arts Fund in 1940.

8. Pueblo of Acoma, Tablita, wood, paint, and wax crayon. Donated by the Estate of Amelia Elizabeth White. Chemically treated, 3/24/1978, likely with ORB fog, a pyrethrins product.

9. Pueblo of Acoma, Bowl, clay and paints. Bequeathed by James Richard (Rick) Dillingham II; received at SAR in 1994.

10. Pueblo of Acoma, Bowl, clay and paints. Bequeathed by James Richard (Rick) Dillingham II; received at SAR in 1994.

11. Pueblo of Acoma, Christmas Offering Set (32 pieces), clay. Bequeathed by James Richard (Rick) Dillingham II; received at SAR in 1994.

Determinations

The School for Advanced Research has determined that:

- The 11 items of cultural patrimony described in this notice have ongoing historical, traditional, or cultural importance central to the Native American group, including any

constituent sub-group (such as a band, clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.

- There is a reasonable connection between the cultural items described in this notice and the Pueblo of Acoma, New Mexico.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the School for Advanced Research must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The School for Advanced Research is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Dated: May 31, 2024.

[NPS-NERO-CACO-37864; PPNECACOS0, PPMPSPD1Z.YM0000]

Cape Cod National Seashore Advisory Commission Notice of Public Meetings

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: In accordance with the Federal Advisory Committee Act of 1972, as amended, the National Park Service (NPS) is hereby giving notice of the 310th, 311th, 312th and 313th meetings of the Cape Cod National

Seashore Advisory Commission (Commission).

DATES: The Commission will meet on Monday, July 1, 2024; Monday, August 5, 2024; Monday, September 9, 2024; and Monday, October 7, 2024. All scheduled meetings will begin at 1 p.m. and will end by 4 p.m. (eastern time).

ADDRESSES: All meetings will be held at the Salt Pond Visitors Center, 50 Nauset Road, Eastham, Massachusetts 02642. Information on joining the teleconference will be made available to the public on the Cape Cod National Seashore website at least two weeks prior to the meetings at <https://www.nps.gov/caco/learn/management/advisory-commission.htm>.

FOR FURTHER INFORMATION CONTACT: Jennifer Flynn, Superintendent and Designated Federal Officer, Cape Cod National Seashore, 99 Marconi Site Road, Wellfleet, Massachusetts 02667, telephone (508) 771-2144 or caco_superintendent@nps.gov. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The Commission was established by section 8 of Public Law 87-126, as amended, and expired on September 26, 2018. The Commission was reestablished by Div. DD, title VI, subtitle B, section 613 of Public Law 117-328, the Consolidated Appropriations Act, 2023. The Commission's new termination date is September 26, 2029. The purpose of the Commission is to consult with the Secretary of the Interior, or her designee, with respect to matters relating to the development of Cape Cod National Seashore, and with respect to carrying out the provisions of the Act establishing the Seashore. The meetings are open to the public. Interested persons may make oral presentations to the Commission. Such requests should be made to the Superintendent at the beginning of the meeting. Depending on the number of persons wishing to speak, and the time available, the time for individual comments may be limited. Written comments can be sent to Jennifer Flynn (see **FOR FURTHER INFORMATION CONTACT**). All comments received will be provided to the Commission.

The Commission meeting location may change based on inclement weather or exceptional circumstances. If a

meeting location is changed, the Superintendent will issue a press release and use local newspapers to announce the change. Detailed minutes of the meeting will be available for public inspection within 90 days of the meeting.

Purpose of the Meeting: The standing agenda/purpose of each meeting is to discuss the following:

1. Adoption of agenda
2. Approval of meeting minutes
3. Superintendent's report
4. Members comments
5. Meeting primary topic
6. Public comment
7. Adjournment

Focus of each meeting as follows:

July—Fresh Water
August—Zoning
September—Fire
October—Climate/Coastal Resiliency

Meeting Accessibility/Special Accommodations: The meetings are open to the public. Please make requests in advance for sign language interpreter services, assistive listening devices, language translation services, or other reasonable accommodations. We ask that you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice at least seven (7) business days prior to the meeting to give the Department of the Interior sufficient time to process your request. All reasonable accommodation requests are managed on a case-by-case basis.

Public Disclosure of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 5 U.S.C. ch. 10.

Alma Rippes,
Chief, Office of Policy.

Notice of Inventory Completion: Los Rios Community College District, Sacramento, CA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Los Rios Community College District (LRCCD) has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after July 11, 2024.

ADDRESSES: Jamey Nye, Los Rios Community College District, 1919 Spanos Ct., Arden-Arcade, CA 95825, telephone (916) 568-3031, email nagpra@losrios.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the LRCCD and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, associated funerary objects removed from the Bennett Mound or Bennett site (CA-SAC-16), Sacramento County, CA have been identified. The associated funerary objects were removed sometime in or around 1932 by Jeremiah B. Lillard. Between 1923 and 1940, Lillard was president of Sacramento Junior College, now named Sacramento City College, which is one of four campuses within LRCCD. As early as July 1981, the objects were located on the American River College campus, another campus within LRCCD. The five associated funerary objects are two stone charmstones, one stone projectile point, one bone awl, and one abalone ornament. LRCCD has no knowledge of any potentially hazardous substances being used to treat the associated funerary objects.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the associated funerary objects described in this notice.

Determinations

LRCCD has determined that:

- The five objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.

- There is a reasonable connection between associated funerary objects described in this notice and the Buena Vista Rancheria of Me-Wuk Indians of California; California Valley Miwok Tribe, California; Chicken Ranch Rancheria of Me-Wuk Indians of California; Ione Band of Miwok Indians of California; Jackson Band of Miwok Indians; Shingle Springs Band of Miwok Indians, Shingle Springs Rancheria (Verona Tract), California; Tuolumne Band of Me-Wuk Indians of the Tuolumne Rancheria of California; United Auburn Indian Community of the Auburn Rancheria of California; and the Wilton Rancheria, California

Requests for Repatriation

Written requests for repatriation of the associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the associated funerary objects in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, LRCCD must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. LRCCD is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: May 31, 2024.

Melanie O'Brien,

Manager, National NAGPRA Program.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS-WASO-NAGPRA-NPS0038052; PPWOCRADNO-PCU00RP14.R50000]

Notice of Intended Repatriation: University of Michigan, Ann Arbor, MI

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the University of Michigan intends to repatriate certain cultural items that meet the definition of unassociated funerary objects and that have a known lineal descendant.

DATES: Repatriation of the cultural items in this notice may occur on or after July 11, 2024.

ADDRESSES: Dr. Ben Secunda, NAGPRA Office Managing Director, University of Michigan, Office of Research, Suite G269, Lane Hall, Ann Arbor, MI 48109-1274, telephone (734) 615-8936, email bsecunda@umich.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the University of Michigan and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

A total of two cultural items have been requested for repatriation. The two unassociated funerary objects are one lot of nickel silver brooches and one lot of shell and glass beads. On an unknown date in 1913, two lots of Cultural Items were removed from the Ft. Wayne site in Allen Co, Indiana on the property of Dr. Gillis, Lawton Place, and donated to the University of Michigan Museum of Anthropological Archaeology (UMMAA) by Mrs. Gertrude E. Dean on June 19, 1936. UMMAA records note "a sword with the burial. Someone in Wash. D. C. got most of the material . . . silver crosses and arm bands." The site is dated to the post-contact A.D. 1700-1850 based on diagnostic artifacts. This location is known to be the burial site of the Miami leader, Little Turtle. The University of Michigan has no record of, nor do its officials have any knowledge of, any treatment of items with pesticides, preservatives, or other

substances that represent a potential hazard to the collection(s) or to persons handling the collection(s).

Determinations

The University of Michigan has determined that:

- The two unassociated funerary objects described in this notice are reasonably believed to have been placed intentionally with or near human remains, and are connected, either at the time of death or later as part of the death rite or ceremony of a Native American culture according to the Native American traditional knowledge of a lineal descendant, Indian Tribe, or Native Hawaiian organization. The unassociated funerary objects have been identified by a preponderance of the evidence as related to human remains, specific individuals, or families, or removed from a specific burial site or burial area of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.

- The known lineal descendants, Daryl Baldwin (Miami Tribe of Oklahoma) and Scott Willard (Miami Tribe of Oklahoma), are connected to the cultural items described in this notice.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the University of Michigan must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. The University of Michigan is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: Department of the Interior, Bureau of Land Management, Canyons of the Ancients Visitors Center and Museum, Dolores, CO

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the U.S. Department of the Interior, Bureau of Land Management, Canyons of the Ancients Visitors Center and Museum has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice. The human remains and associated funerary object were removed from San Miguel County, Colorado.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after July 11, 2024.

ADDRESSES: Ray O'Neil, Monument Manager, Bureau of Land Management, Canyons of the Ancients National Monument, 27501 Highway 184, Dolores, CO 81323, telephone (303) 882–5600, email roneil@blm.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Canyons of the Ancients Visitors Center and Museum, Bureau of Land Management, Dolores, CO, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Human remains representing, at least, one individual have been identified. The one associated funerary object is a bone awl. The human remains were

removed from the burial site in San Miguel County, CO, in 1983 after the site (5SM790) had been vandalized sometime during the winter of 1982–1983. The burial appeared to be a cairn burial, comprised of about 20 sandstone cobbles and two groundstone slabs, within a rockshelter. A detailed assessment of the human remains was made by archaeologists in 1983 and in 1994, who determined the individual was of Native American descent. The human remains belong to an adult female. With the exception of the right arm and hand, one lumbar vertebra, and rib fragments, the upper portion of the body was completely missing. Based upon the burial context, as well as a radiocarbon date from charcoal included in the burial pit (A.D. 460 ± 140), the site is reasonably believed to be from, in archaeological terms, the late Archaic or Formative period.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location of the human remains and associated funerary object described in this notice.

Determinations

The BLM Canyons of the Ancients Visitors Center and Museum has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- The one object described in this notice is reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a connection between the human remains and associated funerary objects described in this notice and the Hopi Tribe of Arizona; Ohkay Owingeh, New Mexico; Pueblo of Acoma, New Mexico; Pueblo of Cochiti, New Mexico; Pueblo of Isleta, New Mexico; Pueblo of Jemez, New Mexico; Pueblo of Laguna, New Mexico; Pueblo of Nambe, New Mexico; Pueblo of Picuris, New Mexico; Pueblo of Pojoaque, New Mexico; Pueblo of San Felipe, New Mexico; Pueblo of San Ildefonso, New Mexico; Pueblo of Sandia, New Mexico; Pueblo of Santa Ana, New Mexico; Pueblo of Santa Clara, New Mexico; Pueblo of Taos, New Mexico; Pueblo of Tesuque, New Mexico; Pueblo of Zia, New Mexico; Santo Domingo Pueblo; Southern Ute Indian Tribe of the Southern Ute Reservation, Colorado; Ute Indian Tribe of the Uintah & Ouray Reservation, Utah; Ute Mountain Ute

Tribe; Ysleta del Sur Pueblo; and the Zuni Tribe of the Zuni Reservation, New Mexico.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the BLM Canyons of the Ancients Visitors Center and Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The BLM Canyons of the Ancients Visitors Center and Museum is responsible for sending a copy of this notice to the Indian Tribes identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Notice of Inventory Completion: Western Washington University, Department of Anthropology, Bellingham, WA

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), Western Washington University (WWU), has completed an inventory of human remains and has determined that there is a cultural affiliation between the

human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were removed from 45–WH–11 in Whatcom County, WA.

DATES: Repatriation of the human remains in this notice may occur on or after July 11, 2024.

ADDRESSES: Dr. Judith Pine, Western Washington University, Department of Anthropology, Arntzen Hall 340, 516 High Street, Bellingham, WA 98225, telephone (360) 650–4783, email pinej@wwu.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of WWU, and additional information on the determinations in this notice, including the results of consultation, can be found in its inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at least, one individual have been reasonably identified. No associated funerary objects are present.

The human remains in this notice were removed from 45–WH–11 (Birch Bay, Washington) by students from Western Washington University under the direction of WWU professor Dr. Garland Grabert in the fall of 1970. Notes indicated that surface collection and a small-scale excavation occurred; the human remains were found in Test Cut #2 but were not recognized as human remains until after 2018. No known individuals were identified. No hazardous chemicals are known to have been used to treat the human remains while in the custody of WWU.

The human remains in this notice are connected to one or more identifiable earlier groups, tribes, peoples, or cultures. There is a relationship of shared group identity between the identifiable earlier groups, tribes, peoples, or cultures and one or more Indian Tribes or Native Hawaiian organizations. The following types of information were used to reasonably trace the relationship: anthropological information, archaeological information, geographical information, historical information, and oral tradition.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the

information available about the human remains described in this notice.

Determinations

The WWU has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- There is a connection between the human remains described in this notice and the Lummi Tribe of the Lummi Reservation and the Nooksack Indian Tribe.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the authorized representative identified in this notice under

ADDRESSES. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or an Indian Tribe or Native Hawaiian organization with cultural affiliation.

Repatriation of the human remains described in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the WWU must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The WWU is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: May 31, 2024.

BILLING CODE 4312–52–P

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NAGPRA–NPS0038054; PPWOCRADN0–PCU00RP14.R50000]

Notice of Intended Disposition: General Services Administration, Fort Worth, TX

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the General Services Administration (GSA) intends to carry out the disposition of human remains, associated funerary objects, unassociated funerary objects, sacred objects, or objects of cultural patrimony removed from Federal or Tribal lands to the lineal descendants, Indian Tribe, or Native Hawaiian organization with priority for disposition in this notice.

DATES: Disposition of the human remains or cultural items in this notice may occur on or after July 11, 2024. If no claim for disposition is received by June 11, 2025, the human remains or cultural items in this notice will become unclaimed human remains or cultural items.

ADDRESSES: Victoria Clow, General Services Administration, 819 Taylor Street, 11th Floor, Fort Worth, TX 76012, telephone (817) 978–0199, email Victoria.clow@gsa.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the General Services Administration, and additional information on the human remains or cultural items in this notice, including the results of consultation, can be found in the related records. The National Park Service is not responsible for the identifications in this notice.

Abstract of Information Available

The one object of cultural patrimony is a small, complete stone ax. The object was found on Federal property within the city of Santa Fe, Santa Fe County, New Mexico. In November of 2019, during sprinkler maintenance work outside of the archaeological monitoring area, an irrigation worker discovered an artifact in disturbed soils identified as construction fill. The irrigation worker submitted the discovery to the New Mexico Office of Archeological Studies with the Department of Cultural Affairs. An archaeologist with that office notified the General Services Administration and identified the object as likely having ongoing historical, traditional, or cultural importance.

Determinations

The General Services Administration has determined that:

- The one object of cultural patrimony described in this notice have ongoing historical, traditional, or cultural importance central to the Native American group, including any constituent sub-group (such as a band,

clan, lineage, ceremonial society, or other subdivision), according to the Native American traditional knowledge of an Indian Tribe or Native Hawaiian organization.

- The Pueblo of Tesuque, New Mexico has priority for disposition of the cultural item described in this notice.

Claims for Disposition

Written claims for disposition of the human remains or cultural items in this notice must be sent to the appropriate official identified in this notice under **ADDRESSES**. If no claim for disposition is received by June 11, 2025, the human remains or cultural items in this notice will become unclaimed human remains or cultural items. Claims for disposition may be submitted by:

1. Any lineal descendant, Indian Tribe, or Native Hawaiian organization identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that they have priority for disposition.

Disposition of the human remains or cultural items in this notice may occur on or after July 11, 2024. If competing claims for disposition are received, the General Services Administration must determine the most appropriate claimant prior to disposition. Requests for joint disposition of the human remains or cultural items are considered a single request and not competing requests. The General Services Administration is responsible for sending a copy of this notice to the lineal descendants, Indian Tribes, and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3002, and the implementing regulations, 43 CFR 10.7.

Dated: May 31, 2024.

**Notice of Inventory Completion:
Peabody Museum of Archaeology and
Ethnology, Harvard University,
Cambridge, MA**

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Peabody Museum of Archaeology and Ethnology, Harvard University (PMAE) has completed an inventory of human remains and has determined that there is a cultural affiliation between the human remains and Indian Tribes or Native Hawaiian organizations in this notice. The human remains were collected at the Rosebud Indian Reservation, SD, and Flandreau Indian School, Moody County, SD.

DATES: Repatriation of the human remains in this notice may occur on or after July 11, 2024.

ADDRESSES: Jane Pickering, Peabody Museum of Archaeology and Ethnology, Harvard University, 11 Divinity Avenue, Cambridge, MA 02138, telephone (617) 496-2374, email jpickering@fas.harvard.edu.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the PMAE, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at minimum, two individuals were collected at the Rosebud Indian Reservation, SD. The human remains are hair clippings collected from one individual who was recorded as being 58 years old and one individual who was recorded as being 46 years old and identified as "Yankton." William O. Roberts took the hair clippings at the Rosebud Indian Reservation between 1930 and 1933. Roberts sent the hair clippings to George Woodbury, who donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Based on the information available, human remains representing, at minimum, one individual was collected at the Flandreau Indian School, Moody County, SD. The human remains are hair clippings collected from one individual who was recorded as being 22 years old and identified as "Sioux." George E. Peters took the hair clippings at the Flandreau Indian School between 1930 and 1933. Peters sent the hair clippings to George Woodbury, who

donated the hair clippings to the PMAE in 1935. No associated funerary objects are present.

Cultural Affiliation

Based on the available information and the results of consultation, cultural affiliation is clearly identified by the information available about the human remains described in this notice.

Determinations

The PMAE has determined that:

- The human remains described in this notice represent the physical remains of three individuals of Native American ancestry.
- There is a reasonable connection between the human remains described in this notice and the Yankton Sioux Tribe of South Dakota.

Requests for Repatriation

Written requests for repatriation of the human remains in this notice must be sent to the Responsible Official identified in **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the PMAE must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains are considered a single request and not competing requests. The PMAE is responsible for sending a copy of this notice to the Indian Tribe identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: May 31, 2024.

**Notice of Intended Disposition:
Department of the Interior, Bureau of
Reclamation, Upper Colorado Basin
Region, Provo, UT**

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), U.S. Department of the Interior, Bureau of Reclamation (Reclamation), Upper Colorado Basin Region intends to carry out the disposition of human remains removed from Federal or Tribal lands to the lineal descendants, Indian Tribe, or Native Hawaiian organization with priority for disposition in this notice.

DATES: Disposition of the human remains or cultural items in this notice may occur on or after July 11, 2024. If no claim for disposition is received by June 11, 2025, the human remains in this notice will become unclaimed human remains.

ADDRESSES: Dr. Zachary Nelson, Bureau of Reclamation, Upper Colorado Basin Region, 302 East Lakeview Parkway, Provo, UT 84606, telephone (801) 379-1164, email znelson@usbr.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of Reclamation, Upper Colorado Basin Region, and additional information on the human remains in this notice, including the results of consultation, can be found in the related records. The National Park Service is not responsible for the identifications in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at least, one individual has been reasonably identified. No associated funerary objects are present. On May 9, 2021, at Red Fleet Reservoir in Uintah County, Utah, human remains were discovered along the shore at the water line. No identified burial was located.

Determinations

The Reclamation Upper Colorado Basin Region has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.

- The Ute Indian Tribe of the Uintah & Ouray Reservation, Utah has priority for disposition of the human remains described in this notice.

Claims for Disposition

Written claims for disposition of the human remains or cultural items in this notice must be sent to the appropriate official identified in this notice under **ADDRESSES**. If no claim for disposition is received by June 11, 2025, the human remains in this notice will become unclaimed human remains. Claims for disposition may be submitted by:

1. Any lineal descendant, Indian Tribe, or Native Hawaiian organization identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that they have priority for disposition.

Disposition of the human remains or cultural items in this notice may occur on or after July 11, 2024. If competing claims for disposition are received, Reclamation Upper Colorado Basin Region must determine the most appropriate claimant prior to disposition. Requests for joint disposition of the human remains or cultural items are considered a single request and not competing requests. The Reclamation Upper Colorado Basin Region is responsible for sending a copy of this notice to the lineal descendants, Indian Tribes, and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3002, and the implementing regulations, 43 CFR 10.7.

**Notice of Intended Repatriation:
Department of the Interior, National
Park Service, Pipe Spring National
Monument, Fredonia, AZ**

AGENCY: National Park Service, Interior.
ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the U.S. Department of the Interior, National

Park Service, Pipe Spring National Monument (PISP) intends to repatriate certain cultural items that meet the definition of unassociated funerary objects and that have a cultural affiliation with the Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the cultural items in this notice may occur on or after July 11, 2024.

ADDRESSES: Amanda McCutcheon, Superintendent, Pipe Spring National Monument, 406 N Pipe Spring Road, Fredonia, AZ 86022, telephone (928) 643-7105, email amanda_mccutcheon@nps.gov.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Superintendent, PISP, and additional information on the determinations in this notice, including the results of consultation, can be found in the summary or related records.

Abstract of Information Available

A total of eight cultural items have been requested for repatriation. The eight unassociated funerary objects are two mineral pigments, two lots of shell beads/fragments, one ceramic pot, one ceramic bowl, and two pipe bowls. Journal entries from PISP's first superintendent, Leonard Heaton, describes his finding of these objects alongside human remains. These entries span several years, from 1928 to 1940, and do not provide specifics as to exact locations. The artifacts were not cataloged at the time of discovery and were later found in collections in 1985, along with hand-written envelopes from Heaton.

Determinations

PISP has determined that:

- The eight unassociated funerary objects described above are reasonably believed to have been placed intentionally with or near individual human remains, and are connected, either at the time of death or later as part of the death rite or ceremony and are believed, by a preponderance of the evidence, to have been removed from a specific burial site of an individual or individuals with cultural affiliation to an Indian Tribe or Native Hawaiian organization.

- There is a reasonable connection between the cultural items described in this notice and the Kaibab Band of Paiute Indians of the Kaibab Indian Reservation, Arizona.

Requests for Repatriation

Additional, written requests for repatriation of the cultural items in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the cultural items in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, PISP must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the cultural items are considered a single request and not competing requests. PISP is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice and to any other consulting parties.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3004 and the implementing regulations, 43 CFR 10.9.

Notice of Inventory Completion: Grand Rapids Public Museum, Grand Rapids, MI

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Grand Rapids Public Museum has completed an inventory of human remains and associated funerary objects and has determined that there is a cultural affiliation between the human remains and associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the human remains and associated funerary objects in this notice may occur on or after July 11, 2024.

ADDRESSES: Alex Forist, 272 Pearl Street NW, Grand Rapids, MI 49504, telephone (616) 929-1809, email aforist@grpm.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Grand Rapids Public Museum, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, human remains representing, at least, one individual has been reasonably identified. The three associated funerary objects are an ax head, steel, and flint. At an unknown date, the related ancestral remains and associated funerary objects were found wrapped in birch bark on Sugar Island about 18 miles from Sault Ste. Marie, Chippewa County, MI by Charles Bradshaw during a house excavation. At an unknown date, they were acquired by Isaac Lemon. In 1907, they were donated to the Kent Scientific Museum (now the Grand Rapids Public Museum).

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is reasonably identified by the geographical location or acquisition history of the human remains and associated funerary objects described in this notice.

Determinations

The Grand Rapids Public Museum has determined that:

- The human remains described in this notice represent the physical remains of one individual of Native American ancestry.
- The three objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a reasonable connection between the human remains and associated funerary objects described in this notice and the Bay Mills Indian Community, Michigan and the Sault Ste. Marie Tribe of Chippewa Indians, Michigan.

Requests for Repatriation

Written requests for repatriation of the human remains and associated funerary objects in this notice must be sent to the

authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.

2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the human remains and associated funerary objects in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the Grand Rapids Public Museum must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the human remains and associated funerary objects are considered a single request and not competing requests. The Grand Rapids Public Museum is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: May 31, 2024.

Notice of Inventory Completion: Mukwonago Community Library, Mukwonago, WI

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: In accordance with the Native American Graves Protection and Repatriation Act (NAGPRA), the Mukwonago Community Library has completed an inventory of associated funerary objects and has determined that there is a cultural affiliation between the associated funerary objects and Indian Tribes or Native Hawaiian organizations in this notice.

DATES: Repatriation of the associated funerary objects in this notice may occur on or after July 11, 2024.

ADDRESSES: Abby Armour, Mukwonago Community Library, 511 Division Street,

Mukwonago, WI 53149, telephone (262) 363-6411, email nagpra@mukwonagolibrary.org.

SUPPLEMENTARY INFORMATION: This notice is published as part of the National Park Service's administrative responsibilities under NAGPRA. The determinations in this notice are the sole responsibility of the Mukwonago Community Library, and additional information on the determinations in this notice, including the results of consultation, can be found in the inventory or related records. The National Park Service is not responsible for the determinations in this notice.

Abstract of Information Available

Based on the information available, associated funerary objects removed from Bennett Mound or Bennett Site (CA-SAC-16), Sacramento County, CA have been identified. On an unknown date, the associated funerary objects were likely removed by Jeremiah B. Lillard, based on handwriting found on item tags. On a date prior to 1965, Arthur Grutzmacher, a collector and dealer from Mukwonago, WI, obtained the associated funerary objects. Following his death in 1965, the associated funerary objects were bequeathed to the Mukwonago Community Library. The three associated funerary objects are one lot of shell beads, one lot of glass and stone beads, and one bone tube. Mukwonago Community Library has no knowledge of any potentially hazardous substances used to treat the associated funerary objects.

Cultural Affiliation

Based on the information available and the results of consultation, cultural affiliation is clearly identified by the information available about the associated funerary objects described in this notice.

Determinations

The Mukwonago Community Library has determined that:

- The three objects described in this notice are reasonably believed to have been placed intentionally with or near individual human remains at the time of death or later as part of the death rite or ceremony.
- There is a reasonable connection between the associated funerary objects described in this notice and the Buena Vista Rancheria of Me-Wuk Indians of California; California Valley Miwok Tribe, California; Chicken Ranch Rancheria of Me-Wuk Indians of California; Ione Band of Miwok Indians of California; Jackson Band of Miwok Indians; Shingle Springs Band of Miwok

Indians, Shingle Springs Rancheria (Verona Tract), California; Tuolumne Band of Me-Wuk Indians of the Tuolumne Rancheria of California; United Auburn Indian Community of the Auburn Rancheria of California; and the Wilton Rancheria, California.

Requests for Repatriation

Written requests for repatriation of the associated funerary objects in this notice must be sent to the authorized representative identified in this notice under **ADDRESSES**. Requests for repatriation may be submitted by:

1. Any one or more of the Indian Tribes or Native Hawaiian organizations identified in this notice.
2. Any lineal descendant, Indian Tribe, or Native Hawaiian organization not identified in this notice who shows, by a preponderance of the evidence, that the requestor is a lineal descendant or a culturally affiliated Indian Tribe or Native Hawaiian organization.

Repatriation of the associated funerary objects in this notice to a requestor may occur on or after July 11, 2024. If competing requests for repatriation are received, the Mukwonago Community Library must determine the most appropriate requestor prior to repatriation. Requests for joint repatriation of the associated funerary objects are considered a single request and not competing requests. The Mukwonago Community Library is responsible for sending a copy of this notice to the Indian Tribes and Native Hawaiian organizations identified in this notice.

Authority: Native American Graves Protection and Repatriation Act, 25 U.S.C. 3003, and the implementing regulations, 43 CFR 10.10.

Dated: May 31, 2024.

BILLING CODE 4312-52-P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701-TA-728 and 731-TA-1697 (Preliminary)]

Vanillin From China; Institution of Antidumping and Countervailing Duty Investigations and Scheduling of Preliminary Phase Investigations

AGENCY: United States International Trade Commission.

ACTION: Notice.

SUMMARY: The Commission hereby gives notice of the institution of investigations

and commencement of preliminary phase antidumping and countervailing duty investigations Nos. 701-TA-728 and 731-TA-1697 (Preliminary) pursuant to the Tariff Act of 1930 ("the Act") to determine whether there is a reasonable indication that an industry in the United States is materially injured or threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports of vanillin from China, provided for in subheadings 2912.41.00 and 2912.42.00 of the Harmonized Tariff Schedule of the United States, that are alleged to be sold in the United States at less than fair value and alleged to be subsidized by the Government of China. Unless the Department of Commerce ("Commerce") extends the time for initiation, the Commission must reach a preliminary determination in antidumping and countervailing duty investigations in 45 days, or in this case by July 22, 2024. The Commission's views must be transmitted to Commerce within five business days thereafter, or by July 29, 2024.

DATES: June 5, 2024.

FOR FURTHER INFORMATION CONTACT:

Caitlyn Hendricks-Costello (202-205-2058), Office of Investigations, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202-205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000. General information concerning the Commission may also be obtained by accessing its internet server (<https://www.usitc.gov>). The public record for these investigations may be viewed on the Commission's electronic docket (EDIS) at <https://edis.usitc.gov>.

SUPPLEMENTARY INFORMATION:

Background.—These investigations are being instituted, pursuant to sections 703(a) and 733(a) of the Tariff Act of 1930 (19 U.S.C. 1671b(a) and 1673b(a)), in response to a petition filed on June 5, 2024, by Solvay USA LLC, Baton Rouge, Louisiana.

For further information concerning the conduct of these investigations and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A and B (19 CFR part 201), and part 207, subparts A and B (19 CFR part 207).

Participation in the investigations and public service list.—Persons (other than petitioners) wishing to participate in the

investigations as parties must file an entry of appearance with the Secretary to the Commission, as provided in §§ 201.11 and 207.10 of the Commission's rules, not later than seven days after publication of this notice in the **Federal Register**. Industrial users and (if the merchandise under investigation is sold at the retail level) representative consumer organizations have the right to appear as parties in Commission antidumping duty and countervailing duty investigations. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to these investigations upon the expiration of the period for filing entries of appearance.

Limited disclosure of business proprietary information (BPI) under an administrative protective order (APO) and BPI service list.—Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in these investigations available to authorized applicants representing interested parties (as defined in 19 U.S.C. 1677(9)) who are parties to the investigations under the APO issued in the investigations, provided that the application is made not later than seven days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Conference.—The Office of Investigations will hold a staff conference in connection with the preliminary phase of these investigations beginning at 9:30 a.m. on Wednesday, June 26, 2024. Requests to appear at the conference should be emailed to preliminaryconferences@usitc.gov (DO NOT FILE ON EDIS) on or before Monday, June 24, 2024. Please provide an email address for each conference participant in the email. Information on conference procedures, format, and participation, including guidance for requests to appear as a witness via videoconference, will be available on the Commission's Public Calendar (Calendar (USITC) | United States International Trade Commission). A nonparty who has testimony that may aid the Commission's deliberations may request permission to participate by submitting a short statement.

Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, <https://edis.usitc.gov>). No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice.

Written submissions.—As provided in §§ 201.8 and 207.15 of the Commission's rules, any person may submit to the Commission on or before 5:15 p.m. on July 1, 2024, a written brief containing information and arguments pertinent to the subject matter of the investigations. Parties shall file written testimony and supplementary material in connection with their presentation at the conference no later than noon on June 25, 2024. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules. The Commission's *Handbook on Filing Procedures*, available on the Commission's website at https://www.usitc.gov/documents/handbook_on_filing_procedures.pdf, elaborates upon the Commission's procedures with respect to filings.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigations must be served on all other parties to the investigations (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Certification.—Pursuant to § 207.3 of the Commission's rules, any person submitting information to the Commission in connection with these investigations must certify that the information is accurate and complete to the best of the submitter's knowledge. In making the certification, the submitter will acknowledge that any information that it submits to the Commission during these investigations may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of these or related investigations or reviews, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel, solely for cybersecurity purposes. All contract personnel will sign appropriate nondisclosure agreements.

Authority: These investigations are being conducted under authority of title VII of the Tariff Act of 1930; this notice is published pursuant to § 207.12 of the Commission's rules.

By order of the Commission.

Issued: June 5, 2024.

Lisa Barton,

Secretary to the Commission.

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–688 and 731–TA–1612–1613 and 1615–1617 (Final)]

Brass Rod From Brazil, India, Mexico, South Africa, and South Korea; Determinations

On the basis of the record¹ developed in the subject investigations, the United States International Trade Commission ("Commission") determines, pursuant to the Tariff Act of 1930 ("the Act"), that an industry in the United States is materially injured by reason of imports of brass rod from Brazil, India, Mexico, South Africa, and South Korea, provided for in subheadings 7407.21.15, 7407.21.30, 7407.21.70, and 7407.21.90 of the Harmonized Tariff Schedule of the United States, that have been found by the U.S. Department of Commerce ("Commerce") to be sold in the United States at less than fair value ("LTFV"), and imports of the subject merchandise from South Korea that have been found by Commerce to be subsidized by the government of South Korea.^{2,3}

Background

The Commission instituted these investigations effective April 27, 2023, following receipt of petitions filed with the Commission and Commerce by American Brass Rod Fair Trade Coalition, Washington, District of Columbia; Mueller Brass Co., Port Huron, Michigan; and Wieland Chase LLC, Montpelier, Ohio. The Commission scheduled the final phase of the investigations following notification of a preliminary determination by Commerce that imports of brass rod from India were subsidized within the meaning of section 703(b) of the Act (19 U.S.C. 1671b(b)). Notice of the scheduling of the final phase of the Commission's investigations and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the

¹ The record is defined in § 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

² 89 FR 29290, 89 FR 29303, 89 FR 29300, 89 FR 29305, 89 FR 29292, 89 FR 29298, and 89 FR 29290, April 22, 2024.

³ Commissioner David S. Johanson dissenting.

notice in the **Federal Register** of October 5, 2023 (88 FR 6922). The Commission conducted its hearing on December 12, 2023. All persons who requested the opportunity were permitted to participate.

The investigation schedules became staggered when Commerce did not align its countervailing duty investigation with its antidumping duty investigation regarding India, and reached an earlier final countervailing duty determination. On February 1, 2024, the Commission issued a final affirmative determination in its countervailing duty investigation of brass rod from India (89 FR 8440, February 7, 2024). Following notification of final determinations by Commerce that imports of brass rod from Brazil, India, Mexico, South Africa, and South Korea were being sold at LTFV within the meaning of section 735(a) of the Act (19 U.S.C. 1673d(a)) and imports of brass rod from South Korea were being subsidized by the government of South Korea within the meaning of section 705(a) of the Act (19 U.S.C. 1671d(a)), notice of the supplemental scheduling of the final phase of the Commission's antidumping duty investigations regarding brass rod from Brazil, India, Mexico, South Africa, and South Korea and countervailing duty investigation regarding brass rod from South Korea was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of May 1, 2024 (89 FR 35236).

The Commission made these determinations pursuant to § 705(b) and § 735(b) of the Act (19 U.S.C. 1671d(b) and 19 U.S.C. 1673d(b)). It completed and filed its determinations in these investigations on June 5, 2024. The views of the Commission are contained in USITC Publication 5513 (June 2024), entitled *Brass Rod from Brazil, India, Mexico, South Africa, and South Korea: Investigation Nos. 701–TA–688 and 731–TA–1612–1613 and 1615–1617 (Final)*.

By order of the Commission.

Issued: June 5, 2024.

BILLING CODE 7020–02–P

DEPARTMENT OF JUSTICE

Antitrust Division

State of Ohio et al. v. National Collegiate Athletics Association; Proposed Final Judgment and Competitive Impact Statement

Notice is hereby given pursuant to the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h), that a proposed Final Judgment, Stipulation, and Competitive Impact Statement have been filed with the United States District Court for the Northern District of West Virginia in *State of Ohio et al. v. National Collegiate Athletics Association*, Civil Action No. 1:23–cv–100. On January 18, 2024, the United States, along with ten states and the District of Columbia, filed an Amended Complaint alleging that the NCAA's Division I rule requiring student athletes who transfer between institutions to complete a year in residence before being eligible to compete in intercollegiate contests unreasonably restrained trade in violation of section 1 of the Sherman Act, 15 U.S.C. 1. The proposed Final Judgment, filed on May 30, 2024, requires the NCAA to refrain from enforcing the offending rules and to restore eligibility to certain affected student athletes.

Copies of the Amended Complaint, proposed Final Judgment, and Competitive Impact Statement are available for inspection on the Antitrust Division's website at <http://www.justice.gov/atr> and at the Office of the Clerk of the United States District Court for the Northern District of West Virginia. Copies of these materials may be obtained from the Antitrust Division upon request and payment of the copying fee set by Department of Justice regulations.

Public comment is invited within 60 days of the date of this notice. Such comments, including the name of the submitter, and responses thereto, will be posted on the Antitrust Division's website, filed with the Court, and, under certain circumstances, published in the **Federal Register**. Comments should be submitted in English and directed to Yvette Tarlov, Chief, Media, Entertainment & Communications, Antitrust Division, Department of Justice, 450 Fifth Street NW, Suite 7000,

Washington, DC 20530 (email address: Yvette.Tarlov@usdoj.gov).

Suzanne Morris,

Deputy Director, Civil Enforcement Operations, Antitrust Division.

National Collegiate Athletic Association, 700 W Washington Street, P.O. Box 6222, Indianapolis, IN 46206–6222, Defendant.

Bailey,
Case No: 1:23–cv–00100
Judge Bailey

Amended Complaint for Injunctive Relief

1. The State of Ohio, Commonwealth of Virginia, District of Columbia, and States of Colorado, Illinois, Minnesota, Mississippi, New York, North Carolina, Tennessee, and West Virginia (“Plaintiff States”) and the United States of America bring this action to challenge Bylaw 14.5.5.1 (“Transfer Eligibility Rule”) of Defendant, the National Collegiate Athletic Association (“NCAA”). This bylaw imposes a one-year delay in the eligibility of certain college athletes transferring between NCAA member institutions and unjustifiably restrains the ability of these college athletes to engage in the market for their labor as NCAA Division I college athletes. This action seeks declaratory and injunctive relief against Defendant for a violation of section 1 of the Sherman Act, 15 U.S.C. 1.

Introduction

2. NCAA member institutions and their college athletes engage in intense competition on and off the field. The contests that take place on fields and courts across the nation are the most visible. But off the field, schools compete to recruit and retain talented

college athletes, and college athletes compete to market their labor to the schools of their choice.

3. In the time since the NCAA's founding in 1906, the scope and subject matter of its rules governing intercollegiate sports have expanded significantly. It has not only adopted rules to ensure the actual contests on the field are fair and safe, but it has also created rules that control off-the-field competition among its members and college athletes. Although some of these rules may be necessary to administer college sports, rules that unreasonably restrict competition between competitors, with no overriding procompetitive benefit, run headlong into this nation's antitrust laws which are premised on the belief that market forces provide the best outcomes.

4. One such NCAA rule is the Transfer Eligibility Rule, which restricts the eligibility of college athletes who transfer between Division I schools. The NCAA claims that this Rule promotes academic well-being of college athletes and preserves its amateurism model. But the connection between the Rule and academic well-being or athletic amateurism is tenuous at best and is outweighed by the harm it does to college athletes and consumers of college athletics. In the language of antitrust law, the Transfer Eligibility Rule is a no-poach agreement between horizontal competitor member schools that serves to allocate the market for the labor of NCAA Division I college athletes. This agreement plainly violates the Sherman Act. The fact that it was created under the auspices of the NCAA does not shield it from antitrust scrutiny. In contrast to college athletes, students with academic or music scholarships can freely transfer institutions without facing similar restraints on their ability to practice their craft. Likewise, coaches and administrators face no comparable barriers.

5. The Transfer Eligibility Rule requires a year of academic residency before a transferring Division I college athlete is eligible to participate in NCAA athletic competition. Underscoring its anticompetitive nature, the rule is not universally applied. A college athlete's first transfer is excepted from this process, and there is a discretionary waiver process. But the Rule remains the default for Division I college athletes who transfer a second time.

6. For NCAA college athletes, a one-year waiting period for eligibility can be devastating. This amounts to 20% of the total time allotted by NCAA regulations for the completion of the college

athlete's total seasons of eligibility. Furthermore, only by competing on the field or court can the college athlete receive the full benefits of participation in Division I NCAA athletics.

7. The Transfer Eligibility Rule artificially deters players and teams from achieving optimal matches by forcing college athletes to weigh the one-year ineligibility period against the benefits of moving to a better matched school. It is ironic that this rule, stylized as promoting the welfare of college athletes, strips them of the agency and opportunity to optimize their own welfare as they see fit.

8. Though the NCAA is an association of member institutions that compete against each other to attract revenues, fans, and college athletes, it has enacted and enforced anticompetitive rules and policies that act as an unlawful barrier on the ability of certain college athletes and universities to compete against each other.

9. Plaintiff States and the United States bring this action to put a stop to Defendant's unjustified overreach into the lives and careers of college athletes, to prevent the unjustified anticompetitive restriction on universities who seek to compete for college athletes, and to restore freedom of economic opportunity.

Jurisdiction and Venue

10. This Court has jurisdiction over this action under section 1 of the Sherman Act, 15 U.S.C. 1, section 26 of the Clayton Act, 15 U.S.C. 26, and under 28 U.S.C. 1331 and 1337.

11. This Court may exercise personal jurisdiction over Defendant because Defendant currently transacts business in the Clarksburg Division of the Northern District of West Virginia. Defendant and its member institutions conduct athletic competitions, ticket and merchandise sales, television agreements, and other revenue-generating activities in the Northern District of West Virginia.

12. Venue is proper in this district under section 12 of the Clayton Act, 15 U.S.C. 22, and under 28 U.S.C. 1391(b)(2).

The Parties

13. The Attorneys General of the Plaintiff States bring this action in their quasi-sovereign capacities as the chief law enforcement officers of their respective states.

14. Plaintiff States have quasi-sovereign interests in protecting their citizens, including but not limited to college athletes and the consumers of college athletics, from economic harm and in ensuring that their economies

and the labor markets therein are not suppressed by unjustified restraints of trade.

15. The Plaintiff States are granted authority to bring actions for injunctive relief under federal antitrust law pursuant to 15 U.S.C. 26.

16. The United States brings this action pursuant to section 4 of the Sherman Act, 15 U.S.C. 4, to prevent and restrain NCAA from violating section 1 of the Sherman Act, 15 U.S.C. 1.

17. Defendant NCAA is an unincorporated association that acts as the governing body of college sports. The NCAA includes more than 1,000 member colleges and universities throughout the United States, including institutions in each of the Plaintiff States. These member institutions are organized into three divisions, and Division I includes over 350 schools. Through the NCAA Constitution and Bylaws, the NCAA and its members have adopted regulations governing all aspects of college sports, including specifically, the Bylaw at issue in this case, Division I Bylaw 14.5.5.1. The NCAA Constitution and Bylaws were adopted by votes of the member institutions and various NCAA councils, and they may be amended by votes of the member institutions or NCAA councils. Thus, the rules set forth in the NCAA Constitution and Bylaws constitute horizontal agreements between the NCAA and its member institutions and among NCAA member institutions.

18. As a practical matter, an academic institution that wishes to participate in any meaningful way in the highest and most popular level of collegiate athletics must maintain membership in the NCAA and abide by the Division I rules and regulations promulgated by the NCAA and its members. Failure to abide by these rules and regulations risks subjecting sports programs at the academic institution to punitive measures from the NCAA that include reduced athletic-scholarships, suspensions, prohibition on post-season eligibility, vacating previously-earned wins, monetary fines, and the so-called "death penalty."

19. The NCAA and its member institutions control the highest and most popular level of collegiate athletics. Therefore, any individual who wishes to provide athletic services in exchange for the payment of partial or full tuition for an undergraduate academic education and wishes to derive the substantial benefits from competing at the highest level of collegiate athletics must by necessity attend an NCAA Division I member institution.

20. There are zero practical alternatives that can provide the unique combination of attributes offered by Division I NCAA athletic schools: (i) the ability to exchange athletics services for the payment of the partial or full cost of an education plus room and board, (ii) high quality academic educational services, (iii) top-of-the-line training facilities, (iv) high quality coaches that will best be able to launch players to professional careers, (v) national publicity through national championships and nationwide broadcasting contracts, (vi) opportunities to profit from name, image, and likeness (“NIL”) agreements, and (vii) competition at the highest level of collegiate athletics.

Background

The Transfer Eligibility Rule, NCAA Bylaw 14.5.5.1

21. The NCAA and its member institutions are organized under a constitution and divided into three divisions. NCAA, Division I 2023–24 Manual, 3 (accessed Nov. 2, 2023), <https://web3.ncaa.org/lstdbi/reports/getReport/90008>, included in this filing as Exhibit A. Each of the NCAA’s three divisions has the authority to determine its own governing structure and membership. *Id.* at 5. The NCAA is overseen by a Board of Governors which appoints the President to administer the Association and “implement directions of the Board of Governors and divisional leadership bodies.” *Id.* at 4. Each member institution is required to “hold itself accountable to support and comply with the rules and principles approved by the membership.” *Id.* at 9.

22. Each NCAA division maintains its own legislative process for adopting bylaws, with some bylaws applying to only one division and others applying across divisions. *Id.* at 14. Proposed bylaw changes that move through the divisional legislative process within an “area of autonomy” as identified by the bylaws are adopted by certain conferences and their member institutions. *Id.* at 15. Federated legislation—changes that are applicable only to the adopting division—can be made by the Division I Council. *Id.* at 17. The Division I Council is comprised of representatives from member institutions and conferences. *Id.* at 396–397. Member institutions can propose amendments to the bylaws for the Division I Council’s review and can comment on proposed amendments under consideration. *Id.* at 17–18.

23. NCAA Bylaw 13.1.1.3.1 provides that for undergraduate college athletes that wish to transfer to a new member

institution, the college athlete must provide notice to the current institution during a specified period for the college athlete’s given sport. *Id.* at 75–76. After notification of intent to transfer, the current institution must “enter the [college athlete’s] information into the national transfer database,” a process known as the NCAA Transfer Portal. *Id.* at 75. According to a recent NCAA statement, 21,685 college athletes had entered the transfer portal in 2023 as of September 12. *DI Board Statement Regarding Transfer Waivers*, NCAA (Sept. 12, 2023), available at: <https://www.ncaa.org/news/2023/9/12/media-center-di-board-statement-regarding-transfer-waivers.aspx>.

24. NCAA Bylaw 14.5.5.1, herein referred to as the Transfer Eligibility Rule, states, “A transfer student from a four-year institution shall not be eligible for intercollegiate competition at a member institution until the student has fulfilled a residence requirement of one full academic year (two full semesters or three full quarters) at the certifying institution.” Exhibit A at 165. This rule does not prevent a college athlete from practicing or participating in other team activities during this one-year waiting period, only from competing on gameday. *Id.* One exception to this rule found in NCAA Bylaw 14.5.5.2.10 exempts college athletes transferring for the first time from the Transfer Eligibility Rule. *Id.* at 167. NCAA Bylaw 12.8.1 provides that college athletes have five calendar years to complete their four seasons of eligibility in any one sport. *Id.* at 55.

25. The NCAA Bylaws contain what is commonly known as the “Rule of Restitution,” which provides:

If a student-athlete who is ineligible under the terms of the bylaws or other legislation of the Association is permitted to participate in intercollegiate competition contrary to such NCAA legislation but in accordance with the terms of a court restraining order or injunction operative against the institution attended by such student-athlete or against the Association, or both, and said injunction is voluntarily vacated, stayed or reversed or it is finally determined by the courts that injunctive relief is not or was not justified, the Board of Directors may take any one or more of the following actions against such institution in the interest of restitution and fairness to competing institutions:

(a) Require that individual records and performances achieved during participation by such ineligible student-athlete shall be vacated or stricken;

(b) Require that team records and performances achieved during participation by such ineligible student-athlete shall be vacated or stricken;

(c) Require that team victories achieved during participation by such ineligible student-athlete shall be abrogated and the

games or events forfeited to the opposing institutions;

(d) Require that individual awards earned during participation by such ineligible student-athlete shall be returned to the Association, the sponsor or the competing institution supplying same;

(e) Require that team awards earned during participation by such ineligible student-athlete shall be returned to the Association, the sponsor or the competing institution supplying same;

(f) Determine that the institution is ineligible for one or more NCAA championships in the sports and in the seasons in which such ineligible student-athlete participated;

(g) Determine that the institution is ineligible for invitational and postseason meets and tournaments in the sports and in the seasons in which such ineligible student-athlete participated;

(h) Require that the institution shall remit to the NCAA the institution’s share of television receipts (other than the portion shared with other conference members) for appearing on any live television series or program if such ineligible student-athlete participates in a contest selected for such telecast, or if the Board of Directors concludes that the institution would not have been selected for such telecast but for the participation of such ineligible student-athlete during the season of the telecast; any such funds thus remitted shall be devoted to the NCAA postgraduate scholarship program; and

(i) Require that the institution that has been represented in an NCAA championship by such a student-athlete shall be assessed a financial penalty as determined by the Committee on Infractions.

Id. at 66–67. This rule allows the NCAA to punish college athletes and their member universities for actions taken in accordance with court orders if those orders are later revoked. *Id.*

26. Because of the commercial nature of the transactions between college athletes and NCAA member institutions and the effect these transactions have on college athletes and the consumers of college athletics, the NCAA’s enforcement of the Transfer Eligibility Rule falls within the purview of the Sherman Act. The Transfer Eligibility Rule’s anticompetitive effects within the sport-specific markets for the labor of NCAA Division I college athletes far outweigh the pretextual procompetitive benefits, and the Rule is an unreasonable restraint of trade that cannot survive rule of reason analysis.

Relevant Markets

27. Within NCAA Division I athletics, the Transfer Eligibility Rule affects two broad categories of labor markets: (1) athletic services in men’s and women’s Division I basketball and football bowl subdivision (“FBS”) football, wherein each college athlete participates in his or her sport-specific market, and (2)

athletic services in all other men's and women's Division I sports, wherein each athlete participates in his or her sport-specific market. Within these markets, college athletes compete for spots on NCAA Division I member institution athletic teams, while the NCAA member institutions simultaneously compete to secure elite-level college athletes. In so doing, the NCAA member institutions secure the labor of these college athletes through in-kind benefits—specifically, scholarships, academic programs, access to modern training facilities, and knowledge and training from premier coaching staffs.

28. The relevant geographic market is the United States. The NCAA and its member institutions are located across the country, and they engage in on-field competition and competition in the relevant labor markets throughout the United States.

29. Participation in NCAA Division I athletic events on gameday significant benefits to a college athlete. College athletes can showcase their skill in front of national audiences, gain exposure to professional team scouts, and compete against other college athletes at the highest level of collegiate athletics. In addition, the recent advent of NIL agreements presents college athletes the opportunity to benefit financially—sometimes in the millions of dollars—while playing college sports.

30. As mentioned above, there are no practical alternatives to the Division I level of NCAA athletics for college athletes who seek to market and showcase their elite-level skills. The benefits that come with participation in NCAA Division I athletics include the ability to exchange athletics services for (i) the payment of the partial or full cost of an education plus room and board, (ii) high quality academic educational services, (iii) top-of-the-line training facilities, (iv) high quality coaches that will best be able to launch players to professional careers, (v) national publicity through national championships and nationwide broadcasting contracts, (vi) opportunities to profit from NIL agreements, and (vii) competition at the highest level of collegiate athletics.

31. Within these relevant markets, the NCAA maintains exclusive power, dictating the rules and regulations for participation in Division I athletics through the Division I Council and NCAA member institutions.

32. Although the NCAA is a non-profit organization, the transactions that member institutions make with college athletes yield significant financial revenue for the member institutions and have significant effects on the future

earning potential of those college athletes. Namely, these transactions include partial or full scholarships in exchange for the college athlete's services. The college athletes, in return, receive the means to develop, refine, and showcase their skills—essential inputs to their future earning potential. NCAA athletic events in which these college athletes compete are marketed to consumers who view both in-person and via broadcasts of these sporting events, yielding significant revenue to the NCAA's member institutions and conferences. Accordingly, the transactions between these member institutions and the college athletes are inherently commercial in nature and fall under the purview of the Sherman Act.

Anticompetitive Effects

33. The NCAA enacts and enforces rules that it claims promote the well-being of college athletes and preserve the amateurism aspect of Division I college sports.

34. The NCAA and its member institutions adopt these rules through the member institutions and the Division I Council, making these rules equivalent to horizontal agreements among the NCAA and its member institutions who compete against one another for the labor of Division I college athletes.

35. Despite what the NCAA may claim, the Transfer Eligibility Rule restrains college athletes from freely moving among member institutions to improve their economic opportunity, personal growth, and well-being, a freedom afforded to other students at NCAA member institutions but not to college athletes. This restriction violates the Sherman Act because it has direct anticompetitive effects that harm college athletes and consumers of college athletics.

The Transfer Eligibility Rule's Effects on College Athletes

36. College athletes compete within the relevant markets of their respective sports for scholarships at NCAA Division I member institutions. Within these markets, college athletes are harmed by the Transfer Eligibility Rule. Effectively, the Transfer Eligibility Rule operates as a no-poach, market allocation agreement among the NCAA and its member institutions for the labor of NCAA Division I college athletes. The Transfer Eligibility Rule harms college athletes in three main areas of the relevant markets: (1) when college athletes are making the decision on whether to transfer, (2) when college athletes decide to transfer and are searching for a new institution to attend,

and (3) when college athletes are denied eligibility to compete for one year after transferring to a new institution.

37. First, the Transfer Eligibility Rule harms college athletes by discouraging them from transferring to a different institution that may benefit their academic, mental, and athletic well-being. Because of the Transfer Eligibility Rule, college athletes are denied the freedom of choice among Division I schools once they have competed on behalf of a given school. They are prevented from competing at a school to which they might choose to transfer for an entire year, denying them the benefits of competing in NCAA athletic events. This equates to a 20% loss of the time given to them to complete their seasons of eligibility and compete in the highest level of collegiate athletics.

38. With the threat of a year of ineligibility looming over transfer decisions, college athletes may hesitate to transfer even when a different institution may offer a situation that is better for the college athlete than the situation at the current institution. College athletes, just like non-athlete college students, may desire to transfer schools for any number of reasons. Distance from family, struggles with mental health, or better academic or athletic opportunities elsewhere are just a few of the many reasons college athletes may seek a transfer. The Transfer Eligibility Rule creates friction in the relevant markets by deterring college athletes from exploring better options within their sport-specific market.

39. Second, the Transfer Eligibility Rule affects college athletes in the relevant markets by artificially disadvantaging second-time transfers. Just like college athletes compete within the relevant markets for scholarship positions on Division I athletic teams, NCAA member institutions compete against each other to attract and retain elite college athletes to compete on the institutions' athletic teams. Second-time transferring college athletes are not able to apply for a waiver of the Transfer Eligibility Rule until after they have been accepted and enrolled at their new institution. Because the waiver process is discretionary and has been inconsistently applied, member institutions that accept a second-time transfer risk that the college athlete might not be eligible to compete for an entire academic year. This distorts the market by artificially deflating the value of a second-time transfer.

40. In some instances, college athletes may have no choice but to transfer or risk losing a scholarship at their current institution. Head coaches can

essentially force a player into the transfer portal by threatening to cut a player and revoke their scholarship, making the choice to transfer no real choice at all. In such situations, college athletes that have already transferred once, making them unqualified for the first-time transfer exception, must face the consequences of the Transfer Eligibility Rule despite having no control over the situation at their current institution. Such situations force college athletes into a transfer market where, compared to transfers who qualify for the first-time exception, they face an artificial competitive disadvantage because of the Transfer Eligibility Rule.

41. Third, the Transfer Eligibility Rule harms college athletes transferring a second time by denying them the opportunity to compete in NCAA Division I athletic events for an entire academic year after transferring to a new institution. NCAA Division I sports are the pinnacle of college athletics in the United States. Competing at this high level of athletics comes with immeasurable opportunities for personal, professional, and economic growth. For athletes seeking to continue competing professionally after college, NCAA Division I sports provide a platform to showcase athletic skills in front of national audiences and professional scouts. The Transfer Eligibility Rule unjustifiably denies these benefits to affected student athletes for an entire academic year.

42. The NCAA has often noted the importance of its college athletes' opportunities to compete at the highest level. See, e.g., *The Value of College Sports*, NCAA (last visited Nov. 10, 2023), <https://www.ncaa.org/sports/2014/1/3/the-value-of-college-sports.aspx> (where the NCAA expressly notes that the value of college sports to its college athletes includes unparalleled exposure and experiences through "the opportunity to travel across the country and around the world for regular-season contests, NCAA championships and foreign tours," which "can open doors for the few who will compete professionally and for the majority who will go pro in something other than sports.").

43. While college athletes subject to the Transfer Eligibility Rule's restrictions are allowed to practice and participate in other team activities, they are expressly restricted from competing in their sport. Practicing with one's teammates and competing on gameday are not the same thing. Competition is fundamentally different. Even the NCAA's public statements support this point:

NCAA tournaments are where dreams are fulfilled, lifelong memories are made and communities come together under a shared love for the game. Seeing college athletes, both in victory and defeat, competing with passion and conviction wins our hearts long after the clock hits zero. Simply put, championships represent the very best of college athletics.

This deserves to be felt at every juncture. Transformation Committee members evaluated differences that exist across sports to find ways to improve equity and bring these experiences closer together. *We recognized that championships are the pinnacle of a [college athlete's] Division I experience and sought to grant greater access to championships for well-qualified teams while honoring the existing structure for entry.* For travel to championships, our goal was to create new, elevated recommendations so teams and college athletes would have a comparable experience when traveling, regardless of sport or gender.

NCAA, *NCAA Division I Transformation Committee Final Report*, 14 (Jan. 3, 2023), https://ncaaorg.s3.amazonaws.com/committees/d1/transformation/Jan2023D1TC_FinalReport.pdf (where Lynda Tealer, a member of the Division I Transformation Committee and executive associate athletics director at the University of Florida, reemphasized the importance of competition at the highest level) (emphasis added).

44. Moreover, college athletes' opportunities to show the world the fruits of their labor occur on fields, courts, and rinks where the NCAA has unlawfully restricted their participation. Forced ineligibility and missing even a single game can negatively impact a college athlete's future earning potential. National television broadcasts provide significant exposure for college athletes. One game can take a college athlete from a local fan favorite to a household name. When even the slightest differences among players can affect positioning and earning potential in professional league drafts, every game is vital for college athletes and can significantly impact their future earning potential.

45. Apart from future earning potential, the Transfer Eligibility Rule impairs college athletes' ability to take advantage of current and future opportunities derived from their name, image, and likeness. NIL agreements may vary depending on the school at which an athlete competes (and the NIL-related resources a school might provide), the degree of exposure that the athlete might expect from playing sports at that school, the relationships a given school might have with third parties interested in entering NIL agreements (through collectives or otherwise), and ties to established media markets in which NIL agreements may be more

prevalent, among other factors. By limiting eligibility for affected college athletes, the Transfer Eligibility Rule prevents these college athletes from maximizing NIL valuations, which can run into the millions of dollars. The Transfer Eligibility Rule's restrictions for an entire academic year can have immeasurable and lasting economic effects on college athletes.

46. In addition to the potential economic effects on these college athletes and the dramatic impact these restraints have on the college athletes' overall collegiate athletics experience, the NCAA's denial of college athletes' ability to compete immediately through enforcement of the Transfer Eligibility Rule has caused negative impacts on the mental health and overall well-being of some college athletes.

47. There are numerous college athletes whose academic and athletic aspirations are being unlawfully restrained by the Transfer Eligibility Rule; the NCAA, media, and consumers of college athletics are well aware of this issue as evidenced by recently publicized examples of college athletes harmed by the Transfer Eligibility Rule.

RaeQuan Battle

48. RaeQuan Battle is a member of the West Virginia University ("WVU") Men's Basketball Team. Before joining WVU, he played basketball at the University of Washington for the 2019–20 and 2020–21 basketball seasons. Thereafter, he transferred to Montana State University ("MSU") and played there during the 2021–22 and 2022–23 basketball seasons.

49. Because Mr. Battle had transferred on a prior occasion, his ability to transfer to WVU from MSU for the 2023–24 basketball season was restricted by the Transfer Eligibility Rule. Thus, to be eligible to play immediately, he needed to have a waiver approved by the NCAA. WVU applied for him to receive a waiver for immediate eligibility, as he and WVU believed that his circumstances fit within the NCAA's criteria for waiver requests.

50. However, the NCAA recently denied his appeal for immediate eligibility at WVU. Mr. Battle is completely devastated by the NCAA's decision to deny him eligibility for the 2023–24 basketball season. Losing his coach at MSU, which prompted his decision to transfer to WVU, is a situation that he had no control over and severely affected his mental health. The denial of competition only exacerbates this impact to his mental health and overall well-being.

51. WVU is scheduled to play 31 regular season games during the 2023–2024 season. Mr. Battle is currently on the bench and has been unable to play in six competitive games thus far this season because of the Transfer Eligibility Rule. If he continues to be kept out of competition through December, then that would mean missing seven additional games (a total of 13 competitive games, which is almost half of the regular season schedule). Once these games have been played, they are gone forever. They will not be replayed in the future, and opportunities for development, exposure, and joy from participating in these contests are lost for Mr. Battle. Every passing game missed further irreparably harms Mr. Battle.

52. Not participating in competitive games significantly impacts Mr. Battle's ability to pursue NIL compensation and for his chances to pursue a career in professional basketball.

Jarrett Hensley

53. Jarrett Hensley is a member of the Southern Illinois University ("SIU") Men's Basketball Team. Before joining SIU, Mr. Hensley played at the University of North Carolina Greensboro ("UNCG") until deciding to transfer to the University of Cincinnati ("UC"). Because the coach who recruited him to UNCG chose to leave UNCG for UC, Mr. Hensley made the decision to follow his coach to UC. While this was a difficult decision, Mr. Hensley's coach was the only real connection he had to UNCG, so he and his family felt that following his coach to UC was the right decision.

54. The adjustment to basketball and school at UC was extremely difficult for Mr. Hensley, and he began to feel very depressed and anxious. After UC made the move to the Big 12 Conference, the level of competition and the amount of pressure Mr. Hensley put on himself only increased, as the pressure to win increased tremendously. As the coaches and staff started putting more emphasis on outcomes instead of focusing on his collegiate athlete experience, UC staff encouraged Mr. Hensley to enter the transfer portal, and he felt that it was necessary to transfer somewhere closer to home and to family.

55. Mr. Hensley feels like SIU coaches promote a family environment that makes him feel comfortable. As he knew he could make an impact and play on the SIU team, SIU was the right place for him as a student and athlete.

56. Mr. Hensley worked with the UC compliance staff in preparation to file for a waiver of the Transfer Eligibility Rule, who assured him that he would be immediately eligible upon transferring. As such, when Mr. Hensley made the decision to enter the transfer portal, he was convinced that he would be able to play immediately at his new school.

57. However, on the first day of school, SIU's coach had a meeting with Mr. Hensley to let him know that his waiver was denied. He was shocked, upset, and emotional. Being new to the school and having basketball taken from him led to stress and anxiety. There would be many nights that he didn't sleep at all. It made him question if he even wanted to continue playing, and he even had conversations with his coaches about potentially quitting the sport.

58. Mr. Hensley ultimately decided to stay at SIU and see the waiver the process through. The process and the decision looms over him every day. He struggles knowing that his season is in the hands of someone else and that he cannot do anything about it.

59. If unable to compete for the 2023–2024 season, Mr. Hensley will miss 31 games plus any postseason contests. Many of these games will be televised. On December 5, 2023, Mr. Hensley was forced to sit out the first SIU home basketball game against a Power 5 conference opponent since 2007. Mr. Hensley knows he could have helped his team win that nationally televised game, but because of the transfer Eligibility Rule, he did not get the opportunity to compete in that contest. He also missed out on the media coverage that could have helped him with potential NIL opportunities.

Noah Fenske

60. Noah Fenske is currently a member of the football team at SIU. He started his collegiate career at the University of Iowa on a football scholarship.

61. Mr. Fenske left Iowa due to mental health concerns and decided to transfer

to the University of Colorado. While at Colorado, he dealt with mental health issues and sought counseling, as the environment at Colorado was difficult and the school transitioned through more than one coaching staff while he was on the team.

62. The new coach at Colorado made it clear that current players were not going to be welcomed back after spring practices, and as such, Mr. Fenske had no choice but to look to transfer again in order to keep his scholarship.

63. Mr. Fenske was advised that if he transferred to a lower-level school, he would be eligible, even if he was transferring for a second time. Despite receiving offers to play from Power 5 conference teams, he entered the transfer portal hoping to find a place like SIU where he could play football and finish his degree. He would not have transferred if he had not been pushed into the decision and told that he would be able to play immediately. He wanted to finish his degree at Colorado and was only one year away, but when he was told that he would not have a scholarship, he had no choice but to find another school.

64. After arriving at SIU under the assumption he would be immediately eligible, Mr. Fenske was subsequently made aware that there had been a rule change, and that a waiver would have to be filed with the NCAA for immediate eligibility based on mental health struggles. To apply for this waiver, Mr. Fenske was forced to relive and relate to the NCAA the difficult circumstances that led to his mental health struggles.

65. Mr. Fenske had many coaches tell him he was good enough to enter the draft after the season, but as Mr. Fenske did not get to compete, no one had the opportunity to assess his talent. In total, he missed 11 regular season and two FCS Playoff games during the Fall 2023 season. Since his team was eliminated from the playoffs, Mr. Fenske wonders every day if he could have made a difference in that loss. Instead, the forced ineligibility from the Transfer Eligibility Rule negatively impacted his ability to play professional football, his ability to earn NIL money, and his mental health.

66. The NCAA's willingness to apply the Transfer Eligibility Rule despite the negative mental health consequences suffered by college athletes because of the Rule flies in the face of the lip-service that the NCAA has proudly given to its commitment to understanding and addressing college athletes' mental health concerns. See, e.g., Michelle Brutlag Hosick, *NCAA President Charlie Baker Lays Out Agenda for Growth, Transformation with Focus on Serving Student-Athletes*, NCAA (Aug. 2, 2023, 11:00 a.m.), <https://www.ncaa.org/news/2023/8/2/media-center-ncaa-lays-out-agenda-for-growth-transformation-with-focus-on-serving-student-athletes.aspx> (where the NCAA's national office, just months ago, reaffirmed its guidance to "[p]rovide a world-class athletics and academic experience for [college athletes] that fosters lifelong well-being."); see also Charlie Henry, *Social Series Highlights Importance of Mental Health Resources and Education*, NCAA (May 5, 2022, 11:26 a.m.), <https://www.ncaa.org/news/2022/5/25/media-center-social-series-highlights-importance-of-mental-health-resources-and-education.aspx#:~:text=The%20NCAA%20has%20developed%20several,mental%20health%20needs%20of%20their> ("NCAA has developed several educational resources, including 'Mental Health Best Practices: Understanding and Supporting Student-Athlete Mental Wellness,' [a] resource . . . designed with input from a diverse group of member and industry voices to help schools support and address the mental health needs of their [college athletes]."); see also Sports Science Institute, *Mental Health*, NCAA, <https://www.ncaa.org/sports/2021/2/10/sport-science-institute-mental-health.aspx> (last visited Nov. 10, 2023) (where the NCAA discusses educational resources, best practices for campuses, data and research, and summits and task forces, which all seek to address the importance of safeguarding college athletes' mental health and where the NCAA states that "[m]ental health [is a part of athlete health and] exists on a continuum, with resilience and thriving on one end of the spectrum and mental health disorders that disrupt a [college athlete's] functioning and performance at the other.").

67. The Transfer Eligibility Rule harms college athletes at every point in the transfer process and for the entire academic year where the Rule forces affected college athletes to watch from the sidelines and forego the benefits of competing in NCAA athletic events. The Rule's chilling effect on transfer

decisions can discourage college athletes from seeking the environment that is most beneficial to their well-being, and the Rule can limit the choices a college athlete has when transferring by competitively disadvantaging them when seeking a new school. Beyond the transfer process itself, the Rule prevents affected college athletes from realizing the significant benefits that come from competing in NCAA athletic events that are available only through competing on gameday. Thus, the Transfer Eligibility Rule harms college athletes in the relevant markets.

The Transfer Eligibility Rule's Effects on Consumers

68. The Transfer Eligibility Rule has downstream effects for consumers who attend NCAA athletic events in-person and for consumers who watch the events on television or listen on the radio. When the Transfer Eligibility Rule prevents college athletes from competing at their new institution after transferring, the Rule can decrease fan interest in a team's season by making popular players ineligible for competition and decreasing a team's competitiveness on gameday.

69. Furthermore, the Transfer Eligibility Rule is a barrier to increased parity in college athletics that would create a better product for consumers. By discouraging transfers through the academic year in residence requirement, the Transfer Eligibility Rule benefits larger and historically successful sports programs by allowing them to retain talented players on their depth charts who may otherwise wish to transfer and may be better served by transferring to another institution. Similarly, programs outside of the traditional upper echelon of college athletics would benefit from an environment without the Transfer Eligibility Rule, as it would allow them to enroll such transferring college athletes and have them compete in their athletics program. This, in turn, would lead to more parity within college athletics. A more level playing field of talent among Division I institutions creates a more compelling product for consumers of college athletics, and the Transfer Eligibility Rule stifles this increase in parity. The Transfer Eligibility Rule harms consumers of college athletics by making teams less competitive while affected college athletes are ineligible for an entire academic year and by preventing increased parity in college athletics that would create a more compelling product for consumers.

The Rule of Restitution and Its Impact on College Athletes and NCAA Division I Institutions

70. The Rule of Restitution, NCAA Bylaw 12.11.4.2, in a nutshell, provides that, if a plaintiff obtains an injunction against the unlawful conduct of the NCAA, and a college athlete and his or her member institution conduct themselves in conformity with that injunction, the NCAA may impose draconian punishments on both the athlete and the institution if the injunction is "vacated, stayed or reversed or it is finally determined by the courts that injunctive relief is not or was not justified." Exhibit A at 66–67.

71. The breadth of the Rule of Restitution is staggering and goes well beyond final adjudication on the merits in the NCAA's favor. For example, a college athlete could obtain a preliminary injunction to play during his final year of eligibility and, once the season is over, not wish to incur the cost and effort of continuing to litigate and instead wish to voluntarily dismiss. Alternatively, a court could determine that the athlete's eligibility had ended and the case was thereby mooted, resulting in dismissal. In both instances, the NCAA could impose harsh penalties in retaliation against the college athlete and the athlete's school even though the only court to consider the issue had ruled in the college athlete's favor.

72. Knowing this, many universities will not permit college athletes who challenge NCAA rules in court to compete, even if a court issues a temporary restraining order or preliminary injunction finding that those rules are likely illegal. This, in turn, deters college athletes from challenging the NCAA's substantive eligibility rules, such as the Transfer Eligibility Rule.

73. The Rule of Restitution's purpose and effect is to deter challenges to the NCAA's anticompetitive rules by attempting to deprive courts of the ability to grant effective relief and depriving individual college athletes and member universities of the practical ability to rely on court orders in their favor. Thus, the Rule of Restitution is itself a means of preventing defection from the anticompetitive agreement by member schools and of weaponizing the delay inherent in the litigation process to deter college athletes from mounting challenges to the antitrust merits of the NCAA's rules.

74. For any relief granted by this Court during the pendency of this case or on the merits to be effective, this Court must enjoin the NCAA from enforcing the Rule of Restitution against

college athletes and NCAA member institutions in retaliation for compliance with orders from this Court. Absent relief enjoining the Rule of Restitution, schools still may not allow college athletes ineligible under the Transfer Eligibility Rule to play for fear of future retaliation by the NCAA.

75. Because of the Rule of Restitution, college athletes run the risk of severe personal punishment and the risk of subjecting their schools or teammates to the harsh sanctions of the Rule of Restitution simply by following the terms of a court order. The rule amounts to the NCAA effectively deciding for itself the rules of interim relief rather than the courts. This deprives college athletes of the practical ability to rely on a court's temporary or preliminary injunctive relief in their favor. The Rule of Restitution is also a means of enforcing cartel-style discipline among the NCAA's member institutions, preventing defection, and manipulating rules of mootness to discourage challenges to the rules. For injunctive relief from this court to be effective, that relief must enjoin Defendant from punishing college athletes and member institutions under the Rule of Restitution simply for doing what a court of law prescribed for them to do.

Lack of Procompetitive Justifications

76. With the anticompetitive effects of the Transfer Eligibility Rule in the relevant markets described above, the burden must shift to Defendant under the rule of reason to provide procompetitive justifications for the Transfer Eligibility Rule. Despite what the NCAA could offer as justifications for the Rule, these justifications are pretextual and cannot outweigh the anticompetitive effects of the rule. Furthermore, the purported goals for the Transfer Eligibility Rule can be accomplished through less restrictive alternatives that are already present in the NCAA's bylaws.

The Transfer Eligibility Rule's Purported Justifications are Pretextual

77. The NCAA claims that bylaws such as the Transfer Eligibility Rule help college athletes maintain their academic progress and avoid falling behind due to the logistics and change that come with transferring schools. In addition, one purported justification for rules like the Transfer Eligibility Rule is that it promotes the NCAA's goal of preserving athletic amateurism, allowing it to widen consumer choice

through a unique product of amateur sports distinct from professional sports. However, both the text and the actual impact of the Transfer Eligibility Rule make these justifications pretextual.

78. Despite the NCAA's goal of promoting college athletes' academic well-being, the Transfer Eligibility Rule does not accomplish this goal and does not give college athletes additional time in their schedules to acclimate to a new campus environment. The Rule prevents college athletes from competing in NCAA athletic events for one academic year following a transfer. However, the Rule does not prevent those college athletes from participating in practices or other team activities during this year of ineligibility. Sitting out an entire season of practices and team workouts is not an option for college athletes who want to maintain their standing on a team. Thus, even under the restrictions of the Transfer Eligibility Rule, college athletes have no additional time in their schedules for increased attention to academics compared to their teammates who are eligible for competition except for a few hours on gameday when affected college athletes are forced to watch from the sidelines. Moreover, the NCAA does not limit the eligibility of freshman college athletes, whose transition from high school to college is far more arduous than that of a college athlete transferring between schools. Therefore, the Transfer Eligibility Rule does not promote the academic well-being of college athletes.

79. Furthermore, the Transfer Eligibility Rule does not support the goal of maintaining athletic amateurism in the NCAA. The NCAA has claimed in previous cases that the amateur nature of college athletics makes it uniquely appealing to consumers, as it distinguishes NCAA athletics from professional sports leagues. However, as a matter of law, supposed benefits in the market for watching college athletics cannot counterbalance harms the distinct, sport-specific markets for college athlete labor. See *Deslandes v. McDonald's United States, LLC*, 81 F.4th 699, 703 (7th Cir. 2023). Even if this cross-market balancing was appropriate, the Transfer Eligibility Rule has nothing to do with college athletes maintaining amateur status.

80. NCAA Bylaw 12.1.2 requires that Division I college athletes maintain amateur status to be eligible for NCAA competition. Exhibit A at 37. This bylaw states:

An individual loses amateur status and thus shall not be eligible for intercollegiate competition in a particular sport if the individual:

- (a) Uses athletics skill (directly or indirectly) for pay in any form in that sport;
- (b) Accepts a promise of pay even if such pay is to be received following completion of intercollegiate athletics participation;
- (c) Signs a contract or commitment of any kind to play professional athletics, regardless of its legal enforceability or any consideration received, except as permitted in Bylaw 12.2.5.1;
- (d) Receives, directly or indirectly, a salary, reimbursement of expenses or any other form of financial assistance from a professional sports organization based on athletics skill or participation, except as permitted by NCAA rules and regulations;
- (e) Competes on any professional athletics team per Bylaw 12.02.12, even if no pay or remuneration for expenses was received, except as permitted in Bylaw 12.2.3.2.1;
- (f) After initial full-time collegiate enrollment, enters into a professional draft (see Bylaw 12.2.4); or
- (g) Enters into an agreement with an agent.

Id.

81. By the definition the NCAA uses in its own bylaws, the Transfer Eligibility Rule does not affect anything related to a college athlete's amateur status. Allowing college athletes to practice all season with their teams but preventing them from competing on gameday does nothing to a college athlete's amateur status. The absence of the Transfer Eligibility Rule would do nothing to affect the amateur status of transferring college athletes. The Transfer Eligibility Rule does not serve the goal of preserving the NCAA's amateurism model nor does it help preserve the amateur status of college athletes, and the justifications for the Transfer Eligibility Rule are pretextual.

The Purported Goals of the Transfer Eligibility Rule Are Accomplished Through Less Restrictive Bylaws Already in Place

82. While the goals of the Transfer Eligibility Rule may be promoting the academic well-being of college athletes and preserving athletic amateurism within the NCAA, less restrictive alternatives already exist within the NCAA's regulatory structure that ensure that college athletes maintain progress towards college degrees and prevent college sports from becoming a free agent market like professional sports leagues.

83. NCAA Bylaws already require college athletes to maintain progress toward degrees to be eligible to compete in NCAA events. NCAA Bylaw 14.4.1 requires college athletes to “maintain progress toward a baccalaureate or equivalent degree at that institution” to be eligible for intercollegiate competition at their college or university. Exhibit A at 150–51. In addition, NCAA Bylaw 20.2.4.13 requires member institutions to publish their progress-toward-degree requirements for college athletes, thus making these requirements available to college athletes at each institution. *Id.* at 367. Other NCAA Bylaws require minimum credit hour and grade point averages for college athletes to be eligible for competition. *Id.* at 151, 154.

84. Further, NCAA Bylaws already prohibit in-season transfers within the same sport. Specifically, NCAA Bylaw 14.5.5.3 states,

A transfer student from a four-year institution who has received a waiver of or qualifies for an exception to the transfer residence requirement (per Bylaw 14.5.5.2) shall not be eligible for competition in which the [college athlete’s] performance could be used for NCAA championship qualification or consideration if the [college athlete] participated in competition at the previous four-year institution in the same sport in which the [college athlete’s] performance could have been used for NCAA championship qualification or consideration. *Id.* at 168.

85. These NCAA Bylaws setting minimum academic requirements and preventing in-season transfers already exist as less restrictive alternatives to achieving the goals of the Transfer Eligibility Rule. The academic eligibility requirements already in effect serve the goal of preventing college athletes from falling behind academically while still being eligible to compete in athletic events. If a college athlete fails to make adequate progress toward a degree or otherwise fails to meet minimum NCAA requirements, the student will be ineligible to participate in competition. The requirement that the member institutions provide college athletes with the progress-toward-degree requirements at each institution allows college athletes to adequately plan and know what will be required academically to maintain athletic eligibility.

86. Furthermore, preventing in-season transfers with immediate eligibility serves the goal of preserving athletic amateurism among NCAA college athletes. This rule prevents the kind of free agent movement among teams seen in professional sports leagues by preventing college athletes from leaving

mid-season either for participation on a higher-achieving team or in search of more playing time. These goals are accomplished without the unwarranted restrictions of the Transfer Eligibility Rule.

87. With the goals of the Transfer Eligibility Rule met by less restrictive alternatives already present in the NCAA’s Bylaws, the NCAA cannot justify imposing the restrictions of the Transfer Eligibility Rule on college athletes. Any purported benefits of the Transfer Eligibility Rule are far outweighed by the harm the rule inflicts on college athletes and consumers of college athletics. With less restrictive alternatives already in place, there is no justification for the NCAA to restrict the choices of college athletes in the relevant markets by enforcing the Transfer Eligibility Rule.

Count 1: Violation of Section 1 of the Sherman Act

88. Plaintiffs repeat and reallege each allegation set forth in the preceding paragraphs as if fully set forth herein.

89. Defendant NCAA, by and through its officers, directors, employees, agents or other representatives, and its member institutions have entered an illegal agreement to restrain and suppress competition in the relevant markets through the adoption and enforcement of the Transfer Eligibility Rule. Specifically, the NCAA and NCAA member institutions have agreed to unlawfully restrain the ability of Division I college athletes to transfer to other Division I schools without loss of athletic eligibility. The restraint imposed by the Transfer Eligibility Rule cannot withstand analysis under the rule of reason.

90. The markets for athletic services in men’s and women’s Division I basketball and football bowl subdivision (“FBS”) football and for athletics services in all other men’s and women’s Division I sports are relevant antitrust markets. The transactions between NCAA member institutions and college athletes in these markets are commercial in nature and fall under the purview of the Sherman Act.

91. This unlawful agreement among horizontal competitors has unreasonably restrained competition among schools for the college athletes competing in the relevant markets, as transferring college athletes potentially face a one-year waiting period before obtaining full eligibility to compete in NCAA athletic events at their new member institution. The threat of this one-year waiting period discourages transfers, disadvantages college athletes subject to this waiting period, and

prevents college athletes from realizing the benefits of competing in NCAA athletic events for an entire academic year.

92. Division I college athletes have been deprived of the benefits of free and open competition because of the Transfer Eligibility Rule. Furthermore, college athletes forced to wait a year prior to eligibility after transferring are deprived of the benefits that come from competition in NCAA Division I athletic events, harming these college athletes’ current and future earning potentials.

93. As a direct result of Defendant’s conduct, Division I college athletes and consumers of college athletics have suffered and continue to suffer antitrust injury due to the reduction in competition among Division I schools for college athletes through the restrictions imposed by the Transfer Eligibility Rule.

94. The Transfer Eligibility Rule yields few, if any, benefits to competition in Division I collegiate athletics to the NCAA’s member institutions, to college athletes, or to consumers of NCAA athletics contests. Any such benefits are far outweighed by the harm to competition and to the college athletes who are subject to the Transfer Eligibility Rule. Furthermore, the NCAA bylaws already contain less restrictive alternatives that accomplish the NCAA’s goals for the Transfer Eligibility Rule.

95. Defendant’s conduct is ongoing and will continue to impose injury on college athletes and consumers of college athletics unless injunctive relief is granted. This ongoing harm from the Transfer Eligibility Rule affects residents and the economies of the Plaintiff States by unreasonably restraining trade in labor markets for college athletics within the Plaintiff States and throughout the United States.

96. Defendant and its member institutions’ anticompetitive acts were intentionally directed at the United States market and had a substantial and foreseeable effect on interstate commerce.

Prayer for Relief

Wherefore, Plaintiffs respectfully request that this Court:

97. Adjudge and decree that Defendant’s enforcement of NCAA Bylaw 14.5.5.1 violates section 1 of the Sherman Act, 15 U.S.C. 1;

98. Enter a permanent injunction, in a form that the Court deems just and proper, pursuant to 15 U.S.C. 4 and 26, enjoining Defendant from continuing to violate section 1 of the Sherman Act by enforcing NCAA Bylaw 14.5.5.1 and from enforcing NCAA Bylaw 12.11.4.2

to punish college athletes and member institutions for actions taken in compliance with any orders from this Court;

99. Award to each Plaintiff its costs, including reasonable attorneys' fees; and

100. Order any other relief that this Court deems just and proper.

Case No: 1:23-cv-00100

Judge Bailey

**EXHIBIT A TO AMENDED
COMPLAINT**

(Exhibit A is NCAA, Division I 2023-24
Manual, available at <https://web3.ncaa.org/lstdbi/reports/getReport/90008>)

**In the United States District Court for
the Northern District of West Virginia
Clarksburg Division**

State of Ohio, State of Colorado, State
of Illinois, State of Minnesota, State of
Mississippi, State of New York, State of
North Carolina, State of Tennessee,
Commonwealth of Virginia, State of
West Virginia, District of Columbia, and
United States of America, Plaintiffs, v.
National Collegiate Athletic
Association, Defendant.

Civil No. 1:23-cv-100

Judge John Preston Bailey

**[Proposed] Final Judgment and
Permanent Injunction**

1. *Whereas* the Plaintiff States of
Ohio, Colorado, Illinois, Minnesota,
Mississippi, New York, North Carolina,
Tennessee, and West Virginia; the
Commonwealth of Virginia; the District
of Columbia (collectively, “States”); and the

United States of America have
brought this action alleging violations of
the Sherman Act, 15 U.S.C. 1 *et seq.*,
against Defendant National Collegiate
Athletic Association (“NCAA”).

2. *Whereas* Plaintiff States, through
their respective Attorneys General, are
duly authorized to bring suits for
injunctive relief to enforce the Sherman
Act pursuant to 15 U.S.C. 1 and 26.

3. *Whereas* Plaintiff United States of
America is duly authorized to bring
suits for injunctive relief to enforce the
Sherman Act pursuant to 15 U.S.C. 1
and 4.

4. *Whereas* all parties consent to this
venue and to the personal jurisdiction of
the Court for purposes of this litigation,
entry of the Final Judgment, and any
subsequent litigation to enforce its
terms.

5. *Whereas* this Court has subject
matter jurisdiction over this action
under 15 U.S.C. 4 and 28 U.S.C. 1331
and 1337(a), and in the case of Plaintiff
United States, 28 U.S.C. 1345.

6. *Whereas* the NCAA’s member
institutions and conferences have
adopted rules and regulations governing
certain aspects of college sports.

7. *Whereas* NCAA Bylaw¹ 14.5.5.1,
herein referred to as the Transfer
Eligibility Rule, provides that certain
transfer students shall not be eligible for
intercollegiate competition in Division I
until they have fulfilled an academic
“year of residence” at their new
institution, unless they qualify for a
transfer exception or secure a waiver.

8. *Whereas* Plaintiffs allege that the
Transfer Eligibility Rule has
unreasonably restrained competition for
Division I student-athletes among
schools and has prevented them from
realizing the benefits of free and open
competition for their athletic services.

9. *Whereas* Plaintiffs allege that the
Transfer Eligibility Rule yields few, if
any, procompetitive benefits.

10. *Whereas* Plaintiffs allege that, as a
direct result of the NCAA’s conduct,
Division I student-athletes and
consumers of college athletics have
suffered and continue to suffer antitrust
injury due to the reduction in
competition among member institutions
for student-athletes’ services.

11. *Whereas* Plaintiffs therefore allege
that the Transfer Eligibility Rule is an
illegal agreement to restrain and
suppress competition in the nationwide
market for Division I student-athletes’
labor in intercollegiate athletics, in
violation of section 1 of the Sherman
Act.

12. *Whereas* NCAA Bylaw 12.11.4.2,
herein referred to as the Rule of
Restitution, provides that, if a student-
athlete obtains an injunction against the
NCAA, and the student-athlete and his
or her member institution conduct
themselves in conformity with that
injunction, the NCAA may nonetheless
impose certain penalties on both the
student-athlete and the member
institution if the injunction is ultimately
vacated, stayed, or reversed.

13. *Whereas* Plaintiffs allege that the
Rule of Restitution deters member
institutions from relying on court orders
finding that the NCAA’s rules are

¹ All references to “Bylaws” or “NCAA Rules” are
to the NCAA Division I 2023-24 Manual.

anticompetitive (or otherwise illegal) and, therefore, deprives courts of the ability to grant effective relief from violations of state and federal law.

14. *Whereas* Plaintiffs allege that for injunctive relief prohibiting enforcement of the Transfer Eligibility Rule to be effective, the NCAA must also be enjoined from enforcing the Rule of Restitution to punish member institutions or student-athletes who immediately participate in intercollegiate competition following a transfer.

15. *Whereas* following an evidentiary hearing, the Court entered a temporary restraining order and preliminary injunctive relief against the NCAA enjoining enforcement of the Transfer Eligibility Rule and the Rule of Restitution. Dkt. 39, 63.

16. *Whereas* Plaintiffs allege that absent permanent injunctive relief, Division I student-athletes will continue to suffer irreparable harm from the Transfer Eligibility Rule, whether by missing games that cannot be replayed, failing to secure name, image, and likeness (“NIL”) deals or professional opportunities that would otherwise be available, or foregoing transfer decisions they would otherwise pursue.

17. *Whereas* Plaintiffs allege that the balance of the equities favors issuing a permanent injunction, and issuance of a permanent injunction is in the public interest.

18. *Whereas* the United States and the NCAA have agreed to resolve this matter by entry of this Final Judgment.

Accordingly, it is *Hereby Ordered, Adjudged, and Decreed*:

19. The foregoing recitals are incorporated and made a part of this Final Judgment.

20. The NCAA shall take all steps necessary to comply with the Stipulation and Order entered by the Court.

21. This Final Judgment resolves only the United States’ claims with respect to the Transfer Eligibility Rule as applied to Division I student-athletes and does not affect other Bylaws or claims not made in this action. For the avoidance of doubt, this Final Judgment does not apply to any Bylaws of NCAA Division II or NCAA Division III nor does it resolve any antitrust claims regarding those rules.

22. The NCAA and any person or organization acting in concert with it (including but not limited to its officers, employees, staff, member institutions, councils, and committees), are permanently restrained and enjoined from:

a. enforcing the Transfer Eligibility Rule, NCAA Bylaw 14.5.5.1, or any

substantially similar rule requiring a Division I student-athlete to maintain a period of residence or otherwise refrain from competition solely because of a transfer between NCAA member institutions;

b. enforcing the Rule of Restitution, NCAA Bylaw 12.11.4.2, on any Division I member institution or student-athlete related to a student-athlete’s participation in intercollegiate competition following a transfer in reliance on this Court’s temporary restraining order or preliminary injunction or this Final Judgment;

c. taking any other action to retaliate against a Division I member institution for conduct related to the Transfer Eligibility Rule, including but not limited to (i) supporting a student-athlete who challenged the Transfer Eligibility Rule or (ii) permitting a student-athlete to compete during the period of this Court’s temporary restraining order or its preliminary injunction in reliance on those orders; and

d. taking any action to retaliate against any Division I student-athlete that transferred NCAA member institutions, including but not limited to those student-athletes who (i) challenged the Transfer Eligibility Rule, (ii) sought a waiver from the Transfer Eligibility Rule, or (iii) competed during the period of this Court’s temporary restraining order or its preliminary injunction in reliance on those orders.

23. The NCAA shall provide an additional year of eligibility to any Division I student-athlete who was deemed ineligible to compete for a season or any portion of a season of competition occurring during or since the 2019–20 academic year because of the Transfer Eligibility Rule provided the student-athlete:

a. transferred between two member institutions more than once;

b. is currently enrolled at a Division I member institution; and

c. is currently eligible to compete, or their eligibility expired at the end of a season of competition completed during the 2023–24 academic year.

For the avoidance of doubt, a Division I student-athlete described in this provision shall have no fewer than six calendar years to complete their four seasons of intercollegiate competition in any one sport (see NCAA Bylaw 12.8), instead of the five calendar years set forth under NCAA Bylaw 12.8.1.

24. For the purposes of determining or securing compliance with this Final Judgment or determining whether this Final Judgment should be modified or vacated, upon written request of

Plaintiffs and reasonable notice to the NCAA, the NCAA must:

a. permit, subject to legally recognized privileges, authorized representatives of Plaintiffs to inspect all books, ledgers, accounts, records, data, and documents in the possession, custody, or control of the NCAA relating to any matters contained in this Final Judgment;

b. permit, subject to legally recognized privileges, authorized representatives of Plaintiffs to interview, either informally or on the record, the NCAA’s officers, employees, or agents relating to any matters contained in this Final Judgment; and

c. submit written reports or respond to written interrogatories, under oath if requested, relating to any matters contained in this Final Judgment.

25. No information or documents obtained pursuant to this Final Judgment may be divulged by Plaintiffs to any person other than an authorized representative of Plaintiffs, except (a) in the course of legal proceedings to which the United States is a party, including grand-jury proceedings; (b) for the purpose of securing compliance with this Final Judgment; or (c) as otherwise required by law.

26. If the United States receives a request under the Freedom of Information Act, 5 U.S.C. 552, for disclosure of documents or information obtained pursuant to this Final Judgment, the United States will act in accordance with that statute and with all applicable Department of Justice regulations regarding the protection of confidential commercial information. When providing any documents or information to the United States pursuant to this Final Judgment, the NCAA should designate the confidential portions of such materials as provided by 28 CFR 16.7.

27. Within sixty (60) days of entry of this Final Judgment, the NCAA shall post a copy of this Final Judgment on its public website.

28. The NCAA shall not take any action, nor adopt any rules, by-laws or policies that have the effect of undermining or circumventing the provisions of this Final Judgment.

29. The Court will retain jurisdiction for purposes of enforcing this Final Judgment and resolving any dispute that may arise under it.

30. Plaintiff United States retains and reserves all rights to enforce the provisions of this Final Judgment, including the right to seek an order of contempt from the Court. The NCAA agrees that in a civil contempt action, a motion to show cause, or a similar action brought by the United States relating to an alleged violation of this

Final Judgment, the United States may establish a violation of this Final Judgment and the appropriateness of a remedy therefor by a preponderance of the evidence, and the NCAA waives any argument that a different standard of proof should apply. This Final Judgment should be interpreted to give full effect to the procompetitive purposes of the antitrust laws and to restore the competition Plaintiffs allege was harmed by the challenged conduct. The NCAA agrees that it may be held in contempt of, and that the Court may enforce, any provision of this Final Judgment that, as interpreted by the Court in light of these procompetitive principles and applying ordinary tools of interpretation, is stated specifically and in reasonable detail, whether or not it is clear and unambiguous on its face. In any such interpretation, the terms of this Final Judgment should not be construed against either party as the drafter.

31. In connection with a successful effort by the United States to enforce this Final Judgment against the NCAA, whether litigated or resolved before litigation, the NCAA agrees to reimburse the United States for reasonable fees and expenses incurred by its attorneys, as well as all other costs including experts' fees, reasonably incurred in connection with that effort to enforce this Final Judgment, including in the investigation of the potential violation.

Dated: _____, 2024

John Preston Bailey,
United States District Judge.

**In the United States District Court for
the Northern District of West Virginia
Clarksburg Division**

State of Ohio, State of Colorado, State of Illinois, State of Minnesota, State of Mississippi, State of New York, State of North Carolina, State of Tennessee, Commonwealth of Virginia, State of West Virginia, District of Columbia, and United States of America, Plaintiffs, v. *National Collegiate Athletic Association*, Defendant.

Civil No. 1:23-cv-100
Judge John Preston Bailey

Competitive Impact Statement

In accordance with the Antitrust Procedures and Penalties Act, 15 U.S.C. 16(b)–(h) (the “APPA” or “Tunney Act”), the United States of America files this Competitive Impact Statement related to the proposed Final Judgment here.¹

¹ The Plaintiff States and the NCAA have agreed to a parallel proposed Consent Judgment that would resolve the States' claims in this action.

I. Nature and Purpose of the Proceeding

The United States joined this action against Defendant National Collegiate Athletic Association (“NCAA”) on January 18, 2024, to remedy a violation of section 1 of the Sherman Act, 15 U.S.C. 1. section 1 of the Sherman Act prohibits “contract[s], combination[s], or conspirac[ies]” in restraint of trade or commerce.” 15 U.S.C. 1. The Sherman Act is designed to ensure “free and unfettered competition as the rule of trade. It rests on the premise that the unrestrained interaction of competitive forces will yield the best allocation of our economic resources, the lowest prices, the highest quality and the greatest material progress. . . .” *National Collegiate Athletic Ass’n v. Board of Regents of Univ. of Okla.*, 468 U.S. 85, 104 n.27 (1984) (quoting *Northern Pac. Ry. v. United States*, 356 U.S. 1, 4–1 (1958)).

The Amended Complaint alleges that the NCAA and its Division I members agreed to limit competition for student athletes. Former NCAA Bylaw 14.5.5.1 (the “Transfer Eligibility Rule”) unjustifiably restrained the ability of college athletes to engage in the market for their labor.³ The Transfer Eligibility Rule, which was in effect at the time the Amended Complaint was filed and is described in more detail below, imposed a one-year delay in the eligibility of certain college athletes transferring between NCAA member institutions and thus reduced competition in the labor market for college athletes. This rule increased the cost of student-athletes transferring to different institutions and made Division I institutions less interested in recruiting student athletes.

The Amended Complaint also alleges that NCAA Bylaw 12.11.4.2 (the “Rule of Restitution”) furthers the anticompetitive effects of certain eligibility rules by deterring college athletes from challenging those rules. Under that rule, the NCAA can punish college athletes (and their associated institutions) that bring a legal challenge against the NCAA’s eligibility rules and receive a court-ordered injunction barring enforcement of those rules, if the injunction is later overturned or stayed. Concurrently with filing the initial Complaint, Plaintiffs sought a temporary restraining order to enjoin Defendant

³ Plaintiffs State of Ohio, State of Colorado, State of Illinois, State of New York, State of North Carolina, State of Tennessee, and State of West Virginia filed the initial Complaint in this action on Dec. 7, 2023. Plaintiff United States, along with Plaintiffs Commonwealth of Virginia, District of Columbia, State of Minnesota, and State of Mississippi joined this action via an Amended Complaint filed on January 18, 2024.

from enforcing the Transfer Eligibility Rule and the Rule of Restitution. ECF No. 2.

The Court granted Plaintiffs’ request for a temporary restraining order, finding that Plaintiffs were likely to succeed on the merits and enjoining the NCAA from enforcing the Transfer Eligibility Rule and the Rule of Restitution. *Ohio v. National Collegiate Athletic Ass’n*, No. 1:23–CV–100, — F.Supp.3d—, 2023 WL 9103711 (N.D. W. Va. Dec. 13, 2023). The Court subsequently converted the temporary restraining order into a preliminary injunction upon agreement of the parties. ECF No. 63.

On April 17, 2024, the NCAA’s Division I Council voted to withdraw the Transfer Eligibility Rule, modifying its bylaws to allow players to freely transfer multiple times without a year-in-residence requirement. This change was approved by the NCAA’s Board of Governors on April 22, 2024. See *Division I Board of Directors ratifies transfer, NIL rule changes*, available at: <https://www.ncaa.org/news/2024/4/22/media-center-division-i-board-of-directors-ratifies-transfer-nil-rule-changes.aspx>.

The United States has now filed a proposed Final Judgment and Stipulation and Order, which are designed to ensure that the loss of competition alleged in the Amended Complaint is fully remedied and does not recur. Under the proposed Final Judgment, which is explained more fully below, the NCAA would be permanently enjoined from enforcing the former Transfer Eligibility Rule and prohibited from implementing similar rules in the future. The Stipulation and Order requires the NCAA to abide by and comply with the provisions of the proposed Final Judgment until the proposed Final Judgment is entered by the Court or until expiration of time for all appeals of any Court ruling declining entry of the proposed Final Judgment.

The United States and the NCAA have stipulated that the proposed Final Judgment may be entered after compliance with the APPA. Entry of the proposed Final Judgment will terminate this action, except that the Court will retain jurisdiction to construe, modify, or enforce the provisions of the proposed Final Judgment and to punish violations thereof.

II. Description of Events Giving Rise to the Alleged Violation

A. Defendant NCAA

Defendant NCAA is an unincorporated association that acts as the governing body of college sports.

Am. Compl. ¶ 17. The NCAA includes more than 1,000 member colleges and universities throughout the United States. *Id.* These member institutions are organized into three divisions, including Division I, which includes over 350 schools and allows for scholarships. *Id.* Division I schools compete with each other not only through athletic events but also in other upstream and downstream economic markets: for instance, NCAA Division I schools “compete against each other to attract television revenues,” *Board of Regents*, 468 U.S. at 99, and, at issue in this case, “compete fiercely” in the labor market “for student athletes.” *National Collegiate Athletic Ass’n v. Alston*, 594 U.S. 69, 86 (2021). Through the NCAA Constitution and Bylaws, the NCAA and its members have adopted regulations governing all aspects of college sports, including the Transfer Eligibility Rule. The NCAA Constitution and Bylaws are adopted by the votes of member institutions and various NCAA councils, and they may be amended by votes of member institutions or NCAA councils. Am. Compl. ¶ 17. Accordingly, the rules set forth in the NCAA Constitution are horizontal agreements between the NCAA and its member institutions and among NCAA member institutions. *Id.*

An academic institution that wishes to participate in any meaningful way in the highest and most popular level of collegiate athletics must maintain membership in the NCAA and abide by its Division I rules, regulations, and bylaws. Am. Compl. ¶ 18. Failure to abide by these rules puts academic institutions at risk of punitive measures from the NCAA that include, among other things, reduced athletic scholarships, prohibitions on postseason eligibility, vacating of previously earned wins, and monetary fines. *Id.* Because the NCAA and its member institutions have monopsony power in controlling the highest and most popular level of college athletics, any individual who wishes to provide athletic services in exchange for full or partial payment of undergraduate tuition as well as other substantial benefits gained from competing at the highest level of collegiate athletics must by necessity attend an NCAA Division I member institution and has no option but to abide by its rules. Am. Compl. ¶ 19.

Participation in NCAA Division I athletics offers college athletes unique opportunities that are not available elsewhere: (i) the ability to exchange athletics services for the payment of the partial or full cost of an education plus room and board, (ii) high quality

academic educational services, (iii) top-of-the-line training facilities, (iv) high quality coaches who will best be able to launch players to professional careers, (v) national publicity through national championships and nationwide broadcasting contracts, (vi) opportunities to profit from name, image, and likeness (“NIL”) agreements, and (vii) competition at the highest level of collegiate athletics. Am. Compl. ¶ 20.

B. Relevant Markets

Within NCAA Division I athletics, the Transfer Eligibility Rule affects labor markets for athletic services in men’s and women’s Division I sports, wherein each college athlete participates in his or her sport-specific market. *See* Am. Compl. ¶ 27. Within these markets, NCAA member institutions compete to attract and enroll elite-level college athletes. In so doing, NCAA member institutions secure the labor of these college athletes through in-kind benefits: specifically, scholarships, academic programs, access to modern training facilities, and training from premier coaches and their staff. *Id.*

Participation in NCAA Division I athletic competition confers significant and unique benefits to college athletes, such as the ability to showcase their skill before national audiences, gain exposure to professional team scouts, and compete against other elite college athletes. Am. Compl. ¶ 29. In addition, NIL agreements allow college athletes to benefit financially—sometimes for millions of dollars—from the aforementioned national exposure and elite competitive environment that NCAA Division I athletics provide. *Id.* There are no practical alternatives to NCAA Division I athletics for college athletes who seek these benefits. *Id.* at ¶ 30.

The relevant geographic market is the United States. NCAA member institutions are located across the country, and many college athletes are willing to enroll in schools far distant from home to pursue athletic opportunities. Therefore, those NCAA member institutions engage in competition in the relevant labor markets throughout the United States. Am. Compl. ¶ 28. Within the relevant geographic and labor markets, the NCAA maintains exclusive power, dictating the rules and regulations for participation Division I athletics through the Division I Council and NCAA member institutions. *Id.* at ¶ 32.

C. The Transfer Eligibility Rule

Under the Transfer Eligibility Rule, “[a] transfer student from a four-year institution shall not be eligible for

intercollegiate competition at a[n NCAA] member until the student has fulfilled a residence requirement of one full academic year (two full semesters or three full quarters) at the certifying institution.” Am. Compl. ¶ 23 (quoting *NCAA Division I 2023–24 Manual*, Am. Compl. Ex. A at 165). Although the Transfer Eligibility Rule was a default rule that applied to all transfers, a separate rule created an exemption for the first time a college athlete transfers; thus, the Transfer Eligibility Rule in effect applied only to the second time (or more) that a college athlete transferred schools. *Id.* While the Rule barred a college athlete from competing during this one-year waiting period, it did not exempt college athletes from all the other requirements and obligations—including practicing, traveling with the team, and other commitments—of being a college athlete. *Id.* Under NCAA Bylaw 12.8.1, college athletes have five calendar years to complete four seasons of competitive eligibility in any one sport. *See* Am. Compl. Ex. A at 55. Thus, this one-year waiting period removed 20% of the total time available for the college athlete to complete her athletic career. College athletes were thus forced to weigh the one-year ineligibility period against the potential benefits of moving to a better opportunity at another school. Am. Compl. ¶ 7. While the Rule provided for the possibility of a waiver of the ineligibility period, the granting of the waiver was at the discretion of the NCAA and only after the college athlete had already enrolled in a new school. In practice, those waivers were inconsistently and arbitrarily awarded, and, in any event, the uncertainty of the waiver process itself was a deterrent to transferring. Am. Compl. ¶ 39.

D. The “Rule of Restitution”

The NCAA Bylaws contain what is commonly known as the “Rule of Restitution,” which allows the NCAA to punish college athletes and their member institutions for actions taken in accordance with court orders if those orders are later revoked. Am. Compl. ¶ 25 (citing NCAA Bylaw 12.11.4.2, Am. Compl. Ex. A at 66–67). For example, under the Rule of Restitution, were a college athlete to challenge an NCAA bylaw preventing her participation, receive a court order enjoining the bylaw, and then go on to win a conference championship with her team that season, the school would be at risk of having its wins later vacated by the NCAA if the court’s order were reversed.

The obvious purpose and effect of the Rule of Restitution is to deter challenges

to the NCAA's anticompetitive rules by discouraging athletes from protecting themselves and thus trying to deprive courts of the ability to grant effective relief. Am. Compl. ¶ 73. Under the Rule of Restitution, college athletes run the risk of personal punishment and the risk of subjecting their schools or teammates to harsh sanctions simply by following the terms of a court order. *Id.* The Rule of Restitution grants the NCAA the ability to decide for itself the rules of interim relief rather than the courts. *Id.* Plaintiffs argued, and the Court agreed, that any injunctive relief against the Transfer Eligibility Rule would need to be paired with injunctive relief against the Rule of Restitution. Am. Compl. ¶ 74; *Ohio v. NCAA*, 2023 WL 9103711, at *11–12.

E. Anticompetitive Effects

The Transfer Eligibility Rule restrained college athletes from freely moving among member institutions to improve their economic opportunity, personal growth, and well-being, a freedom afforded to other students at NCAA member institutions but not to college athletes. The Transfer Eligibility Rule produced direct anticompetitive effects in the relevant markets in three phases of the college athlete transfer process: (1) when college athletes were deciding whether to transfer, (2) when college athletes decided to transfer and were searching for a new institution to attend, and (3) when college athletes were denied eligibility to compete for one year after transferring to a new institution. *Ohio v. NCAA*, 2023 WL 9103711, at *5.

In the first phase, when college athletes were deciding whether to transfer, the Transfer Eligibility Rule discouraged college athletes from transferring to a different institution that may benefit their academic, athletic, mental, and financial well-being. *Ohio v. NCAA*, 2023 WL 9103711, at *5. College athletes, just like non-athlete college students, seek to transfer schools for any number of reasons, including but not limited to better academic, athletic, or financial opportunities elsewhere. College athletes also seek to transfer institutions for reasons having nothing to do with sports, for example, a desire to be closer to home. The Transfer Eligibility Rule dampened competition in the relevant markets by deterring college athletes from exploring better options within their sport-specific market. *Id.*

Second, the Transfer Eligibility Rule also artificially disadvantaged college athletes who choose to transfer a second time by reducing their attractiveness to potential destination institutions. *Id.*

Second-time transfer college athletes were not able to apply for a waiver of the Transfer Eligibility Rule until after they had been accepted and enrolled at their new institution. Because the waiver process was discretionary and was inconsistently applied, member institutions that accepted a second-time transfer risked that the college athlete might not be eligible to compete for an entire academic year. This eligibility risk artificially deflated the value of a second-time transfer, creating an additional impediment in the market for college athlete labor. *Id.*

Third, the Transfer Eligibility Rule harmed college athletes transferring a second time by denying them the opportunity to compete in NCAA Division I athletic events for an entire academic year after transferring to a new institution. *Id.* at *6. NCAA Division I competition is the pinnacle of college athletics in the United States. Competing at this high level of athletics comes with immeasurable opportunities for personal, professional, and economic growth. For athletes seeking to continue competing professionally after college, NCAA Division I competition provides a unique platform to showcase athletic skills in front of national audiences and professional scouts. The Transfer Eligibility Rule unjustifiably denied these benefits to affected college athletes for an entire academic year. *Id.*

F. The Transfer Eligibility Rule Lacks Procompetitive Justifications

In its opposition to Plaintiffs' motion for a temporary restraining order, NCAA argued that the Transfer Eligibility Rule is procompetitive, as it "aim[s] to promote academic success by minimizing the significant potential disruption from multiple transfers, promoting the benefits of team continuity and predictability, and protecting the viability of collegiate sports by preserving some level of competitive balance between programs and some level of continuity in the makeup of teams." ECF No. 32 at 9–10.

Ruling on Plaintiffs' motion for a temporary restraining order, the Court found that these purportedly procompetitive justifications were "uncompelling" and "pretextual." *Ohio v. NCAA*, 2023 WL 9103711, at *7. The Court was unpersuaded by the NCAA's argument that the Rule promotes academic success, noting that the Rule only bars competition, not participation in practices or other team activities. Thus, second-time transfers (who as a practical matter must train and attend practice to remain viable members of their teams) are likely to spend just as much time away from their studies as

their teammates, save for a few hours of actual competition on gameday. *Id.* With respect to the NCAA's argument that the Transfer Eligibility Rule promotes team stability, the Court found that the NCAA Bylaws are silent as to the mid-season firing of coaches and contemplate first-time transfers. Accordingly, "the NCAA's stability argument [is] without merit given that there are currently no restrictions on first time transfers or coaches leaving," two circumstances that could also affect team stability. *Id.*

G. Less Restrictive Alternatives to the Transfer Eligibility Rule

To the extent the goals of the Transfer Eligibility Rule were to promote the academic well-being of college athletes and to prevent college sports from becoming a free agent market like professional sports leagues, the NCAA's other rules already promote these ends. Am. Compl. ¶ 82; *Ohio v. NCAA*, 2023 WL 9103711, at *8. For example, NCAA Bylaws already require college athletes to maintain progress toward degrees to be eligible to compete in NCAA events. NCAA Bylaw 14.4.1 requires college athletes to "maintain progress toward a baccalaureate or equivalent degree at that institution" to be eligible for intercollegiate competition at their college or university. Am. Compl. Ex. A at 150–51. In addition, NCAA Bylaw 20.2.4.13 requires member institutions to publish their progress-toward-degree requirements for college athletes, thus making these requirements available to college athletes at each institution. *Id.* at 367. Other NCAA Bylaws require minimum credit hour and grade point averages for college athletes to be eligible for competition. *Id.* at 151, 154. Additionally, NCAA Bylaws already prohibit in-season transfers within the same sport, ensuring that college athletics do not morph into a professional free agent system. Am. Compl. ¶¶ 84–86. In enjoining the Transfer Eligibility Rule, the Court found that these bylaws related to academic progress and in-season transfers accomplished NCAA's goals "without the unjustified restrictions imposed by the Transfer Eligibility Rule." *Ohio v. NCAA*, 2023 WL 9103711, at *8.

III. Explanation of the Proposed Final Judgment

The relief required by the proposed Final Judgment addresses the loss of competition alleged in the Amended Complaint. Paragraph 22 permanently enjoins the NCAA from enforcing the Transfer Eligibility Rule or any substantially similar rule requiring a

college athlete to maintain a period of residence or refrain from competition because of a transfer between NCAA member institutions. Paragraph 22 of the proposed Final Judgment also prohibits the NCAA from enforcing the Rule of Restitution on any member institution or college athlete related to a college athlete's participation in intercollegiate competition following a transfer in reliance on this Court's orders.

Paragraph 23 of the proposed Final Judgment requires the NCAA to issue an additional year of eligibility to any qualifying college athlete who was previously deemed ineligible to participate because of the Transfer Eligibility Rule for a season or any portion of a season during or since the 2019–20 academic year. Those college athletes will have no fewer than six years to complete their four seasons of intercollegiate competition and thus will not be disadvantaged from having sat out a year because of the Transfer Eligibility Rule.

The proposed Final Judgment also contains provisions designed to promote compliance with and make enforcement of the Final Judgment as effective as possible. Paragraph 30 provides that the United States retains and reserves all rights to enforce the Final Judgment, including the right to seek an order of contempt from the Court. Under the terms of this paragraph, the NCAA agrees that in any civil contempt action, any motion to show cause, or any similar action brought by the United States regarding an alleged violation of the Final Judgment, the United States may establish the violation and the appropriateness of any remedy by a preponderance of the evidence and that the NCAA has waived any argument that a different standard of proof should apply. This provision aligns the standard for compliance with the Final Judgment with the standard of proof that applies to the underlying offense that the Final Judgment addresses.

Paragraph 30 provides additional clarification regarding the interpretation of the provisions of the proposed Final Judgment. The proposed Final Judgment is intended to remedy the loss of competition that the United States alleges would otherwise result from the continued application of the Transfer Eligibility Rule. The NCAA agrees that it will abide by the proposed Final Judgment and that it may be held in contempt of the Court for failing to comply with any provision of the proposed Final Judgment that is stated specifically and in reasonable detail, as interpreted in light of this procompetitive purpose.

Paragraph 31 provides that if the Court finds in an enforcement proceeding that the NCAA has violated the Final Judgment, the United States may apply to the Court for appropriate relief, including contempt remedies and any additional relief to ensure the NCAA complies with the terms of the Final Judgment. In addition, to compensate American taxpayers for any costs associated with investigating and enforcing violations of the Final Judgment, Paragraph 31 provides that, in any successful effort by the United States to enforce the Final Judgment against the NCAA, whether litigated or resolved before litigation, the NCAA must reimburse the United States for attorneys' fees, experts' fees, and other costs incurred in connection with that effort to enforce this Final Judgment, including the investigation of the potential violation.

Under the proposed Final Judgment, the United States may file an action at any time against NCAA for other Bylaws or claims not made in this action. Paragraph 23 states that only the United States' claims with respect to the Transfer Eligibility Rule as applied to Division I college athletes is resolved pursuant to the proposed Final Judgment, and that the proposed Final Judgment specifically does not apply to any Bylaws of NCAA Division II or NCAA Division III nor does it resolve any antitrust claims regarding those rules. The proposed Final Judgment applies only to the Transfer Eligibility Rule as applied to Division I college athletes and does not mean that the United States condones any other Bylaws of NCAA Division I or any of the Bylaws of NCAA Division II or NCAA Division III.

IV. Remedies Available to Potential Private Plaintiffs

Section 4 of the Clayton Act, 15 U.S.C. 15, provides that any person who has been injured as a result of conduct prohibited by the antitrust laws may bring suit in federal court to recover three times the damages the person has suffered, as well as costs and reasonable attorneys' fees. Entry of the proposed Final Judgment neither impairs nor assists the bringing of any private antitrust damage action. Under the provisions of section 5(a) of the Clayton Act, 15 U.S.C. 16(a), the proposed Final Judgment has no prima facie effect in any subsequent private lawsuit that may be brought against Defendants.

V. Procedures Available for Modification of the Proposed Final Judgment

The United States and the NCAA have stipulated that the proposed Final Judgment may be entered by the Court after compliance with the provisions of the APPA, provided that the United States has not withdrawn its consent. The APPA conditions entry upon the Court's determination that the proposed Final Judgment is in the public interest.

The APPA provides a period of at least 60 days preceding the effective date of the proposed Final Judgment within which any person may submit to the United States written comments regarding the proposed Final Judgment. Any person who wishes to comment should do so within 60 days of the date of publication of this Competitive Impact Statement in the **Federal Register**, or within 60 days of the first date of publication in a newspaper of the summary of this Competitive Impact Statement, whichever is later. All comments received during this period will be considered by the U.S. Department of Justice, which remains free to withdraw its consent to the proposed Final Judgment at any time before the Court's entry of the Final Judgment. The comments and the response of the United States will be filed with the Court. In addition, the comments and the United States' responses will be published in the **Federal Register** unless the Court agrees that the United States instead may publish them on the U.S. Department of Justice, Antitrust Division's internet website.

Written comments should be submitted in English to: Yvette Tarlov, Chief, Media, Entertainment, and Communications Section, Antitrust Division, United States Department of Justice, 450 Fifth St. NW, Suite 7000, Washington, DC 20530, yvette.tarlov@usdoj.gov.

The proposed Final Judgment provides that the Court retains jurisdiction over this action, and the parties may apply to the Court for any order necessary or appropriate for the modification, interpretation, or enforcement of the Final Judgment.

VI. Alternatives to the Proposed Final Judgment

As an alternative to the proposed Final Judgment, the United States considered continuing the litigation and seeking a full trial on the merits against Defendant. The United States is satisfied, however, that the relief required by the proposed Final Judgment is likely to ensure competition

in the relevant markets by remedying the anticompetitive effects alleged in the Amended Complaint. Thus, the proposed Final Judgment is likely to achieve all or substantially all the relief the United States would have obtained through litigation but avoids the time, expense, and uncertainty of a full trial on the merits.

VII. Standard of Review Under the APPA for the Proposed Final Judgment

Under the Clayton Act and APPA, proposed Final Judgments, or “consent decrees,” in antitrust cases brought by the United States are subject to a 60-day comment period, after which the Court shall determine whether entry of the proposed Final Judgment “is in the public interest.” 15 U.S.C. 16(e)(1). In making that determination, the Court, in accordance with the statute as amended in 2004, is required to consider:

(A) the competitive impact of such judgment, including termination of alleged violations, provisions for enforcement and modification, duration of relief sought, anticipated effects of alternative remedies actually considered, whether its terms are ambiguous, and any other competitive considerations bearing upon the adequacy of such judgment that the court deems necessary to a determination of whether the consent judgment is in the public interest; and

(B) the impact of entry of such judgment upon competition in the relevant market or markets, upon the public generally and individuals alleging specific injury from the violations set forth in the complaint including consideration of the public benefit, if any, to be derived from a determination of the issues at trial.

15 U.S.C. 16(e)(1)(A) & (B). In considering these statutory factors, the Court’s inquiry is necessarily a limited one as the government is entitled to “broad discretion to settle with the defendant within the reaches of the public interest.” *United States v. Microsoft Corp.*, 56 F.3d 1448, 1461 (D.C. Cir. 1995); *United States v. U.S. Airways Grp., Inc.*, 38 F. Supp. 3d 69, 75 (D.D.C. 2014) (explaining that the “court’s inquiry is limited” in Tunney Act settlements); *United States v. InBev N.V./S.A.*, No. 08–1965 (JR), 2009 U.S. Dist. LEXIS 84787, at *3 (D.D.C. Aug. 11, 2009) (noting that a court’s review of a proposed Final Judgment is limited and only inquires “into whether the government’s determination that the proposed remedies will cure the antitrust violations alleged in the complaint was reasonable, and whether the mechanisms to enforce the final judgment are clear and manageable”).

As the U.S. Court of Appeals for the District of Columbia Circuit has held, under the APPA a court considers,

among other things, the relationship between the remedy secured and the specific allegations in the government’s Amended Complaint, whether the proposed Final Judgment is sufficiently clear, whether its enforcement mechanisms are sufficient, and whether it may positively harm third parties. *See Microsoft*, 56 F.3d at 1458–62. With respect to the adequacy of the relief secured by the proposed Final Judgment, a court may not “make de novo determination of facts and issues.” *United States v. W. Elec. Co.*, 993 F.2d 1572, 1577 (D.C. Cir. 1993) (quotation marks omitted); *see also Microsoft*, 56 F.3d at 1460–62; *United States v. Alcoa, Inc.*, 152 F. Supp. 2d 37, 40 (D.D.C. 2001); *United States v. Enova Corp.*, 107 F. Supp. 2d 10, 16 (D.D.C. 2000); *InBev*, 2009 U.S. Dist. LEXIS 84787, at *3. Instead, “[t]he balancing of competing social and political interests affected by a proposed antitrust decree must be left, in the first instance, to the discretion of the Attorney General.” *W. Elec. Co.*, 993 F.2d at 1577 (quotation marks omitted). “The court should also bear in mind the flexibility of the public interest inquiry: the court’s function is not to determine whether the resulting array of rights and liabilities is the one that will best serve society, but only to confirm that the resulting settlement is within the reaches of the public interest.” *Microsoft*, 56 F.3d at 1460 (quotation marks omitted); *see also United States v. Deutsche Telekom AG*, No. 19–2232 (TJK), 2020 WL 1873555, at *7 (D.D.C. Apr. 14, 2020). More demanding requirements would “have enormous practical consequences for the government’s ability to negotiate future settlements,” contrary to congressional intent. *Microsoft*, 56 F.3d at 1456. “The Tunney Act was not intended to create a disincentive to the use of the consent decree.” *Id.*

The United States’ predictions about the efficacy of the remedy are to be afforded deference by the Court. *See, e.g., Microsoft*, 56 F.3d at 1461 (recognizing courts should give “due respect to the Justice Department’s . . . view of the nature of its case”); *United States v. Iron Mountain, Inc.*, 217 F. Supp. 3d 146, 152–53 (D.D.C. 2016) (“In evaluating objections to settlement agreements under the Tunney Act, a court must be mindful that [t]he government need not prove that the settlements will perfectly remedy the alleged antitrust harms[;] it need only provide a factual basis for concluding that the settlements are reasonably adequate remedies for the alleged harms.” (internal citations omitted)); *United States v. Republic Servs., Inc.*,

723 F. Supp. 2d 157, 160 (D.D.C. 2010) (noting “the deferential review to which the government’s proposed remedy is accorded”); *United States v. Archer-Daniels-Midland Co.*, 272 F. Supp. 2d 1, 6 (D.D.C. 2003) (“A district court must accord due respect to the government’s prediction as to the effect of proposed remedies, its perception of the market structure, and its view of the nature of the case.”). The ultimate question is whether “the remedies [obtained by the Final Judgment are] so inconsonant with the allegations charged as to fall outside of the ‘reaches of the public interest.’” *Microsoft*, 56 F.3d at 1461 (quoting *W. Elec. Co.*, 900 F.2d at 309).

Moreover, the Court’s role under the APPA is limited to reviewing the remedy in relationship to the violations that the United States has alleged in its Amended Complaint, and does not authorize the Court to “construct [its] own hypothetical case and then evaluate the decree against that case.” *Microsoft*, 56 F.3d at 1459; *see also U.S. Airways*, 38 F. Supp. 3d at 75 (noting that the court must simply determine whether there is a factual foundation for the government’s decisions such that its conclusions regarding the proposed settlements are reasonable); *InBev*, 2009 U.S. Dist. LEXIS 84787, at *20 (“[T]he ‘public interest’ is not to be measured by comparing the violations alleged in the complaint against those the court believes could have, or even should have, been alleged”). Because the “court’s authority to review the decree depends entirely on the government’s exercising its prosecutorial discretion by bringing a case in the first place,” it follows that “the court is only authorized to review the decree itself,” and not to “effectively redraft the complaint” to inquire into other matters that the United States did not pursue. *Microsoft*, 56 F.3d at 1459–60.

In its 2004 amendments to the APPA, Congress made clear its intent to preserve the practical benefits of using judgments proposed by the United States in antitrust enforcement, Public Law 108–237 § 221, and added the unambiguous instruction that “[n]othing in this section shall be construed to require the court to conduct an evidentiary hearing or to require the court to permit anyone to intervene.” 15 U.S.C. 16(e)(2); *see also U.S. Airways*, 38 F. Supp. 3d at 76 (indicating that a court is not required to hold an evidentiary hearing or to permit intervenors as part of its review under the Tunney Act). This language explicitly wrote into the statute what Congress intended when it first enacted the Tunney Act in 1974. As Senator Tunney explained: “[t]he court is

nowhere compelled to go to trial or to engage in extended proceedings which might have the effect of vitiating the benefits of prompt and less costly settlement through the consent decree process.” 119 Cong. Rec. 24,598 (1973) (statement of Sen. Tunney). “A court can make its public interest determination based on the competitive impact statement and response to public comments alone.” *U.S. Airways*, 38 F. Supp. 3d at 76 (citing *Enova Corp.*, 107 F. Supp. 2d at 17).

VIII. Determinative Documents

There are no determinative materials or documents within the meaning of the APPA that were considered by the United States in formulating the proposed Final Judgment.

Dated: May 30, 2024

Respectfully,

Maximillian F. Nogay
Assistant United States Attorney

United States Attorney's Office, Northern District of West Virginia, P.O. Box 591, 1125 Chapline Street, Suite 3000, Wheeling, WV 26003, Tel: 304-234-0100, Fax: 304-234-0110, Email: max.nogay@usdoj.gov.

[FR Doc. 2024-12720 Filed 6-10-24; 8:45 am]

BILLING CODE 4410-11-P

DEPARTMENT OF JUSTICE

[OMB 1140-0087]

Agency Information Collection Activities; Proposed eCollection Activities; Requested; Revision of a Previously Approved Collection eForm Access Request/User Registration

AGENCY: Bureau of Alcohol, Tobacco, Firearms and Explosives, Department of Justice.

ACTION: 60-Day notice.

SUMMARY: The Department of Justice (DOJ), The Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted for 60 days until August 12, 2024.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, contact: Victoria Kenney, FEIB/FESD, either by mail at 244 Needy Road, Martinsburg, WV 25405, by email at Victoria.Kenney@atf.gov, or telephone at 304-616-3376.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Bureau of Justice Statistics, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Abstract: The information on this form allows users to obtain access to the eForms system to submit various forms to ATF and allows ATF to authenticate those users. Information Collection (IC) OMB 1140-0087—eForm Access Request/User Registration is being revised to include updated screenshots that reflect the new systems appearance and layout. New system updates have led to the prior screenshots being outdated.

Overview of This Information Collection

1. *Type of Information Collection:* Revision of a previously approved collection.

2. *The Title of the Form/Collection:* eForm Access Request/User Registration.

3. *The agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form number: None.

Component: Bureau of Alcohol, Tobacco, Firearms and Explosives, U.S. Department of Justice.

4. *Affected public who will be asked or required to respond, as well as the obligation to respond:* Affected Public: Private Sector-for or not for profit institutions.

The obligation to respond is voluntary.

5. *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* An estimated 390,000 respondents will complete this registration form annually, and it will take each respondent approximately 2.24 minutes to complete their responses.

6. *An estimate of the total annual burden (in hours) associated with the collection:* The estimated annual public burden associated with this collection is 2837 hours, which is equal to 390,000 (total respondents) * 1 (# of response per respondent) * .00727436 (2.24 minutes).

7. *An estimate of the total annual cost burden associated with the collection, if applicable:* \$0.

TOTAL BURDEN HOURS

Activity	Number of respondents	Frequency	Total annual responses	Time per response	Total annual burden (hours)
eForm Access Request/User Registration	390,000	1/annually	390,000	2.24 minutes ..	2837
Unduplicated Totals.					

If additional information is required contact: Darwin Arceo, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE, 4W-218, Washington, DC.

Dated: May 6, 2024.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-FY-P

DEPARTMENT OF JUSTICE

[OMB Number 1105-0092]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Reinstatement Without Change September 11th Victim Compensation Fund ("VCF") Claim Form

AGENCY: Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The September 11th Victim Compensation Fund, Department of Justice (DOJ), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** on January 29, 2024, allowing a 60-day comment period.

DATES: Comments are encouraged and will be accepted for 30 days until July 11, 2024.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Kimberly Brown, Director of Operations, September 11th Victim Compensation Fund, 1100 L Street NW, Washington, DC 20531 (855) 885-1555 or (202) 507-6453; email: Kimberly.C.Brown@usdoj.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should

address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and/or
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of responses.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting "Currently under 30-day Review—Open for Public Comments" or by using the search function and entering either the title of the information collection or the OMB Control Number 1105-0092. This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view Department of Justice, information collections currently under review by OMB.

DOJ seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOJ notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Overview of This Information Collection

1. *Type of Information Collection:* Reinstatement of a previously approved collection.
2. *Title of the Form/Collection:* VCF Claim Form.
3. Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection: N/A. Civil Division

4. Affected public who will be asked or required to respond, as well as a brief abstract: Individuals or households.

The September 11th Victim Compensation Fund of 2001 ("VCF" or "Fund") provides compensation to any individual (or beneficiary of a deceased individual) who was physically injured or killed as a result of the terrorist-related aircraft crashes of September 11, 2001. The information collected from the VCF Claim Form will be used to determine whether claimants will be eligible for compensation from the Fund, and if so, the amount of compensation they will be awarded. The Form consists primarily of two main sections: Eligibility and Compensation.

The Eligibility section seeks the information required by the Zadroga Act to determine whether a claimant is eligible for the Fund, including information related to: participation in lawsuits related to September 11, 2001; presence at a 9/11 crash site between September 11, 2001 and May 30, 2002; and physical harm suffered as a result of the air crashes and/or debris removal.

The Compensation section seeks the information required by the Zadroga Act to determine the amount of compensation for which the claimant is eligible. Specifically, the section seeks information regarding the out-of-pocket losses (including medical expenses) incurred by the claimant that are attributable to the 9/11 air crashes or debris removal; the claimant's loss of earnings or replacement services that are attributable to the 9/11 air crashes or debris removal; and any collateral source payments (such as insurance payments) that the claimant received as a result of the terrorist-related aircraft crashes of September 11, 2001 or debris removal efforts.

5. *Obligation to Respond:* Required to obtain or retain a benefit.

6. *Total Estimated Number of Respondents:* 21,000 (total estimate for the time period from June 2024 through June 2027).

7. *Estimated Time per Respondent:* 8 hours.

8. *Frequency:* One time only.

9. *Total Estimated Annual Time Burden:* The estimated annual burden associated with this collection is 168,000 hours.

10. *Total Estimated Annual Other Costs Burden:*

TOTAL BURDEN HOURS

Activity	Number of respondents	Frequency	Total annual responses	Time per response (hours)	Total annual burden (hours)
September 11th Victim Compensation Fund Claim Form.	21,000	1/annually	21,000	8	168,000

If additional information is required, contact: Darwin Arceo, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE, 4W-218, Washington, DC 20530.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

[FR Doc. 2024-12279 Filed 6-10-24; 8:45 am]

BILLING CODE 4410-12-P

EMPLOYEE BENEFITS SECURITY ADMINISTRATION

[Exemption Application No. D-12098]

Proposed Exemption for Certain Prohibited Transaction Restrictions Involving UBS AG (UBS) Located in Zurich, Switzerland

AGENCY: Employee Benefits Security Administration, Department of Labor.

ACTION: Notice of proposed exemption.

SUMMARY: This document provides notice of the pendency before the Department of Labor (the Department) of a proposed individual exemption from certain of the prohibited transaction restrictions of the Employee Retirement Income Security Act of 1974 (ERISA or the Act) and/or the Internal Revenue Code of 1986 (the Code). The Department previously issued an individual prohibited transaction exemption (PTE) 2023-14 that allowed certain asset managers related to UBS (the Applicant) and Credit Suisse Group AG (CSAG) to continue to rely on the exemptive relief provided by Prohibited Transaction Exemption 84-14 for one year following UBS' acquisition of CSAG. This proposed exemption would allow current and future asset managers under the UBS corporate umbrella to continue to rely on PTE 84-14 from June 12, 2024, to June 11, 2029 if certain conditions were met, notwithstanding the five judgments of conviction involving entities within the UBS and CSAG corporate umbrellas that are described below.

DATES: If granted, this proposed exemption will be in effect for the period beginning on June 12, 2024, and

ending on June 11, 2029, and may also provide retrospective relief for part or all of the period covered by the preceding exemption, PTE 2023-14, which permitted the UBS QPAMs to rely on PTE 84-14 and extended from June 12, 2023, through June 11, 2024.

Comments due: Written comments and requests for a public hearing on the proposed exemption should be submitted to the Department by July 15, 2024.

ADDRESSES: All written comments and requests for a hearing should be sent to the Employee Benefits Security Administration (EBSA), Office of Exemption Determinations, Attention: Application No. D-12098, via email to e-OED@dol.gov or online through <http://www.regulations.gov>. Any such comments or requests should be sent by the end of the scheduled comment period. The application for exemption and the comments received will be available for public inspection in the Public Disclosure Room of the Employee Benefits Security Administration, U.S. Department of Labor, Room N-1515, 200 Constitution Avenue NW, Washington, DC 20210 ((202) 693-8673). See **SUPPLEMENTARY INFORMATION** below for additional information regarding comments.

FOR FURTHER INFORMATION CONTACT: Nicholas Schroth of the Department at (202) 693-8571. (This is not a toll-free number.)

SUPPLEMENTARY INFORMATION:

Comments

1. Persons are encouraged to submit all comments electronically and not to follow with paper copies. Comments should state the nature of the person's interest in the proposed exemption and the manner in which the person would be adversely affected by the exemption, if granted. Any person who may be adversely affected by an exemption can request that the Department holds a hearing on the exemption. A request for a hearing must state: (1) the name, address, telephone number, and email address of the person making the request; (2) the nature of the person's interest in the exemption and the manner in which the person would be adversely affected by the exemption; and (3) a statement of the issues to be

addressed and a general description of the evidence to be presented at the hearing. The Department will grant a request for a hearing made in accordance with the requirements above where a hearing is necessary to fully explore material factual issues identified by the person requesting the hearing. A notice of such hearing shall be published by the Department in the **Federal Register**. The Department may decline to hold a hearing if: (1) the request for the hearing does not meet the requirements above; (2) the only issues identified for exploration at the hearing are matters of law; or (3) the factual issues identified can be fully explored through the submission of evidence in written (including electronic) form.

2. **Warning:** All comments received will be included in the public record without change and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes information claimed to be confidential or other information whose disclosure is restricted by statute. If you submit a comment, EBSA recommends that you include your name and other contact information in the body of your comment, but DO NOT submit information that you consider to be confidential, or otherwise protected (such as a Social Security number or an unlisted phone number) or confidential business information that you do not want publicly disclosed. However, if EBSA cannot read your comment due to technical difficulties and cannot contact you for clarification, EBSA might not be able to consider your comment. Additionally, the <http://www.regulations.gov> website is an "anonymous access" system, which means EBSA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email directly to EBSA without going through <http://www.regulations.gov>, your email address will be automatically captured and included as part of the comment that is placed in the public record and made available on the internet.

Background

3. Upon the expiration of the one-year period set forth in PTE 2023–14 (June 12, 2024), the exemption no longer will provide the Applicant with relief from ERISA’s prohibited transaction provisions. This proposed exemption would allow current and future asset managers under the UBS corporate umbrella to continue to rely on PTE 84–14 from June 12, 2024, to June 11, 2029, if the conditions specified herein are satisfied. As described below, the Department is proposing the exemption to protect affected plans from the harms that the Applicant has represented would occur if the UBS QPAMs are no longer allowed to engage in the transactions permitted by PTE 84–14. The Department also seeks comments on whether the requested exemption, if granted, should include retrospective relief covering transactions that would have been permitted under the QPAMs’ previous exemption, (PTE 2023–14), but for their failure to comply timely with the audit requirements of that exemption.

4. The current UBS-affiliated asset managers that rely on PTE 84–14 are UBS Asset Management (Americas) LLC, and UBS Hedge Fund Solutions LLC (together with any future entity within the Asset Management or the Global Wealth Management Americas U.S. divisions of UBS that qualifies as a “qualified professional asset manager” as defined in Section VI(a) of PTE 84–14, (hereafter referred to as the Affiliated QPAMs)). In addition, UBS holds or may in the future hold a greater than five (5) percent interest in a number of smaller asset managers that are not considered to be “affiliates” of UBS and also may qualify as a “qualified professional asset manager” as defined in Section VI(a) of PTE 84–14 (the Related QPAMs). The Affiliated QPAMs and Related QPAMs are collectively referred to herein as the “UBS QPAMs.” This proposed exemption, if granted, would enable UBS QPAMs to continue to rely on PTE 84–14 for a five-year period ending on June 11, 2029, if the conditions of this exemption are met, notwithstanding four criminal convictions of entities within the UBS corporate family that occurred within the last 10 years.¹ The proposed exemption would provide the Applicant with continued relief under PTE 84–14 which, in turn, would provide relief from restrictions set forth

in ERISA sections 406 and 407.² In addition, the Applicant is requesting that the Department structure the exemption in such a way that it avoids the loss of relief under the terms of PTE 2023–14 as a result of its failure to timely comply with the audit requirements set forth in that exemption. No relief from a violation of any other law would be provided by this exemption, including any criminal conviction described herein.

Benefits of the Proposed Exemption

5. The Department is proposing relief based on the Applicant’s representation that significant harm to the Applicant’s Covered Plan clients would be prevented if the Department grants an exemption. The Department’s objective in proposing this exemption is to protect Covered Plans from the harms and costs that could be imposed on them if the UBS QPAMs no longer could rely on the relief provided in PTE 84–14. Furthermore, the terms of this exemption are intended to promote the UBS QPAMs’ adherence to basic fiduciary standards under Title I of ERISA and the Code and reinforce their obligation to act with a high degree of integrity on behalf of their Covered Plan clients.

6. The Department notes that this individual exemption would solely provide relief from the limitations of PTE 84–14 Section I(g) with respect to the four criminal convictions of entities within the UBS corporate family that are described below. The conditions of this exemption explicitly require the UBS QPAMs to adhere to every other condition for relief specified in PTE 84–14, as amended, including the robust disqualification provisions found in Section I(g). If any condition of PTE 84–14, as amended, is violated by a UBS Affiliated QPAM, that QPAM would fail to comply with the requirements of the exemption.

Summary of Facts and Representations³

7. UBS is a Swiss-based global financial services company organized

under the laws of Switzerland. UBS Asset Management (Americas) LLC and UBS Hedge Fund Solutions LLC are entities under the UBS corporate umbrella that currently operate as QPAMs and manage the assets of Covered Plans⁴ on a discretionary basis in reliance on PTE 84–14.⁵ On June 12, 2023, UBS acquired CSAG, another Swiss-based global financial services firm. This acquisition brought Credit Suisse Asset Management, LLC, a subsidiary of CSAG, under the UBS corporate umbrella. The Applicant represents that, on May 1, 2024, Credit Suisse Asset Management, LLC (an entity that previously constituted an Affiliated QPAM) was merged into UBS Asset Management (Americas) LLC, with UBS Asset Management (Americas) LLC being the surviving entity. The only current Affiliated QPAMs are UBS Asset Management (Americas) LLC and UBS Hedge Fund Solutions LLC.

Relevant ERISA Provisions and PTE 84–14

8. The rules set forth in ERISA section 406 and Code section 4975(c)(1) proscribe certain “prohibited transactions” between plans and related parties with respect to those plans. Under ERISA section 3(14), such parties are known as “parties in interest” with respect to a plan, and include, among others, the plan fiduciary, a sponsoring employer of the plan, a union whose members are covered by the plan, service providers with respect to the plan, and certain of their affiliates.⁶

the exemption will cease to apply as of the date of the change.

⁴ The term “Covered Plan” means a plan subject to Part IV of Title I of ERISA (an ERISA-covered plan) or a plan subject to Code section 4975 (an IRA), in each case, with respect to which an Affiliated QPAM relies on PTE 84–14 or with respect to which an Affiliated QPAM (or any UBS affiliate) has expressly represented that the manager qualifies as a QPAM or relies on PTE 84–14. A Covered Plan does not include an ERISA-covered plan or IRA to the extent the Affiliated QPAM has expressly disclaimed reliance on QPAM status or PTE 84–14 in entering into a contract, arrangement, or agreement with the ERISA-covered plan or IRA. Notwithstanding the above, an Affiliated QPAM may disclaim reliance on QPAM status or PTE 84–14 in a written modification of a contract, arrangement, or agreement with an ERISA-covered plan or IRA, where: the modification is made in a bilateral document signed by the client; the client’s attention is specifically directed toward the disclaimer; and the client is advised in writing that, with respect to any transaction involving the client’s assets, the Affiliated QPAM will not represent that it is a QPAM, and will not rely on the relief described in PTE 84–14.

⁵ UBS represents that UBS O’Connor LLC and UBS Realty Investors LLC are entities under the UBS corporate umbrella that currently offer investment products which are assessable by ERISA-covered plans, but do not currently rely on Class PTE 84–14 when managing those products.

⁶ Under the Code, such parties, or similar parties, are referred to as “disqualified persons.”

¹ Relief in this exemption is not provided for one of the criminal convictions covered by PTE 2023–14, because that conviction occurred outside the 10-year ineligibility period under PTE 84–14 Section I(g).

² Unless otherwise specified, references to specific provisions of Title I of ERISA also refers to the corresponding provisions of Code section 4975.

³ The Summary of Facts and Representations is based on UBS representations and does not reflect factual findings or opinions of the Department unless indicated otherwise. The Department notes that availability of this exemption is subject to the express condition that the material facts and representations made by UBS are true, complete, and accurately describe all material terms of the transaction(s) covered by the exemption. If there is any material change in a transaction covered by the exemption, or in a material fact or representation that is part of the record attributable to D–12098,

9. The prohibited transaction provisions under ERISA section 406(a) and Code section 4975(c)(1) prohibit, in relevant part, sales, leases, loans or the provision of services between a party in interest and a plan (or an entity whose assets are deemed to constitute the assets of a plan), as well as the use of plan assets by or for the benefit of a party in interest or a transfer of plan assets to a party in interest.⁷ Under ERISA section 408(a) and Code section 4975(c)(2), the Department has the authority to grant exemptions from such “prohibited transactions” in accordance with its exemption procedures if the Department finds that an exemption is (1) administratively feasible for the Department; (2) in the interests of the plan and of its participants and beneficiaries; and (3) protective of the rights of participants and beneficiaries.⁸ PTE 84–14 reflects the Department’s conclusion that it could provide broad relief from the prohibited transaction provisions of ERISA section 406(a) and Code section 4975(c)(1) only if the commitments and the investments of plan assets and the negotiations leading thereto are the sole responsibility of an independent discretionary manager the meets the exemption’s conditions.

10. PTE 84–14 Section I(g) prevents an entity that may otherwise meet the QPAM definition from utilizing the exemptive relief provided by PTE 84–14 for itself and its client plans, if that entity, an “affiliate” thereof,⁹ or any direct or indirect five percent or more owner in the QPAM has within 10 years immediately preceding the transaction, been: (1) either convicted or released from imprisonment, whichever is later, as a result of criminal activity described in Section I(g); or (2) engaged in prohibited misconduct as described in

that section (in both cases subject to the Ineligibility Date described in Section I(h)).¹⁰

11. The Department’s inclusion of Section I(g) in PTE 84–14 is, in part, based on an expectation that QPAMs will maintain a high standard of integrity. This expectation extends not only to the QPAM itself but also to those who may be in a position to influence the policies of the QPAM.

Five Relevant Convictions

The 2017 UBS Conviction

12. In 2013, UBS Securities Japan Co. Ltd. (UBS Securities Japan) pled guilty to a crime arising out of its fraudulent submission of Yen London Interbank Offer Rate (Yen LIBOR) rates between 2006 and 2009, and its participation in a scheme to defraud counterparties to interest rate derivatives trades executed on its behalf, by secretly manipulating certain benchmark interest rates to which the profitability of those trades was tied (the 2013 UBS Conviction).¹¹

13. In connection with misconduct related to the 2013 UBS Conviction, UBS and the DOJ entered into a Non-Prosecution Agreement (the LIBOR NPA) wherein the DOJ agreed not to criminally prosecute UBS for any crimes related to UBS’s misconduct involving its submission of Yen LIBOR rates and other benchmark rates between 2001 and 2010 (LIBOR Manipulation). As a condition for the DOJ’s agreement not to prosecute UBS for the LIBOR Manipulation, UBS was required, among other things, to avoid engaging in additional criminal activity for two years from the date of the NPA.

14. Separately from the LIBOR Manipulation and after entering into the NPA, UBS was also revealed to have participated in certain deceptive currency trading and sales practices with respect to certain foreign exchange (FX) market transactions and collusive conduct in certain FX markets (FX Misconduct). The DOJ determined that by engaging in the FX Misconduct, UBS had breached the terms of the LIBOR NPA. As a result, UBS entered a guilty plea and was convicted on January 10, 2017 of engaging in the LIBOR Manipulation that was the subject of the LIBOR NPA—specifically, UBS pled

guilty to a scheme to defraud counterparties to interest rate derivatives transactions by secretly manipulating benchmark interest rates to which the profitability of those transactions was tied. This is referred to as the “2017 UBS Conviction”.¹² PTE 84–14, Section I(g), disqualifies UBS-related QPAMs from relying on the relief set forth in PTE 84–14 for ten years, from January 10, 2017, to January 9, 2027.

The 2014 CSAG Conviction

15. On May 19, 2014, the Tax Division of the United States Department of Justice (DOJ) and the U.S. Attorney’s Office for the Eastern District of Virginia filed a one-count criminal information in the District Court for the Eastern District of Virginia charging CSAG with a conspiracy to violate Code section 7206(2) in violation of Title 18, United States Code, Section 371. According to the Statement of Facts, for decades before and through approximately 2009 CSAG operated an illegal cross-border banking business that knowingly and willfully aided and assisted thousands of U.S. clients in opening and maintaining undeclared accounts that concealed offshore assets and income from the IRS. On May 19, 2014, pursuant to a plea agreement (the Plea Agreement), CSAG entered a plea of guilty for assisting U.S. citizens in federal income tax evasion. The District Court entered a judgment of conviction against CSAG on November 21, 2014. PTE 84–14, Section I(g), disqualifies CSAG-related (and, thus, UBS-related QPAMs) from the relief set forth in PTE 84–14 for ten years, from November 21, 2014 to November 20, 2024.

The 2019 UBS France Conviction

16. In 2013, France opened an investigation into UBS, UBS France, and certain former employees of UBS France S.A. The investigation centered on the maintenance of foreign (“cross-border”) UBS bank accounts held for private citizens. Following a trial in the French First Instance Court, the French court convicted UBS and UBS France on February 20, 2019, of illegally soliciting clients from 2004 to 2012 and laundering the proceeds of tax fraud from 2004 to 2012. PTE 84–14, Section I(g), disqualifies UBS-related QPAMs from relying on the relief in PTE 84–14 for ten years, from February 20, 2019 to February 19, 2029.

¹² In PTE 2023–14, the Department erroneously referred to this conviction as the 2018 Conviction. The actual conviction occurred on January 10, 2017 (as described in the prior UBS PTE 2020–01).

⁷ The prohibited transaction provisions also include certain fiduciary prohibited transactions under ERISA section 406(b) and Code section 4975(c)(1)(E) and (F). These include transactions involving fiduciary self-dealing, fiduciary conflicts of interest, and kickbacks to fiduciaries. PTE 84–14 provides only very narrow conditional relief for transactions described in ERISA section 406(b).

⁸ 29 CFR part 2570, subpart B at 76 FR 66637, 66644, October 27, 2011, amended at 89 FR 4662, January 24, 2024.

⁹ Section VI(d) of PTE 84–14 defines the term “affiliate” for purposes of Section I(g) as “(1) Any person directly or indirectly through one or more intermediaries, Controlling, Controlled by, or under Common Control with the person; (2) Any director of, Relative of, or partner in, any such person, (3) Any corporation, partnership, trust or unincorporated enterprise of which such person is an officer, director, or a five percent or more partner or owner; and (4) Any employee or officer of the person who—(A) Is a highly compensated employee (as defined in Code section 4975(e)(2)(H) or officer (earning ten (10) percent or more of the yearly wages of such person); or (B) Has direct or indirect authority, responsibility, or control regarding the custody, management or disposition of Plan assets.”

¹⁰ The prohibited misconduct provision is effective on June 17, 2024.

¹¹ In connection with the 2013 Conviction, the UBS QPAMs received exemptive relief to continue to rely on PTE 84–14 notwithstanding such conviction. However, the disqualification period under Section I(g) of PTE 84–14 with respect to the 2013 Conviction expired on or about February 19, 2023 and therefore the UBS QPAMs no longer require an exemption to continue to rely on PTE 84–14 with respect to that conviction.

The 2022 Credit Suisse Securities (Europe) Limited (CSSEL) Conviction

17. On October 19, 2021, the DOJ, Criminal Division, Money Laundering and Asset Recovery Section and Fraud Section, and the United States Attorney's Office for the Eastern District of New York, filed a criminal information in the District Court for the Eastern District of New York charging CSSEL with one count of conspiracy to commit wire fraud in violation of 18 U.S.C. 1349. CSSEL agreed to resolve the action through a plea agreement presented to the New York District Court on October 19, 2021 (the CSSEL Plea Agreement). Under the CSSEL Plea Agreement, CSSEL agreed to enter a plea of guilty to the charge set out in the CSSEL information (the CSSEL Plea). The District Court entered a judgment of conviction against CSSEL on July 22, 2022. PTE 84–14, Section I(g), disqualifies CSAG-related QPAMs (and, thus, UBS-related QPAMs) from relying on the relief set forth in PTE 84–14 for ten years, from July 22, 2022 to July 21, 2032.

Prior Exemptions

18. The UBS entities of UBS Asset Management (Americas) Inc., UBS Realty Investors LLC, UBS Hedge Fund Solutions LLC, and UBS O'Connor LLC (the Prior UBS Applicants) and two CSAG asset management affiliates, Credit Suisse Asset Management, LLC and Credit Suisse Asset Management Limited, as well as other entities in which CSAG owned a five percent or more interest (cumulatively, the Prior Applicants), historically relied on the exemptive relief provided in PTE 84–14. To protect Covered Plans from the costs and harms that could arise if the Prior Applicants lost their ability to engage in beneficial transactions on behalf of the Covered Plans due to the convictions described above, the Department issued a number of individual exemptions. The Department's practice was to issue temporary short-term exemptions that generally lasted for a one-year period to enable the Department to conduct an in-depth evaluation of the Prior Applicants' criminal activity and compliance regimes. These short-term temporary exemptions afforded the Department time to: (i) ascertain whether exemptive relief was warranted based on a robust demonstration from Applicants of the harms that could be sustained by Covered Plan clients if the Department chose not to provide longer-term relief; (ii) develop stringent conditions designed to safeguard the interests of Covered Plan clients; and (iii) more fully develop the factual

record to determine if it supports relief. Generally, the temporary exemptions were followed by longer-term exemptions that were limited to four or five-year time periods. These longer term (but still temporary) exemptions provided the Department with a further opportunity to ascertain whether the exemptions continued to be in the interest of the Applicant's Covered Plan clients and the conditions continued to be protective of their rights and interests. In connection with Credit Suisse-related convictions, the Department issued the following exemptions: PTE 2022–01 (87 FR 1186 (Jan. 10, 2022)); PTE 2019–07 (84 FR 61928 (Nov. 14, 2019)); PTE 2015–14 (80 FR 59817 (Oct. 2, 2015)); PTE 2014–11 (79 FR 68716 (Nov. 18, 2014)). In connection with the UBS-related convictions, the Department issued: PTE 2020–01 (85 FR 8020 (Feb. 12, 2020)); PTE 2019–01 (84 FR 6163 (Feb. 26, 2019)); PTE 2017–07 (82 FR 61903 (Dec. 29, 2017)); PTE 2016–17 (81 FR 94049 (Dec. 22, 2016)); PTE 2013–09 (78 FR 56740 (Sep. 13, 2013)).

Merger of UBS and CSAG

19. PTE 2020–01 permitted the UBS asset managers to continue to rely on PTE 84–14 only if, among other things, UBS and its affiliates had not been convicted of a crime described in Section I(g) of PTE 84–14 over the prior 10 years, other than the UBS-related convictions described above. Similarly, PTE 2022–01 permitted Credit Suisse QPAMs to continue to rely on PTE 84–14 only if, among other things, such entities and their affiliates had not been convicted of a crime described in Section I(g) of PTE 84–14 other than the CSAG-related convictions described above. Following the Merger, UBS was affiliated with CSAG and CSSEL; therefore, the convictions attributable to CSAG and CSSEL resulted in a violation of PTE 2020–01. In addition, CSAG was affiliated with UBS, UBS Securities Japan, and UBS France, and was accountable for the convictions attributable to those entities in violation of PTE 2022–01.

20. In order to protect Covered Plans that could be harmed by the sudden loss of PTE 2020–01 and PTE 2022–01 due to the Merger, the Department granted PTE 2023–14 which was effective on the Merger date (June 12, 2023). PTE 2023–14 granted relief only for the one-year period following the closing of the Merger in order to afford Department sufficient time to build a record upon which it could make its findings under ERISA section 408(a) that longer-term exemptive relief was warranted and for UBS and Credit Suisse's covered plan

clients to exercise their discretion to find a different investment manager in the event they deemed it was prudent to do so in light of the numerous convictions of these entities and their affiliates.

Application for Five-Year Extension

21. On February 22, 2024, UBS applied to the Department for a five-year extension of the relief granted in PTE 2023–14 that would allow the UBS QPAMs to rely on PTE 84–14 notwithstanding the 2014 CSAG Conviction, the 2022 CSSEL Conviction, the 2017 UBS Conviction, and the 2019 UBS France Conviction. These four criminal convictions are hereinafter referred to as the "Covered Convictions."¹³ The Applicant represents that the conduct underlying the Covered Convictions occurred within business divisions that are separate from UBS QPAMs and that the UBS QPAMs are insulated from the business divisions where the wrongdoing incurred by policies, procedures, and dedicated personnel.

22. *Department's Note:* Although only the Covered Convictions would cause the UBS QPAMs to become ineligible under PTE 84–14 Section I(g), the Department also is concerned about the conduct underlying the 2013 UBS Conviction and the FX Misconduct. Therefore, the Department has conditioned relief in the proposed exemption on the Applicant's insulation of the UBS QPAMs from the conduct underlying the Covered Convictions, the FX Misconduct, and the 2013 UBS Conviction (referred to in the aggregate as the Criminal Activity). Accordingly, the Department uses the term "Misconduct Entity" in the proposed exemption to refer to any of the following: an entity subject to one of the Covered Convictions, *i.e.*, UBS, UBS France (recently merged into UBS Europe), CSAG and CSSEL; an entity that is the subject of the 2013 Conviction, *i.e.*, UBS Securities Japan; and the entity that is the subject of the FX Misconduct, *i.e.*, also UBS. Similarly, the Department uses the term "Criminal Activity" in the proposed exemption to refer to the facts underlying the Covered Convictions, the 2013 UBS Conviction, and the FX Misconduct in order to ensure the insulation of the UBS QPAMs from the past criminal behavior of entities in the UBS and Credit Suisse corporate families.

¹³ As noted above, the UBS QPAMs represent that they no longer need exemptive relief from the prohibitions of PTE 84–14 Section I(g) with respect to the 2013 UBS Conviction.

23. In its exemption application, UBS represents that every independent audit that has been performed has determined that the UBS QPAMs met the terms and conditions of each exemption. Finally, as described below, UBS represents that an exemption would prevent significant harms and costs from being imposed on the UBS QPAMs' Covered Plan clients if the UBS QPAMs no longer could rely on the relief provided in PTE 84–14.

Retroactive Relief Periods

24. Based on its review of the record, the UBS QPAMs appear to have lost their exemptive relief for the period from June 12, 2023, through June 11, 2024 (the PTE 2023–14 Period) because of their failure, during the pendency of the exemption, to comply with the audit conditions set forth in Section III(j) of PTE 2023–14, as described below.

25. In addition, UBS will not have relief for the period subsequent to the original term of PTE 2023–14, which expires on June 12, 2024, until the date the Department grants an exemption (if it determines the record supports the grant of a final exemption). These two periods are discussed more fully below.

Retroactive Relief Relating to the PTE 2023–14 Period

26. Section I(i) of PTE 2020–01 provides that each UBS QPAM must submit to an audit conducted by an independent auditor, who has been prudently selected and who has appropriate technical training and proficiency with ERISA and the Code, to evaluate the adequacy of, and each UBS QPAM's compliance with, the Policies and Training described herein. As UBS stated in its exemption application, “[t]he purpose of the independent audit is to give [Covered Plans] clients and the Department the confidence that the asset manager is complying with ERISA, and that continued exemptive relief is warranted.” Under this provision, the UBS QPAMs were required to complete an audit for the period from March 20, 2023 through March 19, 2024. However, PTE 2023–14 truncated this period due to the Merger, which was effective on June 12, 2023.

27. Section III(j)(1) of PTE 2023–14 requires the UBS QPAMs to complete an audit for the period from March 20, 2023 through June 12, 2023 (the beginning date of the one-year exemption provided in PTE 2023–14), which is referred to herein as the “stub period audit” within 180 days of June 12, 2023 (by December 9, 2023).¹⁴

Section III(j)(7) required the General Counsel or one of the three most senior executive officers of the UBS QPAM to which the audit report applies to certify the audit; Section III(j)(8), required the Risk Committee of UBS's Board of Directors to be provided with a copy of the Audit Report, and for a senior executive officer of UBS's Compliance and Operational Risk Control function to review the Audit Report for each UBS QPAM and certify in writing, under penalty of perjury, that such officer has reviewed the Audit Report; and III(j)(9) required each UBS QPAM to provide its certified Audit Report to the Department no later than 45 days following completion of the Audit Report (January 23, 2024). The Department required these audits in order to specifically and closely assess whether the UBS QPAMs remain insulated from the convicted UBS and Credit Suisse entities and could be trusted to safeguard plan assets, notwithstanding the convictions. On May 3, 2024, UBS' counsel notified the Department that UBS failed to complete the stub period audit report. UBS did not submit the certified audit report to the Department until May 10, 2024.

28. The record currently before the Department indicates that UBS did not engage the Independent Auditor, Fiduciary Counselors Inc, to complete the stub period audit until March 18, 2024, notwithstanding the fact that PTE 2023–14 required the audit to be completed by December 9, 2023, and for the audit report to be certified and submitted to the Department by January 23, 2024.¹⁵ UBS should have engaged an independent auditor well in advance of the dates set forth in Section III(j) of the exemption for the audit to be timely completed and for the audit report to be timely certified and submitted to the Department. Because it failed to meet this exemption condition, UBS did not comply with the requirements for relief

(PTE 2020–01) required an audit to be performed covering the period of March 20, 2023 through March 19, 2024. However, due to the timing of the merger (June 2024) the audit period shifted from a March-to-March cycle to a June-to-June cycle. Due to this shift, an audit was required for a “stub” period from the beginning of the March audit period on March 20, 2024, through the date of the merger on June 12, 2024. The audit requirement for this “stub” period was included in both the Department's proposed relief, and following a comment period, retained in the final exemption.

¹⁵ In a supplemental letter to the Department dated May 29, 2024, UBS' counsel informed the Department that the auditor notified UBS about the failure to complete the stub audit in January 2024, and the auditor sent a draft of the engagement letter to perform the audit to UBS on February 12, 2024. These events occurred before the Department received UBS' exemption application on February 23, 2024, and UBS should have disclosed them in its exemption application.

in PTE 2023–14 and engaged in non-exempt prohibited transactions for which it now requests relief.

29. In its exemption application, UBS stated that “. . . through independent audits required by the Department, the UBS QPAMs have proven, on an annual basis for many years, that they are in compliance with ERISA and protective of plan assets. In every category, and in every audit, the independent auditor has deemed that the UBS QPAMs met the terms of the exemption.” As stated above, however, based on the record, it appears that UBS became aware that the UBS QPAMs failed to complete the stub period audit report in January 2024, and did not notify the Department of this failure until May 3, 2024. The Department's exemption procedure regulation provides that “[w]hile an exemption application is pending final action with the Department, an applicant must promptly notify the Department in writing if he or she discovers that any material fact or representation contained in the application . . . is inaccurate, [or] if any such fact or representation changes during this period. . . .” Under the exemption procedure, UBS had an affirmative obligation to notify the Department of its failure to complete the stub period audit, and therefore to comply with a core condition of the exemption, well before it notified the Department on May 3, 2024.

30. Because the UBS QPAMs failed to comply with the audit conditions of the exemption, they lost the benefit of the relief provided by PTE 2023–14, and the Department is considering whether it should grant retroactive relief extending back to June 12, 2023 as part of this exemption, which would otherwise provide relief only from June 12, 2024 through June 11, 2029.¹⁶ The Department requests comments from UBS, the public, and interested parties on whether retroactive relief is appropriately including in this exemption, which would extend exemptive coverage to include the period from June 12, 2023 to June 11, 2024, as well as June 12, 2024 to June 11, 2029. In this connection, UBS should provide a detailed statement as to how a grant of retroactive relief would be consistent with the requirements for such relief as set forth in 29 CFR 2570.35(d).

31. The Department, however, will consider granting retroactive relief in connection with this proposal to the extent that UBS demonstrates to the Department that such relief is

¹⁶ The Department's requirements for retroactive relief are set forth in 29 CFR 2570.35(d).

¹⁴ The stub audit was required because UBS' audit cycle under its prior QPAM section I(g) five-year exemption that was in effect before the merger

appropriate in this exemption. In this connection, UBS should provide a detailed statement as to how it has satisfied the requirements for retroactive relief as set forth in 29 CFR 2570.35(d).

32. Specifically, for the Department to grant retroactive relief, UBS must explain how the Covered Plans were adequately safeguarded, notwithstanding UBS's failure to (1) contract with an auditor for the stub period audit and (2) timely certify, under penalty of perjury, that UBS reviewed this audit. The UBS QPAMs must also demonstrate that at a minimum that the UBS QPAMs: (i) ensured and will ensure that appropriate safeguards were established during the PTE 2023–14 Period to protect the interests of Covered Plan clients;¹⁷ (ii) Covered Plan clients were not harmed by non-exempt transactions during the PTE 2023–14 Period;¹⁸ (iii) a responsible plan fiduciary acted (and is acting) in good faith and took (and will take) appropriate steps that are necessary to protect the Covered Plans from abuse, loss, and risk during the PTE 2023–23 Period; and (iv) the UBS QPAMs have adjusted their policies and procedures in light of past failures to comply with PTE 2023–14 to ensure that such failures will not reoccur.¹⁹

33. The Department also invites comment from the UBS QPAMs, the independent auditor, UBS, and Covered Plans regarding whether UBS acted in good faith in engaging in the transactions permitted by PTE 2023–14, notwithstanding the fact that the UBS QPAMs, the independent auditor, and UBS failed to timely comply with an essential condition of the exemption.

34. The Department further requests UBS to provide detailed information to the Department regarding the costs and harms Covered Plans would occur if the Department does not grant retroactive relief for the period from June 12, 2023, to June 11, 2024. This detailed information should include, but not be limited to, a quantified estimate of the size of the losses Covered Plans would suffer if retroactive relief is not granted, and an explanation of the methodology UBS used to calculate these amounts and the underlying assumptions UBS used in its calculation. The Department notes that receipt of this explanation and detailed estimate of specific dollar amounts of the costs and harms is critical to its decision regarding whether it will grant retroactive relief to UBS.

Retroactive Period Relating to Filing Date of UBS' Exemption Application

35. As previously stated, PTE 2023–14 allowed the UBS QPAMs to continue to rely on the QPAM exemption for a one-year period following the Merger date notwithstanding the Convictions. This relief was necessary, because the relief granted to QPAMs before the Merger was no longer available on the effective date of the Merger. To receive further relief after the end of the one-period in PTE 2023–14, the UBS QPAMs would have to submit another exemption application to the Department to receive relief after the Merger.

36. The Department issued a clear statement to Covered Plan fiduciaries in the preamble to PTE 2023–14's proposal that clearly indicated that in order for the UBS QPAMs to receive relief beyond the one-year period in PTE 2023–14, they must submit sufficient written information to the Department substantially in advance of the expiration of the exemption's one-year term to permit the Department to make its requisite findings under ERISA section 408(a).²⁰ The Department also stated in that preamble that, it "is requesting detailed information from UBS and CSAG regarding the costs and harms to Covered Plans, if any, that could arise if the UBS QPAMs and the [CSAG QPAMs] can no longer rely on PTE 2020–01 and PTE 2022–01 following the Merger." Finally, the Department stated that, "if UBS and CSAG do not submit detailed and reliable information in this regard, the Department will not extend the relief [proposed] in this exemption beyond one year."²¹

37. The Department made these statements in the preamble to the notice of proposal for PTE 2023–14 to ensure that the UBS QPAMs were aware that they needed to submit their exemption application for extended relief sufficiently in advance of the expiration of the relief provided in PTE 2023–14 for the Department to be afforded with sufficient information and time to develop a complete required record upon which it could determine whether the Department could make its requisite findings under ERISA section 408(a) that UBS' requested exemptive relief is (1) administratively feasible, (2) in the interest of its Covered Plan clients, (3) and protective of the rights of its Covered Plan client's participants and beneficiaries.²²

²⁰ 88 FR 30785, 30786 (May 12, 2023).

²¹ *Id.* at 30788.

²² ERISA section 408(a) also requires the Secretary to publish a notice in the **Federal Register** of the pendency of an exemption, provide adequate

38. Nevertheless, UBS did not submit its application until February 22, 2024, and the application failed to convincingly establish the specific "costs and harms to Covered Plans," as requested by the Department in the preamble to proposed PTE 2023–14.²³ Further, as noted above, UBS and the UBS QPAMs failed to perform and certify the stub period audit in accordance with Section III(j) of PTE 2023–14, and did not disclose this failure in the February 22, 2024, exemption application which further complicated and delayed the Department's ability to review and resolve UBS' exemption application. For all these reasons, the Department has not been given sufficient information and time to develop a complete record, publish a proposed exemption with adequate public notice and comment, and issue a final exemption before the June 11, 2024 that grants all the requested exemptive relief prior to the expiration date provided in PTE 2023–14. In particular, the Department cannot make the required findings under ERISA section 408(a) that UBS' requested exemptive relief is (1) administratively feasible, (2) in the interest of its Covered Plan clients, (3) and protective of the rights of its Covered Plan clients' participants and beneficiaries, without additional submissions, public comments, and review.

39. Nonetheless, to protect Covered Plans, the Department is proposing to grant UBS retroactive relief from the date the Department publishes a final exemption (if granted) back to June 12, 2024, provided that UBS demonstrates, as part of the public notice and comment process, that the Department can make the required findings under ERISA Section 408(a) and that UBS will properly safeguard Covered Plans from harm. Since this retroactive relief period has not yet occurred, the Department also is requesting UBS to represent in a statement made in its comment response to this proposed exemption that it will continuously adhere to the conditions of PTE 2023–14 through the effective date of a final exemption (if granted). Moreover, to ensure that Covered Plans are adequately protected, the Department seeks comments from UBS and the public on whether it should grant retroactive relief for the period that would have been covered by PTE 2023–14, but for the failure to comply with the audit condition. As

notice to interested persons, and afford interested persons with an opportunity to comment on the proposed exemption.

²³ UBS did not provide this detailed information until May 2, 2024, a little more than a month from the expiration of PTE 2023–14.

¹⁷ 29 CFR 2570.35(d)(1)(i).

¹⁸ 29 CFR 2570.35(d)(1)(ii).

¹⁹ *Id.*

discussed below, the Department also proposes to add an additional condition designed to minimize the risk of future harm to Covered Plans.

Harm to Covered Plans in the Absence of QPAM Relief

40. Before it grants relief from ineligibility under PTE 84–14 Section I(g) due to a conviction or misconduct, the Department requires ineligible QPAMs to provide detailed statements that demonstrate and quantify the harms that Covered Plan clients would experience if the QPAMs were unable to rely on PTE 84–14 due to ineligibility. In its exemption application and in a response to a request for supplemental information from the Department, UBS provided the Department with the following estimates of the costs that each type of portfolio managed by the UBS QPAMs would incur if denied relief. The application assumed that Covered Plan assets would have to be liquidated because of the unavailability of PTE 84–14 with the following consequences for Covered Plans.²⁴

41. UBS Hedge Fund Solutions provides customized portfolios of hedge funds that are run as plan asset funds. UBS Hedge Fund Solutions manages approximately \$6.8 billion as part of this business. UBS estimated that these customized hedge fund portfolios would lose \$46.8 million if the covered plans liquidated their assets because the UBS QPAMs could not rely upon PTE 84–14. In calculating the estimates of losses in the event these portfolios were liquidated, UBS assumed that its clients would immediately request full redemptions and any current illiquid/side pocket investment would need to be sold in the secondary market at a 30 percent discount.

42. UBS Hedge Fund Solutions also provides investment advice to a private pension client that is invested in a customized portfolio of credit funds, including private credit funds. UBS Hedge Fund Solutions currently manages \$1.3 billion for this client. Due to the less liquid nature of these holdings, UBS estimates that it would take from two to six years to liquidate these holdings, or sometimes longer under the investments terms. UBS estimates that the costs of liquidation would be \$14.5 million. This estimate

assumes that any investment that would take five years or longer to be redeemed would be sold in the secondary market at a 30 percent discount.

43. UBS Hedge Fund Solutions is also a platform manager for select managed accounts with third party trading advisers. In this role, UBS Hedge Fund Solutions provides investment advice to pension clients as well as non-ERISA clients to invest in commingled managed accounts, which are run as plan asset funds. UBS Hedge Fund Solutions manages approximately \$406.6 million as part of this business. If UBS QPAMs are no longer allowed to rely on PTE 84–14, UBS estimated that the economic loss for these investors would be \$29.1 million. This estimate assumes the entire portfolio would be liquidated and the Covered Plan clients would pay the related transaction costs.

44. UBS also estimated the loss to active equity portfolios if UBS QPAMs were no longer able to rely on PTE 84–14. These equity portfolios cover large, small and mid-cap equity securities, and pursue a variety of strategies. Within these portfolios, UBS QPAMs managed approximately \$727 million in assets for ERISA plan clients. UBS estimates that liquidation costs for these portfolios would amount to approximately \$6.2 million based on a transaction cost model.

45. UBS offers a range of strategies across the global fixed income asset class spectrum. These strategies trade a variety of products, such as investment grade and non-investment grade debt securities, US treasuries, agency and non-agency mortgage-backed securities, and related derivatives. UBS QPAMs manage approximately \$1.1 billion in fixed income strategies for ERISA plan clients. If the Department does not grant an exemption, UBS estimates that the liquidation costs to these plans will be approximately \$3.84 million. To calculate these estimates, UBS constructed a bid/offer spread model based on the individual securities held in each client portfolio. The model assumes that liquidation will not occur during a time of market stress, and UBS suggests that the estimates may therefore be low.

46. UBS Investment Solutions²⁵ manages portfolios primarily based on a long-term, fundamental analysis, but may also employ different strategies as dictated by client investment guidelines and/or market conditions and may allow long and/or short positions in

markets, currencies, or other portfolio factors through the use of derivatives. UBS Investment Solutions may also employ long/short investment strategies that purchase securities on margin and/or sell securities short were permitted by client guidelines. UBS QPAMs manage approximately \$934 million in Investment Solutions strategies for ERISA plan clients.

47. If the Department does not grant an exemption, UBS estimates that liquidation costs for those portfolios will amount to \$358,907.

48. Credit Investments Group (CIG) is a business unit within UBS Asset Management Americas LLC. As part of its business, CIG manages an ERISA client account with a net asset value of \$109 million. In the event of a portfolio liquidation scenario, CIG would typically initiate what is effectively an auction process for every unique line item in the portfolio and invite various loan trading desks to bid on each asset. In this auction process, positions marked below 80 percent reasonably would be estimated to trade at least 10 percent below the current mark. Based on this, and other, assumptions, UBS estimates economic loss of \$2 million to the ERISA client's account in the event of liquidation.

49. In addition to the liquidation costs described above, UBS also represents that its Covered Plan clients would incur other costs associated with losing relief under PTE 84–14, such as costs of performing due diligence on a replacement manager, liquidating the legal entity, setting up a new legal entity with a replacement manager, building back a portfolio, losing capacity in closed or customized hedge funds, transferring positions, being out of the market, losing time invested for purposes of lock up periods, and costs associated with the paying commissions when a new manager sells the Covered Plans' current securities and buys new securities that it prefers. Hereinafter, these costs, and any other cost that may be incurred by a Covered Plan due to a UBS QPAM's loss of relief under PTE 84–14, other than a Liquidation Cost, is referred to as an additional cost.

Department's Request for Additional Information Regarding the Liquidation Costs and Additional Costs

50. The Applicant's representations imply that if the exemption is not granted, all affected Covered Plans will need to liquidate their investments. If that was not the Applicant's intent, the Department requests the Applicant to revise its Liquidation Costs estimates to reflect the view that not all Covered Plans would need to liquidate their

²⁴ The Department notes that UBS provided information not mentioned in this proposal regarding the potential losses to ERISA clients, but without clearly identifying the dollar amount of losses to plans in concrete terms. In such cases, the Department does not have enough information to include such representations in its findings. However, the information the Applicant provided that the Department can rely on is described below.

²⁵ It is the Department's understanding that UBS Investment Solutions is a team within UBS that manages portfolios based on an asset allocation investment process.

investments if the exemption is not granted, along with the methodology the Applicant used to provide the estimates, and the factors that may affect those estimates.

51. Section III(k)(2) of PTE 2023–14 requires that any arrangement, agreement, or contract between the UBS QPAMs and Covered Plans, include an obligation for the QPAM to indemnify and hold harmless Covered Plans from actual losses. This includes the losses and related costs arising from unwinding transactions with third parties and from transitioning Covered Plan assets to an alternative asset manager as well as costs associated with any exposure to excise taxes under Code section 4975 as a result of a QPAM's inability to rely upon the relief in PTE 84–14.²⁶

52. Accordingly, it is unclear why the Covered Plans would incur the Liquidation Costs and Additional Costs identified by the Applicant, in the event relief were not granted. To the extent the Applicant does not believe Covered Plans are contractually protected from these costs, the Department requests comment from the Applicant identifying and describing the extent to which the Liquidation Costs and/or Additional Costs are outside the scope of Section III(k)(2), and the Applicant's explanation of why such costs are outside the scope of Section III(k)(2).

53. The Department also requests comments on whether there are other potential costs or benefits associated with the failure to grant retroactive relief that are not addressed by the questions above. For example, what impact would the denial of retroactive relief have on the willingness of parties to rely on the QPAM exemption in the future? To what extent is the denial of retroactive relief proportionate or disproportionate with the failure of the

exemptions of PTE 2023–14? Are there other issues or considerations that the Department should address before making a determination on retroactive relief?

Audits of Credit Suisse

54. Newport Trust Company (Newport) conducted the audits of Credit Suisse Asset Management, LLC (CSAM LLC) before the merger between UBS and Credit Suisse AG. The most recent PTE 2022–01 required UBS to submit to an audit by an independent auditor for the period of November 21, 2022, to June 11, 2023. In its audit report Newport determined that CSAM was in compliance with the terms and conditions of PTE 2022–01. Moreover, Newport had no recommendations to strengthen the Exemption Review by the Compliance Officer or any new recommendations to strengthen CSAM LLC's exemption compliance program, or any recommendation specific to the Policies or Training.

55. Newport represents in its latest audit report that it conducted a thorough due diligence process to conduct the audit and issue the report for the covered period. Its examination involved ongoing contact with representatives of CSAM, reviews of the Policies and Training, testing of data related to Plan accounts, review of collected data, testing of CSAM's operational compliance with the Policies and Training, and preparation of the Audit Report.

In making its determinations, Newport:

(1) reviewed the following Policies and evaluated their adequacy during the Covered Period—CSAM's ERISA Compliance Manual, including appendices on PTE 2022–01, Parties in Interest, and QPAM Compliance Guidance; “Handling of ERISA Related MyIncidents Procedure;” and CSAM's best execution policy. Numerous CSAG risk policy publications, including policies on data management, policies governing interactions with and exchange of information with regulators, government agencies, and legislative bodies; global regulatory reporting accountability policy; records management global policy; policy prohibiting certain persons serving as employee, officers or directors of Credit Suisse affiliates.

(2) gathered and reviewed extensive documentation and information from CSAM to determine compliance with the terms of the exemption—including marketing materials, numerous internal and external written correspondence, correspondence with regulators (including Forms ADV for CSAM), financial documents, balance sheets, records of best execution, internal announcements, compliance records from CSAG compliance systems, trading records and spreadsheets detailing corrections of

trading errors; copies of notices required under PTE 2022–01 and prior exemptions, personnel files, sample internal documents, etc.

(3) reviewed updates to the Training program content and anticipated content for upcoming online training;

(4) reviewed the Annual Exemption Review and report completed by the Compliance Officer (“Annual Exemption Report”) and evaluated its adequacy; and

(5) developed tests to evaluate CSAM's operational compliance with the Policies, including manager independence, ERISA compliance, communications with regulators and Plan/IRA clients, and Exemption compliance and corrections during the Covered Period, with particular focus on class actions and complying with limits on employer securities.

Newport also validated that certain follow-up actions from its preceding audit were completed.

Audits of UBS

56. Fiduciary Counselors Inc. (FCI) conducted the audits of UBS QPAMs pursuant to PTE 2020–01. FCI confirmed that the UBS QPAMs fulfilled the terms and conditions of the exemption during the audit periods of February 20, 2020 through March 19, 2021; March 20, 2021 to March 19, 2022; March 20, 2022 to March 19, 2023; and March 20, 2023 to June 11, 2023. FCI also concluded that the QPAMs' policies and procedures are reasonably designed to ensure that each QPAM continues to operate in a manner compliant with ERISA and the requirements of the exemption.

57. During the course of the audits performed since the effective date of PTE 2020–01, Fiduciary Counselors Inc. reviewed the following:

(1) marketing materials directed to Covered Plans, investment committee minutes, client complaints, compliant policies, broker dealer reports, billing records, and consent forms for PTE 77–4, Compliance Office Exemption Reports, ADV Forms, gifts and entertainment policies, performance reports and disclosures;

(2) trading system, guideline breaches and ERISA breach hardcoding process in trading system, any guideline breaches and correspondence files associated with the breaches.

(3) client adoption process.

(4) compliance with the following PTE 84–14 requirements: power to appoint rule, the 20% rule, that the counterparty is not a UBS QPAM or a person related to the UBS QPAM, the transaction is not an excluded transaction, shareholders' or partners' equity of the QPAM is at least \$1 million, and total client assets under management and control of the QPAM/investment adviser is at least \$85 million.

(5) whether required notices under PTE 2020–01 were sent timely and appropriately, whether additional communications are sent

²⁶ PTE 2023–14, Section III, Condition (k) states, in part, “. . . with respect to any arrangement, agreement, or contract between an Affiliated QPAM and a Covered Plan, the QPAM agrees and warrants to Covered Plans . . . (2) To indemnify and hold harmless the Covered Plan for any actual losses resulting directly from the QPAM's violation of ERISA's fiduciary duties, as applicable, and of the prohibited transaction provisions of ERISA and the Code, as applicable; a breach of contract by the QPAM; or any claim arising out of the failure of such QPAM to qualify for the exemptive relief provided by PTE 84–14 as a result of a violation of Section I(g) of PTE 84–14, other than a Conviction covered under this exemption. This condition applies only to actual losses caused by the QPAM's violations. The term Actual Losses includes, but is not limited to, losses and related costs arising from unwinding transactions with third parties and from transitioning Plan assets to an alternative asset manager as well as costs associated with any exposure to excise taxes under Code section 4975 as a result of a QPAM's inability to rely upon the relief in the QPAM Exemption;”

in a timely manner, and whether training was held in a timely manner.

(6) proof of training, content of training; proof of ethics training, training of new hires, conduct interviews with portfolio managers regarding effectiveness of training and suggested improvements, online training modules, training system and process of assigning courses to employees and process for employees completing assigned training.

(7) the written Exemption Report prepared by the Compliance Officer for compliance with the requirements of PTE 2020–01.

58. FCI also validated that certain follow-up actions from its preceding audit were completed. Namely, in its prior audit report, FCI recommended that the UBS QPAMs develop processes to identify affiliates of the party in interest with the authority to appoint or terminate the QPAM or negotiate the terms of the QPAM's management agreement with the plan.

New Conditions in the Proposed Exemption

59. By failing to comply with the audit requirement in PTE 2023–14, the Applicant breached a core protective condition of the exemption. In order to address this failure and to prevent its reoccurrence or the occurrence of any additional failures, the Department is proposing to add additional conditions to those it included in PTE 2023–14. The first new proposed condition in Section III(v)(4) of the proposed exemption would require each UBS QPAM to develop written processes that clearly describe: (1) how the QPAM identifies and quantifies “actual losses” for purposes of Section III(j)(2); and (2) how Covered Plans may recover or avoid incurring the losses that the UBS QPAM must indemnify or hold Covered Plans harmless from incurring pursuant to Section III(j)(2). Each UBS QPAM must develop these processes within 30 days after the date the Department publishes a final exemption in the **Federal Register**. Furthermore, the Department is adding clarifying language to Section III(j)(2) to better articulate its longstanding position regarding the scope of QPAMs’ “hold harmless” obligations. In this regard, the Department is adding text to clarify that a “violation of any conditions of this exemption” triggers the “hold harmless” obligations of a QPAM under that section. That language also appears in certain other places throughout the proposal where relevant.

60. The second new proposed condition in Section III(t) provides that if the independent auditor or UBS or its affiliates learns of any material noncompliance with a condition of this exemption, UBS must send a notice (a Violation Notice) to all affected Covered

Plans and the Department that prominently and conspicuously states or describes: (1) UBS, or the UBS QPAM, as applicable, failed to meet the terms of this exemption (and describe the failure); (2) the extent to which UBS QPAMs have potentially been operating without an exemption due to the failure; (3) whether UBS plans to apply for retroactive relief from the Department for this failed condition; (4) any further transactions engaged in by the UBS QPAMs on behalf of Covered Plans that may be non-exempt prohibited transactions unless the Department grants retroactive relief for the period in which the transactions occurred; and (5) UBS must indemnify and hold harmless the Covered Plan for: any actual losses resulting directly from the QPAM's failure to comply with any conditions of this exemption, ERISA's fiduciary duties and of the prohibited transaction provisions of ERISA and the Code, a breach of contract by the QPAM, or any claim arising out of the failure of such QPAM to qualify for the exemptive relief provided by PTE 84–14 as a result of a violation of PTE 84–14 Section I(g), other than a Conviction covered under the exemption. The Violation Notice must be sent to all affected Covered Plans and the Department within 14 days of discovering the violation. The Department's objective in proposing a requirement that UBS send the Violation Notice to its Covered Plan clients is to provide the Covered Plan clients with the opportunity to make informed and prudent decisions regarding the protection of plan assets. The Department requests comment on whether the Violation Notice is sufficiently protective of the interests of the Client Plans and their participants and beneficiaries. In that context, the Department is interested in receiving comments discussing whether additional disclosure or a requirement for additional oversight by an independent fiduciary may be necessary to ensure that the exemption is sufficiently protective of the Client Plans and their participants and beneficiaries.

The Proposed Exemption

61. As stated above, the Department is proposing this exemption to protect Covered Plans from the costs and harms that would arise if the UBS QPAMs no longer were able to rely on the relief provided in PTE 84–14. If the proposed exemption is granted, the UBS QPAMs would not be precluded from relying on the exemptive relief provided by PTE 84–14, notwithstanding the Covered

Convictions.²⁷ This proposed exemption would be effective for a five-year period beginning on June 12, 2024, and ending on June 11, 2029, if the Applicant satisfies the requirements of the Proposed Exemption at all times.

Expiration of Exemption

62. If UBS satisfies all the conditions of this exemption, its relief under this exemption as proposed will expire on June 11, 2029. UBS and its underlying entities, as well as Covered Plan fiduciaries, are cautioned that the Department may not extend this five-year exemption following its expiration due to the significant number of convictions and the seriousness of the underlying conduct of the tainted entities within the UBS corporate umbrella following the five year term unless, among other things, UBS submits a complete and accurate application with detailed written information to the Department by December 14, 2027. This will ensure that the Department has sufficient time to analyze the exemption application to ensure it provides sufficient information for the Department to make its findings under ERISA Section 408(a), publish a notice of proposed exemption with a sufficient notice and comment period, consider comments received on the proposed exemption, and publish a notice of final exemption (if appropriate based on the entire record).

Summary of the Exemption's Protective Conditions

63. In developing administrative exemptions under ERISA section 408(a), the Department implements its statutory directive to grant only exemptions that are appropriately protective and in the interest of, affected plans and IRAs. The Department is proposing this exemption with conditions that would protect Covered Plans (and their participants and beneficiaries) and allow them to continue to benefit from the transactions described in PTE 84–14.²⁸ The Department notes that this exemption includes most of the conditions it imposed upon CSAG and UBS in their most recent individual exemption, PTE 2023–14, but the Department has made

²⁷ Section I(g) of PTE 84–14 generally provides that a QPAM is ineligible to rely on PTE 84–14 for 10 years following a Criminal Conviction, or participation in Prohibited Misconduct (as both are defined in PTE 84–14), of the QPAM, any affiliate thereof, or any direct or indirect owner of a five percent or more interest in the QPAM, subject to the Ineligibility Date in Section I(h).

²⁸ The Department notes that this is a summary of the conditions intended for the convenience of a reader; however, the governing conditions for the exemptive relief are those reflected in the operative text in Section III of the proposed exemption.

minor changes and added additional conditions that are described below.

64. Misconduct Entity.

Notwithstanding that the 2013 UBS Conviction is no longer within the 10-year period of disqualification period under Section I(g), the proposal requires that the UBS QPAMs continue to be completely insulated from any aspect of the business activities of UBS Securities Japan. Because the same criminal activity (which relates to the fraudulent submission of Yen LIBOR rates during roughly the same time period) underpins both the 2013 UBS Conviction, and the 2017 UBS Conviction, there is not a valid reason for the Department to require the UBS QPAMs to be insulated from UBS while it permits the UBS QPAMs to engage in transactions with UBS Securities Japan. Therefore, the Department has broadened the definition of “Misconduct Entity” in PTE 2023–14 to include UBS Securities Japan. Furthermore, although the FX Misconduct itself did not violate Section I(g), the misconduct led to the DOJ’s determination that UBS had breached the LIBOR NPA. The FX Misconduct was itself egregious enough to raise concerns that the UBS QPAMs should be completely insulated from any entity involved in that misconduct. However, because UBS is already a Misconduct Entity by virtue of the 2017 UBS Conviction, no updates to the definition is required.

65. Criminal Activity. For reasons similar to those articulated in the prior paragraph, the Department has determined that each instance of the Criminal Activity is equally concerning notwithstanding that the 2013 UBS Conviction and the FX Misconduct do not in themselves trigger a disqualification of the UBS QPAMs from relying on PTE 84–14. As such, the Department has drafted certain exemption conditions to ensure that the UBS QPAMs continue to be fully insulated from the personnel that were involved in the misconduct related to the Criminal Activity. Therefore, the Department maintains in the proposal the approach it took in the PTE 2023–14 conditions where it refers to the Covered Convictions and the FX Misconduct. However, the Department uses the defined term Criminal Activity in this proposal, because the 2013 UBS Conviction is technically no longer included in the definition of “Covered Convictions” due to the expiration of the ten-year ineligibility period.

66. UBS Seconded Employees. In prior exemptions, UBS and Credit Suisse had requested a carve-out from the exemption conditions for services

provided by individuals that are considered to be employed by a Misconduct Entity for payroll and certain administrative purposes. Applicants in those exemptions referred to these employees as being “seconded” or “double-hatted.” The Department has proposed a new definition of “UBS Seconded Employee” in Section I(j) of the proposal to avoid using ambiguous terms such as “double-hatted” and to ensure that no employees of Misconduct Entities are involved in the UBS QPAMs’ business activities, except to the extent that such employees are subject to the control and supervision of the UBS QPAMs. The new definition of UBS Seconded Employee is included in the conditions where references to “double-hatted” and “seconded” employees previously appeared in PTE 2023–14. New Section I(j) provides that a “UBS Seconded Employee” means “an individual nominally employed by UBS who performs work on behalf of a UBS QPAM; provided that such UBS QPAM is solely responsible for the management and control of the employee’s job activities performed on behalf of such QPAM. Notwithstanding the preceding sentence, the UBS QPAM must be solely responsible for the establishment of the employee’s job duties and terms of employment (including compensation, promotions, and benefits) and must have supervisory responsibility with respect to, among other things, the employee’s performance, training, and disciplinary actions.” The Department is requesting that the Applicant’s comment includes a representation that demonstrates how this arrangement remains protective of Covered Plans following the merger.

67. The UBS QPAMs (including their officers, directors, agents (with very narrow exceptions), employees of such QPAMs, and UBS Seconded Employees) must not have known, have reason to know of, nor participated in the criminal conduct that is the subject of any of the Criminal Activity. Each UBS QPAM (and its officers, directors, etc.) must meet this condition with respect to each element of Criminal Activity regardless of whether the misconduct occurred within the QPAM’s corporate umbrella at the time it occurred. Further, any other party engaged on behalf of the UBS QPAMs who had responsibility for or exercised authority in connection with the management of plan assets must not have known, had reason to know of, nor participated in the Criminal Activity. Again, each Affiliated and Related QPAM (and their officers, directors, etc.) must comply with this prohibition, regardless of

whether the criminal misconduct occurred within the QPAM’s corporate umbrella at the time the Criminal Activity occurred.

68. The proposed exemption continues the requirement from PTE 2023–14 that no UBS QPAM (including their officers, directors, agents other than one of the entities subject to a Covered Conviction, employees of such QPAMs, and UBS Seconded Employees) received direct compensation, or knowingly received indirect compensation, in connection with the criminal conduct that is the subject of the Criminal Activity. Further, no other party engaged on behalf of the UBS QPAMs who had responsibility for, or exercised authority in connection with the management of plan assets received direct compensation, or knowingly received indirect compensation, in connection with the criminal conduct of that is the subject of the subject of the Criminal Activity.

69. The protective conditions contained in this proposed exemption include a requirement that precludes each Affiliated QPAM from employing or knowingly engaging any of the individuals who participated in the criminal conduct underlying the Criminal Activity. This means that no individual who participated in criminal misconduct at either UBS, UBS Securities Japan, UBS France, CSAG, or CSSEL (each, a Misconduct Entity) may be employed by any Affiliated QPAM, regardless of whether the Misconduct Entity was outside the QPAM’s corporate umbrella at the time of the misconduct. A UBS QPAM also must not have exercised authority over the assets of any Covered Plan client in a manner that it knew or should have known would further the criminal conduct underlying the Criminal Activity; or cause the UBS QPAM or its affiliates to directly or indirectly profit from the criminal conduct underlying the Criminal Activity.

70. Under this exemption, no Affiliated QPAM will use its authority or influence to direct an “investment fund” (as defined in Section VI(b) of PTE 84–14) that is subject to ERISA or the Code and managed by such Affiliated QPAM with respect to one or more Covered Plans, to enter into any transaction with a Misconduct Entity or to engage a Misconduct Entity to provide any service to such investment fund, for a direct or indirect fee borne by such investment fund, regardless of whether such transaction or service may otherwise be within the scope of relief provided by an administrative or statutory exemption. This condition provides exceptions for the provision of:

(1) certain sub-custodial services by an affiliate of UBS that is selected by an unaffiliated global custodian that, in turn, is selected by someone other than a UBS QPAM; and (2) services provided by UBS Seconded Employees. Further, other than with respect to employee benefit plans maintained or sponsored for its own employees or the employees of an affiliate, a Misconduct Entity may not act as a fiduciary within the meaning of ERISA section 3(21)(A)(i) or (iii), or Code section 4975(e)(3)(A) and (C), with respect to Covered Plan assets.

71. Each Affiliated QPAM must continue to maintain, adjust to the extent necessary, implement, and follow written policies and procedures (the Policies) that are reasonably designed to ensure that: (a) the asset management decisions of the Affiliated QPAM are conducted independently of each Misconduct Entity's corporate management and business activities; (b) the Affiliated QPAMs fully comply with ERISA's fiduciary duties and with ERISA's and the Code's prohibited transaction provisions; (c) the Affiliated QPAMs do not knowingly participate in any other person's violation of ERISA or the Code with respect to Covered Plans; (d) any filings or statements made by the Affiliated QPAMs to regulators on behalf of, or in relation to, Covered Plans are materially accurate and complete; (e) the Affiliated QPAMs do not make material misrepresentations or omit material information in their communications with such regulators, or in their communications with Covered Plans; and (f) the Affiliated QPAMs comply with the terms of the exemption.

72. This proposed exemption requires each Affiliated QPAM to maintain, adjust to the extent necessary, and implement a training program (the Training) that will be conducted at least annually for all relevant asset/portfolio management, trading, legal, compliance, and internal audit personnel. The Training must cover, at a minimum, the Policies, ERISA and Code compliance, ethical conduct, the consequences that would result from not complying with the proposed exemption conditions, and the requirement to promptly report wrongdoing.

73. This proposed exemption requires each Affiliated QPAM to continue to engage an independent auditor annually to evaluate the adequacy of, and the QPAM's compliance with, the Policies and Training required by the exemption. The independent auditor must be prudently selected by the Affiliated QPAMs and have appropriate technical training and proficiency with ERISA and the Code to perform the tasks

required by the exemption. The Affiliated QPAMs must grant the auditor unconditional access to their business, and the auditor's engagement must specifically require the auditor to test each Affiliated QPAM's operational compliance with the Policies and Training.

74. The independent auditor must issue a written audit report (the Audit Report) annually to UBS and the Affiliated QPAM to which the audit applies, that describes the procedures performed by the auditor in connection with its examination. Further, the Affiliated QPAMs must promptly address any instance of noncompliance identified by the auditor and must promptly address or prepare a written plan of action to address any determination as to the adequacy of the Policies and Training and the auditor's recommendations, if any, with respect to strengthening the Policies and Training of the respective Affiliated QPAM. The Audit Report must be provided to the Department annually by the Affiliated QPAM, and the Department will make the Audit Report part of the public record each year regarding this five-year exemption.

75. This proposed exemption further requires the General Counsel, or one of the three most senior executive officers of the Affiliated QPAM to which the Audit Report applies, to certify in writing and under penalty of perjury that the officer has reviewed the Audit Report and the exemption, and the Affiliated QPAM has addressed, corrected, and remedied (or has an appropriate written plan to address) any identified instance of noncompliance or inadequacy regarding the Policies and Training identified in the Audit Report.

76. With respect to any arrangement, agreement, or contract between an Affiliated QPAM and a Covered Plan, this proposal requires each Affiliated QPAM to agree and warrant: (a) to comply with ERISA and the Code, including the standards of prudence and loyalty set forth in ERISA section 404; (b) to refrain from engaging in prohibited transactions that are not otherwise exempt; (c) to indemnify and hold harmless the Covered Plan for any actual losses resulting directly from, among other things, the Affiliated QPAM's violation of the conditions for this exemption, prohibited transactions, and ERISA's fiduciary duties; (d) with narrow exceptions, to not restrict the ability of such Covered Plan to terminate or withdraw from its arrangement with the Affiliated QPAM with respect to any investment in a separately managed account or pooled fund subject to ERISA and managed by

such QPAM; (e) with narrow exceptions, to not impose any fees, penalties, or charges for such termination or withdrawal; and (f) to not include exculpatory provisions disclaiming or otherwise limiting the liability of the Affiliated QPAM for a violation of such agreement's terms.

77. Each Affiliated QPAM must provide a notice of its obligations under this exemption to each applicable Covered Plan, by the dates specified in the exemption. Each Affiliated QPAM also must provide to each applicable sponsor and beneficial owner of a Covered Plan a copy of the proposal and final notice of the exemption as published in the **Federal Register**, a separate summary describing the facts that led to each Conviction, and a prominently displayed statement that each Conviction results in a failure to meet a condition in PTE 84-14 and an individual exemption, which must be identified, by the dates specified in the exemption.

78. This proposed exemption requires each Affiliated QPAM to maintain a designated senior compliance officer (the Compliance Officer) who will be responsible for compliance with the Policies and Training requirements described in this proposed exemption. The Compliance Officer must conduct a review, for the twelve-month period specified below (the Exemption Review), to determine the adequacy and effectiveness of the implementation of the Policies and Training and issue a written report (the Exemption Report) on the findings.

79. This proposed exemption requires UBS to impose internal procedures, controls, and protocols on each Misconduct Entity to reduce the likelihood of any recurrence of conduct that is the subject of the Criminal Activity.

Statutory Findings

80. ERISA section 408(a) provides, in part, that the Department may not grant an exemption unless the Department finds that the exemption is administratively feasible, in the interest of affected plans and of their participants and beneficiaries, and protective of the rights of such participants and beneficiaries. These criteria are discussed below.

81. "*Administratively Feasible.*" The Department has tentatively determined that the proposal is administratively feasible for the Department, because among other things, a qualified independent auditor will be engaged by the Affiliated QPAM to perform an in-depth annual audit covering each Affiliated QPAM's compliance with the

terms of the exemption, and a corresponding written audit report will be provided to the Department and be made available to the public. Further, detailed periodic reports will be made to the Department and to Covered Plan fiduciaries.

82. *“In the interest of.”* The Department has tentatively determined that the proposed exemption is in the interests of the participants and beneficiaries of affected Covered Plans. The Department understands based on representations from the Applicant, that if the requested exemption is denied, Covered Plans may be forced to find other managers and may be deprived of the investment management services that these plans expected to receive when they appointed these managers. Loss of the exemption could result in the termination of relationships that the fiduciaries of the Covered Plans have determined to be in the best interests of those plans, even after the disclosures of the earlier Covered Convictions, the 2013 UBS Conviction, and the FX Misconduct pursuant to the individual exemptions the managers previously received. Additionally, the independent audit, while untimely performed, found no other violation by the UBS QPAMs of the terms of PTE 2023–14.

83. *“Protective of.”* The Department has tentatively determined that the proposed exemption is protective of the interests of the participants and beneficiaries of affected Covered Plans. As described above, the proposed exemption imposes a suite of affirmative requirements and obligations upon the Affiliated QPAMs that include but are not limited to: (a) the maintenance of the Policies; (b) the maintenance of the Training; (c) a robust audit conducted by a qualified independent auditor; (d) the provision of certain agreements and warranties on the part of the Affiliated QPAMs; (e) specific notices and disclosures concerning the circumstances necessitating the need for exemptive relief and the Affiliated QPAMs’ obligations under this proposed exemption; and (f) the designation of a Compliance Officer with responsibility to ensure compliance with the Policies and Training requirements under this proposed exemption, and the Compliance Officer’s completion of an Exemption Review and corresponding Exemption Report. The Department notes that this exemption includes all conditions imposed upon UBS in PTE 2023–14 as well as certain modifications described above designed to enhance the protections required for Covered Plans.

Summary

84. This proposed five-year exemption would provide prospective relief from certain restrictions set forth in ERISA section 406 and Code Section 4975(c)(1). No relief or waiver of a violation of any other law is provided by the exemption. The relief in this proposed five-year exemption would terminate in the event that an entity within the UBS corporate structure is convicted of any crime covered by PTE 84–14 Section I(g) (other than a Covered Conviction), or any term of PTE 84–14, as amended, is violated. In such event, and as described above, the UBS QPAMs would have to comply with the requirements of amended PTE 84–14 for additional relief.

85. When interpreting and implementing this exemption, the Applicant and the relevant QPAM should resolve any ambiguities considering the exemption’s protective purposes. To the extent additional clarification is necessary, these persons or entities should contact EBSA’s Office of Exemption Determinations by email (e-oed@dol.gov) or phone (202–693–8540).

86. Based on the conditions that are included in this proposed exemption, the Department has tentatively determined that the prospective relief sought by the Applicant would satisfy the statutory requirements for an individual exemption under ERISA section 408(a) and Code section 4975(c)(2) if the Applicant submits sufficient additional information the Department is requiring the Applicant to provide in its comment response to this proposed exemption.

87. This exemption proposes conditions that would apply during the five-year period from June 12, 2024, to June 11, 2029. In addition, and as explained in detail above, the Department seeks comments on whether to include retroactive relief for the period between June 12, 2023 to June 12, 2024 (the PTE 2023–14 Period). In order for the Department to determine whether UBS should receive retroactive relief during the PTE 2023–14 Period, UBS must provide a detailed statement in a comment to this proposed exemption that demonstrates a grant of retroactive relief would be consistent with the Department’s requirements for such relief as set forth in 29 CFR 2570.35(d) during the PTE 2023–14 Period.

Notice to Interested Persons

UBS will provide notice of this proposed exemption to its Covered Plan clients by first class mail or email

within two days after the publication of the notice of proposed exemption in the **Federal Register**. The notice of this proposed exemption will contain a supplemental statement, as required pursuant to 29 CFR 2570.43(a)(2) and a Summary the Proposed Exemption which includes information regarding the non-compliance in the PTE 2023–14 Period. The supplemental statement will inform interested persons of their right to comment on and to request a hearing with respect to the pending exemption. Written comments and hearing requests are due within 32 days after publication of this notice of proposed exemption in the **Federal Register**. The Department will make all comments available to the public.

Warning:

If you submit a comment, EBSA recommends that you include your name and other contact information in the body of your comment, but DO NOT submit information that you consider to be confidential, or otherwise protected (such as Social Security number or an unlisted phone number) or confidential business information that you do not want publicly disclosed. All comments may be posted on the internet and can be retrieved by most internet search engines.

General Information

The attention of interested persons is directed to the following:

(1) The fact that a transaction is the subject of an exemption under ERISA section 408(a) and/or Code section 4975(c)(2) does not relieve a fiduciary or other party in interest or disqualified person from certain other provisions of ERISA and/or the Code, including any prohibited transaction provisions to which the exemption does not apply and the general fiduciary responsibility provisions of ERISA section 404, which, among other things, require a fiduciary to discharge his duties respecting the plan solely in the interest of the participants and beneficiaries of the plan and in a prudent fashion in accordance with ERISA section 404(a)(1)(B); nor does it affect the requirement of Code section 401(a) that the plan must operate for the exclusive benefit of the employees of the employer maintaining the plan and their beneficiaries;

(2) Before an exemption may be granted under ERISA section 408(a) and/or Code section 4975(c)(2), the Department must find that the exemption is administratively feasible, in the interests of the plan and of its participants and beneficiaries, and

protective of the rights of participants and beneficiaries of the plan;

(3) The proposed exemption, if granted, will be supplemental to, and not in derogation of, any other provisions of ERISA and/or the Code, including statutory or administrative exemptions and transitional rules. Furthermore, the fact that a transaction is subject to an administrative or statutory exemption is not dispositive of whether the transaction is in fact a prohibited transaction; and

(4) The proposed exemption, if granted, will be subject to the express condition that the material facts and representations contained in each application are true and complete, and that each application accurately describes all material terms of the transaction which is the subject of the exemption.

Proposed Five-Year Exemption

The Department is considering granting this five-year exemption under the authority of ERISA section 408(a) and Internal Revenue Code (or Code) section 4975(c)(2), and in accordance with the procedures set forth in 29 CFR part 2570, subpart B (89 FR 4662, January 24, 2024)).²⁹ Effective December 31, 1978, section 102 of Reorganization Plan No. 4 of 1978, 5 U.S.C. App. 1 (1996), transferred the authority of the Secretary of the Treasury to issue exemptions of the type requested to the Secretary of Labor. Therefore, this notice of proposed exemption is issued solely by the Department.

Section I. Definitions

(a) Names of Certain Corporate Entities:

(1) The term “CSAG” means Credit Suisse AG, which was 100% owned by Credit Suisse Group AG, before UBS AG acquired Credit Suisse Group AG.

(2) The term “CSAM LLC” means Credit Suisse Asset Management, LLC. On May 1, 2024, CSAM LLC was merged into UBS Americas, with UBS Americas as the surviving entity.

(3) The term “CSSEL” means Credit Suisse Securities (Europe) Limited an indirectly a wholly owned subsidiary of UBS Group AG.

(4) The term “UBS” means UBS AG which is a wholly owned subsidiary of UBS Group AG.

(5) The term “UBS Americas” means UBS Asset Management (Americas) LLC and is wholly owned by UBS Americas, Inc., a wholly owned subsidiary of UBS AG.

(6) The term “UBS Europe” means UBS Europe SE. UBS Europe is the successor to UBS (France) S.A. UBS (France) S.A. was a wholly owned subsidiary of UBS under the laws of France until 2023. In July of 2023, UBS France S.A. merged into UBS Europe and set up a branch in France called UBS Europe SE France Branch.

(7) The term “UBS Hedge Fund Solutions LLC” was formerly known as UBS Alternative and Quantitative Investments, LLC and is wholly owned by UBS Americas Holding LLC, a wholly owned subsidiary of UBS.

(8) The term “UBS Securities Japan” means UBS Securities Japan Co. Ltd, a wholly owned subsidiary of UBS incorporated under the laws of Japan.

(b) The term “Affiliated QPAM” means: UBS Americas and UBS Hedge Fund Solutions LLC, and any future entity within the Asset Management or the Global Wealth Management Americas U.S. divisions of UBS that qualifies as a “qualified professional asset manager” (as defined in Section VI(a) of PTE 84–14) and that relies on the relief provided by PTE 84–14, and with respect to which UBS is an “affiliate” (as defined in Part VI(d) of PTE 84–14).³⁰ The term Affiliated QPAM excludes a Misconduct Entity.

(c) The term “Criminal Activity” means the Covered Convictions, the 2013 UBS Conviction, and the FX Misconduct.

(d) The term “Covered Convictions” means (1) the judgment of conviction against CSAG for one count of conspiracy to violate section 7206(2) of the Internal Revenue Code in violation of Title 18, United States Code, Section 371, that was entered in the District Court for the Eastern District of Virginia in Case Number 1:14-cr-188-RBS, on November 21, 2014 (the “2014 CSAG Conviction”); (2) the judgment of conviction against CSSEL in Case Number 1:21-cr-00520-WFK (the “2022 CSSEL Conviction”); (3) the judgment of conviction against UBS in case number 3:15-cr-00076-RNC in the U.S. District Court for the District of Connecticut for one count of wire fraud in violation of Title 18, United States Code, Sections 1343 and 2 in connection with UBS’s submission of Yen London Interbank Offered Rates and other benchmark interest rates between 2001 and 2010; and (4) the judgment of conviction on February 20, 2019, against UBS and UBS France in

case Number 1105592033 in the French First Instance Court (the “2019 UBS France Conviction”).

(e) The term “2013 UBS Conviction” means the judgment of conviction against UBS Securities Japan Co. Ltd. in case number 3:12 cr 00268 RNC in the U.S. District Court of the District of Connecticut for one count of wire fraud in violation of Title 18, United States Code, sections 1343 and 2 in connection with submission of YEN London Interbank Offered Rates and other benchmark interest rates.

(f) The term “FX Misconduct” means the conduct engaged in by UBS personnel described in Exhibit 1 of the Plea Agreement (Factual Basis for Breach) entered into between UBS and the Department of Justice Criminal Division, on May 20, 2015, in connection with Case Number 3:15-cr-00076-RNC filed in the US District Court for the District of Connecticut.

(g) The term “Covered Plan” means a plan subject to Part IV of Title I of ERISA (an “ERISA-covered plan”) or a plan subject to Code section 4975 (an “IRA”), in each case, with respect to which an Affiliated QPAM relies on PTE 84–14, or with respect to which an Affiliated QPAM (or any UBS affiliate) has expressly represented that the manager qualifies as a QPAM or relies on PTE 84–14. A Covered Plan does not include an ERISA-covered plan or IRA to the extent the Affiliated QPAM has expressly disclaimed reliance on QPAM status or PTE 84–14 in entering into a contract, arrangement, or agreement with the ERISA-covered plan or IRA. Notwithstanding the above, an Affiliated QPAM may disclaim reliance on QPAM status or PTE 84–14 in a written modification of a contract, arrangement, or agreement with an ERISA-covered plan or IRA, where the modification is made in a bilateral document signed by the client; the client’s attention is specifically directed toward the disclaimer; and the client is advised in writing that, with respect to any transaction involving the client’s assets, the Affiliated QPAM will not represent that it is a QPAM, and will not rely on the relief described in PTE 84–14.

(h) The term “Exemption Period” means the period beginning on June 12, 2024, and ending on June 11, 2029;

(i) The term “Misconduct Entity” means any one of the following: an entity subject to one of the Covered Convictions, *i.e.*, UBS, UBS France (recently merged into UBS Europe), CSAG and CSSEL; the entity subject to the 2013 UBS Conviction, *i.e.*, UBS Securities Japan; or an entity that was

²⁹ For purposes of the five-year exemption, references to ERISA section 406, unless otherwise specified, should be read to refer as well to the corresponding provisions of Code section 4975.

³⁰ UBS represents that UBS O’Connor LLC and UBS Realty Investors LLC are entities under the UBS corporate umbrella that currently offer investment products which are accessible by ERISA-covered plans, but do not currently rely on Class PTE 84–14 when managing those products.

the subject of the FX Misconduct, *i.e.*, UBS.

(j) The term “Related QPAM” means any current or future “qualified professional asset manager” (as defined in Section VI(a) of PTE 84–14) that relies on the relief provided by PTE 84–14, and with respect to which UBS owns a direct or indirect five (5) percent or more interest, but with respect to which a Misconduct Entity is not an “affiliate” (as defined in section VI(d)(1) of PTE 84–14). The term “Related QPAM” excludes a Misconduct Entity.

(k) The term “best knowledge,” “to the best of one’s knowledge,” “best knowledge at that time,” and other similar “best knowledge” terms shall include matters that are known to the applicable individual or should be known to such individual upon the exercise of such individual’s due diligence required under the circumstances, and, with respect to an entity other than a natural person, such term includes matters that are known to the directors and officers of the entity or should be known to such individuals upon the exercise of such individuals’ due diligence required under the circumstances.

(l) The term “UBS Seconded Employee” means, an individual nominally employed by a Misconduct Entity who performs work on behalf of a UBS QPAM; provided that such UBS QPAM is solely responsible for the management and control of the employee’s job activities performed on behalf of such QPAM. Notwithstanding the preceding sentence, the UBS QPAM must be solely responsible for the establishment of the employee’s job duties and terms of employment (including compensation, promotions, and benefits); and must have supervisory responsibility with respect to, among other things, the employee’s performance, training, and disciplinary actions.

(m) The term “UBS QPAMs” means, individually or collectively, the Affiliated QPAMs and/or the Related QPAMs.

(n) The “conduct” of any person or entity that is the “subject of” the Criminal Activity encompasses any misconduct of CSAG, CSSEL, UBS, UBS France (later merged with UBS Europe), UBS Securities Japan, and/or their personnel: (i) that is described in Exhibit 3 to the Plea Agreement entered into between UBS and the Department of Justice Criminal Division, on May 20, 2015, in connection with case number 3:15-cr-00076-RNC; (ii) that is described in Exhibits 3 and 4 to the Plea Agreement entered into between UBS Securities Japan and the Department of

Justice Criminal Division, on December 19, 2012, in connection with case number 3:12-cr-00268-RNC; (iii) that is described in Exhibit 1 of the Plea Agreement (Factual Basis for Breach) entered into between UBS and the Department of Justice Criminal Division, on May 20, 2015, in connection with Case Number 3:15-cr-00076-RNC filed in the US District Court for the District of Connecticut; (iv) that is the basis of the 2019 UBS France Conviction; and (v) that is the subject of the 2014 CSAG Conviction and the 2022 CSSEL Conviction described in Section I(c)(1) and (c)(2).

(o) The term “participate in” when used to describe an individual or entity’s participation in the Criminal Activity refers not only to active participation in the Criminal Activity but also includes an individual or entity’s knowledge or approval of the Criminal Activity, without taking active steps to prohibit such conduct, such as reporting the conduct to the individual’s supervisors, and to the Board of Directors.

Section II. Covered Transactions

If this proposed exemption is granted, the UBS QPAMs would not be precluded from relying on the exemptive relief provided by Prohibited Transaction Exemption 84–14 (PTE 84–14)³¹ during the Exemption Period, notwithstanding the “Covered Convictions,” provided that the definitions in Section I and the conditions in Section III are satisfied.

Section III. Conditions

(a) The UBS QPAMs (including their officers, directors, agents other than the Misconduct Entities, employees of such QPAMs, and UBS Seconded Employees) did not know or did not have reason to know of and did not participate in the conduct underlying the Criminal Activity. Further, any other party engaged on behalf of the UBS QPAMs who had responsibility for, or exercised authority in connection with, the management of plan assets did not know or have reason to know of and did not participate in the criminal conduct underlying the Criminal Activity.

(b) The UBS QPAMs (including their officers, directors, agents other than the Misconduct Entities, employees of such QPAMs, and UBS Seconded Employees) did not receive direct compensation, or knowingly receive indirect compensation, in connection with the

criminal conduct that is the subject of the Criminal Activity. Further, any other party engaged on behalf of the UBS QPAMs who had responsibility for, or exercised authority in connection with the management of plan assets did not receive direct compensation, or knowingly receive indirect compensation, in connection with the Criminal Activity;

(c) The Affiliated QPAMs do not currently and will not in the future employ or knowingly engage any of the individuals who participated in the criminal conduct underlying the Criminal Activity;

(d) At all times during the Exemption Period, no Affiliated QPAM will use its authority or influence to direct an “investment fund” (as defined in Section VI(b) of PTE 84–14) that is subject to ERISA or the Code and managed by such Affiliated QPAM with respect to one or more Covered Plans, to enter into any transaction with a Misconduct Entity or to engage a Misconduct Entity to provide any service to such investment fund, for a direct or indirect fee borne by such investment fund, regardless of whether such transaction or service may otherwise be within the scope of relief provided by an administrative or statutory exemption. An Affiliated QPAM will not fail this condition solely because:

(1) A UBS (or successor) affiliate serves as a local sub-custodian that is selected by an unaffiliated global custodian that, in turn, is selected by someone other than a UBS QPAM; or

(2) Services are provided by UBS Seconded Employees;

(e) Any failure of an Affiliated QPAM to satisfy Section I(g) of PTE 84–14 arose solely from the Covered Convictions;

(f) A UBS QPAM did not exercise authority over the assets of any plan subject to Part 4 of Title I of ERISA (an “ERISA-covered plan”) or Code section 4975 (an “IRA”) in a manner that it knew or should have known would further the criminal conduct underlying the Criminal Activity; or cause the UBS QPAM or its affiliates to directly or indirectly profit from the criminal conduct underlying the Criminal Activity;

(g) No Misconduct Entity will act as a fiduciary within the meaning of ERISA section 3(21)(A)(i) or (iii) or Code section 4975(e)(3)(A) and (C) with respect to ERISA-covered Plan and IRA assets, except that each may act as such a fiduciary with respect to employee benefit plans sponsored for its own employees or employees of an affiliate. No Misconduct Entity will be treated as violating the conditions of the

³¹ 49 FR 9494 (March 13, 1984), as corrected at 50 FR 41430, (Oct. 10, 1985), as amended at 70 FR 49305 (Aug. 23, 2005), as amended at 75 FR 38837 (July 6, 2010), and as amended at 89 FR 23090 (April 3, 2024).

exemption solely because it acted as an investment advice fiduciary within the meaning of ERISA section 3(21)(A)(ii) or Code section 4975(e)(3)(B);

(h)(1) Each Affiliated QPAM must maintain, adjust (to the extent necessary), implement, and follow the written policies and procedures described below (Policies).³² The Policies must require and must be reasonably designed to ensure that:

(i) The asset management decisions of the QPAM are conducted independently of the corporate and management and business activities of each Misconduct Entity, and without considering any fee a related local sub-custodian may receive from those decisions. This condition does not preclude an Affiliated QPAM, as defined in Section I(b)(1), from receiving publicly available research and other widely available information from a UBS affiliate;

(ii) The QPAM fully complies with ERISA's fiduciary duties, and with ERISA and the Code's prohibited transaction provisions, in each case as applicable with respect to each Covered Plan, and does not knowingly participate in any violation of these duties and provisions with respect to Covered Plans;

(iii) The QPAM does not knowingly participate in any other person's violation of ERISA or the Code with respect to Covered Plans;

(iv) Any filings or statements made by the QPAM to regulators, including but not limited to, the Department, the Department of the Treasury, the Department of Justice, and the Pension Benefit Guaranty Corporation, on behalf of or in relation to Covered Plans, are materially accurate and complete, to the best of such QPAM's knowledge at that time;

(v) To the best of its knowledge at that time, the QPAM does not make material misrepresentations or omit material information in its communications with such regulators with respect to Covered Plans, or make material misrepresentations or omit material information in its communications with Covered Plans; and

(vi) The QPAM complies with the terms of this five-year exemption;

(2) Any violation of, or failure to comply with an item in subparagraphs (h)(1)(ii) through (vi), is corrected as soon as reasonably possible upon discovery, or as soon after the QPAM reasonably should have known of the noncompliance (whichever is earlier),

and any such violation or compliance failure not so corrected is reported, upon the discovery of such failure to so correct, in writing. This report must be made to the head of compliance and the general counsel (or their functional equivalent) of the relevant QPAM that engaged in the violation or failure, and the independent auditor responsible for reviewing compliance with the Policies. A QPAM will not be treated as having failed to develop, implement, maintain, or follow the Policies, if it corrects any instance of noncompliance as soon as reasonably possible upon discovery, or as soon as reasonably possible after the QPAM reasonably should have known of the noncompliance (whichever is earlier), and provided that it adheres to the reporting requirements set forth in this subparagraph (2);

(3) Each Affiliated QPAM must maintain, adjust (to the extent necessary), and implement or continue a program of training during the Exemption Period (the Training) that is conducted at least annually for all relevant Affiliated QPAM asset/portfolio management, trading, legal, compliance, and internal audit personnel.³³ The Training must:

(i) At a minimum, cover the Policies, ERISA and Code compliance (including applicable fiduciary duties and the prohibited transaction provisions), ethical conduct, the consequences for not complying with the conditions of this exemption (including any loss of exemptive relief provided herein), and the requirement for prompt reporting of wrongdoing;

(ii) Be conducted by a professional who has been prudently selected and who has appropriate technical training and proficiency with ERISA and the Code to perform the tasks required by this exemption; and

(iii) Be conducted in-person, electronically, or via a website;

(i)(1) Each Affiliated QPAM submits to an audit conducted by an independent auditor, who has been prudently selected and who has appropriate technical training and proficiency with ERISA and the Code, to evaluate the adequacy of, and each Affiliated QPAM's compliance with, the Policies and Training described above in Section (h). The audit requirement must be incorporated in the Policies. The initial audit under this exemption must cover the period that begins on June 12, 2024, and ends on June 11, 2025, and the audit must be completed

by Thursday, December 11, 2025. The second audit must cover the period that begins on June 12, 2025, and ends on June 11, 2026, and must be completed by Friday, December 11, 2026. The third audit must cover the period that begins on June 12, 2026, and ends on June 11, 2027, and must be completed by Monday, December 13, 2027. The fourth audit must cover the period that begins on June 12, 2027, and ends on June 11, 2028, and must be completed by Monday, December 11, 2028. The fifth audit must cover the period that begins on June 12, 2028, and ends on June 11, 2029, and must be completed by Tuesday, December 11, 2029.

Notwithstanding the audit periods described above, the audit required under PTE 2023-14 must be completed for the prior period of June 12, 2023, through June 11, 2024 and delivered to the Department in accordance with the terms of that exemption. The prior exemption audit report(s) must be submitted in accordance with section III(i)(9) below;

(2) Within the scope of the audit and to the extent necessary for the auditor, in its sole opinion, to complete its audit and comply with the conditions for relief described herein, and only to the extent such disclosure is not prevented by state or federal statute, or involves communications subject to attorney-client privilege, each Affiliated QPAM and, if applicable, UBS, must grant the auditor unconditional access to its business, including, but not limited to: its computer systems; business records; transactional data; workplace locations; training materials; and personnel. Such access is limited to information relevant to the auditor's objectives as specified by the terms of this exemption;

(3) The auditor's engagement must specifically require the auditor to determine whether each Affiliated QPAM has developed, implemented, maintained, and followed the Policies in accordance with the conditions of this one-year exemption, and has developed and implemented the Training, as required herein;

(4) The auditor's engagement must specifically require the auditor to test each Affiliated QPAM's operational compliance with the Policies and Training. In this regard, the auditor must test, for each Affiliated QPAM, a sample of such Affiliated QPAM's transactions involving Covered Plans, sufficient in size and nature to afford the auditor a reasonable basis to determine such Affiliated QPAM's operational compliance with the Policies and Training;

(5) For the audit, on or before the end of the relevant period described in

³² This exemption does not preclude the UBS QPAMs and CS Affiliated QPAM from maintaining separate Policies provided that the Policies comply with this exemption.

³³ The exemption does not preclude an UBS QPAM from maintaining separate training programs provided each training program complies with this exemption.

Section III(i)(1) for completing the audit, the auditor must issue a written report (the Audit Report) to UBS and the Affiliated QPAM to which the audit applies that describes the procedures performed by the auditor in connection with its examination. The auditor, at its discretion, may issue a single consolidated Audit Report that covers all the Affiliated QPAMs. The Audit Report must include the auditor's specific determinations regarding:

(i) The adequacy of each Affiliated QPAM's Policies and Training; each Affiliated QPAM's compliance with the Policies and Training; the need, if any, to strengthen such Policies and Training; and any instance of the respective Affiliated QPAM's noncompliance with the written Policies and Training described in Section III(h) above. The Affiliated QPAM must promptly address any noncompliance and must promptly address or prepare a written plan of action to address any determination as to the adequacy of the Policies and Training and the auditor's recommendations (if any) with respect to strengthening the Policies and Training of the respective Affiliated QPAM. Any action taken or the plan of action to be taken by the respective Affiliated QPAM must be included in an addendum to the Audit Report (such addendum must be completed prior to the certification described in Section III(i)(7) below). In the event such a plan of action to address the auditor's recommendation regarding the adequacy of the Policies and Training is not completed by the time of submission of the Audit Report, the following period's Audit Report must state whether the plan was satisfactorily completed. Any determination by the auditor that an Affiliated QPAM has implemented, maintained, and followed sufficient Policies and Training must not be based solely or in substantial part on an absence of evidence indicating noncompliance. In this last regard, any finding that an Affiliated QPAM has complied with the requirements under this subparagraph must be based on evidence that each Affiliated QPAM has implemented, maintained, and followed the Policies and Training required by this exemption. Furthermore, the auditor must not solely rely on the Exemption Report created by the Compliance Officer, as described in Section III(m) below, as the basis for the auditor's conclusions in lieu of independent determinations and testing performed by the auditor as required by Section III(i)(3) and (4) above; and

(ii) The adequacy of the Exemption Review described in Section III(m);

(6) The auditor must notify the respective Affiliated QPAM of any instance of noncompliance identified by the auditor within five (5) business days after such noncompliance is identified by the auditor, regardless of whether the audit has been completed as of that date;

(7) With respect to the Audit Report, the General Counsel, or one of the three most senior executive officers of the Affiliated QPAM to which the Audit Report applies, must certify in writing, under penalty of perjury, that the officer has reviewed the Audit Report and this exemption; that, to the best of such officer's knowledge at the time, such Affiliated QPAM has addressed, corrected, and remedied any noncompliance and inadequacy or has an appropriate written plan to address any inadequacy regarding the Policies and Training identified in the Audit Report. Such certification must also include the signatory's determination that, to the best of such officer's knowledge at the time, the Policies and Training in effect at the time of signing are adequate to ensure compliance with the conditions of this exemption and with the applicable provisions of ERISA and the Code;

(8) The Risk Committee of UBS's Board of Directors is provided a copy of the Audit Report; and a senior executive officer of UBS's Compliance and Operational Risk Control function must review the Audit Report for each Affiliated QPAM and must certify in writing, under penalty of perjury, that such officer has reviewed the Audit Report;

(9) Each Affiliated QPAM provides its certified Audit Report, by regular mail to: Office of Exemption Determinations (OED), 200 Constitution Avenue NW, Washington, DC 20001; or via email to *e-OED@dol.gov*. This delivery must take place no later than 45 days following completion of the Audit Report. The Audit Reports will be made part of the public record regarding this five-year exemption. Furthermore, each Affiliated QPAM must make its Audit Reports unconditionally available, electronically or otherwise, for examination upon request by any duly authorized employee or representative of the Department, other relevant regulators, and any fiduciary of a Covered Plan;

(10) The auditor must provide the Department, upon request, for inspection and review, access to all the workpapers created and used in connection with the audit, provided such access and inspection is otherwise permitted by law;

(11) UBS must notify OED no later than August 12, 2024, of the auditor

selected to complete audits required by Section III(i)(1) above for the periods covering June 12, 2024, through June 11, 2029. Any engagement agreement with an auditor to perform the audit required by this exemption that is entered into subsequent to the effective date of this exemption must be submitted to OED no later than two months after the execution of such agreement;

(12) For only the initial audit required by Section III(i)(1) above for the period covering June 12, 2024, through June 11, 2025, the auditor must consult with the auditors who performed the audits required pursuant to PTE 2023–14 for the period of June 12, 2023, through June 11, 2024, unless such auditor is the same auditor selected under paragraph 11 of this subsection. UBS must notify OED if for any reason the consultation required by this paragraph 12 cannot occur and must provide an explanation for why the consultation cannot occur. Such consultation may, but need not, occur for subsequent audits;

(13) UBS must notify the Department of a change in the independent auditor no later than two months after the engagement of a substitute or subsequent auditor and must provide an explanation for the substitution or change including a description of any material disputes between the terminated auditor and UBS;

(j) As of the effective date of this five-year exemption, with respect to any arrangement, agreement, or contract between an Affiliated QPAM and a Covered Plan, the QPAM agrees and warrants to Covered Plans:

(1) To comply with ERISA and the Code, as applicable with respect to such Covered Plan; to refrain from engaging in prohibited transactions that are not otherwise exempt (and to promptly correct any prohibited transactions); and to comply with the standards of prudence and loyalty set forth in ERISA section 404 with respect to each such ERISA-covered plan and IRA to the extent that ERISA section 404 is applicable;

(2) To indemnify and hold harmless the Covered Plan for any actual losses resulting directly from the QPAM's violation of any conditions of this exemption, ERISA's fiduciary duties, as applicable, and of the prohibited transaction provisions of ERISA and the Code, as applicable; a breach of contract by the QPAM; or any claim arising out of the failure of such QPAM to qualify for the exemptive relief provided by PTE 84–14 as a result of a violation of Section I(g) of PTE 84–14, other than a Conviction covered under this exemption. The term "actual losses" includes, but is not limited to, losses

and related costs arising from unwinding transactions with third parties and from transitioning Plan assets to an alternative asset manager as well as costs associated with any exposure to excise taxes under Code section 4975 as a result of a QPAM's inability to rely upon the relief in PTE 84-14;

(3) Not to require (or otherwise cause) the Covered Plan to waive, limit, or qualify the liability of the QPAM for violating ERISA or the Code for engaging in prohibited transactions;

(4) Not to restrict the ability of the Covered Plan to terminate or withdraw from its arrangement with the QPAM, with respect to any investment in a separately-managed account or pooled fund subject to ERISA and managed by such QPAM, with the exception of reasonable restrictions, appropriately disclosed in advance, that are specifically designed to ensure equitable treatment of all investors in a pooled fund in the event such withdrawal or termination may have adverse consequences for all other investors. In connection with any such arrangement involving investments in pooled funds subject to ERISA entered into after the effective date of this exemption, the adverse consequences must relate to a lack of liquidity of the underlying assets, valuation issues, or regulatory reasons that prevent the fund from promptly redeeming an ERISA-covered plan's or IRA's investment, and such restrictions must be applicable to all such investors and be effective no longer than reasonably necessary to avoid the adverse consequences;

(5) Not to impose any fees, penalties, or charges for such termination or withdrawal with the exception of reasonable fees, appropriately disclosed in advance, that are specifically designed to prevent generally-recognized abusive investment practices or specifically designed to ensure equitable treatment of all investors in a pooled fund in the event such withdrawal or termination may have adverse consequences for all other investors, provided that such fees are applied consistently and in a like manner to all such investors;

(6) Not to include exculpatory provisions disclaiming or otherwise limiting liability of the QPAM for a violation of such agreement's terms. To the extent consistent with ERISA section 410, however, this provision does not prohibit disclaimers for liability caused by an error, misrepresentation, or misconduct of a plan fiduciary or other party hired by the plan fiduciary who is independent of UBS (and affiliates), or damages

arising from acts outside the control of the Affiliated QPAM; and

(7) Within 120 days after the effective date of this five-year exemption, each QPAM must provide a notice of its obligations under this Section III(j) to each Covered Plan. For prospective Covered Plans that enter into a written asset or investment management agreement with a QPAM on or after a date that is 120 days after the effective date of this exemption, the QPAM must agree to its obligations under this Section III(j) in an updated investment management agreement between the QPAM and such clients or other written contractual agreement. Notwithstanding the above, a QPAM will not violate the condition solely because a Covered Plan refuses to sign an updated investment management agreement. For new Covered Plans that were provided an investment management agreement prior to the effective date of this exemption, returning it within 120 days after the effective date of this exemption, and that signed investment management agreement requires amendment to meet the terms of the exemption, the QPAM may provide the new Covered Plan with amendments that need not be signed with any documents required by this subsection (j) within ten (10) business days after receipt of the signed agreement.

(k) Within 60 days after the publication date of the notice of final exemption in the **Federal Register**, each Affiliated QPAM provides notice of the proposed and final exemption as published in the **Federal Register**, along with a summary describing the facts that led to the Covered Convictions (the Summary), which has been submitted to the Department, and a prominently displayed statement (the Statement) that the Covered Convictions result in a failure to meet a condition in PTE 84-14, to each sponsor and beneficial owner of a Covered Plan that has entered into a written asset or investment management agreement with an Affiliated QPAM, or the sponsor of an investment fund in any case where an Affiliated QPAM acts as a sub-adviser to the investment fund in which such ERISA-covered plan and IRA invests. The Summary will be submitted to OED before it is distributed by each Affiliated QPAM. All prospective Covered Plan clients that enter into a written asset or investment management agreement with an Affiliated QPAM after a date that is 60 days after the effective date of this exemption must receive a copy of the notice of the exemption, the Summary, and the Statement before, or contemporaneously with, the Covered Plan's receipt of a

written asset or investment management agreement from the Affiliated QPAM. The notices may be delivered electronically (including by an email that has a link to the one-year exemption).

(l)(1) The Affiliated QPAMs must comply with each condition of PTE 84-14, as amended, with the sole exception of the violation of Section I(g) of PTE 84-14 that is attributable to the Covered Convictions. If, during the Exemption Period, an entity within UBS's corporate structure is convicted of a crime described in Section I(g) of PTE 84-14 (other than the Covered Convictions), relief in this exemption would terminate immediately.

(m)(1) Within 60 days after the date of publication of the exemption, each Affiliated QPAM must designate a senior compliance officer (the Compliance Officer) who will be responsible for compliance with the Policies and Training requirements described herein. For purposes of this condition (m), each relevant line of business within an Affiliated QPAM may designate its own Compliance Officer(s). Notwithstanding the above, the appointed Compliance Officer must not be a person who: (i) participated in the criminal conduct underlying the Criminal Activity, or knew of, or (ii) had reason to know of, the Criminal Activity without taking active documented steps to stop the misconduct;

The Compliance Officer must conduct a review of each twelve-month period of the Exemption Period (the Exemption Review), to determine the adequacy and effectiveness of the implementation of the Policies and Training.³⁴ With respect to the Compliance Officer, the following conditions must be met:

(i) The Compliance Officer must be a professional who has extensive experience with, and knowledge of, the regulation of financial services and products, including under ERISA and the Code; and

(ii) The Compliance Officer must have a direct reporting line to the highest-ranking corporate officer in charge of compliance for the applicable Affiliated QPAM.

(2) With respect to the Exemption Review, the following conditions must be met:

(i) The Annual Exemption Review includes a review of the Affiliated QPAM's compliance with and effectiveness of the Policies and Training and of the following: any

³⁴ Pursuant to PTE 2023-14, the Compliance Officer also must conduct and complete an exemption review within three months of June 11, 2024.

compliance matter related to the Policies or Training that was identified by, or reported to, the Compliance Officer or others within the compliance and risk control function (or its equivalent) during the time period; the most recent Audit Report issued pursuant to this exemption or PTE 2023–14; any material change in the relevant business activities of the Affiliated QPAMs; and any change to ERISA, the Code, or regulations related to fiduciary duties and the prohibited transaction provisions that may be applicable to the activities of the Affiliated QPAMs;

(ii) The Compliance Officer prepares a written report for the Exemption Review (an Exemption Report) that (A) summarizes their material activities during the prior year; (B) sets forth any instance of noncompliance discovered during the prior year, and any related corrective action; (C) details any change to the Policies or Training to guard against any similar instance of noncompliance occurring again; and (D) makes recommendations, as necessary, for additional training, procedures, monitoring, or additional and/or changed processes or systems, and management's actions on such recommendations;

(iii) In the Exemption Report, the Compliance Officer must certify in writing that to the best of his or her knowledge at the time: (A) the report is accurate; (B) the Policies and Training are working in a manner which is reasonably designed to ensure that the Policies and Training requirements described herein are met; (C) any known instance of noncompliance during the prior year and any related correction taken to date have been identified in the Exemption Report; and (D) the Affiliated QPAMs have complied with the Policies and Training, and/or corrected (or are correcting) any known instances of noncompliance in accordance with Section III(h) above;

(iv) The Exemption Report must be provided to appropriate corporate officers of UBS and to each Affiliated QPAM to which such report relates, and to the head of compliance and the general counsel (or their functional equivalent) of UBS, and the relevant Affiliated QPAM. The Exemption Report must be made unconditionally available to the independent auditor described in Section III(i) above;

(v) The Exemption Review, including the Compliance Officer's written Annual Exemption Report, must cover the Exemption Period, and the Annual Review, including the Compliance Officer's written Report, must be completed within three (3) months

following the end of the period to which it relates;

(n) UBS imposes its internal procedures, controls, and protocols on each Misconduct Entity to reduce the likelihood of any recurrence of conduct that is the subject of the Criminal Activity;

(o) Relief in this exemption will terminate on the date that is six months following the date that a U.S. regulatory authority makes a final decision that UBS or an affiliate of either failed to comply in all material respects with any requirement imposed by such regulatory authority in connection with the Covered Convictions;

(p) Each Affiliated QPAM will maintain records necessary to demonstrate that the conditions of this exemption have been met for six (6) years following the date of any transaction for which the Affiliated QPAM relies upon the relief in this exemption;

(q) During the Exemption Period, UBS must: (1) immediately disclose to the Department any Deferred Prosecution Agreement (a DPA) or Non-Prosecution Agreement (an NPA) with the U.S. Department of Justice, entered into by UBS or any of its affiliates (as defined in Section VI(d) of PTE 84–14) in connection with conduct described in Section I(g) of PTE 84–14 or section 411 of ERISA via email addressed to *e-OED@dol.gov*; and (2) immediately provide the Department with any information requested by the Department, as permitted by law, regarding the agreement and/or conduct and allegations that led to the agreement via email addressed to *e-OED@dol.gov*;

(r) Within 60 days after the effective date of this exemption, each Affiliated QPAM, in its agreements with, or in other written disclosures provided to Covered Plans, will clearly and prominently inform Covered Plan clients of their right to obtain a copy of the Policies or a description (Summary Policies) which accurately summarizes key components of the QPAM's written Policies developed in connection with this exemption. If the Policies are thereafter changed, each Covered Plan client must receive a new disclosure within six (6) months following the end of the calendar year during which the Policies were changed.³⁵ With respect to this requirement, the description may be continuously maintained on a website, provided that such website link to the

³⁵ If the Applicant meets this disclosure requirement through Summary Policies, changes to the Policies shall not result in the requirement for a new disclosure unless, as a result of changes to the Policies, the Summary Policies are no longer accurate.

Policies or Summary Policies is clearly and prominently disclosed to each Covered Plan;

(s) An Affiliated QPAM will not fail to meet the terms of this five-year exemption solely because a different Affiliated QPAM fails to satisfy a condition for relief described in Section III(c), (d), (h), (i), (j), (k), (m), (p), or (r); or if the independent auditor described in Section III(i) fails to comply with a provision of the exemption other than the requirement described in Section III(i)(11), provided that such failure did not result from any actions or inactions of UBS or its affiliates; and

(t) If the independent auditor or UBS or its affiliates learns of any material noncompliance with a condition of this exemption, UBS must send a notice (a "Violation Notice") to all affected Covered Plans and the Department that prominently and conspicuously states or describes: (1) UBS, or the UBS QPAM, as applicable, failed to meet the terms of this exemption (and describe the failure), (2) the extent to which UBS QPAMs have potentially been operating without an exemption due to the failure, (3) whether UBS plans to apply for retroactive relief from the Department for this failed condition; (4) any further transactions engaged in by the UBS QPAMs on behalf of Covered Plans that may be non-exempt prohibited transactions unless the Department grants retroactive relief for the period in which the transactions occurred; and (5) UBS must indemnify and hold harmless the Covered Plan for: any actual losses resulting directly from the QPAM's failure to comply with any conditions of this exemption, ERISA's fiduciary duties and of the prohibited transaction provisions of ERISA and the Code, a breach of contract by the QPAM, or any claim arising out of the failure of such QPAM to qualify for the exemptive relief provided by PTE 84–14 as a result of a violation of PTE 84–14 Section I(g), other than a Conviction covered under the exemption. The Violation Notice must be sent to all affected Covered Plans and the Department within 14 days of discovering the violation.

(u) All the material facts and representations set forth in the Summary of Facts and Representations are true and accurate at all times.

(v) Each UBS QPAM to develop written processes that clearly describe: (1) how the QPAM identifies and quantifies "actual losses" for purposes of Section III(j)(2); and (2) how Covered Plans may recover or avoid incurring the losses that the UBS QPAM must indemnify or hold Covered Plans harmless from incurring pursuant to Section III(j)(2). Each UBS QPAM must

develop these processes within 30 days after the date the Department publishes a final exemption in the **Federal Register**.

Applicability Date: This exemption will be in effect for the period beginning on June 12, 2024 and ending on June 11, 2029.

Signed at Washington, DC, this 5th day of June 2024.

George Christopher Cosby,

*Director, Office of Exemption Determinations,
Employee Benefits Security Administration,
U.S. Department of Labor.*

BILLING CODE 4510–29–P

DEPARTMENT OF LABOR

Employment and Training Administration

Work Opportunity Tax Credit (WOTC) Program

AGENCY: Employment and Training
Administration (ETA), Labor.

ACTION: Notice.

SUMMARY: This Notice announces the revised administrative formula methodology that ETA uses to distribute annual allotment funding to State grantees (53 State Workforce Agencies (SWAs)) for the purpose of administering the Work Opportunity Tax Credit (WOTC). Additionally, this Notice formally communicates the substantial changes to the administrative formula and announces the actualized State allotments for fiscal year (FY) 2024, the revised formula's implementation year, based on Congress' budgetary appropriations.

DATES: The FY 2024 allotment covers the period of October 1, 2023–September 30, 2024.

FOR FURTHER INFORMATION CONTACT:

LaToria Strickland, Office of Workforce Investment, Employment and Training Administration, U.S. Department of Labor, 200 Constitution Avenue NW, Suite C–4510, Washington, DC 20210, telephone: (202) 693–3980 (this is not a toll-free number) or by email: Ask.WOTC@dol.gov. For persons with a hearing or speech disability who need assistance to use the telephone system, please dial 711 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION:

Background: WOTC is a Federal tax credit available to eligible employers that hire and pay wages to first-time, qualifying members of WOTC targeted groups. Section 51 of the Internal Revenue Code of 1986, as amended, provides the legislative authority for the

WOTC. (See [https://uscode.house.gov/view.xhtml?req=\(title:26%20section:51%20edition:prelim\)](https://uscode.house.gov/view.xhtml?req=(title:26%20section:51%20edition:prelim))). WOTC is authorized until December 31, 2025, under division EE, title I, section 113 of the Consolidated Appropriations Act, 2021 (Pub. L. 116–260).

This Notice represents the second of a two-stage process. On February 21, 2023, ETA published a Request for Comment in which the Department proposed modifications to WOTC procedural guidance and the administrative formula (88 FR 10540), hereinafter referred to as the initial Notice. The 60-day public comment period closed on April 24, 2023. The initial Notice presented planning estimates for the modified administrative formula's implementation year, FY 2024, and the FY 2022 actualized allotments. In the initial Notice, ETA committed to publishing modifications to WOTC procedural guidance in a Change 1 to Training and Employment Guidance Letter (TEGL) No. 16–20, “*Updated Work Opportunity Tax Credit (WOTC) Procedural Guidance*,”¹ and publishing the updated administrative formula in the **Federal Register**. Based on the comments received during the public comment period and ETA's consideration of them, ETA finalized the WOTC administrative formula with updated data metrics in the formula methodology, as originally proposed in the initial Notice.

In this second stage, the finalized formula and actual FY 2024 State allotments are described further in this subsequent Notice. (The FY 2024 State allotments are also published in Change 2 to TEGL No. 06–23, “*Work Opportunity Tax Credit (WOTC) Initial Fiscal Year (FY) 2024 Funding Allotments*.”)²

This subsequent Notice contains five sections, as follows:

- *Section I* provides the historical formula methodology used for WOTC State allotments, effective FYs 1996–2023.

- *Section II* reviews the proposed administrative formula that was described in the initial Notice (88 FR 10540), published in the **Federal Register** on February 21, 2023.

¹ ETA, TEGL No. 16–20, Change 1, “*Updated Work Opportunity Tax Credit (WOTC) Procedural Guidance*,” Nov. 20, 2023, <https://www.dol.gov/agencies/eta/advisories/tegl-16-20-change-1>.

² ETA, TEGL No. 06–23, Change 2, “*Change 2 to Training and Employment Guidance Letter No. 06–23, Work Opportunity Tax Credit (WOTC) Initial Fiscal Year Allotments for Fiscal Year 2024*,” May 09 2024, <https://www.dol.gov/agencies/eta/advisories/tegl-06-23-change-2>.

- *Section III* summarizes the comments that ETA received in response to the initial Notice and ETA's decisions concerning the allotment formula modifications, based on those comments.

- *Section IV* describes the formula's “stop-loss/stop-gain” provisions, which are designed to provide a staged transition from the old to the new funding levels for State allotments. Additionally, section IV describes the minimum funding provisions for States under the modified formula. These provisions were previously discussed in detail in the initial Notice (88 FR 10540).

- *Section V* describes the application of the modified formula (using congressional budgetary appropriations) for FY 2024 allotments and subsequent years. The table appended to this Notice reflects the actual FY 2024 distribution resulting from the revised allotment formula.

I. Historical Formula Methodology

The WOTC administrative formula was developed by ETA in 1996 for the purpose of distributing Federal funds to 52 State grantees (50 United States, District of Columbia, and U.S. Virgin Islands) to administer the WOTC and the Welfare-to-Work (WtW), enacted in 1997, tax credit programs. ETA published the original formula methodology in a **Federal Register** Notice (68 FR 15745) on April 1, 2003, announcing the FY 2003 WOTC and WtW program grants to States:

“After reserving \$584,200 for postage and \$20,000 for the Virgin Islands, funds are distributed to states by administrative formula with a \$64,000 minimum allotment and a 95 percent stop-loss/120 percent stop-gain from the prior year allotment share percentage.

The allocation formula is as follows:

(1) 50 percent based on each state's relative share of total FY 2002 (the prior FY) certifications issued for the WOTC/WtW Tax Credit program;

(2) 30 percent based on each state's relative share of the civilian labor force (CLF) for calendar year 2001 (the preceding calendar year); and

(3) 20 percent based on each state's relative share of the adult recipients of Temporary Assistance for Needy Families (TANF) for FY 2001” (FY 2001 was the second preceding FY for which complete annual TANF data was available).

The WtW program, which focused on TANF recipients, was folded into WOTC in 2006 by division A, title I, section 105 of the Tax Relief and Health Care Act of 2006 (Pub. L. 109–432). While ETA has made incremental

modifications over time, including removing the set-aside for postage, increasing the minimum allotment from \$64,000 to \$66,000 (3% increase), and adding the Commonwealth of Puerto Rico as a State grantee, the WOTC administrative formula methodology has remained largely unchanged. ETA used this administrative formula recently for the FY 2023 allotments, as provided in TEGL No. 06–22, “*Work Opportunity Tax Credit (WOTC) Initial Funding Allotments for Fiscal Year 2023*,”³:

“After allocating \$20,000 to the Virgin Islands, ETA distributes the remaining funds to the SWAs by administrative formula with a \$66,000 minimum allotment and a 95 percent stop-loss/120 percent stop-gain from the previous year allotment percentage. The administrative formula is calculated as follows:

(1) 50 percent is based on each state’s relative share of total WOTC certifications issued from October 1, 2021 through September 30, 2022 (the prior fiscal year);

(2) 30 percent is based on each state’s relative share of the CLF averages for the 12-month period from October 1, 2021 through September 30, 2022 (the prior fiscal year); and

(3) 20 percent is based on each state’s relative share of adult recipients of TANF averages from October 1, 2020, through September 30, 2021 (the 12-month period from the second preceding fiscal year).”

II. Formula Updates and Modifications

The WOTC administrative formula bases 50 percent of States’ annual allotments on each State’s relative share of total WOTC certifications issued in the most recently completed FY’s available data (October 1–September 30). Thirty percent is based on each State’s relative share of CLF averages for the most recently completed FY’s available data, and 20 percent is based on each State’s relative share of adult recipients of TANF averages from the second preceding FY. The same three data metrics (certifications issued, CLF averages, and TANF averages) have been the basis of the administrative formula used to determine State allotments since 1996.

In the initial Notice (Feb 2023), ETA proposed modifications to its administrative formula to factor in the SWAs’ output workload to include denials issued and to adjust for inflation. The proposed allotment formula includes two formula factors: (1) total number of determinations

issued by the SWA (certifications and denials) for the most recently completed FY’s available data, based on SWAs’ certified performance data; and (2) each State’s relative share of CLF averages for the most recently completed FY’s available data. States report their annual certification performance data on ETA Form 9058, *Certification Workload and Characteristics of Certified Individuals*, through an existing information collection under the “Work Opportunity Tax Credit” ICR, approved under OMB Control Number 1205–0371.⁴ A description of how the data is used to calculate the State allotments using the proposed modified formula is provided below:

(1) 40 percent based on each State’s relative share of certifications issued for the most recently completed fiscal year’s available data (October 1–September 30),

(2) 40 percent based on each State’s relative share of denials issued for the most recently completed fiscal year’s available data (October 1–September 30), and

(3) 20 percent based on each State’s relative share of CLF averages for the most recently completed fiscal year’s available data (October 1–September 30).

In addition to populating the administrative formula with updated metrics, ETA proposed modifications that would raise the minimum allotment to the States and improve the formula’s accuracy in terms of estimating the true administrative workload of the SWAs. The proposed modifications were a result of ETA’s review of SWAs’ quarterly performance data, WOTC State/regional coordinators’ feedback, and inquiries received from program stakeholders.

A summary of changes under the proposed modified formula (as detailed in Section IV of the initial Notice) are provided below:

- The formula will no longer factor in States’ share of adult TANF recipient averages. With this formula modification, the administrative workload of the SWA (annual certifications and denials issued) is the primary indicator used to determine fiscal year funding.

- To align the funding formula more closely with the SWAs’ workload, ETA will lessen the formula weight of the CLF averages used in the allotment formula. States with larger population sizes (*i.e.*, California, Florida, New York, and Texas) have a larger number of

eligible employers participating in WOTC. These States process a higher volume of certification requests leading to a larger volume of the determinations issued, and consequently receive a larger relative share of the Federal funding allocation.

ETA believes that focusing on the SWAs’ workload outcomes (certifications and denials issued) is the most appropriate metric on which to base WOTC State allotments. To gradually phase in State funding allotment changes due to the updated formula, ETA will continue to use the 95 percent stop-loss/120 percent stop gain funding provisions which are currently used in WOTC allotment formula calculations. This provision is described further in Section V of this subsequent Notice.

III. Summary of Public Comments Received

Although not required by Federal statute or regulations, ETA sought public comment on the proposed administrative formula modifications in the initial **Federal Register** Notice (88 FR 10540; Feb. 21, 2023). As with all grant formulas, changing calculation metrics will result in changes to each State’s relative share of Federal funding. Two commenters [SWAs] concurred with the modified formula as announced in the initial Notice, two commenters [SWAs] proposed adjusting the weight of formula calculation metrics (*i.e.*, lessening the weight for denials issued), and one commenter [SWA] raised concern for States that may receive up to a five percent decrease in allotment during the implementation year (FY 2024). ETA considered these comments and proceeded with updating the WOTC administrative formula for State allotments as originally proposed in the initial Notice. SWAs expend resources to process a growing number of employer certification requests, regardless of the application’s outcome (certification or denial). In FY 2023, SWAs issued 3,708,081 denials, representing 48 percent of the national total workload, compared to 1,918,901 certifications, representing 25 percent of the total workload.⁵ ETA recognizes this impact and, in the initial Notice, adjusted the administrative formula to better align State funding with SWA workloads by including ‘denials issued’ at the same weight as ‘certifications issued’ in the new formula.

IV. Description of Stop-Loss/Stop-Gain and Minimum Funding Provisions

ETA mitigates large changes in State allotments (which may be caused by changes to formula methodology) by using the “Stop-Loss/Stop-Gain” provision, which gradually phases in State funding allotment changes due to updated formula metrics. ETA will continue to use the 95 percent stop-loss/120 percent stop-gain funding provisions in the WOTC allotment formula calculations. This approach is based on a State’s previous year allotment percentage, which is its relative share of the total formula allotments. The stop-gain provision provides that no State grantee will receive an amount that is more than 120 percent of their previous year’s allotment percentage. The stop-loss provision provides that no State grantee will receive an amount less than 95 percent of their previous year’s allotment percentage. The prior (pre-FY 2024) administrative formula was calculated with 95 percent stop-loss/120 percent stop-gain provisions, and this did not change in the modified formula for FY 2024 and subsequent years.

Under the proposed new formula, the new State allotment minimum would be raised to \$119,000 (\$36,000 for U.S. Virgin Islands), adjusted for inflation. As previously mentioned, the stop-gain provision provides that no State grantee will receive an amount that is more than 120 percent of their previous year’s allotment percentage, and using the proposed new formula, some State grantees would require over a 20 percent increase of their FY 2023 allotment percentage to reach the FY

2024 allotment minimum. To phase in the increased minimum allotment, which also impacts other States’ allotments, ETA will use the stop-gain provision to gradually increase the minimum funding allotment amount to reach the new \$119,000 minimum by FY 2026. The minimum State allotment increased to \$79,131 in FY 2024, which represents a 20 percent share increase from the prior minimum of \$66,000 in FY 2023, and it will increase by 20 percent each fiscal year, to reach the new \$119,000 minimum by FY 2026. A State grantee that would receive less than \$119,000 by application of the FY 2024 formula will, at the option of ETA, continue to receive an allotment that is proportional to the SWA’s current fiscal year allotment and anticipated administrative workload.

V. Revised WOTC Administrative Formula, Effective FY 2024 State Allotments

ETA will determine State allotments for normal WOTC operations according to the following methodology, effective with the FY 2024 State allotments:

After allocating \$36,000 to the U.S. Virgin Islands, ETA distributes the remaining funds to the SWAs by administrative formula with a \$119,000 minimum allotment and a 95 percent stop-loss/120 percent stop-gain from the previous year allotment percentage. The administrative formula is calculated as follows:

(1) 40 percent based on each State’s relative share of certifications issued for the most recently completed fiscal year’s available data (October 1–September 30);

(2) 40 percent based on each State’s relative share of denials issued for the most recently completed fiscal year’s available data (October 1–September 30); and

(3) 20 percent based on each State’s relative share of CLF averages for the 12-month period of the most recently completed fiscal year’s available data (October 1–September 30).

The State allotments set forth in the table appended to this subsequent Notice reflect the distribution resulting from the revised allotment formula described above. In FY 2023 and FY 2024, Congress appropriated \$18,485,000 in funding for State grantees (SWAs) to administer WOTC. The figures in column 1 show the actual FY 2023 formula allotments to State grantees. Column 2 shows the percentage of each States’ allotment in proportion to the total funding appropriated. Column 3 shows the actual FY 2024 formula allotments with the application of the 95 percent stop-loss/120 percent stop-gain, and \$119,000 minimum funding provisions. Column 4 shows each State’s relative share of total FY 2024 allotments and column 5 shows the percentage share difference between FY 2024 and FY 2023 State allotments. Additional information on FY 2024 funding allocations may be referenced in TEGL No 06–23, *Work Opportunity Tax Credit (WOTC) Initial Funding Allotments for Fiscal Year 2024*, available at <https://www.dol.gov/agencies/eta/advisories/tegl-06-23>.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR**Employment and Training
Administration****Employment and Training
Administration Program Year 2024
Workforce Innovation and Opportunity
Act Section 167, National Farmworker
Jobs Program Preliminary State
Allotments****AGENCY:** Employment and Training
Administration, Labor.**ACTION:** Notice; request for comments.**SUMMARY:** This Notice announces
preliminary planning estimates for the
National Farmworker Jobs Program

(NFJP) Career Services and Training grants for Program Year (PY) 2024. This Notice also explains the allotment process that ETA will follow in the event that it does not award funds to any grantee in a particular state in the PY 2024 competition.

DATES: The PY 2024 NFJP allotments become effective for the grant period that begins July 1, 2024. Written comments on this notice are invited and must be received on June 25, 2024.

ADDRESSES: Comments are accepted via email to NFJP@dol.gov. Please enter “PY24 National Farmworker Jobs Program State Allotments Public Comment” in the subject line of the email.

Comments: The Department will retain all comments on this notice and will release them upon request via email

to any member of the public. The Department will make copies of this notice available, upon request, in large print, Braille, and electronic file. The Department also will consider providing the notice in other formats upon request. To obtain the notice in an alternative format, contact the Department using the information provided above. The Department will retain all comments received without making any changes to the comments, including any personal information provided. The Department therefore cautions commenters not to include their personal information such as Social Security Numbers, personal addresses, telephone numbers, and email addresses in their comments; this information would be released with the comment if the comments are requested.

It is the commenter's responsibility to safeguard his or her information.

FOR FURTHER INFORMATION CONTACT:

Steven Rietzke, Chief, Division of National Programs, Tools and Technical Assistance, Office of Workforce Investment, at 202-693-3980. (This is not a toll-free number.) If you are deaf, hard of hearing, or have a speech disability, please dial 7-1-1 to access telecommunications relay services.

SUPPLEMENTARY INFORMATION: This notice is published pursuant to Section 182(d) of the Workforce Innovation and Opportunity Act, Prompt Allotment of Funds.

I. Background

The Department has announced the availability of funding for NFJP grants through the PY 2024 Funding Opportunity Announcement (FOA). In distributing funds, the Employment and Training Administration (ETA) calculates allotments for NFJP Career Services and Training grantees through an administrative formula. This notice provides preliminary planning estimates for the NFJP Career Services and Training grants. The allotments are based on the funds appropriated in the Further Consolidated Appropriations Act, 2024, Public Law 118-47 (from this point forward will be referred to as the "the Act").

PY 2024 funding levels, to use for planning purposes, are based on the full-year funding levels for this program in PY 2023 as indicated in **Federal Register** notice 88 FR 31279, May 16, 2023, pro-rated based on the availability of funding for NFJP formula grants in PY 2024. In PY 2024, Congress has provided \$90,134,000 for formula grants (of which \$90,048,000 is available for formula grants after setting aside \$86,000 for program integrity). While Congress appropriated the same amount for formula grants in PY 2023 and PY 2024, ETA is setting aside less funding in PY 2024 for program integrity. Accordingly, as noted above and explained further below, ETA is calculating state allotment amounts by pro-rating the PY 2024 allotment amounts based on the results of the PY 2023 formula and the updated availability of formula funding after set-asides in PY 2024.

In the competition for NFJP Career Services and Training grants, if the Department does not receive any competitive applications from eligible applicants for a state, the Department

does not plan to reopen the competition to seek prospective applicants to provide services in a state. In determining a course of action for a given state, the Department will follow the procedures described in the Funding Opportunity Announcement for the competition. For any state where the Department determines it will not award an NFJP grant under the PY 2024 competition, it will instead redistribute the state's funds among the grants awarded to other state service areas, distributing funds proportionally based on the NFJP allotment formula results for PY 2024.

As background, the PY 2024 appropriation also provides \$6,591,000 for migrant and seasonal farmworker housing (of which \$6,585,000 was allotted after \$6,000 was set aside for program integrity and of which not less than 70 percent shall be for permanent housing), and another \$671,000 was set aside for discretionary purposes. The Housing grant allotments are distributed as a result of a competition and are not the subject of this Notice.

This notice includes the following sections:

- Section II of this notice provides a discussion of the data used to populate the formula.
- Section III describes the prorated method for allotments for the implementation year starting in PY 2024.
- Section IV describes minimum funding provisions to address State service areas that would receive less than \$60,000.
- Section V provides preliminary state allotments for PY 2024.

II. Description of Data Files and Allotment Formula

The formula's original methodology is described in the **Federal Register** notice 64 FR 27390, May 19, 1999. In PY 2018, ETA incorporated two modifications to the allotment formula to provide more accurate estimates of each state service area's relative share of persons eligible for the program. The formula also used updated data from each of the four data files serving as the basis of the formula since 1999. The revised formula methodology is described in the **Federal Register** notice 83 FR 32151, July 11, 2018. In PY 2021, ETA incorporated two modifications to the allotment formula. These modifications are described in **Federal Register** notice 86 FR 32063, June 16, 2021. The **Federal Register**

notices are accessible at <https://www.federalregister.gov/>.

Like the PY 23 appropriation, the PY 24 appropriation includes the language expanding eligibility to farmworkers who are in families with total family incomes at or below 150 percent of the poverty line rather than the higher of the poverty line or 70 percent of the lower living standard income level. Because the PY 2024 allotments will be prorated based on the results of the PY 2023 formula, the PY 2024 allotment results continue to reflect modifications to the formula related to this expansion. ETA will subsequently revise relevant guidance regarding the definition of "low-income individual" as needed if the same expansion of eligibility is not included in subsequent appropriations.

III. Description of the Prorated Method for Allotments

The Department will use a prorated method for PY 2024 allotments. For PY 2024, each state service area will receive a prorated allotment, which is based on their PY 2023 allotment percentage, as applied to the PY 2024 formula funds available. ETA anticipates updating data and reimplementing a staged stop loss/stop gain in PY 2026. ETA will explain its approach to calculating allotments in PY 2026 in a subsequent notice at a later date.

IV. Minimum Funding Provisions

A state service area which would receive less than \$60,000 by application of the formula will, at the option of the DOL, receive no allotment or, if practical, be combined with another adjacent state service area. The Department has determined that funding below \$60,000 is insufficient for sustaining an independently administered program.

V. Program Year 2024 Preliminary State Allotments

The planning estimates set forth in the Table appended to this notice reflect the distribution resulting from the prorated methodology described above.

For purposes of illustrating the effects of using the prorated methodology, columns 2 and 3 show the state allotments for PY 2023 (which incorporated an 85 percent stop loss) and prorated method for PY 2024. The dollar difference between PY 2023 and PY 2024 allotments is shown in column 4. The percent difference is reported in column 5.

BILLING CODE P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

National Endowment for the Humanities

Meeting of Humanities Panel

AGENCY: National Endowment for the Humanities; National Foundation on the Arts and the Humanities.

ACTION: Notice of meeting.

SUMMARY: The National Endowment for the Humanities (NEH) will hold twenty-four meetings, by video conference, of the Humanities Panel, a federal advisory committee, during July 2024. The purpose of the meetings is for panel review, discussion, evaluation, and recommendation of applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965.

DATES: See **SUPPLEMENTARY INFORMATION** for meeting dates. The meetings will open at 8:30 a.m. and will adjourn by 5:00 p.m. on the dates specified below.

FOR FURTHER INFORMATION CONTACT:

Elizabeth Voyatzis, Committee Management Officer, 400 7th Street SW, Room 4060, Washington, DC 20506; (202) 606–8322; evoyatzis@neh.gov.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. 10), notice is hereby given of the following meetings:

1. Date: July 16, 2024

This video meeting will discuss applications on the topics of American Literature, Language, and Studies, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

2. Date: July 16, 2024

This video meeting will discuss applications on the topics of Arts, Media, and Communications, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

3. Date: July 22, 2024

This video meeting will discuss applications on the topics of American History and Studies, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

4. Date: July 23, 2024

This video meeting will discuss applications for the Cultural and Community Resilience grant program, submitted to the Division of Preservation and Access.

5. Date: July 23, 2024

This video meeting will discuss applications on the topics of World History and Studies, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

6. Date: July 23, 2024

This video meeting will discuss applications on the topics of Literature, Medieval, and Renaissance Studies, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

7. Date: July 24, 2024

This video meeting will discuss applications on the topic of Social Sciences, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

8. Date: July 24, 2024

This video meeting will discuss applications on the topics of Philosophy, Politics, and History, for the Awards for Faculty grant program, submitted to the Division of Research Programs.

9. Date: July 24, 2024

This video meeting will discuss applications on the topics of Collections Care and Preservation Training, for the Preservation and Access Education and Training grant program, submitted to the Division of Preservation and Access.

10. Date: July 24, 2024

This video meeting will discuss applications for the Cultural and Community Resilience grant program, submitted to the Division of Preservation and Access.

11. Date: July 25, 2024

This video meeting will discuss applications for the Cultural and Community Resilience grant program, submitted to the Division of Preservation and Access.

12. Date: July 25, 2024

This video meeting will discuss applications for the Fellowships for Advanced Social Science Research on Japan grant program, submitted to the Division of Research Programs.

13. Date: July 25, 2024

This video meeting will discuss applications on the topics of American

Literature, Communications, and Rhetoric, for the Fellowships grant program, submitted to the Division of Research Programs.

14. Date: July 25, 2024

This video meeting will discuss applications on the topics of Music, Dance, Theater, and Performance Studies, for the Fellowships grant program, submitted to the Division of Research Programs.

15. Date: July 26, 2024

This video meeting will discuss applications on the topics of Literature and Literary Theory, for the Fellowships grant program, submitted to the Division of Research Programs.

16. Date: July 26, 2024

This video meeting will discuss applications on the topics of Religious Studies and U.S. History, for the Fellowships grant program, submitted to the Division of Research Programs.

17. Date: July 29, 2024

This video meeting will discuss applications on the topics of Africa, the Middle East, and the Ancient World, for the Fellowships grant program, submitted to the Division of Research Programs.

18. Date: July 29, 2024

This video meeting will discuss applications on the topic of European Studies, for the Fellowships grant program, submitted to the Division of Research Programs.

19. Date: July 30, 2024

This video meeting will discuss applications on the topics of Art, Architecture, and Visual Culture, for the Fellowships grant program, submitted to the Division of Research Programs.

20. Date: July 30, 2024

This video meeting will discuss applications on the topic of Philosophy, for the Fellowships grant program, submitted to the Division of Research Programs.

21. Date: July 30, 2024

This video meeting will discuss applications for the Cultural and Community Resilience grant program, submitted to the Division of Preservation and Access.

22. Date: July 31, 2024

This video meeting will discuss applications for the Cultural and Community Resilience grant program, submitted to the Division of Preservation and Access.

23. Date: July 31, 2024

This video meeting will discuss applications on the topics of Latin American, Caribbean, and American History and Studies, for the Fellowships grant program, submitted to the Division of Research Programs.

24. Date: July 31, 2024

This video meeting will discuss applications on the topics of History of Science, Health Humanities, and Social Sciences, for the Fellowships grant program, submitted to the Division of Research Programs.

Because these meetings will include review of personal and/or proprietary financial and commercial information given in confidence to the agency by grant applicants, the meetings will be closed to the public pursuant to sections 552b(c)(4) and 552b(c)(6) of Title 5, U.S.C., as amended. I have made this determination pursuant to the authority granted me by the Chair's Delegation of Authority to Close Advisory Committee Meetings dated April 15, 2016.

Dated: June 6, 2024.

Jessica Graves,

Paralegal Specialist, National Endowment for the Humanities.

BILLING CODE 7536-01-P

NUCLEAR REGULATORY COMMISSION

[NRC-2024-0108]

Monthly Notice; Applications and Amendments to Facility Operating Licenses and Combined Licenses Involving No Significant Hazards Considerations

AGENCY: Nuclear Regulatory Commission.

ACTION: Monthly notice.

SUMMARY: Pursuant to section 189a.(2) of the Atomic Energy Act of 1954, as amended (the Act), the U.S. Nuclear Regulatory Commission (NRC) is publishing this regular monthly notice. The Act requires the Commission to publish notice of any amendments issued, or proposed to be issued, and grants the Commission the authority to issue and make immediately effective any amendment to an operating license or combined license, as applicable, upon a determination by the Commission that such amendment involves no significant hazards consideration (NSHC), notwithstanding the pendency before the Commission of a request for a hearing from any person.

DATES: Comments must be filed by July 11, 2024. A request for a hearing or petitions for leave to intervene must be filed by August 12, 2024. The last monthly notice was published on May 14, 2024.

ADDRESSES: You may submit comments by any of the following; however, the NRC encourages electronic comment submission through the Federal rulemaking website.

- *Federal rulemaking website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2024-0108. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301-415-0624; email: Stacy.Schumann@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *Mail comments to:* Office of Administration, Mail Stop: TWFN-7-A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see "Obtaining Information and Submitting Comments" in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT:

Shirley Rohrer, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, telephone: 301-415-5411; email: Shirley.Rohrer@nrc.gov.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC-2024-0108, facility name, unit number(s), docket number(s), application date, and subject when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2024-0108.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, at 301-415-4737, or by email to PDR.Resource@nrc.gov. The ADAMS

accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to PDR.Resource@nrc.gov or call 1-800-397-4209 or 301-415-4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (<https://www.regulations.gov>). Please include Docket ID NRC-2024-0108, facility name, unit number(s), docket number(s), application date, and subject, in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <https://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Notice of Consideration of Issuance of Amendments to Facility Operating Licenses and Combined Licenses and Proposed No Significant Hazards Consideration Determination

For the facility-specific amendment requests shown in this notice, the Commission finds that the licensees' analyses provided, consistent with section 50.91 of title 10 of the *Code of Federal Regulations* (10 CFR) "Notice for public comment; State consultation," are sufficient to support the proposed determinations that these amendment requests involve NSHC. Under the Commission's regulations in 10 CFR 50.92, operation of the facilities in accordance with the proposed amendments would not (1) involve a significant increase in the probability or

consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety.

The Commission is seeking public comments on these proposed determinations. Any comments received within 30 days after the date of publication of this notice will be considered in making any final determinations.

Normally, the Commission will not issue the amendments until the expiration of 60 days after the date of publication of this notice. The Commission may issue any of these license amendments before expiration of the 60-day period provided that its final determination is that the amendment involves NSHC. In addition, the Commission may issue any of these amendments prior to the expiration of the 30-day comment period if circumstances change during the 30-day comment period such that failure to act in a timely way would result, for example in derating or shutdown of the facility. If the Commission takes action on any of these amendments prior to the expiration of either the comment period or the notice period, it will publish in the **Federal Register** a notice of issuance. If the Commission makes a final NSHC determination for any of these amendments, any hearing will take place after issuance. The Commission expects that the need to take action on any amendment before 60 days have elapsed will occur very infrequently.

A. Opportunity To Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any person (petitioner) whose interest may be affected by any of these actions may file a request for a hearing and petition for leave to intervene (petition) with respect to that action. Petitions shall be filed in accordance with the Commission's "Agency Rules of Practice and Procedure" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.309. If a petition is filed, the Commission or a presiding officer will rule on the petition and, if appropriate, a notice of a hearing will be issued.

Petitions must be filed no later than 60 days from the date of publication of this notice in accordance with the filing instructions in the "Electronic Submissions (E-Filing)" section of this document. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent

a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i) through (iii).

If a hearing is requested, and the Commission has not made a final determination on the issue of no significant hazards consideration, the Commission will make a final determination on the issue of no significant hazards consideration, which will serve to establish when the hearing is held. If the final determination is that the amendment request involves no significant hazards consideration, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, then any hearing held would take place before the issuance of the amendment unless the Commission finds an imminent danger to the health or safety of the public, in which case it will issue an appropriate order or rule under 10 CFR part 2.

A State, local governmental body, federally recognized Indian Tribe, or designated agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h) no later than 60 days from the date of publication of this notice. Alternatively, a State, local governmental body, federally recognized Indian Tribe, or agency thereof may participate as a non-party under 10 CFR 2.315(c).

For information about filing a petition and about participation by a person not a party under 10 CFR 2.315, see ADAMS Accession No. ML20340A053 (<https://adamswebsearch2.nrc.gov/webSearch2/main.jsp?AccessionNumber=ML20340A053>) and on the NRC's public website at <https://www.nrc.gov/about-nrc/regulatory/adjudicatory/hearing.html#participate>.

B. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including documents filed by an interested State, local governmental body, federally recognized Indian Tribe, or designated agency thereof that requests to participate under 10 CFR 2.315(c), must be filed in accordance with 10 CFR 2.302. The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases, to mail copies on electronic storage media, unless an exemption permitting an alternative filing method, as further discussed, is

granted. Detailed guidance on electronic submissions is located in the "Guidance for Electronic Submissions to the NRC" (ADAMS Accession No. ML13031A056) and on the NRC's public website at <https://www.nrc.gov/site-help/e-submittals.html>.

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at Hearing.Docket@nrc.gov, or by telephone at 301-415-1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public website at <https://www.nrc.gov/site-help/e-submittals/getting-started.html>. After a digital ID certificate is obtained and a docket created, the participant must submit adjudicatory documents in Portable Document Format. Guidance on submissions is available on the NRC's public website at <https://www.nrc.gov/site-help/electronic-sub-ref-mat.html>. A filing is considered complete at the time the document is submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. ET on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email confirming receipt of the document. The E-Filing system also distributes an email that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed to obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system

may seek assistance by contacting the NRC's Electronic Filing Help Desk through the "Contact Us" link located on the NRC's public website at <https://www.nrc.gov/site-help/e-submittals.html>, by email to MSHD.Resource@nrc.gov, or by a toll-free call at 1-866-672-7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., ET, Monday through Friday, except Federal holidays.

Participants who believe that they have good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted in accordance with 10 CFR 2.302(b)–(d). Participants filing adjudicatory documents in this manner are responsible for serving their documents on all other participants.

Participants granted an exemption under 10 CFR 2.302(g)(2) must still meet the electronic formatting requirement in 10 CFR 2.302(g)(1), unless the participant also seeks and is granted an exemption from 10 CFR 2.302(g)(1).

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, which is publicly available at <https://adams.nrc.gov/ehd>, unless excluded pursuant to an order of the presiding officer. If you do not have an NRC-issued digital ID certificate as previously described, click "cancel" when the link requests certificates and you will be automatically directed to the NRC's electronic hearing docket where you will be able to access any publicly available documents in a particular hearing docket. Participants are requested not to include personal privacy information such as social security numbers, home addresses, or personal phone numbers in their filings

unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants should not include copyrighted materials in their submission.

The following table provides the plant name, docket number, date of application, ADAMS accession number, and location in the application of the licensees' proposed NSHC determinations. For further details with respect to these license amendment applications, see the applications for amendment, which are available for public inspection in ADAMS. For additional direction on accessing information related to this document, see the "Obtaining Information and Submitting Comments" section of this document.

LICENSE AMENDMENT REQUESTS

Constellation Energy Generation, LLC.; Braidwood Station, Units 1 and 2, Will County, IL; Constellation Energy Generation, LLC.; Byron Station, Unit Nos. 1 and 2, Ogle County, IL; Constellation Energy Generation, LLC.; Calvert Cliffs Nuclear Power Plant, Units 1 and 2; Calvert County, MD; Constellation Energy Generation, LLC.; Clinton Power Station, Unit 1; Constellation FitzPatrick, LLC and Constellation Energy Generation, LLC.; James A. FitzPatrick Nuclear Power Plant; Oswego County, NY; Constellation Energy Generation, LLC.; LaSalle County Station, Units 1 and 2, LaSalle County, IL; Constellation Energy Generation, LLC.; Limerick Generating Station, Units 1 and 2; Montgomery County, PA.; Constellation Energy Generation, LLC.; Nine Mile Point Nuclear Station, Units 1 and 2; Oswego County, NY; Constellation Energy Generation, LLC.; Peach Bottom Atomic Power Station, Units 2 and 3; York and Lancaster Counties, PA; Constellation Energy Generation, LLC.; R.E. Ginna Nuclear Power Plant; Wayne County, NY

Docket No(s)	50–456, 50–457, 50–454, 50–455, 50–317, 50–318, 50–461, 50–333, 50–373, 50–374, 50–352, 50–353, 50–220, 50–410, 50–277, 50–278, 50–244.
Application date	April 12, 2024.
ADAMS Accession No	ML24103A204.
Location in Application of NSHC	Pages 2–4 of Attachment 1.
Brief Description of Amendment(s)	The proposed amendments would adopt Technical Specifications Task Force (TSTF) Traveler, TSTF–591–A, Revision 0, "Revise Risk Informed Completion Time (RICT) Program." TSTF–591–A would revise Technical Specification (TS), Section 5.5 "Programs and Manuals," "Risk Informed Completion Time Program," to reference Regulatory Guide 1.200, Revision 3, instead of Revision 2, and adds a new report to TS, Section 5.6, "Reporting Requirements," that informs the NRC of newly developed methods used to calculate a RICT. Additionally, the licensee is requesting the removal of certain stations' facility operating license condition sections associated with the implementation of the 10 CFR 50.69 and RICT programs.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Jason Zorn, Associate General Counsel, Constellation Energy Generation, 101 Constitution Ave. NW, Suite 400 East, Washington, DC 20001.
NRC Project Manager, Telephone Number	Scott Wall, 301–415–2855.

Dominion Energy Nuclear Connecticut, Inc.; Millstone Power Station, Unit No. 3; New London County, CT

Docket No(s)	50–423.
Application date	March 22, 2024.
ADAMS Accession No	ML24086A476.
Location in Application of NSHC	Page 2 of Attachment 1.
Brief Description of Amendment(s)	The proposed amendment would extend the reactor coolant pump (RCP) motor flywheel examination frequency from the currently approved 10-year inspection interval, to an interval not to exceed 20 years, consistent with Industry/Technical Specification Task Force (TSTF) Standard Technical Specification Change Traveler, TSTF–421, "Revision to RCP Flywheel Inspection Program (WCAP–15666)." The availability of this technical specification improvement was announced in the Federal Register on October 22, 2003 (68 FR 60422), as part of the consolidated line-item improvement process. The licensee incorporated the original notice by reference in their license amendment request as it concluded that the proposed no significant hazards consideration determination as published on June 24, 2003 (68 FR 37590) is applicable to Millstone, Unit No. 3.

LICENSE AMENDMENT REQUESTS—Continued

Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	W.S. Blair, Senior Counsel, Dominion Energy Services, Inc., 120 Tredegar St., RS-2, Richmond, VA 23219.
NRC Project Manager, Telephone Number	Richard Guzman, 301-415-1030.
Duke Energy Progress, LLC.; Shearon Harris Nuclear Power Plant, Unit 1; Wake and Chatham Counties, NC	
Docket No(s)	50-400.
Application date	March 20, 2024.
ADAMS Accession No	ML24080A449.
Location in Application of NSHC	Page 2 of Enclosure 1.
Brief Description of Amendment(s)	The proposed amendment would extend the completion time from 1 hour to 24 hours for applicable actions of Technical Specification (TS) 3.5.1, "Accumulators." The change is consistent with NRC-approved Industry/Technical Specification Task Force (TSTF) Standard Technical Specification Change Traveler TSTF-370, "Risk-Informed Evaluation of an Extension to Accumulator Completion Times for Westinghouse Plants" (ML003771348). The availability of this TS improvement was announced in the Federal Register on March 12, 2003 (68 FR 11880), as part of the consolidated line-item improvement process.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Tracey Mitchell LeRoy, Deputy General Counsel, Duke Energy Corporation, 4720 Piedmont Row Dr., Charlotte, NC 28210.
NRC Project Manager, Telephone Number	Michael Mahoney, 301-415-3867.
Energy Northwest; Columbia Generating Station; Benton County, WA	
Docket No(s)	50-397.
Application date	January 30, 2024, as supplemented by letter dated March 20, 2024.
ADAMS Accession No	ML24030A844, ML24081A193.
Location in Application of NSHC	Pages 44-46 of Enclosure 1.
Brief Description of Amendment(s)	The proposed amendment would revise the Columbia Emergency Plan to reflect the updates contained in NUREG-0654/FEMA-REP-1, Revision 2, "Criteria for Preparation and Evaluation of Radiological Emergency Response Plans and Preparedness in Support of Nuclear Power Plants," dated December 2019 (ML19347D139).
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Ryan Lukson, Assistant General Counsel, Energy Northwest, MD 1020, P.O. Box 968, Richland, WA 99352.
NRC Project Manager, Telephone Number	Mahesh Chawla, 301-415-8371.
Entergy Operations, Inc.; Arkansas Nuclear One, Unit 2; Pope County, AR	
Docket No(s)	50-368.
Application date	April 4, 2024.
ADAMS Accession No	ML24095A063.
Location in Application of NSHC	Pages 3-4 of the Enclosure.
Brief Description of Amendment(s)	The proposed amendment would correct typographical errors in the Arkansas Nuclear One, Unit 2 Technical Specifications.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Susan Raimo, Associate General Counsel—Nuclear, 101 Constitution Avenue NW, Washington, DC 20001.
NRC Project Manager, Telephone Number	Thomas Wengert, 301-415-4037.
Indiana Michigan Power Company; Donald C. Cook Nuclear Plant, Units 1 and 2; Berrien County, MI	
Docket No(s)	50-315, 50-316.
Application date	April 3, 2024, as supplemented by letter dated May 16, 2024.
ADAMS Accession No	ML24094A288, ML24137A221.
Location in Application of NSHC	Pages 24-26 of Enclosure 2.
Brief Description of Amendment(s)	The proposed amendments would revise Technical Specification (TS) 3.8.1, "AC [Alternating Current] Sources—Operating," by adding a footnote for TS 3.8.1, Required Action A.3 that would allow a one-time completion time extension from 72 hours to 288 hours to support the replacement of the 12AB (Train B) loop feed enclosure and associated bus for the Train B reserve feed preferred power source.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Robert B. Haemer, Senior Nuclear Counsel, Indiana Michigan Power Company, One Cook Place, Bridgman, MI 49106.
NRC Project Manager, Telephone Number	Scott Wall, 301-415-2855.
Southern Nuclear Operating Company, Inc.; Edwin I. Hatch Nuclear Plant, Units 1 and 2; Appling County, GA; Southern Nuclear Operating Company, Inc.; Joseph M. Farley Nuclear Plant, Units 1 and 2; Houston County, AL	
Docket No(s)	50-348, 50-364, 50-321, 50-366.
Application date	May 3, 2024.
ADAMS Accession No	ML24124A133.
Location in Application of NSHC	Pages E-22 and E-23 of the Enclosure.

LICENSE AMENDMENT REQUESTS—Continued

Brief Description of Amendment(s)	The proposed amendments would revise Technical Specification (TS) 1.1, "Use and Application Definitions," and add a new "Online Monitoring Program" to TS 5.5, "Programs and Manuals." The proposed amendments would use an online monitoring (OLM) methodology as the technical basis to switch from time-based surveillance frequency for channel calibrations to a condition-based calibration frequency based on OLM results. The proposed amendments are based on the NRC-approved topical report AMS-TR-0720R2-A, "Online Monitoring Technology to Extend Calibration Intervals of Nuclear Plant Pressure Transmitters."
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	Millicent Ronnlund, Vice President and General Counsel, Southern Nuclear Operating Co., Inc., P.O. Box 1295, Birmingham, AL 35201-1295.
NRC Project Manager, Telephone Number	Jack Minzer Bryant, 301-415-0610.
Tennessee Valley Authority; Browns Ferry Nuclear Plant, Units 1, 2, and 3; Limestone County, AL; Tennessee Valley Authority; Sequoyah Nuclear Plant, Units 1 and 2; Hamilton County, TN; Tennessee Valley Authority; Watts Bar Nuclear Plant, Units 1 and 2; Rhea County, TN	
Docket No(s)	50-259, 50-260, 50-296, 50-327, 50-328, 50-390, 50-391.
Application date	April 1, 2024.
ADAMS Accession No	ML24093A047.
Location in Application of NSHC	Pages E2-4-E2-5 of Enclosure 2.
Brief Description of Amendment(s)	The proposed amendments would revise Browns Ferry Nuclear Plant, Units 1, 2, and 3, and Sequoyah Nuclear Plant, Units 1 and 2, Technical Specification (TS) 5.4.1 and Watts Bar Nuclear Plant, Units 1 and 2, TS 5.7.1 to remove the revision number for Regulatory Guide 1.33 and replace it with a reference to the revision that is specified in the TVA Nuclear Quality Assurance Plan.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	David Fountain, Executive VP and General Counsel, Tennessee Valley Authority, 6A West Tower, 400 West Summit Hill Drive, Knoxville, TN 37902.
NRC Project Manager, Telephone Number	Kimberly Green, 301-415-1627.
Virginia Electric and Power Company; Surry Power Station, Unit Nos. 1 and 2; Surry County, VA	
Docket No(s)	50-280, 50-281.
Application date	March 22, 2024.
ADAMS Accession No	ML24087A208.
Location in Application of NSHC	Pages 10-12 of Attachment 1.
Brief Description of Amendment(s)	The proposed amendments would revise the Surry Power Station, Unit Nos. 1 and 2, Technical Specification (TS), Section 3.8, Containment, to: (1) change the TS 3.8.D heading from Internal Pressure to Containment Pressure, (2) add a minimum containment air partial pressure limit to the Limiting Condition for Operation (LCO) in TS 3.8.D, and (3) add a new TS 3.8.E, Containment Air Temperature, to provide an LCO for containment average air temperature. The proposed change also revises TS 4.1, Operational Safety Review, to incorporate TS Surveillance Requirements for containment air partial pressure and containment average air temperature.
Proposed Determination	NSHC.
Name of Attorney for Licensee, Mailing Address	W.S. Blair, Senior Counsel, Dominion Energy Services, Inc., 120 Tredegar St., RS-2, Richmond, VA 23219.
NRC Project Manager, Telephone Number	John Klos, 301-415-5136.

III. Notice of Issuance of Amendments to Facility Operating Licenses and Combined Licenses

During the period since publication of the last monthly notice, the Commission has issued the following amendments. The Commission has determined for each of these amendments that the application complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR chapter I, which are set forth in the license amendment.

A notice of consideration of issuance of amendment to facility operating license or combined license, as

applicable, proposed NSHC determination, and opportunity for a hearing in connection with these actions, were published in the **Federal Register** as indicated in the safety evaluation for each amendment.

Unless otherwise indicated, the Commission has determined that these amendments satisfy the criteria for categorical exclusion in accordance with 10 CFR 51.22. Therefore, pursuant to 10 CFR 51.22(b), no environmental impact statement or environmental assessment need be prepared for these amendments. If the Commission has prepared an environmental assessment under the special circumstances provision in 10 CFR 51.22(b) and has made a determination based on that

assessment, it is so indicated in the safety evaluation for the amendment.

For further details with respect to each action, see the amendment and associated documents such as the Commission's letter and safety evaluation, which may be obtained using the ADAMS accession numbers indicated in the following table. The safety evaluation will provide the ADAMS accession numbers for the application for amendment and the **Federal Register** citation for any environmental assessment. All of these items can be accessed as described in the "Obtaining Information and Submitting Comments" section of this document.

LICENSE AMENDMENT ISSUANCE(S)

Constellation Energy Generation, LLC.; Clinton Power Station, Unit No. 1; DeWitt County, IL; Constellation Energy Generation, LLC.; Dresden Nuclear Power Station, Units 2 and 3; Grundy County, IL; Constellation Energy Generation, LLC.; LaSalle County Station, Units 1 and 2; LaSalle County, IL; Constellation Energy Generation, LLC.; Quad Cities Nuclear Power Station, Units 1 and 2; Rock Island County, IL; Nine Mile Point Nuclear Station, LLC. and Constellation Energy Generation, LLC.; Nine Mile Point Nuclear Station, Unit 2; Oswego County, NY

Docket No(s)	50–461, 50–237, 50–249, 50–373, 50–374, 50–410, 50–254, 50–265.
Amendment Date	May 23, 2024.
ADAMS Accession No	ML24079A076.
Amendment No(s)	Clinton 253; Dresden 284 (U2) and 277 (U3); LaSalle 263 (U1 and 248 (U2); NMP 196 (U2); Quad Cities 300 (U1) and 296 (U2).
Brief Description of Amendment(s)	The amendments revised the technical specifications for each facility in accordance with Technical Specifications Task Force (TSTF) Traveler TSTF–264, Revision 0, “3.3.9 and 3.3.10—Delete Flux Monitors Specific Overlap Requirement SRs [Surveillance Requirements].” Specifically, the proposed changes delete SRs which verify the overlap between the source range monitor and the intermediate range monitor, and between the intermediate range monitor and the average power range monitor.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Dominion Energy Nuclear Connecticut, Inc.; Millstone Power Station, Unit No. 3; New London County, CT

Docket No(s)	50–423.
Amendment Date	May 21, 2024.
ADAMS Accession No	ML24109A003.
Amendment No(s)	289.
Brief Description of Amendment(s)	The amendment revised Technical Specification (TS) 6.9.1.6.b to support the transition to Framatome (FRM) GAIA fuel with M5™ cladding at Millstone Power Station, Unit No. 3, and the resulting application of the FRM Small Break and Realistic Large Break Loss-of-Coolant Accident (LOCA) methodologies and the associated use of the GALILEO fuel performance code within the LOCA methods. Specifically, FRM Topical Reports EMF–2328–P–A, “PWR [pressurized water reactor] Small Break LOCA Evaluation Model, S–RELAP5 Based,” EMF–2103–P–A, “Realistic Large Break LOCA Methodology for Pressurized Water Reactors,” and ANP–10349–P–A, “GALILEO Implementation in LOCA Methods,” were added to the list of methodologies for establishing core operating limits. The revision to TS 6.9.1.6.b also deleted one methodology no longer used to define core operating limits at Millstone Power Station, Unit No. 3.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

DTE Electric Company; Fermi, Unit 2; Monroe County, MI

Docket No(s)	50–341.
Amendment Date	April 30, 2024.
ADAMS Accession No	ML24052A277.
Amendment No(s)	229.
Brief Description of Amendment(s)	The amendment modified Fermi 2 Technical Specification 3.8.1, “AC [Alternating Current] Sources-Operating,” to revise Surveillance Requirement 3.8.1.12, by adding a requirement to verify the crankcase overpressure automatic trip for each emergency diesel generator is bypassed on an actual or simulated emergency start signal.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Entergy Louisiana, LLC., and Entergy Operations, Inc.; River Bend Station, Unit 1; West Feliciana Parish, LA

Docket No(s)	50–458.
Amendment Date	May 16, 2024.
ADAMS Accession No	ML24081A007.
Amendment No(s)	213.
Brief Description of Amendment(s)	The amendment modified the River Bend Station, Unit 1 technical specification requirements to permit the use of Risk-Informed Completion Times in accordance with Technical Specifications Task Force (TSTF) Traveler TSTF–505, Revision 2, “Provide Risk-Informed Extended Completion Times—RITSTF [Risk-Informed TSTF] Initiative 4b.” The NRC staff issued a final model safety evaluation approving TSTF–505, Revision 2, on November 21, 2018.
Public Comments Received as to Proposed NSHC (Yes/No).	No.

Entergy Louisiana, LLC, and Entergy Operations, Inc.; River Bend Station, Unit 1; West Feliciana Parish, LA

Docket No(s)	50–458.
Amendment Date	May 16, 2024.
ADAMS Accession No	ML24093A089
Amendment No(s)	214.

LICENSE AMENDMENT ISSUANCE(S)—Continued

Brief Description of Amendment(s)	The amendment revised the River Bend Renewed Facility Operating License No. NPF-47 to add a new license condition to allow for the implementation of 10 CFR 50.69, "Risk-informed categorization and treatment of structures, systems and components for nuclear power reactors."
Public Comments Received as to Proposed NSHC (Yes/No).	No.
Florida Power & Light Company, et al.; St. Lucie Plant, Unit Nos. 1 and 2; St. Lucie County, FL	
Docket No(s)	50-335, 50-389.
Amendment Date	March 12, 2024.
ADAMS Accession No	ML24017A209.
Amendment No(s)	254 (Unit 1) and 209 (Unit 2).
Brief Description of Amendment(s)	The amendments modified the licensing basis by the addition of a license condition to allow for the implementation of the provisions of 10 CFR 50.69, "Risk-informed categorization and treatment of structures, systems and components for nuclear power reactors."
Public Comments Received as to Proposed NSHC (Yes/No).	No.
NextEra Energy Seabrook, LLC.; Seabrook Station, Unit No. 1; Rockingham County, NH	
Docket No(s)	50-443.
Amendment Date	May 7, 2024.
ADAMS Accession No	ML24046A051.
Amendment No(s)	174.
Brief Description of Amendment(s)	The amendment revised the applicability of the figures in the technical specifications (TSs) for the reactor coolant system pressure-temperature (P-T) limits. This modified the period of applicability specified in the P-T limits curves of TS Figure 3.4-2, Reactor Coolant System Heatup Limitations—Applicable to 55 effective full-power years (EFPY), and Figure 3.4-3, Reactor Coolant System Cooldown Limitations—applicable to 55 EFPY, and Figure 3.4-4, Maximum Allowable power operated Setpoints for cold overpressure protection system, and conforming changes to the TS Index by updating from 55 EFPY to 52.6 EFPY.
Public Comments Received as to Proposed NSHC (Yes/No).	Yes.
Northern States Power Company—Minnesota; Prairie Island Nuclear Generating Plant, Unit Nos. 1 and 2; Goodhue County, MN	
Docket No(s)	50-282, 50-306.
Amendment Date	May 1, 2024.
ADAMS Accession No	ML24071A116.
Amendment No(s)	244 (Unit 1) and 232 (Unit 2).
Brief Description of Amendment(s)	The amendments revised Technical Specification (TS) 3.7.8, "Cooling Water (CL) System," required actions for Condition B from verification of operability of both CL pumps that supply the operable CL header to verification of the operability of a safeguards CL pump supplying the operable CL header. The amendments also remove reference to an expired one-time allowance for the completion time for TS 3.7.8 required action B.1.
Public Comments Received as to Proposed NSHC (Yes/No).	No.
Southern Nuclear Operating Company, Inc.; Vogtle Electric Generating Plant, Unit 3; Burke County, GA	
Docket No(s)	52-025.
Amendment Date	May 11, 2024.
ADAMS Accession No	ML24101A211.
Amendment No(s)	198.
Brief Description of Amendment(s)	The amendment changed Technical Specification (TS) 5.5.13, "Ventilation Filter Testing Program (VFTP)," to provide an exception to the 24-month testing frequency. The exception deferred the next required performance until prior to startup from the first refueling outage. This exception applies to in-place penetration and system bypass testing of the high efficiency particulate air (HEPA) filter, in place penetration and system bypass testing of the charcoal adsorber, and pressure drop testing across the HEPA filter, the charcoal adsorber, and the post filter, as specified in TSs 5.5.13.a.1, 5.5.13.a.2, and 5.5.13.a.4, respectively.
Public Comments Received as to Proposed NSHC (Yes/No).	Yes.
Tennessee Valley Authority; Watts Bar Nuclear Plant, Unit 1; Rhea County, TN	
Docket No(s)	50-390.
Amendment Date	May 16, 2024.
ADAMS Accession No	ML24100A764.
Amendment No(s)	166.
Brief Description of Amendment(s)	The amendment revised Watts Bar Nuclear Plant, Unit 1, Technical Specification 3.8.2, "AC [Alternating Current] Sources—Shutdown," to remove the Note regarding the C-S diesel generator.

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* June 12, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (<http://www.prc.gov>). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.¹

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s):* CP2020–200; *Filing Title:* Notice of the United States Postal Service of Filing Modification Three to International Priority Airmail, Commercial ePacket, Priority Mail Express International, Priority Mail International & First-Class Package International Service with Reseller Contract 3 Negotiated Service Agreement; *Filing Acceptance Date:* June 4, 2024; *Filing Authority:* 39 CFR 3035.105; *Public Representative:* Katalin K. Clendenin; *Comments Due:* June 12, 2024.

2. *Docket No(s):* *Docket No(s):* CP2020–200; *Filing Title:* Notice of the United States Postal Service of Filing Modification One to Priority Mail

¹ See Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

Express International, Priority Mail International & First-Class Package International Service Contract 18; *Filing Acceptance Date:* June 4, 2024; *Filing Authority:* 39 CFR 3035.105; *Public Representative:* Katalin K. Clendenin; *Comments Due:* June 12, 2024.

3. *Docket No(s):* MC2024–343 and CP2024–351; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 97 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* June 4, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* June 12, 2024.

4. *Docket No(s):* MC2024–344 and CP2024–352; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 98 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* June 4, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* June 12, 2024.

5. *Docket No(s):* MC2024–345 and CP2024–353; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 99 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* June 4, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Alireza Motameni; *Comments Due:* June 12, 2024.

This Notice will be published in the **Federal Register**.

FILING DATES: The application was filed on October 12, 2022, and amended on May 3, 2023, August 22, 2023, and November 8, 2023.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on, July 1, 2024, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov*.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov*. Applicants: Yoohyun K. Choi, HPS Advisors, LLC, at *kathy.choi@hpspartners.com*; and Richard Horowitz, Esq., Dechert LLP, at *richard.horowitz@dechert.com*.

FOR FURTHER INFORMATION CONTACT: Kieran G. Brown, Senior Counsel, or Terri Jordan, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' third amended and restated application, dated November 8, 2023, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at <http://www.sec.gov/edgar/searchedgar/legacy/companysearch.html>. You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Sherry R. Haywood,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100278; File No. SR–NYSEARCA–2024–46]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 7.19–E

June 5, 2024.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (“Act”)² and Rule 19b–4 thereunder,³ notice is hereby given that, on May 28, 2024, NYSE Arca, Inc. (“NYSE Arca” or the “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II, below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 7.19–E to make additional pre-trade risk controls available to Entering Firms. The proposed rule change is available on the Exchange's website at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 7.19–E to make additional pre-trade risk controls available to Entering Firms.

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b–4.

Background and Proposal

In 2020, in order to assist ETP Holders' efforts to manage their risk, the Exchange amended its rules to add Rule 7.19–E (Pre-Trade Risk Controls),⁴ which established a set of optional pre-trade risk controls by which Entering Firms and their designated Clearing Firms⁵ could set credit limits and other pre-trade risk controls for an Entering Firm's trading on the Exchange and authorize the Exchange to take action if those credit limits or other pre-trade risk controls are exceeded.

The Exchange has recently received several requests from market participants to create an additional risk control to restrict the overall rate of orders. The Exchange notes that several other exchanges—including the Cboe equities exchanges, MEMX, and the MIAx Pearl equities exchange (“MIAx Pearl”)⁶—currently offer risk controls substantially similar to the one proposed here. As such, market participants are already familiar with these risk checks, such that the ones proposed by the Exchange in this filing are not novel.

In light of these requests, the Exchange proposes to amend Rule 7.19–E(b)(2) to add a new subparagraph (G), which would provide that the Single Order Risk Controls available to Entering Firms would include “controls to restrict the overall rate of orders.”

As with the Exchange's existing risk controls, use of the pre-trade risk controls proposed herein would be optional. The Exchange proposes no other changes to Rule 7.19–E or its Commentary.

Continuing Obligations of ETP Holders Under Rule 15c3–5

The proposed Pre-Trade Risk Controls described here are meant to supplement, and not replace, the ETP Holders' own internal systems, monitoring, and procedures related to risk management. The Exchange does not guarantee that these controls will be sufficiently

comprehensive to meet all of an ETP Holder's needs, the controls are not designed to be the sole means of risk management, and using these controls will not necessarily meet an ETP Holder's obligations required by Exchange or federal rules (including, without limitation, the Rule 15c3–5 under the Act⁷ (“Rule 15c3–5”). Use of the Exchange's Pre-Trade Risk Controls will not automatically constitute compliance with Exchange or federal rules and responsibility for compliance with all Exchange and SEC rules remains with the ETP Holder.⁸

Timing and Implementation

The Exchange anticipates implementing the proposed change in the second quarter of 2024 and, in any event, will implement the proposed rule change no later than the end of September 2024. The Exchange will announce the timing of such changes by Trader Update.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,⁹ in general, and furthers the objectives of Section 6(b)(5) of the Act,¹⁰ in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

Specifically, the Exchange believes that the proposed rule change will remove impediments to and perfect the mechanism of a free and open market and a national market system because the proposed additional Pre-Trade Risk Control would provide Entering Firms with enhanced abilities to manage their risk with respect to orders on the Exchange. The proposed additional Pre-

Trade Risk Control is not novel; it is based on existing risk settings already in place on the Cboe, MEMX, and MIAx Pearl exchanges and market participants are already familiar with the types of protections that the proposed risk control affords.¹¹ As such, the Exchange believes that the proposed additional Pre-Trade Risk Control would provide a means to address potentially market-impacting events, helping to ensure the proper functioning of the market.

In addition, the Exchange believes that the proposed rule change will protect investors and the public interest because the proposed additional Pre-Trade Risk Control is a form of impact mitigation that will aid Entering Firms in minimizing their risk exposure and reduce the potential for disruptive, market-wide events. The Exchange understands that ETP Holders implement a number of different risk-based controls, including those required by Rule 15c3–5. The controls proposed here will serve as an additional tool for Entering Firms to assist them in identifying any risk exposure. The Exchange believes the proposed additional Pre-Trade Risk Control will assist Entering Firms in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

Finally, the Exchange believes that the proposed rule change does not unfairly discriminate among the Exchange's ETP Holders because use of the proposed additional Pre-Trade Risk Control is optional and is not a prerequisite for participation on the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the proposal will have a positive effect on competition because, by providing Entering Firms additional means to monitor and control risk, the proposed rule will increase confidence in the proper functioning of the markets. The Exchange believes the proposed additional Pre-Trade Risk Control will assist Entering Firms in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system. As a result, the level of competition should increase as

⁴ See Securities Exchange Act Release No. 88904 (May 19, 2020), 85 FR 31560 (May 26, 2020) (SR–NYSEArca–2020–43). Later, in 2023, the Exchange amended its rules to make additional pre-trade risk controls available to Entering Firms. See Securities Exchange Act Release No. 96921 (February 14, 2023), 88 FR 10597 (February 21, 2023) (SR–NYSEARCA–2023–13).

⁵ The terms “Entering Firm” and “Clearing Firm” are defined in Rule 7.19–E.

⁶ See, e.g., Cboe BZX Equities Rule 11.13 interpretation [sic].01 paragraph (f); Cboe BYX Equities Rule 11.13 interpretation [sic].01 paragraph (f); Cboe EDGA Equities Rule 11.10 interpretation [sic].01 paragraph (f); Cboe EDGX Equities Rule 11.10 interpretation [sic].01 paragraph (f); MEMX Rule 11.10 interpretation [sic].01 paragraph (f); and MIAx Pearl Equities Rule 2618(a)(1)(H).

⁷ See 17 CFR 240.15c3–5.

⁸ See also Commentary .01 to Rule 7.19–E, which provides that “[t]he pre-trade risk controls described in this Rule are meant to supplement, and not replace, the ETP Holder's own internal systems, monitoring and procedures related to risk management and are not designed for compliance with Rule 15c3–5 under the Exchange Act. Responsibility for compliance with all Exchange and SEC rules remains with the ETP Holder.”

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(5).

¹¹ See *supra* note 6.

public confidence in the markets is solidified.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act¹² and Rule 19b-4(f)(6) thereunder.¹³ Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁴ and Rule 19b-4(f)(6) thereunder.¹⁵

A proposed rule change filed under Rule 19b-4(f)(6)¹⁶ normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b-4(f)(6)(iii),¹⁷ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposed rule change may become effective and operative upon filing with the Commission. The Exchange states that the proposed rule change is tied to a technological release that the Exchange plans to implement by the end of June 2024, that such release may be ready before the 30-day operative delay has elapsed, and the Exchange seeks to implement the proposed rule change without delay. The Exchange explains that the proposed rule change will assist Entering Firms in minimizing their risk exposure, which could enhance the integrity of trading on the securities markets and help to assure the stability

of the financial system, and that the proposed rule change is not novel as it is based on existing risk settings already in place on other exchanges. For these reasons, and because the proposed rule change does not raise any new or novel regulatory issues, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.¹⁸

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-NYSEARCA-2024-46 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090. All submissions should refer to file number SR-NYSEARCA-2024-46. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements

¹⁸ For purposes only of waiving the 30-day operative delay, the Commission also has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-NYSEARCA-2024-46 and should be submitted on or before July 2, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Sherry R. Haywood,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[SEC File No. 270-348, OMB Control No. 3235-0394]

Proposed Collection; Comment Request; Extension: Rule 15g-5

Upon Written Request, Copies Available From: Securities and Exchange Commission, Office of FOIA Services, 100 F Street NE, Washington, DC 20549-2736

Notice is hereby given that pursuant to the Paperwork Reduction Act of 1995 ("PRA") (44 U.S.C. 3501 *et seq.*), the Securities and Exchange Commission ("Commission") is soliciting comments on the existing collection of information provided for in Rule 15g-5—Disclosure of Compensation to Associated Persons in Connection with Penny Stock Transactions—(17 CFR 240.15g-5) under the Securities Exchange Act of 1934 (15 U.S.C. 78a *et seq.*). The Commission plans to submit this existing collection of information to the Office of Management and Budget ("OMB") for extension and approval.

¹⁹ 17 CFR 200.30-3(a)(12).

¹² 15 U.S.C. 78s(b)(3)(A)(iii).

¹³ 17 CFR 240.19b-4(f)(6).

¹⁴ 15 U.S.C. 78s(b)(3)(A).

¹⁵ 17 CFR 240.19b-4(f)(6). In addition, Rule 19b-4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁶ 17 CFR 240.19b-4(f)(6).

¹⁷ 17 CFR 240.19b-4(f)(6)(iii).

Rule 15g-5 requires brokers and dealers to disclose to customers the amount of compensation to be received by their sales agents in connection with penny stock transactions. The purpose of the rule is to increase the level of disclosure to investors concerning penny stocks generally and specific penny stock transactions.

The Commission estimates that approximately 170 broker-dealers will spend an average of approximately 87 hours annually to comply with the rule. Thus, the total time burden is approximately 14,790 hours per year.

Written comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's estimates of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted by August 12, 2024.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information under the PRA unless it displays a currently valid OMB control number.

Please direct your written comments to: David Bottom, Director/Chief Information Officer, Securities and Exchange Commission, c/o John Pezzullo, 100 F Street NE, Washington, DC 20549, or send an email to: PRA_Mailbox@sec.gov.

Dated: June 5, 2024.

Sherry R. Haywood,
Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-100279; File No. SR-NYSENAT-2024-17]

Self-Regulatory Organizations; NYSE National, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 7.19

June 5, 2024.

Pursuant to Section 19(b)(1) ¹ of the Securities Exchange Act of 1934

(“Act”) ² and Rule 19b-4 thereunder, ³ notice is hereby given that on May 31, 2024, NYSE National, Inc. (“NYSE National” or the “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I and II, below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Rule 7.19 to make additional pre-trade risk controls available to Entering Firms. The proposed rule change is available on the Exchange's website at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 7.19 to make additional pre-trade risk controls available to Entering Firms.

Background and Proposal

In 2020, in order to assist ETP Holders' efforts to manage their risk, the Exchange amended its rules to add Rule 7.19 (Pre-Trade Risk Controls), ⁴ which established a set of optional pre-trade risk controls by which Entering Firms

and their designated Clearing Firms ⁵ could set credit limits and other pre-trade risk controls for an Entering Firm's trading on the Exchange and authorize the Exchange to take action if those credit limits or other pre-trade risk controls are exceeded.

The Exchange has recently received several requests from market participants to create an additional risk control to restrict the overall rate of orders. The Exchange notes that several other exchanges—including the Cboe equities exchanges, MEMX, and the MIAx Pearl equities exchange (“MIAx Pearl”) ⁶—currently offer risk controls substantially similar to the one proposed here. As such, market participants are already familiar with these risk checks, such that the ones proposed by the Exchange in this filing are not novel.

In light of these requests, the Exchange proposes to amend Rule 7.19(b)(2) to add a new subparagraph (G), which would provide that the Single Order Risk Controls available to Entering Firms would include “controls to restrict the overall rate of orders.”

As with the Exchange's existing risk controls, use of the pre-trade risk controls proposed herein would be optional. The Exchange proposes no other changes to Rule 7.19 or its Commentary.

Continuing Obligations of ETP Holders Under Rule 15c3-5

The proposed Pre-Trade Risk Controls described here are meant to supplement, and not replace, the ETP Holders' own internal systems, monitoring, and procedures related to risk management. The Exchange does not guarantee that these controls will be sufficiently comprehensive to meet all of an ETP Holder's needs, the controls are not designed to be the sole means of risk management, and using these controls will not necessarily meet an ETP Holder's obligations required by Exchange or federal rules (including, without limitation, the Rule 15c3-5 under the Act ⁷ (“Rule 15c3-5”). Use of the Exchange's Pre-Trade Risk Controls will not automatically constitute compliance with Exchange or federal rules and responsibility for compliance

⁵ The terms “Entering Firm” and “Clearing Firm” are defined in Rule 7.19.

⁶ See, e.g., Cboe BZX Equities Rule 11.13 Interpretations and Policies .01 paragraph (f); Cboe BYX Equities Rule 11.13 Interpretations and Policies .01 paragraph (f); Cboe EDGA Equities Rule 11.10 Interpretations and Policies .01 paragraph (f); Cboe EDGX Equities Rule 11.10 Interpretations and Policies .01 paragraph (f); MEMX Rule 11.10 Interpretations and Policies .01 paragraph (f); and MIAx Pearl Equities Rule 2618(a)(1)(H).

⁷ See 17 CFR 240.15c3-5.

³ 17 CFR 240.19b-4.

⁴ See Securities Exchange Act Release No. 88905 (May 19, 2020), 85 FR 31582 (May 26, 2020) (SR-NYSENAT-2020-17). Later, in 2023, the Exchange amended its rules to make additional pre-trade risk controls available to Entering Firms. See Securities Exchange Act Release No. 96919 (February 14, 2023), 88 FR 10569 (February 21, 2023) (SR-NYSENAT-2023-07).

¹ 15 U.S.C. 78s(b)(1).

with all Exchange and SEC rules remains with the ETP Holder.⁸

Timing and Implementation

The Exchange anticipates implementing the proposed change in the second quarter of 2024 and, in any event, will implement the proposed rule change no later than the end of September 2024. The Exchange will announce the timing of such changes by Trader Update.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,⁹ in general, and furthers the objectives of Section 6(b)(5) of the Act,¹⁰ in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

Specifically, the Exchange believes that the proposed rule change will remove impediments to and perfect the mechanism of a free and open market and a national market system because the proposed additional Pre-Trade Risk Control would provide Entering Firms with enhanced abilities to manage their risk with respect to orders on the Exchange. The proposed additional Pre-Trade Risk Control is not novel; it is based on existing risk settings already in place on the Cboe, MEMX, and MIAX Pearl exchanges and market participants are already familiar with the types of protections that the proposed risk control affords.¹¹ As such, the Exchange believes that the proposed additional Pre-Trade Risk Control would provide a means to address potentially market-impacting events, helping to ensure the proper functioning of the market.

⁸ See also Commentary .01 to Rule 7.19, which provides that “[t]he pre-trade risk controls described in this Rule are meant to supplement, and not replace, the ETP Holder’s own internal systems, monitoring and procedures related to risk management and are not designed for compliance with Rule 15c3–5 under the Exchange Act. Responsibility for compliance with all Exchange and SEC rules remains with the ETP Holder.”

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(5).

¹¹ See *supra* note 6.

In addition, the Exchange believes that the proposed rule change will protect investors and the public interest because the proposed additional Pre-Trade Risk Control is a form of impact mitigation that will aid Entering Firms in minimizing their risk exposure and reduce the potential for disruptive, market-wide events. The Exchange understands that ETP Holders implement a number of different risk-based controls, including those required by Rule 15c3–5. The controls proposed here will serve as an additional tool for Entering Firms to assist them in identifying any risk exposure. The Exchange believes the proposed additional Pre-Trade Risk Control will assist Entering Firms in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system.

Finally, the Exchange believes that the proposed rule change does not unfairly discriminate among the Exchange’s ETP Holders because use of the proposed additional Pre-Trade Risk Control is optional and is not a prerequisite for participation on the Exchange.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. In fact, the Exchange believes that the proposal will have a positive effect on competition because, by providing Entering Firms additional means to monitor and control risk, the proposed rule will increase confidence in the proper functioning of the markets. The Exchange believes the proposed additional Pre-Trade Risk Control will assist Entering Firms in managing their financial exposure which, in turn, could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system. As a result, the level of competition should increase as public confidence in the markets is solidified.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act¹² and Rule 19b–4(f)(6) thereunder.¹³ Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act¹⁴ and Rule 19b–4(f)(6) thereunder.¹⁵

A proposed rule change filed under Rule 19b–4(f)(6)¹⁶ normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),¹⁷ the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the proposed rule change may become effective and operative upon filing with the Commission. The Exchange states that the proposed rule change is tied to a technological release that the Exchange plans to implement by the end of June 2024, that such release may be ready before the 30-day operative delay has elapsed, and the Exchange seeks to implement the proposed rule change without delay. The Exchange explains that the proposed rule change will assist Entering Firms in minimizing their risk exposure, which could enhance the integrity of trading on the securities markets and help to assure the stability of the financial system, and that the proposed rule change is not novel as it is based on existing risk settings already in place on other exchanges. For these reasons, and because the proposed rule change does not raise any new or novel regulatory issues, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public

¹² 15 U.S.C. 78s(b)(3)(A)(iii).

¹³ 17 CFR 240.19b–4(f)(6).

¹⁴ 15 U.S.C. 78s(b)(3)(A).

¹⁵ 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

¹⁶ 17 CFR 240.19b–4(f)(6).

¹⁷ 17 CFR 240.19b–4(f)(6)(iii).

interest. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.¹⁸

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-NYSENAT-2024-17 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-NYSENAT-2024-17. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public

Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-NYSENAT-2024-17 and should be submitted on or before July 2, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Sherry R. Haywood,
Assistant Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-100274; File No. SR-ICC-2024-003]

Self-Regulatory Organizations; ICE Clear Credit LLC; Order Approving Proposed Rule Change Relating to the ICC Collateral Risk Management Framework

June 5, 2024.

I. Introduction

On April 16, 2024, ICE Clear Credit LLC ("ICC") filed with the Securities and Exchange Commission ("Commission"), pursuant to Section 19(b)(2) of the Securities Exchange Act of 1934 (the "Act")¹ and Rule 19b-4 thereunder,² a proposed rule change to revise its Collateral Risk Management Framework ("CRMF"). The proposed rule change was published for comment in the **Federal Register** on April 26, 2024.³ The Commission did not receive comments regarding the proposed rule change. For the reasons discussed below, the Commission is approving the proposed rule change.

¹⁹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing of Proposed Rule Change Relating to the ICC Collateral Risk Management Framework; Exchange Act Release No. 100008 (Apr. 22, 2024), 89 FR 32496 (Apr. 26, 2024) (File No. SR-ICC-2024-003) ("Notice").

II. Description of the Proposed Rule Change

ICC is registered with the Commission as a clearing agency for the purpose of clearing credit default swaps ("CDS") contracts. The CRMF describes ICC's risk management methodology for the collateral it accepts from Clearing Participants to collateralize their individual credit exposure to ICC, including a description of ICC's quantitative risk management approach that accounts for the risk associated with fluctuations of collateral asset prices (*i.e.*, "haircuts"). Collateral used to cover obligations are subject to a "haircut" assessment, where the assets are priced and posted at a discount to account for certain market risks. The current CRMF contemplates two risk measures for the haircut model approach—a 2-day 99.9% Value-at-Risk ("VaR") and a 5-day Expected Shortfall ("ES")—and requires ICC to use the measure that produces the more conservative result. Based on a comprehensive review of its risk calculations and data, ICC has determined that VaR has never produced the more conservative measurement and, therefore, ICC has always used the ES measurement instead of VaR.⁴ These risk calculations and data also show that ES will continue to produce more conservative results compared to VaR in essentially all circumstances going forward.

Based on these results, the purpose of the proposed rule change is to amend ICC's CRMF to permit ICC to rely solely on the ES to establish its haircut factors for the purposes of pricing and posting collateral. To do so, the proposed rule change would remove all references to the VaR from the CRMF.

The proposed rule change also would remove, renumber, and revise certain figures in the CRMF. The current CRMF contains various charts, graphs, and other figures (collectively, "Figures") by which ICC displays the data used to establish the relevant measurements, including Figures relevant to both the VaR and ES measurements. To effectively remove all references to VaR from the CRMF, the proposed rule change also would remove and revise certain Figures as necessary to effectuate the removal of VaR from the CRMF. Specifically, in connection with the deletion of the 2-day 99.9% VaR risk measure, the proposed rule change

⁴ See Notice, *supra* note 3, at 32496. ICC has provided responses to Commission requests for collateral risk data and analysis as part of its confidential Exhibit 3 to File No. SR-ICC-2024-003. The confidential collateral risk data that ICC provided to the Commission as part of this filing shows the risk calculations conducted by ICC.

¹⁸ For purposes only of waiving the 30-day operative delay, the Commission also has considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

would remove Figures 11, 12, 26, 27, 28, 29, 38, and 39 because those figures relate to the VaR risk measure, including 1-day 99.9% VaR which was used to calculate the VaR risk measure. As a consequence of deleting those figures, the proposed rule change would renumber the remaining figures.

ICC has further determined that altering certain Figures within the CRMF would better illustrate the data used to establish the remaining applicable ES risk measure. As discussed below, the changes are consistent with the current practice of the ICC under its current CRMF, or are being amended for illustrative purposes, and therefore will have no practical impact.

Therefore, the proposed rule change would revise certain figures to correct the label on the y-axis from percentage to bps and to make other typographical fixes, specifically Figures 16, 17, 20, 21, 28 and 30 (as renumbered). It would also correct the label on the x-axis in certain figures. Specifically, the proposed rule change would revise Figures 12, 13, and 26 (as renumbered), to correct the label on the x-axis from percentage to bps. In doing so, the proposed rule change would re-scale those figures to reflect the change from percentage to bps. While the change from percentage to bps does not affect the data underlying the figures, the change affects the presentation of these figures because the scale will be larger as 1 bps equals 1/100 of a percentage point.

The proposed rule change would similarly re-scale Figure 5 to make the x-axis bps and would also adjust the bin size of Figure 5, which relates, illustratively, to the thickness of the bars in the figure. The phrase “bin size” in risk data refers to the width of intervals used to group similar data points when analyzing risk. A change in bin size, while not changing the data, can apportion the data more widely or more narrowly across a figure within newly created intervals. As the distributions change, so could the trend lines across the intervals change.

Finally, ICC has corrected certain other deficiencies by updating a footnote to a current link on its website, and in correcting small typographical errors elsewhere in the CRMF.

III. Discussion and Commission Findings

Section 19(b)(2)(C) of the Act requires the Commission to approve a proposed rule change of a self-regulatory organization if it finds that the proposed rule change is consistent with the requirements of the Act and the rules

and regulations thereunder applicable to the organization.⁵ Under the Commission’s Rules of Practice, the “burden to demonstrate that a proposed rule change is consistent with the Exchange Act and the rules and regulations issued thereunder . . . is on the self-regulatory organization [‘SRO’] that proposed the rule change.”⁶

The description of a proposed rule change, its purpose and operation, its effect, and a legal analysis of its consistency with applicable requirements must all be sufficiently detailed and specific to support an affirmative Commission finding,⁷ and any failure of an SRO to provide this information may result in the Commission not having a sufficient basis to make an affirmative finding that a proposed rule change is consistent with the Exchange Act and the applicable rules and regulations.⁸ Moreover, “unquestioning reliance” on an SRO’s representations in a proposed rule change is not sufficient to justify Commission approval of a proposed rule change.⁹

After carefully considering the proposed rule change, the Commission finds that the proposed rule change is consistent with the requirements of the Exchange Act and the rules and regulations thereunder applicable to ICC. More specifically, the Commission finds *that* the proposed rule change is consistent with Section 17A(b)(3)(F) of the Act¹⁰ and Rules 17Ad–22(e)(5) thereunder.¹¹

a. Consistency With Section 17A(b)(3)(F) of the Act

Section 17A(b)(3)(F) of the Act requires, among other things, that the rules of ICC be designed to promote the prompt and accurate clearance and settlement of securities transactions and, to the extent applicable, derivative agreements, contracts, and transactions.¹² Based on the review of the record, and for the reasons described below, ICC’s proposed updates in the manner described above are consistent with the prompt and accurate clearance and settlement of securities transactions, derivatives agreements, contracts, and transactions.

⁵ 15 U.S.C. 78s(b)(2)(C).

⁶ Rule 700(b)(3), Commission Rules of Practice, 17 CFR 201.700(b)(3).

⁷ *Id.*

⁸ *Id.*

⁹ *Susquehanna Int’l Group, LLP v. Securities and Exchange Commission*, 866 F.3d 442, 447 (D.C. Cir. 2017) (“*Susquehanna*”).

¹⁰ 15 U.S.C. 78q–1(b)(3)(F).

¹¹ 17 CFR 240.17Ad–22(e)(5).

¹² 15 U.S.C. 78q–1(b)(3)(F).

The proposed rule change is consistent with Section 17A(b)(3)(F) of the Act because it would clarify the CRMF by eliminating an unnecessary risk measurement. The use of ES as a risk measurement to establish haircut factors for pricing collateral is already a part of ICC’s risk methodology, and ICC has determined that this calculation will always be more conservative than, and thus always used in lieu of, a VaR risk measurement. The confidential risk calculations and data provided by ICC and reviewed by the Commission demonstrate that ES has always been the most conservative methodology for setting collateral haircut factors when compared to VaR and that it is reasonable to expect that, going forward, ES will continue to be the most conservative methodology for setting collateral haircut factors in essentially all circumstances. Therefore, there would be no actual change in the actual haircut calculation when ICC applies its risk methodology after the proposed rule change is effectuated. Removing VaR as a risk measurement would help avoid the impression that ICC uses both VaR and ES, and therefore would make the CRMF clearer and easier to apply in practice.

Having policies and procedures that clearly and accurately document the way ICC measures risk associated with fluctuations of collateral asset prices is an important component to the effectiveness of ICC’s risk management system and supports ICC’s ability to maintain adequate financial resources and collateral management resources. The proposed rule change is, consequently, consistent with the prompt and accurate clearance and settlement of securities transactions, derivatives agreements, contracts, and transactions, within the meaning of Section 17A(b)(3)(F) of the Act.¹³

b. Consistency With Rule 17Ad–22(e)(5) of the Act

Rule 17Ad–22(e)(5) under the Act requires ICC to establish, implement, maintain and enforce written policies and procedures reasonably designed to limit the assets it accepts as collateral to those with low credit, liquidity, and market risks, and set and enforce appropriately conservative haircuts and concentration limits if it requires collateral to manage its or its participants’ credit exposure.¹⁴ Based on the review of the record, and for the reasons described below, ICC’s

¹³ 15 U.S.C. 78q–1(b)(3)(F).

¹⁴ 17 CFR 240.17Ad–22(e)(5).

proposed revisions are consistent with Rule 17Ad–22(e)(5).

As noted above, while ICC's current CRMF indicates that it will use either VaR or ES to establish haircut factors for the purposes of pricing and posting collateral, in practice ES has always produced the more conservative results and therefore ICC has never utilized VaR to set and enforce the haircut factors it uses to price collateral. By removing VaR from CRMF and definitively identifying ES as the exclusive risk methodology that ICC will use to set and enforce the haircut factors it uses to price collateral going forward, the proposed revisions will make the CRMF more clear and transparent as a risk management framework and help facilitate ICC's efficient and effective pricing of Clearing Member collateral. Adjusting the Figures in the CRMF to better illustrate the data used by ICC will likewise enhance the clarity and transparency of ICC's risk methodology, and improve ICC's ability to communicate and explain its risk for establishing haircut factors for the purposes of pricing and posting collateral.

Accordingly, the proposed rule change is consistent with the requirements of Rule 17Ad–22(e)(5) under the Act.¹⁵

IV. Conclusion

On the basis of the foregoing, the Commission finds that the proposed rule change is consistent with the requirements of the Act, and in particular, with the requirements of Section 17A(b)(3)(F)¹⁶ of the Act and Rule 17Ad–22(e)(5) thereunder.¹⁷

It is therefore ordered pursuant to Section 19(b)(2) of the Act¹⁸ that the proposed rule change (SR–ICC–2024–003), be, and hereby is, approved.¹⁹

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁰

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

DEPARTMENT OF STATE

[Public Notice: 12414]

Annual Determination and Certification of Shrimp-Harvesting Nations

AGENCY: Bureau of Oceans and International Environmental and Scientific Affairs, State Department.

ACTION: Notice of annual determination and certification.

SUMMARY: On May 23, 2024, the Department of State determined and certified to Congress that wild-caught shrimp harvested in the following nations, particular fisheries of certain nations, and Hong Kong are eligible to enter the United States: Argentina, Australia (Northern Prawn Fishery, the Queensland East Coast Trawl Fishery, the Spencer Gulf, and the Torres Strait Prawn Fishery), the Bahamas, Belgium, Belize, Canada, Chile, Colombia, Costa Rica, Denmark, the Dominican Republic, Ecuador, El Salvador, Estonia, Fiji, France (French Guiana), Gabon, Germany, Guatemala, Guyana, Honduras, Iceland, Ireland, Italy (giant red shrimp), Jamaica, Japan (shrimp baskets in Hokkaido), Republic of Korea (mosquito nets), Mexico, the Netherlands, New Zealand, Nicaragua, Nigeria, Norway, Oman, Panama, Peru, Russia, Spain (Mediterranean red shrimp), Sri Lanka, Suriname, Sweden, the United Kingdom, and Uruguay. For nations, economies, and fisheries not listed above, only shrimp harvested from aquaculture is eligible to enter the United States. All shrimp imports into the United States must be accompanied by the DS–2031 Shrimp Exporter's/Importer's Declaration.

DATES: This determination and certification notice is effective on June 11, 2024.

FOR FURTHER INFORMATION CONTACT:

Jared Milton, Section 609 Program Manager, Office of Marine Conservation, Bureau of Oceans and International Environmental and Scientific Affairs, Department of State, 2201 C Street NW, Washington, DC 20520–2758; telephone: (202) 647–3263; email: DS2031@state.gov.

SUPPLEMENTARY INFORMATION: Section 609 of Public Law 101–162 (“Sec. 609”) prohibits imports of wild-caught shrimp or products from shrimp harvested with commercial fishing technology unless the President certifies to the Congress by May 1, 1991, and annually thereafter, that either: (1) the harvesting nation has adopted a regulatory program governing the incidental taking of relevant species of sea turtles in the course of commercial shrimp harvesting that is

comparable to that of the United States and that the average rate of that incidental taking by the vessels of the harvesting nation is comparable to the average rate of incidental taking of sea turtles by United States vessels in the course of such harvesting; or (2) the particular fishing environment of the harvesting nation does not pose a threat of the incidental taking of sea turtles in the course of shrimp harvesting. The President has delegated the authority to make this certification to the Secretary of State (“Secretary”) who further delegated the authority within the Department of State (“Department”). The Revised Guidelines for the Implementation of Sec. 609 were published in the **Federal Register** on July 8, 1999, at 64 FR 36946.

On May 23, 2024, the Department certified to Congress the following nations pursuant to section 609(b)(2)(A) and (B) on the basis that they have adopted a regulatory program governing the incidental taking of relevant species of sea turtles in the course of commercial shrimp harvesting that is comparable to that of the United States and that the average rate of that incidental taking by the vessels of the harvesting nation is comparable to the average rate of incidental taking of such sea turtles by United States vessels in the course of such harvesting: Colombia, Ecuador, El Salvador, Gabon, Guatemala, Guyana, Honduras, Mexico, Nicaragua, Nigeria, Panama, and Suriname. The Department also certified pursuant to section 609(b)(2)(C) several shrimp-harvesting nations and one economy as having fishing environments that do not pose a threat to sea turtles, including the following nations with shrimping grounds only in cold waters where the risk of taking sea turtles is negligible: Argentina, Belgium, Canada, Chile, Denmark, Estonia, Germany, Iceland, Ireland, the Netherlands, New Zealand, Norway, Russia, Sweden, the United Kingdom, and Uruguay. Additionally, the Department certified pursuant to section 609(b)(2)(C) that the following nations and Hong Kong only harvest shrimp using small boats with crews of less than five that only use manual rather than mechanical means to retrieve nets or catch shrimp using other methods that do not pose a threat of incidental taking of sea turtles: the Bahamas, Belize, Costa Rica, the Dominican Republic, Fiji, Jamaica, Oman, Peru, and Sri Lanka.

The Department has certified the above listed nations and Hong Kong pursuant to Sec. 609, and shrimp and products from shrimp are eligible for importation into the United States

¹⁵ 17 CFR 240.17Ad–22(e)(5).

¹⁶ 15 U.S.C. 78q–1(b)(3)(F).

¹⁷ 17 CFR 240.17Ad–22(e)(5).

¹⁸ 15 U.S.C. 78s(b)(2).

¹⁹ In approving the proposed rule change, the Commission considered the proposal's impact on efficiency, competition, and capital formation. 15 U.S.C. 78c(f).

²⁰ 17 CFR 200.30–3(a)(12).

utilizing the Shrimp Exporter's/Importer's Declaration ("DS-2031") Box 7(B) provision for shrimp "harvested in the waters of a nation currently certified pursuant to Section 609 of Pubic Law 101-162."

Shrimp and products of shrimp harvested with turtle excluder devices ("TEDs") in an uncertified nation may, under specific circumstances, be eligible for importation into the United States under the DS-2031 Box 7(A)(2) provision for shrimp "harvested using TEDs comparable in effectiveness to those in the United States, as determined by the U.S. Department of State." Use of this provision requires that the Secretary or his or her delegate determine in advance that the government of the harvesting nation has put in place adequate procedures to monitor the use of TEDs in the specific fishery in question and to ensure the accurate completion of the DS-2031 forms. At this time, the Department has determined that only shrimp and products from shrimp harvested in the Northern Prawn Fishery, the Queensland East Coast Trawl Fishery, and the Torres Strait Prawn Fishery in Australia, and in the French Guiana domestic trawl fishery of France are eligible for entry under this provision. A responsible government official of Australia or France must sign in Block 8 of the DS-2031 form accompanying these imports into the United States.

In addition, shrimp and products of shrimp harvested in a manner or under circumstances determined by the Department of State not to pose a threat of the incidental taking of sea turtles may, under specific circumstances, be eligible for importation into the United States under the DS-2031 Box 7(A)(4) provision for shrimp "harvested in a manner or under circumstances not to pose a threat of the incidental taking of sea turtles, as determined by the U.S. Department of State." The Department has determined that shrimp and products from shrimp harvested in the Spencer Gulf region in Australia, with shrimp baskets in Hokkaido, Japan, with "mosquito" nets in the Republic of Korea, Mediterranean red shrimp (*Aristeus antennatus*) and products from that shrimp harvested in the Mediterranean Sea in Spain, and giant red shrimp (*Aristaeomorpha foliacea*) and products from that shrimp harvested in Italy may be imported into the United States under the DS-2031 Box 7(A)(4) provision. A responsible government official of Australia, Japan, the Republic of Korea, Spain, or Italy must sign in Block 8 of the DS-2031 form accompanying these imports into the United States.

A completed DS-2031 Shrimp Exporter's/Importer's Declaration must accompany all imports of shrimp and products from shrimp into the United States. The DS-2031 form was recently revised, and the current version is accessible at the following link: <https://eforms.state.gov/Forms/ds2031.PDF>. Importers of shrimp and products from shrimp harvested in certified nations and Hong Kong must either provide the DS-2031 form to Customs and Border Protection at the port of entry or provide the information required by the DS-2031 through the Automated Commercial Environment. Importers of shrimp and products from shrimp from certified nations and Hong Kong should mark the box 7(B) provision for shrimp "harvested in the waters of a nation currently certified pursuant to Section 609 of P.L. 101-162" regardless of whether the shrimp is wild-caught or the product of aquaculture. DS-2031 forms accompanying all imports of shrimp and products from shrimp harvested in uncertified nations and economies, to include all fisheries with determinations, must be originals with Box 7(A)(1), 7(A)(2), or 7(A)(4) checked, consistent with the form's instructions with regard to the method of harvest of the shrimp and based on any relevant prior determinations by the Department, and signed by a responsible government official of the harvesting nation. The Department did not determine that shrimp or products from shrimp harvested in a manner as described in 7(A)(3) in any uncertified nation or economy is eligible to enter the United States. The importation of wild-caught shrimp or products from that shrimp from any nation or fishery without a certification or determination will not be allowed.

The Department has communicated these certifications and determinations under Sec. 609 to the Offices of Field Operations and of Trade at U.S. Customs and Border Protection.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. 2013-0259]

Agency Information Collection Activities: Requests for Comments; Clearance of Renewed Approval of Information Collection: Advisory Circular: Reporting of Laser Illumination of Aircraft

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval renew information collection. The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on August 17, 2023. The collection involves information to be collected will be used to and/or is necessary because Advisory Circular 70-2B provides guidance to civilian air crews on the reporting of laser illumination incidents and recommended mitigation actions to be taken in order to ensure continued safe and orderly flight operations.

DATES: Written comments should be submitted by July 6, 2024.

ADDRESSES: Please send written comments:

By Electronic Docket:
www.regulations.gov (Enter docket number into search field).

By Mail: Nicholas Torgerson, Federal Aviation Administration, AJR-223, 800 Independence Ave. SW, Washington, DC 20591.

FOR FURTHER INFORMATION CONTACT: Nicholas Torgerson, by email at: Nicholas.d.torgerson@faa.gov; phone: 202-322-4157.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0698.

Title: Advisory Circular (AC):
Reporting of Laser Illumination of
Aircraft.

Form Numbers: Advisory Circular 70–
2B, Reporting of Laser Illumination of
Aircraft.

Type of Review: Renewal of an
information collection.

Background: The **Federal Register**
Notice with a 60-day comment period
soliciting comments on the following
collection of information was published
on August 17, 2023 (88 FR 58633).
Advisory Circular 70–2B provides
guidance to civilian air crews on the
reporting of laser illumination incidents
and recommended mitigation actions to
be taken in order to ensure continued
safe and orderly flight operations.
Information is collected from pilots and
aircrews that are affected by an
unauthorized illumination by lasers.
The requested reporting involves an
immediate broadcast notification to Air
Traffic Control (ATC) when the incident
occurs, as well as a broadcast warning
of the incident if the aircrew is flying in
uncontrolled airspace. In addition, the
AC requests that the aircrew supply a
written report of the incident and send
it by fax or email to the Washington
Operations Control Complex (WOCC) as
soon as possible.

Respondents: Approximately 2,339
pilots and crewmembers.

Frequency: Information is collected
on occasion.

Estimated Average Burden per
Response: 10 minutes.

Estimated Total Annual Burden: 220
hours.

Issued in Washington, DC, on June 6, 2024.

Sandra L. Ray,

Aviation Safety Inspector, AFS–260.

[FR Doc. 2024–12703 Filed 6–10–24; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Staffing-Related Relief Concerning Operations at Ronald Reagan Washington National Airport, John F. Kennedy International Airport, LaGuardia Airport, and Newark Liberty International Airport, October 27, 2024, Through March 29, 2025 (Winter 2024/ 2025) and March 30, 2025, Through October 25, 2025 (Summer 2025)

AGENCY: Department of Transportation,
Federal Aviation Administration (FAA).

ACTION: Extension to limited waiver of
the slot usage requirement.

SUMMARY: This action extends the
Staffing-Related Relief Concerning

Operations at Ronald Reagan
Washington National Airport, John F.
Kennedy International Airport,
LaGuardia Airport, and Newark Liberty
International Airport, published on
September 20, 2023, from October 27,
2024, through March 29, 2025 (Winter
2024/2025) and March 30, 2025,
through October 25, 2025 (Summer
2025). The limited waiver remains
effective until October 25, 2025, and
does not apply to any slots granted by
the Department of Transportation
pursuant to section 505 of the FAA
Reauthorization Act of 2024.

DATES: This action is applicable on
October 27, 2024.

ADDRESSES: Requests may be submitted
by mail to Slot Administration Office,
System Operations Services, AJR–0,
Room 300W, 800 Independence Avenue
SW, Washington, DC 20591, or by email
to: 7-awa-slotadmin@faa.gov.

FOR FURTHER INFORMATION CONTACT: Al
Meilus, Slot Administration and
Capacity Analysis, FAA ATO System
Operations Services, AJR–G5, Federal
Aviation Administration, 800
Independence Avenue SW, Washington,
DC 20591; telephone (202) 267–2822;
email al.meilus@faa.gov.

SUPPLEMENTARY INFORMATION:

Background

The New York Terminal Radar
Approach Control facility (N90)
currently provides Air Traffic Control
(ATC) services to overhead flights in the
Northeast corridor and to the New York
City area airports, including John F.
Kennedy International Airport (JFK),
LaGuardia Airport (LGA), and Newark
Liberty International Airport (EWR).
The airspace complexity resulting from
the close proximity of the major
commercial airports serving the New
York City region is a significant
contributing factor to delays at JFK,
LGA, and EWR. Against this challenging
backdrop, N90 continues to face staffing
shortfalls that are impacting ATC's
ability to efficiently manage the volume
of air traffic in this congested airspace
despite best efforts to resolve staffing
shortfalls.

The FAA has made significant
changes to increase N90 staffing through
a combination of incentive and training
programs, as well as by relocating
control of the EWR area from N90 to the
Philadelphia Terminal Radar Approach
Control (PHL) beginning in late July of
this year to relieve N90 staffing
pressures. The FAA has determined N90
will need to reach at least 70% of its
targeted number of onboard Certified
Professional Controllers (CPCs) before
ATC can efficiently manage the full

capacity of the New York airspace that
was in place prior to May 15, 2023. The
operational impact of changes to
address N90 staffing shortages will not
be realized immediately but do chart a
path to mitigating the impact in the next
18–24 months.

The targeted staffing number at N90 is
226 CPCs; the current CPC onboard
number at N90 is 135 (59.7% staffed).
CPCs at N90 presently are divided
between five different areas: EWR, Long
Island MacArthur Airport (ISP), JFK,
LGA and the Liberty area. The N90 EWR
area currently has 33 CPCs; 24 of the 33
EWR area CPCs will be transferred to
PHL in July, the remaining 9 EWR CPCs
will be reassigned to the other
remaining areas in N90. Transferring
control of the EWR area to PHL and
adding 9 CPCs to the remaining N90
areas will result in an estimated staffing
level of 68% of the targeted number of
onboard CPCs at the areas remaining in
N90 by the end of 2025. Control of EWR
area will remain at PHL; however, of the
24 CPCs transferred to PHL, 18 are
planned to return to N90 at the end of
July 2026 and will be redistributed to
the remaining N90 areas. The FAA
estimates that the collective
redistribution of 27 former EWR CPCs to
the other areas of N90, along with the
removal of EWR area servicing
responsibilities, should result in N90
exceeding the 70% mark by the
conclusion of 2026. At PHL, actions are
currently underway to start CPC trainees
to service the EWR area and replace the
18 EWR area CPCs that will return to
N90 at the end of July 2026. Unlike N90,
there is a robust pipeline of experienced
controllers interested in transferring to
PHL. This pipeline of personnel will
allow the FAA to build up CPC staffing
for the EWR area at PHL more quickly
than has been experienced at N90.
Regardless, the FAA will continue to
invest in staffing at N90 to meet
anticipated future needs.

With ever-growing demand for air
travel in the New York City region,
additional measures are necessary to
ensure the FAA is able to provide
expeditious services to aircraft operators
and their passengers that traverse this
airspace. Early discussions with carriers
indicate an interest in increasing
operations after October 27, 2024,
through most of the Winter 2024/2025
scheduling season and for all of the
Summer 2025 scheduling season. This
being the case, the FAA expects
increased delays and cancellations in
the New York region to exceed those
experienced over Summer 2022 and
Winter 2022/2023¹ if a waiver similar to

¹ Refer to "Analysis" section for delay analysis.

the one that has been in effect for the Summer 2023, Winter 2023/2024, and Summer 2024 season is not in place for the Winter 2024/2025 and Summer 2025 scheduling season to allow carriers to reduce schedules without penalties for non-use of slots or previously approved operating times. Reducing schedules will improve the alignment between scheduled operations and actual operations, will help prevent unnecessary delays, will help optimize the efficient use of the airports' resources, and will help deliver passengers to their destinations more reliably and on time.

Summary of Petitions Received

On April 3, 2024, Airlines for America (A4A) submitted a petition of behalf of its member carriers² requesting an extension of the current relief provided by FAA due to post-pandemic effects on ATC staffing at N90 through the end of the Summer 2025 season. A4A asserts that the current slot waiver successfully created a better travel experience for consumers and that the underlying conditions creating the need for a waiver still exist as staffing shortages persist. In addition, A4A requests that FAA restore carriers' ability to request retroactive relief if the impacts of controller staffing shortages are even more severe than anticipated and that the FAA not reallocate returned slots for ad-hoc use during the waiver period. Finally, A4A requests that FAA make a timely decision regarding relief as time is needed to give carriers stability and the ability to plan.

On April 5, 2024, the International Air Transport Association (IATA) submitted a petition on behalf of its member carriers³ in support of A4A's request for an extension of the current slot relief through the end of the Summer 2025 season and other relief to protect the traveling public from operational disruptions. IATA asserts that the current relief allowed for careful planning by airlines and resulted in a notably better travel experience for consumers. IATA requests that FAA grant this relief by May 1, 2024, so that carriers can make the complex aircraft

and human capital decisions necessary to serve the flying public.

On April 19, 2024, the Airports Council International of North America (ACI-NA) submitted a petition on behalf of its member airports⁴ opposing A4A's request for an extension of the current slot relief. ACI-NA asserts that there is no proven correlation between the slot relief and ATC capacity shortage and that slot usage waivers in general only serve to protect market access for incumbents. It seeks information surrounding and supporting the decision to grant slot relief for impacted New York airports and requests the FAA to provide an opportunity to the public to comment on A4A's request for relief.

Standard

At JFK and LGA, slot-holding carriers must use each assigned slot at least 80 percent of the time.⁵ The FAA will withdraw slots not meeting the minimum usage requirements. The FAA may waive the 80 percent usage requirement in the event of a highly unusual and unpredictable condition that is beyond the control of the slot-holding air carrier, and which affects carrier operations for a period of five consecutive days or more.⁶

At Ronald Reagan Washington National Airport (DCA), the FAA also will recall any slot not used at least 80 percent of the time over a two-month period.⁷ The FAA may waive this minimum usage requirement in the event of a highly unusual and unpredictable condition that is beyond the control of the slot-holding carrier, and which exists for a period of nine or more days.⁸

In determining historical rights to allocated slots, including whether to grant a waiver of the usage requirement, the FAA seeks to ensure the efficient use of valuable aviation infrastructure and maximize the benefits to both airport users and the traveling public.

⁴ ACI-NA is an organization representing local, regional, and state governing bodies that own and operate more than 300 airports operating in the United States; and nearly 400 aviation-related businesses. The ACI-NA Slot Task Force comprises all Level 2 and Level 3 airports in the United States.

⁵ Operating Limitations at John F. Kennedy International Airport, 89 FR 41486 (May 13, 2024); Operating Limitations at New York LaGuardia Airport, 89 FR 41484 (May 13, 2024).

⁶ At JFK, the FAA will determine historical rights to operating authorizations and withdrawal of those rights due to insufficient usage on a seasonal basis and in accordance with the schedule approved by the FAA prior to the commencement of the applicable season. See JFK Order, 89 FR at 41488. At LGA, the FAA will withdraw any operating authorization not used at least 80 percent of the time over a two-month period. See LGA Order, 89 FR at 41485.

⁷ See 14 CFR 93.227(a).

⁸ See 14 CFR 93.227(j).

The minimum usage requirement is expected to accommodate routine cancellations under all but the most unusual circumstances. Carriers proceed at their own risk if they make scheduling decisions in anticipation of the FAA granting a slot usage waiver.

Analysis

The number of certified controllers at N90 is still not sufficient to allow the FAA to handle normal traffic levels. The FAA has worked with NATCA on a long-term solution to solve the chronic low levels of fully certified air traffic controllers at that facility through a combination of incentive and training programs, as well as relocating control of the EWR area to PHL. The FAA will continue to partner with NATCA as it continues efforts to remediate ATC staffing shortages at N90.

Due to the volume of originating and destination flights in the New York City region, as well as the interdependency and complexity of the airspace surrounding JFK, LGA, and EWR, delays caused in part by N90 staffing shortfalls are expected to significantly impact carriers' ability to operate and meet minimum usage requirements in the Winter 2024/2025 and Summer 2025 scheduling seasons. Absent increased flexibility, the FAA anticipates a high likelihood of congestion, delay, and cancellations at JFK, LGA, and EWR.

Typically, the 20 percent non-utilization allowed under the minimum usage requirement accounts for cancellations due to ATC staffing delays; however, the extent of N90 staffing shortfalls and the expected numbers of scheduled operations for the Winter 2024/2025 and Summer 2025 scheduling seasons present a highly unusual and unpredictable condition beyond the control of carriers that will impact operations through the entire Winter 2024/2025 and Summer 2025 scheduling seasons.

Using the Annual Service Volume (ASV) model,⁹ the FAA projected the delay the NYC airports would experience in the absence of a waiver for Summer 2024.¹⁰ Using Summer

⁹ FAA-developed modeling suite of tools for conducting operational impact analysis for airports and to establish the annual service volume for airports. ASV simulations relate total annual operations to a target delay value and are used by FAA in reports to Congress that identify the airports projected to constrain the NAS. See https://www.faa.gov/about/office_org/headquarters_offices/ato/service_units/systemops/perf_analysis/sim_tools.

¹⁰ The FAA projected a Summer 2024 scenario because the FAA has already received the air carrier schedules for the Summer 2024 scheduling season, and demand is not likely to decrease in 2025.

² A4A members are Alaska Air Group, Inc.; American Airlines Group, Inc.; Atlas Air Worldwide Holdings, Inc.; Delta Air Lines, Inc.; FedEx Corp.; Hawaiian Airlines; JetBlue Airways Corp.; Southwest Airlines Co.; United Airlines Holdings, Inc.; and United Parcel Service Co. Air Canada is an associate member. Alaska Airlines did not join in the submission of A4A's letter.

³ IATA is the trade association of the world's airlines, comprising some 320 member airlines in more than 120 countries and representing approximately 83 percent of the world's total air traffic.

2022 data¹¹ as baseline comparison, the FAA estimates Summer 2024 would experience increased operations by 8.8% to 11%,¹² which would result in 2.3 to 2.8 million minutes of additional delay, or 53% to 65% additional delay, compared to the delay experienced in Summer 2022. At a minimum, the FAA expects these delay numbers to remain valid through Summer 2025.

Therefore, a waiver of minimum slot usage requirements at JFK and LGA, and a similar policy of prioritizing returned operations at EWR, through October 25, 2025, is necessary to allow carriers to reduce operations to enable scheduling and operational stability for the benefit of the flying public.

In addition, because New York City-DCA is a high-frequency market for multiple carriers, the FAA recognizes this market is a likely target for carriers to consolidate flights while retaining their network connectivity. If carriers choose to reduce their schedules in the New York City-DCA market, the FAA encourages, to the extent practical, carriers to utilize their DCA slots to operate to other destinations. However, if carriers choose not to utilize their DCA slots elsewhere, the FAA may consider providing relief to DCA slots that are impacted by the reduction in operations at the New York City airports, except that the limited waiver of the minimum slot usage requirements is not available for any slots granted by the DOT pursuant to section 505 of the FAA Reauthorization Act of 2024 (Pub. L. 118–63).

Carriers have the ability to request retroactive relief; however, they should be aware that the N90 staffing shortfalls will not likely form a sufficient basis for further relief going forward in the Winter 2024/2025 and Summer 2025 scheduling seasons because carriers will have had sufficient opportunity to plan and take remedial action under this waiver policy. The FAA does not foresee providing additional post-hoc relief associated with ATC staffing given the extraordinary relief provided here. Given this relief, operational impacts associated with N90 staffing during the Winter 2024/2025 and Summer 2025 scheduling season will likely not have been beyond carriers' control and will

not serve as a justification for a separate waiver.

Decision

The FAA determined that the post-pandemic effects on N90 staffing meet the applicable waiver standards and warrant a limited waiver of minimum slot usage requirements at JFK and LGA to allow carriers to return up to ten percent of their slots at each airport, as well as impacted operations between DCA and the New York City airports. In addition, the FAA has determined the post-pandemic effects on N90 staffing warrant a limited policy for prioritizing returned operations at EWR to allow carriers to return up to ten percent of their approved operating timings, for purposes of establishing a carrier's operational baseline in the next corresponding season. Despite staffing projections indicating N90 will not reach 70% of the targeted staffing level until the conclusion of 2026, the FAA is taking a measured approach and providing relief in this waiver notice only until the end of the Summer 2025 scheduling season. The FAA will re-evaluate the staffing levels at N90 and the impact to operations in the New York City area before deciding if a waiver beyond the Summer 2025 scheduling season is necessary. Carriers seeking to return their slots and approved operating timings must do so by August 15, 2024, for the Winter 2024/2025 scheduling season (October 27, 2024, through March 29, 2025); and by January 15, 2025, for the Summer 2025 scheduling season (March 30, 2025, through October 25, 2025) to be eligible for relief under this waiver. For DCA, this relief is available only for flights impacted by operations to or from the New York City area airports. If carriers utilizing the relief provided under this limited waiver at EWR subsequently operate unapproved flights at that airport, those carriers will forfeit their scheduling preference to an equal number of returned, approved operating timings chosen at the FAA's discretion for the subsequent equivalent traffic season. Furthermore, the FAA expects carriers to up-gauge aircraft serving the affected airports to the extent possible to maintain passenger throughput and minimize the impact on consumers. The FAA also expects carriers to maintain connections between the affected airports and regional airports to the extent possible in support of continuous scheduled interstate air transportation for small communities and isolated areas. The FAA will closely coordinate with the Department of Transportation, which will be monitoring for indications of

unfair, deceptive, or anticompetitive practices or other unlawful economic activity associated with or resulting from the relief granted by this notice. In addition, the FAA expects carriers to return scheduled operations in the peak delay periods of the day. The following hours (in local time) are the most prone to delay at each airport: EWR: 1400–2159, JFK: 1300–2259, LGA: 1300–2159.

The FAA will not reallocate the temporarily returned slots or approved operating timings at JFK, LGA, or EWR, as the goal is to reduce the total volume of operations in the New York City region. Carriers are encouraged to utilize their DCA slots in other markets before returning them to the FAA. In the event DCA slots are returned under this waiver, other carriers will have an opportunity to operate the slots on an *ad hoc* basis without historic precedence.

The FAA will treat as used the specific slots returned in accordance with the conditions in this notice for the period from October 27, 2024, through March 29, 2025 (Winter 2024/2025) and March 30, 2025, through October 25, 2025 (Summer 2025).

The relief is subject to the following conditions:

1. The specific slots and approved operating timings must be returned to the FAA by August 15, 2024, for the Winter 2024/2025 scheduling season; and by January 15, 2025, for the Summer 2025 scheduling season.
2. This waiver applies only to slots that have corresponding, scheduled operations during the period of the grant. A carrier temporarily returning a slot or approved operating time to the FAA for relief under this waiver must identify corresponding scheduled operations for Winter 2024/2025, or approved slots or operating timings for Summer 2025. The FAA may validate information against published schedule data prior to the issuance of this notice, and other operational data maintained by FAA. Slots or operating times returned without an associated scheduled and canceled operation will not receive relief.
3. Slots or approved operating timings newly allocated for initial use since the previous corresponding scheduling season are not eligible for relief.
4. Slots authorized at DCA by Department of Transportation or FAA exemptions are not eligible for relief.
5. Carriers must not engage in unfair, deceptive, or anticompetitive practices regarding their slot usage, leasing agreements, or operations associated with the relief provided by this notice.

¹¹ Summer 2022 data is used as baseline for comparison because this was the last summer scheduling season unaffected by the ATC waivers.

¹² Under the current waiver, carriers returned 9% of their initially submitted schedules. Compared to Summer 2023, scheduled operations in Summer 2024 increased by 2%. If the FAA assumes an 80% actual usage rate, that results in 8.8% (that is, $((0.09 + 0.02) \times 0.8 = 0.088)$ increase of actual operations. If the FAA assumes 100% actual usage rate, then that would be an 11% $(0.09 + 0.02)$ increase.

Issued in Washington, DC, on June 5, 2024.

Marc A. Nichols,

Chief Counsel.

Alyce Hood-Fleming,

Vice President, System Operations Services.

Qualification of Drivers; Exemption Applications; Hearing

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for 34 individuals from the hearing requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) for interstate commercial motor vehicle (CMV) drivers. The exemptions enable these hard of hearing and deaf individuals to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were applicable on the dates stated in the discussions below and will expire on the dates provided below. Comments must be received on or before July 11, 2024.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA–2013–0123, Docket No. FMCSA–2013–0125, Docket No. FMCSA–2013–0126, Docket No. FMCSA–2014–0102, Docket No. FMCSA–2014–0107, Docket No. FMCSA–2015–0327, Docket No. FMCSA–2015–0328, Docket No. FMCSA–2015–0329, Docket No. FMCSA–2017–0057, Docket No. FMCSA–2017–0059, Docket No. FMCSA–2017–0060, Docket No. FMCSA–2018–0139, Docket No. FMCSA–2019–0109, Docket No. FMCSA–2019–0110, Docket No. FMCSA–2020–0024, Docket No. FMCSA–2020–0025, Docket No. FMCSA–2022–0032, or Docket No.

FMCSA–2022–0033 using any of the following methods:

- *Federal eRulemaking Portal:* Go to www.regulations.gov/, insert the docket number (FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2013–0126, FMCSA–2014–0102, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2017–0060, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0110, FMCSA–2020–0024, FMCSA–2020–0025, FMCSA–2022–0032, or FMCSA–2022–0033) in the keyword box and click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, and click on the “Comment” button. A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2013–0123, Docket No. FMCSA–2013–0125, Docket No. FMCSA–2013–0126, Docket No. FMCSA–2014–0102, Docket No. FMCSA–2014–0107, Docket No. FMCSA–2015–0327, Docket No. FMCSA–2015–0328, Docket No. FMCSA–2015–0329, Docket No. FMCSA–2017–0057, Docket No. FMCSA–2017–0059, Docket No. FMCSA–2017–0060, Docket No. FMCSA–2018–0139, Docket No.

FMCSA–2019–0109, Docket No. FMCSA–2019–0110, Docket No. FMCSA–2020–0024, Docket No. FMCSA–2020–0025, Docket No. FMCSA–2022–0032, or Docket No. FMCSA–2022–0033), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to www.regulations.gov/, insert the docket number (FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2013–0126, FMCSA–2014–0102, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2017–0060, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0110, FMCSA–2020–0024, FMCSA–2020–0025, FMCSA–2022–0032, or FMCSA–2022–0033) in the keyword box and click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, click the “Comment” button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to www.regulations.gov. Insert the docket number (FMCSA–2013–0123, FMCSA–2013–0125, FMCSA–2013–0126, FMCSA–2014–0102, FMCSA–2014–0107, FMCSA–2015–0327, FMCSA–2015–0328, FMCSA–2015–0329, FMCSA–2017–0057, FMCSA–2017–0059, FMCSA–2017–0060, FMCSA–2018–0139, FMCSA–2019–0109, FMCSA–2019–0110, FMCSA–2020–0024, FMCSA–2020–0025, FMCSA–2022–0032, or FMCSA–2022–0033) in the keyword box and click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, and click “Browse Comments.” If you do not have access to the internet, you may view the docket online by

visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590-0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366-9317 or (202) 366-9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption requests. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov. As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at <https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices>, the comments are searchable by the name of the submitter.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statutes also allow the Agency to renew exemptions at the end of the 5-year period. FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver's medical certification.

The physical qualification standard for drivers regarding hearing found in 49 CFR 391.41(b)(11) states that a person is physically qualified to drive a CMV if that person first perceives a forced whispered voice in the better ear at not less than 5 feet with or without the use of a hearing aid or, if tested by use of an audiometric device, does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz with or without a hearing aid when the audiometric device is calibrated to American National Standard (formerly ASA Standard) Z24.5-1951.

This standard was adopted in 1970 and was revised in 1971 to allow drivers to be qualified under this standard while wearing a hearing aid, (35 FR 6458, 6463 (Apr. 22, 1970) and 36 FR 12857 (July 8, 1971), respectively).

The 34 individuals listed in this notice have requested renewal of their exemptions from the hearing standard in § 391.41(b)(11), in accordance with FMCSA procedures. Accordingly,

FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the 34 applicants has satisfied the renewal conditions for obtaining an exemption from the hearing requirement. The 34 drivers in this notice remain in good standing with the Agency. In addition, for commercial driver's license (CDL) holders, the Commercial Driver's License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver's Licensing Agency. These factors provide an adequate basis for predicting each driver's ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each of these drivers for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

In accordance with 49 U.S.C. 31136(e) and 31315(b), the following groups of drivers received renewed exemptions in the month of June and are discussed below. As of June 3, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following nine individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Carlos Arellano (CA)
Michael Beam (MI)
Arthur Brown (FL)
Gregory Crane (AZ)
Gabriel Garza (TX)
Scott Gentry (FL)
Michael Quinonez (NM)
Robert Rollins (NC)
Roderick Thomas (GA)

The drivers were included in docket number FMCSA-2017-0057, FMCSA-

2019-0110, FMCSA-2013-0126, FMCSA-2022-0032, or FMCSA-2022-0033. Their exemptions are applicable as of June 3, 2024 and will expire on June 3, 2026.

As of June 17, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following 15 individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Paul Aseka (TX)
Forrest Carroll (OH)
Glenn Ferguson (TX)
Ariel Gonzalez (RI)
Richard Hadlock (IL)
Jesus Javier (NJ)
Yoel Lopez-Perez (FL)
Darren Nordquist (WI)
Anthony Panto (NJ)
Ernest Pratt (PA)
William Symonds (IL)
Steven Tipton (IA)
Daniel Tricolici (MA)
Fernando Velasquez (TX)
Scott Weeaks (OK)

The drivers were included in docket number FMCSA-2013-0123, FMCSA-2013-0125, FMCSA-2014-0107, FMCSA-2015-0327, FMCSA-2015-0328, FMCSA-2015-0329, FMCSA-2017-0059, FMCSA-2018-0139, FMCSA-2019-0109, or FMCSA-2020-0024. Their exemptions are applicable as of June 17, 2024 and will expire on June 17, 2026.

As of June 18, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following five individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Joshua Affholter (MI)
Gantugla Badarch (IL)
Awash Demoz (MD)
Charles O'Bryan (NY)
Kyle Taylor (GA)

The drivers were included in docket number FMCSA-2020-0025. Their exemptions are applicable as of June 18, 2024 and will expire on June 18, 2026.

As of June 25, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following three individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Alfredo Ramirez (TX); Julie Ramirez (TX); and Hayden Teesdale (TX).

The drivers were included in docket number FMCSA-2014-0102. Their exemptions are applicable as of June 25, 2024 and will expire on June 25, 2026.

As of June 29, 2024, and in accordance with 49 U.S.C. 31136(e) and

31315(b), the following two individuals have satisfied the renewal conditions for obtaining an exemption from the hearing requirement in the FMCSRs for interstate CMV drivers:

Leroy Carter (OH); and Richard Fisher (PA).

The drivers were included in docket number FMCSA–2017–0060. Their exemptions are applicable as of June 29, 2024 and will expire on June 29, 2026.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) each driver must report any crashes or accidents as defined in § 390.5T; and (2) report all citations and convictions for disqualifying offenses under 49 CFR parts 383 and 391 to FMCSA; and (3) each driver prohibited from operating a motorcoach or bus with passengers in interstate commerce. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. In addition, the exemption does not exempt the individual from meeting the applicable CDL testing requirements. Each exemption will be valid for 2 years unless rescinded earlier by FMCSA. The exemption will be rescinded if: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based upon its evaluation of the 34 exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the hearing requirement in § 391.41 (b)(11). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,

Associate Administrator for Policy.

[FR Doc. 2024–12723 Filed 6–10–24; 8:45 am]

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2013–0108; FMCSA–2013–0443; FMCSA–2014–0381; FMCSA–2015–0115; FMCSA–2015–0320; FMCSA–2015–0321; FMCSA–2017–0254; FMCSA–2018–0050; FMCSA–2019–0034; FMCSA–2020–0045; FMCSA–2022–0042; FMCSA–2022–0043]

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of renewal of exemptions; request for comments.

SUMMARY: FMCSA announces its decision to renew exemptions for 18 individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have “no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any loss of ability to control a CMV.” The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: The exemptions are applicable on June 28, 2024. The exemptions expire on June 28, 2026. Comments must be received on or before July 11, 2024.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA–2013–0108, Docket No. FMCSA–2013–0443, Docket No. FMCSA–2014–0381, Docket No. FMCSA–2015–0115, Docket No. FMCSA–2015–0320, Docket No. FMCSA–2015–0321, Docket No. FMCSA–2017–0254, Docket No. FMCSA–2018–0050, Docket No. FMCSA–2019–0034, Docket No. FMCSA–2020–0045, Docket No. FMCSA–2022–0042, or Docket No. FMCSA–2022–0043 using any of the following methods:

- *Federal eRulemaking Portal:* Go to www.regulations.gov/; insert the docket number (FMCSA–2013–0108, FMCSA–2013–0443, FMCSA–2014–0381, FMCSA–2015–0115, FMCSA–2015–0320, FMCSA–2015–0321, FMCSA–2017–0254, FMCSA–2018–0050, FMCSA–2019–0034, FMCSA–2020–0045, FMCSA–2022–0042, or FMCSA–2022–0043) in the keyword box and

click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, and click on the “Comment” button. Follow the online instructions for submitting comments.

- *Mail:* Dockets Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Washington, DC 20590–0001.

- *Hand Delivery:* West Building Ground Floor, 1200 New Jersey Avenue SE, Washington, DC, 20590–0001 between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal Holidays.

- *Fax:* (202) 493–2251.

To avoid duplication, please use only one of these four methods. See the “Public Participation” portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, (202) 366–4001, fmcamedical@dot.gov. Office hours are from 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Dockets Operations, (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA–2013–0108, Docket No. FMCSA–2013–0443, Docket No. FMCSA–2014–0381, Docket No. FMCSA–2015–0115, Docket No. FMCSA–2015–0320, Docket No. FMCSA–2015–0321, Docket No. FMCSA–2017–0254, Docket No. FMCSA–2018–0050, Docket No. FMCSA–2019–0034, Docket No. FMCSA–2020–0045, Docket No. FMCSA–2022–0042, or Docket No. FMCSA–2022–0043), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to www.regulations.gov/, insert the docket number (FMCSA–2013–0108, FMCSA–

2013–0443, FMCSA–2014–0381, FMCSA–2015–0115, FMCSA–2015–0320, FMCSA–2015–0321, FMCSA–2017–0254, FMCSA–2018–0050, FMCSA–2019–0034, FMCSA–2020–0045, FMCSA–2022–0042, or FMCSA–2022–0043) in the keyword box and click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, click the “Comment” button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to www.regulations.gov. Insert the docket number (FMCSA–2013–0108, FMCSA–2013–0443, FMCSA–2014–0381, FMCSA–2015–0115, FMCSA–2015–0320, FMCSA–2015–0321, FMCSA–2017–0254, FMCSA–2018–0050, FMCSA–2019–0034, FMCSA–2020–0045, FMCSA–2022–0042, or FMCSA–2022–0043) in the keyword box and click “Search.” Next, sort the results by “Posted (Newer-Older),” choose the first notice listed, and click “Browse Comments.” If you do not have access to the internet, you may view the docket online by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption request. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov. As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at <https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices>, the comments are searchable by the name of the submitter.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no

longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statutes also allow the Agency to renew exemptions at the end of the 5-year period. However, FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver’s medical certification.

The physical qualification standard for drivers regarding epilepsy found in 49 CFR 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria¹ to assist Medical Examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce.

The 18 individuals listed in this notice have requested renewal of their exemptions from the epilepsy and seizure disorders prohibition in § 391.41(b)(8), in accordance with FMCSA procedures. Accordingly, FMCSA has evaluated these applications for renewal on their merits and decided to extend each exemption for a renewable 2-year period.

III. Request for Comments

Interested parties or organizations possessing information that would otherwise show that any, or all, of these drivers are not currently achieving the statutory level of safety should immediately notify FMCSA. The Agency will evaluate any adverse evidence submitted and, if safety is being compromised or if continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b), FMCSA will take immediate steps to revoke the exemption of a driver.

IV. Basis for Renewing Exemptions

In accordance with 49 U.S.C. 31136(e) and 31315(b), each of the 18 applicants has satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition. The 18 drivers in this

notice remain in good standing with the Agency, have maintained their medical monitoring and have not exhibited any medical issues that would compromise their ability to safely operate a CMV during the previous 2-year exemption period. In addition, for commercial driver’s license (CDL) holders, the Commercial Driver’s License Information System and the Motor Carrier Management Information System are searched for crash and violation data. For non-CDL holders, the Agency reviews the driving records from the State Driver’s Licensing Agency. These factors provide an adequate basis for predicting each driver’s ability to continue to safely operate a CMV in interstate commerce. Therefore, FMCSA concludes that extending the exemption for each renewal applicant for a period of 2 years is likely to achieve a level of safety equal to that existing without the exemption.

As of June 28, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following 18 individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers:

Randall Bernath (MI)
James Crow (ME)
Paul Drewer (WA)
Jeremy Fehrman (WI)
David Funk (OH)
Scott Gessner (PA)
Daniel Halstead (NV)
Aaron Harms (MO)
John Holland, II (IN)
Scott Hughes (IL)
Brian Johnson (MN)
Larry Lintelman (AK)
Michael Miller (WI)
Chad Smith (MA)
Daniel Verduzco (CA)
Mohammad Warrad (IA)
Michael Weymouth (NH)
Karl Wilson, Jr. (GA)

The drivers were included in docket number FMCSA–2013–0108, FMCSA–2013–0443, FMCSA–2014–0381, FMCSA–2015–0115, FMCSA–2015–0320, FMCSA–2015–0321, FMCSA–2017–0254, FMCSA–2018–0050, FMCSA–2019–0034, FMCSA–2020–0045, FMCSA–2022–0042, or FMCSA–2022–0043. Their exemptions are applicable as of June 28, 2024 and will expire on June 28, 2026.

V. Conditions and Requirements

The exemptions are extended subject to the following conditions: (1) each driver must remain seizure-free and maintain a stable treatment during the 2-year exemption period; (2) each driver

¹ These criteria may be found in APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. *Epilepsy*: § 391.41(b)(8), paragraphs 3, 4, and 5, which is available on the internet at <https://www.gpo.gov/fdsys/pkg/CFR-2015-title49-vol5/pdf/CFR-2015-title49-vol5-part391-appA.pdf>.

must submit annual reports from their treating physicians attesting to the stability of treatment and that the driver has remained seizure-free; (3) each driver must undergo an annual medical examination by a certified ME, as defined by § 390.5; and (4) each driver must provide a copy of the annual medical certification to the employer for retention in the driver's qualification file, or keep a copy of his/her driver's qualification file if he/she is self-employed. The driver must also have a copy of the exemption when driving, for presentation to a duly authorized Federal, State, or local enforcement official. The exemption will be rescinded if: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained before it was granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

VI. Preemption

During the period the exemption is in effect, no State shall enforce any law or regulation that conflicts with this exemption with respect to a person operating under the exemption.

VII. Conclusion

Based on its evaluation of the 18 exemption applications, FMCSA renews the exemptions of the aforementioned drivers from the epilepsy and seizure disorders prohibition in § 391.41(b)(8). In accordance with 49 U.S.C. 31136(e) and 31315(b), each exemption will be valid for 2 years unless revoked earlier by FMCSA.

Larry W. Minor,
Associate Administrator for Policy.

BILLING CODE 4910-EX-P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA-2024-0125]

Commercial Driver's License; 3 North LLC; Application for Exemption

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of application for exemption; request for comments.

SUMMARY: FMCSA announces that it has received an application from 3 North LLC for a 5-year exemption to enable 3 of its commercial driver's license (CDL)

holders under the age of 21, with the requisite "K" restriction for intrastate-only operations, to drive commercial motor vehicles (CMVs) in intrastate operations in a State other than their State of domicile. The applicant indicates these individuals will drive less than 20 miles per day in intrastate commerce. FMCSA requests public comment on the applicant's request for exemption.

DATES: Comments must be received on or before July 11, 2024.

ADDRESSES: You may submit comments identified by Federal Docket Management System (FDMS) Number FMCSA-2024-0125 by any of the following methods:

- **Federal eRulemaking Portal:** www.regulations.gov. See the Public Participation and Request for Comments section below for further information.
- **Mail:** Dockets Operations, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Washington, DC 20590-0001.
- **Hand Delivery or Courier:** West Building, Ground Floor, 1200 New Jersey Avenue SE, between 9 a.m. and 5 p.m. E.T., Monday through Friday, except Federal holidays.
- **Fax:** (202) 493-2251.

Each submission must include the Agency name and the docket number (FMCSA-2024-0125) for this notice. Note that DOT posts all comments received without change to www.regulations.gov, including any personal information included in a comment. Please see the Privacy Act heading below.

Docket: If you do not have access to the internet, you may view the docket by visiting Docket Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366-9317 or (202) 366-9826 before visiting Dockets Operations.

Privacy Act: In accordance with 49 U.S.C. 31315(b), DOT solicits comments from the public to better inform its exemption process. DOT posts these comments, including any personal information the commenter provides, to www.regulations.gov, as described in the system of records notice DOT/ALL-14 FDMS, which can be reviewed at <https://www.transportation.gov/privacy>. The comments are posted without edit and are searchable by the name of the submitter.

FOR FURTHER INFORMATION CONTACT: Ms. Bernadette Walker, Driver, and Carrier

Operations Division; Office of Carrier, Driver and Vehicle Safety Standards, FMCSA; (202) 385-2415; bernadette.walker@dot.gov. If you have questions on viewing or submitting material to the docket, contact Dockets Operations at (202) 366-9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation and Request for Comments

FMCSA encourages you to participate by submitting comments and related materials.

Submitting Comments

If you submit a comment, please include the docket number for this notice (FMCSA-2024-0125), indicate the specific section of this document to which the comment applies, and provide a reason for your suggestions or recommendations. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so the Agency can contact you if it has questions regarding your submission.

To submit your comment online, go to www.regulations.gov, enter the docket number "FMCSA-2024-0125" in the keyword box, and click "Search." Next, sort the results by "Posted (Newer-Older)," choose the first notice listed, click the "Comment" button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope. FMCSA will consider all comments and material received during the comment period.

II. Legal Basis

FMCSA has authority under 49 U.S.C. 31136(e) and 31315(b) to grant exemptions from Federal Motor Carrier Safety Regulations (FMCSRs). FMCSA must publish a notice of each exemption request in the **Federal Register** (49 CFR 381.315(a)). The Agency must provide the public an opportunity to inspect the information relevant to the application, including the applicant's safety analyses. The Agency must provide an opportunity for public comment on the request.

The Agency reviews safety analyses and public comments submitted and determines whether granting the exemption would likely maintain a level of safety equivalent to, or greater than, the level that would be achieved by the current regulation (49 CFR 381.305(a)). The Agency must publish its decision in the **Federal Register** (49 CFR 381.315(b)). If granted, the notice will identify the regulatory provision(s) from which the applicant will be exempt, the effective period, and all terms and conditions of the exemption (49 CFR 381.315(c)(1)). If the exemption is denied, the notice will explain the reason for the denial (49 CFR 381.315(c)(2)). The exemption may be renewed (49 CFR 381.300(b)).

III. Applicant's Request

The applicant, 3 North LLC, requests a 5-year exemption for 3 drivers from 49 CFR 383.153(a)(10)(vii), which requires that CDLs issued to drivers under the age of 21 be marked with a "K" restriction limiting them to intrastate operations in the driver's State of domicile. The applicant utilizes a fleet of specialized construction equipment mounted on a straight truck chassis to transport concrete for wind turbine foundations. The applicant stated that it uses a different set of CDL holders to drive the CMVs across State lines. The exemption request is applicable to three drivers who would operate the CMVs in the State where work is being performed, but only after they have been driven to the State by CDL holders over the age of 21. The applicant believes their operations would have no impact on the safety of U.S. highways because the three drivers will operate the CMVs for only 20 miles in one State once the CMVs have been driven from one State to another. The applicant believes that, absent the exemption, the progress towards green, renewable energy could be delayed, potentially causing the energy sector to postpone its transition away from carbon-generating sources of power.

A copy of 3 North LLC's application for exemption is available for review in the docket for this notice.

IV. Request for Comments

In accordance with 49 U.S.C. 31315(b), FMCSA requests public comment from all interested persons on 3 North LLC's exemption application. All comments received before the close of business on the comment closing date indicated at the beginning of this notice will be considered and will be available for examination in the docket at the location listed under the Addresses section of this notice. Comments

received after the comment closing date will be filed in the public docket and will be considered to the extent practicable. In addition to late comments, FMCSA will also continue to file, in the public docket, relevant information that becomes available after the comment closing date. Interested persons should continue to examine the public docket for new material.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910-EX-P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA-2024-0011]

Qualification of Drivers; Exemption Applications; Hearing

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of applications for exemption; request for comments.

SUMMARY: FMCSA announces receipt of applications from 11 individuals for an exemption from the hearing requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) to operate a commercial motor vehicle (CMV) in interstate commerce. If granted, the exemptions would enable these hard of hearing and deaf individuals to operate CMVs in interstate commerce.

DATES: Comments must be received on or before July 11, 2024.

ADDRESSES: You may submit comments identified by the Federal Docket Management System Docket No. FMCSA-2024-0011 using any of the following methods:

- **Federal eRulemaking Portal:** Go to www.regulations.gov/, insert the docket number (FMCSA-2024-0011) in the keyword box and click "Search." Next, choose the only notice listed, and click on the "Comment" button. Follow the online instructions for submitting comments.

- **Mail:** Dockets Operations; U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building Ground Floor, Washington, DC 20590-0001.

- **Hand Delivery:** West Building Ground Floor, 1200 New Jersey Avenue SE, Washington, DC 20590-0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal Holidays.

- **Fax:** (202) 493-2251.

To avoid duplication, please use only one of these four methods. See the "Public Participation" portion of the **SUPPLEMENTARY INFORMATION** section for instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Room W64-224, Washington, DC 20590-0001, (202) 366-4001, fmcsamedical@dot.gov. Office hours are 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays. If you have questions regarding viewing or submitting material to the docket, contact Dockets Operations, (202) 366-9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Submitting Comments

If you submit a comment, please include the docket number for this notice (Docket No. FMCSA-2024-0011), indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so that FMCSA can contact you if there are questions regarding your submission.

To submit your comment online, go to <https://www.regulations.gov/docket/FMCSA-2024-0011>. Next, sort the results by "Posted (Newer-Older)," choose the only notice listed, click the "Comment" button, and type your comment into the text box on the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. FMCSA will consider all comments and material received during the comment period.

B. Viewing Comments

To view comments go to www.regulations.gov. Insert the docket number (FMCSA-2024-0011) in the keyword box and click "Search." Next, choose the only notice listed, and click "Browse Comments." If you do not have access to the internet, you may view the docket online by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey

Avenue SE, Washington, DC 20590–0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

C. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption requests. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov. As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at <https://www.transportation.gov/individuals/privacy/privacy-act-system-records-notices>, the comments are searchable by the name of the submitter.

II. Background

Under 49 U.S.C. 31136(e) and 31315(b), FMCSA may grant an exemption from the FMCSRs for no longer than a 5-year period if it finds such exemption would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved absent such exemption. The statutes also allow the Agency to renew exemptions at the end of the 5-year period. FMCSA grants medical exemptions from the FMCSRs for a 2-year period to align with the maximum duration of a driver's medical certification.

The 11 individuals listed in this notice have requested an exemption from the hearing requirement in 49 CFR 391.41(b)(11). Accordingly, the Agency will evaluate the qualifications of each applicant to determine whether granting the exemption will achieve the required level of safety mandated by statute.

The physical qualification standard for drivers regarding hearing found in § 391.41(b)(11) states that a person is physically qualified to drive a CMV if that person first perceives a forced whispered voice in the better ear at not less than 5 feet with or without the use of a hearing aid or, if tested by use of an audiometric device, does not have an average hearing loss in the better ear greater than 40 decibels at 500 Hz, 1,000 Hz, and 2,000 Hz with or without a hearing aid when the audiometric device is calibrated to American National Standard (formerly ASA Standard) Z24.5–1951.

This standard was adopted in 1970 and was revised in 1971 to allow drivers to be qualified under this standard while wearing a hearing aid, (35 FR

6458, 6463 (Apr. 22, 1970) and 36 FR 12857 (July 8, 1971), respectively).

On February 1, 2013, FMCSA announced in a Notice of Final Disposition titled, “Qualification of Drivers; Application for Exemptions; National Association of the Deaf,” (78 FR 7479), its decision to grant requests from 40 individuals for exemptions from the Agency's physical qualification standard concerning hearing for interstate CMV drivers. Since that time the Agency has published additional notices granting requests from hard of hearing and deaf individuals for exemptions from the Agency's physical qualification standard concerning hearing for interstate CMV drivers.

III. Qualifications of Applicants

Anderson Aberdeen

Anderson Aberdeen, 42, holds a class R driver's license in Colorado.

Ismael Aguirre

Ismael Aguirre, 32, holds a class C driver's license in California.

Ulices Coria

Ulices Coria, 45, holds a class D driver's license in Utah.

Manuel Llano Hevia

Manuel Llano Hevia, 42, holds a class C driver's license in Nevada.

Stan Lockett

Stan Lockett, 39, holds a class CM driver's license in Texas.

Joe Martens

Joe Martens, 66, holds a class D driver's license in Illinois.

Dejan Ortiz

Dejan Ortiz, 20, holds a class C driver's license in Texas.

Elyssa Simmons

Elyssa Simmons, 24, holds a class D driver's license in Virginia.

Tamel Smith

Tamel Smith, 27, holds a class DM driver's license in New York.

Anton Syntax

Anton Syntax, 76, holds a class C driver's license in Pennsylvania.

Jonathan Wilke

Jonathan Wilke, 21, holds a class A driver's license in Iowa.

IV. Request for Comments

In accordance with 49 U.S.C. 31136(e) and 31315(b), FMCSA requests public comment from all interested persons on the exemption petitions described in

this notice. We will consider all comments received before the close of business on the closing date indicated under the **DATES** section of the notice.

Larry W. Minor,

Associate Administrator for Policy.

BILLING CODE 4910–EX–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2023–0266]

Commercial Driver's License: Oregon Department of Transportation; Application for Exemption

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of application for exemption; request for comments.

SUMMARY: FMCSA announces that the Oregon Department of Transportation (Oregon) has applied for a limited exemption from the commercial driver's license (CDL) rules concerning acceptable proof of citizenship or lawful permanent residency for citizens of Freely Associated States (FAS) who now reside in Oregon and wish to obtain a CDL. The FAS are the Federated States of Micronesia, the Republic of the Marshall Islands, and the Republic of Palau. If the exemption is granted, Oregon would be allowed to issue standard commercial learner permits (CLPs) and CDLs to these individuals, rather than issuing non-domiciled CLPs and CDLs. FMCSA requests public comment on the applicant's request for exemption.

DATES: Comments must be received on or before July 11, 2024.

ADDRESSES: You may submit comments identified by Federal Docket Management System (FDMS) Number FMCSA–2023–0266 by any of the following methods:

- *Federal eRulemaking Portal:* www.regulations.gov. See the Public Participation and Request for Comments section below for further information.
- *Mail:* Dockets Operations, U.S. Department of Transportation, 1200 New Jersey Avenue SE, West Building, Ground Floor, Washington, DC 20590–0001.
- *Hand Delivery or Courier:* West Building, Ground Floor, 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m. E.T., Monday through Friday, except Federal holidays.
- *Fax:* (202) 493–2251.

Each submission must include the Agency name and the docket number (FMCSA–2023–0266) for this notice. Note that DOT posts all comments received without change to www.regulations.gov, including any personal information included in a comment. Please see the Privacy Act heading below.

Docket: If you do not have access to the internet, you may view the docket by visiting Docket Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590, between 9 a.m. and 5 p.m., ET, Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366–9317 or (202) 366–9826 before visiting Dockets Operations.

Privacy Act: In accordance with 49 U.S.C. 31315(b), DOT solicits comments from the public to better inform its exemption process. DOT posts these comments, including any personal information the commenter provides, to www.regulations.gov as described in the system of records notice DOT/ALL–14 FDMS, which can be reviewed at <https://www.transportation.gov/privacy>. The comments are posted without edit and are searchable by the name of the submitter.

FOR FURTHER INFORMATION CONTACT: Ms. Pearlle Robinson, Driver and Carrier Operations Division; Office of Carrier, Driver and Vehicle Safety Standards, FMCSA; 1200 New Jersey Avenue SE, Washington, DC 20590–0001; (202) 366–4225; pearlie.robinson@dot.gov. If you have questions on viewing or submitting material to the docket, contact Dockets Operations at (202) 366–9826.

SUPPLEMENTARY INFORMATION:

I. Public Participation and Request for Comments

FMCSA encourages you to participate by submitting comments and related materials.

Submitting Comments

If you submit a comment, please include the docket number for this notice (FMCSA–2023–0266), indicate the specific section of this document to which the comment applies, and provide a reason for your suggestions or recommendations. You may submit your comments and material online or by fax, mail, or hand delivery, but please use only one of these means. FMCSA recommends that you include your name and a mailing address, an email address, or a phone number in the body of your document so the Agency can contact you if it has questions regarding your submission.

To submit your comment online, go to www.regulations.gov and put the docket number “FMCSA–2023–0266” in the “Keyword” box, and click “Search.” When the new screen appears, click on the “Comment” button and type your comment into the text box in the following screen. Choose whether you are submitting your comment as an individual or on behalf of a third party and then submit. If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the facility, please enclose a stamped, self-addressed postcard or envelope. FMCSA will consider all comments and material received during the comment period.

Confidential Business Information (CBI)

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to the notice contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to the notice, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission that constitutes CBI as “PROPIN” to indicate it contains proprietary information. FMCSA will treat such marked submissions as confidential under the Freedom of Information Act, and they will not be placed in the public docket of the notice. Submissions containing CBI should be sent to Brian Dahlin, Chief, Regulatory Evaluation Division, Office of Policy, FMCSA, 1200 New Jersey Avenue SE, Washington, DC 20590–0001 or via email at brian.g.dahlin@dot.gov. At this time, you need not send a duplicate hardcopy of your electronic CBI submissions to FMCSA headquarters. Any comments FMCSA receives not specifically designated as CBI will be placed in the public docket for this notice.

II. Legal Basis

FMCSA has authority under 49 U.S.C. 31136(e) and 31315(b) to grant exemptions from Federal Motor Carrier Safety Regulations (FMCSRs). FMCSA must publish a notice of each exemption request in the **Federal Register** (49 CFR 381.315(a)). The Agency must provide the public an opportunity to inspect the information relevant to the application,

including the applicant’s safety analyses.

The Agency must provide an opportunity for public comment on the request. The Agency reviews safety analyses and public comments submitted and determines whether granting the exemption would likely achieve a level of safety equivalent to, or greater than, the level that would be achieved by the current regulation (49 CFR 381.305(a)). The Agency must publish its decision in the **Federal Register** (49 CFR 381.315(b)). If granted, the notice will identify the regulatory provision(s) from which the applicant will be exempt, the effective period, and all terms and conditions of the exemption (49 CFR 381.315(c)(1)). If the exemption is denied, the notice will explain the reasons for the denial (49 CFR 381.315(c)(2)).

III. Background

Under 49 CFR 383.71(b), a State Driver Licensing Agency (SDLA) may issue a CDL or CLP only to an applicant who presents proof of United States citizenship or lawful permanent residency. If the applicant cannot present this proof, then the SDLA may issue the applicant a non-domiciled CDL or CPL instead, under 49 CFR 383.71(f). Thus, under 49 CFR 383.71, an individual who is a citizen of a FAS, who does not have status of lawful permanent residence, is not eligible for a CDL or CLP and may be issued only non-domiciled credentials.

The United States’ relationships with the FAS are governed by agreements known as Compacts of Free Association (COFA). Under these agreements, citizens of the FAS may enter the United States as nonimmigrants, and, without obtaining a visa, they may remain in and work in the country indefinitely.¹

Under the REAL ID Act of 2005² and its accompanying regulation 6 CFR part 37 promulgated by the Department of Homeland Security (DHS),³ REAL ID compliant States are permitted to issue REAL ID compliant driver’s licenses and identification cards to certain individuals with nonimmigrant status. However, under 6 CFR 37.21(b)(1), if the individual has no end date to their authorized stay in the country, then the license or ID may be issued and valid for a maximum of one year. Because citizens of the FAS may remain in the country indefinitely, initially under this law, these individuals could be issued

¹ See H. Rept. 115–945.

² Public Law 109–13, Div. B.

³ See 73 FR 5272 (January 29, 2008).

REAL ID driver's licenses and ID cards lasting only one year.⁴

Subsequently, Congress enacted a modifying statute entitled the REAL ID Act Modification for Freely Associated States Act,⁵ and DHS issued a corresponding amendment to its regulation. These changes permitted compliant States to issue full-term REAL ID licenses and ID cards to citizens of the FAS. When issuing this regulatory amendment, DHS also modified the identification documents that citizens of the FAS may present when applying for a REAL ID driver's license or ID card from a compliant State.⁶ Under its authority in 6 CFR 37.11(c)(1)(x), DHS stated that complying States may accept "a valid unexpired passport issued by the Republic of the Marshall Islands, the Republic of Palau, or the Federated States of Micronesia with an approved Form I-94 . . . documenting the applicant's most recent admission to the United States under the Compact of Free Association between the United States and the nation that issued the passport." DHS further stated its allowance of these documents was "consistent with the intent of Congress."⁷

Applicant's Request

Oregon seeks an exemption from the CDL "List of Acceptable Proofs of Citizenship or Lawful Permanent Residency" requirements in table 1 to 49 CFR 383.71 for citizens of the FAS. Oregon cited in its application the REAL ID Act Modification for Freely Associated States Act and the amended DHS regulations ensuring that citizens of the FAS residing in the United States are eligible for full-term REAL ID licenses and identification cards. According to Oregon, "citizens of the Freely Associated States are able to meet the domicile requirement described in [49 CFR] 383.71(b)(10)" and noted that "the [COFAs] provide for citizens of the Freely Associated States to reside and work indefinitely within the United States."

Oregon requests that FMCSA grant the proposed exemption and authorize it to issue CDLs and CLPs to citizens of the FAS in accordance with State procedures in 49 CFR 383.73(a) and (b). Ordinarily, a person who is not a United States citizen must present a valid, unexpired Permanent Resident Card. For a person who is a citizen of a FAS, Oregon would instead accept a valid, unexpired passport issued by a FAS and

an Arrival/Departure Record, meaning an I-94 or I-94A form, to prove that the individual has entered the United States lawfully. A copy of the Oregon's application for exemption is available for review in the docket for this notice.

IV. Request for Comments

In accordance with 49 U.S.C. 31315(b), FMCSA requests public comment from all interested persons on Oregon's application for an exemption from the requirement in table 1 to 49 CFR 383.71 for citizens of the FAS. All comments received before the close of business on the comment closing date indicated at the beginning of this notice will be considered and will be available for examination in the docket at the location listed under the **ADDRESSES** section of this notice. Comments received after the comment closing date will be filed in the public docket and will be considered to the extent practicable. In addition to late comments, FMCSA will also continue to file, in the public docket, relevant information that becomes available after the comment closing date. Interested persons should continue to examine the public docket for new material.

Larry W. Minor,

Associate Administrator for Policy.

Qualification of Drivers; Exemption Applications; Epilepsy and Seizure Disorders

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice of final disposition.

SUMMARY: FMCSA announces its decision to renew exemptions for 22 individuals from the requirement in the Federal Motor Carrier Safety Regulations (FMCSRs) that interstate commercial motor vehicle (CMV) drivers have "no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause loss of consciousness or any

loss of ability to control a CMV." The exemptions enable these individuals who have had one or more seizures and are taking anti-seizure medication to continue to operate CMVs in interstate commerce.

DATES: Each group of renewed exemptions were applicable on the dates stated in the discussions below and will expire on the dates provided below.

FOR FURTHER INFORMATION CONTACT: Ms. Christine A. Hydock, Chief, Medical Programs Division, FMCSA, DOT, 1200 New Jersey Avenue SE, Washington, DC 20590-0001, (202) 366-4001, fmcamedical@dot.gov. Office hours are from 8:30 a.m. to 5 p.m. ET Monday through Friday, except Federal holidays. SUPPLEMENTARY INFORMATION:

I. Public Participation

A. Viewing Comments

To view comments go to www.regulations.gov. Insert the docket number (FMCSA-2013-0106, FMCSA-2013-0442, FMCSA-2015-0115, FMCSA-2015-0119, FMCSA-2015-0321, FMCSA-2017-0181, FMCSA-2017-0254, FMCSA-2019-0030, FMCSA-2019-0036, FMCSA-2019-0206, FMCSA-2020-0045, FMCSA-2020-0046, FMCSA-2021-0026, or FMCSA-2022-0042) in the keyword box and click "Search." Next, sort the results by "Posted (Newer-Older)," choose the first notice listed, and click "Browse Comments." If you do not have access to the internet, you may view the docket online by visiting Dockets Operations on the ground floor of the DOT West Building, 1200 New Jersey Avenue SE, Washington, DC 20590-0001, between 9 a.m. and 5 p.m. ET Monday through Friday, except Federal holidays. To be sure someone is there to help you, please call (202) 366-9317 or (202) 366-9826 before visiting Dockets Operations.

B. Privacy Act

In accordance with 49 U.S.C. 31315(b)(6), DOT solicits comments from the public on the exemption request. DOT posts these comments, without edit, including any personal information the commenter provides, to www.regulations.gov. As described in the system of records notice DOT/ALL 14 (Federal Docket Management System), which can be reviewed at <https://www.transportation.gov/individuals/privacy/privacy-act-system->

⁴ See 84 FR 46423 (September 4, 2019).

⁵ Public Law 115-323.

⁶ See 84 FR 46556 (September 4, 2019).

⁷ Id.

records-notices, the comments are searchable by the name of the submitter.

II. Background

On April 25, 2024, FMCSA published a notice announcing its decision to renew exemptions for 22 individuals from the epilepsy and seizure disorders prohibition in 49 CFR 391.41(b)(8) to operate a CMV in interstate commerce and requested comments from the public (89 FR 31794). The public comment period ended on May 28, 2024, and no comments were received.

FMCSA has evaluated the eligibility of these applicants and determined that renewing these exemptions would likely achieve a level of safety that is equivalent to, or greater than, the level that would be achieved by complying with § 391.41(b)(8).

The physical qualification standard for drivers regarding epilepsy found in § 391.41(b)(8) states that a person is physically qualified to drive a CMV if that person has no established medical history or clinical diagnosis of epilepsy or any other condition which is likely to cause the loss of consciousness or any loss of ability to control a CMV.

In addition to the regulations, FMCSA has published advisory criteria¹ to assist medical examiners in determining whether drivers with certain medical conditions are qualified to operate a CMV in interstate commerce.

III. Discussion of Comments

FMCSA received no comments in this proceeding.

IV. Conclusion

Based on its evaluation of the 22 renewal exemption applications and comments received, FMCSA announces its decision to exempt the following drivers from the epilepsy and seizure disorders prohibition in § 391.41(b)(8).

As of May 6, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following nine individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers (89 FR 31794):

Gary Clark (KY)
Michael Curtis (DE)
Callon Hegman (IL)
Zachary Henson (IL)
Gregory Johnson (NC)
Robert Lombardo (CA)
Armando Macias-Tovar (FL)

Joseph Mendoza (IN)
Douglas Slagel (OH)

The drivers were included in docket number FMCSA–2013–0106, FMCSA–2017–0181, FMCSA–2021–0026, or FMCSA–2022–0042. Their exemptions were applicable as of May 6, 2024 and will expire on May 6, 2026.

As of May 15, 2024, and in accordance with 49 U.S.C. 31136(e) and 31315(b), the following 13 individuals have satisfied the renewal conditions for obtaining an exemption from the epilepsy and seizure disorders prohibition in the FMCSRs for interstate CMV drivers (89 FR 31794):

Barry Dull (OH)
Robert J. Forney (WI)
Matthew Heinen (MN)
Logan Hertzler (PA)
Preston Kanagy (TN)
Kenneth Lewis (NC)
Kevin Market (OH)
Gary Olsen (MN)
Randy Pinto (PA)
Jeffrey Totten (KS)
Paul Vitous (WA)
Thomas Vivirito (PA)
Robert J. Wenner (MN)

The drivers were included in docket number FMCSA–2013–0442, FMCSA–2015–0115, FMCSA–2015–0119, FMCSA–2015–0321, FMCSA–2017–0181, FMCSA–2017–0254, FMCSA–2019–0030, FMCSA–2019–0036, FMCSA–2020–0045, or FMCSA–2020–0046. Their exemptions were applicable as of May 15, 2024 and will expire on May 15, 2026.

In accordance with 49 U.S.C. 31315(b), each exemption will be valid for 2 years from the effective date unless revoked earlier by FMCSA. The exemption will be revoked if the following occurs: (1) the person fails to comply with the terms and conditions of the exemption; (2) the exemption has resulted in a lower level of safety than was maintained prior to being granted; or (3) continuation of the exemption would not be consistent with the goals and objectives of 49 U.S.C. 31136(e) and 31315(b).

Larry W. Minor,

Associate Administrator for Policy.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA–2023–0063]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Request for Comment; Human Interaction With Driving Automation Systems

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Notice and request for comments on a request for approval of a new collection of information.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 (PRA), this notice announces that the Information Collection Request (ICR) summarized below will be submitted to the Office of Management and Budget (OMB) for review and approval. The ICR describes the nature of the information collection and its expected burden. The National Highway Traffic Safety Administration (NHTSA) invites public comments about our intention to request approval from the Office of Management and Budget (OMB) for a new information collection. The proposed collection of information described below supports research addressing safety-related aspects of drivers' interactions with driving automation systems. A **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collection was published on December 12, 2023. Comments were received from the Insurance Institute for Highway Safety (IIHS).

DATES: Comments must be submitted on or before July 11, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection, including suggestions for reducing burden, should be submitted to the Office of Management and Budget at www.reginfo.gov/public/do/PRAMain. To find this particular information collection, select “Currently under Review—Open for Public Comment” or use the search function.

FOR FURTHER INFORMATION CONTACT: For additional information or access to background documents, contact: Eric Traube, Office of Vehicle Safety Research, Human Factors/Engineering Integration Division NSR–310, West Building, W46–424, 1200 New Jersey Ave SE, Washington, DC 20590; eric.traube@dot.gov. Please identify the

¹ These criteria may be found in APPENDIX A TO PART 391—MEDICAL ADVISORY CRITERIA, section H. *Epilepsy*: § 391.41(b)(8), paragraphs 3, 4, and 5, which is available on the internet at <https://www.gpo.gov/fdsys/pkg/CFR-2015-title49-vol5/pdf/CFR-2015-title49-vol5-part391-appA.pdf>.

relevant collection of information by referring to its OMB Control Number.

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501 *et seq.*), a Federal agency must receive approval from the Office of Management and Budget (OMB) before it collects certain information from the public and a person is not required to respond to a collection of information by a Federal agency unless the collection displays a valid OMB control number. In compliance with these requirements, this notice announces that the following information collection request will be submitted to OMB.

Title: Human Interaction with Driving Automation Systems

OMB Control Number: New.

Form Numbers: There are multiple forms for this collection including: Eligibility Questionnaire, NHTSA Form 1742; Informed Consent Study 1, NHTSA Form 1743; Informed Consent Study 2, NHTSA Form 1744; Informed Consent Study 3, NHTSA Form 1745; Pre-Drive Questionnaire, NHTSA Form 1746; Wellness Questionnaire, NHTSA Form 1747; In-Drive Questionnaire, NHTSA Form 1748; Post-Drive Questionnaire, NHTSA Form 1749.

Type of Request: New information collection.

Type of Review Requested: Regular.

Requested Expiration Date of

Approval: Three years from date of approval.

Summary of the Collection of Information:

The National Highway Traffic Safety Administration (NHTSA) has proposed to perform research involving the collection of information from the public as part of a multi-year effort to learn about how humans interact with driving automation systems (DAS). This research will support NHTSA in understanding the potential safety challenges associated with human-DAS interactions, particularly in the context of mixed traffic interactions where some vehicles have DAS and others do not. Within mixed traffic environments, vehicles may also have DAS that perform more or less of the driving task (*i.e.*, different levels of automation) and come with their own sets of expectations and limitations.

The research will involve human subjects testing using a driving simulator. The goal is to understand how drivers interact with driving automation systems, specifically in situations where the automation behaves unlike a human driver. The project will measure interactions between humans and driving automation systems by (1) examining

driving performance measures (such as takeover time and reaction time), (2) measuring understanding of the automation through questionnaires, (3) measuring trust in automation using questionnaires, and (4) measuring risk taking through questionnaires and a simple behavioral task on a computer. This research will add to NHTSA's state of knowledge and is not immediately intended to inform regulations or policy. The research will be conducted in three parts, referred to as Study 1, Study 2, and Study 3. All study procedures will be approved by the University of Iowa Institutional Review Board (IRB). Data collection will begin upon receipt of PRA clearance and will involve human-subjects data collection using the driving simulators at the University of Iowa Driving Safety Research Institute (DSRI).

The data collections will be performed once to obtain the target number of valid test participants. Study participants will be members of the general public and participation will be voluntary with monetary compensation provided. Participants will include licensed drivers aged 18 to 65 who are healthy and able to drive without assistive devices. Participants will be recruited using the DSRI registry and through email blasts to University of Iowa community.

The objective of the first study is to understand how humans interact with DAS in mixed traffic environments, driving environments where some vehicles have automated capabilities, and some vehicles are driven manually. In the first study, participants will participate in pairs with each participant driving a separate driving simulator but interacting in the same driving environment. Participants will experience one of two driving automation systems. Both members of the participant pair will provide informed consent, a pre-drive questionnaire, a training presentation, a familiarization drive, wellness questionnaires to screen for simulator sickness, a study drive, in-drive ratings of trust, a post-drive questionnaire, and a risk-propensity assessment. During the simulator drives, one member of the pair will perform a continuous drive along a specified route. The other member of the pair will complete three short drives where they interact with the other participant at specific points throughout the drive. The simulator will collect vehicle data (*e.g.*, brake inputs, steering wheel angle) and data about the surrounding environment (*e.g.*, distance to surrounding vehicles and lane markings). After the drives, participants will complete a questionnaire to assess

their understanding of the DAS and their trust in and acceptance of the DAS. Data will be analyzed to understand how human drivers interact with DAS in mixed traffic situations and to understand how humans understand and perceive automation in different situations.

Study 2 will focus on understanding the impact of different levels of automated system capability, defined by how well the automation can perform different driving behaviors. In the second study, participants will complete a drive in a driving simulator with a driving automation system. The study drive will contain situations to which the DAS must respond. Participants will be randomly assigned to one of three systems with different capabilities, defined by how well the automation can navigate the set of test situations. The simulator will collect vehicle data (*e.g.*, brake inputs, steering wheel angle) and data about the surrounding environment (*e.g.*, distance to surrounding vehicles and lane markings). After the drives, participants will complete a questionnaire to assess their understanding of the DAS and their trust in and acceptance of the DAS as well as a risk-propensity assessment. Data will be analyzed to understand how human drivers interact with DAS in mixed traffic situations and to understand how humans understand and perceive automation in different situations.

Study 3 will be similar to Study 2 but will focus on how the decision-making behaviors of the automated driving systems impact user experience and driving performance. In the third study, participants will complete a drive in a driving simulator with a driving automation system. The study drive will contain situations to which the DAS must respond. Participants will be randomly assigned to one of three systems with different capabilities, defined by how well the automation can navigate the set of test situations. Procedures for the three studies are identical apart from the study drive experienced.

These three studies will involve information collection through participant screening questions, a pre-drive questionnaire, a wellness questionnaire to measure simulator sickness symptoms, assessment of driving performance in a driving simulator with a situational trust questionnaire administered at points during the study drives, a post-drive questionnaire, and a behavioral assessment of risk-taking propensity called the balloon analogue risk task (BART).

The National Highway Traffic Safety Administration's (NHTSA) mission is to save lives, prevent injuries, and reduce economic costs associated with motor vehicle crashes. As new vehicle technologies are developed, it is prudent to ensure that they do not create any unintended decrease in safety. The safe deployment of driving automation systems, particularly when deployed in mixed traffic where some vehicles are controlled by automation and some are controlled manually, requires an understanding of how humans respond to and perceive different automation behavior. This work seeks to examine how drivers interact with driving automation systems in a wide sample of contexts and different levels of automation.

The collection of information will consist of

1. *Eligibility Questionnaire (NHTSA Form 1742)*.

2. *Informed Consent Study 1 (NHTSA Form 1743)*.

3. *Informed Consent Study 2 (NHTSA Form 1744)*.

4. *Informed Consent Study 3 (NHTSA Form 1745)*.

5. *Pre-Drive Questionnaire (NHTSA Form 1746)*.

6. *Wellness Questionnaire (NHTSA Form 1747)*.

7. Driving Behavior Assessment (Pre-Drive PowerPoint Training, Familiarization Drive, Study Drive with In-Drive Questionnaire (NHTSA Form 1748).

8. *Post-Drive Questionnaire (NHTSA Form 1749)*.

9. Balloon Analogue Risk Task (BART).

The information to be collected will be used for the following purposes:

1. *Eligibility Questionnaire (NHTSA Form 1742)*—Necessary for determining individuals' suitability for study participation based on driving experience and history, general health, and ability to safely drive in the simulator without health concerns. The Eligibility Questionnaire will solely be used to determine individuals' suitability for study participation and will not be analyzed in any way. These criteria will remain the same across studies.

2. *Informed Consent Study 1 (NHTSA Form 1743)*—Necessary for obtaining informed written consent from the participant to participate in the study. The form describes all study procedures, data storage and use, and potential risks from the study.

3. *Informed Consent Study 2 (NHTSA Form 1744)*—Necessary for obtaining informed written consent from the participant to participate in the study.

The form describes all study procedures, data storage and use, and potential risks from the study.

4. *Informed Consent Study 3 (NHTSA Form 1745)*—Necessary for obtaining informed written consent from the participant to participate in the study. The form describes all study procedures, data storage and use, and potential risks from the study.

5. *Pre-Drive Questionnaire (NHTSA Form 1746)*—Necessary for collecting data used to measure participants' understanding (*i.e.*, mental model) of DAS and their pre-drive trust in the DAS. Collecting these data before and after the drives will let us measure how exposure to the DAS impacts understanding and trust. Demographic information (*e.g.*, age, sex, gender, race, ethnicity) will also be collected. This pre-drive questionnaire will remain the same across all three studies.

6. *Wellness Questionnaire (NHTSA Form 1747)*—Necessary for evaluating simulator sickness symptoms to determine individuals' ability to complete the study drive in the driving simulator. This questionnaire will be administered pre-drive (to obtain baseline ratings), after the familiarization drive, and after the study drive. This wellness questionnaire will remain the same across all three studies.

7. Driving Behavior Assessment (Study Drive) with *In-Drive Questionnaire (NHTSA Form 1748)*—Before the study drive, participants will complete training via a PowerPoint presentation on a computer in a private study room. The presentation will introduce the simulator, the familiarization and study drive procedures, the DAS, and the non-driving email task. The familiarization drive is necessary to acclimate the participant to the driving simulator and perform a real-time determination for simulator sickness while training the participant on how to use the driving automation system. The study drive is necessary for gathering driving performance information for the purpose of assessing how drivers interact with automated systems and the impact of these interactions on safety. The in-drive questionnaire is necessary for understanding drivers' trust in the DAS at various points during the study drive. In Study 1, this information is collected after the events where the pair of research participants interact with one another. In Studies 2 & 3, this information is collected after the four events where the behavior of the automation varies across the different conditions. The information will be used to measure trust in the DAS following specific events. These

questions will remain the same across all three studies.

8. *Post-Drive Questionnaire (NHTSA Form 1749)*—Necessary for collecting data used to measure participants' understanding (*i.e.*, mental model) of DAS and their post-drive trust in the DAS, as well as general risk-taking behavior while driving. This post-drive questionnaire will remain the same across all three studies.

9. Balloon Analogue Risk Task (BART)—Necessary for measuring objective risk-taking propensity. For this computerized task, participants are presented with 20 different balloons (20 trials) and told that "the actual number of pumps for any particular balloon will vary." Participants are instructed to attempt to earn as many points as possible. At the beginning of each trial, the participant decides how many pumps they thought the balloon would hold and input this number. Each balloon inflates for 3 seconds and then either pops or stays intact depending on whether the participant's wager was above or below the predetermined explosion point for that balloon. If the balloon is pumped past its explosion point, it will pop, and the participant earns no points for that balloon. If the balloon is not pumped past the explosion point, the participant keeps the number of pumps as points. After each outcome, a new deflated balloon appears on the screen and points earned will be added to the total. Each balloon could earn a maximum of 128 points with an explosion point equally likely to occur on any given pump participant to the constraint that within each sequence of 10 balloons the average explosion point was on pump 64. The task will remain the same across the three studies and is a standardized online tool.

Description of the Need for the Information and Proposed Use of the Information:

NHTSA was established by the Highway Safety Act of 1970 (23 U.S.C. 101) to carry out a Congressional mandate to reduce deaths, injuries, and economic losses resulting from motor vehicle crashes on the Nation's highways. As part of this mandate, NHTSA is authorized to conduct research as a foundation for the development of traffic safety programs. As new vehicle technologies are developed, it is prudent to ensure that they do not create any unintended decrease in safety. The safe deployment of driving automation systems, particularly when deployed in mixed traffic where some vehicles are controlled by automation and some are controlled manually, requires an

understanding of how humans respond to and perceive different automation behavior. This work seeks to examine how drivers interact with driving automation systems in a wide sample of contexts and different levels of automation.

60-Day Notice:

A **Federal Register** Notice with a 60-day comment period soliciting comments on the following information collection was published on December 12, 2023 (88 FR 86202). Comments were received from the Insurance Institute for Highway Safety (IIHS).

NHTSA is grateful for the thorough and detailed review of the 60-day notice and the time and attention IIHS has given to ensure appropriate study parameters have been and will be taken into account. IIHS did not disagree with the sampling methodology or size, the design of the study or order of carryout, or the time or costs associated with the collection, so therefore no changes will be made to the study design or sampling methodology. The comments do not affect the burden estimates and therefore no changes will be made to the burden calculations.

IIHS recommended factoring experience, both as a driver and as a passenger where applicable, with each level of driving automation tested in the sampling approach and/or data analysis. We thank IIHS for this suggestion and agree about the importance of considering experience with automation in this project. We plan to collect information regarding participants' experience with automation, their understanding (*i.e.*, mental model) of automation, and their trust in vehicle automation technologies via forms included in this information collection: Pre-Drive Questionnaire, NHTSA Form 1746; In-Drive Questionnaire, NHTSA Form 1748; Post-Drive Questionnaire, NHTSA Form 1749. While we do not plan to include experience as a variable in our study design, we will be able to use the information collected to gain insight into differences in human-automation interaction based on prior experience and understanding.

IIHS commented that experimental manipulation of the simulated driving scenarios could be used to objectively evaluate different levels of situational awareness of the surrounding traffic and wayfinding ability and accuracy. They specifically mentioned reactive and proactive changes in behavior around object detection, trip planning, and navigation updating as important safety-related indicators of how people interact with their vehicles. We thank IIHS for this comment. We agree that variables other than vehicle kinematics should be

considered in measuring driver behavior in the test scenarios. To that end, we will collect information about driver glance behavior and visual attention from eye tracking in the simulator. We will also collect video data of both the driver and driving environment, such that we can code and understand how drivers respond to events involving vehicle automation. We will incorporate this feedback to also consider proactive changes in behavior, such as environmental scanning and latent hazard detection. We agree that trip planning and navigation may also yield valuable information from human-automation interactions, but these tasks are more difficult to replicate in the simulator and fall outside the scope of this project.

IIHS also recommended that NHTSA measure behind-the-wheel behavior, such as gaze and hand activity, because where the driver is looking and what their hands are doing will affect other behavior related to vehicle control. They noted that secondary activity, both driving-related and non-driving-related, is a normal phenomenon in driving with and without automation support and provided examples. IIHS wished for their inclusion in the set of dependent variables to better understand differences between participants and any changes in vehicle-kinematic behavior in the different driving scenarios. We completely agree with the suggestion. Our plan is to examine gaze, hand, and foot behavior during the study events. Previous work shows the importance of understanding (dis)engagement beyond looking at system status or takeover time. In this project, we plan to include different combinations of driving-related and non-driving-related secondary tasks (NDRTs). As IIHS suggests, we plan to examine driver interactions with automated vehicle interfaces, particularly in windows where automation encounters edge case or challenging situations in the study drives. The second and third studies will also include NDRTs and our analyses will consider outcomes such as attentional shifts between NDRTs and driving (or monitoring) as an outcome of different automated vehicle behaviors.

Related to the prior recommendation, IIHS recommended paying close attention to the driver management strategies incorporated in the design of the simulated vehicle. Design factors around driver monitoring, attention reminders, and last-resort countermeasures should be considered as they will shape the observable behind-the-wheel behavior, physical vehicle control, and interactions with

the simulated vehicle's interfaces. We completely agree and, to the extent possible, we will include management strategies that are representative of production or near-production systems. We will also include methods to set appropriate levels of expectation in our sample of drivers about the management strategy being used and the expectations for both the driver and the automated system.

IIHS also noted that the design philosophies currently behind Level 0 to 3 systems in production vary considerably among manufacturers to produce unique relationships between their customers and the technologies in their vehicles such that no two systems of a given level of driving automation should be considered the same. IIHS observed that these factors may produce confounds in the data if they are not considered in the design of the simulated systems under test. We agree with IIHS that the design of currently deployed automated systems varies considerably, and these design differences almost certainly have an impact on driver interactions. Our approach for the project will be to create systems in the simulator that are strong representations of some of the available technologies, understanding that other system designs could yield different driver-system interactions. Throughout our reporting on the project, we will clearly specify what design(s) our simulated system intends to replicate, what differences may exist, and the differences that exist from other systems not included in the simulator studies that are currently classified as within the same levels of automation. We will make clear what conclusions can and cannot be drawn about system design characteristics and be careful to avoid making general conclusions about a level of automation or type of automated system when there is variability in design that cannot be fully captured within the scope of the project.

Lastly, IIHS commented that how the simulated vehicle responds to different traffic conflicts or ambiguous driving scenarios in the study series will have ramifications on participant behavior. They noted that the realism of disruptions in system performance matters, both in terms of a sudden cessation of support as well as inappropriate system behavior. They were concerned that if care is not taken to ensure those disruptions are realistic and conform with what is technically possible and likely using what is known based on current implementations, it may affect participant behavior in ways that are outside the scope of the research and thus limit the

generalizability of the findings. We very much agree with the point that the situations and automated vehicle behaviors studied in this project need to match real-world situations and systems as closely as possible. We will use all available information to design the study scenarios to be representative of situations automation might encounter and might reasonably fall within a system's operational design domain. We will review information about available automated vehicle systems and make sure that the design of our study is consistent with the design of the systems.

We again thank IIHS for the thorough nature of their comments and will use them to improve the data collection.

Affected Public:

Individuals aged 18+ from Eastern Iowa and the surrounding areas who have volunteered to take part in driving studies will be contacted for participation. They will be randomized evenly by sex, though some imbalance will be permitted to be inclusive of individuals who do not identify on the gender spectrum or as a result of differences in how sex may be identified on drivers' licenses across States. Efforts

will be made to enroll a diverse age sample that broadly represents the age of the driving population and includes those at greater risk of crashing (e.g., less than 25 years of age and greater than 65 years of age). Businesses are ineligible for the sample and will not be contacted.

Estimated Number of Responses:
1,033 responses

To obtain the target number of 224 valid test participants. Assuming typical data loss rates for simulator testing with human participants, it is anticipated that 300 participants will need to be run in order to obtain 224 valid participant datasets. This will ensure sufficient statistical power in each of the three studies to detect differences between conditions.

Information for the three studies will be obtained in an incremental fashion to permit the determination of which individuals have the necessary characteristics for study participation. All interested candidates will complete the Eligibility Questionnaire once. From the subset of individuals found to meet the criteria in the Eligibility Questionnaire, a subset will be chosen with the goal of achieving a sample

providing a balance of sex to be scheduled for study participation and complete the appropriate informed consent once. Some imbalance will be allowed to be inclusive of all identities since not all individuals will identify on the gender spectrum. Participants will complete the Pre-Drive Questionnaire, one time, before a familiarization drive and the Wellness Questionnaire a total of three times to screen for simulator sickness. Participants who pass the screening will complete the remainder of the study procedures, including the In-Drive Questionnaire, the Post-Drive Questionnaire, and the Balloon Analogue Risk Task, each performed once.

Data collection will involve approximately 700 respondents for the Eligibility Questionnaire (with approximately 400 potentially meeting eligibility criteria) and 300 respondents for the Pre-Drive Questionnaire, Wellness Questionnaire, the Driving Behavior Assessment, the Post-Drive Questionnaire, and the Balloon Analogue Risk Task. A summary of the estimated numbers of individuals that will complete the noted question sets is provided in the following table.

ESTIMATED NUMBER OF TOTAL RESPONDENTS

Information collection	NHTSA form No.	Participants (i.e., respondents)
Eligibility Questionnaire	1742	700.
Informed Consent Study 1	1743	180.
Informed Consent Study 2	1744	60.
Informed Consent Study 3	1745	60.
Pre-Drive Questionnaire	1746	300 (180 Study 1, 60 Study 2, 60 Study 3).
Wellness Questionnaire	1747	300 (180 Study 1, 60 Study 2, 60 Study 3).
Driving Behavior Assessment (Pre-Drive PowerPoint Training, Familiarization Drive, Study Drive with In-Drive Questionnaire).	1748	300 (180 Study 1, 60 Study 2, 60 Study 3).
Post-Drive Questionnaire	1749	300 (180 Study 1, 60 Study 2, 60 Study 3).
Balloon Analogue Risk Task		300 (180 Study 1, 60 Study 2, 60 Study 3).

Frequency: One-time collection

Estimated Annual Burden Hours: The annual burden hours is estimated to be 301 hours per year.

The Eligibility Questionnaire (NHTSA Form 1742) is estimated to take 11 minutes (averaging those who complete the questionnaire and those who do not complete the questionnaire). The Informed Consent Study 1 (NHTSA Form 1743) is estimated to take 20 minutes. The Informed Consent Study 2 (NHTSA Form 1744) is estimated to take 20 minutes. The Informed Consent Study 3 (NHTSA Form 1745) is estimated to take 20 minutes. The Pre-Drive Questionnaire (NHTSA Form 1746) is estimated to take 15 minutes. The Wellness Questionnaire (NHTSA Form 1747) is estimated to take 5

minutes and is taken three times. The Driving Behavior Assessment (Pre-Drive PowerPoint Training, Familiarization Drive, Study Drive with In-Drive Questionnaire (NHTSA Form 1748) is estimated to take 80 minutes. The Post-Drive Questionnaire (NHTSA Form 1749) is estimated to take 20 minutes. The Balloon Analogue Risk Task (BART) is estimated to take 5 minutes.

The estimated annual time and cost burdens across all three study data collections are summarized in the table below. To calculate the opportunity cost associated with the forms and other relevant activities necessary for this collection of new information, NHTSA looked at average hourly earnings for employees on private nonfarm payrolls. NHTSA estimated the total opportunity

costs associated with these burden hours by looking at the average wage for total private employees on private nonfarm payrolls. The Bureau of Labor Statistics (BLS) estimates that the average hourly wage for this group is \$33.82.¹ Note that the costs in the table are opportunity costs and not labor costs, thus there is no burden cost associated with the study.

¹ See Table B–3 Average hourly and weekly earnings of all employees on private nonfarm payrolls by industry sector, seasonally adjusted, for August 2023, available at <https://www.bls.gov/news.release/empsit.t19.htm> (accessed October 3, 2023). See Table 1. Employer Costs for Employee Compensation by ownership (June 2023), available at <https://www.bls.gov/news.release/ecec.t01.htm> (accessed October 3, 2023).

ANNUAL BURDEN CALCULATIONS

Information collection	Number of respondents annual	Time per response (min)	Cost per response	Frequency of response	Burden (hours) annual	Opportunity cost (dollars) annual
Eligibility questionnaire	233	11	\$6.20	1	43	\$1,445
Informed Consent, Study 1	60	20	11.27	1	20	676
Informed Consent, Study 2	20	20	11.27	1	7	225
Informed Consent, Study 3	20	20	11.27	1	7	225
Pre-Drive Questionnaire	100	15	8.46	1	25	846
Wellness Questionnaire	100	5	2.82	3	25	846
Driving Behavior Assessment (Pre-Drive PowerPoint Training, Familiarization Drive, Study Drive with In-Drive Questionnaire)	100	80	45.09	1	133	4,509
Post-Drive Questionnaire	100	20	11.27	1	33	1,127
Balloon Analogue Risk Task	100	5	2.82	1	8	282
Annual Burden					301	10,181

Estimated Annual Burden Cost: \$0

The respondents will not incur any reporting or recordkeeping cost from the information collection. Respondents will incur a one-time cost for local travel to and from DSRI, which is estimated not to exceed approximately \$39.30 (based on the standard mileage rate for business-related driving in 2023 and a round trip distance of 60 miles²). These transportation costs are offset by participant compensation.

Public Comments Invited: You are asked to comment on any aspects of this information collection, including (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. Chapter 35, as amended; 49 CFR 1.49; and DOT Order 1351.29A.

DEPARTMENT OF THE TREASURY

Financial Crimes Enforcement Network

Agency Information Collection Activities; Proposed Renewal; Comment Request; Renewal Without Change of Due Diligence Programs for Correspondent Accounts for Foreign Financial Institutions and for Private Banking Accounts

AGENCY: Financial Crimes Enforcement Network (FinCEN), Treasury.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork and respondent burden, FinCEN invites comments on the proposed renewal, without change, of existing information collection requirements related to Bank Secrecy Act regulations that require certain banks, brokers or dealers in securities, futures commission merchants, introducing brokers in commodities, and mutual funds (each a “covered financial institution”) to establish and maintain due diligence programs for foreign financial institutions and for private banking accounts. The required due diligence programs include: appropriate, specific, risk-based, and, where necessary, enhanced policies, procedures, and controls reasonably designed to enable the covered financial institution to detect and report, on an on-going basis, money laundering conducted through or involving any correspondent accounts established, maintained, administered or managed by such covered financial institution in the United States for a foreign financial institution; and policies, procedures, and controls that are reasonably designed to detect and report any known or suspected money laundering or suspicious activity conducted through or involving any private

banking account that is established, maintained, administered, or managed in the United States by such covered financial institution. The due diligence programs are required to be part of covered financial institutions’ anti-money laundering programs. This request for comments is made pursuant to the Paperwork Reduction Act of 1995 (PRA).

DATES: Written comments are welcome and must be received on or before August 12, 2024.

ADDRESSES: Comments may be submitted by any of the following methods:

- **Federal E-rulemaking Portal:** <http://www.regulations.gov>. Follow the instructions for submitting comments. Refer to Docket Number FINCEN-2023-0011 and Office of Management and Budget (OMB) control number 1506-0046.

- **Mail:** Policy Division, Financial Crimes Enforcement Network, P.O. Box 39, Vienna, VA 22183. Refer to Docket Number FINCEN-2023-0011 and OMB control number 1506-0046.

Please submit comments by one method only. Comments will be reviewed consistent with the PRA and applicable OMB regulations and guidance. All comments submitted in response to this notice will become a matter of public record. Therefore, you should submit only information that you wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: FinCEN’s Regulatory Support Section at 1-800-767-2825 or electronically at frc@fincen.gov.

SUPPLEMENTARY INFORMATION:

I. Statutory and Regulatory Provisions

The legislative framework generally referred to as the Bank Secrecy Act (BSA) consists of the Currency and Foreign Transactions Reporting Act of 1970, as amended by the Uniting and

Strengthening America by Providing Appropriate Tools Required to Intercept and Obstruct Terrorism Act of 2001 (USA PATRIOT Act)¹ and other legislation, including the Anti-Money Laundering Act of 2020 (AML Act).² The BSA is codified at 12 U.S.C. 1829b and 1951–1960 and 31 U.S.C. 5311–5314 and 5316–5336, and notes thereto, with implementing regulations at 31 CFR chapter X.

The BSA authorizes the Secretary of the Treasury (Secretary) to, *inter alia*, require financial institutions to keep records and file reports that are determined to have a high degree of usefulness in criminal, tax, or regulatory matters, risk assessments or proceedings, or in the conduct of intelligence or counter-intelligence activities to protect against terrorism, and to implement anti-money laundering/countering the financing of terrorism (AML/CFT) programs and compliance procedures.³ The authority of the Secretary to administer the BSA has been delegated to the Director of FinCEN.⁴

Section 312 of the USA PATRIOT Act added subsection (i) to 31 U.S.C. 5318 of the BSA. Section 312 mandates that each financial institution that establishes, maintains, administers, or manages a private banking account or a correspondent account in the United States for non-U.S. persons establish appropriate, specific, and, where necessary, enhanced, due diligence policies, procedures, and controls that are reasonably designed to detect and report instances of money laundering through those accounts. The regulations implementing the due diligence requirements for maintaining foreign correspondent accounts and private banking accounts are found at 31 CFR 1010.610 and 31 CFR 1010.620, respectively, and apply to covered financial institutions defined as certain banks, brokers or dealers in securities, futures commission merchants,

introducing brokers in commodities, and mutual funds.⁵

A. 31 CFR 1010.610—Due Diligence Programs for Correspondent Accounts for Foreign Financial Institutions

Under 31 CFR 1010.610(a), covered financial institutions are required to establish due diligence policies, procedures, and controls that include each of the following for any correspondent account established, maintained, administered, or managed in the United States for a foreign financial institution: (i) determining whether any such correspondent account is subject to enhanced due diligence (EDD) requirements specified in 31 CFR 1010.610(b); (ii) assessing the money laundering risks presented by each such correspondent account based on a consideration of all relevant factors;⁶ and (iii) applying risk-based procedures and controls to each such correspondent account reasonably designed to detect and report known or suspected money laundering activity, including a periodic review of the correspondent account activity sufficient to determine consistency with information obtained about the type, purpose, and anticipated activity of the account.

Under 31 CFR 1010.610(b), covered financial institutions are required to establish EDD policies, procedures, and controls when establishing, maintaining, administering, or managing a correspondent account in the United States for certain foreign banks, as described in 31 CFR 1010.610(c).⁷ The EDD shall include

⁵ 31 CFR 1010.605(e).

⁶ Relevant factors include, as appropriate: (i) the nature of the foreign financial institution's business and the markets it serves; (ii) the type, purpose, and anticipated activity of such correspondent account; (iii) the nature and duration of the covered financial institution's relationship with the foreign financial institution (and any of its affiliates); (iv) the AML and supervisory regime of the jurisdiction that issued the charter or license to the foreign financial institution, and, to the extent that information regarding such jurisdiction is reasonably available, of the jurisdiction in which any company that is an owner of the foreign financial institution is incorporated or chartered; and (v) information known or reasonably available to the covered financial institution about the foreign financial institution's AML record. 31 CFR 1010.610(a)(2).

⁷ The EDD procedures are required for any correspondent account maintained for a foreign bank that operates pursuant to: (i) an offshore banking license; (ii) a banking license issued by a foreign country that has been designated as non-cooperative with international AML principles or procedures by an intergovernmental group or organization of which the United States is a member and with which designation the U.S. representative to the group or organization concurs; or (iii) a banking license issued by a foreign country that has been designated by the Secretary as warranting special measures due to money laundering concerns. 31 CFR 1010.610(c).

procedures designed to ensure that the covered financial institution, at a minimum, takes reasonable steps to:

(1) Conduct enhanced scrutiny of such correspondent account to guard against money laundering and to identify and report any suspicious transactions in accordance with applicable law and regulation. This enhanced scrutiny shall reflect the risk assessment of the account and shall include, as appropriate: (i) obtaining and considering information relating to the foreign bank's AML program to assess the risk of money laundering presented by the foreign bank's correspondent account; (ii) monitoring transactions to, from, or through the correspondent account in a manner reasonably designed to detect money laundering and suspicious activity; (iii) if it is a payable-through account, obtaining information from the foreign bank about the identity of persons with authority to direct transactions through the correspondent account, as well as information about the sources and beneficial owners of funds or other assets in the payable-through account;⁸

(2) Determine whether the foreign bank for which the correspondent account is established or maintained in turn maintains correspondent accounts for other foreign banks that use the foreign correspondent account established or maintained by the covered financial institution and, if so, take reasonable steps to obtain information relevant to assess and mitigate money laundering risks associated with the foreign bank's correspondent accounts for other foreign banks, including, as appropriate, the identity of those foreign banks; and

(3) Determine, for any correspondent account established or maintained for a foreign bank whose shares are not publicly traded,⁹ the identity of each owner¹⁰ of the foreign bank and the nature and extent of each owner's ownership interest.

Under 31 CFR 1010.610(d), covered financial institutions are required to establish special procedures when due diligence or EDD cannot be performed, including when the covered financial institution should refuse to open the account, suspend transaction activity, file a suspicious activity report, or close the account.

⁸ See 31 CFR 1010.610(b)(1)(iii)(B).

⁹ The term "publicly traded" is defined at 31 CFR 1010.610(b)(3)(ii)(B).

¹⁰ The term "owner" is defined at 31 CFR 1010.610(b)(3)(ii)(A).

¹ USA PATRIOT Act, Public Law 107–56.

² The AML Act was enacted as Division F, sections 6001–6511, of the William M. (Mac) Thornberry National Defense Authorization Act for Fiscal Year 2021, Public Law 116–283, 134 Stat. 3388 (NDAA).

³ Section 358 of the USA PATRIOT Act expanded the purpose of the BSA by including a reference to reports and records "that have a high degree of usefulness in intelligence or counterintelligence activities to protect against international terrorism." See 12 U.S.C. 1829b(a). Section 6101 of the AML Act further expanded the purpose of the BSA to cover such matters as preventing money laundering, tracking illicit funds, assessing risk, and establishing appropriate frameworks for information sharing. See 31 U.S.C. 5311.

⁴ Treasury Order 180–01 (Jan. 14, 2020).

B. 31 CFR 1010.620—Due Diligence Programs for Private Banking Accounts

Under 31 CFR 1010.620, covered financial institutions are required to establish due diligence policies, procedures, and controls that, at a minimum, are designed to ensure that the covered financial institutions take reasonable steps to: (i) ascertain the identity of all nominal and beneficial owners of a private banking account;¹¹ (ii) ascertain whether any nominal or beneficial owner is a senior foreign political figure; (iii) ascertain the source(s) of funds deposited into a private banking account and the purpose and expected use of the account; and (iv) review the activity of the account to ensure that it is consistent with the information obtained about the client's source of funds and with the stated purpose and expected use of the account, as needed to guard against money laundering, and to report in accordance with applicable law and regulation, any known or suspected money laundering or suspicious activity conducted to, from, or through a private banking account.

Under 31 CFR 1010.620(c), in the case of a private banking account for which a senior foreign political figure is a nominal or beneficial owner, covered financial institutions are required to conduct enhanced scrutiny of the account that is reasonably designed to detect and report transactions that may involve the proceeds of foreign corruption.¹²

Under 31 CFR 1010.620(d), covered financial institutions are required to establish special procedures when appropriate due diligence cannot be performed, including when the covered financial institution should refuse to open the account, suspend transaction activity, file a suspicious activity report, or close the account.

II. Paperwork Reduction Act of 1995¹³

Title: Due diligence programs for correspondent accounts for foreign financial institutions and private

¹¹ Private banking account means an account (or any combination of accounts) maintained at a covered financial institution that: (i) requires a minimum aggregate deposit of funds or other assets of not less than \$1,000,000; (ii) is established on behalf of or for the benefit of one or more non-U.S. persons who are direct or beneficial owners of the account; and (iii) is assigned to, or is administered or managed by, in whole or in part, an officer, employee, or agent of a covered financial institution acting as a liaison between the covered financial institution and the direct or beneficial owner of the account. 31 CFR 1010.605(m).

¹² See 31 CFR 1010.620(c)(2) for the definition of the term "proceeds of foreign corruption."

¹³ Public Law 104–13, 44 U.S.C. 3506(c)(2)(A).

banking accounts (31 CFR 1010.610 and 31 CFR 1010.620).

OMB Control Number: 1506–0046.

Form Number: Not applicable.

Abstract: FinCEN is issuing this notice to renew the OMB control number for the regulations that require covered financial institutions to establish and maintain due diligence programs for correspondent accounts for foreign financial institutions and for private banking accounts.

Affected Public: Businesses or other for-profit institutions, and non-profit institutions.

Type of Review: Renewal without change of a currently approved information collection.

Frequency: As required.

Estimated Number of Respondents: 16,232 financial institutions.¹⁴

Estimated Recordkeeping Burden:

In Part 1 of this notice, FinCEN describes the distribution of the estimated number of covered financial institutions, by type. In Part 2, FinCEN proposes for review and comment a renewal of the calculation of the annual PRA burden that includes a scope and methodology similar to that used in the 2020 notice to renew this information collection.¹⁵

Part 1. Distribution of the Financial Institutions Covered by This Notice

The distribution of financial institutions, by type, covered by this notice is reflected in table 1 below:

TABLE 1—FINANCIAL INSTITUTIONS COVERED BY THIS NOTICE, BY TYPE

Type of institution	Count
Banks with a Federal functional regulator (FFR) ^a	9,800
Banks lacking an FFR ^b	600
Brokers or dealers in securities ^c	3,478
Mutual funds ^d	1,400
Futures commission merchants and introducing brokers in commodities ^e	954

¹⁴ Table 1 below breaks down the types of financial institutions covered by this notice.

¹⁵ See FinCEN, *Agency Information Collection Activities; Proposed Renewal; Comment Request; Renewal Without Change of Anti-Money Laundering Programs; Due Diligence Programs for Correspondent Accounts for Foreign Financial Institutions and for Private Banking Accounts*, 85 FR 61104 (Sept. 29, 2020).

TABLE 1—FINANCIAL INSTITUTIONS COVERED BY THIS NOTICE, BY TYPE—Continued

Type of institution	Count
Total	16,232

^a This estimate is based on call report data, as publicly available for download at the end of June 2023, from the Federal Financial Institutions Examination Council (FFIEC) for certain types of banks, savings associations, thrifts, trust companies (<https://cdr.ffiec.gov/public/pws/downloadbulkdata.aspx>) and from the NCUA for credit unions (<https://www.ncua.gov/analysis/credit-union-corporate-call-report-data>).

^b This estimate of active entries as of year-end 2023 incorporates data from both public and non-public sources, including: Call Reports; various State banking/financial institution regulators' websites and directories; the Federal Reserve Board of Governors' Master Account and Services database (<https://federalreserve.gov/paymentsystems/master-account-and-services-database-exisiting-access.htm>); and data from the OCIF (Oficina del Comisionado de Instituciones Financieras); and was derived in consultation with staff from the Internal Revenue Service's Small Business/Self-Employed Division.

^c Estimate based on December 2023 file downloaded from data maintained by the U.S. Securities and Exchange Commission's (SEC). SEC, Company Information About Active Broker-Dealers available at <https://www.sec.gov/help/foiadocsbdfioia> (accessed on Feb. 28, 2024).

^d This estimate of the number of active mutual funds as of year-end 2023 is based on Form N-CEN filings received by the SEC through January 20, 2023, as represented by data downloaded from SEC Open Data. SEC, Open Data, available at <https://www.sec.gov/dera/data/form-ncen-data-sets> (accessed Feb. 29, 2024).

^e The number of futures commissions merchants as of December 31, 2023, was obtained from data available through the Commodity Futures Trading Commission (CFTC). CFTC, Financial Data for Futures Commission Merchants, available at <https://www.cftc.gov/MarketReports/financialcmdata/index.htm> (accessed Mar. 1, 2024). To prevent double counting in burden estimates, 35 covered financial institutions that are also affected entities as broker-dealers were removed from the count; the count of introducing brokers in commodities as of year-end 2023 was provided by the CFTC.

In connection with a variety of initiatives FinCEN is undertaking to implement the AML Act, FinCEN intends to conduct, in the future, additional assessments of the PRA burden associated with BSA requirements.

Part 2. Annual PRA Burden and Cost

The scope of the annual PRA burden and cost estimates in this renewal is limited to maintaining and updating the due diligence programs as part of current AML program requirements for covered financial institutions. Due to the practical challenges of obtaining the total number of correspondent accounts maintained by covered financial

institutions for foreign financial institutions subject to general due diligence requirements, the number of correspondent accounts maintained for foreign banks subject to EDD requirements, and the number of private banking accounts, the scope of the annual PRA burden is limited to the annual burden of (i) maintaining and updating a due diligence program as part of the AML program for foreign correspondent accounts and private banking accounts, and (ii) securing approval of the program by an appropriate level of senior management.

FinCEN continues estimating the annual hourly burden of maintaining and updating the due diligence program for foreign correspondent accounts and private banking accounts at two hours per covered financial institution. This estimate covers the burden of (i) maintaining and updating the due diligence program to take into consideration any regulatory changes and any potential modifications required by changes in the types of foreign correspondent accounts or private banking accounts maintained, or by changes in the operations or

organizational structure of the foreign financial institutions for which a covered financial institution maintains accounts, as well as changes to the organizational structure of private banking accounts (one hour), and (ii) presenting the updated due diligence program to the appropriate level of senior management of the financial institution for approval (one hour).

FinCEN’s estimate of the annual PRA burden, therefore, is 32,464 hours, as detailed in table 2 below:

TABLE 2—BURDEN ASSOCIATED WITH UPDATING AND MAINTAINING THE DUE DILIGENCE PROGRAM AND OBTAINING SENIOR MANAGEMENT APPROVAL OF THE PROGRAM

Type of financial institution	Number of financial institutions (see table 1)	Time per financial institution (hours)		Aggregate burden hours per step		Total burden hours
		Maintenance	Approval	Maintenance	Approval	
Banks with an FFR	9,800	1	1	9,800	9,800	19,600
Banks without an FFR	600	1	1	600	600	1,200
Brokers or dealers in securities	3,478	1	1	3,478	3,478	6,956
Mutual funds	1,400	1	1	1,400	1,400	2,800
Futures commission merchants and introducing brokers in commodities	954	1	1	954	954	1,908
Total Burden Hours				16,232	16,232	32,464

FinCEN is utilizing the same fully-loaded composite hourly wage rate of \$106.30 utilized in the notice of proposed rulemaking (NPRM) entitled

Customer Identification Programs for Registered Investment Advisers and Exempt Reporting Companies, which was published on May 21, 2024.¹⁶

The total estimated cost of the annual PRA burden is \$3,450,923.20, as reflected in table 3 below:

TABLE 3—TOTAL COST OF THE ANNUAL PRA BURDEN

Steps	Hourly burden	Hourly cost	Total cost
Maintaining and updating the program	16,232	\$106.30	\$1,725,461.60
Board of directors/senior management approval of the program	16,232	106.30	1,725,461.60
Total Cost			3,450,923.20

Estimated Recordkeeping Burden: The average estimated annual PRA burden, measured in hours per respondent, is two hours (one burden hour to annually maintain and update the due diligence program, and one hour to annually obtain senior management approval of the due diligence program).

Estimated Number of Respondents: 16,232, as set out in table 1.

Estimated Total Annual Responses: 16,232 revised due diligence programs

for foreign correspondent accounts and private banking accounts annually; and 16,232 due diligences programs for foreign correspondent accounts and private banking accounts approved by senior management each year, as set out in table 2.

Estimated Total Annual Recordkeeping Burden: The estimated total annual PRA burden is 32,464 hours, as set out in table 2.

Estimated Total Annual Recordkeeping Cost: The estimated total annual PRA cost is \$3,450,923.20, as set out in table 3.

An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Records required to be retained under the BSA must be retained for five years.

¹⁶ See FinCEN and SEC, *NPRM Customer Identification Programs for Registered Investment Advisers and Exempt Reporting Advisers*, 89 FR 44571 (May 21, 2024). Specifically, as set out on 89 FR 44590, table 1, footnote 1, the wage rate applied here is a general composite hourly wage (\$74.86), scaled by a private-sector benefits factor of 1.42 (\$106.30 = \$74.86 × 1.42), that incorporates the mean wage data (available for download at [https://](https://www.bls.gov/oes/tables.htm)

www.bls.gov/oes/tables.htm, “May 2022—National industry-specific and by ownership”) associated with the six occupational codes (11–1010: Chief Executives; 11–3021: Computer and Information Systems Managers; 11–3031: Financial Managers; 13–1041: Compliance Officers; 23–1010: Lawyers and Judicial Law Clerks; 43–3099: Financial Clerks, All Other) for each of the nine groupings of NAICS industry codes that FinCEN determined are most

directly comparable to its eleven categories of covered financial institutions as delineated in 31 CFR parts 1020 to 1030. The benefit factor is 1 plus the benefit/wages ratio, where as of Dec. 2023, Total Benefits = 29.6 and Wages and salaries = 70.4 (29.6/70.4 = 0.42) based on the private industry workers series data downloaded from <https://www.bls.gov/web/cecec/eccec-private-dataset.xlsx>, accessed Mar. 22, 2024.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (i) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have

practical utility; (ii) the accuracy of the agency's estimate of the burden of the collection of information; (iii) ways to enhance the quality, utility, and clarity of the information to be collected; (iv) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology;

and (v) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Federal Energy Regulatory Commission

18 CFR Part 35

Building for the Future Through Electric Regional Transmission Planning
and Cost Allocation; Final Rule

DEPARTMENT OF ENERGY**Federal Energy Regulatory
Commission****18 CFR Part 35****[Docket No. RM21–17–000; Order No. 1920]****Building for the Future Through
Electric Regional Transmission
Planning and Cost Allocation****AGENCY:** Federal Energy Regulatory
Commission, Department of Energy.**ACTION:** Final order.

SUMMARY: The Federal Energy Regulatory Commission (Commission) revises the *pro forma* Open Access Transmission Tariff (OATT) to remedy deficiencies in the Commission's existing regional and local transmission planning and cost allocation requirements. In this final order, the

Commission requires transmission providers to conduct Long-Term Regional Transmission Planning that will ensure the identification, evaluation, and selection, as well as the allocation of the costs, of more efficient or cost-effective regional transmission solutions to address Long-Term Transmission Needs. The Commission also directs other reforms to improve coordination of regional transmission planning and generator interconnection processes, require consideration of certain alternative transmission technologies in regional transmission planning processes, and improve transparency of local transmission planning processes and coordination between regional and local transmission planning processes. These reforms are intended to ensure that existing regional and local transmission planning and cost allocation requirements are just,

reasonable, and not unduly discriminatory or preferential.

DATES: This final order is effective August 12, 2024.

I. Introduction and Background

1. In this final order, the Commission acts under section 206 of the Federal Power Act (FPA) to adopt reforms to its electric transmission planning and cost allocation requirements.¹ The reforms herein will remedy deficiencies in the Commission's existing regional and local transmission planning and cost allocation requirements to ensure that the rates, terms, and conditions for transmission service provided by public utility transmission providers (transmission providers)² remain just and reasonable and not unduly discriminatory or preferential. This final order builds upon Order No. 888, Order No. 890,³ and Order No. 1000,⁴ in which

¹ 16 U.S.C. 824e.

² Section 201(e) of the FPA, 16 U.S.C. 824(e), defines "public utility" to mean "any person who owns or operates facilities subject to the jurisdiction of the Commission under this subchapter." As stated in the Order No. 888 *pro forma* Open Access Transmission Tariff (OATT), "transmission provider" is a "public utility (or its Designated Agent) that owns, controls, or operates facilities used for the transmission of electric energy in interstate commerce and provides transmission service under the Tariff." *Promoting Wholesale Competition Through Open Access Non-Discriminatory Transmission Servs. by Pub. Utils.; Recovery of Stranded Costs by Pub. Utils. & Transmitting Utils.*, Order No. 888, 61 FR 21540 (May 10, 1996), FERC Stats. & Regs. ¶ 31,036 (1996) (cross-referenced at 75 FERC ¶ 61,080), *order on reh'g*, Order No. 888-A, 62 FR 12274 (Mar. 14, 1997), FERC Stats. & Regs. ¶ 31,048 (cross-referenced at 78 FERC ¶ 61,220), *order on reh'g*, Order No. 888-B, 81 FERC ¶ 61,248 (1997), *order on reh'g*, Order No. 888-C, 82 FERC ¶ 61,046 (1998), *aff'd in relevant part sub nom. Transmission Access Pol'y Study Grp. v. FERC*, 225 F.3d 667 (D.C. Cir. 2000), *aff'd sub nom. N.Y. v. FERC*, 535 U.S. 1 (2002); *Pro forma* OATT section 1.1 (Definitions). The term "transmission provider" includes a public utility transmission owner when the transmission owner is separate from the transmission provider, as is the case in regional transmission organizations (RTO) and independent system operators (ISO).

³ *Preventing Undue Discrimination & Preference in Transmission Serv.*, Order No. 890, 72 FR 12266 (Mar. 15, 2007), FERC Stats. & Regs. ¶ 31,241, 118 FERC ¶ 61,119 (2007), *order on reh'g*, Order No. 890-A, 73 FR 2984 (Jan. 16, 2008), FERC Stats. & Regs. ¶ 31,261 (2007) (cross-referenced at 118 FERC ¶ 61,119), *order on reh'g and clarification*, Order No. 890-B, 73 FR 39092 (July 8, 2008), 123 FERC ¶ 61,299 (2008), *order on reh'g*, Order No. 890-C, 74 FR 12540 (Mar. 25, 2009), 126 FERC ¶ 61,228 (2009), *order on clarification*, Order No. 890-D, 74 FR 61511 (Nov. 25, 2009), 129 FERC ¶ 61,126 (2009).

⁴ *Transmission Plan. & Cost Allocation by Transmission Owning & Operating Pub. Utils.*, Order No. 1000, 76 FR 49842 (Aug. 11, 2011), 136 FERC ¶ 61,051 (2011), Order No. 1000-A, 77 FR 32184 (May 31, 2012), 139 FERC ¶ 61,132 (2012), *order on reh'g & clarification*, Order No. 1000-B, 141 FERC ¶ 61,044 (2012), *aff'd sub nom. S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d 41 (D.C. Cir. 2014).

the Commission incrementally developed the requirements that govern regional transmission planning and cost allocation processes to ensure that Commission-jurisdictional rates remain just and reasonable and not unduly discriminatory or preferential. Specifically, in this final order, we find that there is substantial evidence to support the conclusion that the existing regional transmission planning and cost allocation processes are unjust, unreasonable, and unduly discriminatory or preferential because the Commission's existing transmission planning and cost allocation requirements do not require transmission providers to: (1) perform a sufficiently long-term assessment of transmission needs that identifies Long-Term Transmission Needs;⁵ (2) adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs; and (3) consider the broader set of benefits of regional transmission facilities planned to meet those Long-Term Transmission Needs. Accordingly, we believe that it is necessary to revisit existing transmission planning and cost allocation requirements. We conclude that adopting the reforms of this final order, as previously contemplated in the notice of proposed rulemaking (NOPR),⁶ will remedy the identified deficiencies in existing regional and local transmission planning and cost allocation requirements, as discussed below, and will ensure the identification, evaluation, and selection, as well as the allocation of the costs, of more efficient or cost-effective regional transmission solutions to address Long-Term Transmission Needs.

2. Specifically, the reforms adopted in this final order require transmission providers in each transmission planning region to participate in a regional transmission planning process that includes Long-Term Regional Transmission Planning.⁷ This final

order adopts specific requirements regarding how transmission providers must conduct Long-Term Regional Transmission Planning, including, among other things, the use of scenarios to identify Long-Term Transmission Needs and Long-Term Regional Transmission Facilities to meet those needs.

3. This final order also requires transmission providers to measure and use at least the seven specified benefits to evaluate Long-Term Regional Transmission Facilities as part of Long-Term Regional Transmission Planning. In addition, this final order requires transmission providers to calculate the benefits of Long-Term Regional Transmission Facilities over a time horizon that covers, at a minimum, 20 years starting from the estimated in-service date of the transmission facilities and requires that this minimum 20-year benefit horizon be used both for the evaluation and selection of Long-Term Regional Transmission Facilities in the regional transmission plan for purposes of cost allocation.⁸

4. This final order requires transmission providers to include in their OATTs an evaluation process, including selection criteria, that they will use to identify and evaluate Long-Term Regional Transmission Facilities for potential selection to address Long-Term Transmission Needs.

5. Further, this final order requires transmission providers to file one or more *ex ante* Long-Term Regional Transmission Cost Allocation Methods to allocate the costs of Long-Term Regional Transmission Facilities (or a portfolio of such Facilities) that are selected. This final order further permits, but does not require,

region is one in which transmission providers, in consultation with stakeholders and affected states, have agreed to participate for purposes of regional transmission planning and development of a single regional transmission plan. *See* Order No. 1000, 136 FERC ¶ 61,051 at P 160.

⁸ We recognize that some transmission planning regions may include Long-Term Regional Transmission Facilities, or a portfolio of such Facilities, in a regional transmission plan, but may not necessarily include these Facilities for purposes of cost allocation. *See* Order No. 1000, 136 FERC ¶ 61,051 at P 63. For purposes of this final order, unless otherwise noted, when referencing Long-Term Regional Transmission Facilities (or a portfolio of such Facilities) that are selected, we intend "selected" to mean that those Facilities are selected in the regional transmission plan for purposes of cost allocation.

⁵ All capitalized terms are defined below. *Infra* Use of Terms section.

⁶ *Bldg. for the Future Through Elec. Reg'l Transmission Planning & Cost Allocation & Generator Interconnection*, 87 FR 26504 (May 4, 2022), 179 FERC ¶ 61,028 (2022) (NOPR); *see also* *Bldg. for the Future Through Elec. Reg'l Transmission Planning & Cost Allocation & Generator Interconnection*, 86 FR 40266 (July 27, 2021), 176 FERC ¶ 61,024 (2021) (advanced notice of proposed rulemaking (ANOPR)).

⁷ For purposes of this final order, and consistent with Order No. 1000, a transmission planning

transmission providers to adopt a State Agreement Process, wherein Relevant State Entities agree to such a State Agreement Process that would provide up to six months after selection for its participants to determine, and transmission providers to file, a cost allocation method for specific Long-Term Regional Transmission Facilities. This final order establishes a six-month time period (Engagement Period), during which transmission providers must: (1) provide notice of the starting and end dates for the six-month time period; (2) post contact information that Relevant State Entities may use to communicate with transmission providers about any agreement among Relevant State Entities on a Long-Term Regional Transmission Cost Allocation Method(s) and/or a State Agreement Process, as well as a deadline for communicating such agreement; and (3) provide a forum for negotiation of a Long-Term Regional Transmission Cost Allocation Method(s) and/or a State Agreement Process that enables robust participation by Relevant State Entities.

6. This final order also requires transmission providers to include in their OATTs a process to provide Relevant State Entities and interconnection customers the opportunity to voluntarily fund the cost of, or a portion of the cost of, a Long-Term Regional Transmission Facility that otherwise would not meet the transmission providers' selection criteria. This final order requires transmission providers to include in their OATTs provisions that require transmission providers—in certain circumstances—to reevaluate Long-Term Regional Transmission Facilities that previously were selected.

7. In addition, this final order requires that transmission providers evaluate for potential selection in their existing Order No. 1000 regional transmission planning processes regional transmission facilities that will address certain identified interconnection-related transmission needs associated with certain interconnection-related network upgrades⁹ originally identified

through the generator interconnection process.

8. This final order requires transmission providers in each transmission planning region to consider more fully the alternative transmission technologies of dynamic line ratings, advanced power flow control devices, advanced conductors, and transmission switching in Long-Term Regional Transmission Planning and existing Order No. 1000 regional transmission planning and cost allocation processes.

9. This final order does not finalize the NOPR proposal to not permit transmission providers to take advantage of the recovery of 100% of construction work in progress for Long-Term Regional Transmission Facilities, and the Commission will instead continue to consider transmission incentives issues in other proceedings. This final order similarly does not finalize the NOPR proposal with respect to permitting the exercise of Federal rights of first refusal for selected transmission facilities, conditioned on the incumbent transmission provider with the Federal right of first refusal establishing joint ownership of the transmission facilities, and the Commission will instead continue considering the NOPR proposal and potential Federal right of first refusal issues in other proceedings.

10. This final order adopts the NOPR proposal to require transmission providers to adopt enhanced transparency requirements for local transmission planning processes and improve coordination between regional and local transmission planning with the aim of identifying potential opportunities to “right-size” replacement transmission facilities.

11. This final order requires transmission providers to revise their interregional transmission coordination processes to reflect the Long-Term Regional Transmission Planning reforms adopted in this final order. This final order also requires that transmission providers meet additional information sharing and transparency requirements with respect to their interregional transmission coordination processes.

12. This final order requires that each transmission provider submit a compliance filing within ten months of the effective date of this final order revising its OATT and other document(s) subject to the Commission's jurisdiction to

demonstrate that it meets the requirements of this final order, with the exception of those requirements adopted in the Interregional Transmission Coordination section in this final order. This final order requires that each transmission provider submit a compliance filing within 12 months of the effective date of this final order revising its OATT and other document(s) subject to the Commission's jurisdiction as necessary to demonstrate that it meets the interregional transmission coordination requirements adopted in this final order.

13. We recognize that transmission providers have ongoing efforts to address transmission planning and cost allocation. This final order is not intended to interfere with the potential progress represented by those efforts, and we encourage transmission providers to continue to innovate to improve their transmission planning and cost allocation processes.

A. Historical Framework: Order Nos. 888, 890, and 1000

14. Over the last several decades, the Commission has taken multiple significant actions on transmission planning and cost allocation, including issuing Order Nos. 888, 890, and 1000. In 1996, the Commission issued Order No. 888, which implemented open access to transmission facilities owned, operated, or controlled by a public utility and included certain minimum requirements for transmission planning. In 2007, the Commission issued Order No. 890 to address identified deficiencies in the *pro forma* OATT after more than 10 years of experience since Order No. 888. Among other OATT reforms, the Commission required all public utility transmission providers' local transmission planning processes to satisfy nine transmission planning principles: (1) coordination; (2) openness; (3) transparency; (4) information exchange; (5) comparability; (6) dispute resolution; (7) regional participation; (8) economic planning studies; and (9) cost allocation for new projects.¹⁰

15. In 2011, the Commission recognized the need for further transmission planning reforms with its issuance of Order No. 1000. The Commission based the reforms it adopted in Order No. 1000 on changes in the energy industry, its experience implementing Order No. 890, and a robust record developed through technical conferences and comments

⁹ The Commission's *pro forma* Large Generator Interconnection Procedures (LGIP) and *pro forma* Large Generator Interconnection Agreement (LGIA) provide that, “Network Upgrades shall mean the additions, modifications, and upgrades to the Transmission Provider's Transmission System required at or beyond the point at which the Interconnection Facilities connect to the Transmission Provider's Transmission System to accommodate the interconnection of the Large Generating Facility to the Transmission Provider's Transmission System.” See *Improvements to Generator Interconnection Procedures & Agreements*, Order No. 2023, 88 FR 61014 (Sept. 6, 2023), 184 FERC ¶ 61,054, at P 13 n.23, *order on reh'g*, 185 FERC ¶ 61,063 (2023), *order on reh'g*.

Order No. 2023–A, 89 FR 27006 (Apr. 16, 2024), 186 FERC ¶ 61,199 (2024). In this final order, we refer to network upgrades developed through the generator interconnection process as interconnection-related network upgrades.

¹⁰ Order No. 890, 118 FERC ¶ 61,119 at PP 418–601.

from a diverse range of stakeholders.¹¹ The Commission stated in Order No. 1000 that “the electric industry is currently facing the possibility of substantial investment in future transmission facilities to meet the challenge of maintaining reliable service at a reasonable cost.”¹² In establishing the requirements of Order No. 1000, the Commission found that the existing requirements of Order No. 890 were not adequate, noting that Order No. 1000 “expands upon the reforms begun in Order No. 890 by addressing new concerns that have become apparent in the Commission’s ongoing monitoring of these matters.”¹³ The Commission then enumerated multiple concerns that it had regarding existing transmission planning practices, including concerns about: (1) the lack of an affirmative obligation to develop a transmission plan evaluating if a regional transmission facility “may be more efficient or cost-effective than solutions identified in local transmission planning processes”; (2) the lack of a requirement to address Public Policy Requirements;¹⁴ (3) the Federal right of first refusal for incumbent transmission developers to build upgrades to their existing transmission facilities; (4) the lack of procedures to identify and evaluate the benefits of interregional transmission facilities; and (5) cost allocation for regional and interregional transmission facilities.¹⁵

16. Order No. 1000 included reforms intended to ensure that the transmission planning and cost allocation requirements embodied in the *pro forma* OATT could support the development of more efficient or cost-effective transmission facilities.¹⁶ The reforms in Order No. 1000 included: (1) regional transmission planning; (2) transmission needs driven by Public Policy Requirements; (3) nonincumbent transmission developer reforms; (4) regional and interregional cost

allocation, including a set of principles for each category of cost allocation; and (5) interregional transmission coordination. The reforms focused on the process by which transmission providers engage in regional transmission planning and the associated cost allocation rather than on the outcomes of the process.¹⁷

17. Among other regional transmission planning reforms in Order No. 1000, the Commission required that the following Order No. 890 transmission planning principles apply to regional transmission planning processes: (1) coordination; (2) openness; (3) transparency; (4) information exchange; (5) comparability; (6) dispute resolution; and (7) economic planning studies.¹⁸

18. In addition, with respect to the Order No. 1000 reforms, the Commission made a distinction between a transmission facility “included” in a regional transmission plan and a transmission facility “selected.” A transmission facility selected in a regional transmission plan for purposes of cost allocation is a transmission facility that has been selected pursuant to a transmission planning region’s Commission-approved regional transmission planning process for inclusion in a regional transmission plan for purposes of cost allocation because it is a more efficient or cost-effective transmission facility needed to meet regional transmission needs. Both regional transmission facilities and interregional transmission facilities are eligible for potential “selection” in a regional transmission plan for purposes of cost allocation.¹⁹

19. Selected transmission facilities often will not comprise all of the transmission facilities that are included in a regional transmission plan.²⁰ Some transmission facilities are merely “rolled up” and listed in a regional transmission plan without going through an analysis at the regional level, and/or are merely considered for reliability implications upon a transmission system, and therefore, are not eligible for selection and regional cost allocation.²¹ For example, a local transmission facility is a transmission facility located solely within a

transmission provider’s retail distribution service territory or footprint that is not selected.²² Thus, a local transmission facility may be rolled up and “included” in a regional transmission plan for informational purposes, but it is not “selected.”

B. ANOPR and Technical Conference

20. In July 2021, the Commission issued the ANOPR²³ presenting potential reforms to improve the regional transmission planning and cost allocation and generator interconnection processes. In issuing the ANOPR, the Commission noted that, in part because more than a decade had passed since Order No. 1000, it was now an appropriate time to review its regulations governing regional transmission planning and cost allocation to determine whether reforms are needed to ensure Commission-jurisdictional rates remain just and reasonable and not unduly discriminatory or preferential.²⁴ The Commission noted that the electricity sector is transforming as the generation fleet shifts from resources located close to population centers toward resources that may often be located far from load centers. The Commission also highlighted the growth of new resources seeking to interconnect to the transmission system and that the differing characteristics of those resources are creating new demands on the transmission system. The Commission explained that ensuring just and reasonable Commission-jurisdictional rates during these changes, while maintaining grid reliability, remains the Commission’s priority in adopting requirements for the regional transmission planning and cost allocation and generator interconnection processes. As a result, the Commission issued the ANOPR to consider whether there should be changes in the regional transmission planning and cost allocation and generator interconnection processes and, if so, which changes are necessary to ensure that Commission-jurisdictional rates remain just and reasonable and not unduly

¹¹ For purposes of this final order, and consistent with Order No. 1000, a stakeholder includes any party interested in the transmission planning processes. See Order No. 1000, 136 FERC ¶ 61,051 at P 151 n.143.

¹² *Id.* P 2.

¹³ *Id.* P 21.

¹⁴ Public Policy Requirements are requirements established by local, state, or Federal laws or regulations (*i.e.*, enacted statutes passed by the legislature and signed by the executive and regulations promulgated by a relevant jurisdiction, whether within a state or at the Federal level). *Id.* P 2. Order No. 1000–A clarified that Public Policy Requirements include local laws or regulations passed by a local governmental entity, such as a municipal or county government. Order No. 1000–A, 139 FERC ¶ 61,132 at P 319.

¹⁵ Order No. 1000, 136 FERC ¶ 61,051 at P 3.

¹⁶ *Id.* PP 11–12, 42–44; Order No. 1000–A, 139 FERC ¶ 61,132 at PP 3, 4–6.

¹⁷ Order No. 1000, 136 FERC ¶ 61,051 at P 12.

¹⁸ The Commission did not include the regional participation or cost allocation transmission planning principles with respect to regional transmission planning processes because those issues were addressed by other reforms in Order No. 1000. *Id.* P 151.

¹⁹ *Id.* P 63. A regional transmission facility and an interregional transmission facility are defined below. *Infra* Use of Terms section.

²⁰ Order No. 1000, 136 FERC ¶ 61,051 at P 63.

²¹ *Id.* PP 7, 226, 318.

²² *Id.* P 63. The Commission clarified in Order No. 1000–A that a local transmission facility is one that is located within the geographical boundaries of a public utility transmission provider’s retail distribution service territory, if it has one; otherwise, the area is defined by the public utility transmission provider’s footprint. In the case of an RTO/ISO whose footprint covers the entire region, a local transmission facility is defined by reference to the retail distribution service territories or footprints of its underlying transmission owning members. Order No. 1000–A, 139 FERC ¶ 61,132 at P 429.

²³ ANOPR, 176 FERC ¶ 61,024.

²⁴ *Id.* P 3.

discriminatory or preferential and that reliability is maintained.

21. On November 15, 2021, the Commission convened a staff-led technical conference (November 2021 Technical Conference or Technical Conference) to examine in detail issues and potential reforms related to regional transmission planning as described in the ANOPR. Specifically, the Technical Conference included three panels covering issues to consider in long-term scenarios, consideration of long-term scenarios in regional transmission planning processes, and identifying geographic zones with high renewable resource potential for use in regional transmission planning processes.²⁵ Following the Technical Conference, the Commission invited all interested persons to file comments to address issues raised during the Technical Conference.

C. Joint Federal-State Task Force on Electric Transmission

22. On June 17, 2021, the Commission established a Joint Federal-State Task Force on Electric Transmission (Task Force) to formally explore broad categories of transmission-related topics.²⁶ The Commission explained that the development of new transmission infrastructure implicates a host of different issues, including how to plan and pay for these facilities. Given that Federal and state regulators each have authority over transmission-related issues and given the impact of transmission infrastructure development on numerous different priorities of Federal and state regulators, the Commission determined that the topic was ripe for greater Federal-state coordination and cooperation.²⁷ The Task Force was composed of all sitting FERC Commissioners as well as representatives from 10 state commissions nominated by the National Association of Regulatory Utility Commissioners (NARUC), with two originating from each NARUC region.²⁸

23. The Task Force has convened multiple formal meetings with eight meetings held thus far to discuss

regional transmission planning and cost allocation issues, convening on November 10, 2021, February 16, 2022, May 6, 2022, July 20, 2022, November 15, 2022, February 15, 2023, July 16, 2023, and February 28, 2024.

24. The discussion at the November 2021 meeting was focused on incorporating state perspectives into regional transmission planning.²⁹ The February 2022 meeting included discussion of specific categories and types of transmission benefits that transmission providers should consider for the purposes of transmission planning and cost allocation.³⁰ The May 2022 meeting focused on barriers to the efficient, expeditious, and reliable interconnection of new resources.³¹ The July 2022 meeting focused on interregional transmission planning and transmission project development and the NOPR.³² The November 2022 meeting focused on regulatory gaps and challenges in oversight of transmission development.³³ The February 2023 meeting focused on the physical security of the Nation's transmission system, and featured guest speakers from the North American Electric Reliability Corporation and US DOE.³⁴ The July 2023 meeting focused on grid enhancing technologies, featuring a guest speaker from the Electric Power Research Institute.³⁵ The February 2024 meeting focused on transmission siting, featuring guest speakers from US DOE.³⁶

25. In light of the Task Force expiring three years from its first public meeting, *i.e.*, on November 10, 2024,³⁷ on March 21, 2024, the Commission established the Federal and State Current Issues Collaborative (Collaborative).³⁸ The Collaborative will be comprised of all

Commissioners, as well as representative from 10 state commissions. The Collaborative will provide a venue for Federal and state regulators to share perspectives, increase understanding, and where appropriate, identify potential solutions regarding challenges and coordination on matters that impact specific state and Federal regulatory jurisdiction.³⁹

D. Notice of Proposed Rulemaking

26. On April 21, 2022, the Commission issued the NOPR, proposing reforms focused on long-term regional transmission planning and cost allocation processes. In particular, the Commission proposed in the NOPR that transmission providers in each transmission planning region participate in a regional transmission planning process that includes Long-Term Regional Transmission Planning.⁴⁰ The Commission also proposed to require that transmission providers develop Long-Term Scenarios as part of Long-Term Regional Transmission Planning.⁴¹

27. The Commission proposed that transmission providers consider, as part of their Long-Term Regional Transmission Planning, regional transmission facilities that address certain interconnection-related transmission needs that the transmission provider has identified multiple times in the generator interconnection process but that have never been constructed due to the withdrawal of the relevant interconnection request(s).⁴²

28. The Commission proposed 12 benefits that transmission providers may consider in Long-Term Regional Transmission Planning and cost allocation processes.⁴³ The Commission stated that the list of potential benefits was neither mandatory nor exhaustive, and that pursuant to the proposal, transmission providers would have flexibility to propose which benefits to use as part of their Long-Term Regional Transmission Planning.⁴⁴

29. The Commission proposed, with regard to the selection of Long-Term Regional Transmission Facilities in the regional transmission plan for purposes of cost allocation, to require that transmission providers, as part of their Long-Term Regional Transmission Planning, include in their OATTs: (1) transparent and not unduly

²⁵ Bldg. for the Future Through Elec. Reg'l Transmission Planning & Cost Allocation & Generator Interconnection, Further Supplemental Notice of Technical Conference, Docket No. RM21-17-000 (issued Nov. 12, 2021) (attaching agenda).

discriminatory criteria, which seek to maximize benefits to consumers over time without over-building transmission facilities, to identify and evaluate transmission facilities for potential selection that address transmission needs driven by changes in the resource mix and demand; and (2) a process to coordinate with the Relevant State Entities in developing such criteria.⁴⁵

30. The Commission proposed to require transmission providers to more fully consider the incorporation into transmission facilities of dynamic line ratings and advanced power flow control devices in regional transmission planning and cost allocation processes.⁴⁶

31. The Commission proposed to require, with regard to allocating the costs of Long-Term Regional Transmission Facilities, transmission providers to revise their OATTs to include: (1) a Long-Term Regional Transmission Cost Allocation Method to allocate the costs of Long-Term Regional Transmission Facilities; (2) a State Agreement Process by which one or more Relevant State Entities may voluntarily agree to a cost allocation method; or (3) a combination thereof.⁴⁷ The Commission proposed to require transmission providers to seek the agreement of Relevant State Entities within the transmission planning region regarding the Long-Term Regional Transmission Cost Allocation Method, State Agreement Process, or combination thereof.⁴⁸ The Commission proposed to require transmission providers to identify on compliance the benefits they will use in *ex ante* Long-Term Regional Transmission Cost Allocation Methods associated with Long-Term Regional Transmission Planning, how they will calculate those benefits, and how the benefits will reasonably reflect the benefits of regional transmission facilities to meet identified transmission needs driven by changes in the resource mix and demand.⁴⁹

32. The Commission further proposed to not permit transmission providers to take advantage of the allowance for inclusion of 100% of construction work in progress costs in rate base in certain circumstances for Long-Term Regional Transmission Facilities.⁵⁰

33. Finally, the Commission proposed to permit the exercise of Federal rights of first refusal for selected transmission

facilities, conditioned on the incumbent transmission provider with the Federal right of first refusal for such regional transmission facilities establishing joint ownership of the transmission facilities consistent with certain proposed requirements described in the NOPR.⁵¹

34. The Commission also proposed to require transmission providers to revise the regional transmission planning process in their OATTs with additional provisions to enhance transparency of: (1) the criteria, models, and assumptions that they use in their local transmission planning process; (2) the local transmission needs that they identify through that process; and (3) the potential local or regional transmission facilities that they will evaluate to address those local transmission needs.⁵² The Commission proposed to require transmission providers to evaluate whether transmission facilities operating at or above 230 kV that an individual transmission provider that owns the transmission facility anticipates replacing in-kind with a new transmission facility during the next 10 years can be “right-sized” to more efficiently or cost-effectively address regional transmission needs identified in Long-Term Regional Transmission Planning.⁵³

35. The Commission further proposed to require transmission providers in neighboring transmission planning regions to revise their existing interregional transmission coordination procedures (and regional transmission planning processes as needed) to provide for: (1) the sharing of information regarding their respective transmission needs identified in Long-Term Regional Transmission Planning, as well as potential transmission facilities to meet those needs; and (2) the identification and joint evaluation of interregional transmission facilities that may be more efficient or cost-effective transmission facilities to address transmission needs identified through Long-Term Regional Transmission Planning.⁵⁴ Finally, the Commission proposed to require transmission providers in neighboring transmission planning regions to revise their interregional transmission coordination procedures (and regional transmission planning processes as needed) to allow an entity to propose an interregional transmission facility in the regional transmission planning process as a potential solution to transmission needs

identified through Long-Term Regional Transmission Planning.⁵⁵

E. High-Level Overview of NOPR Comments

36. The Commission received a great many comments from a diverse set of parties in response to the NOPR.⁵⁶ One hundred and ninety-six parties, including Federal agencies, state regulatory commissions, state policy makers and other state representatives, ratepayer advocates, municipalities, RTOs/ISOs, RTO/ISO market monitors, transmission providers, transmission-dependent utilities, electric cooperatives, municipal power providers, independent power producers, transmission developers, generation trade associations, transmission trade associations, industry interest groups, consumer interest groups, energy policy and law interest groups, individual businesses, landowners, and individuals, filed initial comments that totaled over 15,000 pages with attachments. A similarly diverse set of 92 parties filed reply comments that totaled nearly 1,900 pages.

F. Use of Terms

37. Before turning to the detailed requirements of this final order, we note several of the key terms used herein. We further address the definitions of these terms, including any modifications to definitions proposed in the NOPR, in the relevant later sections of this final order.

38. For purposes of this final order, Long-Term Regional Transmission Planning means regional transmission planning on a sufficiently long-term, forward-looking, and comprehensive basis to identify Long-Term Transmission Needs, identify transmission facilities that meet such needs, measure the benefits of those transmission facilities, and evaluate those transmission facilities for potential selection in the regional transmission plan for purposes of cost allocation as the more efficient or cost-effective regional transmission facilities to meet Long-Term Transmission Needs.

39. For purposes of this final order, Long-Term Transmission Needs are transmission needs identified through Long-Term Regional Transmission Planning by, among other things and as discussed in this final order, running

⁵³ *Id.* P 403.

⁵⁴ *Id.* P 427.

⁵⁵ *Id.* P 428.

⁵⁶ See appendix A for a list of commenters and the abbreviated names of commenters that are used in this final order.

scenarios and considering the enumerated categories of factors.⁵⁷

40. For purposes of this final order, Long-Term Scenarios are scenarios that incorporate various assumptions using best available data inputs about the future electric power system over a sufficiently long-term, forward-looking transmission planning horizon to identify Long-Term Transmission Needs and enable the identification and evaluation of transmission facilities to meet such transmission needs.

41. For purposes of this final order, a Long-Term Regional Transmission Facility is a regional transmission facility⁵⁸ that is identified as part of Long-Term Regional Transmission Planning to address Long-Term Transmission Needs.

42. For purposes of this final order, best available data inputs are data inputs that are timely, developed using best practices and diverse and expert perspectives, and adopted via a process that satisfies the transmission planning principles of Order Nos. 890 and 1000, and reflect the list of factors that transmission providers account for in their Long-Term Scenarios.

43. For purposes of this final order, a Long-Term Regional Transmission Cost Allocation Method is an *ex ante* regional cost allocation method for one or more selected Long-Term Regional Transmission Facilities (or a portfolio of such Facilities) that are selected in the regional transmission plan for purposes of cost allocation.

44. For purposes of this final order, a Relevant State Entity is any state entity responsible for electric utility regulation or siting electric transmission facilities within the state or portion of a state located in the transmission planning region, including any state entity as may be designated for that purpose by the law of such state.

45. For purposes of this final order, a State Agreement Process is a process by which one or more Relevant State Entities may voluntarily agree to a cost allocation method for Long-Term Regional Transmission Facilities (or a

portfolio of such Facilities) before or no later than six months after they are selected.

46. For purposes of this final order, federally-recognized Tribes are those Tribes listed in the most recent notice provided by the Bureau of Indian Affairs and published in the **Federal Register**.⁵⁹

II. The Overall Need for Reform

A. NOPR Proposal

47. The Commission issued the NOPR on April 21, 2022, proposing to reform the *pro forma* OATT and the *pro forma* LGIA to remedy deficiencies in the Commission's existing regional transmission planning and cost allocation requirements. The Commission stated that, over the last 25 years, it has undertaken a series of significant reforms to ensure that transmission planning and cost allocation processes result in Commission-jurisdictional rates that are just and reasonable and not unduly discriminatory or preferential.⁶⁰ The Commission noted that it has now been more than a decade since Order No. 1000—its last significant regional transmission planning and cost allocation rule—and that there is mounting evidence that its regional transmission planning and cost allocation requirements may be inadequate to ensure that Commission-jurisdictional rates remain just and reasonable and not unduly discriminatory or preferential.⁶¹

48. The Commission found that, in particular, although transmission providers are required to participate in regional transmission planning and cost allocation processes under Order No. 1000, it was concerned that those processes may not be planning transmission on a sufficiently long-term, forward-looking basis to meet transmission needs driven by changes in the resource mix and demand. The Commission stated that, as a result, the regional transmission planning and cost allocation processes that transmission providers adopted to comply with Order No. 1000 may not be identifying the more efficient or cost-effective transmission facilities.⁶² The Commission stated that it was concerned that the absence of sufficiently long-term, forward-looking, comprehensive transmission planning processes appears to be resulting in

piecemeal transmission expansion to address relatively near-term transmission needs, and that continuing with the status quo approach may cause transmission providers to undertake relatively inefficient investments in transmission infrastructure, the costs of which are ultimately recovered through Commission-jurisdictional rates. The Commission stated that this dynamic may result in transmission customers paying more than necessary to meet their transmission needs, customers forgoing benefits that outweigh their costs, or some combination thereof—either or both of which could potentially render Commission-jurisdictional rates unjust and unreasonable or unduly discriminatory or preferential. Based on the evidence, the Commission preliminarily concluded that revisions to its existing transmission planning and cost allocation requirements established in Order Nos. 890 and 1000 are necessary to ensure that Commission-jurisdictional services are provided at rates, terms, and conditions that are just and reasonable and not unduly discriminatory and preferential.⁶³

B. Comments

49. A significant majority of commenters, including transmission providers, transmission developers, transmission customers, members of Congress, states, state commissions, consumer advocates, trade associations, and public interest organizations, among others, agree that existing regional transmission planning and cost allocation processes need to be reformed.⁶⁴ Advanced Energy Buyers

⁵⁷ Further discussion on Long-Term Transmission Needs can be found below. *Infra* Development of Long-Term Scenarios subsection under the Long-Term Regional Transmission Planning section.

⁵⁸ For purposes of this final order, and consistent with Order No. 1000, a regional transmission facility is a transmission facility located entirely in one transmission planning region. An interregional transmission facility is a transmission facility that is located in two or more transmission planning regions. A local transmission facility is a transmission facility located solely within a transmission provider's retail distribution service territory or footprint that is not selected in the regional transmission plan for purposes of cost allocation. Order No. 1000, 136 FERC ¶ 61,051 at PP 63, 482 n.374.

note that the electric system is presently undergoing one of the most significant transformations in a century.⁶⁵ Other commenters agree that electric energy supply and demand is evolving quickly.⁶⁶ Clean Energy Buyers agree with the Commission that there is a need for reform to meet these drastic changes in the resource mix and load and to ensure continued reliability and cost-effective transmission service.⁶⁷

50. Many commenters argue that current regional transmission planning and cost allocation processes across the country are not ensuring efficient and cost-effective transmission development, are not satisfying the purposes of Order Nos. 890 and 1000, and are not meeting transmission needs at a reasonable cost. For example, several commenters assert that Order Nos. 890 and 1000 have not solved longstanding problems with regional

transmission planning and cost allocation.⁶⁸ Northwest and Intermountain claim that Order No. 1000 has been inadequate to meet transmission needs, particularly in the non-RTO/ISO West.⁶⁹ Michigan State Entities assert that the current lack of long-term transmission planning has led to significantly higher costs for residential ratepayers, costs that will increase without reforms.⁷⁰ SREA argues that reform is needed to correct the unintended consequences of Order No. 1000 in the Southeast, where transmission planning “has grown into an enormously elaborate and extremely expensive black box,” without any meaningful review by state regulatory bodies.⁷¹

51. PIOs assert that transmission owners can evade Order No. 1000 requirements through investments in local transmission projects, which has led to billions of dollars in excessive costs.⁷² PIOs explain that financial incentives drive utilities to upgrade their own systems at the expense of building a more integrated and robust transmission system to meet the needs and demands of the future.⁷³ PIOs observe that, between 2013 and 2017, about one-half of the approximately \$70 billion in aggregate transmission investments by Commission-jurisdictional transmission owners in RTO/ISO regions were approved outside of regional transmission planning processes or with limited stakeholder engagement.⁷⁴ Ohio Consumers add that since 2017, less than 25% of new transmission investments in Ohio have been associated with large regional

transmission projects needed for reliability or economic efficiency.⁷⁵ Competition Coalition argues that incumbent transmission owners have used reliability designations to justify projects with higher costs.⁷⁶

52. Citing to a report from Lawrence Berkeley National Laboratory, US DOE concludes that many existing regional transmission planning approaches are likely understating the economic value of new transmission. US DOE suggests that the need for increased transmission capacity to address persistent and worsening transmission congestion demonstrates that these processes may not fully anticipate present and future transmission needs.⁷⁷ In addition, US DOE notes the unfair burden on interconnection customers that must bear increasing costs, especially for interconnection-related network upgrades that provide system-wide benefits.⁷⁸ US DOJ and FTC agree that reforms are necessary to encourage needed regional and interregional transmission investment and that a larger, more integrated transmission system would improve resilience, promote competition, and lower costs for consumers.⁷⁹

53. Many commenters contend that inadequate regional transmission planning and cost allocation processes have resulted in, or are threatening to cause, unjust, unreasonable, and unduly discriminatory or preferential rates.⁸⁰ Michigan State Entities cite renewable energy curtailments, which limit the supply of energy that customers can access, and the lack of regional and interregional transmission lines, which limit the transfer of lower-priced power.⁸¹ New Jersey Commission asserts that better transmission planning

⁸¹ Michigan State Entities Initial Comments at 3.

can reduce overall system costs by billions of dollars.⁸² Certain TDUs add that Commission action is essential now to ensure that necessary transmission expansion occurs in a way that protects customers from excessive costs and that results in just and reasonable transmission rates.⁸³ CARE Coalition argues that the Commission's current failure to require transmission planners to internalize siting-related costs and risks results in unjust, unreasonable, and unduly discriminatory or preferential rates.⁸⁴ In a similar vein, Ørsted and Massachusetts Attorney General claim that failure to proactively plan for offshore wind generation buildout could lead to transmission rates that are unjust, unreasonable, and unduly discriminatory or preferential.⁸⁵

54. Several commenters agree with the Commission's concerns that the expansion of the high-voltage transmission system is increasingly occurring outside of the regional transmission planning process through other mechanisms such as the generator interconnection process, which results in piecemeal transmission development.⁸⁶ AEE agrees that limited development of regional transmission facilities, increased spending on local transmission projects, and backlogged interconnection queues all show that the existing regional transmission planning requirements are not sufficient to meet customers' transmission needs.⁸⁷ Likewise, Exelon argues that relying on interconnection studies as the primary transmission planning method results in piecemeal and inefficient transmission investment.⁸⁸ PIOs add that many generation developers have to bear the full costs of transmission upgrades, which leads to interconnection request withdrawals, inefficiencies, and higher system-wide costs.⁸⁹ In addition, Clean Energy States note that interconnection queues are extremely large and that the current one-plant-at-a-time approach to transmission upgrades drives up costs

and misses opportunities for improvements to the system as a whole.⁹⁰

55. Non-RTO NASUCA agrees with the Commission that Long-Term Regional Transmission Planning is necessary to help alleviate generation interconnection issues.⁹¹ According to Harvard ELI, current transmission planning processes have failed to address backlogged interconnection queues and operational challenges that are best addressed at the regional level, as well as to include inexpensive technologies that can increase transmission capacity.⁹²

56. ACEG argues that there is no evidence that any regional reliability or economic transmission planning performed in non-RTO/ISO regions, like the Southeastern Regional Transmission Planning region (SERTP), is equal to or superior to the techniques or outcomes in the NOPR.⁹³ ACEG further contends that, instead, most new transmission facilities built since Order No. 1000 have been built for local transmission needs, thereby resulting in less efficient and cost-effective transmission development that does not address the larger needs of the transmission system for reliability and resilience.⁹⁴ Relatedly, SREA states that no state fully participates in SERTP, and that instead, each state in the Southeast uses its own state planning process, with no platform for states to collaborate. As a result, SREA argues that "transmission planning in the Southeast has many holes and is threadbare."⁹⁵ SREA catalogs deficiencies in many Southeastern states' planning processes, including a lack of transparency.⁹⁶

57. Western PIOs argue that, outside of CAISO, transmission planning in the West is ineffective.⁹⁷ Specifically, Western PIOs assert that Western transmission planning groups have not developed new transmission projects using their Order No. 1000 transmission planning processes, but have instead built transmission projects that their utility members have already proposed.⁹⁸ Relatedly, SEIA argues that "non-RTO areas do not engage in sufficient or transparent transmission planning," and that transmission planning in non-RTO/ISO regions is

exclusionary, based on inconsistent and inaccurate data, and disjointed.⁹⁹ More broadly, NRECA contends that incumbent investor-owned utilities control transmission planning, and that some incumbent investor-owned utilities develop transmission without transparency, leading to disparities in transmission rates in different RTO/ISO local zones.¹⁰⁰

58. Several commenters specify other reasons that transmission planning reforms are needed.¹⁰¹ Americans for Fair Energy Prices agree with PIOs that there is a need for regional transmission planning instead of the balkanized process that currently exists.¹⁰² DC and MD Offices of People's Counsel assert that the NOPR provides a once-in-a-generation opportunity to meet the energy transition in a just, equitable, efficient, reliable, and resilient fashion by recognizing the benefits of long-term transmission planning and developing rules that incorporate those broad benefits. DC and MD Offices of People's Counsel state that current transmission planning processes do not fully consider all of the benefits of transmission development, including enhanced reliability and resilience that will serve as a necessary bulwark against disruptions caused by extreme weather.¹⁰³ ACEG argues that current transmission planning processes have not led to investment in interregional transmission capacity, and that more interregional transmission capacity could have avoided some of the \$25 billion to \$70 billion in yearly costs caused by severe weather events.¹⁰⁴ EEI states that robust transmission development will provide a host of benefits for customers, including greater resilience, enhanced system reliability, and cost-savings from greater access to low-cost resources.¹⁰⁵ Some commenters emphasize the importance of the Commission taking prudent action to remedy deficiencies in the Commission's existing regional transmission planning and cost

allocation requirements,¹⁰⁶ and to strengthen electric reliability and resilience, while controlling costs.¹⁰⁷

59. Several commenters argue that the need to reform transmission planning includes addressing environmental justice and equity issues.¹⁰⁸ Center for Biological Diversity states that energy justice and environmental justice considerations are appropriately included in transmission planning.¹⁰⁹ Center for Biological Diversity further asserts that it is within the Commission's authority to consider these costs and benefits, as the benefits of decarbonization and related energy justice objectives will be far greater than the costs.¹¹⁰ Grand Rapids NAACP, CARE Coalition, and PIOs argue that to ensure just, reasonable, and nondiscriminatory rates, transmission planning must consider energy equity and environmental justice.¹¹¹ Grand Rapids NAACP further argues that high energy burdens can be unjust, unreasonable, and unduly discriminatory or preferential.¹¹² Grand Rapids NAACP argues that the Commission's duty under the FPA to promote the public interest requires it to ensure that energy justice and equity considerations are included in transmission planning processes.¹¹³ WE ACT relatedly argues that, due to under-investment, the transmission system is unreliable and vulnerable to extreme

weather events, which is both a reliability and environmental justice issue because communities of color and low-income communities are more susceptible to power outages during extreme weather.¹¹⁴

60. Advanced Energy Buyers state that failure to prepare the grid for the energy transition would be problematic for three primary reasons: (1) insufficient transmission investment will leave customer cost savings on the table; (2) lack of available transmission capacity will constrain its members' ability to meet decarbonization and clean energy goals; and (3) failure to plan and build adequate transmission will hamper the transition to a cleaner and more reliable electric grid.¹¹⁵ New Jersey Commission contends that the lack of holistic multi-driver transmission planning is inflating consumers' electricity costs by billions of dollars every year.¹¹⁶ Northwest and Intermountain explain that due to insufficient transmission capacity from renewable rich zones, utilities must attempt to meet their renewable energy policy targets with new resources that are close to load but more expensive, less reliable, and less efficient than more distant alternatives, even considering the potential costs of transmission expansion.¹¹⁷ Clean Energy Associations add that the lack of transmission capacity imposes real and demonstrable costs today, as evidenced by geographic differences in real-time power prices, and that the lack of robust and proactive transmission planning rules renders current rates unjust, unreasonable, and unduly discriminatory or preferential.¹¹⁸

61. Southeast PIOs contend that the "snowballing" inefficiencies created by numerous small-scale transmission "band-aids" result in unjust, unreasonable, and unduly discriminatory or preferential rates, and that reforms are particularly needed in the Southeast, where there is minimal utility coordination and a balkanized transmission system.¹¹⁹ According to ACEG, short-term, piecemeal transmission planning is unlikely to

identify the more efficient or cost-effective solutions to transmission needs and thus will result in unjust, unreasonable, and unduly discriminatory or preferential rates.¹²⁰

62. Many commenters argue that reforms are necessary to meet state policy goals¹²¹ and that greater state involvement or consideration of state policies is needed to avoid transmission planning inefficiencies.¹²² For example, ACORE cites a recent National Renewable Energy Laboratory (NREL) report highlighting the need for new transmission to aid in achieving zero carbon goals.¹²³ NextEra opines that the passage of the Inflation Reduction Act of 2022 will increase the demand for renewables and drive corresponding demands on the transmission system.¹²⁴ Pacific Northwest State Agencies argue that reforms are critical to successfully achieving their respective state clean energy laws and policies and to ensuring that there is sufficient clean, safe, reliable, and affordable energy.¹²⁵ Michigan State Entities note that some states may pursue aggressive renewable energy portfolio standards, and others may have no such requirements, but these policy choices will inevitably affect the price and reliability of energy for all customers across the states in question and that not planning for that reality imposes costs on unwilling customers.¹²⁶

¹²⁶ Michigan State Entities Initial Comments at 2–3.

63. PacifiCorp and NV Energy similarly assert that the need for reform in the West is driven by the diverse policy priorities in its six-state transmission system, and they note that decisions are subject to state oversight and the participation of disparately situated transmission providers without inclination or authority to accept any cost allocation.¹²⁷ National Grid asserts that ISO New England's (ISO-NE) 2050 Transmission Study demonstrates a direct connection between state laws and requirements to meet clean energy goals and the need for new and expanded transmission facilities.¹²⁸ Indicated PJM TOs add that maintaining a reliable and resilient transmission system requires forward-looking assessments informed by evolving public policy, changing generation mix and demand patterns, and stakeholder input.¹²⁹

64. Maryland Energy Administration contends that Maryland has experienced unfair and costly consequences of inadequate consultation with state authorities in regional transmission planning processes.¹³⁰ AEE argues that if current transmission planning processes fail to incorporate factors such as state laws, corporate targets, and retail demand, then transmission needs will be unmet, risking unjust, unreasonable, and unduly discriminatory or preferential rates.¹³¹

65. Many commenters argue that, based on the record, the Commission has an obligation under the FPA to take action to ensure that transmission planning and cost allocation results in rates that are just and reasonable and not unduly discriminatory.¹³² ACEG states that the Commission's broad authority to remedy unduly discriminatory behavior pursuant to FPA section 206 applies to transmission planning and cost allocation, as the U.S. Court of Appeals for the District of Columbia Circuit held in *South Carolina Public Service Authority v. FERC*.¹³³ PIOs contend that the Commission is

required by the FPA to use its authority to address market abuses and undue discrimination that have led to unjust, unreasonable, and unduly discriminatory or preferential rates for consumers, who bear the costs of inefficiencies in the current transmission planning process.¹³⁴

66. Southeast PIOs assert that the NOPR adequately demonstrated that existing regional transmission planning processes have intrinsic flaws, making the integrated resource planning and request for proposal processes ill-equipped to efficiently address changes in the resource mix and demand.¹³⁵ Specifically, Southeast PIOs cite the following preliminary findings from the NOPR: (1) existing transmission planning processes utilize a limited planning horizon; (2) many transmission planning processes provide an inaccurate portrayal of the comparative benefits of different transmission facilities; and (3) rapid changes to the generation fleet and demand are creating increasingly urgent transmission needs.¹³⁶

67. Southeast PIOs cite the finding in *South Carolina Public Service Authority v. FERC* that the threshold of substantial evidence could be met without "empirical evidence" as long as the Commission provides evidence based on "reasonable economic propositions."¹³⁷ Southeast PIOs also note that *South Carolina Public Service Authority v. FERC* upheld the Commission's findings in Order No. 1000, which were based on (1) a threat to just and reasonable rates from existing regional transmission planning and cost allocation practices, (2) significant changes in the industry driven by increases in renewable energy resources, and (3) recent increases in transmission investment.¹³⁸ Moreover, Southeast PIOs note that findings need not be region-specific, as the "Commission may rely on generic or general findings of a systemic problem to support imposition of an industry-wide solution."¹³⁹

68. ACEG similarly asserts that the Commission has shown the need for transmission planning reform based on findings that existing transmission

planning requirements do not adequately identify transmission needs driven by changes in the resource mix and demand, and that failure to identify such needs causes customers to pay for less efficient or cost-effective transmission investments.¹⁴⁰ Relatedly, ACEG argues that pursuing region-specific solutions will lead to siloed and disjunctive transmission planning policies that will not solve the problems facing the Nation's electric transmission system.¹⁴¹

69. Colorado Consumer Advocate and Joint Consumer Advocates aver that the Commission has a statutory duty under the FPA to reform current regional transmission planning processes because they lack transparency, coordination, and openness, and because they create opportunities for monopoly transmission developers to exert dominant influence and promote their own economic self-interest at customers' and other stakeholders' expense.¹⁴² According to New Jersey Commission, current transmission planning processes are inefficient and unnecessarily burden ratepayers with excessive costs without providing additional benefits. New Jersey Commission contends that those processes are therefore per se unjust and unreasonable, and that the Commission thus has FPA section 206 authority to require that transmission providers employ practices like long-term, holistic, multi-driver transmission planning.¹⁴³

70. Similarly, Harvard ELI states that deficient transmission planning threatens the justness and reasonableness of transmission rates, and therefore the Commission has legal authority and jurisdiction to order changes to transmission planning to remedy that deficiency.¹⁴⁴ Harvard ELI further asserts that the Commission must remedy undue discrimination due to incumbent transmission owners' unduly discriminatory influence in regional transmission planning.¹⁴⁵ Massachusetts Attorney General also

¹⁴⁵ *Id.* at 3.

argues that the Commission's proposed reforms are necessary to fulfill the Commission's statutory obligation to ensure that transmission rates are just and reasonable.¹⁴⁶

71. Some commenters argue that there is insufficient evidence for the Commission to find that existing jurisdictional rates are unjust, unreasonable, and unduly discriminatory or preferential.¹⁴⁷ For example, while Idaho Commission recognizes that there are deficiencies in existing transmission planning and cost allocation processes, Idaho Commission disagrees with the NOPR's claim that their failure to identify and plan for transmission needs driven by changes in the resource mix and demand is resulting in unjust, unreasonable, and unduly discriminatory or preferential Commission-jurisdictional rates.¹⁴⁸ Mississippi Commission also disagrees that the lack of long-term regional transmission planning will result in unjust, unreasonable, and unduly discriminatory or preferential rates.¹⁴⁹ ELCON questions a finding of unjust, unreasonable, and unduly discriminatory or preferential rates, and it states that the NOPR's focus on Long-Term Regional Transmission Planning solely to address changes in resource mix and demand, if adopted, could fail to produce better outcomes for customers and may exceed the Commission's authority under the FPA.¹⁵⁰

72. Louisiana Commission states that the Commission's finding that, absent reforms, transmission rates universally are not just and reasonable and are discriminatory is not based on individual analysis of each RTO or region, is not supported, and should be retracted.¹⁵¹ Mississippi Commission also states that the Commission should, instead, initiate region-specific investigations pursuant to FPA section 206.¹⁵² Southern argues that the Commission has failed to satisfy the first prong of its FPA section 206 burden of proof, noting that the NOPR's preliminary conclusion, that existing

regional transmission planning processes are not sufficient to address changes in the resource mix and demand, cannot reasonably be made of Southern or SERTP.¹⁵³

73. Similarly, Industrial Customers argue that the Commission has not satisfied the first prong of FPA section 206, which requires the Commission to find, and provide substantial evidence supporting its finding, that existing rates are unjust, unreasonable, and unduly discriminatory or preferential.¹⁵⁴ Industrial Customers claim that demand growth should be the primary factor in identifying transmission needs, and that demand is growing more slowly than in previous periods. Industrial Customers add that, in contrast, investment in transmission is rising relative to demand, which is the opposite of the circumstances that prevailed in 2007 when the Commission issued Order No. 890.¹⁵⁵ According to Industrial Customers, changes in demand are not significant enough in historical terms to warrant major changes in transmission planning. Moreover, Industrial Customers state that changes in demand are unpredictable because technological changes are inherently difficult to forecast and the risks to consumers of making mistakes are too high. Industrial Customers argue that, if anything, the rapid growth of renewables indicates that current processes are already facilitating changes in the resource mix.¹⁵⁶ Similarly, NRG argues that long-term forecasts of important factors are often wrong, which has real-world impacts on customers.¹⁵⁷

74. Further, Industrial Customers contend that the NOPR does not clearly define the term "changes in the resource mix and demand," despite using such changes as the justification for the proposals. Industrial Customers argue that transmission should only be planned in order to maintain reliability and should not be based on the demand for certain fuel sources or the fuel type of the generation fleet.¹⁵⁸ Industrial Customers argue that current transmission planning is based on known and measurable factors, and that any attempt to plan for potential future

changes in the resource mix without determining precisely what these changes will be would result in the overbuilding of the system for generation that may not be built.

Industrial Customers argue that this outcome would be unjust and unreasonable and would force transmission customers to pay for generation that is non-existent.¹⁵⁹

75. Other commenters agree that the Commission lacks a specific record to support the need for reform.¹⁶⁰ For example, former Kansas Commission Chair Keen avers that there is no analytical or evidentiary basis in the NOPR for a complete and thorough overhaul or revision of transmission planning processes.¹⁶¹

76. Duke asserts that the NOPR does not provide robust and specific support as to how and why current regional transmission planning processes are failing to plan for transmission needs driven by changes in the resource mix and demand, leading to inefficient investment.¹⁶² Duke asserts that the NOPR does not support the presumption that the absence of significant regional transmission investment is evidence of inefficient transmission planning.¹⁶³ Duke also asserts that, to ensure legal durability, the Commission should identify evidence that justifies a nationwide finding that current transmission planning processes are failing to plan for transmission needs driven by changes in the resource mix and demand, leading to inefficient investment and unjust, unreasonable, and unduly discriminatory or preferential rates.¹⁶⁴

77. Undersigned States argue that the Commission does not have evidence in the record that current rates are unjust, unreasonable, or unduly discriminatory or preferential, which FPA section 206 requires.¹⁶⁵ Undersigned States argue

¹⁶⁵ Undersigned States Reply Comments at 6–7. The Undersigned States that submitted reply comments include the States of Texas, Utah, Alabama, Alaska, Arkansas, Florida, Georgia, Kansas, Kentucky, Louisiana, Mississippi, Montana,

that, contrary to the preliminary findings in the NOPR, the Southeast has developed significant and sufficient transmission infrastructure and renewable energy from 2015–2020. Undersigned States further argue that the Commission is supposed to enhance reliability, and that, because renewables are intermittent and inherently less reliable, forcing ratepayers to subsidize their use through financing the construction of additional transmission infrastructure is not consistent with the Commission's mission. Undersigned States also argue that the Commission has not justified replacing existing transmission planning processes with a new approach, so the NOPR is arbitrary and capricious.¹⁶⁶ Further, Undersigned States argue that the Commission has not offered a detailed justification for countering prior precedent in Order No. 1000 that “the regional transmission planning process is not the vehicle by which integrated resource planning is conducted.”¹⁶⁷

78. Some commenters assert that the intention of the NOPR is to improperly favor certain energy resources.¹⁶⁸ Consumer Organizations argue that solutions that allow for an equitable transition and make space for advancing technology and smaller energy systems are preferable to a rushed plan that favors certain resources, such as wind, solar, and battery storage, that have already proven to be inadequate.¹⁶⁹ ELCON adds that Congress did not give the Commission express authority to balance the FPA's just and reasonable rates requirement with the policy goal of connecting renewable resources to the transmission system.¹⁷⁰ SERTP Sponsors argue that Congress has not clearly provided the Commission with jurisdiction to presuppose generation decisions and thereby effect particular, substantive transmission outcomes; rather, SERTP Sponsors continue, Congress has expressly and unequivocally reserved generation authority to the states.¹⁷¹ Louisiana

Nebraska, Ohio, Oklahoma, South Carolina, and West Virginia. *Id.* at 1. The Undersigned States that submitted initial comments include the States of Utah, Alaska, Georgia, Idaho, Indiana, Kansas, Kentucky, Louisiana, Mississippi, Montana, Nebraska, North Dakota, Ohio, Oklahoma, South Carolina, Texas, West Virginia, and Wyoming. ¹⁷¹ SERTP Sponsors Initial Comments at 18.

Commission argues that the FPA does not confer on the Commission authority to engage in wide-scale public policymaking by enacting sweeping energy policy changes with far-reaching, nationwide effects.¹⁷²

79. Ohio Commission Federal Advocate states that the NOPR may be intended “to establish policies designed to encourage the massive transmission build-out that will doubtless be required to transition to an aspirational renewable future” and “to achieve narrow environmental policy objectives, not to address legitimate requirements under the Federal Power Act like ensuring just and reasonable rates or reliability.”¹⁷³ Former Kansas Commission Chair Keen claims that the NOPR encourages an extensive and expensive transmission build-out without considering the impact on state-jurisdictional generation mixes. He also claims that some of the NOPR proposals impose an accelerated pace for the transition from dispatchable to renewable resources, which could hasten the premature retirement of dispatchable generation and compromise regional and state power reliability. He also expresses concern that the NOPR proposals would force ratepayers in some states to pay for neighboring states' transmission projects to advance public policy goals that they do not share.¹⁷⁴

80. Some commenters challenge aspects of the need for reform. For example, Nebraska Commission believes that the established structures in RTO/ISO regions are generally working and that many aspects of the NOPR are thus unnecessary there.¹⁷⁵ Potomac Economics disagrees with some of the Commission's arguments for requiring Long-Term Regional Transmission Planning, contending that the Commission's proposals are based on anticipated future generation and other speculative factors and seem to be incorrectly premised on a presumption that congestion should not exist or may limit investment in economic generation. Potomac Economics states that investment should occur only to the extent that the savings of reducing congestion are larger than the investment costs. According to Potomac Economics, congestion that is caused by generators' siting decisions should be

¹⁷² Louisiana Commission Initial Comments at 6 (citing *West Virginia v. EPA*, 597 U.S. 697 (2022)).

¹⁷⁵ Nebraska Commission Initial Comments at 1–2.

borne by the generation developers, as it will incent them to propose the lowest-cost projects taking transmission costs into account. Potomac Economics argues that, if transmission is expanded preemptively to facilitate generation investment in a particular location, such costs are equivalent to subsidies for the developer.¹⁷⁶

81. Mississippi Commission disagrees that too much expansion of high-voltage transmission has occurred through the generator interconnection process instead of through regional transmission planning.¹⁷⁷ Similarly, North Carolina Commission and Staff disagree with the Commission's conclusion that the growth in interconnection-related network upgrades demonstrates a failure of regional transmission planning as it relates to North Carolina.¹⁷⁸ Southern adds that, contrary to statements in the NOPR, it is not significantly expanding its transmission system through the generator interconnection process.¹⁷⁹

82. Alabama Commission asserts that Alabama has a resource planning process that accounts for needed transmission buildout to maintain reliable service, and thus, Alabama Power plans its transmission system proactively both to maintain deliveries from existing resources and to accommodate Alabama Commission-certified generation additions. Alabama Commission claims that the SERTP process builds on the integrated resource planning efforts of its sponsor states, ensuring that there are no regional transmission solutions that are more efficient or cost-effective than solutions identified through the underlying state-jurisdictional processes.¹⁸⁰

83. Duke argues that, for certain transmission providers, the local transmission planning process may more effectively meet transmission needs, especially when combined with state-regulated integrated resource planning and a bottom-up regional transmission planning process. Duke contends that a regional transmission facility may not fully address local transmission needs such that a local transmission facility would still be needed, and thus, the regional transmission facility is not necessarily more efficient or cost-effective than the local transmission facility.¹⁸¹

84. NRECA states that certain of its members in RTOs/ISOs believe that regional transmission planning is working well to meet long-term needs (e.g., those in MISO) and that the NOPR proposals would burden transmission providers' limited resources. NRECA states that other NRECA members in RTOs/ISOs believe that existing RTO/ISO transmission planning processes contain discrete deficiencies that the NOPR proposals will not remedy. According to NRECA, these electric cooperatives believe that some incumbent investor-owned transmission owners develop local transmission projects without transparency concerning need or costs, leading to disparities in transmission rates across RTO/ISO transmission zones, and that incumbent transmission owners control the transmission planning process such that no regional transmission planning occurs. NRECA states that, in these cooperatives' view, the criteria to determine the eligibility of a regional transmission project is the barrier, and that requiring Long-Term Regional Transmission Planning, by itself, will not solve the problem.¹⁸²

C. Commission Determination

85. Based on the record, we find that there is substantial evidence to support the conclusion that the Commission's existing regional transmission planning and cost allocation requirements are unjust, unreasonable, and unduly discriminatory or preferential. We therefore adopt the preliminary findings in the NOPR concerning the need for reform. Specifically, we find that the absence of sufficiently long-term, forward-looking, and comprehensive transmission planning requirements is causing transmission providers to fail to adequately anticipate and plan for future system conditions. It causes transmission providers to fail to appropriately evaluate the benefits of transmission infrastructure, and results in piecemeal transmission expansion to address relatively near-term transmission needs. We find that this status quo causes transmission providers to undertake relatively inefficient investments in transmission infrastructure, the costs of which are ultimately recovered through Commission-jurisdictional rates. This dynamic results in, among other things, transmission customers paying more than necessary or appropriate to meet their transmission needs and forgoing benefits that outweigh their costs, which results in less efficient or cost-effective transmission investments. As explained

below, we find that these deficiencies render Commission-jurisdictional regional transmission planning and cost allocation processes unjust, unreasonable, and unduly discriminatory or preferential.

86. The Commission has authority under FPA section 206 to issue this final order. Specifically, FPA section 206 "instructs the Commission to remedy 'any . . . practice' that 'affect[s]' a rate for interstate electricity service 'demanded' or 'charged' by 'any public utility' if such practice is 'unjust, unreasonable, unduly discriminatory or preferential.'" ¹⁸³ As the D.C. Circuit has recognized, regional transmission planning and cost allocation processes are practices affecting rates subject to the Commission's exclusive jurisdiction.¹⁸⁴ As the Court explained in *South Carolina Public Service Authority v. FERC*, transmission providers use those processes to "determine which transmission facilities will more efficiently or cost-effectively meet" transmission needs, the development of which directly impacts the rates, terms, and conditions of Commission-jurisdictional service.¹⁸⁵ In particular, because these processes identify, evaluate, and select the regional transmission facilities whose costs will be recovered through transmission rates, we find that they directly affect those rates.¹⁸⁶ In addition, as discussed below, such transmission facilities contribute to the development of a more robust transmission system, supporting continuity of service in the face of growing reliability challenges and providing wholesale electric customers greater access to lower-cost generation supplied by a wider range of resources. Accordingly, regional transmission

planning and cost allocation processes, as well as "the rules and practices that determine how those [processes] operate,"¹⁸⁷ have a direct effect on the rates that customers pay for *both* the transmission and sale of electric energy in interstate commerce.¹⁸⁸ The Commission may act pursuant to FPA section 206 if the Commission first establishes, through substantial evidence,¹⁸⁹ that the existing practices are unjust, unreasonable, or unduly discriminatory or preferential and, second, establishes that the replacement practices are just and reasonable.¹⁹⁰

87. With regard to the first showing under FPA section 206, we find that, while Order No. 890 requires transmission providers to satisfy certain principles in their local transmission planning processes and Order No. 1000 requires transmission providers to participate in regional transmission planning and cost allocation processes that satisfy the requirements set forth therein, these existing transmission planning and cost allocation requirements do not result in regional transmission planning that is conducted on a sufficiently long-term, forward-looking, and comprehensive basis to plan for Long-Term Transmission Needs. As a result, we find that transmission providers are often not identifying, evaluating, or selecting more efficient or cost-effective regional transmission solutions to meet Long-Term Transmission Needs. This gap in existing regional transmission planning processes results in piecemeal, inefficient, and less cost-effective transmission planning that imposes real costs on customers, who pay Commission-jurisdictional transmission rates for less efficient or cost-effective transmission facilities and do not realize the benefits that would result from long-term, forward-looking, and more comprehensive regional transmission planning and cost allocation processes that identify, evaluate, and select more efficient or cost-effective transmission

¹⁸⁹ *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d at 54 ("The Commission's factual findings are conclusive if supported by substantial evidence."). Courts have held that substantial evidence in this context does not necessarily require the Commission to provide empirical evidence for every proposition. Rather, FPA section 206 empowers the Commission to address a mere threat of unjust and unreasonable rates. *See S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d at 64–65, 85.

¹⁹⁰ 16 U.S.C. 824e(a); *see also* *EPSA*, 577 U.S. at 277 (affirming the Commission "has the authority—and indeed, the duty—to ensure that rules or practices 'affecting' wholesale rates are just and reasonable").

¹⁸² NRECA Initial Comments at 14–16.

solutions to Long-Term Transmission Needs.

88. We find that these deficiencies in the Commission's existing transmission planning and cost allocation requirements render those requirements unjust, unreasonable, and unduly discriminatory or preferential in violation of FPA section 206.

89. We also find that the Commission's existing transmission planning and cost allocation requirements are insufficient to ensure just and reasonable and not unduly discriminatory or preferential rates. Given these findings, we are now requiring, pursuant to FPA section 206, that transmission providers engage in and conduct sufficiently long-term, forward-looking, and comprehensive transmission planning and cost allocation processes to identify and plan for Long-Term Transmission Needs. We find that these reforms will facilitate a process by which transmission providers can better identify, evaluate, and select more efficient or cost-effective transmission solutions to meet Long-Term Transmission Needs, which will ensure that Commission-jurisdictional rates are just and reasonable and not unduly discriminatory or preferential.

1. The Transmission Investment Landscape Today

90. As the Commission explained in the NOPR, a robust, well-planned transmission system is foundational to ensuring an affordable, reliable supply of electricity.¹⁹¹ Due to continuing changes in the industry, ongoing investment in transmission facilities is necessary to ensure the transmission system continues to serve load in a reliable,¹⁹² affordable, and economically efficient fashion. Such investments support enhanced reliability, as larger, more integrated transmission systems result in a diversity of supply and demand conditions and a certain degree of redundancy that allows the system to

better withstand failures during extreme events.¹⁹³ Proactive, forward-looking transmission planning that considers both evolving reliability needs and other drivers of transmission needs more comprehensively can enable transmission providers to identify potential reliability problems and economic constraints, as well as to evaluate potential transmission solutions, well in advance of these issues affecting the transmission system,¹⁹⁴ which can facilitate the selection of more efficient or cost-effective transmission facilities to meet Long-Term Transmission Needs.

91. In addition, transmission infrastructure can unlock the forces of competition, changing who can sell to whom, eliminating barriers to entry, and mitigating market power.¹⁹⁵ Increased competition, in turn, can provide a host of benefits for customers, including cost-savings from greater access to low-cost power and a wider range of resources.¹⁹⁶ Transmission

¹⁹⁴ MISO's Multi-Value Project (MVP) regional transmission planning process, for example, eliminated the need for approximately \$300 million in reliability transmission facilities, resolving reliability violations and mitigating system instability conditions, through a forward-looking approach. Midcontinent Independent System Operator, *MTEP17 MVP Triennial Review: A 2017 review of the public policy, economic, and qualitative benefits of the Multi-Value Project Portfolio*, at 11, 33 (Sept. 2017) (MTEP2017 Review).

¹⁹⁵ Policy Integrity ANOPR Initial Comments at 13 n.40 (“A new transmission project can enhance competition by both increasing the total supply that can be delivered to consumers and the number of suppliers that are available to serve load.” (citing Mohamed Awad et al., *The California ISO Transmission Economic Assessment Methodology (TEAM): Principles and Applications to Path 26*, at 3 (2006)); PIOs ANOPR Initial Comments Ex. A, Johannes Pfeifenberger et al., The Brattle Group and Grid Strategies, *Transmission Planning for the 21st Century: Proven Practices that Increase Value and Reduce Costs*, at 48–49 (Oct. 2021) (Brattle-Grid Strategies Oct. 2021 Report), https://www.brattle.com/wp-content/uploads/2021/10/2021-10-12-Brattle-Grid-Strategies-Transmission-Planning-Report_v2.pdf (“Expansion of the transmission network typically increases the number of independent wholesale electricity suppliers that are able to compete to supply electricity at locations in the transmission network served by the upgrade” (quoting F.A. Wolak, World Bank, *Managing Unilateral Market Power in Electricity*, Policy Research Working Paper No. 3691, at 8 (2005))).

¹⁹⁶ See, e.g., PJM Interconnection, L.L.C., *PJM Value Proposition*, at 1–2 (2019), <https://www.pjm.com/about-pjm/-/media/about-pjm/pjm-value-proposition.ashx> (PJM's planning of resource

infrastructure can also serve as a form of insurance against future uncertainties because a more robust, integrated transmission system has the potential to provide consumers with the benefits of competition and enhanced reliability even if supply and demand fundamentals change over time.¹⁹⁷

92. With that overview, we again begin with the key facts on the ground.¹⁹⁸ Since the issuance of Order No. 1000, transmission spending has continued to increase nationwide. A study by US DOE found that “annual investment [in transmission] first exceeded \$5 billion per year in 2006 . . . and has increased consistently since that time. Annual investment [] doubled to more than \$10 billion per year by 2010 and then [] doubled again by 2016. Annual investment has been between \$18 billion and \$22 billion annually since 2014.”¹⁹⁹ A separate study, noted by the Commission in the NOPR, estimated that transmission developers in the United States invested \$20 to \$25 billion annually in transmission facilities from 2013 to 2020.²⁰⁰ Unsurprisingly, in regions that saw a significant increase in transmission expenditures, transmission costs have also become an increasing

adequacy over a large region is estimated to result in savings of \$1.2–1.8 billion.; Midcontinent Independent System Operator, *MISO Value Proposition* (2020), https://www.misoenergy.org/meet-miso/MISO_Strategy/miso-value-proposition/ (MISO estimated \$517–572 million in savings from more efficient use of existing assets and \$2.5–3.2 billion from reduced need for additional assets.); SPP Transmission Planning, Southwest Power Pool, *SPP's Value of Transmission: 2021 Report and Update* (Mar. 31, 2022) (SPP estimated \$382.7 million in adjusted product costs savings in 2020 due to transmission investment.); see also ACEG Initial Comments at 3–4 (“The benefits generated by MISO's MVPs and SPP's Priority Projects exceeded the costs by 2.2 to 3.5 times and means that every dollar spent on transmission will enable access to generation that is \$3 to \$4 cheaper than would otherwise be available.”).

¹⁹⁷ US DOE, *National Electric Transmission Congestion Study*, at 11 (Sept. 2015), https://www.energy.gov/sites/prod/files/2015/09/f26/2015%20National%20Electric%20Transmission%20Congestion%20Study_0.pdf (stating transmission expansion can strengthen and increase the flexibility of the overall network and “create real options to use the transmission system in ways that were not originally envisioned”); Vikram S. Budhbraja et al., *Improving Electricity Resource Planning Processes by Considering the Strategic Benefits of Transmission*, 22 ELEC. J. 54 (Mar. 2009) (high voltage transmission affords “mitigation of risks as a form of insurance against extreme events”).

¹⁹⁸ NOPR, 179 FERC ¶ 61,028 at P 36.

¹⁹⁹ California Commission Reply Comments at 9 n.27 (quoting US DOE, *National Electric Transmission Congestion Study*, at 9–10 (Sept. 2020), <https://www.energy.gov/sites/default/files/2020/10/f79/2020%20Congestion%20Study%20FINAL%2022Sept2020.pdf>).

²⁰⁰ NOPR, 179 FERC ¶ 61,028 at P 39 (citing Brattle-Grid Strategies Oct. 2021 Report at 2); Brattle Apr. 2019 Competition Report at 2–3 & fig.1.

¹⁹¹ NOPR, 179 FERC ¶ 61,028 at P 28 (citing 16 U.S.C. 824, 824d, 824e); see also US DOE ANOPR Initial Comments at 2 (stating that “strengthening and expanding existing transmission infrastructure, particularly the development of regional and inter-regional transmission projects, is key to continued access to reliable, resilient, lower-cost, and clean electricity for all”).

¹⁹² See, e.g., MISO ANOPR Initial Comments at 40; Testimony of James B. Robb Before the U.S. Senate Energy and Natural Resources Committee, *Reliability, Resiliency, and Affordability of Electric Service in the United States Amid the Changing Energy Mix and Extreme Weather Events*, at 8–9 (Mar. 11, 2021), <https://www.energy.senate.gov/services/files/D47C2B83-A0A7-4E0B-ABF2-9574D9990C11> (testifying that more transmission infrastructure is required to ensure the reliability and resilience of the bulk power system in light of changing conditions).

share of customers' overall electricity bills, underscoring the importance of ensuring that transmission investments are efficient and cost-effective.²⁰¹

93. Furthermore, the record demonstrates that transmission investment is likely to substantially increase in coming years. A number of studies project significant and sustained transmission spending through at least 2050. For example, one projection cited by the US DOJ and FTC states that "high voltage transmission capacity must expand by 60 percent by 2030 at a capital cost of \$330 billion, and must triple by 2050 at a capital cost of \$2.2 trillion."²⁰² TAPS cites a separate study projecting \$750 billion of new transmission investment between 2023 and 2050.²⁰³ SoCal Edison "estimates that grid investments of up to \$75 billion, including transmission upgrades, will be required from 2030 to 2045 in California alone to integrate bulk renewable generation and storage and serve load growth associated with electrification."²⁰⁴ And ISO-NE's

recently-completed 2050 Transmission Study estimates that transmission investment in New England will range from \$16 billion to \$26 billion between 2024 and 2050, depending on the amount of load growth realized in the region.²⁰⁵

94. The growing need for new transmission infrastructure, particularly over a longer time horizon, is being driven by a number of factors. First, longer-term reliability needs are changing. The NOPR explained that transmission system operators are increasing their reliance on regional transmission facilities to ensure operational stability, particularly because of the growing frequency of extreme weather events and increasing share of variable resources entering the resource mix.²⁰⁶ The comments submitted in response to the NOPR support that preliminary finding. The record shows that changing reliability needs are driving a significant shift in demands placed on the transmission system,²⁰⁷ and that because extreme weather events are occurring with greater frequency, transmission is increasingly critical to ensuring system reliability.²⁰⁸ For example, Winter

Storm Uri demonstrated that transmission infrastructure can make critical contributions to system reliability during extreme weather events,²⁰⁹ as well as how transmission constraints can prevent operational generation resources from being able to serve load during tight supply conditions.²¹⁰ Consistent with experience from Winter Storm Uri, US DOE's Lawrence Berkeley National Laboratory provides further evidence of the significant value of transmission during unanticipated events, with research suggesting that 50% of the value created by alleviating transmission system congestion occurs during only 5% of the hours during which the transmission system is used.²¹¹ Thus, transmission investment is likely to be more critical, and produce more reliability benefits, for customers as extreme weather and other system contingencies become more frequent.²¹² For some communities who can be more susceptible to the impacts of extreme weather, like communities of color and

risks (tail risks) related to extreme weather" (internal quotations omitted); NYISO Initial Comments at 16 (expressing a desire to engage in actionable scenario planning to plan for future reliability challenges that may arise due to extreme weather, including the loss of all generation connected to a pipeline or other fuel sources, loss of an entire transmission line, and impacts from weather events like hurricanes or wildfires).

²⁰⁹ ACEG Initial Comments at 22 n.63 (During Winter Storm Uri, "[a]n additional 1 gigawatt (GW) of transmission ties between ERCOT and the Southeastern U.S. could have saved nearly \$1 billion and kept power flowing to hundreds of thousands of Texans." (citing Grid Strategies July 2021 Extreme Weather Report at 1–3, 12)); Grid Strategies July 2021 Extreme Weather Report at 7–8 ("The value of transmission for resilience can be seen in the drastically different outcomes of MISO and SPP relative to ERCOT during [Winter Storm Uri]. . . . In contrast to the 13,000 MW MISO was importing during the peak of [the] event, ERCOT was only able to import about 800 MW of power throughout the event."); NARUC Initial Comments at 67 n.192 (During Winter Storm Uri, SPP's "relationships and interconnections with neighboring systems were critical. Usually a net exporter of energy, SPP relied significantly on imported energy to serve load during the winter event, with net amounts exceeding 6,000 megawatts (MW) at times. This emphasizes the value these relationships and robust transmission interconnections provide during emergency events and the opportunity to further strengthen them." (quoting Southwest Power Pool, *A Comprehensive Review of Southwest Power Pool's Response to the February 2021 Winter Storm: Analysis and Recommendations*, at 9 (July 2021), <https://spp.org/documents/65037/comprehensive%20review%20of%20spp%27s%20response%20to%20the%20feb.%202021%20winter%20storm%202021%2007%2019.pdf> (brackets omitted))).

²⁰⁶ NOPR, 179 FERC ¶ 61,028 at P 45.

²⁰⁷ ACEG Initial Comments at 5 (noting that weather-related power outages cost Americans \$25–70 billion annually (citing Grid Strategies July 2021 Extreme Weather Report at 1)); *id.* at 52 (explaining that "[c]hanges to the transmission planning processes that would allow for certain transmission upgrades identified in the interconnection process to be addressed and ultimately constructed through the transmission planning process will only serve to increase the resiliency and reliability of the transmission system."); ACEG Reply Comments at 5–6 ("[R]eliability requires long term transmission planning that incorporates known and knowable information about the future resource mix."); NERC Initial Comments at 6 ("Transmission will be the key to support the resource transformation enabling delivery of energy from areas that have surplus energy to areas which are deficient. The frequency of such occurrences are increasing as extreme weather conditions resulting from climate change impact the fuel sources for variable energy resources. Regional transmission planning can ensure that sufficient amounts of transmission capacity will be needed to address these more frequent extreme weather conditions.").

²⁰⁸ See DC and Maryland Offices of People's Counsel Reply Comments at 2 (noting that new transmission development has benefits including enhanced reliability and resilience that will serve as a necessary bulwark against disruptions caused by extreme weather); Indicated PJM TOs Initial Comments at 1 (explaining that maintaining a "reliable and resilient" transmission system requires holistic planning); NESCOE Initial Comments at 32–33 ("ISO-NE explains that energy-security risks in New England are well documented, highlighting the importance of conducting comprehensive energy security assessments covering a wide range of operating conditions, including low-probability, high-impact reliability

low-income communities, transmission investment has the potential to be even more critical.²¹³ Conversely, failure to adequately plan the transmission system to meet such changing reliability needs will forgo many of those potential benefits, jeopardize system reliability, and force customers to pay for transmission facilities that may not efficiently or cost-effectively address urgent reliability needs.

95. Second, demand is changing. After many years of flat or minimal load growth in regions across the country, demand, on both a national and a regional basis, is projected to significantly increase in the coming decades, and it will require an increasingly robust transmission system to reliably serve this load growth. As stated in the NOPR, changes in electric demand and associated load profiles are occurring as load-serving entities work to meet increasing needs due to electrification trends, as well as new large loads associated with evolving industrial and commercial needs, such as growth in data centers.²¹⁴ The comments submitted in this record demonstrate that, in regions across the country, customers are electrifying everything from household appliances to vehicles.²¹⁵ Comments also

substantiate the fact that, in many regions, large loads associated with new and emerging industrial needs, like data centers, are driving rapid load growth.²¹⁶ Estimates quantifying the magnitude of this shift show that it is significant, with nationwide demand for electricity projected to increase by 5% to 15% (200 to 600 TWh) by 2030.²¹⁷ That trend is projected not just to continue but to accelerate, with nationwide demand for electricity projected to increase by 25% to 85% (1,100 to 3,700 TWh) by 2050.²¹⁸

Results, at 190–94 (Nov. 2023) (providing sensitivity that included 15% and 10% increases in peak load and average hourly loads, respectively, driven by heating and vehicle electrification); U.S. Energy Info. Admin. (EIA), *Incentives and Lower Costs Drive Electric Vehicle Adoption in Our Annual Energy Outlook*, (May 15, 2023) (noting that, per 2023 Annual Energy Outlook Projections, electric vehicles will account for between 13% and 29% of new light-duty vehicle sales in the United States, and between 11% and 26% of then on-road light duty vehicle stocks, by 2050).

²¹⁶ See, e.g., Transmission Dependent Utilities Initial Comments at 4–5 (“For example, the PJM Interconnection, L.L.C. Transmission Expansion Advisory Committee recently posted that Dominion Energy Virginia will need over \$603 million in transmission upgrades through 2025—just three years from now—to accommodate significant data center load growth in Northern Virginia.” (citing PJM Transmission Advisory Committee, *Reliability Analysis Update*, at 3, 5 (Aug. 9, 2022))). These trends are continuing and even accelerating. See PJM Interconnection, L.L.C., *PJM Load Forecast Report*, at 1 (Jan. 2024), <https://www.pjm.com/-/media/library/reports-notices/load-forecast/2024-load-report.ashx> (noting upward adjustments in 2024 load forecasts for certain zones to account for large, unanticipated load growth driven by data centers, a chip processing plant, and port electrification, among other factors); *id.* at 78 (projecting increase from 2,333 GWh in 2024 to 130,489 GWh in 2039 due to plug-in electric vehicles); *id.* at 30 (showing 1.0% higher load growth projection for 2024, 6% higher load growth projection for 2029, and 10.4% higher load growth projection for 2034, as compared to 2023 Load Forecast Report).

²¹⁷ National Grid Initial Comments at 8 (citing Jürgen Weiss et al., *The Brattle Group, The Coming Electrification of the North American Economy* (Mar. 2019), <https://wiresgroup.com/wp-content/uploads/2020/05/2019-03-06-Brattle-Group-The-Comeing-Electrification-of-the-NA-Economy.pdf>).

²¹⁸ *Id.*; see also John D. Wilson and Zach Zimmerman, *Grid Strategies, The Era of Flat Power Demand is Over*, at 3 (Dec. 2023), <https://gridstrategiesllc.com/wp-content/uploads/2023/12/National-Load-Growth-Report-2023.pdf> (“Over [2023], grid planners nearly doubled the 5-year load growth forecast. The nationwide forecast of electricity demand shot up from 2.6% to 4.7% growth over the next five years, as reflected in 2023 FERC [Form 714] filings. Grid planners forecast peak demand growth of 38 gigawatts (GW) through 2028.”); N. Amer. Elec. Reliability Corp., *2023 Long-Term Reliability Assessment*, at 33 (Dec. 2023), https://www.nerc.com/pa/RAPA/ra/Reliability%20Assessments%20DL/NERC_LTRA_2023.pdf (“Electricity peak demand and energy growth forecasts over the 10-year assessment period are higher than at any point in the past decade. The aggregated assessment area summer peak demand forecast is expected to rise by 79 GW, and aggregated winter peak demand forecasts are increasing by nearly 91 GW. Furthermore, the

Industrial customers in many regions are driving much of this increase; industry executives have reported that electrification initiatives, through which many of the Nation’s largest companies plan to electrify their manufacturing processes, transportation, and heating operations, are well underway or soon to begin.²¹⁹ Importantly, the record shows that these increases in aggregate demand for electricity will have significant consequences for the transmission system. To serve more load, the capacity of the already-oversubscribed transmission system will need to increase.²²⁰ Moreover, load growth driven primarily by electrification can create a load profile that has a higher load factor and that is thus more challenging to serve.²²¹

96. Third, supply is changing. As the NOPR explained, Federal, state, and local policies are incentivizing various forms of generation resources and other technologies,²²² resulting in changes to the Nation’s resource mix. The comments in this record show that these policies are widespread and now span

growth rates of forecasted peak demand and energy have risen sharply since the 2022 [Long-Term Reliability Assessment], reversing a decades-long trend of falling or flat growth rates.”).

²¹⁹ Renewable Northwest Initial Comments at 20 (“A recent study done by Deloitte showed that 70 percent of executives in industrial manufacturing industries have plans for the electrification of industrial processes, and 50 percent of the executives who responded have goals to electrify vehicle fleets and space and water heating within their companies by 2030.” (citing Stanley Porter et al., *Deloitte, Electrification in Industrials* (Aug. 2020), <https://www2.deloitte.com/us/en/insights/industry/power-and-utilities/electrification-in-industrials.html>)).

²²⁰ See, e.g., National Grid Initial Comments at 6 (discussing preliminary findings of the ISO–NE 2050 Transmission Study, which show “significant new transmission will be needed to reliably serve” increased future loads assumed in the study (citing ISO–NE, *2050 Transmission Study* (2023), https://www.iso-ne.com/static-assets/documents/2023/08/2050_study_ma_cetwg_2023_aug_final.pdf)); Northwest and Intermountain Initial Comments at 5 n.12 (“For example, Bonneville Power Administration (‘BPA’) owns about 75 percent of the transmission lines in the Pacific Northwest. In BPA’s 2022 Transmission Service Expansion Plan cluster study, customers submitted 153 separate transmission service requests totaling 11,831 MW of transmission capacity. BPA was able to offer service (without requiring detailed studies and transmission upgrades) to only 275 MWs of those service requests.” (citing BPA, *TSR Study and Expansion Process*, at 12 (Dec. 2021), <https://www.bpa.gov/-/media/Aep/transmission/atc-methodology/2021-22sep-overview.pdf>)).

²²¹ MISO Initial Comments at 54 (“In addition, a return to load growth driven primarily by the electrification of transportation, space heating and water heating is creating a load profile that has a higher load factor and is more challenging to serve.”). Load factor refers to “[t]he ratio of the average load to peak load during a specified time interval.” U.S. Energy Info. Admin. (EIA), *Glossary* (last visited Mar. 2024), <https://www.eia.gov/tools/glossary/index.php?id=L>.

²²² NOPR, 179 FERC ¶ 61,028 at P 45.

²¹³ See, e.g., WE ACT Initial Comments at 1–2 & n.3 (citing Jeff Turrentine, NRDC, *A Roadmap for Frontline Communities* (Dec. 2019)); see also Grand Rapids NAACP Initial Comments at 8 n.20 (“[P]ower outages uniquely burden low-income communities of color ‘given that they are unable to ‘bounce back’ as quickly from events that damage food and medicine supplies’” (citing Shalanda Baker et al., *The Energy Justice Workbook 20* (2019), <https://iejusa.org/wp-content/uploads/2019/12/The-Energy-Justice-Workbook-2019-web.pdf>)).

²¹⁴ NOPR, 179 FERC ¶ 61,028 at PP 45, 51. The continuation and, in some instances, acceleration of these trends identified in the ANOPR and NOPR counters certain commenters’ concerns that changes in demand are inherently unpredictable or that existing regional transmission planning processes are adequately identifying and addressing transmission needs. Compare *infra* notes 21515–2188 and accompanying discussion, with Potomac Economics Initial Comments at 3–4 (arguing that Long-Term Regional Transmission Planning that requires speculating about future uncertainty is not advisable), and Industrial Customers Initial Comments at 10–11 (arguing that changes in demand are unpredictable).

²¹⁵ AEE Initial Comments at 1, 14 (noting that, as of 2022, “[n]ine states have also taken steps directly to promote electrification of transportation and buildings. Individuals and governments are also adopting electric vehicles; for example, light-duty electric vehicle sales have increased from 10,092 vehicles in 2011 to 459,426 vehicles in 2021, over a 4400% increase.”); Renewable Northwest Initial Comments at 20 (explaining that heat pumps installed as part of building electrification could add large new weather-dependent loads, estimated at 20,000 to 40,000 MW of incremental peak capacity by 2050 across the Pacific Northwest); see also AMP Initial Comments at 4; ISO–NE, *Operational Impact of Extreme Weather Events: Final Report on the Probabilistic Energy Adequacy Tool (PEAT) Framework and 2027/2032 Study*

many regions of the country. States and cities in the Northeast,²²³ Mid-Atlantic,²²⁴ Midwest,²²⁵ West,²²⁶ and Southeast²²⁷ have adopted binding state laws requiring emissions reductions. Moreover, with the passage of the Inflation Reduction Act in 2022, Congress has enacted legislation that will further spur investment nationwide in renewable and non-emitting resources.²²⁸

²²³ National Grid Initial Comments at 6–7 (explaining how all six states in New England have renewable energy standards and how ISO-NE’s 2050 Transmission Study demonstrates the demands that meeting those standards will place on New England’s transmission system); *id.* at 7 (explaining how the Climate Leadership and Community Protection Act enacted in New York State requires 70% renewable generation by 2030, zero-emissions by 2040, and 85% economy-wide emissions reductions by 2050, and that transmission infrastructure will be critical in meeting those goals); NESCOE Initial Comments at 15 (“Achieving a decarbonized system is required by laws and mandates in Connecticut, Maine, Massachusetts, Rhode Island, and Vermont.”).

²²⁴ DC and MD Offices of People’s Counsel Initial Comments at 18 (noting that “both Maryland and the District have adopted ambitious jurisdiction-wide decarbonization policies applicable to the [electric distribution companies] regulated by their respective public service commissions.”).

²²⁵ Illinois Commission Initial Comments at 5 (explaining that “[i]n Illinois, the Climate and Equitable Jobs Act of 2021 . . . will affect the future resource mix and demand and lead to decarbonization and electrification. For example, [it] requires Illinois to completely transition to clean energy by 2050 and facilitates electrification through the promotion of electric vehicles.”).

²²⁶ Renewable Northern Initial Comments at 6 (explaining that, “[c]urrently, 80 percent of NorthernGrid’s load is subject to state clean energy laws, and by 2040 NorthernGrid will have 65 percent carbon-free energy.”); *id.* at 21 (explaining that Washington state’s “SB 5974 sets a goal of all vehicles sold in 2030 and beyond to be [electric vehicles], with that goal becoming a mandate in 2035[.]”).

²²⁷ SREA Initial Comments at 25 (noting that North Carolina has adopted Renewable Energy and Energy Efficiency Portfolio Standards and enacted the North Carolina Carbon Plan).

²²⁸ ACOE Initial Comments at 1–2 & n.2 (projecting that “annual additions increasing from 15 GW of wind and 10 GW of utility-scale solar PV in 2020 to an average of 39 GW/year of wind additions in 2025–2026 (~2x the 2020 pace) and 49 GW/year of solar (~5x the 2020 pace), with solar growth rates increasing thereafter.” (citing REPEAT Project, *Preliminary Report: The Climate and Energy Impacts of the Inflation Reduction Act of 2022*, at 15 (2022), https://repeatproject.org/docs/REPEAT_IRA_Preliminary_Report_2022-08-12.pdf)); CARE Coalition Initial Comments at 17 (“Analysis suggests that the [Inflation Reduction Act] could more than triple clean energy production in the U.S. and lead to \$600 billion in capital investment in clean energy infrastructure.” (citing American Clean Power Ass’n, *It’s a Big Deal for Job Growth and for a Clean Energy Future* (2022), <https://cleanpower.org/blog/its-a-big-deal-for-job-growth-and-for-a-clean-energy-future/>)); Evergreen Action Initial Comments at 3–4 (discussing model showing that clean energy could comprise up to 81% of all U.S. generation as a result of increased incentives in the Inflation Reduction Act (citing John Larsen et al., Rhodium Group, *A Turning Point for US Climate Progress: Assessing the Climate and Clean Energy Provisions in the Inflation Reduction Act*

97. Customers are also driving changes in the resource mix. In addition to increasing their aggregate demand for electricity, the NOPR explained that customers, including major corporations, in many regions are increasingly demanding that load be served by renewable or non-emitting resources.²²⁹ Substantial evidence in the record supports the existence of this trend. Since 2014, for example, “commercial and industrial customers have contracted for more than 52 GW of clean energy[.]”²³⁰ Furthermore, this trend is accelerating. In 2021 alone, energy customers voluntarily contracted for “11.06 GW of clean energy.”²³¹ The record demonstrates that, going forward, this shift is projected to continue, as forecasts show that Fortune 1000 companies will have up to 85 GW of new demand for renewable energy to meet their public sustainability commitments for 2030.²³² As also noted in the NOPR, utilities in many regions have made commitments to procure most or all of their electricity from renewable or non-emitting resources. For example, Exelon,²³³ Dominion,²³⁴ AEP,²³⁵ and Southern²³⁶ have all committed to achieve net-zero emissions by 2050, and each has set an

(2022), <https://rhg.com/research/climate-clean-energy-inflation-reduction-act/>); NextEra Reply Comments at 5 (“The signing of the Inflation Reduction Act of 2022 . . . will only increase the demand for renewables in the coming years and accelerate corresponding demands on the transmission system.”).

²⁴¹ AEE Initial Comments at 12–13 (“From 2011 to 2021, the proportion of U.S. electricity generated by coal plants dropped by almost half, from 42%

on the record, those trends are projected to continue, with over 1,300 GW of wind, solar, and storage resources in interconnection queues across the country as of 2021.²⁴² With the passage of the Inflation Reduction Act in 2022, many analysts are predicting that the shift toward renewable resources will accelerate.²⁴³

100. In light of these changing demands on the transmission system, the record also affirms what the Commission has long recognized: regional transmission planning that identifies more efficient or cost-effective transmission solutions to needs helps to ensure cost-effective transmission

to under 22%” (citing U.S. Energy Info. Admin., *U.S. Electricity Generation by Major Energy Source, 1950–2021* (2022), <https://www.eia.gov/energyexplained/electricity/charts/generation-major-source.csv>); California Commission Initial Comments at 65 (citing FERC, *State of the Markets 2020* (Mar. 2021); Renewable Northwest Initial Comments at 36 (using IRP data to show that utilities in NorthernGrid plan to retire 6,573 MW of coal, 1,476 MW of natural gas, 10 MW of wind, and 18 MW of solar, by 2040). FERC’s *State of the Markets 2020* report stated that 9.6 GW of coal capacity retired in 2020, which had a noticeable effect on coal’s operating capacity share in most RTOs/ISOs. FERC, *State of the Markets 2020*, at 10, 12 (Mar. 2021). FERC’s *State of the Markets 2023* indicates that this trend is continuing, with coal generation declining 18.8% in 2023. FERC, *State of the Markets 2023*, at 4 (Mar. 2024). See also US DOE Initial Comments at App. B, pp. 8–9 (Rand et al., Lawrence Berkeley National Laboratory, *Queued Up: Characteristics of Power Plants Seeking Transmission Interconnection as of the End of 2021* (Apr. 2021)).

²⁴² See US DOE Initial Comments app. B, at p. 26 (Lawrence Berkeley National Laboratory, *Queued Up: Characteristics of Power Plants Seeking Transmission Interconnection As of the End of 2021* (Apr. 2022)) (noting that 676 GW of solar, 246 GW of wind, 213 GW of standalone battery capacity, and ~208 GW of hybrid battery capacity wait in interconnection queues across the U.S.). On the other hand, the number of coal and, relatedly, natural gas resources waiting to interconnect is limited. See *id.*; Colorado Consumer Advocates Initial Comments attach. 7, at p. 21 (“No new coal plants have been built for domestic utility electricity production since 2014[.]”); NESCOE Initial Comments at 15–16 (noting that new natural gas generation represented nearly 48% of the queue in 2017, but just 3% by March of 2022). Moreover, the updated version of the report to which US DOE cites indicates that the capacity of wind, solar, and storage in interconnection queues is still increasing. Lawrence Berkeley National Laboratory, *Queued Up: Characteristics of Power Plants Seeking Transmission Interconnection As of the End of 2022* (Apr. 2023) (noting that 947 GW of solar, 300 GW of wind, 325 GW of standalone battery capacity, and ~358 GW of hybrid storage capacity, totaling over 1900 GW, wait in interconnection queues across the country).

²⁴³ ACOE Initial Comments at 1–2 & n.2 (“[P]rojecting annual additions increasing from 15 GW of wind and 10 GW of utility-scale solar PV in 2020 to an average of 39 GW/year of wind additions in 2025–2026 (~2x the 2020 pace) and 49 GW/year of solar (~5x the 2020 pace), with solar growth rates increasing thereafter.” (quoting REPEAT Project, *Preliminary Report: The Climate and Energy Impacts of the Inflation Reduction Act of 2022*, at 15 (2022), https://repeatproject.org/docs/REPEAT_IRA_Preliminary_Report_2022-08-12.pdf)).

development for customers and can yield better returns for every dollar spent than localized or piecemeal transmission solutions.²⁴⁴ Conversely, inadequate or poorly designed transmission planning processes can lead to relatively inefficient or less cost-effective transmission investment, with customers footing the bill for piecemeal, inefficient, and less cost-effective transmission solutions designed to meet short-term or small-scale transmission needs. Given the magnitude of transmission investment needed to meet customers’ changing needs, it is essential that regional transmission planning be of sufficient scope and duration to help to ensure customers’ money is well-spent on transmission infrastructure that can efficiently and cost-effectively meet those needs. Unfortunately, we conclude that this is not the case today and that existing regional transmission planning processes are inadequate to address the emerging Long-Term Transmission Needs that are expected to increasingly drive transmission investment in the coming decades.

101. Experience with the implementation of Order No. 1000 over the last decade has highlighted a critical gap in the Commission’s existing

²⁴⁴ Order No. 1000, 136 FERC ¶ 61,051 at P 55 (“[T]he narrow focus of current planning requirements and shortcomings of current cost allocation practices create an environment that fails to promote the more efficient and cost-effective development of new transmission facilities.”); *id.* P 68 (concluding that reforms that require transmission providers to engage in regional transmission planning and evaluate proposed alternatives that “may resolve the region’s needs more efficiently or cost-effectively than solutions identified in the local transmission plans . . . will provide assurance that rates for transmission services on these systems will reflect more efficient or cost-effective solutions for the region.”); Order No. 890, 118 FERC ¶ 61,119 at P 524 (“[C]oordination of planning on a regional basis will also increase efficiency through the coordination of transmission upgrades that have region-wide benefits, as opposed to pursuing transmission expansion on a piecemeal basis.”); see also ACOE Initial Comments at 6 (demonstrating that effective regional transmission planning could significantly reduce total electric system costs compared to electric system costs that result from intrastate planning (citing Brattle-Grid Strategies Oct. 2021 Report at 12)); R Street Initial Comments at 8 (“[H]olistic transmission planning could improve economic efficiencies and save billions of dollars For example, MISO’s 2022 long-range transmission plan results include \$10 billion in transmission projects that support interconnection of 53,000 megawatts of new renewable generation and reduces other costs by \$37–\$68 billion. PJM similarly identified \$3 billion in transmission upgrades that would save billions compared to the current practice of incremental upgrades through the interconnection process.” (citing Johannes Pfeifenberger, Brattle Group, *Planning for Generation Interconnection*, at 5 (May 31, 2022), <https://www.esig.energy/event/special-topic-webinar-interconnection-study-criteria> (citation omitted))).

transmission planning and cost allocation requirements. Notwithstanding the broad recognition that additional transmission infrastructure is needed to address the drivers noted above, regional transmission planning processes across the country have yielded only limited investments in regional transmission projects. As the Commission observed in the NOPR, investment in regional transmission facilities in some regions has declined compared to prior to Order No. 1000.²⁴⁵ Moreover, across all the non-RTO/ISO regions, there has not yet been a single transmission facility selected since implementation of Order No. 1000.²⁴⁶ The record also demonstrates that within some RTO/ISO regional transmission planning processes, even where investments through the regional transmission planning process do occur, much of that investment has been in transmission projects that only address immediate reliability needs.²⁴⁷ We find that this evidence supports our conclusion that existing regional transmission planning processes are not of sufficient scope and duration to adequately or consistently identify transmission needs and associated opportunities to more comprehensively evaluate and select more efficient or cost-effective transmission solutions to those needs.

102. Indeed, in the limited instances in which transmission providers have followed processes that share many of the elements of the long-term, forward-looking, and more comprehensive regional transmission planning this

²⁴⁵ NOPR, 179 FERC ¶ 61,028 at P 39 (citing ACEG Jan. 2021 Planning Report at 25 & fig. 8); see also ACOE ANOPR Initial Comments at 4 (“Despite the potential benefits, regional transmission investment has not increased and in some regions even has declined over the past decade.”) (citing ACEG Jan. 2021 Planning Report at 25)); State Agencies Initial Comments at 23 (“Regionally planned projects have [] declined in RTOs/ISOs” (citing John C. Gravan and Rob Gramlich, NRRI Insights, *A New State-Federal Cooperation Agenda for Regional and Interregional Transmission*, at 2 (Sept. 2021), <https://pubs.naruc.org/pub/FF5D0E68-1866-DAAC-99FB-A31B360DC685>)).

²⁴⁶ NOPR, 179 FERC ¶ 61,028 at P 39 (citing LS Power ANOPR Initial Comments App. I at 18 & n.57); FERC, Staff Report, *2017 Transmission Metrics*, at 19 (Oct. 6, 2017), <https://www.ferc.gov/sites/default/files/2020-05/transmission-investment-metrics.pdf>); see also Western PIOs Initial Comments at 28 (“The Western Regional Planning Groups, with the exception of the CAISO, have not developed new projects from their current Order 1000 transmission planning process.”).

²⁴⁷ Southwestern Power Group Initial Comments at 15; PIOs ANOPR Initial Comments at 93 & n.276; see also Ari Peskoe, *Is the Utility Syndicate Forever?*, 42 Energy L.J. 1, 56–57 (2021) (explaining, for example, that in ISO–NE, all but one of the transmission projects approved through the regional transmission planning process were immediate-need reliability projects).

order requires, customers have seen clear and quantifiable benefits. For example, as the Commission observed in the NOPR,²⁴⁸ MISO's Multi-Value Project (MVP) transmission planning process proactively planned over a 20-year period for two key drivers of transmission needs: the impacts of changing state laws on the resource mix, and a large increase in the number of generator interconnection requests. To mitigate the uncertainties associated with such long-term projections of transmission needs, MISO relied on scenarios to consider a range of potential future conditions²⁴⁹ and disclosed the assumptions and inputs underlying each scenario.²⁵⁰ The MVP process then identified a portfolio of transmission projects that were projected to provide multiple kinds of reliability and economic benefits under all the alternate future scenarios studied.²⁵¹ This process resulted in MISO identifying, evaluating, and selecting transmission facilities that are estimated to generate \$2.20 to \$3.40 of benefit per dollar invested.²⁵²

103. The benefits to transmission customers of long-term, forward-looking, and more comprehensive regional transmission planning, which we discuss further below, are thus well-documented but realized all too infrequently under existing regional transmission planning processes. Relatedly, the record demonstrates that a substantial amount of new transmission investment is occurring outside of regional transmission planning processes. Because these other processes—specifically, generator interconnection processes and local transmission planning processes—are generally designed to address discrete, shorter-term needs, and do not comprehensively assess either broader transmission needs or solutions to those needs, overreliance on those processes can result in relatively inefficient or less cost-effective transmission development for customers,²⁵³ which contributes to

rates for transmission that are unjust and unreasonable.

104. The record demonstrates that significant expansion of the transmission system is occurring through one-off, piecemeal, interconnection-related network upgrades constructed in response to individual generator interconnection requests.²⁵⁴ As the Commission observed in the NOPR, the evidence shows a sharp growth in both the total cost of interconnection-related network upgrades and in the cost of such upgrades relative to generation project costs.²⁵⁵ The record indicates that the average cost of interconnection-related network upgrades is increasing over time as the transmission system is fully subscribed and demand for interconnection service outpaces transmission investment. As highlighted in the NOPR,²⁵⁶ in 2020, MISO identified the need for nearly \$2.5 billion in interconnection-related network upgrades to interconnect just 9.2 GW of generation in MISO South, and MISO expects to need over \$3 billion in interconnection-related network upgrades for interconnection in MISO West.²⁵⁷ Similarly, SPP identified the need for \$4.6 billion in interconnection-related network upgrades to interconnect just 10.4 GW of new generation.²⁵⁸

105. Record evidence also shows that increases in interconnection costs are being driven, in many cases, by an expansion in the scope and complexity of interconnection-related network upgrades.²⁵⁹ The Commission noted in

“snowballing inefficiencies created by numerous small-scale transmission band-aids, unfit to address broader generation trends, translate into excessive, unjust, and unreasonable rates borne by an already overburdened populace.”).

²⁵⁴ Pine Gate Initial Comments at 6, 8–10; PIOs Initial Comments at 9 (noting how most transmission planning is done through the generator interconnection process or local transmission planning).

²⁵³ ACOE Initial Comments at 4–5 (citing Brattle-Grid Strategies Oct. 2021 Report at 3); Clean Energy Associations Initial Comments at 5 (explaining that proactive, forward-looking transmission planning processes can reduce costs by nearly half as compared to incremental and reactive transmission planning processes); Ørsted Initial Comments at 5 (explaining that failure to proactively plan for offshore wind results in suboptimal transmission development, which can increase costs to ratepayers); Southeast PIOs Reply Comments at 2 (explaining that in the Southeast,

same time, interconnection-related network upgrades have frequently transitioned from primarily small transmission facilities that serve the needs of a limited number of interconnection customers to the size and scope of what have traditionally been considered high voltage transmission facilities. For example, interconnection-related network upgrades have recently included demolishing and rebuilding multiple 500 kV transmission lines²⁶³ and constructing long, double-circuit, 765 kV transmission lines,²⁶⁴ all at significant cost to the interconnection customer initially—and ultimately to consumers.

106. Unlike regional transmission planning processes, however, the generator interconnection process is not designed to consider how to address transmission needs more efficiently or cost-effectively beyond the discrete interconnection request (or requests) being studied. Therefore, the generator interconnection process does not look at time horizons beyond the specific interconnection request(s) being studied, comprehensively assess any transmission needs beyond those created by the specific interconnection request(s), or achieve the economies of scale in transmission investment that long-term, forward-looking, and more comprehensive regional transmission planning processes can provide.²⁶⁵

2017 as representing an increase from around 8% to over 43% of the capital cost of wind generation (citing ACEG Jan. 2021 Interconnection Report at 15); NextEra ANOPR Initial Comments at 17 (similar)).

²⁶³ NOPR, 179 FERC ¶ 61,028 at P 38 (describing interconnection-related network upgrades for a 120 MW solar plus storage project in southern Virginia to interconnect to PJM that cost as much as \$12,086/kW (citing ACEG Jan. 2021 Interconnection Report at 15)).

²⁶⁴ NOPR, 179 FERC ¶ 61,028 at P 38 (describing one interconnection-related network upgrade in SPP identified in the system impact study published in April 2021) (citing ACEG Jan. 2021 Interconnection Report at 15); ICF Sept. 2021 Interconnection Report at 3 (same); NextEra ANOPR Initial Comments at 17 (same). In 2017, for example, SPP included a 165-mile, \$1.34 billion double circuit 765 kV line in its Definitive Interconnection System Impact Study. See ACORE ANOPR Initial Comments Ex. 5, ICF Sept. 2021 Interconnection Report at 4.

107. We acknowledge that the Commission recently issued Order No. 2023, which requires transmission providers to reform their generator interconnection processes. But while Order No. 2023 aims to improve the efficient processing of interconnection queues, it does not attempt to remedy the discrete deficiency addressed in this final order: that existing regional transmission planning and cost allocation requirements do not require transmission providers to plan on a sufficiently long-term, forward-looking, and comprehensive basis. Instead, Order No. 2023 seeks to ameliorate the fact that existing generator interconnection procedures and agreements were “insufficient to ensure that interconnection customers are able to interconnect to the transmission system in a reliable, efficient, transparent, and timely manner[.]”²⁶⁶ The interconnection queue backlogs and delays that were the Commission’s focus in Order No. 2023 have arisen, in part, due to deficiencies in the existing transmission planning requirements. But the Commission found issues regarding the coordination between transmission planning and generator interconnection processes were beyond the scope of Order No. 2023 and, therefore, the Commission addressed only interconnection queue processes rather than also addressing transmission planning requirements.²⁶⁷ Consequently, this final order addresses a root cause of interconnection backlogs and delays that Order No. 2023 did not—the failure of transmission providers to plan on a sufficiently long-term, forward-looking, and comprehensive basis. Accordingly, the need to reform this deficiency persists

Comments at 10; SEIA Initial Comments at 2; Southeast PIOs Initial Comments at 37 (“The lack of any regular, formal proceeding to consider Alabama Power’s comprehensive facility investment plan is troubling and ensures that both generation and transmission are considered on a project-by-project basis. This piecemeal approach to addressing transmission needs for individual generation resource decisions will cause sticker-shock every time and an institutional aversion to broader transmission investment, especially when transmission benefits are expressly ignored.”).

²⁶⁶ Order No. 2023, 184 FERC ¶ 61,054 at P 36.

²⁶⁷ Order No. 2023, 184 FERC ¶ 61,054 at PP 1741, 1743 (finding that, although “several commenters argue in favor of greater coordination between generator interconnection and transmission planning or identify interconnection as a matter requiring interregional planning,” those comments were beyond the scope of that rulemaking proceeding and noting that “the Commission proposed reforms related to coordination between regional transmission planning and cost allocation and generator interconnection in” the docket for this final order).

despite the Commission’s reforms required by Order No. 2023.

108. While some commenters argue that transmission providers do not rely too heavily on the generator interconnection process to build transmission facilities,²⁶⁸ we find that the record indicates otherwise. Specifically, as discussed above, the increase in both the total and average cost of interconnection demonstrates how much transmission investment is occurring on a one-off, incremental basis through generator interconnection processes.²⁶⁹ The Commission has consistently and repeatedly found that interconnection-related network upgrades provide systemwide benefits,²⁷⁰ a finding which courts have upheld.²⁷¹ In turn, we find that increasingly relying on interconnection customers’ interconnection-related network upgrades to expand the capacity of the transmission system is inefficient and leads to less cost-effective transmission development than would result from long-term, forward-looking, and more comprehensive regional transmission planning, to the detriment of customers.

109. Separately, the record here also substantiates the NOPR’s preliminary

finding that the majority of investment in transmission facilities since the issuance of Order No. 1000 has been in local transmission facilities.²⁷² Commenters explain that, in RTO/ISO regions, one half of the nearly \$70 billion in aggregate transmission investments by Commission-jurisdictional transmission providers between 2013 and 2017 was approved outside of regional transmission planning processes.²⁷³ This investment trend is continuing and accelerating. For example, in 2019, PJM approved 383 transmission-owner planned supplemental projects at a total cost of \$3.75 billion, compared to only 80 regionally planned baseline projects at a total cost of \$1.27 billion. Then, in 2020, PJM approved 236 supplemental projects at a total cost of \$4.7 billion, compared to only 43 regionally planned baseline projects at a total cost of \$413 million.²⁷⁴ In MISO, baseline reliability projects and other local transmission projects have grown dramatically since 2010 and constituted 100% of approved transmission between 2018 and 2020 and 80% since 2010.²⁷⁵ From 2019 to 2021, 63% of transmission investment by the three largest transmission owners in CAISO was in local transmission projects, and Pacific Gas and Electric forecasts that of the \$13 billion it will spend on capital additions between 2022 and 2027, approximately 84% will be on local transmission projects.²⁷⁶ In ISO-NE, spending on in-kind transmission replacements, which are not part of the regional transmission planning process, has been significant. Between 2016 and 2022, over \$2.5 billion has been spent on in-kind replacement projects that have entered service and, as of 2022, an additional \$3.122 billion of in-kind replacement projects had been proposed, planned, or were under construction.²⁷⁷

110. As with the growing reliance on the generator interconnection process to identify needed transmission system improvements, local transmission planning, with its focus on the needs of individual utility footprints, does not necessarily provide sufficient, comprehensive analysis of broader

regional transmission needs. Similarly, local transmission planning processes and in-kind replacement processes do not generally assess transmission needs based on a forward-looking multi-scenario assessment that more comprehensively accounts for the benefits of transmission infrastructure.²⁷⁸ Therefore, transmission expansion in this incremental manner also misses the potential for transmission providers to identify, evaluate, and select more efficient or cost-effective transmission facilities to solve transmission needs, as well as to afford system-wide benefits that may not be achieved through piecemeal, one-off local transmission facilities. As stated above, the result is relatively inefficient or less cost-effective transmission development for customers, which contributes to rates for transmission that are unjust and unreasonable.

111. To be clear, our findings here are not intended to call into question the justness and reasonableness of either generator interconnection processes or local transmission planning processes, which each serve important roles in ensuring reliability and integrating new resources onto the transmission system.²⁷⁹ Rather, the trends regarding use of these processes, as well as in-kind replacement processes, provide additional evidence to support our finding that existing regional transmission planning and cost allocation requirements are inadequate without reform. As discussed further in the next section, we conclude that the record regarding the current and projected transmission landscape—including the investment trends and changing drivers of that investment detailed above—highlights critical deficiencies in the Commission's current regional transmission planning and cost allocation requirements. In this final order, we address those deficiencies to help to ensure that customers receive the benefits of long-term, forward-looking, and more comprehensive regional transmission planning.

2. Unjust, Unreasonable, and Unduly Discriminatory or Preferential Commission-Jurisdictional Transmission Planning and Cost Allocation Processes

112. Based on the record, including comments submitted in response to the NOPR, as discussed below, we find that there is substantial evidence to support the determination that sufficiently long-term, forward-looking, and comprehensive regional transmission planning and cost allocation to meet Long-Term Transmission Needs is not occurring on a consistent and sufficient basis. We find that the absence of sufficiently long-term, forward-looking, and comprehensive regional transmission planning processes is resulting in piecemeal transmission expansion to address relatively near-term transmission needs. We find that the status quo approach results in transmission providers undertaking investments in relatively inefficient or less cost-effective transmission infrastructure, the costs of which are ultimately recovered through Commission-jurisdictional rates. This dynamic results in, among other things, transmission customers paying more than is necessary or appropriate to meet their transmission needs, customers forgoing benefits that outweigh their costs, or some combination thereof, which results in less efficient or cost-effective transmission investments and, in turn, renders Commission-jurisdictional regional transmission planning and cost allocation processes unjust and unreasonable.

113. We therefore adopt, as modified by the discussion herein, the preliminary findings of the NOPR concerning the need for reform²⁸⁰ and, pursuant to FPA section 206, conclude that revisions to the Commission's regional transmission planning and cost allocation requirements are necessary to ensure that Commission-jurisdictional rates, terms, and conditions are just, reasonable, and not unduly discriminatory or preferential. We find that, as stated in the NOPR,²⁸¹ absent the reforms instituted by this final order, regional transmission planning processes will continue to fail to identify, evaluate, and select regional transmission facilities that can more efficiently or cost-effectively meet Long-Term Transmission Needs, requiring customers to pay for relatively inefficient or less cost-effective transmission development.

²⁷⁹ As discussed below, we separately find that specific existing requirements governing transparency in local transmission planning processes and coordination between local and regional transmission planning processes are unjust, unreasonable, and unduly discriminatory or preferential. *See infra* Local Transmission Planning Inputs in the Regional Transmission Planning Process section.

²⁸⁰ NOPR, 179 FERC ¶ 61,028 at PP 28–55.

²⁸¹ NOPR, 179 FERC ¶ 61,028 at P 33.

114. Based on the record, including the comments submitted in response to the NOPR, we find that there is substantial evidence to support the conclusion that deficiencies in the Commission's existing regional transmission planning and cost allocation requirements are resulting in Commission-jurisdictional rates that are unjust, unreasonable, and unduly discriminatory or preferential. Specifically, we find that the Commission's regional transmission planning and cost allocation requirements fail to require transmission providers to: (1) perform a sufficiently long-term assessment of transmission needs that identifies Long-Term Transmission Needs; (2) adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs; and (3) consider the broader set of benefits of regional transmission facilities planned to meet those Long-Term Transmission Needs. We find that these deficiencies render Commission-jurisdictional regional transmission planning and cost allocation processes unjust and unreasonable because they result in transmission providers failing to identify Long-Term Transmission Needs, to evaluate and select more efficient or cost-effective transmission solutions to meet those transmission needs, and to allocate the costs of transmission facilities selected to meet those transmission needs in a manner that is at least roughly commensurate with benefits. Below, we address each deficiency in turn.

115. The first deficiency is that the Commission's regional transmission planning and cost allocation requirements fail to require transmission providers to perform a sufficiently long-term assessment of transmission needs. This deficiency is present in multiple aspects of existing regional transmission planning processes, from the degree to which planning studies that identify transmission needs are sufficiently forward looking, to whether forward-looking assessments actually inform the evaluation, selection, and eventual cost allocation of regional transmission facilities. The record demonstrates that, under existing regional transmission planning and cost allocation processes, transmission providers typically identify and plan for transmission needs using a relatively near-term transmission planning horizon. Specifically, commenters have noted that most transmission planning regions do not plan beyond a 10-year transmission planning horizon. For

example, commenters point out that ISO-NE, SERTP, and NorthernGrid plan using a 10-year transmission planning horizon,²⁸² while PJM notes that it plans using two different transmission planning horizons: a 5-year transmission planning horizon for what it refers to as its short-term transmission planning process and a 6-to-15-year transmission planning horizon for what it refers to as its intermediate-term transmission planning process.²⁸³ While it is reasonable and necessary for regional transmission planning and cost allocation processes to include a near-term study of the transmission system, the absence of any consistent and sufficient longer-term assessment of transmission needs prevents transmission providers from identifying Long-Term Transmission Needs and considering regional transmission facilities that may be more efficient or cost-effective solutions to address those needs.²⁸⁴

116. This lack of a longer-term assessment of transmission needs is particularly problematic for a few reasons. First, shorter-term transmission planning fails to take advantage of the potential for efficiencies or economies of scale that regional transmission facilities can provide by allowing fewer or better designed transmission facilities to meet multiple transmission needs.

²⁸² Massachusetts Attorney General Initial Comments at 25 ("For example, the Commission's proposal to increase the required long-term transmission planning horizon to at least 20 years with 3-year reassessments would double the current long-term planning horizon for ISO-NE."); Renewable Northwest Initial Comments at 12 (citing Brattle-Grid Strategies Oct. 2021 Report at 15); Southeast PIOs Initial Comments at 12 ("The 'independent reliability planning studies . . . start with the combined local transmission plans of participating utilities,' and the results comprise the ten-year regional transmission plan." (citation omitted)); Western PIOs Initial Comments at 8–9 ("NorthernGrid conducts transmission reliability plans on a two-year cycle, with each plan covering a 10-year time horizon."); *see also* ITC Initial Comments at 9 (referring to the "broad use of a 10-year planning horizon in the existing transmission planning processes of many major planning regions[.]").

²⁸³ PJM Initial Comments at 2 n.4.

²⁸⁴ *See, e.g.,* MISO ANOPR Reply Comments at 5 ("[G]iven long-term needs of an evolving system, additional transmission is necessary to reliably serve customers now and into the future. These challenges require immediate action and further delay only increases the risk that system enhancements may not be in place in the timeframe needed."); PIOs Initial Comments at 13 ("[A] short-term outlook under-forecasts longer-term transmission needs, preventing the development of more cost-effective transmission facilities, and fails to consider how the needs of the transmission system are shifting[.]"); US DOE ANOPR Initial Comments at 10 (stating that failure to plan transmission far enough ahead results in "adverse implications for system reliability, resilience, consumers' electricity rates, and the achievement of clean energy goals.").

For example, shorter-term transmission planning fails to provide the opportunity for transmission providers to identify, evaluate, and select regional transmission facilities that could address multiple transmission needs over various time horizons.²⁸⁵ Moreover, shorter-term transmission planning fails to create opportunities to "right size" the replacement of aging transmission facilities to address multiple transmission needs over the longer term.²⁸⁶ Second, constructing large (e.g., high voltage or long distance) transmission facilities comes with long lead times: planning, permitting, and building regional transmission facilities can often take more than ten years.²⁸⁷ As an example, the MVP initiative in the MISO region took a decade to move from approval by the MISO Board of Directors in 2011 to completion of most of the projects by 2021, and this period of 10 years does not even account for the significant transmission facility development efforts that occurred prior to the MISO Board of Directors' approval.²⁸⁸ Finally, the useful life of

²⁸⁵ ACORE Initial Comments at 4 ("The narrowly focused current approaches [to transmission planning] do not identify opportunities to take advantage of the large economies of scale in transmission that come from 'up-sizing' reliability projects to capture additional benefits, such as congestion relief, reduced transmission losses, and facilitating the more cost-effective interconnection of the renewable and storage resources needed to meet public policy goals." (quoting Brattle-Grid Strategies Oct. 2021 Report at 3)); PIOs ANOPR Initial Comments at 10–11; SEIA ANOPR Initial Comments at 14.

²⁸⁶ ACORE Initial Comments at 4 ("[I]n-kind replacement of aging existing facilities misses opportunities to better utilize scarce rights-of-way for upsized projects that can meet multiple other needs and provide additional benefits, thus driving up costs and inefficiencies." (quoting Brattle-Grid Strategies Oct. 2021 Report at 3)). PJM's long-term assessment of the transmission system ostensibly uses a 15-year transmission planning horizon, for example, but does not account for changes to the generation mix beyond a 5-year period. *See* Concerned Scientists ANOPR Initial Comments at 10 & n.11 ("Generation additions are unchanged in the 15-year study period, as the input assumption has no additional information that would expand the set of generators included in the forecast."); PSEG ANOPR Initial Comments at 11 (stating that "in practice only new resources that are near the end of the interconnection queue process and have signed an Interconnection Service Agreement are considered in the RTEP base case.").

²⁸⁷ AEP Initial Comments at 11; Nevada Commission Initial Comments at 7 n.24 (noting that it took over seven years between the request to include a transmission line in an Integrated Resource Plan (IRP) and the in-service date, which did not include the lead time for developing the underlying application) PIOs Initial Comments at 14 ("[A] 20-year planning horizon was necessary given the time needed to site, permit, and construct transmission facilities or because states have longer-term public policy goals."); Renewable Northwest Initial Comments at 5; SEIA Initial Comments at 6.

²⁸⁸ AESL Consulting, *A Transmission Success Story: The MISO MVP Transmission Portfolio*, at 39 (2021).

transmission assets generally far exceeds even 20 years, so a 10-year transmission planning horizon is much too short to capture all of the benefits that regional transmission facilities can provide.²⁸⁹

117. Thus, relying solely on shorter-term transmission planning and studies fails to identify Long-Term Transmission Needs and, consequently, undervalues or entirely ignores the benefits of transmission investments to meet those needs. Moreover, the likelihood that near-term assessments will fail to identify Long-Term Transmission Needs and more efficient or cost-effective regional transmission facilities to meet those needs is higher during periods of rapid change, as the electric sector is now experiencing, during which the need for transmission infrastructure is expected to grow considerably.²⁹⁰ We find that continuing with the status quo approach is resulting in transmission providers undertaking investments in relatively inefficient or less cost-effective transmission infrastructure, the costs of which are ultimately recovered through Commission-jurisdictional rates.²⁹¹ As a result, among other things, customers are paying more than necessary or appropriate to meet their transmission needs, forgoing benefits that outweigh their costs, or some combination thereof, which results in less efficient or cost-effective transmission investments and, in turn, renders Commission-jurisdictional regional transmission planning and cost allocation processes unjust and unreasonable.

118. The second deficiency is that the Commission's existing regional transmission planning and cost allocation requirements fail to require transmission providers to account adequately on a forward-looking basis

for known determinants of Long-Term Transmission Needs. This deficiency is related to the first deficiency in the sense that both relate to the failure of the existing transmission planning requirements to require transmission providers to adequately plan for the foreseeable future. We find that, even following Order Nos. 890 and 1000, transmission providers have adopted widely divergent approaches to determining the factors that are relevant to identifying transmission needs within regional transmission planning.²⁹² Specifically, as commenters note, some existing regional transmission planning processes ignore trends in future generation and the impact of extreme weather.²⁹³ Other commenters note that certain regional transmission planning processes ignore state laws or utility goals.²⁹⁴ In addition to failing to

²⁹² ELCON Initial Comments at 3 (“While regional differences are important to consider, too much flexibility was provided to transmission providers in Order No. 1000 that . . . created a patchwork of planning processes further complicating planning and fostering additional balkanization of the grid[.]”); NOPR, 179 FERC ¶ 61,028 at P 50.

²⁹³ GridLab Initial Comments at 4–5 (noting that SPP does not consider extreme weather events in its transmission plan); Grid Strategies July 2021 Extreme Weather Report at 5 (“[T]ransmission’s value for making the grid more resilient against severe weather and other unexpected threats is not typically accounted for in transmission planning and cost allocation analyses. Grid operator transmission planning processes typically assume normal electricity supply and demand patterns, and in most cases do not account for the value of transmission for increasing resilience.”); Renewable Northwest Initial Comments at 4, 8 (explaining that regional transmission planning in the Pacific Northwest does not model extreme weather events and generally does not reflect publicly available data such as utility IRPs or carbon reduction goals); *see also* Brattle-Grid Strategies Oct. 2021 Report at 36 (stating that production cost simulations that are typically used to estimate the economic benefit of regional transmission facilities assume no extreme weather events); SPP Market Monitor ANOPR Initial Comments at 3 & n.5 (describing that even SPP’s more forward-looking scenario analysis of an emerging technology case in its Integrated Transmission Plan presently underestimates the actual growth of renewables so much that “[w]ind capacity in service today (29.8 GW) already exceeds wind levels projected in both 2019 ITP futures that go out to 2029”).

²⁹⁴ Acadia Center and CLF Initial Comments at 1 (“Order No. 1000 has failed to require public utility transmission providers to align their transmission planning and funding processes with state policies and objectives.” (citing Regulatory Assistance Project, *FERC Transmission: The Highest-Yield Reforms*, at 4 (July 2022), <https://www.raponline.org/wp-content/uploads/2023/09/rap-littell-prause-weston-FERC-transmission-highest-yield-reforms-2022-july.pdf>)); Renewable Northwest Initial Comments at 12 (citing Brattle-Grid Strategies Oct. 2021 Report at 15, which states that WestConnect, for example, does not include planning inputs that extend beyond generic, baseline projects nor “knowable information about enacted public policy mandates, publicly stated utility plans, and/or consumer procurement targets[.]”); SREA Initial Comments at 25 (stating that “SERTP relies entirely on member utilities to self-nominate transmission study requests regarding

adequately account for factors that shape the resource mix, commenters also assert that current regional transmission planning processes fail to account for factors that will shape future load, particularly new loads associated with electrification trends like, for example, electric vehicles²⁹⁵ and data centers.²⁹⁶ Although transmission providers in some transmission planning regions account for a wider range of the factors that drive Long-Term Transmission Needs when performing regional transmission planning studies than do others,²⁹⁷ we find that transmission providers are not consistently or sufficiently accounting on a forward-looking basis for the known determinants of Long-Term Transmission Needs or accounting for such known determinants in a manner that ensures the identification and evaluation of more efficient or cost-effective regional transmission facilities to meet Long-Term Transmission Needs.

119. We recognize there is inherent uncertainty in forecasting,²⁹⁸ and we

public policy, meaning if utilities do not provide recommendations or requests, no SERTP study is completed. For instance, in 2021, SERTP stated, “[t]he SERTP did not receive any input or proposals for possible transmission needs driven by Public Policy Requirements for the 2021 planning cycle. Therefore, no possible transmission needs driven by Public Policy Requirements have been identified for further evaluation of potential transmission solutions in the 2021 SERTP planning cycle.” (emphasis in original).

²⁹⁵ *See, e.g.*, Clean Energy Buyers Initial Comments at 7–8; National Grid Initial Comments at 8; *see also* AEE ANOPR Initial Comments at 18 (stating that MISO projects electrification effects on load in its long-term regional transmission planning, but how other transmission providers account for electrification trends is not consistent or transparent).

²⁹⁶ *See supra* note 2166; Rocky Mountain Institute Supplemental Comments at 1 (“Technology companies have begun requesting large interconnections for data centers that require increased electricity supply to power generative artificial intelligence.”); WIRES Supplemental Comments at attach. 1, p. 36 (Rob Gramlich, et al., *Fostering Collaboration Would Help Build Needed Transmission* (Feb. 2024)) (“Load growth is rising in much of the country, and it is happening in a way that is hard for any single entity to assess on their own. It varies by local area due to factors such as manufacturing plant and data center additions, plus expectations for end-use electrification and penetration of electric vehicles.”).

²⁹⁷ *See, e.g.*, Renewable Northwest Initial Comments at 11, 14–15 (discussing how the MISO transmission planning process accounts for the future resource mix); Western PIOs Initial Comments at 23–24, 26–27 (explaining forward-looking aspects of the CAISO transmission planning process).

²⁹⁸ We acknowledge NRG’s comment that forecasting is inherently uncertain. NRG Initial Comments at 10–12. Sufficiently long-term, forward-looking, and comprehensive regional transmission planning and cost allocation, however, is better than a lack of planning. The Commission may, by applying its expertise and experience to the record, determine what type and amount of transmission planning results in a just and

²⁸⁹ SEIA Initial Comments at 6; US DOE Initial Comments at 33 (noting that transmission assets can have a useful life of at least 40 years).

²⁹⁰ US DOE ANOPR Initial Comments at 10 (“Relying on successive small transmission expansion projects to meet foreseeable long-term needs may lead to the need for expensive retrofits (at customers’ expense) at a later date. Economies of scale and network economies suggest that an initial larger-scale buildout will often represent a lower-cost solution.”); Midcontinent Independent System Operator, *MTEP21 Report Addendum: Long Range Transmission Planning Tranche 1 Portfolio Report*, at 6 (July 28, 2022), <https://cdn.misoenergy.org/MTEP21%20Addendum-LRTP%20Tranche%201%20Report%20with%20Executive%20Summary625790.pdf> (“While the Tranche 1 Portfolio is the result of MISO’s long-range planning process being executed for only the second time, the rapid change within the industry will require that it become a more routine aspect of the MISO planning process going forward.”).

²⁹¹ *See, e.g.*, S.C. Pub. Serv. Auth., 762 F.3d at 56–59 (explaining that transmission planning processes are practices affecting rates pursuant to Section 206 of the FPA).

agree with Industrial Customers that current transmission planning is based on known and measurable factors.²⁹⁹ However, we find, based on this record, that the universe of known and measurable factors that drive regional transmission needs extends beyond those that transmission providers currently consider as part of their regional transmission planning processes. Specifically, the record demonstrates that a multitude of factors like reliability needs driven by the impact of extreme weather, trends in future generation additions and retirements, load growth, Federal, federally-recognized Tribal, state, and local laws, and utility goals increasingly shape Long-Term Transmission Needs, are known and identifiable, and have reasonably predictable effects, especially in the aggregate.

120. As noted above, the record shows that the increasing frequency, duration, and intensity of extreme weather events are driving changes in Long-Term Transmission Needs to maintain system reliability.³⁰⁰ Additionally, demand growth is a major driver of Long-Term Transmission Needs, and contrary to commenter assertions,³⁰¹ the record shows that evolving trends in load

reasonable rate. *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d at 55 (“[I]n rate-related matters, the court’s review of the Commission’s determination is particularly deferential because such matters are either fairly technical or ‘involve policy judgements that lie at the core of the regulatory mission.’” (citing *Alcoa Inc. v. FERC*, 564 F.3d 1342, 1347 (D.C. Cir. 2009))). “The court owes the Commission ‘great deference’ in this realm because ‘[t]he statutory requirement that rates be ‘just and reasonable’ is obviously incapable of precise judicial definition’ and ‘the Commission must have considerable latitude in developing a methodology responsive to its regulatory challenge[.]’” *Id.* (citing *Morgan Stanley Cap. Grp. v. Pub. Util. Dist. No. 1*, 554 U.S. 527, 532 (2008); *Am. Pub. Gas Ass’n v. FPC*, 567 F.2d 1016, 1037 (D.C. Cir. 1977)).

²⁹⁹ Industrial Customers Initial Comments at 11.
³⁰⁰ ACEG Initial Comments at 63 (“[T]he need to improve regional and interregional planning arises from the transformative changes occurring with respect to resource diversity, energy market efficiencies, technological changes, operational innovations and resiliency to withstand severe weather events. If transmission facilities are not constructed, these are all benefits that would otherwise be forfeited.”); NERC Initial Comments at 6; Evergreen Action Initial Comments at 2 (“[A]dditional transmission built under improved planning procedures would [] create large reliability benefits. With increasing extreme weather events due to climate change—including wildfires, winter storms, hurricanes, and more—additional transmission infrastructure and grid improvements are increasingly necessary for resilience purposes.”); WE ACT Initial Comments at 2 (“Requiring public utility transmission providers to consider extreme weather events in Long-Term Regional Transmission Planning is a positive step towards addressing grid reliability in the face of more frequent and intensifying weather events.”).

³⁰¹ See, e.g., Industrial Customers Initial Comments at 8–10 (arguing that demand is growing more slowly than in previous periods).

growth due to data centers, electrification, and industrial growth are driving Long-Term Transmission Needs.³⁰² Similarly, state laws, utility integrated resource plans and resource procurements, and other regulatory actions necessarily affect Long-Term Transmission Needs for Commission-jurisdictional transmission services.³⁰³ Several commenters also support the broader consideration of anticipated generation retirements and interconnection requests in regional transmission planning processes because those factors shape the future resource mix and, therefore, Long-Term Transmission Needs.³⁰⁴ Relatedly, many commenters highlight the impact of utility goals on the resource mix because such goals will impact transmission needs.³⁰⁵ Yet, as described above, existing regional transmission planning processes frequently undervalue or entirely omit consideration of some or all of these factors. And while some existing regional transmission planning

³⁰² See, e.g., Northwest and Intermountain Initial Comments at 5 n.12 (“For example, Bonneville Power Administration (‘BPA’) owns about 75 percent of the transmission lines in the Pacific Northwest. In BPA’s 2022 Transmission Service Expansion Plan cluster study, customers submitted 153 separate transmission service requests totaling 11,831 MW of transmission capacity. BPA was able to offer service (without requiring detailed studies and transmission upgrades) to only 275 MWs of those service requests.” (citing BPA, *TSR Study and Expansion Process*, at 12 (Dec. 7, 2021), <https://www.bpa.gov/-/media/Aep/transmission/atc-methodology/2021-22tsep-overview.pdf>)); John Wilson and Zach Zimmerman, *The Era of Flat Demand is Over*, Grid Strategies, at 3, 6 (Dec. 2023), <https://gridstrategiesllc.com/wp-content/uploads/2023/12/National-Load-Growth-Report-2023.pdf> (noting the 5-year load growth forecast has nearly doubled from 2.6% to 4.7% and “transmission investments need to increase just to keep up with demand”).

³⁰³ See, e.g., Acadia Center and CLF Initial Comments at 8 (“State laws are . . . essential considerations in planning transmission . . . as state laws drive substantial procurements of energy resources along with the concomitant need for additional transmission, as well as repurposed transmission and non-transmission grid solutions.”); AEE Initial Comments at 10 (noting that “[a]s of September 2020, 38 states and the District of Columbia had adopted renewable portfolio standards, and 21 states (plus the District of Columbia and Puerto Rico)—representing more than half of the U.S. population—include a target of 100% renewable energy by 2050 or sooner. Many of these requirements have been enacted in statute and are binding on utilities and retail energy providers.”).

³⁰⁴ See, e.g., Pattern Energy Initial Comments at 26 (“[T]he generation interconnection queues are indicative of the market and should also be a major source for generation assumptions in scenario planning (both near-term and long-term).”); SEIA Initial Comments at 9.

³⁰⁵ See, e.g., Renewable Northwest Initial Comments at 6; SREA Initial Comments at 41–46 (“The major utility announcements of achieving net zero or some approximation affects the marketplace, especially in the [S]outheast.”).

processes do a better job than others of incorporating different components of long-term, forward-looking, and more comprehensive regional transmission planning, the Commission’s existing regional transmission planning requirements do not ensure that factors influencing future transmission will be sufficiently accounted for in that planning.

121. The failure to adequately consider such factors delays planning for the transmission system’s changing operational needs until shortly before those transmission needs manifest. As a result, existing transmission planning processes are piecemeal and fail to take advantage of economies of scale in transmission investment or opportunities to address multiple transmission needs over multiple time horizons.³⁰⁶ We find that engaging in regional transmission planning without adequate consideration of such factors leads to transmission investment that is not more efficient or cost-effective and renders Commission-jurisdictional regional transmission planning and cost allocation processes unjust and unreasonable.³⁰⁷

122. Third, the record demonstrates that the Commission’s regional transmission planning and cost allocation requirements fail to require transmission providers to adequately consider the broader set of benefits of regional transmission facilities planned to meet Long-Term Transmission Needs.³⁰⁸ For example, commenters note that many regional transmission planning processes focus too narrowly only on some benefits.³⁰⁹ For instance,

³⁰⁶ PIOs Initial Comments at 10–11; Renewable Northwest Initial Comments at 8 (citing Brattle-Grid Strategies Oct. 2021 Report at iii, iv).

³⁰⁷ See, e.g., AEE Initial Comments at 10 (“Failing to take any of [the Commission-proposed factors] into consideration in developing long-term scenarios would risk under investment in needed regional transmission projects to meet transmission needs and potential[ly] result in unjust and unreasonable rates for transmission service.”); New Jersey Commission Initial Comments at 3–9 (arguing that “[e]nsuring just and reasonable rates requires mandating long-term, multi-value, and portfolio based transmission planning.”).

³⁰⁸ See Order No. 1000, 136 FERC ¶ 61,051 at P 624 (declining to prescribe “a particular definition of ‘benefits’”).

³⁰⁹ Massachusetts Attorney General ANOPR Initial Comments at 22 (“New England’s siloed approach to transmission planning inhibits identification of multi-value solutions.”) As part of ISO-NE’s Boston 2028 Request for Proposals, “[i]n focusing on cost-effectively solving reliability needs alone, ISO-NE rejected all but one of thirty-six proposals. While ISO-NE rejected some of these proposals for technical reasons, it eliminated several due to cost considerations alone.”); PIOs Initial Comments at 10 (“[T]he vast majority of current transmission projects are focused solely either on network reliability or connecting the next

Continued

the Brattle-Grid Strategies Report concludes that “most of [the Nation’s recent transmission] investment addresses individual local asset replacement needs, near-term reliability compliance, and generation-interconnection-related reliability needs without considering a comprehensive set of multiple regional needs and system-wide benefits.”³¹⁰ As PIOs argue, the Commission’s existing regional transmission planning and cost allocation requirements do not require that transmission providers assess “opportunities to benefit from economies of scale that come from ‘right-sizing’ and strategic, comprehensive planning of transmission portfolios and projects to capture additional benefits”³¹¹ Other regional transmission planning processes fail entirely to consider cost savings associated with certain transmission facilities.³¹²

123. Based on the record, we find that, as with the universe of known and measurable factors driving transmission needs, the benefits that regional transmission facilities provide extend beyond those benefits that transmission providers currently consider as part of their regional transmission planning and cost allocation processes.³¹³ Failing to adequately identify and consider the benefits of such transmission facilities may lead to relatively inefficient or less cost-effective transmission

generator in the interconnection queue and ignore any other potential benefits, possible economies of scale or other efficiencies that might occur by considering multiple future needs [M]ultiple quantifiable benefits to transmission . . . are being ignored in the transmission planning process.”).

³¹⁰ Brattle-Grid Strategies Oct. 2021 Report at 2.

³¹¹ PIOs Initial Comments at 10–11. The benefits cited by PIOs “include congestion relief, reduced transmission losses, resiliency to extreme weather events, increased flexibility to respond to changing market or system conditions, and facilitating larger regional or interregional solutions for cost effective interconnection of the renewable and storage resources needed to meet public policy goals.” *Id.* at 11.

³¹² SREA Initial Comments at 24 (“SERTP participants explained that SERTP is unable to conduct adjusted production cost savings, because none of the utilities involved in SERTP have the software capable of doing so. In effect, the ‘Economic Planning Studies’ only evaluate the costs of potential upgrades to the system, but none of the benefits.”).

³¹³ We disagree with Potomac Economics’ arguments that the sole benefit of transmission is alleviating congestion and that congestion is primarily an economic issue, so investment in alleviating congestion should not exceed the benefit of doing so. See Potomac Economics Initial Comments at 3–4. As discussed *infra* in the Evaluation of the Benefits of Regional Transmission Facilities section alleviating congestion is just one of many potential benefits that transmission infrastructure provides, and transmission benefits beyond solving congestion are considered by transmission providers in regional transmission planning processes today.

development. In particular, the cost-benefit analyses that transmission providers often use as part of the evaluation process may fail to identify more efficient or cost-effective regional transmission facilities for selection because they provide an inaccurate portrayal of the comparative benefits of different transmission facilities. Thus, the failure to adequately consider the benefits of regional transmission facilities results in, among other things, transmission customers forgoing benefits that may significantly outweigh their costs, which results in less efficient or cost-effective transmission investments and, in turn, contributes to Commission-jurisdictional rates that are unjust and unreasonable.

124. Given our findings above concerning the deficiencies in existing transmission planning requirements, and our conclusion that long-term, forward-looking, and more comprehensive regional transmission planning is needed, we also conclude that existing cost allocation requirements are deficient and must be modified to properly account for Long-Term Regional Transmission Planning. The Commission has long recognized the “close relationship between transmission planning, which identifies needed transmission facilities, and the allocation of costs of the transmission facilities in the plan,”³¹⁴ and that cost allocation issues will often determine whether transmission providers and customers support the construction of new facilities.³¹⁵ Furthermore, experience with Order No. 1000 has reinforced the critical role that states play in the development of new transmission infrastructure, particularly at the regional level, where transmission projects may physically span, and their costs may be allocated across, multiple states. As the Commission discussed in the NOPR and we continue to find in this final order, facilitating state regulatory involvement in the cost allocation process could minimize delays and additional costs associated with state and local siting proceedings.³¹⁶

125. Given the link between cost allocation and transmission planning, it is essential that cost allocation requirements for Long-Term Regional Transmission Facilities are appropriately tailored to the new Long-Term Regional Transmission Planning requirements of this order, particularly

given the anticipated long-lead time for any regional transmission facilities developed and regionally cost allocated through this final order. Without proper alignment of the regional transmission planning and cost allocation requirements, it is less likely that transmission facilities selected in Long-Term Regional Transmission Planning will be developed, which would undermine the essential purpose of the regional transmission planning process, namely, the development of more efficient or cost-effective regional transmission facilities.

126. We find that the Commission’s current cost allocation requirements, which were designed and established in the context of existing Order No. 1000 regional transmission planning processes, are insufficient to appropriately allocate costs associated with regional transmission facilities that are selected in accordance with the new Long-Term Regional Transmission Planning requirements that we establish in this final order. The Commission’s existing Order No. 1000 cost allocation requirements contemplate the application of differing cost allocation methods to different types of transmission facilities. But we find that Long-Term Regional Transmission Planning, which accounts for multiple drivers of Long-Term Transmission Needs and results in Long-Term Regional Transmission Facilities that produce a broader set of benefits, warrants a different approach to cost allocation for such transmission facilities. Likewise, existing Order No. 1000 regional transmission planning processes do not mandate the consideration of specific benefits that we believe are appropriately considered as part of Long-Term Regional Transmission Planning. New information concerning these benefits uncovered through the transmission planning process may be relevant when allocating the costs of Long-Term Regional Transmission Facilities in a manner that is at least roughly commensurate with their benefits.³¹⁷ Importantly, existing cost allocation requirements do not provide a dedicated process through which states have an opportunity to participate in the development of regional cost allocation methods. We conclude such a role is particularly relevant to Long-Term Regional Transmission Planning, given: (1) the lengthy planning horizon over

³¹⁴ Order No. 1000, 136 FERC ¶ 61,051 at P 496.

³¹⁵ Order No. 890, 118 FERC ¶ 61,119 at P 557; see also Order No. 1000, 136 FERC ¶ 61,051 at P 496.

³¹⁶ NOPR, 179 FERC ¶ 61,028 at P 301; *infra* Regional Transmission Cost Allocation section.

³¹⁷ *Ill. Commerce Comm’n v. FERC*, 576 F.3d 470, 477 (7th Cir. 2009) (*ICC v. FERC I*); Order No. 1000, 136 FERC ¶ 61,051 at PP 622, 639 (requiring costs of regional transmission facilities to be allocated in a manner that is at least roughly commensurate with estimated benefits).

which transmission projects might be identified, selected, and ultimately constructed; (2) the resultant increased uncertainty for Long-Term Regional Transmission Facilities; and (3) accordingly, the increased importance for state engagement regarding cost allocation to increase the likelihood such facilities obtain needed siting approvals from the states and are thus timely and cost-effectively developed. We therefore believe that it is both necessary and appropriate to establish specific cost allocation requirements that are tailored to the Long-Term Regional Transmission Planning reforms in this final order.

127. Based on the record, including comments submitted in response to the NOPR, we find that there is substantial evidence demonstrating that Long-Term Regional Transmission Planning and cost allocation to identify and plan for Long-Term Transmission Needs does not occur on a consistent and sufficient basis.³¹⁸ We find, in large part, that this is because of the deficiencies that we have identified above in the Commission's existing regional transmission planning and cost allocation requirements. In addition, we find that, in the absence of sufficiently long-term, forward-looking, and comprehensive regional transmission planning and cost allocation processes, transmission providers are meeting many transmission needs by identifying transmission solutions and developing transmission facilities through other processes, *i.e.*, outside of the regional transmission planning and cost

allocation processes,³¹⁹ or, as discussed above, in response to near-term reliability needs,³²⁰ which may not identify the more-efficient or cost-effective solution.

128. To reiterate, the fact that transmission facilities are being identified and built outside of regional transmission planning processes and in response to near-term reliability needs is not inherently problematic. In many instances, as some commenters point out,³²¹ those processes may be well equipped to identify necessary and appropriate transmission solutions. Rather, the problem is that incremental and piecemeal expansion of the transmission system outside of regional transmission planning process misses the potential for transmission providers to identify, evaluate, and select more efficient or cost-effective transmission solutions to solve Long-Term Transmission Needs, as well as to afford system-wide benefits that may not be achieved through one-off transmission system upgrades.³²² To the extent that transmission providers may not be identifying and evaluating the more efficient or cost-effective transmission solutions needed to meet underlying transmission needs, including Long-Term Transmission Needs, over time, consumers will bear the costs of relatively inefficient or less cost-effective piecemeal transmission investment and expansion.³²³

³¹⁸ See New Jersey Commission Initial Comments at 8 (explaining that, outside of limited circumstances, PJM, Florida, ISO-NE, Southeastern Regional, South Carolina Regional, WestConnect, NorthernGrid, NYISO, SPP, and CAISO do not conduct multi-driver or portfolio transmission planning, which has required ratepayers to pay for tens of billions of dollars in unnecessary transmission projects); NextEra ANOPR Initial Comments at 71 ("While there are examples of longer-term planning currently being utilized by some regions, such as MISO's annual 15-year Futures assessment or SPP's 20-year Integrated Transmission Plan run every five years, there is no standard as to what time horizon long-term planning must study, nor how often this planning should be done. Further, no standards or guidelines exist as to what should be included in such long-term planning to ensure that customers are charged just and reasonable rates for the most efficient and cost-effective investments given the most comprehensive and up-to-date information available."); Western PIOs Initial Comments at 4–28 (arguing that in the Western United States transmission planning outside of CAISO is not developed and is ineffective); Brattle-Grid Strategies Oct. 2021 Report at 13–15 & tbl. 2 (documenting inconsistent "use of proactive, scenario-based, multi-value processes" across various planning authorities, including NYISO, CAISO, MISO, PJM, ISO-NE, Florida, Southeast Regional, and South Carolina").

³¹⁹ See, e.g., LS Power Initial Comments at 46–50; PIOs Initial Comments at 9–10 (explaining that about half of the approximately \$70 billion in aggregate transmission investment by Commission-jurisdictional transmission owners in RTO/ISO regions was approved outside of regional transmission planning processes).

³²⁰ *Supra* note 309.

³²¹ E.g., Duke Initial Comments at 7.

³²² See, e.g., ACORE Initial Comments at 8 ("For example, two solutions to address a particular reliability need may offer vastly different total system-wide benefits. Thus, the higher-cost transmission solutions can actually result in significantly lower net cost from a system-wide perspective.") (quoting Brattle-Grid Strategies Oct. 2021 Report at 30); Clean Energy States Initial Comments at 2 ("[T]he one-plant-at-a-time approach to transmission upgrades results in a patchwork approach that drives up costs and misses opportunities for improvements to the system as a whole."); Exelon Initial Comments at 5.

³²³ Michigan State Entities Initial Comments at 1–2 (explaining concerns that the lack of long-term transmission planning has led to significantly higher residential rates and how the problem will worsen if transmission investment does not reflect changes in the resource mix and demand); New Jersey Commission Initial Comments at 6–7 (noting PJM analysis showing transmission upgrades to interconnect 87.1 GW of a variety of resources, including offshore wind, would cost \$3.2 billion if done through holistic transmission planning whereas connecting only 15.4 GW of offshore wind would cost \$6.4 billion if done through the interconnection queue process, and estimating that the interconnection of 87.1 GW through the interconnection queue would increase the cost to

129. We find that the concerns arising from the absence of sufficiently long-term, forward-looking, and comprehensive regional transmission planning and cost allocation processes and the corresponding failure by transmission providers to identify and evaluate more efficient or cost-effective transmission solutions to Long-Term Transmission Needs are exacerbated by the fact that transmission needs in most transmission planning regions are drastically changing. Contrary to the claims of some commenters, we are not promulgating this order in an attempt to steer the resource mix and demand³²⁴ based on a preference for certain resources over others.³²⁵ Instead, the Commission is reacting to well-documented factors, which the record demonstrates are driven by exogenous forces beyond the Commission's jurisdiction or control, including, but not limited to, the increasing frequency of extreme weather events, customer preferences, demand growth, economic and technological trends, and Federal, federally-recognized Tribal, state, and local policies.³²⁶

consumers by over \$30 billion compared to holistic transmission planning); PIOs Initial Comments at 8 (noting how deficiencies in the Commission's regional transmission planning processes have "led to billions of dollars in excessive costs for consumers." (citing Brattle-Grid Strategies Oct. 2021 Report at 1–13 (Section 1))).

³²⁴ Consumer Organizations Initial Comments at 1–2; ELCON Initial Comments at 9; SERTP Sponsors Initial Comments at 16–20. *But see* SEIA Reply Comments at 2–3 ("The NOPR does make 'repeated references' to the changing resource mix. But that is not because the NOPR will 'promote a transition to a more renewables-heavy electric system.' The NOPR makes these references because the resource mix is, in fact, changing. The question before the Commission is not whether to promote or impede that change, but how to address the needs of the grid as a result of that inevitable change." (internal quotations omitted)); New Jersey Commission Reply Comments at 2 ("The Commission is . . . trying to ensure the electricity system can reliably and efficiently achieve the generation mix that state policymakers and voluntary consumers—not the Commission—have chosen. Ensuring that these customers are served at the lowest possible cost while maintaining reliability is entirely consistent with and indeed required in order to meet the dictates of the FPA. In other words, the Commission is acting to ensure transmission planning processes account for current realities and meet evolving consumer needs at a total cost that is just and reasonable." (internal citations omitted)).

³²⁵ See, e.g., Ohio Commission Federal Advocate Initial Comments at 4–6 (arguing that the Commission's purpose in issuing the NOPR was to promote an aspirational renewable future and achieve narrow environmental objectives); Undersigned States Reply Comments at 7 (arguing that the Commission is forcing ratepayers to subsidize forms of energy by socializing the cost of a transmission build out).

³²⁶ See New Jersey Commission Initial Comments at 3 ("The Commission is not proposing to unduly favor, mandate, or subsidize forms of generation but is rather seeking to ensure that the bulk electricity

Continued

130. In response to commenters, we acknowledge that integrated resource planning processes, where they exist, shape the resource mix and can often include forms of proactive transmission planning. As stated in Order No. 1000, we reiterate that “the regional transmission planning process is not the vehicle by which integrated resource planning is conducted.”³²⁷ Indeed, this final order does not aim to affect—either facilitate or hinder—any changes or decisions that occur outside of the Commission’s jurisdiction. Instead, because practices directly affecting Commission-jurisdictional rates, terms, and conditions of service for interstate transmission and wholesale electricity are the exclusive jurisdiction of the Commission, we must ensure that Commission-jurisdictional processes associated with regional transmission planning and cost allocation result in rates that are just and reasonable and not unduly discriminatory or preferential. To this end, this final order is focused on ensuring that regional transmission planning processes are adequately *accounting* for the changes occurring outside of the Commission’s jurisdiction, including the resource decisions that are the exclusive jurisdiction of states.³²⁸ Additionally, to the extent that integrated resource planning processes include forms of transmission planning, such planning can be complementary to Commission-jurisdictional regional transmission planning processes but cannot take the place of such processes. This is not to diminish the importance of integrated resource planning processes, which serve a critical role in shaping the generation mix and transmission infrastructure. In recognition of this role, this final order requires transmission providers to consider integrated resource planning as a factor when conducting Long-Term Regional Transmission Planning. But, as discussed below, we conclude that integrated resource planning is appropriately considered as *one of several* categories of factors used to develop Long-Term Scenarios and

system maintains reliability and satisfies evolving consumer demand . . .”).

³²⁸ See *PJM Power Providers Grp. v. FERC*, 88 F.4th 250, 275 (3d Cir. 2023) (holding that the Commission is “unambiguously authorize[d] . . . to take state policies into account to the extent that such policies affect [the Commission’s] statutorily prescribed area of focus . . .”); see also *Elec. Power Supply Ass’n v. Star*, 904 F.3d 518, 524 (7th Cir. 2018) (approving of the Commission’s decision to take state zero-emissions credit systems like that in Illinois “as givens and set out to make the best of the situation [these systems] produce”).

identify Long-Term Transmission Needs.

131. In response to commenters that argue regional transmission facilities may not address local transmission needs such that a local transmission facility would still be needed,³²⁹ we acknowledge that regional transmission facilities are not necessarily always a more efficient or cost-effective solution to address local transmission needs, and nothing in this final order requires transmission providers to rely on regional transmission facilities to address exclusively local transmission needs. Instead, this final order identifies deficiencies in existing Commission-jurisdictional regional transmission planning processes that lead transmission providers to fail to identify Long-Term Transmission Needs and fail to identify, evaluate, or select more efficient or cost-effective transmission solutions to meet those transmission needs. As a result of these deficiencies, transmission providers may undertake relatively inefficient investments in transmission infrastructure by missing opportunities to identify regional transmission facilities that bring economies of scale or address multiple transmission needs over different time horizons, including local transmission needs.

132. We disagree with arguments that the Commission cannot promulgate this final order because we rely on general findings, rather than individualized analyses of each, specific transmission planning region.³³⁰ Relevant precedent, including regarding the Commission’s comparable action in Order No. 1000, is clear that the Commission has discretion as to the procedural means through which it will apply its substantive expertise, and we need not make findings that are region specific in every case; rather, we are empowered to “rely on ‘generic’ or ‘general’ findings of a systemic problem to support imposition of an industry-wide solution,”³³¹ and we do so here. The fact that individual transmission planning regions may have different forms of transmission planning processes, and may experience varying levels of transmission investment, would be “as unastonishing as it is

³²⁹ See, e.g., Duke Initial Comments at 9 (arguing that there are instances in which larger regional transmission projects may not resolve localized transmission needs).

³³⁰ See, e.g., Louisiana Commission Reply Comments at 5–6; NRECA Initial Comments at 14–16.

³³¹ *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d at 67 (quoting *Interstate Nat. Gas v. FERC*, 285 F.3d 18, 37 (D.C. Cir. 2002)).

irrelevant.”³³² Moreover, although transmission planning practices vary considerably between transmission planning regions and some regions may engage in transmission planning that shares many of the elements of the more long-term, forward-looking, comprehensive regional transmission planning required in this order, the record demonstrates that this final order identifies deficiencies that reach well beyond “isolated pockets[.]”³³³ Rather, the record demonstrates that these deficiencies pervade large swaths of the country, which include RTO/ISO and non-RTO/ISO transmission planning regions.³³⁴ Accordingly, this final order’s remedy does not present an “extreme ‘disproportion of remedy to ailment[.]’”³³⁵ The Commission may reasonably rely on a rulemaking procedure to address the industry-wide changes to the transmission landscape, notwithstanding regional variation among regional transmission planning processes. As the Commission stated in Order No. 1000, “[i]t is well established that the choice between rulemaking and case-by-case adjudication ‘lies primarily in the informed discretion of the administrative agency.’”³³⁶ The Commission also stated that “[i]t is within our discretion to conclude that a generic rulemaking, not case-by-case adjudications, is the most efficient approach to take to resolve the industry wide problems facing us.”³³⁷ Moreover, we agree with ACEG that pursuing region-specific solutions will lead to “siloed and disjunctive transmission planning policies [that] will not solve the problems facing the nation’s electric grid.”³³⁸

133. Furthermore, although not every transmission planning region is experiencing these changes in equal measure, the record shows that significant changes are well underway nationwide, and that failing to adequately account for Long-Term Transmission Needs poses a risk to just and reasonable rates throughout the country.³³⁹ In fact, the record raises a wide range of concerns, and the Commission need not, and should not, wait for systemic problems to undermine regional transmission

³³⁹ AEE Reply Comments at 3–4.

planning in every region before it acts.³⁴⁰ The record in this proceeding confirms that significant investments in new transmission facilities are expected to occur, with substantial impacts on the Commission-jurisdictional rates that customers pay.³⁴¹ It is therefore critical, and it is the Commission's responsibility, to act now to address deficiencies in its regional transmission planning and cost allocation requirements to ensure that more efficient or cost-effective transmission investments are made as the industry addresses the changing landscape.³⁴²

3. Benefits of Long-Term Regional Transmission Planning and Cost Allocation To Identify and Plan for Long-Term Transmission Needs

134. Upon consideration of the record, we find that the requirements set forth in this final order will address deficiencies in the existing regional transmission planning and cost allocation requirements and will promote enhanced reliability and more efficient or cost-effective transmission solutions, which will help to ensure just and reasonable Commission-jurisdictional rates.

135. The record demonstrates that long-term, forward-looking, and more comprehensive regional transmission planning that identifies Long-Term Transmission Needs will help transmission providers to identify, evaluate, and select more efficient or cost-effective transmission solutions to those needs. For example, like the Commission in the NOPR,³⁴³ commenters cite to the success of MISO's Long-Range Transmission Plan in delivering more efficient or cost-effective transmission solutions. By addressing public policy, economic, and reliability transmission planning needs simultaneously through its MVP category, MISO "eliminate[d] the need for \$300 million in future baseline reliability upgrades," and provided production cost savings that *exceeded the entire cost of the portfolio by \$10 billion.*³⁴⁴ Brattle Group and Grid Strategies also found that "building out piecemeal network upgrades through the interconnection queue process to integrate the same amount of generation would have cost over 80% more than

the cost of the MVP portfolio."³⁴⁵ Similarly, the New Jersey Commission asserts that, by planning transmission facilities to address a specific set of known and identified transmission needs through a holistic portfolio, rather than piecemeal through the generator interconnection process, PJM could save customers more than \$30 billion.³⁴⁶

136. We note that the cost-saving results that MISO experienced were the direct product of more comprehensive, longer-term regional transmission planning. By expanding the transmission planning horizon and considering factors affecting Long-Term Transmission Needs, as well as considering a broader list of benefits, transmission providers will be able to identify, evaluate, and select more efficient or cost-effective transmission solutions to address Long-Term Transmission Needs.³⁴⁷ Such Long-Term Regional Transmission Planning will: (1) reduce reliance on transmission solutions that are relatively inefficient or less cost-effective because they address only short-term transmission needs; (2) unlock the benefits of economies of scale in transmission investment;³⁴⁸ (3) enable opportunities to "right size" replacement transmission facilities;³⁴⁹ (4) facilitate the selection of regional transmission facilities that could address multiple transmission needs over different time horizons; and (5) provide states, utilities, customers, and other stakeholders with greater insight and transparency into the costs and benefits of particular transmission solutions to address Long-Term Transmission Needs. We conclude that

these regional transmission planning and cost allocation reforms will benefit customers by leading to more efficient or cost-effective transmission investment, thereby helping to ensure just and reasonable rates.³⁵⁰

137. In addition to potentially enhancing the efficiency and cost-effectiveness of transmission investment, we find that sufficiently long-term, forward-looking, and comprehensive regional transmission planning and cost allocation processes will enhance reliability. In the NOPR, the Commission found that a robust, well-planned transmission system is foundational to ensuring an affordable, reliable supply of electricity. The record supports this conclusion. Many commenters agree that, especially in light of continuing changes in both supply and demand, ongoing investment in regional transmission facilities is necessary to ensure that the transmission system continues to serve load in a reliable manner at reasonable cost.³⁵¹ Commenters also agree that regional transmission investments support enhanced reliability because larger, more integrated transmission systems are better equipped to accommodate a diversity of supply and demand conditions and provide redundancy that allow the system to better withstand unpredictable and extreme weather events, which are

³⁵⁰ See, e.g., Exelon Initial Comments at 5 ("The project-by-project approach of developing [interconnection-related] network upgrades in response to generator interconnection requests does not take into account broader, longer-term planning needs and furthermore raises questions about whether it will lead to efficient and cost-effective outcomes as the resource mix rapidly evolves."); PIOs Initial Comments at 8 ("[O]verwhelming evidence indicates that transmission owners are largely able to evade the requirements of Order No. 1000 and . . . have primarily invested in local projects. This has led to . . . billions of dollars in excessive costs for consumers." (citing Brattle-Grid Strategies Oct. 2021 Report at Section 1)); Southeast PIOs Reply Comments at 2 ("All the while, snowballing inefficiencies created by numerous small-scale transmission band-aids, unfit to address broader generation trends, translate into excessive, unjust, and unreasonable rates borne by an already overburdened populace.").

³⁵¹ ACOE ANOPR Initial Comments at 21–22 (explaining how additional transmission investments can alleviate billions of dollars in costs caused by extreme weather); EEI Initial Comments at 4 ("Transmission plays and will continue to play a vital role in enabling the energy transition and in ensuring a reliable and resilient energy grid. A robust transmission system will not only enable electric utilities to integrate more renewable energy resources and deliver more clean energy to customers but will also enhance the reliability and resiliency of the grid and enable the deployment of new technologies." (citing EEI, *Planning and Developing Electric Transmission Projects: The Path to the Grid of the Future* (2022)); NERC Initial Comments at 6 (explaining that transmission will be key to managing a reliable transformation in the resource mix).

³⁴⁵ *Id.* at 4–5 (citing Brattle-Grid Strategies Oct. 2021 Report at 7 & nn.13–14); see *id.* at 5 n.9 (noting that the cost of the MVP portfolio divided by the amount of wind capacity it interconnected came to \$412 per kilowatt, while interconnection-related network upgrades for new generation in MISO planned through the interconnection queue cost \$756 per kilowatt).

³⁴⁶ *Id.* at 6–7 (citing Brattle-Grid Strategies Oct. 2021 Report at 7); *id.* (explaining that the onshore network upgrades required to interconnect 87.1 GW of resources meeting all of PJM states' current offshore wind goals and total renewable portfolio standards through "piecemeal interconnection queue projects would cost nearly \$36 billion in total—more than eleven times the \$3.2 billion cost of the integrated portfolio approach," or "[p]ut another way, proactive, portfolio-based planning in PJM could ultimately save ratepayers over \$30 billion compared to the status quo.").

³⁴⁷ PIOs Initial Comments at 35.

³⁴⁸ *Id.* at 10 ("[T]he vast majority of current transmission projects are focused solely either on network reliability or connecting the next generator in the interconnection queue and ignore any other potential benefits, possible economies of scale or other efficiencies that might occur by considering multiple future needs.").

occurring with increased frequency and severity.³⁵²

138. Moreover, commenters provide examples of how long-term, forward-looking, and more comprehensive regional transmission planning can better identify reliability needs and resolve these needs with more efficient or cost-effective transmission solutions.³⁵³ For example, as noted above, MISO's MVP Portfolio 4 eliminated the need for \$300 million in future baseline reliability upgrades.³⁵⁴ By comparison, the Reliability Must-Run Agreement for Indian River Unit 4, a 410 MW coal-fired generation unit, highlights the costs of inadequate regional transmission planning. As NARUC explains, the Indian River Unit 4 was scheduled to retire, but PJM found that retirement would cause reliability issues and would necessitate upgrades to transmission facilities that, due to their age, were already due to be upgraded, and that the Reliability Must-Run Agreement was needed because those upgrades would take five years to complete.³⁵⁵ A long-term, forward-looking, and more comprehensive regional transmission planning process may have obviated the need for the Reliability Must-Run Agreement, the individual transmission facility upgrades, or both.

4. Conclusion

139. In consideration of the record provided in this proceeding, as well as the related conclusions stated above, we find that the Commission's existing regional transmission planning and cost allocation requirements are unjust, unreasonable, and unduly discriminatory or preferential because they fail to require transmission providers to adequately plan on a sufficiently long-term, forward-looking,

and comprehensive basis. Specifically, as discussed, we find that the Commission's regional transmission planning and cost allocation requirements fail to require transmission providers to: (1) perform a sufficiently long-term assessment of transmission needs that identifies Long-Term Transmission Needs; (2) adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs; and (3) consider the broader set of benefits of regional transmission facilities planned to meet those Long-Term Transmission Needs. We find that reforms to those requirements are thus necessary to ensure that Commission-jurisdictional rates are just, reasonable, and not unduly discriminatory or preferential. The failure to plan on a sufficiently long-term, forward-looking, and comprehensive basis results in the potential for relatively inefficient or less cost-effective transmission development for which customers must pay. The requirements set forth in this final order will help to ensure that transmission providers plan to address Long-Term Transmission Needs, in turn helping to ensure more efficient or cost-effective transmission development and thus just and reasonable Commission-jurisdictional rates.

III. Long-Term Regional Transmission Planning

A. Requirement To Participate in Long-Term Regional Transmission Planning

1. NOPR Proposal

140. In the NOPR, the Commission proposed to require each transmission provider to participate in a regional transmission planning process that includes Long-Term Regional Transmission Planning,³⁵⁶ meaning regional transmission planning on a sufficiently long-term, forward-looking, and comprehensive basis to identify transmission needs driven by changes in the resource mix and demand and to identify and evaluate transmission facilities for potential selection as the more efficient or cost-effective transmission facilities to meet such needs.³⁵⁷

141. The Commission proposed that transmission providers may continue to

rely on their existing regional transmission planning and cost allocation processes to comply with Order No. 1000's requirements related to transmission needs driven by reliability concerns or economic considerations.³⁵⁸

142. The Commission proposed that transmission providers that comply with the Long-Term Regional Transmission Planning requirements will comply with the requirement in Order No. 1000 that they participate in a regional transmission planning process that considers, and has associated cost allocation provisions related to, transmission needs driven by Public Policy Requirements.³⁵⁹ The Commission further proposed to allow transmission providers to propose to continue using some or all aspects of the existing regional transmission planning and cost allocation processes they use to consider transmission needs driven by Public Policy Requirements.³⁶⁰ The Commission stated, however, that such continued use of existing regional transmission planning and cost allocation processes would not supplant transmission providers' obligations to comply with the Long-Term Regional Transmission Planning requirements established in any final order in this proceeding. Moreover, the Commission proposed that transmission providers seeking to retain existing regional transmission planning and cost allocation processes to consider transmission needs driven by Public Policy Requirements would have to demonstrate that continued use of any such processes does not interfere or otherwise undermine the Long-Term Regional Transmission Planning proposed in the NOPR by demonstrating that continued use of such processes is consistent with or superior to any final order issued in this proceeding.³⁶¹

143. The Commission preliminarily found that transmission providers could propose a regional transmission planning process that plans for reliability needs, economic needs, transmission needs driven by Public Policy Requirements, and transmission needs driven by changes in the resource mix and demand simultaneously through a combined approach. The Commission stated that transmission providers proposing to address all such transmission needs in a single regional transmission planning process would bear the burden of demonstrating continued compliance with Order No.

³⁵² NERC Initial Comments at 6 (explaining that regional transmission planning is necessary to ensure sufficient transmission capacity to move energy from areas with a surplus to areas that are deficient).

³⁵³ ITC Initial Comments at 44 ("While local transmission planning continues to serve a critically necessary, valuable function in maintaining the reliability and efficiency of transmission systems, it is nonetheless clear that holistic, long range transmission planning is far more capable of identifying optimal transmission solutions that serve the most needs and deliver the most benefits."); MISO Initial Comments at 88 (explaining that in its Tranche 1 Long Range Transmission Plan, MISO recognizes Avoided Transmission Investment benefits provided by Long Range Transmission Plan facilities in addressing both avoided reliability projects and avoided age and condition replacement projects with the results being avoided costs in local transmission that would have otherwise been incurred to replace existing facilities).

³⁵⁴ New Jersey Commission Initial Comments at 4.

³⁵⁵ NARUC Initial Comments at 14–15.

³⁵⁶ The two features of Long-Term Regional Transmission Planning that the Commission included in the proposed reforms were the development of scenarios with a 20-year transmission planning horizon to be reassessed and revised every three years, with each such reassessment providing the basis for identification and evaluation of transmission facilities for potential selection. NOPR, 179 FERC ¶ 61,028 at P 68 n.128.

³⁵⁷ See *id.* PP 54, 64, 68.

³⁵⁸ *Id.* P 72.

³⁵⁹ *Id.* P 73.

³⁶⁰ *Id.* P 74.

³⁶¹ *Id.*

1000 in addition to compliance with the requirements of any final order in this proceeding.³⁶²

144. Finally, the Commission proposed to require that Long-Term Regional Transmission Planning comply with the following existing Order Nos. 890 and 1000 transmission planning principles: (1) coordination; (2) openness; (3) transparency; (4) information exchange; (5) comparability; and (6) dispute resolution.³⁶³

2. Comments

a. General Comments

145. The majority of commenters support the Commission's proposal.³⁶⁴

with multiple commenters claiming that Long-Term Regional Transmission Planning is crucial to ensure that regional transmission planning appropriately identifies transmission needs to meet the changing resource mix and demand.³⁶⁵

146. AEP and Ørsted argue that the Commission's proposal will address deficiencies in the current transmission planning process.³⁶⁶ National Grid claims that existing long-term transmission planning processes are sufficient for addressing reliability and economic transmission needs in the near-term but are inadequate for addressing the changing resource mix and demand, as well as for addressing resilience challenges driven by climate change.³⁶⁷ ACEG claims that Long-Term Regional Transmission Planning will allow right-sizing of transmission facilities.³⁶⁸

147. Some commenters observe that this proposal may result in cost-savings for consumers. For example, DC and MD Offices of People's Counsel claim that this proposal could result in significant cost savings to consumers by helping address severe weather events and reduce the relative cost of decarbonizing the country's resource fleet.³⁶⁹ AEP argues that the NOPR proposal will benefit consumers by establishing a process that will identify more efficient or cost-effective transmission facilities, capturing currently missed opportunities and achieving economies of scale.³⁷⁰ North Carolina Commission and Staff argue that Long-Term Regional Transmission Planning can provide state utility commissions and consumer advocates with useful information to promote a cost-effective and reliable transmission grid.³⁷¹

148. NextEra states that Long-Term Regional Transmission Planning can minimize overall costs to consumers by enabling the lowest-cost generation.³⁷² Relatedly, Tabors Caramanis Rudkevich states that the NOPR proposal would establish a transmission planning process that coordinates across franchises, states, and regions, which will reduce the production cost of delivery of energy to consumers.³⁷³

149. PPL notes that Long-Term Regional Transmission Planning may improve some of the limitations of criteria-based transmission planning, which is currently employed in RTOs/ISOs.³⁷⁴ Ørsted supports the proposed requirements regarding Long-Term Regional Transmission Planning and argues that existing regional transmission plans fail to anticipate the size and scale of future offshore wind generation development, leading to inaccurate plans and insufficient investment in infrastructure needed to integrate known future offshore wind generation.³⁷⁵

150. State Agencies assert that the Commission's various proposed reforms in the NOPR collectively would enhance transparency, prevent unnecessary investment in local transmission projects, and improve the competitive landscape.³⁷⁶ US DOJ and FTC support reforms that address obstacles to transmission development and that are implemented consistent with principles for competition.³⁷⁷

b. Requests for Flexibility in Transmission Planning

151. A number of commenters support the Commission's proposal to require Long-Term Regional Transmission Planning, but also express reservations or objections regarding what they perceive as an overly prescriptive approach that may disrupt existing processes that are already working.³⁷⁸ For example, multiple

³⁷⁸ See, e.g., Avangrid Initial Comments at 6, 9; CAISO Initial Comments at 1–2, 7–10, 13; California Commission Initial Comments at 6; Duke Initial Comments at 1–2; Indiana Commission Initial Comments at 1, 3; ISO–NE Initial Comments at 20; ISO/RTO Council Initial Comments at 4–5 (citing NOPR, 179 FERC ¶ 61,028 at PP 66, 104); Massachusetts Attorney General Initial Comments at 10–12; Michigan Commission Initial Comments

commenters express concerns that the NOPR's allegedly prescriptive requirements for Long-Term Regional Transmission Planning will significantly limit needed discretion to conduct such planning, and that, without discretion to adjust the scenario modeling and assumptions to regional circumstances, the final order could lead to more delay and conflict.³⁷⁹ MISO TOs contend that the NOPR proposals vary sufficiently from MISO's current approach that MISO and its stakeholders will need to engage in complex and time-intensive revisions in order to comply.³⁸⁰ Similarly, City of New Orleans Council asks that the final order not hinder existing MISO processes.³⁸¹

152. Multiple commenters recommend that the Commission's final order establish principles and objectives for long-term transmission planning that address the Commission's concerns and provide transmission providers with the flexibility to develop tailored long-term transmission planning approaches and implementation details accordingly.³⁸² MISO recommends that each transmission provider should give the Commission a report outlining the actions and processes that support the Commission's principles and guidance, and then the Commission could direct specific changes within each transmission planning region as it deems necessary.³⁸³

153. Multiple commenters argue for flexibility to accommodate local and regional differences, including differences in public policy goals that affect transmission planning.³⁸⁴ NYISO asks that the final order give each transmission planning region discretion to determine, in coordination with state entities and stakeholders, how best to

incorporate the Long-Term Regional Transmission Planning requirements within its transmission planning framework.³⁸⁵ California Municipal Utilities add that a significant amount of demand in the West is served by publicly-owned utilities and electric cooperatives, which fall outside of state commission regulation, highlighting the need for flexibility in planning.³⁸⁶

154. Dominion asserts that any reforms adopted in this proceeding should align with the purpose of the transmission system, which is to provide reliable, affordable electric service to customers rather than to benefit generators.³⁸⁷

155. APPA agrees with concerns expressed by Commissioner Christie and former Commissioner Danly that overly prescriptive transmission planning requirements have the potential to interfere with existing regional transmission planning processes, and hence argues that adequate flexibility is needed.³⁸⁸ Mississippi Commission states that where an RTO/ISO or non-RTO/ISO transmission provider is already engaged in long-term regional transmission planning, the Commission should accept flexibility and regional variations on compliance to address region-specific issues, including the delineation of regional and local transmission facilities through, for example, a voltage threshold (e.g., 100 kV).³⁸⁹

156. CAISO maintains that the Commission should allow it to continue evaluating transmission needs driven by Public Policy Requirements in its transmission planning process, in addition to any Long-Term Regional Transmission Planning process, and give CAISO the flexibility to continue using resource portfolios and geographic zones identified by state agencies and local regulatory authorities.³⁹⁰ Although ACORE urges the Commission not to grant requests for less stringent transmission planning requirements in the final order, ACORE agrees that there may be cases where an individual RTO's/ISO's existing processes may be superior to the proposed reforms, such as in the case of CAISO's treatment of

public policy projects within its annual transmission planning process.³⁹¹ California Municipal Utilities note that CAISO has already begun to implement some of the key reforms that the Commission proposed in the NOPR, specifically by adopting a 20-year outlook for transmission planning.³⁹²

157. MISO requests that a final order support, rather than detract from, its demonstrated success in long-term transmission planning.³⁹³ MISO TOs request that the Commission revise the NOPR's required parameters for Long-Term Regional Transmission Planning to accommodate the robust long-term regional transmission planning that some transmission planning regions, like MISO, have already developed.³⁹⁴ Similarly, Ameren contends that the Commission should find that MISO's approved Long Range Transmission Planning process substantially complies with the proposed reforms.³⁹⁵

158. New York TOs support allowing transmission planning regions with already successful transmission planning processes to retain those processes while making incremental enhancements and to demonstrate on compliance that they meet the NOPR's objectives.³⁹⁶ New York Transco asserts that the current NYISO public policy transmission planning processes already address, at least in part, the proposed reforms and believes that the Commission should permit regional flexibility.³⁹⁷

159. SPP states that its current transmission planning processes are sufficient to meet the intent of the Commission's proposed Long-Term Regional Transmission Planning reforms.³⁹⁸ Omaha Public Power states that SPP and other RTOs/ISOs have already developed long-term planning scenarios and suggests that transmission providers that already have long-term planning scenarios should be provided with the flexibility to continue using their previously established processes.³⁹⁹

160. In contrast, some commenters argue that the final order should not provide too much flexibility to transmission providers because that flexibility will undermine Long-Term

Regional Transmission Planning.⁴⁰⁰ Many commenters opposing greater flexibility argue that the Commission should establish minimum requirements for Long-Term Regional Transmission Planning.⁴⁰¹

161. AEP argues that the Commission must resist requests for excessive regional flexibility that could threaten the development of long-term regional transmission and only permit it in limited instances that exceed minimum requirements.⁴⁰² Onward Energy states that, while flexibility is reasonable, the Commission must clearly identify who will drive regional transmission planning processes and how transmission planners will coordinate, study, and implement Long-Term Scenarios that represent realistic future resource portfolios.⁴⁰³ Clean Energy Associations state that without robust and proactive transmission planning rules, the Commission cannot determine that rates remain just and reasonable.⁴⁰⁴ DC and MD Offices of People's Counsel state that, while regional flexibility is critical, long-term transmission planning rules that provide carve-outs and opt-outs will result in balkanized transmission development.⁴⁰⁵

162. Hannon Armstrong states that by diluting the proposed requirements or granting flexibility as some commenters request, the Commission would allow existing deficiencies to persist, enabling the continued reliance on either the generator interconnection process or operational planning to resolve or mitigate constraints.⁴⁰⁶ Invenergy rebuts commenters' claims that the NOPR is too prescriptive or that some of the NOPR requirements should be optional, stating that optional processes and

deference to regional flexibility will not ensure needed transmission is built and that a flexible approach has already been tried and has failed to produce sufficient results.⁴⁰⁷

c. Comments Regarding More Comprehensive Transmission Planning

163. Several commenters contend that Long-Term Regional Transmission Planning should not interfere with and should not supplant existing shorter-term transmission planning processes.⁴⁰⁸ PJM asks the Commission to confirm that it did not mean for the NOPR proposals on Long-Term Regional Transmission Planning to modify the existing reliability and market efficiency transmission planning processes.⁴⁰⁹ Transmission Dependent Utilities encourage the Commission to ensure that transmission providers do not focus on long-term objectives to satisfy state renewable energy portfolio requirements to the detriment of near-term reliability needs, such as end-of-life transmission planning.⁴¹⁰ Large Public Power and NEPOOL state that any final order should clearly state that the current near-term transmission planning rules and processes, especially cost allocation, are not changed by the final order's reforms, except where expressly indicated.⁴¹¹ Ameren argues that the Commission was clear that changes to existing reliability and economic transmission planning requirements are beyond the scope of the NOPR and that the comments filed supporting holistic planning have provided no compelling basis for the Commission to address them.⁴¹²

164. Several commenters contend that Long-Term Regional Transmission Planning should not interfere with and must not supplant existing shorter-term transmission planning processes for transmission needs driven by Public Policy Requirements.⁴¹³ CAISO states that the NOPR provides no guidance or

criteria regarding how a transmission provider can demonstrate that its existing process for addressing transmission needs driven by Public Policy Requirements does not interfere with or undermine Long-Term Regional Transmission Planning. CAISO contends that it should not have to re-justify its existing process or demonstrate that its existing process is consistent with or superior to Long-Term Regional Transmission Planning.⁴¹⁴

165. AEP asserts that transmission providers should look at nearer-term reliability and economic transmission planning processes to determine whether there are needs that can be incorporated into Long-Term Regional Transmission Planning and addressed by a Long-Term Regional Transmission Facility.⁴¹⁵ SEIA recommends that the Commission require transmission providers to engage in portfolio-based transmission planning that integrates all relevant factors, including near-term needs, into Long-Term Regional Transmission Planning.⁴¹⁶ Policy Integrity argues that inclusion of specific requirements for transmission modeling are needed to fulfill the mandate of ensuring wholesale electric rates are just and reasonable.⁴¹⁷ Xcel recommends that the Commission require that known or expected generation be included in short-term regional transmission planning assumptions.⁴¹⁸

166. PIOs state that, if the two processes continue to exist, the Commission should mandate that the base cases used in Order No. 1000 regional transmission planning processes and Long-Term Scenarios in Long-Term Regional Transmission Planning be defined in the same process. Otherwise, PIOs contend, inconsistent assumptions between the two processes could lead to redundant transmission projects and failure to identify more efficient solutions. In particular, PIOs argue, if an Order No. 1000 transmission planning process base case identifies transmission needs that are not anticipated in the Long-Term Scenarios, the opportunities for more efficient planning created by the long-term process will be lost. In addition, PIOs suggest that there may be opportunities for stakeholders to undermine Long-Term Regional Transmission Planning if they believe Order No. 1000 transmission planning

would produce more favorable results for them. PIOs further argue that because uncertainty grows the further one looks into the future, there should not be significant differences in the short-term results of Long-Term Regional Transmission Planning and Order No. 1000 regional transmission planning processes.⁴¹⁹

167. Several commenters support forward-looking, Long-Term Regional Transmission Planning but argue for holistic planning using multiple drivers of transmission needs.⁴²⁰ They argue that a holistic approach is more efficient, better accounts for long-term benefits of new transmission, addresses the needs of more stakeholders, and is more likely to support development of regional transmission facilities, among other benefits. Competition Advocates support a final order that reflects the benefits of holistic modeling,⁴²¹ while New Jersey Commission contends that holistic transmission planning using a competitive process provides significant benefits, including reducing costs.⁴²²

168. To ensure that reforms are not undermined by existing processes, Clean Energy Buyers recommend that the Commission extend to all existing regional transmission planning processes—not just transmission planning processes to address transmission needs driven by Public Policy Requirements, as proposed in the

NOPR—the requirement that, on compliance with any final order, transmission providers who seek to retain existing regional transmission planning and cost allocation processes must demonstrate that continued use of those processes does not interfere with or undermine Long-Term Regional Transmission Planning.⁴²³

169. However, other commenters support the Commission's proposal in the NOPR to *not* apply the proposed reforms to existing Order No. 1000 reliability and near-term economic regional transmission planning processes.⁴²⁴ Ohio Consumers support the NOPR's proposal to mostly retain the regional transmission planning processes outlined in Order No. 1000, explaining that PJM stakeholders have reached an effective settlement under that framework in which costs are allocated in a manner that is roughly commensurate with the benefits received.⁴²⁵

170. Some commenters argue that the Commission should require that local transmission projects be evaluated and approved as part of a holistic planning approach.⁴²⁶ AEE asserts that, to ensure that transmission providers consider the full range of needs in developing long-term regional transmission plans, the final order should require them to consider local transmission plans and to determine whether a regional solution would be more efficient or cost-effective.⁴²⁷ OMS suggests that the Commission require that all local transmission projects be evaluated and approved as part of regional transmission planning processes with the opportunity for meaningful input from retail regulators, which it argues will enable participation by state regulators while respecting transmission owners' abilities to maintain their systems.⁴²⁸

171. By contrast, WIRES argues that the Commission should maintain the distinction between regional transmission planning and local transmission planning. WIRES argues that, while the regional transmission planning process is directed toward addressing certain reliability concerns, economic criteria, and public policy

initiatives, it is not geared toward addressing additional system needs related to resilience, asset management, customer needs, customer impact, and aging infrastructure replacement that is typically the focus of local transmission planning.⁴²⁹ Similarly, AEP states that if an RTO/ISO were to make all decisions regarding local transmission projects, they would also need to assume the accompanying responsibility—and the liability—for such decisions, which would entail physical inspection and condition assessment of assets, as well as a determination of when transmission facilities have reached their end of useful life.⁴³⁰ AEP points out that both CAISO and PJM have expressly stated that they do not wish to undertake these types of activities and assume such obligations.⁴³¹

d. Concerns Regarding Favoring Renewable Resources

172. ELCON argues that the Commission's proposal could require customers to pay higher costs to connect distant renewables when a lower-cost transmission project would provide the same reliability or economic benefits.⁴³² Utah Division of Public Utilities states that Long-Term Scenario requirements favoring renewable generation burden transmission providers while providing little to no benefit and that developers and generation utilities should determine which renewable generation should be developed at their respective zones or sites.⁴³³ Utah Commission further contends that nationwide mandates for transmission planning add costs, produce confusion, and create conflicts that could lead to higher utility prices for consumers.⁴³⁴ Kansas Ratepayer Advocates contend that Long-Term Regional Transmission Planning would presume material additions of renewable energy to serve consumers within a state, coupled with material additions of transmission to interconnect those renewables to the electric transmission grid, which do not reflect the unique circumstances of Kansas.⁴³⁵

173. Vistra asserts that the proposed reforms could devolve into the subsidization of resources chosen to

achieve state policy goals, masking the true costs of those remotely located resources that require extensive transmission development to interconnect to the grid and leading to market distortions that undermine the objectives of these reforms.⁴³⁶

174. Louisiana Commission states that the NOPR would result in subsidization of the costs of transmitting remote renewable energy, spreading the costs out broadly based on an expanded “nebulous concept of ‘benefits’ and perceived ‘public policy,’” thus ensuring that those transmission projects will pass any economic test.⁴³⁷ According to Louisiana Commission, this subsidization would interfere with price signals, thereby distorting the efficient functioning of the wholesale market.⁴³⁸ Louisiana Commission states that any Commission policy should be resource and technology neutral and should not impose costs on states that do not benefit from distant renewable power.⁴³⁹

175. Finally, Louisiana Commission contends that the NOPR’s long-term transmission planning requirements could threaten the reliability of the transmission grid because the intermittent renewable resources that the NOPR favors do not provide stable output and are not dispatchable.⁴⁴⁰ Similarly, former Kansas Commission Chair Keen argues that the NOPR fails to acknowledge the reliability concerns associated with a generation mix that is too heavily weighted to intermittent renewable generation resources.⁴⁴¹

e. Concerns Regarding Uncertainty, Over-Building, and Costs

176. A few commenters argue that long-term transmission planning introduces uncertainty or incentivizes speculative transmission development.⁴⁴² While EPSA acknowledges that long-term forecasts can provide valuable information about the potential scale of construction necessary to achieve decarbonization, it argues that using such forecasts to

justify investment shifts the risks to consumers from developers and facility owners.⁴⁴³ California Municipal Utilities state that, as transmission planning horizons are extended, the changes in resource mix, technology types, the location of resources, and demand will likely change congestion patterns and therefore the need for transmission upgrades needed to address them.⁴⁴⁴

177. Louisiana Commission states that it opposes the NOPR proposal because it would lead to an inefficient and expensive build-out of the transmission system and could be used to justify shifting the costs of this build-out to load.⁴⁴⁵ ELCON states that it is concerned that the Commission’s proposal to prioritize Long-Term Regional Transmission Planning to connect renewable generation over Long-Term Regional Transmission Planning for economically necessary transmission may exceed the Commission’s authority if it increases transmission rates for the benefit of a few stakeholders.⁴⁴⁶ Southern states that transmission expansion predicated on hypothetical resources that might not materialize would not satisfy the fundamental legal requirements of being used and useful, prudent, and/or otherwise needed for the public use, could harm reliability, and would violate the Commission’s duty under the FPA to facilitate transmission planning to meet load-serving entities’ obligations.⁴⁴⁷

178. Industrial Customers argue that the NOPR does not provide evidence that extending the transmission planning horizon would exclude modeling of speculative projects, which would likely result in the over-building of transmission and unnecessary increases in rates.⁴⁴⁸ Industrial Customers cite the D.C. Circuit’s finding in *Old Dominion Electric Cooperative v. FERC* that “[w]e are sensitive to the concern . . . that individual utilities should not have free rein to impose unjustified costs on an entire region by unilaterally adopting overly ambitious planning criteria,” and argue that the current NOPR proposal would result in the same issues.⁴⁴⁹

179. NRG urges caution on over-reliance on any 20-year planning study for making transmission investments due to the inherent uncertainty of a study with such a long planning horizon.⁴⁵⁰ NRG argues that the NOPR will increase delivery costs by reducing the value of private investments and replacing such investments with a centrally planned, cost-socialized approach that is founded on at least some incorrect assumptions.⁴⁵¹ NRG provides several examples of how forecast errors have caused adverse consequences, including forecasts of natural gas prices, load forecasts, and canceled planned transmission facilities.⁴⁵²

180. Likewise, Ohio Consumers urge the Commission to avoid adopting proposals based on long-term projections that justify massive charges to consumers based on hypothetical scenarios.⁴⁵³ Ohio Consumers state that Ohio customers have recently been saddled with rate increases in part due to transmission investments and that long-term transmission planning requirements would increase ratepayer burden, which is especially troublesome if projections turn out to be inaccurate.⁴⁵⁴

181. As an alternative to Long-Term Regional Transmission Planning, Potomac Economics states that the Commission could require the transmission planning process to incorporate a broader array of near-term emerging trends that are less uncertain than the proposed longer-term factors.⁴⁵⁵ Louisiana Commission states that it shares Potomac Economics’ concerns. Louisiana Commission urges the Commission to heed testimony submitted by Potomac Economics arguing that: (1) there is significant uncertainty about future technology and a significant risk of investing in transmission projects that will not ultimately provide value; (2) large transmission projects are often not the most economic, whereas smaller, targeted projects are more beneficial; and (3) there can and likely would be stranded transmission if transmission planning processes attempt to identify and meet transmission needs 20 to 30 years in the future.⁴⁵⁶

182. US Chamber of Commerce argues that the Commission should ensure that any Long-Term Regional Transmission

Planning reforms do not perpetuate an irrational transmission buildout that undermines competitive advantages of domestic electricity rates. US Chamber of Commerce asserts that the loss of competitive advantage would lead to lost jobs, lost economic growth, decreased electricity use, and fixed system costs assessed to fewer customers.⁴⁵⁷

183. Vistra states that the proposed reforms lean toward accounting for regulatory and public policy initiatives that may shape changes in the generation mix without sufficiently incorporating the commercial and markets-related aspects of generation development.⁴⁵⁸ Vistra states that, without a process to assess commercial interest and financial commitment from generation developers, long-term regional transmission plans may under- or over-build transmission facilities or build them in the wrong locations.⁴⁵⁹ Relatedly, NRECA states that planning a regional transmission network for generation resources or changes in demand not identified by load-serving entities' forecasts, and instead through unsupported top-down assumptions, may produce uneconomic results from over-building and increase reliability risks.⁴⁶⁰

184. NRG states that, in light of the uncertainty of variables such as the amount of electrification and resulting load requirements, technology costs for new resources, and viability and repurposing of existing resources, it is not clear whether a "no regrets" option genuinely exists. NRG also asserts that the centralized planning envisioned in the NOPR sacrifices the ability of market participants to use available information to assess whether their investments will be viable in the future, which is a critical feature of competition. NRG asserts that the Commission has not contemplated that trade-off or quantified its costs, noting that past long-term transmission planning studies have done a questionable job at forecasting future needs.⁴⁶¹

185. Other commenters, however, note that the NOPR proposal includes measures that mitigate the uncertainty inherent in longer-term regional transmission planning.⁴⁶² For example, New Jersey Commission states that the proposed requirements to develop multiple scenarios and perform

reassessments mitigates the uncertainty inherently present in a 20-year transmission planning horizon.⁴⁶³ Additionally, several commenters rebut opposition to Long-Term Regional Transmission Planning based on concerns that it presents unreasonable levels of uncertainty.⁴⁶⁴ For example, SREA and Clean Energy Buyers assert that periodic updates of forecasts and scenarios will help to mitigate uncertainty.⁴⁶⁵

186. Policy Integrity further explains that future uncertainty is exactly why long-term scenario planning is necessary to ensure just and reasonable rates. Policy Integrity states that the current transmission planning process uses deterministic modeling that does not account for the changing world, which will not lead to the development of efficient or cost-effective transmission solutions. Policy Integrity asserts that, in contrast, long-term scenario planning will allow transmission planners to be prepared for changes.⁴⁶⁶ Policy Integrity argues that any forward-looking decision will have a degree of uncertainty, but that the risk posed by uncertainty can be mitigated and managed by using a portfolio evaluation of costs and benefits.⁴⁶⁷ Policy Integrity further argues that ignoring the uncertainty surrounding the energy transition runs its own risk of failing to build transmission that can be useful to meet needs in the short, medium, and long term.⁴⁶⁸

f. Concerns Regarding Incentives for Resource Development

187. Vistra asserts that it is critical for Commission policy to maintain interconnection cost signals to drive cost-effective generation siting choices.⁴⁶⁹ Vistra also argues that a policy that assigns all interconnection-related network upgrade costs, or even a disproportionately high share, to load undermines the incentive that generation developers currently have to site new projects in locations that minimize the related transmission upgrade costs.⁴⁷⁰

188. In contrast, New Jersey Commission argues that requiring individual interconnecting generators to

pay for piecemeal interconnection-related network upgrades does not necessarily encourage developers to make siting decisions that minimize the overall cost of integrating large amounts of new generation.⁴⁷¹ Likewise, Clean Energy Associations state that robust, proactive regional transmission planning will better incent efficient siting decisions, because generators will evaluate the likely costs of interconnection facilities that ensure deliverability to the grid, rather than more broadly beneficial transmission facilities.⁴⁷²

g. Comments Regarding Definition of Long-Term Regional Transmission Facility

189. PJM states that the Commission should clarify certain details of the NOPR proposal, including the meaning of the word "identified" in the proposed definition of Long-Term Regional Transmission Facility.⁴⁷³ In addition, PJM requests that the Commission clarify that if a transmission project shows up in several Long-Term Scenarios but is not selected until it reaches one of the shorter-term reliability and market efficiency transmission planning processes, that project would not be considered a Long-Term Regional Transmission Facility for selection and cost allocation purposes.⁴⁷⁴ Otherwise, PJM contends, the rules for selection and cost allocation for transmission projects selected in the shorter-term and intermediate-term reliability and market efficiency transmission planning processes will be unclear, leading to re-litigation.⁴⁷⁵

h. Challenges to Commission Jurisdiction or Authority

i. FPA Section 201

190. Some commenters argue that the NOPR proposals exceed the Commission's jurisdiction or that the Commission otherwise lacks the authority to adopt a final order in this proceeding. Of these commenters, most contend that the NOPR proposal interferes with authority reserved to the states under FPA section 201.⁴⁷⁶

⁴⁶² New Jersey Commission Initial Comments at 10–11; PIOs Initial Comments at 15–16.

191. Some commenters argue that the NOPR proposal intrudes on the authority reserved to the states under FPA section 201 over integrated resource planning processes or resource mix decision making.⁴⁷⁷ For example, Alabama Commission states that the NOPR proposal for Long-Term Regional Transmission Planning would intrude on state integrated resource planning to the extent that it dictates the construction of facilities through a top-down regional process or seeks to influence or mandate a substantive change to the generation resource mix.⁴⁷⁸ Similarly, Nevada Commission argues that the NOPR may impact states' authority to determine their own mix of generating resources. Nevada Commission contends that the NOPR may cross the line from regulating interstate transmission to regulating intrastate processes—particularly because the Commission has not asserted jurisdiction over bundled retail transmission.⁴⁷⁹ Louisiana Commission argues that the Commission should not override state jurisdiction on resource planning, fuel type, and siting decisions, along with the regulation of retail rates.⁴⁸⁰

192. Mississippi Commission requests that the Commission acknowledge that it cannot force regional planning entities to indirectly act as a national integrated resource planner.⁴⁸¹ SERTP Sponsors and Southern argue that the NOPR essentially constitutes a Commission-regulated integrated resource plan/request for proposal process and that, to be workable, Long-Term Regional Transmission Planning instead must be based on state commission-regulated

integrated resource planning/request for proposal decisions.⁴⁸² SERTP Sponsors and Southern contend that the NOPR proposed to require transmission providers to make independent resource and load decisions because: (1) state integrated resource plans are just one of many factors to be considered in developing Long-Term Scenarios; and (2) state integrated resource planning or request for proposal processes generally use a 10-year planning horizon such that there are no state-approved resources for the second half of the NOPR's proposed 20-year transmission planning horizon.⁴⁸³ SERTP Sponsors and Southern further argue that, in upholding Order No. 1000, the D.C. Circuit emphasized that the Commission was regulating the transmission planning process and not mandating any particular outcome, and that, if the Commission prescribes a process that supplants state decision making, it will have crossed the line into prescribing substantive outcomes and thus exceeded its jurisdiction.⁴⁸⁴

193. Ohio Commission Federal Advocate contends that the NOPR appears designed to target the achievement of narrow environmental policy objectives or the socialization of transmission costs, not to ensure reliability or foster just and reasonable rates.⁴⁸⁵ Southern and Utah Commission state that the Commission has consistently recognized that the FPA does not allow the Commission to pick winners and losers when it comes to generation and argue that the Commission has no authority to favor one generation mix over another.⁴⁸⁶ Similarly, Louisiana Commission, Kansas Ratepayer Advocates, and Undersigned States contend that the Commission lacks the statutory authority to dictate states' generation resource decisions. They argue instead that each state possesses such authority and is uniquely qualified to choose the generation resources that are needed to economically meet ratepayers' electric service needs within their states.⁴⁸⁷

194. SERTP Sponsors and Southern argue that, even if assumptions about the resource mix included in Long-Term Scenarios do not bind states, requiring transmission providers to develop Long-Term Scenarios that are predicated on particular resource assumptions effectively makes a substantive resource decision because it favors the assumed resource mix over others.⁴⁸⁸ SERTP Sponsors and Southern contend that this is akin to the Commission attempting to accomplish indirectly what it could not directly.⁴⁸⁹ SERTP Sponsors argue that the Commission should support the exercise of traditional state resource and infrastructure planning authority rather than supplant it.⁴⁹⁰ North Carolina Commission and Staff argue that the use of the production cost savings benefit in Long-Term Regional Transmission Planning “could conflict with state-jurisdictional resource decisions.”⁴⁹¹

195. Other commenters disagree with these contentions and argue that the NOPR proposal would not intrude on states' reserved authority over resource mix decision making or integrated resource plan processes.⁴⁹² Kentucky Commission Chair Chandler and SEIA argue that the NOPR's stated aim of reforming regional and interregional transmission planning processes does not foreclose states' decision making on generation.⁴⁹³ ACEG contends that the NOPR does not propose or purport to regulate the electric supply mix and that the Commission is acting squarely within its authority under the FPA's cooperative federalism structure.⁴⁹⁴ AEE notes that the Commission included integrated resource planning and utility load-serving planning as a factor driving transmission needs and argues that none of the requirements proposed by the Commission directly conflict with

⁴⁹⁴ ACEG Reply Comments at 15.

integrated resource planning processes, require that integrated resource planning be conducted on a different timeline, or override resource planning efforts.⁴⁹⁵ Likewise, Kentucky Commission Chair Chandler reiterates that Kentucky's integrated resource plans are not driving transmission planning processes in the state. He explains that integrated resource plans/requests for proposals are not the basis for generation investment decisions, but the state's requests for proposals seek generation proposals after the integrated resource planning process is complete and a need for generation is identified.⁴⁹⁶ In response to Alabama Commission's arguments that the NOPR's proposed rules have the potential to encroach on state-jurisdictional integrated resource planning and resource procurement processes overseen by Alabama Commission, SREA contends that Alabama Commission in fact does not have a formal integrated resource planning process upon which the Commission could encroach.⁴⁹⁷

196. New Jersey Commission disagrees with commenters who argue that the Commission intends to impose a preferred resource mix on the Nation by overriding state choices and contends that such arguments are "profoundly misconstruing" the nature of the NOPR proposal and what the Commission aims to achieve.⁴⁹⁸ Instead, New Jersey Commission argues that Long-Term Regional Transmission Planning would address transmission needs that are being driven by state policies, market decisions, and technological changes, all of which reflect consumer-driven demand for cleaner electricity.⁴⁹⁹ New Jersey Commission contends that the NOPR proposal would ensure that transmission needs are reliably met at a total cost that is just and reasonable, which New Jersey Commission argues is required—not precluded—by the FPA.⁵⁰⁰

197. Some commenters argue that the NOPR proposal would intrude on authority over siting and construction of transmission facilities that is reserved to the states under FPA section 201.⁵⁰¹ For

example, Southern argues that the FPA reserves transmission siting authority to the states and that the final order should not directly or indirectly interfere with this authority.⁵⁰² Alabama Commission argues that Long-Term Regional Transmission Planning would interfere with state authority to the extent it dictates the construction of facilities through a top-down regional process.⁵⁰³ Kansas Ratepayer Advocates state that the Commission would exceed its authority and violate states' constitutional rights by ordering states to construct interregional transmission facilities with construction costs paid by retail ratepayers in Kansas.⁵⁰⁴

198. Nevada Commission explains that Nevada law governs the issuance of permits to construct transmission facilities, and that such facilities—even where their costs are not intended to be recovered through retail rates—must go through and may not bypass that process in favor of regional transmission planning processes.⁵⁰⁵ NARUC contends that state participation in cost allocation for a portfolio of Long-Term Regional Transmission Facilities does not require a state, in its role as a transmission siting authority, to approve any projects within the portfolio.⁵⁰⁶

199. A few commenters argue that the NOPR proposal would intrude on the authority over certain transmission planning allegedly reserved to the states under FPA section 201. For example, Mississippi Commission states that the final order must respect state jurisdictional authority over planning and approval of transmission facilities used to serve state load.⁵⁰⁷ Nevada Commission states that Nevada will continue to plan for transmission through its integrated resource planning process and that the Commission should allow "bottom up" transmission planning, particularly in non-RTO/ISO transmission planning regions.⁵⁰⁸

200. In contrast, other commenters express support for the Commission's role in transmission planning. Ohio Consumers argue that the Commission has authority over transmission planning, even in states like Ohio that allow for retail consumer choice.⁵⁰⁹

SREA explains that states and other jurisdictional regulators will continue to have ultimate control over generation resource planning and transmission planning, regardless of what a regional transmission body proposes. SREA states that, even within RTO/ISO regions, "transmission or generation resource plans are subject to review, update or even cancellation, and those decisions are always determined by the relevant regulatory bodies."⁵¹⁰ Vistra states that any final order should recognize the legal and practical boundaries on the Commission's role in transmission development and in shaping the generation sector. According to Vistra, the Commission has successfully relied on its general authority under FPA sections 205 and 206 to oversee rates, terms, and conditions of jurisdictional service as the basis for its policies on transmission planning.⁵¹¹

201. Finally, Mississippi Commission argues that the NOPR proposal may infringe upon states' reserved authority under FPA section 201 to make resource adequacy decisions. Mississippi Commission explains that, when an RTO/ISO approves construction to deliver generation output to remote utilities that have failed to agree to purchase the energy, that RTO/ISO infringes on the state's resource adequacy jurisdiction.⁵¹² Mississippi Commission contends that requiring State A to pay for transmission upgrades to rely on energy generated in State B, despite State A having constructed its own generation facilities, would usurp State A's resource adequacy jurisdiction.⁵¹³

ii. "Major Questions Doctrine"

202. Some commenters argue that the NOPR proposal would not withstand judicial review under the major questions doctrine.⁵¹⁴

203. Louisiana Commission claims that the NOPR proposal violates principles of "agency law" and the separation of powers doctrine because Congress has not clearly delegated to the Commission the authority to enact far-reaching, nationwide policy changes favoring one form of generation over another.⁵¹⁵ Louisiana Commission

⁵¹⁵ Louisiana Commission Initial Comments at 6.

contends that the NOPR proposals exceed the limits of the FPA, which does not provide clear delegated authority for the Commission to decide types of generating resources. Louisiana Commission argues that the Commission therefore lacks the authority to determine whether the country should undergo a clean energy transition. Drawing parallels between the NOPR proposal and the U.S. Supreme Court's decision in *West Virginia v. EPA*, Louisiana Commission avers that the determination of what type of generating resources should be transmitted from where in the United States qualifies as a "major question" of public policy that Congress should order.⁵¹⁶

204. SERTP Sponsors argue that *West Virginia v. EPA* reinforces the need for the Commission to exercise restraint in expanding its jurisdiction without a clear Congressional delegation of authority.⁵¹⁷ According to SERTP Sponsors, *West Virginia v. EPA* makes clear that the Nation's energy policy and generation mix is a "major question" for which the Commission must have direct authorization from Congress to assert jurisdiction.⁵¹⁸ SERTP Sponsors contend that Congress has not clearly provided the Commission with jurisdiction to presuppose generation decisions and thereby effect particular substantive transmission outcomes.⁵¹⁹ Rather, SERTP Sponsors argue that Congress instead expressly and unequivocally reserved generation authority to the states.⁵²⁰

205. Southern similarly argues that *West Virginia v. EPA* makes clear that the Nation's energy policy and generation mix is a "major question" that requires more than a "merely plausible textual basis" for a Federal agency to assert jurisdiction.⁵²¹ Southern contends that, as applied to the NOPR proposal's "contemplated foray into [integrated resource planning and generation/resource matters]," the Commission does not rely upon a specific and clear grant of congressional authorization but instead relies upon its "general, gap-filling authorization in FPA Section 206 to regulate a 'practice' affecting a rate or charge for

transmission."⁵²² Southern contends that rather than provide clear congressional authorization, Congress instead reserved authority over integrated resource plans and generation to the states.⁵²³

206. Utah Commission argues that the Commission has no authority to enact any rule for the purpose of influencing the resource generation mix or expanding development of any type of generation. Utah Commission states that the increased development and integration of renewable generation is a "highly charged political question and a matter of significant political interest about which state legislatures have made very different policy choices." As such, Utah Commission argues that, although courts have given the Commission "some latitude under FPA Section 206," the U.S. Supreme Court will not uphold a final order premised upon the Commission's "claimed authority to prescribe a single, onerous national regime for transmission planning specifically intended to pressure transmission providers to select costly expansions into remote areas for the purpose of realizing [the Commission's] preferred generation mix, a matter specifically reserved to the states."⁵²⁴ Utah Commission explains that the Supreme Court's reasoning in *West Virginia v. EPA* is applicable to the Commission. Utah Commission argues that "imposing a single set of federally mandated, highly prescriptive transmission planning and cost allocation requirements for the purpose of privileging the selection of costly transmission projects to serve remote and speculative renewable generation is not a lawful exercise of [the Commission's] authority under FPA Section 206."⁵²⁵

207. Undersigned States argue that "[n]ational-scale energy grid regulation" is a "major question" because of the "massive economic consequences" involved and the implication of a "unique and complex jurisdictional divide between [s]tate and federal regulatory authority."⁵²⁶ According to Undersigned States, the Commission "has no statutory authority at all—much less 'clear congressional authorization'—to revamp the energy

grid's mix of generation resources writ large."⁵²⁷

208. Harvard ELI and Policy Integrity disagree with Undersigned States. They argue that Undersigned States "mischaracterize the NOPR" because the NOPR would not revamp the energy grid's mix of generation resources. Rather, according to Harvard ELI and Policy Integrity, the NOPR would require utilities to amend their existing regional transmission planning processes in response to changes in the resource mix and demand that are occurring because of factors unrelated to the NOPR.⁵²⁸

209. Harvard ELI and Policy Integrity also contend that Undersigned States overlook the major questions doctrine's key requirements. They assert that application of the major questions doctrine does *not* turn on whether a regulation will have significant economic effects or intrudes on areas traditionally regulated by states. Instead, Harvard ELI and Policy Integrity assert that the major questions doctrine is triggered only when an agency's action is both unheralded and transformative.⁵²⁹

210. Harvard ELI and Policy Integrity argue that the NOPR is not unheralded. They explain that Order No. 1000 similarly regulated transmission planning and cost allocation in response to concerns about the generation mix, and that the D.C. Circuit upheld Order No. 1000 while rejecting arguments similar to those that Undersigned States make here.⁵³⁰ Moreover, Harvard ELI and Policy Integrity identify provisions in existing tariffs that are similar to those that the NOPR proposes and point to other antecedents for Commission regulation of regional transmission planning.⁵³¹

211. Likewise, Harvard ELI and Policy Integrity argue that the NOPR does not represent a transformative expansion in the Commission's authority nor a "fundamental change to the statutory scheme."⁵³² Instead, they assert that the NOPR merely builds on existing regional transmission planning processes to ensure that Commission-jurisdictional rates remain just and reasonable, as the FPA requires.⁵³³

iii. “Equal Sovereignty Doctrine”/Cross-Subsidization

212. Some commenters argue that the NOPR’s cost allocation proposal impermissibly requires states to subsidize other states’ public policies.⁵³⁴ Undersigned States argue that the NOPR would exceed the Commission’s jurisdiction because it violates the Constitution’s equal sovereignty doctrine, which provides constitutional equality among the states.⁵³⁵ According to Undersigned States, the NOPR “sets up a scheme where one [s]tate can effectively require other [s]tates to subsidize their own vision of what resources should be used in electricity generation—a core, sovereign [s]tate function,” which risks “undue discrimination” among states.⁵³⁶ Mississippi Commission argues that unanimous agreement, rather than majority agreement, would be required for any *ex ante* default cost allocation method, as each state has sole jurisdiction within its boundaries.⁵³⁷

213. Louisiana Commission asserts that “group state oversight” is not equivalent to “state oversight,” and that the Commission should not adopt a rule that subjects one state’s will to majority override. Louisiana Commission further argues that the Commission should not enact rules that would “impose costs for projects selected under the proposed long-term planning criteria on unwilling states that do not benefit from those projects, even if those states are in the minority.” Louisiana Commission contends that the Commission should not attempt to override state jurisdiction simply because a majority of states in a region may support imposing costs on unwilling states that do not benefit from transmission projects favored by the majority.⁵³⁸ Louisiana Commission argues that states should not be required to cede their jurisdiction by engaging in any “consulting” committee structure required with respect to Long-Term Regional Transmission Planning,⁵³⁹ because granting each state one vote in a multi-state body cannot replace the

meaningful exercise of state jurisdiction within a state’s borders.⁵⁴⁰

214. Conversely, ACEG disputes these claims, which ACEG states are “incorrect and misconstrue the NOPR.”⁵⁴¹ ACEG highlights the fact that the NOPR does not include resource preferences in its proposed planning criteria, factors, or benefits, nor does the NOPR exclude consideration of non-renewable resources from transmission planning.⁵⁴² ACEG further notes that the NOPR proposes to direct transmission planners to plan the system to “meet transmission needs driven by changes in the resource mix and demand,” requiring transmission planners to consider the resource mix as a whole, which necessarily requires considering all types of resources.⁵⁴³ New Jersey Commission agrees, stating that the Commission did not propose in the NOPR “to unduly favor, mandate, or subsidize forms of generation,” but rather “to ensure that the bulk electricity system maintains reliability and satisfies evolving consumer demands, whether driven by public policy requirements or voluntary goals, at the lowest reasonable cost.”⁵⁴⁴

Moreover, New Jersey Commission argues, allocating the cost of Long-Term Regional Transmission Facilities only to those states with relevant public policy goals “would allow the remaining states to free ride, and effectively force the states with public policy goals to subsidize the provision of normal electricity service in other states in order to pursue their own policies.”⁵⁴⁵

i. Other Issues

215. NRECA requests that the Commission clarify that the final order, consistent with the Commission’s obligation under FPA section 217(b)(4), “is intended to facilitate and support ‘bottom-up’ transmission planning to meet the transmission needs of [load-serving entities] to provide reliable and economical service to consumers.”⁵⁴⁶

216. Some commenters argue that the final order will not withstand judicial scrutiny if it does not permit regional flexibility.⁵⁴⁷ For example, US Chamber of Commerce explains that the interstate power grid includes investor-owned

utilities, publicly-owned utilities, and electric cooperatives, which can be members of RTOs/ISOs, power pooling arrangements, joint-ownership agreements, or subject to traditional vertically-integrated structures.⁵⁴⁸ According to US Chamber of Commerce, imposing a new regional transmission planning regime on all these various entities would ignore the compromises and benefits that led to the status quo.⁵⁴⁹ Relatedly, Southern and SERTP Sponsors argue that the legal viability of the final order will be threatened if the Commission fails to respect the FPA’s fundamental jurisdictional roles by not providing states and transmission providers with the opportunity and flexibility to adapt their planning processes.⁵⁵⁰

j. Miscellaneous Concerns

217. MISO seeks clarification from the Commission that the term “transmission planning region” has the same meaning as in Order No. 1000, where MISO may comprise a single transmission planning region despite including multiple transmission zones or local balancing authorities.⁵⁵¹

218. California Municipal Utilities state that transmission planning should not be a vehicle to centralize resource choices, but instead should reflect the choices made by state and local authorities.⁵⁵² Similarly, Mississippi Commission argues that Long-Term Regional Transmission Planning should be driven by state-specific concerns and needs and that regional priorities should be subordinated to state priorities.⁵⁵³ Mississippi Commission asks that the Commission not issue a final order but instead establish proceedings to address specific concerns with certain regional transmission planning processes on a more limited basis.⁵⁵⁴ Southern argues that Long-Term Regional Transmission Facilities in non-RTO/ISO transmission planning regions must have the support of affected states, as these facilities stem from resource and load assumptions that are not the result of those states’ planning and procurement processes.⁵⁵⁵ Southern urges the Commission to maintain the appropriate transmission

planning and state-driven supply- and demand-side relationships, which Order No. 1000 preserved.⁵⁵⁶ SERTP Sponsors argue that the Commission should avoid mandates that could largely result in transmission expansion or infrastructure decisions that lead to investments borne, largely, by retail electricity consumers that lack the consent and support of the state authorities vested with the responsibility to protect those consumers.⁵⁵⁷

219. Several commenters agree with the Commission that any final order should apply to transmission providers in both RTO/ISO and non-RTO/ISO transmission planning regions.⁵⁵⁸ However, several commenters disagree and argue that the final order, or certain specified requirements in the final order, should apply only to RTO/ISO transmission planning regions.⁵⁵⁹ Nevada Commission argues that the RTOs/ISOs “may be better suited” than other regions for the transmission planning that the NOPR proposes.⁵⁶⁰ Utah Division of Public Utilities stresses the need for regional flexibility, noting that transmission providers located outside of RTOs/ISOs already coordinate on transmission planning with many non-Commission-jurisdictional entities.⁵⁶¹

220. SEIA rebuts the claims of Southern and Louisiana, Utah, Mississippi, and Alabama Commissions that state planning processes already interact well with transmission planning and support customers’ transmission needs.⁵⁶² SEIA and SREA assert that non-RTO/ISO transmission planning regions do not engage in sufficient or transparent transmission planning.⁵⁶³ Specifically, SEIA states, the transmission planning processes in non-RTO/ISO regions are rife with issues, including the use of inconsistent and inaccurate data and an exclusionary and insufficiently transparent process.⁵⁶⁴ Further, SEIA states that the end result of an integrated resource planning process may be based on inconsistent and inaccurate data,⁵⁶⁵ the

process is “sometimes disjointed,”⁵⁶⁶ and the process is a voluntary process in which the planning authority must accept, and not verify, the information provided.⁵⁶⁷

221. SREA rebuts Southern’s contention that Southern’s transmission planning processes are adequate, noting that Southern itself has presented testimony to the Georgia Commission conceding that it is unable to perform more robust transmission planning due to limitations in its software and models.⁵⁶⁸ SREA argues that throughout the Southeast, transmission planning is not a priority and that integrated resource planning is not a substitute for robust transmission planning.⁵⁶⁹ SREA explains that the NOPR borrows many of the qualities of integrated resource planning and applies them to transmission planning, including scenario-based evaluation and use of 20-year planning horizons, and that many states have integrated resource planning rules and guidelines that recognize the value of long-term planning.⁵⁷⁰

222. EPSA states that the Commission should focus not on socializing transmission costs but on reducing transaction costs, accelerating lagging processes, and adopting market-based solutions like open seasons.⁵⁷¹

223. GridLab states that there is evidence to suggest that changes in resource mix, demand, and weather will lead to significant changes in the value of regional transmission facilities in the 2030s, though GridLab asserts that these changes may increase or decrease the value of regional transmission facilities. Accordingly, GridLab recommends that the Commission and stakeholders resist evaluating the success of this rulemaking based on arbitrary metrics related to each transmission provider’s expansion of regional transmission facilities.⁵⁷²

3. Commission Determination

a. Participation in Long-Term Regional Transmission Planning

224. We adopt the NOPR proposal to require transmission providers in each transmission planning region to participate in a regional transmission planning process that includes Long-

Term Regional Transmission Planning, meaning regional transmission planning on a sufficiently long-term, forward-looking, and comprehensive basis to identify Long-Term Transmission Needs, identify transmission facilities that meet such needs, measure the benefits of those transmission facilities, and evaluate those transmission facilities for potential selection in the regional transmission plan for purposes of cost allocation as the more efficient or cost-effective transmission facilities to meet Long-Term Transmission Needs.⁵⁷³ We also adopt the NOPR proposal to require that Long-Term Regional Transmission Planning comply with the following existing Order Nos. 890 and 1000 transmission planning principles: (1) coordination; (2) openness; (3) transparency; (4) information exchange; (5) comparability; and (6) dispute resolution.⁵⁷⁴ In developing their compliance filings, transmission providers and stakeholders should review the requirements set forth in Order No. 890 and Order No. 1000, and the Commission’s orders on compliance filings submitted by transmission providers, for guidance as to what each of these transmission planning principles requires. For example, as a starting point, a transmission provider should review the orders addressing its own Order Nos. 890 and 1000 compliance filings and the compliance filings for transmission providers in its transmission planning region.

225. We also adopt specific requirements regarding how transmission providers must conduct Long-Term Regional Transmission Planning. Specifically, and as discussed further below, we require transmission providers in each transmission planning region⁵⁷⁵ to: (1) identify Long-Term

⁵⁷³ We note that, while we have modified this definition of Long-Term Regional Transmission Planning from the NOPR proposal, the modified definition does not substantively change the steps involved in Long-Term Regional Transmission Planning from those proposed in the NOPR. Rather, the revised definition merely clarifies the steps that transmission providers must take in conducting Long-Term Regional Transmission Planning.

⁵⁷⁴ Order No. 1000, 136 FERC ¶ 61,051 at PP 146, 151. We do not address these principles in detail here.

⁵⁷⁵ In response to MISO’s request, MISO Initial Comments at 24, we clarify that this final order does not alter the meaning of “transmission planning region” as used in Order No. 1000. A transmission planning region is one in which transmission providers, in consultation with stakeholders and affected states, have agreed to participate for purposes of regional transmission planning and development of a single regional transmission plan. Order No. 1000–A, 139 FERC ¶ 61,132 at P 272; Order No. 1000, 136 FERC ¶ 61,051 at P 160.

⁵⁷² GridLab Initial Comments at 9–10.

Transmission Needs and Long-Term Regional Transmission Facilities to meet those needs through the development of Long-Term Scenarios⁵⁷⁶ that satisfy the requirements set forth in this final order; (2) use and measure, at a minimum, a set of seven required benefits⁵⁷⁷ to evaluate Long-Term Regional Transmission Facilities over a time horizon that covers, at a minimum, 20 years starting from the estimated in-service date of each transmission facility; and (3) evaluate Long-Term Regional Transmission Facilities to determine whether they are more efficient or cost-effective transmission solutions to meet Long-Term Transmission Needs and use selection criteria (in collaboration with states and other stakeholders) that provide the opportunity for transmission providers to select such Long-Term Regional Transmission Facilities.

226. These requirements together establish a long-term, forward-looking, and more comprehensive approach to regional transmission planning, which will ensure that transmission providers identify, evaluate, and select more efficient or cost-effective transmission solutions to address Long-Term Transmission Needs. Long-Term Regional Transmission Planning, as set forth in this final order, requires regional transmission planning based on a multitude of drivers of Long-Term Transmission Needs and provides the opportunity for transmission providers to meet those needs by selecting more efficient or cost-effective Long-Term Regional Transmission Facilities.

227. In considering the comments received on this proposal, we strike a careful balance. On the one hand, we believe that there is an inherent risk in transmission providers waiting for the near-term certainty that some commenters appear to believe is necessary⁵⁷⁸ before planning to address transmission needs. As explained in the Overall Need for Reform section above, doing so may result in transmission

providers relying on relatively inefficient and less cost-effective piecemeal transmission solutions to address these needs shortly before they manifest, to the detriment of customers. On the other hand, we acknowledge the inherent uncertainty involved in planning to meet Long-Term Transmission Needs and that this uncertainty means that forward-looking regional transmission planning entails certain risks, including the risk that transmission needs may change over time. In this final order, we balance these risks, requiring planning to meet Long-Term Transmission Needs, while imposing requirements on how Long-Term Regional Transmission Planning is conducted, as discussed further herein, to mitigate uncertainty. To adequately prepare for the future, transmission providers need to make decisions in the present that are grounded in a thorough, informed analysis of the factors that drive Long-Term Transmission Needs.

228. As discussed in the Overall Need for Reform section, these factors are together driving rapid changes in the Long-Term Transmission Needs that transmission providers must plan to meet to continue to provide an affordable, reliable supply of electricity to customers, but neither transmission infrastructure nor regional transmission planning processes are keeping pace. Consequently, the Commission's existing regional transmission planning requirements are no longer just and reasonable, as they increasingly result in transmission investment decisions occurring outside of regional transmission planning processes and instead through generator interconnection processes and local transmission planning processes that typically plan to meet discrete, nearer-term transmission needs. In addition, the record demonstrates that transmission providers have made substantial investments in in-kind replacement transmission facilities, which generally are not identified through more long-term, forward-looking, or comprehensive transmission planning. This final order aims to ensure that transmission providers, through their regional transmission planning processes, identify, evaluate, and select Long-Term Regional Transmission Facilities that more efficiently or cost-effectively address Long-Term Transmission Needs, helping to ensure just and reasonable rates.

229. We disagree with arguments that the Commission should not require Long-Term Regional Transmission Planning because, certain commenters claim, doing so will introduce excessive

uncertainty into regional transmission planning, transmission providers will make forecasting errors, or the final order will result in regional transmission planning that is speculative.⁵⁷⁹ To the contrary, we believe that the reforms adopted in this final order account for and seek to reduce the inherent uncertainty in forward-looking regional transmission planning, while ensuring that transmission providers, through their regional transmission planning processes, identify, evaluate, and select Long-Term Regional Transmission Facilities that more efficiently or cost-effectively address Long-Term Transmission Needs, thus helping to ensure just and reasonable rates.⁵⁸⁰ In fact, by requiring transmission providers to use Long-Term Scenarios in Long-Term Regional Transmission Planning, this final order provides transmission providers with a critical tool for managing uncertainty, facilitating regional transmission planning that accounts for a range of potential futures, as well as an assessment of the likelihood of each scenario manifesting, when identifying, evaluating, and selecting Long-Term Regional Transmission Facilities. Further, as discussed in the Evaluation and Selection of Long-Term Regional Transmission Facilities section below, we require transmission providers to reevaluate Long-Term Regional Transmission Facilities in certain circumstances, which will provide transmission providers with yet another such tool.

230. Moreover, notwithstanding allegations to the contrary, we believe that Long-Term Regional Transmission Planning is a logical and reasonable extension of current regional transmission planning processes, which also manage uncertainty and plan for future regional transmission needs. The key difference, which we address through this final order, is that these existing regional transmission planning processes are conducted in a manner that is not sufficiently long-term, forward-looking, or comprehensive such that transmission providers are not identifying Long-Term Transmission Needs. As a result, transmission providers are failing to identify or evaluate regional transmission facilities that would more efficiently or cost-effectively address those Long-Term Transmission Needs, and consequently,

⁵⁷⁶ The requirements related to Long-Term Scenarios are discussed below.

⁵⁷⁷ As discussed further below in the Evaluation of the Benefits of Regional Transmission Facilities section, these seven benefits are: (1) Benefit 1, Avoided or Deferred Reliability Transmission Facilities and Aging Transmission Infrastructure Replacement; (2) Benefit 2(a), Reduced Loss of Load Probability, or Benefit 2(b), Reduced Planning Reserve Margin; (3) Benefit 3, Production Cost Savings; (4) Benefit 4, Reduced Transmission Energy Losses; (5) Benefit 5, Reduced Congestion Due to Transmission Outages; (6) Mitigation of Extreme Weather Events and Unexpected System Conditions; and (7) Capacity Cost Benefits from Reduced Peak Energy Losses.

⁵⁷⁸ See, e.g., NRG Initial Comments at 8 (arguing that there are unlikely to be any "no regrets" options).

⁵⁷⁹ Louisiana Commission Initial Comments at 4–5; NRG Initial Comments at 3–4; Ohio Consumers Initial Comments at 5.

⁵⁸⁰ See Policy Integrity Initial Comments at 6 (arguing that future uncertainty requires scenario planning).

are missing the opportunity to select such regional transmission facilities. Our reforms in this final order remedy these deficiencies.

231. Further, we believe that Long-Term Regional Transmission Planning as set forth in this final order provides adequate safeguards against excessive transmission development in response to speculative transmission needs. For example, this final order requires transmission providers to develop multiple plausible and diverse Long-Term Scenarios based upon best available data, which will allow transmission providers to better understand how certain categories of factors will give rise to Long-Term Transmission Needs, and requires transmission providers to update their assumptions periodically, as discussed further below.⁵⁸¹ In developing these Long-Term Scenarios, transmission providers are required to treat more certain drivers of Long-Term Transmission Needs differently than less certain drivers, and must provide opportunities for stakeholder engagement. Further, the final order grants substantial flexibility to transmission providers to develop an evaluation process and selection criteria that will provide them with the opportunity to select Long-Term Regional Transmission Facilities in a way that maximizes benefits accounting for costs over time without over-building transmission facilities. Consistent with the existing Order No. 1000 regional transmission planning processes, the final order does not require transmission providers to select any regional transmission facilities as part of Long-Term Regional Transmission Planning. Finally, we require transmission providers to reevaluate previously selected Long-Term Regional Transmission Facilities in certain circumstances, as discussed further below in the Reevaluation section.

232. The regional transmission planning and cost allocation requirements in this final order, like those of Order Nos. 890 and 1000, are focused on the transmission planning process, and do not require any substantive outcomes from this process.⁵⁸² We disagree with certain commenters' assertions that this final order favors, promotes, or subsidizes particular types of generation resources over others, or otherwise engages in

generation planning.⁵⁸³ Instead, this final order requires transmission providers to participate in Long-Term Regional Transmission Planning through their regional transmission planning process that identifies Long-Term Transmission Needs, evaluates the benefits of Long-Term Regional Transmission Facilities to meet those needs, and provides the opportunity for transmission providers to select Long-Term Regional Transmission Facilities that are more efficient or cost-effective transmission solutions to those needs. We reiterate that, as discussed below in the Evaluation and Selection of Long-Term Regional Transmission Facilities section, any selected Long-Term Regional Transmission Facilities must satisfy transmission provider-developed selection criteria that maximize benefits accounting for costs over time without over-building transmission facilities, which ensures that the costs of such transmission facilities are outweighed by the benefits they deliver to customers.

233. We disagree with commenters that argue that the factors giving rise to Long-Term Transmission Needs, such as state laws dictating specific generation resource mixes, are irreconcilable with effective transmission planning.⁵⁸⁴ These changes are occurring independent of any action that we take in this final order, and they are being driven by a wide variety of factors. This final order provides transmission providers with the tools that they need to respond to these factors, requiring that they conduct Long-Term Regional Transmission Planning to identify, evaluate, and select Long-Term Regional Transmission Facilities that are more efficient or cost-effective regional transmission solutions to the Long-Term Transmission Needs that these factors drive.

234. We disagree with Louisiana Commission and former Kansas Commission Chairman Keen's claims that Long-Term Regional Transmission Planning will threaten the reliability of the transmission system. We acknowledge that reliability needs are evolving; for example, the increasing frequency and severity of high-impact extreme weather events threatens grid reliability. We believe that Long-Term

Regional Transmission Planning—in addition to existing Order No. 1000 regional transmission planning and cost allocation requirements—is needed to support the reliable operation of transmission systems, given these changes. As the Commission and the North American Electric Reliability Corporation have noted, the transmission system may not be adequately prepared for extreme weather events and the increasing frequency of these events must be planned for to ensure system reliability.⁵⁸⁵ We thus view our action in this final order as complementary to other steps that the Commission has taken in recent years to bolster system reliability.⁵⁸⁶

235. Further, we disagree with the contention of Louisiana Commission and Vistra that Long-Term Regional Transmission Planning will distort the efficient functioning of Commission-jurisdictional wholesale markets by subsidizing uneconomic generation or by distorting price signals. As discussed further below, we require transmission providers, as part of Long-Term Regional Transmission Planning, to assess the costs and measure the benefits of regional transmission facilities that address Long-Term Transmission Needs and to develop evaluation processes and selection criteria that provide the opportunity to select those transmission facilities as more efficient or cost-effective regional transmission solutions to those Needs. While the addition of any new transmission facility necessarily affects Commission-jurisdictional wholesale markets, the requirements set forth in this final order ensure that transmission providers will have the opportunity to select more efficient or cost-effective Long-Term Regional Transmission Facilities that provide value to transmission customers and support the efficient functioning of wholesale markets by addressing Long-Term Transmission Needs.

⁵⁸⁵ FERC, North American Electric Reliability Corporation, *Winter Storm Elliott Report: Inquiry into Bulk-Power System Operations During December 2022* (Nov. 2023), <https://www.ferc.gov/media/winter-storm-elliott-report-inquiry-bulk-power-system-operations-during-december-2022>; FERC, North American Electric Reliability Corporation, *The February 2021 Cold Weather Outages in Texas and the South Central United States* (Nov. 2021), <https://www.ferc.gov/media/february-2021-cold-weather-outages-texas-and-south-central-united-states-ferc-nerc-and>.

⁵⁸² See, e.g., Order No. 1000, 136 FERC ¶ 61,051 at P 12.

⁵⁸³ Alabama Commission Initial Comments at 7–8; Louisiana Commission Initial Comments at 12, 19–21; Potomac Economics Initial Comments at 3–4; Utah Division of Public Utilities Initial Comments at 2; Vistra Initial Comments at 11.

⁵⁸⁴ See ELCON Initial Comments at 9 (“ELCON has always believed that planning for disparate state energy priorities is at odds with market-driven, efficient, and cost-effective transmission planning.”).

236. We also disagree with Vistra's contention that Long-Term Regional Transmission Planning somehow will assign all, or a disproportionately high share, of interconnection-related network upgrade costs to load or undermine the incentives for generation developers to site new generation resources in ways that minimize transmission system upgrade costs. Rather, because transmission providers will now engage in Long-Term Regional Transmission Planning to identify, evaluate, and select more efficient or cost-effective regional transmission facilities to address Long-Term Transmission Needs, Long-Term Regional Transmission Facilities will be planned in a more efficient and cost-effective manner than if transmission facilities meeting a narrower set of transmission needs were left to be identified through the generator interconnection process. Indeed, numerous commenters explain that the piecemeal expansion of the transmission system is highly inefficient and results in higher costs for transmission customers,⁵⁸⁷ in part because the costs of interconnection-related network upgrades ultimately are passed on to consumers.

237. We strike another careful balance in this final order. On the one hand, we recognize transmission providers' need for sufficient flexibility to implement Long-Term Regional Transmission Planning in their transmission planning regions to reflect regional differences, such as different market structures.⁵⁸⁸ On the other hand, we must ensure that transmission providers' regional transmission planning processes result in just and reasonable rates, which, as discussed above in the Overall Need for Reform section, necessitates that they plan on a sufficiently long-term, forward-looking, and comprehensive basis such that transmission providers are identifying, evaluating, and selecting more efficient or cost-effective regional transmission facilities to address Long-Term Transmission Needs. We believe that the balance struck in the final order will ensure that Commission-jurisdictional rates are just and reasonable and not unduly discriminatory or preferential and, thus, we reject requests for flexibility that exceeds that provided in this final order.

⁵⁸⁷ See, e.g., NYISO Initial Comments at 30; PIOs Initial Comments at 9–10.

⁵⁸⁸ The Commission also recognized the need for sufficient flexibility in regional transmission planning to reflect regional differences in Order No. 1000. See Order No. 1000, 136 FERC ¶ 61,051 at P 61.

238. In particular, we reject requests that, instead of requiring transmission providers to implement Long-Term Regional Transmission Planning in accordance with the requirements adopted in this final order, we set forth principles and objectives articulating our concerns with existing regional transmission planning processes and give transmission providers the flexibility to propose revisions to their processes to address those concerns.⁵⁸⁹ Having found existing regional transmission planning and cost allocation requirements to be unjust and unreasonable, we have an obligation under FPA section 206 to adopt reforms that remedy the deficiencies identified in this final order. We also believe that such an approach would fail to adequately address the deficiencies described above in the Overall Need for Reform section, namely that transmission providers are not currently required to: (1) perform a sufficiently long-term assessment of transmission needs that identifies Long-Term Transmission Needs; (2) adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs; and (3) consider the broader set of benefits of regional transmission facilities planned to meet those Long-Term Transmission Needs. We further believe that establishing requirements rather than principles will ensure a sufficiently robust process for Long-Term Regional Transmission Planning while providing sufficient clarity about that process to avert conflict among stakeholders, as noted by AEP.⁵⁹⁰

239. We also disagree with commenters that argue that this final order should apply to only RTO/ISO transmission planning regions. The Commission's existing regional transmission planning requirements, which, as described above in the Overall Need for Reform section, we find to be deficient, apply in RTO/ISO and non-RTO/ISO transmission planning regions alike; without the Long-Term Regional Transmission Planning Requirements adopted herein, transmission providers in both RTO/ISO and non-RTO/ISO transmission planning regions will continue to be at risk of undertaking investments in relatively inefficient or less cost-effective transmission infrastructure, the costs of which are ultimately recovered through Commission-jurisdictional rates. Accordingly, while we acknowledge

⁵⁸⁹ ISO–NE Initial Comments at 20; ISO RTO Council Initial Comments at 4–5, 8–9; MISO Initial Comments at 22–23.

⁵⁹⁰ AEP Reply Comments at 2–4.

differences between RTO/ISO and non-RTO/ISO transmission planning regions, we find that transmission providers in all transmission planning regions must implement Long-Term Regional Transmission Planning as required in this final order to ensure that Commission-jurisdictional rates are just and reasonable and not unduly discriminatory or preferential. Additionally, we note that many of the requirements established in this final order provide for regional flexibility, including, but not limited to, the requirements to develop Long-Term Scenarios, determine which factors in each required category of factors do not affect Long-Term Transmission Needs and need not be considered, develop methods to measure the benefits of Long-Term Regional Transmission Facilities, design an evaluation process and selection criteria, and establish a Long-Term Regional Transmission Cost Allocation Method.

240. We acknowledge that certain transmission planning regions already conduct some regional transmission planning on a relatively forward-looking, proactive basis. We do not intend to undermine progress made in these transmission planning regions, and our goal is to set a floor, not a ceiling. We decline to prejudge whether any existing regional transmission planning process meets the requirements set forth in this final order and accordingly reject requests that we do so.⁵⁹¹ We note that, if a transmission provider believes that it participates in a regional transmission planning process that fulfills the requirements adopted in this final order, it may describe in its compliance filing how its process meets these requirements.

241. We expect Long-Term Regional Transmission Planning to enhance the existing regional transmission planning and cost allocation processes required by Order No. 1000. Except as set forth in this final order, we do not require that any transmission provider replace or otherwise make changes to its existing Order No. 1000-compliant regional transmission planning processes that plan for reliability or economic transmission needs, or the associated Order No. 1000-compliant regional cost allocation method(s). Transmission providers may continue to rely on their existing regional transmission planning and cost allocation processes to comply with Order No. 1000's requirements related to transmission needs driven by reliability concerns or economic considerations.

⁵⁹¹ See, e.g., Ameren Initial Comments at 8.

242. We also do not alter the existing Order No. 1000 requirement to consider transmission needs driven by Public Policy Requirements in the regional transmission planning process. Instead, we clarify that we will deem transmission providers to be in compliance with this existing requirement by conducting Long-Term Regional Transmission Planning in accordance with the requirements set forth in this final order. As discussed below, we require transmission providers to incorporate a variety of factors into the development of Long-Term Scenarios, which include, among others, certain Federal, state, and local laws and regulations. Therefore, we find that transmission providers that implement Long-Term Regional Transmission Planning and satisfy the requirements set forth in this final order will comply with the requirement in Order No. 1000 to participate in a regional transmission planning process that considers, and has associated cost allocation provisions related to, transmission needs driven by Public Policy Requirements.

243. We understand—and acknowledge comments submitted in this proceeding explaining—that transmission providers in some transmission planning regions have developed processes to consider transmission needs driven by Public Policy Requirements through their regional transmission planning processes that they wish to retain.⁵⁹² In their filings made to comply with this final order, transmission providers may propose to continue using some or all aspects of the existing regional transmission planning and cost allocation processes that they use to consider transmission needs driven by Public Policy Requirements. Transmission providers must nevertheless comply with the Long-Term Regional Transmission Planning requirements set forth in this final order, such that continued use of existing regional transmission planning and cost allocation processes related to transmission needs driven by Public Policy Requirements will not supplant transmission providers' obligation to comply with this final order. In their filing to comply with this final order, transmission providers that wish to continue to use some or all of their existing regional transmission planning and cost allocation processes to consider transmission needs driven by Public Policy Requirements must demonstrate that continued use of any

such processes does not interfere with or otherwise undermine Long-Term Regional Transmission Planning as set forth in this final order.

244. Similarly, we allow transmission providers to propose a regional transmission planning process that simultaneously plans for shorter-term reliability and economic transmission needs, as well as Long-Term Transmission Needs, as outlined in this final order, through a combined process. Transmission providers proposing to address all of these transmission needs in a single regional transmission planning process must demonstrate that the unified regional transmission planning process continues to comply with Order No. 1000, as well as with the Long-Term Regional Transmission Planning requirements set forth in this final order, by demonstrating that such a combined process is consistent with or superior to the requirements of both Order No. 1000 and this final order. However, in the case that the requirements of Order No. 1000 and this final order conflict, the requirements of this final order prevail, and transmission providers must demonstrate that their proposed regional transmission planning process is consistent with or superior to the applicable requirements in this final order.

245. We reject requests to require transmission providers to simultaneously plan for all such transmission needs through a single regional transmission planning process, however.⁵⁹³ We recognize that such a combined process has potential benefits and do not prohibit such an approach, but at this time we believe that the benefits of requiring such a combined process on a generic basis may be outweighed by the difficulty of transitioning to such a process from existing regional transmission planning processes. Therefore, we do not require in this final order that transmission providers plan for all reliability and economic transmission needs and Long-Term Transmission Needs through a single regional transmission planning process. Further, we believe that Long-Term Regional Transmission Planning, as set forth in this final order, meets many of the same objectives as would such a combined regional transmission planning process because, by identifying Long-Term Transmission Needs and considering a broad set of benefits when evaluating Long-Term Regional Transmission Facilities, the existing regional transmission planning processes for economic and reliability

needs may ultimately come to address only residual needs not already addressed through Long-Term Regional Transmission Planning.

246. With respect to the request by PIOs to mandate that the base cases used in Order No. 1000 regional transmission planning processes and Long-Term Scenarios in Long-Term Regional Transmission Planning be defined in the same process,⁵⁹⁴ we decline to adopt this proposal. The record is inadequate to assess the impact that such a requirement would have on existing Order No. 1000 regional transmission planning processes, and whether this proposal would work across the differing transmission planning processes in each transmission planning region. With respect to the proposals by Clean Energy Buyers, Cypress Creek, and Policy Integrity,⁵⁹⁵ these proposals were not among the proposals included in the NOPR and are beyond the scope of this proceeding, and therefore we decline to adopt them.

247. We also reject requests to incorporate local transmission planning into Long-Term Regional Transmission Planning specifically or regional transmission planning more generally,⁵⁹⁶ as well as requests to require transmission providers to evaluate and approve local transmission facilities in regional transmission planning.⁵⁹⁷ This final order sets forth requirements that will enhance the transparency of local transmission planning and examine opportunities for right-sizing in-kind replacements of existing transmission facilities, including local transmission facilities, but the Commission in the NOPR did not propose other changes to local transmission planning processes and therefore these requests are beyond the scope of this final order.

248. As discussed in detail below, we require transmission providers to satisfy specific requirements in implementing Long-Term Regional Transmission Planning, including requirements to: (1) use a transmission planning horizon of no less than 20 years into the future in developing Long-Term Scenarios; (2) reassess and revise those scenarios at least once every five years; (3) incorporate into the Long-Term Scenarios a set of Commission-identified categories of factors that give rise to Long-Term Transmission Needs;

⁵⁹⁴ PIOs Initial Comments at 44–46.

⁵⁹² CAISO Reply Comments at 17–18; New York Transco Initial Comments at 5.

⁵⁹³ See, e.g., ACEG Initial Comments at 30–31.

(4) develop a plausible and diverse set of at least three Long-Term Scenarios; (5) perform sensitivity analyses of uncertain operational outcomes during multiple concurrent and sustained generation and/or transmission outages due to an extreme weather event across a wide area; and (6) use “best available data” in developing Long-Term Scenarios.

249. Before turning to these topics, however, we address two preliminary matters: the definition of Long-Term Regional Transmission Facility; and our jurisdiction to adopt these reforms.

b. Definition of Long-Term Regional Transmission Facility

250. We modify the NOPR proposal and define Long-Term Regional Transmission Facility for purposes of this final order as a regional transmission facility, as defined in Order No. 1000, that is identified as part of Long-Term Regional Transmission Planning to address Long-Term Transmission Needs.⁵⁹⁸ In so doing, we clarify that some Long-Term Regional Transmission Facilities may be selected in a regional transmission plan for purposes of cost allocation, while others may be considered for selection but not be selected.

251. This modification also clarifies that Long-Term Regional Transmission Facilities are a subset of regional transmission facilities as defined in Order No. 1000. Further, consistent with Order No. 1000,⁵⁹⁹ a selected Long-Term Regional Transmission Facility is a regional transmission facility that has been selected pursuant to a Commission-approved Long-Term Regional Transmission Planning process in a regional transmission plan for purposes of cost allocation because it is a more efficient or cost-effective solution to Long-Term Transmission Needs.

252. We disagree with PJM that Order No. 1000’s requirements related to regional transmission planning processes addressing transmission needs driven by reliability concerns or economic considerations will be unclear given the definition of Long-Term Regional Transmission Facility, and we find unpersuasive PJM’s contention that Long-Term Regional Transmission Planning will inadvertently cause the

re-litigation of aspects of those existing processes. If a regional transmission facility is selected in an existing Order No. 1000 regional transmission planning process, the rules of, as well as the regional cost allocation method for, that existing process apply to the selected regional transmission facility. If a Long-Term Regional Transmission Facility is selected in Long-Term Regional Transmission Planning, then the rules of, and the Long-Term Regional Cost Allocation Method for, Long-Term Regional Transmission Planning apply to that Long-Term Regional Transmission Facility.

c. Legal Authority To Adopt Reforms for Long-Term Regional Transmission Planning

253. We reaffirm our conclusion in the NOPR that we are acting within the Commission’s legal authority under FPA section 206 by requiring transmission providers to participate in a regional transmission planning process that includes Long-Term Regional Transmission Planning. The FPA grants the Commission authority over the transmission of electric energy in interstate commerce, which includes transmission on the interconnected national grids.⁶⁰⁰ FPA section 205 requires that the rates charged by any public utility in connection with such transmission—as well as the rules and regulations affecting such rates—be just and reasonable, and further requires that public utilities file with the Commission the practices affecting such rates.⁶⁰¹ Under FPA section 206, when the Commission determines that any rate or any practice affecting such rate is unjust, unreasonable, or unduly discriminatory or preferential—as we find above with respect to transmission planning practices—the Commission must determine the just and reasonable rate or practice to be followed.⁶⁰² Transmission planning and cost allocation processes are practices affecting the rates charged by public utilities in connection with the Commission-jurisdictional transmission of electric energy in interstate commerce.⁶⁰³ No commenter has claimed otherwise.

254. Despite this, a number of commenters claim that the specific transmission planning requirements we adopt in this final order infringe on the authority reserved to the states by FPA

section 201 or are otherwise barred by certain prudential or constitutional principles. As a threshold matter, we believe that commenters’ concerns with respect to our jurisdiction or authority to adopt this final order mainly arise from factual misunderstandings or mischaracterizations about what Long-Term Regional Transmission Planning will and will not require transmission providers to do. As explained above, this final order requires transmission providers in each transmission planning region to participate in a regional transmission planning process that includes Long-Term Regional Transmission Planning and to conduct Long-Term Regional Transmission Planning in accordance with the requirements set forth in this final order. Transmission providers are required to identify Long-Term Transmission Needs, identify Long-Term Regional Transmission Facilities that meet such needs, measure the benefits of these Long-Term Regional Transmission Facilities, and evaluate these Long-Term Regional Transmission Facilities for potential selection. As such, this final order does not regulate, aim at, or otherwise attempt to influence integrated resource planning, the generation mix, decisions related to the siting and construction of transmission facilities or generation resources, or any other matters reserved to states under FPA section 201.

255. As discussed in the Introduction and Background section above, the requirements of this final order build upon more than a quarter century of significant actions taken by the Commission on transmission planning and cost allocation, beginning with the Commission’s initial open access reforms in Order No. 888. In 2007, the Commission issued Order No. 890 to address identified deficiencies in the *pro forma* OATT based on more than 10 years of experience since the issuance of Order No. 888. Most recently, in 2011, the Commission issued Order No. 1000, which required transmission providers to develop a regional transmission plan after evaluating whether regional transmission facilities may be more efficient or cost-effective than transmission facilities identified in local transmission planning processes and to consider transmission needs driven by Public Policy Requirements. These practices serve as the foundation for regional transmission planning, and this final order leaves them in place.

256. As described above, however, we have identified specific gaps in the Order No. 1000 framework—namely, that regional transmission planning practices do not perform a sufficiently

⁵⁹⁸ In the NOPR, the Commission proposed to define a Long-Term Regional Transmission Facility as a transmission facility identified as part of Long-Term Regional Transmission Planning and selected in the regional transmission plan for purposes of cost allocation to address transmission needs driven by changes in the resource mix and demand. NOPR, 179 FERC ¶ 61,028 at P 252 n.398.

⁵⁹⁹ Order No. 1000, 136 FERC ¶ 61,051 at P 63.

⁶⁰⁰ *New York v. FERC*, 535 U.S. at 16–17 (citing 16 U.S.C. 824(b)).

⁶⁰¹ 16 U.S.C. 824d.

⁶⁰² 16 U.S.C. 824e.

⁶⁰³ See *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d at 55–59; accord *Emera Me. v. FERC*, 854 F.3d at 673–74.

long-term assessment of transmission needs, adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs, or consider the broader set of benefits of regional transmission facilities. In this final order, we direct reforms to close these gaps without otherwise disturbing the regional transmission planning structure required by Order No. 1000, which was fully affirmed on appeal in the face of similar objections to those raised here.⁶⁰⁴

257. Critically, as in Order No. 1000, our focus continues to be on ensuring that Commission-jurisdictional regional transmission planning processes are just and reasonable and that, as a result of improvements to the regional transmission planning and cost allocation processes, Commission-jurisdictional rates remain just and reasonable.⁶⁰⁵ And, as in Order No. 1000, while the improvements to the regional transmission planning and cost allocation processes will ensure that potentially more efficient or cost-effective regional transmission facilities are evaluated for potential selection and have a cost allocation method available if they are selected, this order does not mandate development of any particular transmission facility.

258. Consistent with the regional transmission planning and cost allocation reforms adopted in Order No. 1000, and in response to commenters arguing otherwise,⁶⁰⁶ we affirm that this final order does not authorize or require any entity to adopt a particular siting plan for Long-Term Regional Transmission Facilities that transmission providers select; or to forego state-jurisdictional siting proceedings where they are necessary; or to begin construction on such Long-Term Regional Transmission Facilities. Even where transmission providers select a Long-Term Regional Transmission Facility, the relevant transmission developer typically must

secure a variety of other permits and authorizations before beginning to construct the facility, including those that are subject to state jurisdiction. Nothing in this final order changes otherwise applicable siting laws or requirements.

259. Similarly, this final order does not change existing mechanisms for cost-recovery through retail rates; authorize or require states or state commissions to change the laws or regulations that govern the conduct of integrated resource planning or request for proposal processes; authorize or require transmission providers or transmission developers to bypass any applicable state-regulated integrated resource planning or request for proposal processes; or authorize or require states or public utilities to adopt a different mix of generation resources than would otherwise be the case. Comments suggesting otherwise do not accurately represent the Commission's proposed requirements in the NOPR or the requirements adopted in this final order,⁶⁰⁷ which seeks to ensure that transmission providers plan for Long-Term Transmission Needs, however those needs arise.⁶⁰⁸

260. We disagree with Southern and SERTP Sponsors' characterization of Long-Term Regional Transmission Planning as a Commission-regulated integrated resource planning/request for proposal process.⁶⁰⁹ Similarly, comments that suggest that this final order intends to "revamp the energy grid's mix of generation resources writ large"⁶¹⁰ are incorrect. We understand these comments to argue that the Commission seeks reforms to regional transmission planning and cost allocation processes so that it can direct or influence investments toward particular resources, as would an entity

engaged in integrated resource planning. In this final order, the Commission neither aims to influence the resource mix, nor, as a practical matter, could the final order achieve such an outcome.

261. Instead, the final order merely requires transmission providers to account for observable changes affecting the transmission system. The final order neither directs those changes, nor does it require any entity, including a state, to approve changes to any subject within its jurisdiction. As with Order Nos. 890 and 1000, which built on the Commission's open access reforms in Order No. 888, this final order *responds* to changes in the electric industry that have arisen in the years since the Commission's last regulatory action related to transmission planning. As discussed above in the Overall Need for Reform section, this final order responds to evolving reliability concerns, including the increasing frequency of high-impact extreme weather events; changes in electricity demand, including significant load growth that is projected to increase in coming years; changes in supply, including Federal, federally-recognized Tribal, state, and local laws and policies that affect the future resource mix; changes in the economics of generation, transmission, and storage technologies; corporate, governmental, and utility commitments to rely on certain generation resources; and other factors as discussed in this final order.

262. We emphasize that these changes, which are affecting and will continue to drive transmission needs, are not within the Commission's control and, in many cases, are beyond the Commission's jurisdiction. We do not aim to influence these drivers of transmission needs through the requirements in this final order.⁶¹¹ However, the Commission has an obligation under the FPA to ensure that Commission-jurisdictional transmission rates remain just and reasonable, and we affirm—consistent with the Commission's actions in Order Nos. 890 and 1000—that the Commission has the requisite authority to account for the effects of these changes driving transmission needs in Commission-jurisdictional transmission planning processes.⁶¹²

263. We also emphasize, and no commenter contests, that this final order directly regulates transmission planning

⁶⁰⁴ See *S.C. Pub. Serv. Auth. v. FERC*, 762 F.3d at 55–64 (rejecting arguments that the requirement to engage in regional transmission planning, as prescribed in Order No. 1000, exceeded the Commission's jurisdiction under FPA section 206, interfered with traditional state authority reserved under FPA section 201, or improperly interpreted and applied FPA section 202(a)).

⁶⁰⁵ See *id.* at 63–64 (affirming that the Commission was acting within its jurisdiction because its planning mandate "relates wholly to electricity transmission, as opposed to electricity sales" and "is directed at ensuring the proper functioning of the interconnected grid spanning state lines").

⁶¹⁰ Undersigned States Reply Comments at 4; see also Louisiana Commission Initial Comments at 6, 12–13 (arguing that the FPA does not allow the Commission to "enact[] sweeping energy policy changes that would have far-reaching, nationwide effects" or to favor one form of generation over another).

⁶¹¹ See *EPSA*, 577 U.S. 260 at 282 (citing *Oneok, Inc. v. Learjet, Inc.*, 575 U.S. 373, 385 (2015)).

⁶¹² Cf. *EPSA*, 577 U.S. at 281–82 ("When FERC regulates what takes place on the wholesale market, as part of carrying out its charge to improve how that market runs, then no matter the effect on retail rates, 824(b) imposes no bar.").

and cost allocation processes, which are practices that affect the rates for the transmission of electric energy in interstate commerce. Importantly, it directly regulates *only* those practices, and it *does not* directly regulate any matter reserved to the states by FPA section 201. Moreover, in doing so, this final order is not aiming to *indirectly* regulate any matter reserved to the states by FPA section 201. Instead, our aim here is to improve on the Commission's existing transmission planning and cost allocation processes *for the express purpose* of addressing identified deficiencies with those processes.

264. As the U.S. Supreme Court has recognized, it is true that almost any action that the Commission takes with respect to regulating the practices affecting the rates for the transmission of or the wholesale sale of electric energy in interstate commerce will have “some effect, in either the short or long term” on matters reserved to the states’ jurisdiction.⁶¹³ But those effects, inevitable as they may be, are “of no legal consequence” to determining whether this final order infringes on the states’ authority under FPA section 201.⁶¹⁴ Instead, such effects are a “fact of economic life” for the electric industry, given Congress’s decision in the FPA to divide jurisdiction over the industry, including both generation and transmission, into spheres of Commission and state jurisdiction that are not “hermetically sealed” from one another.⁶¹⁵ Accordingly, Commission regulation of Commission-jurisdictional practices affecting transmission may “have natural consequences” for generation.⁶¹⁶ But, even where that happens, that does not defeat Federal jurisdiction.

265. Rather, as in *EPSA*, what matters is that this final order aims to regulate and, in fact, does regulate only practices that affect the transmission of electric energy in interstate commerce, which are squarely within the Commission’s jurisdiction under the FPA. As in Order Nos. 890⁶¹⁷ and 1000,⁶¹⁸ this final order aims to improve Commission-regulated transmission planning *processes*, in this instance by ensuring that they are sufficiently long-term, forward-looking, and comprehensive such that they are capable of identifying and meeting Long-Term Transmission Needs.⁶¹⁹

Thus, this final order ensures just and reasonable Commission-jurisdictional rates and practices by ensuring that transmission providers have adequate processes to identify Long-Term Transmission Needs and to identify, evaluate, and select Long-Term Regional Transmission Facilities that more efficiently or cost-effectively address those needs.

266. Moreover, as in *EPSA*, what also matters is that “every aspect of the [final order] happens exclusively” as part of a process that is subject to the Commission’s jurisdiction and governs exclusively how those processes work.⁶²⁰ In aiming to improve transmission planning processes, this final order does not require that transmission providers achieve any particular substantive *outcome* of those processes, including either the selection or construction of any specific transmission facilities. The final order patently does not aim to alter states’ or the Nation’s generation mix or otherwise regulate matters that are within state jurisdiction. Indeed, to the contrary, our rationale in this final order is “all about, and only about, improving” the relevant matters under the Commission’s jurisdiction.⁶²¹ Nor is it clear how, under commenters’ theory, the final order could be argued to regulate matters under states’ jurisdiction, given that the final order does not require investment in any particular transmission facilities, and could not, even indirectly, ensure investments in any particular set of generating facilities that may rely on such transmission facilities.

267. Despite some commenters’ claims,⁶²² nothing in this final order requires states to subsidize other states’ public policies and, indeed, this final order requires, consistent with long-established Commission and court precedent, that transmission customers within a transmission planning region need only pay costs that are “roughly commensurate” with the benefits that transmission providers estimate they will receive from a regional transmission facility.⁶²³ Thus, the final order ensures that transmission customers nationwide are not required

to pay for Long-Term Regional Transmission Facilities from which they do not benefit.

268. The reforms in the final order require greater transparency regarding the benefits that would result from the development of Long-Term Regional Transmission Facilities, but these reforms also continue to allow flexibility, as under Order No. 1000, for the transmission providers in each transmission planning region to determine the appropriate method for allocating to transmission customers the costs of any selected Long-Term Regional Transmission Facility. Rather than force transmission providers to adopt a particular cost allocation method that would necessarily result in customers in one state subsidizing the costs of customers in another state, as these commenters allege, the final order affords significant new opportunities for Relevant State Entities to inform the evaluation process, selection criteria, and cost allocation method adopted by the transmission providers in a transmission planning region. We believe that the requirements for greater transparency regarding the benefits of proposed transmission facilities, the increased opportunities for state engagement in evaluation, selection, and cost allocation, the flexibility for transmission providers in each transmission planning region to determine their own cost allocation methods, and the requirement that any cost allocation method must ensure costs are allocated in a manner that is at least roughly commensurate with estimated benefits provide robust assurance that the cost allocation methods ultimately proposed under the final order will not result in improper cost subsidization. Ultimately, the Commission must review and accept each cost allocation method proposed under the final order to ensure that it is just and reasonable and consistent with the final order’s requirements.

269. As discussed in the Evaluation of the Benefits of Regional Transmission Facilities section below, this final order requires transmission providers to use and measure a set of seven required benefits to evaluate Long-Term Regional Transmission Facilities. The measurement of these benefits represents the value that the transmission providers expect a particular Long-Term Regional Transmission Facility to provide to transmission customers in the transmission planning region. As further discussed in the Regional Transmission Planning Cost Allocation section below, this final order requires transmission providers to provide a forum for

Relevant State Entities to negotiate a cost allocation method and/or a process for determining future cost allocation methods for Long-Term Regional Transmission Facilities, which enables robust participation by those entities. Moreover, the cost allocation methods required by this final order are intended to ensure that costs are allocated in a manner that is at least roughly commensurate with the estimated benefits that a Long-Term Regional Transmission Facility provides to transmission customers.

270. The benefits this order requires to be used and measured—which provide an important source of transparency regarding any resulting allocation of costs to transmission customers—reflect objective, measurable changes in transmission system conditions, rather than achievement of state public policies. For example, even if a state's public policy is one driver of a Long-Term Transmission Need, these benefits of a Long-Term Regional Transmission Facility resolving that need are well understood and measurable, including, for example, reducing the cost of generating electricity by allowing for the increased dispatch of suppliers that have lower incremental costs of production, minimizing energy losses incurred in transmitting electricity, and lowering the number or duration of loss of load events. Transmission providers will evaluate Long-Term Regional Transmission Facilities for selection considering these benefits that these facilities would provide, and these benefits accrue to the transmission customers that fund their construction. In other words, under this final order, customers pay for a more reliable and economic transmission system as identified through open and transparent Long-Term Regional Transmission Planning, and any state's ratepayers only fund the construction of Long-Term Regional Transmission Facilities that provide them with such benefits that are at least roughly commensurate with the costs of those facilities.

271. We turn now to commenters' specific jurisdiction arguments. As an initial matter, we acknowledge that, in addition to granting authority to the Commission over the transmission of electric energy in interstate commerce, FPA section 201 also reserves certain authority to the states.⁶²⁴ As such, we

agree with Southern that Congress sought in enacting the FPA to ensure the "continued exercise of state power"⁶²⁵ over certain matters. However, the requirements in this final order respect and do not unlawfully infringe on state authority. Rather, as discussed above, the Commission is acting in an area squarely within its jurisdiction—transmission planning and cost allocation—by requiring transmission providers to engage in Long-Term Regional Transmission Planning to remedy deficiencies in the current transmission planning and cost allocation processes, which we conclude are unjust and unreasonable.

272. We acknowledge that Long-Term Regional Transmission Planning will affect matters that are within the states' jurisdiction. As stated, this is inevitable. Effective transmission planning necessarily involves taking into account assumptions about the generation resources that will be available, because transmission needs arise from the relative amounts, locations, and timing of supply (*i.e.*, generation) and of demand (*i.e.*, load); indeed, existing transmission planning processes also take into account these assumptions.⁶²⁶ Our action in this final order simply modifies the scope and duration of these assumptions to ensure that regional transmission planning processes are conducted on a sufficiently long-term, forward-looking, and comprehensive basis by requiring transmission providers to evaluate factors that give rise to Long-Term Transmission Needs.

273. Southern and SERTP Sponsors acknowledge that the NOPR proposed to require transmission providers to incorporate the results of state-sanctioned integrated resource planning as factors in developing Long-Term Scenarios, but they insist that Long-Term Regional Transmission Planning will intrude upon state authority if we do not require Long-Term Scenarios to be *limited* to those state-sanctioned resources.⁶²⁷ This assertion is incorrect for at least three reasons. First, the

had been beyond the reach of state power, but also the regulation of wholesale sales that had been *previously subject* to state regulation. More importantly, as discussed above, the FPA authorized Federal regulation of interstate *transmissions* as well as of interstate wholesale sales, and such transmissions were not of concern in *Attleboro*." (emphasis in original) (internal citations omitted)).

⁶²⁵ Southern Initial Comments at 16 (quoting *Oneok, Inc. v. Learjet, Inc.*, 575 U.S. at 385).

⁶²⁶ See, e.g., Xcel Initial Comments at 13, 16 & n.26 (discussing generation resource assumptions made in existing Order No. 1000 regional transmission planning and cost allocation processes).

⁶²⁷ SERTP Sponsors Initial Comments at 15–17; Southern Initial Comments at 18–19.

public utilities whose integrated resource plans are approved by state commissions are not the only entities whose decisions may influence the development of generation resources within a particular transmission planning region. For example, a wide variety of private enterprises, publicly-owned utilities, and electric cooperatives have made commitments to fund the development of certain generation resources, and transmission providers may reasonably determine that these procurement decisions give rise to Long-Term Transmission Needs. Second, making generation resource assumptions for the purpose of performing transmission planning does not result in any legally-binding determination on a matter within a state's jurisdiction, let alone undermine a state's ability to ultimately decide what generation resources to build, and on what timetable.⁶²⁸ Third, as Southern and SERTP Sponsors concede,⁶²⁹ many existing integrated resource planning processes do not identify specific generation resources beyond a particular point in time. Other integrated resource planning processes may not result in a set of state-sanctioned generation resources and may instead serve merely as a guide for the relevant public utility.⁶³⁰ As a result, relying on such integrated resource planning processes exclusively to identify Long-Term Transmission Needs would fail to ensure that regional transmission planning processes are conducted on a sufficiently long-term, forward-looking, and comprehensive basis and therefore would fail to ensure just and reasonable Commission

⁶²⁸ We disagree with Southern's and SERTP Sponsors' contention that the inclusion of such non-binding assumptions about generation resources in transmission planning will "bias" subsequent state resource decisions. See Southern Initial Comments at 19; SERTP Sponsors Initial Comments at 17 n.20. As Kentucky Commission Chair Chandler argues, the NOPR's reforms do not foreclose states' decision making on generation. Kentucky Commission Chair Chandler Reply Comments at 3. We also disagree with North Carolina Commission and Staff's contention that merely requiring transmission providers to use and measure production cost savings in evaluating Long-Term Regional Transmission Facilities "could conflict with state-jurisdictional resource decisions." North Carolina Commission and Staff Initial Comments at 7. If nothing else, Long-Term Regional Transmission Planning will provide public utilities and state commissions the opportunity to develop longer-term, forward-looking, robust assessments that can inform future decision making.

⁶²⁹ SERTP Sponsors Initial Comments at 16; Southern Initial Comments at 19.

⁶³⁰ See, e.g., SREA Reply Comments at 2–3 (arguing, in response to Alabama Commission, that Alabama has no formal integrated resource plan process upon which the Commission could encroach).

⁶²⁴ See 16 U.S.C. 824(a)–(b)(1); *New York v. FERC*, 535 U.S. at 20–21 ("It is, however, perfectly clear that the original FPA did a good deal more than close the gap in state power identified in [*Pub. Utils. Comm'n of R.I. v. Attleboro Steam & Elec. Co.*, 273 U.S. 83 (1927)] (*Attleboro*)). The FPA authorized Federal regulation not only of wholesale sales that

jurisdictional-rates. To be clear, we are not in this final order attempting to denigrate or diminish the importance of integrated resource planning. Rather, in the context of Long-Term Regional Transmission Planning, integrated resource planning is reasonably considered one of several categories of factors used to develop Long-Term Scenarios and identify Long-Term Transmission Needs.

274. In that light, Southern's and SERTP Sponsors' argument—that we should limit transmission providers to state-approved resources and prohibit non-binding assumptions about the resource mix and demand—does not safeguard but in fact subverts the FPA's division between Federal and state authority. As stated above, were we to require that transmission providers limit their assumptions to only state-sanctioned generation resources, we would be requiring transmission providers to ignore many of the factors that, as demonstrated by this record, transmission providers must reasonably consider to plan on a sufficiently long-term, forward-looking, and comprehensive basis. Instead, it is within our jurisdiction to determine the factors that transmission providers must incorporate in order to identify Long-Term Transmission Needs.

275. Commenters' arguments that the final order would not withstand judicial scrutiny under the “major questions doctrine” are similarly unfounded. For example, some commenters appear to misinterpret *West Virginia v. EPA* as standing for the proposition that “the nation's energy policy and generation mix is a ‘major question’ and that an agency must have direct authorization from Congress to assert jurisdiction” over these matters.⁶³¹ As an initial matter, as noted above, the aim of this final order is not to influence the generation mix or energy policy more broadly, but to ensure that Commission-jurisdictional transmission providers are planning for Long-Term Transmission Needs in a manner that is just and reasonable and results in just and reasonable Commission-jurisdictional rates.

276. In any case, the Court did not determine that energy policy and the mix of generation resources are *in every instance* a major question. Instead, in *West Virginia v. EPA*, the U.S. Supreme Court considered a specific agency action in light of a specific statutory

provision and concluded that the Environmental Protection Agency's (EPA) exercise of authority was a “major question” based on a variety of factors specific to that context—including whether the EPA's administrative action was a “transformative” expansion of its power, whether the EPA had relevant technical and policy expertise, whether the relevant statutory provision was “ancillary” to the broader statutory construct, and whether the EPA's administrative action implicated significant economic and political questions.⁶³²

277. Commenters have not attempted a similar analysis of whether courts should construe this final order as a “major question,”⁶³³ and we find that their contentions that courts ought to do so are based on the factual mischaracterizations discussed above. In any event, this final order neither transforms nor expands the Commission's authority; it merely applies existing authority, based on the Commission's expertise and experience, to identify and remedy deficiencies in existing regional transmission planning and cost allocation processes.⁶³⁴ As with Order Nos. 890 and 1000, the Commission is promulgating a final order pursuant to FPA section 206 to address those deficiencies in order to ensure that transmission planning practices, a subject long-regulated by the Commission and well within its area of expertise, remain just and reasonable and not unduly discriminatory or preferential. To that end, this final order requires further reforms to regional transmission planning and cost allocation processes so that they are sufficiently long-term, forward-looking, and comprehensive. And while the transmission planning required in this final order may be more forward-looking, long-term, and comprehensive than the status quo, as a matter of the Commission's jurisdiction, it is fundamentally no different than the regional transmission planning already required by the Commission and upheld by appellate courts.⁶³⁵ In short, the differences in transmission planning required by this final order represent

differences in degree, not kind, from the Commission's longstanding regulations. As such, they are a far cry from the “transformative expansion” of the EPA's authority on which the Court relied in *West Virginia v. EPA* to find that the issue presented therein represented a major question not delegated to the agency to decide.

278. Just as it is clear that incremental improvements to practices that the courts have already determined fall squarely within the Commission's jurisdiction do not constitute a “transformative expansion” or “extraordinary grant” of regulatory authority to which the major questions doctrine may apply, so too is it clear that the other ancillary factors cited by the Court are similarly inapplicable. The final order's incremental process improvements, while necessary to ensure just and reasonable Commission-jurisdictional rates, do not have the “vast economic and political significance” that would implicate the major questions doctrine.⁶³⁶ The Commission's regulation of interstate transmission rates will have an effect on billions of dollars in customer charges and, in that generic sense, is of political interest to many. The incremental process improvements required by the final order, however, do not fundamentally change the economic or political stakes of ensuring that Commission-jurisdictional rates remain just and reasonable.

279. Likewise, the Commission's continued assertion of authority over regional transmission planning and cost allocation processes does not resemble the EPA's assertion of authority related to the electric system that the Court found to be beyond that agency's expertise.⁶³⁷ Here, the Commission undisputedly bears the relevant expertise over the interstate transmission system.⁶³⁸ Nor does the Commission rely on a “backwater” statutory provision to achieve its reforms.⁶³⁹ The Commission relies on FPA sections 205 and 206, which the Court has held “unambiguously authorize[]” the Commission to assert jurisdiction over interstate

⁶³² *West Virginia v. EPA*, 597 U.S. at 710, 724–725, 729, 731–32; see also *Biden v. Nebraska*, 143 S. Ct. 2355, 2372–2374 (2023) (applying *West Virginia v. EPA*'s mode of analysis).

⁶³³ See Harvard ELI and Policy Integrity Supplemental Comments at 2 (arguing that Undersigned States, for example, “overlook key requirements of the major questions doctrine”).

⁶³⁷ *West Virginia v. EPA*, 597 U.S. at 729 (finding relevant that EPA itself admitted it lacked expertise to project “system-wide trends in areas such as electricity transmission, distribution, and storage”).

⁶³⁸ Cf. *Amerada Hess Pipeline Corp. v. FERC*, 117 F.3d 596, 600–01 (D.C. Cir. 1997) (“[The Federal Energy Regulatory Commission] is entrusted with administering the regulations relating to oil pipelines and has an expertise in the field based on that jurisdiction.” (emphasis added)).

⁶³⁹ *West Virginia v. EPA*, 597 U.S. at 729.

⁶³¹ SERTP Sponsors Initial Comments at 17–18; Southern Initial Comments at 20; see also Undersigned States Reply Comments at 3 (“National-scale energy grid regulation is a ‘major question’ because of the massive economic consequences involved in such regulation.”).

transmission⁶⁴⁰ and extends an authority—indeed, a duty—to ensure that the practices directly affecting such rates are just and reasonable.⁶⁴¹ This provision was not ancillary to the statutory scheme but, rather, central to Congress' aim to ensure that the Commission possessed adequate authority to regulate interstate transmission beyond the reach of state power.⁶⁴² Finally, commenters do not point to Congress's "conspicuous[] and repeated[]" rejection of legislation that would enact reforms similar to those adopted in the final order.⁶⁴³

280. We also disagree with Undersigned States' legal claim that allowing "one [s]tate [to] effectively require other [s]tates to subsidize their own vision of what resources should be used in electricity generation" would violate the Constitution's "equal sovereignty doctrine."⁶⁴⁴ As discussed above, the final order categorically does not require states to subsidize other states' public policies or generation decisions. To the contrary, consistent with the cost causation principle, this final order requires customers to pay for a share of the costs of new Long-Term Regional Transmission Facilities only to the extent that *they* benefit from those facilities and, even then, any share they pay for must be roughly commensurate with the benefits they receive.⁶⁴⁵

281. Moreover, according to Undersigned States, the equal sovereignty doctrine dictates that the Nation "is a union of [s]tates, equal in power, dignity and authority, each competent to exert that residuum of sovereignty not delegated to the United States by the Constitution itself."⁶⁴⁶ But, "neither the Supreme Court nor any other court has ever applied that principle as a limit on the Commerce Clause or other Article I powers."⁶⁴⁷ Instead, Courts have found that "the Constitution does not contain any textual provision suggesting an equal sovereignty limit on Congress's Article I powers generally or on the Commerce

Clause in particular."⁶⁴⁸ As relevant here, pursuant to the Constitution's Commerce Clause,⁶⁴⁹ Congress duly enacted the FPA, which in turn empowers the Commission to regulate the rates and practices affecting rates for the transmission of electricity in interstate commerce.⁶⁵⁰ Under the FPA, the Commission is "unambiguously authorize[d] . . . to take state policies into account to the extent that such policies affect [the Commission's] statutorily prescribed area of focus"⁶⁵¹

282. The nature of the interconnected transmission system is such that states naturally affect one another in pursuing policies available to them while exercising the authority reserved to them under FPA section 201.⁶⁵² For the reasons explained in this final order, we conclude that transmission providers must participate in a regional transmission planning process that includes Long-Term Regional Transmission Planning, and we find that transmission providers must have the opportunity to select Long-Term Regional Transmission Facilities that more efficiently or cost-effectively address Long-Term Transmission Needs. Our role within our Federal system is not to "unreasonably interfere with" nor to "pass judgement on state and local policies and objectives,"⁶⁵³ including where such policies and objectives have incidental interstate effects.⁶⁵⁴ Nor need we, because even if one state's public policy is a driver of a Long-Term Transmission Need, the costs of a Long-Term Regional Transmission Facility that transmission providers select will be allocated to

transmission customers only to the extent that they benefit from that facility and only to a degree that is at least roughly commensurate with the benefits that facility provides to them. That approach is consistent with Commission precedent and commenters have not demonstrated that this framework results in impermissible cross-subsidization among states.⁶⁵⁵

283. Finally, in response to NRECA's request, we confirm that the final order is consistent with the Commission's obligation under FPA section 217(b)(4). As articulated in *South Carolina Public Service Authority v. FERC*, FPA section 217(b)(4) requires the Commission to "facilitate the planning of a reliable grid," and we do so by "seek[ing] to ensure that adequate transmission capacity is built to allow load-serving entities to meet their service obligations."⁶⁵⁶ This final order seeks to ensure precisely the same goal, and it therefore satisfies the Commission's obligation under FPA section 217(b)(4).

B. Development of Long-Term Scenarios

1. NOPR Proposal

284. In the NOPR, the Commission proposed to require transmission providers to develop Long-Term Scenarios as part of Long-Term Regional Transmission Planning. The Commission proposed to define Long-Term Scenarios as a tool to identify the transmission planning region's needs driven by changes in the resource mix and demand—and enable the evaluation of transmission facilities to meet such transmission needs—across multiple scenarios that incorporate different assumptions about the future electric power system over a sufficiently long-term, forward-looking transmission planning horizon. The Commission explained that a scenario is a hypothetical sequence of events that includes assumptions used to forecast transmission needs. The Commission also stated that assumptions used to forecast transmission needs driven by

⁶⁴⁰ *Id.* at *16.

⁶⁴¹ U.S. Const. art. 1, 8.

⁶⁴² 16 U.S.C. 824d.

⁶⁴³ *PJM Power Providers Grp. v. FERC*, 88 F.4th at 275; see also *Elec. Power Supply Ass'n v. Star*, 904 F.3d at 524 (approving of the Commission's decision to take state zero-emissions credit systems like that in Illinois "as givens and set out to make the best of the situation [these systems] produce").

⁶⁴⁴ See *Elec. Power Supply Ass'n v. Star*, 904 F.3d at 524 (describing the effects on interstate sales resulting from states' exercise of powers reserved to them under FPA section 201 as "an inevitable consequence of a system in which power is shared between state and national governments" (citing *Hughes v. Talen Energy Mktg., LLC*, 578 U.S. 150, 164 (2016))).

⁶⁴⁵ *N.J. Bd. Pub. Utils. v. FERC*, 744 F.3d 74, 98 n.24 (3rd Cir. 2014) (quoting *PJM Interconnection, L.L.C.*, 137 FERC ¶ 61,145, at P 3 (2011)); see also *PJM Interconnection, L.L.C.*, 186 FERC ¶ 61,080, at P 186 (2024) (rejecting an argument that the Commission was required to determine whether state-sponsored resources were providing disproportionate benefits to other states in the form of lower capacity market prices).

⁶⁴⁶ See *Coal. for Competitive Elec. v. Zibelman*, 906 F.3d 41, 56 (2d Cir. 2018) (collecting Commission orders sanctioning state-jurisdictional programs incidentally affecting wholesale markets).

⁶⁴⁷ For example, PJM incorporates transmission needs driven by Public Policy Requirements into the assumptions stage of its regional transmission planning process to identify needed reliability and economic regional transmission facilities for potential selection and cost allocation, rather than through a separate and distinct process to identify and allocate the costs of transmission facilities selected to address transmission needs driven by Public Policy Requirements. The Commission found PJM's approach complied with the requirement in Order No. 1000 to consider transmission needs driven by Public Policy Requirements in regional transmission planning and cost allocation processes. *PJM Interconnection, L.L.C.*, 142 FERC ¶ 61,214, at PP 109–120 (2013), *order on reh'g and compliance*, 147 FERC ¶ 61,128, at PP 66–71 (2014).

⁶⁴⁶ Undersigned States Reply Comments at 5 (citing *Coyle v. Smith*, 221 U.S. at 567). But see *Ohio v. EPA*, 2024 WL 1515001, at *15 (D.C. Cir. Apr. 9, 2024) (holding that "[t]he equal footing cases," like *Coyle v. Smith*, "do not directly apply either outside of the admission context or to Article I powers like the Commerce Clause.").

⁶⁴⁷ *Ohio v. EPA*, 2024 WL 1515001 at *13.

changes in the resource mix and demand include: forecasts of the level and pattern (*i.e.*, hourly and seasonal variability) of future electricity demand; the quantity, location, and type of resource additions and retirements; and other relevant forecasts about the electric power system that are used as inputs to the transmission model and determine the need for new transmission facilities over the transmission planning horizon. In addition, the Commission noted that other relevant assumptions might include forecasts for natural gas prices, increasing outage trends due to extreme weather and climatic trends, and other future events.

285. The Commission also proposed in the NOPR to require that transmission providers use Long-Term Scenarios to evaluate potential regional transmission facilities needed to meet transmission needs driven by changes in the resource mix and demand to identify the more efficient or cost-effective regional transmission facilities.⁶⁵⁷

2. Comments

a. General Comments

286. Of the commenters specifically addressing the proposal to require Long-Term Scenarios in Long-Term Regional Transmission Planning, the majority support scenario-based planning.⁶⁵⁸ Clean Energy Buyers state that Long-Term Scenarios are critical to Long-Term Regional Transmission Planning because its success will depend on the quality of forecasting.⁶⁵⁹ Form Energy states that long-term scenario review will ensure that transmission upgrades address future needs in a cost-effective and environmentally friendly manner.⁶⁶⁰ LADWP asserts that Long-

Term Scenarios are critical to developing an effective transmission system that ensures reliability, while also providing flexibility to support the delivery of renewable energy.⁶⁶¹ NARUC states that Long-Term Scenarios are a flexible planning tool for addressing the uncertainty involved in identifying transmission needs driven by changes in the resource mix and demand and that using them will ensure that transmission providers adequately assess the potential benefits of regional transmission facilities.⁶⁶²

287. Southeast PIOs claim that Long-Term Scenarios are essential to improving current transmission planning processes in the Southeast.⁶⁶³ SREA argues that Long-Term Regional Transmission Planning is not occurring in MISO South and states that scenario planning is contentious but necessary.⁶⁶⁴

288. California Energy Commission requests that the Commission clarify that transmission providers may rely on scenarios developed by other agencies, as currently CAISO relies on analyses conducted by California Energy Commission and California Commission.⁶⁶⁵ Relatedly, New York Commission and NYSEDA and ISO-NE highlight the importance of state-led identification of public policy needs and their impact on scenario assumptions.⁶⁶⁶ New York Commission and NYSEDA state that, especially in a single-state RTO/ISO like NYISO, the state should be afforded a central role in determining the scenarios to be studied.⁶⁶⁷ ISO-NE also believes that reliance on states is consistent with prior Commission orders permitting transmission providers to rely on a committee of state regulators to identify transmission needs driven by Public Policy Requirements.⁶⁶⁸

289. PJM States suggest that the Commission's proposal for state involvement in the development of Long-Term Scenarios could be interpreted as more limited than its proposal for state involvement with respect to Long-Term Regional Cost Allocation and ask that the Commission clarify that retail regulators have a

primary role in both. PJM States warn that, if a retail regulator disagrees with the scenarios or benefits metrics used to select a transmission project, it is unlikely to receive regulatory approval.⁶⁶⁹

290. Cypress Creek asserts that the Commission should require the use of a defined and standardized set of baseline assumptions to ensure that scenario projections are realistic, and that deviation should only be allowed if the proposal is consistent with or superior to the *pro forma*.⁶⁷⁰

291. Concerned Scientists state that the Commission should reject comments arguing that uncertainty prohibits scenario-based planning, and instead endeavor to create a transmission planning process that properly acknowledges and addresses that uncertainty. Concerned Scientists state that uncertainty does not prohibit long-term transmission planning but rather necessitates the evaluation of multiple plausible scenarios to identify investments that will perform well over a variety of possible future conditions. Concerned Scientists explain that, just as utilities and generator developers do not shy away from an uncertain future when building new generation resources, transmission investments should also be informed by, but not avoided due to, future uncertainty. Concerned Scientists state that the Commission's proposed Long-Term Scenarios requirements are a reasonable minimum for responsible transmission planning.⁶⁷¹

292. Other commenters support the NOPR proposal to require Long-Term Scenarios in transmission planning but have reservations.⁶⁷² Many of these commenters argue that the NOPR is too prescriptive and ask for greater flexibility so that the Long-Term Scenario planning already occurring in their respective transmission planning region will comply with any final order.⁶⁷³ For example, OMS points to such flexibility as key to the success of MISO's long-term transmission planning

processes.⁶⁷⁴ SERTP Sponsors argue that the Commission should not make Long-Term Scenarios even more prescriptive because such an approach would likely result in litigation and delay.⁶⁷⁵

293. American Municipal Power believes that transmission providers should conduct Long-Term Scenarios in a highly collaborative way with the full and active participation of all stakeholders.⁶⁷⁶ Similarly, Six Cities recommend that Long-Term Scenarios be coordinated between state and local regulatory authorities to reflect varying policies. Six Cities recommend that, in CAISO, Long-Term Scenarios should consider the procurement choices of non-jurisdictional utilities, such as Six Cities, as well as policy portfolios provided by California Commission.⁶⁷⁷

294. Some commenters oppose the NOPR proposal to require Long-Term Scenarios in Long-Term Regional Transmission Planning.⁶⁷⁸ Dominion argues for maximum flexibility for planning assumptions to support reliable and affordable transmission service for customers.⁶⁷⁹ Idaho Commission states that any prescription for scenario analysis should be supported by clear evidence of a deficiency.⁶⁸⁰ Instead of specific scenario planning requirements, Nebraska Commission states that the Commission should provide general guidelines and as much flexibility as possible to transmission providers, who—along with state regulatory officials—are best situated to evaluate the needs of each transmission planning region.⁶⁸¹

295. Potomac Economics questions the NOPR's proposal to require Long-Term Scenarios, stating that it will force RTOs/ISOs to plan and commit to sizable transmission investment costs based on uncertain factors and unreasonable speculation on factors such as the location of future generation, retirements, grid enhancing technologies, and transmission reconfiguration options.⁶⁸² Potomac Economics also questions the usefulness of Long-Term Scenarios, asserting that future congestion patterns will be

increasingly uncertain given that the higher penetration of intermittent resources will cause larger fluctuations in transmission flows, making it more difficult to accurately estimate the benefits of transmission upgrades.⁶⁸³ Potomac Economics argues that many of the most beneficial transmission upgrades address very specific constraints, are smaller in size, can be difficult to identify in advance, and can be very sensitive to modest changes in generation and load.⁶⁸⁴

b. Applying Scenario Planning to Reliability and Economic Planning

296. California Commission and City of New York assert that the Commission should require the use of Long-Term Scenarios in all transmission planning processes—not just Long-Term Regional Transmission Planning.⁶⁸⁵ City of New York argues that such a requirement would enable consideration of a broad range of potential future system conditions across multiple planning categories.⁶⁸⁶ Similarly, NYISO states that the final order should authorize, but not require, the use of multiple alternative scenarios in existing transmission planning processes. NYISO states that doing so would enhance its ability to anticipate and solicit more efficient, holistic transmission solutions, which would support system reliability and resilience.⁶⁸⁷

297. In contrast, certain commenters oppose requiring transmission providers to incorporate some form of scenario analysis into their existing reliability and economic regional transmission planning processes.⁶⁸⁸ Duke contends that the Commission should avoid disrupting existing regional transmission planning processes that work well.⁶⁸⁹ MISO notes that, while this type of scenario-based planning has been applied to economic transmission planning processes and could be applied to existing reliability transmission planning processes, such application should be flexible and tailored to the unique needs of each transmission provider, adding that scenario-based planning requires considerable time and resources.⁶⁹⁰

3. Commission Determination

298. We adopt, with modification, the NOPR proposals to require transmission providers in each transmission planning region to (1) develop and use Long-Term Scenarios as part of Long-Term Regional Transmission Planning and (2) use those Long-Term Scenarios to identify and evaluate Long-Term Regional Transmission Facilities needed to meet Long-Term Transmission Needs. As further explained in subsequent sections of this final order, we find that these requirements regarding the development and use of Long-Term Scenarios in Long-Term Regional Transmission Planning strike a reasonable balance between ensuring that Long-Term Regional Transmission Planning reasonably identifies Long-Term Transmission Needs over a sufficiently long-term, forward-looking transmission planning horizon and providing sufficient flexibility for transmission providers to develop and use Long-Term Scenarios in a way that reflects the unique characteristics of their respective transmission planning regions.

299. We first address the definition of Long-Term Transmission Needs. For purposes of this final order, Long-Term Transmission Needs are transmission needs identified through Long-Term Regional Transmission Planning by, among other things and as discussed in this final order, running scenarios and considering the enumerated categories of factors. As explained in the NOPR, the drivers of transmission needs are diverse and include, but are not limited to, evolving reliability concerns, changes in the resource mix, and changes in demand. For example, as identified in the NOPR, reliability concerns giving rise to Long-Term Transmission Needs include, among other things, the increasing frequency of high-impact extreme weather events, the increasing reliance by transmission system operators on regional integration and coordination to reliably serve load, the operational challenges created by the increasing share of variable resources entering the resource mix, and changes in electric demand patterns such as shifts in load profiles caused by, for example, the emergence of large loads associated with evolving industrial and commercial needs such as the growth in data centers, and increased electrification of energy end uses.⁶⁹¹

300. In the NOPR, the Commission referred to transmission needs identified through Long-Term Regional Transmission Planning largely as needs

driven by changes in the resource mix and demand.⁶⁹² Nevertheless, we agree with commenters who correctly note that there are additional drivers of Long-Term Transmission Needs,⁶⁹³ and, as noted above, the Commission itself contemplated in the NOPR that Long-Term Regional Transmission Planning would consider drivers beyond those tied directly to changes in supply and demand. We therefore clarify that, although changes in the resource mix and demand are important drivers of Long-Term Transmission Needs, they represent only a subset of such drivers. In addition, we note that Long-Term Transmission Needs are similar in kind to transmission needs identified through existing regional transmission planning processes established under Order No. 1000. Where Long-Term Transmission Needs differ is their identification through the long-term, forward-looking, and more comprehensive regional transmission planning and cost allocation processes established in this final order. Accordingly, in this final order, we refer to the transmission needs that are identified through Long-Term Regional Transmission Planning as Long-Term Transmission Needs. The identification of Long-Term Transmission Needs and Long-Term Regional Transmission Facilities to potentially meet those needs is accomplished through the use of Long-Term Scenarios in Long-Term Regional Transmission Planning.

301. As discussed in the Requirement for Transmission Providers to Use a Set of Seven Required Benefits section of this final order, we require transmission providers to measure and use a set of seven required benefits in Long-Term Regional Transmission Planning. Transmission providers must use this same set of benefits to help to inform their identification of Long-Term

Transmission Needs. For example, in this final order we require transmission providers to measure and use production cost savings in Long-Term Regional Transmission Planning. As such, when transmission providers are working to identify Long-Term Transmission Needs, areas of significant congestion on the transmission system—where Long-Term Regional Transmission Facilities could reduce congestion and in turn facilitate production cost savings—may indicate a Long-Term Transmission Need.

302. We adopt the definition of Long-Term Scenarios proposed in the NOPR,⁶⁹⁴ with modification. We define Long-Term Scenarios as scenarios that incorporate various assumptions using best available data inputs about the future electric power system over a sufficiently long-term, forward-looking transmission planning horizon to identify Long-Term Transmission Needs and enable the identification and evaluation of transmission facilities to meet such transmission needs. We make this modification to clarify the intent of the definition proposed in the NOPR, rather than modify the definition in substance.

303. Certain commenters assert that the Commission should not require transmission providers to develop Long-Term Scenarios due to the inherent uncertainty of forecasting future transmission needs over a long transmission planning horizon. We acknowledge the inherent uncertainty involved in planning to meet Long-Term Transmission Needs. However, we believe that such uncertainty is mitigated by using Long-Term Scenarios themselves, as noted by Concerned Scientists and NARUC.⁶⁹⁵ Scenario planning allows transmission providers to evaluate whether Long-Term Regional Transmission Facilities are beneficial in more than one scenario. Transmission providers may also examine whether Long-Term Transmission Needs appear in one or more scenarios. Scenario planning also allows transmission providers to consider a broader range of future circumstances and be better prepared for changes in the electric

power system.⁶⁹⁶ Finally, transmission providers may use scenario planning to determine whether identified Long-Term Regional Transmission Facilities provide sufficient benefits across more than one scenario when considering whether to select such facilities, as also noted by NARUC.⁶⁹⁷ Moreover, we adopt requirements for Long-Term Scenarios, as discussed further below, to ensure they are based on reasonable assumptions and better reflect future transmission system conditions and uncertainties in those future circumstances. In sum, incorporating Long-Term Scenarios into Long-Term Regional Transmission Planning provides an appropriate approach to ensure just and reasonable rates by accounting for the increasing uncertainty in the accuracy of assumptions over longer (*i.e.*, over 10 years) transmission planning horizons and mitigating the risks of under-building or over-building Long-Term Regional Transmission Facilities.

304. Further, we disagree with commenters that suggest that the Commission should not establish specific Long-Term Scenario requirements and that imposing general principles is sufficient to ensure just and reasonable rates. We find that Long-Term Regional Transmission Planning that does not incorporate Long-Term Scenarios that meet the requirements of this final order would fail to ensure that transmission providers identify Long-Term Transmission Needs, as well as identify and evaluate Long-Term Regional Transmission Facilities to address those needs. For example, relying on a single forecast of future transmission system conditions may limit transmission providers' and stakeholders' confidence in identified Long-Term Transmission Needs, and accordingly the evaluation of Long-Term Regional Transmission Facilities to address those needs. Further, failure to incorporate Long-Term Scenarios would increase the likelihood of piecemeal and relatively inefficient or less cost-effective transmission development. Accordingly, we find that requiring transmission providers to develop and use Long-Term Scenarios that meet the requirements established in this final order as part of Long-Term Regional Transmission Planning will ensure that Commission-jurisdictional rates are just and reasonable and not unduly discriminatory or preferential.

305. Additionally, as stated above and in response to commenters that emphasize the importance of

⁶⁹² *Id.*

⁶⁹³ See, e.g., AEE Initial Comments at 7–8 (noting that reforms are needed to meet transmission needs driven by “market forces, state policies, and new reliability and resilience imperatives”); ELCON Initial Comments at 4 (“[L]ong term scenario planning should not be limited to anticipated resource mix but also take into consideration impacts on reliability and congestion management.”); New Jersey Commission Initial Comments at 2 (“[T]he Board stresses that most of the reforms the Commission is proposing would be necessary even in the absence of ‘changes in the resource mix and demand.’”) (citing NOPR, 179 FERC ¶ 61,028 at P 24); Renewable Northwest Initial Comments at 8 (noting how current transmission planning processes ignore both “trends in future generation and the impact of extreme weather events”) (citing NOPR, 179 FERC ¶ 61,028 at P 51); Southeast PIOs Initial Comments at 7–8 (noting that both intensifying “changes in the generation mix” and “increasingly common extreme weather and high-intensity, low frequency events” burden the existing transmission system).

⁶⁹⁴ In the NOPR, the Commission proposed to define Long-Term Scenarios as a tool to identify transmission needs driven by changes in the resource mix and demand—and enable the evaluation of transmission facilities to meet such transmission needs—across multiple scenarios that incorporate different assumptions about the future electric power system over a sufficiently long-term, forward-looking transmission planning horizon. NOPR, 179 FERC ¶ 61,028 at P 84.

⁶⁹⁵ Concerned Scientists Reply Comments at 18–19; NARUC Initial Comments at 4 (citing NOPR, 179 FERC ¶ 61,028 at PP 86, 88).

⁶⁹⁶ See Policy Integrity Reply Comments at 2.

⁶⁹⁷ NARUC Initial Comments at 4.

collaboration in developing Long-Term Scenarios, this final order retains the requirements for an open, coordinated, and transparent local transmission planning process established in Order No. 890 and further required for regional transmission planning in Order No. 1000.⁶⁹⁸ For example, consistent with the transparency transmission planning principle,⁶⁹⁹ transmission providers must make transparent the methodology, criteria, assumptions, and data used to develop each Long-Term Scenario. Moreover, as described below, this final order requires that transmission providers provide meaningful opportunity for stakeholder input, including from state and local regulators, as well as non-jurisdictional entities, into the factors used to develop Long-Term Scenarios.

306. In response to PJM's request that the Commission clarify that the role of the state regulator is primary in developing Long-Term Scenarios, we note that, as described in the Stakeholder Process and Transparency determination within the Categories of Factors section, transmission providers retain the ultimate responsibility for transmission planning.⁷⁰⁰ As such, transmission providers have discretion, subject to the limits imposed in this final order, to weigh more heavily one source of information over another, such as weighing information related to a factor provided by a state regulator more heavily than information provided by other stakeholders. In response to California Energy Commission, we find that the final order does not preclude transmission providers from relying on scenarios developed by state agencies, provided that the Commission finds that the OATT provisions governing those Long-Term Scenarios' development comply with the Long-Term Scenarios requirements of this final order (e.g., transmission planning horizon and stakeholder input requirements). We decline to require the use of Long-Term Scenarios in all transmission planning processes, as requested by California Commission and City of New York. The record in this proceeding does not

demonstrate that the incorporation of Long-Term Scenarios in existing Order No. 1000 regional transmission planning processes is necessary to ensure that Long-Term Regional Transmission Planning is just and reasonable. In response to NYISO's request that transmission providers be allowed to use scenario planning in their existing Order No. 1000 regional transmission planning processes, while we agree that such a practice may offer benefits, we find that any such request amending existing transmission planning processes must be submitted in an FPA section 205 filing separate from their compliance filings to this final order.⁷⁰¹

C. Long-Term Scenarios Requirements

1. Transmission Planning Horizon

a. NOPR Proposal

307. In the NOPR, the Commission proposed to require transmission providers to develop Long-Term Scenarios as part of Long-Term Regional Transmission Planning using no less than a 20-year transmission planning horizon.⁷⁰²

308. The Commission preliminarily found that a 20-year transmission planning horizon requirement strikes a reasonable balance between the current transmission planning horizons used in many transmission planning regions and the 30-year or longer transmission planning horizon proposed by some ANOPR commenters. The Commission noted that the 30-year or longer transmission planning horizon was criticized by other commenters as speculative or too uncertain. The Commission also stated that a 20-year transmission planning horizon requirement may be reasonable because some transmission providers use a 20-year transmission planning horizon in existing regional transmission planning processes. In addition, the Commission stated that a 20-year transmission planning horizon would allow for sufficient time to identify, plan, and obtain siting and permitting approval for and to construct regional transmission facilities to meet long-term regional transmission needs, including those that may take longer than the average amount of time to go from the planning stage to in-service. Finally, the Commission stated that a 20-year transmission planning horizon would allow transmission providers to better

leverage economies of scale by sizing transmission facilities to meet not only nearer-term transmission needs, but also longer-term transmission needs driven by changes in the resource mix and demand over time. The Commission preliminarily found that by assessing transmission needs over a longer time horizon—for example, starting in year six⁷⁰³ through year 20 of the transmission planning horizon—Long-Term Regional Transmission Planning should be able to identify more efficient or cost-effective regional transmission facilities to address these needs.⁷⁰⁴

b. Comments

i. Support for 20-Year Transmission Planning Horizon

309. Many commenters support the Commission's proposal to require transmission providers to develop Long-Term Scenarios as part of Long-Term Regional Transmission Planning using no less than a 20-year transmission planning horizon.⁷⁰⁵ Several

⁷⁰³ The Commission noted that the North American Electric Reliability Corporation defines the long-term transmission planning horizon as covering year six through year 10 and beyond. *Id.* P 94 n.160.

⁷⁰⁴ *Id.* PP 97–99 (footnotes omitted).

⁶⁹⁸ Order No. 1000, 136 FERC ¶ 61,051 at PP 150–152; Order No. 890, 118 FERC ¶ 61,119 at P 435.

⁶⁹⁹ Order No. 890, 118 FERC ¶ 61,119 at P 471.

⁷⁰⁰ *Id.* P 454. There, we stated in response to the suggestion by some commenters that we require transmission providers to allow customers to collaboratively develop transmission plans with transmission providers on a co-equal basis that transmission planning is the tariff obligation of each transmission provider, and the *pro forma* OATT planning process adopted in the final rule is the means to see that it is carried out in a coordinated, open, and transparent manner, in order to ensure that customers are treated comparably. Therefore, the ultimate responsibility for planning remains with transmission providers.

⁷⁰¹ We note that an exception to the requirement to file a separate FPA section 205 filing applies if transmission providers were to propose a unified transmission planning process, as discussed above. See *supra* Participation in Long-Term Regional Transmission Planning section.

⁷⁰² NOPR, 179 FERC ¶ 61,028 at PP 97–100.

commenters generally consider a 20-year transmission planning horizon to be reasonable, acceptable, or appropriate.⁷⁰⁶ Some commenters argue that a 20-year transmission planning horizon provides a reasonable balance between shorter- and longer-term transmission planning horizons.⁷⁰⁷ National Grid states that a 20-year transmission planning horizon balances the benefits of prospective transmission planning with the greater uncertainty that comes with forecasting system needs over a longer period.⁷⁰⁸ Numerous commenters argue that a 20-year transmission planning horizon will help to improve the efficiency and cost of developing transmission and to assess future transmission needs.⁷⁰⁹

310. New Jersey Commission argues that a 20-year transmission planning horizon should help to make long-term multi-driver transmission projects viable by identifying needs and opportunities in a timeframe that allows states to have a meaningful conversation about voluntarily funding such projects.⁷¹⁰ Policy Integrity argues that it is crucial to model what is going to be needed over the next 20 years to ensure that short- and medium-term transmission projects are built efficiently, stating that a longer transmission planning horizon is reasonable in the context of long-lived transmission assets with long lead times.⁷¹¹

311. US DOE asserts that there is sufficient evidence to extend the transmission planning horizon to a minimum of 20 years for Long-Term Regional Transmission Planning to capture power sector changes that occur during transmission development.⁷¹² PIOs note that panelists at the November 2021 Technical Conference suggested a 20-year transmission planning horizon is necessary, in part, due to long-term public policy goals.⁷¹³

Acadia Center and CLF similarly argue that transmission planners should plan over long-term horizons to factor in predictable trends, such as timelines required under state laws and policies.⁷¹⁴

312. Several commenters emphasize that a transmission planning horizon of 20 years is sufficient to account for the amount of time needed to develop transmission projects, considering the complexity and challenges of major transmission development.⁷¹⁵ Eversource states that a long-term perspective is necessary to take advantage of the economies of scale that large transmission projects can enable, as well as to incorporate anticipated changes in generation and load beyond the traditional transmission planning horizon.⁷¹⁶ Illinois Commission states that a 20-year transmission planning horizon is necessary to properly plan and build transmission and generation resources.⁷¹⁷ LADWP states that a 20-year transmission planning horizon provides enough time for transmission projects to be developed and placed in service when such projects require new rights-of-way without becoming too speculative.⁷¹⁸ NextEra contends that a 20-year transmission planning horizon will ensure that transmission planners anticipate and plan transmission facilities for needs driven by changes in the resource mix and demand.⁷¹⁹

313. PIOs state that a 20-year transmission planning horizon should be the minimum timeframe, explaining that because transmission facilities can take 15 years to plan, permit, and construct, a 20-year transmission planning horizon can result in just-in-time planning, where the transmission plan is developed shortly before the process for siting and permitting must begin.⁷²⁰ GridLab asserts that a 20-year transmission planning horizon might identify regional transmission needs that occur after year 10, as well as transmission projects that would be selected and approved in later transmission planning cycles.⁷²¹

314. Clean Energy States support quick adoption of at least a 20-year planning horizon because many of their member states have established 100%

clean energy power sector or zero-carbon goals for their state economies by 2040 or 2050.⁷²² California Municipal Utilities, on the other hand, support a 20-year transmission planning horizon, but caution that transmission costs identified can be significant and could rely upon speculative resources that may not come to fruition, namely offshore wind development.⁷²³

315. Many commenters highlight transmission planning regions with existing long-term transmission planning that either does or will conform to the 20-year transmission planning horizon proposed in the NOPR.⁷²⁴ MISO commits to continue using its 20-year forecast period under this proposed reform.⁷²⁵ SPP states that it currently performs a 20-year assessment that incorporates Long-Term Scenarios at least once every five years.⁷²⁶ New York Transco notes that NYISO's transmission planning process utilizes multiple cases and scenarios over a 20-year evaluation horizon.⁷²⁷ Acadia Center and CLF note that ISO–NE recently gained Commission approval for longer-term transmission studies to undertake long-term transmission planning to 2050.⁷²⁸

316. CAISO states that it currently approves transmission projects in its annual transmission planning process based on a 10-year outlook, although the CAISO OATT allows for a longer 20-year transmission horizon outlook to reliably and cost-effectively account for California's greenhouse gas and renewable energy objectives.⁷²⁹ CAISO explains that its 20-year outlook does not include a process for approving specific transmission projects, but rather allows considerations beyond 10 years to inform decisions in its annual

⁷²⁸ Acadia Center and CLF Initial Comments at 3.

⁷²⁹ CAISO Initial Comments at 15.

transmission planning process.⁷³⁰ California Municipal Utilities also highlight CAISO's existing transmission planning processes, noting that its 20-year transmission outlook calls for an estimated combined capital cost of \$30.5 billion.⁷³¹ NextEra notes that, while many transmission planning regions use or will use a 20-year transmission planning horizon, no requirements exist to ensure that these practices persist.⁷³²

317. Several commenters reference existing long-term planning processes as support for the Commission's proposed 20-year transmission planning horizon.⁷³³ NextEra and ACEG explain that longer time horizons are embedded into existing integrated resource plans, through law or common practice, and extend into and beyond 2040 to meet ambitious resource goals.⁷³⁴ R Street argues that, for benchmarking purposes, 20- to 25-year planning horizons have been a best practice for integrated resource planning for decades.⁷³⁵

318. LADWP asserts that the proposed 20-year transmission planning horizon is likely the least disruptive horizon because of its current use by many transmission providers. LADWP further argues that a consistent transmission planning horizon will optimize asset investment and minimize public impacts; facilitate planning, coordination, and development of large-scale regional transmission projects; and ensure that transmission providers consider the same end point assessments of the evolving resource mix, environmental requirements that develop beyond a typical 10-year

period, and significant maintenance and retirement issues.⁷³⁶

ii. Requests for Flexibility

319. Several commenters recommend that the Commission provide transmission providers in each transmission planning region with the flexibility to propose other transmission planning horizons that may be appropriate and beneficial based on their planning processes.⁷³⁷ APS states that it is not convinced that a prescriptive approach will yield the benefits that the Commission seeks.⁷³⁸

320. NESCOE states that there is not one "right" transmission planning horizon and that it does not support a one-size-fits-all transmission planning horizon requirement.⁷³⁹ NESCOE requests that the Commission allow transmission providers in each transmission planning region to demonstrate that existing tariff provisions are consistent with or superior to a final order mandating a minimum transmission planning horizon, explaining—along with ISO-NE—that ISO-NE's Tariff does not provide a prescribed timeframe to request transmission analyses based on state-provided scenarios.⁷⁴⁰ Relatedly, California Commission suggests that, instead of mandating a 20-year transmission planning horizon, the Commission should adopt NYISO's recommendation to provide transmission providers with the discretion, up to 20 years, to plan for their needs.⁷⁴¹

321. PG&E understands that not every transmission need identified in the latter years of a 20-year transmission planning horizon will require immediate selection resolution, and it therefore asks the Commission to give individual transmission planning regions the flexibility to determine how to allow for monitoring and updating planning assumptions for transmission projects that meet transmission needs

beyond 10 years.⁷⁴² ISO-NE argues that the Commission should permit an approach that allows (but does not require) a transmission planning horizon beyond 10 years because the 20-year transmission planning horizon could potentially limit the identification of system issues during interim years, inhibit adaptation to evolving policies, and preclude the transmission planning process from considering public policies that may include shorter timeframes, which may limit the ability to adapt to emerging needs or changing laws.⁷⁴³ NESCOE contends that a rigid 20-year transmission planning horizon may be counterproductive and could divert resources focused on meeting requests under ISO-NE's longer-term transmission planning process to study a time horizon that states, stakeholders, and ISO-NE may not find useful.⁷⁴⁴

322. OMS argues that the final order should permit flexibility in transmission planning horizons and enable transmission planning regions to meet objectives through routine scenario-based planning within an appropriate study window.⁷⁴⁵ Industrial Customers assert that transmission planning horizons should consider the time to identify, plan, and obtain siting and permitting approval to construct regional transmission facilities, and that timing can vary dramatically by region. Industrial Customers believe a stringent 20-year transmission planning horizon could create more uncertainty, resulting in stranded transmission investments and increased transmission rates because it is difficult, if not impossible, to forecast transmission needs and requirements 20 years into the future.⁷⁴⁶

323. PJM States recommend, and Clean Energy Associations agree, that instead of requiring a transmission planning horizon of a particular length, the Commission should require each transmission provider to demonstrate that the transmission planning horizon it chooses is adequate to achieve the goals of Long-Term Regional Transmission Planning.⁷⁴⁷

324. New York State Department recommends that the final order allow states to determine the appropriate transmission planning horizon since New York Public Service Commission has already issued orders directing long-term transmission and distribution

planning with undefined terms.⁷⁴⁸ EEI and US Chamber of Commerce explain that state regulators may not appreciate a rigid 20-year transmission planning horizon requirement given that some state resource procurement processes use a 10-year outlook, and the proposed transmission planning process may thus make resource decisions that are not state-sanctioned.⁷⁴⁹ Consistent with their Coordinated Grid Planning Process, New York Commission and NYSEDA assert that the Commission should allow state regulators to help determine the appropriate transmission planning horizon, especially in a single-state RTO/ISO such as NYISO.⁷⁵⁰

325. Louisiana Commission states that a 20-year transmission planning horizon may be longer than the planning horizon utilized in state integrated resource planning, explaining that its integrated resource planning rules allow for a 20-year default planning period, but also for alternative periods, and more importantly, require 5-year action plans.⁷⁵¹

326. APPA argues, and TANC concurs, that the Commission should allow transmission planning regions to incorporate cost and benefit-tracking mechanisms to reduce the risk of speculative transmission projects.⁷⁵²

iii. Requests for a Different Transmission Planning Horizon

327. Several commenters argue that a 20-year transmission planning horizon is too long.⁷⁵³ Indicated PJM TOs contend that the Commission should ensure that transmission planning horizons result in the identification of transmission facilities that can be realistically planned and developed, and that 20 years may be too long given rapidly changing technology, generation mix, and demand patterns.⁷⁵⁴ Mississippi Commission also favors a

shorter transmission planning horizon, arguing that there is too much uncertainty to plan 20 to 40 years into the future.⁷⁵⁵ NRECA argues that a 20-year transmission planning horizon may allow more alternatives to be considered, but cost efficacy is not guaranteed. Further, NRECA argues that planning beyond 10 years will by necessity devolve into a top-down process that would, at best, relegate actual load-serving entity resource plans and demand forecasts to a secondary status or, at worst, ignore them altogether, violating FPA section 217(b)(4).⁷⁵⁶

328. PJM Market Monitor states that uncertainty increases significantly as the transmission planning horizon is extended, and the transmission planning process should be both long-term and flexible, allowing transmission planners to change plans as reality changes.⁷⁵⁷ Similarly, US Chamber of Commerce asserts that, as the length of the transmission planning horizon increases, the number of assumptions increases and the quality of assumptions decreases, rendering costs and benefits less certain. US Chamber of Commerce states that today's transmission grid was not forecasted at the turn of the century, and, thus, forecasts made today for a similar period are likely to under or over-shoot transmission needs due to new and advancing generation technologies with commercial operation timeframes not yet known.⁷⁵⁸ Nebraska Commission states that a 20-year transmission planning horizon may reduce the transmission planning process to an academic exercise due to the amount of speculation necessarily involved.⁷⁵⁹

329. Industrial Customers state that the Commission has not ruled against transmission planning horizons under 15 years and has acknowledged that the average time needed to develop and build a transmission project is 10 years.⁷⁶⁰ Industrial Customers assert that, contrary to the Commission's view, most transmission planners use 10-year transmission planning horizons, and transmission investment should be driven by shorter timeframes to plan for economic and reliability needs.⁷⁶¹ Ohio

Consumers note that the 5-year timeframe used by PJM's DFAX method is characterized by high uncertainty, so a longer timeframe would exacerbate inaccuracies.⁷⁶²

330. Several commenters argue that a 10-year transmission planning horizon could reduce speculation, such as with respect to the changing resource mix.⁷⁶³ NRG states that a shorter, 10-year transmission planning horizon would fit within the time horizon necessary to make transmission investment decisions and still reflect regional policy goals.⁷⁶⁴ Utah Commission notes that NorthernGrid's members in 2020 adopted a 10-year transmission planning horizon and objects to being compelled to abandon that planning horizon in favor of a one-size-fits-all mandate.⁷⁶⁵

331. PJM and Exelon advocate for a 15-year transmission planning horizon to reduce uncertainty and enhance reliability.⁷⁶⁶ Exelon argues that a 15-year transmission planning horizon may yield less uncertain forecasts that are more likely to be actionable and better align with target dates in public policies.⁷⁶⁷ PJM argues that its current 15-year transmission planning horizon is sufficient to plan and develop needed transmission, and that forecasts of fuel prices, load trends, generation retirement, and other relevant parameters become more uncertain the further one looks out. Moreover, PJM asserts, a longer transmission planning horizon leads to a greater probability that a transmission provider will commit to a transmission project that will look unfortunate in hindsight.⁷⁶⁸

332. Some commenters argue that a transmission planning horizon longer than 20 years may be warranted to capture the longer-term benefits of transmission facilities.⁷⁶⁹ ACEG recommends that the Commission

consider up to a 40-year transmission planning horizon to match the expected life of most transmission assets.⁷⁷⁰ CARE Coalition argues that a 40-year transmission planning horizon would be consistent with standard practice in economics and public policy of evaluating benefits over the life of the asset, and that the long lead time to develop transmission facilities justifies a longer planning horizon.⁷⁷¹

iv. Opposition to Requests for a Different Transmission Planning Horizon

333. Several commenters dispute claims that a 20-year transmission planning horizon introduces risks from uncertainty and that a shorter planning horizon is more appropriate.⁷⁷² Southeast PIOs claim that the risk of unaddressed transmission needs grows over time because of long lead times needed for transmission development, and that SERTP's 10-year transmission planning horizon prevented Georgia Power from using that process to plan for its long-term North Georgia Reliability & Resilience Plan and its goal to integrate 6,000 MW of renewable resources by 2035.⁷⁷³ Southeast PIOs assert that a longer transmission planning horizon will put future transmission needs on the radar for transmission planners and, if updated frequently, allow transmission providers to select transmission facilities conditional on subsequent transmission planning cycles, which affords planners flexibility to determine the need for the facility and whether there are more cost-effective alternatives.⁷⁷⁴ ACORE notes that the NOPR addresses the uncertainty about the future by requiring the use of multiple Long-Term Scenarios that are revised every three years.⁷⁷⁵

334. Several commenters state that the transmission planning horizon should not extend beyond 20 years to avoid overly speculative long-term forecasts.⁷⁷⁶ Entergy asserts that looking

beyond 20 years would increase the likelihood of errors, risk billions of dollars in investments that may prove to be misguided, and amplify the risk of planning a transmission system that poorly aligns with actual future needs.⁷⁷⁷ Illinois Commission states that a transmission planning horizon longer than 20 years would make it difficult to accurately predict the factors relevant to transmission planning.⁷⁷⁸ Clean Energy Buyers propose that transmission providers seeking to adopt a transmission planning horizon beyond 20 years should be required to demonstrate the justness and reasonableness of that transmission planning horizon.⁷⁷⁹

335. Certain TDUs and Louisiana Commission oppose a 40-year transmission planning horizon.⁷⁸⁰ Certain TDUs emphasize that, as evidenced by the Michigan Thumb Loop transmission project, assumptions such as the resource mix can change in as few as seven years.⁷⁸¹ Louisiana Commission argues that longer periods, such as the 40-year transmission planning horizon proposed by some commenters, will greatly increase the risk for errors and wasted investments. According to Louisiana Commission, transmission planning horizons should neither exceed the availability of reasonable data and assumptions nor create unnecessary risks that ratepayers will be required to fund transmission facilities that do not deliver expected benefits.⁷⁸²

v. Meaning and Scope of Transmission Planning Horizon

336. Several commenters request that the Commission define the 20-year transmission planning horizon as a simple 20-year period, and not a 20-year period starting from the estimated in-service date of the transmission facilities, which would result in forecasting transmission needs beyond 20 years.⁷⁸³ Kentucky Commission Chair Chandler states that the usefulness of Long-Term Regional Transmission Planning and measuring

benefits 20 years after a transmission project's in-service date will decrease if each project's relative benefits cannot be adequately measured and identified.⁷⁸⁴ PPL argues that tying the transmission planning horizon to the study date rather than the solution in-service date will facilitate a more realistic, certain, and simple transmission planning process and reduce the need for additional analysis.⁷⁸⁵ US Chamber of Commerce adds that beginning at the in-service date of the transmission facilities would extend the effective transmission planning horizon to 25–30 years, thereby further increasing the uncertainty of Long-Term Regional Transmission Planning; thus, US Chamber of Commerce argues the Commission should use the 20-year transmission planning horizon as a ceiling, rather than a floor, consistent with the far end of most state planning horizons, which would protect transmission planners from being forced to plan beyond the requirements of applicable state law.⁷⁸⁶

337. Policy Integrity requests that the Commission clarify the details of the 20-year time horizon, stating that it is unclear whether the Commission intended the 20-year time horizon for Long-Term Regional Transmission Planning to be tied to construction commencing in year 20.⁷⁸⁷ ISO-NE and Policy Integrity seek clarification that, if the Commission requires that transmission providers must study what is needed over the next 20 years, transmission providers are not precluded from evaluating what needs to be built in the short and medium terms.⁷⁸⁸ Industrial Customers assert that the proposed 20-year transmission planning horizon is unclear because some commenters interpret the Commission's proposal as requiring a 20-year transmission planning horizon for Long-Term Regional Transmission Planning,⁷⁸⁹ while others argue it requires a 20-year transmission planning horizon in existing regional transmission planning processes.⁷⁹⁰

338. Several commenters support a 20-year transmission planning horizon if Long-Term Scenarios are used to inform the development of transmission

facilities but not used to select transmission facilities or to dictate construction.⁷⁹¹ TANC does not believe that a 20-year transmission planning horizon should be used for local transmission planning processes or selection.⁷⁹² Nebraska Commission states that using a 20-year transmission planning horizon for only research, study, and projections will avoid speculation, increased costs, and unjust and unreasonable rates.⁷⁹³ NRECA asserts that using a 20-year transmission planning horizon in Long-Term Regional Transmission Planning to select transmission projects will not produce the granularity and certainty needed to assign costs to beneficiaries.⁷⁹⁴ Similarly, Ohio Consumers argue that too little is known about the location of future loads and resources and the direction of power flows over 20 years to use a 20-year transmission planning horizon for cost allocation purposes.⁷⁹⁵ NRG argues that use of a 20-year transmission planning horizon to allocate costs will lead to unjust and unreasonable outcomes, and instead, a 10-year transmission planning horizon is appropriate.⁷⁹⁶ New England Systems state that the Commission should adjust the NOPR's focus on transmission planning horizons toward an evolutionary and evidence-based transmission planning process aimed at mitigating avoidable costs for operating generation out of economic merit order and at improving the utilization of renewable resources that experience curtailment due to congestion.⁷⁹⁷

339. Some commenters support a 20-year transmission planning horizon only if the latter portion of the planning horizon is not used to direct the development of transmission facilities.⁷⁹⁸ SERTP Sponsors state that the Commission should not require that regional transmission expansion be

based on transmission planning horizons that are incompatible with the planning horizons used for integrated resource planning or supply-side resource plan development, or that involve a degree of speculation that the states comprising a transmission planning region are not willing to accept.⁷⁹⁹ SPP Market Monitor contends that if the Commission requires all RTOs/ISOs to perform a 20-year study, the final order should also provide guidance on how information determined in that long-term study will be used. SPP Market Monitor supports a secondary, shorter-term transmission planning horizon of 10 years that could be based on the results of the longer-term 20-year studies.⁸⁰⁰

340. Shell suggests that the 20-year transmission planning horizon include a developmental "Actionable Period" for the first 10 years, during which developers may be willing to invest in generation projects, or the RTOs/ISOs or utilities may be willing to commit to and authorize the construction of new transmission. Shell proposes that there would be an "Indicative Period" for the following 10 years, which would be used to drive the Actionable Period so that the Commission establishes a process that converges and integrates short, medium, and long-term planning. Shell asserts that its proposal could foster more comprehensive and efficient Long-Term Regional Transmission Planning and inform existing regional transmission planning processes.⁸⁰¹ To remove speculative assumptions from Long-Term Regional Transmission Planning, Arizona Commission similarly suggests that the Commission divide the 20-year transmission planning horizon into two equal parts: a "more certain" forecast and a "flexible" forecast.⁸⁰² Likewise, APS recommends that the Commission adopt a 20-year transmission planning horizon for "potential projects" and a 10-year planning horizon for "planned projects" to provide greater regional flexibility.⁸⁰³

341. Kansas Commission, Mississippi Commission, and NRECA state that the results of Long-Term Regional Transmission Planning should be considered informational only.⁸⁰⁴ Kansas Commission requests that the Commission establish solid evidentiary and policy bases to support a 20-year transmission planning horizon before

imposing such a requirement.⁸⁰⁵ Mississippi Commission believes that transmission construction decisions should use a 10-year transmission planning horizon.⁸⁰⁶

342. Some commenters rebut arguments that Long-Term Regional Transmission Planning should be performed for informational purposes only.⁸⁰⁷ ACEG contends that adopting the proposed transmission planning methods is essential to accomplishing the Commission's responsibilities and that less stringent requirements have not led to much-needed development of high-capacity transmission throughout the country. ACEG further states that providing informational reports will do little to remedy undue discrimination and achieve actual transmission plans.⁸⁰⁸ DC and MD Offices of People's Counsel state that the potential benefits to ratepayers and other stakeholders of a 20-year transmission planning horizon is significantly diminished if transmission planning is simply an academic exercise, without actual impact on future transmission development.⁸⁰⁹ SEIA argues that the Commission should mandate that scenarios developed under the final order be used in transmission planning rather than for informational purposes only or contingent on the approval of state regulators.⁸¹⁰

343. Business Council for Sustainable Energy states that transmission planning should consider the length of time that it takes for transmission assets to be built and the estimated useful life of those facilities.⁸¹¹ California Municipal Utilities argue, and TANC concurs, that any lengthening of the transmission planning horizon must be accompanied by consumer protections that guard against speculative siting of generation and a rigorous re-evaluation of planning assumptions and other relevant factors, such as commercial viability of transmission projects and the associated resources.⁸¹²

c. Commission Determination

344. We adopt the NOPR proposal to require transmission providers in each transmission planning region to develop

Long-Term Scenarios as part of Long-Term Regional Transmission Planning using no less than a 20-year transmission planning horizon. We further clarify that using a transmission planning horizon of no less than 20 years means that transmission providers must develop Long-Term Scenarios to identify Long-Term Transmission Needs that will materialize in the 20 years or more following the commencement of the Long-Term Regional Transmission Planning cycle.

345. In requiring a transmission planning horizon of not less than 20 years, we strike a balance. On the one hand, a 20-year transmission planning horizon extends far enough into the future that transmission providers can proactively identify Long-Term Transmission Needs that could be met with more efficient or cost-effective Long-Term Regional Transmission Facilities; in contrast, as discussed below, a transmission planning horizon less than 20 years may limit transmission providers' ability to adequately plan for Long-Term Transmission Needs. Specifically, as described in the NOPR, a 20-year transmission planning horizon allows for more time between when a transmission facility is identified to meet a future transmission need, and when the transmission need materializes, allowing for sufficient time to identify, plan, obtain siting and permitting approval for, and construct Long-Term Regional Transmission Facilities. Moreover, as some commenters observe, several transmission providers, including MISO, SPP, and NYISO, already use a 20-year transmission planning horizon. On the other hand, based on the record before us, we find that there may be sufficient uncertainty with regard to system conditions and transmission needs beyond a 20-year horizon such that it may be challenging for transmission providers to forecast Long-Term Transmission Needs across that time period, especially for those transmission providers that do not presently conduct, and thus do not have experience with, long-term regional transmission planning. Accordingly, we decline to adopt a requirement to use a transmission planning horizon that exceeds 20 years. However, this does not preclude transmission providers from proposing to use a transmission planning horizon of more than 20 years.

346. We clarify that transmission providers must plan for the entire duration of the 20-year transmission planning horizon. Specifically, transmission providers must, among other requirements established in this

final order, develop and use Long-Term Scenarios to identify Long-Term Transmission Needs occurring in any period of the 20-year transmission planning horizon and to evaluate potential transmission solutions to those needs.

347. Certain commenters either misstate aspects of the proposed 20-year transmission planning horizon or request clarification regarding the horizon.⁸¹³ We specify that the transmission planning horizon starts at the beginning of the Long-Term Regional Transmission Planning cycle and ends 20 years from that date. The transmission planning horizon is not tied to the in-service date of any identified transmission solution; rather, potential transmission solutions are identified after identifying Long-Term Transmission Needs that manifest during the 20-year transmission planning horizon.

348. We disagree with commenters that assert that a 20-year transmission planning horizon could result in Long-Term Regional Transmission Planning based on speculative transmission needs⁸¹⁴ or, relatedly, that a 20-year transmission planning horizon is only appropriate if Long-Term Scenarios are not used to select Long-Term Regional Transmission Facilities.⁸¹⁵ We find these assertions to be unfounded. In fact, the Long-Term Regional Transmission Planning requirements adopted in this final order are designed to avoid over-building transmission in response to speculative transmission needs through a series of tools and safeguards, discussed at length above.⁸¹⁶ To highlight just one of these safeguards, as discussed in the Evaluation and Selection of Long-Term Regional Transmission Facilities section of this final order, we require transmission providers to reevaluate certain previously selected Long-Term Regional Transmission Facilities in some circumstances to confirm that the Long-Term Regional Transmission Facility continues to meet the transmission providers' selection criteria. This reevaluation process will

⁸¹³ Kentucky Commission Chair Chandler Reply Comments at 2; National Grid Initial Comments at 12–13; PJM States Initial Comments at 3; PPL Initial Comments at 6; US Chamber of Commerce Initial Comments at 6.

⁸¹⁶ See *supra* Participation in Long-Term Regional Transmission Planning section.

help ensure that the continued selection of Long-Term Regional Transmission Facilities is based on the use of updated information regarding the existence of a Long-Term Transmission Need and the benefits that transmission providers expect a Long-Term Regional Transmission Facility to provide.

349. We disagree with commenters that assert that the Commission should adopt a shorter transmission planning horizon.⁸¹⁷ A transmission planning horizon of less than 20 years would fail to sufficiently capture Long-Term Transmission Needs given that at least some of the drivers of such needs extend up to 20 years into the future (e.g., many state laws include requirements to be met 15 to 20 years in the future). Additionally, a shorter minimum transmission planning horizon may not allow for sufficient time to develop Long-Term Regional Transmission Facilities with long lead-time requirements or to compare alternative transmission solutions to identify more efficient or cost-effective transmission solutions to meet Long-Term Transmission Needs.

350. We disagree with commenters that assert requiring a 20-year transmission planning horizon is incompatible with planning horizons used with state integrated resource planning.⁸¹⁸ In addition to the discussions in the Overall Need for Reform and Legal Authority to Adopt Reforms for Long-Term Regional Transmission Planning sections regarding state integrated resource planning, we note that regardless of the planning horizon used in a state integrated resource planning process, the results of that process can be incorporated into Long-Term Regional Transmission Planning to identify Long-Term Transmission Needs. In fact, as explained in State-Approved Utility Integrated Resource Plans and Expected Supply Obligations for Load-Serving Entities (Factor Category Three) section below, integrated resource plans are part of the Categories of Factors and thus, transmission providers must incorporate information on the load-serving entities' projected loads and resources over the planning horizon. The fact that a state integrated resource plan does not extend out a full 20 years—or extends further

⁸¹⁷ Exelon Initial Comments at 4, 7–8; Industrial Customers Initial Comments at 18; Mississippi Commission Initial Comments at 34; Nebraska Commission Initial Comments at 3–4; NRECA Initial Comments at 27–28; NRG Initial Comments at 6–9, 14; Omaha Public Power Initial Comments at 3–4; PJM Initial Comments at 5, 58–62; US Chamber of Commerce Initial Comments at 6; Utah Commission Initial Comments at 13.

⁸¹⁸ SERTP Sponsors Initial Comments at 21.

into the future—does not change the obligation for transmission providers to incorporate the information that is available over the 20-year transmission planning horizon.

351. In response to ISO–NE, and Policy Integrity,⁸¹⁹ the 20-year transmission planning horizon is distinct from the requirement to calculate benefits of an identified Long-Term Regional Transmission Facility over a minimum of 20 years from the estimated in-service date, as discussed in the Required Benefits section.

2. Frequency of Long-Term Scenario Revisions

a. NOPR Proposal

352. In the NOPR, the Commission proposed to require each transmission provider to develop Long-Term Scenarios at least every three years, by reassessing whether the data inputs and factors incorporated in the previously developed Long-Term Scenarios need to be updated and then revising the Long-Term Scenarios as needed to reflect updated data inputs and factors. The Commission also proposed to require that the development of Long-Term Scenarios be completed within three years, before the next three-year assessment commences.⁸²⁰

353. The Commission preliminarily found that a three-year frequency requirement balances the need of transmission providers to reassess changes in the resource mix and demand, as technology, markets, and policies have the potential to rapidly change, against the burden of developing Long-Term Scenarios that can take a year or longer to produce. The Commission stated that this three-year frequency requirement would allow transmission providers to identify new transmission needs driven by changes in the resource mix and demand during the interim years of the transmission planning period, and update previously identified transmission needs, if warranted.⁸²¹

b. Comments

i. Support for Frequency of Long-Term Scenario Revisions

354. Many commenters support the Commission's proposal to require transmission providers in each transmission planning region to develop Long-Term Scenarios at least every three years, by reassessing whether the data inputs and factors incorporated in the previously developed Long-Term

Scenarios need to be updated and then revising the Long-Term Scenarios as needed to reflect updated data inputs and factors.⁸²² Arizona Commission and Interwest state that the proposed three-year process aligns with their existing regional transmission planning processes.⁸²³ Several commenters assert that this proposal allows for Long-Term Scenarios to remain accurate and account for material technological, political, environmental, and operational developments in the energy industry,⁸²⁴ with some commenters indicating that past experience demonstrates that the energy industry is rapidly changing.⁸²⁵ For example, PIOs share that MISO recently recognized assumptions in its MISO Transmission Expansion Plan did not capture the rate of change for the region's fuel mix.⁸²⁶

355. Pennsylvania Commission states that routine reviews could update information and data, justify modifications to transmission plans, and reduce the risk of uneconomic transmission investments.⁸²⁷ ELCON notes that the proposed three-year reassessment provides the opportunity to consult recent data and update the probability of each scenario, which will produce better outcomes in the

transmission planning process.⁸²⁸ Joint Consumer Advocates state that long-term transmission plans must be revisited regularly and with sufficient frequency to ensure that they remain accurate and account for material developments.⁸²⁹ AEE states that triennial updates will provide a suitable amount of time for stakeholders to complete comprehensive studies while also ensuring that scenarios do not become stale as advanced energy technology deployment scales more rapidly and policy changes disrupt existing assumptions.⁸³⁰

356. Louisiana Commission avers that the proposed three-year reassessment will prevent transmission providers from ignoring changes that might better reflect future assumptions.⁸³¹ PIOs state that a three-year update will also help address issues that could occur if a transmission provider is too aggressive or conservative when defining scenarios.⁸³² DC and MD Offices of People's Counsel recommend that plans be updated every three years.⁸³³

357. Entergy and Interwest state that a three-year reassessment cycle balances the need for recent data and the time and resources needed to develop the updates.⁸³⁴ LADWP states that a rolling near-term planning horizon provides the long-term transmission planning process with up-to-date information without being too frequent.⁸³⁵ New Jersey Commission notes that reassessments more frequent than every three years would be overly burdensome.⁸³⁶ Similarly, Nebraska Commission states that a frequency shorter than every three years would require almost constant updates from transmission providers, which would drive up costs, while a frequency longer than three to five years could risk the underlying information becoming stale between revisions.⁸³⁷

358. Certain TDUs suggest that the Commission address concerns that a three-year review period would put significant strain on transmission provider resources by clarifying that three-year assessments would review the key drivers and assumptions behind

⁸²² ACORE Initial Comments at 10; Advanced Energy Buyers Initial Comments at 7; AEE Initial Comments at 8–9; AEP Initial Comments at 5, 8, 13–14; Amazon Initial Comments at 3; Arizona Commission Initial Comments at 4; BP Initial Comments at 4; Breakthrough Energy Supplemental Comments at 1; CAISO Initial Comments at 21; California Water Initial Comments at 15; Clean Energy Associations Initial Comments at 10; Clean Energy Buyers Initial Comments at 13; DC and MD Offices of People's Counsel Initial Comments at 8; Entergy Initial Comments at 11; Idaho Power Initial Comments at 4; Interwest Initial Comments at 6–8; Joint Consumer Advocates Initial Comments at 8; Nevada Commission Initial Comments at 7; New England Offshore Wind Initial Comments at 2; New Jersey Commission Initial Comments at 11; NYISO Initial Comments at 18; Pacific Northwest State Agencies Initial Comments at 13–14; Pennsylvania Commission Initial Comments at 5; PG&E Initial Comments at 6; PIOs Initial Comments at 16; PJM Initial Comments at 5–6, 63; SEIA Initial Comments at 6; SPP Market Monitor Initial Comments at 6; US DOE Initial Comments at 11; Vermont State Entities Initial Comments at 5; WE ACT Initial Comments at 3.

⁸²¹ NOPR, 179 FERC ¶ 61,208 at P 99.

a transmission plan with updates as needed for material changes rather than a rerun of the full transmission planning process. In addition, Certain TDUs state that a three-year reassessment of initial transmission plans would result in more transparency and consideration of alternatives in the transmission planning process.⁸³⁸ In contrast, PJM requests that the Commission clarify that Long-Term Scenarios would be completely updated with new data, updated factors, and the best information available at least every three years, not merely partially reassessed. PJM also requests that the Commission clarify that scenario evaluations will not overlap, as re-runs are expensive, and a predictable three-year clock will make the process run smoothly.⁸³⁹

359. AEP requests that the Commission require all transmission planning regions to continuously follow the same, consistent three-year transmission planning cycles to align future efforts and ease burdens on transmission providers and developers operating in multiple transmission planning regions and to promote better coordination among regions concerning potential interregional transmission solutions.⁸⁴⁰

360. Southeast PIOs support the NOPR proposal to require transmission providers to reassess and revise Long-Term Scenarios every three years, arguing that it would synchronize with existing state processes and ensure that long-term regional transmission plans remain an up-to-date resource for state planning.⁸⁴¹ Similarly, Certain TDUs argue that a five-year transmission planning cycle is too long and that a three-year transmission planning cycle would be more likely to account for unforeseen changes, helping to prevent inefficient transmission development and balance planning for future needs with the need to quickly identify material changes to planning assumptions.⁸⁴²

ii. Concerns About Frequency of Long-Term Scenario Revisions

361. Some commenters urge the Commission to provide flexibility for transmission providers to determine the frequency at which they must develop Long-Term Scenarios by reassessing whether the data inputs and factors incorporated in their previously

developed Long-Term Scenarios need to be updated and then revising the Long-Term Scenarios as needed to reflect updated data inputs and factors.⁸⁴³ EEI requests that the Commission allow transmission providers in each transmission planning region to initiate a new Long-Term Scenario process in lieu of a refresh of old Long-Term Scenarios.⁸⁴⁴ California Commission and Omaha Public Power argue that requiring transmission providers to reassess and revise Long-Term Scenarios at least every three years will create a significant compliance burden without improving planning outcomes, such as forecast accuracy.⁸⁴⁵

362. MISO TOs argue that flexibility is warranted because MISO is already implementing Long-Term Regional Transmission Planning, as well as reassessing its data as needed.⁸⁴⁶ MISO states that the NOPR proposal is overly prescriptive, may not reflect stakeholder and regional needs, and could result in a compliance exercise without the prospect of transmission expansion.⁸⁴⁷ NESCOE and OMS suggest that the Commission require transmission providers to reassess Long-Term Scenarios at regular intervals but leave the timing of that reassessment to the transmission planning region.⁸⁴⁸ MISO also recommends that the Commission allow transmission providers to reuse Long-Term Scenarios as long as they update the relevant input data to reflect the latest available information.⁸⁴⁹

363. Duke asserts that the Commission should allow transmission planning regions to propose their own cycles to reassess and revise Long-Term Scenarios to meet the needs of the region, keep pace with markets and policies across the country, and align their processes with state integrated resource planning processes.⁸⁵⁰ Similarly, WIRES requests a variance to the proposed three-year scenario reassessment requirement because three years may be too short and could

potentially be disruptive or increase costs. WIRES further asks that the Commission clarify that transmission providers are not required to reassess previously approved transmission projects as part of their triennial review process.⁸⁵¹

364. Pacific Northwest State Agencies state that the Commission should set three years as a minimum and provide transmission planning regions with the flexibility to work with states to determine the appropriate schedule for developing Long-Term Scenarios.⁸⁵² Similarly, Vermont State Entities and Pennsylvania Commission argue that transmission planning regions should have the flexibility to conduct reassessments at intervals shorter than every three years.⁸⁵³

365. NYISO recommends that the final order should allow transmission planning regions to modify or add to their Long-Term Scenarios to account for changes that would significantly affect their analysis when they occur instead of waiting for the next transmission planning cycle. NYISO further requests that the Commission clarify that, if a transmission planning region requires more than three years to complete a given transmission planning cycle, it may extend the three-year time period. In addition, NYISO requests that the Commission permit transmission providers in each transmission planning region to commence the next Long-Term Regional Transmission Planning cycle using current information even if the prior transmission planning cycle is running in parallel. NYISO adds that the Commission should allow transmission planning regions to use their existing Long-Term Scenarios for the duration of a Long-Term Regional Transmission Planning cycle, even if it runs beyond three years, to avoid stopping and re-starting that cycle due to changes in circumstances.⁸⁵⁴

366. Some commenters raise concerns that the proposal to require development of Long-Term Scenarios at least every three years may create overlapping planning assessments and suggest ways to avoid that situation.⁸⁵⁵ ISO-NE states that the timeframe for Long-Term Regional Transmission Planning should account for all the elements of the process, such as implementing the process for selecting

transmission solutions, before the next long-term study begins. ISO–NE indicates that this will allow subsequent Long-Term Regional Transmission Planning studies to account for the outcomes of the preceding transmission planning cycle and avoid unnecessary study overlap between cycles.⁸⁵⁶

367. Eversource suggests that the Commission require completion of project selection before the development of the next set of Long-Term Scenarios, arguing that it would undermine the project selection process if the current three-year Long-Term Scenario cycle fails to include selected transmission facilities from the prior three-year cycle.⁸⁵⁷

368. Similarly, NESCOE is concerned that the three-year Long-Term Scenario cycle requirement is inflexible and could interfere with existing procedures in New England. NESCOE states that ISO–NE’s longer-term transmission planning process requires that a planning process be concluded before a new one can begin, and that a request for a longer-term transmission study may be submitted to ISO–NE no earlier than six months after the conclusion of the prior study.⁸⁵⁸

369. Some commenters argue that requiring transmission providers to reassess and revise their Long-Term Scenarios every three years may be too frequent and costly, asserting that between every three and five years may be more appropriate.⁸⁵⁹ ITC avers that a three-year transmission planning cycle for Long-Term Regional Transmission Planning would exceed the capabilities of the transmission providers administering the process.⁸⁶⁰ Likewise, NRECA asserts that developing multiple Long-Term Scenarios and updating them every three years will require significant time and resources, as well as substantial changes in transmission planning throughout the country. NRECA asserts that existing power supply and transmission planning models employ different assumptions that cannot be used to prepare 20-year Long-Term Scenarios, much less update them every three years.⁸⁶¹

iii. Support for Different Frequency of Long-Term Scenario Revisions

370. Western PIOs support mandating a two-year timeframe for revision, as three years may be too long and therefore may miss important updated data inputs.⁸⁶²

371. Shell argues that the Commission should require transmission providers to reassess and revise their Long-Term Scenarios every five years, asserting that the proposal to use three years could create too much uncertainty and delay the development of renewable generation being developed to comply with state climate objectives and resource adequacy requirements in forward-looking capacity markets.⁸⁶³ Indicated PJM TOs argue that three years may be insufficient to perform relevant studies and recommend that the Commission provide transmission providers with the flexibility to adopt four- or five-year transmission planning cycles.⁸⁶⁴

372. Exelon argues that a three-year transmission planning cycle is too short, as it is unlikely that transmission needs will surface within three years, and that conducting a study so soon could create uncertainty that recently selected transmission projects will be revisited. Exelon instead recommends that the final order adopt a five-year transmission planning cycle requirement with a provision that requires transmission providers to initiate a new cycle sooner, with good reason, to better align with the time needed to permit and construct new transmission infrastructure.⁸⁶⁵

373. Similarly, PPL argues that a five-year transmission planning cycle will allow sufficient time for one transmission planning cycle to be completed before the subsequent cycle commences.⁸⁶⁶ Pine Gate states that a five-year transmission planning cycle is warranted given the size and complexity of transmission planning regions and the time needed to receive and incorporate stakeholder feedback and to achieve consensus on cost allocation. Pine Gate further notes that a five-year transmission planning cycle would more closely align the results of Long-Term Regional Transmission Planning with the time horizons for reliability planning and other transmission planning processes.⁸⁶⁷

374. SPP argues in favor of the update procedures in its current transmission

planning processes rather than the three-year schedule for updating Long-Term Scenarios proposed in the NOPR. SPP states that it performs a 20-year assessment that incorporates Long-Term Scenarios at least once every five years and that, on an annual basis, SPP assesses data inputs and factors incorporated into the assessment.⁸⁶⁸

iv. Miscellaneous Comments

375. Several commenters state that the Commission should regularly review transmission planning processes and assumptions to account for new developments.⁸⁶⁹ Pattern Energy states that the best way to make 20-year transmission plans useful is for their outputs to be fed into near-term (*i.e.*, five-to-seven-year horizon) transmission planning activities.⁸⁷⁰

376. ELCON recommends that the Commission hold a technical conference after the first three-year reassessment period for Long-Term Scenarios to allow transmission providers to offer their experiences with and best practices for Long-Term Regional Transmission Planning.⁸⁷¹

c. Commission Determination

377. We modify the NOPR proposal to require transmission providers in each transmission planning region to reassess and revise the Long-Term Scenarios that they use in Long-Term Regional Transmission Planning at least once every five years. In implementing this requirement, transmission providers in each transmission planning region must reassess whether the data inputs and factors incorporated in previously developed Long-Term Scenarios need to be updated and then revise those Long-Term Scenarios, as needed, to reflect updated data inputs and factors. At the outset of a Long-Term Regional Transmission Planning cycle, transmission providers may develop the new Long-Term Scenarios either by crafting entirely new Long-Term Scenarios, or by updating the data inputs and factors of previously developed Long-Term Scenarios.

378. To assist transmission providers in implementing the requirement to reassess and revise Long-Term Scenarios used in Long-Term Regional Transmission Planning at least once every five years, we clarify that the process, which begins with the development of Long-Term Scenarios using best available data inputs, and

proceeds to identifying Long-Term Transmission Needs, measuring the benefits of Long-Term Regional Transmission Facilities to address those needs, and evaluating and deciding whether to select Long-Term Regional Transmission Facilities (collectively, the Long-Term Regional Transmission Planning cycle),⁸⁷² must conclude at a date that is no later than five years after the date that it began.

379. While we find that the record supports a five-year interval before new Long-Term Scenarios must be developed, we also conclude that transmission providers should not need the full five-year period to reach the point in Long-Term Regional Transmission Planning at which they decide whether to select Long-Term Regional Transmission Facilities that they have evaluated. Accordingly, we require transmission providers to complete the steps of the Long-Term Regional Transmission Planning cycle and determine whether to select Long-Term Regional Transmission Facilities no later than three years from the date when the Long-Term Regional Transmission Planning cycle began.⁸⁷³ Specifically, we find the record sufficient time for transmission providers to develop Long-Term Scenarios, identify Long-Term Transmission Needs, measure the benefits of Long-Term Regional Transmission Facilities to address those needs, and evaluate and decide whether to select Long-Term Regional Transmission Facilities.⁸⁷⁴ At the same

time, we are persuaded by commenters' concerns that requiring the Long-Term Regional Transmission Planning cycle to repeat at three-year intervals could be administratively burdensome, and that the benefit of updating Long-Term Scenarios every three years may not outweigh those additional burdens.⁸⁷⁵ We therefore find that requiring selection decisions to occur within three years of commencing a Long-Term Regional Transmission Planning cycle, while allowing as long as five years between the commencement of each planning cycle, strikes an appropriate balance by ensuring timely identification, evaluation, and selection of more efficient or cost-effective Long-Term Regional Transmission Facilities, while balancing the administrative burden associated with updating the Long-Term Scenarios that form the basis for Long-Term Regional Transmission Planning during each planning cycle.⁸⁷⁶

380. We find that requiring transmission providers to reassess and revise Long-Term Scenarios used in Long-Term Regional Transmission Planning at least once every five years is necessary to ensure that the Long-Term Scenarios accurately reflect factors that may change over the five-year time span, such as changes in technology, load forecasts, or Federal, federally-recognized Tribal, state, or local laws. Furthermore, regular scenario reassessment and revision may also address some of the uncertainty associated with Long-Term Regional Transmission Planning over a 20-year transmission planning horizon that some commenters assert may result in under-building or over-building

transmission facilities.⁸⁷⁷ As discussed below in the Specificity of Data Inputs section, nothing in this final order prohibits transmission providers from updating the inputs used to inform Long-Term Scenarios during a Long-Term Regional Transmission Planning cycle.

381. As discussed in the Evaluation and Selection of Long-Term Regional Transmission Facilities section of this final order, transmission providers must designate a point in the evaluation process at which they will make a decision to either select or not select the relevant Long-Term Regional Transmission Facility (or portfolio of such Facilities). Further, we clarify that transmission providers must conclude a Long-Term Regional Transmission Planning cycle before developing Long-Term Scenarios at the beginning of the next Long-Term Regional Transmission Planning cycle. Given that, as we state directly above, nothing in this final order prevents transmission providers from evaluating and selecting additional Long-Term Regional Transmission Facilities after year three of the Long-Term Regional Transmission Planning cycle and before the next five-year Long-Term Regional Transmission Planning cycle begins, we further find that transmission providers must designate the point in time or action that concludes a Long-Term Regional Transmission Planning cycle. Such designation will ensure transparency regarding whether the transmission providers are engaging in the evaluation and selection of additional Long-Term Regional Transmission Facilities after year three of the Long-Term Regional Transmission Planning cycle.

382. Some commenters express concern that the proposal to reassess Long-Term Scenarios in concurrent Long-Term Regional Transmission Planning cycles would create uncertainty as to which cycle produced the controlling outcome and would burden stakeholders (e.g., requiring them to provide input on the development of Long-Term Scenarios for the next Long-Term Regional Transmission Planning cycle while also requiring them to provide input on Long-Term Regional Transmission Facilities being considered for selection from the previous Long-Term Regional Transmission Planning cycle).⁸⁷⁸ By providing for a period of up to two years between the date by which transmission

⁸⁷² The Long-Term Regional Transmission Planning cycle encompasses all components of Long-Term Regional Transmission Planning, including each of these foundational steps.

⁸⁷³ To be clear, nothing in this final order prevents transmission providers from evaluating and selecting *additional* Long-Term Regional Transmission Facilities after year three of the Long-Term Regional Transmission Planning cycle and before the next five-year Long-Term Regional Transmission Planning cycle begins. However, if Long-Term Regional Transmission Facilities are selected at year three of the Long-Term Regional Transmission Planning cycle, those same Long-Term Regional Transmission Facilities cannot be de-selected during the remainder of the current five-year planning cycle.

⁸⁷⁵ See Ameren Initial Comments at 12–13; American Municipal Power Initial Comments at 33; California Commission Initial Comments at 16; Duke Initial Comments at 11; ISO–NE Initial Comments at 24; MISO Initial Comments at 28–29; MISO TOs Initial Comments at 17; NARUC Initial Comments at 6–7; NESCOE Initial Comments at 25–26; OMS Initial Comments at 4–5; Pacific Northwest State Agencies Initial Comments at 15; Vermont State Entities Initial Comments at 5; WIRES Initial Comments at 7.

⁸⁷⁶ Accordingly, we decline NYISO's request to clarify that the transmission provider may extend the transmission planning cycle. As explained, we find that three years provides sufficient time to complete the actions necessary to make selection decisions.

⁸⁷⁷ Industrial Customers Initial Comments at 15–16, 19–21; NRECA Initial Comments at 18–19, 28; Vistra Initial Comments at 7.

⁸⁷⁸ Eversource Initial Comments at 15; ISO–NE Initial Comments at 24; NESCOE Initial Comments at 26.

providers are required to make a decision to select or not select Long-Term Regional Transmission Facilities and the date by which the next Long-Term Regional Transmission Planning cycle must commence, and by clarifying that transmission providers must conclude one Long-Term Regional Transmission Planning cycle before another begins, this final order will appropriately minimize confusion regarding overlap between planning assessments. Specifically, this clarification will allow transmission providers to use in subsequent Long-Term Regional Transmission Planning cycles updated base or reference cases that include all Long-Term Regional Transmission Facilities that were selected in a previous Long-Term Regional Transmission Planning cycle, including those not yet in service. We find that including the selected Long-Term Regional Transmission Facilities in subsequent Long-Term Regional Transmission Planning cycles will improve the accuracy of Long-Term Regional Transmission Planning.

383. In response to WIRES's request,⁸⁷⁹ we clarify that transmission providers need not routinely reevaluate selected Long-Term Regional Transmission Facilities. However, we note that, as discussed further in the Evaluation and Selection of Long-Term Regional Transmission Facilities section below, we require transmission providers to reevaluate previously selected Long-Term Regional Transmission Facilities in certain specified circumstances.

384. Given that we are requiring transmission providers in each transmission planning region to reassess and revise Long-Term Scenarios used in Long-Term Regional Transmission Planning at least once every five years, thus establishing the maximum length of the Long-Term Regional Transmission Planning cycle, we affirm that to the extent that transmission providers believe that a shorter Long-Term Regional Transmission Planning cycle is appropriate for their transmission planning region and circumstances, they may propose on compliance to conduct Long-Term Regional Transmission Planning more frequently than every five years.

385. We find AEP's request to require all transmission planning regions to follow the same-length transmission planning cycles is beyond the scope of this proceeding.⁸⁸⁰ In the NOPR, we proposed frequency requirements

related to the Long-Term Regional Transmission Planning cycles but did not propose a requirement for transmission providers to align their regional transmission planning cycles with those of the transmission providers in neighboring transmission planning regions.

386. While we do not establish a technical conference after the first Long-Term Regional Transmission Planning cycle, as ELCON requests,⁸⁸¹ the Commission has discretion to conduct additional proceedings at a future date if it finds they are warranted.

3. Categories of Factors

a. Requirement To Incorporate Categories of Factors

i. NOPR Proposal

387. In the NOPR, the Commission proposed to require transmission providers to incorporate specific categories of factors in the development of Long-Term Scenarios as part of Long-Term Regional Transmission Planning.⁸⁸² Specifically, the Commission proposed to require transmission providers to incorporate, at a minimum, the following categories of factors in the development of Long-Term Scenarios: (1) Federal, state, and local laws and regulations that affect the future resource mix and demand;⁸⁸³ (2) Federal, state, and local laws and regulations on decarbonization and electrification; (3) state-approved utility integrated resource plans and expected supply obligations for load-serving entities; (4) trends in technology and fuel costs within and outside of the electricity supply industry, including shifts toward electrification of buildings and transportation; (5) resource retirements; (6) generator interconnection requests and withdrawals; and (7) utility and corporate commitments and Federal, state, and local goals⁸⁸⁴ that affect the future resource mix and demand.⁸⁸⁵

388. The Commission preliminarily found that incorporating, at a minimum, these categories of factors in the development of Long-Term Scenarios is appropriate because these categories of factors affect the future resource mix and demand, and their incorporation in

Long-Term Scenarios is therefore essential to identifying transmission needs driven by changes in the resource mix and demand through Long-Term Regional Transmission Planning.⁸⁸⁶ To the extent that transmission providers in a transmission planning region would like to incorporate additional categories of factors in the development of Long-Term Scenarios, the Commission proposed to require that they demonstrate on compliance with any final order that the incorporation of more than the minimum categories is consistent with or superior to any final order in this proceeding.⁸⁸⁷

389. Also, as discussed in the Coordination of Regional Transmission Planning and Generator Interconnection Processes section of the NOPR,⁸⁸⁸ the Commission proposed to require that transmission providers consider in their Long-Term Regional Transmission Planning regional transmission facilities that address interconnection-related transmission needs that the transmission provider has identified multiple times in the generator interconnection process but that have never been constructed due to the withdrawal of the underlying interconnection request(s). The Commission proposed to require that transmission providers incorporate the specific interconnection-related needs identified through that proposed reform, in addition to one or more factors that more generally characterize generator interconnection withdrawals, as a factor in the generator interconnection requests and withdrawals category of factors in their development of Long-Term Scenarios.⁸⁸⁹

390. The Commission explained that incorporation of the categories of factors set forth above in developing Long-Term Scenarios would help facilitate the identification of transmission needs driven by changes in the resource mix and demand, which the Commission preliminarily found was necessary to ensure just and reasonable and not unduly discriminatory or preferential Commission-jurisdictional rates. The Commission explained that absent a requirement to incorporate these categories of factors in the development of Long-Term Scenarios, transmission providers may not incorporate known inputs that likely will affect the future resource mix and demand. Additionally, the Commission explained that transmission providers may not adequately identify transmission needs

⁸⁸¹ ELCON Initial Comments at 11.

driven by changes in the resource mix and demand and evaluate the potential benefits of regional transmission facilities that may more efficiently or cost-effectively meet such needs. The Commission stated that, as an additional benefit, this requirement would provide clarity to transmission providers and stakeholders regarding which factors must be considered in scenario development.⁸⁹⁰

ii. Comments

(a) Requirement To Incorporate Categories of Factors

391. A number of commenters support the proposal to require transmission providers to incorporate in their development of Long-Term Scenarios the seven specific categories of factors identified in the NOPR.⁸⁹¹ Georgia Commission asserts that these categories of factors adequately capture the factors expected to drive changes in the resource mix and demand,⁸⁹² and APPA states that they reflect potential drivers of the need for new transmission.⁸⁹³

392. AEE asks that the Commission clarify that consideration of each factor is mandatory, arguing that failing to take into account any of the seven listed categories of factors would risk under-investment in regional transmission facilities, which could result in unjust and unreasonable rates.⁸⁹⁴ Evergreen Action and Pine Gate assert that the Commission should require that the seven factors are “incorporated” instead of “considered” in order to make clear that incorporation is not optional.⁸⁹⁵ Otherwise, Pine Gate states, transmission providers may ignore certain categories relevant and critical to

identifying needed transmission infrastructure.⁸⁹⁶

393. DC and MD Offices of People’s Counsel also urge the Commission to require that all seven factor categories listed in the NOPR be included in Long-Term Scenarios.⁸⁹⁷ DC and MD Offices of People’s Counsel and ACEG state that the flexibility proposed in the NOPR could give transmission providers the option of not considering the last four factor categories.⁸⁹⁸ SEIA recommends that the Commission establish guidelines on the information used to determine factors in the last four factor categories to ensure some level of certainty in how they are reflected in Long-Term Scenarios.⁸⁹⁹

394. Clean Energy Buyers support the NOPR proposal, arguing that requiring uniform categories of factors across transmission planning regions could promote efficiency and interregional coordination.⁹⁰⁰ Southeast PIOs argue that broader consideration of resource trends and other transmission drivers through comprehensive scenarios will inform the decision-making of state authorities tasked with approving transmission facilities.⁹⁰¹ Indicated US Senators and Representatives express general support for proactive transmission planning that considers a broad range of factors.⁹⁰²

395. MISO TOs, MISO, and OMS state that existing MISO processes already identify and consider the proposed categories of factors to develop scenarios for transmission planning.⁹⁰³ MISO TOs further claim that there is no need to require that MISO consider additional factors.⁹⁰⁴ OMS supports the NOPR’s proposed requirements as to the minimum categories of factors and asserts that the categories of factors proposed in the NOPR are all included in MISO’s existing transmission planning processes.⁹⁰⁵

396. Some commenters support the NOPR proposal because they note that it provides transmission providers with flexibility as to the specific factors they incorporate into their development of

Long-Term Scenarios, as well as how they incorporate those factors.⁹⁰⁶

397. A few commenters support the NOPR proposal to allow transmission providers to incorporate additional categories of factors if they can demonstrate that doing so is consistent with or superior to the final order.⁹⁰⁷ Specifically, AEE states that the Commission should clarify that transmission providers can propose to consider other categories of factors.⁹⁰⁸

398. Pattern Energy states that the Commission should provide examples of how the categories of factors and their associated sensitivities may be modeled to ensure that each Long-Term Scenario is useful for Long-Term Regional Transmission Planning. For example, Pattern Energy asks whether the different scenarios alter the various assumptions for each (or some) of the factors. Alternatively, Pattern Energy asks whether the assumptions remained fixed across scenarios and different scenarios are designed to evaluate different transmission solutions.⁹⁰⁹

(b) Requests for Flexibility

399. Some commenters argue that the Commission should give transmission providers more flexibility to determine the appropriate categories of factors or individual factors to include in their development of Long-Term Scenarios.⁹¹⁰ NESCOE contends that providing flexibility would be consistent with the Commission’s approach in Order No. 1000, where it did not require the identification of transmission needs driven by any particular Public Policy Requirements.⁹¹¹ PG&E argues that the Commission should allow transmission providers to experiment with how they define scenarios and factors to best reflect the policy and planning environments of their transmission

planning regions.⁹¹² EEI notes that not all of the factors listed in the NOPR may be relevant for all transmission planning regions during every long-term assessment and explains that private sector, Federal, state, and local public policy goals may diverge or conflict, especially in multi-state regions.⁹¹³

400. ISO-NE requests that the Commission provide transmission providers with flexibility in the consideration of factors for inclusion in each scenario, noting that the factors may vary from study to study depending on the study objectives. Specifically, ISO-NE argues that the Commission should not require that each Long-Term Scenario account for and consistently reflect the first three categories of factors: Federal, state, and local laws and regulations on the future resource mix, decarbonization and electrification, and state-approved integrated resource plans. ISO-NE emphasizes that the Commission should not require local laws to be consistently reflected in and accounted for in Long-Term Scenarios. ISO-NE argues that, in addition to being too prescriptive, such a requirement would introduce unnecessary and substantial administrative burdens and compliance risks with the possibility for inadvertent exclusion of a required law, regulation, or integrated resource plan. Moreover, ISO-NE contends, it would unnecessarily prevent testing of variations with these categories of factors, limiting the usefulness of scenario analysis.⁹¹⁴

401. Idaho Commission and Idaho Power argue that the NOPR proposal is too prescriptive.⁹¹⁵ PJM advises the Commission not to include too many inflexible details in the implementation of the factors.⁹¹⁶ However, PJM generally supports the NOPR proposal to create seven factors that should guide the development of scenarios with some additions and revisions.⁹¹⁷

402. NYISO states that the Commission should not prescribe specific categories of factors that transmission providers must use and instead should allow each transmission planning region, in coordination with state entities and stakeholders, to determine to what extent and how the seven categories of factors should be applied.⁹¹⁸ SEIA disagrees, asserting that each proposed category of factors is broad enough to reflect regional

differences within the category, but suggests that the Commission provide flexibility on implementation details. SEIA explains that the categories of factors do not set forth specific requirements on how much weight each factor should have in each Long-Term Scenario, what generation mix will result from the mix of factors, or what models to use. SEIA states that the Commission should allow transmission providers to include these implementation details in their manuals.⁹¹⁹

403. Some commenters express support for some or all of the proposed categories of factors but request that the Commission provide transmission providers with flexibility in how they incorporate the factors into their development of Long-Term Scenarios.⁹²⁰ For example, TANC requests that the Commission allow transmission planning regions, in consultation with stakeholders, to exclude some of the proposed factors (*i.e.*, regulatory and corporate goals or technology trends) from their development of Long-Term Scenarios.⁹²¹ TANC also advocates that the Commission should allow transmission planning regions to determine the manner in which other factors, namely trends, resource requirements, generator interconnection requests, and withdrawals, are incorporated in regional transmission planning studies. Although SPP states that most of the categories of factors are appropriate, it contends that requiring the listed factors to be incorporated, rather than considered, in development of Long-Term Scenarios could overburden the process.⁹²²

404. NEPOOL states that the categories of factors identified in the NOPR seem generic enough to allow implementation despite regional differences or changes in circumstances over time but contends that the Commission should carefully consider different market structures and potential changes to state policies to ensure that any requirement accommodates regional differences.⁹²³ Pine Gate further requests clarification as to the degree of flexibility that the Commission will grant to transmission providers in how

they incorporate each factor into Long-Term Scenarios.⁹²⁴

(c) Concerns With the Requirement To Incorporate Categories of Factors

405. Large Public Power argues that the NOPR proposal ignores the Commission's fundamental responsibility to facilitate planning to meet the needs of load-serving entities, as well as Congress' recognition that load-serving entities themselves have a fundamental obligation to build transmission to meet their load.⁹²⁵ Large Public Power asserts that the NOPR proposal to establish factors that look more broadly than the Commission's core obligations under the FPA threatens to undermine the needs of load-serving entities and their customers.⁹²⁶ Further, Large Public Power contends that the Commission has no authority to direct the development of transmission facilities.⁹²⁷ Similarly, some commenters voice concerns with the use of categories of factors to direct transmission investment.⁹²⁸ Louisiana Commission states that the incorporation of speculative factors would result in a large-scale transmission build-out to accommodate the policy preference of some, at the cost of all.⁹²⁹

406. Undersigned States claim that the proposed requirement that each Long-Term Scenario "incorporate and be consistent" with certain factors does not address potentially irresolvable conflicts over how certain factors affect the future resource mix and demand.⁹³⁰ PPL criticizes the NOPR for failing to explain how to translate the proposed factors into usable assumptions that can feed into transmission planning models, leading to increased uncertainty for transmission developers and greater difficulty in financing transmission projects or gaining siting approval.⁹³¹

(d) Alternative Frameworks

407. Other commenters propose alternative frameworks for incorporating factors in the development of Long-Term Scenarios. PPL believes that the Commission's proposed categories of factors are largely overlapping and can

be summarized and replaced by a single factor: reasonable expectations regarding the future resource mix and demand.⁹³² ENGIE suggests that, because the Commission's proposed factors may be too numerous for transmission providers to model, certain factors (*i.e.*, laws, regulations, and announced retirements) should be fixed while others are varied or studied as sensitivities (*i.e.*, costs, demand, and resource development trends).⁹³³ PIOs state that the Commission must set minimum requirements for some factors, asserting that there is broad support for minimum requirements.⁹³⁴

408. GridLab contends that the Commission's proposal to require that transmission providers incorporate specific categories of factors in the development of Long-Term Scenarios cannot be enforced and that such broad factors will not change investment outcomes. GridLab states that the proposed list of factors are a helpful minimum standard and recommends that the Commission focus on whether transmission providers have meaningfully incorporated them into Long-Term Regional Transmission Planning.⁹³⁵ Further, GridLab avers that local laws and regulations and corporate commitments are difficult to incorporate into Long-Term Regional Transmission Planning in a bottom-up, meaningful way.⁹³⁶ As an alternative, GridLab suggests that transmission providers could use aggregate assumptions and indicative scenario design and allow state and local agencies, as well as other stakeholders, to provide inputs into scenario development, and then evaluate whether the resulting scenarios are consistent with state, local, and corporate commitments.⁹³⁷

iii. Commission Determination

409. We adopt the NOPR proposal to require transmission providers in each transmission planning region to incorporate the seven specific categories of factors proposed in the NOPR, as modified in this final order, in the development of Long-Term Scenarios. Specifically, as discussed in more detail below, transmission providers must incorporate in the development of Long-Term Scenarios: (1) Federal, federally-recognized Tribal,⁹³⁸ state, and local

laws and regulations affecting the resource mix and demand; (2) Federal, federally-recognized Tribal, state, and local laws and regulations on decarbonization and electrification; (3) state-approved integrated resource plans and expected supply obligations for load-serving entities; (4) trends in fuel costs and in the cost, performance, and availability of generation, electric storage resources, and building and transportation electrification technologies; (5) resource retirements; (6) generator interconnection requests and withdrawals; and (7) utility and corporate commitments and Federal, federally-recognized Tribal, state, and local policy goals that affect Long-Term Transmission Needs.⁹³⁹ We address each of these categories of factors in the Specific Categories of Factors determination section below.

410. We find that existing regional transmission planning requirements fail to ensure that transmission providers adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs.⁹⁴⁰ Many commenters in this proceeding, even some that may oppose the prescriptiveness of the requirement or otherwise request more flexibility in how transmission providers account for factors affecting Long-Term Transmission Needs,⁹⁴¹ generally agree that the categories of factors outlined in the NOPR account for many of the known determinants of such needs. We find that incorporating the seven categories of factors in the development of Long-Term Scenarios is necessary because these categories of factors are essential to identifying Long-Term Transmission Needs. Further, we find that requiring transmission providers to incorporate the enumerated categories of factors in Long-Term Regional Transmission Planning will help to ensure that transmission providers are accounting for known and identifiable drivers of Long-Term Transmission Needs.

411. We are not persuaded by commenters' arguments that certain of the categories of factors may not be relevant in certain transmission planning regions and therefore that transmission providers should not be required to incorporate those categories

of factors in the development of Long-Term Scenarios.⁹⁴² We decline to allow transmission providers to exclude some of the proposed categories of factors from being incorporated in the development of Long-Term Scenarios, as certain commenters request, because we conclude that each category of factors includes important determinants of Long-Term Transmission Needs. We are concerned that not requiring incorporation of all of the proposed categories of factors in Long-Term Scenarios would increase the likelihood that transmission providers will continue to underestimate—or omit entirely—certain known determinants of Long-Term Transmission Needs in their regional transmission planning processes.

412. In response to AEE's request, we affirm that the seven categories of factors adopted in this final order are the minimum set of known determinants of Long-Term Transmission Needs that transmission providers must incorporate into the development of their Long-Term Scenarios, and we decline to adopt the NOPR proposal to require transmission providers to demonstrate on compliance that the incorporation of additional categories of factors is consistent with or superior to any final order in this proceeding.⁹⁴³ Transmission providers may be aware of additional categories of factors beyond those adopted in this final order that drive Long-Term Transmission Needs and, thus, should be incorporated into the development of Long-Term Scenarios. While transmission providers may incorporate additional categories of factors into the development of Long-Term Scenarios, we require in this final order that each Long-Term Scenario remains plausible, as discussed further below.

413. We clarify that incorporating each category of factors into the development of Long-Term Scenarios means more than merely considering each category of factors in the development of Long-Term Scenarios.⁹⁴⁴ Incorporating a category of factors in the development of Long-Term Scenarios means that transmission providers must use factors in the category, for each factor individually or collectively, to determine the assumptions that will be used in the development of Long-Term Scenarios. Incorporating a category of factors into the development of Long-Term

⁹⁴² *See, e.g.*, EEI Initial Comments at 12–13; SPP Initial Comments at 7–8.

⁹⁴³ AEE Initial Comments at 10.

⁹⁴⁴ Evergreen Action Initial Comments at 4; Pine Gate Initial Comments at 22–23.

Scenarios does not require exacting precision; transmission providers may generalize how all of the discrete factors in a category of factors will, in the aggregate, affect the development of Long-Term Scenarios.⁹⁴⁵ However, we expect that similar factors (or groups of factors) affecting a single assumption used in the development of Long-Term Scenarios will have an additive effect on that assumption.⁹⁴⁶ We also expect that incorporating a category of factors into the development of Long-Term Scenarios will result in scenarios that differ from scenarios lacking that specific category of factors; that is, the incorporation of a category of factors should have a measurable impact on the Long-Term Scenario, compared to that same Long-Term Scenario, all else equal, if it had not incorporated that category of factors.

414. We believe that the best-available data requirement, which we adopt and discuss further below, should mitigate concerns that transmission providers may undermine Long-Term Regional Transmission Planning by not incorporating categories of factors in a meaningful way.⁹⁴⁷ The best-available data requirement will ensure that the data inputs that transmission providers use to incorporate categories of factors are timely, developed using best practices, and diverse and expert perspectives. We also clarify that, as a consequence of the requirement that all Long-Term Scenarios must be plausible, as well as the requirement that all Long-Term Scenarios must be diverse, both of which we adopt and discuss below, transmission providers must incorporate the categories of factors in the development of Long-Term Scenarios in a way that results in plausible and diverse Long-Term Scenarios.

415. As to the factors within each category that transmission providers must account for when they incorporate each category of factors in the development of Long-Term Scenarios, we require transmission providers to

account for the factors that they have determined are likely to affect Long-Term Transmission Needs. As explained above, these Long-Term Transmission Needs include, but are not limited to, evolving reliability concerns and changes in the resource mix, and changes in demand. For each factor (or group of similar factors) within each category of factors that transmission providers identify, in coordination with stakeholders through an open and transparent process as described below, transmission providers must make a determination as to how that factor (or group of similar factors) is likely to affect Long-Term Transmission Needs. Transmission providers must then account for the factors that they have determined are likely to affect Long-Term Transmission Needs in the development of the Long-Term Scenarios used in Long-Term Regional Transmission Planning. We clarify, however, that transmission providers in a transmission planning region need not account for a factor, stakeholder-identified or otherwise, if they determine that factor is unlikely to affect Long-Term Transmission Needs.

416. We also clarify that a category of factors (*e.g.*, Factor Category Two: Federal, federally-recognized Tribal, state, and local laws and regulations on decarbonization and electrification) differs from a specific factor (*e.g.*, a specific state law with a decarbonization requirement). We make this distinction because some commenters use only the word “factors” when describing the categories of factors proposed in the NOPR.⁹⁴⁸

417. We disagree with commenters that the categories of factors requirements are too prescriptive,⁹⁴⁹ and we believe that the framework adopted in this final order requiring transmission providers to incorporate categories of factors into the development of Long-Term Scenarios strikes the right balance between prescriptive requirements and flexibility. Transmission providers have discretion to determine whether specific factors must be accounted for within each category (*i.e.*, if the specific factor will likely affect Long-Term Transmission Needs), how to account for specific factors in the development of Long-Term Scenarios (*e.g.*, the method and data used to forecast resource retirements), and how to vary the treatment of each category of factors across Long-Term Scenarios (*e.g.*,

assume all forecasted resource retirements materialize in some but not all Long-Term Scenarios), so long as transmission providers assume that the laws, regulations, state-approved integrated resource plans, and expected supply obligations for load-serving entities identified in the first three categories of factors—that transmission providers have determined are likely to affect Long-Term Transmission Needs—are fully met (as discussed below). We believe that each proposed category of factors is broad enough to allow the transmission providers in each transmission planning region to reflect regional differences within the category, as noted by SEIA and NEPOOL.⁹⁵⁰ In response to PG&E’s request that we allow flexibility for transmission providers to use Long-Term Scenarios that best reflect the individual policy and planning environments in their specific transmission planning regions, and to Pattern Energy’s questions about how categories of factors may be modeled,⁹⁵¹ we clarify that transmission providers have the flexibility to develop different Long-Term Scenarios specific to their transmission planning region and develop using assumptions based on the categories of factors.

418. In response to NESCOE, we decline to give transmission providers the flexibility to choose which of the proposed categories of factors to incorporate into Long-Term Scenarios, which NESCOE states would be consistent with the flexibility that the Commission provided to transmission providers in Order No. 1000, where it did “not . . . require the identification of any particular transmission need driven by any particular Public Policy Requirements.”⁹⁵² As noted in The Overall Need for Reform section, there are deficiencies in the Commission’s existing regional transmission planning requirements, including that they fail to ensure that transmission providers adequately account on a forward-looking basis for known determinants of Long-Term Transmission Needs. We are concerned that, if transmission providers have flexibility to choose which of the proposed categories of factors to incorporate into the development of Long-Term Scenarios, they will continue to underestimate—or omit entirely—certain known determinants of Long-Term Transmission Needs in their regional

⁹⁴⁵ For example, transmission providers could aggregate the effect of corporate goals by leveraging publicly available surveys of corporations’ clean energy and electrification goals and then using those surveys to inform the assumptions used to develop Long-Term Scenarios (*e.g.*, 10% more clean energy resources and 10% higher load growth for a Long-Term Scenario that assumes full achievement of those goals than in a Long-Term Scenario that does not consider such goals).

⁹⁴⁶ For example, two independent factors that increase the likelihood of future electric storage resource development (*e.g.*, (1) a state law requiring the deployment of at least 5 gigawatts of electric storage resources by 2030 and (2) a Federal investment tax credit for the deployment of electric storage resources) would have a combined effect that exceeds the effect of either factor alone.

transmission planning processes. Additionally, we note that transmission needs are distinct from categories of factors: as explained above, categories of factors, and specific factors therein, form the basis for assumptions that will be used in the development of Long-Term Scenarios that transmission providers will then use to identify Long-Term Transmission Needs.

419. We also disagree with arguments that we are directing the development of specific transmission facilities.⁹⁵³ As an initial matter, transmission providers retain discretion to determine how specific factors will affect Long-Term Transmission Needs. Moreover, the categories of factors requirements adopted in this final order do not create new transmission needs that did not previously exist, but rather, they improve regional transmission planning processes by requiring transmission providers to identify Long-Term Transmission Needs across a plausible and diverse range of future scenarios and to identify, evaluate, and select Long-Term Regional Transmission Facilities to address those needs. If transmission providers do not account in Long-Term Regional Transmission Planning for known determinants of Long-Term Transmission Needs, then those needs would still exist and would likely be resolved, if at all, in a relatively inefficient or less cost-effective manner (*e.g.*, in a piecemeal fashion through local transmission planning processes and/or generator interconnection processes). We are not requiring that transmission providers select any particular Long-Term Regional Transmission Facility and therefore are not directing the development of any particular transmission facilities. Finally, we clarify that while the requirement for transmission providers to incorporate the seven categories of factors adopted in this final order into the development of Long-Term Scenarios is intended to ensure that Long-Term Regional Transmission Facilities are identified for selection to more efficiently or cost-effectively address Long-Term Transmission Needs, we do not believe that concerns over whether a transmission provider appropriately implemented this requirement represent an appropriate basis on which to challenge the cost allocation for one or more individual Long-Term Regional Transmission Facilities. Rather, whether

the allocation of costs is just and reasonable and not unduly discriminatory is governed by the requirement that costs be roughly commensurate with benefits, as discussed in the Regional Transmission Cost Allocation section below.

420. We disagree with Large Public Power's argument that we are ignoring the Commission's fundamental responsibility to facilitate planning to meet the needs of load-serving entities.⁹⁵⁴ As described below, we are requiring all Long-Term Scenarios to be consistent with and fully account for factors in Factor Category Three, which includes state-approved integrated resource plans and the expected supply obligations of load-serving entities. Therefore, transmission providers are required to plan to meet the needs of load-serving entities.

421. We decline to adopt more specific minimum requirements than those described herein for incorporating categories of factors in the development of Long-Term Scenarios, as requested by some commenters.⁹⁵⁵ We believe that the requirements adopted herein, coupled with the other Long-Term Scenarios requirements, including the plausible and diverse and best available data requirements, are sufficiently detailed to address the need for reform without limiting regional flexibility.

b. Specific Categories of Factors

i. NOPR Proposal

422. In the NOPR, the Commission proposed to require transmission providers to incorporate, at a minimum, the following categories of factors in the development of Long-Term Scenarios: (1) Federal, state, and local laws and regulations that affect the future resource mix and demand;⁹⁵⁶ (2) Federal, state, and local laws and regulations on decarbonization and electrification; (3) state-approved utility integrated resource plans and expected supply obligations for load-serving entities; (4) trends in technology and fuel costs within and outside of the electricity supply industry, including shifts toward electrification of buildings and transportation; (5) resource retirements; (6) generator

interconnection requests and withdrawals; and (7) utility and corporate commitments and Federal, state, and local goals that affect the future resource mix and demand.⁹⁵⁷

(a) Federal, Federally-Recognized Tribal, State, and Local Laws and Regulations That Affect the Future Resource Mix and Demand (Factor Category One)

(1) Comments

423. Many commenters support the proposed requirement that each Long-Term Scenario incorporate and be consistent with the Federal, state, and local laws and regulations that affect the future resource mix and demand.⁹⁵⁸ AEE, Clean Energy States, and Acadia Center and CLF argue that laws and regulations implementing clean energy and decarbonization policies will be key drivers in changes to the resource mix and demand.⁹⁵⁹ Moreover, AEE notes, 38 states and the District of Columbia have adopted renewable portfolio standards, many of which have been enacted in statute and constitute binding commitments on utilities and retail energy providers.⁹⁶⁰ Clean Energy States similarly assert that the 21 states (plus the District of Columbia and Puerto Rico) with 100% clean energy policies account for 42.3% of United States power sales as of 2020, 49.4% of United States customer accounts, and 51% of United States population.⁹⁶¹ Clean Energy States argue that altogether, these states could see an aggregated demand for 800 TWh of new energy generation to meet their targets.

424. AEE, DC and MD Offices of People's Counsel, and SEIA agree that transmission providers should incorporate the effects of Federal, state, and local laws and regulations on

⁹⁵⁷ *Id.* P. 104.

⁹⁵⁴ Large Public Power Initial Comments at 19–20 (citing 16 U.S.C. 824q, (e)); *see also* NRECA Initial Comments at 17–18 (quoting 16 U.S.C. 824q(b)(4)), 19–20.

⁹⁵⁵ *E.g.*, PIOs Reply Comments at 10.

⁹⁵⁶ NOPR, 179 FERC ¶ 61,028 at P. 104 n.189. The Commission explained that “state or federal laws or regulations” meant “enacted statutes (*i.e.*, passed by the legislature and signed by the executive) and regulations promulgated by a relevant jurisdiction, whether within a state or municipality, or at the federal level.”

renewable energy development into development of Long-Term Scenarios.⁹⁶² City of New York states that government action that bears the force of law should be reflected in baseline transmission planning studies and not considered as merely one of multiple factors used to develop Long-Term Scenarios.⁹⁶³

425. Southeast PIOs argue that concerns that requiring the incorporation of local laws and regulations in the development of Long-Term Scenarios is unduly burdensome are misplaced at this stage because the details of how it will be done will be established during compliance proceedings.⁹⁶⁴

426. PIOs argue that the Commission should require the same level of engagement with Tribal governments as it does with states and that the Commission should clarify that Long-Term Scenarios must incorporate relevant aspects of Tribal policies.⁹⁶⁵

427. Acadia Center and CLF claim that the Commission should clarify that state laws and regulations that affect the future resource mix and demand include state laws and regulations that affect demand management, such as energy efficiency, distributed generation, flexible load, and demand response because laws and initiatives in this area will also affect transmission needs while providing grid solutions.⁹⁶⁶

428. Center for Biological Diversity states that the Commission must include all Executive Actions, not just laws and regulations, as factors in Long-Term Regional Transmission Planning. Center for Biological Diversity states that allowing transmission providers to decide whether to consider Executive Orders fails to provide stakeholders with the type of clarity that is a goal of the NOPR.⁹⁶⁷

429. As noted above, some commenters oppose the overall categories of factors requirement in this final order and argue that requiring transmission providers to incorporate certain factors, such as laws and regulations that affect the resource mix, will force transmission providers to settle irresolvable conflicts among state policies and conduct transmission

planning that accommodates the policy preferences of some, at the cost of all.⁹⁶⁸

430. Some commenters acknowledge that state laws and regulations may affect the future resource mix and demand but argue against mandatory inclusion such that they cannot discount certain Federal, state, and local laws and regulations.⁹⁶⁹ Idaho Power states that the NOPR proposal does not provide transmission providers with the flexibility necessary to create transmission planning regions that span multiple states and could cause non-jurisdictional entities to opt out of regional transmission planning.⁹⁷⁰ NYISO states that the final order should not require transmission providers to assume across all scenarios the full achievement of all Federal, state, and local laws and regulations that could drive the need for transmission. NYISO also does not think that the final order should require the identification of all Federal, state, and local laws and regulations that may drive the need for transmission over the 20-year transmission planning horizon, but instead should provide each transmission planning region with flexibility.⁹⁷¹

431. Although Duke agrees that many of the categories of factors identified in the NOPR capture a minimum list of factors that are expected to drive changes in the resource mix and demand, it does not support the inclusion of local laws and regulations.⁹⁷²

(2) Commission Determination

432. We adopt the NOPR proposal, with modification, to require transmission providers in each transmission planning region to incorporate Factor Category One: Federal, federally-recognized Tribal, state, and local laws and regulations affecting the resource mix and demand, in the development of Long-Term Scenarios. We find that the factors in this category have been, and will continue to be, key drivers of Long-Term Transmission Needs and therefore must be accounted for in Long-Term Regional Transmission Planning. Accordingly, we find that failing to account for factors in Factor Category One would hamper the identification, evaluation, and selection of Long-Term Regional Transmission Facilities that

are potentially more efficient or cost-effective solutions to Long-Term Transmission Needs.

433. We clarify that factors in Factor Category One include, among other things, legally binding obligations, incentives (e.g., tax credits), and/or restrictions promulgated by policymakers that will affect new or existing generators, or demand. Further, as discussed in the Additional Categories of Factors section below, we recognize that energy equity and justice laws and regulations are also potential factors within Factor Category One to the extent that they are likely to affect Long-Term Transmission Needs.

434. As discussed in further detail below in the Additional Categories of Factors section, we modify the NOPR proposal for Factor Category One to include federally-recognized Tribal laws and regulations affecting the resource mix and demand because we are persuaded by commenters that contend that such factors have a similar potential to affect Long-Term Transmission Needs as Federal, state, and local laws and regulations. Federally-recognized Tribal laws and regulations mean the legally binding obligations, incentives, and/or restrictions promulgated by federally-recognized Tribes that will affect new or existing generators, or demand. We make similar modifications to Factor Category Two and Factor Category Seven, as discussed in the Factor Category Two and Factor Category Seven sections below.

435. We are not persuaded by Louisiana Commission's argument that requiring transmission providers to incorporate certain factors, such as Federal, federally-recognized Tribal, state, and local laws and regulations affecting the resource mix and demand, would result in a transmission buildout that only accommodates the policy preferences of some stakeholders, at the cost of all transmission customers.⁹⁷³ Similarly, we are not persuaded by Undersigned States' contention that policy differences among states may be irresolvable, and therefore the Commission should not require transmission providers to account for laws and regulations in their Long-Term Scenarios.⁹⁷⁴ First, every policy choice—from Federal tax incentives and state regulation of generation, down to local economic development policies—that changes the quantity and location of generation and load contributes to changes in transmission needs. Accordingly, all transmission buildout—whether it occurs through a

local or regional transmission plan, or through a near-term transmission planning process or a more forward-looking one—is a reflection, at least in part, of Federal, federally-recognized Tribal, state, and local laws and regulations that drive transmission needs. Rather than a unique feature of Long-Term Regional Transmission Planning, transmission planning of any kind will inherently reflect the policy choices of multiple decisionmakers, because the quantity and location of generation and load are shaped by multiple decisionmakers.

436. Second, we find that requiring transmission providers to properly account for known determinants of Long-Term Transmission Needs is necessary to ensure just and reasonable rates. Specifically, because, as described above, Long-Term Transmission Needs driven by disparate policy decisions would continue to exist, regardless of whether they were identified in Long-Term Regional Transmission Planning, failing to identify, evaluate, and select Long-Term Regional Transmission Facilities to address those needs will result in unjust and unreasonable rates. We note that some policy decisions are reflected in laws and regulations, which can affect load-serving entities' supply obligations, and in transmission planning regions with vertically integrated utilities, some policy decisions are reflected in the integrated resource plans approved by retail regulators.

437. We are not endorsing the merits of any specific Federal, federally-recognized Tribal, state, or local laws and regulations or of any specific state-approved integrated resource plans. We emphasize that the Commission's policies are technology neutral, and we are not establishing a preference for certain types of generation or energy end uses. We acknowledge that, in some instances, a policy choice in one jurisdiction may reduce or negate the effect of a policy choice in another jurisdiction. However, the fact that certain factors may have conflicting effects on Long-Term Transmission Needs is not a basis to conclude that the effects of laws and regulations or state-approved integrated resource plans should be ignored or discounted.

(b) Federal, Federally-Recognized Tribal, State, and Local Laws and Regulations on Decarbonization and Electrification (Factor Category Two)

(1) Comments

438. Several commenters support the proposed requirement that Long-Term Scenarios incorporate Federal, state, and

local laws and regulations on decarbonization and electrification.⁹⁷⁵ Illinois Commission notes that, in Illinois, the Climate and Equitable Jobs Act of 2021 will affect future demand and the supply mix and that Long-Term Regional Transmission Planning will be critical to meeting Illinois' policy goals.⁹⁷⁶ New England for Offshore Wind states that electrification to meet New England states' greenhouse gas emissions mandates will dramatically increase electricity load and require massive amounts of clean energy.⁹⁷⁷ Pattern Energy states that Federal and state legislative efforts to promote decarbonization should be the basis of scenario modeling for generation and demand.⁹⁷⁸ Center for Biological Diversity states that the Commission should identify decarbonization as an objective in Long-Term Regional Transmission Planning because it has the authority and responsibility to prioritize decarbonization in the transmission planning process since these policies bear directly on the provision of transmission service.⁹⁷⁹

439. Nevada Commission acknowledges that other state policies and its own integrated resource planning process should be considered in Long-Term Regional Transmission Planning even though it does not support other state policies affecting Nevada ratepayers.⁹⁸⁰ Utah Division of Public Utilities states that the impact of state policies should be part of the Long-Term Regional Transmission Planning scenario analysis.⁹⁸¹ Cypress Creek asserts that the Commission should include state policy requirements in a uniform set of assumptions that are applicable across all Long-Term Scenarios.⁹⁸²

(2) Commission Determination

440. We adopt the NOPR proposal, with modification, to require

⁹⁸² Cypress Creek Reply Comments at 5–6.

transmission providers in each transmission planning region to incorporate Factor Category Two: Federal, federally-recognized Tribal, state, and local laws and regulations on decarbonization and electrification, in the development of Long-Term Scenarios. Similar to Factor Category One, we find that the factors in this category have been, and will continue to be, key drivers of Long-Term Transmission Needs and therefore must be accounted for in Long-Term Regional Transmission Planning. We clarify that this category of factors includes legally binding obligations, incentives, and/or restrictions that affect Long-Term Transmission Needs in different ways than Factor Category One, for example, by limiting the carbon intensity of electricity generation or electrifying energy end uses and thereby significantly increasing electricity use in certain sectors of the economy, such as transportation and building heating and cooling. We acknowledge that there could be overlap between Factor Categories One and Two because a certain law or regulation could reasonably be considered to fit into both categories. In such a circumstance, transmission providers must account for the law or regulation in one of the two categories, not both, to avoid double-counting of that factor's anticipated effect on Long-Term Transmission Needs. Since transmission providers must account for and be consistent with, and not discount, factors in the first three categories of factors equally once the transmission providers have determined that such a factor is likely to affect Long-Term Transmission Needs, we do not believe it is necessary to ensure that a certain factor is considered as part of Factor Category One instead of Factor Category Two (or vice versa), but rather it is only necessary to ensure that these factors are accounted for in the development of Long-Term Scenarios.

441. In addition, based on the record before us, we modify the NOPR proposal for Factor Category Two to include federally-recognized Tribal laws and regulations on decarbonization and electrification because we are persuaded by commenters that argue that such factors have the same potential to affect Long-Term Transmission Needs as Federal, state, and local laws and regulations on decarbonization and electrification.

442. Similar to our response in the Factor Category One section to commenters arguing that categories of factors involving Federal, federally-recognized Tribal, state, and local laws and regulations would provide

preference to some at the cost of all or result in irresolvable conflict,⁹⁸³ we find that differences in if and how government entities promulgate laws and regulations concerning decarbonization and electrification (*i.e.*, factors in Factor Category Two) do not diminish the effect of such laws and regulations. As such, Long-Term Scenarios must account for these key drivers of Long-Term Transmission Needs so that transmission providers can identify such needs through Long-Term Regional Transmission Planning and can identify, evaluate, and select Long-Term Regional Transmission Facilities to address those needs.

(c) State-Approved Utility Integrated Resource Plans and Expected Supply Obligations for Load-Serving Entities (Factor Category Three)

(1) Comments

443. Several commenters support the proposed requirement that each Long-Term Scenario incorporate state-approved integrated resource plans and expected supply obligations for load-serving entities.⁹⁸⁴ NRECA and TAPS state that using Long-Term Scenarios that satisfy expected load-serving entity supply obligations is consistent with FPA section 217(b)(4)'s directive to facilitate the planning and expansion of transmission to meet the reasonable needs of load-serving entities to satisfy their service obligations.⁹⁸⁵ NRECA asserts that this category should be moved to the top of the list of categories of factors because state-approved integrated resource plans and load-serving entity supply obligations will incorporate state laws and regulations affecting resource mix, demand, decarbonization, and electrification. Additionally, NRECA contends that the changing characteristics of the distribution grid, such as distributed energy resources, storage, demand response, energy efficiency, and electrification of demand, will affect load-serving entity needs and should be incorporated in this category of factors.⁹⁸⁶ Clean Energy Associations and ACEG agree.⁹⁸⁷

444. APPA and ACEG argue that the final order should focus on the resource plans of load-serving entities and include a requirement for transmission providers to include in their Long-Term Regional Transmission Planning process a requirement to coordinate with load-serving entities.⁹⁸⁸ ACEG argues that such a requirement is necessary because not all load-serving entities either own generation or are overseen by a state regulator, meaning that they must rely on the Commission to ensure that transmission planning meets their needs.⁹⁸⁹

445. Several commenters clarify that they support the inclusion of load-serving entity demand as a factor in Long-Term Scenarios.⁹⁹⁰ In addition, some commenters support the inclusion of load-serving entity generation resource planning as a factor in Long-Term Scenarios.⁹⁹¹ PIOs argue that the Commission should require load-serving entities to provide their generation and demand forecasts to transmission planning entities.⁹⁹² ACEG agrees and argues that PIOs' recommendation will decrease the burden on transmission planning entities and provide them with the information they need to determine the future resource mix.⁹⁹³

446. Entergy asserts that the Commission has identified the appropriate factors but explains that not all states conduct commission proceedings related to integrated resource plans and, for those states that do, the timelines are not necessarily the same. Thus, Entergy requests that the Commission clarify that the term "state-approved utility integrated resource plans" will be construed broadly to include any resource plan developed and reviewed through a retail commission proceeding and submitted to the relevant transmission provider for use in Long-Term Regional Transmission Planning. Entergy asserts that such clarification would result in a range of benefits such as consistency of data with current local, state, and Federal laws and expected retirements, additions, and corporate goals.⁹⁹⁴

(2) Commission Determination

447. We adopt the NOPR proposal to require transmission providers in each transmission planning region to incorporate Factor Category Three: state-approved integrated resource plans and expected supply obligations for load-serving entities, in the development of Long-Term Scenarios. We find it appropriate to require transmission providers to incorporate Factor Category Three because it reflects the outcomes of retail-level regulatory proceedings that will affect Long-Term Transmission Needs. Further, incorporation of Factor Category Three into Long-Term Scenarios will ensure that transmission providers properly account for resource planning and anticipated changes to demand, including increased integration of distributed energy resources. We note that the Commission shares concurrent jurisdiction over the bulk power system with retail regulators,⁹⁹⁵ and we agree with commenters that note that FPA section 217(b)(4) directs the Commission to facilitate the planning and expansion of transmission to meet the reasonable needs of load-serving entities to satisfy their service obligations.⁹⁹⁶

448. In response to commenters that note some retail regulators may review but not formally approve integrated resource plans, we clarify that, for this category of factors, state-approved integrated resource plans includes resource plans that are developed and reviewed through a retail proceeding in jurisdictions where the retail regulator does not formally approve such plans.⁹⁹⁷ We grant Entergy's clarification request that the term "state-approved utility integrated resource plans" be construed broadly to include any resource plan developed and reviewed through a retail commission proceeding and submitted to the relevant transmission provider for use in Long-Term Regional Transmission Planning because it would enable a more complete consideration of state-approved integrated resource plans and

⁹⁹⁵ Compare 16 U.S.C. 824d(a) (providing the Commission authority to regulate the rates charged by public utilities in connection with the transmission or wholesale sale of electric energy), with *id.* 824(a) (reserving certain state authorities).

⁹⁹⁶ 16 U.S.C. 824q(b)(4) ("The Commission shall exercise the authority of the Commission under this chapter in a manner that facilitates the planning and expansion of transmission facilities to meet the reasonable needs of load-serving entities to satisfy the service obligations of the load-serving entities, and enables load-serving entities to secure firm transmission rights (or equivalent tradable or financial rights) on a long-term basis for long-term power supply arrangements made, or planned, to meet such needs.").

⁹⁹⁷ Entergy Initial Comments at 15–16.

expected supply obligations for load-serving entities.

449. In response to APPA and ACEG's request for the Commission to require transmission providers to coordinate with load-serving entities,⁹⁹⁸ we note that we require transmission providers, as described in further detail below, to provide an open and transparent process in their OATT that provides stakeholders, including load-serving entities, with a meaningful opportunity to propose potential factors and to provide input on how to account for specific factors in the development of Long-Term Scenarios.⁹⁹⁹ However, in response to PIOs' request that the Commission require load-serving entities to provide their generation and demand forecast to transmission providers, we agree that such information will assist transmission providers in developing Long-Term Scenarios. Therefore, consistent with the information exchange transmission planning principle established in Order No. 890,¹⁰⁰⁰ we require load-serving entities that are taking transmission service pursuant to an OATT to provide transmission providers with information on the load-serving entities' projected loads and resources over the planning horizon.

(d) Trends in Technology and Fuel Costs Within and Outside of the Electricity Supply Industry, Including Shifts Toward Electrification of Buildings and Transportation (Factor Category Four)

(1) Comments

450. Several commenters emphasize the importance of incorporating assumptions regarding shifts towards electrification in Long-Term Scenarios.¹⁰⁰¹ Clean Energy Buyers

⁹⁹⁸ ACEG Reply Comments at 22; APPA Initial Comments at 27–28.

⁹⁹⁹ See *infra* Stakeholder Process and Transparency section.

¹⁰⁰⁰ The information exchange transmission planning principle requires network transmission customers to submit information on their projected loads and resources on a comparable basis (*e.g.*, planning horizon and format) as used by transmission providers in planning for their native load. Point-to-point transmission customers are required to submit their projections for need of service over the planning horizon and at what receipt and delivery points. To the extent applicable, transmission customers should also provide information on existing and planned demand resources and their impact on demand and peak demand. Transmission providers, in consultation with their customers and other stakeholders, must develop guidelines and a schedule for the submittal of such customer information. Order No. 890, 118 FERC ¶ 61,119 at PP 486–487.

¹⁰⁰¹ Clean Energy Associations Initial Comments at 11; Clean Energy Buyers Initial Comments at 15–16; DC and MD Offices of People's Counsel Initial

assert that regional flexibility should not be used to diminish the representation in Long-Term Scenarios of significant load growth from the commercial and industrial sectors and electrification of transportation.¹⁰⁰² Likewise, DC and MD Offices of People's Counsel assert that regional flexibility should be reflected in the actual inputs for these factors, rather than their inclusion in or exclusion from Long-Term Scenarios, noting, for example, that electrification forecasts in some areas are increasing load growth estimates by 30%.¹⁰⁰³ Clean Energy Associations argue that, to keep pace with changes in supply and demand, Long-Term Scenarios should incorporate aging infrastructure and planned replacements, along with load and generation trends informed by both historical data and applicable policy drivers.¹⁰⁰⁴

451. Other commenters emphasize the trends in specific technology costs, such as long-duration storage. ENGIE states that advances in longer-duration storage and advancing photovoltaic technologies may affect the ability to develop resources in areas previously considered to be uneconomic, which could affect the resource and demand mix.¹⁰⁰⁵ Form Energy argues that the inclusion of diverse, long-duration electric storage technologies would require significantly fewer new transmission needs.¹⁰⁰⁶

452. Pine Gate supports the inclusion of trends in technology and fuel costs in Long-Term Scenarios; however, Pine Gate requests that the Commission clarify what type of data would constitute a “trend” and how it expects transmission providers to assure that trend-related input is objective and representative of the “best available data.”¹⁰⁰⁷ Similarly, US DOE recommends that the Commission clarify whether the term “trends in technology and fuel costs” refers to trends in fuel cost and trends in technology, or rather trends in the cost of fuel and trends in the cost of technology. If the Commission is referring to the former, US DOE recommends that the Commission consider the phrase “trends in fuel costs and in the cost, performance, and availability of generation, storage, and

¹⁰⁰⁷ Pine Gate Initial Comments at 24.

transmission technologies.” US DOE further recommends that the Commission provide a non-exhaustive list of examples of cost and technology trends that transmission planners could consider.¹⁰⁰⁸

453. SEIA recommends that the Commission direct transmission providers to use the data and models used in NREL's Electrification Futures Study, Solar Futures Study, Storage Futures Study, and Transportation Futures Study.¹⁰⁰⁹ PIOs disagree with granting discretion to transmission providers to define trends in technology and fuel costs because PIOs state that it could empower them to distort the modeling process and create Long-Term Scenarios that are meaningless.¹⁰¹⁰

454. PIOs argue that the Commission should require transmission providers to use certain values for trends in technology and fuel costs within and outside of the electricity supply industry.¹⁰¹¹

455. New York TOs argue that trends in technology costs are amorphous and therefore should not be prescribed as a required factor for transmission providers to consider.¹⁰¹² Similarly, PPL criticizes the Commission's proposed requirement that transmission providers forecast trends in technology without providing concrete assumptions to use, or without a guarantee for cost recovery for investments that are based on those uncertain forecasts.¹⁰¹³

(2) Commission Determination

456. We adopt the NOPR proposal, with modification, to require transmission providers in each transmission planning region to incorporate Factor Category Four: trends in fuel costs and in the cost, performance, and availability of generation, electric storage resources, and building and transportation electrification technologies, in the development of Long-Term Scenarios. We find it appropriate to require transmission providers to incorporate Factor Category Four into the development of Long-Term Scenarios because the relative cost of constructing and operating different types of generation or storage resources and the relative cost of electrifying certain energy end uses will affect Long-Term Transmission Needs. We further find that this requirement is necessary to ensure that transmission providers

¹⁰⁰⁸ US DOE Initial Comments at 12–13.

¹⁰⁰⁹ SEIA Initial Comments at 10.

¹⁰¹⁰ PIOs Initial Comments at 19.

¹⁰¹¹ *Id.* at 17–19.

¹⁰¹² New York TOs Initial Comments at 11–12.

¹⁰¹³ PPL Initial Comments at 8.

develop plausible Long-Term Scenarios that account for technological changes expected over the transmission planning horizon, facilitating transmission providers' identification of Long-Term Transmission Needs.

457. As requested by commenters, including US DOE, we modify this category of factors in the final order to clarify that this category of factors is meant to capture changes in the cost, as well as the performance and availability, of certain technologies relevant to the electric industry.¹⁰¹⁴ In response to commenters arguing that trends in technology costs are amorphous and should not be included in the final order as a required category of factors, we disagree. However, as discussed above, we grant transmission providers discretion to determine whether specific trends identified in Factor Category Four are likely to affect Long-Term Transmission Needs and how to account for those specific trends in Long-Term Scenarios.¹⁰¹⁵ As discussed in further detail below, transmission providers also have some discretion to discount or place more weight on the anticipated effects on Long-Term Transmission Needs due to factors in this category.

458. In response to comments from US DOE,¹⁰¹⁶ we clarify that trends in fuel costs and in the cost, performance, and availability of generation, storage, and building and transportation electrification technologies may include, but are not limited to, cost and technology trends for: utility-scale generation construction costs for different generating technologies; distributed energy resources; storage technologies with differing duration limitations; carbon capture and sequestration; small modular nuclear; light-, medium-, and heavy-duty electric vehicles and electric vehicle supply equipment; and ground- and air-source heat pumps. While we agree with US DOE that transmission providers should consider trends in the cost, performance, and availability of transmission technologies as part of their evaluation of potential solutions to Long-Term Transmission Needs, we do not believe that these trends should be included as factors in this category because trends in the cost, performance, and availability of transmission technologies do not drive Long-Term Transmission Needs. We also agree with commenters that note that the effects of

the factors in this category may vary significantly, such as shifts towards electrification leading to significant load growth, or cost reductions for emerging technologies, like long-duration electric storage resources, mitigating some new transmission needs.

(e) Resource Retirements (Factor Category Five)

(1) Comments

459. Several commenters support the proposed requirement that each Long-Term Scenario incorporate resource retirements as a category of factors.¹⁰¹⁷ PJM Market Monitor states that PJM faces the potential for the retirement of large coal resources and that the PJM capacity market design and the transmission planning process need to identify these specific resources well in advance and ensure an efficient response to obviate the need for nonmarket cost-of-service contracts to retain generation while transmission is constructed.¹⁰¹⁸

460. PIOs and NYISO both argue that the Commission should further specify that transmission providers must incorporate expected trends in resource retirements rather than just announced retirements into Long-Term Scenarios.¹⁰¹⁹ PIOs state the Commission should require transmission providers to (1) specify how they will use generator age and condition data to predict retirements, (2) include announced retirements, and (3) specify how they will reflect trends and incentives for distributed energy resources, as well as how they will quantify these trends.¹⁰²⁰

461. NYISO states that the final order should confirm that each transmission planning region has the authority and flexibility to account for likely resource retirements that have not been announced by the resource based on factors that include the facility's age, its emission profile, applicable laws and regulations, and other factors.¹⁰²¹ Similarly, Pine Gate asserts that

resource retirements should be included at the earliest opportunity as there is often a significant gap of time between when a public announcement is made and when the official notice of deactivation is communicated to the transmission provider.¹⁰²²

462. SEIA states that transmission providers should only be required to include the retirement of resources that have provided notice of pending retirement pursuant to the applicable tariff provisions.¹⁰²³ PJM supports engaging in transparent economic impact analyses of generation resource retirements but asserts that such analyses might disclose confidential information about specific generators. Therefore, PJM contends that the Commission will need to provide clear direction on how it wishes to address these issues, especially since masking of data is not a practical solution once the transmission case is released.¹⁰²⁴

(2) Commission Determination

463. We adopt the NOPR proposal to require transmission providers in each transmission planning region to incorporate Factor Category Five: resource retirements, in the development of Long-Term Scenarios. We find it appropriate to require transmission providers to incorporate Factor Category Five because resource retirements expected over the transmission planning horizon will affect Long-Term Transmission Needs. Commenters generally support requiring this category of factors, but commenters disagree as to how transmission providers should account for projected resource retirements that have not been publicly announced.¹⁰²⁵

464. In response to those commenters, we clarify that, to develop plausible Long-Term Scenarios, transmission providers must, in incorporating Factor Category Five into the development of Long-Term Scenarios, account for likely resource retirements beyond those that have been publicly announced. The record indicates that resource retirements have significantly influenced the supply of electricity in the past and are expected to do so in the coming decades.¹⁰²⁶ The North

¹⁰²⁵ NYISO Initial Comments at 24; Pine Gate Initial Comments at 24; PIOs Initial Comments at 21.

¹⁰²⁶ *See supra* note 241; Colorado Consumer Advocate Initial Comments, attach. 7 (US DOE, *Staff Report to the Secretary on Electricity Markets and Reliability* (Aug. 2017)) at 13–14 (stating that 132 GW of generation capacity retired between 2002 and 2016—approximately 15% of the installed capacity in 2002—due to the advantaged economics

American Electric Reliability Corporation's 2021 Long-Term Reliability Assessment reports nearly 50 GW of confirmed thermal generation resource retirements by 2026 and acknowledges that many more are yet to be announced.¹⁰²⁷ In addition, the record reflects that publicly announced resource retirements are only a fraction of the resource retirements expected over the required 20-year transmission planning horizon.¹⁰²⁸ Given the significance of resource retirements, and the limited scope of publicly announced resource retirements, we find that transmission providers must account for expected retirements that have not been publicly announced to meet this final order's requirement that transmission providers develop a plausible set of Long-Term Scenarios.¹⁰²⁹

465. We provide flexibility to transmission providers to propose on compliance with this final order how to account for resource retirements that might take place over the transmission planning horizon, in addition to those that have been publicly announced. We note, for example, that transmission providers could propose to account for expected retirements by considering factors such as a generating facility's age, its emissions profile, its projected costs and revenues, and any applicable laws and regulations that may affect a generating facility's continued operation over the transmission planning horizon.¹⁰³⁰ To the extent that certain

of natural gas-fired generation, low electricity demand growth, the deployment of variable energy resources, and regulatory requirements); *see also*, e.g., AEP Initial Comments at 4 n.12.

¹⁰²⁷ SEIA Initial Comments at 9 (citing North American Electric Reliability Corporation, *2021 Long-Term Reliability Assessment*, at 30, 35 (Dec. 2021)). The North American Electric Reliability Corporation states that long-range retirement projects based on confirmed retirements could be "significantly understated" because generator retirement announcements can be made as late as 90 days prior to planned deactivation in some areas. The North American Electric Reliability Corporation's 2021 reported retirements through 2026 increased 126% compared to the North American Electric Reliability Corporation's 2020 estimates; and the North American Electric Reliability Corporation's 2022 reported retirements through 2026 increased compared to the North American Electric Reliability Corporation's 2021 retirements. *See* North American Electric Reliability Corporation, *2021 Long-Term Reliability Assessment*, at 35 (Dec. 2021); NERC, *2022 Long-Term Reliability Assessment*, at 17 (Dec. 2022).

¹⁰²⁸ For example, announced retirements account for less than half of MISO's projected retirements over a 20-year transmission planning horizon. *See* MISO Initial Comments at 35 (citing MISO, *MISO Futures Report*, at 14–19, (Dec. 2021), <https://cdn.misoenergy.org/MISO%20Futures%20Report538224.pdf>).

¹⁰²⁹ *See infra* Types of Long-Term Scenarios section.

¹⁰³⁰ For example, MISO assumes age-based resource retirements which vary by resource type

laws and regulations identified by stakeholders in Factor Categories One and Two will necessitate the retirement of certain resources, we reiterate that transmission providers must develop Long-Term Scenarios that are consistent with such laws and regulations.

466. In response to PJM's concerns that conducting transparent economic impact analyses of generation resource retirements could lead to the disclosure of confidential information about specific generators, we note that the Commission has previously acknowledged that tension exists between ensuring transparency in transmission planning processes and protecting confidential information, including commercially sensitive information.¹⁰³¹ We note that we are not specifying how transmission providers must estimate resource retirements, and we clarify that transmission providers may include what they believe to be appropriate confidentiality protections in their proposals to account for resource retirements that might take place over the transmission planning horizon. The Commission will evaluate those proposals by using the established principles in Order No. 890,¹⁰³² as well as precedent on existing confidentiality protections with respect to transmission planning that the Commission has previously found comply with the Order No. 890 principles, to guide its findings on whether such protections are appropriate.

(f) Generator Interconnection Requests and Withdrawals (Factor Category Six)

(1) Comments

467. Several commenters support the proposed requirement that each Long-Term Scenario incorporate generator interconnection requests and withdrawals.¹⁰³³ Pattern Energy argues that generation interconnection queues are indicative of the market for generation capacity additions and should also be a major source for generation assumptions in both near-term and long-term scenario

and scenario, over a 20-year transmission planning horizon. In a 2021 study, MISO assumes coal-fired resources will retire at age 46 in one scenario, and age 36 in another. MISO assumes utility-scale solar resources will retire at age 25 in every scenario. MISO also incorporates resource retirements announced by the resource owner, stated in an integrated resource plan, or filed in MISO's Attachment Y. *See* MISO Initial Comments at 35 (citing MISO, *MISO Futures Report*, at 14–19, (Dec. 2021), <https://cdn.misoenergy.org/MISO%20Futures%20Report538224.pdf>).

¹⁰³¹ *Sw. Power Pool, Inc.*, 137 FERC ¶ 61,227, at P 20 (2011).

¹⁰³² Order No. 890, 118 FERC ¶ 61,119 at PP 471–476.

¹⁰³³ Breakthrough Energy Initial Comments at 14; Cypress Creek Reply Comments at 5–7.

planning.¹⁰³⁴ SEIA supports the proposed requirement with the caveat that transmission providers should only include interconnection customers that have signed a facilities study agreement, or other applicable study agreement.¹⁰³⁵ Cypress Creek asserts that the Commission should require transmission providers to include the proposed generator interconnection requests in the queue that have completed a system impact study as part of a uniform set of assumptions applicable across all scenarios.¹⁰³⁶

468. CAISO and MISO state that their regional transmission planning processes already include projects in the generator interconnection queue.¹⁰³⁷ MISO further explains that it considers the generator interconnection queue when determining the location where future generation will interconnect, but MISO also states that transmission providers and their stakeholders need to have flexibility, including how to consider trends in interconnection queue requests.¹⁰³⁸ Further, MISO argues that "generation interconnection requests and withdrawals" as stated in the NOPR is unclear regarding how the transmission provider must weigh withdrawals differently than requests. Therefore, MISO requests that the Commission revise the NOPR proposal to require transmission providers to "consider activity in the generation interconnection queue."¹⁰³⁹

469. Nebraska Commission asserts that the Commission should not include interconnection request withdrawals as a factor because it does not follow the Commission's cost causation principles and would incentivize additional interconnection requests. For example, Nebraska Commission states, most interconnection requests in SPP are duplicative, and entities compare costs among their requests once they are analyzed. Nebraska Commission asserts that such requests could be used to game the transmission planning process, create additional backlogs in the interconnection queue, and shift costs from interconnection customers to transmission customers.¹⁰⁴⁰

470. Likewise, Omaha Public Power claims that, until generator interconnection reform is enacted, the use of interconnection queues and withdrawals as factors will lead to

scenario inaccuracy due to the size of interconnection backlogs and speculative nature of many queued projects.¹⁰⁴¹ Dominion also opposes using the number and size of interconnection requests as a basis for transmission planning because speculative interconnection requests could stimulate transmission development in areas slated for development by private interests.¹⁰⁴²

471. PJM Market Monitor states that, while there are many comments on the significant renewable resources PJM will connect to its grid, based on historic completion rates and effective load carry capability derate factors, only 5.6% of renewable resources are expected to go into service.¹⁰⁴³

(2) Commission Determination

472. We adopt the NOPR proposal to require transmission providers in each transmission planning region to incorporate Factor Category Six: generator interconnection requests and withdrawals, in the development of Long-Term Scenarios. We find it appropriate to require transmission providers to incorporate Factor Category Six because generation interconnection queues provide important information about future generation development over the transmission planning horizon and therefore affect Long-Term Transmission Needs. Multiple RTOs/ISOs explain that their regional transmission planning processes already account for generation projects in the interconnection queue, but MISO notes that transmission providers need flexibility in how to incorporate that data into the development of Long-Term Scenarios.¹⁰⁴⁴ In response to MISO's concerns, we reiterate that transmission providers have discretion to determine how to account for all factors, including interconnection requests and withdrawals, in Long-Term Scenarios.

473. We disagree with commenters that argue that, because many interconnection requests are speculative and/or duplicative, requiring transmission providers to incorporate Factor Category Six into the development of Long-Term Scenarios will compromise the accuracy of Long-Term Scenarios, shift costs to transmission customers that should be borne by interconnection customers, or create an incentive for additional interconnection requests that could slow down interconnection queue

processing.¹⁰⁴⁵ We note that over the years, and recently with Order No. 2023, transmission providers and the Commission have adopted changes to generator interconnection procedures to reduce the submission of speculative interconnection requests in the interconnection queue. For example, interconnection requests require significant financial commitments from the interconnection customer (e.g., application fees, study deposits, and site control requirements), which the Commission made more stringent in Order No. 2023.¹⁰⁴⁶ Noting that, as discussed above, transmission providers will have discretion as to how they account for factors in Long-Term Scenarios and may determine whether certain generator interconnection requests are speculative and/or duplicative, such that the requests are unlikely to affect Long-Term Transmission Needs, and then make corresponding adjustments to their Long-Term Scenarios. As discussed in further detail below, transmission providers can also account for uncertainty by discounting or putting more weight on the anticipated effects on Long-Term Transmission Needs due to factors in this category. Additionally, we believe that the existence of a large number of interconnection requests in a certain area, even if some of those requests are speculative, indicates that generation developers have an interest in interconnecting resources in that area, which Long-Term Scenarios should take into account.

(g) Utility and Corporate Commitments and Federal, Federally-Recognized Tribal, State, and Local Policy Goals That Affect Long-Term Transmission Needs (Factor Category Seven)

(1) Comments

474. Some commenters generally support the proposed requirement to incorporate in Long-Term Scenarios utility and corporate commitments and Federal, state, and local goals that affect the future resource mix and demand.¹⁰⁴⁷ ACEG contends that FPA

section 217(b)(4) supports the Commission's proposed requirement to include public policies and utility and corporate renewable procurement goals within Long-Term Scenarios because load-serving entities' service obligations will depend upon both public policies and the resource preferences of their customers.¹⁰⁴⁸ AEE highlights the role of local goals by noting that 29 of the 50 most populous cities in the United States have set clean or renewable energy targets.¹⁰⁴⁹

475. Advanced Energy Buyers argue that private efforts to use more low- and zero-carbon electricity are significantly affecting the resource mix and in turn transmission needs, noting that since 2014, commercial and industrial customers have contracted for more than 52 GW of clean energy in the United States, with annual increases every year since 2016.¹⁰⁵⁰ Moreover, Advanced Energy Buyers state, corporate and industrial customer demand for renewable energy in the United States is expected to reach about 85 GW by 2030.¹⁰⁵¹ Advanced Energy Buyers state that, in some markets, corporate demand is already a dominant driver of renewable energy deployment, as in Illinois, where corporate procurement accounted for roughly one-third of total renewable deployment.¹⁰⁵² SEIA states that, for corporate commitments, transmission providers should include data from the Clean Energy Buyers Association Deal Tracker, and for utility commitments, transmission providers should include

driven by consumer, utility, and corporate preferences, state public policies, and the cost competitiveness of renewable energy. The Commission's transmission planning and cost allocation standards must be up to the challenge of enabling this transition while ensuring the continued provision of reliable and affordable electricity at just and reasonable rates.").

data from state resource plans and regulatory filings.¹⁰⁵³

476. SREA and ACEG argue that the Commission should require transmission providers to incorporate utilities' generation planning announcements associated with net zero commitments and publicized utility resource plans, including SEC filings and public statements, into the development of Long-Term Scenarios.¹⁰⁵⁴ SREA contends that such a requirement would protect the interests of customers and generation developers because these announcements affect the marketplace.¹⁰⁵⁵ Breakthrough Energy suggests that utility targets and expected consumer demand should also be incorporated into the development of Long-Term Scenarios because actual demand is often higher than reflected in utility plans, which do not sufficiently incorporate corporate demand, including corporate buyer commitments.¹⁰⁵⁶

477. LADWP, MISO, and NRECA support the inclusion of this category of factors as long as transmission providers are allowed to discount these factors in their analysis by assuming the goals or commitments may not be fully met.¹⁰⁵⁷ NRECA is concerned that factor category seven (utility and corporate commitments) carries a distinct risk of stranded transmission costs and therefore supports it being discounted.¹⁰⁵⁸ NRECA further states that it is concerned that stakeholders may try to use Long-Term Regional Transmission Planning to impose goals and commitments that lack the force of law.¹⁰⁵⁹ LADWP argues that the Commission should allow transmission planners to use discretion when identifying utility commitments and local goals.¹⁰⁶⁰ MISO is concerned about the inherent difficulty of modeling corporate commitments given the ambiguous nature of corporate footprints.¹⁰⁶¹

478. Several commenters oppose including utility and corporate

commitments and/or Federal, state, and local goals as a category of factors in Long-Term Scenarios.¹⁰⁶² For example, California Commission states that it is not clear what purpose would be served by requiring transmission providers to incorporate these commitments or goals into Long-Term Scenarios yet, at the same time, allowing them to discount such commitments or goals to account for their inherent uncertainty.¹⁰⁶³ New York TOs argue that corporate commitments are amorphous and therefore should not be prescribed as a required factor for transmission providers to consider. Moreover, New York TOs state that, if a goal is not codified as a law, it is not clear that it is sufficiently solidified and supported to be included as a factor.¹⁰⁶⁴

479. PJM argues that the NOPR proposal to include corporate commitments as a factor in Long-Term Scenarios is vague, inappropriate, and impractical, because even if PJM is able to develop a record of information in the expansive PJM footprint, this information will likely be incomplete. PJM argues that the burden to ensure that a transmission provider is aware of corporate commitments and goals should be on the corporation or another interested party.¹⁰⁶⁵

480. Illinois Commission states that transmission planning criteria should not include vague terms such as "corporate goals," which could mean multiple things and may already be accounted for.¹⁰⁶⁶ Alabama Commission states that corporate commitments and goals are not a sufficient basis for planning decisions as they are not law and accountability for achieving them is limited.¹⁰⁶⁷ Similarly, Pennsylvania Commission states that determinants for Long-Term Scenarios should not be based on speculative factors, arguing that factors that include Federal, state, and local laws and regulations that affect the future resource mix and demand are preferable to factors that include utility, corporate, Federal, state, and local goals or policies that have no enforcement mechanisms.¹⁰⁶⁸ PPL states that utility and corporate commitments

are unlikely to be sufficiently firm or definitive to pass state siting review.¹⁰⁶⁹

(2) Commission Determination

481. We adopt the NOPR proposal, with modification, to require transmission providers in each transmission planning region to incorporate Factor Category Seven: utility and corporate commitments and Federal, federally-recognized Tribal, state, and local policy goals that affect Long-Term Transmission Needs, in the development of Long-Term Scenarios. We find it appropriate to require transmission providers to incorporate Factor Category Seven into the development of Long-Term Scenarios because the relevant commitments and goals represent known consumer preferences that have been, and will continue to be, key drivers of Long-Term Transmission Needs. We agree with commenters that argue that corporate demand for clean energy resources, as demonstrated by the volume of bilateral corporate contracts with renewable energy resources, is already a major driver of changes in the resource mix and demand and that corporate and industrial customer demand for clean energy is projected to increase. We believe that it is necessary for transmission providers to incorporate publicly announced utility commitments in the development of Long-Term Scenarios. Such commitments may be ignored or overlooked in retail-level regulatory proceedings, but they nevertheless may have an impact on future changes in the resource mix and demand that must be accounted for to ensure the development of plausible Long-Term Scenarios.

482. We modify the NOPR proposal for Factor Category Seven to include federally-recognized Tribal goals that affect the resource mix and demand because we are persuaded by commenters that argue that such factors have the same potential to affect Long-Term Transmission Needs as Federal, state, and local goals. We believe that federally-recognized Tribal goals should include publicly announced policy recommendations, such as energy vision reports.¹⁰⁷⁰ Further, as discussed under Additional Categories of Factors below, we recognize that energy equity and justice goals are potential factors within Factor Category Seven.

¹⁰⁶⁶ Illinois Commission Initial Comments at 7.

¹⁰⁶⁷ Alabama Commission Initial Comments at 6.

¹⁰⁶⁸ Pennsylvania Commission Initial Comments at 5–6.

483. While Federal, federally-recognized Tribal, state, and local goals may not have the same durability and binding impact of laws and regulations, we believe that it is appropriate for transmission providers to account for such goals in Long-Term Scenarios because these goals represent known preferences of governmental entities that affect Long-Term Transmission Needs. Such goals may improve or diminish the prospects of deploying certain technologies. For example, as AEE explains, local governments representing some of the most populous cities in the United States have established goals to have their cities' loads served by clean or renewable energy.¹⁰⁷¹

484. We disagree with commenters that argue that transmission providers should not be required to incorporate utility and corporate commitments into the development of Long-Term Scenarios because they may not be significant enough to drive Long-Term Transmission Needs or that accountability for achieving commitments and goals is too limited for these factors to be considered sufficiently firm.¹⁰⁷² We acknowledge that utility and corporate commitments and governmental goals may be more likely to change over the transmission planning horizon than factors in other required factor categories; however, we are not persuaded that these commitments and goals are so speculative, amorphous, or unreliable that they should not be incorporated into Long-Term Scenarios at all. We emphasize that transmission providers have discretion, as discussed above, in how to account for these factors in the development of Long-Term Scenarios, and we note, as discussed in further detail below, that transmission providers can account for the uncertainty associated with the achievement of these commitments and goals by using discounting or putting more weight on the effects of these factors on Long-Term Transmission Needs in each of the required Long-Term Scenarios. Similarly, transmission providers have discretion to determine how to account for commitments and goals in Long-Term Scenarios if the

effects of particular commitments or goals conflict with, negate, or duplicate the effects of other factors.

(h) Additional Categories of Factors

(1) Comments on Energy Equity and Justice

485. Some commenters argue that the Commission should include equity and energy justice considerations in Long-Term Regional Transmission Planning.¹⁰⁷³ Grand Rapids NAACP, agreeing with NASEO, urges the Commission to expand factors considered in Long-Term Regional Transmission Planning to include energy equity and justice.¹⁰⁷⁴ Grand Rapids NAACP also states that transmission providers should be required to follow Federal, state, and local laws addressing the need for energy equity and justice.¹⁰⁷⁵ In concordance with PIOs, Grand Rapids NAACP urges the Commission to address equity in the transmission planning process because doing so would encourage competition and lower consumer costs.¹⁰⁷⁶ Finally, Grand Rapids NAACP urges the Commission to encourage transmission providers to develop metrics that advance economic equity and environmental justice by facilitating consideration of the impact of transmission infrastructure on disadvantaged communities.¹⁰⁷⁷

486. US DOE asserts that energy justice considerations will form an integral part of transmission planning. Specifically, US DOE states that transmission planning can identify potential sources, sinks, and locations of transmission expansion facilities and that identifying locations where frontline communities and historically underserved communities have faced long-standing impacts may affect the future resource mix.¹⁰⁷⁸ NESCOE agrees with US DOE and argues that regional transmission planning processes should accommodate state efforts to advance equity and environmental justice concerns.¹⁰⁷⁹ New England for Offshore

Wind argues that without a transparent and inclusive transmission planning process, regional transmission planning efforts will be at odds with state policy on environmental justice.¹⁰⁸⁰

487. PIOs state that the Commission should be clear that Long-Term Regional Transmission Planning complies with and incorporates relevant aspects of applicable Federal, federally-recognized Tribal, state, and local environmental and energy justice policies—including future resource mix impacts, assignment of transmission benefits toward disadvantaged communities, and project selection.¹⁰⁸¹

488. CARE Coalition states that the Commission should consider issues of siting and the granting of permits that cause significant delays in construction of new transmission facilities.¹⁰⁸² CARE Coalition emphasizes WE ACT's argument that a final order should ensure that transmission planners and states "are cognizant about siting and the potential harms of transmission development to environmental justice communities."¹⁰⁸³ Relatedly, CARE Coalition highlights NRECA's argument that rural and poorer areas are disproportionately burdened under the current regime because "siting decisions are primarily driven by technical and economic factors."¹⁰⁸⁴

(2) Comments on Efficiency and Technology

489. NASEO argues that the Commission should expand its list of factors that transmission providers should include in Long-Term Regional Transmission Planning and Long-Term Scenarios to include increased energy efficiency of existing transmission lines, and the efficient use of existing rights of way.¹⁰⁸⁵ Invenergy suggests that the Commission expressly require consideration of advanced-stage merchant HVDC transmission as a factor in regional transmission planning scenarios.¹⁰⁸⁶ Invenergy highlights US DOE's proposal that transmission providers consider trends in the development of HVDC network technology, arguing, however, that such

¹⁰⁷¹ AEE Initial Comments at 10–11 (citing Third Way, *Utilities, Cities, and States with Clean Energy Targets* (July 30, 2021), <https://www.thirdway.org/graphic/utilities-cities-and-states-with-clean-energy-targets>).

consideration should include incorporating and accounting for HVDC transmission facilities in transmission planning models and scenarios.¹⁰⁸⁷

(3) Comments Regarding Enhanced Reliability and Interregional Transfer Capability

490. PJM recommends that the Commission require enhanced reliability and Interregional Transfer Capability as two additional categories of factors that transmission providers must incorporate into the development of Long-Term Scenarios.¹⁰⁸⁸ PJM envisions enhanced reliability to include, but not be limited to, storm hardening of critical facilities, reducing the number of critical CIP-014 facilities through transmission upgrades, coordination of infrastructure development with natural gas pipelines serving generation in the region, and ensuring redundancy of facilities, where appropriate, to address the threat of physical or cyber attacks.¹⁰⁸⁹ PJM envisions Interregional Transfer Capability to be established in accordance with the methodology that the Commission adopts in a subsequent order.¹⁰⁹⁰

491. Invenenergy agrees with the additional categories of factors that PJM proposes.¹⁰⁹¹ ELCON supports the consideration of transfer capability between seams, which it asserts would provide transmission providers with the ability to develop and consider solutions that may solve for multiple drivers and offer greater benefits to more consumers.¹⁰⁹² In contrast, AEE states that it disagrees with the additional categories of factors that PJM proposes, although it agrees with PJM that enhanced reliability planning is an important consideration.¹⁰⁹³

(4) Commission Determination

492. We recognize that some commenters ask the Commission to require transmission providers to incorporate several categories of factors in addition to those proposed in the NOPR in the development of Long-Term Scenarios. We decline to include energy equity and justice as a distinct and additional category of factors because we believe that these important energy equity and justice laws and regulations, or goals, that are likely to affect Long-Term Transmission Needs, are

accounted for in Factor Category One: Federal, federally-recognized Tribal, state, and local laws and regulations affecting the resource mix and demand, or Seven: utility and corporate commitments and Federal, federally-recognized Tribal, state, and local policy goals that affect Long-Term Transmission Needs.¹⁰⁹⁴ Stakeholders will have a meaningful opportunity to identify any such factors as part of the open and transparent stakeholder process described below in the Stakeholder Process and Transparency section.

493. We decline to adopt Invenenergy's recommendation that the Commission require transmission providers to include advanced-stage merchant HVDC transmission as an additional category of factors. The Commission did not propose specific requirements in the NOPR regarding merchant HVDC transmission facilities under development, and we are not persuaded by the evidence in the record that the Commission should include advanced-stage HVDC transmission facilities in the minimum set of known determinants of Long-Term Transmission Needs. We reiterate that transmission providers may be aware of additional categories of factors beyond those adopted in this final order that drive Long-Term Transmission Needs and may incorporate additional categories of factors in the development of Long-Term Scenarios provided that each Long-Term Scenario remains plausible.

494. In response to PJM's request for the Commission to require enhanced reliability and Interregional Transfer Capability¹⁰⁹⁵ as additional categories of factors,¹⁰⁹⁶ we find that the record in this proceeding is insufficient to adequately consider whether to require transmission providers to adopt such categories of factors in this final order. As noted in our response to Invenenergy just above, transmission providers may incorporate additional categories of factors in the development of Long-

Term Scenarios provided that each Long-Term Scenario remains plausible. We note that, in this final order, we provide transmission providers with flexibility in how they develop Long-Term Scenarios to identify Long-Term Transmission Needs. We believe that other parts of this final order enable transmission providers to account for enhanced reliability and Interregional Transfer Capability by modeling sensitivities and using certain transmission benefits. As discussed below, we require transmission providers to develop at least one sensitivity analysis, applied to each Long-Term Scenario, to account for uncertain operational outcomes during multiple concurrent and sustained generation and/or transmission outages due to an extreme weather event across a wide area that determine the benefits of or need for Long-Term Regional Transmission Facilities. As discussed in the Evaluation of the Benefits of Regional Transmission Facilities section below, we require transmission providers to measure, and consider as part of Benefit 6, the benefits associated with any increase in Interregional Transfer Capability that a Long-Term Regional Transmission Facility would provide.

c. Treatment of Specific Categories of Factors

i. NOPR Proposal

495. The Commission proposed to require that each Long-Term Scenario that transmission providers use in Long-Term Regional Transmission Planning incorporate and be consistent with Federal, state, and local laws and regulations that affect the future resource mix and demand; Federal, state, and local laws and regulations on decarbonization and electrification; and state-approved integrated resource plans and expected supply obligations for load-serving entities. The Commission preliminarily found that it is reasonable to require transmission providers to assume that legally binding obligations and state utility regulator-approved plans will be followed and that expected supply obligations for load-serving entities will be fully met. As a result, the Commission explained that, under the proposal, transmission providers cannot discount the factors included in the categories of Federal, state, and local laws and regulations that affect the future resource mix; Federal, state, and local laws and regulations on decarbonization and electrification; and state-approved integrated resource plans and expected

¹⁰⁸⁷ Invenenergy Reply Comments at 11 (citing US DOE Initial Comments at 13).

¹⁰⁹² ELCON Initial Comments at 8.

¹⁰⁹³ AEE Reply Comments at 20.

¹⁰⁹⁴ Grand Rapids NAACP Reply Comments at 2 (citing NASEO Initial Comments at 5).

¹⁰⁹⁵ We define Interregional Transfer Capability for purposes of this final order consistent with the definition of total transfer capability in the Commission's regulations as: "the amount of electric power that can be moved or transferred reliably from one area to another area of the interconnected transmission systems by way of all transmission lines (or paths) between those areas under specified system conditions, or such definition as contained in Commission-approved Reliability Standards." 18 CFR 37.6(b)(1)(vi). In the context of Interregional Transfer Capability, an "area" in the above definition would be a transmission planning region composed of transmission providers.

¹⁰⁹⁶ PJM Initial Comments at 6, 13, 65–67.

supply obligations for load-serving entities.¹⁰⁹⁷

496. In addition, the Commission proposed to require that each Long-Term Scenario that transmission providers use in Long-Term Regional Transmission Planning include trends in technology and fuel costs within and outside the electricity supply industry, including shifts toward electrification of buildings and transportation; resource retirements; and generator interconnection requests and withdrawals. For these particular categories of factors, the Commission proposed to provide transmission providers with flexibility in how they incorporate each factor into Long-Term Scenarios as long as transmission providers identify and publish specific factors for each of these categories, as further described below.¹⁰⁹⁸

497. Further, the Commission proposed to require that each Long-Term Scenario incorporate utility and corporate goals and Federal, state, and local goals that affect the future resource mix and demand. However, the Commission acknowledged that these categories of factors are less binding and more likely to change over time, and therefore their impact on the future resource mix and demand are less certain, than other categories of factors. For this reason, the Commission preliminarily found that it may be appropriate for transmission providers to discount such goals to account for this uncertainty. The Commission explained that transmission providers would not be required to assume that utility and corporate goals and Federal, state, and local goals that affect the future resource mix will be fully met.¹⁰⁹⁹

ii. Comments

498. Several commenters, that generally support the NOPR proposal, support discounting and rebut arguments opposing discounting.¹¹⁰⁰ NRECA, Exelon, and TAPS argue that the NOPR proposal to allow transmission providers to discount some categories of factors while weighing factors in other categories more heavily strikes an appropriate balance.¹¹⁰¹ Specifically, Exelon supports the NOPR

proposal to allow for variation in the treatment of different categories of factors such as legislated energy policy, which it states should not vary by scenario, and non-binding targets, which it states may be discounted yet are important to consider.¹¹⁰² TAPS also supports the proposed flexibility in how transmission providers incorporate factors that are not Federal, state, and local laws and regulations, state-approved integrated resource plans, and expected supply obligations for load-serving entities.¹¹⁰³

499. Some commenters express concerns that the NOPR proposal would allow transmission providers in each transmission planning region to discount, or not fully incorporate, some factors when developing Long-Term Scenarios.¹¹⁰⁴ Clean Energy Associations state that certain factors (*i.e.*, Federal, state, and local policies, utility integrated resource plans, generator retirements, interconnection requests, corporate commitments, and trends in technology and fuel costs) can be quantified and should be reflected in Long-Term Scenarios without discounting.¹¹⁰⁵ Clean Energy Buyers are concerned that the flexibility proposed in the NOPR for transmission providers to incorporate into their Long-Term Scenarios the categories of factors that include trends in fuel costs and technologies both inside and outside the electricity supply industry, including regarding shifts in electrification of transport and buildings, resource retirements, and generator interconnection requests and withdrawals, could delay the transmission build-out.¹¹⁰⁶ ACEG recommends that the Commission presume that all factors are required to be incorporated (and not discounted or only considered) unless the Commission approves a request from the transmission providers in a transmission planning region not to include a factor.¹¹⁰⁷ In response, California Municipal Utilities argue that mandating the use of specific factors would not account for the cost consequences of such mandates, which must be considered for any transmission

planning requirements to be just and reasonable.¹¹⁰⁸

500. Several commenters object to the Commission's proposal to provide transmission providers with the flexibility to discount utility and corporate and Federal, state, and local goals that affect the future resource mix and demand.¹¹⁰⁹ Amazon states that transmission providers should not be allowed to discount clean energy goals in their development of Long-Term Scenarios without proving such discounting is just and reasonable by showing evidence that such goals have been unfulfilled in the past, or that those goals have been altered or abandoned.¹¹¹⁰

501. PIOs state that the NOPR proposal to discount Factor Category Seven would allow transmission providers to game the results if their incentives are contrary to consumers' goals.¹¹¹¹ SEIA urges the Commission to limit the flexibility given to transmission providers regarding this factor because SEIA believes that they would ignore certain factors if consideration is not mandatory.¹¹¹² Further, Clean Energy Associations argue that utility, corporate, and Federal, state, and local goals should be fully incorporated, without discounting targets not enshrined in law or regulation. If necessary, Clean Energy Associations contend, changes in non-binding obligations could be treated as a sensitivity or probabilistic change in one or more scenarios to determine how they might affect transmission development.¹¹¹³

502. PIOs state that, when utilities make commitments affecting the future resource mix and consumer demand, they should be held to them and that granting transmission providers complete discretion to discount such factors could undermine the goals of the NOPR proposal. Thus, PIOs state, the Commission should set minimum requirements for some factors, including for incorporating corporate commitments into future resource mix estimates.¹¹¹⁴ PIOs assert that widespread support exists for these

recommendations, citing ELCON as an example.¹¹¹⁵

503. Pine Gate argues that transmission providers should be required to assume that utility and corporate and Federal, state, and local goals that affect the future resource mix will be fully met in at least one of their Long-Term Scenarios.¹¹¹⁶

504. In addition, Pattern Energy argues that the Commission should distinguish between generation assumptions and demand assumptions for purposes of 20-year transmission planning so that there is no ambiguity. For example, Pattern Energy states that transmission providers should not be permitted to utilize their planning for load growth to satisfy the requirement to plan for changing resources and demand. Pattern Energy asserts that transmission providers should be required to distinguish between modeling a changing resource mix and, separately, a changing demand profile, arguing that both are important and should be considerations in near-term and long-term transmission planning.¹¹¹⁷

505. NYISO argues that the final order should permit transmission providers to appropriately account for, in coordination with state and local entities and stakeholders, the likely effect of applicable laws and regulations on the need for transmission and to realistically appraise achievement of such laws and regulations.¹¹¹⁸

506. Some commenters oppose the NOPR proposal to require that transmission providers incorporate applicable local laws and regulations in their development of Long-Term Scenarios.¹¹¹⁹ Duke explains that although local laws and regulations for decarbonization and electrification may affect the resource mix and demand at the local level, it is unclear how such laws would have a material effect on regional transmission planning that warrants the additional burden of tracking and incorporating them into Long-Term Scenarios.¹¹²⁰ Alabama Commission argues that local laws, regulations, and goals might change or conflict with the policy perspectives of other states.¹¹²¹ PPL claims that the

NOPR proposal is impractical and will significantly increase uncertainty, which in turn will invite disagreement and litigation.¹¹²² PJM recommends that the Commission require transmission providers to only consider local laws, local regulations, and local goals to the extent that such laws, regulations, and goals are brought to their attention by states, other local regulators, or stakeholders.¹¹²³

iii. Commission Determination

(a) Treatment of Factors in the First Three Categories

507. With regard to the first three categories of factors,¹¹²⁴ we require transmission providers in each transmission planning region to assume that legally binding obligations (*i.e.*, Federal, federally-recognized Tribal, state, and local laws and regulations) are followed, state-approved integrated resource plans are followed, and expected supply obligations for load-serving entities are fully met. Therefore, we require that each Long-Term Scenario account for and be consistent with, and not discount, factors in the first three categories of factors once the transmission providers have determined that such a factor is likely to affect Long-Term Transmission Needs. We believe it is necessary to prohibit discounting of factors in the first three categories of factors because they are more certain drivers of Long-Term Transmission Needs, relative to factors in other factor categories.

508. We clarify that transmission providers may rely on the open and transparent stakeholder process discussed below to identify the factors in the first three required categories of factors. More specifically, this final order does not obligate transmission providers to independently identify all of the factors in the first three categories of factors. We believe that it would be unduly burdensome and potentially impractical for transmission providers to independently identify all of the potential factors in the first three categories of factors, which will include numerous Federal, federally-recognized Tribal, state, and local laws and regulations, as well as integrated

resource plans and expected supply obligations for load-serving entities.¹¹²⁵ However, transmission providers may, if they choose, independently identify factors in the first three categories of factors as part of the stakeholder process, discussed further in the Stakeholder Process and Transparency section below.

509. We believe that this clarification addresses PJM's request that we clarify that the burden of making the transmission provider aware of laws, regulations, and goals rests with stakeholders and not with the transmission provider itself.¹¹²⁶ We also believe that this clarification mitigates the potential administrative burdens and compliance risks identified by ISO-NE, as well as the burden of incorporating factors identified by SPP.¹¹²⁷

510. In addition, as clarified above, transmission providers retain the discretion to determine whether particular factors, including those in the first three categories of factors, that stakeholders identify are likely to affect Long-Term Transmission Needs. Thus, transmission providers may determine, for example, that some stakeholder-identified local laws and regulations that fall within Factor Categories One and Two are unlikely to affect Long-Term Transmission Needs and therefore need not be accounted for in the development of Long-Term Scenarios. We believe that this clarification addresses concerns about the additional burden some commenters identified of tracking and incorporating local laws and regulations into the development of Long-Term Scenarios, as well as concerns that the inclusion of local laws and regulations in the first two categories of factors creates a burden for transmission providers to account for factors that are unlikely to affect Long-Term Transmission Needs.¹¹²⁸

511. We believe that the open and transparent stakeholder process

¹¹²⁰ Duke Initial Comments at 13.

¹¹²¹ Alabama Commission Initial Comments at 5–6.

¹¹²² PPL Initial Comments at 7–8.

¹¹²³ PJM Reply Comments at 38 (citing PJM Initial Comments at 68).

¹¹²⁴ As explained above, the first three categories of factors are: (1) Federal, federally-recognized Tribal, state, and local laws and regulations affecting the resource mix and demand; (2) Federal, federally-recognized Tribal, state, and local laws and regulations on decarbonization and electrification; and (3) state-approved integrated resource plans and expected supply obligations for load-serving entities.

¹¹²⁵ The Commission has previously found that transmission providers “cannot later be faulted” for failing to consider projections of a need for service from a point-to-point transmission customer if such projections are not provided by the transmission customer. Order No. 890, 118 FERC ¶ 61,119 at P 487; *id.* (“We also believe that it is appropriate to require point-to-point customers to submit any projections they have of a need for service over the planning horizon and at what receipt and delivery points If the point-to-point customers do not submit such projections, then the transmission provider cannot later be faulted for failing to consider planning scenarios that might have taken into account reasonable projections of future system uses that were not the subject of specific service requests.”).

¹¹²⁶ PJM Initial Comments at 68.

¹¹²⁷ ISO-NE Initial Comments at 26–27; SPP Initial Comments at 7–8.

¹¹²⁸ Duke Initial Comments at 13.

discussed below in the Stakeholder Process and Transparency section will help transmission providers to ensure that each Long-Term Scenario accounts for factors in the first three categories of factors without discounting the effects of those factors on Long-Term Transmission Needs. We expect that transmission providers will rely, at least in part, on information that relevant Federal, state, and local government entities, federally-recognized Tribes, utilities, and load-serving entities provide during the required open and transparent stakeholder process to determine if specific factors are likely to affect Long-Term Transmission Needs and how to account for those specific factors in Long-Term Scenarios. We agree with NYISO regarding the value of coordination and clarify that transmission providers may work in coordination with government entities and stakeholders to determine how applicable laws and regulations may affect Long-Term Transmission Needs.¹¹²⁹

512. We recognize that some commenters raise concerns as to whether factors in the first three categories of factors can be fully achieved (*e.g.*, a legislative requirement is met) or may have various levels of impact on Long-Term Transmission Needs.¹¹³⁰ At the outset, we find it appropriate to assume legally binding obligations are met, unless and until there is a change in law. Government entities have an interest and ability to ensure that the requirements of laws and regulations are fully achieved. Similarly, utilities and load-serving entities, as well as the relevant retail regulator, have an interest in developing accurate integrated resource plans and expected supply obligations that can be fully achieved. Even in the limited circumstances in which these factors are not fully achieved, we expect the targets or requirements associated with these factors will be informative for purposes of identifying Long-Term Transmission Needs. We acknowledge that, for certain factors, there may be insufficient information for transmission providers to determine, or stakeholder disagreement about, how the factor will affect Long-Term Transmission Needs. In such instances, we clarify that transmission providers have discretion over how to account for a factor in the first three categories of factors in their Long-Term Scenarios as long as the assumptions in each Long-Term Scenario are consistent with legally binding obligations, state-approved

integrated resource plans, and expected supply obligations of load-serving entities.

513. For example, when a legally binding obligation sets a minimum requirement or threshold (*e.g.*, a state law requiring the deployment of at least 5 gigawatts of electric storage resources by 2030), transmission providers may develop Long-Term Scenarios assuming either the minimum amount of the requirement or more than the minimum amount of the requirement (*e.g.*, modeling 10 gigawatts of electric storage resources deployed by 2030 instead of the minimum 5 gigawatts) but may not develop any Long-Term Scenarios that are inconsistent with that minimum (*e.g.*, modeling only 2 gigawatts of electric storage resources deployed by 2030). We believe that these clarifications sufficiently address PPL's concerns regarding the uncertainty associated with how transmission providers are expected to translate factors, including local laws and regulations, into Long-Term Scenarios.¹¹³¹ We note that the requirement, discussed further below, that Long-Term Scenarios be plausible and diverse also clarifies how transmission providers must account for factors in the Long-Term Scenarios. That is, while transmission providers can model assumptions that exceed the minimum requirements of factors in the first three categories in developing Long-Term Scenarios, they can only exceed those minimum requirements such that each Long-Term Scenario remains plausible.¹¹³² Similarly, the requirement that Long-Term Scenarios be diverse ensures that transmission providers will model the effect of factors on Long Term Transmission Needs in different ways, and thus that Long-Term Scenarios help to manage uncertainty over how factors will affect Long-Term Transmission Needs.

514. We disagree with ISO-NE's claim that requiring that each Long-Term Scenario account for and consistently reflect the first three categories of factors would unnecessarily prevent testing of variations with these categories of factors. Where a factor's effect is not clear on its face, transmission providers have discretion, within reason, to determine the likely effect of full achievement of the factor and reflect that into development of the Long-Term Scenarios. Transmission providers also

are not limited to assuming only the minimum requirements of a factor are fully achieved in developing the Long-Term Scenarios.

515. We also are unpersuaded by commenter claims that local laws and regulations might conflict with state laws and regulations and, therefore, we should not include local laws and regulations in the first two categories of factors.¹¹³³ However, we acknowledge that there may be limited circumstances when two legally binding factors have conflicting or opposite implications for Long-Term Transmission Needs. We clarify that, in such circumstances, transmission providers shall reconcile this information while giving full effect to the maximum extent possible to all legally binding factors. For example, where two laws have equal and opposite effect, transmission providers may need to incorporate them as negating each other, as necessary to comply with the requirement to produce plausible Long-Term Scenarios. In circumstances when that is not possible because the legally binding factors support alternatives to the same assumption used to develop Long-Term Scenarios, transmission providers could use two or more of the three required Long-Term Scenarios, or develop additional Long-Term Scenarios, to capture the differences implied by each of the conflicting factors.

(b) Treatment of Factors in the Last Four Categories

516. We affirm that transmission providers have additional discretion in how they account for each factor in the last four categories of factors compared to how they account for each factor in the first three categories.¹¹³⁴ After transmission providers have determined that a specific factor, stakeholder-identified or otherwise, is likely to affect Long-Term Transmission Needs over the transmission planning horizon, transmission providers must then assess the extent to which the anticipated effects on Long-Term Transmission Needs due to that factor are likely to be realized in full, in part, or exceeded, for purposes of developing a plausible and diverse set of Long-Term Scenarios. For example, for a corporate commitment

¹¹³³ Alabama Commission Initial Comments at 5–6; PJM Initial Comments at 68.

¹¹³⁴ As explained above, the last four categories of factors are: (4) trends in fuel costs and in the cost, performance, and availability of generation, electric storage resources and building and transportation electrification technologies; (5) resource retirements; (6) generator interconnection requests and withdrawals; (7) utility and corporate commitments and Federal, federally-recognized Tribal, state, and local policy goals that affect Long-Term Transmission Needs.

¹¹³¹ PPL Initial Comments at 8.

¹¹³² Likewise, as discussed in the Treatment of Factors in the Last Four Categories section, transmission providers may only discount the effect of factors in the last four categories on Long-Term Transmission Needs such that each Long-Term Scenario remains plausible.

¹¹²⁹ NYISO Initial Comments at 23.

¹¹³⁰ *Id.*

identified in Factor Category Seven, transmission providers can make a determination that only a fraction of that corporate commitment will actually be met, and the transmission providers can subsequently model more limited effects on Long-Term Transmission Needs due to that factor, in some or all Long-Term Scenarios. Likewise, transmission providers may put more weight on the factor by modeling more than the projected change in some or all Long-Term Scenarios to reflect the transmission providers' view regarding the likelihood that the anticipated effects on Long-Term Transmission Needs due to that factor will occur. Transmission providers may choose to discount or put more weight on the effects on Long-Term Transmission Needs due to factors in Factor Categories Four through Seven to account for uncertainty when developing plausible and diverse Long-Term Scenarios.

517. Several commenters generally support this flexibility to treat the last four categories of factors differently from the first three.¹¹³⁵ We believe that requiring transmission providers to incorporate the last four categories of factors, but allowing transmission providers to discount the effects of factors within these categories, strikes an appropriate balance between requiring factors in these categories be given full weight, and allowing them to be excluded entirely in developing Long-Term Scenarios. We believe that these categories of factors affect Long-Term Transmission Needs, and absent a requirement to incorporate them, transmission providers may fail to identify, evaluate, and select more efficient or cost-effective Long-Term Regional Transmission Facilities to address those Long-Term Transmission Needs. On the other hand, these categories of factors are less certain than the first three categories and should not necessarily be given the same weight in developing Long-Term Scenarios as factors that are legally binding.

518. We disagree with the concern that this flexibility could allow transmission providers to ignore the last four factor categories¹¹³⁶ because the final order requires transmission providers to incorporate all categories of factors in each Long-Term Scenario,

even if they discount specific factors within the category, and requires that all Long-Term Scenarios be plausible.¹¹³⁷ We reiterate that transmission providers may only discount the effects of factors in these categories on Long-Term Transmission Needs such that each Long-Term Scenario remains plausible.

d. Stakeholder Process and Transparency

i. NOPR Proposal

519. The Commission proposed to require that transmission providers identify and publish on an Open Access Same-Time Information System (OASIS) or other public website a list of the factors that fall into each of the required categories of factors that they will incorporate in their development of Long-Term Scenarios. The Commission explained that transmission providers would be responsible for identifying all the factors they know of and are considering incorporating in the development of Long-Term Scenarios as part of Long-Term Regional Transmission Planning. The Commission also proposed to require transmission providers to revise the regional transmission planning processes in their OATTs to outline an open and transparent process that provides stakeholders, including states, with a meaningful opportunity to propose potential factors that transmission providers must incorporate in their development of Long-Term Scenarios, such as specific laws, regulations, goals, and commitments, and to provide input on how to appropriately discount factors that are less certain.¹¹³⁸

520. The Commission noted that, under Order No. 1000, transmission providers must already have procedures in their OATTs that give stakeholders a meaningful opportunity to submit proposed transmission needs driven by Public Policy Requirements and that allow transmission providers to identify, out of the larger set of potential transmission needs driven by Public Policy Requirements that stakeholders propose, those needs for which transmission facilities will be evaluated.¹¹³⁹ Therefore, the Commission explained that transmission providers may be able to modify and expand these existing procedures for identifying transmission needs driven by Public Policy

Requirements to meet these proposed requirements regarding the identification of factors for incorporation into Long-Term Scenarios.¹¹⁴⁰

ii. Comments

(a) State Input

521. Several commenters emphasize the important role of stakeholders, including states, in identifying or commenting on the factors to be included in the development of Long-Term Scenarios.¹¹⁴¹ In addition, Southeast PIOs note that states do not currently engage in regional transmission planning processes to any meaningful degree, and therefore, the Commission should encourage their participation in shaping and conducting Long-Term Regional Transmission Planning.¹¹⁴²

522. Some commenters discuss the important role of states in identifying factors within specific category of factors.¹¹⁴³ DC and MD Offices of People's Counsel assert that the final order should explicitly require information on the factors to be provided by appropriate authorities, such as state agencies.¹¹⁴⁴ New Jersey Commission supports the Commission's proposal to require that states have a meaningful opportunity to propose potential factors to be incorporated into the development of Long-Term Scenarios and to provide input on appropriately discounting less certain factors.¹¹⁴⁵ NESCOE asserts that, if states do not play a central role in determining the factors, the proposed reforms will likely run into the problem that underlies the Order No. 1000 public policy transmission planning process in New England, where states do not have a decision-making role over project selection even though state laws or policies could be the driver for the project.¹¹⁴⁶

523. However, other commenters state that their existing processes are adequate for determining the relevant factors to include in Long-Term

¹¹³⁹ *Id.* P 110 (citing Order No. 1000, 136 FERC ¶ 61,051 at PP 206–207; Order No. 1000–A, 139 FERC ¶ 61,132 at P 335).

Regional Transmission Planning.¹¹⁴⁷ PJM states that it currently has processes and standing committees that allow states and stakeholders to participate in discussions of factors to use in its transmission planning processes. For example, PJM asserts that its Independent State Agencies Committee is set up to receive feedback on transmission planning from states, and it discusses, among other things, assumptions used in the models, relevant regulatory initiatives and their impact, and alternative sensitivities, as well as what was discussed at other committee meetings. In addition, PJM states, it vets all proposed transmission solutions with its Transmission Expansion Advisory Committee before submitting them to the PJM board for approval.¹¹⁴⁸

(b) Transparency, Enforcement, and Accuracy

524. Cross Sector Representatives state that Long-Term Regional Transmission Planning processes should provide transparency for impacted stakeholders.¹¹⁴⁹ SEIA argues that the Commission should adopt clear, uniform language that sets forth the specific goals and deliverables from the proposed Long-Term Regional Transmission Planning process for transmission providers to include in their tariffs, including language that mirrors the proposed list of categories of factors the Commission included in the NOPR.¹¹⁵⁰

525. Several commenters support the NOPR proposal to require transmission providers to post the list of factors that they will incorporate into their Long-Term Scenarios on a public website for stakeholder comment.¹¹⁵¹ Pine Gate recommends that the Commission further require that transmission providers identify and publish all factors that were considered but not incorporated.¹¹⁵²

526. Clean Energy Buyers state that, to ensure transparency and just and reasonable rates, the Commission should require that transmission providers post the details regarding any proposed or adopted discounting of factors on OASIS, including: (1) which

factors are to be discounted; (2) the extent of the discounting; and (3) the justification for and derivation of the amount of discounting deemed appropriate.¹¹⁵³

527. GridLab and R Street propose modifications to the NOPR proposal regarding the role of stakeholders.¹¹⁵⁴ GridLab proposes that state agencies, other stakeholders, and independent experts could play a dominant role in enforcing the Commission's requirement to incorporate specific categories of factors, and that the Commission would provide a common framework establishing guidelines on the kinds of factors that transmission providers should consider, at a minimum, in developing Long-Term Scenarios.¹¹⁵⁵ In addition, R Street argues that governance mechanisms should drive the selection of data sets, methods, and assumptions behind these factors to promote objective accuracy.¹¹⁵⁶

iii. Commission Determination

528. We adopt the NOPR proposal, with modification, to require transmission providers in each transmission planning region to revise the regional transmission planning processes in their OATTs to outline an open and transparent process that provides stakeholders, including federally-recognized Tribes and states, with a meaningful opportunity to propose potential factors and to provide timely input on how to account for specific factors in the development of Long-Term Scenarios.¹¹⁵⁷ As discussed below, we also adopt the NOPR proposal, with modification, to require transmission providers to publish on the public portion of an OASIS or other public website: (1) the list of the factors in each of the seven required categories of factors that they will account for in their Long-Term Scenarios; (2) a description of each factor that they will account for in their Long-Term Scenarios; (3) a general statement explaining how they will account for each of those factors in their Long-Term Scenarios; (4) a description of the extent to which they will discount any factors in Factor Categories Four through Seven in each Long-Term Scenario; and (5) a

list of the factors that they considered but did not incorporate in their Long-Term Scenarios.

529. We believe that a robust stakeholder process will ensure that transmission providers can identify which, and how, specific factors might influence Long-Term Transmission Needs over the transmission planning horizon. For this reason, consistent with Order No. 890's transmission planning principles,¹¹⁵⁸ we require transmission providers to give stakeholders a meaningful opportunity to provide timely input on how and what information to incorporate in Long-Term Scenarios, including how to account for a specific factor in terms of how the factor may affect Long-Term Transmission Needs. We clarify that this meaningful opportunity for stakeholders to provide timely input includes the opportunity to propose factors, provide information and identify sources of best available data, propose how a factor may affect Long-Term Transmission Needs, and explain how that factor could be reflected in the development of Long-Term Scenarios, including the extent to which it is appropriate to discount the effects of certain factors on Long-Term Transmission Needs. We note that some transmission providers have existing processes in place that allow states and stakeholders to participate in discussions of factors, which transmission providers can propose, with any necessary modifications, to comply with this final order.¹¹⁵⁹

530. We believe that affording stakeholders a meaningful opportunity to propose potential factors and to provide input on how to account for specific factors in the development of Long-Term Scenarios will help transmission providers to develop more accurate assumptions to serve as the basis for their Long-Term Scenarios. Specifically, with stakeholder input, transmission providers will be in a better position to determine which specific factors within each category of factors they should account for in the development of Long-Term Scenarios, as well as how best to incorporate them. Stakeholder input is particularly important for factors in the first three categories of factors because Federal, state, and local government entities, federally-recognized Tribes, and utilities, load-serving entities, and their retail regulators that participate in the stakeholder process are distinctly

¹¹⁵⁵ GridLab Initial Comments at 21.

¹¹⁵⁶ R Street Initial Comments at 7.

¹¹⁵⁷ As an example, transmission providers would provide stakeholders with an opportunity to describe how a specific state law in the first category of factors will result in the development of new resources of a certain type, the retirement of existing resources, or changes in demand patterns due to increased electrification.

¹¹⁵⁸ See, e.g., Order No. 890, 118 FERC ¶61,119 at P 454.

¹¹⁵⁹ MISO Initial Comments at 34–35; PJM Initial Comments at 6, 64, 70–71.

positioned to provide transmission providers with vital information on how the factors over which they have authority or govern are likely to influence Long-Term Transmission Needs over the transmission planning horizon. Similarly, utilities, corporations, and governments that participate in the stakeholder process are distinctly positioned to provide transmission providers with vital information regarding factors in Factor Category Seven: utility and corporate commitments and Federal, federally-recognized Tribal, state, and local policy goals that affect Long-Term Transmission Needs. The required stakeholder process ensures that all stakeholders, including states, can provide important and useful information concerning factors that they believe will affect Long-Term Transmission Needs.

531. We recognize that different stakeholders may provide information about the same factor that is contradictory—an issue identified by some commenters.¹¹⁶⁰ Different stakeholders may also provide different analyses showing, for example, how a specific factor will affect resource additions and retirements. However, as we explain earlier, transmission providers have discretion regarding how to account for specific factors in their development of Long-Term Scenarios. In reviewing the information provided by stakeholders in the open and transparent stakeholder process, transmission providers may weigh more heavily one source of information over another. To maintain transparency for stakeholders, transmission providers must include a general statement explaining how they will account for each factor in their Long-Term Scenarios on the public portion of an OASIS or other public website, as further described below.

532. We also believe that the information provided in the open and transparent stakeholder process will reduce the burden placed on transmission providers to identify and assess the impact of relevant factors for each category. For example, transmission providers can rely on the open and transparent stakeholder process to identify the multiple relevant local laws and regulations that are likely to influence Long-Term Transmission Needs over the transmission planning horizon. The same is true for the utility and corporate commitments and Federal, federally-recognized Tribal, state, and local policy goals that affect

Long-Term Transmission Needs in Factor Category Seven. During the stakeholder process, government entities, utilities, and corporate entities can identify their publicly announced goals and provide feedback on how the transmission providers can account for these publicly announced goals in Long-Term Scenarios. These entities will have an opportunity to provide information to help the transmission providers determine the likelihood that they will achieve their stated goals, which the transmission providers can then use to discount the specific factors in Factor Category Seven, if necessary.

533. With regard to the information about factors and categories of factors that transmission providers must publish on the public portion of an OASIS or other public website, we modify the proposal in the NOPR. We require transmission providers to publish on the public portion of an OASIS or other public website: (1) the list of the factors in each of the seven required categories of factors that they will account for in their Long-Term Scenarios; (2) a description of each factor that they will account for in their Long-Term Scenarios; (3) a general statement explaining how they will account for each of these factors in their Long-Term Scenarios; (4) a description of the extent to which they will discount any factors in Factor Categories Four through Seven in each Long-Term Scenario; and (5) a list of the factors that they considered but did not incorporate in their Long-Term Scenarios.¹¹⁶¹ Transmission providers must post this information after stakeholders, including states, have had the meaningful opportunity to propose potential factors and to provide input on how to account for specific factors in the development of Long-Term Scenarios.

534. We believe that this transparency is necessary to make clear to stakeholders which specific factors transmission providers incorporate into Long-Term Scenarios and how they incorporate those factors. We believe the posting requirement will also provide greater transparency into how transmission providers develop Long-Term Scenarios (discussed below), as some commenters requested, while still providing transmission providers with flexibility regarding whether, and if so, how they choose to incorporate relevant factors.

535. In response to commenters requesting additional transparency,¹¹⁶² we require transmission providers to publish on the public portion of an OASIS or other public website the factors that were considered but not accounted for in the development of Long-Term Scenarios. We believe this requirement will help stakeholders understand which factors, either identified in the stakeholder process or independently identified by a transmission provider, the transmission providers in a transmission planning region have determined are unlikely to affect Long-Term Transmission Needs. This transparency also ensures that stakeholder-proposed factors are reviewed in a fair and non-discriminatory manner.

536. We decline to require transmission providers to publicly publish the justification for and derivation of the amount of discounting deemed appropriate, as requested by Clean Energy Buyers.¹¹⁶³ We believe such a requirement to detail the rationale for the treatment of each factor in Factor Categories Four through Seven, across all Long-Term Scenarios, would create a time-consuming administrative burden for transmission providers that is not justified by the value of the additional information provided to stakeholders.

537. We decline to adopt modifications to the NOPR proposal that would diminish the role of the transmission providers in developing Long-Term Scenarios.¹¹⁶⁴ Transmission providers must provide stakeholders with a meaningful opportunity to propose potential factors and to provide input on how to incorporate specific factors in the development of Long-Term Scenarios, as described above. However, we reiterate that transmission providers are not required to incorporate stakeholder-identified factors into their development of Long-Term Scenarios merely because stakeholders propose them, if transmission providers determine that the factor is unlikely to influence Long-Term Transmission Needs over the transmission planning horizon. Consistent with Order No. 890, the ultimate responsibility for transmission planning remains with the transmission provider.¹¹⁶⁵

¹¹⁶² E.g., Pine Gate Initial Comments at 25.

¹¹⁶⁴ E.g., GridLab Initial Comments at 20–21; R Street Initial Comments at 7.

¹¹⁶⁵ Order No. 890, 118 FERC ¶ 61,119 at P 454.

There, in response to the suggestion by some commenters that we require transmission providers

¹¹⁶⁰ E.g., Undersigned States Initial Comments at 3 (citing NOPR, 179 FERC ¶ 61,028 at P 106).

¹¹⁶¹ As discussed above, transmission providers may not discount factors in Factor Categories One through Three.

4. Number and Development of Long-Term Scenarios

a. NOPR Proposal

538. In the NOPR, the Commission proposed to require transmission providers to develop at least four distinct Long-Term Scenarios as part of Long-Term Regional Transmission Planning at least once during a transmission planning cycle.¹¹⁶⁶ The Commission explained that it preliminarily found that using at least four distinct Long-Term Scenarios is a reasonable lower bound for the number of Long-Term Scenarios that transmission providers must evaluate in Long-Term Regional Transmission Planning. The Commission explained that this minimum number of Long-Term Scenarios would help to ensure that transmission providers conduct Long-Term Regional Transmission Planning that identifies more efficient or cost-effective regional transmission facilities to meet transmission needs driven by changes in the resource mix and demand. The Commission explained that to satisfy this requirement, transmission providers could develop a base case and three alternatives, or a low-, medium-, and high-level assumption for the factors that transmission providers (and their stakeholders) believe to be important to conduct Long-Term Regional Transmission Planning to more efficiently or cost-effectively meet transmission needs driven by changes in the resource mix and demand, along with a scenario that accounts for a high-impact, low-frequency event (as discussed below).¹¹⁶⁷

539. Consistent with the Order No. 890 transparency transmission planning principle,¹¹⁶⁸ the Commission proposed to require transmission providers in
