Comments were mixed on the need for and potential breadth of this requirement. The Board received several comments, primarily from investors and investor-related groups, suggesting that the proposed requirement did not go far enough. Some commenters stated that the oversight function should not be limited to one individual but instead a larger number (such as three) of independent non-employee members should be required, or potentially an advisory council or committee of the firm's board of directors with multiple or even a majority of independent non-employee members. Some of these commenters asserted that requiring only one person with undefined authority to serve in an oversight role makes it unlikely to be effective and falls short of the 2008 recommendations of the U.S. Treasury Department's Advisory Committee on the Auditing Profession, which suggested consideration of "firms appointing independent members with full voting power to firm boards and/or advisory boards with meaningful

governance responsibilities."¹⁸⁴ One commenter objected that the requirement only mandates practices that are already in place at the largest firms, and so will not generate any change. Another commenter asserted that there is little merit in requiring an independent member of the firm's oversight function without also considering the balance of the oversight function and the contribution of the independent member. Others called for more specificity about the individual's role, including specific powers, such as the power to meet with firm management and obtain relevant information. Some investor-related groups also called for transparency on the role of the non-employee members.

Many commenters, including some larger firms, supported the oversight role. Two commenters suggested that the requirement for an independent oversight function be extended to apply to all firms that issue audit reports for issuers and one of these commenters suggested having firms consider whether an independent function is an appropriate response to achieving the quality objectives.

Other commenters, including some mid-sized firms, did not support the specified quality response and suggested it should be a quality objective instead. One firm suggested that the objective could be better accomplished by designating an "audit quality expert" on a firm's board (similar to a "financial expert" on an audit committee) or by hiring independent external QC advisers. Some commenters expressed concern about the lack of specificity and clarity regarding the role, including questions regarding the individual's authority and function. One noted that the individual was not required to be a CPA and asserted that the need for and benefits of the role had not been sufficiently articulated; on that basis, the commenter did not support it. Another commenter did not see the linkage between the specified quality response and the quality objectives and suggested that the lack of definition of the role, coupled with a lack of clarity about which quality objectives were being addressed, would make implementation challenging. Other commenters stated that finding individuals to fill this role may be challenging.

Some commenters requested guidance on how to implement the requirement, including with respect to the qualifications or roles of the

individuals. One firm sought clarity on whether supervisory liability under Sarbanes-Oxley section 105(c)(6) would apply equally to members with an oversight or advisory function. Some commenters, including firms, expressed concern about the potential scope and meaning of the terms such as "governance structure," "independent judgment," and "oversight function," and requested confirmation that current practices such as independent advisory boards are a permissible approach. One firm requested an extended implementation period to allow time for firms to design and implement the oversight function, including identifying and onboarding appropriate individuals.

Based on the comments received, the Board refined the proposed requirement to provide additional specificity and clarity. The final rule refers to an "external" oversight function "for the QC system composed of one or more persons," none of whom has a disqualifying relationship with the firm. This more precise language clarifies that the focus is on the QC system and emphasizes that the function is to be carried out entirely by one or more persons external to the firm, who are not principals or employees of the firm and do not have any other relationship with the firm that would interfere with the exercise of independent judgment with regard to QC-related matters. The Board also added a name for the position—External QC Function, or EQCF—which it believes clarifies and underscores that the person or persons are external to the firm and serve in a QC-focused role.¹⁸⁵ The Board also conformed the provision to the descriptions in QC 1000.12 of other specified QC system roles by providing that the EQCF should have the experience, competence, authority, and time necessary to enable them to carry out the responsibilities assigned to them by the firm.

To clarify what is entailed in "an external oversight function for the QC system," the final standard also specifies a baseline requirement that the EQCF's responsibilities should include evaluating, at a minimum, the significant judgments made and the related conclusions reached by the firm when evaluating and reporting on the effectiveness of its QC system. The Board believes this addition is responsive to commenters who requested clarification of the proposal, as well as those suggesting that the

105(c)(6) that provides for commencing a disciplinary proceeding if it appears that a firm or its supervisory personnel have failed reasonably to supervise an associated person who has committed a violation. *See* PCAOB Rule 5200, *Commencement of Disciplinary Proceedings*, at (a)(2); *see also, e.g., In the Matter of Scott Marcello, CPA*, PCAOB Rel. No. 105–2022–004 (Apr. 5, 2022) (imposing sanctions under section 105(c)(6)); *In the Matter of WWC, P.C.*, PCAOB Rel. No. 105–2022–006 (Apr. 19, 2022) (same); *In the Matter of KPMG Inc., Cornelis Van Niekerk, and Coenraad Basson*, PCAOB Rel. No. 105–2022–015 (Aug. 29, 2022) (same).

¹⁸⁴ U.S. Treasury Department, *Advisory Committee on the Auditing Profession Final Report* (Oct. 6, 2008) at VII.8.

¹⁸⁵ Firms may assign other functions to the person or persons serving in the EQCF role so long as the specified QC function can be carried out as set forth in the standard and discussed in this release.

standard include some specific requirements with respect to the role. The Board expects that firms will make a number of significant judgments in performing and reporting on their QC system evaluation. The Board expects that the person or persons serving in this external oversight function will evaluate judgments made by firm personnel in the firm's evaluation of the firm QC system and the required reporting.

The evaluation performed by the EQCF will be in some respects analogous to the EQR's evaluation of significant judgments made by the engagement team and the related conclusions reached in forming the overall conclusion on the engagement and in preparing the engagement report.¹⁸⁶ Like the EQR, the EQCF will review and evaluate work performed by others, not redo the work, and must exercise due professional care in performing their responsibilities.¹⁸⁷

However, there are important differences between the requirements for the EQR and the EQCF. Unlike the EQR standard, QC 1000 does not impose specific limits on the length of service of the EQCF, though firms should consider the potential for arrangements relating to length of service, such as term limits and protections against removal, to prevent the creation of a relationship with the firm that impairs independent judgment. QC 1000 also does not specify the procedures the EQCF should perform to evaluate the significant judgments made and related conclusions reached. These may vary based on the circumstances of the firm and the design, implementation, and operation of its QC system, but must be sufficient to enable the EQCF to perform their evaluation with due professional care. In addition, unlike the EQR standard, QC 1000 does not require that the EQCF provide concurring approval of reporting, although firms would be free to establish such concurring approval as a matter of policy. Documentation will have to be prepared and maintained in sufficient detail to evidence how the quality response operated.¹⁸⁸ This will form part of the QC documentation supporting the firm's ongoing risk assessment and monitoring and remediation efforts, as well as the Board's oversight activities. Under QC

1000.65, firms will be required to consider the EQCF's evaluation in their ongoing monitoring of the QC system (including monitoring of the evaluation process).

Separately, the Board carefully considered commenter suggestions to increase the required number of independent individuals and to establish specific eligibility criteria for them. Given the oversight responsibility of an EQCF, the Board believes at least one person is always necessary and firms may determine, based on their circumstances, that more than one person is needed to appropriately carry out the function. The Board believes the requirement will respond to the quality objective in paragraph .25e by ensuring an independent perspective on QC matters, but it does not supplant firm leadership or relieve them of their fundamental responsibility to instill and maintain a firm culture that appropriately prioritizes QC.

Accordingly, the Board does not believe it would be appropriate to mandate a specific number of individuals or the specific credentials they must have (besides their ability to exercise independent judgment with regard to matters related to the QC system and the general requirement that they have the experience, competence, authority, and time necessary to enable them to carry out their assigned responsibilities). Rather, the decision will be based on specific skillsets of the person or persons in this function to be able to carry out the requirements of the function. In that regard, firms may conclude that one or persons appointed to the EQCF should be non-auditors to bring a greater diversity of perspectives to the function.

Beyond the minimum responsibilities specified in the standard, the Board gave firms flexibility in establishing other responsibilities of the EQCF, enabling the function to best respond to the nature and circumstances of the firm. For example, if the firm has experienced an increase in recurring engagement deficiencies, the firm may charge the EQCF with reviewing and evaluating the firm's remediation actions and monitoring plan. As another example, a firm may assign the EQCF with strategic responsibilities, such as maintaining situational awareness through the identification and monitoring of emerging risks or trends that could potentially affect the firm's QC system. While QC 1000 specifies that the EQCF exercise oversight over the QC system, the firm may also choose to extend its authority more broadly. The responsibilities assigned to the EQCF will in turn drive decisions about

the scope of the EQCF's authority. At a minimum, that will entail sufficient access to information, documentation, and firm personnel to enable evaluation of the significant judgments made and the related conclusions reached by the firm when evaluating and reporting on the effectiveness of its QC system, but it could be broader depending on the scope of the EQCF's responsibilities as assigned by the firm.¹⁸⁹ Consideration of the experience, competence, and time necessary to serve in the role will likewise depend on the responsibilities assigned by the firm.

The firm may consider many matters when establishing an EQCF. Such matters could include:

- The responsibilities assigned by the firm to the EQCF, including those specified in QC 1000;
- The qualifications required of the individual(s) assigned to fulfill those responsibilities, including those specified in QC 1000;
- The scope of authority afforded to the EQCF in light of the assigned responsibilities;
- Whether to establish a direct line of communication from the EQCF to the individual assigned ultimate responsibility and accountability for the QC system as a whole, or the individual assigned operational responsibility for the QC system as a whole, or both;
- Whether to require that the EQCF comply with independence requirements applicable to auditors;¹⁹⁰
- The level of external transparency of the EQCF's role and responsibilities;
- The compensation structure for the EQCF; and
- The term of service for the EQCF, including restrictions on removal and limits on length of service.

In making these determinations, the firm should be mindful of the requirement that members of the EQCF not have any relationship with the firm that would interfere with the exercise of independent judgment with regard to matters related to the QC system.

The EQCF could be, but would not be required to be, in the "chain of command" under the SEC independence rule.¹⁹¹ The Board does not believe that the EQCF would be a "supervisory person" under Sarbanes-Oxley section 105(c)(6) solely by virtue

¹⁸⁹ The scope of the firm policies and procedures regarding the EQCF will also depend on its role and the associated risks. For example, pursuant to QC 1000.53g, firms will have to develop policies and procedures regarding information communicated to and obtained from the EQCF.

¹⁹⁰ See Regulation S-X Rule 2-01(b)-(c), 17 CFR 210.2-01(b)-(c), and PCAOB Rules under Section 3, *Auditing and Related Professional Practice Standards*, Part 5—*Ethics and Independence*.

¹⁹¹ See 17 CFR 210.2-01(f)(8).

¹⁸⁶ See AS 1220.09.

¹⁸⁷ See QC 1000.10; AS 1220.12.

¹⁸⁸ QC 1000.83b. The board expects such documentation to include both (1) how the EQCF evaluated the significant judgments made and the related conclusions reached by the firm when evaluating and reporting on the effectiveness of its QC system and (2) the results of the EQCF's evaluation.

of having evaluated the significant judgments made and related conclusions reached by the firm when evaluating and reporting on the effectiveness of the firm's QC system. However, depending on the nature and degree of their responsibility, ability, or authority to affect the conduct of the firm's associated persons, as established by the firm, the EQCF could be subject to Sarbanes-Oxley section 105(c)(6).

The Board has not required the results of the EQCF's evaluation to be publicly disclosed.¹⁹² However, nothing set forth in this release would limit or prohibit firms from disclosing any information about the EQCF's activities—including the EQCF's practices, methods, or procedures, or the manner or results of the EQCF's evaluation—if the firm chooses.

Based on comments received and experience with inspections of firms' systems of quality control, the Board believes that investors, audit committees, and other stakeholders will benefit from the EQCF's evaluation even in the absence of public disclosure. An external oversight function should enhance the discipline with which the firm carries out its own QC system evaluation. As the Board observe the implementation and performance of the EQCF through its inspection activities, the PCAOB may publish observations or good practices. For these reasons, the Board believes that the EQCF will support improvements in firms' systems of quality control, ultimately benefiting investors, audit committees, and other stakeholders.

People internal and external to the firm can help a firm identify instances of noncompliance with applicable professional and legal requirements earlier than might be possible through the firm's own monitoring.¹⁹³ The proposal included a specified quality response requiring policies and procedures for addressing potential noncompliance with applicable professional and legal requirements and with the firm's policies and procedures with respect to the QC system, the firm's

engagements, firm personnel, or other participants.

This would include clearly defining channels within the firm that enable reporting of complaints and allegations by firm personnel and external parties (e.g., employees of companies or other participants) and establishing procedures for appropriately investigating and addressing such complaints and allegations, including complying with any applicable reporting or other requirements.¹⁹⁴

The proposal sought comment on the appropriateness of this specified quality response, and whether any additional specified quality responses should be considered. Two firms that commented supported the specified quality response. Two other firms expressed concern with the prescriptiveness of other participants being included in the requirement. One investor suggested there should be an explicit requirement for a whistleblower mechanism with key protections such as confidentiality and protection against retaliation, and that the individual responsible for the firm's QC system be responsible for the investigation of whistleblower complaints and remediation of QC issues identified by whistleblowers.

The Board adopted the specified quality response with some modifications, described below. The Board believes that establishing policies and procedures that support the reporting and investigation of potential noncompliance will assist firms in complying with applicable professional and legal requirements. It will also assist them in identifying and dealing with individuals, including those in leadership, who fail to comply with applicable professional and legal requirements or the firm's policies and procedures. Finally, it may result in firm personnel or external parties identifying and communicating deficiencies in the QC system.

The final provision retains the reference to other participants, as the Board believes it is important for the firm to capture any potential noncompliance with applicable professional and legal requirements,

including with regard to work performed by other participants that relates to the firm's QC system or the firm's engagements.

The Board has expanded the requirements related to the firm's policies and procedures for collecting and addressing complaints and allegations to explicitly require that they:

- Be made available to all firm personnel and other participants;
- Address processes and responsibilities for receiving, investigating, and addressing complaints and allegations; and
- Include protecting persons making complaints and allegations from retaliation.

The Board also expanded the specified quality response to require firms that issued audit reports with respect to more than 100 issuers during the prior calendar year to include confidentiality protections in their policies and procedures.

The firm's policies and procedures regarding complaints and allegations should be made available to all firm personnel and other participants, which could occur by posting them on an intranet site or providing such policies and procedures to other participants upon engagement. The policies and procedures should include identifying who is responsible for receiving, investigating, and addressing complaints and allegations; describing the process for submitting complaints and allegations; and describing how the firm will investigate and address complaints and allegations received. The Board also specified that the policies and procedures should explicitly address protection against retaliation of persons making complaints and allegations, which the Board believes is a critical element of any effective program for receiving complaints and allegations.

The required policies and procedures regarding investigating and addressing complaints and allegations allow scalability. The process for investigating and addressing a complaint or allegation would vary, commensurate with and responsive to the significance of the complaint or allegation.

For firms that issued audit reports with respect to more than 100 issuers during the prior calendar year, the policies and procedures will have to provide a confidential and anonymous submission process for complaints and allegations, similar to the requirements for audit committees under the Exchange Act.¹⁹⁵ For example, a firm

¹⁹² For a discussion of certain legal constraints imposed by Sarbanes-Oxley on the Board's ability to require public disclosure of certain QC-related information, see Section IV.L.1.c.ii. As part of a separate project, the Board has proposed a requirement for firms that have an EQCF to disclose the identity of the person or persons, an explanation for the basis of the firm's determination that each such person is independent of the firm (including the criteria used for such determination), and the nature and scope of each such person's responsibilities. See PCAOB Rel. No. 2024-003.

¹⁹³ In addition, through this process information may be received regarding noncompliance with laws and regulations by companies that engage the firm.

¹⁹⁴ A firm's program for addressing complaints and allegations may be subject to requirements under applicable law regarding whistleblowers (such as, for example, N.Y. Labor Law Section 740). However, such a program should not be confused with a whistleblower program established and administered by the Federal government, including the program administered by the SEC, which has its own requirements and protections. See, e.g., 17 CFR 240.21F-1 through .21F-18. To the extent a firm's program for addressing complaints and allegations provides protective measures, such as confidentiality and non-retaliation, based only on firm policy and not on law, such protective measures may not create legally enforceable rights.

¹⁹⁵ See 15 U.S.C. 78j-1(m).

may have a confidential and anonymous submission process through a website, toll-free number, or mobile app, and could manage the process in-house or through a third-party provider. The firm's policies and procedures will also have to provide for protection, during the investigation, of the confidentiality of individuals and entities who make complaints and allegations. The Board believes this requirement specifically targets and responds to potential quality risks that are more likely to arise in audit practices of a certain size and complexity. However, firms that are not subject to this express requirement may nevertheless determine that such requirements are a necessary or appropriate quality response to address their quality risks.

2. Current PCAOB Standards

Existing PCAOB QC standards contain limited references to firm governance and leadership. For example:

- QC 20 acknowledges that the QC system includes the firm's organizational structure;¹⁹⁶
- The SECPS member requirements on independence quality controls provide that the importance of compliance with such independence standards, and the QC standards, should be reinforced by management of the member firm, thereby setting the appropriate tone at the top and instilling its importance into the professional values and culture of the member firm;¹⁹⁷ and
- The SECPS member requirements provide that member firms should communicate to all professional firm personnel the broad principles that influence the firm's quality control and operating policies and procedures on, at a minimum, matters related to the recommendation and approval of accounting principles, present and potential client relationships, and the types of services provided, and inform professional firm personnel periodically that compliance with those principles is mandatory.¹⁹⁸

Ethics and Independence

This component addresses the fulfillment of firm and individual responsibilities under relevant ethics and independence requirements. Adhering to such requirements is a foundational concept that not only promotes audit quality but also safeguards the vital role that auditors play within the capital markets.

The ethics and independence component of the standard has been tailored to the ethics and independence requirements that apply to engagements performed under PCAOB standards. Under the standard, ethics and independence requirements include the PCAOB's ethics and independence standards and rules, the SEC's rule on auditor independence, and other applicable requirements regarding accountant ethics and independence, such as those arising under state law or the law of other jurisdictions (e.g., obligations regarding client confidentiality).¹⁹⁹ The Board clarified that the reference to other applicable requirements is limited to those that are relevant to fulfilling auditor obligations and responsibilities in the conduct of engagements or in relation to the QC system. The standard requires firms to establish quality objectives related to ethics and independence requirements and design and implement specified quality responses.

1. QC 1000

a. Ethics and Independence Quality Objectives (QC 1000.31)

Understanding of and compliance with ethics and independence requirements are fundamental to the auditor's role. Adherence to standards of professional ethics is as important as adherence to requirements regarding auditor independence, and firms' QC systems should address both. Under the standard, firms are required to establish quality objectives that address understanding of and compliance with ethics and independence requirements. While maintaining independence and adhering to ethical requirements is each individual's responsibility, the firm also has responsibility and plays a critical role in ensuring that individuals understand those requirements and have the tools and resources they need to comply.

One firm suggested that the Board clarify the ethical requirements that are subject to the responsibility of the individual assigned operational responsibility for the firm's compliance with ethics and independence

requirements. The firm specifically commented that competence and due care are characteristics required by both ethical standards and QC standards, and as a result, there could be confusion over whether such requirements are ethical requirements or quality control requirements when determining the responsibility of the individual assigned operational responsibility for the firm's compliance with ethical and independence requirements. In some cases, a matter may be applicable to the responsibilities of both the individual assigned operational responsibility for the firm's compliance with ethics and independence requirements and the individual assigned operational responsibility and accountability for the QC system as a whole. A firm could divide responsibilities based on the specific issues involved, so long as the lines of responsibility are clear (for example, duties of competence and due care in the context of the audit, codified under the PCAOB's ethics rules, could be assigned to the individual with operational responsibility for compliance with ethics and independence requirements, while duties of competence and due care in the context of QC system activities, codified in QC 1000, could be assigned to the individual with operational responsibility for the QC system).

Under the standard, the firm is required to establish a quality objective to identify conditions, relationships, events, and activities that could result in violations of ethics and independence requirements and evaluate and respond to such conditions, relationships, events, and activities on a timely basis. This will help the firm reduce the risk of noncompliance by identifying potential violations of ethics and independence requirements in time to prevent many violations and to quickly remediate violations that do occur. For example, a firm that plans to acquire another firm could identify the acquisition as an event that could result in independence violations by the personnel of the acquired entity. This could prompt the firm to develop policies and procedures that address onboarding processes for firm personnel of acquired entities around independence. These policies and procedures would assist in identifying and resolving potential independence violations before the acquisition is completed. One firm commented that as the proposed quality objectives for ethics and independence are broadly consistent with other jurisdictional and international quality control/management standards, it

¹⁹⁶ See QC 20.04.

¹⁹⁷ See SECPS 1000.46.

¹⁹⁸ See SECPS 1000.08(l).

¹⁹⁹ Footnote 10 to QC 1000 provides: Ethics and independence requirements include PCAOB independence and ethics standards and rules, the U.S. Securities and Exchange Commission ("SEC") rule on auditor independence, and other applicable requirements regarding accountant ethics and independence that are relevant to fulfilling their obligations and responsibilities in the conduct of engagements or in relation to the QC system, such as those arising under state law or the law of other jurisdictions. See, e.g., 17 CFR 210.2-01, and PCAOB Rules under Section 3. *Auditing and Related Professional Practice Standards*, Part 5—*Ethics and Independence*.

believes that they are appropriate, and no further changes are needed.

An investor-related group expressed concern that the proposal did not sufficiently address conflicts of interest, such as when an audit firm performs other services for the audited company. The investor-related group further commented that without clear separation between those responsible for quality control and those responsible for maintaining client relationships and winning consulting contracts, investors can have less than full confidence the system of quality control will ensure the necessary level of audit quality. The Board acknowledges that QC 1000 does not create new requirements regarding auditor independence. However, in relation to the commenter's specific concern about the performance of non-audit services, QC 1000 requires the QC system to operate over compliance with numerous restrictions on non-audit services that exist under current independence rules enacted in response to previous independence conflicts.²⁰⁰

QC 1000 establishes quality objectives that apply to all firms. Within the ethics and independence component, firms are required to establish quality objectives that address both personal and firm-level compliance. Personal violations include such matters as owning stock in companies that are audit clients of the firm or its affiliated entities while a "covered person in the firm."²⁰¹ Firm-level violations include such matters as providing prohibited services or failing to obtain required audit committee pre-approval. The Board has also included specified quality responses that directly address the firm's policies and procedures for identifying and monitoring firm and personal relationships with audit clients to help mitigate the risk of potential violations. In addition, the roles and responsibilities requirements direct firms to assign an individual operational responsibility for the firm's compliance with ethics and independence requirements to provide oversight specifically focused on this area.

The quality objectives address compliance with ethics and independence requirements not just by firm personnel, but also by others who may be subject to ethics and independence requirements in relation to work they perform on behalf of the firm. These others may include, for example, "persons associated with a public accounting firm" as defined in

PCAOB rules²⁰² or "covered persons in the firm" under the SEC independence rule.²⁰³ The Board notes that these and other concepts used in the ethics and independence rules do not map directly to the terminology the Board generally uses in QC 1000. (For example, some "other participants," such as other accounting firms, are subject to independence requirements, while others, such as engaged specialists and the company's internal auditors, are not.) To ensure that the requirements for this component of the QC system align with, and do not go beyond, the ethics and independence requirements over which the QC system would operate, in this component the Board uses terminology that incorporates or refers back to the underlying ethics and independence requirements. For example, rather than having quality objectives address compliance by "other participants," in this component the quality objective addresses compliance by "others subject to [ethics and independence] requirements."

One firm commented that it supported the direction of the quality objectives, but asserted that some of the terms were confusing as it related to "others subject to ethics and independence requirements." The firm questioned whether these correspond to other participants as defined in the standard. The firm further commented that the terminology used for others subject to ethics and independence requirements could create operational challenges because those terms are open to interpretation and requested that the Board clarify the language the standard used. The firm suggested that the proposed requirements that contain this language could go beyond the intended applicability of the independence rules to the various parties contemplated. Again, the Board uses terminology in this component that incorporates or refers back to the terminology used in ethics and independence rules, terminology which it believes is well understood in those contexts. The Board uses it precisely to avoid going beyond the scope of existing ethics and independence requirements, and to ensure that QC 1000 addresses exactly the same population as the ethics and independence rules themselves.

One firm commented that while the proposed quality objectives for ethics and independence are appropriate and important, further clarification may be

needed of how the objectives apply to firm personnel. Specifically, the firm argued that it could be inferred that the ethics and independence requirements extend to all individuals involved in the operation of the firm's QC system, including those individuals who are not subject to the requirements under the existing PCAOB and SEC independence rules, for example, data research teams. QC 1000 does not impose ethics and independence requirements on individuals who are not currently subject to them. References in the standard to "requirements" and "obligations" are to existing requirements and obligations which themselves specify to whom they apply. However, firms may choose to implement broader policies regarding ethical behavior that impose requirements on individuals who are not subject to the ethics and independence rules of the PCAOB and the independence rule of the SEC.

With respect to the timing of communication of violations to the individual assigned operational responsibility for the firm's compliance with applicable ethics and independence requirements, the quality objective states that such actions should take place on a timely basis. One firm agreed that timely communication of ethics and independence related matters within the firm is important for audit quality, but expressed concern that the prescriptive nature of the requirements addressing communications may detract from the achievement of the intended objectives. The firm suggested that it is important to recognize that the evaluation of certain matters would be done in accordance with the firm's policies and procedures, which are designed to strike a balance between prematurely alerting individuals to matters for which the facts and potential impacts are not sufficiently known and making sure those with ultimate responsibility for decisions are made aware on a timely basis. The final standard does not specify that all violations need to be communicated immediately. However, the Board believes timely communication and action should be sufficiently prompt to achieve its objective. In some cases, for example, where there is a high risk of a severe or pervasive problem, communication and action may have to be immediate to be timely.

b. Ethics and Independence Specified Quality Responses (QC 1000.32–.36)

The specified quality responses are primarily based on existing PCAOB ethics and independence requirements and SEC independence requirements,

²⁰⁰ See, e.g., 17 CFR 210.2–01(c)(4); PCAOB Rules 3522–3526.

²⁰¹ See 17 CFR 210.2–01(f)(11).

²⁰² See PCAOB Rule 1001(p)(i).

²⁰³ For example, because the definition of "accounting firm" under 17 CFR 210.2–01(f)(2) includes associated entities, "covered persons in the firm" may include personnel of network affiliates in addition to firm personnel.

including the provisions regarding independence quality controls that currently apply to SECPS member firms.²⁰⁴ The Board incorporated these SECPS member requirements into QC 1000, with some refinements, and extending those requirements to all firms. The Board's view is that the SECPS requirements address matters that are generally relevant to a QC system operating over compliance with SEC and PCAOB independence rules. Since those rules apply to all firms that perform engagements for issuers and broker dealers, the Board believes it is appropriate to extend the SECPS requirements to all firms.

Under the standard, the firm is required to design, implement, and maintain policies and procedures for the following:

- General ethics and independence matters;
- Certain specific matters that may reasonably be thought to bear on independence;
- Communication regarding ethics and independence policies and procedures; and
- Mandatory training on ethics and independence.

One firm commented that it generally supports the specified quality responses and believes that it is appropriate to have the same set of independence requirements apply for all firms. Another firm suggested that the specified quality responses are not necessary to achieve the objectives of QC 1000. Instead of prescriptive specified responses, the firm suggested that the standard include more specified quality objectives which would promote scalability and allow for future adaptations to technological or other innovations. Another commenter said that the proposal expanded on the independence requirements in a granular manner and suggested that the details be moved into an appendix or practice aid or provided as additional guidance to help reduce differences between QC 1000 and other standard setters. The specified quality responses for the ethics and independence component primarily carry forward existing requirements from the PCAOB's QC standards and extend certain existing requirements to all firms. The Board believes that the specified quality responses relate to risks that apply to all firms and therefore should be addressed by all firms. The Board intends them to be obligations of all firms and have therefore codified them within the rule text rather than as guidance.

i. QC Policies and Procedures About General Ethics and Independence Matters (QC 1000.33)

The standard requires the adoption of policies and procedures regarding general ethics and independence matters, carrying forward current PCAOB and SEC requirements.

The proposed requirement in QC 1000.33.a did not draw comment and was adopted as proposed.

The phrase "may reasonably be thought to bear on independence" is used in PCAOB Rule 3526²⁰⁵ and should be familiar to all firms. It is taken from an independence standard that predates the existence of the PCAOB,²⁰⁶ and, as the Board noted in connection with the adoption of Rule 3526, it focuses auditors on the perceptions of reasonable third parties when making independence determinations. It is consistent with the SEC's general standard on independence.²⁰⁷ The firm's policies and procedures are required to address all matters that may reasonably be thought to bear on the independence of the firm, firm personnel, and affiliates of the firm under SEC and PCAOB rules.

In addition to the broad concept of matters that "may reasonably be thought to bear on independence," SEC and PCAOB rules address certain specific matters that bear on independence. For example, 17 CFR 210.2–01(c) sets forth a non-exclusive list of circumstances that the SEC considers to be inconsistent with independence.²⁰⁸ Such circumstances include, among others, certain financial relationships, employment relationships, business relationships, non-audit services, contingent fees, and circumstances related to partner rotation. PCAOB rules also list certain prohibited tax transactions and tax services that would make the firm not independent of its client.²⁰⁹

The underlying facts and circumstances and relevant requirements will determine what actions need to be taken by the firm to address a matter that may reasonably be thought to bear on independence. For example, in some situations, it will be

sufficient to communicate the matter to the audit committee. In other situations, further action may be required.

The proposed requirements in QC 1000.33.b–c did not draw comment and were adopted substantially as proposed.

Integrity and objectivity are important ethical concepts currently addressed in QC 20.²¹⁰ Under the existing standard, integrity requires personnel to be honest and candid within the constraints of client confidentiality, whereas objectivity imposes the obligation to be impartial, intellectually honest, and free of conflicts of interest.

As discussed in more detail below, the Board rescinded the interim ethics and independence standard, ET 102, *Integrity and Objectivity*, and replacing it with a new standard, EI 1000, *Integrity and Objectivity*.²¹¹ QC 1000 includes a reference to that new rule and to PCAOB Rule 3500T, *Interim Ethics and Independence Standards*.

The final standard clarifies that firm personnel are expected to demonstrate integrity and objectivity in carrying out all of their professional responsibilities associated with the QC system and the performance of engagements. This includes activities ranging from the design and implementation of the QC system, monitoring and remediation, and evaluation of the QC system, to training and professional development; planning, performing, and supervising engagements; and internal and external communications. The Board also believes that it is important for the firm's policies and procedures to address obligations related to integrity and objectivity for associated persons of the firm, other than firm personnel, who perform work on behalf of the firm.

The proposed requirement in QC 1000.33.d did not draw comment and was adopted as proposed.

Establishing a consultation process on independence matters is an existing concept under SECPS independence requirements. Currently, SECPS member firms are required to designate a senior-level partner responsible for overseeing the adequate functioning of the firm's independence policies and consultation process.²¹²

The Board expanded this concept in QC 1000 by covering not only independence matters, but also ethics matters, and by expressly requiring the firm's policies and procedures to address the identification of ethics and independence matters that require consultation. The Board believes the

²⁰⁴ See SECPS 1000.46.

specific focus on identifying matters requiring consultation should prompt firm personnel and others subject to such requirements to more effectively identify ethics and independence issues that are new, challenging, or complex and that would benefit from evaluation by subject matter experts. The Board applied the requirement to all firms, not just SECPS member firms.

Under existing SECPS requirements, member firms are required to establish a monitoring system to determine that corrective actions are taken on all apparent independence violations reported by firm personnel.²¹³ Under those requirements, the monitoring system should include procedures to provide reasonable assurance that (i) investments of the firm and its benefit plans are in compliance with the firm's policies and (ii) information received from its partners and managers is complete and accurate. The SECPS requirements do not prescribe specific activities for the monitoring system, other than stating that generally it includes auditing, on a sample basis, selected information such as brokerage statements, or alternative procedures that accomplish the same objective. One firm requested clarification of whether auditing, on a sample basis, selected information such as brokerage statements, will be mandatory under QC 1000. The standard does not prescribe specific activities to monitor compliance with ethics and independence requirements and the firm's ethics and independence policies. This allows scalability based on the firm's size and specific circumstances. The Board expects that firms that have developed monitoring systems to comply with SECPS requirements would continue to use these systems as one aspect of monitoring compliance under the standard. While auditing brokerage statements is not mandatory under QC 1000, the firm must design, implement, and maintain policies and procedures to monitor compliance with applicable ethics and independence requirements and related firm policies and procedures. Based on the firm's size and specific circumstances, a firm can choose which monitoring activities are an effective response to meet the quality objective.

With respect to compliance with applicable ethics and independence requirements by the firm and its affiliates, the Board understands that firms employ various manual and automated tools for evaluating whether the firm and its affiliates comply with SEC and PCAOB independence

requirements and the firm's independence policies and procedures. Some examples of such tools include having a centralized process to monitor business relationships, establishing an independence confirmation process that includes detailed guidance and questions related to independence and prohibited non-audit services, and periodic review of the completeness and accuracy of information reported on independence confirmations.

A firm may establish ethics and independence policies and procedures that are more restrictive than the rules of the SEC and PCAOB—for example, to comply with requirements of other jurisdictions or to simplify compliance with SEC and PCAOB requirements by setting bright-line policies and reducing the range for individual judgment. Under the standard, the firm's evaluation of compliance covers applicable ethics and independence requirements as well as the firm's policies and procedures.

The proposed requirements in QC 1000.33.f were adopted substantially as proposed.

As previously discussed, QC 1000 includes the existing SECPS requirement for firms to have policies and procedures that address independence violations and expands the requirement to cover all firms and to include ethics violations.

Under the standard, the firm is required to establish policies and procedures addressing violations and potential violations of ethics and independence requirements. These types of policies and procedures are intended to be preventive, detective, and corrective by nature.

The firm's policies and procedures are required to address identifying conditions, events, relationships, or activities that could constitute ethics or independence violations involving the firm, firm personnel, and, with respect to work performed on behalf of the firm, others subject to such requirements. For example, if a firm or its network is contemplating a reorganization or restructuring that would affect the relationships among affiliated firms or other entities, identifying post-reorganization investment activities as such an activity could assist the firm in designing and implementing appropriate policies to prevent independence violations.

With respect to ethics and independence violations that do or could occur, the firm's policies and procedures are required to address the taking of preventive and corrective actions to address violations on a timely basis. Such policies and procedures

could specify the individuals responsible for taking preventive and corrective actions (at the engagement or firm level), the timing of preventive and corrective actions, and any potential sanctions against firm personnel or other individuals for violating ethics and independence requirements. While one firm supported bringing greater attention and accountability to the ethics and independence component, it suggested that the level of prescription may create operational challenges that could be detrimental to audit quality. Specifically, with regards to paragraph .33f.(2), the firm commented that ethical or independence violations may take a variety of forms and that dictating that preventive and corrective actions must be taken does not promote a risk-based approach. The standard requires that a firm's policies and procedures address, with respect to violations and potential violations, the taking of preventive and corrective actions, as appropriate. Ethics or independence violations may take a variety of forms, and therefore the nature and extent of the preventive and/or corrective actions may also take a variety of forms commensurate to the severity and pervasiveness of the violation.

The firm's policies and procedures are required to address reporting of ethics and independence violations. QC 1000 requires that firm personnel and others performing work on behalf of the firm that are subject to the ethics and independence requirements report both their own violations and other violations of which they become aware that may affect the firm. The Board revised the language in proposed paragraph .33f.(3) to clarify that the requirement applies to others performing work on behalf of the firm that are subject to the ethics and independence requirements.

The standard takes a principles-based approach, which allows each firm to determine which reporting mechanisms best fit its structure and address its quality risks. Through the Board's oversight activities, it has observed that firms employ various mechanisms for firm personnel to report violations. Some examples include direct communication lines to an ethics and independence group, designated individuals within the human resources department or the legal department, and whistleblower hotlines.²¹⁴ Firms may assess each case individually and involve appropriate subject matter experts, depending on the nature of the

²¹³ See SECPS 1000.46 (requirement 7.d).

²¹⁴ See, e.g., paragraph .29 of QC 1000, discussed above, for requirements regarding firm processes for addressing complaints and allegations.

violation. Some firms also establish escalation protocols for certain types of ethics and independence violations (e.g., violations involving a partner in the firm).

In addition, the firm's policies and procedures are required to address any communications that need to take place as a result of a violation of ethics and independence requirements. For example, PCAOB Rule 3526 requires certain communications to the audit committee regarding matters that are thought to bear on the firm's independence, including violations of independence requirements.

ii. QC Policies and Procedures About Certain Matters That May Reasonably Be Thought To Bear on Independence: Restricted Entities, Independence and Ethics Certifications, and Matters Requiring Audit Committee Pre-Approval

Under the standard, the firm's policies and procedures on matters that may reasonably be thought to bear on the independence of the firm are required to address, among other things, (1) restricted entities, including the maintenance and dissemination of the list of restricted entities; (2) independence and ethics certifications; and (3) matters requiring audit committee pre-approval.

(1) Restricted Entities (QC 1000.34.a–d)

Most of the requirements related to restricted entities come from existing SECPS member requirements,²¹⁵ which will now apply to all firms. Under the standard, as under current requirements, restricted entities include all audit clients (including affiliates of the audit client) of the firm and affiliates of the firm. One firm commented that the proposal did not define “affiliates” and recommended either referencing the definition provided in PCAOB Rule 3501 or defining the term in the standard in a manner similar to Rule 3501. “Audit client,” “affiliate of the audit client,” and “affiliate of the accounting firm” are terms defined in existing PCAOB and SEC rules.²¹⁶ As

²¹⁵ The SECPS term “restricted entities” includes all audit clients of the firm (and, where applicable, its foreign-associated firms) that are SEC registrants, along with other entities that the firm is required to be independent of under the applicable SEC requirements.

²¹⁶ “Audit client” is defined for purposes of SEC rules in 17 CFR 210.2–01(f)(6), and for purposes of PCAOB rules in PCAOB Rule 3501(a)(iv). “Affiliate of the audit client” is defined in PCAOB Rule 3501(a)(ii) as having the same meaning as defined in 17 CFR 210.2–01(f)(4). “Affiliate of the accounting firm” is defined in PCAOB Rule 3501(a)(i) and, for purposes of the Note to paragraph .34a, “accounting firm,” which includes

proposed, paragraph .34 includes a footnote referring to those definitions.

Existing SECPS requirements require firms that audit more than 500 SEC registrants to have an automated system to identify investment holdings of partners and managers that might impair independence.²¹⁷ As proposed, the Board required an automated system for firms that issued audit reports with respect to more than 100 issuers during the prior calendar year. The Board understands that firms that audit more than 500 SEC registrants already have automated systems in place, based on the SECPS requirements to have an automated system 17 CFR 210.2–01(d).²¹⁸ Firms that issued audit reports for 100 or fewer issuers are required to consider whether the system needs to be automated, taking into account the quality risks and the nature and circumstances of the firm. For example, a firm with close to 100 issuers and a significant number of managers and partners may assess timely identification of personal investments that may impair independence as a quality risk, and a quality response to address that risk may include an automated system to help facilitate a more timely relationship-checking process.

One firm commented that the specified quality response to have an automated process for identifying direct or material indirect financial interests is appropriate, and another firm commented that it did not object to the requirement. However, a firm and a firm-related group recommended that the PCAOB consider if the existing SEC requirements are sufficient such that no additional PCAOB requirements are needed, and several firms commented that the costs of implementing the requirement would be significant and instead the threshold should be increased to 500 issuers to be consistent with the SEC requirements. Some of these firms suggested that the cost may be a potential barrier to entry for firms approaching the 100-issuer audit client

the firm's associated entities, is defined in 17 CFR 210.2–01(f)(2).

²¹⁷ See SECPS 1000.46 (requirement 4).

²¹⁸ 17 CFR 210.2–01(d) provides that a firm's independence is not impaired solely because a covered person in the firm is not independent of an audit client, provided the covered person did not know of the circumstances giving rise to the violation, the violation was corrected as promptly as possible, and the firm maintains a quality control system meeting specified standards. 17 CFR 210.2–01(d)(4), describes, for firms that provide audit, review, or attest services to more than 500 SEC registrants, features necessary for the firm's QC system to meet the specified standards, including an automated system to identify investment holdings of partners and managers that might impair independence.

threshold. One of these firms commented further that some firms that audit over 100 issuers will consider decreasing the size of their practice due to the associated cost of the requirement. This firm suggested that the specified quality response be removed and instead, if necessary, implement a quality objective that firms could address through their risk assessment process. Several firms suggested that firms that audit more than 100 but no more than 500 issuers could consider implementing such a process, but it should not be required. One firm-related group suggested that the threshold for requiring an automated independence system be reduced further, given the number of repeated independence issues among all firms.

One firm expressed concerns with both the proposed requirement in paragraph .34a.(1) and the suggestion in paragraph .34a.(2) to automate this process, suggesting that this would be cost prohibitive and firms should design processes that reflect their respective size, complexities and risks identified. Another firm commented that firms subject to the current SECPS requirements have likely invested significant capital and resources to implement and maintain tools that enable compliance with those requirements, and while the firm views that investment as worthwhile and believes the procedures have contributed to audit quality over the years, it expressed concerns for the cost of the requirement to firms that audit between 100 and 500 issuers. Another firm commented that it has such an automated system in place, however it suggested that the implementation of such a system within the timeframe set out in the proposed standard may be challenging and costly. One firm commented that the determination of whether or not to implement an automated process for identifying and tracking direct and material indirect financial interests should be risk-based and not include a prescriptive requirement based on an arbitrary count of greater than 100 issuers. The firm specifically commented that the size, scope, nature, and complexity of firms' issuer practices can vary significantly among the annually inspected firms, noting for example that a large portion of its issuer client count consists of Form 11–K audits and smaller reporting companies. Another firm commented that while the size of the firm's client base is one factor to consider in determining an appropriate quality response, the nature and circumstances of the firm and the firm's clients are also

factors that should be taken into consideration, as well as the firm structure, industries served, and number of managers and partners.

Some firms sought clarity as to whether an automated process would be required for other financial relationships, for example, employment relationships, business relationships, or non-audit services, and commented that the identification of certain financial relationships cannot be easily automated. Instead, the firms suggested limiting the requirement to automate the process for identifying investments in securities that might impair independence, to align with the SEC requirement. A number of firms and a firm-related group requested clarity on what “automated” means and what the Board’s expectations are with regards to the nature, extent and scope of automation.

After consideration of the comments, the Board adopted the 100-issuer threshold as proposed. The Board believes it is important to maintain a consistent threshold for the incremental requirements in QC 1000. As discussed in more detail above, the Board believes that the 100-issuer threshold is appropriate, and while the nature of each firm’s audit client list may vary, there still exist complexities inherent to firms with a large number of issuer audit clients that may give rise to quality risks that apply to the firm’s independence, for which the automated system would be an appropriate quality response.

The Board clarified in the final standard that the requirement for an automated process is limited to the process to identify investments in securities that might impair the independence of the firm or firm personnel, the same scope as required under 17 CFR 210.2–01(d). The Board has observed through its oversight activities that some firms have systems that automate the identification of their professionals’ investment holdings through direct broker feeds, but a direct broker feed is not the only type of automated process that would meet the Board’s requirement. As discussed in a December 9, 1999, letter from the SEC’s Chief Accountant,²¹⁹ firms need to develop a system that tracks audit engagements and financial investments held by professionals such that the conflict verification process is automated. Such a system may rely on firm professionals accurately self-

reporting and entering their investments into the system in a timely manner. These holdings would automatically be compared to the list of restricted entities to identify any relationships with restricted entities. Based on the size of the firm and other characteristics, a firm may determine that a direct broker feed is an appropriate quality response (for example, if the firm’s monitoring activities found high rates of non-compliance by firm personnel with the firm’s policies and procedures for reporting financial investments), but a direct broker feed is not expressly mandated for firms subject to the requirement to implement an automated process. The Board also made a change to require that the process described in paragraph .34a.(1) must be automated to conform to the degree of responsibility that the requirement imposes on the auditor to that required under paragraph .34.

One firm suggested that a longer transition period be provided for firms that are not currently subject to a requirement to implement an automated system. The firm commented that if two firms merged and one or both of the firms had previously not been subject to the requirement, it is unlikely that a system of this nature could be implemented and tested for effectiveness in the time period provided. The Board believes that firms continuously monitor the size of their audit practice relative to the 100-issuer threshold, and if a firm is considering a transaction such as a merger that would increase its number of issuer audit clients significantly, then the firm could begin to implement such a system in advance of the end of the calendar year in which the firm first surpasses the 100-issuer threshold. Indeed, for a transaction such as a merger of audit firms, the Board believes that there could exist specific risks to independence as a result, which in itself may result in a firm developing an automated system as a quality response.

Current SECPS requirements require timely (generally monthly) communication of additions to the Restricted Entity List.²²⁰ The proposal contemplated requiring that firms have policies and procedures for maintaining and making available the list of restricted entities to firm personnel and others performing work on behalf of the firm who are subject to independence requirements, and updating and communicating changes to the list of restricted entities at least monthly to such persons.

Several firms and a firm-related group suggested the specified quality response

be replaced with a quality objective regarding updates to and awareness of changes in the restricted entity list. Two of these firms suggested that the requirement be amended to limit communications to additions to the restricted entity list. Another firm suggested communications be limited to firm personnel subject to independence requirements and the requirements should allow for flexibility in the nature, timing, and extent of communications. QC 1000 does not enlarge the population of individuals who are subject to ethics and independence requirements. References in the standard to “requirements” and “obligations” are to existing requirements and obligations which themselves specify to whom they apply. In addition, after consideration of the comments received, the Board amended the standard to limit the required communications to additions to the list of restricted entities, rather than all changes.

Some firms did not support this communication to “others performing work on behalf of the firm,” and suggested that communications should be limited to potential covered persons affected by the additions. Two of these firms commented that these individuals would likely not be considered covered persons for engagements other than the engagement they are working on, and suggested that the Board allow firms to take a risk-based approach when determining the scope and frequency of the communications. Another firm suggested that QC 1000 does not need to specifically address certain communications to other participants where this is required by another standard, specifically AS 2101 (as in effect for audits of fiscal years ending on or after December 15, 2024) paragraph .06D, which includes a “written description of all relationships between the other auditor and the audit client of persons in financial oversight roles at the audit client that may reasonably be thought to bear on independence. Another firm commented that the goal of alerting others performing work on behalf of the firm to specific engagement independence requirements could be achieved through engagement-specific independence certifications.

After consideration of the comments received, the Board amended the standard to require at least monthly communication of additions to the list of restricted entities to firm personnel and others performing work on behalf of the firm whose relationships and arrangements with such additional restricted entities may reasonably be thought to bear on the independence of

²¹⁹ See Letter From the Chief Accountant: Issues Related to Independence/Quality Control to SEC Practice Section (II) (Dec.9, 1999), available at <https://www.sec.gov/info/accountants/staffletters/cal1129a.htm>.

²²⁰ See SECPS 1000.46 (requirement 5).

the firm. The Board believes that it is appropriate to limit communications of additions to the list of restricted entities to firm personnel and others performing work on behalf of the firm to those additions that could reasonably be thought to bear on the independence of the firm. For example, additions to the affiliate list for an issuer would be relevant for an individual who is performing work on behalf of the firm on that issuer, or a partner who is located in the same office of the firm in which the lead audit engagement partner primarily practices in connection with the audit. This communication should be made as frequently as necessary, and on at least monthly basis, through the period that the individual is subject to the independence requirements.

Several firms and a firm-related group commented that the requirement to communicate the restricted entity list would not be more effective than the automated systems already in place at larger firms. Two firms also commented that smaller firms with infrequent changes to the restricted entity list may not need to communicate changes monthly. One of these firms suggested that many firms already have policies where individuals are required to review the restricted entities list prior to purchasing stock/during proposal/acceptance procedures to determine whether an independence conflict would exist, and that many firms also make those restricted lists readily available to employees as part of their current QC systems. The Board believes, and has observed through its oversight activities, that such automated systems may not fully mitigate quality risks associated with the timely reporting of financial relationships by firm personnel, for example, if the automated system is not equipped to identify certain financial relationships, or if the firm is reliant on its professionals making timely reporting of these relationships into the firm systems. The Board believes that requiring the communication of additions to the list of restricted entities to firm personnel whose relationships and arrangements with such additional restricted entities may reasonably be thought to bear on the independence of the firm on an at least monthly basis may prompt firm personnel to report a previously unreported relationship. If there are no additions, there is no required communication.

One firm commented that it is unclear whether communication is intended to mean a distributed communication (e.g., email of the updated list) or communication can be made available

(e.g., a website that hosts such list and is readily available to access). Some firms may decide to communicate updates to the list of restricted entities on a more frequent basis, as changes are being made, or in more targeted ways (such as to particular offices or engagement teams). The standard does not prescribe the method of communication. Through the Board's oversight activities, it have observed that some firms comply with existing SECPS requirements by communicating additions to the list of restricted entities to all firm personnel weekly via email. These firms could continue that practice to comply with the standard. However, other methods that result in an effective communication may also be acceptable; for example, a firm might communicate that there have been additions to the list of restricted entities via email, and include within the email a link to an accessible website-hosted list of additions.²²¹ While the standard requires communications of additions to those individuals whose relationships and arrangements with such additional restricted entities may reasonably be thought to bear on the independence of the firm, the firm may choose to extend the communications of additions more broadly. In addition, if the firm communicates additions to less than all firm personnel, then the firm must have correctly identified the group of people whose relationships and arrangements with such additional restricted entities may reasonably be thought to bear on the independence of the firm.

The standard does not prescribe a specific process for maintaining and making available the list of restricted entities to firm personnel and other individuals. Firms are able to determine the specific methods and tools needed to keep the list of restricted entities up to date and to ensure that any additions are communicated on a timely basis to firm personnel and other individuals. This determination is based on factors such as the size of the firm, the number of audit clients, and the complexity of those clients (e.g., the number of audit client affiliates). For example, a smaller firm with a small group of professionals, a stable portfolio of audit clients, and a manual process for maintaining the list of restricted entities may decide to communicate changes monthly. For a larger firm with many audit clients and firm affiliates, an automated tool could help facilitate more frequent updates to the list of restricted entities. The firm is

²²¹ Firms are required to communicate additions to the list of restricted entities. For periods where there were no changes, no such communication would be required.

required to notify relevant professionals of additions to the list at least monthly.

The Board recognizes that some firms are members of networks that may develop systems, processes, and controls to monitor network firms' compliance with independence requirements, including maintaining a database of restricted entities. As described above, the standard does not prescribe a specific process for maintaining a database of restricted entities, so this process could potentially be performed by a network or outsourced to a third party. At the same time, the standard requires each firm to establish its own quality objective, which places responsibility on the firm with respect to resources or services provided by the network or a third-party provider.²²²

The Board incorporated into QC 1000 the existing SECPS requirements for firm personnel²²³ to review the list of restricted entities prior to obtaining any security or other financial interest in an entity, but with the following refinements:

- Require firm personnel to review the list of restricted entities, not only before they or their relevant family members²²⁴ obtain a direct or material indirect financial interest in an entity or enter into a direct or material indirect relationship with an entity,²²⁵ but also after additions to the list of restricted entities are communicated by the firm, upon firm personnel's employment at the firm, prior to changes in position (e.g., going into a chain of command or other covered person role²²⁶), and prior to entering into or modifying any business or employment relationships.

- Require the firm and firm personnel to take required actions on a timely basis if the review of the list of restricted entities indicates that action is required under applicable professional and legal requirements or the firm's policies and procedures.

Under this approach, the firm's policies and procedures will require

²²² See below for a discussion of the firm's responsibilities when it uses resources or services provided by a network or third-party provider.

²²³ SECPS requirements use the term "professionals," which means professional staff, including partners. See SECPS 1000.46 (requirement 1.a).

²²⁴ Context determines which family members would be relevant. See, e.g., 17 CFR 210.2–01(f)(9) (defining "close family members"); 17 CFR 210.2–01(f)(13) (defining "immediate family members"); see generally 17 CFR 210.2–01(c) (referring to "close family member" or "immediate family member" depending on the context).

²²⁵ The Board is using the terms direct and material indirect in the same sense as 17 CFR 210.2–01(c).

²²⁶ "Covered persons in the firm" is defined in 17 CFR 210.2–01(f)(11).

that the list of restricted entities be reviewed before the firm enters into any relationship, engagement to perform non-audit services, or fee arrangement that might affect compliance with independence requirements. This requirement serves the same purpose as review of the list of restricted entities by the firm personnel and helps the firm to identify relationships that may result in noncompliance with applicable professional or legal requirements.

One firm commented that, rather than requiring that the list of restricted entities be reviewed before the firm enters into any relationships, engagements to perform non-audit services, or fee arrangements that might affect compliance with independence requirements, firms should be permitted to develop quality responses to identify prohibited relationships and fee arrangements that appropriately respond to quality risks, based on the firm's facts and circumstances. The firm also suggested that the requirement for firm personnel to review the list of restricted entities after changes to the list are made should be deleted since firm personnel would already be notified of changes based on paragraph .34b. The Board believes these specified quality responses are appropriate and should be addressed by all firms, regardless of the specific facts and circumstances of the firm. In addition, the Board views the requirements of paragraph .34b for the firm to maintain and make available the list of restricted entities, and paragraph .34d for firm personnel to review the list of restricted entities, as separate.

(2) Independence and Ethics Certifications (QC 1000.34.e)

Certifications are intended to drive greater accountability for firm personnel's compliance with independence requirements and to deter independence violations. The certification requirement is similar to an existing SECPS requirement, which requires each professional to certify near the time of initial employment and at least annually thereafter that he or she (1) has read the member firm's independence policies, (2) understands their applicability to his or her activities and those of his or her spouse and dependents, and (3) has complied with the requirements of the member firm's independence policies since the prior certification.²²⁷

The proposal contemplated obtaining certifications from firm personnel regarding familiarity and compliance with SEC and PCAOB independence

requirements and the firm's independence policies and procedures (1) upon employment, (2) at least annually thereafter, and (3) upon any change in personal circumstances, such as firm role, geographic location, or marital status, that is relevant to independence.

Several commenters, including firms, did not support the requirement to obtain additional certifications upon changes in personal circumstances, and three firms raised practical concerns when the changes involved marital status. One firm suggested that the standard should emphasize that a firm's independence certification process should consider timeliness in addressing the quality objective, and instead encourage firms to consider the appropriateness of obtaining periodic certifications throughout the year. One firm commented that a firm should have flexibility to determine its own policies and procedures for certifications beyond requiring them at employment and annually thereafter; the firm suggested that, for example, quarterly certification accompanied by training on the impact of life events may be more effective and practicable than event-driven review and certification. Another firm recommended that firms be allowed to develop their own quality responses based on their own unique quality risks when personal circumstances change rather than requiring certification upon changes in personal circumstances as a quality response. Another firm suggested that this requirement should instead be managed through proper education and awareness of relevant independence requirements. Another firm suggested that these items would be better suited as examples of considerations included in implementation guidance. One firm suggested that the certification requirements should be applicable for firms with over 500 issuers that already have an automated independence system. The firm further commented that the requirement is onerous in terms of being able to identify the data on a timely basis and suggested a semi-annual representation period instead of circumstance-driven.

In addition, the proposing release sought feedback on whether the standard should require annual written certification regarding familiarity and compliance with ethics requirements and the firm's ethics policies and procedures, in addition to those regarding independence. The proposing release further asked whether firms should be required or encouraged to adopt firm-wide codes of ethics or similar protocols. One firm did not

support a specific quality response that includes a certification process for ethics requirements and procedures. The firm suggested that firms should be permitted to adopt a quality response that addresses the risks within their own practice, and that a certification requirement that applies to all firm practice staff could turn into a "check-the-box" compliance exercise that would not benefit audit quality. One firm commented that such requirements would already be addressed by the requirement for mandatory training in paragraph .36. Other commenters, including firms, investors, and investor-related organizations, supported the requirement to obtain a written annual certification regarding familiarity and compliance with ethics requirements and the firm's ethics policies and procedures. One of these investors commented that the main argument against such certifications is that it imposes a cost and that it becomes a "tick-the-box exercise," but in the investor's view the cost is de minimis given other annual declarations needed by firm personnel, and firm leadership can send an appropriate signal by embracing the ethics code to stop such annual declarations becoming a perfunctory exercise. One firm and an investor-related organization supported a requirement that firms should adopt firm-wide codes of ethics.

After consideration of the comments received, the Board made two changes to the final standard. First, the Board removed from the standard the requirement to obtain a certification from firm personnel regarding familiarity and compliance with SEC and PCAOB independence requirements and the firm's independence policies and procedures upon any change in personal circumstances, and replaced this with the requirement that such a certification must be obtained for any change in professional circumstances that is relevant to independence. Rather than include examples of such changes in the text of the standard, the Board provided in this release some examples of changed professional circumstances that may be relevant to the independence of the firm's personnel under applicable independence rules. These examples include changes within the firm such as promotions, moving offices, or changing practice groups (e.g., changes to covered person status). Although, in connection with this change, the Board removed a certification requirement with regard to changes in personal circumstances, such changes can have independence implications under SEC and PCAOB

²²⁷ See SECPS 1000.46 (requirement 7.b).

independence requirements, and a firm's QC system must provide reasonable assurance of compliance with those requirements. Secondly, the Board added a requirement for certification by firm personnel regarding familiarity and compliance with the applicable ethics requirements and the firm's ethics policies and procedures as the Board believes such certification will enhance individual accountability and, ultimately, compliance. The Board not added a requirement for firms to adopt a firm-wide code of ethics or similar protocol, because it believes that firms should have flexibility to determine whether this would assist them in meeting the relevant quality objectives.

The standard does not prescribe a checklist of specific content for the certifications, focusing instead on general concepts of familiarity and compliance. It is possible that the form of certification called for by the existing SECPS requirement would satisfy the standard. In addition, the standard expands on the existing SECPS requirement by requiring firms to obtain certifications every time firm personnel have a change in professional circumstances that is relevant to independence, such as a change in role or geographic location. Changes within the firm such as promotions, moving offices, or changing practice groups may have consequences under independence rules (e.g., changes to covered person status) and result in noncompliance. The Board continues to believe that a specified quality response requiring specific event-driven independence and ethics certifications appropriately considers timeliness in addressing the quality objective and applies to quality risks that exist in all firms.

(3) Matters Requiring Audit Committee Pre-Approval (QC 1000.34.f)

The proposed requirement did not draw comment and was adopted as proposed. QC 1000 contains a new requirement regarding firm policies and procedures for identifying matters that require pre-approval by the audit committee and obtaining such approval. The primary responsibility for identifying matters that require audit committee pre-approval and obtaining such pre-approval resides at the engagement level. The firm's policies and procedures, however, provide tools and guidance that enable engagement teams to properly identify the relevant matters and obtain necessary pre-approvals on a timely basis. Through the Board's oversight activities, it has observed numerous instances where firms did not have an effective

mechanism in place for monitoring whether matters that require audit committee pre-approval were properly disclosed to audit committees. The new requirement should lead to more consistent compliance.

iii. Communication of Changes to Ethics and Independence Policies and Procedures (QC 1000.35)

The proposed requirement did not draw comment and was adopted as proposed. The final standard incorporates existing SECPS requirements regarding the dissemination of the firm's independence policies and procedures and expands the requirements to cover ethics policies and procedures.

When deciding how to make ethics and independence policies and procedures available, firms would consider how to make firm personnel and others performing work on behalf of the firm aware of where and how to find these policies and procedures in a way that supports those individuals' ongoing compliance with certification and other requirements. The standard requires the firm to communicate any substantive changes to its ethics and independence policies and procedures on a timely basis.

iv. QC Policies and Procedures About Mandatory Ethics and Independence Training (QC 1000.36)

The proposed requirement did not draw comment and was adopted as proposed.

The standard includes a requirement for mandatory periodic training on ethics and independence, which expands on the existing SECPS requirements that cover training on independence. The mandatory training requirement promotes awareness and understanding of the ethics and independence requirements, which should lead to better compliance with such requirements. Under existing SECPS requirements, firms are required to establish a training program for professionals to complete near the time of initial employment and periodically thereafter.²²⁸

The specific content and extent and timing of the training will be determined by the firm, but the program is required to cover both the relevant professional and legal requirements (for example, regarding financial interests, business relationships, employment relationships, proscribed services, and fee arrangements) and the firm's related policies and procedures.

By not specifying the content for such mandatory training, the standard allows firms the ability to develop training programs based on their circumstances. For example, a firm may develop its training to place a greater emphasis on areas with recurring ethics and independence findings across the firm, or it may target specific ethics and independence findings in different regions. Similarly, the standard does not specify how the firm would provide such training. A firm may develop and deliver its own training, contract with others to provide training, or provide access to third-party training.

Under the standard, the firm is required to provide such training at least annually, or more often as needed.

2. Current PCAOB Standards

QC 20 provides that policies and procedures should be established to provide the firm with reasonable assurance that personnel maintain independence (in fact and in appearance) in all required circumstances, perform all professional responsibilities with integrity, and maintain objectivity in discharging professional responsibilities.²²⁹ The SECPS member requirements regarding independence quality controls apply only to certain firms. The requirements for ethics and independence discussed above are more detailed than the existing requirements in QC 20 and Appendix L of the SECPS and would apply to all firms.

Acceptance and Continuance of Engagements

This component addresses the firm's processes when considering whether to accept or continue an engagement.

1. QC 1000

a. Acceptance and Continuance of Engagements Quality Objectives (QC 1000.38)

The proposal described the quality objectives related to acceptance and continuance of engagements. Several commenters, including firms, were generally supportive of the proposed quality objectives.

A commenter on the AS 1000 rulemaking objected to the use of the term "client" in that standard to refer to the company and its management. The commenter suggested "company under audit" instead. The Board agrees with the commenter that the terminology used in the PCAOB standards should help to remind auditors that they work for the benefit of investors, not the management of the company.

²²⁸ See SECPS 1000.46 (requirement 3).

²²⁹ See QC 20.09.

Accordingly, the Board generally replaced references to the “client” with references to the “company” or eliminated them altogether (for example, this component, called “Acceptance and Continuance of Client Relationships and Specific Engagements” in proposed QC 1000, is “Acceptance and Continuance of Engagements” in the final standard). The Board, however, retained references to the “client” where that aligns with other rules, such as in the area of independence.

The quality objectives in this component were adopted substantially in the form proposed, with the exception of the change throughout to focus on the engagement instead of the client relationship and the other clarifications discussed below.

Acceptance and continuance of engagements is an aspect of a firm’s compliance and risk management process. Each firm, depending on its nature and circumstances, may approach acceptance and continuance of engagements differently. The acceptance and continuance of engagements process assists the firm in mitigating reputational, business, and litigation risk. The quality objectives stress the importance of focusing the acceptance and continuance of engagements process on the firm’s ability to perform an engagement in accordance with applicable professional and legal requirements.

i. Timing (QC 1000.38.a(1))

The proposed standard required the firm’s judgment about whether to accept or continue an engagement to be made as part of or before performing preliminary engagement activities. Preliminary engagement activities, which are activities the auditor should perform at the beginning of the audit, are described in AS 2101.06.

One commenter stated that the proposed requirement implied that the judgment was only made during preliminary activities and not throughout the engagement. The Board clarified the quality objective in paragraph .38a(1) to specify that the initial judgment is to be made as part of or before preliminary engagement activities. QC 1000.40, discussed below, addresses the firm’s obligation to continue to address situations that could have caused it to decline the engagement had the information been known prior to acceptance and continuance.

ii. Independence and Permissibility of Services (QC 1000.38.a(2)(a) and (b))

This proposed quality objective did not draw significant comment and was adopted as proposed.

The firm’s ability to perform the engagement includes considering whether the firm is independent and whether the services are permissible. These are threshold considerations for acceptance and continuance, because in general, under PCAOB standards the firm is not allowed to accept an engagement unless it is independent of the company for which the engagement will be performed and the services are permissible under applicable professional and legal requirements (including obtaining audit committee pre-approval where that is required).

The firm’s policies for acceptance and continuance in the areas of independence, permissibility of services, and pre-approval relate to and to some extent overlap with the ethics and independence component. The requirements in the ethics and independence component more generally address the ongoing evaluation of compliance with applicable professional and legal requirements relating to the independence of the firm, firm personnel, and others subject to such requirements.

iii. Access to Company Information and Company Personnel (QC 1000.38.a.(2)(c))

This proposed quality objective did not draw significant comment and was adopted substantially as proposed.

The firm’s ability to perform an engagement in accordance with applicable professional and legal requirements depends on the firm’s ability to obtain information from the company and gain access to individuals at the company who can respond to the firm’s inquiries. Restricted or limited access to company information or personnel—for example, due to language differences, physical location, or local law restrictions—could impair the firm’s ability to perform the engagement in accordance with applicable professional and legal requirements.

iv. Resources (QC 1000.38.a(2)(d))

Another aspect of the firm’s ability to complete the engagement in accordance with applicable professional and legal requirements is the resources available to the firm. The Board believes it is important for a firm to have the right resources available so that the engagement can be performed in

accordance with applicable professional and legal requirements. This includes the availability of resources like the following, either internal or external to the firm:

- Firm personnel or other participants with competence to perform procedures (*e.g.*, industry experience or experience with new or specialized accounting pronouncements that apply to the company) and sufficient availability to meet audit timing requirements;
- Engagement partners;
- Specialists;
- EQRs;
- Technology to be used in the performance of the engagement, such as technology for testing the implementation and effectiveness of automated processes; and
- Intellectual resources needed in the performance of the engagement (*e.g.*, industry-specific audit programs).

One commenter suggested that consideration should be given to the availability of industry-specific resources at the partner and manager level and the Board agrees that industry-specific resources are important in certain audits. However, the Board believes that issue is adequately addressed by the general reference to “resources to perform the engagement,” which includes industry-specific resources where those would be needed. The Board adopted this quality objective as proposed.

v. Other Relevant Factors (QC 1000.38.a(2)(e))

This proposed quality objective did not draw comment and was adopted as proposed.

The firm’s ability to perform engagements in accordance with applicable professional and legal requirements may also be affected by other factors associated with providing professional services in the particular circumstances. Accordingly, the standard, by directing firms to consider such other relevant factors, retains the breadth and inclusiveness of QC 20.15b, which requires the firm to establish policies and procedures to provide reasonable assurance that the firm appropriately considers the risks associated with providing professional services in the particular circumstances.

v. Information About the Nature and Circumstances of the Engagement, Including the Integrity and Ethical Values of the Company (QC 1000.38.a(3))

In order for the firm to make appropriate judgments about whether to accept or continue an engagement, the

firm needs to obtain sufficient information about the nature and circumstances of the engagement (*e.g.*, the nature of the company and the environment in which it operates) and the integrity and ethical values of the company, including its management and audit committee.²³⁰ This information is relevant because it can help identify potential risks to performing the engagement that may result in the firm not being able to perform the engagement in accordance with applicable professional and legal requirements. The nature and circumstances of the engagement may, for example, reveal the need for specialized expertise that the firm does not have. A lack of management integrity may affect the reliability of the company's accounting records. Designing and implementing policies and procedures that direct and standardize the collection and evaluation of such information could help the firm in consistently making appropriate judgments about whether to accept or continue an engagement. Additionally, information obtained during the firm's acceptance and continuance process about the nature and circumstances of the engagement and the integrity of management and the audit committee would in many cases be relevant when planning and performing the engagement.²³¹

One commenter requested clarification of whose integrity and ethical values are relevant to the consideration of "the integrity and ethical values of the company (including management and the audit committee)"—for example, whether consideration could be limited to the audit committee chair. Since members of management and the audit committee all have influence over the company's financial reporting, the Board believes their integrity and ethical values are important to the judgment of accepting or continuing an engagement. Therefore, consistent with the proposal, the final standard does not include such a limitation.

The quality objective in QC 1000.38.b retains the concept in QC 20.16 of having policies and procedures regarding obtaining an understanding with the company about the engagement and aligns with similar requirements under PCAOB auditing and attestation

standards.²³² Achieving this objective should minimize the risk of misunderstandings regarding the nature and scope of the engagement and any limitations associated with it.

c. Acceptance and Continuance of Engagements Specified Quality Response (QC 1000.39–.40)

The proposal included a specified quality response regarding policies and procedures to address situations where the firm learns of information that would have caused it to decline a previously accepted engagement. Two commenters were generally supportive of the proposed specified quality response.

Under this specified quality response, the firm's policies and procedures are required to address situations in which the firm becomes aware of relevant contrary information after the firm's decision to accept or continue an engagement. This contrary information may have existed at the time of the decision to accept or continue an engagement but not been known by the firm at the time, or it may have emerged subsequent to that decision. Depending on the circumstances, appropriate responses may include such actions as:

- Consulting with legal counsel or others within the firm to determine if the firm is able to continue the engagement;
- Discussing the information with management and the audit committee to determine if the firm is able to continue the engagement;
- Including this information in the auditor's risk assessment procedures so that any additional risks are responded to during the audit; and
- Withdrawing from the engagement and notifying appropriate regulatory authorities as required under applicable professional and legal requirements.

One commenter suggested that specific circumstances should require an immediate reconsideration of client continuance, such as illegal acts, fraud, or material omissions of fact. Existing auditing standards, such as AS 1301, include requirements related to evaluating the continuation of the client relationship. The QC system would address compliance with these requirements.

Under the proposal, a firm would be deemed to have become "aware" of information if any partner, shareholder, member, or other principal of the firm was aware of such information, the

same standard that applies with respect to the reporting of specified events on Form 3. One commenter stated that the concept of when a firm becomes "aware" should take into account the size and scale of the firm, and the nature of the matters related to the QC system, suggesting that alignment with the requirements of Form 3 may be inappropriate because of Form 3's relatively limited scope compared to the matters addressed by QC 1000. The Board continues to believe that it would be inappropriate to differentiate among firm principals in this regard; all firm principals should be responsible for promptly communicating and acting upon relevant information. Accordingly, the class of persons whose awareness is attributed to the firm was not been narrowed.

Another commenter recommended clarifying the timing of when a firm becomes "aware" of information subsequent to accepting or continuing a client relationship. Footnote 26 of the final standard reflects the suggested clarification that the firm is deemed "aware" of information when any partner, shareholder, member, or other principal of the firm "first becomes aware" of such information.²³³

2. Current PCAOB Standards

The quality objectives of QC 1000 paragraph .38 do not fundamentally change a firm's existing responsibilities regarding acceptance and continuance decisions under QC 20.²³⁴ The quality objectives expand on the requirements in QC 20 with regard to considering the necessary information and making appropriate judgments about the associated risks and the firm's ability to mitigate those risks and perform an engagement in accordance with applicable professional and legal requirements.

Engagement Performance

This component addresses the firm's processes relating to the performance of the firm's engagements in accordance with applicable professional and legal requirements. Engagement performance encompasses the activities of firm personnel and other participants in all phases of the design and execution of the engagement—planning, performing, supervising, and documenting the engagement; conducting an engagement quality review; and making

²³⁰ For a prospective engagement, this includes evaluating information obtained from a predecessor firm. See generally, *e.g.*, AS 2610, *Initial Audits—Communications Between Predecessor and Successor Auditors*.

²³¹ See, *e.g.*, AS 2110.41–.45.

²³² See paragraph .05 of AS 1301, *Communications with Audit Committees*, and paragraph .46 of AT Section 101, *Attest Engagements*.

²³³ This approach aligns with the instructions to Form 3, under which a firm is deemed aware of reportable facts on the first day that any partner, shareholder, principal, owner, or member of the firm first becomes aware of the facts. See Form 3, Note to Instructions to Part II.

²³⁴ See QC 20.14–.16.

communications regarding the engagement.²³⁵ In order for the firm to consistently deliver compliant engagements, including when performing work on other firms' engagements, firm personnel and other participants need to understand and fulfill their responsibilities in accordance with applicable professional and legal requirements.

1. QC 1000

The proposal described the quality objectives for the engagement performance component and asked if there should be any specified quality responses for this component. Firms that commented were generally supportive of the proposed quality objectives. Two commenters wanted clarity on why some concepts in auditing standards were or were not included in QC 1000. One of these commenters, an investor-related group, suggested the standard address certain areas like fraud protection, crypto assets, climate change, and critical audit matters. The Board believes these areas are engagement-level specific, whereas QC 1000 focuses on the firm-level controls over engagement responsibilities. Commenters, including firms and related groups, were also supportive of not providing specified quality responses in this component. The Board adopted these provisions substantially as proposed.

Under QC 1000, a firm is required to establish quality objectives for the engagement performance component in the following areas:

- Engagement responsibilities;
- Consultations and differences in professional judgment; and
- Engagement documentation.

a. Engagement Responsibilities (QC 1000.42.a)

This proposed quality objective did not draw comment and was adopted as proposed.

The standard uses the term "engagement partner" with its existing meaning under PCAOB audit and attestation standards: the member of the engagement team²³⁶ with primary responsibility for the audit, examination, or review, as the case may be.²³⁷ The definition of "engagement"

under QC 1000, under which substantial role work is defined as an engagement, does not change the meaning of engagement partner or affect the responsibilities of individuals involved in substantial role engagements. No comments were received on the use of this term.

i. Responsibilities of the Engagement Partner (QC 1000.42.a(1))

The engagement partner is responsible for the engagement and its performance, including managing and achieving consistent compliance with applicable professional and legal requirements on the engagement. This quality objective focuses firms on partner involvement throughout the engagement, including appropriately supervising firm personnel and other participants.²³⁸

ii. Due Professional Care (QC 1000.42.a(2)(a))

Due professional care means acting with reasonable care and diligence, exercising professional skepticism, acting with integrity, and complying with applicable professional and legal requirements.²³⁹ In the context of engagement performance, professional skepticism is an attitude that includes a questioning mind and critical assessment of audit evidence and other information that is obtained to comply with PCAOB standards and rules. Exercising professional skepticism improves the quality of judgments made while performing the engagement and is key to performing an engagement in good faith and with integrity. PCAOB oversight activities have suggested that the lack of professional skepticism contributes to some of the QC deficiencies identified during PCAOB inspections.²⁴⁰ As an example, a firm's policies and procedures did not provide reasonable assurance that engagement partners supervised engagements with due professional care, which contributed to the failure to identify deficiencies in those engagements.

The quality objective related to due professional care, including professional skepticism, enables appropriate conclusions to be reached that are supported by sufficient appropriate evidence.²⁴¹

iii. Supervision (QC 1000.42.a(2)(b))

Proper supervision aims to ensure that work is performed as directed and supports the conclusions reached.²⁴² The quality objective emphasizes the importance of firm personnel and other participants being supervised properly, consistent with AS 1201 and AT No. 1.

iv. Reporting and Other Communications (QC 1000.42.a(3))

PCAOB standards and rules impose a number of requirements relating to reporting and communicating the results of the engagement.²⁴³ The engagement report and communications to the audit committee are typically prepared at the engagement level and may include information provided by the firm. For example, the firm may provide information related to independence to be communicated in accordance with PCAOB Rule 3524 or PCAOB Rule 3526. This quality objective emphasizes the importance of auditor reporting and communication in accordance with applicable requirements.

b. Consultations and Differences in Professional Judgment (QC 1000.42.b-.c)

Consultations are an important aspect of engagement performance, as they provide a mechanism to discuss and resolve complex, unusual, or unfamiliar matters with individuals who have the requisite knowledge, skill, and ability. Under current PCAOB standards, QC 20.19 highlights the significance of consultations, requiring appropriate policies and procedures. The quality objective should drive firms to continue to focus on the importance of consultation and resolution before the issuance of an engagement report.

The quality objective in the proposed standard provided that consultations on complex, unusual, or unfamiliar accounting and auditing matters are undertaken with qualified individuals from within or outside the firm.

One commenter suggested that the standard require firms to adopt policies that identify situations when national office consultation is required. The Board does not believe it is appropriate to include such prescriptiveness in the standard, as not all firms have national offices. Additionally, the quality objective provides that the firm will identify the risks specific to their

²³⁵ See QC 20.18.

²³⁶ The term "engagement team" is used as defined in the amendments to AS 2101, *Audit Planning*, adopted in PCAOB Rel. No. 2022-002, which takes effect for audits of financial statements for fiscal years ending on or after Dec. 15, 2024.

²³⁷ See AS 1201.A2; AT No. 1 at paragraph .07 note; AT No. 2 at paragraph .06 note. AT 101 uses the term "practitioner with final responsibility for the engagement," which the Board construes as having the same meaning.

²³⁸ See generally, e.g., AS 1201.

²³⁹ The general principles and responsibilities of the auditor when conducting an audit, including professional skepticism and due professional care, are being reaffirmed and combined in AS 1000, as adopted. See Auditor Responsibilities Release.

²⁴⁰ See, e.g., 2022 Broker-Dealer Inspection Report, at 31.

²⁴¹ See Roles and Responsibilities above.

²⁴² See AS 1201.02.

²⁴³ See generally, e.g., AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*; AS 2201.85-.89; AS 1301; paragraphs .34-.38 of AT No. 1; and AT 101.63-.90.

engagements and determine whether there are specific situations that always require consultation.

Another commenter said that the reference to “unfamiliar” accounting and auditing matters was unclear and was concerned that it creates an unnecessary level of prescription that will be difficult to operationalize. The commenter also expressed concern that an unintended consequence could be that auditors may infer that consultations may compensate for lack of competence on the engagement team. The final standard retains the term, consistent with the use of “unfamiliar” in current QC 20.19. It is noted that inclusion of that term in paragraph .42 does not modify or limit auditor obligations to have the competence necessary to conduct the engagement established elsewhere in PCAOB standards.

Differences in professional judgment may occur when there is a concern or disagreement regarding the application of applicable professional and legal requirements during the performance of the engagement. The quality objective underscores the importance of having and adhering to appropriate procedures for the resolution of differences in professional judgment during the performance of engagements such that the firm, firm personnel, and other participants comply with applicable professional and legal requirements.

The proposed quality objective provided that differences in professional judgment related to the engagement are brought to the attention of the individual(s) with responsibility and authority for resolving such matters and are resolved before the issuance of an engagement report. One commenter suggested clarifying that if the engagement partner does not agree with the conclusions arising from the consultation (addressed above), that would be treated as a difference in professional judgment that would require compliance with the quality objective regarding differences of professional judgment. The final standard clarifies that point.

c. Engagement Documentation (QC 1000.42.d)

This proposed quality objective did not draw significant comment and the Board adopted as proposed.

AS 1215 contains the general requirements for the documentation the auditor should prepare and retain in connection with engagements. 17 CFR 210.2–06 also addresses documentation retention requirements.²⁴⁴ The quality

objective regarding engagement documentation in proposed QC 1000 is meant to drive firms to focus on compliance with these requirements.

2. Appendix K Requirements

Existing PCAOB standards (referred to as Appendix K requirements) require SECPS member firms that are associated with international firms or networks to seek adoption of policies and procedures by their associated international firms or network regarding filing reviews, inspection procedures, and disagreements between the engagement partner and the reviewer.²⁴⁵ As noted in the proposal, the Board believes that the purposes originally intended to be served by Appendix K have either been eliminated (through the elimination of the U.S. GAAP reconciliation) or otherwise addressed (through requirements for engagement quality review). Accordingly, the Board proposed to not retain requirements like those in Appendix K.

The proposal asked whether the PCAOB should eliminate Appendix K and rely exclusively on a risk-based approach. Commenters had mixed views regarding the retention of Appendix K requirements. Some commenters supported the elimination of Appendix K requirements and reliance on a risk-based approach. Other commenters asserted that the Appendix K requirements are beneficial and should be retained or made even more prescriptive. The Board believes it unnecessary to retain the Appendix K requirements because under the risk-based approach, firms will have to assess and respond to quality risks including, if applicable, a relative lack of experience in performing engagements under U.S. professional and legal requirements.

Some commenters expressed concern that in a risk-based approach, a person performing a limited review function similar to the current Appendix K reviewer would be considered part of the engagement team, while another commenter requested clarification that such a reviewer would not necessarily be a member of the engagement team. Under QC 1000, the firm’s assessment of quality risks will determine the nature and extent, if any, of additional resources or reviews that would need to be performed over engagements to

ensure compliance with PCAOB and SEC requirements. In some circumstances, the response might involve adding one or more additional members to the engagement team. In other circumstances, the response might involve resources that would not constitute members of the engagement team because they perform a contemporaneous quality control function and do not perform audit procedures or help plan or supervise the audit work.²⁴⁶

One commenter expressed concern that reviewers’ firms would be considered “other accounting firms” and reviewers’ hours would be included for purposes of Form AP filings. Specific to Form AP filing requirements, firms should review the Note to Item 3.2 of the Form AP Instructions regarding the reporting of other accounting firms.²⁴⁷

3. Current PCAOB Standards

Under current QC standards, engagement performance covers all phases of the design and execution of the engagement, and engagement quality reviews.²⁴⁸ QC 20 contains general requirements regarding engagement performance, including planning, performing, supervising, reviewing, documenting, and communicating the results of each engagement; referring to authoritative literature; and consulting with qualified individuals when appropriate. QC 20 provides that policies and procedures should be established to provide reasonable assurance that the engagement is performed in accordance with applicable professional standards. QC 1000 retains these concepts from the extant standards.

As discussed above, QC 1000 does not contain provisions similar to the Appendix K requirements that currently apply to former SECPS member firms.

Resources

This component addresses the firm’s responsibilities for obtaining, developing, using, maintaining, allocating, and assigning resources—including people, financial, technological, and intellectual resources—to enable the design, implementation, and operation of the firm’s QC system and the performance of its engagements.

²⁴⁵ See SECPS 1000.08(n) (cross-referencing the objectives set forth in Appendix K, SECPS 1000.45). The types of SEC filings subject to review under Appendix K are registration statements, annual reports on Form 20–F and Form 10–K, and other filings that include or incorporate the foreign associated firm’s audit report on the financial statements of an SEC registrant.

²⁴⁶ See PCAOB Rel. No. 2022–002 at A4–5.

²⁴⁷ See *id.* at A3–19.

²⁴⁸ See QC 20.18.

²⁴⁴ 17 CFR 210.2–06.

1. QC 1000

a. Resources Quality Objectives (QC 1000.44)

The proposal asked if the Board's proposed quality objectives for resources were appropriate. Commenters that responded to this question generally supported the quality objectives. One commenter suggested that the risks associated with the resources component are greater and that a prescriptive approach would be warranted. The Board believes the combination of quality objectives and specified quality responses appropriately provides for scalability and prescriptiveness.

Under QC 1000, a firm is required to establish quality objectives for the resources component in several different areas:

- People;
- Technological resources;
- Intellectual resources; and
- Resources from a network or third-party provider.

i. People (QC 1000.44.a–g)

The quality objectives in QC 1000.44.a–b are similar to the personnel management element of quality control addressed in QC 20 and QC 40, and the Board adopted them as proposed with one change. The proposed standard included a note that describes what competence comprises—knowledge, skill, and ability—which is derived from QC 40.04.²⁴⁹ Two commenters suggested deleting the last sentence in the note, which as proposed stated that “The measure of competence is qualitative rather than quantitative . . . ,” on the basis that it would discourage the use of quantitative performance metrics. The Board believes that QC 40 should be understood as saying, not that quantitative measures are wholly irrelevant, but that competence is not measured exclusively on a quantitative basis because quantitative measurement alone may not accurately reflect the nature of experience gained over time. The note in the final standard has been revised to clarify that competence can be measured both qualitatively and quantitatively.

These two quality objectives work together in addressing competence from the perspective of both the firm and individual. The firm and its personnel have responsibilities for developing and maintaining competence that will support the operation of the firm's QC

system and the performance of the firm's engagements in accordance with applicable professional and legal requirements and the firm's policies and procedures.

Understanding the competence needed to carry out responsibilities for the operation of the firm's QC system and the performance of the firm's engagements assists a firm in identifying its personnel needs. This understanding also assists a firm in identifying areas for personnel development. Competence can be developed through an appropriate combination of education, professional experience in accounting and auditing with proper supervision, and training such as CPE.

A commitment to quality can be demonstrated through a person's actions and behaviors, including consistent adherence to firm policies and procedures, demonstrating key professional attributes like objectivity, integrity, and due professional care, and taking the initiative to develop and maintain competence. Conversely, a lack of commitment to quality can be seen through actions and behaviors such as inconsistent compliance with professional standards, cheating on professional development and compliance exams, or a “check the box” approach to professional development.

The quality objectives in QC 1000.44.c–e address the assignment of firm personnel and individuals who are other participants, in the firm's engagements, QC roles, and other firms' engagements. As discussed previously, the firm's people resources may include firm personnel (generally, employees of the firm) or resources from outside the firm (other participants). For example, EQRs or personnel at service centers may be considered either firm personnel (if employed by the firm or functioning as firm employees) or other participants (if contracted by the firm).²⁵⁰ One commenter was concerned that the inclusion of other participants in the firm's QC system may create cross-jurisdictional legal issues, such as employment information that may be protected by privacy laws. The Board believes it is important for the QC system to assess the competence of other participants, which may include having policies and procedures on what to do if the firm is unable to make such assessment due to legal issues. One commenter mentioned that the responsibilities related to the use of specialists engaged by the firm, other auditors, and internal auditors providing direct assistance are addressed in existing auditing standards

as engagement team responsibilities and are not needed within this quality objective. While it is acknowledged that there are auditing standards that address those topics at the engagement level, the quality objectives relate to the firm's processes for assigning the appropriate individuals to engagements and QC activities.

One commenter emphasized the need for firm resources to have time to fulfill their assigned responsibilities. Another commenter suggested a prescriptive approach to human capital management, including monitoring assignments and time requirements, utilization, and engagements with high turnover and workloads. Given the wide range of firms based on their size, scope, and nature of practice, the Board does not believe prescriptive requirements in this area are appropriate. The Board clarified paragraphs .44c and .44e by adding “needed” to the quality objective to increase the focus on sufficient competency, objectivity, time, and when appropriate, the authority needed to fulfill their assigned responsibilities. The PCAOB has also separately proposed new reporting requirements regarding firm and engagement metrics that, if adopted by the Board and approved by the SEC, would enhance transparency about, among other things, firms' human capital management.²⁵¹

The quality objectives focus on three key aspects of the ability to fulfill the assigned role: competence, objectivity, and time. Individuals need to have competence to fulfill their assigned roles in accordance with applicable professional and legal requirements and the firm's policies and procedures. As previously discussed, both the individual and the firm play a part in developing a person's competence. The ability to maintain objectivity is essential to performing QC activities or engagements; a lack of objectivity may, for instance, create an unconscious bias that directly affects quality. Individuals' ability to devote appropriate time to their assignments also affects quality.

In addition to the competence, objectivity, and time needed to perform engagement and QC activities, individuals need to have the requisite authority to perform effectively. In the context of engagement activities, the auditing standards already provide authority structures with respect to, for example, supervision and the responsibilities of the engagement partner, and those standards are augmented by firm policies on matters such as consultation. For QC activities,

²⁴⁹ See QC 40.04 (competencies are not measured by periods of time because such quantitative measurement may not accurately reflect the kinds of experiences gained in any given time period).

²⁵⁰ See QC 1000.A5 and .A7.

²⁵¹ See PCAOB Rel. No. 2024–002.

the need for appropriate authority is specified in the quality objective.

The QC 1000.44.f quality objective to comply with the firm's policies and procedures did not attract comment and was adopted as proposed.

This quality objective is based on a concept embedded in QC 20: that firm personnel should adhere to the firm's own standards of quality. The Board believes that this should remain among the firm's objectives, and also that it would play an important role in the operation of the QC system under QC 1000.

The firm's QC-related policies and procedures are essential to the proper functioning of an effective QC system. By definition, those policies and procedures are the "quality responses" the firm has designed and implemented to address quality risks. Firm personnel need to understand those policies and procedures and operate in compliance with them in order for the QC system to operate as designed and achieve its objectives. Additionally, firm personnel need to understand and comply with firm policies and procedures in order for the firm's work on its own engagements and other firms' engagements to be performed appropriately.

Evaluations help support and promote the continuous development of the competence of firm personnel. Some commenters, generally investor-related groups, suggested the standard address incentives in partner compensation relative to quality control systems and weight it at least as much as revenue growth. After considering comments, the Board revised paragraph .44g to add "including through compensation plans and decisions in which quality considerations play a critical part." The Board believes this change will prompt firms to appropriately weight quality concerns in their organization-wide compensation plans and individual compensation decisions. The Board believes his change, along with the change to the quality objective in paragraph .25b, should result in firms giving appropriate weight to quality in compensation plans and decisions regarding performance for both firm leadership and firm personnel.

The quality objective contemplates that evaluations should be performed at least annually. Many firms currently utilize an annual performance review process in order to facilitate such evaluations. A firm may have multiple quality responses to address the quality risks associated with the different types of firm personnel. For example, non-employee contractors and consultants, who work under the firm's supervision

or direction and control and are considered firm personnel, may be evaluated through the contracting process to determine whether the firm should retain them. The quality objective does not specify the format of or approach to periodic evaluations.

The quality objective in QC 1000.44.g, which refers to accountability and incentives, is principles-based, and firms will be able to design and implement incentive systems based upon their nature and circumstances. The "appropriate standards of conduct" identified in the quality objective include fulfilling engagement and QC responsibilities with competence, integrity, objectivity, and due professional care and complying with applicable professional and legal requirements and the firm's policies and procedures, as described in paragraph .46 of the standard.

ii. Technological Resources (QC 1000.44.h)

Technological resources cover many aspects that collectively comprise a firm's technological environment, including information technology applications, infrastructure, and processes (e.g., firm processes to manage access to the IT environment, program changes, changes to the IT environment, or IT operations). Technological resources may be developed by the firm or obtained, for example, from the firm's network or a third-party provider.

The nature and extent of the use of technological resources differs across firms. For example, some audit firms are making significant investments in technological resources and expanding their use of technology-based audit tools, such as software used to perform data analytics or to access information from a distributed ledger. Some technology facilitates the operation of firms' QC systems, such as monitoring individual financial investments for purposes of compliance with independence rules. The availability of "off-the-shelf" technological resources continues to evolve, leading to an increase in firms of all sizes employing technology to assist in operating their QC systems or planning and performing engagements.

The quality objective in QC 1000.44.h highlights that the proper use of technological resources, in a manner that enables the operation of the firm's QC system and the performance of its engagements in accordance with applicable professional and legal requirements and the firm's policies and procedures, is the firm's responsibility. The proposal asked if the quality objective and specified quality

responses related to technological resources provide sufficient direction to enable the appropriate use of emerging technologies. Commenters that addressed this question, generally firms, indicated the proposed quality objectives and specified quality responses provide sufficient direction. One commenter suggested that the standard does not create incentives to use technology to improve audit quality.

The technology environment is dynamic, and firms' use of technological resources will likely continue to evolve in the future. The Board believes that principles-based standards are more adaptable to future developments, less likely to become obsolete, and less likely to discourage the use of emerging technologies. As a result, QC 1000 does not include any prescriptive requirements related to how firms address emerging technology. Instead, it includes a risk factor to prompt consideration of technology as part of the firm's risk assessment process.²⁵² Separately, the Board has proposed certain amendments to PCAOB auditing standards that address certain aspects of designing and performing audit procedures using technology-assisted data analysis of information in electronic format.²⁵³

The Board adopted the technological resources quality objective as proposed. The Board believes the risk-based approach creates incentives for firms to obtain or develop, implement, maintain, and use technological resources throughout the firm based on the size and nature of the firm.

iii. Intellectual Resources (QC 1000.44.i)

The quality objective in QC 1000.44.i related to intellectual resources did not attract comment and was adopted substantially as proposed. The Board revised the note to add "to enable the operation of the firm's QC system," consistent with the quality objective.

Intellectual resources generally include the information the firm uses to promote consistency in the execution of the firm's QC system and the performance of engagements. Intellectual resources may be made available through a variety of media, including via written manuals or technological resources (e.g., the firm's methodology may be embedded in the information technology application that enables the operation of the firm's QC

²⁵² See paragraph .20a.(1)(e) and Appendix B paragraph .B6 of QC 1000.

²⁵³ See Proposed Amendments Related to Aspects of Designing and Performing Audit Procedures that Involve Technology-Assisted Analysis of Information in Electronic Form, PCAOB Rel. No. 2023-004 (June 26, 2023).

system and facilitates the performance of the engagement).

Intellectual resources may be obtained or developed internally, or acquired externally (for example, a commercially available audit or QC methodology or a subscription data feed). Regardless of how intellectual resources are acquired, the firm remains responsible for ensuring they are fit for purpose and properly implementing and maintaining them. For example, if a firm acquired its QC methodology from a vendor, the firm is responsible for choosing a methodology and implementing it (including appropriately identifying risks and designing, implementing, and operating appropriate responses) in a way that enabled the firm's engagements to be properly performed and the firm's QC system to operate in accordance with QC 1000. If a firm developed methodology to direct the performance of its engagements in accordance with applicable professional and legal requirements, and a new auditing standard were issued after that methodology was implemented by the firm, the methodology would need to be updated to properly address the applicable professional and legal requirements.

The quality objective related to intellectual resources in the final standard is similar to the technological resources quality objective, as both objectives relate to resources enabling the operation of the firm's QC system and the performance of its engagements in accordance with applicable professional and legal requirements and the firm's policies and procedures.

iv. Resources From a Network or Third-Party Provider (QC 1000.44.j)

In some circumstances, the firm may use resources provided by a network or a third-party provider. Such resources may include methodologies, applications, and tools used in the firm's QC system or the performance of its engagements.

The proposal included a quality objective in QC 1000.44.j related to the resources provided by a network or a third-party provider. One commenter requested the objective be broken into two quality objectives, as a firm's approach to each of these groups may be significantly different. The Board agrees that a firm's approach to resources provided by the network may be different from resources provided by a third-party provider, and that the approach to different types of third-party providers could also vary. But the Board does not believe that such differences compel separate quality objectives. A firm may identify multiple

quality risks and develop multiple quality responses related to a single quality objective.

For example, a firm may use multiple third-party providers for a variety of different resources, such as an audit methodology provider or a confirmation intermediary. If these different types of third-party providers or resources present different risks, the firm would be required to develop different quality responses. In that scenario, the firm could have different policies and procedures applicable to different types of third-party providers and/or different types of resources. A firm that is not affiliated with a network is not required to establish a quality objective related to network-provided resources and therefore would not identify quality risks or related quality responses.

Notwithstanding that a firm may use resources from a network or a third-party provider, the firm remains responsible for the use of these resources in the QC system and performance of its engagements.

Consideration of the nature of the resources provided by the network or third-party providers, how and to what extent the resources will be used, and the general characteristics of the third-party provider will assist the firm in determining whether it needs to supplement or adapt such resources. For example, the firm may obtain its methodology from a third-party provider under an arrangement whereby the third-party provider agrees to update the methodology when new standards are issued. In this scenario, the firm remains responsible for verifying that such changes are incorporated into the methodology and supplementing the methodology if such changes are not made, so that the firm's resources support its performance of compliant engagements. As another example, the firm may obtain a service from a third-party provider that provides a System and Organization Controls 1 (SOC 1) report. The firm would be responsible for verifying that the controls are designed effectively at the third-party provider and for designing and implementing any complementary user entity controls identified in the report.

The firm is also responsible for taking any necessary actions in using a resource from a network or third-party provider to enable the resource to function effectively. For example, the network or third-party provider may need information related to the firm's restricted entities so that it can facilitate independence confirmations. In addition, if the firm discovered a problem with the design or operation of the resource, it may need to

communicate such problems to the network or third-party provider so that the resource can effectively operate.

b. Resources Specified Quality Responses (QC 1000.45–.51)

The proposal asked if the specified quality responses for resources were appropriate. Two commenters that addressed this question supported the specified quality responses. Two other commenters objected that the specified quality responses were too prescriptive and suggested they be rewritten as risk-based quality objectives.

One commenter stated that certain of these requirements relate closely to auditing standards and requested clarity on how QC 1000 is intended to interact with engagement-related auditing standards. QC 1000 focuses on firm-level controls over compliance with auditing standards, including those related to engagement performance.

The Board adopted the specified quality responses as proposed, with one modification suggested by commenters. These specified quality responses carry provisions from the PCAOB's existing QC standards into QC 1000 or establish firm-level requirements that align with existing engagement-level requirements. They also include new requirements that the Board believes are important to a firm's QC system.

The specified quality response related to appropriate standards of conduct did not attract comment and was adopted as proposed.

The reference to "appropriate standards of conduct" reflects a number of concepts in existing PCAOB standards, including:

- Fulfilling responsibilities with professional competence;²⁵⁴
- Integrity and objectivity;²⁵⁵
- Due professional care (including the exercise of professional skepticism);²⁵⁶ and
- Complying with applicable professional and legal requirements and the firm's policies and procedures.²⁵⁷

Firm personnel are individually responsible for complying with the firm's standards of conduct, and the firm's policies and procedures around these standards of conduct are intended to result in firm personnel being held accountable for their behavior and actions. This includes evaluating firm personnel's adherence to such standards

²⁵⁴ See, e.g., QC 20.13a, .13b, and .15a.

²⁵⁵ See, e.g., QC 20.10.

²⁵⁶ The general principles and responsibilities of the auditor when conducting an audit, including professional skepticism and due professional care, are being reaffirmed and combined in AS 1000, as adopted. See Auditor Responsibilities Release.

²⁵⁷ See, e.g., QC 20.03.

of conduct, addressing deviations, and holding personnel accountable for fulfilling their engagement and QC responsibilities, including through the firm's incentive system. The Board believes the standards of conduct included in this specified quality response are foundational to fulfilling not only engagement responsibilities, but also QC responsibilities.

QC 40 addresses requirements regarding the competencies of engagement partners and, by extension, EQRs.²⁵⁸ The proposed standard, in QC 1000.47, required that firms' QC policies and procedures address certain enumerated competencies, as well as other competencies as necessary in the circumstances. Some commenters suggested that the competencies identified in proposed paragraph .47a-h be moved to a quality objective or staff guidance and argued that they were redundant to the auditing standards. The Board believes that the competencies in paragraph .47 are applicable to all firms and accordingly are appropriate as specified quality responses. One commenter asked for clarification of the expectation of "including an understanding of" and suggested that the standard include consideration of "other competencies as necessary in the circumstances," consistent with QC 40.08. The Board believes that auditors should be familiar with the concept of obtaining an understanding, and note that the construct of QC 40 is a restrictive list whereas the list of competencies in this requirement is identified as "including" and not intended to be comprehensive, so the Board does not believe a reference to other competencies is necessary.

One commenter indicated that the firm would not be in a position to impose the specific requirements in paragraph .47 on individuals that are not part of the firm. The Board has narrowed the requirement to apply only to firm personnel, rather than "others participating in an engagement," as proposed. It is noted, however, that other quality objectives, such as those in paragraphs .44c and .44e, continue to apply with respect to individuals outside of the firm as well as firm personnel. As discussed in more detail above in the Acceptance and Continuance of Engagements discussion, the Board also revised "client" to "company" in paragraph .47.

Paragraph .47 of QC 1000 both expands the required competencies for engagement partners and requires certain competencies for other firm

personnel in engagement roles commensurate with their responsibilities. This includes applying existing requirements for engagement partners—an understanding of, among other things, the importance of exercising sound judgment, the role of the firm's QC system in the performance of engagements, and the industry in which the company operates—to everyone in an engagement role, at a level commensurate with their responsibilities.

To reflect changes in the environment since the existing QC standards were issued, the Board required competencies related to understanding the subject matter of attestation engagements, the internal control framework and technology used by the company, and the technological and intellectual resources used in performing engagement procedures. Regarding technological and intellectual resources, the Board required an understanding of how and whether it is appropriate to use these resources in performing the engagement. This specified quality response does not imply that the engagement partner or other firm personnel participating on an engagement need to be knowledgeable about how such resources are developed.

QC 20 provides that policies and procedures are required to be established to provide the firm with reasonable assurance that personnel participate in CPE and other professional development activities that enable them to fulfill responsibilities assigned and satisfy applicable CPE requirements.²⁵⁹ In addition, SECPS member requirements provide that member firms are required to ensure that (1) all professionals in the firm residing in the United States, including CPAs and non-CPAs, participate in at least 20 hours of qualifying CPE every year and at least 120 hours every three years and (2) professionals who devote at least 25 percent of their time to performing audit, review or other attest engagements, or who have the partner- or manager-level responsibility for the overall supervision or review of any such engagements, must obtain at least 40 percent (eight hours in any one year and 48 hours every three years) of their required CPE in subjects relating to accounting and auditing.²⁶⁰

²⁵⁹ See QC 20.13; QC 40.02, .05.

²⁶⁰ See SECPS 1000.08(d), 8000. The SECPS member requirements provide that "accounting and auditing subjects" should be broadly interpreted, and include, for example, subjects relating to the business or economic environments of the entities to which the professional is assigned.

Through the PCAOB's oversight activities, the Board has observed situations where a lack of understanding of professional standards appears to have contributed to audit deficiencies. These problems have been observed in domestic firms and international firms, including firms that were not SECPS members.

One commenter requested the standard set out more specific requirements with respect to training, identify areas or categories that must be regularly addressed, and not eliminate the CPE obligation in the existing standard. Another commenter requested the standard include minimum requirements related to training of audit staff. The Board believes it is important for firms to provide training focused on areas where firm personnel need to develop or maintain their competence so that they may fulfill their QC and engagement roles. If the Board were to set specific requirements with respect to training, firms may not evolve their training over time to respond to changes in the firm or in the needs of firm personnel. The Board maintained the principles-based approach to training.

Under the specified quality response in QC 1000.48, the firm is required to provide training, including training on applicable professional and legal requirements, that is mandatory for all firm personnel on an annual basis. This specified quality response provides firms the ability to determine the type and extent of training necessary based on their personnel and the nature and circumstances of the firm and its engagements. For example, a firm may determine that training is necessary on a wide array of topics for a certain level of staff within the firm. Another firm may determine that training is necessary for one or more staff in a certain area due to a new engagement or as a result of an area of development identified as part of a performance evaluation. A firm may also decide that it is necessary to repeat training as a periodic reminder of existing requirements, such as those relating to internal control over financial reporting. Ultimately, the type and extent of training should be directed at whatever is necessary to enable firm personnel to fulfill their assigned QC and engagement roles in accordance with applicable professional and legal requirements and the firm's policies and procedures.

This specified quality response in QC 1000.49 did not attract comment and was adopted as proposed.

This specified quality response relates to the quality objective in paragraph .44g, which provides that firm personnel are evaluated at least

²⁵⁸ See, e.g., QC 40.08; AS 1220.05.

annually, incentivized to fulfill their assigned responsibilities and adhere to appropriate standards of conduct, including through compensation plans and performance decisions regarding performance that appropriately prioritize quality considerations, and held accountable for their actions and failures to act.

Specific to the individuals assigned ultimate responsibility and accountability for the QC system as a whole and operational responsibility and accountability for the QC system as a whole, the firm's periodic performance evaluations of these individuals are required to take into account the results of the firm's evaluation of its QC system.²⁶¹ A firm will be able to determine its approach to comply with this specified quality response. For example, the firm may set targets and measure the outcome of the evaluation of the QC system against those targets. As another example, the firm may consider the individual's actions taken in response to identified QC deficiencies or major QC deficiencies, including the timeliness and effectiveness of such actions. The periodic performance evaluation of these individuals may be informal in a less complex firm or undertaken by a special committee in a more complex firm.

No comments were received on the specified quality response in QC 1000.50 and it was adopted as proposed.

Laws or regulations may establish requirements for the professional licensing or other qualifications of the firm and firm personnel. Under this specified quality response, the firm is required to have policies and procedures regarding licensure such that the firm and firm personnel hold the required licenses or qualifications. The policies and procedures address such matters as (1) the jurisdiction(s) where firm and firm personnel are required to hold licenses or other qualifications, and (2) whether the firm and such firm personnel comply with the jurisdictions' requirements.

The quality objective in paragraph .44h. provides that technological resources are obtained or developed, implemented, maintained, and used to enable the firm's QC system and the performance of its engagements. As part of the firm's quality response to this quality objective, the firm's technological resources should also have the characteristics described in paragraph .51. One commenter stated

that the quality objective in proposed paragraph .44h is sufficient and this specified quality response should be removed. The Board believes the firm's policies and procedures should address its technological resources having the capacity (resource requirements for the necessary output), integrity (guarding against improper information modification), resiliency (ability to operate and recover under adverse conditions), availability (ensuring timely and reliable access to and use of information), reliability (ability to function consistently), and security (protection against intentional subversion).²⁶² These characteristics enable the ongoing operation of the firm's QC system and performance of its engagements. The Board believes this specified quality response provides additional direction and has retained it in the final standard.

Also related to technology, the proposal asked if the standard should include a specified quality response that would require the use of technological resources by the firm to respond to the risks related to the use of certain technology by the companies for which the firm performs engagements. Several commenters did not support inclusion of such a specified quality response. One commenter requested a requirement to design and implement controls to prevent unauthorized access to data and technology. The Board did not make any changes or additions to the quality objective or specified quality responses related to technological resources because it believes the more general provisions appropriately address this issue, and more specific provisions are at risk of quickly becoming outdated as technology evolves.

2. Current PCAOB Standards

QC 1000 largely covers the same areas addressed in QC 20 and QC 40 for personnel management and assignment of responsibilities.²⁶³ Existing PCAOB QC standards do not provide specific direction on the use of intellectual resources or technological resources, except for one application regarding independence.²⁶⁴

Information and Communication

This component addresses the firm's processes for obtaining, generating, sharing, and using information to enable the design, implementation, and operation of the QC system and the

performance of the firm's engagements, and for communicating information within the firm and to external parties.²⁶⁵ As discussed in more detail below, the Board made some changes in response to commenter input but adopted most provisions as proposed.

1. QC 1000

The information and communication area of the firm's operations serves the critical function of generating, gathering, and disseminating the information needed for the firm, including the QC system, to function. The process of determining information needs is iterative and ongoing; as the nature and circumstances of the firm change, information needs also change. The information and communication component of the QC system operates over this area of the firm's operations.

One firm suggested that the information and communication component refer to "relevant and reliable" information to convey that not all information is intended to be obtained and disseminated to the relevant individuals or roles. The firm disagreed that relevance and reliability is implied within the context of the proposed requirements, and argued that the term "information" needs parameters and qualifying language to provide boundaries to the vast amount of information that exists or could be created in the context of a firm's QC system. The firm further argued that without appropriate qualifiers, the breadth of information to be considered and/or communicated within a QC system will inhibit firm leaders from identifying and focusing on information most relevant to the successful operation of the QC system. As discussed in the proposal, in determining specific information to be communicated to firm personnel, including the nature and extent of such communication, the firm may consider the type of information that is relevant to the recipients given their roles and responsibilities within the firm. The Board continues to believe that information would have to be relevant and reliable to support the operation of the firm's QC system and the performance of the firm's engagements in accordance with applicable professional and legal requirements, so that a reference in the standard to "relevant and reliable" information is unnecessary.

²⁶¹ Evaluation of a firm's QC system is addressed in paragraphs .77–.78 of QC 1000 and discussed below.

²⁶² See, National Institute of Standards and Technology Glossary, available at <https://csrc.nist.gov/glossary>.

²⁶³ See QC 20.13 and .22.

²⁶⁴ See SECPS 1000.46 (requirement 4).

²⁶⁵ Other aspects of the standard also include specific provisions regarding communication (see, e.g., paragraphs 16–.17 in Roles and Responsibilities, and paragraphs .31 and .35 in Ethics and Independence).

a. Information and Communication Quality Objectives

The standard requires the firm to establish a number of quality objectives for the information and communication component. These objectives are discussed in more detail below. One firm commented that, as the proposed quality objectives for information and communication are broadly consistent with other jurisdictional and international quality control/management standards, they are appropriate, and no further changes are needed.

i. Identifying, Capturing, Processing, and Maintaining Information (QC 1000.53.a)

Identifying, capturing, processing, and maintaining information is an ongoing process necessary to support the firm's QC activities and the performance of its engagements in accordance with applicable professional and legal requirements. Information systems vary from firm to firm and encompass various sets of activities involving people, processes, data, or technology, or some combination thereof. Some firms' information systems may be heavily reliant on IT aspects while other information systems may require more manual intervention. Firms are able to determine the type of information systems necessary to achieve their quality objectives.

One commenter suggested that the information and communication component could be enriched by explicitly integrating academic audit and accounting studies as a vital source of information to be used by firms to inform their QC system. The Board believes that the quality objectives within the information and communication component sufficiently establish the desired outcomes for the identification of external information to support the operation of the firm's QC system. A firm may determine that the conclusions of certain academic studies inform the design or operation of its QC system. Furthermore, depending on the nature and circumstances of the firm and its engagements, the firm may consider any applicable academic studies in the firm's risk assessment process as it obtains an understanding of the conditions, events, and activities that may adversely affect the achievement of its quality objectives. The requirement was adopted as proposed.

ii. Exchange of Information (QC 1000.53.b–c)

Information is essential to firm personnel being able to understand and fulfill their responsibilities relating to the QC system and the performance of the firm's engagements. For example, through the Board's oversight activities, it observed improved audit quality when there was regular, consistent communication among members of the engagement team.²⁶⁶ The quality objective prompts firms to tailor the nature, timing, and extent of information communicated based on firm personnel's responsibilities, including those related to the firm's policies and procedures.

Communication is generally an ongoing process that involves all firm personnel. For example, the firm communicates information to engagement teams, such as information obtained during the firm's acceptance and continuance process that is relevant in performing the engagement. Engagement teams also communicate information to the firm—for example, information about the company obtained during engagement performance that may assist the firm when evaluating whether to continue the engagement. Two-way communication may also occur among firm personnel. For example, firm personnel performing engagements may exchange information directly with firm personnel performing activities within the firm's QC system, such as information to facilitate compliance with the firm's independence policies and procedures. The standard emphasizes the need for two-way communication within the firm and the responsibility of all firm personnel to communicate information.

One commenter addressed the quality objectives set out in paragraphs .53b–.53c. of the proposed standard related to the timely exchange of information between firm personnel and leadership, including those with responsibilities for the firm's QC system. The commenter recommended that the final release clarify that the firm's policies and procedures assist in promoting communication such that the appropriate individuals with responsibilities over the firm's QC system become aware of relevant matters in a timely manner, as appropriate for the size and the scale of the firm and relative nature of the matter. As discussed above, the Board believes timely communication and action should be sufficiently prompt to

achieve its objective and that timeliness is a function of the nature and significance of the issue. These requirements were adopted as proposed.

iii. External Parties (QC 1000.53.d–e)

There are many circumstances in which firms communicate information about themselves and their performance to external parties. Some external communications are required by law or regulation, such as the transparency reporting that is required in some jurisdictions, and others are made by firms voluntarily, for example, in connection with marketing or recruitment efforts.

The standard requires the firm to establish a quality objective that addresses communications to external parties in accordance with applicable professional and legal requirements. This quality objective focuses firms on providing the necessary communications to external parties when required. Among other things, this objective (paragraph .53d.) covers the completeness, accuracy, and timeliness of a firm's existing annual and periodic reporting to the PCAOB (*i.e.*, Forms 2 and 3, Form AP, and Form QC). It would also cover reporting under the Board's proposed revised reporting requirements and metrics requirements²⁶⁷ if those are ultimately adopted by the Board and approved by the SEC.

An investor expressed concern with the absence of references to investors or the public from the examples of external parties, and further commented that the proposal makes no mention of the role of quality control with respect to critical audit matters. This provision relates to communications to external parties that are required under applicable professional and legal requirements. Under current requirements, the only required communication from the audit firm to investors is the audit report. Audit reporting is part of engagement performance, is covered by a separate quality objective relating to engagement performance,²⁶⁸ and is not addressed by this quality objective. To the extent that a communication to a regulator is ultimately available to the public (as is the case with, for example, various forms filed with the PCAOB), such communications would be covered by this quality objective, thus providing

²⁶⁷ See PCAOB Rel. No. 2024–002.

²⁶⁸ See paragraph .42a.(3): “Responsibilities are understood and fulfilled . . . , including, as applicable . . . Responsibilities for reporting and other communications with respect to the engagement.”

²⁶⁶ See, *e.g.*, 2019 Inspection Observations Preview at 5.

downstream benefits for investors and the public.

A firm recommended that the scope of the requirement be limited to information or communications regarding a firm's audit practice and engagements performed in accordance with PCAOB standards. As discussed in more detail above, the definition of applicable professional and legal requirements in the final rule has been more narrowly tailored to address engagements, as defined in QC 1000, and the QC system itself. The Board believes this change addresses the commenter's concern about the possible overbreadth of the quality objective, and the Board adopted it as proposed.

The PCAOB also observed that some firms make public communications about firm-level or engagement-level information, such as firm metrics and financial data. For example, some firms publish transparency or audit quality reports, either voluntarily or in response to the requirements of other jurisdictions, that contain data such as:

- Revenue breakdown by service line, by year, or by geographic segment;
- Professional staff ratios;
- Staff turnover ratios;
- Average training hours per professional; and
- Partner workload.

In addition to transparency or audit quality reports, firms may communicate these data via web pages or other media, such as promotional publications, social media, interviews, or presentations via webcast or video. Furthermore, if adopted, the Firm and Engagement Metrics proposal will require firms to publicly report certain metrics relating to their audits and their audit practices.

Regardless of the form of communication and the type of information presented, the Board believes that firms' QC systems should address the integrity of firms' external communications about themselves and the performance of their engagements. Such information can influence the views of relevant stakeholders, including audit committees determining whether to engage or retain an auditor and investors determining whether to ratify such an appointment.

The proposed standard contemplated that the firm would establish a specific quality objective that firm-level or engagement-level information communicated externally is accurate and not misleading and, with respect to any performance metrics, that the communication explains in reasonable detail how the metrics were determined and, if applicable, how the metrics or the method of determining them changed since performance metrics

were last communicated. The Board's view is that a specific quality objective in this area will prompt firms to implement targeted policies and procedures that address, for example, the quality and consistency of data and the need for context or explanation. This in turn will improve the informativeness, reliability, and comparability of such communications and avoid misleading the intended audience.

Several commenters, including firms and related groups, broadly supported the quality objectives or agreed that it is important to address communications to stakeholders about a firm's or engagement's performance, and that such communications should be accurate and not misleading. However, many of the commenters on this topic raised concerns with regard to the proposed quality objective addressing the firm's external communications relating to metrics.

Several commenters suggested that additional clarification be provided on the metrics and communications that are in scope for the quality objective. Some commenters recommended that the scope of the requirement be limited to metrics related to audit quality that are required to be communicated under applicable professional, legal, or other regulatory requirements and are communicated publicly. One firm recommended that the scope of metrics be limited to those related to the effectiveness of the firm's QC system or audit quality, and that the scope of the communications be limited to "formal" external reporting such as audit quality reports, transparency reports, communications with audit committees, and other published reports. Another firm recommended that the external communications in scope for the objective should be limited to communications externally about audit quality and should not extend to other external information issued by the firm that is not specifically related to audit quality such as marketing communications or recruiting information. The firm further argued that this limitation on scope to only audit-quality-related external communications should also apply to the communication of how metrics were determined and explanations of year-on-year changes. Another firm recommended that the scope be limited to information or communications regarding a firm's audit practice and engagements performed in accordance with PCAOB standards.

One firm expressed concern regarding firms' ability to design and implement quality responses to address the risk of

every type and form of information communicated given the broad scope of the requirement. The firm recommended that the scope should be limited to information resulting from and regarding the evaluation of the firm's QC system, which will allow firms to focus efforts on the information that is most meaningful to stakeholders, which in turn will enhance the reliability of such information.

One firm commented that in addition to recommending limiting the quality objective to engagements performed under PCAOB standards that would be subject to the firm's QC system, it may not be practicable to communicate in reasonable detail how a metric was determined in all situations (*e.g.*, if the metric was provided in a speech). The firm asserted that it should be allowed to present the information about how a metric was determined and, if necessary, how it changed, in a single, publicly available location (*e.g.*, on the firm's website). One firm commented that the level of disclosure that would be required may create confusion or may not ultimately be necessary, in particular in instances when the metric does not relate to audit quality. Further, the firm stated that the disclosures may conflict with requirements that may apply to registered firms outside of the U.S. Another firm recommended that the words "explains in reasonable detail how the metrics were determined and, if applicable, how the metrics or the method of determining them changed since performance metrics were last communicated" be removed from the quality objective. The firm asserted that this requirement may discourage smaller firms from including many quality metrics in their audit quality, transparency, and similar reports given limited time and resources available to produce their voluntary report. Some commenters, including firms and a related group, recommended that considerations related to metrics in QC 1000 be taken up as part of the PCAOB's research project on firm and engagement performance metrics.

After consideration of the comments received, the Board continues to believe it is appropriate that all firm communications to external parties regarding themselves and their audit practice, in whatever medium, meet the minimum standard of being accurate and not misleading.

However, in response to commenters, the Board clarified the quality objective in certain respects. It has clarified that the quality objective is limited to communications regarding the firm's audit practice, firm personnel, or engagements and removed the word

“performance” from the phrase “performance metrics,” to align with the terminology use in the Board’s proposed metrics requirements.²⁶⁹ Additionally, the Board revised the quality objective to provide that only metrics communicated in writing require an explanation of how the metrics were determined and, if applicable, how the method of determining them changed since metrics were last communicated. The Board believes this will address commenter concerns about the feasibility of providing such explanations for metrics communicated orally. In addition, the Board removed the requirement to explain in reasonable detail, if applicable, how the metrics themselves have changed since they were last communicated. The Board believes that requiring an explanation of how the metrics were determined and, if applicable, how the method of determining the metric changed since it was last communicated will enhance the understandability and comparability of the metrics made available to external parties. However, the Board does not believe it to be necessary to require narrative discussion of numeric changes in the metric period over period if there has been no change in the underlying calculation method.

These disclosures may be incremental to requirements that could apply to registered firms outside of the U.S., however, the Board does not believe that these requirements will operate in conflict. The Board has observed variation and complexities in how metrics are defined and calculated by firms, as well as changes in the calculation method over time such that it believes this quality objective is necessary to improve the informativeness, reliability, and comparability of such communications and avoid misleading the intended audience. In addition, over 100 unique qualitative disclosures and quantitative audit quality metrics have been observed by the Center for Audit Quality (“CAQ”) in its analysis of the CAQ’s eight Governing Board firms’ most recent audit quality reports.²⁷⁰ The Board believes this indicates both a demand for and an ability to supply metrics, which further emphasizes the need for consistency and comparability of the metrics.

The Board considered whether it would be appropriate to allow for additional disclosures relating to metrics to be presented in a single

public location such as the firm’s website. However, the Board believes that by limiting the requirement to written communications, it has eliminated the concern about how to present such information with respect to an oral communication, and given the importance of the information to the intended audience, that this should be presented in the same written communication as the disclosed metrics.

The Board received feedback from a number of commenters, including investors and related groups, criticizing the proposal for failing to include required metrics or audit quality indicators. The Board has proposed a separate standard on firm and engagement metrics²⁷¹ and it has addressed these comments in that proposal.

iv. Networks (QC 1000.53.f)

If the firm belongs to a network, exchange of information between the firm and the network may play an important role in supporting the operation of the firm’s QC system and the performance of its engagements. For example, if the network performs certain monitoring activities relating to the firm’s QC system, the network’s communication of information (*e.g.*, results of its monitoring activities or any changes to its activities from the prior year) may result in the firm adjusting the nature, timing, and extent of its own monitoring activities. On the other hand, the firm may need to communicate to the network when there are changes to the firm’s QC system that may affect the network’s monitoring activities.

The Board did not receive comment on the proposed quality objective relating to the exchange of information between a firm and a network and adopted it as proposed.

v. Other Participants (QC 1000.53.g–h)

Many firms have increasingly involved parties outside the firm in QC functions, such as independence compliance, and engagement functions, such as performing audit procedures and evaluating audit evidence. Working with other participants can differ from working with individuals within the firm. For example, auditor-engaged specialists²⁷² may have different professional training and experience

and may operate under a different type of QC system, or none at all. Firms may experience differences in local norms and expectations when working with firms based in other jurisdictions. These and other factors give rise to risks in the communication between firm personnel and other participants, including the potential for misunderstandings regarding the audit effort needed to meet the objective of the other participant’s work.²⁷³ It is therefore imperative that appropriate communications take place between the firm and other participants to enable the other participants to understand and carry out their responsibilities relating to activities within the firm’s QC system and the performance of its engagements in accordance with applicable professional and legal requirements and the firm’s policies and procedures.

The Board broadened the language of the quality objective to clarify that it applies to the use of participants in both the firm QC system and in engagements.

For other participants that are firms, the Board proposed that information obtained from the other participants should include the conclusion of the most recent evaluation of its QC system and a brief overview of remedial actions taken and to be taken, as well as a footnote clarifying that the most recent evaluation of the other participant firm’s QC system refers to that firm’s evaluation under paragraph .77 of QC 1000 as of the most recent evaluation date, if such an evaluation was performed, and otherwise to the most recent QC evaluation performed by the other participant firm under any professional standard.²⁷⁴

One commenter stated that audit firms monitor the quality of member firms but have typically been reluctant to share negative information about a member firm, and that requiring transparency in such information would be beneficial. However, several firms and related groups expressed concerns about the impact of having other participant firms share the most recent evaluation of their QC system based on the confidentiality protections set out in Sarbanes-Oxley or other relevant local laws and regulations. Two firms commented that these concerns would be alleviated if the definition of QC deficiency was updated to align with the definition in ISQM 1 and SQMS 1. One firm commented that the proposed quality objective addressing information and communication related to other participants is appropriate, however if

²⁷¹ See PCAOB Rel. No. 2024–002.

²⁷² AS 1210, establishes requirements regarding the use of a specialist engaged by the auditor’s firm (“auditor-engaged specialist”) to assist the auditor in obtaining or evaluating audit evidence with respect to a relevant assertion of a significant account or disclosure.

²⁷³ See, *e.g.*, PCAOB Rel. No. 2022–002.

²⁷⁴ See, *e.g.*, ISQM 1 paragraphs .53–.54; and SQMS 1 paragraphs .54–.55.

²⁶⁹ See PCAOB Rel. No. 2024–002.

²⁷⁰ See Audit Quality Reports Analysis: A Year in Review, available at <https://www.thecaq.org/aqr-analysis-yir/>.

information is to be shared at the deficiency level, the firm is concerned that this would violate the confidentiality provision within Sarbanes-Oxley. Another firm suggested limiting the extent of information shared to only what is necessary for firms to achieve the reasonable assurance objective. This firm agreed with obtaining and considering the other participant firm's overall conclusion of the most recent evaluation of the QC system, however it argued that this should not include information regarding deficiencies, if any, and remedial actions taken and to be taken. Some commenters argued that firms should be able to take a risk-based approach in determining whether it is necessary to request specific information regarding an other participant firm's QC system.

One firm-related group argued that certain international legislation may be an issue for firms when reporting clients' or individuals' personal information. The commenter further expressed concerns that those firms applying QC 1000 fully and reporting thereunder may be selected in preference to those using other standards. Another firm-related group expressed concern that a firm-level QC inspection finding might result in the best firm for the component auditor role being bypassed. The commenter further suggested that guidance is needed for when the evaluation and/or overview of remedial actions is not forthcoming.

Some commenters, including firms and a related group, argued practical concerns regarding the application of the requirement to other participants not registered with the PCAOB. One firm commented that, while it is not aware of any legal or regulatory concerns with other participants sharing the most recent evaluation of their QC system, it suggested that the PCAOB state that firms will not violate this requirement if local laws or regulations exist that prevent compliance.

After consideration of the comments received, the Board amended the standard to limit the information that should be obtained to only the conclusion of the most recent evaluation of the QC system. The Board believes that this addresses commenter concerns relating to the risk of communicating privileged information. Furthermore, the Board continues to believe that obtaining the communication of the conclusion of the other participant's most recent evaluation may assist a firm in determining the nature and extent of supervision of the work of other participants or deciding whether other participants are fit to participate in the

firm's engagements, including ensuring that the best firm for the job is not bypassed. If necessary, the firm may discuss the conclusion with the other participant firm to seek to gain a better understanding of the basis for such conclusion.

The Board believes that in practically all cases, the firm would be able to obtain the conclusion of the most recent evaluation of the other participant's QC system. However, if a firm is unable to obtain this (for example, if the other participant has not performed an evaluation, or if local laws forbid them from sharing it), then the firm should assess what other procedures are necessary to achieve the quality objective.²⁷⁵

One firm commented that paragraph 53f. specifically addressed networks, while .53g. addresses other participants, and that it was unclear whether paragraph .53g. also applies to networks given their inclusion in the definition of "other participants" or if the Board intends for paragraph .53g. to apply to any other party defined within "other participants." Paragraph .53g. applies to firms within a network to the extent that the firm is an other participant, as defined in QC 1000.A7 and discussed in more detail above.

Another firm expressed concerns that it may not be able to practically apply paragraph .53g. to all "other participants." Specifically, the firm requested clarification as to the expectation regarding the extent to which firms design policies and procedures to ensure other participants comply with applicable professional and legal requirements, including bifurcation of participants that are part of the engagement team as compared to participants in the firm's quality control system. Another firm suggested it would be impractical to suggest that a firm's QC system can be applied to other participants or that they would explicitly comply with the firm's policies and procedures as if they were part of the firm. As discussed in more detail above, just because a quality objective or other provision of QC 1000 refers to all types of other participants in the same way, this does not mean that the firm should respond by treating all types of other participants in the same way. The firm's policies and procedures addressing other participants should differentiate based on the types and roles of other participants to the extent necessary to be responsive to the firm's quality risks (for example, the firm would have

different policies for the use of engaged specialists versus external EQRs).

The proposed requirement in paragraph .53.h did not draw comment and was adopted as proposed.

The firm may also participate in another firm's engagement as an other participant. For the same reasons that apply when the firm is issuing the engagement report and using the work of other participants, it is important that there is an appropriate exchange of information in order to enable the firm serving as an other participant to fulfill its role in accordance with applicable professional and legal requirements.

d. Information and Communication Specified Quality Responses (QC 1000.55–.56)

One firm commented that the proposed specified quality responses for information and communication are appropriate. Other comments that are specific to each specified quality response are discussed below.

The requirement in paragraph .55 carries forward an existing requirement from the PCAOB's QC standards and extends it to cover other participants, not just firm personnel.²⁷⁶ One firm suggested that, as it relates to other participants, the quality objective in paragraph .53g. was sufficient, and the specified quality response was not needed. Another firm commented that it is concerned that expanding the requirement to communicate quality control policies and procedures beyond firm personnel to include other participants may not be operational due to the size, content, and methods of accessing the policies and procedures. The firm further asserted that the proposed standard may inappropriately blur the lines between a firm's system of quality control and engagement-level requirements that are already addressed through existing PCAOB standards and rules. The Board believes that other participants play an important role in the operation of the firm's QC system and the performance of its engagements and that it is imperative for these other participants to be aware of the firm's policies and procedures to the extent required to enable them to carry out their responsibilities. For that reason, the Board believes it is necessary to expand the existing requirement to include other participants in a specified quality response.

To address the concern about the volume of material required to be shared with other participants, the Board clarified the requirement by providing that policies and procedures should be

²⁷⁵ See PCAOB Rule 3101(a)(2).

²⁷⁶ See QC 20.23.

communicated “to the extent” and in a manner reasonably designed to enable firm personnel and other participants to carry out their responsibilities; in other words, the requirement is to communicate what firm personnel and other participants need to know, not necessarily all of the firm’s policies and procedures. For example, a firm would communicate to an EQR contracted by the firm its policies and procedures related to EQR review and independence. In addition, although the wording of the requirement is different, the substance of the existing requirement²⁷⁷ is unchanged. Reference to “reasonably designed and implemented” captures the existing requirement to communicate in “a manner that provides reasonable assurance that those policies and procedures are understood and complied with” without repeating the reasonable assurance already captured by the overarching objective of the QC standard.

Another commenter requested clarification as to whether the communication of policies and procedures is required in narrative, flowchart, or other form. The Board believes that the policies and procedures should be in writing and in a manner that is reasonably designed to enable firm personnel and other participants to understand and carry out their responsibilities relating to activities within the firm’s QC system and the performance of its engagements. The format of these policies and procedures may vary depending on the specific responsibilities being addressed and how the firm wants to communicate them.

Under the existing PCAOB standard, the firm is also required to make timely communications to appropriate personnel regarding changes to its established quality control policies and procedures. The Board does not think it is necessary to address changes to policies and procedures separately; the requirement is to communicate policies and procedures as in effect, which includes changes to such policies and procedures over time. If the firm needs to communicate changes to its policies and procedures to enable firm personnel and other participants to understand and carry out their responsibilities, then the specified quality response will require such communication.

Given the importance of information generated from the monitoring and remediation process, paragraph .56 includes a specified quality response that requires the firm to communicate

such information to firm personnel to enable them to take timely action. In determining specific information to be communicated to firm personnel, including the nature and extent of such communication, the firm may consider the type of information that is relevant to the recipients given their roles and responsibilities within the firm. For example, information communicated to engagement teams may be focused on a description of identified engagement deficiencies and related remedial actions that are likely to be relevant to such firm personnel and their engagements. Information communicated to all firm personnel may relate to deficiencies identified through QC system-level monitoring activities, such as compliance issues in connection with the firm’s ethics and independence policies and procedures.

One firm asserted that the requirement to communicate identified engagement deficiencies and QC deficiencies to firm personnel could hold firms to a higher standard than may be prudent, and that a perceived requirement to communicate each engagement deficiency seems imbalanced to appropriately influence change. The specified quality response requires that such communications be made to enable firm personnel to take timely action in accordance with their responsibilities. Based on the results of the monitoring and remediation process, the firm can assess the nature and extent of the communications to be made, and this should be commensurate with the risk that other similar unidentified engagement deficiencies exist; for example, for engagement deficiencies related to the examination of broker-dealer compliance reports, the firm may limit the communications to firm personnel working on broker-dealer engagements and adjacent industry sectors.

In addition, under paragraph .57 the firm is required to communicate the results of the annual evaluation of its QC system to certain individuals in firm leadership positions. These individuals may use this information in various ways, for example, as a basis for further communications to firm personnel about the importance of quality or to address concerns about the QC system in a timely manner. The requirement reinforces firm leadership’s responsibility and accountability for the firm’s QC system.

2. Current PCAOB Standards

Existing PCAOB QC standards focus principally on communication of certain information, specifically:

- Firm QC policies and procedures;²⁷⁸
- Weaknesses identified in the QC system or the level of understanding or compliance therewith;²⁷⁹
- Internal inspection findings;²⁸⁰
- Principles that influence the firm’s policies and procedures on matters related to the recommendation and approval of accounting principles, present and potential client relationships, and the types of services provided;²⁸¹
- Additions to the Restricted Entity List;²⁸² and
- Notification to the SEC of resignations and dismissals from audit engagements for SEC registrants.²⁸³

QC 1000, by contrast, more broadly addresses the firm’s responsibilities regarding its information system and internal and external communications.

Monitoring and Remediation Process

1. QC 1000

a. Overview (QC 1000.58)

The monitoring and remediation process is an integral part of an effective QC system because it creates a feedback loop to inform the firm’s risk assessment process. The feedback loop will help the firm identify and assess new and evolving quality risks and design and implement effective quality responses. It drives a firm’s focus on continuing to improve its QC system, with a view to preventing future engagement deficiencies. The monitoring and remediation process applies to the design, implementation, and operation of all QC system components, including the monitoring and remediation component, and provides the basis for a firm’s evaluation of whether its QC system is effective and for reporting on the QC system.²⁸⁴

The Board has observed through its oversight activities that some firms have made significant efforts to enhance their monitoring and remediation process, which has led to improvements in the firms’ QC systems and in audit quality. These efforts include increased attention to ongoing monitoring activities, internal monitoring of both in-process and completed engagements,

²⁷⁸ See QC 20.23.

²⁷⁹ See QC 30.03.

²⁸⁰ See QC 30.06.

²⁸¹ See SECPS 1000.08(l), 1000.42.

²⁸² See SECPS 1000.46 (requirement 5).

²⁸³ See SECPS 1000.08(m); see also Appendix 5 for a proposed new standard, AS 1310, *Notification of Termination of the Auditor-Issuer Relationship*, that would retain existing requirements of SECPS 1000.08(m) and apply those requirements to all firms.

²⁸⁴ For further discussion of the evaluation of a firm’s QC system, see below.

²⁷⁷ See QC 20.18.

root cause analysis of both positive outcomes and QC deficiencies, and remedial actions to address QC deficiencies. However, PCAOB inspections continue to identify deficiencies for some firms, suggesting that not all firms have made meaningful improvements in these areas.

Under QC 1000, the monitoring and remediation process addresses the following:

- General requirements;
- Engagement monitoring activities;
- QC system-level monitoring activities;
- Monitoring activities performed by a network;
- Determining whether engagement deficiencies exist;
- Responding to engagement deficiencies;
- Determining whether QC observations exist;
- Determining whether QC deficiencies exist;
- Responding to QC deficiencies; and
- Monitoring the implementation and operating effectiveness of remedial actions.

Under the standard, a firm performs monitoring activities to determine whether its quality responses are properly designed and operating as intended, such that the firm's quality risks are sufficiently mitigated and its quality objectives are achieved. As described later, the results of the firm's monitoring and remediation process are to be evaluated annually as part of the evaluation of the QC system. Therefore, the monitoring activities conducted need to be sufficient to support the conclusions reached during such an evaluation.

b. General Requirements (QC 1000.59–.61)

The standard specifies three goals for the monitoring and remediation process:

- *Relevant, reliable, and timely information.* Monitoring and

remediation must provide information about the design, implementation, and operation of the firm's QC system that is relevant, reliable, and timely. The information obtained from monitoring activities informs a firm about actions, behaviors, or conditions that contributed to issues that need to be addressed and may also provide insights as to factors that help prevent deficiencies from occurring. For example, information obtained about actions, behaviors, and conditions related to an engagement that was subject to internal or external monitoring activities where no deficiencies were identified may provide insights about good practices to use when addressing issues on similar engagements.

- *Reasonable basis for timely detection of engagement deficiencies and QC deficiencies.* The standard uses the concept of “reasonable basis,” which is present throughout PCAOB auditing standards, including the standards governing the auditor's report.²⁸⁵ Therefore, this concept is well understood by the profession. “Timely” as it relates to the detection of engagement deficiencies means that the firm's monitoring activities are designed to identify deficiencies as promptly as practicable. For example, the Board expects that the firm's monitoring activities will generally enable the firm to identify deficiencies in calendar year-end engagements in time to include them in its evaluation of the QC system as of the following September 30.

- *Timely remediation.* The firm's monitoring and remediation process must enable timely remediation of identified engagement deficiencies and QC deficiencies. What constitutes

“timely” depends on the deficiency's nature, scope, and impact. For example, where there is a high risk of severity or pervasiveness, remedial actions may have to be immediate to be timely.

The first element of monitoring and remediation is designing and performing monitoring activities for engagements and the QC system itself. The Board believes that the selected frequency and timing of the firm's monitoring activities (e.g., a combination of ongoing and periodic monitoring activities) are important elements in achieving an overall effective monitoring and remediation process. Ongoing monitoring activities are generally those activities that are routine in nature, built into the firm's processes, and performed on a real-time basis. Periodic monitoring activities, by contrast, are conducted from time to time at set intervals. The use of ongoing and periodic monitoring activities would vary by firm and be influenced by the nature and circumstances of the firm.

The other elements of the monitoring and remediation process specified in the standard are:

- Determining whether engagement deficiencies exist and responding to them.
- Determining whether QC observations exist.
- Determining whether QC deficiencies exist.
- Performing root cause analysis of QC deficiencies.
- Designing and implementing remedial actions to respond to QC deficiencies and determining whether such actions are implemented as designed and operate effectively.

These other elements are discussed below, in relation to the requirements of paragraphs .61–.76.

BILLING CODE 8011-01-P

²⁸⁵ See, e.g., AS 3101.09f (noting that one of the elements in the Basis for Opinion section of the auditor's report is “[a] statement that the auditor believes that the audit provides a reasonable basis for the auditor's opinion”).

**BILLING CODE 8011-01-C**

QC 1000 requires that the firm's QC system include both engagement monitoring activities and QC system-level monitoring activities. The standard differentiates engagement monitoring activities from QC system-level monitoring activities. The two types of activities would provide different kinds of information and, in the Board's view, a firm would need both in order to have a reasonable basis for detecting engagement and QC deficiencies and evaluating its QC system. Engagement monitoring activities are monitoring procedures performed on engagements, including in-process and completed engagements. QC system-level monitoring activities are monitoring procedures regarding aspects of a firm's QC system, including the firm's risk assessment and monitoring and remediation processes.

Notwithstanding the differences between engagement monitoring activities and QC system-level monitoring activities, a firm could design and perform dual-purpose monitoring activities—*i.e.*, activities directed at individual engagements that also address aspects of the firm's QC system. For example, a firm could perform engagement monitoring activities related to acceptance and continuance of engagements that would also address the design, implementation, and operation of the acceptance and continuance of engagements component of the firm's QC system.

QC 1000 defines "engagement" as any audit, attestation, review, or other engagement performed under PCAOB standards (1) led by a firm or (2) in which a firm plays a substantial role in the preparation or furnishing of an

engagement report. Under the standard, substantial role engagements that the firm undertakes would be required to be included in the population of engagements on which the firm performs monitoring activities. In situations where the firm participates in another firm's engagement but does not play a substantial role, while such work would not be treated as the firm's own "engagement" for purposes of the standard, any firm that was required to implement and operate an effective QC system under the standard is required to extend its QC system to all audit, attestation, review, and other work it performs under PCAOB standards, including other firms' engagements in which the firm plays less than a substantial role.

In general, for purposes of QC 1000, engagement monitoring activities are performed only on "engagements" as

that term is defined in the standard. One firm suggested that audit quality should consistently be measured for all engagements, whether performed under the PCAOB standards or other auditing standards, and therefore a firm's QC system should provide reasonable assurance of performing all such engagements in compliance with applicable laws and professional requirements. This firm urged the Board to consider whether the monitoring-related requirements in QC 1000 that use the term "engagements" (as defined in QC 1000) may result in a lost opportunity to fully capitalize on the expected benefits of a more comprehensive monitoring program. Given the limits of the Board's statutory authority under Sarbanes-Oxley, the Board does not believe it would be appropriate to expand the scope of the term "engagements" to include work performed under standards of other standard-setters. However, nothing prevents firms from developing a single QC system for their entire audit practice that satisfies both PCAOB requirements and other professional standards to which the firm is subject, which could include performing the same types of monitoring activities for both PCAOB engagements and other audits.

The Board also understands that firms that perform only a small number of issuer and broker-dealer engagements would be significantly affected by a requirement to perform monitoring activities over PCAOB "engagements" every year.²⁸⁶ In the extreme case, a firm that issues an audit report for only one issuer would have to monitor the same engagement every year. The prospect of annual monitoring could disincentivize partners from serving as the engagement partner and ultimately affect competitive conditions in the market. Accordingly, paragraph .61a includes a note that permits firms that issued engagement reports for five or fewer issuers, brokers, and dealers in the previous year to include audits not performed under PCAOB auditing standards in their engagement monitoring activities for purposes of QC 1000, so long as the audits are selected taking into account the factors in determining the nature, timing, and extent of engagement monitoring activities set forth in paragraph .64. This accommodation takes into consideration the structure of the SEC's partner rotation requirements exemption for

small firms,²⁸⁷ and is limited to audits rather than attestation work because audits are performed under more rigorous standards. These firms will still have to design, implement, and operate a monitoring and remediation process that meets the requirements of QC 1000, including the requirements regarding the objectives and elements of the monitoring and remediation process set forth in paragraphs .59 and .60, which focus on "engagements" as defined in the standard. The firms will also be subject to the requirement under paragraph .62b to inspect at least one completed PCAOB engagement for each engagement partner on a cyclical basis, as discussed below.

Current PCAOB QC standards provide that, in some circumstances, individuals may perform monitoring procedures over the same areas for which they are responsible.²⁸⁸ Such monitoring procedures are a type of self-assessment and under the proposed standard, self-assessments would not have been permissible. Individuals would lack the requisite objectivity if they reviewed engagements in which they participated (or, in the case of audits, for which they performed the engagement quality review), or monitoring activities for which they participated in the design, implementation, or operation of the activity.

Two commenters agreed that self-assessment should not be permitted in QC 1000. Other commenters, including firms and a related group, raised concerns regarding the proposal's disallowance of self-assessments as part of a firm's monitoring and remediation process. Specific concerns included the impact of this requirement on smaller firms and the resource constraint that may be very difficult for firms to overcome if individuals who may be involved in an engagement through consulting with engagement teams, evaluating engagement team progress, or monitoring turnover on the engagement team are ineligible to perform monitoring activities.

While the Board appreciates the concerns around resource constraints raised by commenters, allowing individuals to review their own work is inconsistent with the quality objective in paragraph .44e that individuals assigned to perform activities within the QC system have the objectivity needed to perform such activities in accordance with applicable professional and legal requirements and the firm's policies and

procedures. Taking into account commenter feedback, the Board added a note to the standard to clarify that the restriction on self-assessment is grounded in that quality objective. The note further explains the implication, in the context of the monitoring and remediation process, that individuals generally cannot perform monitoring activities over their own work, for example by performing engagement monitoring activities on an area of an engagement in which they participated. The impact of this restriction will depend on the role that the individual played in the engagement. For example, individuals who have consulted on a particular area of an engagement would be permitted to perform monitoring activities on other areas of an engagement that were unrelated to the consultation. However, individuals that served as the engagement quality reviewer on an engagement may not perform monitoring activities on that engagement, even if they did not review every area of the engagement.

e. Engagement Monitoring Activities (QC 1000.62–.64)

Engagement monitoring activities provide valuable information to firms on whether engagement or QC system-level areas may require additional attention. For example, monitoring procedures may highlight an area on an audit engagement where insufficient audit evidence was obtained to support the auditor's opinion. More broadly, engagement monitoring activities may identify pervasive issues where a number of engagements have similar problems, possibly highlighting the need to revise methodology, provide additional training, or take other actions at the QC-system level.

i. Monitoring Completed Engagements (QC 1000.62)

Similar to the proposal, the final standard requires firms to perform engagement monitoring activities on completed engagements. Two commenters expressed support for the requirement to monitor completed engagements. One commenter suggested that paragraph .62 be amended to permit the legacy flexibility of QC 20 for a firm to have pre-issuance or post-issuance, or both, monitoring programs, depending on the individual firm's risk assessment. This commenter asserted that some smaller firms, in particular, have already implemented robust pre-issuance quality monitoring reviews on substantially all issuer audits.

The Board continues to believe that the information derived from performing inspections of completed

²⁸⁶ Firms that issued audit opinions for between one and five issuers or broker-dealers represented 38% of all registered firms in 2022, 39% in 2021, and 43% in 2020.

²⁸⁷ See 17 CFR 210.2–01(c)(6)(ii).

²⁸⁸ See QC 30.10, which applies to small firms with a limited number of management-level individuals.

engagements provides the firm a perspective on its engagements that cannot be obtained through other monitoring activities. The Board also noted that the standard does not prescribe specific monitoring activities, so firms will be able to determine what activities to perform when monitoring completed engagements. Based on PCAOB oversight activities, the Board has observed that most firms perform engagement monitoring activities on their completed engagements as part of their existing QC practices. Requiring the inspection of completed engagements would therefore not change practice for most firms and, accordingly, seems unlikely to impose incremental costs in most instances.

The proposed standard also included a requirement for firms to establish a cyclical basis for monitoring completed engagements such that each engagement partner would have at least one engagement subject to monitoring in each cycle. Some firms and a related group supported that requirement in principle. Some commenters suggested that firms should be permitted to include all of the engagements within a particular engagement partner's portfolio of engagements, not only PCAOB engagements, since the firm operates a single QC system. One commenter stressed that if firms are not permitted to consider all engagements in an engagement partner's portfolio, it may unnecessarily drive firms to two separate cyclical inspection programs (that is, doubling inspection program activities) based on the applicable set of professional standards. This commenter also suggested that the standard should allow firms to consider whether engagement partners have been subjected to external inspections/reviews when determining if, and when, to subject them to an internal inspection.

Similar to the proposal, the final standard requires firms to inspect at least one completed PCAOB engagement for each engagement partner over a cyclical period. Although, as discussed above, firms with five or fewer issuer and broker-dealer engagements may be permitted to include non-PCAOB engagements in their monitoring activities, inspections under this paragraph must be of "engagements" as defined in QC 1000. This will ensure that firms regularly evaluate the work of every partner under PCAOB standards to determine whether engagement deficiencies or QC deficiencies have occurred and can design and implement appropriate remedial actions. The note to the final standard clarifies that point.

The proposed standard also included a note stating that if a firm uses a cycle longer than three years, the firm would be required to demonstrate how its cycle is adequate to provide the firm with a reasonable basis for detecting engagement deficiencies and QC deficiencies, taking into account the factors in paragraph .64. Several commenters, including an investor-related group, disagreed with this aspect of the proposal, suggesting that each firm should be allowed to determine the appropriate cycle for engagement partner selection. Some of these commenters stated that requiring a set interval for engagement partner selection could actually result in a reduced ability by the firm to incorporate unpredictability into the selection process. One firm further stated that the proposed requirement regarding the engagement partner selection cycle could also decrease the frequency of other monitoring activities, such as in-process reviews, or curb investment and innovation in pre-issuance monitoring programs.

The Board continues to believe it is appropriate to incorporate an expectation that each engagement partner will be subject to inspection at least every three years and adopted that aspect as proposed. A three-year period appears to be a norm for other standard setters and, based on PCAOB oversight activities, is common in practice.²⁸⁹ The Board appreciates that requiring a set interval could make the timing of selection predictable for an engagement partner, so a three-year cycle is a baseline expectation, not a requirement. Firms can of course adopt a shorter cycle, or can adopt a longer cycle if they are able to demonstrate how that cycle is adequate to provide a reasonable basis for detecting engagement deficiencies and QC deficiencies. Regardless of the cyclical period used by the firm, risks or other circumstances related to an engagement or an engagement partner may trigger the need for the firm to inspect an engagement partner's completed engagement(s) more than once during the cyclical period.

The proposed note to paragraph .62b also included language requiring firms to consider incorporating a level of unpredictability when determining when, during the cyclical period, an engagement partner has an engagement selected for monitoring and which completed engagement(s) to select. This

was intended to make it less likely that engagement partners would be in a position to manage engagements with the expectation that they would or would not be inspected. However, commenters, including firms and investors and related groups, suggested that this language should be strengthened to require that the firm "should" incorporate unpredictability into the selection process. One of these commenters went further to suggest that the PCAOB also incorporate language requiring unpredictability in the focus areas subject to internal inspection monitoring, in addition to the timing of such monitoring. The Board agreed with the comments raised with respect to requiring firms to incorporate unpredictability into their selection process and this change is reflected in the note to paragraph .62b. Additionally, in order to allow sufficient flexibility for firms to determine how to incorporate unpredictability in the selection process, language has been added to the note to clarify that the firm should include an element of unpredictability in "at least one of" the elements listed in the note to paragraph .62b.

The firm's selection of completed engagements should be responsive to information obtained from various sources, including prior monitoring activities. The standard, in paragraph .64 (discussed further below), includes factors for a firm to take into account when selecting engagements for monitoring. These factors will assist a firm when determining its cyclical basis and selecting at least one engagement to inspect for each engagement partner.

ii. Monitoring In-Process Engagements and Other Work (QC 1000.63)

Monitoring in-process engagements can help firms detect and prevent potential engagement deficiencies before an engagement report is issued, resulting in a more proactive, preventive monitoring approach. Through its oversight activities, the PCAOB has observed a variety of different in-process engagement monitoring activities, including:

- Monitoring activities on a specific area of the audit after the engagement team has conducted certain audit procedures or used a specific tool or template (e.g., an in-process reviewer evaluates an engagement team's testing of management's earnings forecast used in an impairment analysis);
- Engagement team coaching by an individual who is not part of the engagement team (e.g., a member of the firm's national office works with an engagement team to review their audit

²⁸⁹ The application material accompanying the IAASB and AICPA QC standards provide an example of a three-year inspection cycle for engagement partners performing financial statement audits. See ISQM 1 paragraph A153, SQMS 1 paragraph A165.

approach, including the nature, timing, and extent of planned audit procedures);

- Evaluating an engagement team's progress against certain defined milestones or metrics and taking appropriate action when such milestones or metrics are not achieved (e.g., if an engagement partner did not review an engagement team's planning memo before interim audit procedures were to start, adjusting the engagement team's schedule so that the document could be reviewed and comments addressed before starting interim work; if an engagement team's hours exceed a certain weekly threshold, taking action by identifying the issue and adding additional resources to the team); and
- Monitoring engagement team turnover during the engagement and taking appropriate action when issues arise (e.g., if more experienced or senior personnel on the engagement, such as the manager or senior manager, leaves the firm during the engagement and prior to the completion of procedures, taking actions to ensure the engagement team has the necessary resources to complete the engagement).

The proposed standard contemplated that firms that issue audit reports with respect to more than 100 issuers during the prior calendar year would be required to monitor in-process engagements. The proposal noted the Board's understanding that monitoring in-process engagements may be challenging for some firms based on their size and nature, so the proposed standard also included a "should consider" requirement to provide sufficient scalability for firms that issue audit reports with respect to 100 or fewer issuers. Under the proposed standard, firms that audit 100 or fewer issuers would be expected to reach a conclusion about whether to monitor in-process engagements in light of identified quality risks and quality responses.

Firms that commented on this requirement supported the concept of monitoring in-process engagements and the flexibility the standard provided for firms to design their in-process monitoring based on the nature and circumstances of the firm. Two firms stated that the purposes of in-process monitoring are clear and appropriate and that the proposed standard clearly distinguished between in-process engagement monitoring and engagement quality reviews under AS 1220. Two firms suggested that the 100-issuer threshold is not necessary, and that all firms should only be required to consider whether to monitor in-process engagements.

The Board believes that differentiating a firm's obligation based on the number of issuer clients is appropriate because, in its view, firms with larger, more complex audit practices generally are subject to quality risks for which in-process monitoring is an appropriate quality response. The Board based the requirement on the size of a firm's issuer audit practice rather than its broker-dealer audit practice, as it believes the number of a firm's issuer clients is more indicative of the firm's size and the complexity of its practice. And, as noted above, firms are familiar with the threshold of more than 100 issuer audit reports. The majority of firms with 100 or fewer issuers do not perform in-process engagement monitoring activities. Requiring these firms to perform such monitoring activities could significantly change current practice and is not justified by the circumstances of every firm. However, due to the benefits of this proactive engagement monitoring, the standard requires that firms that do not meet the 100-issuer threshold should consider monitoring in-process engagements. The Board believes that this approach strikes an appropriate balance between prescriptiveness and scalability, and adopted the requirement as proposed.

One individual commenter suggested that audit firms would find it cost prohibitive to build in "in process" controls that would be akin to doing an inspection of an audit in process, with the exception of certain circumstances, but the PCAOB did not receive any specific comments from firms expressing that concern. In addition, firms with over 100 issuer clients typically have the resources to implement such procedures, and based on PCAOB oversight activities, the majority of them already monitor in-process engagements to some extent.²⁹⁰

In situations where the firm participates in another firm's engagement but does not play a substantial role, paragraph .63c provides that the firm should consider performing monitoring activities on such work. Some commenters agreed with the requirement for firms to consider performing monitoring activities on their work on other firms' engagements. When deciding whether and when to do so, and what monitoring activities to perform, firms would take into account the factors identified in paragraph .64, such as the firm's monitoring and external inspection

history and the risks associated with the performance of the work. In addition, if a substantial portion of the firm's activities that are subject to the QC system relate to work performed on other firms' engagements at less than a substantial role, the firm would have to make that decision in light of the overall objectives of the QC system.²⁹¹

One commenter requested clarification as to whether the in-process monitoring activities the Board has observed would be sufficient to meet the requirement, or whether the Board expects such activities to be expanded or enhanced. The standard does not specify any particular monitoring activities, so the firm has discretion to select activities based on the nature and circumstances of the firm and its engagements and the scope and nature of its other monitoring activities. For example, when determining which engagements to select for in-process monitoring, a firm would leverage the factors presented in paragraph .64 of the standard to identify engagements where there is a greater risk of noncompliance with applicable professional or legal requirements. Similarly, these factors will also assist a firm in determining the riskier areas of such engagements upon which to perform in-process engagement monitoring activities.

i. Designing Engagement Monitoring Activities, Including Selecting Which Engagements To Monitor (QC 1000.64)

Similar to the proposal, the final standard requires a firm to take into account certain factors when determining the nature, timing, and extent of engagement monitoring activities, including which completed or in-process engagements to select for monitoring. These factors reflect aspects of a firm and its engagements that could create a greater risk of noncompliance with applicable professional and legal requirements. A firm will need to tailor its monitoring activities to address the particular circumstances of the firm and select engagements for monitoring based upon their specific risks.

The factors are:

- *Quality risks and the reason for their assessments, and quality responses.* For example, the complexity of or changes to applicable professional and legal requirements and the firm's policies and procedures may present a quality risk that the firm may not timely communicate the required use of a practice aid for planning audit procedures when certain fraud risk factors are present. In response to this risk, the firm would design its

²⁹⁰ In 2023, 11 of the 14 annually inspected firms performed some in-process engagement monitoring activities.

²⁹¹ See QC 1000.05a.(2).

engagement monitoring activities to verify the engagement team's use of the practice aid. The earlier these monitoring activities are performed, the more proactive the firm could be in planning audit procedures that address audit issues as they arise. Regarding the proposed factor in paragraph .64b related to the "design of the quality responses," the final standard has removed the word "design" from the factor and made other edits to clarify that the firm should also take into account the scope and operation of quality responses, for example related to information about how those quality responses operated in previous years.

- *The nature, timing, extent, and results of previous monitoring activities.* This includes insights learned from previous engagements and QC system-level monitoring activities that are applied when determining engagement monitoring activities to perform. For example, in selecting engagements for monitoring, the firm would take into account deficiencies identified in previous engagements for the same client and other engagements where a similar deficiency may exist. As another example, engagement deficiencies related to inventory obsolescence testing identified by a firm through prior year engagement monitoring activities may prompt a firm to monitor the testing of inventory obsolescence on more engagements in the current year. One commenter recommended a clarifying revision to paragraph .64c to change the reference to "inspections of in-process engagements" to "monitoring of in-process engagements." The commenter explained that the characterization of in-process engagement monitoring as an "inspection" is not consistent with how in-process engagement monitoring was described in the proposal, as the in-process monitoring activities observed by the PCAOB do not include inspections of in-process engagements. The Board agreed and included this revision in the final standard.

- *Information obtained from oversight activities by regulators, other external inspections or reviews, and, if applicable, monitoring activities performed by a network.* Information obtained from network monitoring activities or external reviews provides a firm direction as to, for example, the type of procedures to perform or when to perform them. The results of network monitoring activities or information obtained from external reviews could also identify issues that may exist on other similar engagements of the firm, prompting a decision to monitor some or all of these other engagements. For example, if an engagement was recently

inspected through network monitoring activities or an external review, a firm may determine that selecting the same engagement for internal inspection would be unnecessary.

The proposal included a note that a firm cannot rely solely on network monitoring activities or external inspections by regulators of individual engagements without performing its own inspections of completed engagements. One commenter, a firm, agreed with the proposed requirements for firms to perform their own monitoring activities rather than solely relying on the monitoring activities performed by the network. Another firm disagreed and recommended that the standard permit networks to perform monitoring activities on behalf of a member firm, including in certain circumstances as the sole source of a firm's QC engagement monitoring. This commenter stated that monitoring of completed and in-process engagements by the network may provide member firms in the network with more objective and experienced monitoring resources, and that smaller member firms may not have the resources to perform objective monitoring on completed and/or in-process engagements without leveraging the network. Similar to what is described below as it relates to a firm's QC system and the extent of monitoring activities performed by a network, regardless of whether a network performs engagement monitoring activities on a firm's engagements, the firm is ultimately responsible for its QC system and for evaluating any information it obtains from the network about any engagement monitoring activities the network performs. The firm would take into account the nature and extent of activities performed by a network in designing and implementing its own activities but all firms are required to perform some level of engagement monitoring. The final standard includes a clarifying revision to this note that replaces "inspections of completed engagements" with "engagement monitoring activities."

- *Characteristics of a particular engagement.* Factors such as the industry, the type of engagement (e.g., issuer audit, broker-dealer audit, attestation), the location(s) or jurisdiction(s) in which the client is located or the work is to be performed, whether it is a new engagement for the firm, and the experience and competence of the engagement team could affect conduct and outcomes of the engagement. For example, if the engagement team members are all new to the engagement, their lack of

historical knowledge may present an additional risk for that engagement and provide a basis for its selection for monitoring.

- *Characteristics of particular engagement partners.* Factors such as the experience and competence of engagement partners, the results of internal and external inspections of their work, and the firm's cycle for inspecting their engagements could affect the quality risks associated with an engagement, whether positively or negatively. For example, an engagement partner's lack of experience in an industry the company under audit recently entered may create additional risks to complying with applicable professional and legal requirements. Therefore, performing engagement monitoring activities on such engagements may be appropriate.

- *Other information relevant to the quality risks.* The standard includes a non-exhaustive list of examples. For clarity, this factor was rephrased in terms of "quality risks" rather than "risks of noncompliance with applicable professional and legal requirements." The standard also includes a footnote referencing footnote 26, which explains that the firm is deemed "aware" of information when any partner, shareholder, member, or other principal of the firm first becomes aware of such information.

The requirement is both principles-based and risk-centered, rather than prescriptive. It provides for scalability by including factors for firms to take into account when determining the nature, timing, and extent of engagement monitoring activities. In addition to the factors included in the standard, a firm may identify other factors that are also relevant based on the nature and circumstances of the firm and its engagements.

d. QC System-Level Monitoring Activities (QC 1000.65)

Similar to the proposal, the final standard requires a firm to take into account certain factors when determining the nature, timing, and extent of QC system-level monitoring activities.

Due to their nature, some of the factors are consistent with the factors a firm is required to take into account when determining the nature, timing, and extent of engagement monitoring activities, such as the quality responses, including their timing, frequency, scope and operation. Regarding the proposed factor in paragraph .65b related to the "design of the quality responses," conforming to the change made in paragraph .64b, the word "design" was

removed from the factor and made other edits to clarify that the firm should also take into account the scope and operation of quality responses, for example related to information about how those quality responses operated in previous years. The specific features of a firm's quality responses are also relevant for a firm to consider when designing QC system-level monitoring activities. For example, a firm's quality responses related to acceptance and continuance of engagements might include a policy that firm personnel complete a checklist and assemble information evaluated by the engagement partner before making a recommendation to firm leadership on whether to continue with an engagement for the upcoming year. Based on this quality response, a firm might design QC system-level monitoring activities that include a review of the checklist and documentation for a selection of engagements.

Some other factors the standard requires firms to take into account when determining the nature, timing, and extent of QC system-level monitoring activities include:

- *The design of a firm's risk assessment and monitoring and remediation processes.* The design of these processes is relevant when designing monitoring activities to evaluate if such processes are implemented and operating effectively. For example, a firm may monitor the cyclical basis determined by the firm for inspecting engagement partners' completed engagements. A firm's monitoring activities in this area could include whether the firm is complying with the established period for selecting completed engagements as well as evaluating whether changes to the period may be necessary based on the results of other monitoring activities. The firm could also develop metrics for its QC system and use them in its monitoring and remediation process.

- *Changes in the QC system.* As a firm's QC system is continuously evolving in response to changes in risks, the firm would have to consider whether and how such changes necessitate changes to the nature, timing, and extent of QC-system level monitoring activities. For example, changes to a quality response would be an indication that changes to the activities that monitor the design, implementation, and operation of such response may be necessary. It should be noted that, even in the absence of changes in the QC system, for example in cases where the firm determines that there have been no changes related to a

particular quality response, the firm would still need to consider whether previous monitoring activities related to that quality response continue to provide the firm with a reasonable basis to evaluate the QC system, including the appropriateness of the firm's monitoring activities for the current period.

- *When applicable, services provided by other participants in the firm's QC system.* A firm may use other participants in its QC system (for example, other participants may assist with engagement quality reviews). The firm would take that into account when deciding what QC system-level monitoring activities to undertake (for example, assessing other participants' compliance with PCAOB standards regarding engagement quality reviews).²⁹²

A firm's monitoring activities are likely to vary over time as a firm takes into account the factors included in the standard (see paragraphs .64–.65). Since a firm's QC system is a continuous and iterative process, such factors will generally lead a firm to perform different monitoring activities or employ different monitoring approaches over time.

Several commenters, including investor-related groups, suggested that the standard should require that the monitoring and remediation process, or more generally QC 1000, provide for use of quantitative metrics. QC 1000 does not require firms to use quantifiable metrics in their monitoring activities or suggest the use of any particular metrics. The Board has recently proposed a new set of firm reporting requirements that includes both firm-level and engagement-level metrics, and the comments regarding metrics received in response to the QC 1000 proposal are addressed in that proposing release.²⁹³

Other than removing the word “performance” from the phrase “performance metrics,” to align with the terminology used in the PCAOB's proposed metrics requirements, the Board adopted as proposed paragraph .65c, which requires the firm to take into account any metrics that the firm may use in its QC system when determining the nature, timing, and extent of QC system-level monitoring activities. This could include, but is not required to include, any metrics firms would be required to report if the metrics proposal is ultimately adopted by the Board and approved by the SEC, as well as any additional metrics a firm may develop. Depending on their

circumstances, firms may find that developing metrics to monitor engagements and the QC system would enhance their ability to identify deficiencies, measure whether quality objectives have been met, and evaluate the effectiveness of remediation activities.

e. Monitoring Activities Performed by a Network (QC 1000.66)

The Board adopted substantially as proposed the requirements that apply when networks perform monitoring activities relating to a firm's QC system or engagements. Networks employ a variety of different approaches to monitoring firm QC systems. Some networks perform monitoring activities either directly on the firm's QC system, such as monitoring a firm's compliance with QC policies and procedures established by the network and adopted by the firm, or on tools or other resources developed or purchased by the network and used by the firm, such as an independence tracking system. Other networks perform no monitoring activities.

The nature and extent of a network's monitoring activities will inform a firm's approach to monitoring. To illustrate, if a firm used a network independence tracking system to identify matters that may bear on the independence of firm personnel, and if the network monitored the design and operation of the tracking system and provided the firm with relevant information about those activities, the firm is required to evaluate the monitoring activities performed by the network on the tracking system. In performing its evaluation, the firm needs to understand the scope of the network monitoring activities, such as whether the firm's personnel were selected for monitoring procedures, and if so, whether the population selected was sufficient to provide a reasonable basis for detecting engagement and QC deficiencies. To the extent provided, the firm is also required to evaluate the results of the testing performed by the network, and if deficiencies were identified, the remedial actions, if any, taken or proposed to be taken by the network. Under this example, the firm would also determine its responsibilities in assisting the network with any monitoring or remediation activities related to the tracking system.

Regardless of any QC monitoring activities that a network may perform on behalf of the firm, the firm is ultimately responsible for its QC system. Therefore, under the standard, the firm is responsible for evaluating any information it obtains from the network

²⁹² See generally, e.g., AS 1220.

²⁹³ See PCAOB Rel. No. 2024–002 at 12–13.

about any QC monitoring activities the network performs. Some commenters, all of which were firms, supported the proposed requirements related to monitoring activities performed by a network.

A firm is required to adjust its monitoring activities as necessary, based on the scope of the network's monitoring activities and the information the firm receives (or does not receive) from the network about those activities. One commenter expressed concern that the proposal allows the firm to request certain categories of information from a network but does not require that the information actually be received. In situations where a firm does not receive information requested from the network about the monitoring activities the network performed, the firm would not be in a position to take such activities into account in planning its own activities. To illustrate, a network may provide information to a firm regarding the results of member firms' internal engagement monitoring activities, which the firm uses to evaluate the competence of other network firm personnel and their ability to participate in the firm's engagements. If, due to a change in a particular network firm's local privacy laws, the network is unable to provide such information regarding that member firm, the firm will need to evaluate that member firm's competence and ability using a different approach.²⁹⁴ To illustrate another case, if a firm requests but does not receive any information from the network regarding QC monitoring activities related to independence that the network performed on behalf of the firm, and the firm does not perform any monitoring activities related to its QC system in that area, the firm would have no basis for concluding that the quality objectives related to independence were achieved.

f. Determining Whether Engagement Deficiencies Exist (QC 1000.67)

The requirements for determining whether engagement deficiencies exist did not draw comment and were adopted with one modification, described below.

As defined by the standard, an engagement deficiency is an instance of noncompliance with applicable professional or legal requirements by the firm, firm personnel, or other participants with respect to an

engagement of the firm, or by the firm or firm personnel with respect to an engagement of another firm.

Engagement deficiencies include:

- Instances of noncompliance in which a firm did not adequately support its opinion—because the firm did not perform sufficient procedures, obtain sufficient appropriate evidence, or reach appropriate conclusions with respect to relevant financial statement assertions;
- Instances in which the firm did not fulfill the objective of its role in the engagement, such as not performing attestation services in accordance with AT No. 2; and
- Other instances of noncompliance with applicable professional and legal requirements with respect to a firm's engagement, which may include, for example, not satisfying applicable independence requirements,²⁹⁵ not making required communications to the audit committee,²⁹⁶ or not filing Form AP.²⁹⁷

The standard requires a firm to evaluate a variety of information in making its determination about whether an engagement deficiency exists, including internally developed information from monitoring activities, information from external parties like regulators and peer reviewers, and other relevant information of which the firm becomes aware. Beyond the sources specified in the standard, a firm is not expected to seek out other sources of information that may indicate an engagement deficiency exists. However, if the firm becomes aware of such information, the firm is expected to evaluate it. For purposes of the standard, the firm is deemed "aware" of information when any partner, shareholder, member, or other principal of the firm first becomes aware of such information. The Board made a change to the proposed note in paragraph .67e item (4) to clarify that complaints the firm becomes aware of, that may indicate the existence of an engagement deficiency, could be related to either a company or the firm. The language was also broadened to clarify that complaints are not limited to those submitted through a formal whistleblower program.

The standard does not specify how a firm would evaluate information to determine whether an engagement deficiency exists. Rather, it provides firms the ability to develop an approach

for such evaluation. A determination that an engagement deficiency exists due to the firm not complying with a PCAOB reporting requirement may be relatively simple to make. For example, evaluating whether the firm filed a Form AP in accordance with PCAOB Rule 3211 would not require a significant amount of effort. However, evaluating information indicating the firm did not perform the necessary audit procedures for an issuer's revenue transactions to determine whether an engagement deficiency exists could be more complex, and therefore require a more in-depth analysis.

A firm's determination that an engagement deficiency exists may pertain to an in-process engagement, a completed engagement, or work performed on other firms' engagements.

If a firm obtains information about a potential deficiency in an in-process engagement, whether from monitoring activities or other sources, the firm is expected to evaluate the information to determine whether an engagement deficiency exists before the engagement report is issued. In that regard, it should be noted that identifying a problem while an engagement is in process may enable the firm to rectify the problem before an engagement deficiency could arise. Many professional and legal requirements that apply to performing an engagement impose ongoing responsibilities that are not completed until the engagement itself is completed. In relation to such ongoing responsibilities, if a problem is identified in an in-process engagement but resolved before the engagement is completed, no engagement deficiency would arise. For example, if an engagement team initially failed to obtain sufficient appropriate audit evidence in its testing of revenue because it failed to perform a necessary procedure, the engagement team could still perform the procedure at a later time during the engagement; as long as sufficient appropriate audit evidence was obtained prior to the issuance of the report, there would be no engagement deficiency. QC 1000 does not have specific provisions to address remediation of this type of problem because the auditor's responsibility is already addressed by applicable professional and legal requirements. However, even in instances where an engagement deficiency does not arise because a problem was identified and corrected prior to issuance of an engagement report, a firm would still need to consider whether the existence of the problem constitutes a QC observation—an observation about the design, implementation, or operation of

²⁹⁴ Irrespective of how the evaluation is performed, the engagement partner's responsibility for the engagement and its performance would not change. See AS 1201.03.

²⁹⁵ See generally, e.g., 17 CFR 210.2–01; PCAOB rules under Section 3. Auditing and Related Professional Practice Standards, Part 5—Ethics and Independence.

²⁹⁶ See generally AS 1301.

²⁹⁷ See PCAOB Rule 3211, *Auditor Reporting of Certain Audit Participants*.

the firm's QC system that may indicate one or more QC deficiencies exist—and, ultimately, a QC deficiency.

By contrast, some applicable professional and legal requirements (such as those relating to preliminary engagement activities, including engagement acceptance procedures, and certain required communications to the audit committee) are required to be complied with prior to or at the beginning of the engagement. With respect to those requirements, an engagement deficiency would arise if the required time for performance had passed and the required activities were not performed appropriately, even if the engagement was still in process.

The standard requires determinations to be made on a timely basis. For completed engagements, the timeliness of the determination depends on the nature of the information subject to evaluation. For example, if the information suggested other engagements may present a similar issue, then it would be expected that determination would be made sooner so that the risk of engagement deficiencies on other engagements—whether in-process or completed—is mitigated.

The final standard was revised to clarify that the evaluation and determination of whether engagement deficiencies exist must both be done on a timely basis.

g. Responding to Engagement Deficiencies (QC 1000.68)

Under the final standard, when a firm determines an engagement deficiency exists, the firm is required to take action to address the deficiency. The action taken would depend on whether the engagement deficiency related to an in-process engagement, a completed engagement, or work performed by the firm on other firms' engagements. In some instances, a firm may find it beneficial to perform a root cause analysis to determine what action to take.

i. Engagement Deficiency Related to an In-Process Engagement

For an engagement deficiency related to an in-process engagement, the proposed standard provided that the firm take action to address the deficiency in accordance with applicable professional and legal requirements. The nature of the engagement deficiency would determine what a firm would need to do to address it and the timing of the required action. For engagement deficiencies that could affect the auditor's report, under the proposed standard, remedial action would be required before the

engagement report is issued, such that the engagement report issued is appropriate in the circumstances. In other instances, action would still be required to address the deficiency, but the firm would have more flexibility regarding when such actions are performed; action could be performed either before the report is issued or afterwards (if afterwards, the provisions of paragraph .68b would apply). The Board adopted substantially as proposed the requirement for responding to an engagement deficiency on an in-process engagement.

ii. Engagement Deficiency Related to a Completed Engagement

For an engagement deficiency related to a completed engagement, the proposed standard included a requirement for firms to take action to address the engagement deficiency in accordance with applicable professional and legal requirements (discussed in more detail below in connection with paragraph .70). However, under the proposed requirement, no action would have been required if it was probable that the engagement report was not being relied upon.²⁹⁸

The proposed standard included a note that stated the firm must treat an auditor's report as being relied upon if the auditor's report is included in the most recent SEC filing on a form that requires its inclusion. Because this note also appeared in the proposed amendments to AS 2901 in paragraph .01, refer to the detailed discussion below for commenter feedback and the Board's responses. The note to paragraph .68b. was revised to provide that, in the absence of circumstances indicating that reliance is impossible or unreasonable (e.g., cessation of a trading market for issuer securities), inclusion of an engagement report in the most recent filing on an SEC form that requires inclusion of such an engagement report generally evidences that the report is being relied upon. The Board believes this is responsive to commenter concerns and allows for sufficient flexibility for such circumstances. The note was also revised to clarify that an engagement report can be included in an SEC filing either directly or through incorporation by reference.

²⁹⁸ The use of "probable" in the note to paragraph .68 is consistent with how the term is used in FASB ASC, Contingencies Topic, paragraph 450–20–25–1, which provides that an event is "probable" when it is likely to occur.

iii. Engagement Deficiency Related to Work Performed on Other Firms' Engagements

For an engagement deficiency related to work performed on other firms' engagements, the standard requires a firm to communicate to the other firm the engagement deficiency. The communication needs to be sufficient to enable the other firm to develop a response commensurate with the extent of noncompliance. These engagement deficiencies, while there may or may not be additional remedial actions for the firm to take related to the particular work performed, should be included in the population of QC observations to be evaluated to determine whether QC deficiencies exist. The Board did not receive comment on this aspect of the proposal and adopted it as proposed.

iv. Evaluating Whether Similar Engagement Deficiencies Exist

The proposed standard also required a firm to evaluate whether similar engagement deficiencies exist in other in-process engagements, completed engagements (unless it is probable that the engagement report is not being relied upon), and work performed on other firms' engagements, and if so, to take actions as required by paragraphs .68a.–c. for in-process engagements, completed engagements, and any other work performed by the firm on other firms' engagements at less than a substantial role. Understanding the nature of the engagement deficiency will assist the firm in determining the extent of the necessary evaluation. To illustrate, if the engagement deficiency was caused by an error in the firm's methodology for auditing a company's loan valuation allowance, then the firm would evaluate whether similar engagement deficiencies exist on engagements that were also using that methodology. As another example, if engagement team members did not comply with PCAOB standards when auditing accounts receivable because they failed to perform certain procedures in the firm's audit program, the firm would evaluate whether the person(s) who were responsible for performing the procedures and the person(s) supervising the work participated in any other audit engagement's accounts receivable testing, and if so, whether similar engagement deficiencies exist.

One commenter requested that the Board provide additional examples of engagement deficiencies, as the concept of applicability to other in-process engagements could be subject to different interpretations. The Board will

consider whether application guidance in this area would be appropriate.

Another commenter stated that the expectation of what “evaluate,” as used in this context, may require is not clear and suggested that the evaluation be limited to certain engagements based on

a risk-based assessment, taking into consideration the root cause of the identified engagement deficiency. As noted above, understanding the nature of the engagement deficiency would assist the firm in determining the extent

of the actions to take in order to evaluate whether similar engagement deficiencies exist on other engagements.

The Board adopted this aspect of the standard as proposed.

BILLING CODE 8011-01-P

*APLR = Applicable professional and legal requirements

BILLING CODE 8011-01-C

v. Addressing Engagement Deficiencies (QC 1000.69–70)

Paragraph .69 of the standard requires firms to respond to engagement deficiencies by taking into account the nature and severity of the engagement deficiency. In other words, the response should be targeted based on the nature of the problem and proportionate to the severity of the problem.

Understanding the nature and severity of an engagement deficiency could assist firms in:

- Developing an appropriate response to the engagement deficiency;
- Determining whether an engagement deficiency could relate to other engagements; and
- Assessing whether the engagement deficiency, which represents a QC observation, is also a QC deficiency.

The actions taken by the firm to respond to engagement deficiencies may include preventive or corrective actions (or a combination of these actions):

- *Corrective actions* are actions taken to rectify an identified deficiency in a current or completed engagement (for example, performing a procedure that had been omitted, designing and performing additional or alternative procedures if audit evidence is insufficient, or filing a required report).
- *Preventive actions* are actions taken to prevent the occurrence of a deficiency in future engagements (for example, training, developing audit tools, or enhancing audit methodology).

The proposed note to this requirement also appeared in the proposed amendments to AS 2901.04 and a detailed discussion of commenter feedback and the Board's views appears below. As adopted, the note in paragraph .69 includes clarifying changes. The requirement was otherwise adopted as proposed.

The proposed requirement in paragraph .70 did not draw comment and the Board adopted it as proposed. Firms should comply, as applicable, with other standards related to engagement deficiencies on completed engagements.

- AS 2901 addresses auditor responsibilities with respect to engagement deficiencies on completed audit engagements. AS 2201.99 directs the auditor to comply with AS 2901 as it relates to audits of internal control over financial reporting.

- AS 2905 deals with auditor responsibilities when, subsequent to the date of a report on audited financial statements, the auditor becomes aware of facts that might have affected the report had he or she then been aware of

such facts before issuing the report. AS 2201.98 is a similar provision relating to auditor's reports on internal control over financial reporting.

- AT No. 1 and AT No. 2 incorporate responsibilities similar to those required under AS 2901 for attestation engagements relating to certain broker-dealer reports.

The amendments to AS 2901 are discussed below.

h. Determining Whether QC Observations Exist (QC 1000.71)

The proposed standard would have required firms to determine the existence of "QC findings," defined as "[a] finding about the design, implementation, or operation of the firm's QC system that may indicate one or more QC deficiencies exist. Engagement deficiencies are QC findings."

Commenter feedback on this defined term was in most instances directly related to the last sentence in the defined term, urging that engagement deficiencies should not automatically be considered QC findings. The Board was concerned that commenters may have misinterpreted "QC findings" as akin to "QC deficiencies," whereas the intention is only to designate matters that have to be evaluated as potential QC deficiencies. To alleviate the potential confusion, the defined term was changed to "QC observation" and the definition reworded. The definition of a QC observation in the final standard is "(1) An engagement deficiency; or (2) Any other observation about the design, implementation, or operation of the firm's QC system that may indicate one or more QC deficiencies exist."²⁹⁹

Under the definition, any information that may indicate a problem with the design, implementation, or operation of the firm's QC system would be a QC observation. Because a QC system provides reasonable assurance that engagements are conducted in accordance with applicable professional and legal requirements, all engagement deficiencies would be QC observations. Examples of other QC observations include an error in the design or operation of a technology tool or methodology, or information suggesting that a firm may not have achieved a quality objective.

The determination of QC observations involves collecting observations and related evidence that may indicate a QC deficiency exists, including information from monitoring activities, information from external parties like regulators and

peer reviewers, and other relevant information of which the firm becomes aware.

Under the standard, the results of all monitoring activities performed by the firm, and if applicable, those performed by a network relating to the firm's QC system or its engagements, are required to be analyzed by the firm to determine if there are QC observations. It is possible that a firm's engagement monitoring activities could identify not only engagement deficiencies, but also QC observations that are not engagement deficiencies. For example, if, as part of the firm's quality response related to technological resources, the firm's technology leader must review and approve all software audit tools used on engagements, and if a firm's engagement monitoring activities reveal that an engagement team did not receive the appropriate authorization to use a specific tool, that observation would be a QC observation, regardless of whether the use of the tool also gave rise to an engagement deficiency.

Oversight activities by regulators and external inspections or reviews include activities of the PCAOB and other regulators. As a firm typically has one QC system for its entire audit practice, the results of the inspections, reviews, and other oversight activities performed by these external parties would likely be relevant to a firm's determination of whether QC observations exist.

Other relevant information of which the firm becomes aware would comprise information obtained from within and outside the firm. A firm would not be expected to seek out such other sources of information; however, if other relevant information came to the firm's attention, a firm is expected to determine whether it is a QC observation. For example, the firm may become aware of an issue with a formula in a practice aid used to assist engagement teams in auditing stock-based compensation if a member of an engagement team communicates that issue to firm personnel supporting the firm's QC system.

The final standard has been revised to clarify that the evaluation and determination must both be done on a timely basis.

i. Determining Whether QC Deficiencies Exist (QC 1000.72)

The standard requires firms to determine whether QC deficiencies exist, and (except for the change in terminology to "QC observation") was adopted as proposed.

²⁹⁹ QC deficiencies are defined and discussed in the next subsection. See below.

i. Definition of QC Deficiency

In response to commenter input, the Board made changes to the definition of the term “QC deficiency.” As proposed, the definition provided in part that a QC deficiency was a QC finding that results in “a reduced likelihood of the firm achieving the reasonable assurance objective or one or more quality objectives,” and included a note providing examples of circumstances where that likelihood could be reduced. Two commenters questioned the operability of that aspect of the proposed definition of QC deficiency, in particular its linkage to the definition of an internal control deficiency under COSO in its integrated framework through the phrase “reduced likelihood.” Two commenters suggested that the definition of QC deficiency should incorporate the concept of “a significantly reduced likelihood.” Another commenter requested guidance relative to the application of the “reduced likelihood” model. Other commenters suggested that the definition should be more closely aligned with that of other standard setters, for example ISQM 1, by incorporating the concept of an “acceptably low level.”

Taking into account commenter feedback, the standard defines a QC deficiency as a QC observation that, based on the evaluation under paragraph .72, individually, or in combination with one or more other QC observations, evidences:

- That the likelihood of the firm not achieving the reasonable assurance objective or one or more quality objectives has not been reduced to an acceptably low level;

Note: The likelihood of not achieving the reasonable assurance objective or one or more quality objectives would be above an acceptably low level if, for example, a quality objective is not established, a quality risk is not properly identified or assessed, or a quality response is not properly designed or implemented or is not operating effectively.

- Noncompliance with requirements of this standard, other than those under “Documentation”; or

- Noncompliance with requirements of this standard under “Documentation” that adversely affects the firm’s ability to comply with any of the other requirements of this standard.

The first subparagraph of the definition of QC deficiency incorporates an existing concept of “acceptably low level” that is currently used in PCAOB auditing standards³⁰⁰ so this concept

should be familiar to firms. In addition, it aligns more closely with similar definitions of other standard setters, for example the definition of “deficiency” in ISQM 1. The Board made conforming changes to the note that follows subparagraph (1) of the definition.

Similar to the proposal, the definition of QC deficiency in the final standard also includes noncompliance with the requirements of the proposed standard other than documentation requirements, such as the requirements related to roles and responsibilities, the firm’s risk assessment process, the monitoring and remediation process, and the evaluation of the QC system. Two commenters expressed concern with this requirement, stating that there may be instances where the firm may not comply with a requirement in the standard but the quality objectives and specified quality responses were met, and a firm should be able to apply judgment to determine whether a QC deficiency exists under those circumstances. The Board continues to believe that compliance with the requirements of QC 1000 is a baseline element of any firm’s QC system, such that failure to comply is always a QC deficiency, and adopted this aspect of the QC definition as proposed.

The definition also includes noncompliance with the documentation requirements of QC 1000, to the extent that such noncompliance adversely affects the firm’s ability to comply with any of the other requirements of the proposed standard, while excluding other documentation issues. For example, a firm’s failure to document some details of its monitoring activities, in a context where the firm otherwise sufficiently documents the evaluation of the results from its monitoring activities, would not meet the definition of a QC deficiency. The Board received no comment on this aspect of the definition of QC deficiency and adopted it as proposed.

Under the final standard, the determination of whether something identified as a QC observation meets the definition of a QC deficiency would be based on the nature, severity, and pervasiveness of the underlying matter; the likelihood that it could affect other component(s) of the QC system or other engagements; and the severity of such an effect if it were to occur. In the case of engagement deficiencies, this evaluation would take account of the basis for the firm’s determination of the actions required under paragraph .68 of QC 1000, including any root cause analysis performed. These considerations are discussed, in turn, in the following subsections.

The final standard has been revised to clarify that the evaluation and determination must both be done on a timely basis.

ii. Nature, Severity, and Pervasiveness of the Matter That Gave Rise to the QC Observation

The nature, severity, and pervasiveness of the matter that gave rise to the QC observation should be taken into account when determining whether a QC deficiency exists. For a QC observation that is also an engagement deficiency, the results of the firm’s evaluation of whether a similar engagement deficiency exists on other in-process and completed engagements would provide useful information to the firm when determining whether a QC deficiency exists.

The standard explains that the nature, severity, and pervasiveness of the matter that gave rise to the QC observation includes:

- *The component(s) of the QC system, quality objective(s), or quality risk(s) to which the QC observation relates.*

Depending on the quality risks that a firm identifies, some components may play a greater role in its QC system than others. For example, for a small firm that audits one issuer and has no intention to expand its issuer audit practice, the engagement performance component would have a greater role than acceptance and continuance of engagements because the quality risks associated with the new engagement would be mitigated by the firm’s policy of not taking on new issuer audit engagements. Based on the firm’s risk assessment, certain quality risks may pose a greater threat to the firm’s QC system than others. In addition, some QC observations may relate to a single component of the QC system or a single quality objective, while others may relate to multiple components of the QC system or multiple quality objectives. For example, an engagement deficiency may relate to the resource component (e.g., competence and training of firm personnel, firm methodology), the information and communication component (e.g., failure to communicate changes to the methodology), or the engagement performance component (e.g., failure to consult when required), or all three of those components.

- *Whether the QC observation is in the design, implementation, or operation of the QC system.* For example, a matter that gave rise to a QC observation in the design of a process has a greater likelihood of being pervasive to a firm’s practice than a

³⁰⁰ See, e.g., AS 2315, *Audit Sampling*.

process that did not operate as designed on one occasion.

- *The frequency with which the QC observation occurred.* Frequency relates to the number of times the matter that gave rise to the QC observation occurred—for example, on engagements within a particular industry sector or practice group, a particular office, or firmwide. It might also relate to the number of times the observation was identified, the number of firm personnel involved, or the number of quality objectives affected. When related to the execution of a firm's quality response, it would also include relative frequency of QC observations compared to the number of times the procedure was executed properly.

The duration of time that the QC observation existed. Duration addresses how long the matter that gave rise to the QC observation existed. In order to understand duration, a firm would need to understand whether there were other instances prior to those initially identified by the firm as QC observations.

iii. Likelihood That the Matter That Gave Rise to the QC Observation Could Affect Other Component(s) of the QC System or Other Engagements, and the Severity of Such an Effect

Whether a QC observation is a QC deficiency would also depend on the likelihood that the matter that gave rise to the QC observation could affect other QC system components or other engagements.

Other engagements include in-process engagements, completed engagements, engagements to be performed in the future, as well as work performed on other firms' engagements. A firm may design and implement mitigating actions to address an engagement deficiency when such a deficiency comes to the firm's attention. When considering the likelihood that future engagements could be affected (for purposes of determining whether a QC deficiency exists), a firm would not take into account any mitigating actions, even if they have been implemented. This is because the determination of whether a QC deficiency exists must be made based on the nature, severity, and pervasiveness of the matter that gave rise to the QC observation, viewed on its

own. That shows the extent to which the QC system failed in allowing the underlying matter to occur. Whether the firm was subsequently able to partially or fully remediate the QC deficiency does not eliminate the fact that the failure occurred.

In addition to the likelihood of a matter's recurrence, the standard also requires a firm to evaluate the matter's severity if it were to affect other component(s) or engagements.

One commenter suggested that the standard address the concept of compensating responses as a factor when considering QC findings in proposed paragraph .72. In considering whether a QC observation is a QC deficiency (on the basis that the likelihood of the firm not achieving the reasonable assurance objective or one or more quality objectives has not been reduced to an acceptably low level) the firm could consider compensating responses that address the same quality risk. Additional discussion in response to this commenter's feedback appears below in the context of discussion of remedial actions.

BILLING CODE 8011-01-P

Example of Considerations Relevant to Determining QC Deficiency

BILLING CODE 8011-01-C

j. Responding to QC Deficiencies

i. Root Cause Analysis (QC 1000.73–.74)

The requirement to perform root cause analysis on all identified QC deficiencies did not draw comment and was adopted as proposed.

Root cause analysis is a widely used concept in QC frameworks.³⁰¹

³⁰¹ See *Spotlight: Root Cause Analysis—An Effective Practice to Drive Audit Quality* (April 2024) available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/documents/root-cause-spotlight.pdf?sfvrsn=55f82206_2.

Identifying and understanding the underlying causes of a problem supports developing solutions that address those causes, rather than just the symptoms. Proper determination of the causal factors that led to QC deficiencies is essential to developing effective remedial actions. For example, a policy or procedure could be inappropriately designed or implemented or a person may not have complied with a policy or executed a procedure as it was intended. As another example, an audit tool may not have operated as intended. Root cause analysis looks for different

types of causes through investigating the patterns of negative effects, finding hidden flaws in the QC system, and discovering specific actions that contributed to the problem. Improvements in audit quality have generally been observed through PCAOB oversight activities where a firm has established an effective root cause analysis program.³⁰² Many different types of causes may contribute to a problem.

³⁰² See 2018 Inspection Observations Preview.

A firm might find it helpful when performing root cause analysis to leverage information obtained from its evaluation of whether a QC deficiency exists. That is, information about the nature, severity, or pervasiveness of the matter that gave rise to the QC observation and the likelihood that the matter that gave rise to the QC observation could affect other components of the QC system or other engagements may provide evidence of what caused the problem to occur.

Root cause analysis procedures could take different forms depending on the circumstances, which allows for scalability. Some key elements that the PCAOB has observed that may lead to more robust and comprehensive root cause analysis include:³⁰³

- Monitoring audit deficiencies identified and performing root cause analysis on a continual basis. This allows firms to obtain information that allows them to react more timely and implement remedial actions to reduce recurring deficiencies in other audits.³⁰⁴
- Process mapping at the engagement level and the firm level of the underlying work flows of how a firm conducts its practice. A well-defined process makes it easier to analyze negative events to determine what went wrong.
- Consideration of both positive and negative quality events (*i.e.*, actions, behaviors, or conditions that resulted in positive or negative outcomes) to identify whether such actions, behaviors, or conditions were present on engagements where QC deficiencies were identified.
- Measuring, in real time, the effectiveness of remedial actions and audit quality improvement plans or initiatives to identify whether remedial efforts are effective.

The standard does not require firms to perform root cause analysis on QC observations that are not QC deficiencies.

Paragraph .74 of the standard requires that the nature, timing, and extent of the root cause analysis be commensurate with the nature, severity, and pervasiveness of the QC deficiency. This provision did not draw comment and was adopted as proposed.

A QC deficiency that could affect multiple engagements may require more urgent root cause analysis, depending on the circumstances. To illustrate, a QC

deficiency related to a firm's approach to testing business combinations would be more urgent if a firm's clients regularly enter into such transactions. Taking into account the nature, severity, and pervasiveness of the QC deficiency, root cause analysis may be performed at different points in time or, depending on the size and nature of the firm, operate as more of a continual process. At times, it might be effective to combine similar QC deficiencies and perform root cause analysis on them collectively rather than on an individual basis.

In some instances, the causal factors may be relatively apparent and therefore require less analysis than in a situation where the cause of the deficiency is complex and requires significant investigation and analysis. As previously mentioned, there may be multiple causes contributing to a QC deficiency. Generally, the more thorough the analysis, the more likely the causal factors will be identified and the greater the likelihood that a firm could design and implement remediation efforts that will be effective in preventing similar QC deficiencies from occurring again.

It is important for firms to have well-defined processes in order to perform sufficient root cause analysis. The better delineated the underlying processes, the less work that may be necessary to determine why the QC deficiency occurred.

ii. Remedial Actions (QC 1000.75)

The requirement to design and implement timely remedial action for QC deficiencies did not attract comment and was adopted as proposed.

The timing of a firm's efforts to design and implement remedial actions depends on the results of the firm's root cause analysis and the nature, severity, and pervasiveness of the QC deficiency. The Board expects a firm to respond in a manner that would mitigate the occurrence of additional QC deficiencies related to similar underlying causes.

In some circumstances, due to the extent of remedial actions necessary to address the QC deficiency, a firm might design and implement temporary remedial actions until permanent actions can be designed and implemented. For example, a firm could design and implement supplemental audit practice aids to address QC deficiencies until the firm is able to revise its comprehensive audit methodology. In some situations, a complex QC deficiency may result in the firm developing a multi-step plan with milestones necessary to be

achieved as the firm designs and implements its remedial actions.

In other situations, the extent of remedial actions the firm needs to take to address a particular QC deficiency may be reduced by other compensating responses that the firm has in place. If the remedial actions, including any relevant compensating responses, have been tested and found effective in addressing the issue, the firm might determine, based on the facts and circumstances, that no further remedial action is necessary.

The process of identifying QC observations, determining QC deficiencies, performing root cause analysis, and designing and implementing remedial actions is iterative. For example, a firm may learn information from performing root cause analysis that may identify issues that would have been relevant when evaluating a different QC observation had such information been known at the time. If this were to occur, a firm would further evaluate the other QC observation to determine if a QC deficiency exists based on this new information. As another example, the work entailed in a root cause analysis could potentially help a firm identify other quality objectives that are not being met. To illustrate, the firm's root cause analysis may show that a lack of training caused deficiencies in a complex audit or accounting area that is common to the firm's engagements, and may also lead to the identification of other problems in the same area, such as inadequate audit methodology or a missed consultation due to the lack of a well-understood, robust consultation process.

PCAOB oversight activities have identified that some firms evaluate positive quality events associated with engagements where no engagement deficiencies were identified. For example, certain procedures, techniques, or voluntary practice aids may have contributed to an engagement performed in accordance with applicable professional and legal requirements. These firms use the information obtained from such evaluations to assess the actions of individuals on engagements with deficiencies, ultimately highlighting potential actions to prevent future engagement deficiencies. The Board believes that evaluating positive outcomes could contribute to the success of the firm's root cause analysis and remediation efforts. Therefore, the standard includes a note highlighting that it may be beneficial for firms to consider actions, behaviors, or conditions that resulted in positive

³⁰³ See June 2014 SAG Briefing Paper at 2.

³⁰⁴ See *Staff Inspection Brief*, Vol. 2017/4: *Preview of Observations from 2016 Inspections of Auditors of Issuers* (Nov. 2017), at 16, available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/inspections/documents/inspection-brief-2017-4-issuer-results.pdf?sfvrsn=c216d8a7_0.

outcomes, such as where aspects of the firm's QC system operated effectively or where no engagement deficiencies were identified for individual engagements.

In some circumstances, a firm may determine the root cause of a QC deficiency is related to the use of a resource or service provided by a third-party provider. If this were to occur, under the standard, the firm is responsible for addressing the effect of the deficiency on its QC system. This could include, among other things, working with the third-party provider to design and implement remedial actions or deciding to end the relationship with the third-party provider and, as part of the firm's remedial actions, revising its policies and procedures in the area affected. Irrespective of the approach taken and the extent of participation by third parties, the firm remains responsible for its QC system.

If a firm belongs to a network and uses network resources or services to enable the operation of the firm's QC system or the performance of its engagements, a root cause of a QC deficiency could be related to the network resource or service. Similar to a firm's use of resources or services

provided by a third-party provider, a firm is responsible for addressing the effect of the deficiency on its QC system regardless of whether the remedial actions taken by the firm are coordinated with the network or designed and implemented exclusively by the firm. Further, the firm remains responsible for determining whether the actions taken by the network sufficiently remediate the QC deficiency.

Under the standard, firms are able to design their approach to conducting root cause analysis and developing remedial actions. Firms' approaches will vary based on the nature and circumstances of the firm and its engagements. In addition, approaches will likely change as new technologies become available and other techniques develop.

k. Monitoring the Implementation and Operating Effectiveness of Remedial Actions (QC 1000.76)

The requirement to monitor the implementation and operating effectiveness of remedial action for QC deficiencies did not attract comment and was adopted as proposed.

Under the final standard, a firm monitors the effectiveness of its remedial actions through engagement monitoring activities and/or QC system-level monitoring activities, depending on the nature of the QC deficiency. If a firm determines the remedial actions were not properly implemented or operating effectively, the firm would be required to take timely actions until the monitoring activities indicate the QC deficiency was remediated. Timely actions could include, among others, one or more of the following:

- Adjusting the implemented remedial actions;
- Designing and implementing additional remedial actions; or
- Performing additional root cause analysis to determine if other causes exist and, if so, designing and implementing remedial actions to address such causes.

Once additional actions are taken, a firm is required to perform monitoring activities on such changes to determine whether the QC deficiency was remediated.

BILLING CODE 8011-01-P

Determining the Existence of and Remediating QC Deficiencies

BILLING CODE 8011-01-C

2. Current PCAOB Standards

Current PCAOB QC standards require firms to establish policies and procedures to provide the firm with reasonable assurance that the policies and procedures relating to each of the other QC elements are suitably designed and are being effectively applied.³⁰⁵ The standards also address how a firm implements the monitoring element of a QC system in its accounting and auditing practice.³⁰⁶ The standards discuss various monitoring procedures that a firm may perform, such as reviewing engagements before or after the engagement reports are issued,

reviewing selected administrative and personnel records pertaining to the QC elements, considering systemic causes of findings that indicate improvements are needed, determining corrective actions, and following up to ensure that any necessary modifications are made to the firm's QC policies and procedures on a timely basis.³⁰⁷ Although current PCAOB QC standards provide that monitoring procedures taken as a whole should enable firms to obtain reasonable assurance that their QC systems are effective,³⁰⁸ there are no express obligations for firms to perform any specific types of monitoring.

Evaluation of and Reporting on the QC System

1. QC 1000

a. Annual Evaluation of the Effectiveness of the QC System (QC 1000.77)

A firm's evaluation of the results of its monitoring and remediation process helps the firm identify the areas within the QC system that are designed, implemented, and operating effectively, as well as areas that require attention. This perspective will assist firm leadership in allocating resources to address QC deficiencies and provide them with a basis for communicating to others—within or outside the firm—the status of the firm's QC system.

Current PCAOB QC standards do not require such an evaluation. The Board

³⁰⁵ See QC 20.20.

³⁰⁶ See generally QC 30.

³⁰⁷ See QC 30.03; QC 30.06.

³⁰⁸ See QC 30.03.

understands that some firms already evaluate their QC systems, either voluntarily or in response to other requirements.³⁰⁹ However, not all firms evaluate their QC systems, and those that do may not apply the same degree of rigor.

i. Evaluation Requirement

The proposed standard included a requirement for the firm to evaluate annually whether its QC system is effective, is effective except for one or more unremediated QC deficiencies that are not major QC deficiencies, or is not effective (*i.e.*, one or more major QC deficiencies exists). Pursuant to proposed paragraph .07c, firms that were not required to implement and operate a QC system at any time within the previous 12 months would not be subject to the requirement to evaluate and report on their QC system.

Some commenters expressed support for the proposed annual evaluation requirement. However, several commenters suggested that the Board conform the terminology to ISQM 1, such that the conclusions reached in evaluating the QC system would be the same under both standards. Some commenters expressed concern about the potential for stakeholder confusion because the criteria and terminology used in QC 1000 differ from ISQM 1. One commenter expressed concern that the more stringent criteria of QC 1000 would create a competitive disadvantage.

One commenter recommended that the Board eliminate the middle category (effective except for one or more unremediated QC deficiencies that are not major QC deficiencies), so that a firm's QC system would be evaluated as either effective or not effective based on whether any unremediated major QC deficiencies exist as of the evaluation date, such that the reasonable assurance objective has not been achieved. The commenter analogized to ICFR reporting, where management is only required to report material weaknesses.

The Board adopted the evaluation requirements as proposed. The Board does not believe there is any likelihood of confusion among external stakeholders arising from differences in evaluation criteria between QC 1000 and ISQM 1 because, under the final PCAOB standard, the conclusion reached about the effectiveness of a firm's QC system is not required to be made public. The same is true under ISQM 1. Therefore, if a firm were to

evaluate its QC system under both standards and reach different conclusions, market participants would be unaware of that fact unless the firm chose to make the results of its evaluation public (in which case, it could also choose to provide an explanation of the difference). Additionally, while ISQM 1 requires communication to those charged with governance about how the system of quality management supports the consistent performance of quality audit engagements, QC 1000 does not require any such communication to the audit committee.³¹⁰ Firms would of course be free to discuss the evaluation of their QC system with the audit committee, potentially as part of the report required under listing standards that may apply to the issuer.³¹¹ The Board believes most audit committee members are already well acquainted with reviewing information prepared under different frameworks, *e.g.*, financial statements prepared under U.S. GAAP and under IFRS, and could readily understand that the more stringent criteria under QC 1000 could lead to a different conclusion about the effectiveness of the QC system.

Similarly, the Board believes that firms that are required to perform multiple QC system evaluations will be able to train their personnel and acquire other resources as necessary to avoid confusion among internal stakeholders and perform the evaluation under QC 1000 appropriately. A firm will be subject to both QC 1000 and other QC standards only if it is performing audits under multiple sets of auditing standards. Just as such firms manage the differences in audit requirements and methodology associated with different auditing standards, the Board believes they will be capable of managing differences in the QC system requirements under QC 1000 and other QC standards, including differences in the criteria and terminology used in evaluating the QC system.

The Board also believes that requiring three categories for the QC system evaluation, as proposed—effective, effective except for one or more unremediated QC deficiencies that are not major QC deficiencies, and ineffective—will result in a more rigorous QC system evaluation, a greater incentive for firms to address QC deficiencies promptly, and more detailed and informative reporting to the PCAOB. Given that reporting is only

to the PCAOB, the Board does not believe an analogy to management's public reporting regarding ICFR, where only material weaknesses are required to be reported, is appropriate.

Firms will be required to perform an evaluation of their QC system annually. The firm's evaluation is based on data and evidence provided by the firm's monitoring and remediation activities. An annual evaluation will provide leadership with timely information to facilitate an effective feedback loop.³¹² This approach highlights the importance of the QC system in driving continuous improvement in firms' ability to perform compliant engagements on a consistent basis. The evaluation requirement will drive firms to collect and analyze the results of their monitoring and remediation processes in order to identify deficiencies and will provide an additional incentive for firms to focus on areas requiring the most immediate attention and improvement.

The evaluation requirement also reinforces the responsibility and accountability of leadership for the firm's QC system.³¹³ As discussed above, the individual charged with ultimate responsibility and accountability for the QC system as a whole will be accountable for the annual evaluation, and both that individual and the individual charged with operational responsibility and accountability for the QC system as a whole will be required to certify the firm's annual report regarding the evaluation of its QC system.³¹⁴ The Board believes this will send a clear message about the importance of the evaluation and incentivize firm leadership to take ownership of both the annual evaluation of the QC system and the results.

While the Board adopted as proposed a requirement for annual evaluation of the QC system, it made some changes in response to commenter input, as described below.

ii. Evaluation Frequency and Date

The proposed standard would have required the firm to evaluate its QC system annually as of November 30 and conclude on whether any unremediated QC deficiencies (including major QC deficiencies) exist as of that date.

³¹² Firms could decide to evaluate the QC system more frequently than required under the standard. For example, a firm with one or more major QC deficiencies may decide to perform a mid-year evaluation to gauge the effectiveness of its remedial actions.

³¹³ See QC 1000.13–.17.

³¹⁴ See QC 1000.14c.–d. and .15b.

³⁰⁹ See, *e.g.*, NYSE Listed Company Manual, Section 303A.07(b)(iii)(A); Section 2(d) of Article 13, Regulation (EU) 537/2014.

³¹⁰ See Reporting to the audit committee, discussed below.

³¹¹ See NYSE Listed Company Manual, Section 303A.07(b)(iii)(A).

One commenter, an investor-related group, supported the proposed November 30 evaluation date and opposed allowing firms to set their own reporting date.

Many commenters, generally firms and firm-related groups, suggested that firms should be permitted to choose their own evaluation date, primarily because it would enable them to choose a date based on their own operating and business cycle or inspection cycle. These commenters also noted other considerations, such as alignment with the firm's fiscal year end or the date already chosen for the evaluation required under ISQM 1. Several commenters suggested that firms should be able to choose a date that would allow them sufficient time to perform root cause analysis, remediate identified issues, and test the effectiveness of their remediation efforts. One commenter noted that firms could choose a date with a view to enabling real-time conversations with audit committees. Another commenter suggested that additional flexibility on the evaluation date would enhance the scalability of the standard. Some commenters stated that requiring a specific evaluation date could lead firms to perform assessments twice a year. Several commenters also raised a concern about potential resource limitations in performing the evaluation on the timetable the Board proposed.

Other commenters suggested various options for potential alternative evaluation dates:

- March 31, on the basis that it is better aligned with a natural business cycle for many firms or aligns with the Form 2 reporting date. (These commenters generally preferred allowing firms to choose their own evaluation date over a mandated date applicable to all firms and suggested March 31 as a second-best approach.)
- September 30, which would allow firms to report to the PCAOB by November 15 and, in turn, report to audit committees before the end of the calendar year.
- September 30 or October 31, if the proposed January 15th reporting date is implemented, to allow additional time to complete reporting.
- February 28, to allow reporting by April 1, in advance of the April/May proxy season.
- A window, for example, November to March, within which firms could choose a date.

Taking into account commenter feedback on the proposed evaluation date of November 30, the evaluation date was revised to September 30 for all firms. The Board believes this earlier

date addresses commenter concerns that the November 30 date would have caused potential resource limitations during the traditional busy period for many firms. Further, the Board believes an evaluation date of September 30 would provide the firm with enough time to identify and potentially remediate any QC deficiencies identified from the most recent calendar year-end engagements, which might not be possible if an earlier date were selected.

As summarized above, some firms expressed concern that a firm that has already chosen its evaluation date under ISQM 1 would be required to perform two QC system evaluations per year since the PCAOB's evaluation date differs from ISQM 1's. The Board believes firms can build on work already done for the purpose of complying with the requirements of one QC standard in performing the other, to the extent applicable. However, since the nature of the two evaluations is inherently different (e.g., the determination of major QC deficiencies, the differing definitions of QC deficiency under QC 1000 vs. deficiency under ISQM 1), the Board believes that there would always be some differences between the evaluation required under QC 1000 and the evaluation required under ISQM 1. While there could be additional costs associated with multiple evaluations if a firm chose to have separate evaluation dates for purposes of QC 1000 and other QC standards to which it is subject, firms would be free to change their evaluation date under other QC standards so that the evaluation dates coincide.

The proposed standard also included a note clarifying what unremediated means in the context of this requirement: remedial actions that completely address the QC deficiency have not been fully implemented, tested, and found effective. While this note did not draw specific comment, one commenter suggested that the framework afforded by section 104(g)(2) of Sarbanes-Oxley, which the commenter said focuses on substantial good faith progress instead of complete remediation, is necessary and should be retained. The Board disagrees as, in its view, the two provisions serve fundamentally different purposes and a different approach is appropriate for firm evaluation and reporting under QC 1000.

Sarbanes-Oxley section 104(g)(2) governs the circumstances under which the PCAOB is permitted to make portions of an inspection report dealing with quality control criticisms and potential defects public. It forbids

publication if the criticisms or defects "are addressed by the firm, to the satisfaction of the Board," not later than 12 months after the date of the report. In describing its process for determining whether a matter has been addressed to its satisfaction, the Board indicated that a "favorable Board determination reflects the Board's assessment that the firm has demonstrated substantial, good faith progress toward achieving the relevant quality control objectives, sufficient to merit the result that the criticisms remain nonpublic. A favorable determination does not necessarily mean that the firm completely and permanently cured any particular quality control defect."³¹⁵

By contrast, reporting on Form QC is simply factual: as of the evaluation date, has each identified QC deficiency been fully remediated or not? Under QC 1000, firms will perform a self-evaluation, based on the process and criteria set forth in the standard. This is very different from the process by which the Board determines whether a matter has been remediated to its satisfaction for purposes of section 104(g)(2),³¹⁶ not least because it involves the firm's self-assessment rather than the Board's judgment. Moreover, the Board does not believe the consequences of a firm reporting an unremediated QC deficiency to the PCAOB would be the same as the consequences of the PCAOB publishing QC criticisms in an inspection report; in particular, the Board does not believe that the legislative policy choice reflected in section 104(g)(2), which, as the Board has said, favors "the correction of quality control problems over the exposure of them,"³¹⁷ applies in this context, given the nonpublic nature of the Form QC reporting. Accordingly, the Board adopted the note to paragraph .77 as proposed.

b. Determining Whether Major QC Deficiencies Exist (QC 1000.78)

The standard requires firms to evaluate unremediated QC deficiencies as of the evaluation date to determine whether major QC deficiencies exist. While the identification of QC deficiencies will be an ongoing process throughout the year, the determination of whether any of those QC deficiencies, alone or in combination, constitute major QC deficiencies will be required only as part of a firm's annual evaluation of its QC system.

³¹⁵ PCAOB Rel. No. 104-2006-077 at 6.

³¹⁶ See PCAOB Rule 4009, *Firm Response to Quality Control Defects*.

³¹⁷ PCAOB Rel. No. 104-2006-007 at 2.

i. Definition of a Major QC Deficiency

The proposed standard provided that a major QC deficiency was “an unremediated QC deficiency or combination of unremediated QC deficiencies, based on the evaluation under paragraph .78, that severely reduces the likelihood of the firm achieving the reasonable assurance objective or one or more quality objectives.” One commenter supported the concept of major QC deficiency. However, a number of commenters expressed concern with that proposed definition:

- Several commenters expressed concern that the definition could cause a firm to come to a different conclusion about its QC system during the annual evaluation process under QC 1000 than the conclusion a firm may reach under ISQM 1 and suggested that the definition be revised to include the concepts of severe and pervasive, similar to the concepts that appear in relation to the evaluation of QC deficiencies under ISQM 1.
- One commenter stated that it was unclear why a new term, “major QC deficiency,” would be necessary and questioned the need for a reference to a threshold other than “achieving reasonable assurance.”
- Another commenter was concerned that the concept of major QC deficiency, which other QC standards do not use, will redirect time and resources to analyzing the level of a deficiency instead of the important elements to remediate the deficiency such as root cause analysis and implementing timely changes to a firm’s system.
- Another commenter stated that the phrase “severely reduces the likelihood” in the definition of major QC deficiency is vague and not sufficiently defined in the proposed QC standards and suggested that the phrase be replaced with the phrase “prevents the firm from concluding.”

The Board considered the commenter feedback and determined to adopt this language as proposed. The Board agrees it is possible that firms could reach different conclusions as to the effectiveness of their QC system under QC 1000 and ISQM 1 or SQMS 1. However, the concept of severe and pervasive, which commenters suggested be incorporated in the definition, appears in the factors for firms to consider when determining the existence of a major QC deficiency (see paragraph .78b. below). The Board believes that including this concept in the factors clarifies the process firms will need to go through in making their

determination of whether a major QC deficiency exists.

The defined term “major QC deficiency” is unique to QC 1000, but the concept it embodies—that the QC system does not provide the firm with reasonable assurance that the objectives of the QC system have been met—is not, and appears in both ISQM 1 and SQMS 1. Accordingly, the Board does not believe that phrasing the requirements as it has, including the use of a defined term, will require a different evaluation process than if it had simply required a determination that the QC system was ineffective. The standard does not require the determination of major QC deficiencies to be performed at any time other than the evaluation date. However, firms may choose to perform such an analysis ahead of the annual evaluation date to enable sufficient time to design, implement, and test remedial actions related to the QC deficiencies that have the greatest potential impact on the QC system.

As with the defined term “QC deficiency,” the defined term “major QC deficiency” is analogous to a term in COSO’s integrated framework, major deficiency, which includes the concept of “severely reduces the likelihood.” The Board believes that this concept is already well-understood by firms.

Another commenter expressed concern that a major QC deficiency would exist if there was a severely reduced likelihood that the firm did not achieve a single quality objective, even when the firm had in fact achieved the reasonable assurance objective. In the Board’s view, this concern is more theoretical than real. The quality objectives in QC 1000 relate to compliance with applicable professional and legal requirements in each component of the QC system and in the aspects of the firm’s practice that are addressed by each component. Failing to achieve such a quality objective implies that the reasonable assurance objective has not been achieved. Some quality objectives, particularly in the resources component, also relate to compliance with the firm’s policies and procedures. These quality objectives are directed to the QC system itself: compliance with policies and procedures is necessary for the QC system to operate as designed. While failure to comply with firm policies and procedures does not necessarily imply failure to comply with applicable professional and legal requirements, it does mean that the QC system is not operating as designed, which may raise questions about the level of assurance it provides.

In response to commenter feedback regarding the proposed concept of presumed major QC deficiencies (discussed in the next section), the lead-in language of paragraph .78 was revised to clarify that the factors in paragraph .78b are to be applied by the firm both (i) when a presumption arises that a major QC deficiency exists and the firm attempts to rebut the presumption, and (ii) in instances where no presumption arises.

ii. Presumed Major QC Deficiency (QC 1000.78.a)

The proposed definition of a major QC deficiency provided for two circumstances that would be presumed to evidence a major QC deficiency. These circumstances included an unremediated QC deficiency or combination of unremediated QC deficiencies that:

- *Relates to the firm’s governance and leadership that affect the overall environment supporting the operation of the QC system.* Firm governance and leadership establish the environment that determines how firm personnel carry out responsibilities for the operation of a firm’s QC system and the performance of its engagements. Because of the pervasive impact of leadership and the “tone at the top,” one or more unremediated QC deficiencies related to firm governance and leadership that affect the overall environment supporting the operation of the QC system would almost always severely reduce the likelihood of the firm achieving the reasonable assurance objective or one or more quality objectives.
- *Results in or is likely to result in one or more significant engagement deficiencies in engagements that, taken together, are significant in relation to the firm’s total portfolio of engagements conducted under PCAOB standards.* A significant engagement deficiency exists when (1) the engagement team failed to obtain sufficient appropriate evidence in accordance with the standards of the PCAOB or failed to perform interim review or attestation procedures necessary in the circumstances, (2) the engagement team reached an inappropriate overall conclusion on the subject matter of the engagement, (3) the engagement report is not appropriate in the circumstances, or (4) the firm is not independent of its client.³¹⁸ An unremediated QC deficiency that would likely result in one or more of these deficiencies in engagements that, taken together, are significant in relation to the firm’s total portfolio of engagements

³¹⁸ See Notes to AS 1220.12, .17, .18B.

conducted under PCAOB standards would give rise to a presumption that a major QC deficiency exists. The definition included examples of quantitative and qualitative criteria that may signal such significance.

One commenter argued that the proposed presumption regarding deficiencies in the governance and leadership component was unnecessary, on the basis that not every deficiency in governance and leadership was necessarily a major QC deficiency. Other commenters expressed concern that the circumstances presumed to evidence a major QC deficiency remove the auditor's ability to apply professional judgment. Another commenter suggested that the presumptions could be replaced with indicators of a major QC deficiency, similar to how AS 2201 treats material weaknesses. Another commenter stated that it is not appropriate to include in the proposed definition circumstances when a major QC deficiency is presumed to exist because the factors provided in paragraph .78 are sufficient to make the evaluation of whether a QC deficiency is a major QC deficiency. Another commenter suggested that these presumed major QC deficiencies could be relocated from the definition and into paragraph .78 and achieve the same objective.

The Board considered the commenter feedback. However, as described above, the Board continues to believe that because of the pervasive impact of leadership and the "tone at the top," one or more unremediated QC deficiencies related to firm governance and leadership that affect the overall environment supporting the operation of the QC system would almost always severely reduce the likelihood of the firm achieving the reasonable assurance objective or one or more quality objectives—that is, would almost always result in a major QC deficiency.

The Board also noted that, consistent with the proposal, the presumptions are not conclusive and can be rebutted by the firm in appropriate circumstances. The note to paragraph .78a clarifies that in order to rebut a presumption that a major QC deficiency exists, a firm must demonstrate, by taking into account both of the factors in paragraph .78b. (including all of the listed examples in paragraph .78b.(1)), that a major QC deficiency does not exist.³¹⁹ The

standard thus allows for circumstances in which a deficiency related to one of the presumptions does not amount to a major QC deficiency, and creates an opportunity for firms to exercise professional judgment in deciding whether to attempt to rebut the presumption and, if so, how to apply the paragraph .78b factors. However—appropriately, in the Board's view—the presumptions shift the burden of proof to the firm, which will have to demonstrate that circumstances generally reflecting a major QC deficiency do not constitute a major QC deficiency in its case. The Board believes the term "presumption" achieves this burden shifting more clearly than "indicators" or other terms would do.

The Board agrees with the commenter that suggested that the presumed major QC deficiencies should not be included in the definition of major QC deficiency and have taken another commenter's suggestion to relocate the presumption to paragraph .78. Accordingly, the Board made the following revisions to paragraph .78:

- Relocated the circumstances presumed to evidence a major QC deficiency from the definition into paragraph .78a, so they are explicitly part of the process of determining whether a major QC deficiency exists.
- Included a note to clarify what the firm has to demonstrate in order to rebut the presumption that a major QC deficiency exists.

Importantly, the circumstances where a major QC deficiency is presumed to exist are not an exhaustive list of possible major QC deficiencies. For example, any deficiency that requires significant effort and resources to remediate may be a major QC deficiency.

One firm requested clarification of the relationship between the definitions of "engagement deficiencies" and "significant engagement deficiencies." As is evident from their respective definitions, significant engagement deficiencies are a subset of engagement deficiencies. QC 1000 defines an engagement deficiency as "an instance of noncompliance with applicable professional and legal requirements by the firm, firm personnel, or other participants with respect to an engagement of the firm, or by the firm or firm personnel with respect to an engagement of another firm." As the footnote to paragraph .78 of the standard provides, "A significant engagement deficiency exists when (1) the

engagement team failed to obtain sufficient appropriate evidence in accordance with the standards of the PCAOB or failed to perform interim review or attestation procedures necessary in the circumstances, (2) the engagement team reached an inappropriate overall conclusion on the subject matter of the engagement, (3) the engagement report is not appropriate in the circumstances, or (4) the firm is not independent of its client. *See, e.g.,* Notes to AS 1220.12, .17, .18B."

iii. Factors for Consideration

To help firms make the determination of whether a major QC deficiency exists, the standard provides factors on which to base the determination, which assist firms in applying the definition. Several commenters expressed general support for the proposed factors, and the Board adopted them as proposed.

The Board did not receive comments on the examples that illustrated the proposed factors, and adopted this aspect of the proposal substantially as proposed, with one addition, in a renumbered paragraph .78b.(1)(d). The added example relates to the persistence of an unremediated QC deficiency or combination of unremediated QC deficiencies over time. Through its oversight activities the PCAOB has observed repeat or persistent criticisms—appearing in consecutive inspections, or occurring consistently over multiple years, even if not every year—which the Board believes may be indicative of a problem so pervasive and/or so severe that the firm has been unable to effectively remediate it, or of significant failures in the firm's remediation process. Firms will need to consider whether and how the existence of a persistent unremediated QC deficiency or combination of unremediated QC deficiencies year over year might indicate the existence of a major QC deficiency.

Under the standard, the factors for determining whether a major QC deficiency exists are:

- *The severity and pervasiveness of the unremediated QC deficiency or combination of unremediated QC deficiencies.* A firm assesses an unremediated QC deficiency, considering both quantitative and qualitative implications. For example, a firm will assess how many of the components of its QC system, quality objectives, and quality responses are affected by the deficiency, the number of root causes, and the number of affected engagements or engagements likely to be affected in the future, as well as the impact on those engagements, including engagements

³¹⁹ When circumstances exist that are presumed to evidence a major QC deficiency, but the firm demonstrates that it does not have a major QC deficiency, the firm will be required to disclose the basis for its determination in its report to the PCAOB on Form QC, as discussed further below.

See Form QC, Report on the Evaluation of the Firm's System of Quality Control, Item 2.5.

where the opinion was not appropriately supported or the financial statements or management's internal control assessment had to be revised or restated. The firm would also consider the implications of the deficiency for the QC system overall, based on ways in which the design or operation of other aspects of the QC system may be affected, the pervasiveness of the root causes, and the risk of the firm issuing inappropriate engagement reports or otherwise performing deficient engagements in the future. Viewed this way, for example, an unremediated QC deficiency that affects engagements only in a single industry, where the firm has few clients and no intention to acquire more and the engagements represent an

insignificant portion of the firm's total portfolio of engagements under PCAOB standards, is less likely to be severe or pervasive. The Board views the concepts of severity and pervasiveness as overlapping and the factors in paragraph .78b.(1) that indicate the severity and pervasiveness of an unremediated QC deficiency, or combination of unremediated QC deficiencies, represent both aspects. The standard does not require the firm to determine that an unremediated QC deficiency is both severe and pervasive in order for it to constitute a major QC deficiency, nor is the list of examples exhaustive.

- *The extent to which remedial actions have been implemented, tested,*

and found to be effective. Before the annual evaluation date, a firm may implement remedial actions that reduce the severity or pervasiveness of an unremediated QC deficiency. To illustrate, if a firm identifies an issue with its audit software, it could develop a temporary "work around" to mitigate the unremediated QC deficiency until a permanent solution is employed. For this factor to be relevant for a firm when determining whether a major QC deficiency exists as of the annual evaluation date, the remedial actions have to be tested and the results have to show that such remedial actions are operating effectively.

BILLING CODE 8011-01-P

Annual Evaluation of the Firm’s QC System

Determine Whether a Major QC Deficiency(ies) Exists

*SED – Significant engagement deficiency. A significant engagement deficiency exists when (1) the engagement team failed to obtain sufficient appropriate evidence in accordance with the standards of the PCAOB or failed to perform interim review or attestation procedures necessary in the circumstances, (2) the engagement team reached an inappropriate overall conclusion on the subject matter of the engagement, (3) the engagement report is not appropriate in the circumstances, or (4) the firm is not independent of its client.

Example Considerations Relevant to Determining Major QC Deficiency

BILLING CODE 8011-01-C

c. Firm Reporting on QC System Evaluation (QC 1000.79-.80)

i. Reporting to the PCAOB

(1) Annual Reporting

Under the proposal, firms were to report to the Board annually the outcome of the evaluation of the firm's QC system with respect to any period during which the firm was required to implement and operate the QC system. Many commenters supported the proposed annual reporting requirement. However, one commenter stated that this annual firm reporting would be of no meaningful incremental benefit to the PCAOB and has the potential to create an adversarial dynamic that would not promote audit quality or well serve investor protection goals. Another commenter suggested that if the required reporting on Form QC to the PCAOB would lead to follow-on requests from the PCAOB to furnish more detailed information as to specific findings, then confidentiality legislation may be an issue for firms. Other commenters argued that, because the PCAOB could obtain the same information through the inspections process, reporting to the PCAOB would be unnecessarily duplicative. Another commenter argued that all unremediated QC deficiencies should not have to be reported on Form QC, specifically commenting that the PCAOB already has the ability to access QC documentation for all registered firms to view this information. Another commenter suggested that the value of the report when not accompanied by independent attestation is likely to be limited.

The Board acknowledges that it has the ability to request from firms information relating to their QC systems. However, the Board continues to believe that annual reporting to the

Board will provide the PCAOB with important information about firm QC systems in a timely and structured way and will provide an effective and efficient means of gathering information about firm QC systems. Currently, only 14 of the approximately 1,600 registered firms are subject to annual inspection. Approximately 640 registered firms are required to be inspected on a triennial basis, of which approximately one third are inspected in any given year.³²⁰ Therefore, the Board does not believe that collecting firms' QC information during an inspection would provide timely information regarding the majority of registered firms' QC systems. Data collected by the PCAOB will inform its inspections process, including decisions about the selection of firms and engagements as well as focus areas to inspect and the nature and extent of its inspection procedures (both for QC processes and individual engagements), and will enable the PCAOB not only to make more refined data requests from the firms, but also to focus its inspection resources on those firms and engagements with the greatest risk. The Board believes that this will help better advance its investor protection mandate. Additionally, the Board believes that a formal reporting process will result in enhanced accountability of firm leadership for QC and an additional incentive for prompt remediation of identified QC deficiencies. While the standard does not require attestation over the firm's evaluation process, the Board believes that the requirements regarding the form, including required certifications, will provide sufficient incentive for firms to report accurately and completely (and enforcement remedies

³²⁰ The data were obtained from Audit Analytics and publicly available data from the PCAOB's Registration, Annual and Special Reporting (RASR) available at <https://rasr.pcaobus.org>.

will be available if they do not). The incremental effort for a firm to report its evaluation to the PCAOB will not be substantial, as the firm is simply communicating the results of its evaluation process and any related remediation activities, which it is required to conduct and document under QC 1000 in any case.

One firm suggested that the Board only require reporting to the PCAOB if a firm performed engagements in accordance with PCAOB standards during the one-year period ending on the evaluation date. The Board considered whether this change would be of significant benefit to firms and would further enhance the scalability of the standard. However, firms that are not currently performing engagements may have responsibilities with respect to past engagements.³²¹ Moreover, regardless of whether they are required to report the results of the annual evaluation, firms will still be required to perform an evaluation pursuant to QC 1000 in such a circumstance. On that basis, the Board believes that reporting would be valuable even for firms that did not perform an engagement during the year preceding the evaluation date, and that reporting should not constitute an undue burden.

(2) Reporting Mechanism: Form QC

As proposed and under the final rules, firms are required to report their annual QC evaluation on a new form, Form QC. Several commenters supported the use of a separate Form QC, with some of these commenters asserting that because firms should be allowed to select their own evaluation date, this would necessitate the use of Form QC, rather than an existing form such as Form 2. Another commenter supported the view that expanding Form 2 to incorporate QC information

³²¹ See, e.g., AS 2901; AS 2905.

was not favorable as this would make the form longer and more complex. The Board continues to believe that separate reporting on new Form QC remains appropriate. The contents of Form QC are the result of a separate evaluation process by a firm and the Board believes that it is simpler for the results of the annual evaluation to be reported on a separate form. In addition, as discussed in more detail above, QC 1000 requires firms to conduct an annual evaluation of their QC system as of September 30. The use of a separate Form QC for reporting the results of the annual evaluation will facilitate closer alignment of the timing of the reporting and the annual evaluation date. For example, the submission deadline for Form 2 is June 30, which is nine months after the annual evaluation date of September 30. Furthermore, Form 2 reporting is public and, as discussed in more detail below, Form QC will not be publicly available.

The proposal asked whether Form QC should be permitted to be filed in XML or another machine-readable format. In response, one commenter supported the PCAOB permitting widely accepted formats that support usability. Another commenter supported that the web-based system for submitting the information be navigable and easy to use. Reporting to the PCAOB will be done using the same platform as its other reporting forms (currently, its web-based RASR system and, in the future, potentially new means of information exchanges as the PCAOB continues to modernize its reporting technology aimed at simplifying and automating data collection, processing, and interoperability).

(3) Contents of Form QC

The contents of Form QC will address the matters listed in paragraphs .79–.80. In addition, Form QC will elicit certain information about the firm and the individuals responsible for the QC system, aggregated information about the items required to be reported in paragraph .80, the areas of QC to which any unremediated QC deficiencies relate, and a certification of the evaluation of the QC system by certain designated individuals (discussed below).

One firm asserted that the requirement to report unremediated deficiencies is at too granular a level to be meaningful. The Board considered several alternatives, including requiring firms to report to the Board on the outcome of the annual evaluation of the firm's QC system only when the firm identifies a major QC deficiency. While this approach could reduce some of the costs associated with preparing the

annual evaluation to the PCAOB, it would also significantly reduce the value of the reporting of the firm's annual evaluation to the PCAOB, as well as potentially affecting the rigor of the firm's evaluation process. As noted above, reporting on all unremediated QC deficiencies will inform various aspects of the Board's oversight activities. In addition, to the extent that reporting may increase firm leadership's focus on their responsibility and accountability for quality, reduced reporting would be less beneficial. Therefore, the Board decided that annual reporting to the PCAOB of the results of firms' annual evaluation of the QC system, including unremediated QC deficiencies, is the appropriate approach.

One commenter supported the inclusion of Item 4.1 of Form QC on whether the Board should inform a party of a subpoena for information on Form QC, but another commenter argued that it was unnecessary, may interfere with investigations, may create a potential ground for firms to sue the Board in the event notification did not occur, or potentially involve the PCAOB in private litigation. Because Form QC will be nonpublic, the Board believes that firms should be given the opportunity to request such notification, consistent with the PCAOB's treatment of the other nonpublic form filed with the PCAOB.³²²

An investor suggested firms should also affirm to the PCAOB on Form QC that any information that the firm voluntarily released (e.g., in transparency reports, audit quality reports, and CEO speeches) over the time period covered by Form QC was consistent with the state of their quality control system, as of the time of the voluntary disclosure. This commenter also suggested that the affirmation should be publicly available. An investor-related group suggested that firms should report publicly on Form QC how an independent QC board committee (established under paragraph .28 of QC 1000) carries out its responsibilities. As discussed in more detail below, Form QC will not be publicly available, so there would be no benefit to the public in adding this information to Form QC. However, the Board remains committed to finding additional ways of providing public disclosure to better inform investors about firms, and to that end, has separately proposed to amend Form 2 to identify whether the firm has an

external oversight function for the audit practice (established under paragraph .28 of QC 1000) and, if so, the identity of the person or persons and an explanation for the basis of the firm's determination that each such person is independent (including the criteria used for such determination) and the nature and scope of each such person's responsibilities.³²³

Some commenters indicated that there might be circumstances in which information required by Form QC may be restricted from disclosure by the operation of legal requirements (such as data protection laws). Two of these commenters suggested that the instructions to Form QC should include a provision found in other PCAOB forms allowing firms to decline to provide information if the firm believes that providing such information would violate non-U.S. law. Another commenter, while acknowledging that it was not aware of non-U.S. laws that would prohibit reporting the information required on Form QC, suggested that the Board state that firms would not violate the requirement to file Form QC if laws or regulations exist in the jurisdiction(s) of the firm that prevent compliance with this requirement.

The Board acknowledges that certain PCAOB forms include a general instruction for assertions of conflicts with non-U.S. law. In these circumstances, the instructions identify the specific parts and items within the form for which the firm may withhold responsive information on the basis that the firm could not provide such information without violating non-U.S. law. Form QC, however, calls for certain discrete information that the Board does not believe, and that no commenter has suggested, would be restricted from disclosure under non-U.S. law (e.g., the firm's name, the evaluation date, the overall conclusion of the firm's evaluation, the number of unremediated QC deficiencies, and for each unremediated QC deficiency, whether it is or is not major and the areas of the QC system to which it relates). Beyond that, Form QC requires firms to provide narrative information, including a description of each unremediated QC deficiency, the basis for the firm's QC deficiency determination, a summary of remedial actions, and the firm's major QC deficiency presumption analysis (if applicable). The Board believes that the narrative information required to be reported in Form QC can be provided at a sufficiently summarized level such that the reporting of such information

³²² See General Instructions 5 to PCAOB Form 1–WD, *Request for Leave to Withdraw from Registration*.

³²³ See PCAOB Rel. No. 2024–003 at 29.

by the firm would not require disclosure of information that could be restricted by legal requirements such as data protection laws. For example, if a firm reports an unremediated QC deficiency on Form QC, the Board believes that the firm could provide a description of the deficiency and a summary of the remedial actions taken and planned to be taken without violating non-U.S. law.

Some commenters suggested that the standard should clarify that firms submit Form QC in connection with an inspection under section 104 of the Sarbanes-Oxley Act and that Form QC should receive the same confidentiality protections of section 105(b)(5)(A) of the Act that other inspections-based documents and information receive. One of these commenters further suggested that the Board should make clear that all of Form QC and its contents benefit from the privilege established by section 105(b)(5)(A), regardless of how a deficiency has come to light. Another commenter suggested that the Board consider requesting firms to provide the information proposed to be in Form QC through the inspection process, and that such requests could be made at any time to facilitate the PCAOB's inspections. The commenter explained that under this suggested alternative approach, Part II and the related exhibits of Form QC could be removed and instead, the PCAOB could request this as part of the inspection process, to allow the information to be privileged under section 105(b)(5), while retaining the certification.

The Board does not believe that it is appropriate to specify that Form QC is provided in connection with an inspection. The obligation to furnish Form QC to the PCAOB does not derive from a request from PCAOB inspection staff; instead, that obligation arises expressly from paragraph .79 of QC 1000. And while Form QC, like other forms filed with the PCAOB (such as annual reports on Form 2), may be used to inform the PCAOB inspection process, that is not the only purpose of the form; it may be used, for example, in connection with PCAOB standard-setting processes, its economic and risk analysis, and its registration program, to name a few examples. Furthermore, Form QC submissions may not directly relate to an inspection. For example, triennially inspected firms are required to report on Form QC annually, including in years in which they are not subject to inspection. Firms that are no longer performing engagements making them subject to PCAOB inspection may still be required to report on Form QC in light of their post-issuance QC responsibilities, such as their audit

documentation retention obligations under AS 1215. Accordingly, the Board does not believe that Form QC is received by the Board in connection with an inspection for purposes of section 105(b)(5)(A) of the Act, though it notes, as discussed further below, that certain information contained within a Form QC may be subject to the protections of section 105(b)(5)(A).

(4) Reporting Date

The proposal contemplated that firms would have until January 15 of the year following the November 30 evaluation date to file Form QC. This provided firms 46 days from the evaluation date to the reporting date. As adopted, the standard provides that firms have until November 30 to report on Form QC to the PCAOB. This provides firms with 61 days after the evaluation date of September 30 to file Form QC. A general instruction was added to Form QC to clarify the reporting period covered by the firm's evaluation. The reporting period is the period beginning on October 1 of the year preceding the year in which Form QC is required to be filed (or, if a firm's obligation to implement and operate a QC system arises under paragraph .07a after October 1 of that year, the date on which that obligation arises) and ending September 30 of the year Form QC is required to be filed. Under this provision, the reporting period will generally be 12 months long, but will be shorter if the obligation to implement and operate the QC system arises mid-period (whether by virtue of the effective date of QC 1000 or the firm's otherwise becoming subject to the requirement to implement and operate the QC system).

Several commenters suggested a 90-day period from the evaluation date to the reporting date would be appropriate because this would allow for testing of controls that operate at the evaluation date, and allow firms to perform thorough and detailed evaluations. Several commenters suggested that additional time is required for Form QC preparation beyond 45 days to be able to compile relevant information, including information on remedial actions, with some commenters supporting a 60-day period that would align with the shortest due date applicable to issuers to report on their conclusion on internal control over financial reporting. Another commenter suggested that reporting should be in advance of the April/May proxy season, suggesting a reporting date of April 1 using an evaluation date of February 28. One commenter did not support a January 15 reporting deadline, suggesting that this would be close to

the conclusion of the audit and, if there are matters to be reported to the audit committee, would leave the audit committee with little time to consider and respond to the information before the due date of the issuer's Form 10-K. The commenter also suggested that for firms subject to both ISQM 1 and QC 1000, having different reporting dates would create unnecessary complexities for audit committees receiving reports under different standards and different points in time. Several commenters suggested that a January 15 reporting deadline would be challenging for many firms given the proximity to year-end holidays. One commenter suggested that coinciding the reporting date of January 15 with the PCAOB's inspection process should not be a key consideration for firms in determining the most appropriate date for their annual assessment.

The Board believes that extending the number of days from the evaluation date to the reporting date to 61 days will provide firms sufficient time to complete their evaluation and report to the PCAOB. In addition, the reporting date of November 30 as adopted is prior to the calendar year end and the traditional busy period for many firms, which the Board believes will further benefit firms in performing their evaluations.

ii. Form QC: Not Publicly Available

The proposed standard contemplated that Form QC would be nonpublic. Many commenters, including firms, supported requiring the contents of Form QC to be nonpublic. One firm commented that to require public reporting would be inconsistent with the balance that Congress struck in sections 104(g)(2) and 105(b)(5) of Sarbanes-Oxley. One commenter asserted that the PCAOB should not use rulemaking to cause firms to disclose quality control matters that the PCAOB is prohibited by Sarbanes-Oxley from disclosing or cause firms to otherwise disclose information that would be confidential under statute. Another commenter suggested that public disclosure of unremediated QC criticisms could allow companies that have a lower demand for audit quality to select a lower quality auditor.

Other commenters, generally investors and investor-related groups, objected to the lack of public disclosure. Two investors commented that the proposed disclosure to audit committees but not to the public leaves investors in the dark, and that disclosure requirements provide an effective incentive for remediation of identified quality control issues. Another

commenter asserted that if the PCAOB is permitted to compel firms to disclose quality control information to audit committees, then they expect that the PCAOB could also compel disclosure of such information to the public. The commenter suggested that QC disclosures only to audit committees may have unintended consequences for the public markets as companies will have more information regarding the quality of their auditors than individual investors. Some investors and investor-related groups commented that the proposal provides little public accountability with no mandated or meaningful disclosures about the operation of the QC system. Two investors and an investor-related group commented that firms furnish a statement of the quality control policies of the firm when registering with the PCAOB, however this information is not required to be updated and can quickly become out of date. Therefore, providing the public with additional disclosure about a firm's quality control system will act as an updating function.

One firm suggested that it would be difficult for the public to synthesize in a useful manner the information in Form QC without the right level of context. However, three investor-related groups did not support the view that partial disclosure of Form QC would result in potentially incomplete or misleading picture of a firm's QC system, and favored disclosing elements of Form QC and leaving to investors the assessment of the relative importance of the information. One of the investors further suggested a restructuring of Form QC that would allow confidential information to remain confidential while sharing decision-useful information with investors. Another investor suggested that investors would directly benefit from the disclosure of firm-identified deficiencies that omits PCAOB-identified deficiencies, further commenting that to the extent firms do not disclose any deficiencies to the public, investors may have concern that the system of quality control was not sufficient to proactively identify deficiencies.

The Board continues to recognize the desire of investors and other stakeholders for information related to audit quality and the effectiveness of firms' QC systems. But its ability to require firms to publicly disclose their QC deficiencies is subject to certain legal constraints imposed by Sarbanes-Oxley.

As a threshold matter, some or all of the unremediated QC deficiencies identified during a firm's annual evaluation may have been identified as

QC criticisms or potential defects during a PCAOB inspection.³²⁴ Furthermore, the Board believes that the QC deficiencies identified during PCAOB inspections are likely to be important information from the perspective of investors and other stakeholders, especially because PCAOB inspection teams customize their QC-related procedures based on, among other things, the firm's structure, procedures performed in prior inspections, past and current inspection observations, the size of the firm, and an assessment of risk related to each focus area. Notably, however, section 104(g)(2) of Sarbanes-Oxley provides that if a quality control criticism or potential defect identified during a PCAOB inspection is addressed by the firm to the Board's satisfaction within 12 months of the date of the Board's inspection report, no portions of the inspection report that deal with that criticism or potential defect will be made public.³²⁵ Making or requiring public disclosure through a publicly available form of QC deficiencies that have been identified during a PCAOB inspection would be inconsistent with this provision of Sarbanes-Oxley, if disclosure were required before the Board has determined whether it is satisfied with the firm's remediation efforts or after the Board has determined that the firm has satisfactorily addressed the deficiencies.

The limitation imposed by section 104(g)(2) is a significant one. In light of section 104(g)(2), it appears that even if the PCAOB were to require Form QC to be publicly available, the PCAOB could not require the disclosure of information regarding the existence or nature of QC deficiencies that are still subject to the Board's remediation determination. However, if information reported by a firm on Form QC informs a QC criticism contained within an inspection report, and if that QC criticism is not addressed to the Board's satisfaction within 12 months of the date of that report, then the QC criticism would be made public in accordance with section 104(g)(2).

The Board believes that the omission of deficiencies that are still subject to the Board's remediation determination (or as to which the Board has made a favorable remediation determination) would result in a publicly available Form QC that supplies an incomplete and potentially misleading picture of the effectiveness of the firm's QC system. This view is guided by the familiar principle that omitting material facts from a disclosure can cause the

statements that are made to be misleading.³²⁶ The Board's decision not to mandate public disclosure of Form QC, in a context where material information (namely, the existence and nature of QC deficiencies that are still subject to the Board's remediation determination) may often be omitted, is motivated in part by that concern, not by any lack of confidence in investors' ability to interpret the information provided to them. For example, a firm may have self-identified a number of relatively minor QC deficiencies in its own evaluation, while QC deficiencies identified by the PCAOB are more severe or could be of greater public interest. In a partial disclosure scenario, the firm would disclose the minor matters, but not the more significant ones that are still subject to the Board's remediation determination, creating a misleading picture of the state of its QC system.

The Board was also concerned that, in certain circumstances, even such partial disclosure would conflict with section 104(g)(2) of Sarbanes-Oxley. For example, assume firms were required to disclose the conclusion of their most recent evaluation and any QC deficiencies that were self-identified, but not any PCAOB-identified QC deficiencies that remain subject to the Board's remediation determination. Under such an approach, if a firm had PCAOB-identified QC deficiencies but no additional self-identified QC deficiencies, then the firm would not disclose any specific QC deficiencies but would disclose an overall conclusion (either "effective except for one or more QC deficiencies that are not major QC deficiencies" or "ineffective," depending on the nature of the PCAOB-identified deficiencies) that nonetheless reveals that the firm has unremediated QC deficiencies, without specifically identifying them. In such a scenario, the Board would be indirectly requiring firms to disclose the existence of PCAOB-identified QC deficiencies that are still subject to the Board's remediation determination, notwithstanding section 104(g)(2) of Sarbanes-Oxley.

Moreover, public disclosure of portions of Form QC may in some cases be subject to other legal constraints imposed by Sarbanes-Oxley. Depending on how a QC deficiency has come to light, certain information contained within a Form QC might be confidential pursuant to section 105(b)(5)(A) of Sarbanes-Oxley, which addresses documents and information prepared or received by or specifically for the Board

³²⁴ See QC 1000.71b.

³²⁵ See section 104(g)(2) of Sarbanes-Oxley, 15 U.S.C. 7214(g)(2); see also PCAOB Rule 4009.

³²⁶ See, e.g., 17 CFR 240.10b-5(b).

in connection with an inspection or investigation.³²⁷ Additionally, Form QC requires firms to report on remedial actions that in certain (though likely rare) circumstances may be subject to laws relating to the confidentiality of proprietary, personal, or other information, or might reasonably be identified by a firm as proprietary. In such a scenario, the Board, in accordance with section 102(e) of Sarbanes-Oxley, would need to honor a firm's properly substantiated request for confidential treatment of such information.³²⁸

The Board also believes that firms may be in a better position to report fully and candidly to the PCAOB about their annual evaluation—more effectively supporting both their own remediation efforts and PCAOB oversight activities—if they are confident that the information would be understood and used in the context of a broader understanding of their overall audit practice and an ongoing dialogue between the firm and the PCAOB.

Accordingly, the Board adopted Form QC as a nonpublic form, as proposed.

To that end, the Board adopted new PCAOB Rule 2203A, which establishes the Form QC reporting requirement and specifies that the Board will not make a filed Form QC or the contents thereof (including any amendment thereto) public.³²⁹ The rule does not, however, prohibit a firm from voluntarily disclosing its Form QC or the contents thereof to the public or to particular stakeholders. Nor does the rule prohibit the PCAOB from sharing Form QCs or their contents and related documentation with the SEC or other entities, consistent with Sarbanes-

Oxley.³³⁰ The rule expressly provides that Form QCs and their contents may be publicly disclosed in enforcement proceedings.³³¹

One commenter noted that Form QC or its contents may not be relevant to all enforcement proceedings and suggested that the Board explicitly clarify in the final standard that the Form QC may become public as part of an enforcement proceeding where Form QC or its content is relevant to the respective enforcement proceeding. The Board does not believe that such a clarification is necessary. When a Form QC or its content is relevant to an enforcement proceeding, it would be admissible, and when it is not relevant to an enforcement proceeding, PCAOB adjudication rules already specify that it shall be excluded.³³²

The rule also provides that the Board may publish Form QC information in summaries, compilations, or other general reports, provided that the firm or firms to which particular Form QC information relates are not identified (unless the information has previously been made public by the firm or firms involved or by other lawful means). Two commenters suggested that the Board could publish Form QC information in summaries, compilations, or other general reports, provided that the firms are not identified. However, another commenter did not support aggregated anonymized information and suggested that this would depart from the spirit and letter of the confidentiality provisions of Sarbanes-Oxley. The Board believes that summaries, compilations, or general reports that present relevant QC-related information on an aggregated and anonymized basis may provide useful insight to investors, audit committees, firms, and other stakeholders about firm QC systems, the implementation of QC 1000, and related matters. The Board also continues to believe that presenting such data on an aggregated and anonymized basis would not run afoul of any limitations of Sarbanes-Oxley.³³³

³²⁷ See section 105(b)(5)(A) of Sarbanes-Oxley, 15 U.S.C. 7215(b)(5)(A).

³²⁸ See section 102(e) of Sarbanes-Oxley, 15 U.S.C. 7212(e); PCAOB Rule 2300(b).

³²⁹ Sections 102(b)(2) and (d) of Sarbanes-Oxley authorize the Board to adopt rules requiring firms to periodically update the information contained in their registration applications or provide to the Board information as necessary or appropriate in the public interest or for the protection of investors. See section 102(b)(2)(D), (b)(2)(H), and (d) of Sarbanes-Oxley, 15 U.S.C. 7212(b)(2)(D), (b)(2)(H), and (d). section 102(e) of Sarbanes-Oxley, in turn, permits the Board to designate in its rules the portions of registration applications and annual reports that will be made available for public inspection (subject to applicable laws relating to the confidentiality of proprietary, personal, or other information, and provided that the Board shall protect from public disclosure information reasonably identified by the firm as proprietary information). See section 102(e) of Sarbanes-Oxley, 15 U.S.C. 7212(e); see also PCAOB Rule 2300(a)(2) (providing that forms filed pursuant to Part 1 or Part 2 of Section 2 of the Board's rules will be publicly available "except to the extent otherwise specified in the Board's rules or the instructions to the form").

³³⁰ See, e.g., section 105(b)(5)(B) of Sarbanes-Oxley, 15 U.S.C. 7215(b)(5)(B).

³³¹ On Form QC, firms may elect to request notification from the Board if the Board is requested by legal subpoena or other legal process to disclose information contained in Form QC. The Board will make reasonable efforts to honor such a request. This notification process does not apply to the PCAOB's or the SEC's use of Form QC or its contents in an enforcement proceeding, because those scenarios do not involve Board disclosure of Form QC information in response to a legal subpoena or other legal process.

³³² See PCAOB Rule 5441, Evidence: Admissibility.

³³³ For comparison, see PCAOB Rule 4010, *Board Public Reports*, which provides, in pertinent part, that the Board may publish summaries,

While firm reporting on Form QC will be nonpublic due to the aforementioned legal constraints and policy considerations, the Board notes that other aspects of QC 1000 and related requirements promote transparency about firm QC systems within the confines of those constraints. For example, the PCAOB has observed the emerging practice of firm transparency reporting, including that the nature and content of these reports continues to evolve and expand in response to market demand. Advances in thinking about firm and engagement metrics could also affect what financial statement users demand and what firms could usefully provide. QC 1000 requires that the QC system operate over any public reporting that firms do provide, including any public reporting of metrics. Firms have to establish a specific quality objective with regard to their public reporting, including that any firm-level or engagement-level information with respect to the firm's audit practice, firm personnel, or engagements communicated to external parties be accurate and not misleading, and—as with any quality objective—they have to monitor their performance in relation to that objective and remediate identified deficiencies.

As part of their annual reporting on Form 2, all registered firms will also be required to provide an annual confirmation with regard to the design of their QC system under QC 1000 and whether they were required to implement and operate the QC system. The Board believes an annual confirmation will be a useful reminder to all firms of their responsibilities regarding the design, implementation, and operation of an effective QC system. The Board also believes that the public will benefit from being able to determine whether a particular firm has been required to implement and operate its QC system from year to year. Such information on Form 2 will be publicly available on the PCAOB website and will be accessible to investors and other financial statement users, audit committees, and other stakeholders. It will also inform PCAOB oversight efforts.

To accompany the changes to Form 2, a similar confirmation has been added to the application for PCAOB

compilations, or other general reports concerning the findings and results of its inspections, including discussion of QC criticisms or potential QC defects, provided that no such published report shall identify the firm or firms to which such criticisms relate, or at which such defects were found, unless that information has previously been made public in accordance with PCAOB Rule 4009, by the firm or firms involved, or by other lawful means.

registration, Form 1. The Board believes such a confirmation will appropriately put applicants on notice of their obligations with respect to their QC systems, which would apply from and after the time that their registration is approved.

iii. Certification of the Evaluation of the Firm's QC System by Firm Leadership

As proposed, the Board required that both the individual assigned ultimate responsibility and accountability for the QC system as a whole and the individual assigned operational responsibility and accountability for the firm's QC system as a whole (the "QC certifiers") certify the firm's report to the PCAOB on the evaluation of its QC system.³³⁴ Several commenters were supportive of the certification requirement, including a commenter that stated that individual certifications are likely to focus the mind and it seems likely that improvements will be seen as a result of such a requirement.

Some commenters opposed the certification requirement, saying it adds little value to the evaluation of the QC system, may not provide a full view of the subject matter it purports to be certifying to and may create an unjust reliance by a third party on the certification, or is an ineffective incentive for making quality control a higher priority within a firm. Another suggested that while certification may sharpen an individual's sense of accountability, this may not necessarily lead to and cannot guarantee enhanced engagement quality. Another commenter suggested that certification requirements could act as a barrier to registration for firms operating in environments in which there are no Sarbanes-Oxley style reporting requirements,³³⁵ and that it could have

a disproportionate impact on smaller firms.

The Board continues to believe that, analogous to the CEO and CFO certifications required under Sarbanes-Oxley, certification of Form QC will lead to increased discipline in the evaluation process and will reinforce the accountability of the certifying individuals, which in turn should improve the quality of the firm's evaluation. The text of the certification, which is unchanged from the proposal, appears in Item 3.2 of Form QC. That item requires certification of certain information regarding the design and evaluation of a firm's QC system, including that each QC certifier reviewed the Form QC and that the disclosures made in the Form QC are complete and accurate in all material respects to the individual's knowledge.³³⁶

As proposed, the final rules require certification from both the individual assigned ultimate responsibility and accountability for the QC system (*i.e.*, the firm's principal executive officer(s)) and the individual assigned operational responsibility and accountability for the QC system. One commenter suggested that certification be required only from the individual with ultimate responsibility and accountability for the firm's QC system on the basis that, in the event of differences of opinion between the two certifiers, the individual responsible for the operational responsibility and accountability for the QC system could be subject to excessive pressure from the firm's principal executive officer. However, under EI 1000, certifiers will be subject to a duty to act with integrity, which includes not subordinating their professional judgment, and the individual with ultimate responsibility and accountability for the firm's QC system will have a number of obligations (for example, under QC 1000.14a.) that are inconsistent with the exercise of undue influence over a subordinate.

The Board does not require similar certifications from other personnel in the QC system, but firms may choose to institute policies that require levels of certification internal to the firm to assist those certifying Form QC.

Some commenters raised concerns about the potential liability of the QC certifiers. Several requested clarification on whether the QC certifiers could be held personally liable for an inaccurate statement only if they made the statement knowing it was false or recklessly not knowing it was false. One of these commenters further stated it had concerns about the potential for unnecessary and excessive liability that the certification could impose upon the QC certifiers, and the effect that this could have on firms' ability to recruit qualified professionals to serve. The commenter further suggested that the final adopting release expressly state that while the QC certifiers are responsible for exercising professional competence in connection with the design and operation of the firm's QC system (and may face consequences for failure to do so), the QC certifiers shall not be held responsible for inevitable system errors or the wrongful acts of others which may, in limited circumstances, overcome the best of those efforts.

If a QC certifier fails to certify the firm's Form QC, such conduct would constitute a violation of the individual's obligation under either paragraph .14d or .15b of QC 1000, as applicable to the particular individual. The Board believes this requirement is important for creating accountability within the firm to achieve the reasonable assurance objective.

Beyond that, QC certifiers' potential liability for statements contained within the Form QC certification is informed by the particular language of those statements. Certain statements in the certification reflect objective facts that the Board believes are readily knowable by the individual. Paragraph 1 of the certification, for instance, recites that the individual reviewed the firm's report on Form QC. Paragraph 3(a) of the certification contains an acknowledgement that the individual is responsible and accountable for the firm's QC system as a whole and has designed, or caused to be designed, the QC system to ensure that it meets QC 1000's reasonable assurance objective. Notably, this paragraph is not tantamount to a certification that the firm's QC system in fact meets QC 1000's reasonable assurance objective; on the contrary, Form QC contemplates that a firm might conclude, and report on its certified Form QC, that its QC

³³⁴ See QC 1000.14d and .15b.

³³⁵ Under SEC rules adopted pursuant to section 302 of Sarbanes-Oxley, CEOs and CFOs of issuers are required to certify, for each quarterly or annual report of the issuer, among other things, that (1) they have reviewed the report; (2) based on the officer's knowledge, the report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made not misleading; (3) based on the officer's knowledge, the financial statements and other financial information included in the report fairly present in all material respects the financial condition and results of operations of the issuer; (4) they (a) are responsible for establishing and maintaining internal control over financial reporting, (b) have designed ICFR to ensure that material information is made known to them, (c) have evaluated the effectiveness of ICFR, and (d) have presented their conclusions about the effectiveness of ICFR in the report; and (5) they have disclosed to the issuer's auditors and audit committee any significant deficiencies in ICFR and any fraud involving management or others involved with ICFR. See 17 CFR 240.13a-14(a), 240.15d14(a).

³³⁶ See *e.g.*, Daniel A. Cohen, Aiysha Dey, and Thomas Z. Lys, *Corporate Governance Reform and Executive Incentive: Implications for Investments and Risk Taking*, 30 Contemporary Accounting Research 1298 (2013) (finding that their sample of firms significantly reduced investments in risky projects in the period following SOX); Hsihui Chang, Jengfang Chen, Woody M. Liao, and Birendra K. Mishra, *CEOs'/CFOs' Swearing by the Numbers: Does it Impact Share Price of the Firm?*, 81 The Accounting Review 22 (2006) (concluding that the SEC order requiring filing of sworn statements by CEOs and CFOs had a positive effect on the market value of certifying firms); Gerald J. Lobo and Jian Zhou, *Did Conservatism in Financial Reporting Increase after the Sarbanes-Oxley Act? Initial Evidence*, 20 Accounting Horizons 57 (2006).

system is not effective. Rather, in paragraph 3(a), the QC certifiers acknowledge their role in designing (or causing to be designed) the firm's QC system. Paragraph 3(b) of the certification states that the individual evaluated the effectiveness of the firm's QC system and has presented in Form QC the conclusions reached. With respect to each of these statements in the Form QC certification, the Board believes that the QC certifiers can and should reach a conclusion about their accuracy through the exercise of due professional care. In light of the nature of these statements, the Board does not agree with the commenters that a showing of recklessness or knowing misconduct is necessary to establish a violation with respect to these aspects of the Form QC certification.

The other statements in the Form QC certification are subject to knowledge qualifiers. In paragraph 2, the QC certifier states that the disclosures made in Part II of Form QC regarding the evaluation of the effectiveness of the firm's system of quality control are complete and accurate in all material respects "[b]ased on my knowledge." Similarly, paragraph 3(c) states that the QC certifier has disclosed, based on the evaluation of the QC system, all unremediated QC deficiencies "of which I am aware." These statements would be inaccurate, and the QC certifier's certification would therefore constitute violative conduct, only if they were knowingly false (if the QC certifier knew that Part II was not complete and accurate in all material respects, or if the QC certifier was aware of undisclosed unremediated QC deficiencies), or if they were made recklessly not knowing they were false.

One commenter suggested that the certification say "to the best of my knowledge" rather than "based on my knowledge," and another commenter suggested that the wording of the certification be updated to "in my capacity as the individual assigned [ultimate/operational] responsibility" rather than "who have been assigned [ultimate/operational] responsibility." After consideration of these comments, the Board believes that the proposed language is clear, appropriate, and likely to be easily understood, and does not believe that the proposed certification text requires amending.

One commenter did not support the clause in the proposed certification that states that the firm has disclosed all unremediated quality control deficiencies. The commenter, while acknowledging that this statement is subject to a knowledge qualifier, suggested that this certification could

lead to unnecessary disputes over what the QC certifiers should have known in a particular circumstance and suggested that obtaining a certification from the firm (not the individual) may sufficiently address this item without discounting the standards to which auditors are held. As discussed above, the inclusion of "of which I am aware" in paragraph 3(c) of certification means that liability would arise with respect to that paragraph only if the QC certifier made the statement knowing it was false or recklessly not knowing it was false.

Another commenter also suggested that the standards clarify that such certification relates to the "firm's evaluation" of its QC system, and not a specific individual's evaluation of the quality management system. As reflected in paragraph .77 of QC 1000, the annual evaluation is conducted by the firm, but the firm, as a legal entity, acts through individuals, and the QC certifiers are the individuals who, under the standard, are responsible and accountable for the QC system as a whole and are required to certify the firm's report to the PCAOB on its annual evaluation.

Another commenter asserted that the text of the certification suggests that a certifying individual should be considered to have violated QC 1000 only to the extent that the inaccuracy in a submitted certification is material to an investor's or reasonable auditor's understanding of the QC system as a whole, and asked that the Board confirm that is the case. The Board does not agree with this characterization of Form QC. Some statements in Form QC, such as the one in paragraph 2, are expressly conditioned on materiality, while other statements, such as that in paragraph 3(b), are not.

One commenter suggested that creating a potential Sarbanes-Oxley type certification for privately held accounting firms and making this available to the public could create market confusion as to what exactly is being certified and the level of reliance users should place on such a certification. The certification does not contain the outcome of the firm's annual evaluation of its QC system or identify any unremediated QC deficiencies, but rather certifies the completeness and accuracy of the information being reported to the PCAOB on Form QC. That information is set forth elsewhere in Form QC and, as explained above, that information is treated as nonpublic. Because the certified information is treated as nonpublic, the Item 3.2 certifications are likewise treated as nonpublic; in the Board's view, the certifications do not present a full or

useful picture of a firm's QC system without the underlying information.

iv. Requirement for Form QC Amendments

The proposed general instructions for Form QC included provisions detailing when amendments of Form QC should be filed. Those instructions indicate that Form QC should be amended only to correct information that was incorrect at the time that the form was filed or to provide information that was omitted from the form and was required to be provided at the time the form was filed. The Board considered commenters' feedback, and retained the language regarding amendments in the proposed general instructions for Form QC, which mirrors the standard for amending certain other PCAOB forms.

Two commenters requested clarification on how firms should consider information that comes to their attention after the evaluation date or the reporting date that is relevant to the firm's conclusion on Form QC, including how this interacts with relevant provisions in proposed EI 1000. Other commenters suggested that revisions to Form QC not be required for inconsequential matters. Other commenters requested guidance on when an amendment to Form QC would be required, and some suggested that a threshold be developed for potential amendments.

QC 1000 requires firms to conduct the annual evaluation of their QC system's effectiveness as of September 30 and to file their report on Form QC regarding that evaluation by November 30. Consequently, annual evaluations under QC 1000 should conclude sometime between October 1 and November 30 of each year. Information that relates to the firm's QC system as of the evaluation date (September 30), and that comes to the firm's attention after the evaluation date but before the firm has filed Form QC, should be factored into the firm's evaluation and reflected, if and as appropriate, in Form QC. In contrast, any information that relates to the firm's QC system as of the evaluation date, but that comes to the firm's attention after the firm has filed its Form QC, would not need to be reflected on Form QC or on an amendment to Form QC (although it may constitute a QC observation to be considered in the next annual evaluation of the QC system).

In other words, Form QC captures, and conveys to the Board, the conclusions reached by the firm as a result of its completed annual evaluation, and that evaluation cannot disregard information that comes to light before Form QC has been filed.

Therefore, when Form QC is filed, it should be complete and accurate as of the date of its filing. Similar to PCAOB staff guidance on Form 2 reporting,³³⁷ if a firm discovers that it provided incorrect information in a filed Form QC or omitted information that should have been included based on information that the firm was aware of at the time of filing, then the firm should file an amended Form QC. That amendment obligation is not subject to any materiality or other thresholds, because the Board believes it is entitled to receive Form QCs that contain information that is correct and that do not omit information that was required to be provided. The Board does not believe that any of the information on Form QC is inconsequential.

v. Reporting to the Audit Committee

In connection with the proposal of QC 1000, the Board also proposed amendments to AS 1301, *Communications with Audit Committees*, which contemplated communication to the audit committee of certain information about the firm's most recent evaluation of its QC system. Several commenters supported the amendments as proposed. Other commenters supported limiting the communications to the conclusion of the annual evaluation or limiting communication of deficiencies to only major QC deficiencies. One commenter expressed concern with reporting to audit committees about all unremediated QC deficiencies that exist as of the evaluation date, in part because of the interaction of such communications with the confidentiality restrictions under section 105(b)(5)(A) of Sarbanes-Oxley. The commenter further suggested that requiring all QC deficiencies to be communicated would create more extensive communication requirements for firms related to QC deficiencies than what auditors are required to communicate to audit committees in an audit of ICFR, and in addition, this approach would differ from management's external reporting on its ICFR to its stakeholders, which solely discloses deficiencies that are material weaknesses.

One commenter asserted that audit committees are likely to find more value in understanding quality matters specific to the engagement and having a broader dialogue about the firm's approach to quality control. Two

commenters argued that a firmwide report on audit quality would have little utility to each individual audit committee. One of these commenters suggested instead that audit committees would be more influenced by an independent verification of the QC system such as the PCAOB inspection report on their auditor, and information relating to the auditor's performance on their engagement, including audit quality indicators. The other commenter recommended that firms report relevant human resource metrics to the audit committee and explain what was done to assure audit quality was not compromised. One commenter asserted it could be extremely challenging for audit committees to understand and reconcile the information that would be communicated to them under the proposed changes to AS 1301, especially given the considerable time period between the issuance of public portions of firm inspection reports and the potential release of nonpublic inspection findings. One commenter did not support the requirement to disclose a firm's QC deficiencies to audit committees, and stated that QC deficiencies may have little to no impact on a given reporting issuer's audit or that area of the firm's practice. Another commenter questioned whether or not the audit committee would be inclined to seek a new auditor based only on a firm-wide evaluation of quality control furnished to the audit committee by the auditor. One commenter was generally supportive of the requirements but expressed concern with the timing of the required communication due to existing important year-end communications. The commenter expressed concern that not communicating QC deficiencies known at a January 15 reporting date could potentially introduce legal considerations that could place tension on the engagement team and the firm's obligation to comply with other existing required communications under AS 1301. One commenter recommended specifying that this communication is not required to be in writing due to confidentiality concerns, and two commenters did not support any required communication of the annual evaluation of the QC system to the audit committee.

One commenter asserted that requiring firms to communicate to audit committees about their most recent annual QC evaluations is inconsistent with the Congressional balance struck in Sarbanes-Oxley section 104(g)(2). In addition, the commenter suggested that the requirement indirectly regulates the

actions of audit committees and imposes a fiduciary duty of care on audit committees, regardless of whether quality control issues relate to the performance of the engagement, which is beyond the scope of the PCAOB's jurisdiction. Another commenter asserted that the proposed communication could also be construed as contradictory to the PCAOB's conclusion that Form QC would be treated as nonpublic.

Several commenters were concerned about the proposed requirement to discuss remedial actions taken and to be taken, and suggested that some of this information may be protected by section 104(g)(2) or section 105(b)(5)(A) of Sarbanes-Oxley. One commenter suggested that the communication of a brief overview of remedial actions taken or to be taken should only be required upon the determination that substantial good faith progress has not been made on the remedial actions.

After consideration of the comments received, the Board determined not to adopt the proposed amendments to AS 1301. Although the Board continues to believe that firms could communicate the overall conclusion of their annual evaluation and their planned remedial actions to audit committees without expressly disclosing information subject to section 104(g)(2) or section 105(b)(5)(A) of Sarbanes-Oxley, the Board recognizes that such a disclosure obligation could present implementation challenges. Specifically, and as discussed in more detail above, there may be challenges associated with compelling firms to publicly disclose certain information about their QC systems while simultaneously preserving their ability not to disclose other related information that may be subject to confidentiality protections, privileges, or prescribed disclosure procedures under Sarbanes-Oxley. The Board believes that the same challenges could arise if firms were compelled to make disclosures to audit committees.

The Board also recognizes that firms and audit committees have direct interaction, so while PCAOB standards do not require firms to make disclosures to audit committees, an audit committee may ask a firm to voluntarily disclose information about its QC system. As the Board has previously noted, such inquiries could include requesting the firm to keep the audit committee apprised of the status of the quality control remediation process (including whether the firm made a submission to the Board responding to inspection report quality control criticisms by the 12-month deadline) and whether the

³³⁷ See *Staff Questions and Answers Annual Reporting on Form 2*, at Q34, available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/registration/rasr/documents/staff_qa-annual-reporting.pdf?sfvrsn=5e7259ff_0.

Board has made a final remediation determination (including a negative determination that has not yet become public).³³⁸

2. Current PCAOB Standards

Current PCAOB QC standards do not require firms to evaluate their QC systems or to report on any such evaluations. As previously noted, some firms conduct evaluations and share their results in published reports, either voluntarily or under other regulatory requirements.

Documentation

Documentation supports a firm's QC system in a number of ways. It helps provide clarity around roles and responsibilities and the firm's policies and procedures, which promotes consistent compliance by firm personnel and other participants. Documentation enables proper monitoring and supports the evaluation and continuous improvement of a firm's QC system. It makes it easier to train firm personnel and other participants and facilitates the retention of organizational knowledge, providing a history of the basis for decisions made by the firm about its QC system. Further, documentation assists others conducting reviews of the firm's QC system by providing evidence of the system's design, implementation, and operation. Current PCAOB standards provide only general direction on the nature and extent of QC documentation and specific requirements for documentation of certain items.³³⁹

Through its oversight activities, the PCAOB has observed that the nature and extent of firms' documentation of their QC systems vary greatly. Some firms have detailed documentation for all areas of their QC systems. Other firms have significantly less documentation. For example, some firms have documentation only in areas that have been subject to PCAOB inspections, such as remediation, root cause analysis, or internal inspections. QC 1000 establishes more comprehensive requirements for firms to document their QC systems.

1. QC 1000

The proposal included an overarching documentation requirement that captured the design, implementation, and operation of the firm's QC system and the annual evaluation of the QC

system. The scope of that requirement was then specified in proposed paragraphs .82 and .83.

The documentation of the design and implementation of the QC system captures decisions made regarding "the who, what, when, where, why, and how" of the QC system. This aspect of documentation will help firm personnel and others understand what is expected of them in fulfilling their responsibilities and support consistent implementation and operation of the firm's QC system. For example, documentation of the design of policies and procedures regarding general and specific independence matters would enable a consistent understanding by firm personnel and others about who is responsible for what, when the responsibilities are triggered, and why certain actions are necessary.³⁴⁰ Such documentation will allow for consistent actions by firm personnel and others in implementing the design of those policies.

The documentation of the operation of the firm's QC system enables the firm to determine if the policies and procedures were operated in the manner that the firm intended.³⁴¹ It would also provide evidence of compliance with the specified quality responses and other requirements of QC 1000. For example, it would provide evidence of how the firm complied with specific communication requirements related to the operation of the firm's QC system and the performance of its engagements³⁴² and whether the quality responses implemented by the firm operated as designed.

The Board received no comments on the general obligation to prepare and retain documentation regarding the QC system and paragraph .81 was adopted as proposed. The comments received regarding the scope of the proposed documentation requirement are addressed below, in connection with the discussion of paragraphs .82 and .83.

The proposal included a list of specific matters that firms would be required to document. Documentation of the lines of responsibilities and supervision within the QC system should reduce operational ambiguity and provide clarity about who within the firm is accountable for various firm supervisory responsibilities within the firm's QC system. One firm suggested that the phrase "successive senior levels" may not be clear. As discussed

in more detail above, under QC 1000.27, the firm should establish and maintain clear lines of responsibility and supervision—including defining authorities, responsibilities, accountabilities, and supervisory and reporting lines for roles within the firm, up to and including the principal executive officer(s)—within the QC environment. A description of these successive lines of responsibility and supervision must be included in the documentation of the QC system, and a reference to paragraph .27 was added to clarify that point.

The requirement for the firm to document aspects of its risk assessment process ensures that the firm will have adequate evidence to support its annual risk assessment. Specifically, the firm is required to document identified quality risks, reasons these risks were identified, and policies and procedures the firm had put in place in response. This documentation is valuable in subsequent risk assessments and could help to support decisions about, for example, whether to establish additional quality objectives, identify new or modified quality risks, or design and implement new quality responses.

The requirements for the firm to document aspects of its monitoring and remediation process will also support its monitoring and remediation activities. For example, a firm's documentation of engagement and QC system-level monitoring activities performed, its evaluation of the results of those monitoring activities, actions taken to address engagement deficiencies, and identified QC deficiencies would demonstrate the firm's approach to complying with certain requirements of the standard for the monitoring and remediation process component. This documentation will also assist the firm in monitoring its monitoring and remediation process and in making its annual evaluation of the effectiveness of the QC system pursuant to paragraph .77.

The standard also requires the firm to document the basis for the conclusion it reached in evaluating the effectiveness of its QC system pursuant to paragraph .77. This documentation provides evidence of the decisions made in reaching the conclusion about the effectiveness of the firm's QC system, which may be valuable in future evaluations and in establishing compliance with the firm's reporting obligations to the PCAOB.

The standard requires the firm to document certain matters if the firm uses resources or services provided by a network or a third-party provider in the firm's QC system or the performance

³³⁸ See *Information for Audit Committees about the PCAOB Inspection Process*, PCAOB Rel. No. 2012-003, at 11 (Aug. 1, 2012), available at https://pcaobus.org/Inspections/Documents/Inspection_Information_for_Audit_Committees.pdf.

³³⁹ See, e.g., QC 20.21, .24–.25.

³⁴⁰ See, e.g., QC 1000.33–.34.

³⁴¹ Firms that are not required to implement and operate their QC system would not be expected to have anything to document with respect to the operation of the QC system.

³⁴² See, e.g., QC 1000.55–.57.

of the firm's engagements. When a firm uses resources or services provided by a network or a third-party provider, the standard requires the firm to document how the resources or services are developed and maintained and, if such services or resources were supplemented or adapted, how and why they were supplemented or adapted. Firms will also have to document how the resources or services were implemented and operated. Documentation of such matters will serve as evidence of decisions made regarding resources or services used by the firm.

Some networks or third-party providers may provide documentation about their services or resources to the firm. For example, the firm may obtain an understanding of how the resources were developed and maintained by the network through documentation provided by the network. This documentation may need to be supplemented by the firm depending on various factors, including the extent of the documentation provided and whether the firm supplements or adapts the resource or service.

As discussed above, a reference to paragraph .27 was added to paragraph .82a. to clarify that a description of the successive lines of responsibility and supervision must be included in the documentation of the QC system. Paragraph .82 was otherwise adopted as proposed.

Requiring documentation to be in sufficient detail to support a consistent understanding of the QC system by firm personnel, including an understanding of their roles and responsibilities with respect to the firm's QC system, will help to clarify the firm's expectations of its personnel and promote consistent compliance with the firm's QC policies and procedures.

One firm expressed concern that this "consistent understanding" threshold may not be easily understood. The Board believes that firms will be able to determine the nature and extent of the documentation needed to facilitate a consistent understanding by firm personnel based on the functioning of their QC system. Based on the requirements in paragraph .83a, firms would initially determine the appropriate level of detail of documentation based on the experience they already have in implementing and operating a QC system under current standards and whether their personnel understand their roles and responsibilities, and modify documentation as needed over time based on their monitoring and

remediation activities and the results of their QC system evaluations.

As described previously, documentation supports a firm's QC system in a number of ways. For example, it provides clarity around the firm's policies and procedures, enables proper monitoring, and supports the evaluation and continuous improvement of a firm's QC system. Documentation also facilitates the retention of organizational knowledge, providing a history of the basis for decisions made by the firm about its QC system. Further, it assists others conducting reviews of the firm's QC system by providing evidence of the system's design, implementation, and operation.

In particular, the Board believes that appropriate documentation of the QC system is necessary for the PCAOB to fulfill its statutory mandate to protect investors and the public interest. Sarbanes-Oxley requires that, in conducting an inspection of a registered public accounting firm, the PCAOB evaluates the sufficiency of the quality control system of the firm and the manner of the documentation and communication of that system by the firm.³⁴³ Sarbanes-Oxley further authorizes the PCAOB to perform such other testing of quality control procedures as are necessary or appropriate in light of the purpose of the inspection and the responsibilities of the Board.³⁴⁴ In addition, the Board's rules provide that a regular inspection will include, but is not limited to, the steps and procedures as specified in sections 104(d)(1) and (2) of Sarbanes-Oxley and any other tests of the audit, supervisory, and quality control procedures of the firm as the Director of the Division of Registration and Inspections or the Board determines appropriate.³⁴⁵ As part of the Board's inspection procedures, firms will be expected to provide the PCAOB with evidence relating to the effectiveness of the QC system.

Given that mandate, the level of documentation that would be sufficient to enable PCAOB inspectors to evaluate the effectiveness of a firm's QC system through an inspection may be different from the level of documentation that would be sufficient for the firm to support its annual evaluation. Under QC 1000, a firm must evaluate the effectiveness of its QC system based on the results of its monitoring and

remediation activities,³⁴⁶ and firms can determine the nature, timing, and extent of QC system-level monitoring activities taking into account a number of factors.³⁴⁷ There could be certain quality responses, or certain instances of the operation of quality responses, that are not monitored by the firm within a given year and not considered in connection with the firm's annual evaluation. If the firm were required to prepare and retain documentation only to the extent related to its own annual evaluation, the firm might not prepare and retain documentation to evidence that these quality responses operated effectively. However, in light of the scope of the PCAOB's statutory mandate, its inspection procedures cannot be limited to quality responses (and, to the extent applicable, samples of the operation of quality responses) that the firm chose to monitor in the period. On the contrary, firms will be expected to provide evidence of the operating effectiveness of any quality responses selected for inspection in connection with the PCAOB's evaluation of the effectiveness of the firm's QC system.

Therefore, the proposed standard contemplated that, in order to effectively support the firm's QC system, the documentation of the QC system needs to be at the level of detail to enable an experienced auditor that understands QC systems but has no experience with the design, implementation, and operation of the firm's QC system to understand the design, implementation, and operation of the QC system, including the quality objectives, quality risks, quality responses, monitoring activities, remedial actions, and basis for the firm's conclusions reached in the evaluation of the QC system ("experienced auditor threshold"). Incorporating the experienced auditor threshold when describing the extent of detail firms are required to document and maintain regarding their QC system is appropriate because that level of detail will facilitate the firm's monitoring activities and external monitoring, including PCAOB inspections conducted in accordance with Sarbanes-Oxley. Two firms agreed that the experienced auditor threshold was appropriate.

Several commenters, including firms and a related group, argued that the proposed documentation requirements were too broad, and suggested a variety of different limitations to narrow their scope. Some firms suggested that the standard differentiate data relating to

³⁴³ See section 104(d)(2) of Sarbanes-Oxley, 15 U.S.C. 7214(d)(2).

³⁴⁴ See section 104(d)(3) of Sarbanes-Oxley, 15 U.S.C. 7214(d)(3); see also Rule 4001, *Regular Inspections*.

³⁴⁵ See Rule 4001, *Regular Inspections*.

³⁴⁶ See QC 1000.77.

³⁴⁷ See QC 1000.65.

the operation of the QC system from data relating to the design, implementation, and annual evaluation of the QC system, with a shorter retention period for the former. Other commenters, including firms and a related group, recommended that the documentation requirements be comparable to the documentation requirements that Sarbanes-Oxley imposes on issuers with regard to management's assessment of the effectiveness of the issuer's internal control over financial reporting.³⁴⁸ Another firm suggested that the documentation requirements be comparable and analogous to the documentation retention requirements set out in the SEC's rules for issuer audits and related interpretive guidance.³⁴⁹ One firm and a related group suggested that the documentation requirements be limited to the evidence to support the annual evaluation of the QC system and related monitoring. Two firms suggested that additional guidance or clarity would be necessary in order for firms to appropriately adopt documentation retention policies related to the operation of controls that meet the expectations of the proposed standard.

The Board does not believe that any of the more narrowly scoped documentation requirements suggested by commenters would be appropriate. QC 1000's documentation requirements need to be aligned with the PCAOB's mandate, provided by Congress, to "evaluate the sufficiency of the quality control system of a firm" through its inspection procedures.³⁵⁰ Therefore, the Board believes that it is imperative that documentation that enables the experienced auditor to evaluate the operation of the quality responses should be included in the documentation that is prepared and retained by the firm.

To clarify the level of detail of the documentation relating to the operation of the QC system that is to be prepared and retained under QC 1000, paragraph

.83 was revised to include a note to .83b. stating that with respect to the operation of the QC system, the documentation must include documentation that enables the experienced auditor to evaluate the operation of the quality responses. As discussed in connection with paragraph .86 below, the Board continues to believe that all of the documentation required under the standard should be retained for seven years.

Commenters also expressed concern that firms would be required to retain large volumes of documentation. Several commenters suggested that the costs associated with retaining documentation of the operation of the QC system would be burdensome, and some further commented that the data relating to the operation of the QC system could include sensitive data, and a requirement to prepare and retain all such data could also introduce heightened data security risks. One firm suggested the Board consider adding language that appears in SQMS 1 clarifying which matters require documentation, specifically referencing SQMS 1 paragraphs A224 and A227.³⁵¹

In considering commenters' concerns that the documentation to support that the quality responses operated effectively in every instance would result in a substantial volume of documentation, the Board believes that the ability to effectively monitor whether the firm's quality responses are properly designed and operating effectively should not be restricted by the documentation requirements of the standard. Furthermore, the Board believes that the new note to paragraph .83b clarifies that the firm need not prepare and retain excessively voluminous documentation of the day-to-day operation of every action of its QC system, provided the information is not required to satisfy the requirements of paragraphs .82–.83.

³⁵¹ Paragraph A224 of SQMS 1 states that it is neither necessary nor practicable for the firm to document every matter considered, or judgment made, about its system of quality management. Furthermore, compliance with this SQMS may be evidenced by the firm through its information and communication component, documents or other written materials, or IT applications that are integral to the components of the system of quality management. Paragraph A227 of SQMS 1 states that the firm is not required to document the consideration of every condition, event, circumstance, action, or inaction for each quality objective or each risk that may give rise to a quality risk. However, in documenting the quality risks and how the firm's responses address the quality risks, the firm may document the reasons for the assessment given to the quality risks (that is, the considered occurrence and effect on the achievement of one or more quality objectives) to support the consistent implementation and operation of the responses.

The Board believes that the extent of documentation sufficient to evidence whether the quality responses operated effectively would scale with the size of the firm's PCAOB practice and the risks and complexities of their engagements and, in turn, the assessed quality risks and the quality responses established to address them. Therefore, the documentation requirements of the standard should be less costly and burdensome for firms with smaller PCAOB audit practices, which the Board believes is appropriate.

In addition, firms are able to evaluate the nature and extent of the documentation that is necessary to evidence the operation of the quality responses. In determining the sufficiency of the detail and extent of the QC documentation, the firm may identify quality responses for which the evidence required to be able to demonstrate that the quality response operated effectively may not entail retention of all the information produced in the day-to-day operation of the QC system. For example, in the event that a large volume of automated emails sent by the firm to its employees are evidence supporting that a quality response operated, the firm could evaluate whether alternative evidence (such as email delivery reports or other aggregated data) would provide sufficient support regarding the operation of the quality response—without having to prepare and retain all of the individual emails within the QC documentation. In addition, to the extent that the operation of the firm's QC system includes sensitive data, the firm has flexibility to not include the sensitive data fields in the documentation that is prepared and retained to the extent that they are not necessary to evidence that the quality response operated effectively. Furthermore, informed by its oversight activities, the PCAOB has observed that firms currently archive and retain documentation for extended periods of time and are able to implement processes to appropriately safeguard the information. The PCAOB has also observed instances where firms have migrated systems and still maintained the appropriate documentation through archives or through migration of the information onto the new systems.

As the note to paragraph .83b makes clear, documentation of every aspect of the operation of the firm's QC system may not be required to evidence that each quality response operated effectively. For example, there may be certain documentation, such as emails or meeting invitations that are sent as part of the day-to-day operation of the

³⁴⁸ See 17 CFR 229.308 (requiring issuers to maintain evidential matter, including documentation, to provide reasonable support for management's assessment of the effectiveness of ICFR).

³⁴⁹ See 17 CFR 210.2–06(a) (requiring, for audits or reviews of an issuer's financial statements, retention of records relevant to the audit or review, including workpapers and other documents that form the basis of the audit or review, and memoranda, correspondence, communications, other documents, and records (including electronic records), which: (1) Are created, sent or received in connection with the audit or review, and (2) Contain conclusions, opinions, analyses, or financial data related to the audit or review).

³⁵⁰ See section 104(d)(2) of Sarbanes-Oxley, 15 U.S.C. 7214(d)(2).

QC system, that may not be necessary to enable an experienced auditor to evaluate the effective operation of the quality responses. In these circumstances, the firm may determine it is not required to prepare and retain this information within the documentation of its QC system. However, the Board also believes that there may be circumstances in which an email or meeting invitation needs to be retained because it evidences how a quality response operated to address a quality risk and is necessary to enable an experienced auditor to evaluate the operation of the quality response.

Although some commenters suggested the documentation requirements be analogous to the SEC's ICFR documentation retention guidance, the Board does not believe that is an appropriate threshold. The SEC's guidance indicates that management's documentation needs to provide "reasonable support" for its ICFR assessment and that management's documentation need not include all controls that exist within a process that impacts financial reporting, but should be focused on those controls that management concludes are adequate to address the financial reporting risks.³⁵² QC 1000 is not a "reasonable support" standard and instead requires documentation to understand how the firm's quality responses are designed to address the quality risks and evidence the operation of the QC system.

The standard's approach to documentation requirements is principles-based and provides for scalability. When determining the form, content, and extent of documentation, the firm will consider, among other things, the nature and circumstances of the firm and the nature and complexity of the matter being documented. For example, for a large multi-office firm that performs many audits under PCAOB standards, the extent of documentation would be greater than for a small, single-office firm with a few firm personnel that audits one issuer or broker-dealer. The firm's documentation may take the form of formal written manuals and checklists or may be informally documented (e.g., in email communications), subject to the requirement of paragraph .83 that the documentation be in sufficient detail to support a consistent understanding of the QC system by firm personnel and for an experienced auditor to understand

the design, implementation, and operation of the QC system. The firm may determine that a detailed memo is a more appropriate form of documentation for more complex matters, whereas, for less complex matters, briefer communications, such as email, may suffice. The nature and circumstances of the firm and the nature and complexity of the matter being documented are not the only factors that could drive the form, content, and extent of documentation. There may be other factors, such as the nature of the firm's engagements or the frequency and extent of changes in the firm's QC systems. The Board believes this principles-based approach provides for scalability and that providing specific guidelines and detailed examples of various types of documentation would potentially limit firms' flexibility unnecessarily.

The proposal contemplated that firms would have to concurrently file their Form QC and assemble their documentation for retention by the same date. As adopted, the standard provides that firms have an additional 14 days after the date that the firm is required to file Form QC to assemble their documentation. Several commenters expressed concern with having the QC documentation completion date be concurrent with the date that the firm must report annually to the PCAOB on Form QC pursuant to paragraph .79. Many of these commenters recommended a document completion date 45 days after the reporting date, with some of these commenters suggesting that 45 days would ensure consistency with the requirements of AS 1215. One firm suggested that a full 45 days to assemble a complete and final set of documentation was not necessary, but the time period needed to assemble documentation should be built into an evaluation of the length of the reporting period if the final standard retained a document completion date concurrent to the reporting date.

After consideration of the comments received, the Board revised paragraph .84 to provide firms up until December 14 (a total of 75 days after the evaluation date) to complete a final set of QC documentation. This includes an additional 14 days after the date that the firm is required to report to the PCAOB on Form QC. The 14-day period aligns with the changes to PCAOB requirements for engagement documentation.³⁵³ The Board believes

that larger PCAOB audit practices with more complex and scaled up QC systems will employ the use of electronic tools in the assembly of the documentation of the QC system, and therefore a 14-day period to the QC documentation completion date is feasible. In addition, for smaller PCAOB audit practices with scaled down QC systems, the Board expects that the volume of documentation to be assembled will be smaller such that a 14-day period is also feasible for those firms. Furthermore, the Board notes that, because the final rule includes a longer period from evaluation date to reporting date than proposed, under the final standard firms will have 75 days after the evaluation date to assemble their documentation, rather than 45 days as proposed.

The standard permits additional documentation supporting a firm's QC system to be added after the QC documentation completion date in a manner similar to the addition of audit evidence to audit documentation under AS 1215.16. When this occurs, the standard requires a firm to indicate the date the information was added, the name of the person who prepared the additional documentation, and the reason for adding it. The standard also requires all previously retained documentation supporting the firm's evaluation of its QC system to remain intact and not be discarded.

The proposed standard contemplated that the firm would retain QC documentation for seven years from the QC documentation completion date, unless a longer period is required by law.

Two firms commented that they believed the seven-year retention period to be cost-prohibitive. One of these firms commented that if the firm changed its systems, for example, it will have to maintain additional licenses for old systems to access and use the data and pay for up to seven years' worth of storage, and it believes that maintaining that much data would introduce unnecessary cost as well as increased cybersecurity risk. The firm also commented that the seven-year retention period goes beyond the retention requirements of the quality management standards set forth by the

³⁵² See Commission Guidance Regarding Management's Report on Internal Control Over Financial Reporting Under section 13(a) or 15(d) of the Securities Exchange Act of 1934, SEC Rel. No. 33-8810 (June 27, 2007), available at <https://www.sec.gov/files/rules/interp/2007/33-8810.pdf>.

³⁵³ Amendments to the engagement documentation requirements in AS 1215 are addressed in a separate release. See Auditor Responsibilities Release.

AICPA³⁵⁴ and IAASB,³⁵⁵ and that this difference could cause operational challenges. The firm recommended aligning the documentation requirements with the firm's inspection and remediation cycle or allowing the firm to use a risk-based approach based on its judgment. Two firms opposed the seven-year period and suggested that it be based on the most recent inspection (for example, one year from the most recent inspection period), or until the inspection for a particular period has been completed.

As discussed in the proposal, the Board was concerned that requiring the retention period to be aligned with the PCAOB inspection cycle would be too short. A firm's remediation activities may span multiple years and the actions taken by the firm in certain areas may be informed by prior actions. Further, the objective of the documentation requirement is much broader than providing evidence for inspection purposes or enabling proper remediation. As described in the proposal, the Board believes that the documentation may also be useful for training purposes, ensuring the retention of organizational knowledge, and providing a history of the basis for decisions made by the firm about its QC system. One firm commented on these purposes and suggested that firms should determine what documentation has continuing relevance based on the circumstances. Another firm suggested that this could be reasonably handled by firms on a case-by-case basis, and any necessary documentation that could impact or inform future periods could be specifically retained. The firm further commented that some information would become stale over time and that it does not anticipate information retained early on being used for training or the retention of organizational knowledge in later years. A firm and a related group commented that a seven-year retention requirement is appropriate as it pertains to documentation that supports a firm's evaluation of its system of quality control and the related testing.

³⁵⁴ SQMS 1 requires the firm to establish a period of time for the retention of documentation for the system of quality management that is sufficient to enable the firm and its peer reviewer to monitor the design, implementation, and operation of the firm's system of quality management or for a longer period if required by law or regulation. See paragraph 61. Of SQMS 1.

³⁵⁵ ISQM 1 requires the firm to establish a period of time for the retention of documentation for the system of quality management that is sufficient to enable the firm to monitor the design, implementation and operation of the firm's system of quality management, or for a longer period if required by law or regulation. See paragraph 60. of ISQM 1.

After consideration of the comments received, together with the amendment made to paragraph .83. of the standard, the Board adopted the requirement to retain documentation for seven years from the QC documentation completion date, unless a longer period of time is required by law, as proposed. Paragraph .86 was amended to clarify that the documentation to be retained for this period is the documentation of its QC system required under paragraphs .81–.83 and paragraph .85. This requirement aligns the QC document retention requirement with other requirements in PCAOB standards and SEC rules (such as 17 CFR 210.2–06). Furthermore, the documentation relating to the firm's engagements must be retained for seven years,³⁵⁶ and the Board believes that it is appropriate for the firm to also retain documentation of the QC system that operated over those engagements for the same time period. For consistency and practical application, the retention period is the same for all firms and applies to all documentation the firm is required to accumulate to meet the documentation requirements of the standard.

2. Current PCAOB Standards

Existing QC 20 provides that:

- Appropriate consideration should be given to the extent to which QC policies and procedures, and compliance with them, should be documented.³⁵⁷
- The form, content, and extent of documentation depends on relevant factors, including the size, structure, and nature of the firm's practice.³⁵⁸
- A firm should prepare appropriate documentation to demonstrate compliance with its policies and procedures for the QC system.³⁵⁹
- Documentation should be retained for a period sufficient to enable those performing monitoring procedures and a peer review to evaluate the extent of the firm's compliance with its QC policies and procedures.³⁶⁰

QC 30 and the SECPS membership requirements include documentation requirements for certain items such as findings from certain monitoring activities, CPE, notification of cessation of client relationships, filing reviews under Appendix K, and corrective actions to address apparent independence violations.³⁶¹

³⁵⁶ See AS 1215.14.

³⁵⁷ See QC 20.21.

³⁵⁸ See QC 20.24–.25.

³⁵⁹ See QC 20.25.

³⁶⁰ See QC 20.25.

³⁶¹ See, e.g., QC 30.08; SECPS 1000.08(m), 1000.45, 1000.46, 8000.

Additional Amendments

QC 1000 supersedes the existing PCAOB interim QC standards in their entirety. Currently, Rule 3400T requires registered firms and their associated persons to comply with the AICPA's quality control standards as in existence on April 16, 2003, to the extent not superseded or amended by the Board. Rule 3400T identifies the AICPA's Statements on QC Standards (QC 20, QC 30, QC 40) and certain of the AICPA's SECPS membership requirements, which are applicable only to firms that were members of the AICPA SEC Practice Section on April 16, 2003. The Board rescinded Rule 3400T. In consequence, the interim quality control standards referenced in Rule 3400T are no longer part of PCAOB standards. Rule 3400T is replaced with Rule 3400, which describes the auditor's responsibilities for complying with quality control standards adopted by the Board and approved by the SEC.

Other amendments to PCAOB standards, rules, and forms are described below.

Amendments to AS 2901, Consideration of Omitted Procedures After the Report Date, and Related Amendments

1. Background

Currently, AS 2901 applies when the auditor concludes, after issuing its report on the financial statements, that procedures “considered necessary at the time of the audit in the circumstances then existing” were omitted from an audit of the financial statements, but there is no indication that the financial statements are not fairly presented.³⁶² Existing AS 2901 requires remedial action if (i) the auditor concludes that the omitted procedures impair its ability to support the previously issued opinion, and (ii) people are likely to rely on the report. If remedial action is required but the auditor is not able to perform the omitted procedures or alternative procedures that support the opinion, the standard directs the auditor to consult with counsel. Existing AS 2901 does not apply to ICFR audits or to attestation engagements.

2. Amendments to AS 2901

The Board believes that amendments to AS 2901 are appropriate to modernize the standard, incorporate the concepts and terminology introduced in QC 1000, and bring the standard into alignment

³⁶² AS 2905, rather than AS 2901, applies if the auditor subsequently learns of facts regarding the financial statements existing at the date of its report that might have affected its opinion. Paragraph .98 of AS 2201 is an analogous provision in the context of ICFR audits.

with the auditor's existing responsibility to obtain sufficient appropriate audit evidence to support the opinion.

QC 1000 introduces a new term, "engagement deficiency," defined as an instance of noncompliance with applicable professional or legal requirements by the firm, firm personnel, or other participants with respect to an engagement of the firm, or by the firm or firm personnel with respect to an engagement of another firm. For an engagement deficiency related to a completed engagement, QC 1000 requires firms to take action to address the engagement deficiency "in accordance with applicable professional and legal requirements" (e.g., AS 2901, AS 2905, AS 2201.98–.99).

The Board broadened the scope of AS 2901 to incorporate this new terminology, so that remedial action is required for engagement deficiencies for both financial statement audits and ICFR audits unless it was probable that the engagement report is not being relied upon.³⁶³ Reflecting this broader scope, the name of the standard was also changed to "Responding to Engagement Deficiencies After Issuance of the Auditor's Report."

a. Scope and Applicability (AS 2901.01–.02)

Note that, under PCAOB Rule 1001(a)(xii), "auditor" as used in AS 2901 means both firms and their associated persons.

i. Engagements Covered

Existing AS 2901 predates ICFR audit requirements and applies only to financial statement audits. The Board proposed to extend the scope of AS 2901 to cover engagement deficiencies in ICFR audits as well. Several commenters, generally firms, agreed with the proposal to extend the scope of AS 2901 to include engagement deficiencies in ICFR audits, and the Board adopted that change in scope.

Similar to the concept in existing AS 2901, the Board proposed that the revised standard would not apply to engagements where it is probable that the audit report is not being relied upon.³⁶⁴ The proposed standard included a note providing that the firm must treat an engagement report as being relied upon if the engagement

report is included in the most recent SEC filing on a form that requires its inclusion. One commenter pointed out that the use of the term "must" in the proposed note did not allow for the auditor to take into account situations that may indicate an auditor's report is not being relied upon even when the auditor's report is included in the most recent filing on an SEC form. Two commenters suggested that the standard should also exclude engagements where the issuance of the subsequent year's auditor's report is imminent.

The Board agrees that the standard should allow for circumstances where the auditor's report is included in the most recent filing on an SEC report, but the auditor may nonetheless conclude that the auditor's report is no longer being relied upon. However, in the Board's view, the fact that the issuance of the subsequent year's auditor's report is imminent is not determinative of whether the report continues to be relied upon.

The Board revised the note to paragraph .01 to provide that, in the absence of circumstances indicating that reliance is impossible or unreasonable (e.g., cessation of a trading market for issuer securities), inclusion of an auditor's report in the most recent filing on an SEC form that requires inclusion of such an auditor's report evidences that the report is being relied upon. The Board believes this is responsive to commenter concerns and allows for sufficient flexibility. The note has also been revised to clarify that an auditor's report can be included in an SEC filing either directly or through incorporation by reference.

The determination that an auditor's report is not being relied upon would primarily be influenced by whether the auditor's report and related financial statements are readily available and whether a trading market exists for the company's securities. Circumstances that may suggest the engagement report is no longer being relied upon could include:

- So much time has elapsed that the financial statements covered by the auditor's report are no longer required to be included in SEC periodic reports.
- The issuer's or broker-dealer's business has been dissolved or gone into liquidation.

ii. Compliance With AS 2905/AS 2201.98

Under the amendments, AS 2901 points the auditor to AS 2905 or AS 2201.98 to the extent they apply. This preserves the difference in treatment that exists under current auditing standards between situations where

financial statements and potentially the audit opinion may be in doubt (AS 2905 or AS 2201), and other circumstances where remedial action is required but there is no initial indication that the financial statements might be misstated (AS 2901).

iii. Deficiencies Covered

Existing AS 2901 applies when the auditor concludes that procedures considered necessary at the time of the audit in the circumstances then existing were omitted. As proposed, AS 2901 was extended to cover all engagement deficiencies identified. The Board believes it is more consistent with the basic philosophy of QC 1000 and better supports the ultimate goal of improving audit quality to require remedial action for all engagement deficiencies, regardless of whether the audit opinion is unsupported.

b. Activities To Address Engagement Deficiencies

AS 2901 currently requires remedial action when, due to omitted procedures that were considered necessary at the time of the audit, the auditor's opinion is not sufficiently supported. The required action is to perform the omitted procedures or alternative procedures that would support the opinion. If that is not possible, the auditor is directed to consult an attorney to determine an appropriate course of action.

Under the proposal, remedial action would be required for all engagement deficiencies—both those engagement deficiencies that affect the auditor's opinion and those that do not. Many commenters expressed concern with the proposal to require remedial actions for all engagement deficiencies, with one commenter suggesting that remedial actions should only be required for major deficiencies, and another commenter suggesting that the need for remedial actions should be assessed on a case-by-case basis, taking into account the severity of the engagement deficiency. Several commenters suggested that firms should be able to exercise judgment about whether remediation is necessary and observed that in practice most identified engagement deficiencies are remediated. Other commenters considered the proposed requirement overly prescriptive and one commenter suggested that the requirement was unnecessarily burdensome for instances where the auditor's report is adequately supported despite an identified engagement deficiency. On the other hand, two commenters expressed support for the Board's approach to the

³⁶³ See QC 1000.68b.

³⁶⁴ Under current AS 2901, the test is whether the auditor believes there are persons currently relying, or likely to rely, on the audit report. Under the final standard, the test would be whether it is probable that no one is relying, without reference to the auditor's belief. The term "probable" has the same meaning as described in the FASB ASC paragraph 450–20–25–1.

obligation to remediate engagement deficiencies, with one commenter stating that requiring remedial action for all identified engagement deficiencies, not just in situations where the auditor's opinion may be unsupported, would contribute to improving audit quality.

The Board continues to believe that requiring firms to take action to address all engagement deficiencies, whether related to an unsupported auditor's opinion or not, is appropriate and reinforces a firm's obligation to comply with all applicable professional and legal requirements, and adopted this requirement as proposed. As discussed below, when the opinion is appropriately supported, the firm may determine which actions to take in response to an engagement deficiency.

i. Addressing Engagement Deficiencies Related to an Unsupported Auditor's Opinion (AS 2901.03)

Under the proposal, in cases where the auditor did not obtain sufficient appropriate audit evidence to support the opinion, the auditor would have been required to either obtain additional evidence such that the opinion is adequately supported or take action to prevent future reliance on the report. One firm suggested that further guidance regarding these requirements would assist a firm in distinguishing between the engagement deficiencies that are subject to this provision rather than paragraph .04 (discussed below), or in the alternative, explicit alignment to the PCAOB's definition of a Part I.A or Part I.B deficiency.³⁶⁵ The Board is reluctant to incorporate terminology into its standards that does not have a fixed meaning under PCAOB rules and is subject to change.³⁶⁶ The Board also does not want to suggest that the requirements apply only to deficiencies identified by the PCAOB. However, in order to address this concern, paragraphs .03a and .03b were revised to make it explicit that the auditor's actions in paragraph .03b relate specifically to instances where the auditor is not able to obtain sufficient appropriate audit evidence to support the auditor's opinion.

The type of procedures that the auditor performs in response should be

guided by the type and amount of evidence needed to support the auditor's opinion. If the auditor is not able to obtain sufficient appropriate evidence to support the opinion, the auditor is required to take appropriate action to prevent future reliance on the audit report. The Board also amended AS 2201 as part of this rulemaking to include a reference to AS 2901 as a reminder of auditor responsibilities under that section with respect to audits of internal control over financial reporting.³⁶⁷

ii. Addressing All Other Engagement Deficiencies

Under the proposed standard, for all other deficiencies on audit engagements, the auditor would have been required to perform remedial actions, similar to those described in QC 1000.69, based on the auditor's determination of what action (corrective, preventive, or both) is appropriate based upon the specific facts and circumstances. The proposal described the following potential responses to engagement deficiencies:

- Take corrective action to completely remediate the deficiency, where appropriate.
- For deficiencies that cannot be completely remediated, remediate to the extent possible and implement measures to prevent recurrence. For example, if a Form AP was filed late, the auditor would not be able to remediate the lateness but could improve the controls over the filing process.
- Determine, based on the facts and circumstances, that no further remedial action is necessary, e.g., because of remedial actions already taken to respond to other deficiencies.

One commenter suggested including language in the lead-in to the note to paragraph .04 to further clarify that the actions a firm may take to remediate an engagement deficiency could be either corrective or preventive, or could be a combination of the two. The note in the final standard reflects this clarification.

Additionally, the term "remedial" was removed from the final standard in the lead-in to the note to paragraph .04 in order to encompass all actions required under applicable professional and legal requirements, some of which (e.g., notification to the board of directors or regulatory agencies) may not be remedial in nature.

c. Documentation

The proposed documentation requirement did not draw comment and was adopted as proposed.

When the auditor's response to engagement deficiencies involves adding additional information to the auditor's working papers, the requirements of AS 1215.16 will apply.

Under AS 2901, the auditor should document the actions taken pursuant to paragraphs .03 and .04 to address engagement deficiencies in an audit engagement where the audit report has previously been issued. This documentation requirement is consistent with the documentation requirements in proposed QC 1000.82c for all engagement deficiencies.

3. Related Amendments

The Board proposed to add provisions similar to AS 2901 to the standards for broker-dealer attestation engagements, AT No. 1 and AT No. 2, to prompt auditors of brokers and dealers to take appropriate action if they discover that the opinion or conclusion in a previously issued attestation report was not supported. Currently, those standards are silent as to the responsibilities that apply when a deficiency is identified after the engagement report is issued.

One commenter, who recommended changes to proposed AS 2901 (including that remediation should be required only when the auditor's opinion may not be supported), suggested that the same changes be incorporated into AT No. 1 and AT No. 2. For the reasons discussed above in the context of AS 2901, the Board does not believe such a limitation is appropriate. However, the Board made a conforming change, similar to a change made to AS 2901, to the note to clarify that the auditor must treat reports as being relied upon when the examination report (in the case of AT No. 1) or review report (in the case of AT No. 2) is included (either directly or through incorporation by reference) in an SEC filing on an SEC form that requires inclusion of such an examination report or review report. The Board also made revisions to the proposed requirements in AT No. 1 and AT No. 2 by removing the word "remedial" from the lead-in language to the notes in each of the respective standards in order to encompass all actions required under applicable professional and legal requirements, some of which (e.g., notification to the board of directors or regulatory agencies) may not be remedial in nature. With these modifications, the Board adopted the proposed amendments to AT No. 1 and AT No. 2.

The Board also amended AS 2201 as part of this rulemaking to include a reference to AS 2901 as a reminder of auditor responsibilities under that

³⁶⁵ Subsequent to the date of the comment letter, the PCAOB created an additional category, Part I.C deficiencies. Definitions of Part I.A, Part I.B, and Part I.C deficiencies are available on the PCAOB website at <https://pcaobus.org/oversight/inspections/inspection-procedures>.

³⁶⁶ As an example of how the Board's inspection reporting framework can change over time, in May 2023, the Board introduced several transparency enhancements to its inspection reports, including a new section of the inspection report focused on independence violations (Part I.C).

³⁶⁷ See Appendix 5, Other Amendments.

section with respect to audits of internal control over financial reporting.³⁶⁸

The Board did not propose to amend its interim attestation standards to include provisions similar to AS 2901. One commenter encouraged the Board to consider creating a separate attestation standard like AS 2901 to minimize repetition within each attestation standard, especially if the Board plans to adopt new standards beyond AT No. 1 and AT No. 2 in the future. At this time, the Board did not amend its interim attestation standards to include provisions similar to AS 2901, though it may consider doing so in the future.

Rescission of ET Section 102; Adoption of EI 1000; Related Amendments

1. Rescission of ET Section 102 and Adoption of EI 1000, Integrity and Objectivity

The Board rescinded an interim ethics and independence standard, ET 102, *Integrity and Objectivity*, replacing it with a new standard, EI 1000, *Integrity and Objectivity*. EI 1000 is based on existing ET 102, including its related interpretations codified as ET 102.02, .03, and .05, but reflects revisions that align PCAOB ethics requirements with the scope, approach, and terminology of QC 1000. To take one example, the new EI 1000 applies to registered public accounting firms and their associated persons rather than current AICPA “members” as referenced in ET 102.

Integrity and objectivity are foundational to the audit and critical to the performance of engagements under PCAOB standards. They lend credibility and engender trust in financial reporting. As the U.S. Supreme Court pointed out in *United States v. Arthur Young*:

By certifying the public reports that collectively depict a corporation’s financial status, the independent auditor assumes a public responsibility transcending any employment relationship with the client. The independent public accountant performing this special function owes ultimate allegiance to the corporation’s creditors and stockholders, as well as to the investing public. This “public watchdog” function demands that the accountant maintain total independence from the client at all times, and requires complete fidelity to the public trust.³⁶⁹

The responsibility to maintain integrity and objectivity is an important counterbalance to the risk that the auditor may be unduly influenced by company management or may be subject

to cognitive or other biases in performing the audit.³⁷⁰ In turn, an auditor’s integrity and objectivity can help to increase investor trust in financial reporting and strengthen capital markets.

Currently, paragraph .01 of ET 102 sets out three requirements that apply in the performance of a professional service: (i) maintaining integrity and objectivity, (ii) being free of conflicts of interest, and (iii) not knowingly misrepresenting facts or subordinating judgment. The remaining paragraphs of the rule and the relevant portions of ET 191 provide more detailed direction in specific contexts.

The Board proposed creating two overarching requirements in EI 1000: (i) maintaining integrity, which would include being honest and candid, not knowingly or recklessly misrepresenting facts, and not subordinating judgment; and (ii) maintaining objectivity, which would include being impartial, intellectually honest, and free of conflicts of interest. The proposal incorporated descriptions of integrity and objectivity that were substantially based on existing requirements in QC 20.10.³⁷¹

In addition to substantially recodifying existing requirements, the Board also proposed to clarify the scope of the rule and more closely align it with the scope, approach, and terminology of QC 1000.

With two clarifications discussed below, the Board adopted EI 1000 as proposed and rescinded ET 102.

a. General

As proposed, the Board modernized the standard and aligned it with other PCAOB standards and rules by renumbering it in accordance with the PCAOB’s reorganized standards framework, incorporating PCAOB terminology, and eliminating outdated provisions.

The final rule clarifies that the requirements of EI 1000 apply in connection with all responsibilities under “applicable professional and legal requirements” (as defined in QC 1000) and the firm’s related policies and procedures, whether in relation to the firm’s engagements, work the firm does

on other firms’ engagements, training, independence monitoring, or other activities that are part of or subject to the firm’s QC system. In addition, EI 1000 applies to registered firms and their associated persons, rather than to “members” as ET 102 currently provides.

The final rule also corrects a reference in EI 1000.02.b(2) from “materially false and misleading” to “materially false or misleading.”

One commenter supported the replacement of ET 102 with EI 1000, but recommended labeling it “OI” for Objectivity and Integrity. As described in the proposal, the Board created a designation not only for its standard on objectivity and integrity, but for future standards as well. The Board intends to use “EI” for all ethics and independence standards, just as it uses “AS” to designate auditing standards.

While one commenter confirmed that the terms used in EI 1000 are generally clear, another commenter recommended clarifying the expectations for the terms “being honest and candid” in EI 1000.02 and “being intellectually honest” in EI 1000.03. This language is drawn from existing QC 20.10, has a clear plain English meaning, and the Board believes should be well understood.

b. Integrity

EI 1000.02 notes that, as part of maintaining integrity, a firm and its associated persons must be “honest and candid.” This requirement is drawn from existing QC 20.10. The Board omitted the reference to “within the constraints of client confidentiality” in order to avoid suggesting that “client confidentiality” could limit a firm’s or its associated persons’ obligations to comply with the requirements of PCAOB rules or standards. This is consistent with the Board’s interpretation of QC 20.10, under which a firm or its associated persons must be honest and candid in complying with PCAOB rules and standards, including during PCAOB inspections. It also confirms, among other things, that associated persons have the ability to report wrongdoing within the firm and to the appropriate regulatory authorities without constraints of confidentiality, consistent with PCAOB rules and standards. Similar to current QC 20.10, EI 1000.02 does not address the requirements of client confidentiality beyond the requirements set forth in PCAOB rules and standards and applicable requirements of the Federal

³⁷⁰ See, e.g., *Auditing Accounting Estimates, Including Fair Value Measurements and Amendments to PCAOB Auditing Standards*, PCAOB Rel. No. 2018–005 (Dec. 20, 2018), at 30–35 (discussing auditor incentives and potential cognitive biases).

³⁷¹ QC 20.10 states: “Integrity requires personnel to be honest and candid within the constraints of client confidentiality. . . . The principle of objectivity imposes the obligation to be impartial, intellectually honest, and free of conflicts of interest.”

³⁶⁸ See Appendix 5, Other Amendments.

³⁶⁹ *United States v. Arthur Young*, 465 U.S. 805, 817–818 (1984).

securities laws, including the Sarbanes-Oxley Act.³⁷²

One commenter suggested that, rather than removing the reference to confidentiality, the Board should instead refer to IESBA Code Section 260 related to noncompliance with laws or regulations. In general, the Board does not incorporate by reference the concepts and terminology used by other standard setters. In relation to noncompliance with laws and regulations in particular, the Board has proposed its own new standard.³⁷³ If a new PCAOB standard in that area is ultimately adopted by the Board and approved by the SEC and makes it appropriate for the Board to amend EI 1000, the Board would of course intend for EI 1000 to align with its new standard rather than the IESBA code.

The proposal clarified that the responsibility to avoid factual misrepresentations covers not only knowing, but also reckless behavior, and that this responsibility applies to any knowing or reckless misrepresentation of fact, including situations where documents—such as work papers and communications with the PCAOB and the SEC—containing materially false or misleading information are knowingly or recklessly signed, permitted or directed to be signed, or left uncorrected by those with authority to correct them.

One commenter suggested that the concept of failing to correct a document that is materially false and misleading when having the authority to do so should be limited to circumstances in which the document was materially false and misleading “when made.” The Board agrees that the duty to correct is not unbounded, and generally applies at the time that a document is made (including when filed with or submitted to a regulatory authority). The Board notes, however, that while EI 1000 does not independently impose a duty to correct a document that was not materially false or misleading when made, such a duty may arise under other statutes, laws, or regulations, and the Board believes that in such a

circumstance, the failure to discharge that duty should also constitute a violation of EI 1000. The Board added language to EI 1000.02b to clarify the circumstances under which failure to correct a document would constitute a knowing or reckless misrepresentation of facts.

The Board proposed to broaden the responsibility to avoid subordination of judgment so it would apply to any dispute or disagreement over applicable professional and legal requirements or how to apply them. One commenter suggested that, as part of the provision on subordination of judgment, the Board should address the risk of supervisors exercising undue influence over subordinates in the same manner as under the AICPA Code of Professional Conduct.³⁷⁴ The relevant interpretive provision of the AICPA Code, 1.130.020, *Subordination of Judgment*, identifies undue influence by a supervisor as a potential threat to compliance with the AICPA’s Integrity and Objectivity Rule³⁷⁵ and provides safeguards to be applied when the threat is not at an acceptable level. The safeguards to be applied are essentially the same as the process required under EI 1000.02c, including research and consultation to determine whether the supervisor’s position is supportable, consultation with higher levels of management, and, if appropriate action is not taken, consideration of potential duties to notify third parties and consideration of the appropriateness of continuing a relationship with the firm. In addition to the provision in EI 1000, QC 1000 also addresses the risk of undue influence through a quality objective in the engagement performance component related to the appropriate resolution of differences in professional judgment,³⁷⁶ as well as general provisions that would apply to undue influence by a supervisor, including in the governance and leadership component,³⁷⁷ the ethics and independence component,³⁷⁸ and the resources component.³⁷⁹ The Board believes these provisions address the concerns raised by this commenter and have adopted the subordination of judgment provision of EI 1000 as proposed.

c. Objectivity

One commenter suggested that the Board could clarify the standard by including references to the AICPA or

IESBA concepts of conflict of interest. As noted above, it is not generally Board policy to incorporate by reference the concepts and terminology used by other standard setters. The Board also believes that a cross reference is not appropriate because EI 1000 addresses essentially the same conduct as the AICPA and IESBA provisions.

d. Rescission of Certain AICPA Interpretations

Additionally, the Board rescinded the former AICPA interpretations currently codified as ET 102.04, .06, and .07, which address members’ obligations to their employer’s external accountant, performance of educational services, and professional services involving client advocacy, respectively. These are generally not relevant to engagements performed under PCAOB standards. In addition, the matters addressed in paragraph .07 are either effectively superseded by 17 CFR 210.2–01 or more effectively addressed elsewhere in PCAOB standards (e.g., AS 2610, *Initial Audits—Communications Between Predecessor and Successor Auditors*).

2. Amendments to ET Section 191

In connection with EI 1000, the Board also proposed amending ET 191 by making a conforming amendment to paragraph .062 and rescinding paragraphs .130, .131, .170, .171, .186, .187, .198, .199, .202, and .203. The only commenter on this topic supported these amendments. The Board adopted the amendments as proposed. The interpretations the Board rescinded (addressing, respectively, use of the CPA designation by accountants not in public practice, service as a director of a bank, service on the board of directors of United Way or a similar federated fund-raising organization, providing services for company executives, and providing client advocacy services) are generally not relevant to engagements performed under PCAOB standards or are addressed elsewhere in PCAOB and SEC rules. The Board did not amend the portions of ET 191 that pertain to ET 101, which is not being substantively amended in this rulemaking.

3. Amendments to Rule 3500T, Interim Ethics and Independence Standards, and ET Section 101, Independence

The Board proposed amending paragraph (a) of Rule 3500T to eliminate the introductory phrase “In connection with the preparation or issuance of any audit report,” which it believes may cause the rule to be read unduly narrowly. The Board also proposed eliminating references to ET 102, *Integrity and Objectivity*, and

³⁷² As a general matter, the Uniform Accountancy Act excludes from the prohibition against voluntary disclosure, in part, “information required to be disclosed by the standards of the public accounting profession in reporting on the examination of financial statements or as prohibiting compliance with applicable laws, government regulations or PCAOB requirements.” AICPA, Uniform Accountancy Act (January 2018), available at <https://us.aicpa.org/content/dam/aicpa/advocacy/state/downloadabledocuments/uaa-eighth-edition-january-2018.pdf>.

³⁷³ See *Proposing Release: Amendments to PCAOB Auditing Standards related to a Company’s Noncompliance with Laws and Regulations And Other Related Amendments*, PCAOB Rel. No. 2023–003 (June 6, 2023).

³⁷⁴ AICPA Code of Professional Conduct 1.130.020, *Subordination of Judgment*.

³⁷⁵ *Id.* at 1.100.001.

³⁷⁶ QC 1000.42.c.

³⁷⁷ QC 1000.25.

³⁷⁸ QC 1000.33b, c., and f.

³⁷⁹ QC 1000.46a.

substituting a reference to EI 1000, *Integrity and Objectivity*. These proposed amendments did not receive any comment and were adopted as proposed.

Lastly, the Board amended paragraphs .04, .13, and .16 of ET 101, *Independence*, to conform the references to ET 102, which will be rescinded, to EI 1000.

Other Amendments

In connection with the adoption of QC 1000, the Board also adopted amendments to other professional standards, PCAOB rules, and PCAOB forms. As discussed in more detail below, these amendments:

- Align terminology, concepts, and cross-references with QC 1000;
- Rescind standards that are unnecessary in light of the adoption of QC 1000;
- Recodify certain provisions of requirements that are rescinded into other PCAOB standards and rules; and
- Make other technical and clarifying amendments.

The one commenter that addressed this topic generally supported the amendments and also recommended an amendment to PCAOB Rule 1001(p)(vi) to use the term “quality control standards” instead of “quality control policies and procedures.” The language used in PCAOB Rule 1001(p)(vi) is drawn from section 110(5) of Sarbanes-Oxley and the Board believes its rule should continue to align with that statutory provision.

These amendments are discussed further below.

1. Rescission of Rule 3400T, Interim Quality Control Standards; Adoption of Rule 3400, Quality Control Standards

These rule changes did not receive any comment and were adopted as proposed.

PCAOB Rule 3400T, *Interim Quality Control Standards*, requires registered public accounting firms and their associated persons to comply with the Board’s interim quality control standards. The Board rescinded Rule 3400T, including all current QC standards identified in the rule, which the Board adopted on an interim, transitional basis.³⁸⁰ The Board adopted

in its place a new rule, Rule 3400, to codify the auditor’s responsibilities for complying with the Board’s quality control standards.

2. Rescission of AS 1110, Relationship of Auditing Standards to Quality Control Standards

The Board received no comment on the proposed rescission of AS 1110 and rescinded it, as proposed.

At the time AS 1110 was issued, it served to describe the relationship between the then already-existing auditing standards and the new set of standards that governed a firm’s system of quality control. This relationship is now well understood by firms and clarified within QC 1000. In addition, the first two paragraphs of AS 1110 merely repeat the requirements to comply with the auditing and QC standards that are addressed by other PCAOB standards and rules. Accordingly, the Board rescinded AS 1110.

3. Adoption of AS 1310, Notification of Termination of the Auditor-Issuer Relationship

The Board adopted a new standard, AS 1310, which recodifies existing requirements of SECPS 1000.08(m), *Notification of the Commission of Resignations and Dismissals from Audit Engagements for Commission Registrants*, and applies those requirements to all firms and all issuer engagements. As noted above, the Board rescinded the QC standards that pertain only to firms that were SECPS members at the time the PCAOB was created. In lieu of the SECPS requirement, the Board adopted a new standard that requires the auditor to notify the SEC upon resignation or dismissal from an audit engagement of an issuer if the issuer does not report such change in a current report on Form 8-K.

The only commenter to address this proposed standard agreed that it could provide valuable and timely information to investors to alert them when audit committees have failed to fulfill their reporting responsibilities. The Board notes, however, that notifications provided under the current SECPS requirement might not be made publicly available. Nevertheless, the Board believes that notices provided to the SEC under the standard could provide

valuable information to the SEC. Therefore, the Board adopted the standard substantially as proposed, with a revision to conform to the precise language on Form 8-K. This requirement applies to all issuer engagements, regardless of whether the firm was a member of the SECPS and regardless of whether the issuer is required to report on Form 8-K.

4. Amendments to AT Section 101, Attest Engagements

These amendments did not receive any comment and were adopted as proposed.

The amendments to AT Section 101 align with the rescission of AS 1110 discussed above, by deleting the paragraphs that address the relationship of attestation standards to QC standards. Additionally, the deletion of footnote 23 removes language related to monitoring compliance with quality control policies and procedures, which is unnecessary in light of the adoption of QC 1000.

5. Amendments to Form 1, Application for Registration

The Board proposed to amend Form 1 to (i) refer to QC 1000 in the instructions in order to prompt firms to consider their obligations with respect to QC in connection with their application for registration, and (ii) add a new item whereby firms confirm whether they have designed a QC system in accordance with PCAOB standards. The only commenter to address this amendment agreed that the amendments would be appropriate. The Board adopted these amendments as proposed.

6. Amendments to Form 2, Annual Report Form

The Board proposed to amend Form 2 to add a new item whereby firms would confirm (i) that they have designed a QC system in accordance with PCAOB standards; and (ii) whether they were required to implement and operate a QC system in accordance with PCAOB standards at any time during the period of time covered by Form 2. The only commenter to address this amendment agreed that the amendments would be appropriate. The Board adopted these amendments as proposed.

7. Technical and Conforming Amendments

These amendments did not receive any comment and were adopted as proposed.

The Board implemented a number of technical and conforming amendments to align terminology and concepts in

³⁸⁰ Under PCAOB Rule 3400T(a), all firms are required to comply with QC standards as described in “the AICPA’s Auditing Standards Board’s Statements on Quality Control Standards, as in existence on April 16, 2003 (AICPA Professional Standards, QC §§ 20–40 (AICPA 2002)), to the extent not superseded or amended by the Board.” PCAOB Rule 3400T(b) requires certain firms to comply with QC standards as described in “the AICPA SEC Practice Section’s Requirements of Membership (d), (l), (m), (n)(1), and (o), as in

existence on April 16, 2003 (AICPA SEC Practice Section Manual 1000.08(d), (j), (m), (n)(1), and (o)), to the extent not superseded or amended by the Board.” PCAOB Rule 3400T(b). The note to Rule 3400T provides that those requirements “only apply to those registered public accounting firms that were members of the AICPA SEC Practice Section on April 16, 2003.”

existing standards and one PCAOB form with QC 1000.

The Board also implemented a technical amendment to the instructions to Form AP to clarify an exclusion from disclosing the identity of, and hours incurred by, accounting firms in certain circumstances. The Board, when it adopted Form AP, stated that it intended to exclude the reporting of “hours incurred in the audit of entities in which the issuer has . . . an investment” using the equity method of accounting.³⁸¹ Form AP currently excludes hours “of an accounting firm performing the audit of entities in which the issuer has an investment that is accounted for using the equity method,” but the Board is concerned that such language might be read to exclude all of the audit work performed by such an accounting firm on an audit, rather than only those hours spent performing the audit of entities in which the issuer has an investment accounted for using the equity method. The Board revised the instruction in Part IV of the form to exclude from its disclosure requirements the identity of, and hours incurred by, accounting firms “in performing” the audit of entities in which the issuer has an investment that is accounted for using the equity method, which clarifies that the identity of, and hours incurred by, such firms with respect to other work on the audit must be disclosed on Form AP, unless they are subject to other Form AP exclusions.

Effective Date

In the proposing release, the Board sought comment on the amount of time auditors would need before the proposed new quality control standard and the other proposed amendments to PCAOB standards, rules, and forms, if adopted by the Board and approved by the SEC, become effective. We proposed an effective date of December 15 of the year after approval by the SEC.

One commenter agreed that the proposed effective date should be reasonable in practical terms. Another commenter asserted that the standard is not clear on the effective date as it relates to design and implementation and operating effectiveness, and recommended that the Board allow firms significant time between the release of the final standard and its effective date. One commenter suggested that an 11-month period from the effective date to the first evaluation

date would not be practicable, and firms would need time to consider whether and how to transition from their evaluation date previously established under ISQM 1.

Several commenters suggested that if the standard is approved in 2023, and becomes effective on December 15, 2024, this would provide challenges to auditors. Some of these commenters further suggested that the proposed effective date would be particularly challenging for smaller firms that might not have already implemented ISQM 1 and do not have to implement SQMS 1 until December 15, 2025. Commenters suggested alternative effective dates such as December 15, 2025; 18 months after approval by the SEC and no sooner than December 15, 2025; the later of 12 months after approval by the SEC or December 15, 2025; or two years after SEC approval. One commenter suggested a phased approach such that the effective date would be different for firms that are annually inspected than for other firms, while other commenters suggested that firms that are required to implement incremental requirements based on the size of the firm should be provided additional time to implement the incremental requirements. One commenter suggested that an overly speedy adoption timeline could create unintended consequences such as disruption to QC systems and increased difficulty of getting buy-in on the proposed QC changes from stakeholders. Another commenter suggested that an additional one to two years may be needed for firms with less than 100 issuers, or that have not adopted ISQM 1, to develop and implement the additional monitoring, evaluation and remediation requirements. The commenter further suggested that a proposed initial evaluation date that is eleven and a half months after the effective date may not allow enough time for remediation and that the PCAOB should consider a longer onboarding process.

After considering the comments received subject to approval by the SEC, the final standard and related amendments to auditing standards, rules, and forms will take effect on December 15, 2025.

The Board believes that an effective date of December 15, 2025 strikes an appropriate balance between the benefits to investors of having QC 1000 take effect as promptly as practicable, while allowing sufficient time for firms to design and implement robust, QC 1000-compliant QC systems.

One commenter suggested the Board consider how mergers and acquisitions of firms would impact the effective date

for the standard, and suggested the Board consider similar guidance to the SEC that provides that issuers may exclude an acquired business's internal control over financial reporting from its assessment of internal control for up to one year or for one assessment. After consideration of the comment received, the Board appreciates that it could take time to fully integrate a newly acquired firm's QC system and perform an evaluation of its effectiveness. However, the Board does not believe that it is appropriate or consistent with its investor protection mandate to allow for a portion of a firm's QC system to be excluded from the annual evaluation. The Board believes that specific quality risks could arise as the result of a merger or acquisition, and that firms should be designing, implementing, and operating quality responses to address these as part of merger planning and execution. Furthermore, if, as a result of a merger or acquisition between registered public accounting firms, the resultant firm is unable to conclude that the QC system is effective as of the evaluation date, then the Board believes that it is essential that the firm has identified and is remediating the QC deficiencies that exist as a result of the merger or acquisition and is monitoring any impact on the firm's engagements.

Unlike ISQM 1 and SQMS 1, under QC 1000, the requirements for QC system evaluation are not being implemented on a delayed basis. When QC 1000 takes effect, all provisions of QC 1000 will take effect. Because the evaluation date of September 30 builds in over a nine-month delay between the effective date of the standard and the first evaluation date, the Board does not believe further delaying the effective date of the evaluation requirements would be necessary or appropriate. However, the first evaluation period will be of the period beginning on the effective date of the standard (*i.e.*, December 15, 2025) and ending on the next September 30, rather than the 12-month period ending on that September 30.

D. Economic Considerations and Application to Audits of Emerging Growth Companies

Economic analysis is an important aspect of the rulemaking process. This economic analysis describes the baseline for evaluating the economic impacts of the rulemaking, the need for rulemaking, its expected economic impacts (including benefits, costs, and potential unintended consequences), and reasonable alternatives considered. Due to data limitations, much of the economic analysis is qualitative in

³⁸¹ See *Improving the Transparency of Audits: Rules to Require Disclosure of Certain Audit Participants on a New PCAOB Form and Related Amendments to Auditing Standards*, PCAOB Rel. No. 2015-008 (Dec. 15, 2015), at 26.

nature; however, where reasonable and feasible, the analysis incorporates quantitative information, including information from PCAOB inspections of registered firms.

The Board has sought information relevant to the economic analysis over the course of this rulemaking.³⁸² To the extent that commenters expressed views related to the economic analysis, many commenters generally agreed with the need for QC 1000, but some commenters raised concerns with certain impacts of the proposed standard. Several commenters expressed concerns about costs associated with certain key requirements, such as documentation. Some commenters suggested that the economic analysis should more explicitly consider costs that could disproportionately impact smaller and mid-size firms. Some commenters asserted potential unintended consequences with the proposed standard, including demand on staff resources and potential competitive effects, while other commenters suggested alternatives to help manage costs associated with certain proposed requirements, such as the 100-issuer threshold and evaluation and reporting dates. Some commenters offered a quantitative perspective regarding impacts. Several commenters referenced additional academic research for the Board's consideration. The Board considered all the comments received, including the quantitative perspectives and academic research the comments referenced, and has developed the following economic analysis that evaluates the expected benefits and costs of the final requirements, discusses potential unintended consequences, and facilitates comparison to alternative actions considered.

Baseline

The discussion above provides an overview of current PCAOB QC standards; summarizes observations from PCAOB oversight activities; and describes developments in the auditing environment since the adoption of current PCAOB QC standards, including the actions of other standard setters. This section expands on that discussion by describing additional aspects of the economic baseline against which the economic impacts of the requirements can be considered and presenting other relevant information on the audit services market for issuers and broker-dealers. Specifically, this expanded discussion includes:

- Three complementary proxies for the level of compliance with professional standards applicable to the performance of engagements, derived from PCAOB inspections data. Analysis of these proxies informs the baseline for considering the expected benefits of the requirements (e.g., improved compliance with professional standards).³⁸³
- Information on resources that U.S. global network firms ("GNFs") invest in their QC systems. As the requirements are expected to result in changes to some firms' QC systems, this information informs the baseline for considering the expected costs of the requirements.
- Changes firms have made to their QC systems to remediate QC deficiencies identified by PCAOB inspections staff and presents QC deficiencies related to firms' management of their audit practices. This discussion provides information on the evolution of QC systems and informs the evaluation of the need for and the economic impacts of the requirements.
- A concise survey of academic literature on quality-threatening behaviors that suggest certain weaknesses in some QC systems in practice.
- Key assumptions regarding how QC systems are likely to evolve absent the requirements.

In describing the baseline,³⁸⁴ the analysis presents anonymized and aggregated summary statistics regarding deficiencies included in past PCAOB inspection reports. Since PCAOB inspection reports do not consider broker-dealer engagements, the analysis also presents anonymized and aggregated summary statistics regarding audit and attestation engagement deficiencies included in annual reports on the PCAOB's interim inspection program related to audits of brokers and dealers. The following background

³⁸³ See below for further discussion.

³⁸⁴ The scope of the information on inspections and remediation efforts presented in the baseline section is limited to those firms that are subject to inspection under Sarbanes-Oxley; specifically, firms that provide one or more audit reports for an issuer, broker, or dealer and firms that play a substantial role in the preparation or furnishing of such audit reports. See section 104(a)(1), (2), and (b)(1) of Sarbanes-Oxley, 15 U.S.C. 7214(a)(1), (2), and (b)(1). In particular, PCAOB's analysis of deficiencies included in past PCAOB inspection reports does not include registered firms that would be subject only to design requirements on the basis that they do not perform "engagements" as defined in QC 1000. Based on Form 2 reporting as of June 30, 2023, approximately 60% of registered firms reported that they had not issued an audit report for an audit of an issuer or broker-dealer or played a substantial role in such an engagement during the preceding 12 months.

information associated with this quantitative inspection information bears emphasizing:

- QC deficiencies presented in Part II of a PCAOB inspection report³⁸⁵ may relate to: (1) a firm's management of its audit practice or (2) a firm's performance of audit procedures.³⁸⁶ QC deficiencies of the first type refer to the operation of QC policies and procedures. For example, a QC deficiency related to a firm's management of its audit practice may be identified through inspection staff's review of how the firm considers and addresses risks in connection with engagement acceptance and continuance decisions. QC deficiencies of the second type are inferred through analysis of deficiencies identified during inspections of individual issuer audit engagements. For example, a QC deficiency related to a firm's performance of audit procedures may be identified through inspection staff review of the performance of audit procedures related to management's accounting estimates.³⁸⁷

- Deficiencies presented in Part I.A of an inspection report represent deficiencies in issuer audits selected for inspection that were of such significance that the Board believes that the firm, at the time it issued its audit report, had not obtained sufficient appropriate audit evidence to support its opinion on the issuer's financial statements and/or internal control over financial reporting. As part of the PCAOB's process for reviewing firms' QC systems, PCAOB inspection teams evaluate whether identified deficiencies in individual audits indicate a defect or potential defect in a firm's QC system. However, a Part I.A deficiency does not, on its own, necessarily imply significant defects or potential defects in a firm's QC system. The PCAOB inspection team will consider the nature, significance, and frequency of deficiencies and related firm methodology, guidance, practices, and possible root causes when assessing whether Part I.A deficiencies in individual audits indicate significant

³⁸⁵ Part II of a firm's inspection report includes any criticisms of, and potential defects in, the firm's QC system, that were communicated to the firm as part of a PCAOB inspection. As required under Sarbanes-Oxley, any QC deficiencies observed during a PCAOB inspection are not included in the public portion of the relevant inspection report when first issued. If a firm does not address to the Board's satisfaction criticisms of, and potential defects in, the firm's QC system within 12 months after the issuance of the PCAOB inspection report, Part II of the report will be issued publicly to include such deficiencies. Additional information is available on the PCAOB website at <https://pcaobus.org/oversight/inspections/remediation>.

³⁸⁶ See PCAOB Rel. No. 2012-003, at 8-9.

³⁸⁷ See PCAOB Rel. No. 2012-003, at 8.

³⁸² See PCAOB Rel. No. 2022-006; PCAOB Rel. No. 2019-003.

defects or potential defects in a firm's QC system that should appear in Part II of the firm's inspection report.³⁸⁸

- The Dodd-Frank Wall Street Reform and Consumer Protection Act gave the PCAOB oversight of auditors of broker-dealers registered with the SEC. In June 2011, the PCAOB established an interim program to inspect these auditors and identify and address with them any significant issues observed in their audits and related attestation engagements. This interim inspection program remains in place today. The inspection processes for audits of issuers and broker-dealers are different in many respects, including the applicable laws, rules, and professional standards; the inspection selection process; inspection focus areas; and reporting of inspection results. In particular, unlike PCAOB inspections of issuer audits, which lead to an inspection report for each inspected firm, the PCAOB issues a single annual report on the interim inspection program related to audits of broker-dealers, which summarizes the results of the PCAOB's inspections of broker-dealer engagements performed during the previous year.³⁸⁹

- The analysis of QC and issuer audit deficiencies below is presented over a twelve-year period for three separate categories of firms: (1) U.S. GNFs, (2) other firms having more than five inspected issuer engagements, and (3) other firms having five or fewer inspected issuer engagements.³⁹⁰

³⁸⁸ Additional information on PCAOB inspection procedures is available on the PCAOB website at <https://pcaobus.org/oversight/inspections/inspection-procedures>.

³⁸⁹ See *Annual Report on the Interim Inspection Program Related to Audits of Brokers and Dealers*, PCAOB Rel. No. 2023-005 (Aug. 10, 2023). Additional information on the interim inspection program is available on the PCAOB website at <https://pcaobus.org/resources/information-for-audit-firms/information-for-auditors-of-broker-dealer>.

³⁹⁰ Time trends can help to identify associative relationships and may suggest how the audit market could evolve absent the requirements. However, time trends in PCAOB inspection deficiencies depend on, among other things, changes in the set of firms and engagements selected for inspection. Firms that issue 100 or fewer audit reports for issuers are, in general, inspected at least once every three years. Firms that issue audit reports for more than 100 issuers are inspected annually. Therefore, the set of inspected firms and engagements is not fixed year over year.

Categorizing inspections information among firms of different sizes helps account for the significantly skewed variation in audit firm size present in the audit market.³⁹¹ The 2011 through 2022 period is used because information from earlier inspection years is less comparable and information from later inspection years was not completely available as of the date of this analysis. Information was preliminary for the 2022 inspection year as of the date of the PCAOB staff analysis.

- The analysis of audit and attestation engagement deficiencies included in annual reports on the PCAOB's interim inspection program related to audits of brokers and dealers below is presented over a 12-year period. The 2011 through 2022 period is used because 2011 was the first year of the interim inspection program and 2022 is the most recent year that data are available as of the date of this analysis. Information on deficiencies associated with attestation examinations or reviews is not available prior to 2015 because 2015 was the first full year during which the PCAOB was able to review attestation engagements of brokers and dealers.

1. Proxies Related to Compliance With Professional Standards

This subsection presents analyses of three quantitative proxies for the level of compliance with professional standards and thus provides information on the baseline for considering the key expected benefit of the requirements: improved compliance with professional standards. Specifically, it presents information on Part I.A deficiencies, QC deficiencies related to audit performance, and broker-dealer engagement deficiencies, from the audits or engagements PCAOB inspected. Overall, the analyses suggest that some firms' QC systems may not be providing the required reasonable assurance. Broker-dealer engagements and issuer audits performed by firms

³⁹¹ Current PCAOB QC standards recognize that the nature, extent, and formality of a firm's QC policies and procedures should take into account various factors, including the size of the firm. Because PCAOB QC assessments also take into account these factors, the number of QC deficiencies across each of the three categories of firms are not directly comparable. See PCAOB Rel. No. 104-2006-077, at 9-10.

other than U.S. GNFs appear to have more room for improvement on average based on the period examined.

a. Part I.A Deficiencies

Figure 1 presents for categories of PCAOB-inspected audits the percentage of inspected issuer audits having at least one Part I.A deficiency. PCAOB staff calculated the Part I.A deficiency rates by dividing the number of inspected issuer audits that had at least one Part I.A deficiency by the number of inspected issuer audits for each given year. The Part I.A deficiency rate should not be equated with the rate of audit deficiencies across the whole issuer population. It may understate the true rate of issuer audit deficiencies because some deficiencies may not rise to the level of a Part I.A deficiency and because PCAOB inspectors do not inspect all aspects of inspected audits. However, it may also overstate the true rate of issuer audit deficiencies because PCAOB inspectors generally focus their attention on, among other things, audits and audit areas with a heightened risk of material misstatement.

Despite these potential biases in the Part I.A deficiency rate, the Board believes that the Part I.A deficiency rates presented in Figure 1 are indicative of underlying issuer audit deficiencies. However, there are two caveats that may impact the interpretation of Figure 1. First, because the audits with deficiencies are not drawn from a random sample, the deficiencies could be driven in part by changes over time in the proportion of reviewed audits that were selected based on characteristics associated with high-risk audits. Second, PCAOB inspections staff review more focus areas during reviews of U.S. GNF issuer audits than they do during reviews of other firms' issuer audits, increasing the opportunity for a reviewed U.S. GNF issuer audit to have at least one Part I.A deficiency.

For U.S. GNFs, Figure 1 shows that the percentage of inspected issuer audits having at least one Part I.A deficiency was 37% in 2011 and 30% in 2022. For other firms, the percentage has remained in the 31% to 53% range.

Figure 1. Percentage of Inspected Issuer Audits Having at Least One Part I.A Deficiency (2011-2022)

Figure 2 provides additional insight on how the percentage of inspected issuer audits having at least one Part I.A deficiency varies by firm. Each bar indicates the percentage of 2020, 2021, and 2022 firm inspections with a Part I.A deficiency rate within a given range.

For example, Figure 2 indicates that 22% of all 2020, 2021, and 2022 U.S. GNF inspections and 11% of all 2020, 2021, and 2022 inspections of other firms with more than five inspected engagements had a Part I.A deficiency rate below 10%. Figure 2 excludes firm

inspections with five or fewer inspected engagements because the Part I.A deficiency rate is a less informative proxy in these cases due to the small number of inspected engagements.

Figure 2. Percentage of Firm Inspections with a Part I.A Deficiency Rate within a Given Range (2020-2022)

Note: During the 2020, 2021, and 2022 inspection years, there were in total 18 inspections of U.S. GNFs and 35 inspections of other firms having more than five engagements reviewed.

b. QC Deficiencies Related to Audit Performance

Figure 3 presents the average number of QC deficiencies related to audit performance per inspected firm. QC deficiencies related to audit performance are inferred through analysis of inspections of individual audits and thus represent another proxy for the level of compliance with professional standards. To prepare Figure 3, PCAOB staff counted the number of distinct QC deficiencies

related to audit performance in Part II of PCAOB inspection reports. Staff assigned a zero to firm inspections that resulted in no QC deficiencies related to audit performance. Staff then calculated averages per inspected firm by year and firm group, assigning equal weight to each QC deficiency regardless of its nature or whether it was a repeat deficiency. While the total number of QC deficiencies is not readily comparable across each of the three categories of firms because of differences in inspection approach, the averages have ranged between 3.3 and 15.8 for U.S. GNFs, between 2.9 and 8.0 for other firms having more than five engagements reviewed, and between 0.9

and 2.7 for other firms having five or fewer engagements reviewed. Two caveats may impact the interpretation of Figure 3. First, starting in 2019, the PCAOB revised its approach to identifying QC deficiencies related to audit performance. The Board believes this policy change reduced the number of QC deficiencies related to audit performance for some of the inspections of non-affiliated firms (“NAFs”) but not for the U.S. GNFs. Second, the variability in the deficiency rate in the second panel may be due in part to year-over-year changes in the set of firms having more than five engagements reviewed, which may include triennial firms.³⁹²

³⁹² Firms that issued audit reports with respect to 100 or fewer issuers during the prior calendar year

(“triennial firms”) must be inspected at least once every three years.

Figure 3. Average Number of QC Deficiencies Related to Audit Performance Per Inspected Firm (2011-2022)

c. Broker-Dealer Engagement Deficiencies

Figure 4 presents the percentage of broker-dealer audits with deficiencies and the percentage of attestation engagements and reviews with deficiencies, among the selected sample

of PCAOB engagements. The percentages are reproduced from the PCAOB's annual reports on the interim inspection program related to the audits of broker-dealers. The percentages are equal to the number of inspected engagements for which there were

deficiencies divided by the number of inspected engagements. The percentages of audits and attestation examinations with deficiencies have remained greater than 45%. The percentage of attestation reviews with deficiencies has remained in the 23% to 54% range.

Figure 4. Percentages of Broker-Dealer Engagements with Deficiencies (2011-2022)

2. Resources Associated With QC systems

Firms implement their QC systems through a set of policies and procedures. These policies and procedures vary across firms, reflecting both the principles-based nature of current QC standards and the variation in firms' particular circumstances. To inform the baseline for considering the expected costs of the requirements, PCAOB staff: (1) held initial discussions with U.S. GNFs to obtain qualitative information regarding the resources associated with their QC systems and (2) conducted a voluntary survey of U.S. GNFs on the resources they employ to design, implement, and operate QC policies and procedures. Overall, the information indicates the resources that U.S. GNFs are already devoting to the design, implementation, and operation of QC policies and procedures related to the ISQM 1 requirements.

The U.S. GNF survey requested both qualitative and quantitative information for each of the eight QC system components specified by ISQM 1: risk assessment, governance and leadership, independence and ethics, acceptance and continuance, engagement performance, resources (human, intellectual, and technological), information and communication, and monitoring and remediation.³⁹³ In addition, the survey requested qualitative and quantitative information related to network requirements or network services, evaluation of the QC system, and documentation.³⁹⁴ The request referred to ISQM 1 explicitly in order to facilitate comparability of the information gathered across firms and to the proposed QC standard.

All six U.S. GNFs provided qualitative information and five provided quantitative information. Staff received completed surveys between June 23 and July 6, 2021. The respondents provided the information as of their most recently completed fiscal year-end or QC system assessment date.

The qualitative information that PCAOB staff received indicates that U.S. GNFs' QC policies and procedures are extensive and highly integrated with the audit process. Multiple groups, teams, functions, and individuals participate in the design, implementation, and operation of QC policies and procedures. Engagement teams play a key role in the operation of many QC policies and procedures. Among other QC-related responsibilities, engagement

teams often assist in acceptance and continuance decisions; initiate consultations; help maintain accurate and complete information within independence systems; attend training; and initiate and complete individual performance evaluations.

The U.S. GNFs' QC systems involve multiple IT systems that support QC activities and may also serve other operational functions. These QC systems may also rely upon work or services provided by the firm's global network and/or third-party vendors. Global network services may relate to development and maintenance of technological and intellectual resources (e.g., global audit methodology, global independence and assurance policies and procedures, etc.) or monitoring the quality of audit services performed by network affiliates. The firms report making ongoing investments in their QC systems, including implementation of new technology that supports QC activities.

The quantitative portion of the survey asked the U.S. GNFs to estimate: (1) the number of firm personnel involved in designing, implementing, or operating QC policies and procedures on an annual basis (by partner vs. non-partner); (2) the percentage of their time committed; and (3) the expected percentage change in QC resource requirements as of December 15, 2022, when ISQM 1 became effective.³⁹⁵ PCAOB staff asked the firms to include in their estimates only those resources directly related to the design, implementation, and operation of QC policies and procedures over audits of U.S. issuers and broker-dealers. In cases where removing time spent on QC policies and procedures related to audits of private companies was prohibitively difficult or impossible, staff asked firms to include this time in their estimates and describe the inseparable portion. Firms reported that their QC policies and procedures generally apply across their entire audit practice and thus their estimates typically included resources dedicated to QC systems over engagements

³⁹⁵ More specifically, staff asked U.S. GNFs to estimate the number of firm personnel who are directly involved in the design, implementation, or operation of each QC system component by commitment level (i.e., <10%, 10–40%, 40–60%, 60–90%, or >90% of the individual's time). If an individual committed time to multiple QC system components, staff asked firms to count the individual once for each QC component and to indicate the time committed to each component. For example, if an individual committed 100% of the individual's time to the firm's QC system, 50% to acceptance and continuance and 50% to monitoring and remediation, firms were asked to count the individual under the 40–60% commitment level for both components.

performed under PCAOB standards as well as audits performed under other standards.

In initial discussions with the U.S. GNFs, firms reported that identifying all firm personnel hours related to their QC systems would be an enormous challenge. To make the data request feasible, PCAOB staff directed firms to exclude from their quantitative estimates time spent by engagement teams operating QC policies and procedures (e.g., performing independence procedures, planning for or engaging in consultations, executing the firm's methodology) and facilitating internal inspections. Staff also asked firms to exclude: (1) time spent by firm personnel attending training; (2) time spent by individuals on compliance with personal independence policies and procedures; (3) time spent performing engagement quality reviews of individual engagements; and (4) any resources invested at the global network level to design, implement, or operate QC policies or procedures. The qualitative information received from the firms suggests that these aspects of their QC systems are likely resource-intensive.

Table 1 summarizes the quantitative information received in aggregate form. It presents the means and standard deviations of partner, non-partner, and total full-time equivalents (FTEs) by QC system component.³⁹⁶ The means provide a sense of average scale while the standard deviations provide a sense of average variability across the firms. Overall, the means presented in Table 1 indicate that U.S. GNFs commit a mean of 647.9 total FTEs to designing, implementing, and operating their QC policies and procedures. QC policies and procedures related to: (1) independence and ethics utilize a mean of 189.9 total FTEs and (2) human,

³⁹⁶ To calculate the means presented in Table 1, staff summed the number of individuals directly involved in the design, implementation, or operation of each QC system component, weighting individuals by the mid-point of their respective commitment level and divided by the number of firms that were able to provide data for the respective QC system component. The "Total" row mean is equal to the number of individuals directly involved in the design, implementation, or operation of any QC system component, weighting individuals by the mid-point of their respective commitment level divided by five (i.e., the number of firms that provided quantitative information). Therefore, the "Total" row mean does not equal the sum of the QC component-level means. The standard deviations presented in Table 1 were calculated without Bessel corrections. The standard deviation for the "Other" component is equal to the geometric mean of the standard deviations of the network requirements or network services, evaluation of the system of quality management, and documentation components. The Board's data are insufficient to account for potential covariances between these components.

³⁹³ See paragraphs 23–33 and 35–47 of ISQM 1.

³⁹⁴ See paragraphs 48–60 of ISQM 1.

intellectual, and technological resources utilize a mean of 252.6 total FTEs. Non-partner FTEs are roughly 3.5 times partner FTEs, but partners play a relatively larger role in the governance and leadership, engagement performance, and monitoring and remediation components of QC systems. The standard deviations presented in Table 1 indicate that the average variability across firms is 499.9 total FTEs. The average variability for the independence and ethics component is 173.9 total FTEs and for the resources component is 295.2 total FTEs.

The mean “Total” row values presented in Table 1 may include some underestimation error for several reasons. First, some firms were unable to reasonably estimate all of the resources for certain components, most notably for the governance and leadership component. Second, firms were generally unable to reliably estimate the cost of IT infrastructure

that supports the QC system. Third, firms were generally unable to reliably estimate the portion of common-pool resources attributable to the QC system that support broader operational or financial objectives of the firm. Fourth, due to estimation challenges as described above, firms were directed to exclude certain resources from their estimates, including time spent by engagement teams executing QC policies and procedures and time spent by firm personnel attending training.

By contrast the mean “Total” row values may also include some overestimation error. For example, firms broadly reported that their QC policies and procedures apply to both issuer and non-issuer audits and it would generally be infeasible to identify firm personnel hours related to quality control over issuer audits only. In these cases, PCAOB staff asked firms to include both issuer and non-issuer QC hours in their estimates.

Some firms were unable to separately break out the level of resources committed to designing, implementing, and operating QC policies and procedures for risk assessment, information and communication, network requirements or network services, evaluation of the system of quality management, and documentation. These firms distributed these resources across the remaining components. While this leads to some overestimation error to the remaining components, the information provided by the firms that were able to separately break out these components indicates that these components are relatively less resource-intensive and, therefore, the overestimation error is likely small. This overestimation error does not apply to the mean “Total” row values because any errors in how the firms allocated across components nets out when summing.

TABLE 1—RESOURCES ASSOCIATED WITH U.S. GNFS’ QC POLICIES AND PROCEDURES

	Partner (FTEs) mean	Non-partner (FTEs)	Total (FTEs)			
			Per firm	St. dev	Mean per firm	St. dev
Risk Assessment	2.1	1.4	4.6	2.3	6.7	2.4
Governance and Leadership	10.0	5.8	9.2	9.3	19.2	14.7
Independence and Ethics	17.7	15.7	172.2	164.2	189.9	173.9
Acceptance and Continuance	11.5	6.1	13.7	13.8	25.2	14.2

*The “Other” category includes network requirements or network services, evaluation of the system of quality management, and documentation.

Most U.S. GNFS were unable to provide precise estimates regarding expected future changes in QC system resource requirements as of December 15, 2022, when ISQM 1 became effective. The qualitative information provided by the firms indicates that: (1) additional resources likely were required; (2) some of the U.S. GNFS had assigned teams to manage ISQM 1 implementation; and (3) the risk assessment component and the evaluation of the system of quality management component were expected to require the most additional resources.

The Board also received information regarding non-GNFS through the proposal comment process that indicates that non-GNFS have devoted resources to the design, implementation, and operation of QC policies and procedures related to ISQM 1 and/or SQMS 1 requirements. One commenter

noted that national firms with fewer than 500 issuers have significantly fewer resources associated with QC policies and procedures.³⁹⁷ One commenter noted that firms have invested significant time and resources to comply with the existing quality management standards from other standard setters, and another commenter noted that, at least with respect to QC roles and responsibilities, smaller firms have already designed their processes to accord with ISQM 1

³⁹⁷ The commenter asserted that the mean total FTEs reported in Table 1 for GNFS represent approximately 10% of partners and employees for firms of similar size and composition to the commenter. However, the commenter also reported having approximately 90% fewer partners and employees than some U.S. GNFS and approximately 99% fewer than other U.S. GNFS, so the resources reported in Table 1 would likely be scaled down accordingly for the commenter and similar sized firms.

and SQMS 1. One firm explained that its implementation efforts of ISQM 1 required a great deal of evaluation of risks and related responses, and another firm explained that its implementation effort was a significant undertaking that involved a number of people across the firm. Another commenter suggested that non-U.S. firms may be incorporating quality management frameworks adopted by their local regulator, such as CPAB’s Quality Management System framework. Several commenters representing non-GNF perspectives focused more generally on the provisions of QC 1000 that diverge from ISQM 1 and SQMS 1, which the Board understands as implying that these firms had expended resources to construct and operate quality control systems in compliance with those standards. However, at least one

commenter noted that for small firms that do not need to comply with ISQM 1, efforts may be ongoing to implement SQMS 1, indicating that some of these firms may be focused on resources for design and may not yet be spending resources to operate QC policies in line with SQMS 1.

One commenter noted research that appears to be too tangential or unrelated to actual resources employed by firms to be useful for advancing the Board's understanding of resources associated with the design, implementation, and operations of their QC systems. The commenter noted that most academic studies related to resources employed by NAFs or foreign affiliates of GNFs in the design, implementation, and operations of their QC systems focus on either: (1) the contributions of internal quality reviews to audit firm quality³⁹⁸ or (2) the association of audit firm network arrangements, as proxies for resources, with audit quality.³⁹⁹ For example, one study suggests that when firms have formal connections via networks or large alliance arrangements, audits within those arrangements have similar levels of quality,⁴⁰⁰ which the commenter noted may imply that formal connections are a vehicle to share and enforce QC practices.

3. Developments in Firms' QC Policies and Procedures

This subsection provides information on the evolution of firms' QC policies and procedures. First, it describes changes firms have made to their QC policies and procedures to remediate QC deficiencies identified in inspection reports. Second, it presents analyses of QC deficiencies related to firms' management of their audit practices. QC deficiencies related to firms' management of their audit practice relate to the operation of QC policies and procedures. Overall, the information suggests that QC policies and procedures are advancing.

Many firms have implemented a number of changes to their QC systems

to remediate their QC deficiencies.⁴⁰¹ Changes brought about through remediation are wide-ranging and can touch upon all major elements of the current QC standards. The nature, extent, and formality of changes made by a firm vary based on the size of the firm and the nature and complexity of its practice. Examples of changes made by various types of firms include:⁴⁰²

- Adding in-process review and coaching programs to assist engagement teams in certain challenging areas, including ICFR and accounting estimates;
- Creating a committee to evaluate partner performance in relation to audit quality and issuing an accountability framework with penalties for negative audit quality events;
- Implementing a new template that includes guidance to facilitate the assessment and documentation of partner performance, including guidance related to various performance metrics (such as technical knowledge; leadership and training skills; and compliance with firm quality control policies and procedures);
- Requiring audit partners to articulate specific actions they will take to achieve performance goals related to audit quality and providing additional guidance and information around partner workload management;
- Implementing new policies and procedures for engagement teams to focus on obtaining a thorough understanding of how issuers initiate, record, process, and report significant classes of transactions and how that information is recorded in the financial statements;
- Hiring external consultants to work with the firm to develop a new ICFR audit approach;
- Adding new leadership positions to the internal inspection program, developing new analysis and reporting of internal inspection findings, and beginning to disseminate findings more broadly;
- Creating a committee to provide oversight on the firm's audit quality

initiatives and a new leadership position to drive consistency across regions; and

- Implementing new templates that provide guidance related to performing a root cause analysis, including identifying areas of a firm's quality control process to perform causal analysis, collecting relevant data, and documenting the results.

The Board took these observations into account in developing QC 1000.

One commenter, an academic, referred to a recent unpublished study examining how firms change and manage their QC systems, which involved surveying QC leaders from eight U.S. accounting firms. The commenter reported that the three most common changes currently underway in the firms relate to: (1) engagement monitoring and use of data analytics; (2) organizational structure (*e.g.*, a dedicated ISQM team, independent advisors); and (3) a more proactive approach to identifying QC issues.⁴⁰³

Figure 5 presents the average number of QC deficiencies related to firms' management of their audit practice per inspected firm. To prepare Figure 5, PCAOB staff counted the number of distinct QC deficiencies related to firms' management of their audit practice in Part II of PCAOB inspection reports. Staff assigned a zero to firm inspections that resulted in no QC deficiencies related to the firm's management of its audit practice. Staff then calculated averages per inspected firm by year and firm group, assigning equal weight to each QC deficiency regardless of its nature or whether it was a repeat deficiency. While the total number of QC deficiencies are not readily comparable across each of the three categories of firms, the averages have ranged between 0.8 and 10.2 for U.S. GNFs, between 0.3 and 1.5 for other firms having more than five engagements reviewed, and between 0.3 and 0.6 for other firms having five or fewer engagements reviewed.

Evidence from Financial Reporting Comparability*, 95 *The Accounting Review* 151 (2020).

⁴⁰⁰ See Flasher and Schenck, *Exploring PCAOB Inspection Results* 1.

⁴⁰¹ Additional information about the PCAOB remediation process is available on the PCAOB

website at https://pcaobus.org/oversight/inspections/remediation/remediation_process.

⁴⁰² Examples are drawn from firms' Rule 4009 submissions. A Rule 4009 submission is a submission prepared by a firm, pursuant to PCAOB Rule 4009, concerning the ways in which a firm has addressed a QC criticism. For additional background, see PCAOB Rel. No. 104–2006–077.

⁴⁰³ The commenter also reported that the three most commonly described ideal changes relate to: (1) engagement monitoring and use of data analytics; (2) human talent-related initiatives such as changes to hiring and promotion practices; and (3) client risk assessment processes. Ideal changes are described as changes the QC leaders would make if the firms did not face resource constraints.

Figure 5. Average Number of QC Deficiencies Related to Firms' Management of Their Audit Practice per Inspected Firm (2011-2022)

4. Academic Literature on Quality-Threatening Behaviors and Quality Control

This subsection discusses academic research on behaviors that suggest certain weaknesses in QC systems in practice. Over time, researchers have documented a variety of quality-threatening behaviors, including “premature sign-off of audit procedures, failure to perform required procedures, inappropriate reductions in substantive testing or other forms of under-auditing, underreporting of time, inadequate adjustments of audit procedures in response to changing risk conditions, and over-reliance on management explanations of unusual deviations in analytical procedures.”⁴⁰⁴

Some commenters provided additional specific examples of quality-threatening behaviors. For example, one commenter reported that some academic research finds auditors may not always be objective when deciding on the acceptability of management’s accounting choices or when recommending audit adjustments that would reduce reported income or assets.⁴⁰⁵ Citing a settlement between a

U.S. GNF and the Federal Deposit Insurance Corporation, another commenter asserted that one firm’s QC system failed when one of the firm’s engagement teams inappropriately assigned a responsibility to an intern.

Research suggests that quality-threatening behaviors imply a failure of QC systems to provide reasonable assurance of compliance.⁴⁰⁶ Moreover, some research suggests that, while not solely responsible, certain features of firms’ management of their audit practice may encourage quality-threatening behaviors.⁴⁰⁷ For example, experimental research suggests that certain cognitive biases in auditor evaluation and reward systems may inadvertently deter appropriate professional skepticism⁴⁰⁸ and other studies suggest that partner reward systems at some firms may weight revenue generation more heavily than professional competencies.⁴⁰⁹ Some research finds that reward systems

oriented toward revenue generation are associated with lower proxies for audit quality.⁴¹⁰ Synthesizing several recent academic studies, one commenter reported that an excessive focus on commercialism, rather than professionalism, continues to be a dominant focus within firms’ cultures and may negatively impact audit quality.⁴¹¹ The commenter also reported that academic research indicates quality-threatening behaviors may be negatively associated with audit team leadership characteristics.⁴¹² For

Hopkins, and Joseph H. Schroeder, *An Investigation of Auditors’ Judgments When Companies Release Earnings*

example, skeptical auditors may be penalized if they do not find a material misstatement,⁴¹³ audit managers sometimes reward senior associates for performing the unethical act of under-reporting time when the client is more desirable,⁴¹⁴ or while internal inspections lead to increased auditor effort in the inspection year, positive internal inspection results may lead auditors to decrease effort in the future.⁴¹⁵

An excessive focus on commercial objectives may also lead to undue focus on cost-control in the execution of audits. For example, in one study, audit staff report working, on average, five hours per week, and sometimes 20 hours per week, past the threshold where they feel audit quality begins to deteriorate.⁴¹⁶ In another study, audit staff report working on average 72 hours per week during busy season.⁴¹⁷ Other research finds that a heavier workload in the fieldwork phase of the audit is negatively associated with proxies for audit quality⁴¹⁸ and that high levels of time pressure are positively associated with audit quality-threatening behaviors.⁴¹⁹ Referring to academic research, one commenter reported that

Karla M. Johnstone, *A Field Survey of Contemporary Brainstorming Practices*, 30 Accounting Horizons 449 (2016); Jodi L. Gissel and Karla M. Desirability in this case is determined by various situational and contextual factors that are inherent to the client, such as a client that is convenient for the audit manager's work schedule, a client that is easy to get to, client management that the audit manager gets along particularly well with personally, a client that is within the audit manager's industry of interest, or an engagement that involves an influential partner at the audit manager's office.

engagement-level pressures, including meeting budgets, can affect audit quality.⁴²⁰ The commenter also reported that academic research finds that audit partner workload compression is negatively associated with audit quality.⁴²¹

One commenter noted academic papers that study various factors that may impact audit quality but appear to be too tangential or unrelated to quality-threatening behaviors that suggest certain weaknesses in QC systems. The commenter included academic research that studies the relationship between audit teams' use of the work of other participants and audit quality.⁴²² The commenter also cited research from other countries that finds evidence that partner-related characteristics influence audit quality.⁴²³ In addition, the

Robert

commenter noted academic papers that find evidence that non-audit services can negatively affect audit quality through mechanisms other than independence impairment.⁴²⁴ Moreover, the commenter included research that has examined the association between PCAOB inspections of audit firms and audit quality but does not appear to relate specifically to weaknesses in QC systems.⁴²⁵

5. Assumptions Regarding the Baseline

Absent the requirements, the Board believes that many firms would continue to design and implement new QC policies and procedures or modify existing QC policies and procedures in response to evolving audit market conditions, technological advances, PCAOB oversight activities, internal monitoring, and actions of other standard setters.⁴²⁶ The Board believes that most firms have either implemented ISQM 1 or will implement SQMS 1 when it goes into effect. PCAOB-registered firms with an international presence or that are part of a global network will likely find it efficient to design and implement a QC system that complies with both PCAOB standards and ISQM 1 and have that

Peña-Romera, *The Revolving Door between Large Audit Firms and the PCAOB: Implications for Future Inspection Reports and Audit Quality*, 97 The Accounting Review 261 (2022).

⁴²⁶ See above for additional background on the actions of other standard setters.

system operate over their entire assurance practice. For similar reasons, PCAOB-registered firms with a private company audit practice will likely find it efficient to design and implement a QC system that complies with both PCAOB standards and SQMS 1 and have that system operate over their entire assurance practice.

Supporting that view, comment letters on the proposing release suggest that some firms have already designed and implemented, or are in the process of designing and implementing, QC policies and procedures consistent with the requirements of other QC standards. For example, one commenter said that nearly all firms are subject to multiple QC standards, including ISQM 1. Another commenter said that firms in Europe have invested heavily to implement ISQM 1. Another commenter said that nearly all firms that will need to adopt QC 1000 are also subject to other QC standards, including ISQM 1 and SQMS 1, and that firms have already invested significant time and resources to comply with them. Another commenter presented its recent survey research that finds firms have started to prepare for ISQM 1 and SQMS 1 implementation but that there is variation in their level of preparedness.⁴²⁷ Overall, the comments indicate that firms have made progress implementing the quality control standards of other standard setters.

The Board's view is also informed by several public information sources. First, the AICPA website indicates that most registered firms that are headquartered in the U.S. were reviewed as part of the AICPA's Peer Review program since 2019, and therefore were required to comply with AICPA QC standards at that time.⁴²⁸ Second, among the U.S.-headquartered firms that signed an issuer or broker-dealer audit opinion in 2021 but were not peer reviewed since 2019, most indicate on their web page that they perform audits or tax services that require them to comply with AICPA QC standards. Third, most foreign jurisdictions require companies to have a statutory audit performed, which the Board believes suggests that most registered firms headquartered in foreign jurisdictions likely perform audits under IAASB QC standards. Finally, firms' annual reports filed with

the PCAOB on Form 2 for the April 1, 2022, through March 31, 2023, reporting period indicate that most firms collected fees for services aside from the performance of issuer audits and therefore may have performed services subject to AICPA or IAASB QC standards during that time. Overall, the Board believes these public information sources support its view that most firms will be complying with either ISQM 1 or SQMS 1. Furthermore, most firms that will not be complying with ISQM 1 or SQMS 1 will likely be scaled-applicability firms and therefore less impacted by the requirements.

Need

1. Introduction and summary

This section discusses the problem that the requirements are intended to address and explains how the requirements address it. Overall, three observations suggest that there is a problem that the requirements will help to address:

- Under current PCAOB QC standards, a firm's QC system is required to provide reasonable assurance that the firm's personnel comply with applicable professional standards, regulatory requirements, and the firm's standards of quality.⁴²⁹ However, the audit market does not currently provide sufficient incentives for all firms to design, implement, and operate QC systems that achieve this requirement on a consistent basis.
- Current PCAOB QC standards contain higher-level principles and do not directly address recent developments in QC. As a result, the current regulatory baseline is not rigorous enough to sufficiently support PCAOB oversight, further undermining firms' and individuals' incentives to provide the required reasonable assurance.

- The lack of incentives to provide the required reasonable assurance is evidenced by the prevalence of audit performance deficiencies—i.e., Part I.A deficiencies and QC deficiencies related to audit performance discussed above—which, as noted in the first two observations above, suggest that some firms' QC systems are not providing the required reasonable assurance.

The requirements of QC 1000 will help address the problem by establishing three overarching features, which are discussed further below:

- The requirements mandate firms' QC systems to more proactively assess risks and monitor and remediate deficiencies.

- The requirements improve accountability within firms with respect to the reasonable assurance objective.

- The requirements use more precise language and include more prescriptive requirements in key areas to reflect best practices.

2. The Audit Market Does Not Provide Sufficient Incentives for All Firms To Design, Implement, and Operate QC Systems That Provide Reasonable Assurance

A diverse set of investors and other financial statement users need and request high quality audits. However, due to the presence of asymmetric information⁴³⁰ and positive externalities⁴³¹ in the audit market, there are not sufficient incentives for all firms to design, implement, and operate QC systems that provide reasonable assurance that a firm's personnel comply with applicable professional standards, regulatory requirements, and the firm's standards of quality. This lack of incentives can lead to an inefficient allocation of audit services as described in the following paragraphs.

Investors and other financial statement users cannot easily observe the services performed by an auditor. This information asymmetry creates a risk that, unbeknownst to investors and other financial statement users, auditors may under-audit and gather insufficient audit evidence to support their opinion or may otherwise depart from applicable requirements. Economic theory refers to this effect as moral hazard.⁴³² While this may enable the auditor to do less work and reduce potential conflicts with company management and may therefore lead to short-run benefits for the auditor, it may also lead to a net welfare loss in the audit market as a whole.⁴³³

⁴³⁰ See N. Gregory Mankiw, *Principles of Economics* 468 (6th ed. 2008) ("A difference in access to relevant knowledge is called an information asymmetry.").

⁴³¹ See Mankiw, *Principles of Economics* 196 ("An externality arises when a person engages in an activity that influences the well-being of a bystander but neither pays nor receives any compensation for that effect. . . . If it is beneficial, it is called a positive externality.").

⁴³² See, e.g., Mankiw, *Principles of Economics* 468 ("Moral hazard is a problem that arises when one person, called an agent, is performing some task on behalf of another person, called the principal. If the principal cannot perfectly monitor the agent's behavior, the agent tends to undertake less effort than the principal considers desirable.").

⁴³³ See, e.g., Mankiw, *Principles of Economics* 145 ("Consumer surplus and producer surplus are the basic tools that economists use to study the welfare of buyers and sellers in a market. Consumer surplus is the benefit that buyers receive from participating in a market, and producer surplus is the benefit that sellers receive. It is therefore natural

⁴²⁸ See AICPA Peer Review web page, available at <https://us.aicpa.org/interestareas/peerreview>.

⁴²⁹ See above for more discussion of current QC requirements.

A positive externality inherent to the current audit market may exacerbate this risk. The services of an auditor provide benefits to a variety of investors and financial statement users, including current shareholders, potential shareholders, investors in other companies, creditors, and regulators, among others. However, auditors do not bargain with all of these parties. Rather, Sarbanes-Oxley requires that the audit committee be responsible for the appointment, compensation, and retention of the auditor.⁴³⁴ In practice, company management may also play a role through its influence over the audit committee.⁴³⁵ This creates a *de facto* principal-agent relationship between the company and the auditor. Moreover, some beneficiaries of the auditor's work (e.g., investors generally, who benefit from overall confidence in the quality of financial information provided to the market) may have no influence on the auditor at all. Economic theory suggests that, in the presence of positive externalities such as these, markets may undersupply goods or services.⁴³⁶ As a result, the positive externality in the audit market may create an additional risk that auditors may gather insufficient audit evidence to support their opinion or otherwise depart from applicable requirements.

A firm also faces its own management challenges in implementing its desired service, economic, and regulatory compliance objectives. Individual offices or personnel may have incentives that diverge from the firm's collective best interest. For example, some research suggests that certain partners or offices may be commercially dependent on particular clients and may be willing to take risks to retain those clients that the firm as a whole would not—a form of free riding on the firm's reputation and capacity to absorb

potential litigation costs.⁴³⁷ In addition, research suggests that an audit firm's QC system is essential to increase audit effort and audit quality because it aligns incentives of individual partners with those of the firm.⁴³⁸ Even if QC systems were able to align the incentives of individual offices and personnel to the firm's collective best interest, some research suggests that behavioral biases (e.g., confirmation bias, over-optimism, and anchoring bias) may lead offices or personnel to act in ways contrary to both their own self-interest and the firm's collective best interest.⁴³⁹ One commenter presented its recent unpublished survey research regarding challenges firms face when implementing changes to their QC systems. The commenter reported that challenges include obtaining buy-in and acceptance from staff as well as managing different perspectives from various offices.⁴⁴⁰

Some firms may manage these challenges by adopting centralized control practices that may have ambiguous impacts on their QC systems. For example, academic research suggests that firms carefully screen new partners to act in the best interest of the firm⁴⁴¹ and emphasize meeting engagement budgets—an easily monitored metric that ties directly to profitability.⁴⁴² One commenter asserted that audit firms' financial incentives to operate too lean undermine audit quality. Investors and other financial statement users may have trouble monitoring how firms incentivize, implement, and monitor compliance with applicable professional requirements. These monitoring challenges, as well as the lack of specificity in current PCAOB QC standards, give firms the flexibility to design, implement, and operate QC systems that may not fully meet the needs of investors and other financial statement users.

In the absence of sufficient market incentives to achieve an efficient allocation of audit services,⁴⁴³ regulatory intervention can introduce incentives that generate changes in behavior and impact audit quality.⁴⁴⁴ For example, economic research suggests that auditing standards play a role in determining the amount of effort an auditor exerts, which ultimately impacts audit quality.⁴⁴⁵ In addition, auditing standards can introduce incentives by providing a baseline against which an auditor manages legal liability.⁴⁴⁶ Auditing standards also provide a benchmark for regulatory inspections and enforcement actions that introduce incentives for firms to initiate changes that impact audit

⁴⁴³ An efficient allocation of resources occurs when total surplus is maximized. Total surplus is maximized when the good or service in question is supplied until the marginal benefit is equal to the marginal cost. See Mankiw, *Principles of Economics* 146–148.

⁴⁴⁴ See, e.g., W. Robert Knechel, *Do Auditing Standards Matter?*, 7 *Current Issues in Auditing* A1 (2013) (explaining that auditing standards send a message to auditors that it is inappropriate to intentionally under-audit, regardless of incentives). Note that QC standards are not auditing standards but that auditing standards are a closely related form of regulatory intervention. Also, academic research suggests that a positive association among standard setting, auditor effort, and audit quality depends on a number of factors. See, e.g., Pingyang Gao and Gaoqing Zhang, *Auditing Standards, Professional Judgment, and Audit Quality*, 94 *The Accounting Review* 201 (2019) (showing that auditing standards can help align auditor incentives with investor interests by compelling the auditor to exert more effort, which improves audit quality, but that auditing standards can weaken the auditor's incentive to acquire expertise, which reduces audit quality); Mark DeFond and Jieying Zhang, *A Review of Archival Auditing Research*, 58 *Journal of Accounting and Economics* 275 (2014) (concluding that the effectiveness of auditing standard setting is difficult to gauge since it involves broader consideration of the social welfare of all stakeholders).

⁴⁴⁵ See, e.g., Marleen Willekens and Dan A. Simunic, *Precision in Auditing Standards: Effects on Auditor and Director Liability and the Supply and Demand for Audit Services*, 37 *Accounting and Business Research* 217 (2007) (showing that decreasing the precision of auditing standards initially incentivizes auditors to produce higher audit quality by exerting more effort but that decreasing precision beyond a certain point leads auditors to decrease effort).

⁴⁴⁶ See, e.g., Ronald A. Dye, *Auditing Standards, Legal Liability, and Auditor Wealth*, 101 *Journal of Political Economy* 887 (1993) (showing that an auditor who intends to comply with standards typically prefers higher standards when the auditor's personal wealth is observable by potential litigants but prefers lower standards when the auditor's wealth is unobservable); Causholli and Knechel, *An Examination of the Credence* 631 (explaining that regulation and litigation play an important role in shaping the audit process and an auditor's behavior); Knechel, *Do Auditing Standards A1* (explaining that auditing standards can influence the likelihood and extent of under-auditing by providing a basis for auditor liability that is an increasing function of the extent to which auditor effort falls short of the standard-compliant level).

to use total surplus as a measure of society's economic well-being. . . Total surplus in a market is the total value to buyers of the goods, as measured by their willingness to pay, minus the total cost to sellers of providing those goods.”).

⁴³⁴ See section 301 of Sarbanes-Oxley, 15 U.S.C 78j–1.

⁴³⁵ See, e.g., Liesbeth Bruynseels and Eddy Cardinaels, *The Audit Committee: Management Watchdog or Personal Friend of the CEO?*, 89 *The Accounting Review* 113 (2014) (finding that social ties between management and the audit committee are present in 39% of the companies in their sample and “may reduce the quality of the audit committee's oversight”).

⁴³⁶ See, e.g., Mankiw, *Principles of Economics* 200, 201 (“In the presence of a positive externality, the social value of the good exceeds the private value. The optimal quantity is therefore larger than the equilibrium quantity . . . Positive externalities lead markets to produce a smaller quantity than is socially desirable.”).

⁴³⁷ See, e.g., Robert A. Prentice, *The Case of the Irrational Auditor: A Behavioral Insight into Securities Fraud Litigation*, 95 *Northwestern University Law Review* 133 (2000).

⁴³⁸ See, e.g., Daniel Aobdia, *The Economic Consequences of Audit Firms' Quality Control System Deficiencies*, 66 *Management Science* 2883 (2019).

⁴³⁹ See, e.g., Prentice, *The Case of the Irrational Auditor* 133, 162.

⁴⁴⁰ See Hayne, et al., *Managing Quality Control Systems*.

⁴⁴¹ See, e.g., C. J. McNair, *Proper Compromises: The Management Control Dilemma in Public Accounting and its Impact on Auditor Behavior*, 16 *Accounting, Organizations and Society* 635 (1991).

⁴⁴² See, e.g., Bernard Pierce and Breda Sweeney, *Cost–Quality Conflict in Audit Firms: An Empirical Investigation*, 13 *European Accounting Review* 415 (2004).

quality.⁴⁴⁷ Moreover, research suggests that PCAOB Part II inspection findings introduce strong incentives for firms to make changes necessary to remediate QC deficiencies in order to avoid public disclosure of the deficiencies.⁴⁴⁸

3. Current PCAOB QC Standards Do Not Directly Address Recent QC Developments

Developments in the auditing environment since the development of the current PCAOB QC standards by the AICPA and subsequent adoption of these standards on an interim basis by the Board are discussed above. In brief and as discussed above, the audit market has changed significantly since the AICPA developed the current PCAOB QC standards in 1997. At that time, the audit market was largely self-regulated by firms and QC inspections were performed through a peer review program. Since then, PCAOB oversight has led firms to address deficiencies identified during inspections, including making changes to their QC systems to remediate QC deficiencies.⁴⁴⁹ There have also been significant developments in the use of technology by firms in relation to QC activities and performing engagements. Some firm management and organizational structures have also evolved to include more focus on centralization and a globally consistent methodology. Some firms have strengthened their approaches to firm governance and leadership, incentive systems, and accountability. In addition, thought leadership in quality management has advanced,⁴⁵⁰ as have the QC standards adopted by other standard setters.

The current PCAOB QC standards are based on the higher-level principles described above and do not directly address the developments described in the previous paragraph. While research suggests that PCAOB oversight is

associated with higher audit quality,⁴⁵¹ the current PCAOB QC standards were not written with a view to inspection and enforcement by a regulator. As a result, the current PCAOB QC standards yield a regulatory baseline that is not rigorous enough to sufficiently support the Board's ability to address audit performance deficiencies through PCAOB inspection and enforcement activities related to firms' QC systems. For example, some firms have added external parties to oversight roles as described above, but current PCAOB QC standards contain limited references to firm governance and leadership. At the same time, the current PCAOB QC standards do not provide sufficiently specific requirements to directly incentivize firms and individuals to establish and implement QC policies and procedures that achieve the reasonable assurance objective as evidenced by the prevalence of audit performance deficiencies.

4. Prevalence of Audit Performance Deficiencies

The three proxies for the level of compliance with applicable professional standards discussed above—*i.e.*, Part I.A deficiencies, QC deficiencies related to audit performance, and deficiencies arising during inspections of broker-dealer engagements—as well as the recent PCAOB enforcement actions discussed above suggest that some firms' QC systems are not providing reasonable assurance as required under current PCAOB QC standards.⁴⁵² To be sure, this analysis of PCAOB inspection activities does suggest that some improvements in audit performance have followed from remedial changes firms have made to their QC systems⁴⁵³ and that some firms have already reduced the number of QC deficiencies related to management of their audit practice.⁴⁵⁴ However, the Board continues to observe high rates of audit performance deficiencies⁴⁵⁵ and believes that a new QC standard will address these audit performance deficiencies because the new standard

will incentivize firms to design, implement, and operate effective QC systems.

5. How the Requirements Address the Need

The requirements provide substantial additional direction to firms regarding the design, implementation, and operation of their QC systems that the Board believes address the need for standard-setting. Three overarching features of the requirements help address the problem. The first feature pertains to the mandate for a more integrated, proactive, and risk-based QC system. The second pertains to the enhancements to accountability within the firm to achieve the reasonable assurance objective. The third pertains to more precise language and more prescriptive requirements in several key areas.

Regarding the first feature, the new risk assessment process, coupled with a detailed monitoring and remediation process, form a feedback loop designed to foster a proactive approach to QC that drives continuous improvement. For example, the risk assessment process requires the firm to obtain an understanding of the conditions, events, and activities that may adversely affect the achievement of its quality objectives; identify and assess quality risks; and then design and implement quality responses. The monitoring and remediation process will help the firm evaluate whether the QC system is working effectively in practice. This more proactive approach to QC should help address the positive externality problem in the audit market by leading firms to implement QC systems that more consistently satisfy the interests of all beneficiaries of the audit. Additionally, as discussed above, information asymmetry may cause investors and other financial statement users not to have sufficient information to understand whether their issuer's audit firm has an effective QC system that consistently produces high-quality audits, and investors and other financial statement users may not have a sufficient voice in the financial reporting ecosystem to be able to demand or incentivize audit firms to implement one. Requiring the auditor to implement a robust QC system substitutes a compliance incentive for the insufficient market incentive.

Regarding the second feature, the Board believes QC 1000 will improve accountability within the firm to achieve the reasonable assurance objective. Several of the requirements that improve accountability within the firm address the positive externality

⁴⁴⁷ See, e.g., Aobdia, *The Impact of the PCAOB Individual 53* (finding that firms take corrective action on engagements with PCAOB Part I inspection findings and the effects spillover to non-inspected engagements); Phillip T. Lamoreaux, Michael Mowchan, and Wei Zhang, *Does Public Company Accounting Oversight Board Regulatory Enforcement Deter Low-Quality Audits?*, 98 *The Accounting Review* 335 (2023) (finding that large audit firm offices improve audit quality following enforcement naming another office within their firm while small firm offices improve following enforcement of local small firm competitors).

⁴⁴⁸ See, e.g., Aobdia, *The Economic Consequences* 2883.

⁴⁴⁹ See discussion on the developments in firms' QC policies and procedures within the baseline discussion above.

⁴⁵⁰ See, e.g., COSO, ISO 9000, and the audit firm governance codes of the UK Financial Reporting Council and Japan Financial Services Agency.

⁴⁵¹ See, e.g., Albert L. Nagy, *PCAOB Quality Control Inspection Reports and Auditor Reputation*, 33 *Auditing: A Journal of Practice & Theory* 87 (2014) (concluding that audit firms lose market share following public disclosure of PCAOB Part II inspection findings, suggesting that disclosure provides a credible signal of auditor quality). The results from this study that suggests a positive association between PCAOB oversight and audit quality does not necessarily mean that PCAOB oversight causes higher audit quality.

⁴⁵² See Background discussion above for more discussion of current regulatory requirements.

⁴⁵³ This point is discussed more fully in below.

⁴⁵⁴ See Figure 5 above.

⁴⁵⁵ See Figures 1 and 3 above.

problem directly by leading firms to implement QC systems that more consistently satisfy the interests of all beneficiaries of the audit. For example, QC 1000 requires the firm to document and assign roles and responsibilities; communicate information related to the monitoring and remediation process to firm personnel to enable them to take timely action in accordance with their responsibilities; and establish a quality objective to incentivize individuals to fulfill their assigned responsibilities, through means such as performance evaluations and compensation. Leadership will also be accountable for the design, implementation, and operation of the firm's QC system, including through means such as their performance evaluation and compensation, and the firm will be required to establish a quality objective that leadership communicate and promote the firm's role in protecting the interests of investors and the public interest. The requirements that improve accountability within the firm will help address the information asymmetry problem by requiring the firm's QC system to operate over any public reporting regarding firm or engagement metrics that the firm provides.⁴⁵⁶ Overall, this second feature reinforces the first through an additional incentive that is personal to responsible individuals within the firm and reinforces the general incentives for the firm to comply with the standard.

Regarding the third feature, while the requirements provide substantial additional guidance to firms regarding the design, implementation, and operation of their QC systems, QC 1000 also provides more precise and prescriptive requirements that will enhance the Board's ability to inspect and enforce and incentivize firms to design, implement, and operate effective QC systems. For example, QC 1000 includes more unconditional responsibilities than current PCAOB QC standards and specifies precise conditions under which a firm must design, implement, and operate an effective QC system. Together with the features described above—*i.e.*, a more integrated, proactive, and risk-based QC system and enhanced accountability within the firm to achieve the reasonable assurance objective—these features establish a regulatory baseline that more directly incentivizes firms and individuals to comply in order to avoid enforcement.

⁴⁵⁶ See PCAOB Rel. No. 2024–002 and PCAOB Rel. No. 2024–003.

Economic Impacts

This section discusses the expected benefits and costs, and the potential unintended consequences, that may result from the requirements. The expected impacts of several key provisions are highlighted. These provisions relate to:

- Scaled applicability;
- In-process monitoring activities;
- Firm governance structure;
- The automated independence process;
- Complaints and allegations policies and procedures;
- Reporting the annual QC system evaluation;
- Certification of the annual QC system evaluation;
- Responding to engagement deficiencies identified after issuance of the audit report; and
- SECPS requirements.

While the analysis of economic impacts is largely qualitative in nature due to data limitations, the analysis does, in part, use PCAOB inspections data to help evaluate the expected benefits. Technical details regarding the quantitative analysis of the expected benefits are included in a separate staff white paper.⁴⁵⁷

The economic impacts of the requirements will arise out of changes firms will make to their QC systems that they would not otherwise make but for the requirements. As discussed above, the Board expects that, absent the requirements, many firms would continue to make changes to their QC systems in response to evolving audit market conditions, advances in technology, PCAOB oversight activity, internal monitoring, and the actions of other standard setters. This attenuates both the benefits and the costs attributable to the requirements.

1. Benefits

The expected benefits of the requirements are described using four complementary views: (1) the benefits of quality management frameworks generally; (2) the direct benefits of the requirements in the form of improved compliance with applicable professional and legal requirements; (3) the indirect benefits of the requirements in the form of improved financial reporting quality and capital market efficiency; and (4) the benefits of key provisions.

⁴⁵⁷ See PCAOB, *Staff White Paper, The Impact of Quality Control System Remediation on Audit Performance and Financial Reporting Quality* (Nov. 18, 2022), (“QC White Paper”), available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/rulemaking/docket046/qc-staff-white-paper-november-2022.pdf?sfvrsn=dcb22504_4.

a. Benefits of Related Frameworks

QC 1000 bears resemblance to existing quality management and enterprise risk management frameworks (*e.g.*, ISO 9000 and COSO). These frameworks share several features in common with QC 1000, including embedding risk in decision making, proactive involvement of leadership, clearly defined objectives, objective-oriented processes, monitoring, and remediation. Using a variety of proxies (*e.g.*, market reaction), academic research has found that these frameworks improve company performance.⁴⁵⁸ In particular, researchers have found that the COSO framework—the closest antecedent to QC 1000—effectively improves financial reporting.⁴⁵⁹ Similarly, research finds that markets penalize public companies with weaker internal control systems and reward the remediation of those weaknesses.⁴⁶⁰ While differences between QC 1000 and existing frameworks as well as differences between audit firms and other companies may limit the relevance of this research to some extent, this research suggests that QC 1000 may help firms design, implement, and operate more effective QC systems.

b. Improved Compliance With Applicable Professional and Legal Requirements

The Board expects the requirements will benefit investors and other financial statement users by improving compliance with applicable professional and legal requirements via a more detailed QC standard. As described above, the requirements are expected to achieve this through three principal mechanisms. First, they explicitly connect the components of the QC system into an integrated cycle of risk assessment, performance monitoring, and remediation. Second, several of the new requirements will support the effectiveness of QC systems by

⁴⁵⁸ See, *e.g.*, Iñaki Heras-Saizarbitoria and Olivier Boiral, *ISO 9001 and ISO 14001: Towards a Research Agenda on Management System Standards*, 15 *International Journal of Management Reviews* 47 (2013); Robert E. Hoyt and Andre P. Liebenberg, *The Value of Enterprise Risk Management*, 78 *Journal of Risk and Insurance* 795 (2011).

⁴⁵⁹ See, *e.g.*, Hanwen Chen, Wang Dong, Hongling Han, and Nan Zhou, *A Comprehensive and Quantitative Internal Control Index: Construction, Validation, and Impact*, 49 *Review of Quantitative Finance and Accounting* 337 (2017); Ifeoma Udeh, *Observed Effectiveness of the COSO 2013 Framework*, 16 *Journal of Accounting & Organizational Change* 31 (2020).

⁴⁶⁰ See, *e.g.*, Hollis Ashbaugh-Skaife, Daniel W. Collins, William R. Kinney, Jr., and Ryan Lafond, *The Effect of SOX Internal Control Deficiencies on Firm Risk and Cost of Equity*, 47 *Journal of Accounting Research* 1 (2009).

emphasizing accountability to the reasonable assurance objective. Third, more precise and prescriptive requirements will enhance the Board's ability to inspect and enforce. Broker-dealer engagements and issuer audits performed by firms other than U.S. GNFs may see more improvement because they appear to have more room for improvement on average. However, the recent uptick in deficiencies for U.S. GNFs suggests that QC 1000 will also be a valuable resource for these firms to address those deficiencies and, thus, further protect investors.

Some commenters described how a risk-based QC standard would improve audit quality. However, one commenter argued that the requirements are too risk-based (e.g., they could result in too little change at the larger firms) and suggested an even stronger prescriptive approach to certain aspects of the standard (e.g., training and supervision). The Board believes the standard reflects a balanced approach that includes prescriptive requirements where appropriate.

PCAOB staff analysis of PCAOB inspections data supports the view that more effective QC policies and procedures will lead to improved compliance with applicable professional and legal requirements. Staff examined the historical association between satisfactory remediation of QC deficiencies and subsequent Part I.A deficiencies for triennial firms. Satisfactory remediation of a QC deficiency reflects substantial good-faith progress toward achieving a quality control objective.⁴⁶¹ As such, an association between historical satisfactory remediation efforts and a subsequent decrease in Part I.A deficiencies would suggest that more effective QC policies and procedures lead to improved compliance with applicable professional and legal requirements. After controlling for auditor and issuer characteristics that may also drive Part I.A deficiencies using standard statistical techniques, the staff analysis indicates that, on average, satisfactory remediation is associated with reduced likelihood of subsequent Part I.A deficiencies. This suggests that more effective QC policies and procedures may lead to improved compliance with applicable professional and legal requirements.⁴⁶² One commenter reported observing that satisfactory remediation of QC

deficiencies results in fewer audit failures and asserted that this was in line with certain key findings of the staff analysis.

The staff analysis is subject to several important caveats. First, remedial actions typically target specific aspects of a firm's QC system. By contrast, implementation of QC 1000 may require a broader set of changes. Second, due to the transformational nature of QC 1000, the changes firms will make to their QC systems could be substantially different from firms' historical satisfactory remedial actions. Third, U.S. GNFs were intentionally excluded from the analysis, potentially limiting its applicability to the U.S. GNFs. However, though association does not imply causation, the historical association between the number of QC deficiencies related to U.S. GNFs' management of their audit practice⁴⁶³ and U.S. GNFs' compliance with applicable professional standards⁴⁶⁴ suggests that, even among the U.S. GNFs, more effective QC systems could lead to improved compliance with applicable professional and legal requirements.⁴⁶⁵ Overall, the Board expects the association between satisfactory remediation and subsequent Part I.A deficiencies among triennial firms more likely understates the impact of QC 1000 due to its transformational nature.

Observations from PCAOB inspections and academic research also suggest that the requirements may improve compliance with applicable professional and legal requirements. PCAOB inspectors have observed that root cause analyses, effective design and implementation of remedial actions, and appropriate governance practices related to leadership's tone can drive audit quality,⁴⁶⁶ and one academic study reports that, as perceptions of the strength of the QC system increase, the likelihood of "reduced audit quality

behaviors" decreases.⁴⁶⁷ These findings likewise support the view that the requirements, which place greater emphasis on root cause analysis, remediation, and governance practices, if successfully implemented, will lead to improved compliance with applicable professional and legal requirements.

c. Improved Financial Reporting Quality and Capital Market efficiency

Academic research provides evidence that compliance with auditing standards is positively associated with proxies for financial reporting quality.⁴⁶⁸ Research also finds a positive association between firms' successful remediation of QC deficiencies—a proxy for adopting effective QC system practices—and the financial reporting quality of their issuer clients.⁴⁶⁹ PCAOB staff analysis also provides some evidence that successful remediation may be associated with improved financial reporting quality.⁴⁷⁰ The fact that the results from each of these studies that suggest a positive association with financial reporting quality does not necessarily mean that auditing standards or remediation of deficiencies cause better financial reporting quality.

Investors and other financial statement users may benefit from improved issuer financial reporting quality because it helps solve information asymmetries and agency problems inherent to capital markets. Economic theory suggests that investors face a separation-of-ownership-and-control problem whereby issuer management may misappropriate investors' capital.⁴⁷¹ Relevant and accurate financial reporting can alleviate these problems by providing investors and other financial statement users with more accurate information regarding the financial position and operating results of companies. Investors may use this information to improve the efficiency of their capital

⁴⁶⁷ See, e.g., Charles F. Malone and Robin W. Roberts, *Factors Associated with the Incidence of Reduced Audit Quality Behaviors*, 15 *Auditing: A Journal of Practice & Theory* 49 (1996).

⁴⁶⁸ See, e.g., Daniel Aobdia, *Do Practitioner Assessments Agree with Academic Proxies for Audit Quality? Evidence from PCAOB and Internal Inspections*, 67 *Journal of Accounting and Economics* 144 (2019); Katherine A. Gunny and Tracey Chunqi Zhang, *PCAOB Inspection Reports and Audit Quality*, 32 *Journal of Accounting and Public Policy* 136 (2013).

⁴⁶⁹ See, e.g., Aobdia, *The Economic Consequences* 2883.

⁴⁷⁰ See QC White Paper.

⁴⁷¹ See, e.g., Michael C. Jensen and William H. Meckling, *Theory of the Firm: Managerial Behavior, Agency Costs and Ownership Structure*, 3 *Journal of Financial Economics* 305 (1976); Adolf Augustus Berle and Gardiner Coit Means, *The Modern Corporation and Private Property* (1991).

⁴⁶¹ See *Staff Guidance Concerning the Remediation Process* (Nov. 18, 2013), available at https://pcaobus.org/Inspections/Pages/Remediation_Process.aspx.

⁴⁶² For additional details, including definitions of all control variables, see QC White Paper.

⁴⁶³ See Figure 5 above.

⁴⁶⁴ See Figures 1 and 3 above.

⁴⁶⁵ Several nuances of smaller firms' QC systems and the PCAOB inspections process may explain the absence of such an association for these firms. First, although there is a downward trend in QC deficiencies related to management of the audit practice (Figure 5 above), smaller firms' QC systems may be deficient in certain important respects that render them less effective overall. Second, the roughly increasing trend in QC deficiencies related to audit performance for the smallest firms (Figure 3 above) may be driven in part by deficiencies in the application of new auditing requirements by these firms. Third, the inspection approach to QC assessments for the smaller firms is simplified and does not lend itself to such a correlation analysis.

⁴⁶⁶ See, e.g., 2018 Inspection Observations Preview

allocation decisions (e.g., investors may more accurately identify companies with the strongest prospects for generating future risk-adjusted returns and allocate their capital accordingly). Investors may also perceive less risk in capital markets generally, leading to an increase in the supply of capital. An increase in the supply of capital could increase capital formation while also reducing the cost of capital to companies.⁴⁷² While some uncertainty remains regarding the economic impacts of financial reporting,⁴⁷³ empirical academic research has affirmed this basic premise under certain conditions.⁴⁷⁴ Moreover, some studies have identified a direct association between auditors' compliance with PCAOB standards and capital market efficiency.⁴⁷⁵

The requirements may also lead to improved compliance with applicable professional and legal requirements on broker-dealer audit engagements and, in turn, improved financial reporting quality and investor protection. An

auditor's work on these engagements, if appropriately performed, should make it more likely that a broker-dealer will maintain appropriate controls over compliance and less likely that there will be material reporting errors. The auditor's work also has the potential to make it more difficult for broker-dealers to engage in fraud and other misconduct. Improved broker-dealer financial reporting quality also gives industry overseers, such as the SEC and FINRA, as well as other users of broker-dealer financial information, such as the Securities Investor Protection Corporation, more accurate information relevant to a broker-dealer's financial condition, its ability to continue as a going concern, and its handling of customer securities and cash. This, in turn, enhances the ability of these organizations to carry out their responsibilities in ways that protect investors. Compliance with applicable professional and legal requirements may also contribute to the early identification or prevention of broker-dealer failures. Failures of large broker-dealers can have a negative impact on the stability and liquidity of financial markets, and failures caused by misconduct may damage investor confidence. A reduction in such failures could help improve the strength and safety of the financial system.

d. Benefits of Key Provisions

i. Scaled Applicability

QC 1000 will require that a firm implement and operate an effective QC system at all times when the firm is required to comply with applicable professional and legal requirements with respect to any of the firm's engagements, and thereafter through the next September 30.⁴⁷⁶ The discussion above provides further information on this provision. As of June 30, 2023, up to 60% of firms may not meet this criterion but will be required to design a QC system in compliance with QC 1000.⁴⁷⁷ Because registering with the

PCAOB enables a firm to issue audit reports or play a substantial role on audits performed under PCAOB standards for issuers and broker-dealers, and because investors and companies considering engaging the firm could reasonably expect that any firm that could pursue such an engagement would already have a PCAOB-compliant QC system designed and ready for implementation and operation, the Board believes that imposing a design requirement on all registered firms promotes its mission of protecting investors and promoting the public interest. The Board also believes that designing the QC system will better position these firms to accept and perform engagements in compliance with applicable professional and legal requirements to the extent that the firm will have a PCAOB-compliant QC system ready for implementation and operation.

ii. In-Process Monitoring Activities

QC 1000 will require firms that issued audit reports with respect to more than 100 issuers during the prior calendar year to monitor in-process engagements and will require all other firms to consider monitoring in-process engagements.⁴⁷⁸ The discussion above provides further information on this provision. Monitoring in-process engagements can help firms detect and prevent engagement deficiencies before the engagement report is issued, resulting in a more proactive and preventive monitoring approach that has the potential to benefit investors through improved audit quality. The benefits will depend on the extent to which firms already have in-process monitoring activities in place. Information gathered through PCAOB inspection activities indicates that 11 out of 14 annually inspected firms perform some in-process engagement monitoring activities.

iii. Firm Governance Structure

QC 1000 will require firms that issued audit reports with respect to more than 100 issuers during the prior calendar year to incorporate into their governance structure an external oversight function for the QC system composed of one or more persons who are not principals or employees of the firm and do not otherwise have a commercial, familial, or other relationship with the firm that would interfere with the exercise of

Act (e.g., offerings under Regulation A, Regulation D, or Regulation Crowdfunding), pursuant to a contractual obligation such as a loan covenant, or on an entirely voluntary basis.

⁴⁷⁸ See QC 1000.63.

⁴⁷² See, e.g., Richard Lambert, Christian Leuz, and Robert E. Verrecchia, *Accounting Information, Disclosure, and the Cost of Capital*, 45 *Journal of Accounting Research* 385, 387 (2007) (discussing how increasing the quality of mandated disclosures should in general move the cost of capital to the risk-free rate for all firms in the economy); William Robert Scott and Patricia C. O'Brien, *Financial Accounting Theory* (2003), 412 (explaining that regulation is intended to improve the operation of capital markets by enhancing public confidence in their fairness).

⁴⁷³ See, e.g., Christian Leuz and Peter D. Wysocki, *The Economics of Disclosure and Financial Reporting Regulation: Evidence and Suggestions for Future Research*, 54 *Journal of Accounting Research* 525 (2016) (explaining the relative rarity of evidence on causal effects of disclosure and reporting regulation); Matthias Breuer, Christian Leuz, and Steven Vanhaverbeke, *Mandated Financial Reporting and Corporate Innovation*, No. w26291, National Bureau of Economic Research (2020), at 41 (reporting evidence consistent with the notion that mandatory reporting deters firms' incentives to innovate and generate proprietary know-how because of concerns about the loss of proprietary information).

⁴⁷⁴ See, e.g., Christian Leuz and Robert E. Verrecchia, *The Economic Consequences of Increased Disclosure*, 38 *Journal of Accounting Research* 91 (2000) (finding that German companies that elect to commit to International Accounting Standards or U.S. GAAP exhibit lower percentage bid-ask spreads and higher share turnover than firms using German GAAP); Utpal Bhattacharya, Hazem Daouk, and Michael Welker, *The World Price of Earnings Opacity*, 78 *The Accounting Review* 641 (2003) (finding that an increase in overall earnings opacity in a country is linked to an economically significant increase in the cost of equity and an economically significant decrease in trading in the stock market of that country based on financial statements from 34 countries for the period 1984–1998). Because U.S. institutions differ from other countries and the studies pre-date Sarbanes-Oxley, the results may not be directly relevant to all PCAOB-registered firms.

⁴⁷⁵ See, e.g., Nemit Shroff, *Real Effects of PCAOB International Inspections*, 95 *The Accounting Review* 399 (2020).

⁴⁷⁶ See QC 1000.07.

⁴⁷⁷ The 60% reported here is based on Form 2 reporting as of June 30, 2023, and reflects registered firms that reported they had not issued an audit report for an audit of an issuer or broker-dealer or played a substantial role in such an engagement during the preceding 12 months. As noted above, approximately 51% of firms have not performed an engagement under PCAOB standards for an issuer or broker-dealer in the past five years. The PCAOB does not collect information about whether registered firms perform engagements under PCAOB standards other than for issuers and broker-dealers. Firms may be engaged, for example, in connection with the audit of a reporting company that does not meet the Sarbanes-Oxley definition of "issuer" described in footnote 2 above, in connection with certain offerings of securities that are exempt from registration under the Securities

independent judgment with regard to matters related to the QC system (*i.e.*, EQCF).⁴⁷⁹ The final standard specifies a baseline requirement that the EQCF's responsibilities should include, at a minimum, evaluating the significant judgments made and the related conclusions reached by the firm when evaluating and reporting on the effectiveness of its QC system. The discussion above provides further information on this provision. Such an oversight function could reduce negative impacts of commercial considerations on decision making by firms about their QC system and thereby improve incentives to implement QC systems that more fully meet the interests of investors and other financial statement users. Some academic research finds that the level of board of directors independence is associated with certain benefits, such as improved operating performance and company value, which implies independent oversight in a firm's governance structure could potentially improve the quality of audit services provided by the firm.⁴⁸⁰

iv. The Automated Independence Process

QC 1000 will require firms that issued audit reports with respect to more than 100 issuers during the prior calendar year to automate the process to identify investments in securities that might impair the independence of the firm or firm personnel that are managerial employees or partners, shareholders, members, or other principals.⁴⁸¹ The discussion above provides further information on this provision. Automating this process should help firms more effectively and efficiently identify such investments. The automated process could also indirectly improve compliance with other relevant independence requirements. For example, automating this process may lead firms to maintain and make available the list of restricted entities more efficiently and effectively.

v. Complaints and Allegations Policies and Procedures

QC 1000 will require firms to design, implement, and maintain policies and procedures that address processes and responsibilities for receiving, investigating, and addressing complaints and allegations and include protecting persons making complaints and allegations from retaliation.⁴⁸² Firms that issued audit reports with respect to more than 100 issuers during the prior calendar year will be required to include confidentiality protections in their policies and procedures. The discussion above provides further information on this provision. Overall, the Board expects the policies and procedure regarding complaints and allegations will help reduce information asymmetry within the firm by alerting responsible individuals to instances of non-compliance of which they may otherwise be unaware. Some academic research suggests that the complaints and allegations provisions will increase the likelihood that individuals will submit complaints and allegations related to potential non-compliance. For example, one survey of public company auditors finds that (1) greater protection of individual identity and (2) trust that the firm would investigate and act on a report are both positively associated with intention to report non-compliance with auditing standards.⁴⁸³ A survey of accounting students finds that a weaker threat of retaliation is positively associated with the propensity to submit a complaint.⁴⁸⁴ The Board acknowledges that some experimental research finds that explicit protections may unintentionally deter internal complaints and allegations because the protections signal to potential persons making complaints that retaliation is a risk.⁴⁸⁵ However, overall, the Board expects the complaints and allegations provisions will benefit investors by reducing non-compliance with auditing standards and, thus, improving audit quality.

⁴⁷⁹ See QC 1000.28.

⁴⁸⁰ See, e.g., Anzhela Knyazeva, Diana Knyazeva, and Ronald W. Masulis, *The Supply of Corporate Directors and Board Independence*, 26 *The Review of Financial Studies* 1561 (2013). Other academic research indicates that a tradeoff of more independent board of directors may be less efficient monitoring by directors. See, e.g., Praveen Kumar and K. Sivaramakrishnan, *Who Monitors the Monitor? The Effect of Board Independence on Executive Compensation and Firm Value*, 21 *The Review of Financial Studies* 1371 (2008).

⁴⁸⁵ See James Wainberg and Stephen Perreault, *Whistleblowing in Audit Firms: Do Explicit Protections from Retaliation Activate Implicit Threats of Reprisal?*, 28 *Behavioral Research in Accounting* 83 (2016).

vi. Reporting the Annual QC System Evaluation

QC 1000 will require firms to report to the PCAOB about the annual evaluation of their QC system.⁴⁸⁶ The discussion above provides further information on this provision. This requirement will help the Board obtain more timely, structured, and consistent information regarding the effectiveness of firms' QC systems relative to what could be gathered through the inspections process, especially for the triennial firms. The Board will use this information to support its oversight activities (e.g., to select firms, audits, or focus areas for review). Reporting to the PCAOB will also improve incentives within a firm to design, implement, and operate an effective QC system.

vii. Certification of the Annual QC System Evaluation

QC 1000 will require certain individuals in firms' leadership to certify the annual evaluation of their firm's QC system.⁴⁸⁷ The discussion above provides further information on this provision. This requirement will help address the positive externality problem in the audit market by creating greater accountability within firm leadership to implement an effective QC system. As noted in the proposal, PCAOB staff reviewed academic literature on the impacts of CEO and CFO certification requirements in the U.S. and engagement partner signature requirements in the United Kingdom and found both supportive and unsupportive findings.⁴⁸⁸ One commenter noted academic research that has found there is little, if any, effect of CEO and CFO certifications

⁴⁸⁶ See QC 1000.79.

Lys, *Corporate Governance Reform and Executive Incentive: Implications for Investments and Risk Taking*, 30 *Contemporary Accounting Research* 1298 (2013) (finding that their sample of firms significantly reduced investments in risky projects in the period following SOX); Hsihui Chang, Jengfang Chen, Woody M. Liao, and Birendra K. Mishra, *CEOs'/CFOs' Swearing by the Numbers: Does it Impact Share Price of the Firm?*, 81 *The Accounting Review* 1, 22 (2006) (concluding that the SEC order requiring filing of sworn statements by CEOs and CFOs had a positive effect on the market value of certifying firms); Jeffrey R. Cohen, Colleen Hayes, Ganesh Krishnamoorthy, Gary S. Monroe, and Arnold M. Wright, *The Effectiveness of SOX Regulation: An Interview Study of Corporate Directors*, 25 *Behavioral Research in Accounting* 61 (2013) (discussing that CEO certification was viewed as having led to heightened ownership and diligence on the part of decision agents throughout the financial reporting decision hierarchy but was also identified as a source of the costly resource-intensive reaction to Sarbanes-Oxley).

required under Sarbanes-Oxley.⁴⁸⁹ Citing academic literature on accountability frameworks, the same commenter noted that imposition of accountability is largely positive⁴⁹⁰ but that the increased accountability that would result from the certification requirement could have negative consequences.⁴⁹¹ As discussed below, the Board acknowledges that increased accountability could lead to potential unintended consequences. However, the Board continues to believe that the certification requirement will benefit investors by increasing discipline in the

evaluation process and reinforcing the accountability of the certifying individuals.

viii. Responding to Engagement Deficiencies Identified After Issuance of the Audit Report

The amendments to AS 2901, *Consideration of Omitted Procedures After the Report Date*, include: (1) addressing engagement deficiencies in addition to omitted procedures and (2) including the ICFR audit within its scope. Relatedly, the amendments to AT No. 1 and AT No. 2 mirror the amendments to AS 2901. The discussion above provides further information on this provision. The Board expects these amendments will lead auditors to perform additional procedures to obtain sufficient appropriate evidence or take additional action to prevent future reliance on insufficiently supported audit opinions (or review reports in the case of review engagements) that are being relied on. In such cases, PCAOB standards will require firms to advise their client to make appropriate disclosure of the newly discovered facts and their impact on the financial statements (or examination or review reports in the case of attestation engagements) to persons who are known to be currently relying or who are likely to rely on the financial statements and the related auditor's report (or review report in the case of a review engagement). Academic research on ICFR suggests that such disclosures will be valuable to capital market participants with improvements in company performance and financial reporting.⁴⁹²

ix. SECPS Requirements

The requirements will refine, integrate into QC 1000, and extend to all firms the SECPS member requirements currently required under PCAOB Rule 3400T. Based on current registration data, approximately 13% of PCAOB-registered firms are already subject to these requirements under PCAOB Rule 3400T. The discussion above provides an overview of these requirements. The Board expects that this feature of the rulemaking will benefit investors by enhancing audit quality through improved compliance with SEC and PCAOB independence rules on engagements performed by firms not already subject to these requirements under PCAOB Rule 3400T.

⁴⁹² See discussion on economic impacts above and the research cited therein.

2. Costs

The Board expects the requirements will result in additional direct and indirect costs to auditors and, potentially, indirect costs to the companies that they audit. The extent of these costs will depend on the degree to which firms otherwise have QC systems in place designed to comply with other QC standards and the specific policies and procedures adopted by the firm. The information presented above suggests that U.S. GNFs commit hundreds of partner and non-partner FTEs to their QC systems, including, individually, each of the major QC system components specified in ISQM 1. Resources are particularly utilized in the areas of independence, ethics, and resources. As discussed above, the Board believes most firms are subject to other QC standards. In designing, implementing, and operating their QC systems, firms that are subject to both PCAOB standards and other QC standards can leverage the investments they make to comply with the requirements of the other standards. Therefore, the Board expects that a portion of the overall costs of designing, implementing, and operating policies and procedures to comply with QC 1000 have been or will be incurred by most firms regardless of whether QC 1000 is adopted. As a consequence, for most firms, the Board expects the costs discussed below will derive primarily from the provisions in QC 1000 that go beyond the requirements of other QC standards.

Several commenters noted there will be costs and challenges to implement and operate features of QC 1000 that are incremental to the systems firms have established to comply with other QC standards. One commenter said that the need to accommodate nuances among different standards results in firms maintaining different methodologies, practices, and procedures that puts pressure on limited firm resources. Several commenters asserted that firms that audit between 100 and 500 issuers will be significantly impacted by costs associated with some or all of QC 1000's incremental requirements for firms that issue audit reports for more than 100 issuers, and some of the commenters noted resource differences between GNFs and annually inspected NAFs. Since QC systems are resource-intensive, the efforts required to respond to the additional provisions in QC 1000 or to otherwise adapt the QC system to the auditing environment for issuers and SEC-registered broker-dealers could be significant.

While the PCAOB lacks data to quantify the costs that could result from QC 1000, some studies have estimated costs associated with ICFR under Sarbanes-Oxley section 404.⁴⁹³ The Board acknowledges differences between section 404 and QC 1000, but section 404 is similar to QC 1000 in that section 404 was a policy shock that led large public companies to improve their internal control practices. In addition, while QC 1000 is not an internal control framework *per se*, it does reflect similar principles as COSO, the industry standard control framework that was widely relied upon to implement section 404. One commenter observed that the requirements under QC 1000 are similar in certain ways to the requirements related to ICFR under Sarbanes-Oxley for companies and suggested that the impacts of QC 1000 on auditors will be similar to the impact Sarbanes-Oxley had on companies notwithstanding key differences between a company's ICFR and an audit firm's QC system.

⁴⁹³ Based on a sample of companies that voluntarily disclosed Section 404 cost information in their SEC filings during the period Jan. 2003 to Sept. 2005, one study found that the mean total compliance costs for Section 404 was \$2.2 million (\$3.7 million adjusted for inflation), and the median was \$1.2 million (\$2.0 million adjusted for inflation). See Jagan Krishnan, Dasaratha Rama, and Yinghong Zhang, *Costs to Comply with SOX Section 404*, 27 *Auditing: A Journal of Practice & Theory* 169 (2008). Using a sample of Fortune 1000 companies, another study estimated the companies spent an average of \$5.9 million (\$9.6 million adjusted for inflation) to comply with Section 404 in the first year of implementation. See Charles River Associates, *Sarbanes-Oxley 404 Costs and Remediation of Deficiencies: Estimates from a Sample of Fortune 1000 Companies* (2005). Another study found that direct costs of Section 404 fell by as much as 40% by the second year after implementation and varied significantly by company size. See John C. Coates IV, *The Goals and Promise of the Sarbanes-Oxley Act*, 21 *Journal of Economic Perspectives* 91 (2007). Another study reported an SEC survey sample that showed an overall average Section 404 compliance expense of \$1.2 million (\$1.7 million adjusted for inflation) in the latest fiscal year before the survey (Dec. 2008 to Jan. 2009) and respondents reported a decline over time in such costs. See Cindy R. Alexander, Scott W. Bauguess, Gennaro Bernile, Yoon-Ho Alex Lee, and Jennifer Marietta-Westberg, *Economic Effects of SOX Section 404 Compliance: A Corporate Insider Perspective*, 56 *Journal of Accounting and Economics* 273 (2013). To adjust results from the studies for inflation, PCAOB staff used an inflationary factor as of the third quarter 2023 from the current dollar index number of the Employment Cost Index for private workers employed in the professional, scientific, and technical services industry published by the U.S. Bureau of Labor Statistics (available at <https://www.bls.gov/eci/data.htm>). This inflationary adjustment does not account for any potential differences between QC 1000 costs and Section 404 costs or any potential structural changes over time.

a. Direct and Indirect Costs of the Proposed Requirements

The Board expects the requirements will lead to several direct and indirect costs. There will be a direct cost to audit firms to design a QC system that complies with QC 1000. For example, firms will likely spend time reviewing QC 1000; assigning roles and responsibilities; identifying staffing and training needs; and developing a set of quality objectives, quality risks, and quality responses. Once a QC system is designed, firms will incur costs to monitor, identify, and assess changes to conditions, events, and activities that indicate modifications to the firm's quality objectives, quality risks, or quality responses may be needed. Some firms may outsource certain aspects of QC system design. The Board also expects that customization will be necessary to ensure that each QC system design appropriately addresses each firm's circumstances. The extent of the design costs will likely depend on facts and circumstances unique to each firm. Among firms that will be subject to other QC standards, which the Board believes represents most firms, the design costs will likely be reduced and limited to incremental requirements around ethics, independence, monitoring, and remediation.

For full applicability firms—those that will be required to implement and operate an effective QC system—there will likely be additional costs. Firms may need to implement fixed resources (e.g., people, financial, technological, or intellectual) prior to operating their QC system. For example, a firm may need to invest in an IT system or train individuals having QC roles or responsibilities. Several commenters identified significant implementation costs and called for an extended implementation period due to these costs. Describing the results of its recent survey of assurance service QC leaders, one commenter reported that obtaining “buy in” and acceptance from organizational members is the most common challenge firms face when implementing changes to their QC systems.⁴⁹⁴ As discussed, the Board agrees there will be implementation costs; however, these implementation costs will be reduced to the extent that firms already implement the requirements to comply with the actions of other standard setters or due to other developments. Furthermore, the Board expects the design and implementation

costs will be largely fixed in nature and will decline over time.

Firms may also incur new operating costs, at the firm level and the engagement level. At the firm level, firms may require additional resources to administer new or revised quality responses after they are implemented, execute the annual risk assessment, perform the annual evaluation of the QC system, report the results of the evaluation to the PCAOB using the same PCAOB platform as the other reporting forms, and prepare and retain the required documentation. Several commenters identified significant operating costs. For example, one commenter argued that the proposed independent oversight function could entail insurance costs. At the engagement level, engagement team time may be required to execute new or revised quality responses. For example, an engagement team may carry out procedures regarding continuance of the firm's relationship with the client served by that engagement team. These operating costs will be reduced for firms that would be subject to other standard setters or other developments.

Several commenters asserted that the documentation costs, as originally proposed, could be particularly onerous. For example, several commenters asserted that firms would be required to retain large volumes of documentation to support the operation of the firm's quality responses for each instance related to all years for which firms are required to maintain such documentation. One commenter noted that information evidencing the operation of a firm's QC system can vary in size, type, and storage requirements and that the costs of modifying the firm's existing IT systems to comply with the documentation requirement could be significant. Some commenters noted that the amount of documentation to be retained is expected to require considerably more storage space for each evaluation period, which the commenters suggested translates to a need for new servers and extended licensing agreements. One commenter said that firms that change their systems will have to maintain licenses for old systems for up to seven years. The same commenter said the seven-year retention period goes well beyond the retention requirements of ISQM 1 and SQMS 1 and asserted that firms with a significant private company client base would be challenged to have different documentation retention policies since many aspects of quality control relate to the firm as a whole. Some commenters suggested that retaining sensitive information introduces heightened

⁴⁹⁴ See Hayne, et al., *Managing Quality Control Systems*.

cybersecurity risks for firms, firm personnel, clients, and other stakeholders. The Board acknowledges that the documentation requirement could create costs for firms, including costs related to retention and cybersecurity infrastructure. To clarify the expected cost burden, the discussion above notes that documentation of every aspect of the operation of the firm's QC system may not be required to evidence that each quality response operated effectively.

Several commenters asserted that smaller firms may be especially affected by the new QC requirements, including requirements incremental or alternative to ISQM 1 and SQMS 1. One commenter said that smaller firms will need to hire consultants or additional staff for the monitoring, remediation, and evaluation functions, notwithstanding the scalability of QC 1000. Another commenter asserted that QC 1000 will impose disproportionate costs on smaller firms but noted that the commenter did not analyze in detail the cost of each incremental requirement and therefore did not have an estimate of the disproportionate costs. Relatedly, research finds that implementation and operating costs of internal control frameworks precipitated by Sarbanes-Oxley are proportionally greater for smaller companies.⁴⁹⁵

The Board acknowledges that the direct costs will likely vary depending on the size of the firm and the nature of its audit practice. Larger PCAOB audit practices that already have extensive QC systems in place may benefit from economies of scale or scope when incorporating the new requirements into their existing systems, which would decrease the cost of QC 1000 per engagement. Larger PCAOB audit practices will be able to distribute fixed implementation costs over a larger number of engagements, while smaller practices will distribute fixed implementation costs over a smaller number of engagements. On the other hand, it may also be difficult for firms with more complex clients and diverse client portfolios—characteristics of larger PCAOB audit practices—to implement effective QC systems. To the extent that smaller firms may be disproportionately impacted as commenters have suggested, the Board continues to believe that the principles-based features and scalable nature of QC 1000, described in greater detail above, as well as the 100-issuer threshold for some provisions, help to mitigate their

costs because smaller firms will rely on proportionally fewer resources for design, implementation, and operation of their QC systems.

In addition to the direct costs to auditors to comply with the requirements, indirect costs may arise. To the extent that compliance with the requirements will improve compliance with applicable professional and legal requirements at the engagement level, costs may increase for the affected engagements. For example, in bringing their work into compliance with PCAOB auditing standards, some engagement teams may gather additional or more persuasive audit evidence and prepare more documentation than they previously did. However, firms should be incurring these costs already.

Audited companies may also incur indirect costs related to the requirements. For example, some commenters asserted that the 100-issuer threshold could deter triennially inspected firms from accepting new public company audit engagements or encourage firms to resign from existing audit engagements to avoid crossing the 100-issuer threshold. Although the Board recognizes this possibility, for context regarding the number of firms currently around the 100-issuer threshold, PCAOB staff analysis of audit reports included in SEC filings indicates that, during the 2022 calendar year, two NAFs audited between 80 and 100 issuers and two NAFs audited between 100 and 120 issuers. Firms may pass on part of any increased costs they incur at the firm or engagement level by raising the fees they charge their clients. In addition, to the extent that the requirements improve compliance with applicable professional and legal requirements, some audited companies could face additional costs to respond to their auditors' requests for additional or more extensive audit evidence. Audited companies may incur other costs due to changes in audit firm QC policies and procedures. For example, if QC 1000 results in changes to firms' client acceptance and continuance practices, firms may require greater fees or refuse to accept or retain high-risk clients. While this outcome would represent a cost to audited companies, the result could be a more efficient audit market if riskier companies pay more. These indirect costs will be reduced to the extent that firms will have already implemented the requirements in response to similar actions of other standard setters or due to other developments.

b. Costs of Key Provisions

i. Scaled Applicability

Scaled-applicability firms will incur the design costs discussed above. Should a scaled-applicability firm ever become subject to the implementation and operation requirements, the firm will then incur the implementation and operation costs discussed above. As with other registered firms, the costs to scaled-applicability firms will be less to the extent they will already be complying with ISQM 1 or SQMS 1. Firms and a related group suggested allowing firms that do not perform engagements the flexibility to design their QC system in accordance with another QC standard, such as ISQM 1 or SQMS 1, to help manage costs. However, the Board expects the design costs for those firms to be limited to incremental requirements around ethics, independence, monitoring, and remediation. Furthermore, scaled-applicability firms may choose to avoid the design costs by withdrawing from PCAOB registration given that they are not required to be registered.

ii. In-Process Monitoring Activities

The Board believes the in-process monitoring requirement may contribute to the direct and indirect costs discussed above such as: (1) developing documentation, (2) providing training, (3) gathering additional audit evidence, and (4) other potential indirect costs such as the time required of issuers to provide their auditor with additional or more extensive audit evidence. The costs will depend on the extent to which firms already have in-process monitoring activities in place. In addition, in-process monitoring may result in increased audit fees. Information gathered through PCAOB inspection activities indicates that 11 out of 14 annually inspected firms perform some in-process engagement monitoring activities.

iii. Firm Governance Structure

The Board believes there could be costs to design, implement, and operate the oversight function (*i.e.*, EQCF). For example, firms that are required to incorporate the oversight function into their governance structure for the first time may incur costs when retaining appropriate individuals from outside of the firm.⁴⁹⁶ Firms with an existing

⁴⁹⁵ See, e.g., John C. Coates and Suraj Srinivasan, *SOX after Ten Years: A Multidisciplinary Review*, 28 Accounting Horizons 627 (2014).

⁴⁹⁶ According to Spencer Stuart, the average compensation per non-employee director was \$327,764 in 2023. See 2023 U.S. Spencer Stuart Board Index (2023), available at <https://www.spencerstuart.com/-/media/2021/october/ssbi2021/us-spencer-stuart-board-index-2021.pdf> (analyzing 489 DEF-14A proxy statements filed by

oversight function may incur costs to find different individuals to fill the role. In addition, firms with an existing oversight function may incur incremental costs to incorporate the baseline requirement to evaluate, at a minimum, significant judgments made and the related conclusions reached by the firm when evaluating and reporting on the effectiveness of its QC system.

Several commenters expressed concern that the oversight function would be costly or difficult to fulfill, especially for firms that audit between 100 and 500 issuers. One commenter suggested the oversight function could add costs that ultimately have to be passed on through higher audit fees, which investors in smaller issuers are unlikely to support, particularly when the costs are spread over a small amount of invested public capital in a firm's issuer audits clients. Conversely, one commenter said that the costs of the oversight function could be reduced by engaging an independent accounting firm to provide weekly advisory services.

To help address these cost concerns, the requirement will allow firms to implement an oversight function into their QC system suitable for their circumstances. Costs, as well as the associated benefits, could be attenuated for U.S. GNFs by the fact that all of the U.S. GNFs indicate, as of the 2020 inspection cycle, that they already have a governance structure that includes a non-employee.

iv. The Automated Independence Process

The Board believes there could be costs to design, implement, and operate the required automated process to identify investments in securities that might impair independence. The costs will depend on the extent to which firms already have such an automated process in place. Information gathered through PCAOB inspection activities indicates that nine out of 14 annually inspected firms already have one in place. The remaining five have processes in place that are not fully automated. Firms will be able to automate the process in a way that is suitable to their unique facts and circumstances. Most firms will likely need to: (1) convert their restricted entity list into a searchable electronic form; (2) maintain the electronic restricted entity list; and (3) develop

queries that can compare a manager's or partner's relevant investments in securities to the electronic restricted entity list. Some firms may choose to integrate the automated process with existing systems related to client acceptance or time and expense. Firms with simple restricted entity lists (*e.g.*, fewer clients, fewer subsidiaries) or simpler QC policies and procedures for restricted entities (*e.g.*, any investment in any security of a restricted entity is restricted) may require less investment in software and expertise than other firms.

Several commenters said that the proposed automated process will entail significant costs. One commenter emphasized that there will be upfront and ongoing investments in technology and other overhead to operate such a process. Another commenter noted that implementing and maintaining an automated independence monitoring system is costly for smaller firms, which audit predominantly privately held companies and have not previously been subject to the automated independence system requirement under SEC rules. One commenter said it was unaware of any truly off-the-shelf system responsive to the proposed requirement. One commenter emphasized that for firms that audit between 100 and 500 issuers, the main potential downside of an automated process is the associated time and incremental cost to develop an efficient and effective system. The commenter noted that, in addition to software costs, there will be costs to oversee the system to ensure the data entered are correct and firm personnel are trained to use the system. Another commenter noted that the six largest firms represent 60% of issuers and approximately 98.7% of the capital markets and asserted that the automated independence process will nearly triple the number of firms required to implement automated investment tracking systems but pick up less than 15% of issuers, which represent less than 1% of the capital markets. The same commenter also asserted that the differences in size, scope, nature, and complexity between the six largest annually inspected firms and other annually inspected firms can be immense and that more than 80% of the commenter's issuer client count consists of either Form 11-K audits or audits of smaller companies, which have less impact on capital markets. While the commenter provided these figures in response to costs of the automated independence process, the same figures could apply to the costs and benefits of each of the key policy

provisions that invoke the 100-issuer threshold.

To help address these views, the final standard clarifies that the required automated process: (1) will apply only to the identification of relevant investments in securities and (2) will permit firms to rely on firm professionals accurately self-reporting and entering their investments into the system (*e.g.*, direct brokerage feeds will not be expressly mandated). In addition, the Board believes that existing software products likely could be adapted to respond to the requirements.

Furthermore, off-the-shelf systems more tailored to the requirements may enter the market in the future.

Notwithstanding the commenters' views, the Board retained the automated independence process requirement, and acknowledges there will be costs to design, implement, and operate it.

v. Complaints and Allegations Policies and Procedures

The Board expects the policies and procedures regarding complaints and allegations will entail direct costs to firms to design, implement, and maintain. Most notably, firms will incur additional variable costs to receive, investigate, and address complaints and allegations. Firms that issued audit reports with respect to more than 100 issuers during the prior calendar year will incur costs to implement confidentiality protections. The costs will depend on the extent to which firms already have policies and procedures regarding complaints and allegations in place. Information gathered through PCAOB inspection activities indicates that 10 out of 14 annually inspected firms already have hotlines in place that may satisfy certain of the complaints and allegations requirements.⁴⁹⁷

vi. Reporting the Annual QC System Evaluation

The Board expects the requirement to report the annual QC system evaluation to the PCAOB will entail an additional annual cost to firms to prepare Form QC. However, since firms will already be required to perform and document the evaluation, any additional costs associated with preparing Form QC should be minimal. The requirement may also result in some increased

S&P 500 companies with the SEC between May 1, 2022, and Apr. 30, 2023). PCAOB staff notes that variation between the responsibilities of an oversight function and a non-employee director function may limit the relevance of this cost reference to some extent.

⁴⁹⁷ According to one hotline vendor that posted their service prices online, the annual fee for a hotline that covers up to 75 employees starts at \$1,200 and the annual fee for a hotline that covers more than 5,000 employees starts at \$7,000 (*see* <https://www.allvoices.co/basic-purchase>). The Board notes that the complaints and allegations provisions include more than having a hotline.

litigation risk to the extent that information reported to the PCAOB is not subject to privilege under section 105(b)(5) of Sarbanes-Oxley, and to the extent that reporting of this information to a third party may vitiate other privileges that otherwise could have been used to protect the information from compelled disclosure in third-party actions. Non-protected material may become subject to compulsory production, which could impose indirect costs on firms to the extent that legal or other consequences may flow from that production.

vii. Certification of the Annual QC System Evaluation

The certification requirement itself may not impose much direct cost on firms because the evaluation activities precede certification. However, to the extent that firms choose to implement a more robust internal compliance infrastructure (e.g., by requiring sub-certifications from personnel with direct responsibility for certain functions), those costs could also be attributable to the certification requirement. Moreover, firms may be exposed to litigation costs because the certifications in Form QC are not subject to privilege under section 105(b)(5) of Sarbanes-Oxley, meaning that third parties may be able to compel production of the certifications, and the certifications may have an impact in third-party litigation. For example, the threat of liability for negligent conduct could lead to costs if individuals demand additional remuneration or take additional steps to act reasonably and demonstrate that they have acted reasonably (e.g., assuring themselves that the QC system is appropriately designed) or to defend against enforcement allegations. The Board believes, however, that the internal compliance exercise, and even potentially the threat of third-party litigation, can reinforce the importance of the firm's QC system within the firm, which in turn can help produce the benefits the Board expects this provision will generate.

viii. Responding to Engagement Deficiencies Identified After Issuance of the Audit Report

The amendments to AS 2901, *Consideration of Omitted Procedures After the Report Date*, and related amendments to AT No. 1 and AT No. 2 will contribute to the engagement-level costs discussed above to the extent auditors will perform additional procedures to obtain sufficient appropriate evidence or take additional action to prevent future reliance on insufficiently supported audit opinions

(or review reports in the case of review engagements) that are being relied on. The Board expects the requirement to extend the scope of AS 2901 to include the ICFR audit within its scope will be particularly impactful because the audit of internal control over financial reporting is both resource-intensive⁴⁹⁸ and a common and recurring area of deficiency.⁴⁹⁹

vii. SECPS Requirements

The requirements will refine, integrate into QC 1000, and extend to all firms the SECPS member requirements currently required under PCAOB Rule 3400T. The Board expects this will increase development, implementation, and operating costs for firms not already subject to these requirements. However, the Board believes the costs should be minimal because, based on its oversight activities, the Board believes these firms already have in place policies and procedures related to compliance with SEC and PCAOB independence rules.

3. Unintended Consequences

The requirements could give rise to unintended consequences. Overall, however, the Board expects any potential unintended consequences will be mitigated by other factors.

a. Human Capital

Some firms may require additional staff resources to implement the requirements. To meet this demand, firms may transfer personnel from engagement-level roles to QC roles. This could create a risk that engagements are insufficiently staffed. Alternatively, some firms may assign more junior staff to QC roles or to new openings on engagements. This could create a risk that QC system or engagement personnel lack sufficient training or experience. One commenter reported the commenter's own analysis to demonstrate that audits are largely conducted by non-CPAs with limited experience in the field of auditing. QC 1000 includes quality objectives that mitigate these risks. For example, firms will be required to establish quality objectives that individuals who are assigned to engagements or perform QC system activities have the competence, objectivity, authority (in the case of activities within the QC system), and time to perform their responsibilities in

accordance with applicable professional and legal requirements and the firm's policies and procedures.⁵⁰⁰

Some commenters argued that the costs of QC 1000 would be especially significant due to labor shortages. One commenter asserted that an aggressive enforcement atmosphere may create disincentives for individuals to join the profession, harming the talent pipeline that is necessary for the production of high-quality audits. Another commenter raised concerns that recruiting and retaining partners and employees for a firm's QC system will be a tremendous challenge for firms willing and able to absorb additional costs to properly implement the requirements of QC 1000 given the tight labor market. One commenter reported that some market research indicates significant declines in the number of new CPA candidates and annual accounting degree completions.⁵⁰¹ The commenter also reported commentary from a survey that reveals the largest accounting firms regularly score low along dimensions that are most indicative of their desirability as places to work.⁵⁰² Another commenter cited news articles⁵⁰³ and academic research⁵⁰⁴ that suggest attracting and retaining talent is a serious concern for accounting firms and university accounting programs. However, based on its preliminary survey research, another commenter reported that some QC leaders do not feel resource constrained.⁵⁰⁵

The Board acknowledges the commenters' concerns about the potential impact on staff resources. However, the potential impact on staff resources is likely the result of the interplay among numerous factors in the labor market, such as the rigor of qualifying for and completing the requirements for CPA licensure and the relatively low starting salaries being cited by college students as one of the main hurdles to choosing accounting as a major. To meet increased demand for staff resources, some firms may choose to hire additional experienced staff. It is

⁵⁰⁴ See, e.g., Hermanson, et al., *The Work Environment in Large Audit Firms* A38; Dana R. Hermanson, Heather M. Hermanson, Susan D. Hermanson, *Where is Public Company Auditing Headed?*, 90 CPA Journal 54 (2020); Westermann, et al., *PCAOB Inspections* 694.

⁵⁰⁵ See Hayne, et al., *Managing Quality Control*.

⁴⁹⁸ See, e.g., U.S. Securities and Exchange Commission Office of Economic Analysis, *Study of the Sarbanes-Oxley Act of 2002 Section 404 Internal Control over Financial Reporting Requirements* (Sept. 2009), at Table 8 (reporting that roughly one-third of total audit fees may be attributable to the ICFR audit).

⁴⁹⁹ See, e.g., 2020 Inspection Observations Preview.

possible that the labor demand shock could result in increased wages and potentially higher audit fees, which could be exacerbated by the concentration of large firms in the audit market. Higher wages could in turn help firms attract and retain a skilled workforce or encourage qualified individuals to take essential roles at firms.⁵⁰⁶ The principles-based features and scalable nature of QC 1000 described above, as well as the 100-issuer threshold for some provisions, help mitigate this risk because fewer resources will be required for firms based on those features.

b. Competition

The requirements could also cause firms to exit the public company audit market or deter other firms from future entry. Entry deterrence could be exacerbated by the fact that being registered with the PCAOB will subject firms to certain QC requirements even if they do not perform engagements. Several commenters agreed that the proposed requirements, if adopted, could impact competition. One commenter expressed concern that the incremental requirements of QC 1000 relative to other QC standards could lead smaller high-quality firms to exit the market. One commenter asserted that the certification requirement would be an especially significant driver of exit, particularly for smaller firms. Some commenters suggested that the design requirement for scaled-applicability firms could lead some scaled-applicability firms to deregister with the PCAOB or create a barrier to entry. One commenter added that the design requirement for scaled-applicability firms could impact audit markets beyond the U.S. by creating a disincentive for foreign firms to serve specific audit markets. Another commenter suggested that further enhancing the scalability of QC 1000 may be helpful for smaller firms to stay competitive. One commenter noted that QC 1000 requirements may serve as an impediment to audit firm mergers and acquisitions and otherwise perturb market activity. Correspondingly, less consolidation could mitigate concentration or help preserve a competitive dynamic amongst firms. Nevertheless, the presence of fewer

firms could reduce competition in the public company audit market even in light of additional scalability or fewer mergers and acquisitions. Some commenters said that some firms may resign existing issuer clients or decline new ones to avoid incremental QC 1000 requirements for firms that issue more than 100 audit reports. This could lead to a further reduction in competition for engagements that these firms would otherwise compete. This reduction in competition would likely only apply to actual or potential issuer clients of firms that are close to the 100-issuer threshold. As noted above, PCAOB staff analysis of audit reports included in SEC filings indicates that, during the 2022 calendar year, the number of firms currently around the 100-issuer threshold includes two NAFs that audited between 80 and 100 issuers and two NAFs that audited between 100 and 120 issuers.

Confirming the widely held view that audit firms compete on price, some research suggests that reduced competition is indeed associated with higher audit fees.⁵⁰⁷ However, any exit would likely be limited primarily to firms with small market shares and to the smaller issuer or broker-dealer audit markets, which research suggests tend to be competitive.⁵⁰⁸ For example, firms

⁵⁰⁷ See, e.g., Joshua L. Gunn, Brett S. Kawada, and Paul N. Michas, *Audit Market Concentration, Audit Fees, and Audit Quality: A Cross-Country Analysis of Complex Audit Clients*, 38 *Journal of Accounting and Public Policy* 1 (2019).

⁵⁰⁸ While research generally has focused on competition for the largest public company audits and the corresponding concentration amongst the largest audit firms, less is known about market forces within the smaller audit firm market. However, some research has studied competitive aspects of the smaller firm market. See, e.g., Tracy Ti Gu, Dan A. Simunic, Michael T. Stein, Minlei Ye, and Ping Zhang, *The Market for Audit Services: The Role of Market Power*, 19 *Journal of International Accounting Research* 3 (2020) (concluding that small public companies can potentially purchase audit services from any audit firm and that the number of suppliers to small public companies is relatively higher than the number of suppliers to large public companies); Kenneth L. Bills and Nathaniel M. Stephens, *Spatial Competition at the Intersection of the Large and Small Audit Firm Markets*, 35 *Auditing: A Journal of Practice and Theory* 23 (2016) (concluding that smaller and larger firms compete locally in some cases); Andrew Kitto, Phillip T. Lamoreaux, and Devin Williams, *Do Entry Barriers Allow Low Quality Audit Firms to Enter the Public Company Audit Market?*, available on SSRN: [https://ssrn.com/abstract=3572688\(2023\)](https://ssrn.com/abstract=3572688(2023)) (concluding that current barriers to entry likely deter some audit firms from entering the audit market but that current barriers fail to prevent entry by firms that are significantly lower quality compared to incumbent firms); Brant Christensen, Kecia Williams Smith, Dechun Wang, and Devin Williams, *The Audit Quality Effects of Small Audit Firm Mergers in the United States*, 42 *Auditing: A Journal of Practice & Theory* 75 (2023) (concluding that audit quality decreases post-merger based on data regarding mergers of very small audit firms).

that would manage their client portfolio to avoid incremental QC 1000 requirements would likely prefer to resign (or decline to accept) smaller issuer clients than larger issuer clients. Moreover, some research suggests that reduced competition may have a positive impact on audit quality because it curtails issuers' opportunity to opinion shop.⁵⁰⁹ Compounding this effect, the requirements may further deter opinion shopping as a basis for competition to the extent they would improve auditors' compliance with professional standards. One commenter argued that opinion shopping is not prevalent and any reduction in opinion shopping would be minimal.

c. Network Resources

Some commenters expressed concern that the requirements could diminish the availability of global network resources and that smaller firms around the world could decline to assist U.S. firms in their global audits. One commenter added that this could be detrimental to overall engagement quality. Several factors could mitigate this potential unintended consequence. First, staff analysis of 2021 Form AP filings finds that 74% of all audits (32% of Fortune 500 audits) do not use other auditors.⁵¹⁰ Second, this potential unintended consequence would likely be limited primarily to firms that lack the network resources to implement QC 1000. One academic study finds that 94% of component auditors identified on Form AP are affiliated with the principal auditor (99% when the principal auditor is a GNF).⁵¹¹ Third, other auditors that do not play a substantial role on any PCAOB engagement would be able to deregister with the PCAOB and continue to perform their existing roles on the engagements. Fourth, the competitiveness of the smaller issuer audit market suggests that principal auditors would be able to retain a different component auditor of comparable quality. Finally, to the extent the requirements would lead a firm to retain a lower-quality

⁵⁰⁹ See, e.g., Nathan J. Newton, Julie S. Persellin, Dechun Wang, and Michael S. Wilkins, *Internal Control Opinion Shopping and Audit Market Competition*, 91 *The Accounting Review* 603 (2016); Nathan J. Newton, Dechun Wang, and Michael S. Wilkins, *Does a Lack of Choice Lead to Lower Quality? Evidence From Auditor Competition and Client Restatements*, 32 *Auditing: A Journal of Practice & Theory* 31 (2013).

⁵¹⁰ See PCAOB Rel. No. 2022-002, at Figure 2.

⁵¹¹ See William M. Docimo, Joshua L. Gunn, Chan Li, and Paul N. Nicholas, *Do Foreign Component Auditors Harm Financial Reporting Quality? A Subsidiary-Level Analysis of Foreign Component Auditor Use*, 38 *Contemporary Accounting Research* 3113 (2021).

⁵⁰⁶ There are some indications that retention and recruitment of staff is currently a challenge for audit firms. See, e.g., Persellin, et al., *Auditor Perceptions* 95; AICPA Private Companies Practice Section, *2021 PCPS CPA Top Issues Survey*; AICPA, *2021 Trends: A Report on Accounting Education, the CPA Exam and Public Accounting Firms' Hiring of Recent Graduates* ("AICPA Trends Report") (Apr. 2022).

component auditor, existing PCAOB standards related to audits involving other auditors could help mitigate the risk that the new component auditor performs a low-quality component audit.⁵¹² It is possible that, despite the requirements, firms may not improve compliance with applicable professional and legal requirements when performing their engagements. For example, personnel assigned to QC roles may adopt a perfunctory, “check the box” attitude toward compliance. The firm’s risk assessment process and monitoring and remediation process requirements, which require personnel assigned to QC roles to think proactively about the reasonable assurance objective, could help to mitigate this risk. As another example, engagement partners may overestimate the ability of their firm’s QC system to support achievement of the reasonable assurance objective and relax their efforts to self-monitor or monitor others. While QC 1000 centralizes responsibility for QC to a degree, other requirements could mitigate this risk. For example, individual responsibility features prominently in QC 1000 and PCAOB auditing standards emphasize the responsibility of the engagement partner for the engagement and its performance.⁵¹³

d. Accountability

Some commenters expressed concern that the accountability provisions of QC 1000 could have potentially harmful unintended consequences. For example, one commenter asserted that good faith actions with regard to supervisory responsibilities could become subject to PCAOB enforcement. Some commenters suggested that the roles and responsibilities requirements could reduce audit quality or increase costs by creating a disincentive for the most qualified individuals to take on the specified roles. One commenter noted that individual certification poses a potential threat of additional liability and could affect the recruitment of talented individuals needed to fill critical roles within firms. Another commenter noted that for firms with an issuer practice that makes up a small portion of the overall practice, it can be difficult to find partners to fill lead and

engagement quality reviewer roles on engagements when those roles are subject to a higher risk of individual enforcement actions.

The Board acknowledges that, in addition to positive consequences, accountability can have negative consequences, such as disincentives from taking on QC roles with greater accountability. One commenter suggested that the incorporation of rewards into the firms’ accountability model could mitigate this potential unintended consequence. QC 1000 contemplates that the firm’s compensation plans and performance evaluations will appropriately incentivize firm personnel to fulfill their assigned responsibilities⁵¹⁴ and that firm leadership will be held accountable for quality, including through their performance evaluations and compensation.⁵¹⁵ Depending on the firm’s specific quality risks, including the risk that qualified individuals may be unwilling to take on QC roles, firms can incorporate both positive incentives (“carrots”) and negative incentives (“sticks”) in the design of their incentive plans.

e. Scalability

One commenter expressed concern based on academic research that limiting the applicability of certain requirements to firms of a certain size could give rise to audit quality differences between larger and smaller firms. In general, the incremental requirements for larger PCAOB audit practices are less suitable to smaller PCAOB audit practices’ QC systems. For example, a smaller firm may not need an automated system to track investments if it has a stable number of issuer clients and a small group of persons subject to independence requirements. But if a smaller firm does not achieve its quality objectives or the reasonable assurance objective, it will have to take remedial action, which could include implementing some or all of the incremental QC system features that are expressly required for larger PCAOB audit practices.

f. Design Requirements Under Scaled Applicability

Some commenters expressed concern that scaled-applicability firms could design QC systems inappropriate for the future circumstances that would arise should the firm eventually become a full-applicability firm. One commenter cited research that suggests audit firm personnel designing a QC system to

address hypothetical future circumstances will need to overcome numerous cognitive biases.⁵¹⁶ The Board believes this potential unintended consequence is mitigated by QC 1000’s proactive approach. For example, the firm will be required to establish policies and procedures to monitor, identify, and assess changes to conditions, events, and activities that indicate modifications to the firm’s quality objectives, quality risks, or quality responses may be needed. When such changes are identified, the firm will be required to determine what, if any, modifications are needed to make them on a timely basis. In effect, a scaled-applicability firm’s QC system design should be appropriate for its circumstances in the event it becomes a full-applicability firm.

g. Other Potential Unintended Consequences

Because firms’ QC systems will likely operate over all of their engagements, including those that are not subject to PCAOB standards, the engagement-level costs discussed above could apply to those engagements as well. Moreover, one commenter asserted that firms with a significant private company client base will be challenged by different documentation retention policies based on client base since many aspects of QC relate to the firm as a whole. Correspondingly, the requirements could improve compliance on those engagements because they would be governed by more effective QC policies and procedures. Indeed, one commenter said that requiring all firms to design a QC system that complies with QC 1000

⁵¹⁶ See, e.g., Paul J.H. Schoemaker, *Forecasting and Scenario Planning: The Challenges of Uncertainty and Complexity*, in Blackwell Handbook of Judgment & Decision Making, eds. D.J. Koehler and N. ⁵¹² See, e.g., PCAOB Rel. No. 2022–002.

⁵¹³ See, e.g., QC 1000.42a.(1); AS 1201.03. The Board has also proposed to clarify the engagement partner’s existing responsibilities for supervision and review in AS 1201, AS 1215, and AS 2101 to provide more specificity about the engagement partner’s responsibility to exercise due professional care related to supervisory and review activities required to be performed under existing auditor requirements. See PCAOB Rel. No. 2023–001 at 15.

⁵¹⁴ See QC 1000.44g.

⁵¹⁵ See QC 1000.25b.

could have a beneficial impact on private company audits.

Research on other quality management and enterprise risk management systems suggests other potential unintended consequences. For example, research on ISO 9000 adoption indicates that it may reduce staff morale, stifle innovation, and require excessive levels of documentation.⁵¹⁷ The principles-based features and scalable nature of QC 1000 described above, as well as the 100-issuer threshold for some provisions, help mitigate these concerns by providing firms the ability to design, implement, and operate policies and procedures to support achievement of the reasonable assurance objective based on their facts and circumstances.

Alternatives Considered

During the development of the requirements, the Board considered a number of alternative approaches to address the need described above. This section explains: (1) why standard setting is preferable to other policy-making approaches, such as providing interpretive guidance or enhancing inspection or enforcement efforts; (2) why the chosen standard-setting approach is preferable to other standard-setting approaches; and (3) key policy choices made in determining the details of the standard-setting approach.

1. Why Standard Setting Is Preferable to Another Approach

As potential alternatives to standard setting, the Board considered whether interpretive guidance or greater focus on inspections or enforcement could better address the need described above.

Interpretive guidance assists firms in the implementation of existing PCAOB standards and rules and can advance audit quality by establishing a common understanding of a firm's obligations under PCAOB standards and rules. For example, interpretive guidance may address, among other things, specific, common audit deficiencies identified during PCAOB inspections and the applicable requirements under PCAOB standards and rules. By contrast, as discussed above, some firms' QC systems appear to not be providing reasonable assurance of compliance generally. Moreover, current PCAOB QC standards were developed decades ago

in a very different audit environment and have not been updated to reflect the risk-based, proactive approach to QC that the Board believes would be most effective. Therefore, the Board believes revisions to the current PCAOB QC standards are needed to require firms to make the necessary enhancements to their QC systems to help drive compliance with professional standards.

While the PCAOB will continue to address firms' compliance with PCAOB standards and rules through inspection and enforcement activities, QC standard setting provides certain unique benefits. Firms' QC systems operate over all aspects of all issuer audits and broker-dealer engagements, whereas PCAOB inspections assess compliance with only certain aspects of the issuer audits and broker-dealer engagements selected for review. In addition, inspection and enforcement efforts take place after the engagement has occurred and after investors and other financial statement users have potentially suffered harm. Therefore, greater focus on inspecting and enforcing compliance with PCAOB standards and rules may not be as effective as updating the QC standards and amending other related standards.

2. Why the Chosen Standard-Setting Approach Is Preferable to Other Standard-Setting Approaches

QC 1000 shares the same basic structure as ISQM 1 and SQMS 1. The Board also considered basing QC 1000 on a different quality management framework, such as COSO or ISO 9001, or developing its own risk-based approach. The essential features of these other quality management frameworks are broadly similar to ISQM 1 and SQMS 1. For example, they typically are risk-based and focus on monitoring and remediating deficiencies. However, ISQM 1 and SQMS 1 have the further advantage of being specifically tailored to audit firms. Furthermore, an original risk-based approach would likely include the same essential features as ISQM 1 and SQMS 1. Overall, the Board believes that the benefits of basing QC 1000 on a different quality management framework or an original PCAOB risk-based approach (e.g., improved compliance with applicable professional and legal requirements) would be similar to the benefits of using a structure similar to ISQM 1 and SQMS 1.

Basing QC 1000 on a different quality management framework or an original PCAOB risk-based approach would likely be more costly. As highlighted above, the Board expects that many firms are familiar with ISQM 1 or SQMS 1 and have made, or will make,

investments in their QC systems to comply with those requirements. Firms may be less familiar with other quality management frameworks than they are with ISQM 1 and SQMS 1. Basing QC 1000 on a different quality management framework or an original PCAOB risk-based approach therefore would likely require additional effort by firms to understand and apply the standard. Some firms may be required to employ or engage persons with the necessary expertise in the particular quality framework to facilitate appropriate implementation. While the largest firms may employ consultants with this expertise, smaller firms may not, and acquiring or engaging the necessary consultants could be costly. In addition, basing QC 1000 on a different quality management framework or an original PCAOB risk-based approach may introduce an element of regulatory complexity, which could both increase cost and detract from audit quality for firms that would be required to comply with ISQM 1 or SQMS 1.⁵¹⁸

3. Key Policy Choices

This section discusses several potential provisions that the Board decided against including in QC 1000. These provisions relate to: (1) applicability; (2) the threshold for incremental requirements; (3) firm governance structure; (4) self-assessment monitoring; (5) in-process monitoring activities; (6) the evaluation and reporting dates; (7) reporting the annual QC system evaluation; (8) certification of the annual evaluation; (9) public reporting; and (10) audit committee communications.

a. Applicability

The discussion above explains the distinction between scaled applicability and full applicability. The Board considered requiring all firms to design, implement, and operate a QC system that meets the requirements only upon being required to comply with applicable professional and legal requirements with respect to a firm

⁵¹⁸ One commenter suggested that the Board look at any lessons learned or studies published by the IAASB or the AICPA related to their quality management standards to help inform any refinements that might be needed or additional implementation guidance that might be useful for adoption of QC 1000. As discussed above, the Board took into consideration actions by other standard setters and requirements of their quality management standards in the development of QC 1000. PCAOB staff searched for studies but did not find any available. The recent effective date of ISQM 1 on Dec. 15, 2022, and the forthcoming effective date of SQMS 1 on Dec. 15, 2025, may explain a dearth of lessons learned or post-implementation studies published by IAASB or the AICPA to date.

⁵¹⁷ See, e.g., John Seddon, *Ten Arguments Against ISO 9000*, 7 *Managing Service Quality: An International Journal* 162 (1997); Bozena Poksinska, Jörgen AE Eklund, and Jens Jörn Dahlgaard, *ISO 9001:2000 in Small Organisations Lost Opportunities, Benefits and Influencing Factors*, 23 *International Journal of Quality & Reliability Management* 490 (2006).

engagement. This approach would reduce the costs of the requirements to firms not performing engagements by allowing them to defer the costs of designing their QC system. However, scaled-applicability firms may reduce their costs under the approach by withdrawing from PCAOB registration. Furthermore, any reduced costs would not address the risk that firms could be unprepared to accept and perform engagements in compliance with applicable professional and legal requirements.

The discussion above also addresses commenters' views on alternative approaches to this key policy choice. For example, several commenters suggested allowing scaled applicability firms to design a QC system that complies with ISQM 1. One commenter suggested limiting the design requirements to acceptance and continuance policies. One commenter suggested limiting the design requirement to firms that satisfy an issuer client market capitalization criterion. While these alternative approaches could reduce some of the costs to scaled-applicability firms associated with designing their QC systems, they could also reduce the benefit of firms having a PCAOB-compliant QC system ready for implementation and operation. Furthermore, as discussed above, firms could avoid the costs of designing a QC system that complies with QC 1000 by deregistering.

b. Threshold for Incremental Requirements

The incremental requirements that will apply only to firms that issued audit reports for more than 100 issuers in the prior calendar year (e.g., requirements related to firm governance structure) are discussed above. Several commenters suggested alternative thresholds. For example, some commenters suggested the threshold should consider the market capitalizations of issuer clients. One commenter suggested that the threshold should consider the types of financial statements being audited.⁵¹⁹ These alternative approaches could help ensure QC 1000 is appropriately scalable to the facts and circumstances of all firms. However, the Board believes there could be practical challenges with implementing a more complex threshold. For example, market capitalization can be volatile and would

require PCAOB and firm resources to track. Some firms may cross an issuer market capitalization threshold multiple times within a short period of time. Issuer count, by contrast, aligns with Rule 4003, *Frequency of Inspections*, is easier to track, and may not be as volatile as market capitalization. Finally, while market capitalization may be a useful proxy for investor exposure to the issuers audited by the firm, it would be a less useful proxy for the complexity of a firm's QC system.

c. Firm Governance Structure

Specified quality responses related to governance and leadership are discussed above. The Board considered extending to all firms the requirement to incorporate into their governance structure an external oversight function for the QC system composed of one or more persons who are not principals or employees of the firm and do not otherwise have a commercial, familial, or other relationship with the firm that would interfere with the exercise of independent judgment regarding matters related to the QC system. However, in light of the direct cost of such an oversight function, which could disproportionately impact smaller PCAOB audit practices, and reflecting the Board's view that the public interest in such independent oversight is strongest in relation to the largest firms, the requirement applies only to firms that issued audit reports with respect to more than 100 issuers during the prior calendar year.

Some commenters suggested that more than one independent member of the oversight function should be required. In support of this view, one commenter noted that the independent member(s) would be in the minority and cited academic research regarding audit committees that suggests oversight functions are more effective with a greater proportion of independent members.⁵²⁰ Another commenter referred to a report that cites survey research that suggests female directors improve corporate governance and that the positive influence is most significant when there are three or more female

⁵²⁰ See, e.g., F. Todd DeZoort, Dana R. Hermanson, Deborah S. Archambeault, and Scott A. Reed, *Audit Committee Effectiveness: A Synthesis of the Empirical Audit Committee Literature*, 21 *Journal of Accounting Literature* 38 (2002); Jean Bédard and Yves Gendron, *Strengthening the Financial Reporting System: Can Audit Committees Deliver?*, 14 *International Journal of Auditing* 174 (2010); Joseph V. Carcello, Dana R. Hermanson, and Zhongxia (Shelly) Ye, *Corporate Governance Research in Accounting and Auditing: Insights, Practice Implications, and Future Research Directions*, 30 *Auditing: A Journal of Practice & Theory* 1 (2011).

directors.⁵²¹ The same commenter suggested that the oversight function should have public reporting responsibilities. Some commenters suggested that the independent oversight member should have more control. The Board acknowledges the commenters' views on the potential additional benefits of additional independent oversight requirements. However, the Board is also sensitive to the costs of any additional requirements, which several commenters suggested may be costly or difficult to fulfill.⁵²²

d. Self-Assessment Monitoring

The Board considered permitting individuals to perform monitoring procedures over the same areas for which they are responsible. It decided against this approach because the Board feels it would be inconsistent with the quality objective that individuals who are assigned to perform activities within the QC system have the objectivity to monitor work in accordance with applicable professional and legal requirements and the firm's policies and procedures.⁵²³ As emphasized above, this quality objective is important for creating accountability within the firm to achieve the reasonable assurance objective. Information gathered through PCAOB inspection activities indicates that roughly 3% of firms inspected between 2018 and 2020 performed self-assessments. This suggests that relatively few firms would be impacted by this policy choice. The Board considered allowing self-assessment monitoring under certain conditions to reduce costs for impacted firms but ultimately decided against it out of concern that individuals may not be able to objectively assess their own work. In these circumstances, the firm may use other participants or third-party providers to perform monitoring activities.

e. In-Process Monitoring Activities

In-process monitoring activities are discussed above. The Board considered extending the requirement to monitor in-process engagements to all firms but decided to limit the requirement to firms that issue audit reports with respect to more than 100 issuers. The Board believes that differentiating a

⁵²¹ See The Conference Board, *Maximizing the Benefits of Board Diversity: Lessons Learned from Activist Investing* at 13 (June 2020); Alison M. Konrad, Vicki W. Kramer, and Sumru Erkut, *Critical Mass: The Impact of Three or More Women on Corporate Boards*, 37 *Organizational Dynamics* 145 (2008).

⁵²² See previous discussion on economic impacts above.

⁵²³ See QC 1000.44e.

⁵¹⁹ The commenter noted that a large percentage of their issuer audit counts consist of Form 11-K audits, which have limited impact on the capital markets.

firm's obligation based on the number of issuer clients may be appropriate because, in the Board's view, firms with larger, more complex audit practices are generally subject to quality risks for which in-process monitoring is an appropriate quality response. The Board also understands through PCAOB oversight activities that the majority of smaller PCAOB audit practices do not perform in-process monitoring activities and may lack the resources to do so. Therefore, to balance these concerns, QC 1000 includes a "should consider" requirement to provide sufficient scalability for firms that issue audit reports with respect to 100 or fewer issuers.

f. Evaluation and Reporting Dates

Several commenters suggested that QC 1000 should allow firms to choose their own evaluation date. This alternative could reduce the cost of QC 1000 by allowing firms to perform the evaluation when most convenient. For example, some firms could set their QC 1000 evaluation date near their ISQM 1 evaluation date and use parts of their ISQM 1 evaluation for their QC 1000 evaluation. However, the information reported to the PCAOB on Form QC would be less current and therefore less informative to the PCAOB when it selects firms and engagements for inspection, inspection focus areas, and inspection procedures. Tracking firms' compliance with the evaluation requirements could also be more challenging. In addition, the inherent differences between the QC 1000 and ISQM 1 evaluations will require incremental effort from firms to comply with QC 1000.

The Board initially proposed a November 30 evaluation date followed by 46 days from the evaluation date to both report and document the QC system evaluation. This timeline would provide the PCAOB with timely information to inform PCAOB oversight activities. Some commenters expressed concern that a November 30 evaluation date could present costs and other challenges because some firms have already chosen an alternative evaluation date under ISQM 1 or because the timeframe for the evaluation could conflict with some firms' inspection cycles or business cycles and can encompass holidays and religious observances. The Board was persuaded that a November 30 evaluation date could have led to unnecessary incremental resource demands during the busy and holiday seasons. Accordingly, the Board instead required firms to adopt a September 30 evaluation date as discussed above.

Some commenters expressed concern that 46 days would be insufficient to report on and document their evaluation. The Board was persuaded that 46 days to report on and document the QC system evaluation could have created unnecessary costs to firms. Therefore, under the final standard, a firm will have 61 days to evaluate their QC system and an additional 14 days after the evaluation to assemble their documentation.

g. Reporting the Annual QC System Evaluation

Firm reporting on the QC system evaluation is discussed above. One commenter asserted that an explicit reporting requirement is unnecessary because the PCAOB inspection process provides the Board and staff with any relevant contemporaneous quality control information for both annual and triennially inspected firms. The Board considered obtaining the annual QC system evaluation as part of the PCAOB inspection process rather than an explicit reporting requirement. Under this alternative approach, the evaluation would be less timely, structured, and consistent and likely would not inform the PCAOB's inspection approach as effectively, especially for triennial firms. It could also diminish the beneficial incentive effect of mandatory reporting to the PCAOB. This alternative approach could eliminate or reduce the costs to firms associated with preparing a summary report of the firm's QC system evaluation. In addition, if, under this alternative approach, the privilege protections of section 105(b)(5) were determined to apply to some or all of the information generated by the firm pursuant to QC 1000, that could diminish the discoverability of such information in litigation, thereby decreasing third-party litigation risk. However, this alternative approach would not address the lost information value, particularly for the triennial firms.

The Board also considered requiring firms to report to the Board on Form QC only when the firm identifies a major QC deficiency. This approach would reduce some of the variable costs associated with preparing and transmitting Form QC to the PCAOB. However, this approach would also reduce the value of Form QC to the PCAOB. For example, reporting on unremediated QC deficiencies would inform various aspects of PCAOB oversight activities, including focusing inspection resources on higher risk firms, engagements, and focus areas; designing the nature and extent of inspection procedures, both for QC

processes and individual engagements; and making more refined data requests from the firms. This alternative approach could also diminish the beneficial incentive effect of mandatory reporting to the PCAOB.

Several commenters suggested that the PCAOB clarify that Form QC is submitted under the PCAOB's inspections authority, as a way of bestowing the confidentiality protections of section 105(b)(5) upon the information provided therein. This would, according to commenters, alleviate uncertainty about the extent to which information submitted thereon may be subject to discovery or other disclosures, diminish a risk of unwarranted legal exposure, and help place the information in the context of the ongoing inspections dialogue. The Board acknowledges the commenters' concerns about these issues. However, as discussed above, QC 1000 is not an inspections rule; it is a QC standard that places obligations on all registered firms regardless of their inspection status (annual, triennial, or exempt), and as such the Board is not able to say that Form QC information is necessarily submitted "in connection with an inspection" as would be necessary to trigger the confidentiality protections of section 105(b)(5) of Sarbanes-Oxley.

h. Certification of the Annual Evaluation

Some commenters requested that the Board specify a heightened legal standard (e.g., recklessness) at which liability could be imposed on individuals for making a certification that is later determined to be false, or create safe harbors for inevitable system errors or the wrongful acts of others. As discussed above, the standard for liability turns on the particular language of each statement in the certification: some statements are subject to a negligence standard, while others (namely those with knowledge qualifiers) give rise to liability only if the certifier knew that the statement was false or recklessly did not know it was false. The Board acknowledges that alternative approaches urged by commenters could have saved some costs. Specifically, limiting liability to recklessness in all circumstances would provide individuals with comfort that their decisions would not be second-guessed in litigation. This result may make the performance of those services more efficient by removing an incentive to perform tasks that are not directly related to quality. For example, individuals may be less incentivized to engage in self-protective behaviors if a heightened legal standard (e.g.,

recklessness) is imposed. In addition, more staff may be willing to take these roles (or to take them at a lower price) if liability or workload would have been more limited by a heightened legal standard.⁵²⁴ However, that approach would have attenuated the benefits sought to be achieved by the certification requirement by removing the Board's ability to hold individuals accountable for conduct that fails to meet a reasonable person standard of care.

i. Public Reporting

The discussion above summarizes commenters' views on public reporting about firms' QC systems and legal constraints on public disclosure that are imposed by Sarbanes-Oxley. Some commenters suggested that the non-confidential portions of Form QC could be made publicly available. Such public reporting could in principle provide investors with additional information on audit quality and thereby help address the problem discussed above. However, the Board believes that significant portions of Form QC may be confidential. As a result, the non-confidential portions of Form QC could have been misleading and difficult to compare across firms. Public reporting of non-confidential portions of Form QC could also lead firms to be less candid in their Form QC reporting and thereby diminish its value to the PCAOB. Some commenters also expressed concern that any public reporting could be contrary to Sarbanes-Oxley. After considering the benefits and costs of alternative approaches, including those identified by commenters, the Board believes that firm reporting on Form QC should be nonpublic.

Several commenters suggested that QC 1000 should require firms to

publicly disclose information related to audit quality. As discussed above, the Board has proposed separate rules related to firm and engagement metrics as well as firm reporting.⁵²⁵

j. Audit Committee Communications

Commenters' views on potential required reporting to audit committees are discussed above. The Board initially proposed to require the firm to discuss with the audit committee the conclusion of the firm's most recent annual evaluation of its QC system and a brief overview of remedial actions taken and to be taken. This information could give audit committees greater insight into the quality of their auditor. Several commenters were supportive of the proposed requirement. However, several other commenters asserted that the information could be largely difficult to understand, irrelevant to an individual audit committee, and potentially inconsistent with Sarbanes-Oxley. Furthermore, one commenter noted research and expressed concern that disclosure regarding the annual QC system evaluation to the audit committee only could enable audit committees to shop for lower-quality auditors.⁵²⁶ Similarly, another commenter expressed concern with an approach that would provide mandatory disclosure to audit committees but not to investors and the public. As discussed above, the Board determined not to adopt the proposed amendments to AS 1301 after consideration of the comments received.

Special Considerations for Emerging Growth Companies

Pursuant to section 104 of the Jumpstart Our Business Startups ("JOBS") Act, rules adopted by the Board subsequent to April 5, 2012, generally do not apply to the audits of

emerging growth companies ("EGCs"), as defined in section 3(a)(80) of the Exchange Act, unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation."⁵²⁷ As a result of the JOBS Act, the rules and related amendments to PCAOB standards that the Board adopts are generally subject to a separate determination by the SEC regarding their applicability to audits of EGCs.

To inform consideration of the application of PCAOB standards to audits of EGCs,⁵²⁸ PCAOB staff prepares a white paper annually that provides general information about characteristics of EGCs.⁵²⁹ As of the November 15, 2022, measurement date, there were 3,031 companies⁵³⁰ that self-identified as EGCs and filed audited financial statements with the SEC between May 16, 2021, and November 15, 2022, that included an audit report signed by a firm. Of the 263 registered firms that audited EGCs, 227 firms (or 86%) performed audits for both EGC and non-EGC issuers.⁵³¹ Approximately 98% of EGCs were audited by these 227 firms.⁵³²

PCAOB staff also gathered information on Part I.A deficiencies for the audits of EGCs between 2013 and 2022. Figure 6 presents the percentage of inspected EGC and non-EGC issuer audits having at least one Part I.A deficiency. The data suggest that Part I.A deficiencies are even more common among audits of EGCs, raising questions about whether QC systems of firms that audit EGCs are effective in preventing audit deficiencies for these types of audit engagements.

⁵²⁴ See Economic benefits—improved compliance with applicable professional and legal requirements—above for a discussion of commenters' concerns regarding increased liability or workload associated with the roles as potential disincentives that may keep qualified individuals from accepting the roles.

⁵²⁵ See PCAOB Rel. No. 2024–002 and PCAOB Rel. No. 2024–003.

⁵²⁶ See, e.g., Melissa Carlisle, Wei Yu, and Bryan K. Church, *The Effect of Small Audit Firms' Failure to Remediate the PCAOB's Quality Control Criticisms on Audit Market Segmentation*, 41 *Journal of Accounting and Public Policy* 1 (2022).

⁵²⁷ See Public Law 112–106 (Apr. 5, 2012). Section 103(a)(3)(C) of Sarbanes-Oxley, 15 U.S.C. 7213(a)(3)(C), as added by section 104 of the JOBS Act, also provides that any rules of the Board requiring (1) mandatory audit firm rotation or (2) a

supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer (auditor discussion and analysis) shall not apply to an audit of an EGC. None of the rules and amendments would fall within either of these two categories.

⁵²⁸ This analysis of the impact on EGCs is provided to assist the SEC in making the determination required under section 104 to the extent that the requirements apply to "the audit of any emerging growth company" within the meaning of section 104 of the JOBS Act.

⁵²⁹ See PCAOB, *Characteristics of Emerging Growth Companies and Their Audit Firms at November 15, 2022* (Feb. 20, 2024) ("EGC White Paper"), available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/economicandriskanalysis/projects/other/documents/white-paper-on-characteristics-of-emerging-growth-companies-as-of-nov-15-2022.pdf?sfvrsn=a8294f3_2.

⁵³⁰ The EGC White Paper uses a lagging 18-month window to identify companies as EGCs. Please refer to the "Current Methodology" section in the EGC White Paper for details. Using an 18-month window enables PCAOB staff to analyze the characteristics of a fuller population in the EGC White Paper but may tend to result in a larger number of EGCs being included for purposes of the present EGC analysis than would alternative methodologies. For example, an estimate using a lagging 12-month window would exclude some EGCs that are delinquent in making periodic filings. An estimate as of the measurement date would exclude EGCs that have terminated their registration or that have exceeded the eligibility or time limits.

⁵³¹ See EGC White Paper, at 17.

⁵³² See *id.*

Figure 6. Percentage of Inspected EGC and Non-EGC Issuer Audits Having at Least One Part I.A Deficiency (2013-2022)

In general, any new PCAOB standards and amendments to existing standards determined not to apply to the audits of EGCs would require auditors to address differing requirements within their methodologies or policies and procedures with respect to audits of EGCs and non-EGCs, which would create the potential for confusion. This may not be practical in the context of the QC standards; while some components of the QC system (such as engagement monitoring) may enable different approaches for audits of EGCs compared to audits of other companies, other elements (for example, resources and governance and leadership) are necessarily firm-wide and cannot easily be differentiated for different types of audits. Even where differentiation is possible, maintaining separate QC system components for EGC and non-EGC audits and separate methodologies with respect to, for example, auditor obligations with respect to deficiencies in completed engagements and foundational ethics requirements, may add cost or lead to confusion, and could run counter to the objective of integrating QC practices into a single virtuous cycle of risk assessment, monitoring, and remediation. These methodology and QC system differentiation costs would affect at least the 227 registered firms that audit both EGCs and non-EGCs and that, collectively, audit approximately 98% of EGCs.

The discussion of economic impacts of the requirements is generally

applicable to the audits of EGCs. In particular, the benefits to financial reporting quality articulated above may be especially pertinent for EGCs, including improved efficiency of capital allocation, lower cost of capital, and enhanced capital formation. EGCs tend to be smaller⁵³³ and have a shorter SEC financial reporting history than the broader population of public companies. Academic research suggests that, for several reasons, smaller public companies tend to exhibit greater information asymmetry between management and investors.⁵³⁴ Accordingly, EGCs are likely to exhibit greater information asymmetry between management and investors and hence the importance of the external audit to investors in enhancing the credibility of EGC financial reporting may be more pronounced.

The requirements could impact competition in an EGC product market if the indirect costs to audited companies of the requirements disproportionately impact the EGCs relative to their competitors. EGCs may be forced to raise prices, thereby

diverting market share toward their competitors. This could increase competition in markets where EGCs have a dominant market share and decrease competition in markets where EGCs have a less than dominant market share. The potential impact to competition in EGC product markets would be reduced to the extent EGC auditors will already be required to comply with ISQM 1 or SQMS 1 or otherwise would choose not to pass on incremental costs arising from the requirements in the form of higher audit fees.

The proposal sought comment on the applicability of the proposed requirements to audits of EGCs. Some commenters agreed that the proposed requirements should apply to the audits of EGCs.

Accordingly, and for the reasons explained above, the Board requests that the Commission determine that it is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation, to apply QC 1000 and the related amendments to Board standards, rules, and forms to audits of EGCs.

III. Date of Effectiveness of the Proposed Rules and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to

⁵³³ See EGC White Paper, at Figure 9 and Figure 12 (indicating that exchange-listed EGCs have lower market capitalization and revenue than exchange-listed non-EGCs).

⁵³⁴ For example, smaller public companies tend to have less analyst coverage and a greater share of insider holdings. See, e.g., Raymond Chiang and P. C. Venkatesh, *Insider Holdings and Perceptions of Information Asymmetry: A Note*, 43 *Journal of Finance* 1041 (1988); Ravi Bhushan, *Firm Characteristics and Analyst Following*, 11 *Journal of Accounting and Economics* 255 (1989).

90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding; or (ii) as to which the Board consents, the Commission will:

(A) By order approve or disapprove such proposed rules; or

(B) Institute proceedings to determine whether the proposed rules should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rules are consistent with the requirements of Title I of the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/pcaob>); or
- Send an email to rule-comments@sec.gov. Please include PCAOB-2024-02 on the subject line.

Paper Comments

- Send paper comments in triplicate to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to PCAOB-2024-02. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/pcaob>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rules that are filed with the Commission, and all written communications relating to the proposed rules between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the

Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the PCAOB. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to PCAOB-2024-02 and should be submitted on or before July 2, 2024.

For the Commission, by the Office of the Chief Accountant.⁵³⁵

Vanessa A. Countryman,
Secretary.

FEDERAL REGISTER

Vol. 89

Tuesday,

No. 113

June 11, 2024

Part IV

Securities and Exchange Commission

Public Company Accounting Oversight Board; Notice of Filing of Proposed Rules on General Responsibilities of the Auditor in Conducting an Audit and Amendments to PCAOB Standards; Notice

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-100276; File No. PCAOB-2024-01]

Public Company Accounting Oversight Board; Notice of Filing of Proposed Rules on General Responsibilities of the Auditor in Conducting an Audit and Amendments to PCAOB Standards

June 5, 2024

Pursuant to Section 107(b) of the Sarbanes-Oxley Act of 2002 (“Sarbanes-Oxley,” or the “Act”), notice is hereby given that on May 24, 2024, the Public Company Accounting Oversight Board (the “Board” or the “PCAOB”) filed with the Securities and Exchange Commission (the “Commission” or the “SEC”) the proposed rules described in items I and II below, which items have been prepared by the Board. The Commission is publishing this notice to solicit comments on the proposed rules from interested persons.

I. Board’s Statement of the Terms of Substance of the Proposed Rules

On May 13, 2024, the Board adopted *General Responsibilities of the Auditor in Conducting an Audit and Amendments to PCAOB Standards* (“proposed rules”). The text of the proposed rules appears in Exhibit A to the SEC Filing Form 19b-4 and is available on the Board’s website at <https://pcaobus.org/about/rules-rulemaking/rulemaking-dockets/docket-049-responsibilities-auditor-conducting-audit>, and at the Commission’s Public Reference Room.

II. Board’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rules

In its filing with the Commission, the Board included statements concerning the purpose of, and basis for, the proposed rules and discussed any comments it received on the proposed rules. The text of these statements may be examined at the places specified in Item IV below. The Board has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements. In addition, the Board is requesting that the Commission approve the proposed rules, pursuant to Section 103(a)(3)(C) of the Act, for application to audits of emerging growth companies (“EGCs”), as that term is defined in Section 3(a)(80) of the Securities Exchange Act of 1934 (“Exchange Act”). The Board’s request is set forth in section D.

A. Board’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rules

(a) Purpose

The Board adopted a new auditing standard, AS 1000, *General Responsibilities of the Auditor in Conducting an Audit* (“new standard,” “final standard,” or “AS 1000”). The new standard replaces a group of standards originally developed by the American Institute of Certified Public Accountants (“AICPA”) and adopted on an interim basis by the PCAOB in 2003. That group of standards established the general principles and responsibilities of the auditor when conducting an audit (“foundational standards”). The general principles and responsibilities addressed by the foundational standards include reasonable assurance, due professional care, professional skepticism, independence, competence, and professional judgment. These principles and related responsibilities provide a foundation for the proper performance of the audit.

Through this standard-setting project, the Board has reaffirmed the general principles and responsibilities of the auditor so that the foundation underlying the standards continues to be sound and appropriate for performing high-quality audits. These principles and responsibilities, enhanced and consolidated into a single auditing standard, together with related amendments, will modernize the auditing standards to better address fundamental aspects of the audit and provide auditors with better direction to protect investors and further the public interest in the preparation of informative, accurate, and independent auditor’s reports.

AS 1000 will replace four standards that set forth the general principles and responsibilities of the auditor: AS 1001, *Responsibilities and Functions of the Independent Auditor*; AS 1005, *Independence*; AS 1010, *Training and Proficiency of the Independent Auditor*; and AS 1015, *Due Professional Care in the Performance of Work*. AS 1000 combines and updates the general principles and responsibilities of these standards to reflect developments in the auditing environment.

The Board also amended certain other standards that address responsibilities fundamental to the conduct of an audit. These amendments clarify the engagement partner’s responsibility to exercise due professional care related to supervision and review of the audit, accelerate the documentation completion date by reducing the maximum period for the auditor to

assemble a complete and final set of audit documentation from 45 days to 14 days, and clarify the auditor’s responsibility to evaluate whether the financial statements are “presented fairly.” Finally, the Board adopted additional amendments to conform to these changes.

After carefully considering the comments the Board received, the Board adopted the amendments substantially as proposed, with revisions that reflect the input of commenters.

Since the PCAOB’s adoption of the foundational standards in 2003, the auditing environment has evolved, including:

- Changes to auditing requirements through Board-issued standards;
- New or revised independence requirements issued by the Board; and
- Advancements in technology that are increasing the availability of electronic audit tools and use of audit software.

The new standard and related amendments the Board adopted will modernize PCAOB standards to:

- Reflect changes in the auditing environment;
- Eliminate outdated and inconsistent language; and
- Achieve consistency with Board-issued standards.

AS 1000 and the related amendments modernize, clarify, and streamline the general principles and responsibilities of the auditor and provide a more logical presentation, which should enhance the useability of the standards by making them easier to read, understand, and apply.

The Board clarified the auditor’s responsibility to evaluate whether the financial statements are “presented fairly.” The Board also clarified the engagement partner’s due professional care responsibilities by adding specificity to certain audit performance principles set out in the standards. Finally, the accelerated documentation completion date reflects changes in the auditing environment, including advancements in technology that have enabled auditors to assemble a complete and final set of audit documentation in less time than in a paper-based environment. The new documentation completion date reduces the window of opportunity for improper alteration of audit documentation and also enables the Board to potentially begin the inspection process sooner after completion of an audit, which the Board believes can enhance the Board’s efforts to improve audit quality and promote investor protection, ultimately enhancing investor confidence.

The new standard and related amendments will apply to all audits conducted under PCAOB standards.

See Exhibit 3 for additional discussion of the purpose of this project.

(b) Statutory Basis

The statutory basis for the proposed rules is Title I of the Act.

B. Board's Statement on Burden on Competition

Not applicable. The Board's consideration of the economic impacts of the proposed rules is discussed in section D below.

C. Board's Statement on Comments on the Proposed Rules Received From Members, Participants or Others

The Board initially released the proposed rules for public comment in PCAOB Release No. 2023-001 (Mar. 28, 2023). The Board received 28 written comment letters that were specifically submitted in response to its initial proposed rules in PCAOB Release No. 2023-001. In addition, the Board received six comment letters relating to its consideration of proposed amendments on quality control, which were released for public comment on November 19, 2022, and that are relevant to the definition of "applicable professional and legal requirements" in these proposed rules. See Exhibits 2(a)(B) and 2(a)(C). The Board has carefully considered all comments received. The Board's response to the comments it received, and the changes made to the rules in response to the comments received are discussed below.

Background

In April 2003, the Board adopted, on an interim basis, the generally accepted auditing standards of the AICPA's Auditing Standards Board ("interim standards") and the related auditing interpretations as they existed then.¹ At that time, the Board stated that it would determine whether the interim standards "should become permanent standards of the Board, should be repealed, or should be modified."² Since then, the Board has adopted a number of new auditing standards that supersede or amend portions of the interim standards and related auditing interpretations.³ However, certain

remaining interim standards, including those that address the general principles and responsibilities of the auditor, have continued to be in effect substantially in the form adopted.

Since the adoption of the interim standards, the auditing environment has evolved in many ways, including (i) changes to auditing requirements through Board-issued standards; (ii) new or revised independence requirements issued by the Board;⁴ and (iii) advancements in technology that are increasing the availability of electronic audit tools and the use of audit software. While these developments have generally been reflected through amendments to some interim standards and related interpretations in connection with the Board's standard-setting initiatives, the 2022-2026 Strategic Plan reinforced the Board's intent "to modernize and streamline [the Board's] existing standards and to issue new standards where necessary to meet today's needs" as part of the PCAOB's investor protection mission.⁵

In connection with these initiatives,⁶ the Board analyzed the interim foundational standards that address the general principles and responsibilities of the auditor in conducting an audit. These foundational standards are:

- AS 1001, *Responsibilities and Functions of the Independent Auditor*;
- AS 1005, *Independence*;
- AS 1010, *Training and Proficiency of the Independent Auditor*; and
- AS 1015, *Due Professional Care in the Performance of Work*.⁷

The general principles and responsibilities addressed by the foundational standards include

Results, and AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

⁴ See generally Section 3 of PCAOB rules, *Auditing and Related Professional Practice Standards*, Part 5, *Ethics and Independence*.

⁵ See PCAOB, *Strategic Plan 2022-2026*, at 10, available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/about/administration/documents/strategic_plans/strategic-plan-2022-2026.pdf?sfvrsn=b2ec4b6a_4/.

⁶ See PCAOB's interim standards project, available at <https://pcaobus.org/oversight/standards/standard-setting-research-projects/interim-standards>.

⁷ When adopted by the Board in 2003, this group of interim standards was designated as AU sec. 110, AU sec. 220, AU sec. 210, and AU sec. 230. In 2015, the PCAOB reorganized its auditing standards using a topical structure and a single, integrated number system, and these interim standards were designated as AS 1001, AS 1005, AS 1010, and AS 1015, respectively. See *Reorganization of PCAOB Auditing Standards and Related Amendments to PCAOB Standards and Rules*, PCAOB Rel. No. 2015-002 (Mar. 31, 2015). The reorganization did not impose additional requirements on auditors or change substantively the requirements of PCAOB standards.

reasonable assurance, due professional care, professional skepticism, independence, competence, and professional judgment. Through this rulemaking, the Board is reaffirming and modernizing the general principles and responsibilities of the auditor to ensure that the foundation continues to be sound and appropriate for performing high-quality audits.

Rulemaking History

In March 2023, the Board proposed a new, single standard to replace the foundational standards that address the general principles and responsibilities of the auditor in conducting an audit ("proposed standard").⁸ The proposal also included key amendments to other PCAOB standards that address matters that are fundamental to the conduct of an audit. These proposed amendments clarified the engagement partner's responsibility to exercise due professional care related to supervision and review of the audit, accelerated the documentation completion date by reducing the maximum period for the auditor to assemble a complete and final set of audit documentation from 45 days to 14 days, and clarified the auditor's responsibility to evaluate whether the financial statements are "presented fairly."

The Board received 28 comment letters on the proposal.⁹ Commenters included investor-related groups, firms, firm-related groups, academics, and others. The Board considered all comments in developing the final standard and amendments, and specific comments are discussed in the analysis that follows.

Overview of Existing Requirements

This section discusses key provisions of the existing standards.

Key provisions of AS 1001, *Responsibilities and Functions of the Independent Auditor*, include:

- The objective of an audit of financial statements is to express an opinion on the fairness of the financial statements in presenting, in all material respects, the financial position, results of operations, and cash flows in accordance with generally accepted accounting principles ("GAAP"). The

⁸ Proposed Auditing Standard—General Responsibilities of the Auditor in Conducting an Audit and Proposed Amendments to PCAOB Standards, PCAOB Rel. No. 2023-001 (Mar. 28, 2023) ("proposal" or "proposing release").

⁹ The comment letters received on the proposal are available in the docket for this rulemaking on the PCAOB's website (<https://pcaobus.org/about/rules-rulemaking/rulemaking-dockets/docket-049-responsibilities-auditor-conducting-audit/comment-letters>).

¹ See *Establishment of Interim Professional Auditing Standards*, PCAOB Rel. No. 2003-006 (Apr. 18, 2003). The auditing interpretations were the publications entitled "Auditing Interpretations" issued by the AICPA Auditing Standards Board, as they existed and were effective as of April 2003.

² See PCAOB Rel. No. 2003-006.

³ See, e.g., AS 1201, *Supervision of the Audit Engagement*; AS 1215, *Audit Documentation*; AS 2101, *Audit Planning*; AS 2810, *Evaluating Audit*

auditor also disclaims an opinion if circumstances require. (AS 1001.01)

- The responsibilities of the auditor and management are that (i) the auditor plans and performs the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud; and (ii) management is responsible for the financial statements, including adopting accounting policies and establishing and maintaining internal control to initiate, record, process, and report transactions (as well as events and conditions) consistent with management's assertions in the financial statements. (AS 1001.02–.03)

- The auditor is to possess professional qualifications and exercise professional judgment in determining which auditing procedures are necessary in the circumstances to gain a reasonable basis for the opinion. (AS 1001.04–.05)

- The auditor should be aware of and consider auditing interpretations applicable to the audit and, if the guidance in the interpretations is not followed, be prepared to explain how the auditor complied with the provisions of the auditing standard addressed by the guidance. (AS 1001.11)

Key provisions of AS 1005, *Independence*, require that the auditor:

- Maintain independence in mental attitude and be intellectually honest, impartial, and without bias with respect to the client (*i.e.*, be independent in fact). (AS 1005.01–.03)
- Be free from any obligation to or interest in the client, its management, or its owners, so that the general public maintains confidence in the independence of auditors. (AS 1005.03)
- Not only be independent in fact, but also avoid situations that may lead outsiders to doubt the auditor's independence. (AS 1005.03)

Key provisions of AS 1010, *Training and Proficiency of the Independent Auditor*, require that:

- The audit be performed by persons having adequate technical training, proficiency, and experience as an auditor. (AS 1010.01–.02)
- The training of the auditor be adequate to meet the requirements of the profession, be adequate in technical scope, and include general education. (AS 1010.01–.03)
- New audit professionals obtain professional experience through proper supervision and review of their work by those who are more experienced, with the nature and extent of supervision reflecting variances in practice. (AS 1010.03)
- The engagement partner exercise seasoned judgment in the varying

degrees of supervision and review of work performed and judgments exercised by subordinates, and subordinates meet the responsibilities of their work. (AS 1010.03)

- The auditor continue professional training to become aware of developments in business and the profession, and study, understand, and apply new pronouncements on accounting and auditing. (AS 1010.04)

Key provisions of AS 1015, *Due Professional Care in the Performance of Work*, require that:

- The auditor exercise due professional care in the planning and performance of the audit and the preparation of the report, including observance of the auditing standards by professionals within the auditor's organization. (AS 1015.01–.02)
- The auditor possess “the degree of skill commonly possessed” by other auditors and exercise it with “reasonable care and diligence” (*i.e.*, due professional care) in the planning and performance of the audit and the preparation of the report. (AS 1015.01 and .05)

- The engagement team be assigned to tasks and be supervised commensurate with their level of knowledge, skill, and ability so that they can evaluate the audit evidence they are examining. (AS 1015.06)

- The engagement partner know, at a minimum, the relevant professional accounting and auditing standards, be knowledgeable of the audit client, and be responsible for the assignment of tasks to, and supervision of, the members of the engagement team. (AS 1015.06)

- The auditor exercise professional skepticism throughout the audit, with a questioning mind and a critical assessment of audit evidence, to diligently gather and objectively evaluate audit evidence, and consider the competency and sufficiency of the evidence, and not be satisfied with less than persuasive evidence because of a belief that management is honest. (AS 1015.07–.09)

- The auditor obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud, or whether any material weaknesses exist as of the date of management's assessment. Reasonable assurance is “a high level of assurance” but is not absolute assurance because of the nature of audit evidence and the characteristics of fraud. (AS 1015.10)

Key provisions of other standards relevant to this rulemaking include:

- AS 1201.04–.05 and AS 2101.03, which describe the engagement

partner's responsibilities for supervision and review of audit documentation.

- AS 1215.06, which requires the auditor to document procedures performed, evidence obtained, and conclusions reached with respect to relevant financial statement assertions.

- AS 1215.15, which requires the auditor to complete the necessary auditing procedures and assemble for retention a complete and final set of audit documentation within 45 days after the report release date.

- AS 2810.30, which requires the auditor to evaluate whether the financial statements are presented fairly, in all material respects, in conformity with the applicable financial reporting framework.

- AS 2815, *The Meaning of “Present Fairly in Conformity with Generally Accepted Accounting Principles,”* which explains the meaning of “present fairly” as used in the phrase “present fairly . . . in conformity with generally accepted accounting principles,” and the basis for the auditor's opinion on whether the financial statements present fairly an entity's financial position, results of operations, and cash flows in conformity with generally accepted accounting principles.

Reasons To Improve Auditing Standards

The new standard and related amendments are intended to modernize, clarify, and streamline the general principles and responsibilities of the auditor described in the foundational standards. The Board identified several areas discussed below that the Board believes will enhance the useability of the requirements by making them easier to read, understand, and apply.

1. Alignment With Board-Issued Standards and Rules

Since the adoption of the foundational standards, the Board has issued a number of new auditing standards and amendments. Certain of these standards address other principles and responsibilities that are fundamental to the conduct of an audit, including the engagement partner's supervisory and review responsibilities and general requirements for audit documentation. Expressly incorporating these specific principles and responsibilities for conducting an audit in the new standard and related amendments should provide the auditor with more complete direction on matters that are central to the auditor's work.

Certain descriptions of requirements in the foundational standards do not align with the language used in Board-issued standards. For example, some

provisions in the foundational standards refer to GAAP;¹⁰ however, in recognition of the SEC's acceptance of filings that include financial statements prepared under accounting frameworks other than U.S. GAAP, such as International Financial Reporting Standards ("IFRS"), Board-issued standards are written as framework neutral and refer instead to the applicable financial reporting framework.¹¹ As another example, in describing professional skepticism, AS 1015 refers to the competency and sufficiency of the audit evidence rather than using terminology consistent with the Board-issued AS 1105, *Audit Evidence*, which refers to audit evidence as sufficient and appropriate. The Board believes that aligning the descriptions of the general principles and responsibilities in the new standard with language used in Board-issued standards will minimize potential confusion.

The foundational standards were originally written for audits of financial statements, but certain general principles and responsibilities described in the standards (e.g., reasonable assurance, due professional care, and professional skepticism) apply equally to audits of internal control over financial reporting ("ICFR"). None of the foundational standards mention audits of ICFR or refer to AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*. While AS 2201 refers to the foundational standards for the requirements related to technical training and proficiency as an auditor, independence, and the exercise of due professional care, including professional skepticism,¹² the Board believes it is important to clarify in the new standard that the general principles and responsibilities apply to an audit of ICFR as well as an audit of financial statements.

The application of the general principles and responsibilities should be improved by conforming the presentation of the related requirements to the structure used in Board-issued standards. This includes specifying an

introduction and objectives to the new standard. In addition, the responsibilities from the foundational standards should be clarified by expressing the related requirements using terms described in PCAOB Rule 3101, *Certain Terms Used in Auditing and Related Professional Practice Standards* (e.g., using "must" and "should" to describe the degree of responsibility that the standards impose on auditors). Much of the explanatory material from the foundational standards that continues to be relevant has been relocated to the discussion in this release, which should facilitate the auditor's navigation of the relevant requirements and align with the approach taken in Board-issued standards.

2. New or Revised Independence Requirements Issued by the PCAOB and the SEC

Since the adoption of AS 1005 in 2003, the PCAOB has issued independence rules that have imposed certain incremental independence requirements on firms, relative to the SEC rules¹³ (e.g., provisions related to tax services for persons in financial reporting oversight roles at issuer audit clients).¹⁴ These incremental independence requirements are not expressly addressed in AS 1005, but nevertheless the auditor is required to comply with them. Further, while AS 1005 includes a general reference to the SEC's requirements for auditor independence, there is no reference to the specific requirements. The Board believes it is helpful to refer explicitly in the new standard to the requirements that govern auditor independence, including independence requirements set out by the federal securities laws and related rules, which include an overarching provision for the auditor to maintain independence from its client in fact and in appearance.¹⁵

3. Advancements in Technology Increasing the Availability of Electronic Audit Tools and Use of Audit Software

Since the foundational standards were adopted by the PCAOB, advancements in technology have increased the availability of electronic audit tools and use of audit software. Auditors have largely moved away from a paper-based approach to audit documentation in

favor of using software that houses electronic workpapers and audit programs. Use of electronic workpapers facilitates more efficient performance and review of audit procedures and enables auditors to assemble a complete and final set of audit documentation in less time than in a paper-based environment.

Auditors are also expanding their use of and reliance on electronic audit tools. For example, some firms have made significant investments in internally developed tools for use in the audit. In addition, some "off-the-shelf" applications such as data analysis software have become available to auditors. These advancements have changed the way that many auditors perform and document their audit procedures and retain related audit documentation. Accordingly, the new standard and amendments reflect an accelerated documentation completion date and related documentation requirements.

4. Outdated and Inconsistent Language

The foundational standards include outdated and inconsistent language that is not relevant to audits conducted under the standards of the PCAOB. For example, paragraph .03 of AS 1001 provides that the auditor may draft the financial statements in whole or in part based on information from management during performance of the audit. This provision is outdated and should not be included in PCAOB auditing standards because an auditor drafting the financial statements would violate the applicable independence rules.¹⁶ Eliminating outdated language used in the foundational standards should remove inconsistencies between PCAOB auditing standards and the relevant rules of the PCAOB and the SEC. Similarly, in describing the objective of the audit, paragraph .01 of AS 1001 refers to financial position, results of operations, and cash flows. This language could be unnecessarily limiting because the objective of the audit does not change based on the subject matter of the audit (e.g., whether it is an audit of ICFR or the financial statements). The new standard excludes references that are outdated or inconsistent, which the Board believes improves the application of the requirements and provides clearer direction to auditors in executing their responsibilities.

¹⁰ See, e.g., AS 1001.01 and .03.

¹¹ See paragraph .01, footnote 1 of AS 2410, *Related Parties* ("The auditor should look to the requirements of the U.S. Securities and Exchange Commission for the company under audit with respect to the accounting principles applicable to that company . . ."); *Auditing Standard No. 18—Related Parties Amendments to Certain PCAOB Auditing Standards Regarding Significant Unusual Transactions and Other Amendments to PCAOB Auditing Standards*, PCAOB Rel. No. 2014-002 (June 10, 2014), at A4-6 (describing the approach of AS 2410.01, footnote 1 as "framework neutral").

¹² See AS 2201.04.

¹³ See generally PCAOB rules under Section 3. Auditing and Related Professional Practice Standards, Part 5—Ethics and Independence.

¹⁴ See PCAOB Rule 3523, Tax Services for Persons in Financial Reporting Oversight Roles.

¹⁵ See Section 10A(g) of the Securities Exchange Act of 1934 ("the Exchange Act"), 15 U.S.C. 78j-1(g); 17 CFR 210.2-01 (Regulation S-X Rule 2-01).

¹⁶ See 17 CFR 210.2-01(c)(4)(i) (Regulation S-X Rule 2-01(c)(4)(i)).

5. Activities of Other Standard Setters

Since the Board's adoption of the foundational standards, both the International Auditing and Assurance Standards Board ("IAASB") and the Auditing Standards Board ("ASB") of the AICPA have updated their analogous standards:

- IAASB Standard—International Standard on Auditing 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance with International Standards on Auditing* ("ISA 200") (effective 2009); and
- ASB Standard—AU-C Section 200, *Overall Objectives of the Independent Auditor and the Conduct of an Audit in Accordance With Generally Accepted Auditing Standards* ("AU-C 200") (effective 2012).

These revisions were part of clarity projects that were designed to make the standards easier to read, understand, and apply.¹⁷ These standards were updated to align the terminology used throughout the standards for consistency and to enhance and update explanatory materials.

6. Comments on Reasons for Standard Setting and Proposed Approach

The proposal sought comment on the appropriateness of the general principles and responsibilities of the auditor and the approach to reorganize and consolidate those responsibilities. Commenters who responded generally agreed that the general principles and responsibilities (*i.e.*, reasonable assurance, due professional care, professional skepticism, independence, competence, and professional judgment) described in the proposal are appropriate. One commenter suggested that the Board address the relevance and reliability of audit evidence and information in conjunction with the requirements in AS 1105, as part of the general principles and responsibilities. Some commenters addressed the reorganization and consolidation of the four existing foundational standards into one new standard and generally supported the proposed approach.

Commenters were generally supportive of the Board's efforts to modernize and streamline the general principles and responsibilities of the auditor. Several commenters, for example, agreed that the proposed standard would provide a more logical presentation, which would enhance the

useability of the standards by making them easier to read, understand, and apply. Some commenters, including investor-related groups, also expressed support for the proposal's focus on investor protection.

Two commenters suggested consideration of analogous standards of the IAASB and the ASB. One commenter stated that PCAOB auditing standards should not diverge from AICPA auditing standards, to the extent appropriate. Another commenter recommended that the Board consider similar standards of the IAASB and the ASB and assess whether their approach could result in higher quality audits.

The proposal also sought comment on the appropriateness of the general principles and responsibilities of the auditor in light of the availability of electronic audit tools and the use of audit software by both larger and smaller firms. Most commenters did not address this question. One commenter agreed that the proposed general principles and responsibilities of the auditor are appropriate and clear because they are necessary to the audit regardless of electronic tools and audit software. Another commenter recommended considering future possibilities and uses of machine learning and artificial intelligence ("AI") technologies, which in the views of the commenter "are progressing rapidly."

The final standard retains the general principles and responsibilities of the auditor described in the proposal, subject to revisions described below. The final standard also retains the overall approach of consolidating the foundational standards and the general principles and responsibilities of the auditor under one standard. The Board did not add specific requirements for evaluating the relevance and reliability of audit evidence, as suggested by one commenter, because AS 1105 provides the necessary framework for this evaluation. The final standard includes general requirements for conducting an audit, and obtaining sufficient appropriate audit evidence is part of those general requirements.

In addition, in the final standard the Board did not add provisions specific to the current and future use of emerging technologies. Due to the ever-evolving nature of technology, specifying requirements for certain types of technology based on how those tools are used today could quickly make the standard become outdated. Further, the general principles and responsibilities addressed in the standard apply to all audits, irrespective of the technology that may be used in performing audit

procedures. The Board continues to address emerging technologies (*e.g.*, machine learning and AI) as part of the staff's ongoing Data and Technology research project.¹⁸ Research from this project may give rise to individual standard-setting projects and may also inform the scope or nature of other projects that are included on the Board's standard-setting agenda.

With respect to comments on analogous standards issued by other standard setters, the Board believes that AS 1000 is based on general principles and responsibilities of the auditor, similar to the bases of analogous IAASB and AICPA standards. The Board carefully considered the approaches of other standard setters when developing the proposal, and the new standard and amendments being adopted reflect the approach that the Board believes best protects investors and furthers the public interest. As a result, certain differences exist between the Board's new standard and those of other standard setters, including a number of provisions that the Board believes are appropriate and consistent with the Board's statutory mandate to protect the interests of investors and further the public interest.

Discussion of Final Rules

A. Overview of Final Rules

The Board replaced AS 1001, AS 1005, AS 1010, and AS 1015 with one standard, AS 1000, that describes the general principles and responsibilities of an auditor¹⁹ in conducting an audit in accordance with the standards of the PCAOB. Briefly, the new standard:

- Includes introductory language that reaffirms the auditor's fundamental obligation to protect investors through the preparation and issuance of informative, accurate, and independent auditor's reports;
- Includes objectives for the auditor to conduct and communicate the results of both an audit of a company's financial statements and an audit of a company's ICFR and satisfy and fulfill other general principles and responsibilities described in this standard;

¹⁸ See the PCAOB's agenda related to standard setting, research, and rulemaking projects, available at <https://pcaobus.org/oversight/standards/standard-setting-research-projects>.

¹⁹ The term "auditor" includes both a public accounting firm registered with the PCAOB and associated persons thereof, as defined in PCAOB Rule 1001, *Definitions of Terms Employed in Rules*. For example, engagement quality reviewers ("EQRs"), by virtue of their status as associated persons, are within the term "auditor" in AS 1000. See also paragraph .03 of AS 1220, *Engagement Quality Review*.

¹⁷ Descriptions of the clarity projects of the IAASB and ASB are available, respectively, at <https://www.iaasb.org/projects/clarity-iaasb-standards> and <https://us.aicpa.org/interestareas/frc/auditattest/improvingclarityasbstandards>.

- Retains and clarifies the general principles and responsibilities that are important for an audit, including reasonable assurance, due professional care, professional skepticism, and professional judgment;

- Aligns the engagement partner's supervisory responsibilities under AS 1201 with due professional care;

- Retains the requirement for the auditor to be independent but expresses the obligation more directly by referring to the PCAOB's independence criteria in its rules and standards, and the independence criteria set out in the rules and regulations of the SEC;

- Describes the auditor's obligations to (i) comply with ethics requirements, (ii) obtain and maintain competence, and (iii) prepare audit documentation;

- Expresses the auditor's responsibilities by using the terms set forth in PCAOB Rule 3101 (*e.g.*, must and should) that describe the degree of responsibility that PCAOB standards impose on auditors; and

- Removes language that is outdated, inconsistent, and not relevant to audits conducted under the standards of the PCAOB.

As previously noted, the Board amended other PCAOB auditing standards that address responsibilities fundamental to the conduct of an audit to:

- Clarify the engagement partner's existing responsibilities for supervision and review in AS 1201, AS 1215, and AS 2101 to provide more specificity about the engagement partner's responsibility to exercise due professional care related to supervisory and review activities required to be performed under existing auditor requirements;

- Clarify the requirements for audit documentation in AS 1215 to identify who performed the work, who reviewed the work, and the date of such review;

- Accelerate the period in AS 1215 to assemble a complete and final set of audit documentation for retention from 45 days to 14 days; and

- Update and incorporate the underlying requirements of AS 2815 into AS 2810, and rescind AS 2815, while preserving the meaning of "present fairly" and streamlining the requirements to provide a more logical presentation.

In a separate release, the Board is also adopting a new quality control standard, QC 1000, *A Firm's System of Quality Control*, and a new ethics standard, EI 1000, *Integrity and Objectivity*, together with other amendments to PCAOB

standards, rules, and forms.²⁰ This release includes references to QC 1000 and EI 1000, where appropriate.

B. AS 1000

1. Introduction

See Paragraphs .01 Through .02 of the New Standard.

The first paragraph of the proposed standard, under the heading "Introduction," described the fundamental obligation of auditors to protect investors through the preparation and issuance of informative, accurate, and independent auditor's reports. It noted that an audit primarily benefits investors who rely on the audit to provide objective and independent opinions on whether the company's financial statements are presented fairly and, if applicable, on the effectiveness of the company's ICFR. The proposed paragraph further provided that a properly conducted audit and related auditor's report enhance the confidence of investors and other market participants in the company's financial statements and, if applicable, ICFR. The existing foundational standards do not include an introduction and do not describe the auditor's fundamental responsibility to protect investors.

Investor-related groups strongly supported the proposed standard's emphasis on the auditor's obligation to protect investors. These commenters suggested some clarification in the language describing the auditor's obligation for, and role in, protecting investors, as described in the Supreme Court opinion in *United States v. Arthur Young & Co.*²¹ Some pointed to, for example, language stating that the auditor "assumes a *public* responsibility transcending any employment relationship with the client" and that the auditor "owes ultimate allegiance to the corporation's creditors and stockholders, as well as the investing public."²² One of these commenters stated that without additional clarification, the phrase "fundamental obligation" is a vague concept and open to interpretation. Two commenters recommended including in AS 1000 a footnote from the proposal that cites the *Arthur Young* opinion.

Two commenters, including an investor-related group, recommended that the standard's reference to investors be broadened to include shareholders, debtholders, and other financial

statement users who rely on a company's financial statements, consistent with the usage by Financial Accounting Standards Board ("FASB") and the Supreme Court in the *Arthur Young* opinion. One of these commenters recommended including a definition of "financial statement users" in the final standard. Another recommended adding a footnote to the first sentence of paragraph .01 defining and describing the meaning of "investors."

A number of other commenters, primarily firms, expressed concerns that the introduction language describing the auditor's role was unclear and could be misleading. For example, several commenters noted that the description of the auditor's role in protecting investors could be viewed as creating a new legal obligation owed to investors. In the view of one commenter, the proposed language implied that investor protection is the sole responsibility of the auditor and could give investors false confidence that they can solely rely on an auditor's report as investment advice, when in fact there are many other factors investors should consider. Another commenter asserted that the proposed language could create a misimpression that auditors are permitted and expected to deviate from auditing standards when they believe such a departure would be warranted to further investors' interests. These commenters suggested that the Board clarify the introduction language in the final standard. Some commenters provided alternative language for the Board's consideration. For example, two commenters suggested replacing the phrase "properly conducted" in the last sentence of paragraph .01 with "conducted in accordance with the standards of the PCAOB" to align with language used in the auditor's report. One commenter suggested deleting paragraph .01 entirely.

After considering the comments received, the Board retained the proposed approach to the introduction section, while making certain revisions in light of the comments received.

The Board revised the first sentence of the introduction to state that the auditor has a fundamental obligation to protect investors through the preparation and issuance of informative, accurate, and independent auditor's reports. The Board also removed a redundant statement from proposed paragraph .01 ("and that obligation governs the auditor's work under the standards of the PCAOB"). This statement is unnecessary because paragraph .02 already clarifies that AS 1000 describes the general principles and

²⁰ See A Firm's System of Quality Control and Other Amendments to PCAOB Standard, Rules, and Forms, PCAOB Rel. No. 2024-005 (May 13, 2024).

²¹ *United States v. Arthur Young & Co.*, 465 U.S. 805, 817-18 (1984).

²² *Id.* at 817 (emphasis in original).

responsibilities of the auditor in properly conducting an audit in accordance with the standards of the PCAOB. This includes the fundamental obligation to protect investors as described in paragraph .01.

The fundamental obligation to protect investors is interwoven in the general principles and responsibilities that guide auditors throughout their work. Under current law, the auditor plays a critical role in the financial reporting process. By issuing opinions concerning whether financial statements are presented fairly, in all material respects, in conformity with the applicable financial reporting framework, auditors serve a special “public watchdog” function under the existing federal securities laws, requiring “complete fidelity to the public trust.”²³ As “gatekeepers,” auditors have a public responsibility to serve the public interest.²⁴ Investors rely on auditors to promote companies’ adherence to federal securities law mandates and companies’ disclosure of accurate and reliable financial information.²⁵ “Investor confidence is bolstered by the knowledge that public financial statements have been subjected to the rigors of independent and objective investigation and analysis” by an auditor.²⁶ This enhanced confidence of investors and other financial statement users in the company’s financial statements and ICFR also plays an integral role in maintaining the public trust in the capital markets. The introduction in the final standard underscores the auditor’s obligation under the Board’s auditing standards and other applicable laws and regulations.

The Board emphasized—in response to commenters who expressed concern that the introductory language, and specifically its use of the term “obligation,” could be interpreted to establish a new legal duty—that the introductory language does not alter any existing regulatory or legal requirements or obligations between auditors and investors. It does not establish a novel duty or new form of legal obligation. Rather, it reaffirms the auditor’s

obligation under the existing legal framework and the important role of the auditing profession in the capital markets.²⁷

Paragraph .01 of the final standard has also been revised, as suggested by some commenters, to state that the auditor’s responsibility²⁸ transcends the auditor’s relationship with management and the audit committee of the company under audit, providing the foundation for an objective and independent audit. This statement expresses a longstanding principle of public accounting.²⁹ Paragraph .01 also states that a properly conducted audit and the related auditor’s report enhance the confidence of investors and other financial statement users in the company’s financial statements and, if applicable, ICFR. The Board retained the phrase “properly conducted audit” to align with the description in paragraph .02. The Board removed the sentence that states that “An audit primarily benefits investors, who rely on the audit to provide an objective and independent opinion on whether the company’s financial statements are presented fairly and, if applicable, on the effectiveness of the company’s internal control over financial reporting” because it is redundant and unnecessary in the context of the surrounding statements. The Board does not believe that the language in paragraph .01 suggests that auditors may deviate from PCAOB auditing standards to protect investors. In fact, the language clearly establishes the fundamental duty of auditors to prepare and issue their reports in accordance with PCAOB standards. Similarly, the Board does not interpret

the language of paragraph .01 as suggesting that investors should view auditor’s reports as the sole source of investment advice. Collectively, these provisions emphasize that auditors play a critical role in ensuring the accuracy and transparency of a company’s financial information, and that this role helps investors make well-informed decisions and supports trust in a company’s financial statements.

Finally, a new footnote to paragraph .01 clarifies that references to “investors and other financial statement users” in AS 1000 encompass a broad spectrum of stakeholders. This group includes not only a company’s existing and potential shareholders, but also bondholders, lenders, other creditors, and others who use the company’s financial statements.³⁰

In addition to the revisions to paragraph .01, the Board relocated certain content, discussed in more detail below, from proposed paragraph .15 into a new note to paragraph .01. The note reminds auditors that their obligation to protect investors provides important context to the auditor’s work when applying the requirements of AS 1000 and other PCAOB standards and rules (e.g., when conducting interim reviews in accordance with AS 4105, *Reviews of Interim Financial Information*, or when conducting audits of ICFR in accordance with AS 2201).

Paragraph .02 summarizes the scope and content of AS 1000. The Board did not receive comment on this paragraph and adopted it as proposed.

2. Objectives of the Auditor

See Paragraph .03 of the New Standard

The proposed standard set forth three objectives of the auditor (a) in an audit of financial statements, to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud, and to issue an auditor’s report that expresses an opinion about whether the financial statements, taken as a whole, are presented fairly, in all material respects, in conformity with the applicable financial reporting framework; (b) in an audit of internal control over financial reporting, to obtain reasonable assurance about whether material weaknesses exist as of

²⁷ See Section 101(c)(6) of Sarbanes-Oxley (authorizing PCAOB to enforce compliance with the “Act, the rules of the Board, professional standards, and the securities laws relating to the preparation and issuance of audit reports and the obligations and liabilities of accountants with respect thereto, by registered public accounting firms and associated persons thereof . . .”) (emphasis added).

²⁸ The terms “obligation” and “responsibility” are used synonymously in this standard.

²⁹ See *Arthur Young*, 465 U.S. at 817–818 (“By certifying the public reports that collectively depict a corporation’s financial status, the independent auditor assumes a public responsibility transcending any employment relationship with the client. The independent public accountant performing this special function owes ultimate allegiance to the corporation’s creditors and stockholders, as well as to the investing public.”) (emphasis in original); AICPA Professional Standards, Vol. 2, Code of Professional Conduct, ET Section 53, Article II—The Public Interest (2002) (“...01 A distinguishing mark of a profession is acceptance of its responsibility to the public. The accounting profession’s public consists of clients, credit grantors, governments, employers, investors, the business and financial community, and others who rely on the objectivity and integrity of certified public accountants to maintain the orderly functioning of commerce.”).

³⁰ See FASB, Statement of Financial Accounting Concepts No. 8, *Conceptual Framework for Financial Reporting*, Chapter 1, *The Objective of General Purpose Financial Reporting* (Dec. 2021) (“The objective of general purpose financial reporting is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders, and other creditors in making decisions about providing resources to the entity”).

the date specified in management's assessment, and to issue an auditor's report that expresses an opinion on the effectiveness of the company's internal control over financial reporting; and (c) to communicate externally, as required by applicable professional and legal requirements. Other than AS 1001,³¹ the existing foundational standards do not include an objective.

The proposal defined the term "applicable professional and legal requirements" by referring to the term's definition in proposed QC 1000.³² That proposed definition included (i) professional standards, as defined in PCAOB Rule 1001(p)(vi); (ii) rules of the PCAOB that are not professional standards; and (iii) to the extent related to the obligations and responsibilities of accountants or auditors or to the conduct of engagements, rules of the SEC, other provisions of U.S. federal securities law, and other applicable statutory, regulatory, and other legal requirements.

Several commenters expressly supported the proposed objectives of the auditor. Some commenters suggested ways to further clarify these objectives. For example, one commenter suggested that the objectives be reframed as objectives of the "audit" rather than of the "auditor." Another commenter suggested moving the requirements on the determination of critical audit matters ("CAMs") from AS 3101.11, to the objectives of the auditor in AS 1000 in order to highlight the importance of CAMs. One commenter recommended that the objective related to the audit of ICFR refer to the relevant criteria used (e.g., criteria issued by the Committee of Sponsoring Organizations of the Treadway Commission) and clarify that it is integrated with the audit of financial statements.

With respect to the communication objective, one commenter stated that the proposed objective should also refer to communications with the company. Another commenter stated that the term "applicable legal and professional requirements" is overly broad and may inadvertently scope in legal requirements outside of public accountancy laws. An additional commenter suggested that AS 1000 refer instead to "PCAOB rules and standards."

The Board adopted the objectives in the final standard substantially as proposed, with the modifications discussed below.

The purpose of the objectives is to provide additional context for understanding the requirements in the standard. Therefore, the Board added the objective to "satisfy and fulfill the other general principles and responsibilities described in this standard." This provides more explicit linkage to the general principles and responsibilities set forth in the final standard.

The objectives refer, as proposed, to the "objectives of the auditor." Because the standard addresses the general principles and responsibilities of the auditor in conducting an audit, the Board believes that the objectives should be directed at the "auditor" rather than the audit as a whole.

The determination of CAMs is an important part of the auditor's reporting responsibilities and is encompassed under the applicable professional and legal requirements. The auditor's responsibilities for determining and communicating CAMs are described in AS 3101 and align with the stated objectives of that standard.³³ Rather than repeating these requirements, the Board instead added a note to paragraph .17 of the final standard that refers to the potential inclusion of CAMs in the auditor's report.

The suggested references to the relevant criteria used in the audit of ICFR are not suitable for the objective section of AS 1000 and are already covered in other PCAOB standards. The specific requirements relevant to performing an audit of ICFR are addressed in AS 2201, which provides the appropriate context for the framework to be used by the auditor when conducting an ICFR audit and integrating the audit of ICFR with an audit of financial statements.

As was proposed, the final standard includes an objective to communicate externally in accordance with applicable legal and professional requirements. The auditor has a responsibility to make certain communications (e.g., communications about audit results to the audit committee under AS 1301, *Communications with Audit Committees*), in addition to reporting externally on the results of the audit. The reference to these requirements in the objective is not intended to limit or preclude appropriate communications with company personnel. For example, PCAOB auditing standards require the auditor to conduct various inquiries of management and other company personnel (e.g., AS 2110, *Identifying and Assessing Risks of Material*

Misstatement, and AS 2201), which is part of complying with applicable professional and legal requirements.

For ease of reference, the final standard includes the definition of the term "applicable professional and legal requirements" as:

- Professional standards, as defined in PCAOB Rule 1001(p)(vi);
- Rules of the PCAOB that are not professional standards; and
- To the extent related to the obligations and responsibilities of accountants or auditors in the conduct of engagements or in relation to the quality control system, rules of the SEC, other provisions of U.S. federal securities law, ethics laws and regulations, and other applicable statutory, regulatory, and other legal requirements.

This definition is intended to capture all professional and legal requirements specifically related to engagements under PCAOB standards of issuers and SEC-registered broker-dealers, including relevant accounting, auditing, and attestation standards, PCAOB rules, SEC rules and regulations, other provisions of federal securities law, other relevant laws and regulations (e.g., state law and rules governing accountants), applicable ethics law and rules, and other legal requirements related to the obligations and responsibilities of accountants or auditors in the conduct of the firm's engagements or in relation to the quality control system.³⁴ It does not encompass requirements that apply to businesses generally, such as tax laws, safety regulations, and employment law.

This definition reflects revisions made in response to comments received on proposed QC 1000.³⁵ The definition

³⁴ The requirements related to compliance with applicable professional and legal requirements are meant to make clear that, in engagements subject to PCAOB auditing standards, all applicable professional and legal requirements must be followed. The requirement does not suggest that application of "other applicable statutory, regulatory, and other legal requirements" could supersede rules of the SEC, other provisions of U.S. federal securities law, rules of the PCAOB that are not professional standards, or PCAOB professional standards. On the contrary, requirements relating to "applicable professional and legal requirements" are meant to highlight the importance of adhering to other requirements when those requirements do not conflict with or abridge requirements of federal securities laws, PCAOB rules, or PCAOB standards.

³⁵ Two commenters supported the definition as proposed. One commenter recommended including the profession's ethical standards explicitly. Two commenters stated the phrase "other applicable statutory, regulatory, and other legal requirements" could be read broadly and extend beyond regulations that directly bear on the conduct of audit engagements. Another commenter suggested amending the definition of "professional standards" in PCAOB Rule 1001(p)(vi) to refer to "quality control standards" rather than "quality control policy and procedures."

³¹ See AS 1001.01.

³² See A Firm's System of Quality Control and Other Proposed Amendments to PCAOB Standards, Rules, and Forms, PCAOB Rel. No. 2022-006 (Nov. 18, 2022).

³³ See AS 3101.04 and .11-.17.

was expanded to explicitly mention ethics laws and regulations.³⁶ It was also refined to make clear that it encompasses statutory, regulatory, and other legal requirements beyond professional standards and other PCAOB rules “[t]o the extent related to the obligations and responsibilities of accountants or auditors in the conduct of engagements or in relation to the quality control system.” This change is designed to limit the breadth of the definition to the relevant circumstances. The phrase “quality control policies and procedures,” used in PCAOB Rule 1001(p)(vi), is drawn from Section 110(5) of Sarbanes-Oxley, and therefore no amendment to the PCAOB rule was necessary.

3. Professional Qualifications of the Auditor

i. Independence

See Paragraphs .04 Through .05 of the New Standard

The Board proposed to carry forward the existing requirement in AS 1005 for the auditor to be independent, and to align the language that describes auditor independence obligations with language used in PCAOB Rule 3520, *Auditor Independence*, and SEC Rule 2–01.³⁷ Specifically, the Board proposed to require the auditor to be independent of its audit client both in fact and in appearance throughout the audit and professional engagement period.³⁸ The proposed standard also clarified that the auditor is not independent with respect to an audit client if the auditor is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that the auditor is not, capable of exercising objective and impartial judgment on all matters encompassed within the engagement. This clarification aligned the standard with language used in SEC Rule 2–01(b)³⁹ to explain further the meaning of being independent both in fact and in appearance. In addition, the Board proposed to require the auditor to satisfy the independence criteria set out

in the rules and standards of the PCAOB, and satisfy all other independence criteria applicable to the engagement, including the independence criteria set out in the rules and regulations of the SEC under the federal securities laws.

Several commenters expressed support for including in AS 1000 the existing requirements from AS 1005 and stating more directly the auditor’s obligation to comply with the independence requirements of the PCAOB and SEC. Two commenters, including an investor-related group, suggested that the Board replace references to “audit client” with “company under audit.” One commenter asserted that using “client” does not recognize that the auditor’s public responsibility transcends the employment relationship with the client. Another commenter asserted that the use of “client” mischaracterizes the relationship between auditor and the company or its management, and places the auditor in a “subservient” position. In addition, one commenter suggested adding to the final standard additional language from SEC Rule 2–01(b) to indicate that the PCAOB and SEC will consider “all relevant facts and circumstances” in determining independence. That commenter also suggested limiting the use of the term “independent” in the title of the auditor’s report to only those auditors that have complied with the SEC and PCAOB rules.

After considering the comments received, the Board adopted the requirements related to independence substantially as proposed with some modifications. The Board agrees with the commenters’ observation that language used in the Board’s standards can help emphasize that audits are performed primarily for the benefit of investors, not management of the company. Accordingly, the Board replaced references to “audit client” with “company under audit” and added a footnote to clarify that the phrase “company under audit” has the same meaning as “audit client” as defined by PCAOB Rule 3501(a)(iv).

The Board did not add to the final standard additional language from SEC Rule 2–01(b) stating that the PCAOB and SEC will consider “all relevant facts and circumstances” in determining independence. The Board’s standards do not address the SEC’s processes, and need not repeat in this standard that relevant matters are considered in PCAOB independence determinations.⁴⁰

The Board also did not add limitations on the use of the term “independent” in the title of the auditor’s report. AS 3101 contains requirements regarding the content of the auditor’s report, including the title “Report of Independent Registered Public Accounting Firm.” AS 3101 also requires that the auditor’s report include a statement that the auditor is required to be independent with respect to the company in accordance with U.S. federal securities laws and the applicable rules and regulations of the SEC and PCAOB. Imposing any limitations on the use of the term “independent” in the title, as suggested by a commenter, is outside of the scope of this standard.

ii. Ethics

See Paragraph .06 of the New Standard

The Board proposed to require the auditor to comply with applicable ethics requirements, including the rules and standards of the PCAOB. Under the proposed standard, ethics requirements included the rules in Section 3, Part 5 of PCAOB rules and proposed EI 1000, *Integrity and Objectivity*, of the QC proposal. The existing foundational standards do not reference the auditor’s responsibility to comply with ethics requirements.

A few commenters suggested revisions to the proposed requirement. Two commenters, including an investor-related group, stated that the proposed requirement is weak because it focused on merely complying with rules and standards of the Board. The investor-related group also suggested adding language that discusses subordination of judgment to others, specifically those outside the audit firm (e.g., external specialists). The other commenter recommended requiring that firms create and maintain codes of ethics embracing the principles of proposed EI 1000 and upholding the integrity of capital markets and auditors’ fundamental obligations to investors. An additional commenter suggested addressing in the standard broader ethical principles, such as integrity and objectivity, in addition to compliance with rules and standards.

After considering the comments received, the Board retained the requirement to comply with ethics

Services Related to Internal Control Over Financial Reporting (“Independence requirements provide that an auditor is not independent of his or her audit client if the auditor is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that the auditor is not, capable of exercising objective and impartial judgment on all issues encompassed within the accountant’s engagement.”) (emphasis added).

³⁶ These include those arising under state law or the law of other jurisdictions (e.g., obligations regarding client confidentiality).

³⁷ 17 CFR 210.2–01 (Regulation S–X Rule 2–01).

³⁸ See PCAOB Rule 3501, *Definitions of Terms Employed in Section 3, Part 5 of the Rules*, for the definition of the term “audit and professional engagement period.”

³⁹ Under the general standard in SEC Rule 2–01(b), the SEC “will not recognize an accountant as independent, with respect to an audit client, if the accountant is not, or a reasonable investor with knowledge of all relevant facts and circumstances would conclude that the accountant is not, capable of exercising objective and impartial judgment on all issues encompassed within the accountant’s engagement.”

⁴⁰ See Note to paragraph (b) of PCAOB Rule 3525, *Audit Committee Pre-approval of Non-audit*

requirements substantially as proposed, with the modifications discussed below. The Board added the word “ethics” before “rules and standards of the PCAOB” to provide a clearer indication of the rules and standards referenced. Under the final standard, applicable ethics requirements are not limited to the ethics rules and standards of the PCAOB but also include state law and the laws of other jurisdictions that may establish additional ethics provisions with which the auditor is required to comply (e.g., obligations regarding conflicts of interest).

The Board agrees with the underlying point of the comment that auditors should not subordinate their judgment to individuals outside the audit firm (e.g., external specialists) and believe that the new standard will achieve the desired objective of the comment. A subordination or relinquishment of professional judgment would be inconsistent with the requirements of AS 1000.09–.10 related to due professional care, which are discussed below. In addition, EI 1000 addresses the broader ethical principles of integrity and objectivity. Specifically, the overarching requirements in EI 1000 include (i) maintaining integrity, which includes being honest and candid, not knowingly or recklessly misrepresenting facts, and not subordinating judgment; and (ii) maintaining objectivity, which includes being impartial, intellectually honest, and free of conflicts of interest. The intent of the requirement to comply with ethics in AS 1000 is to remind auditors of their responsibilities described in EI 1000 and Section 3, Part 5 of PCAOB rules. Therefore, additional discussion of broader ethical principles and responsibilities is appropriately addressed in EI 1000 and need not be duplicated in AS 1000. The Board expanded the reference to EI 1000 in footnote 6 of paragraph .06 of AS 1000 to clarify that EI 1000 specifically requires auditors to maintain integrity and objectivity. Further clarification on matters related to subordination of professional judgment is unnecessary in this release. Lastly, the Board considered comments related to firms’ adoption of an ethics code as part of the adoption of EI 1000.

iii. Competence

See Paragraphs .07 and .08 of the New Standard

a. Description of Competence

The Board proposed to require that the audit be performed by an auditor who has competence to conduct an audit in accordance with applicable professional and legal requirements.

Competence, as described in the proposed standard, consists of having the knowledge, skill, and ability that enable an auditor to perform the assigned activities in accordance with applicable professional and legal requirements and the firm’s policies and procedures. In the proposing release, the Board explained that the auditor’s knowledge and skill relate to adequate technical training and proficiency as an auditor, and the auditor’s ability relates to the capabilities to perform, and in the case of supervisory staff, to review assigned tasks. The proposed standard also provided that, in determining the appropriate level of competence, the measure is qualitative rather than quantitative because quantitative measurement may not accurately reflect the experience gained over time. A note to the proposed requirement stated that competence includes knowledge and expertise in accounting and auditing standards and in SEC rules and regulations relevant to the company being audited and to the related industry or industries in which it operates. The proposed requirement was consistent with the auditor’s existing responsibilities under AS 1010 for maintaining “adequate technical training and proficiency” but used updated terminology.

Several commenters sought greater clarity in the proposed requirement, stating that it did not account for the collective competence of the engagement team or that it might imply that all individual members of an engagement team are expected to have the same level of competence. These commenters generally suggested (i) revising the requirement to apply to, for example, “the engagement team, including specialists” or “auditors, collectively” instead of “an auditor” and (ii) clarifying that necessary competence is commensurate with the assigned tasks of the individual auditor. One commenter suggested (i) defining the individuals intended to be covered by the requirement, including subject matter experts and EQRs; (ii) explaining that the competence of individuals varies based on a variety of factors; and (iii) including quantitative factors in the measure of competence. Another commenter noted that the proposed requirement could be interpreted to limit the ability to assign challenging work to junior staff because they may lack significant experience.

Some commenters, mostly firms and professional organizations, also expressed concern with the description of competence in the note to the proposed requirement—which referred to having “expertise” in SEC rules and

regulations and the relevant industry of the company being audited—and asked for additional clarification. These commenters asserted that the term “expertise” may impose a higher standard of competence than intended and could imply that the expected level of knowledge is that of a person qualified to engage in the practice of another profession or occupation (e.g., the legal profession). One of these commenters also expressed concern with the implication that a partner without relevant expertise in the industry in which the issuer operates may not be competent to perform an audit of the issuer, even with the assistance of other firm or engagement team members with relevant industry expertise. Several commenters recommended deleting the reference to “expertise” or using alternative language such as “proficiency” or “sufficient knowledge.”

After considering the comments received, the Board adopted the requirement related to competence substantially as proposed, with the modifications discussed below.

First, consistent with the Board’s description in the proposal, the Board continues to believe the level of competence needed to conduct the audit is driven by the activities assigned to the individual auditors performing those activities. As the assigned activities in an audit vary from individual to individual, so does the required level of competence to complete those activities in accordance with applicable professional and legal requirements and the firm’s policies and procedures. For example, a first-year auditor is not expected to have the same level of competence as a more experienced auditor because the tasks assigned to the seasoned auditor generally require experience gained over time. Further, PCAOB standards and rules use the term “auditor” to mean both a firm registered with the PCAOB and its associated persons.⁴¹ Therefore, the Board believes that defining the individuals covered by the requirement or revising terminology to “auditors” or “engagement team,” as suggested by some commenters, is not necessary. The requirements regarding the appropriate assignment of responsibilities to engagement team members and proper supervision are addressed in other PCAOB standards.⁴²

Second, the Board agrees that quantitative measures are not wholly

⁴¹ See PCAOB Rule 1001(a)(xiii).

⁴² See, e.g., paragraph .05 of AS 2301, The Auditor’s Responses to the Risks of Material Misstatement, and AS 1201.05.

irrelevant when measuring competence. Quantitative measures alone may not accurately reflect the nature of experience gained over time and therefore competence should not be measured exclusively on a quantitative basis.⁴³ In consideration of comments, the final requirement clarifies that competence is measured both qualitatively and quantitatively.

Third, the intent of the proposed requirement's note (providing that competence "includes knowledge and expertise" in certain areas) was to provide additional direction to auditors on the meaning of competence in the context of the company being audited. The Board did not intend to impose a higher standard of competence beyond having the knowledge, skill, and ability to enable the auditor to perform the assigned activities in accordance with applicable professional and legal requirements. The Board therefore changed "expertise" to "proficiency" in the final requirement in response to comments. Nevertheless, the Board continues to believe that understanding the company's business and being proficient in the rules and regulations relevant to the company under audit and its related industry is an important part of competence. For example, an engagement partner with significant experience mostly in auditing manufacturing companies may not necessarily have the appropriate level of competence to oversee, and have primary responsibility for, an audit of a financial institution.

b. Developing and Maintaining Competence

The Board also proposed to require that the auditor develop and maintain competence through an appropriate combination of academic education; professional experience in accounting and auditing with proper supervision; and training, including accounting, auditing, independence, ethics, and other relevant continuing professional education. Existing AS 1010 includes a similar requirement.

Investor-related groups advocated for the inclusion of investor-related training that focuses on investors as the primary beneficiaries of the audit and being responsive to investors' needs. These commenters also emphasized the importance of including the auditor's understanding of the business and industry related to the company under audit as part of developing competence. One investor-related group suggested specific training on materiality.

The Board retained the requirement to develop and maintain competence as proposed. The Board agrees with investor-related groups' views on the importance of protecting investors when conducting an audit. In that regard, paragraph .01 of the final standard and the Board's related discussion provide the context of investor protection that is relevant to the auditor's compliance with the requirements for developing and maintaining competence. Further, in considering commenters' suggestion about investor-focused training, the Board believes that the implementation of the final standard will necessarily involve training auditors on the application of the relevant requirements, including conducting an audit with investor protection in mind.

The note to paragraph .07 of the final standard reinforces the need for auditors to have knowledge and proficiency in the requirements relevant to the company being audited and the related industry. Further, the auditor's responsibilities for understanding the company's business and consideration of materiality in planning and performing an audit are specifically addressed in other PCAOB auditing standards,⁴⁴ and the Board expects that these responsibilities would already be included in training on auditing standards.

4. Due Professional Care, Including Professional Skepticism

i. Due Professional Care

See Paragraphs .09 Through .10 of the New Standard

The Board proposed to require the auditor to exercise due professional care in all matters related to the audit. The proposed standard stated that due professional care (i) concerns what the auditor does and how well the auditor does it, and (ii) means acting with reasonable care and diligence, exercising professional skepticism, acting with integrity, and complying with applicable professional and legal requirements. The proposed requirement was based on the existing requirement in AS 1015 to exercise due professional care.

The proposing release explained that exercising due professional care "in all matters related to the audit" would encompass all aspects of planning and performing an audit, including client acceptance and continuance procedures, and would extend to periods after the issuance of the auditor's report, such as

completion of audit documentation,⁴⁵ reporting on Form AP, *Auditor Reporting of Certain Audit Participants*,⁴⁶ and procedures performed in connection with filings under the federal securities statutes.⁴⁷ The Board also proposed to retain language from existing standards related to an auditor's use of the work of other auditors, which emphasized that other auditors are responsible for performing their work with due professional care.⁴⁸

Some commenters acknowledged that due professional care is an important principle that should be retained in the final standard. Several commenters expressed support for requiring auditors to exercise due professional care "in all matters related to the audit."

Some commenters, primarily some firms, advocated for retaining certain contextual language from AS 1015.03–.04, including, for example, the description of due professional care in the 1932 legal treatise, *Cooley on Torts*.⁴⁹ These commenters expressed concern that without such language there may be a lack of transparency, or confusion among investors and other stakeholders, about the limitations of due professional care.

After considering comments, the Board adopted the requirement to exercise due professional care as proposed. The Board continues to believe that the description of due professional care in the final standard is consistent with the description in AS 1015.03 (and the reference in the current standard to the legal treatise, *Cooley on Torts*), which uses the terms "reasonable care and diligence" and "good faith and integrity but not infallibility" to describe due care. As discussed in the proposal, the Board retained explicit reference to "reasonable care and diligence," which the Board believes is well understood. The Board also believes that "good faith

⁴⁵ See AS 1215.15 (as proposed to be amended).

⁴⁶ See PCAOB Rule 3211, Auditor Reporting of Certain Audit Participants.

⁴⁷ See AS 4101, *Responsibilities Regarding Filings Under Federal Securities Statutes*, which describes the auditor's responsibilities when the auditor's report is included in filings under federal securities statutes.

⁴⁸ See Planning and Supervision of Audits Involving Other Auditors and Dividing Responsibility for the Audit with Another Accounting Firm, PCAOB Rel. No. 2022–002 (June 21, 2022) (amendments approved by the SEC in Rel. No. 34–95488 (Aug. 12, 2022)), which amended AS 1015 to add this provision.

⁴⁹ The treatise states, among other things, that "no man, whether skilled or unskilled, undertakes that the task he assumes shall be performed successfully, and without fault or error; he undertakes for good faith and integrity, but not for infallibility, and he is liable to his employer for negligence, bad faith, or dishonesty, but not for losses consequent upon pure errors of judgment."

⁴³ The description of competence is consistent with the description in QC 1000.

⁴⁴ See AS 2110 and AS 2105, Consideration of Materiality in Planning and Performing an Audit.

and integrity” means acting with “integrity.” The Board’s use of the term “integrity” aligns with its meaning established in EI 1000, which the Board adopted in connection with the Quality Control rulemaking. EI 1000 codifies the concepts of integrity and objectivity, emphasizing that integrity includes being honest and candid, not knowingly or recklessly misrepresenting facts, and not subordinating judgment.⁵⁰ The Board believes that the terms used to describe due professional care are clear and should not cause confusion, as suggested by some commenters, because the Board did not change the meaning of due professional care.

The proposed standard specified that, for engagement partners, due professional care also includes (i) appropriately assigning responsibilities to, and supervising, engagement team members; (ii) determining that the audit is properly planned and performed to obtain reasonable assurance; (iii) evaluating that significant findings or issues are appropriately addressed; (iv) determining that significant judgments and conclusions on which the auditor’s report is based are appropriate and supported by sufficient appropriate audit evidence; and (v) determining that required communications under applicable professional and legal requirements have been made.

The proposed clarifications of the engagement partner’s responsibilities leveraged existing requirements for planning and performing an audit and for completing the corresponding audit documentation. For example, AS 1215 describes matters that are considered to be significant findings or issues in an audit and requires the auditor to document the significant findings or issues, including the actions taken to address them.⁵¹ As part of the engagement partner’s supervisory responsibilities under AS 1201, the proposal stated that the engagement partner would need to evaluate (in a timely manner) the significant findings and issues identified by the engagement team to ensure appropriate action was taken.⁵²

Similarly, the proposal stated that significant judgments made by the engagement team, which AS 1220 specifically requires the EQR to review, also warrant the engagement partner’s review. Because the engagement partner has primary responsibility for the engagement, they have primary responsibility for the significant judgments made during the engagement,

notwithstanding any involvement in or responsibility for those judgments by firm personnel outside of the engagement team, such as members of the firm’s national office. Accordingly, the “significant judgments made by the engagement team” include all of the significant judgments made during the engagement.⁵³ The proposed standard aligned the engagement partner’s supervisory and review activities with existing auditor responsibilities.

A few commenters addressed the proposed requirement regarding the engagement partner’s responsibilities for exercising due professional care. One commenter recommended separating the partner’s responsibilities from the broader requirement to exercise due professional care. Another commenter expressed concern that, as presented, the responsibilities of the engagement partner could be viewed as a substitute for the broader responsibilities applicable to all auditors. This commenter suggested emphasizing in the final standard that for engagement partners, the responsibilities are in addition to those required for all auditors.

Several commenters also suggested clarifications to the proposed requirements. For example, one commenter suggested that the requirements be extended to team members performing supervisory activities. Another commenter pointed to potential inconsistencies with requirements of AS 1201 and AS 2101, noting that AS 1201 does not explicitly require the partner to assign activities to team members that adequately match their levels of competence and allows the partner to seek assistance from appropriate engagement team members in fulfilling responsibilities. One commenter recommended adding a footnote to AS 1220 to the discussion of significant judgments and conclusions.

In response to commenters, the Board relocated the proposed engagement partner’s responsibility for due professional care into a separate paragraph in the final standard, with certain clarifications. Specifically, the Board agrees with commenters’ views that the engagement partner is not required to directly assign responsibilities to all engagement team members (e.g., audit staff at other accounting firms involved in the audit). Nevertheless, consistent with AS 1015.06, the engagement partner is responsible for the appropriate

assignment of tasks to, and supervision of, engagement team members. As such, the final standard states that the engagement partner’s responsibility for due professional care includes “being responsible for the appropriate assignment of responsibilities to, and supervision of, engagement team members.” This formulation acknowledges that in certain audit engagements, such as large, multi-tiered audits, the engagement partner may not be directly assigning work to engagement team members. Instead, other engagement team members performing supervisory activities may assist the engagement partner and inform engagement team members of their responsibilities.⁵⁴

The Board believes that relocating the engagement partner’s responsibility for due professional care into a separate paragraph helps draw a distinction between the responsibilities applicable to all auditors and those that are incremental for engagement partners. To clarify this further, the Board added “also” to the requirement in paragraph .10 to indicate that the engagement partner responsibilities for due professional care are in addition to those applicable to all auditors. The Board did not expand the applicability of the engagement partner responsibilities described in AS 1000 to other members of the engagement team performing supervisory activities because, as discussed above, the intent of this requirement is to focus the engagement partner on exercising due professional care as the person with the primary responsibility for the engagement and its performance. As suggested by one commenter, the Board added a footnote to the final standard referencing AS 1220 for the discussion of significant judgments and conclusions. The Board adopted the remaining provisions of the requirement as proposed.

ii. Description of Professional Skepticism

See Paragraph .11 of the New Standard

The proposed standard stated that exercising due professional care includes exercising professional skepticism in conducting an audit, and described professional skepticism as an attitude that includes a questioning mind and a critical assessment of information related to the audit. This requirement is based on the existing auditor responsibility to exercise professional skepticism in AS 1015. The Board emphasized in the proposal that

⁵⁰ See also PCAOB Rel. No. 2024–005.

⁵¹ See AS 1215.12.

⁵² See AS 1201.05.

⁵³ See Auditing Standard No. 7—Engagement Quality Review and Conforming Amendment to the Board’s Interim Quality Controls Standards, PCAOB Rel. No. 2009–004 (July 28, 2009), at 4 n.7.

⁵⁴ See AS 1201.05.

application of professional skepticism extends beyond the information used as audit evidence, which is described in AS 1105.02 as the information “that is used by the auditor in arriving at conclusions on which the auditor’s opinion is based.” For example, by exercising professional skepticism in the preparation of Form AP, the auditor may become aware of inconsistencies in total audit hours reported by another accounting firm participating in the audit based on the level of work assigned to that accounting firm and take corrective action.

An investor-related group supported the proposed description of professional skepticism to include a critical assessment of information related to the audit. In contrast, a number of other commenters, mostly firms, expressed concern about the proposed change in the description of professional skepticism from a critical assessment of “audit evidence” to “information related to the audit,” stating that this language is overly broad and its meaning unclear. Some of these commenters noted that, unlike with audit evidence, there is no established framework for auditors to assess information related to the audit and it is unclear what such an assessment would entail. Many of these commenters advocated for retaining the extant description of professional skepticism in AS 1015.07, which includes “a critical assessment of audit evidence.”

Some commenters offered additional explanation or suggestions, for example:

- One commenter indicated they were unable to identify information, other than Form AP data, that would be considered “information related to the audit” that is not already part of “audit evidence.” This commenter and another recommended specifically incorporating Form AP data into the requirement.
- One commenter indicated the proposed language could risk including information related to the audit that was never presented to the auditor. This commenter suggested retaining reference to “audit evidence” and including a reference to information obtained to comply with rules of the Board.
- Another commenter recommended retaining the reference to “audit evidence” because this concept is supplemented by the requirements in proposed paragraph .11 and by the overarching responsibility to exercise due professional care in relation to all matters related to the audit (including the preparation of Form AP).

Several commenters offered other views related to the description of

professional skepticism. For example, one commenter stated that the difference between “critical assessment of information related to the audit” and “objective evaluation of evidence obtained in an audit” in proposed paragraph .11 is unclear. This commenter suggested combining proposed paragraphs .10 and .11 or providing further guidance, including guidance that is aligned with other standard setters. Another commenter questioned the assumption in the proposed standard that all auditors can exercise professional skepticism consistently for the duration of the audit, pointing to a lack of research.

After consideration of comments, the Board revised the description of professional skepticism. The final standard describes professional skepticism as “an attitude that includes a questioning mind and a critical assessment of audit evidence and other information that is obtained to comply with PCAOB standards and rules.” While the Board agrees with commenters that information related to the audit that is obtained by the auditor is generally audit evidence, the Board continues to believe that the exercise of professional skepticism in an audit extends beyond the evaluation of the sufficiency and appropriateness of audit evidence. Professional skepticism is an attitude held by the auditor throughout the audit process. For example, AS 2401, *Consideration of Fraud in a Financial Statement Audit*, provides that professional skepticism requires an ongoing questioning of whether the information and evidence obtained suggests that a material misstatement due to fraud has occurred.⁵⁵ The revised description in AS 1000 retains the extant reference to “critical assessment of audit evidence” but also, as suggested by one commenter, refers to information obtained by the auditor to comply with PCAOB standards and rules, such as information to complete Form AP. The Board believes that the revised description will provide auditors with a clear framework for exercising professional skepticism and aligns with the auditor’s obligation to exercise due professional care, which applies to all matters related to the audit.

As suggested by one commenter, the final standard also combines in paragraph .11 the description of professional skepticism (proposed paragraph .10) with the description of what exercising professional skepticism entails (proposed paragraph .11) discussed below. The Board believes this unified paragraph will provide

better context for the application of professional skepticism.

iii. Exercise of Professional Skepticism See Paragraph .11 of the New Standard

The proposed standard described several factors involved in the exercise of professional skepticism, which were largely consistent with extant requirements. Under the proposed standard, the auditor’s exercise of professional skepticism included:

- Objective evaluation of evidence obtained in an audit (including information that supports and corroborates management’s assertions regarding the financial statements or internal control over financial reporting and information that contradicts such assertions), and consideration of the sufficiency and appropriateness (*i.e.*, relevance and reliability) of that evidence;
- Remaining alert to conditions that may indicate possible misstatement due to error or fraud;
- Not relying on evidence that is less than persuasive;
- Not assuming that management is honest or dishonest; and
- Consideration of potential bias on the part of management and the auditor.

Some commenters provided views on specific aspects of the factors involved in the auditor’s exercise of professional skepticism. The comments and related responses are discussed in more detail below.

Objectively evaluating evidence. One commenter suggested requiring the auditor to search for contradictory evidence. Another commenter stated that the proposed description did not sufficiently address professional skepticism in obtaining audit evidence and instead focused only on evaluating the evidence. One commenter stated that the proposed description was unclear and suggested using more direct language, including requiring the auditor to be more neutral in the assessment (*e.g.*, evaluating evidence that both supports assertions and evidence that does not).

The intent of paragraph .11a of AS 1000 is not to alter the responsibilities for obtaining and evaluating evidence addressed in AS 1105, but to remind auditors of their responsibility to exercise professional skepticism in connection with both obtaining and evaluating audit evidence. As discussed in the proposal, sufficient appropriate audit evidence is necessary to support the auditor’s opinion. While primarily obtained from audit procedures performed during the audit, audit evidence may also include information

⁵⁵ See AS 2401.13.

obtained from other sources such as previous audits, and client acceptance or continuance procedures. The exercise of professional skepticism is particularly important in obtaining and evaluating audit evidence when responding to assessed risks of material misstatement, including fraud risks.

Audit evidence consists of both information that supports and corroborates management's assertions and information that contradicts such assertions.⁵⁶ The auditor's appropriate application of professional skepticism includes critically assessing this information and should result in procedures that are focused on obtaining evidence that is more relevant and reliable,⁵⁷ such as evidence obtained directly by the auditor and evidence obtained from independent, knowledgeable sources. Further, if audit evidence obtained from one source is inconsistent with audit evidence obtained from another, the auditor is required to perform the audit procedures necessary to resolve the matter and should determine the effect, if any, on other aspects of the audit.⁵⁸

Professional skepticism is important in all aspects of the audit, particularly in those areas of the audit that involve significant management judgments or transactions outside the normal course of business. It is ultimately the responsibility of each individual auditor to appropriately apply professional skepticism throughout the audit, including when (i) identifying and assessing risks of material misstatement, (ii) performing tests of controls and substantive procedures, and (iii) evaluating audit results. For example, a lack of professional skepticism in the risk assessment process could result in an auditor not identifying or assessing risks appropriately, which could impact the effectiveness of the audit.

Remaining alert to conditions that may indicate possible misstatement due to fraud. The Board did not receive significant comments in this area. As part of exercising professional skepticism, the auditor remains alert to conditions that may indicate possible misstatement due to error or fraud. This includes, for example, being alert to information that calls into question the reliability of documents and responses

to inquiries the auditor plans to use as audit evidence. Such information could identify conditions that may indicate possible fraud or error in the financial statements. As discussed above, AS 2401 provides further requirements regarding potential fraud risk factors.

Not relying on evidence that is less than persuasive. One commenter stated that the proposed phrase "not rely" appears to be more restrictive than the existing phrase "not be satisfied with" in AS 1015.09 because the proposed phrase would preclude the auditor from placing any reliance on anything less than completely persuasive evidence, even in combination with other persuasive evidence.

The proposed phrase "not rely" was intended to convey that, consistent with AS 1015.09, exercising professional skepticism involves seeking evidence that is more persuasive rather than settling on evidence that may be less so. AS 1000 is not intended to address the sufficiency and appropriateness of evidence. To avoid confusion, the final standard retains the existing terminology from AS 1015 as "not being satisfied with evidence that is less than persuasive." The requirements for obtaining audit evidence, including evaluating its relevance and reliability, are discussed in AS 1105, which provides that the quantity of audit evidence needed is affected by both the risk of material misstatement and the quality of the evidence obtained (*i.e.*, its relevance and reliability). To supplement evidence that is less relevant or obtained from a less reliable source, an auditor would need to gather additional evidence. The appropriate application of professional skepticism focuses the auditor on seeking the best evidence reasonably obtainable.

Not assuming that management is honest or dishonest. An investor-related group referenced certain views expressed in the 2000 report by the Public Oversight Board's Panel on Audit Effectiveness.⁵⁹ That report recommended that auditing standards require forensic-type fieldwork in which auditors would "modify the otherwise neutral concept of professional skepticism and presume the possibility of dishonesty at various levels of management, including collusion, override of internal control and falsification of documents."⁶⁰ The Board believes that establishing a presumption of management's dishonesty would have broader

implications beyond the exercise of professional skepticism under this standard.

Consideration of potential bias on the part of management and the auditor. Several commenters expressed concern that the obligations related to consideration of the auditor's own bias were unclear or could be viewed as a requirement to seek contradictory evidence. Some of these commenters noted that consideration of auditor bias is inherent in the requirements for evaluating audit evidence under AS 1105 and suggested deleting the reference to "and the auditor" from proposed paragraph .11e. One commenter suggested aligning this concept with the approach used by the AICPA in their revised audit evidence standard. Two commenters also questioned the nature and extent of documentation necessary to demonstrate consideration of auditor bias. One investor-related group advocated for requiring the auditor to affirmatively consider the risk of bias, particularly confirmation bias, arising out of the financial relationship between management and the auditor.

The Board continues to believe that it is important to include reference to auditor bias in connection with exercising professional skepticism because certain conditions inherent in the audit environment create incentives and pressures that could impede the appropriate application of professional skepticism and allow unconscious bias to influence decisions. Examples of these incentives and pressures include avoiding significant conflicts with management, providing an unqualified audit opinion prior to the company's filing deadline, achieving high client satisfaction ratings, keeping audit costs low, or cross-selling other services.

As discussed in the proposal, it is important for the auditor, as part of exercising professional skepticism, to consider the impact of management bias and the auditor's own bias that could affect the auditor's judgments. For example, the tendency to seek confirming information can lead the auditor to seek audit evidence that is only consistent with management's explanations, or to favor conclusions that are consistent with the auditor's initial beliefs or conclusions reached in prior year audits. In exercising professional skepticism, the auditor could mitigate such potential bias by being aware of "confirmation bias," considering alternatives provided by others, and being aware of contradictory

⁵⁶ See AS 1105.02. A new footnote has been added to AS 1000.11a, referring to AS 1105 for the discussion of management's assertions regarding the financial statements and internal control over financial reporting, and the proposed phrase "regarding the financial statements or internal control over financial reporting" has been deleted from paragraph .11a.

⁵⁷ See AS 1105.07--08.

⁵⁸ See AS 1105.29.

⁵⁹ See Public Oversight Board, The Panel on Audit Effectiveness Report and Recommendations (Aug. 31, 2000).

⁶⁰ *Id.* at 88-89.

information.⁶¹ Auditors and management may also have biases related to electronic information (e.g., a belief that electronic information is either always reliable or inherently prone to error). For example, a tendency to favor output generated from automated systems, even when contradictory information raises questions as to whether such output is reliable, illustrates a form of bias. Exercising professional skepticism, including critically assessing information related to the audit, helps the auditor address the effects of potential bias on professional judgment and decision-making. It is important to clarify, however, that the consideration of potential bias discussed above does not change the auditor's responsibilities for evaluating contradictory evidence, as suggested by some commenters.

Finally, the Board did not add new documentation requirements for demonstrating the auditor's exercise of professional skepticism beyond those addressed in AS 1215. Auditors can demonstrate that their work encompassed the exercise of professional skepticism by documenting the procedures performed and conclusions reached in accordance with AS 1215.

After consideration of the comments, the Board adopted the provisions for exercising professional skepticism substantially as proposed, with the modifications discussed above.

5. Professional Judgment

See Paragraph .12 of the New Standard

Auditors exercise professional judgment throughout the audit, and existing standards refer to the use of professional judgment, but do not describe in detail what professional judgment means. The proposed standard provided that the auditor must exercise professional judgment and included a description of professional judgment. As discussed in the proposing release, auditors exercise professional judgment throughout the audit. For example, the auditor exercises professional judgment in:

- Determining the areas to be tested and the nature, timing, and extent of the tests to be performed;
- Interpreting the results of audit testing and evaluating audit evidence;
- Evaluating the reasonableness of accounting estimates in significant accounts and disclosures, based on information that could reasonably be

expected to be available through the date of the auditor's report;⁶²

- Determining if there are any CAMs in the audit of the financial statements;⁶³ and

- Determining the nature and extent of documentation to comply with documentation requirements.⁶⁴

As proposed, professional judgment involved applying relevant training, knowledge, and experience to make informed decisions and reach well-reasoned conclusions about the courses of action that are appropriate in the circumstances such that the audit is planned and performed, and the report or reports are issued, in accordance with applicable professional and legal requirements.

Several commenters, primarily firms, expressed concern that the proposed description of professional judgment could be interpreted as imposing a new strict liability requirement. These commenters suggested removing the phrase "such that the audit is planned and performed, and the report or reports are issued, in accordance with applicable professional and legal requirements" in the description, noting that a deficiency in an auditor's compliance with applicable professional and legal requirements should not, by default, indicate a failure to exercise appropriate professional judgment. In the view of these commenters, this implication would be contrary to the established interpretation of an auditor's responsibilities, which recognizes that reasonable observers may disagree regarding whether applicable standards were complied with while agreeing that the matter in question was within the purview of the auditors' professional judgment and could result in hindsight challenges of auditors' judgments.

One commenter recommended that the description of professional judgment refer to "sound" judgment, consistent with the description used by the International Ethics Standards Board for Accountants ("IESBA").⁶⁵ Another commenter asked for clarification of the concept of "well-reasoned conclusions,"

⁶² See AS 2501, *Auditing Accounting Estimates, Including Fair Value Measurements*, which discusses the auditor's responsibility to obtain sufficient appropriate evidence to determine whether accounting estimates in significant accounts and disclosures are properly accounted for and disclosed in the financial statements.

⁶³ See AS 3101 for requirements regarding CAMs.

⁶⁴ See AS 1215 for documentation requirements.

⁶⁵ See IESBA, *Handbook of the International Code of Ethics for Professional Accountants* (2023), Subsection 113—Professional Competence and Due Care, at 113.1 A1 ("Serving clients and employing organizations with professional competence requires the exercise of sound judgment in applying professional knowledge and skill when undertaking professional activities.").

noting potential differences with the definition of professional judgment established by other standard setters. Two commenters advocated for the establishment of a judgment framework by the Board. One commenter stated that they heard auditors express the need for more clarity about the degree of documentation necessary to demonstrate their reasoned judgment. Another commenter suggested adding the concept of materiality to the description of an auditor's exercise of judgment, based on the description of judgment in AS 2815.04 with regard to the auditor's opinion on financial statements.

The proposed phrase "such that the audit is planned and performed, and the report or reports are issued, in accordance with applicable professional and legal requirements" was meant to provide context to the application of professional judgment and was not intended to introduce a strict liability requirement. After considering the comments received, the Board removed this phrase in the final description of professional judgment. The Board continues to believe that it is important to clarify that the use of professional judgment does not allow for an arbitrary exercise of discretion. While conclusions could vary, auditors are required to apply relevant training, knowledge, and experience to make informed decisions and reach well-reasoned conclusions about the courses of action that are appropriate in the circumstances. Therefore, the Board added a note to paragraph .12 to clarify that professional judgment is applied in the context of conducting an audit with due professional care in accordance with applicable professional and legal requirements. The Board believes that this note properly frames the exercise of professional judgment without implying that a deficiency in an auditor's compliance with applicable professional and legal requirements would by default also indicate a failure to exercise appropriate professional judgment.

The Board did not change the description of professional judgment to include "sound judgment" as the Board believes that term is redundant with the phrase "well-reasoned." The phrase "well-reasoned," used in the context of an auditor exercising professional judgment and reaching conclusions, is clear because it refers to judgment made and conclusions reached that are based on logical thinking and an analysis of relevant information.

As discussed earlier, the auditor is required to exercise due professional care in all matters related to the audit. The concept of the auditor's exercise of

⁶¹ For a discussion of confirmation bias, see, e.g., Raymond S. Nickerson, *Confirmation Bias: A Ubiquitous Phenomenon in Many Guises*, 2 Review of General Psychology 175 (1998).

professional judgment is rooted in conducting the audit with due professional care. Therefore, the Board retained the phrase “well-reasoned” as proposed. Regarding the degree of documentation related to professional judgment, the auditor is expected to comply with documentation requirements of AS 1215, which includes requirements for considering the nature and extent of documentation needed.

The Board believes that creating a “framework” for how auditors should exercise their professional judgment, as suggested by some commenters, would be beyond the scope of this project. The Board further believes it is better for auditors to adhere to overarching principles and standards that mandate the exercise of professional judgment in connection with conducting an audit with due professional care. This approach acknowledges the multifaceted nature of audits and allows auditors to exercise their professional judgment in the unique circumstances of each audit engagement.

6. Conducting an Audit

i. Auditor and Management Responsibilities

See Paragraph .13 of the New Standard

The Board proposed to require the auditor to plan and perform the audit to obtain sufficient appropriate audit evidence to (a) obtain reasonable assurance about whether: (1) in an audit of financial statements, the financial statements are free of material misstatement, whether due to error or fraud, or (2) in an audit of ICFR, material weaknesses exist as of the date specified in management’s assessment; and (b) provide the auditor with a reasonable basis for forming an opinion. This requirement was retained from AS 1001 and AS 1015 but expanded to cover an audit of ICFR. The Board also proposed to include a note to the requirement that clarified the distinction between the responsibilities of the auditor and those of management, and to expand those responsibilities to include an audit of ICFR. Specifically, the note stated that in an audit of financial statements, the financial statements are management’s responsibility and the auditor’s responsibility is to express an opinion on the financial statements. In an audit of ICFR, management is responsible for maintaining effective ICFR and for assessing the effectiveness of ICFR, and the auditor’s responsibility is to express an opinion on the effectiveness of the company’s ICFR.

Several commenters discussed the importance of clearly distinguishing the responsibilities of the auditor from those of management and suggested retaining the corresponding language from AS 1001.02–.03. For example, one commenter observed that some investors may mistakenly believe that the auditor drafts the financial statements. In the view of this commenter, stating that management is “responsible” for the financial statements may be interpreted as a legal responsibility and does not explicitly convey that management prepares the financial statements.

The Board retained the requirement substantially as proposed. In response to commenters, the Board updated the language in the note to clarify that the financial statements, “including their preparation,” are the responsibility of management and that management is responsible for “establishing and maintaining” effective ICFR.

ii. Reasonable Assurance

See Paragraph.14 of the New Standard

The Board proposed to retain the concept of reasonable assurance from AS 1015. Specifically, the proposed standard stated that reasonable assurance is a high level of assurance and is obtained by reducing audit risk to an appropriately low level through the application of due professional care, including in obtaining sufficient appropriate audit evidence.⁶⁶ The auditor is able to obtain reasonable, but not absolute, assurance that (1) misstatements are detected that, individually or in combination, would result in material misstatement of the financial statements; and (2) in an audit of ICFR, material weaknesses are detected.

Commenters generally supported retaining the concept of reasonable assurance but provided views on its proposed description. A number of commenters, primarily firms, recommended that the Board retain certain statements from AS 1015.10–.13 (or similar language) that describe the limitations of an audit. These statements include:

- Absolute assurance is not attainable because of the nature of audit evidence and the characteristics of fraud. Therefore, an audit conducted in accordance with the standards of the PCAOB may not detect a material weakness in internal control over financial reporting or a material misstatement to the financial statements.⁶⁷

- Even with good faith and integrity, mistakes and errors in judgment can be made [I]n the great majority of cases, the auditor has to rely on evidence that is persuasive rather than convincing.⁶⁸

- Because of the characteristics of fraud, a properly planned and performed audit may not detect a material misstatement.⁶⁹

- [T]he auditor is not an insurer and his or her report does not constitute a guarantee. Therefore, the subsequent discovery that either a material misstatement, whether from error or fraud, exists in the financial statements or a material weakness in internal control over financial reporting exists does not, in and of itself, evidence (a) failure to obtain reasonable assurance, (b) inadequate planning, performance, or judgment, (c) the absence of due professional care, or (d) a failure to comply with the standards of the PCAOB.⁷⁰

A few of these commenters also pointed to the characterization of reasonable assurance in the standards of other standard setters (e.g., ISA 200).⁷¹ These commenters generally expressed concern that without such language, the proposal would reduce transparency and contribute to the expectation gap among investors and other stakeholders regarding the nature of reasonable assurance (as compared to absolute assurance). For example, one commenter stated that the elimination of the existing clarifying language could also result in ambiguity as to whether a new level of assurance would be expected, beyond reasonable assurance but less than absolute assurance.

Some commenters offered other clarifications. For example, two commenters suggested retaining certain language from AS 1001.02, which states that the auditor has no responsibility to plan and perform the audit to obtain reasonable assurance that misstatements, whether caused by errors

⁶⁸ See AS 1015.11.

⁶⁹ See AS 1015.12.

⁷⁰ See AS 1015.13.

⁷¹ Paragraph 13(m) of ISA 200 defines reasonable assurance as “in the context of an audit of financial statements, a high, but not absolute, level of assurance.” Paragraph 5 of ISA 200 further describes that reasonable assurance “is obtained when the auditor has obtained sufficient appropriate audit evidence to reduce audit risk (that is, the risk that the auditor expresses an inappropriate opinion when the financial statements are materially misstated) to an acceptably low level. However, reasonable assurance is not an absolute level of assurance, because there are inherent limitations of an audit which result in most of the audit evidence on which the auditor draws conclusions and bases the auditor’s opinion being persuasive rather than conclusive.”

⁶⁶ See paragraph .03 of AS 1101, *Audit Risk*.

⁶⁷ See AS 1015.10.

or fraud, that are not material to the financial statements are detected. One of these commenters also acknowledged that identifying limitations on the auditor's responsibilities should not be the main focus of the standard. One commenter recommended that the final standard include guidance on determining whether audit risk is reduced to an appropriately low level, including a requirement to consider changes in technology, the nature and quality of an issuer's financial reporting system, relevant academic and other research, and any other factor that can reduce the risk of material misstatements or fraud.

As discussed further below, the Board retained the description of reasonable assurance as proposed with some modifications. The concept of "reasonable assurance" is not new. Reasonable assurance refers to the auditor's degree of satisfaction that the evidence obtained during the audit supports the assertions of the financial statements. It is a high level of assurance and is obtained by reducing audit risk to an appropriately low level (*i.e.*, the risk that the auditor expresses an inappropriate audit opinion when the financial statements are materially misstated or in an audit of ICFR, when a material weakness exists) through applying due professional care, including obtaining sufficient appropriate audit evidence.⁷² AS 1101 discusses audit risk and the relationships among the various components of audit risk in an audit of financial statements. The Board retained a reference to AS 1101 in the final standard and added the description of the term "audit risk." The Board believes that additional guidance on consideration of audit risk, as suggested by one commenter, is outside the scope of this standard. If additional guidance is necessary regarding the auditor's assessment of and response to the risks of material misstatement in an audit, it would be provided in connection with the Board's risk assessment standards.⁷³

The Board did not change the meaning of reasonable assurance or the requirement to obtain reasonable assurance. In consideration of comments received, the Board emphasized in the final requirement that reasonable assurance is not absolute assurance. As observed by some commenters, absolute assurance is not attainable because of the nature of audit evidence (*e.g.*, selective testing

involving professional judgments⁷⁴ regarding the nature, timing, and extent of procedures to be performed; and inherent uncertainty of accounting estimates), and the characteristics of fraud (*e.g.*, falsified company documentation). In many cases, the auditor has to rely on evidence that is persuasive rather than convincing. Because the Board did not change the meaning of reasonable assurance, the Board believes that further explanation of the difference between reasonable assurance and absolute assurance is not needed in the final standard.

The Board did not retain additional descriptions of the inherent limitations of an audit from AS 1015.10–.13. The Board believes that these matters are part of the differences between reasonable and absolute assurance discussed above or addressed elsewhere in PCAOB standards. Although a properly planned and performed audit may not detect a material misstatement because of the characteristics of fraud, that does not diminish the auditor's responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

iii. Compliance With Applicable Professional and Legal Requirements

See Paragraph .15 of the New Standard

The Board proposed to require that the auditor comply with applicable professional and legal requirements in conducting the audit. As discussed above, the term "applicable professional and legal requirements" was proposed to have the same meaning as defined in proposed QC 1000. Under existing provisions, auditors are required to comply with PCAOB standards and rules. The proposed requirement emphasized that the overall objective of the auditor is achieved by complying with more than just the standards of the PCAOB. This includes compliance with requirements of Section 10A of the Exchange Act related to illegal acts, related party transactions, and an evaluation of whether there is substantial doubt about the ability of the company to continue as a going concern.⁷⁵ The proposed requirement also stated that, in fulfilling these requirements, the auditor should keep in mind its role in protecting investors.

One commenter on this proposed paragraph stated that the term "applicable professional and legal requirements" appears to exceed the

Board's authority, citing Sections 104 and 105 of Sarbanes-Oxley and urged that the Board replace it with "PCAOB rules and standards." Two other commenters noted that applicable professional and legal requirements could be read broadly as a wide range of laws and regulations that do not directly bear on the conduct of audit engagements. Another commenter recommended adding clarifying language in the release to state that although the auditor is expected to comply with applicable legal requirements, the auditor is not expected to have the expertise of a lawyer or to express opinions on matters of law.

The Board disagrees with the commenter's assertions regarding the Board's authority, which extends beyond PCAOB rules and standards. For example, Section 105(c)(4) of Sarbanes-Oxley empowers the Board to sanction a registered firm and its associated persons for violations not only of PCAOB rules and standards but also violations of "the provisions of the securities laws relating to the preparation and issuance of audit reports and the obligations and liabilities of accountants with respect thereto, including the rules of the Commission issued under [the] Act[.]"

As discussed above, the final standard includes a definition of the term "applicable professional and legal requirements" rather than a reference to the definition in QC 1000. The definition that was proposed in the QC 1000 project has been modified in response to comments received in that rulemaking, to explicitly mention ethics laws and regulations. The definition was also refined to limit the breadth of the term, by clarifying that it encompasses statutory, regulatory, and other legal requirements beyond professional standards and other PCAOB rules "[t]o the extent related to the obligations and responsibilities of accountants or auditors in the conduct of engagements or in relation to the quality control system." The Board believes that further changes to this term in the final standard are not necessary.

As discussed above, the Board changed "expertise" to "proficiency" in the final description of competence in response to comments. While the Board does not expect auditors to have the expertise of a lawyer, the Board believes that understanding the company's business and being proficient in the rules and regulations relevant to the company under audit and the related industry is important.

⁷² See AS 1101.03–.04.

⁷³ See, *e.g.*, AS 1101, AS 2101, AS 2105, AS 2110, and AS 2301.

⁷⁴ The discussion above describes requirements for exercising professional judgment.

⁷⁵ 15 U.S.C. 78j–1.

Some commenters also stated that the requirement for auditors to “keep in mind their role in protecting investors” when fulfilling the requirement to comply with applicable professional and legal requirements was unclear, including how to apply such a requirement. As discussed above, investor-related groups suggested including the language from the *Arthur Young opinion* to describe the auditor’s responsibility. Other commenters suggested that the proposed reference to the auditor’s role in protecting investors be deleted from the final requirement or reframed. One commenter pointed to research noting that encouraging auditors to adopt an investor perspective when making judgments may be detrimental to audit quality.⁷⁶

After considering comments and for the reasons discussed above, the Board retained the requirement to comply with applicable professional and legal requirements. The Board removed the reference to “keep in mind their role in protecting investors” from the final standard based on changes made to paragraph .01 of the final standard. As discussed earlier, in connection with certain revisions made to the introductory paragraph of the final standard, the Board added a note to paragraph .01 to remind auditors that their obligation to protect investors is important when complying with all requirements of this and other PCAOB standards and rules.

iv. Relevant Guidance

See Paragraph .15 of the New Standard

The Board also proposed a note to paragraph .15 stating that, as part of complying with all applicable professional and legal requirements in conducting the audit, the auditor is required to take into account relevant guidance applicable to the audit. The proposed requirement was an extension of the existing requirement in AS 1001.11 that the auditor be aware of and consider auditing interpretations issued by the AICPA as of 2003, and adopted by the PCAOB and in effect. Under the proposal, relevant guidance included PCAOB auditing interpretations, Board-issued guidance, and releases that accompany the rules and standards of the Board.

Many commenters, mostly firms and firm-related groups, expressed concern

⁷⁶ This commenter cited two research papers: (i) Altiero, Kang, and Peecher (2022) “show that auditors prompted to take an investor perspective are less likely to assess a misstatement as material” and (ii) Dong, Wang, and Chien (2022) “highlight that taking an investor perspective can decrease assessed risk of material misstatement.” See additional discussion below.

that the proposed note is overly broad and unclear. For example, some commenters cited a lack of clarity as to (i) the scope of the Board-issued guidance including whether documents such as concept releases would be covered; (ii) the timeline in which the requirement would apply; (iii) the hierarchy of guidance and what types of guidance would be considered authoritative; and (iv) how to reconcile potentially conflicting information between proposing and final releases. These commenters generally suggested either deleting the note, codifying the relevant guidance to ensure consistent application, or specifying that relevant guidance includes releases accompanying “final” standards. Another commenter also suggested clarifying the meaning of “take into account,” including defining the phrase in PCAOB Rule 3101.

A few commenters, including an investor-related group, recommended including relevant guidance within the standard rather than the accompanying release. Two commenters suggested that the Board consider restructuring guidance in a manner similar to the application and other explanatory material, as presented in the AICPA and IAASB standards. An investor-related group recommended a “codification” approach that would include placing all guidance, interpretations, releases, amendments, and rules in the same location.

After considering comments received, the Board revised the note as follows:

- Replaced the reference to “relevant guidance” with “PCAOB auditing interpretations”; and
- Replaced a footnote describing the scope of the relevant guidance with a footnote describing the scope of PCAOB auditing interpretations.

The note in the final standard provides that, when complying with PCAOB standards, the auditor is required to also take into account PCAOB auditing interpretations applicable to the audit. As mentioned previously, this is an existing requirement that is being carried forward with modifications. In the final standard, PCAOB auditing interpretations refer to the PCAOB publications entitled “Auditing Interpretations” as currently in effect.⁷⁷ These interpretations were originally adopted by the Board in 2003 along with the interim standards. Since that time, certain of these auditing

⁷⁷ PCAOB auditing interpretations do not include independence interpretations. The requirements to comply with independence interpretations are covered by PCAOB Rule 3500T, *Interim Ethics and Independence Standards*.

interpretations have been and continue to be revised or rescinded in connection with the other amendments to PCAOB standards. The requirement in the final standard, as it did previously, relates to the interpretations currently in effect.

Apart from the PCAOB auditing interpretations referenced in paragraph .15, the PCAOB also supports the implementation of and compliance with its standards in many other ways, including providing guidance in rulemaking releases that accompany standards, amendments, or rules, or issuing staff guidance.⁷⁸ Although there is no requirement to follow these guidance documents, the Board continues to believe that it is important for auditors to pay attention to such guidance, if relevant, when conducting an audit in accordance with PCAOB standards because it may help the auditor understand and comply with complex provisions of those standards or rules. For example, staff guidance can help auditors better understand how the PCAOB intends to implement, inspect against, or enforce existing rules and standards.

The phrase “take into account” in the rule text is not new. It has been used previously in PCAOB standards in reference to information or matters that the auditor should think about or give attention to in performing an audit procedure or reaching a conclusion.⁷⁹ Accordingly, the results of the auditor’s thinking on the relevant matters should be reflected in the performance and documentation of the respective audit procedure performed or conclusion reached.

Lastly, the Board did not consider the “codification” approach because it is out of scope for this project.

v. Audit Documentation

See Paragraph .16 of the New Standard

The Board proposed to require the auditor to prepare audit documentation in accordance with AS 1215. This requirement was intended to emphasize the importance of adequate audit documentation to planning and performing the audit and to the supervision and review of work performed during the audit. Commenters did not express concerns

⁷⁸ PCAOB staff prepares guidance to assist in the implementation of PCAOB standards and rules. The typical legend on such guidance states that the document represents the views of PCAOB staff and not necessarily those of the Board, and that the document is not a rule, policy, or statement of the Board. PCAOB staff audit practice alerts are examples of staff guidance that highlight new, emerging, or otherwise noteworthy circumstances that may affect how auditors conduct audits under existing PCAOB standards.

⁷⁹ See, e.g., AS 3101.12 and AS 2501.

with the documentation requirement, and the Board adopted it as proposed.

vi. Auditor Communications

See Paragraphs .17 Through .20 of the New Standard

The Board proposed an explicit requirement for the auditor's report to contain (i) an expression of opinion on the financial statements, taken as a whole, or an assertion that an opinion cannot be expressed; and (ii) in an audit of internal control over financial reporting, an expression of opinion on the effectiveness of the company's internal control over financial reporting or an assertion that an opinion cannot be expressed. Under the proposed standard, the auditor would be in a position to express an unqualified opinion only when the auditor has performed the audit in accordance with standards of the PCAOB and has obtained sufficient appropriate audit evidence to conclude that: (i) in an audit of financial statements, the financial statements, taken as a whole, are presented fairly, in all material respects, in conformity with the applicable financial reporting framework; and (ii) in an audit of internal control over financial reporting, the company maintained, in all material respects, effective internal control over financial reporting. The proposal also briefly addressed when circumstances require an auditor to express a qualified opinion, adverse opinion, or disclaimer of opinion and referred to AS 3105 and AS 2201 for a description of those circumstances. The proposed requirements were retained from AS 1001 with modifications to be consistent with provisions of AS 3101 and AS 2201.

One investor-related group requested that the required communications include CAMs, and that paragraph .17a of the proposed standard be revised to refer to CAMs "as a 'must contain' item in the auditor's report." The commenter was concerned with the low numbers of CAMs in auditor's reports and that auditors treat the determination of CAMs as "nearly a 'check the box' exercise." Another commenter suggested edits to proposed paragraphs .17 and .19 to align with existing requirements (e.g., adding the phrase "In an audit of financial statements" to paragraph .17a and moving the phrase "the company's" within paragraph .19).

The Board adopted paragraphs .17–.19 substantially as proposed with some modifications. After considering the comments received, the reference to CAMs in a footnote has been moved to a note to paragraph .17 to emphasize the

importance of CAMs. The Board did not make any additional changes to address concerns regarding CAMs. The proposal was not designed to address concerns about the frequency or informative quality of CAMs. Although the Board understands the importance of the concern raised by commenters, this is outside the scope of this project. The Board also revised paragraph .17a and paragraph .19 to incorporate commenters' suggestions described above. Additionally, the Board changed the phrase "modify the report" to "depart from an unqualified opinion" in paragraph .19 to align with other Board-issued standards that describe reports that include opinions other than an unqualified opinion.⁸⁰

The Board proposed in paragraph .20 to require that the auditor communicate externally in accordance with applicable professional and legal requirements. This is an overarching requirement to communicate externally that is based on existing auditor communication requirements (e.g., AS 1301). The Board did not receive any comments on this requirement and are adopting it with slight modification. The Board changed "as required by" to "in accordance with" applicable professional and legal requirements to align with similar phrases used in other Board-issued standards.

Amendments Related to AS 1000

The amendments the Board adopted are described below.

1. Amendments to AS 2810 and Rescission of AS 2815

The Board proposed to incorporate into AS 2810 the requirements of AS 2815 regarding the determination of whether the financial statements are presented fairly in conformity with the applicable financial reporting framework for a more logical presentation, and to rescind AS 2815. Currently, AS 2810 requires the auditor to evaluate whether the financial statements are presented fairly, in all material respects, in conformity with the applicable financial reporting framework, and AS 2815 describes the meaning of this evaluation. The proposed approach was intended to streamline these requirements into one standard and eliminate redundant or unnecessary language. A number of commenters commented on the proposed amendments to AS 2810. After considering the comments received, the Board adopted amendments to AS 2810 with certain modifications discussed below.

i. Clarifying the Meaning of "Present Fairly"

The discussion in the proposing release was designed to clarify the auditor's existing obligation to evaluate the fairness of the financial statements in conformity with the applicable financial reporting framework by stating that "present fairly," under extant PCAOB standards, is a concept that goes beyond mere technical compliance with the requirements of the applicable financial reporting framework.

Some commenters, primarily investor-related groups, supported clarifying the meaning of "present fairly" and provided additional suggestions on amendments to AS 2810. Two investor-related groups suggested that the Board consider going further and require auditors to focus on whether the financial statements are a fair presentation of the company's position rather than narrowly focusing on whether the company is following U.S. GAAP. One investor-related group suggested adding the word "and" immediately before the phrase "in conformity" to make it clear that there is an expectation that the financials are presented fairly, in all material respects *in addition to* conforming with the applicable financial reporting framework. Another group said that auditors should aid in disclosing and providing transparency around the sensitivity and accuracy of climate-related estimates and assumptions.

Other commenters, primarily firms and firm-related groups, viewed the proposed amendments as an expansion of auditors' existing responsibilities. Some commenters asserted that the statement in the proposal that the auditor's judgments concerning the fair presentation of the financial statements go beyond compliance with the applicable financial reporting framework may create a conflict between the auditor's judgment and management's judgment and introduce potential inconsistency in accounting treatment. Others expressed concern that under the proposal, auditors would expect the company to override the requirements of an applicable financial reporting framework if the financial statements prepared in accordance with the framework did not fairly present the substance of the company's financial results.

Some commenters suggested retaining language from AS 2815.03 which states, "The independent auditor's judgment concerning the 'fairness' of the overall presentation of financial statements should be applied within the framework of generally accepted accounting

⁸⁰ See, e.g., AS 3105.

principles. Without that framework, the auditor would have no uniform standard for judging the presentation of financial position, results of operations, and cash flows in financial statements.” Other commenters suggested explicitly retaining the concept of professional judgment for evaluation of fair presentation.

The Board’s proposed clarification of “present fairly” was not intended to change the auditor’s existing responsibilities for the evaluation of whether the financial statements are presented fairly in conformity with the applicable financial reporting framework.

First, the amendments to AS 2810 clarify that “presents fairly” involves evaluating whether information in the financial statements is presented and classified appropriately and in a manner that is not misleading, and that this evaluation is made within the applicable financial reporting framework. Contrary to the views of some commenters, the amendments do not require auditors to expect that the company override or deviate from the requirements of the applicable financial reporting framework. Any override or deviation from the requirements of the applicable financial reporting framework would normally result in a departure from an unqualified opinion under PCAOB standards.⁸¹ Further, the auditor is required to evaluate the risk of omitted, incomplete, or inaccurate disclosures as part of the auditor’s risk assessment procedures.⁸²

Second, the amendments acknowledge that applicable financial reporting frameworks recognize that additional disclosures may be needed to ensure fair presentation. For example, as noted above, the SEC requires by rule that a company provide further material information as necessary to make any required statements, in the light of the

circumstances under which they are made, not misleading.⁸³ This obligation is also consistent with the accounting standards issued by the FASB⁸⁴ and International Accounting Standards Board (“IASB”).⁸⁵ Thus, when the auditor evaluates whether company transactions have been recorded and presented in conformity with the applicable financial reporting framework, the auditor may determine that additional company disclosures are needed to better reflect the substance of the transactions. Such evaluation is currently required under both AS 2810.31 and AS 2815.06, and the

⁸³ See 17 CFR 210.4–01(a) (Regulation S–X Rule 4–01(a)).

⁸⁴ See, e.g., FASB Accounting Standards Codification (“FASB ASC”) paragraph 105–10–05–1, Generally Accepted Accounting Principles—Overall—Overview and Background (“Rules and interpretive releases of the Securities and Exchange Commission (SEC) under authority of federal securities laws are also sources of authoritative GAAP for SEC registrants.”); FASB ASC paragraph 235–10–05–3, Presentation—Notes to Financial Statements—Overall—Overview and Background—Importance of Accounting Policies Disclosure (“The accounting policies of an entity are the specific accounting principles and the methods of applying those principles that are judged by the management of the entity to be the most appropriate in the circumstances to present fairly financial position, cash flows, and results of operations in accordance with generally accepted accounting principles (GAAP) and that, accordingly, have been adopted for preparing the financial statements.”).

⁸⁵ See, e.g., IASB International Accounting Standards (“IAS”) 1, paragraph 15, Presentation of Financial Statements—Financial Statements—General features—Fair presentation and compliance with IFRSs (“Financial statements shall present fairly the financial position, financial performance and cash flows of an entity. Fair presentation requires the faithful representation of the effects of transactions, other events and conditions in accordance with the definitions and recognition criteria for assets, liabilities, income and expenses set out in the *Conceptual Framework for Financial Reporting (Conceptual Framework)*. The application of IFRSs, with additional disclosure when necessary, is presumed to result in financial statements that achieve a fair presentation.”); IAS 1, paragraphs 19–24, Presentation of Financial Statements—Financial Statements—General features—Fair presentation and compliance with IFRSs (describing financial reporting responsibilities in the “extremely rare circumstances in which management concludes that compliance with a requirement in an IFRS would be so misleading that it would conflict with the objective of financial statements set out in the *Conceptual Framework*”); IAS 8, paragraph 10, Accounting Policies, Changes in Accounting Estimates and Errors (“In the absence of an IFRS that specifically applies to a transaction, other event or condition, management shall use its judgement in developing and applying an accounting policy that results in information that is: (a) relevant to the economic decision-making needs of users; and (b) reliable, in that the financial statements: (i) represent faithfully the financial position, financial performance and cash flows of the entity; (ii) reflect the economic substance of transactions, other events and conditions, and not merely the legal form; (iii) are neutral, ie free from bias; (iv) are prudent; and (v) are complete in all material respects.”).

requirement is retained in the amendments to AS 2810.30A and .31.

In response to commenters, the Board retained, in the first note to AS 2810.30, the language of AS 2815.03, with some modifications. Specifically, the Board revised the reference to “generally accepted accounting principles” to “applicable financial reporting framework.” The Board rephrased the sentence to emphasize that the “applicable financial reporting framework provides the basis for the auditor’s judgment regarding the presentation of financial position, results of operations, cash flows, and disclosures in financial statements.” The Board also agrees with commenters that the auditor’s evaluation of fairness of presentation of the financial statements is an exercise of professional judgment in the context of an applicable financial reporting framework. The first note to AS 2810.30 refers to the auditor’s judgment when evaluating the fairness of the overall presentation of financial statements.

The Board also added a new footnote to paragraph .30A, as discussed below, referencing SEC Rule 4–01(a) that describes the company’s obligation regarding additional information that may need to be disclosed in the financial statements so that the financial statements are not misleading.

ii. References to SEC Rule 12b–20

The proposed amendment to AS 2810.30 included a new footnote 17A that referred to a company’s responsibility pursuant to SEC Rule 12b–20 under the Exchange Act, 17 CFR 240.12b–20 (“SEC Rule 12b–20”). That rule requires the company to disclose “such further material information, if any, as may be necessary to make the required statements, in the light of the circumstances under which they are made not misleading.”

Most commenters who addressed the proposed citation to SEC Rule 12b–20 expressed concern with it. While one investor-related group recommended relocating the proposed footnote to the body of the amendments due to its significance, other commenters suggested removing the reference to SEC Rule 12b–20, with some commenters objecting primarily because the rule pertains to companies’ disclosures within or beyond the financial statements. Some commenters emphasized that disclosures beyond the financial statements are the responsibility of companies rather than of auditors. Many expressed concerns that referring to the rule might be viewed as expanding the auditor’s responsibilities, or would conflict with

⁸¹ See AS 3105. In addition, under SEC rules, a company’s “[f]inancial statements filed with the Commission which are not prepared in accordance with generally accepted accounting principles will be presumed to be misleading or inaccurate, despite footnote or other disclosures, unless the Commission has otherwise provided.” 17 CFR 210.4–01(a)(1) (Regulation S–X Rule 4–01(a)(1)). Paragraph (a) of that rule also provides that “the information required with respect to any statement shall be furnished as a minimum requirement to which shall be added such further material information as is necessary to make the required statements, in the light of the circumstances under which they are made, not misleading.”

⁸² See, e.g., AS 2110.67, which requires the auditor, as part of the auditor’s evaluation of fraud risk factors, to include evaluation of how fraud could be perpetrated or concealed by presenting incomplete or inaccurate disclosures or omitting disclosures that are necessary for the financial statements to be presented fairly in conformity with the applicable financial reporting framework.

the auditor's responsibilities described in AS 3101.08e.⁸⁶ One of these commenters suggested citing SEC Rule 4–01(a)(1) instead, because that rule relates specifically to financial statements, upon which the auditor expresses an opinion.

After considering the comments received, the Board deleted proposed footnote 17A with the reference to SEC Rule 12b–20 from the final amendment to AS 2810.30 because that rule reflects a company's responsibilities for information beyond as well as within the financial statements.⁸⁷ Instead, the Board retained the existing note to that paragraph requiring that the auditor look to the requirements of the SEC for the company under audit with respect to the accounting principles applicable to that company. The requirements of the SEC for the company under audit are included in SEC Rule 4–01(a), which the Board referenced in a new footnote to paragraph .30A, to remind auditors of the company's obligation regarding additional information that may need to be disclosed in the financial statements so that the financial statements are not misleading.

iii. Other Clarifications To Proposed AS 2810.30A

The Board proposed a new paragraph AS 2810.30A based on the extant requirement from AS 2815.04, using language consistent with other PCAOB standards. Specifically, the Board:

- Combined the concepts in AS 2815.04a–b regarding acceptability and appropriateness of accounting principles and presented them in AS 2810.30Ab;
- Retained the concepts from AS 2815.04c–d regarding informativeness of information presented in the financial statements and presented them as a new AS 2810.30Aa; and
- Retained the concepts from AS 2815.04e regarding transactions presented in the financial statements within a range of acceptable limits as a new AS 2810.30Ac and an amendment to AS 2810.31.

Several commenters expressed concern about not retaining the reference to the “within a range of

acceptable limits” from AS 2815 and suggested (i) retaining this phrase in AS 2810.30A or (ii) revising proposed 2810.30A to include a footnote referencing AS 2110 or a note describing the relationship between AS 2810.30A and AS 2110 and adding “in all material respects” to AS 2810.30Ac. Another commenter suggested defining “a reasonable investor” used in AS 2810.30Aa. One commenter encouraged the Board to provide guidance on the use of the term “informative” in AS 2810.30A because it could be widely interpreted and applied in practice.

In addition, several commenters suggested including or clarifying certain terminology or concepts used in the proposed new paragraph, AS 2810.30A. Suggestions included:

- Referencing the importance of exercising professional judgment when evaluating the requirements specified in AS 2810.30A; and
- Clarifying that (i) “financial statements” include all notes to the statements and all related schedules;⁸⁸ and (ii) “disclosures” used in AS 2810.30A means “accompanying notes,” not other information included in management discussion and analysis (“MD&A”) and other disclosures included in the annual report.

After considering the comments received, the Board retained proposed paragraph .30A with modifications discussed below.

The final AS 2810.30A requires an auditor, when evaluating whether the financial statements (including the accompanying notes) present fairly the financial position, results of operations, and cash flows, in all material respects, in conformity with the applicable financial reporting framework, to evaluate whether:

- a. The financial statements are informative of matters that may affect their use, understanding, and interpretation; and the information in the financial statements is presented and classified appropriately and in a manner that is not misleading;
- b. The accounting principles selected and applied by the company's management are appropriate in the circumstances; and
- c. Company transactions and relevant events and conditions are appropriately recognized, measured, and disclosed in the financial statements.

The Board added “(including the accompanying notes)” in AS 2810.30A to clarify that financial statements include the accompanying notes, to match the description in AS 2810.31 of

financial statements as “financial statements (including the accompanying notes).” Because the Board uses “disclosures” as an interchangeable term with “notes” or “accompanying notes” throughout PCAOB standards, it is unnecessary to further clarify the terms in AS 2810.30A. The Board also did not add a reference to professional judgment in AS 2810.30A, but as discussed above the Board revised the first note to AS 2810.30 to clarify that the auditor uses professional judgment when evaluating the fairness of financial statements.

The term “informative” is in AS 2815.04c, which refers to AS 2810.31, which in turn provides additional considerations for evaluation of information disclosed in the financial statements (*e.g.*, consideration of the form, arrangement, and the amount of detail given). To clarify this further, the Board retained in the final standard language from AS 2815.04c stating that the information in the financial statements is presented appropriately, in a manner that is “informative of matters that may affect their use, understanding and interpretation” and not misleading. The Board removed the reference to “reasonable investor” from AS 2810.30A because it was limiting and did not consider a broader population of financial statement users (*e.g.*, creditors). The Board also believes that introducing “reasonable investor” in AS 2810.30A may create confusion by implying that an analysis is needed that is distinct from determining if the financial statements are presented fairly in conformity with the applicable financial reporting framework.

Finally, the Board does not believe it is necessary to retain a reference to “within a range of acceptable limits” in AS 2810.30A. The standard is clear that evaluation of fairness is based on auditor judgment and that the concept of materiality is inherent in that judgment, which involves the consideration of qualitative as well as quantitative factors. The combination of these considerations should be clear that not every transaction or account is evaluated to arrive at the conclusion that the company's financial statements, taken as a whole, are presented fairly, in all material respects.

iv. Other Clarifications to Proposed AS 2810.31

The Board proposed to revise the note to AS 2810.31 by (i) removing the first sentence that describes the requirements from AS 3105 (*i.e.*, inadequate disclosures) and instead adding a reference to AS 3105.24–.27 in paragraph .31, and (ii) adding an extant

⁸⁶ AS 3101.08e requires that the auditor's report include an opinion that the financial statements present fairly, in all material respects, the financial position of the company, results of operations, and cash flows in conformity with the applicable financial reporting framework, and that the opinion identify the applicable financial reporting framework.

⁸⁷ The auditor's responsibility for other information outside of the financial statements is specified in AS 2710, *Other Information in Documents Containing Audited Financial Statements*.

⁸⁸ See 17 CFR 210.1–01(b) (Regulation S–X Rule 1–01(b)).

requirement from AS 2815.06 for the auditor to also evaluate whether the substance of transaction or events differs materially from their form, but changing it from “should consider” to “should evaluate.”

Several commenters suggested, in addition to retaining the requirement from AS 2815.06, to also retain a provision from AS 2815.06 that states “generally accepted accounting principles recognize the importance of reporting transactions and events in accordance with their substance.” Some commenters suggested not changing the “should consider” requirement from extant AS 2815.06 to “should evaluate” when evaluating a transaction in substance over form. Additionally, some commenters recommended removing or relocating the note in AS 2810.31 to proposed AS 2810.30A for better context.

Two investor-related groups suggested providing guidance on AS 2810.31 by adding the existing concept of what the auditors are required to do (per AS 2815.04c) when the applicable financial reporting framework does not provide guidance (e.g., financial statements and accompanying notes do not disclose the necessary information required), or what considerations should be given by auditors in evaluating fair presentation of financial statements in accordance with proposed AS 2810.30.

After considering the comments received, rather than amending the existing note to AS 2810.31, the Board removed the note in its entirety. The Board believes that a separate requirement to evaluate whether the substance of transactions differs from their form is unnecessary in light of the requirement in new AS 2810.30Aa. As discussed above, AS 2810.30Aa requires auditors to evaluate “whether the financial statements are informative of matters that may affect their use, understanding, and interpretation;” and the information in the financial statements is presented and classified appropriately and in a manner that is not misleading. This evaluation includes determining whether additional disclosures are necessary to reflect, for example, the substance of the company’s transactions. The auditor’s evaluation of whether company transactions have been recorded and presented in conformity with the applicable financial reporting framework includes the determination of whether additional disclosures are needed in the financial statements.

The Board also believes that AS 2810.31 and the amendments are comprehensive and clear, and thus no additional guidance is warranted. For

example, under US GAAP and IFRS, management has a range of conforming choices in selecting classifications and measurements of revenue recognition, segment reporting, and fair value measurement. The auditor is responsible for evaluating whether the disclosures reflect the choices made by management and are not misleading to investors and other financial statement users.

2. Amendments Related to Engagement Partner Responsibilities for Supervision

i. Seeking Assistance From Other Engagement Team Members

AS 1201 and AS 2101 establish the engagement partner’s responsibility for the engagement and its performance, including planning, supervision, and review. The Board proposed to amend the existing requirements in AS 1201 and AS 2101 to clarify that even when the engagement partner seeks assistance from other engagement team members, the engagement partner retains the primary responsibility for the engagement and its performance. One commenter strongly supported these amendments, and the Board adopted them as proposed.

The final notes added to AS 1201 and AS 2101 clarify that while an engagement partner may seek assistance on specific tasks from other engagement team members, they continue to retain the primary responsibility for supervising, reviewing, and ensuring the quality of the work performed in the audit. In other words, the work of other engagement team members does not replace or reduce the engagement partner’s responsibility for the engagement and its performance.

ii. Timing of review

The Board also proposed a requirement to clarify that the review and evaluation by the engagement partner (and as applicable by other engagement team members performing supervisory activities) of work performed by engagement team members, as described in AS 1201.05c, must be completed prior to the report release date. These amendments did not receive any comment and are being adopted as proposed.

iii. Workpaper Review

The Board proposed to amend AS 1201 to clarify the extent of the planning, supervisory, review, and documentation activities to be performed by the engagement partner by aligning those activities with existing auditor responsibilities under AS 1015 because the Board believes that the engagement partner’s review of audit

documentation is an important part of supervision. These amendments were intended to reaffirm the engagement partner’s supervisory and review responsibilities in the context of exercising due professional care.⁸⁹ Specifically, the Board proposed to add a note stating that notwithstanding assistance from other engagement team members performing supervisory activities, the engagement partner is required to review sufficient documentation to determine that (i) the engagement was performed as planned; (ii) significant judgments were appropriate and significant findings and issues, along with matters brought to the engagement partner’s attention pursuant to AS 1201.05b, were appropriately addressed; (iii) the conclusions expressed in the auditor’s report are appropriate and supported by sufficient appropriate evidence; and (iv) matters requiring communication under applicable professional and legal requirements are appropriately identified and communicated. The proposed note also provided that the engagement partner’s review includes review of documentation of significant findings or issues⁹⁰ and review of documentation that is also subject to review by the EQR, citing the provisions of AS 1220 that specifically require the EQR to review certain documentation.⁹¹

One commenter stated that the proposed amendments were overly prescriptive and should allow more flexibility regarding the engagement partner’s review and sign-off. Another commenter recommended clarifying how due professional care in AS 1201 relates to the engagement partner’s responsibilities in AS 1000. This commenter further recommended better aligning AS 1201 with proposed AS 1000.09, including the interplay between Note 2 of AS 1201.05, which has specific workpaper review requirements by the engagement partner, while AS 1201.04 also allows the engagement partner to seek assistance from other engagement team members.

After considering the comments received, the Board adopted amendments to AS 1201 substantially as proposed. The Board believes that the amendments clarify the engagement partner’s existing obligations for supervision and review. As the engagement team member with primary responsibility for the engagement, the engagement partner must review, at minimum, sufficient documentation of

⁸⁹ See AS 1000.10 discussed above.

⁹⁰ See AS 1215.12.

⁹¹ See AS 1220.09–.10 and .14–.15.

specific audit areas that are deemed important to support the auditor's opinion. Without reviewing sufficient documentation in these areas, the engagement partner would not be able to demonstrate that the engagement partner has the primary responsibility for the audit.

One commenter asserted that the proposed requirement that the "engagement partner's review should include review of documentation . . . subject to review by the engagement quality reviewer" could be interpreted to require the engagement partner to review all documentation reviewed by the EQR, beyond what is required in AS 1220.10 or .15. Another commenter expressed concern about the proposed note stating that in multi-tiered audits, other audit partners, not only the engagement partner, should retain the ability to review all documentation subject to EQR review. This commenter suggested not linking engagement partner review requirements to documentation subject to review by EQR.

In response to the commenters, the Board clarified the final requirement by changing the phrase "review of documentation subject to review by the engagement quality reviewer" to "review of documentation required to be reviewed by the engagement quality reviewer pursuant to the requirements of paragraphs .09–.10 and .14–.15 of AS 1220 . . ." This revision further clarifies that the Board expects the engagement partner to review the documentation that the engagement quality reviewer is required to review in order to comply with those provisions of AS 1220, rather than all of the documentation that the engagement quality reviewer may have actually reviewed. The Board believes that the documentation of significant judgments made and conclusions reached by the engagement team that is required to be reviewed by the EQR provides important information to the engagement partner. This is true for all engagements, including multi-location and multi-tiered engagements. The extent of documentation reviewed by the EQR and, under the final amendment, by the engagement partner, will depend on the facts and circumstances of the particular engagement. Further, the requirement for the engagement partner to review documentation required to be reviewed by the EQR does not preclude other engagement team members performing supervisory activities to also review this documentation.

Several commenters further expressed concerns that the proposed amendments

create an incorrect perception that the responsibility for all phases of the audit resides with the engagement partner only without any consideration given to the responsibility of the firm or other engagement team members. One of these commenters further suggested including a statement that the engagement partner should tailor the extent of their supervision based on a variety of factors as described in AS 1201.06. AS 1201.05 specifically addresses the responsibilities of the engagement partner relating to supervision of engagement team members, and the Board does not think it is necessary to change these requirements to address the responsibilities of others.

One commenter stated that the engagement partner's review of documentation to determine that the engagement was performed as planned may be construed as expanding the partner review requirements beyond AS 1215.12c because the review of documentation only relates to "results of auditing procedures that indicate a need for significant modification of planned auditing procedures." The Board does not believe that Note 2 of AS 1201.05 expands the engagement partner's responsibilities. AS 2101.03 states that the engagement partner is responsible for planning the audit and that the engagement partner retains primary responsibility for the engagement and its performance. In addition, the documentation requirements under AS 1215 are not limited to the significant findings and issues described in AS 1215.12 and there are other documentation requirements outside of documenting specific matters.

Another commenter further suggested that the Board define "sufficient documentation" used in proposed Note 2 of AS 1201.05. The Board does not believe this is necessary. What is sufficient will depend on the facts and circumstances of the particular engagement under review. The amount of documentation that the engagement partner would review will vary depending on the associated risk involved in the audit area and the nature of the work performed that the engagement partner reviews. The Board further clarified this point, by changing "sufficient documentation to determine" to "documentation sufficient to determine" in the final amendment. This change is designed to better connect the concept of sufficiency with the matters that the engagement partner will determine.

The Board also proposed other amendments to AS 1201 and AS 2101 to conform to the adoption of AS 1000.

These technical and clarifying amendments included replacing references to titles of existing standards with the title of the new standard and updating cross-referenced terminology and paragraph citations. The Board adopted these other amendments as proposed as no comments were received.

3. Amendments Related to Documentation

The Board proposed several amendments to AS 1215 discussed in more detail below. Commenters generally supported the proposed amendments to AS 1215. Some commenters provided specific comments related to (i) documentation completion date and (ii) specific audit documentation and timing for documentation review. These are discussed in more detail below.

i. Documentation Completion Date

Audit documentation is the written record of the basis for the auditor's conclusions that provides the support for the auditor's representations, whether those representations are contained in the auditor's report or otherwise. Audit documentation also facilitates the planning, performance, and supervision of the engagement, and is the basis for the review of the quality of the work because it provides the reviewer with written documentation of the evidence supporting the auditor's significant conclusions.⁹² Under existing standards, a complete and final set of audit documentation is required to be assembled for retention as of a date not more than 45 days after the report release date, known as the documentation completion date.⁹³ The Board proposed to accelerate the documentation completion date by reducing the maximum period from 45 days to 14 days.

Many commenters who addressed the amendment generally supported it or agreed that the proposed acceleration of the documentation completion date would be appropriate or result in increased audit quality. Two commenters further stated that the shorter period of 14 days would not cause significant changes at most firms.

Several commenters raised concerns over the acceleration of the documentation completion date. One commenter stated that the acceleration would likely lead to more audit quality issues due to the increasingly more complex financial accounting, reporting, and auditing landscape requiring more

⁹² See AS 1215.02.

⁹³ See AS 1215.15.

time as well as the current talent crisis. Another commenter stated that 14 days is too short to handle any unforeseen consequences (*e.g.*, technology interruptions). Another commenter questioned whether acceleration of documentation will (i) have any meaningful impact on PCAOB inspection timelines and operating efficiencies and (ii) be workable for smaller firms, who may not have the technology to implement this change.

Two commenters, both investor-related groups, recommended further shortening the documentation completion date to two days because an earlier PCAOB inspection would benefit investors. These two investor-related groups and another commenter questioned why 14 days is a more appropriate timeframe. Focusing on challenges that smaller firms may face in implementing the acceleration, and the diversity across global network firms in documentation archive systems, several commenters recommended a phased implementation approach or extending the implementation over a longer period (*e.g.*, two-year period).

The proposal also sought comment, in light of the proposed 14-day documentation completion date, on whether firms would have difficulty, when filing Form AP within 35 days of the audit report being filed, complying with AS 1215.16. That paragraph of AS 1215 prohibits the deletion or discarding of audit documentation after the documentation completion date but permits the addition of documentation under certain conditions. Two firms stated that they did not foresee significant difficulties in complying with AS 1215.16 with additional costs, while another firm indicated some technological and process challenges. Two commenters recommended making both due dates (*i.e.*, documentation completion date and Form AP due date) the same.

After considering the comments received, the Board adopted the accelerated documentation completion date of 14 days as proposed with modification to the effective date for certain firms discussed below. The 14-day timeline strikes a good balance of meeting the objectives of this amendment (*e.g.*, enhance investor protection by enabling the Board to begin the inspection process sooner after the completion of an audit) while still allowing a two-week period (14 calendar days) to assemble audit documentation for retention (*i.e.*, archive audit documentation). As echoed by some commenters, the Board believes that the accelerated documentation period will not require a

significant change for many firms. In the Board's view, the changes to the archiving period (*i.e.*, 14 days) are necessary to focus auditors on assembling a complete set of audit documentation that is high-quality and without documentation errors or omissions in a timely manner. The Board believes that a delay in assembling the audit documentation increases the potential for omissions to occur.

Further, shortening the archiving period also reduces the window of opportunity for improper alteration of audit documentation and increases the quality of documentation because recalling and describing audit procedures long after the work was actually performed can be difficult.

In accordance with AS 1215, the auditor must have completed all necessary auditing procedures and obtained sufficient evidence to support the representations in the auditor's report before the report release date.⁹⁴ The presence of complex financial accounting, reporting, or auditing matters should not have a bearing on the archiving period as the effects of such matters on the audit should be addressed before the report release date (*i.e.*, before the 14 days to assemble the audit documentation). Under existing AS 1215.16 auditors are allowed to add documentation after the documentation completion date, if needed.⁹⁵ While the Board understands that in practice some firms use a short archiving period, the Board believes that an archiving period of two days, as suggested by investor-related groups, may be too short to handle any unforeseen consequences (*e.g.*, technology interruptions) and could result in inadvertent non-compliance.

The Board also continues to believe that the accelerated documentation completion date of 14 days is still appropriate even when considering the Form AP deadline of 35 days. The Board acknowledged that in most situations, firms currently have 35 days to file Form AP,⁹⁶ and a firm must document the computation of total audit hours and include that computation in the files.⁹⁷ If the actual hours become available

after the documentation completion date but before the Form AP filing, the auditor is required under provisions of AS 1215 to add that information to the audit documentation after the documentation completion date.⁹⁸ The instructions to Form AP also provide that firms may use a reasonable method to estimate audit hours when actual hours have not been reported or are otherwise unavailable.⁹⁹

The Board acknowledged that certain firms may have less technologically advanced systems in place and may need more time to implement new processes to comply with the accelerated documentation completion date requirement. Therefore, as discussed in more detail below, the effective dates for this requirement allow a phased-in approach for smaller firms to comply with the 14-day documentation completion date. This approach addresses implementation challenges that some commenters suggested smaller firms may face.

ii. Specific Audit Documentation and Timing of Review

The Board also proposed to emphasize that audit documentation must clearly demonstrate who performed the work, who reviewed the work, and the date of such review.¹⁰⁰ In order for an engagement partner to conclude that the audit evidence obtained is sufficient and appropriate to support the opinion expressed in the auditor's report,¹⁰¹ the audit work is required to be reviewed prior to the report release date. Therefore, the Board also proposed to amend AS 1215.15 to clarify that, before the report release date, the engagement partner and other engagement team members performing supervisory activities have completed their reviews of audit documentation.

One commenter raised a concern that the amendments may result in lower quality documentation and an increase in late filings, providing an example of when a significant issue emerged closer to the issuer's filing deadline, because additional time to complete and review the relevant documentation would be needed. Another commenter suggested further clarifying whether the engagement partner and other supervisors must ensure that all review notes have been sufficiently addressed prior to the report release date.

The Board adopted the amendments to AS 1215 as proposed. The

⁹⁴ See AS 1215.15 (as amended).

⁹⁵ See AS 1215.16.

⁹⁶ Form AP has a filing deadline of 35 days after the date the auditor's report is first included in a document filed with the SEC, or 10 days after the auditor's report is first included in a document filed with the SEC for a registration statement under the Securities Act of 1933. PCAOB Rule 3211(b).

⁹⁷ See Improving the Transparency of Audits: Rules to Require Disclosure of Certain Audit Participants on a New PCAOB Form and Related Amendments to Auditing Standards, PCAOB Rel. No. 2015-008 (Dec. 15, 2015).

⁹⁸ See AS 1215.16.

⁹⁹ See Instructions to Form AP, Part IV—Responsibility for the Audit is Not Divided.

¹⁰⁰ See AS 1215.06.

¹⁰¹ See AS 2810.02.

requirement for the engagement partner and other supervisors to review relevant audit documentation prior to the report release date is a clarification of existing requirements in AS 1215 and AS 2101. As discussed earlier, since the auditor's report is dated no earlier than the date on which the auditor has obtained sufficient appropriate evidence to support the auditor's opinion,¹⁰² the auditor must have completed all necessary auditing procedures, including documentation to support the work performed that is reviewed by the engagement partner and other reviewers, on or before the auditor's report date, in all cases. The engagement partner and other supervisors should refer to existing requirements in AS 1215.07, in determining the sufficiency of audit documentation. Several factors to consider include nature of the audit procedure, risk of material misstatement associated with the assertion, and extent of judgment required in performing the work and evaluating the results (i.e., accounting estimates require greater judgment and commensurately more extensive documentation).¹⁰³

Lastly, in relation to proposed amendments in AS 1215.06 and .06A, one commenter agreed with the addition of paragraph .06A but suggested removing the phrase of "who performed the work, the person or persons who reviewed the work, and the date of such review" in AS 1215.06 because the same phrase is already included in AS 1215.06Ab. The Board did not make changes to the final amendments to AS 1215.06 and .06A. The addition of the phrase in paragraph .06 is an intentional clarification, rather than duplication, of what the audit documentation is required to demonstrate. The requirement in paragraph .06, is different, and relates to the sufficiency of documentation needed to meet the experienced auditor threshold.

The Board also proposed other amendments to AS 1215 to conform to AS 1000. These technical and clarifying amendments included replacing references to titles of existing standards with the title of the new standard and updating cross-referenced terminology and paragraph citations. The Board did not receive any comments relating to other amendments to AS 1215 and adopted those as proposed.

4. Other Amendments

In connection with the adoption of AS 1000, the Board also adopted other amendments to several PCAOB

standards to conform with AS 1000, amendments to AS 2810, and rescission of AS 2815. These amendments include superseding the foundational auditing standards.

The other changes adopted include replacing references to titles of existing standards with the title of the final standard and updating cross-referenced terminology and paragraph citations.

The proposed amendments that received comments are discussed in more detail below.

i. Amendments to AS 2710, Other Information in Documents Containing Audited Financial Statements

AS 2710.05 refers to differences in the auditor's judgment or opinion. The Board proposed to amend that standard in two ways, by clarifying that the difference of judgment or opinion is "between the auditor and the client," and by adding a footnote clarifying the meaning of "judgment." One commenter suggested replacing "the client" with "management" to be consistent with other PCAOB standards. Although the Board adopted other amendments that refer to the management and audit committee of the company under audit rather than to the auditor's "client," the Board did not make this change throughout the auditing standards because such a sweeping change is outside the scope of this project and may not be warranted in each instance, and thus could create confusion. Because "client" is used in AS 2710 throughout the standard, the Board retained the use of that term in the existing standard and in the amendment, and thus adopted the amendments to AS 2710.05 as proposed.

ii. Amendments to AS 3101, The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion

The Board proposed to move certain language in paragraph .01 of AS 3101 to AS 1000. The Board also proposed to move footnote 2 that describes the term "taken as a whole" to paragraph .02 of AS 3101. Two commenters on the proposed amendments to AS 3101 suggested amending paragraph .11 and paragraph .14, primarily due to the declining number of CAMs disclosed by firms. Other commenters suggested adding language about the meaning of reasonable assurance means and the limitation of the audit in the auditor's report (paragraph .09 and Appendix B). The Board did not make these changes suggested by commenters because they are outside the scope of this project.

One commenter expressed concern that the meaning of "taken as a whole"

was changed because a footnote was added to AS 3101.02. As discussed above, the Board did not change the meaning of "taken as a whole" by moving the existing footnote to another paragraph. The Board therefore adopted the amendments as proposed.

iii. Amendments to AS 4105, Reviews of Interim Financial Information

The Board proposed to replace references to titles of existing standards with the title of the final standard and update cross-referenced terms and paragraph citations in paragraphs .01 and .07. Three commenters noted that the amendments are appropriate. One commenter suggested adding "to the extent those standards are relevant" in AS 4105.01 when referencing AS 1000 because interim reviews are not required to provide reasonable assurance. The Board believes this addition is not necessary because the amendment refers only to compliance with independence and ethics requirements, competence, and exercise of due professional care, which are fundamental to any audit, review, or attestation engagements under the PCAOB standards. All of these concepts are relevant to AS 4105 without exception. The Board adopted the amendments as proposed.

iv. Amendments to Attestation Standards

The Board proposed to replace references to titles of existing standards with the title of the final standard and update cross-referenced terms and paragraph citations. One commenter on these amendments stated that they are appropriate. Another commenter offered suggestions to (i) limit the references to AS 1000 in attestation standards because the general principles and responsibilities in AS 1000 should be specifically tailored to attestation engagements to be operable, (ii) retain paragraph .41 of AT Section 101, *Attest Engagements* a reference to *Cooley on Torts*, which was removed, and (iii) change the reference in footnote 9A of Attestation Standard No. 2, *Review Engagements Regarding Exemption Reports of Brokers and Dealers*, as "review" engagement as opposed to "examination" engagement. The Board noted that the references to AS 1000 have been tailored to the attestation standards. The Board did not retain the reference to the 1932 treatise *Cooley on Torts* because, as the Board explained when it proposed AS 1000, that reference is unnecessary and AS 1000 explains the concept of due professional care in plain language without changing

¹⁰² See paragraph .01 of AS 3110, Dating of the Independent Auditor's Report.

¹⁰³ See AS 1215.07.

its meaning.¹⁰⁴ The Board revised the footnote of AT No. 2 to refer to a “review” engagement. Otherwise, the Board adopted the amendments as proposed.

Effective Date

In the proposing release, the Board sought comment on the amount of time auditors would need before the proposed standard and related proposed amendments to PCAOB standards would become effective, if adopted by the Board and approved by the SEC. The Board proposed an effective date of June 30 of the year after approval by the SEC.

A number of commenters, mostly firms, suggested that an effective date be based on a fiscal year end date (e.g., audits of fiscal years ending on or after December 15) rather than the proposed effective date of June 30 in the year after SEC approval. These commenters generally pointed to challenges associated with a mid-year implementation (e.g., need to update firm methodologies for foundational standards and for performance standards amended by this project, provide training). Specific dates suggested by commenters included: (i) audits of periods beginning on or after December 15, 2024 (assuming 2023 SEC approval); (ii) 12 months after SEC approval; (iii) 18 months after SEC approval; and (iv) 24 months after SEC approval.

In addition, a firm and a firm-related group suggested that the Board consider the effective dates for other standard-setting projects such as QC 1000 when setting the effective date for AS 1000. In response to commenters, and after considering the effective dates for other Board rulemaking projects, the Board revised the effective date for the new standard and related amendments.

Subject to approval by the SEC, the new standard and related amendments will take effect for audits of financial statements for fiscal years beginning on or after December 15, 2024, except for the 14-day documentation completion date requirement (AS 1215.15). For that requirement, the Board adopted a phased approach to provide smaller firms more time to prepare for implementation. The requirement will take effect as follows:

- For public accounting firms that, during the calendar year ending December 31, 2024, issued audit reports with respect to more than 100 issuers, the 14-day documentation completion requirement will take effect for audits of financial statements for fiscal years

beginning on or after December 15, 2024; and

- For all other registered public accounting firms, the 14-day documentation completion requirement will take effect for audits of financial statements for fiscal years beginning on or after December 15, 2025.

The Board believes that changing the effective date to fiscal years beginning on or after December 15, 2024 responds to commenters who (i) expressed concerns about having a mid-year implementation and (ii) suggested that an effective date be based on a fiscal year-end date. Given the nature of requirements of the new standard and related amendments, as well as the extent of the differences between the new standard and the foundational standards, the Board believes that the general effective date will provide auditors with reasonable time to implement the new standard and related amendments. Further, extending the effective date for implementation of the 14-day documentation completion date requirement responds to the need articulated by commenters to provide smaller firms more time to prepare for implementation.

D. Economic Considerations and Application to Audits of Emerging Growth Companies

The Board is mindful of the economic impacts of its standard setting. This section describes the economic baseline, need, and expected economic impacts of the final standard and related amendments, as well as alternative approaches considered by the Board. Due to data limitations, the economic analysis is generally qualitative in nature.

The Board sought and received comments on the economic analysis in the proposing release.¹⁰⁵ A majority of the commenters expressed views related to the economic analysis, and they generally agreed with the need for the standard. Some commenters suggested that the use of certain proposed language or certain proposed clarifications could result in potential confusion or expansion of auditors’ responsibilities or that the proposed removal of certain extant explanatory language could reduce transparency regarding the meaning of the general principles and responsibilities and exacerbate an audit expectation gap. Some commenters suggested that the economic analysis should more carefully consider potential costs or unintended consequences associated with certain key provisions. These

comments are addressed below. One commenter asserted that costs that have not been analyzed, quantitatively or qualitatively, include costs to firms from new legal duties and auditor responsibilities. The commenters did not provide data to support their concerns about potential costs and unintended consequences. Their views were based on interpretations that the Board’s proposal would make broader changes. However, the Board believes the economic analysis is appropriate and consistent with the limited scope of changes the rulemaking requires. Commenters generally agreed that accelerating the documentation completion date is feasible for firms and beneficial to investors, although some commenters noted potential costs or questioned the expected benefits. One commenter suggested potential unintended consequences associated with clarifying engagement partner responsibilities. Three commenters referenced additional academic research for the Board’s consideration. These comments are addressed below.

The Board considered all of the comments received and have developed an economic analysis below that includes these considerations and evaluates the expected benefits and costs of the final standard and related amendments, discusses potential unintended consequences, and facilitates comparison to alternative actions considered. Specific input is discussed where relevant in the analysis that follows.

A. Baseline

The discussion above describes important components of the baseline against which the economic impacts of the standard can be considered, including an overview of existing requirements. Below is the Board’s discussion of additional matters that informed its understanding of the baseline for each of the changes.

1. Modernization of the Foundational Standards

The discussion above provides an overview of existing requirements of the auditing standards that describe the general principles and responsibilities of the auditor in conducting an audit in accordance with the standards of the PCAOB (i.e., foundational standards). The general principles and responsibilities addressed by the foundational standards are described above and include reasonable assurance, due professional care, professional skepticism, independence, competence, and professional judgment.

¹⁰⁴ See PCAOB Rel. No. 2023–001, at 22.

¹⁰⁵ See *id.* at 55–57.

The foundational standards are required to be followed in every audit conducted in accordance with PCAOB standards. The general principles and responsibilities in the foundational standards are reflected in firm methodologies, commercially published guidance, and other technical tools. Although there may be circumstances where some auditors' understanding of the general principles and responsibilities is made more difficult than necessary by how the foundational standards are organized and written, the Board does not have evidence that auditors are systematically confused about the meaning of the general principles and responsibilities or that the foundational standards are insufficient to support high-quality audits, when applied appropriately.

One commenter suggested there is no evidence that audit personnel are unclear or uncertain about the meaning of the proposed requirements. An investor-related group noted that the proposed standard was consistent with the extant standards.

The views expressed by the commenters align with the Board's belief that the core general principles and responsibilities encompassed by the foundational standards are well-established and sound. While the foundational standards are currently spread across four standards (*i.e.*, AS 1001, AS 1005, AS 1010, AS 1015), contain some extraneous restrictive language, and do not emphasize the investor protection obligation as prominently as desired, applied appropriately, they are sufficient to support high-quality audits.

2. Clarification of Engagement Partner Responsibilities

Under PCAOB standards, engagement partners are responsible for the engagement and its performance, including the proper planning and supervision of the engagement and its compliance with PCAOB standards. While engagement partners are permitted to seek assistance from other team members performing supervisory activities, engagement partners are responsible for proper supervision of the engagement and have primary responsibility for the engagement.

As discussed in the proposal, the staff reviewed firms' available methodology documentation to obtain an understanding of firms' policies and practices for engagement partner review.¹⁰⁶ A number of larger firms have developed specific guidance, checklists, and other tools to facilitate

the engagement partner's review. For example, some firms mandate the use of tools that specify workpapers or topics that engagement partners are required to review directly. These tools require the engagement partner to document their review. Conversely, similar policies of some smaller firms are designed to be applied at a higher level and are not as specific about the required review.¹⁰⁷ The Board did not receive comments that provided additional information addressing the baseline for engagement partner review.

3. Accelerating the Documentation Completion Date

The auditor is required to complete all necessary auditing procedures, review those procedures, and obtain sufficient appropriate audit evidence prior to the report release date. Auditors may need some time after the report release date to assemble the final audit file and complete the audit documentation. The PCAOB standard on audit documentation currently requires completion of documentation within 45 days after the report release date.

When PCAOB inspection staff select issuer audits for inspection, PCAOB notice of inspection and access to firm audit documentation generally do not occur until after the documentation completion date. After an inspection is complete, the Board issues a report on the inspection, and a portion of each report is made available to investors and the public on the PCAOB's website.

As discussed in the proposal, the staff reviewed firms' stated archiving policies and firms' archiving practices to obtain an understanding of firms' policies and practices for completing audit documentation.¹⁰⁸ The Board found a wide range of archiving periods among firms, from the full 45-day period to a much shorter period. In addition, PCAOB staff has observed that certain firms require audit documentation to be archive-ready upon completion of interim audit procedures. The PCAOB established the 45-day period in 2004¹⁰⁹ when firms relied more on

paper documentation and needed time to copy, collate, finalize, and file workpapers. PCAOB staff has observed that most firms today have electronic audit tools and audit software that either make those tasks unnecessary or enable the tasks to be performed much faster.

Some U.S. GNFs require engagement teams to archive audit documentation within 10 days after the report release date. Other firms require engagement teams to archive audit documentation within longer periods (ranging from 30 to 45 days after the report release date). Of the firms with policies that allow longer periods, certain of them express expectations to complete documentation within a much shorter period.

All GNFs have established global policies for archiving to be used by their respective non-U.S. affiliate firms. The global policies generally allow for completion of documentation not more than 45 days after the report release date. The global policies of certain GNFs specify a documentation completion date within 14 days after the report release date, or sooner when required by local laws or regulations. In addition to the global policies, certain non-U.S. affiliates of GNFs have local policies requiring documentation completion dates earlier than their respective global policies. Examples observed through the PCAOB's 2022 inspections include non-U.S. affiliates that have local policies specifying completion of documentation by deadlines such as 2 days, 7 days, 10 days, 14 days, and 30 days after the report release date. Additionally, even among certain non-U.S. affiliates that have stated policies of 45 days after the report release date, their documentation systems require completion of documentation within 15 to 40 days (depending on the firm). Generally, non-U.S. affiliates of GNFs use electronic audit documentation systems for documentation and archiving.

The archiving policies of NAFs generally specify a documentation completion date of 45 days after the report release date. PCAOB staff has observed certain NAFs annually inspected by the PCAOB that, in practice, typically archive documentation within 40 days of the report release date. In addition, PCAOB staff has noted that certain other NAFs generally complete their documentation at the end of the full 45-day archiving period. While most NAFs use electronic audit documentation systems, PCAOB staff is aware that some smaller firms still use paper-based workpapers.

The Board did not receive comments specific to the baseline for the documentation completion date,

¹⁰⁷ The observations in this paragraph are based on the staff's review of the policies of U.S. global network firms ("GNFs") and U.S. non-affiliate firms ("NAFs"). GNFs are the member firms of the six global accounting firm networks (BDO International Ltd., Deloitte Touche Tohmatsu Ltd., Ernst & Young Global Ltd., Grant Thornton International Ltd., KPMG International Ltd., and PricewaterhouseCoopers International Ltd.). NAFs are both U.S. and non-U.S. accounting firms registered with the Board that are not GNFs. Some of the NAFs belong to international networks.

¹⁰⁶ See *id.* at 36.

including additional information on firms' current archiving policies and practices.

B. Need

The changes introduced in the final standard are part of the Board's effort to continuously improve and update PCAOB standards. In practice, PCAOB standards are used by auditors, who are responsible for applying the general principles and responsibilities of the foundational standards. Investors and other stakeholders may also rely on the foundational standards (directly or indirectly) to establish expectations about auditor responsibilities.

1. Problem To Be Addressed

i. Modernization of the Foundational Standards

The Board identified three potential concerns about the foundational standards: (i) compliance with the standards; (ii) soundness of the general principles and responsibilities; and (iii) clarity of the standards. The next three subsections explain that the Board does not see a need to make changes to the standards based on compliance with the standards or soundness of the general principles and responsibilities, but does see a need to make changes to modernize and enhance the clarity of the foundational standards.

a. Compliance With the Foundational Standards

In some instances, auditors have not performed audits in compliance with the foundational standards. For example, for the years 2018–2022, the PCAOB issued almost two dozen enforcement orders that described the violation of at least one of the foundational standards. One commenter, an academic, noted research that suggests that audit failures often relate to basic areas of auditor responsibility, such as failure to gather sufficient appropriate audit evidence, failure to exercise due professional care, or insufficient professional skepticism.¹¹⁰ The commenter added that contributing factors to the noted failures appear to be auditor disincentives to be skeptical¹¹¹ or high

auditor workloads.¹¹² For example, research indicates that professional skepticism could be affected by priorities such as engagement budgets rather than investor protection.¹¹³ The commenter also suggested that persistent audit deficiencies, despite PCAOB inspection and enforcement efforts, highlight the importance of auditors' understanding of and compliance with foundational auditing principles.¹¹⁴ The views expressed by the commenter seem to align with the Board's understanding of auditors' adherence to the foundational standards and the Board's assessment of the need to modernize and clarify those standards, including a reaffirmation of the auditor's obligation to protect investors.

b. Soundness of the General Principles and Responsibilities

The foundational standards address the general principles and responsibilities of reasonable assurance, due professional care, professional skepticism, independence, competence, and professional judgment. These principles and responsibilities are interconnected. For example, due professional care requires the auditor to exercise professional skepticism, including a questioning mind and a critical assessment of audit evidence. Audit procedures performed with due professional care allow the auditor to obtain reasonable assurance about whether the financial statements are free of material misstatement. Reasonable assurance is achieved, in part, by the exercise of professional judgment, which involves the auditor making decisions based on applying relevant training, knowledge, and experience. There is ample published research that studies alternative versions of these general principles and responsibilities. Below is a summary of several papers that demonstrate an ongoing debate regarding alternatives.

As noted in the proposal,¹¹⁵ academic research regarding professional skepticism provides a model that

identifies two components—skeptical judgment and skeptical action—that are necessary for the effective exercise of professional skepticism.¹¹⁶ In a synthesis of literature on professional skepticism, researchers conclude that professional skepticism is foundational to the performance of a high-quality audit, and they note that academic research tends to focus on skeptical judgment while PCAOB inspections tend to focus on skeptical action.¹¹⁷ When accountability to regulators is an incentive based on principles, research suggests that auditors may exhibit more skeptical judgment.¹¹⁸ When accountability is based on a checklist mentality of following a set of strictly specific requirements, research suggests that auditors may engage in cognitive processing that reduces skeptical judgment.¹¹⁹ On the other hand, a principles-only approach to standards may provide insufficient guidance to support the exercise of judgment.¹²⁰ Overall, therefore, there is a spectrum of possible approaches to audit regulation that lies between excessively vague principles and excessively specific requirements. In practice, effective auditing standards may fit into the middle of that spectrum by emphasizing core principles while including some specific requirements to help support skeptical judgment and skeptical action.¹²¹ One commenter, an academic, noted that research on rules- versus principles-based requirements for independence and ethics suggests that a combination of rules and principles is

¹¹⁶ See Mark W. Nelson, *A Model and Literature Review of Professional Skepticism in Auditing*, 28 *Auditing: A Journal of Practice & Theory* 1, 5 (2009).

Earley, and Ganesh Krishnamoorthy, *Research on Auditor Professional Skepticism: Literature Synthesis and Opportunities for Future Research*, 32 *Auditing: A Journal of Practice & Theory* 45, 47 (2013). According to the authors, "Skeptical judgment occurs when an auditor recognizes that a potential issue may exist and that more work or effort is necessary. Skeptical action occurs when an auditor changes his/her behavior based on the skeptical judgment. Both skeptical judgment and skeptical action are essential to the audit, with skeptical judgment being a necessary condition for skeptical action."

likely to be the most effective approach.¹²²

One commenter referenced several academic papers and highlighted pragmatic challenges and costs auditors face when applying the concept of professional skepticism.¹²³ The commenter reported that past economic research finds violations of professional skepticism underlying audit deficiencies.¹²⁴ The commenter also reported that lack of professional skepticism by auditors regarding frauds of the early 2000s generated academic literature on models of professional skepticism,¹²⁵ a scale to measure professional skepticism traits,¹²⁶ and interventions designed to help increase professional skepticism.¹²⁷ Moreover, the commenter reported that an area of academic psychology research asserts that skeptical behavior is a personality trait that may require a counter-dispositional change in mindset.¹²⁸ (The Board noted that this research does not

specifically study professional skepticism as a general principle or responsibility in auditing.) In contrast, another commenter reported that academic research highlights the merits of focusing on both obtaining and evaluating information as a pragmatic approach in the exercise of professional skepticism.¹²⁹

These comments suggest that efforts by firms, such as training and on-the-job-coaching, may be needed regarding professional skepticism, but do not suggest that professional skepticism as a general principle and responsibility of auditors is flawed. In addition, the views shared by these commenters underscore the need for a well-defined standard that sets forth the requirements of due professional care and professional skepticism, which is discussed further below.

As noted in the proposal, research also offers insights on the appropriate and expected levels of assurance for investors and other users of financial statements.¹³⁰ One accounting firm referenced a literature review that notes the audit expectation gap has existed for many years and describes it as a phenomenon in which the expectations of beneficiaries of audited financial statements exceed what auditors can reasonably be expected to accomplish.¹³¹ Early research on the audit expectation gap concludes that the majority of investors prefer absolute assurance that financial statements are free of material misstatement, in contrast to the profession's standard that an audit should provide reasonable assurance.¹³² Similarly, a more recent multi-country study finds that survey respondents appear to expect much more than reasonable assurance from auditors in order to prevent fraud and company failure.¹³³

The Board believes this cross-section of research, either noted in the proposal or by commenters, aligns with the Board's decision to maintain the core general principles and responsibilities

of the foundational standards. The synthesis research supports professional skepticism as foundational to the performance of effective audits. Likewise, the research on audit assurance supports the principle of reasonable assurance as an appropriate level of assurance based on the underlying benefits and costs of an audit engagement.¹³⁴ As explained above, absolute assurance is not attainable because of the nature of audit evidence and the characteristics of fraud. As described above, AS 1000 clarifies the general principles and responsibilities without substantially modifying the general principles and responsibilities. Moreover, the Board does not anticipate that the final standard and related amendments will markedly influence the current audit expectation gap since the Board preserved the core concepts while making marginal adjustments to reaffirm the auditor's obligation to protect investors.

c. Clarity of the Foundational Standards

As discussed in the proposal, some current features of the foundational standards do not support the most efficient use of the standards.¹³⁵ The general principles and responsibilities are currently spread across four standards, which were not developed originally as a cohesive whole. Their current organization continues to reflect their origin as separate requirements that were not drafted to be read together. In addition, the foundational standards contain language that was used in the AICPA's former standards but is outdated and inconsistent for audits conducted today under the standards of the PCAOB. This could undermine users' understanding of the general responsibilities of the auditor for audits conducted in accordance with PCAOB standards. The foundational standards also do not conform to the structure of Board-issued standards, which may hinder an auditor's navigation of the requirements. Finally, the foundational standards do not reflect developments in the auditing environment since their adoption in 2003, including the PCAOB's adoption of standards and rules, such as standards on audit documentation and engagement supervision, and this lack of consistency or alignment may draw attention away from the general principles and responsibilities.

Overall, these current features of the foundational standards may reduce

efficient use of the standards by requiring more time and attention than necessary to read, understand, and apply the standards and may lead to inconsistent application, potential misinterpretation, and ineffective regulatory intervention. Clarity of auditing standards requires effective communication through features such as relevant language, consistency with Board-issued standards and rules, and well-organized presentation, which appear throughout PCAOB and SEC rulemaking initiatives.

Several firms and a firm-related group acknowledged that modernization efforts to streamline and clarify the foundational standards will enhance users' awareness and understanding of the auditor's responsibilities.

(1) Characteristics of Modernized Auditing Standards

Academic research identifies three characteristics of effective disclosure documents that align well with the features of modernized auditing standards: simplicity,¹³⁶ salience,¹³⁷ and standardization.¹³⁸ Simplicity can be achieved with an auditing standard that eliminates language that is outdated and inconsistent. Salience can be achieved with an auditing standard that emphasizes requirements while including explanations in the Board's release rather than the rule text and that incorporates the latest developments in the auditing environment, including the adoption of Board-issued standards and rules. Standardization can be achieved with an auditing standard that is well-organized, with general principles and responsibilities presented in a single standard that is structured similar to other standards.

In addition, the Board is aware of other regulatory initiatives that emphasize clear, well-organized writing as characteristics of effective communication with stakeholders. Two examples of other regulatory initiatives are the SEC Plain English Disclosure

rule¹³⁹ for issuers' prospectuses, and the Plain Writing Act of 2010¹⁴⁰ for government communications with the public. The purpose of the Plain English Disclosure rule was to make financial and business information available to investors in a form they could read and understand, and the rule includes specific guidance for clear, concise language.¹⁴¹ The purpose of the Plain Writing Act was to improve the effectiveness and accountability of federal agencies to the public by promoting clear communication that the public can understand and use, and the statute defines plain writing as writing that is clear, concise, and well-organized, and that follows other best practices appropriate to the subject and the intended audience.¹⁴² While neither the Plain English Disclosure rule nor the Plain Writing Act imposes obligations on the PCAOB, their overall objective to promote effective communication for efficiency of stakeholders' understanding is aligned with the objectives of and approach to the Board's modernization of the foundational standards.

The Board did not receive comments that provided additional information regarding characteristics of modernized auditing standards.

(2) Useability of Modernized Auditing Standards

As summarized above, the Board continues to believe that auditors generally understand their responsibilities under the foundational standards. Nonetheless, there could be certain circumstances where some auditors' understanding of the general principles and responsibilities is made

more difficult than necessary by the current language and organization of the foundational standards. New entrants, for example, may need to spend more time navigating and distilling the extant general principles and responsibilities than they would with more modernized language and organization. These new entrants may include accounting students seeking to enter the auditing profession. They may also include auditors who are experienced in applying other auditing or attestation standards, such as those of the AICPA for entities other than issuers, but who are seeking to perform an audit under PCAOB standards for the first time and who need to confirm their responsibilities under PCAOB rules.

In addition, the current language and organization of the foundational standards could impede investors' abilities to form accurate expectations about auditor responsibilities under PCAOB standards. Investors form expectations from a number of sources, including potentially the language of the standards themselves, but also from third parties (e.g., media) who may write about PCAOB standards. Standards that are not modernized could contribute to an expectation gap—in this case, a gap between what investors expect from an audit and what auditing standards require.¹⁴³ Such a gap could in principle exist in either direction. Investors could be led to expect more than what an audit is required to deliver, and thereby fail to price the risk appropriately. Alternatively, investors could be led to expect less than what an audit is required to deliver, and thereby fail to appreciate the important functions performed by auditors regarding reasonable assurance.

Audit committees may also form inaccurate expectations about the content of PCAOB standards if the standards are not modernized, via mechanisms similar to investors. Given audit committee members' greater familiarity with auditing through their position and responsibilities with the issuer and other relevant professional background, the Board believes this is

¹³⁶ See, e.g., R.E. Nisbett and L. Ross, *Human Inference: Strategies and Shortcomings of Social Judgment* (1980) (finding that individuals have limited cognitive resources to absorb and process information).

¹³⁷ See, e.g., Daniel Kahneman, *Thinking, Fast and Slow* (2013) (suggesting that individuals who focus their limited cognitive resources on a subset of information are able to give more weight to the subset when making decisions).

¹³⁸ See, e.g., Jeffrey R. Kling, Sendhil Mullainathan, Eldar Shafir, Lee C. Vermeulen, and Marian V. Wrobel, *Comparison Friction: Experimental Evidence from Medicare Drug Plans*, 127 *The Quarterly Journal of Economics* 199 (2012) (finding that standardized information better enables individuals to assess tradeoffs and make coherent, rational decisions).

¹³⁹ *Plain English Disclosure*, SEC Rel. No. 33–7497 (Oct. 1, 1998).

¹⁴⁰ *Plain Writing Act of 2010*, Public Law 111–274.

¹⁴¹ The economic effects of easy-to-read disclosure documents are quantified in research that demonstrates a decrease in company valuation caused by a decrease in readability of disclosure documents. See Byoung-Hyoun Hwang and Hugh Hokwang Kim, *It Pays to Write Well*, 124 *Journal of Financial Economics* 373 (2017).

¹⁴² Using the Plain Writing Act as an exogenous event, research has found that the Plain Writing Act resulted in improved readability of Form 10–Ks that caused the risk of stock price crash to fall. See Shiyang Yin, Thanaset Chevapatrakul, and Kai Yao, *The Causal Effect of Improved Readability of Financial Reporting on Stock Price Crash Risk: Evidence from the Plain Writing Act of 2010*, 216 *Economics Letters* (2022). Research has also found that while readability of disclosures improved following the Plain English Disclosure rule, improved readability does not appear to influence more experienced market participants, as measured by equity analysts' earnings forecasts. See Samuel B. Bonsall IV, Andrew J. Leone, Brian P. Miller, and Kristina Rennekamp, *A Plain English Measure of Financial Reporting Readability*, 63 *Journal of Accounting and Economics* 329 (2017).

¹⁴³ Research finds evidence of a persistent gap between investors' expectations of an audit and auditors' performance based on requirements under auditing standards. See, e.g., Klaus Ruhnke and Martin Schmidt, *The Audit Expectation Gap: Existence, Causes, and the Impact of Changes*, 44 *Accounting and Business Research* 572, 592 (2014) (finding that the public has expectations of auditors' responsibilities that do not exist under auditing standards, such as conducting a management audit) and ACCA Report (finding that the persistence of the audit expectation gap reflects, in part, the fact that public expectations of audits can grow in line with what auditors can accomplish).

less likely to occur for audit committees than for investors. However, the negative impact of an audit committee member failing to correctly comprehend the auditor's general responsibilities under PCAOB standards could be more severe, given the audit committee's role in supervising the audit and the auditor under Sarbanes-Oxley for the benefit of investors.

The Board did not receive comments that provided additional information regarding useability of modernized auditing standards.

ii. Clarification of Engagement Partner Responsibilities

One of the responsibilities of engagement partners is to review the work of engagement team members. Any uncertainty under the standards may give engagement partners an incentive, particularly under time pressures, to de-emphasize or omit the review of workpapers. For example, the Board has found instances in which engagement partners did not fulfill their responsibilities for review.¹⁴⁴ However, engagement partner review of workpapers is a critical step to promote audit quality. As noted above, firms have varying policies and tools to facilitate the review required by the engagement partner.

One commenter, an academic, referenced academic studies regarding engagement partner impacts. The commenter reported that one study using data from Taiwan finds evidence that suggests there is variation in the quality of engagement partners and that the market responds to engagement partner quality.¹⁴⁵ In addition, the commenter reported that a group of studies finds evidence that engagement partners can negatively impact audit quality when they do not follow auditing standards, such as by not promoting the need for professional skepticism, ethical behavior, and continuing education.¹⁴⁶ The views

shared by the commenter align with the Board's identification of the need to clarify the engagement partner's responsibility to review certain audit documentation.

iii. Accelerating the Documentation Completion Date

The discussion above emphasizes the importance of adequate audit documentation and the auditor's responsibilities for documentation under AS 1215, which currently specifies an audit documentation completion date no more than 45 days after the report release date. PCAOB standards require auditors to complete all necessary auditing procedures, review those procedures, and obtain sufficient appropriate audit evidence prior to the report release date. The extant requirements were established in part because documentation that is added well after the completion of an audit is likely to be of lesser quality than documentation produced contemporaneously when audit procedures are performed because reconstructing and recalling activities related to performing audit procedures long after the work was actually performed can be difficult.¹⁴⁷

Separately, significant advancements in electronic audit tools and the use of audit software have occurred over the last two decades, which facilitate contemporaneous documentation and more timely documentation completion. Based on these observations and some firms' policies and practices summarized above, the current documentation completion date that is 45 days after the report release date may provide more time than necessary to complete and finalize the audit documentation.

The PCAOB inspection process generally cannot begin until after the documentation completion date. In cases where the PCAOB would like to initiate inspections earlier, the 45-day period imposes an unnecessarily long lag before the PCAOB can provide notice of inspection and obtain access to audit documentation, which may prevent timely identification and resolution of audit deficiencies and delay information on firm performance that is useful to investors for assessing attributes such as audit quality or auditor effort.¹⁴⁸

and Client Pressure on Auditors' Judgments, 93 The Accounting Review 335 (2018).

¹⁴⁷ See PCAOB Rel. No. 2004–006.

¹⁴⁸ See, e.g., Jagan Krishnan, Jayanthi Krishnan, and Hakjoon Song, *PCAOB International Inspections and Audit Quality*, 92 The Accounting Review 143 (2017) (finding evidence consistent with improvements in audit quality for foreign

As discussed in the Board's proposal, the 45-day period also may pose a greater risk of improper alteration of audit documentation because it provides a lengthy window of opportunity between the release of the audit report and the completion of the audit documentation.¹⁴⁹

The Board did not receive comments that provided additional information regarding the need to accelerate the documentation completion date.

2. How the Changes Address the Need

i. Modernization of the Foundational Standards

The changes modernize the foundational standards by reorganizing and consolidating four standards, eliminating language that is no longer relevant, establishing conformity with the structure of Board-issued standards, and harmonizing with PCAOB standards and rules issued after the adoption of interim standards in 2003. These changes are designed to make AS 1000 a more effective and efficiently used standard through a well-organized presentation with relevant language that is more consistent with other PCAOB standards.

ii. Clarification of Engagement Partner Responsibilities

The changes clarify engagement partner responsibilities by specifying the engagement partner's due professional care responsibilities, explicitly stating that the engagement partner has primary responsibility for the engagement that is not reduced when assistance is provided by other engagement team members, and explicitly stating that audit documentation must clearly demonstrate the person or persons who reviewed the work and the date of such review. Clarification of the engagement partner's responsibility to review certain audit documentation—including review of documentation of significant findings or issues and review of documentation that is required to be reviewed by the EQR—reaffirms the existing minimum level of responsibilities under due

firms after PCAOB inspections) and Daniel Aobdia, *The Impact of the PCAOB Individual Engagement Inspection Process—Preliminary Evidence*, 93 The Accounting Review 53 (2018) (finding increases in auditor effort subsequent to deficiencies found through PCAOB inspections). The Board notes that the results from these studies do not necessarily mean that PCAOB inspections cause higher audit quality.

¹⁴⁹ For examples of improper alteration of audit documentation within the 45-day archiving period, see, e.g., *In the Matter of Deloitte LLP*, PCAOB Rel. No. 105–2021–014 (Sept. 29, 2021) and *In the Matter of Richard J. Bertuglia, CPA*, SEC Rel. No. 84419 (Oct. 12, 2018).

¹⁴⁴ See, e.g., *In the Matter of Jin Tae Kim*, PCAOB Rel. No. 105–2022–013 (Aug. 16, 2022) and *In the Matter of KPMG Assurance and Consulting Services LLP and Sagar Pravin Lakhani*, PCAOB Rel. No. 105–2022–033 (Dec. 6, 2022).

¹⁴⁵ See, e.g., Daniel Aobdia, Chan-Jane Lin, and Reining Petacchi, *Capital Market Consequences of Audit Partner Quality*, 90 The Accounting Review 2143 (2015).

¹⁴⁶ See, e.g., Sean A. Dennis and Karla M. Johnstone, *A Field Survey of Contemporary Brainstorming Practices*, 30 Accounting Horizons 449 (2016); Harding and Trotman, *The Effect of Partner 111*; Christopher Koch and Steven E. Salterio, *The Effects of Auditor Affinity for Client and Perceived Client Pressure on Auditor Proposed Adjustments*, 92 The Accounting Review 117 (2017); and William F. Messier, Jr. and Martin Schmidt, *Offsetting Misstatements: The Effect of Misstatement Distribution, Quantitative Materiality,*

professional care and promotes consistency across audits regarding an engagement partner's oversight of the audit.

iii. Accelerating the Documentation Completion Date

The changes accelerate the documentation completion date by reducing the maximum period for the auditor to assemble a complete and final set of audit documentation from 45 days to 14 days after the report release date. This change enables PCAOB inspections staff earlier access to audit documentation and reduces the window of opportunity for improper alteration of audit documentation prior to the documentation completion date.

C. Economic Impacts

This section discusses the expected benefits and costs of the changes and potential unintended consequences. The proposal described expected benefits and costs, resulting in comments on each.¹⁵⁰ Two commenters on the proposal noted that the changes will not result in any significant additional costs to auditors or the companies they audit or in any significant benefits to market participants. Some commenters suggested that the economic analysis should more carefully consider potential costs or unintended consequences associated with certain key provisions, as discussed further below. The Board expects the economic impacts of AS 1000, including both benefits and costs, to be relatively modest, especially for those firms that have already incorporated in practice an engagement partner's responsibility for review and an accelerated documentation completion date.

1. Benefits

i. Modernization of the Foundational Standards

To the extent that current features of the existing foundational standards reduce efficient use of the standards, the changes will help enhance useability by making the general principles and responsibilities of the auditor in conducting an audit in accordance with the standards of the PCAOB easier to read, understand, and apply in practice.

For users trying to navigate and understand the general principles and responsibilities, efficiency gains may be associated with each of the changes as follows:

- The change to reorganize and consolidate the standards into a single standard will reduce time and attention required to navigate several standards to

locate the general principles and ensure relevant requirements are met.

- The changes to eliminate language that is no longer relevant will reduce time and attention required to read, understand, and apply the standard by facilitating a focus on core requirements of the standard.

- The changes to establish conformity with the structure of Board-issued standards and make certain enhancements will help expedite navigation of the requirements and ensure relevant requirements are met by: (i) providing more uniformity among the PCAOB standards with an introduction and objectives that emphasize the auditor's obligations; (ii) updating the articulations of the concepts of due professional care, professional skepticism, professional judgment, and reasonable assurance; (iii) clarifying auditor responsibilities by expressing the requirements using Rule 3101 terms; and (iv) minimizing explanatory material that is instead included in the release discussion.

- The changes to harmonize with PCAOB standards and rules issued after adoption of the interim standards in 2003 will reduce time and attention required to read, understand, and apply the standard by drawing attention to: (i) changes to auditing requirements through Board-issued standards; (ii) clarifying the meaning of present fairly; (iii) an overarching objective for audits of ICFR; and (iv) new rules issued by the Board.

Auditors learning the general principles and responsibilities for the first time may do so more quickly and easily, thereby reducing the cost of training and potentially facilitating the newer auditor's ability to perform PCAOB audits.

While the obligation of auditors would not change, reaffirming the auditor's obligation to protect investors could serve as a reminder. Especially to the extent that auditors do not currently fulfill this obligation, it may prompt auditors to reflect on a sense of obligation to investors and the public that goes beyond their responsibilities to a specific company under audit. At the margins, the emphasis on investor protection could reinforce support for auditors in circumstances where they face decisions that may require them to prioritize the interests of the public over their own interests or the interests of the company under audit. Further, by highlighting the important role auditors play in protecting investors, it could underscore the value of the auditing profession to capital markets.

In addition, a modernized standard may enhance investors' and audit

committees' awareness and understanding of the auditor's responsibilities. Investors could be able to more appropriately assess financial statement risk by better understanding the nature and extent of auditor responsibilities. Audit committees' oversight of the auditor could be enhanced, for example, if enhanced clarity of standards facilitates communication between the audit committee and the auditor. Referencing academic research, one commenter on the proposal explained that the role of the audit committee in ensuring the quality of reported financial results requires improved and expanded dialogue between the audit committee and the auditor.¹⁵¹

ii. Clarification of Engagement Partner Responsibilities

To the extent that engagement partners currently do not fulfill their responsibilities for an appropriate review of the work of other engagement team members as required under the existing standards,¹⁵² the clarification of engagement partner responsibilities could improve auditor performance and audit quality by: (i) improving the timeliness of the engagement partner's evaluation of significant findings and judgments; (ii) enhancing the ability of the engagement partner to prevent or detect audit deficiencies; and (iii) facilitating improvements in the quality of the work of other engagement team members. As summarized above, one commenter referenced academic studies that suggest engagement partners can negatively impact audit quality when they do not follow auditing standards.

iii. Accelerating the Documentation Completion Date

The amendment to accelerate the documentation completion date by reducing the maximum period for the auditor to assemble a complete and final set of audit documentation from 45 days to 14 days after the report release date will promote contemporaneous documentation and more timely documentation completion. Documentation that is produced contemporaneously when audit procedures are performed and then completed soon thereafter is likely to provide a more accurate and complete

¹⁵¹ See, e.g., Jeffrey Cohen, Lisa Milici Gaynor, Ganesh Krishnamoorthy, and Arnold M. Wright, *Auditor Communications with the Audit Committee and the Board of Directors: Policy Recommendations and Opportunities for Future Research*, 21 Accounting Horizons 165 (2007).

¹⁵² See, e.g., Jin Tae Kim, PCAOB Rel. No. 105–2022–013 and KPMG Assurance and Consulting Services LLP, PCAOB Rel. No. 105–2022–033.

¹⁵⁰ See PCAOB Rel. No. 2023–001, at 45–50.

audit file for the engagement. The amendment will also support PCAOB efforts to enhance audit quality via timelier identification and potential resolution of audit deficiencies in cases where inspections are initiated earlier. In such cases, the amendment could facilitate earlier issuance of inspection reports and their availability to investors. In addition, the amendment could enhance auditor performance and audit quality for firms that do not currently implement best practices, but will be more inclined to do so, by proactively focusing on sequencing of work, allocation of resources, and other operating practices.

The benefits associated with an accelerated documentation completion date are likely to be greater for firms that currently make use of the entire 45-day period permitted under current PCAOB standards due to current operating circumstances. These firms would need to make more adjustments to their sequencing of work and allocation of effort to meet the accelerated period. Thus, the concomitant benefits to audit quality would therefore be greater. Based on firms' current archiving policies and practices summarized above, the benefits associated with an accelerated documentation completion date are likely to be higher for NAFs than for GNFs in cases where NAFs experience operating efficiencies associated with changes in their sequencing of work, allocation of resources, and other operating practices to comply with the documentation completion date.

The benefits associated with an accelerated documentation completion date will be lower for firms that already either: (i) have a policy that requires that documentation be completed in 14 days or fewer or (ii) have a policy that is closer to or equal to the current 45-day period but in practice complete their documentation shortly after releasing the audit report. Specifically, the benefits to audit quality will be lower for these firms, but the benefits to investors of earlier PCAOB inspections will still be achieved in cases where inspections are initiated earlier.

Commenters on the proposal generally agreed that accelerating the documentation completion date is feasible for firms and beneficial to investors. One commenter suggested the ability to inspect audits sooner is a benefit that will not significantly increase costs. Another commenter, an academic, suggested there could be market benefits associated with earlier inspections if inspection reports are publicly available earlier and the content of inspection reports is

meaningful. The commenter referenced several academic studies that demonstrate improvements in audit quality after PCAOB inspections.¹⁵³ The commenter reported that one study finds improvements in internal control audits after PCAOB inspections¹⁵⁴ and that another study finds increases in auditor effort after PCAOB inspections find audit deficiencies.¹⁵⁵ One commenter questioned whether accelerating the documentation completion date would have any meaningful impact on inspection timelines. Based on the acceleration of the documentation completion date by 31 days, the Board noted that the most an inspection report could be accelerated as a result of the accelerated documentation completion date is 31 days.

2. Costs

i. Modernization of the Foundational Standards

The primary costs of the modernization efforts reflected in the standard will be one-time costs to firms for updating references within firm methodologies and related guidance to reflect the final standard and related amendments. Larger firms that develop their own methodologies will update references directly in those methodologies. Smaller firms generally purchase methodologies from third-party vendors. The implementation costs of the changes may be offset over time because a more logical and easy-to-read-and-navigate standard could enable auditors to save time reading, understanding, and applying the standard. Third parties that refer to PCAOB standards (e.g., in textbooks, training, or review materials) will also need to update those materials.

To the extent that auditors are not taking into account PCAOB auditing interpretations, as used in paragraph .15 and the related note of the standard, those firms will also incur one-time and ongoing costs related to methodology and periodic training for PCAOB auditing interpretations.

To the extent that auditors do not currently fulfill their obligation to protect investors, auditors who face decisions that require them to prioritize the interests of the public over their own interests or the interests of the

company under audit may make decisions that benefit the public at a potential cost to the auditor, such as alienating or losing a company under audit. There is likely already a balance struck between fulfilling the auditor's obligation to protect investors and the risk of alienating or losing a company under audit. At the margins, the emphasis on investor protection may move the fulcrum closer to the public interest.

The Board did not receive comments that provided additional information regarding costs of modernization.

ii. Clarification of Engagement Partner Responsibilities

To the extent that engagement partners currently do not fulfill their responsibilities for an appropriate review of the work of other engagement team members as required under the existing standards,¹⁵⁶ those firms may incur one-time costs to update firm methodologies and ongoing costs related to fulfilling their responsibilities. Larger firms that develop their own methodologies will update references directly in those methodologies. Smaller firms generally purchase methodologies from third-party vendors.

While the responsibilities of engagement partners would not change under the new standard, the clarification for engagement partners to perform their duties with due professional care, including their responsibility for performing an appropriate review of the work of other engagement team members, could also impose incremental costs related to fulfilling engagement partner responsibilities to the extent that engagement partners are not currently fulfilling their responsibilities.

One commenter reported that research highlights the importance of and variation in the direction, supervision, and review of audit work.¹⁵⁷ The commenter further noted that direction, supervision, and review are functions that are performed by auditors at different levels of experience, not just engagement partners, and cited research that highlights that the effectiveness of the functions can vary across

¹⁵⁶ See, e.g., Jin Tae Kim, PCAOB Rel. No. 105–2022–013 and KPMG Assurance and Consulting Services LLP, PCAOB Rel. No. 105–2022–033.

Trotman, *The Audit Review Process: A Characterization from the Persuasion Perspective*, 22 Accounting, Organizations & Society 481 (1997) and Mark Nelson and Hun-Tong Tan, *Judgment and Decision Making Research in Auditing: A Task, Person, and Interpersonal Interaction Perspective*, 24 Auditing: A Journal of Practice & Theory 41 (2005).

¹⁵³ See, e.g., Krishnan, et al., *PCAOB International Inspections*. The Board notes that the results from these studies do not necessarily mean that PCAOB inspections cause higher audit quality.

¹⁵⁴ See, e.g., Mark L. DeFond and Clive S. Lennox, *Do PCAOB Inspections Improve the Quality of Internal Control Audits?* 55 Journal of Accounting Research 591 (2017).

¹⁵⁵ See, e.g., Aobdia, *The Impact of the PCAOB*.

hierarchical levels.¹⁵⁸ While the Board acknowledged the commenter's points regarding the effectiveness of functions performed by auditors at different levels of experience, the Board's analysis of costs here is limited to costs that are relevant to the economic impacts of the clarification of engagement partner responsibilities.

iii. Accelerating the Documentation Completion Date

The amendment to accelerate the documentation completion date by reducing the maximum period for the auditor to assemble a complete and final set of audit documentation from 45 days to 14 days after the report release date will allow less time to assemble the final set of workpapers after the audit report is released. However, the PCAOB requirement to complete necessary auditing procedures, review those procedures, and collect sufficient appropriate audit evidence prior to the report release date could help mitigate costs to implement the amendment because the only activities that remain are assembling a complete and final set of audit documentation. In addition, the widespread use of electronic audit tools and audit software could help mitigate any costs associated with the amendment.

The costs associated with an accelerated documentation completion date are likely to be greater for firms that currently specify by policy an archiving period that is near or equal to the maximum permitted under current AS 1215.15 and that currently take all or nearly all of the full 45-day period to complete their archiving because of operating circumstances that inhibit faster completion. These firms will have to invest additional resources to enhance sequencing of their work, allocation of resources, and other operating practices, or may have to enhance their audit documentation systems, or both, in order to comply with the documentation completion date. Based on firms' current archiving policies and practices summarized above, the costs associated with an accelerated documentation completion date are likely to be higher for NAFs than for GNFs in cases where NAFs currently use the entire 45-day period. However, the extended effective date of the 14-day requirement for firms that issued audit reports with respect to 100

or fewer issuers during the calendar year ending December 31, 2024, will allow those firms more time to implement the revised requirement. By contrast, GNFs that already require the completion of documentation within a 14-day period will likely not incur substantial additional costs to comply with the revised requirement.

Electronic audit tools and audit software may facilitate compliance with the requirement by automating, and thereby performing more quickly, certain processes. For firms without electronic systems in place, costs associated with an accelerated documentation completion date may include additional resources, such as in-house personnel or capital investments in audit software, to help assemble a complete and final set of audit documentation in the 14-day time period. PCAOB staff is aware that some small NAFs still use paper-based systems. However, these firms generally perform smaller, less complex audits, such that the firms do not have to mail audit workpapers from multiple locations; therefore, even with a paper-based system, effective sequencing of work, allocation of resources, and other operating practices could enable them to meet the 14-day documentation completion date.

For firms with electronic audit tools and audit software in place, the earlier documentation completion date should not change the functionality or cost of software, which will facilitate a low-cost transition to the new archiving period. Some firms already have policies that require documentation completion within 14 days of the report release date, and some firms require audit documentation to be archive-ready upon completion of interim procedures. These practices suggest that much of the process involved in assembling a complete and final set of audit documentation, such as assembly, cleanup, and retention, is substantially finished in advance of 45 days. Any firms that currently have a policy or practice of completing audit documentation on or near the 45th day may do so merely because the current standard allows 45 days, and thus will not incur costs to meet the accelerated documentation completion date. Alternatively, any firms that currently complete audit documentation on or near the 45th day because of operating circumstances may incur costs associated with implementing best practices to effectively sequence work, allocate resources, and incorporate other operating practices to comply with the accelerated documentation completion date. In this case, the Board anticipates

that the costs will be offset over time by improvements in operating efficiencies to the extent that operating circumstances are within the firm's control.

An accelerated documentation completion date may also impose costs on multi-firm audits if electronic audit documentation systems are not integrated across firms. GNFs are more likely than NAFs to perform multi-firm audits, but some NAFs do perform multi-firm audits.¹⁵⁹ If electronic systems are not integrated across firms, which is more likely for NAFs, other auditors may need to transmit documentation to the lead auditor to assemble the final set of workpapers. If electronic systems are integrated across firms, the lead auditor may be able to seamlessly archive the work of other auditors.

Any costs associated with the requirements may be passed through to investors, or costs may be internalized by firms. While competition in the audit market is characterized by a combination of unique features,¹⁶⁰ issuers that engage firms that pass through any costs may switch firms if the benefits of switching justify the costs of switching.

Some commenters noted potential costs associated with accelerating the documentation completion date. One commenter generally supported accelerating the documentation completion date but noted that firms that use proprietary audit tools and audit software will incur costs related to reprogramming and testing that could be exacerbated for GNFs that are subject to differing jurisdictional requirements. The same commenter also noted that accelerating the documentation completion date may negatively impact smaller firms that do not utilize electronic audit tools to the extent that they are unable to comply with the requirement without considerable investments that may not be economically feasible. Another commenter disagreed with accelerating the date because of human capital factors and a complex auditing landscape. Another commenter reported that academic research investigating the SEC's acceleration of Form 10-K filing deadlines in the 2000s suggests that accelerating the filing deadlines more

¹⁵⁹ See PCAOB Rel. No. 2022-002, at 26-52.

¹⁶⁰ See, e.g., Joseph Gerakos and Chad Syverson, *Competition in the Audit Market: Policy Implications*, 53 *Journal of Accounting Research* 725 (2015) (explaining that the audit market exhibits a set of features that distinguish it from other markets for business services, including its role in capital market transparency, mandated demand, and concentrated supply).

¹⁵⁸ See, e.g., Robert J. Ramsay, *Senior/Manager Differences in Audit Workpaper Review Performance*, 32 *Journal of Accounting Research* 127 (1994) and Noel Harding and Ken T. Trotman, *Hierarchical Differences in Audit Workpaper Review Performance*, 16 *Contemporary Accounting Research* 671 (1999).

quickly than 15 days was costly to issuers regarding misstated financial statements.¹⁶¹ The commenter acknowledged the analogy may not align with the documentation completion date but suggested that it is likely that firms currently requiring more than 29 days to complete audit documentation will likely incur non-trivial compliance costs.

The Board acknowledged that firms that use proprietary audit tools and audit software will incur costs related to reprogramming and testing. While the Board also acknowledged that some smaller firms may incur costs related to investments and some firms may incur costs related to human capital or a complex auditing landscape, the Board believes that most firms will incur incremental costs because they already use electronic audit documentation systems. Likewise, the Board believes the contrast between the SEC's acceleration of Form 10-K reporting deadlines and the Board's acceleration of the documentation completion date is too stark to be a useful comparison because the auditing standards require that all necessary auditing procedures, review of those procedures, and collection of sufficient appropriate audit evidence be completed prior to the report release date. Based on the broad support by commenters for accelerating the documentation completion date and the existing requirement that all necessary auditing procedures, review of those procedures, and collection of sufficient appropriate audit evidence be completed prior to the report release date, the Board continues to believe that accelerating the documentation completion date by reducing the maximum period for the auditor to assemble a complete and final set of audit documentation from 45 days to 14 days after the report release date will provide better protection for investors.

One commenter suggested that keeping the 35-day filing requirement for Form AP in light of accelerating the documentation completion date could create technological and process challenges for firms. Another commenter suggested that firms could incur incremental costs such as process

changes and administrative costs. In contrast, some commenters said they would not have difficulty filing Form AP within 35 days of the audit report being filed with the SEC. Two commenters suggested the time to file Form AP should be consistent with the documentation completion date. The Board adopted the 14-day deadline for archiving audit documentation. The Board noted that firms, under AS 1215, can add information to the audit documentation after the documentation completion date, if necessary, to record their compliance with Form AP requirements. Consequently, the Board does not perceive any conflict or a necessity to modify either the 35-day Form AP filing requirement or the proposed 14-day deadline for archiving audit documentation.

3. Potential Unintended Consequences

In addition to the benefits and costs discussed above, the final standard and related amendments could have unintended economic consequences. The proposal described potential unintended consequences, which commenters addressed in their letters.¹⁶² This section discusses the potential unintended consequences the Board considered as well as its consideration of such consequences in adopting the final standard and related amendments. The discussion also addresses, where applicable, any mitigating or countervailing factors, including revisions to the proposed standard and related amendments reflected in the final standard and related amendments the Board adopted.

i. Modernization of the Foundational Standards

The changes to modernize the foundational standards are not intended to impose new requirements on auditors or substantially change the requirements of PCAOB standards.

Commenters noted potential unintended consequences related to the removal of explanatory language or the use of certain language in the proposed rule text or release discussion. Several commenters suggested that removing explanatory language on limitations of an audit may exacerbate the audit expectation gap and cause potential confusion among auditors. Commenters also suggested that the use of certain proposed language or certain proposed clarifications could result in potential confusion or unintended expansion of auditors' responsibilities. For example, one commenter suggested that requiring auditors to "keep in mind their role in

protecting investors" could encourage auditors to adopt an investor perspective when making judgments, which research highlights may be detrimental to audit quality.¹⁶³

These potential unintended consequences will be mitigated by changes to language in the adopted rule text or release discussion. Throughout the rulemaking process, the Board emphasized that eliminating restrictive provisions does not alter the core principles and responsibilities that are transitioned from the current standards to AS 1000. The Board removed the reference to "keep in mind their role in protecting investors" from the final standard based on changes made to paragraph .01 of the final standard. While the Board emphasized the investor protection obligation, the Board clarified that the emphasis does not create any new legal requirements. The Board does not believe that highlighting the auditor's existing obligation to protect investors will widen any expectation gap or decrease audit quality. Instead, the Board's goal was to heighten auditors' awareness and reinforce their existing obligation.

ii. Clarification of Engagement Partner Responsibilities

An unintended consequence of the amendment to clarify engagement partner responsibilities would occur if, contrary to the Board's expectation, some firms whose engagement partners currently do more than will be required to meet the minimum requirement for engagement partner review, do less in the future to merely meet the minimum requirement.¹⁶⁴

This potential unintended consequence will be mitigated by the extent to which engagement partners are aware that the engagement's performance is primarily their responsibility. Furthermore, in contrast to a highly specific minimum threshold, the Board noted that engagement partners under AS 1000 are bound to broad due professional care responsibilities that are less likely to incentivize engagement partners to merely meet a precise set of criteria

¹⁶¹ See, e.g., Lisa Bryant-Kutcher, Emma Yan Peng, and David P. Weber, *Regulating the Timing of Disclosure: Insights from the Acceleration of 10-K Filing Deadlines*, 32 *Journal of Accounting and Public Policy* 475 (2013); Colleen M. Boland, Scott N. Bronson, and Chris E. Hogan, *Accelerated Filing Deadlines, Internal Controls, and Financial Statement Quality: The Case of Originating Misstatements*, 29 *Accounting Horizons* 551 (2015); and Khaled Alsabab, *The 15-Day Debate and the Value of Early Release of Information: Evidence from 10-K Filings*, 42 *Journal of Accounting and Public Policy* 1 (2023).

¹⁶² See PCAOB Rel. No. 2023-001, at 50-51.

¹⁶³ See, e.g., Elizabeth C. Altiero, Yoon Ju Kang, and Mark E. Peecher, *Motivated Perspective Taking: Why Prompting Auditors to Take an Investor's Perspective Makes Them Treat Identified Audit Differences as Less Material*, 39 *Contemporary Accounting Research* 339 (2022) and Lei Dong, Lei Wang, and Wen-Wen Chien, *The Joint Effect of Supervisor Influence and Investor Perspective: Unintended Consequences on Assessing Accounting Estimates*, 37 *Managerial Auditing Journal* 151 (2022).

¹⁶⁴ See, e.g., Aobdia, *The Impact of the PCAOB* (finding that auditor effort declines subsequent to PCAOB inspections of engagements that do not receive a Part I finding).

without exceeding those criteria. In addition, economic reasons that generate enhanced performance in the first place, such as partner compensation, inspections, and litigation threat, help to mitigate this potential unintended consequence.

One commenter suggested that the amendment to clarify engagement partner responsibilities is reasonable and clear but could present unintended consequences by limiting firms' abilities to attract and retain talent, which could potentially result in lower audit quality if people leave the profession. The Board anticipates that the amendments related to engagement partner responsibilities will be unlikely to significantly affect firms' abilities to attract or retain talent, or to disincentivize individuals from being willing to serve as engagement partners because AS 1000 clarifies existing engagement partner responsibilities. As outlined in the rest of the economic analysis, the Board acknowledges that some marginal economic impacts could follow from these amendments, but does not agree with the commenter that those effects will be dramatic.

iii. Accelerating the Documentation Completion Date

Unintended consequences of accelerating the documentation completion date would occur if, contrary to the Board's expectation, (i) auditor time prior to the report release date that was previously spent focusing on audit procedures is now spent on assembling final workpapers or (ii) the archiving period results in higher costs that cause firms with paper-based documentation systems to exit the audit market or to not enter the audit market.

These potential unintended consequences will be mitigated by the current requirement that all necessary auditing procedures, review of those procedures, and collection of sufficient appropriate audit evidence be completed prior to the report release date.¹⁶⁵ Furthermore, if firms proactively sequence work, allocate resources, and incorporate other operating efficiencies, they should not experience substantial disruptions and should be able to handle the accelerated archiving deadline without major problems.

One commenter acknowledged that accelerating the documentation completion date may enhance audit quality overall but suggested that it could have an initial negative impact on audit quality as a result of accelerating the archiving process into the period

when many SEC practice audit professionals need to start working on other issuer audit engagements. Another commenter also acknowledged that accelerating the documentation completion date may enhance audit quality and said it may allow PCAOB inspections to begin sooner after completion of an audit, but issuers may have various filing deadlines or require extensions that will necessitate the full attention of professionals on those engagements. One commenter acknowledged that the acceleration is beneficial and appropriate, but suggested that beginning the inspection process earlier could be detrimental to audit quality because earlier inspections could cause auditors to reallocate their time to the inspection process and away from audits of financial statements. Consistent with the acknowledgements by these commenters, the Board continues to believe that accelerating the documentation completion date will be facilitated by the widespread use of electronic audit tools and audit software by most firms, which could mitigate potential operating disruptions that firms experience as they adjust to the accelerated date.

One commenter stressed the importance of the quality of audit documentation and noted that technology interruptions or cybersecurity matters could impact the ability of a firm to meet the accelerated deadline. However, the possibility of technology interruptions or cybersecurity matters could impact a firm's ability to meet any deadline. Another commenter reported that academic studies find there can be unintended consequences of additional regulation, including new costs associated with extensive audit documentation, auditors taking a "box-ticking" approach to extensive documentation requirements, and reduced auditor retention.¹⁶⁶ However, accelerating the documentation completion date does not add any new documentation requirements.

D. Alternatives Considered

During the formulation of the proposal and adoption of the final standard and related amendments, the Board considered a number of alternative approaches to the final

standard and related amendments the Board adopted, including those suggested by commenters.

1. Modernization of the Foundational Standards

The Board considered whether to update the foundational standards and keep them as individual standards, but the Board believes that combining the general principles and responsibilities into one standard is more logical and easier to navigate. This approach is also consistent with the approaches of other standard setters. For example, both the IAASB and the ASB address general responsibilities of the auditor in one standard (see IAASB's ISA 200 and ASB's AU-C 200).

The Board also considered whether to incorporate the requirements of AS 2815 into AS 1000, but believes that it is more logical to incorporate the requirements of AS 2815 into AS 2810 because both standards address requirements for concluding audit procedures. This approach also eliminates unnecessary cross-references between the two standards and makes the auditor's responsibilities easier to locate. AS 1000 includes a reference to AS 2810 for the auditor's responsibilities related to the evaluation of whether the financial statements are presented fairly, in all material respects, in conformity with the applicable financial reporting framework.

2. Clarification of Engagement Partner Responsibilities

With respect to engagement partner responsibilities, the Board considered retaining the language of AS 1010 that describes the use of judgment in the context of the partner's responsibilities for supervision. However, the Board believes that leveraging the requirements of AS 1201, a more recent standard, avoids potential confusion and aligns the engagement partner's responsibilities with Board-issued standards. Other alternatives to the amendments related to engagement partner responsibilities, including comments received, were considered as discussed above.

3. Accelerating the Documentation Completion Date

For the documentation completion date, the Board considered a length of time between the current 45-day period and the 14-day period, such as 21 days or 30 days. The Board believes that a shorter period of time may provide better protection for investors than a longer period: it could permit acceleration of PCAOB inspections and provide the strongest incentives for

¹⁶⁶ See, e.g., Colleen M. Boland, Brian E. Daugherty, and Denise Dickins, *Evidence of the Relationship between PCAOB Inspection Outcomes and the Use of Structured Audit Technologies*, 38 Auditing: A Journal of Practice & Theory 57 (2019) and Marion Brivot, Mélanie Roussy, and Maryse Mayer, *Conventions of Audit Quality: The Perspective of Public and Private Company Audit Partners*, 37 Auditing: A Journal of Practice & Theory 51 (2018).

¹⁶⁵ See AS 1215.15.

firms to implement operating efficiencies that may ultimately improve audit quality. Thus, in principle, a shorter documentation completion date could achieve more benefits than a longer period. The Board's assessment of existing firm practice as described above led it to believe that 14 days is feasible for firms and that a longer period could therefore be unnecessary and would erode the benefits that would otherwise be achieved.

Investor-related groups suggested the documentation completion date should be reduced to two days for all firms. The Board continues to believe 14 days is feasible for all firms while not being too restrictive for firms that may require more time. Another commenter asserted that the economic analysis did not adequately consider alternatives other than 14 days and that the analysis did not offer any alternatives to begin inspections earlier other than accelerating the documentation completion date. As noted above, the Board considered a length of time between the current 45-day period and the 14-day period. Moreover, the need to accelerate the documentation completion date is based on other considerations in addition to cases where the PCAOB would like to initiate inspections earlier. Another commenter asserted that firms' operating efficiencies are not the purview of the PCAOB. However, the need for the amendment is not based on operating efficiencies but may result in operating efficiencies that improve audit quality.

The Board also considered whether to specify different documentation completion dates for different classes of firms, based on specific firm characteristics that may make compliance with an accelerated documentation completion date especially challenging because of some practical obstacle or because of expenses that are common to that class of firms. For example, the Board considered specifying a longer documentation completion date for NAFs than for GNFs. However, as noted above, the Board believes that the 14-day period is a feasible period for all firms; the Board is not aware of any practical obstacle or expenses that will make compliance with a 14-day period especially challenging for all firms within a particular class. In contrast, a uniform and consistent archiving period for all firms would facilitate implementation and compliance, especially for audits that involve multiple firms that could be subject to different archiving periods. Finally, having a unified archiving date will

enable earlier PCAOB inspections across all registered firms.¹⁶⁷

Special Considerations for Audits of Emerging Growth Companies

Pursuant to Section 104 of the Jumpstart Our Business Startups ("JOBS") Act, rules adopted by the Board subsequent to April 5, 2012, generally do not apply to the audits of emerging growth companies ("EGCs"), as defined in Section 3(a)(80) of the Exchange Act, unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation."¹⁶⁸ As a result of the JOBS Act, the rules and related amendments to PCAOB standards that the Board adopts are generally subject to a separate determination by the SEC regarding their applicability to audits of EGCs.¹⁶⁹

To inform consideration of the application of auditing standards to audits of EGCs, PCAOB staff prepares a white paper annually that provides general information about characteristics of EGCs.¹⁷⁰ As of the November 15, 2022 measurement date, there were 3,031 companies¹⁷¹ that self-

¹⁶⁷ While the Board has not specified different documentation completion dates for different classes of firms, the extended effective date of the 14-day requirement for firms that issued audit reports with respect to 100 or fewer issuers during the calendar year ending December 31, 2024, will allow those firms more time to implement the revised requirement.

¹⁶⁸ See Public Law 112–106 (Apr. 5, 2012). Section 103(a)(3)(C) of Sarbanes-Oxley, as added by Section 104 of the JOBS Act, also provides that any rules of the Board requiring (1) mandatory audit firm rotation or (2) a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer (auditor discussion and analysis) shall not apply to an audit of an EGC. The new standard does not fall within either of these two categories.

¹⁶⁹ The Board provided this analysis of the impact on EGCs to assist the SEC in making the determination required under Section 104 to the extent that the requirements apply to "the audit of any emerging growth company" within the meaning of Section 104 of the JOBS Act.

¹⁷⁰ See PCAOB, *Characteristics of Emerging Growth Companies and Their Audit Firms* at November 15, 2022 (Feb. 20, 2024) ("EGC White Paper"), available at https://assets.pcaobus.org/pcaob-dev/docs/default-source/economicandriskanalysis/projectsother/documents/white-paper-on-characteristics-of-emerging-growth-companies-as-of-nov-15-2022.pdf?sfvrsn=a8294f3_2.

¹⁷¹ The EGC White Paper uses a lagging 18-month window to identify companies as EGCs. Please refer to the "Current Methodology" section in the EGC White Paper for details. Using an 18-month window enables staff to analyze the characteristics of a fuller population in the EGC White Paper but may tend to result in a larger number of EGCs being included for purposes of the present EGC analysis than

identified as EGCs and filed audited financial statements with the SEC between May 16, 2021, and November 15, 2022, that included an audit report signed by a firm.¹⁷²

As discussed in the proposal, the economic impacts of the standard and related amendments are generally applicable to audits of EGCs.¹⁷³ The amendment to accelerate the documentation completion date by reducing the maximum period for the auditor to assemble a complete and final set of audit documentation from 45 days to 14 days could impact the audits of EGCs more than the audits of non-EGCs to the extent that EGCs are more likely than non-EGCs to be audited by NAFs.¹⁷⁴ As discussed above, NAFs are expected to require more changes than GNFs in their sequencing of work, allocation of resources, and other operating practices to comply with the accelerated documentation completion date. Therefore, all else equal, both the benefits and costs of the amendments, including the amendment to accelerate the documentation completion date, may be higher for EGC audits than for non-EGC audits.

While both the benefits and costs of the amendment to accelerate the documentation completion date may be higher for EGC audits, the costs may be mitigated based on certain characteristics of EGCs. For example, to the extent that EGCs are smaller than non-EGCs, EGC audits may be less complex, which potentially facilitates expeditious assembly of the final workpapers.¹⁷⁵ In addition, to the extent that EGCs are audited by firms that issued audit reports with respect to 100 or fewer issuers during the calendar year ending December 31, 2024, the extended effective date of the amendment to accelerate the documentation completion date will allow those firms more time to

would alternative methodologies. For example, an estimate using a lagging 12-month window would exclude some EGCs that are delinquent in making periodic filings. An estimate as of the measurement date would exclude EGCs that have terminated their registration or that have exceeded the eligibility or time limits.

¹⁷² See EGC White Paper 17. Based on staff analysis as of the Nov. 15, 2022 measurement date, 86 percent of the 263 firms that issued audit reports for EGCs performed audits for both EGC and non-EGC issuers while 14 percent performed issuer audits only for EGCs.

¹⁷³ See PCAOB Rel. No. 2023–001, at 52–54.

¹⁷⁴ PCAOB staff analysis indicates that, compared to exchange-listed non-EGCs, exchange-listed EGCs are approximately 2.6 times as likely to be audited by an NAF (source: EGC White Paper and Standard & Poor's).

¹⁷⁵ See EGC White Paper, Figure 9 and Figure 12 (indicating that exchange-listed EGCs have lower market capitalization and revenue than exchange-listed non-EGCs).

implement the accelerated documentation completion date.¹⁷⁶ Moreover, as EGCs are not large accelerated filers (“LAFs”), the SEC Form 10–K filing deadline for EGCs is either 75 days after the fiscal year end for accelerated filers or 90 days for non-accelerated filers. This provides firms with an additional 15 days for accelerated filers or 30 days for non-accelerated filers, as compared to the time period for LAFs, to assemble the required final workpapers during a period that may be proportionately less busy.

The amendment to accelerate the documentation completion date could improve efficiency and capital formation for EGCs to the extent that the amendment reduces uncertainty about the reliability of an EGC’s financial statements via enhanced audit quality. Investors who are uncertain about the reliability of an EGC’s financial statements may require a larger risk premium that reduces the efficient allocation of capital or increases the cost of capital. Thus, any reduction of uncertainty via enhanced audit quality, including from firms’ implementation of operating efficiencies, could improve the efficiency of capital allocation, lower the cost of capital, and enhance capital formation for those EGCs.

The amendment to accelerate the documentation completion date could also impact competition in an EGC product market if any indirect costs to audited companies disproportionately affect EGCs relative to their competitors. For example, if EGCs are forced to raise prices in order to remain viable but their non-EGC competitors are not forced to raise prices, this may divert market share toward their non-EGC competitors. This could increase competition in markets where EGCs have a dominant market share and decrease competition in markets where EGCs have a less than dominant market share. However, the incentives for firms to pass costs onto EGCs may also be limited by competition for audits.

The proposal sought comments on the applicability of the proposed requirements to audits of EGCs. Several commenters agreed that the

requirements of AS 1000 should apply to the audits of EGCs. One commenter suggested that the audits of EGCs should be subject to stricter requirements because non-accelerated filers have a higher incidence of restatements and because small capitalization issuers have a higher proportion of equity owned by individual investors but less coverage by sell-side analysts.¹⁷⁷ However, the Board continues to believe the same standard and related amendments should apply to audits of EGCs and non-EGCs to avoid the potential for confusion that could accompany differences within firms’ policies and procedures with respect to audits of EGCs and non-EGCs.

Accordingly, and for the reasons explained above, the Board has requested that the Commission determine that it is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation, to apply the standard and related amendments to audits of EGCs.

III. Date of Effectiveness of the Proposed Rules and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Board consents, the Commission will:

(A) By order approve or disapprove such proposed rules; or

(B) Institute proceedings to determine whether the proposed rules should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rules are consistent with the requirements of Title I of the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (<https://www.sec.gov/rules/pcaob>); or
- Send an email to rule-comments@sec.gov. Please include PCAOB–2024–01 on the subject line.

Paper Comments

- Send paper comments in triplicate to Vanessa A. Countryman, Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to PCAOB–2024–01. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (<https://www.sec.gov/rules/pcaob>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rules that are filed with the Commission, and all written communications relating to the proposed rules between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the PCAOB. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to PCAOB–2024–01 and should be submitted on or before July 2, 2024.

For the Commission, by the Office of the Chief Accountant.¹⁷⁸

Vanessa A. Countryman,
Secretary.

No. 113

June 11, 2024

Part V

Environmental Protection Agency

40 CFR Part 721

Significant New Use Rules on Certain Chemical Substances (23–3.5e);
Proposed Rule

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 721

[EPA-HQ-OPPT-2023-0328; FRL-11825-01-OCSPP]

RIN 2070-AB27

Significant New Use Rules on Certain Chemical Substances (23-3.5e)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for chemical substances that were the subject of premanufacture notices (PMNs) and are also subject to a TSCA Order. A SNUR requires persons who intend to manufacture (defined by statute to include import) or process a particular chemical substance for an activity that is identified as a significant new use in the SNUR to notify EPA at least 90 days before commencing that activity. The required notification initiates EPA's evaluation of the conditions of use identified in the notification to EPA. In addition, the manufacture or processing for the significant new use may not commence until EPA has conducted a review of the required notification, made an appropriate determination regarding that notification, and taken such actions as required by that determination.

DATES: Comments must be received on or before July 11, 2024.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2023-0328, online at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

For technical information: William Wysong, New Chemicals Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 564-4163; email address: wysong.william@epa.gov.

For general information: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620;

telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. What is the Agency's authority for taking this action?

TSCA section 5(a)(2) (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a "significant new use." EPA must make this determination by rule after considering all relevant factors, including the factors in TSCA section 5(a)(2) (see also the discussion in Unit II.).

B. What action is the Agency taking?

EPA is proposing SNURs for chemical substances that were the subject of PMNs as discussed in Unit III. These SNURs, if finalized as proposed, would require persons who intend to manufacture or process any of these chemical substances for an activity that is designated as a significant new use to notify EPA at least 90 days before commencing that activity.

C. Does this action apply to me?

1. General Applicability

This action applies to you if you manufacture, process, or use the chemical substances contained in this proposed rule. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Manufacturers or processors of one or more subject chemical substances (NAICS) codes 325 and 324110, *e.g.*, chemical manufacturing and petroleum refineries.

2. Applicability to Importers and Exporters

This action may also apply to certain entities through pre-existing import certification and export notification rules under TSCA (<https://www.epa.gov/tsc-import-export-requirements>).

Chemical importers are subject to the import provisions in TSCA section 13 (15 U.S.C. 2612), the requirements promulgated at 19 CFR 12.118 through 12.127 (see also 19 CFR 127.28), and the EPA policy in support of import certification at 40 CFR part 707, subpart B. Chemical importers must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA, including

regulations issued under TSCA sections 5, 6, 7 and TSCA title IV.

Pursuant to 40 CFR 721.20, any persons who export or intend to export a chemical substance that is the subject of this proposed rule on or after July 11, 2024 are subject to the export notification provisions of TSCA section 12(b) (15 U.S.C. 2611(b)) and must comply with the export notification requirements in 40 CFR part 707, subpart D.

D. What are the incremental economic impacts of this action?

EPA has evaluated the potential costs of establishing significant new use notice (SNUN) reporting requirements for potential manufacturers (including importers) and processors of the chemical substances subject to these proposed SNURs. This analysis, which is available in the docket, is briefly summarized here.

1. Estimated Costs for SNUN Submissions

If a SNUN is submitted, costs are an estimated \$45,000 per SNUN submission for large business submitters and \$14,500 for small business submitters. These estimates include the cost to prepare and submit the SNUN (including registration for EPA's Central Data Exchange (CDX)), and the payment of a user fee. Businesses that submit a SNUN would be subject to either a \$37,000 user fee required by 40 CFR 700.45(c)(2)(ii) and (d), or, if they are a small business as defined at 13 CFR 121.201, a reduced user fee of \$6,480 (40 CFR 700.45(c)(1)(ii) and (d)) per fiscal year 2022. The costs of submission for SNUNs will not be incurred by any company unless a company decides to pursue a significant new use as defined in these SNURs. Additionally, these estimates reflect the costs and fees as they are known at the time of this rulemaking.

2. Estimated Costs for Export Notifications

EPA has also evaluated the potential costs associated with the export notification requirements under TSCA section 12(b) and the implementing regulations at 40 CFR part 707, subpart D. For persons exporting a substance that is the subject of a SNUR, a one-time notice to EPA must be provided for the first export or intended export to a particular country. The total costs of export notification will vary by chemical, depending on the number of required notifications (*i.e.*, the number of countries to which the chemical is exported). While EPA is unable to make any estimate of the likely number of

export notifications for the chemical substances covered by these SNURs, as stated in the accompanying economic analysis, the estimated cost of the export notification requirement on a per unit basis is approximately \$106.

E. What should I consider as I prepare my comments for EPA?

1. Submitting CBI

Do not submit CBI to EPA through email or <https://www.regulations.gov>. If you wish to include CBI in your comment, please follow the applicable instructions at <https://www.epa.gov/dockets/commenting-epa-dockets#rules> and clearly mark the information that you claim to be CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR parts 2 and 703.

2. Tips for Preparing Your Comments

When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets>.

II. Background

This unit provides general information about SNURs. For additional information about EPA's new chemical program go to <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca>.

A. Significant New Use Determination Factors

TSCA section 5(a)(2) states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors, including:

- The projected volume of manufacturing and processing of a chemical substance.
- The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance.
- The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.
- The reasonably anticipated manner and methods of manufacturing, processing, distribution in commerce, and disposal of a chemical substance.

In determining what would constitute a significant new use for the chemical substances that are the subject of these SNURs, EPA considered relevant information about the toxicity of the chemical substances, and potential human exposures and environmental releases that may be associated with the substances, in the context of the four bulleted TSCA section 5(a)(2) factors

listed in this unit and discussed in Unit III.

These proposed SNURs include PMN substances that are subject to Orders issued under TSCA section 5(e)(1)(A), as required by the determinations made by EPA under TSCA section 5(a)(3)(B). The TSCA Orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

B. Rationale and Objectives of the SNURs

1. Rationale

Under TSCA, no person may manufacture a new chemical substance or manufacture or process a chemical substance for a significant new use until EPA makes a determination as described in TSCA section 5(a) and takes any required action. The issuance of a SNUR is not a risk determination itself, only a notification requirement for "significant new uses," so that the Agency has the opportunity to review the SNUN for the significant new use and make a TSCA section 5(a)(3) risk determination.

During review of the PMNs submitted for the chemical substances, EPA concluded that regulation was warranted under TSCA section 5(e), pending the development of information sufficient to make reasoned evaluations of the health or environmental effects of the chemical substances. The basis for such findings is outlined in Unit IV. Based on these findings, TSCA section 5(e) Orders requiring the use of appropriate exposure controls were negotiated with the PMN submitters. As a general matter, EPA believes it is necessary to follow the TSCA Orders with a SNUR that identifies the absence of those protective measures as significant new uses to ensure that all manufacturers and processors—not just the original submitter—are held to the same standard.

2. Objectives

EPA is proposing these SNURs because the Agency wants:

- To identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).
- To have an opportunity to review and evaluate data submitted in a SNUN

before the submitter begins manufacturing or processing a listed chemical substance for the described significant new use.

- To be obligated to make a determination under TSCA section 5(a)(3) regarding the use described in the SNUN, under the conditions of use. The Agency will either determine under TSCA section 5(a)(3)(C) that the significant new use is not likely to present an unreasonable risk, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by the Administrator under the conditions of use, or make a determination under TSCA section 5(a)(3)(A) or (B) and take the required regulatory action associated with the determination, before manufacture or processing for the significant new use of the chemical substance can occur.

Issuance of a proposed SNUR for a chemical substance does not signify that the chemical substance is listed on the TSCA Chemical Substance Inventory (TSCA) Inventory. Guidance on how to determine if a chemical substance is on the TSCA Inventory is available at <https://www.epa.gov/tsca-inventory>.

C. Significant New Uses Claimed as CBI

EPA is proposing to establish certain significant new uses which have been claimed as CBI subject to Agency confidentiality regulations at 40 CFR part 2 and 40 CFR part 720, subpart E. Absent a final determination or other disposition of the confidentiality claim under 40 CFR part 2 procedures, EPA is required to keep this information confidential. EPA promulgated a procedure to deal with the situation where a specific significant new use is CBI, at 40 CFR 721.11.

Under these procedures a manufacturer or processor may request EPA to determine whether a specific use would be a significant new use under the rule. The manufacturer or processor must show that it has a *bona fide* intent to manufacture or process the chemical substance and must identify the specific use for which it intends to manufacture or process the chemical substance. If EPA concludes that the person has shown a *bona fide* intent to manufacture or process the chemical substance, EPA will tell the person whether the use identified in the *bona fide* submission would be a significant new use under the rule. Since most of the chemical identities of the chemical substances subject to these SNURs are also CBI, manufacturers and processors can combine the *bona fide* submission under the procedure in 40 CFR 721.11 into a single step.

If EPA determines that the use identified in the *bona fide* submission would not be a significant new use, *i.e.*, the use does not meet the criteria specified in the rule for a significant new use, that person can manufacture or process the chemical substance so long as the significant new use trigger is not met. In the case of a production volume trigger, this means that the aggregate annual production volume does not exceed that identified in the *bona fide* submission to EPA. Because of confidentiality concerns, EPA does not typically disclose the actual production volume that constitutes the use trigger. Thus, if the person later intends to exceed that volume, a new *bona fide* submission would be necessary to determine whether that higher volume would be a significant new use.

D. Applicability of General Provisions

General provisions for SNURs appear in 40 CFR part 721, subpart A. These provisions describe persons subject to SNURs, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the rule.

Pursuant to 40 CFR 721.1(c), persons subject to SNURs must comply with the same requirements and EPA regulatory procedures as submitters of PMNs under TSCA section 5(a)(1)(A). In particular, these requirements include the information submission requirements of TSCA sections 5(b) and 5(d)(1), the exemptions authorized by TSCA sections 5(h)(1), 5(h)(2), 5(h)(3), and 5(h)(5) and the regulations at 40 CFR part 720. In addition, provisions relating to user fees appear at 40 CFR part 700.

Once EPA receives a SNUN, EPA must either determine that the conditions of use is not likely to present an unreasonable risk of injury under the conditions of use for the chemical substance or take such regulatory action as is associated with an alternative determination under TSCA section 5 before the manufacture (including import) or processing for the significant new use can commence. If EPA determines that the conditions of use of the chemical substance is not likely to present an unreasonable risk, EPA is required under TSCA section 5(g) to publish a statement of EPA's findings in the **Federal Register**.

As discussed in Unit I.C.2., persons who export or intend to export a chemical substance identified in a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b), and persons who import a chemical substance identified in a final SNUR are subject to the TSCA

section 13 import certification requirements. See also <https://www.epa.gov/tsca-import-export-requirements>.

E. Applicability of the Proposed SNURs to Uses Occurring Before the Effective Date of the Final Rule

To establish a significant new use, EPA must determine that the use is not ongoing. The chemical substances subject to this proposed rule have undergone premanufacture review and received determinations under TSCA section 5(a)(3)(C). TSCA Orders have been issued for these substances and the PMN submitters are required by the TSCA Orders to submit a SNUN before undertaking activities which would be designated as significant new uses in these SNURs. Additionally, the identities of many of the chemical substances subject to this proposed rule have been claimed as confidential per 40 CFR 720.85, further reducing the likelihood that another party would manufacture or process the substances for an activity that would be designated as a significant new use. Based on this, the Agency believes that it is highly unlikely that any of the significant new uses identified in Unit III are ongoing.

When the chemical substances identified in Unit III are added to the TSCA Inventory, EPA recognizes that, before the rule is effective, other persons might engage in a use that has been identified as a significant new use. Persons who begin manufacture or processing of the chemical substances for a significant new use identified on or after the designated cutoff date specified in Unit III.A. would have to cease any such activity upon the effective date of the final rule. To resume their activities, these persons would have to first comply with all applicable SNUR notification requirements and EPA would have to take action under TSCA section 5 allowing manufacture or processing to proceed.

F. Important Information About SNUN Submissions

1. SNUN Submissions

SNUNs must be submitted on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 720.40 and 721.25. E-PMN software is available at <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca>.

2. Development and Submission of Information

EPA recognizes that TSCA section 5 does not require development of any particular new information (*e.g.*, generating test data) before submission of a SNUN. There is an exception: If a person is required to submit information for a chemical substance pursuant to a rule, order or consent agreement under TSCA section 4, then TSCA section 5(b)(1)(A) requires such information to be submitted to EPA at the time of submission of the SNUN.

In the absence of a rule, TSCA Order, or consent agreement under TSCA section 4 covering the chemical substance, persons are required only to submit information in their possession or control and to describe any other information known to or reasonably ascertainable by them (see 40 CFR 720.50). However, upon review of PMNs and SNUNs, the Agency has the authority to require appropriate testing. To assist with EPA's analysis of the SNUN, submitters are encouraged, but not required, to provide the potentially useful information identified for the chemical substance in Unit III.C.

EPA strongly encourages persons, before performing any testing, to consult with the Agency pertaining to protocol selection. Furthermore, pursuant to TSCA section 4(h), which pertains to reduction of testing in vertebrate animals, EPA encourages consultation with the Agency on the use of alternative test methods and strategies (also called New Approach Methodologies, or NAMs), if available, to generate the recommended test data. EPA encourages dialog with Agency representatives to help determine how best the submitter can meet both the data needs and the objective of TSCA section 4(h). For more information on alternative test methods and strategies to reduce vertebrate animal testing, visit <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/alternative-test-methods-and-strategies-reduce>.

The potentially useful information described in Unit III.C. for these chemical substances may not be the only means of providing information to evaluate the chemical substance associated with the significant new uses. However, submitting a SNUN without any information may increase the likelihood that EPA will take action under TSCA sections 5(e) or 5(f). EPA recommends that potential SNUN submitters contact EPA early enough so that they will be able to conduct the appropriate tests to provide useful

information with their SNUN submission.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs which provide detailed information on the following:

- Human exposure and environmental release that may result from the significant new use of the chemical substances.

III. Chemical Substances Subject to These Proposed SNURs

A. What is the designated cutoff date for ongoing uses?

EPA designates June 11, 2024 as the cutoff date for determining whether the new use is ongoing. This designation is explained in more detail in Unit II.D.

B. What information is provided for each chemical substance?

For each chemical substance identified in Unit III.C., EPA provides the following information:

- PMN number (the proposed CFR citation assigned in the regulatory text section of this document).
- Chemical name (generic name, if the specific name is claimed as CBI).
- Chemical Abstracts Service Registry Number (CASRN) (if assigned for non-confidential chemical identities).
- Effective date of and basis for the TSCA Order.
- Potentially useful information.

The regulatory text section of the proposed rule specifies the activities designated as significant new uses. Certain new uses, including production volume limits and other uses designated in the proposed rules, may be claimed as CBI.

These proposed rules include PMN substances that are subject to orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). Those TSCA Orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

C. Which chemical substances are subject to the proposed SNURs in this document?

The substances subject to the proposed rules in this document are as follows:

PMN Number (Proposed CFR Citation): P-20-96 (40 CFR 721.11829)

Chemical Name: Unsaturated dicarboxylic acid polymer with 2-(dialkylamino)alkyl-alkyl-alkanoate, N,N-dialkyl-alkene amide, 2-propenamide and salt of alkyl-substituted alkene sulfonate (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 8, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be in a papermaking process. Based on a structural alert for aliphatic amines, the acid moieties, and a confidential residual substance, EPA has identified concerns for skin, eye, and respiratory tract irritation. Based on comparison to analogous polyamphoteric polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 490 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified gas/vapor respirator with an APF of at least 10 where there is a potential for inhalation exposure;
- No manufacture of the PMN substance unless the percentage of the confidential reactant listed in the Order represents 10% or less (by weight) of the PMN substance;
- No release of the PMN substance resulting in surface water concentrations that exceed 490 ppb; and
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity testing may be potentially useful to characterize the environmental effects of the PMN substance. Although the Order does not require these tests,

the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-2 (40 CFR 721.11830)

Chemical Name: Octadecanoic acid, 12-hydroxy-, polymer with aziridine, 2-oxepanone and tetrahydro-2H-pyran-2-one, reaction products with disubstituted heteropolycycle (generic).

CASRN: Not available.

Effective Date of TSCA Order: October 4, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a polymer in coatings. Based on a structural alert for aliphatic amines, EPA has identified concerns for lung effects (cationic binding) and irritation to the skin, eyes, and respiratory tract. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 50 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in consumer products;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 50 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified respirator with an APF of at least 50 where there is a potential for inhalation exposure during non-spray applications;
- Use of a NIOSH-certified respirator with an APF of at least 10,000 where there is a potential for inhalation exposure during spray applications;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has

determined that the results of skin irritation, eye irritation/corrosion, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-19 (40 CFR 721.11831)

Chemical Name: Ethyl 4-alkyl-2-oxocycloalkancarboxylate (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 17, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a fragrance ingredient. Based on submitted test data on PMN substance, EPA has identified concerns for acute neurotoxicity and kidney effects, and EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 460 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No use of the PMN substance other than as a fragrance ingredient for making fragrance oils by blending (mixing) with other fragrance ingredients;
- No use of the PMN substance at a concentration of 0.5% (by weight) or greater in consumer products;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity testing may be potentially

useful to characterize the environmental effects of the PMN substances. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P-21-48 (40 CFR 721.11832), P-21-130 (40 CFR 721.11833), P-21-131 (40 CFR 721.11834), P-21-177 (40 CFR 721.11835), P-21-204 (40 CFR 721.11836), and P-22-12 (40 CFR 721.11837)

Chemical Names: Sulfonium, tricarboxylic-, polyfluoropolyhydro-2,2-dicarboxylic -4,7-methano-1,3-benzodioxole-5-alkanesulfonate (1:1) (generic) (P-21-48), Sulfonium, tricarboxylic-, 2-[3,5-bis(haloalkyl)phenyl]-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2-alkyl-4,7-alkano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic) (P-21-130), Sulfonium, tricarboxylic-, 2-(4-alkoxyhalocarboxymonocyclic)-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic) (P-21-131), Sulfonium, monocarboxylicbisarylpolychloroalkyl, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic) (P-21-177), Sulfonium, bis(3,4-polyhalocarboxylic)aryl-, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic) (P-21-204), and Sulfonium, tricarboxylic-, 2-heteroatom-substituted-4-(halocarboxylic)carboxylate (1:1) (generic) (P-22-12).

CASRNs: Not available.

Effective Date of TSCA Order: December 22, 2022.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use of the PMN substances will be for photolithography. Based on the physical/chemical properties of the PMN substances (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and in the absence of data, the PMN substances and photolysis products are potentially persistent, bioaccumulative, and toxic (PBT) chemicals. EPA estimates that the PMN substances will persist in the environment for more than two months and that their potential to bioaccumulate is unknown. EPA estimates that the photolysis products will persist in the environment for more than two months and estimates a bioaccumulation factor of greater than

or equal to 1,000. Based on the reactivity of the PMN substances, EPA has identified concerns for photosensitization. Based on information provided in the SDS and data on analogues, EPA has also identified concerns for irritation to the skin, eyes, and respiratory tract. Based on data on sulfonium compounds, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, eye corrosion, ocular lethality, neurological effects, and systemic effects for the sulfonium cation of the PMN substances. Based on comparison to analogous substances, EPA has also identified concerns for mutagenicity. Based on analogue data, EPA has also identified concerns for thyroid, liver, and reproductive (developmental) toxicity for the anion for PMNs P-21-48, P-21-130, P-21-131, P-21-177, and P-21-204. Based on test data on salicylic acid and sodium salicylate and a structural alert for phenols, EPA has also identified concerns for acute toxicity, eye irritation, neurotoxicity, reproductive and developmental effects for P-22-12. Based on protein binding alert for benzyl phenyl ethers, EPA has also identified concerns for skin sensitization for P-22-12. Based on data on a potential incineration product, EPA has identified concerns for local and systemic effects. Based on insufficient information, the PMN substance has unknown toxicity to aquatic organisms. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of any of the PMN substances beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;
- No modification of the processing or use of the PMN substances in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substances only for the confidential use stated in the Order;
- No domestic manufacture of the PMN substances (*i.e.*, import only);

- Import of the PMN substances only in solution, or in any form in sealed containers weighing 5 kilograms or less; and

- No exceedance of the confidential annual importation volumes stated in the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substances may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P-21-55 (40 CFR 721.11838)

Chemical Name: Fatty acids, reaction products with polyamine-polyacid polymer and fatty acid (generic).

CASRN: Not available.

Effective Date of TSCA Order: March 29, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an adhesive used for coating formulations. Based on structural alert for aliphatic amines, EPA has identified concerns for irritation to the skin, eyes, and respiratory tract. Based on a potential metabolite and confidential residual, EPA has also identified concerns for systemic (body weight, adrenal, and clinical chemistry), reproductive, and developmental effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Manufacture of the PMN substance only in a manner that results in an amine value of no more than 127 mg KOH/g;
- Use of a NIOSH-certified particulate respirator with an APF of at least 10 where there is a potential for inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye damage, and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P-21-71 (40 CFR 721.11839) and P-21-72 (40 CFR 721.11840)

Chemical Names: Poly[oxy(methyl-1,2-ethandiyl)], .alpha.-(dithiocarboxy)-.omega.-(1-methylethoxy)-, sodium salt (1:1) (P-21-71) and Poly[oxy(methyl-1,2-ethandiyl)], .alpha.-(dithiocarboxy)-.omega.-butoxy-, sodium salt (1:1) (P-21-72).

CASRNs: 2304726-53-0 (P-21-71) and 2304726-56-3 (P-21-72).

Effective Date of TSCA Order: October 5, 2022.

Basis for TSCA Order: The PMNs state that the uses will be as flotation aids in sulfide ore mining. Based on surfactant properties, EPA has identified concerns for lung effects and skin and eye irritation. Based on data on carbon disulfide, EPA has also identified concerns for neurotoxicity and systemic, reproductive, and developmental effects for the hydrolysis product. Based on comparison to analogous esters, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 350 ppb (P-21-71) and 150 ppb (P-21-72). The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;

- Use of a NIOSH-certified respirator with an APF of at least 10 where there is a potential for inhalation exposure;

- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;

- No use of the PMN substances other than as flotation aids in sulfide ore mining at mines with valid permits (State, Federal, or Tribal) for operations and waste handling;

- No domestic manufacture of the PMN substances (*i.e.*, import only); and
- No release of the PMN substances resulting in surface water concentrations that exceed 150 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity, developmental toxicity, eye damage, neurotoxicity, reproductive toxicity, skin irritation, specific target organ toxicity, and pulmonary effects testing may be potentially useful to characterize the health and environmental effects of the PMN substances. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-73 (40 CFR 721.11841)

Chemical Name: 1,4-Cyclohexanedicarboxylic acid, 1,4-dinonyl ester, branched and linear.

CASRN: 2449089-78-3.

Effective Date of TSCA Order: September 1, 2022.

Basis for TSCA Order: The PMN states that the use will be as a plasticizer in PVC articles like roofing membranes, flooring, or coated fabrics. Based on the potential hydrolysis product, EPA has identified concerns for reproductive and developmental effects. Based on test data on the PMN substance and comparison to neutral organic substances, EPA predicts the PMN substance may be toxic to aquatic organisms and has unknown toxicity to sediment dwelling environmental organisms. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information

to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- No processing or use of the PMN substance in a consumer product;
- No processing or use of the PMN substance other than as a plasticizer in polyvinyl chloride (PVC) articles;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;
- No release of the PMN substance, or any waste stream containing the PMN substance, into water or into any environmental media destined for water.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity testing may be potentially useful to characterize the environmental effects of the PMN substance. Although the Order does not require this test, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-74 (40 CFR 721.11842)

Chemical Name: 1,3-Butadiene, homopolymer, hydrogenated, 2-(ethenyl)ethyl-terminated.

CASRN: 2511154-73-5.

Effective Date of TSCA Order: March 28, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a resin component of an adhesive formulation. Based on potential epoxidation of the terminal C=C bonds, EPA has identified concerns for dermal and respiratory sensitization, reproductive and developmental effects, genotoxicity, and carcinogenicity. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To

protect against these risks, the Order requires:

- No use of the PMN substance in consumer products;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- Use of the PMN substance only for the confidential use listed in the Order;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of sensitization, germ cell mutagenicity, specific target organ toxicity, reproductive toxicity, and developmental toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P-21-89 (40 CFR 721.11843) and P-21-90 (40 CFR 721.11844)

Chemical Names: Lignin, modified, reaction products with alkylamine by-products, hydrochlorides (generic) (P-21-89) and Lignin, modified, reaction products with alkylamine by-products (generic) (P-21-90).

CASRNs: Not available.

Effective Date of TSCA Order: July 25, 2022.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) uses will be as an emulsifier (P-21-89) and a component in paving formulations (P-21-90). Based on the cationic binding of amines to lung membranes, EPA has identified concerns for lung effects. Based on analogue data, EPA has also identified concerns for corrosion to the skin and eyes for P-21-90. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to

aquatic organisms may occur at concentrations that exceed 2 ppb (P-21-89). Based on comparison to analogous polyamphoteric polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 12 ppb (P-21-90). The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure to P-21-90;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;
- No manufacture, processing, or use in any manner that results in inhalation exposure;
- No manufacture, processing, or use in any manner that results in air releases to the environment except during loading or unloading of transport containers;
- No release of PMN P-21-89 resulting in surface water concentrations that exceed 2 ppb; and
- No release of PMN P-21-90 resulting in surface water concentrations that exceed 12 ppb.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity and specific target organ toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substances. EPA has also determined that the results of skin corrosion and serious eye damage testing may be potentially useful to characterize the health effects of P-21-90. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-124 (40 CFR 721.11845)

Chemical Name: Sulfonium, triphenyl-, salt with fluoroalkyl 5-

sulfobicyclo[2.2.1]heptane carboxylate (1:1) (generic).

CASRN: Not available.

Effective Date of TSCA Order: December 22, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be for photolithography. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and in the absence of data, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance may potentially persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. Based on the reactivity of the PMN substance, EPA has identified concerns for photosensitization. Based on data on sulfonium compounds, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, eye corrosion, ocular lethality, neurological effects, and systemic effects for the sulfonium cation of the PMN substance. Based on comparison to analogous substances, EPA has also identified concerns for genetic toxicity. Based on perfluoro analogue data, EPA has also identified concerns for thyroid, liver, and reproductive (developmental) toxicity for the anion. Based on data on a potential incineration product, EPA has also identified concerns for local and systemic effects. Based on insufficient information, the PMN substance has unknown toxicity to aquatic organisms. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;
- No modification of the processing or use of the PMN substance in any way

that generates a vapor, dust, mist, or aerosol in a non-enclosed process;

- Use of the PMN substance only as an onium salt that generates strong or weak acid in lithography process;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Import of the PMN substance only in solution, or in any form in sealed containers weighing 5 kilograms or less; and
- No exceedance of the confidential annual importation volume listed in the Order.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P-21-137 (40 CFR 721.11846)

Chemical Name: Triazine-trione, tris(isocyanatoalkyl)-, polymer with substituted diisocyanato alkylcarbomonocycle, hydro-hydroxypoly(oxyalkanediyl) and hydro-hydroxypoly[oxy(alkyl-alkanediyl)], aliphatic alkyl amine-blocked (generic).

CASRN: Not available.

Effective Date of TSCA Order: August 3, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an industrial additive. Based on information in the SDS, comparison to analogous chemical substances, and test data on a residual, EPA has identified concerns for eye, skin, and respiratory irritation, eye and skin corrosion, acute toxicity, acute neurotoxicity, systemic effects, portal-of-entry effects, mutagenicity, and reproductive effects. Based on the potential of the PMN substance as a crosslinker, EPA has also identified concerns for skin sensitization. Based on comparison to analogous substituted ureas, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 15 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence

of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in consumer products;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 15 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of reproductive toxicity, specific target organ toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-138 (40 CFR 721.11847)

Chemical Name: Lithium metal oxide (generic).

CASRN: Not available.

Effective Date of TSCA Order: October 31, 2022.

Basis for TSCA Order: The PMN states that the use will be as an electrode material for use in the manufacture of batteries. Based on the physical/chemical properties of the PMN substance and comparison to analogous respirable, poorly soluble particulates, EPA has identified concerns for lung effects (lung overload). Based on comparison to analogous chemical substances, EPA has also identified concerns for systemic, reproductive, and developmental effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I),

based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified particulate respirator with an APF of at least 1,000 if the dust control capture and reduction rate is at less than 90% where there is a potential for inhalation exposure;
- Use of a NIOSH-certified particulate respirator with an APF of at least 50 if the dust control capture and reduction rate is at least 90% where there is a potential for inhalation exposure;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- No disposal of the PMN substance or waste streams containing the PMN substance other than by landfill or incineration;
- No use of the PMN substance in a consumer product;
- No use of the PMN substance other than in the manufacture of batteries; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require this test, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–140 (40 CFR 721.11848)

Chemical Name: Soybean oil, oleic acid-high, epoxidized.

CASRN: 2410202–82–1.

Effective Date of TSCA Order: September 1, 2022.

Basis for TSCA Order: The PMN states that the use will be as a chemical intermediate to prepare acrylate-containing oil, which is subsequently polymerized to prepare a viscosity modifier for asphalt. Based on analogous epoxides, EPA has identified

concerns for reproductive effects and carcinogenicity. Based on OECD QSAR Toolbox results and test data for a functional analogue, 4-vinylcyclohexene diepoxide, EPA has also identified concerns for carcinogenicity. Based on test data for an analogue, epoxidized soybean oil, EPA has also identified concerns for systemic effects and reproductive effects. Based on OECD QSAR Toolbox identification as a respiratory sensitizer, the new chemical substance having bifunctional reactive groups which can crosslink proteins, and the respiratory tract not having a stratum corneum protective layer like the skin to inhibit absorption, EPA has also identified concerns for respiratory sensitization. Based on insufficient information, toxicity to sediment-dwelling organisms is unknown. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- No use of the PMN substance other than as a chemical intermediate to prepare acrylate-containing oil, which is subsequently polymerized to prepare a viscosity modifier for asphalt;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure; and
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, skin irritation, eye irritation/corrosion, reproductive toxicity, developmental toxicity, carcinogenicity, and sediment organism toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN

substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–180 (40 CFR 721.11849)

Chemical Name: Sulfonium, (halocarbomonocycle)diphenyl-, salt with 1-heterosubstituted-2-methylalkyl trihalobenzoate (1:1) (generic).

CASRN: Not available.

Effective Date of TSCA Order: December 20, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be for microlithography for electronic device manufacturing. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program’s PBT category at 64 FR 60194; November 1999) and the absence of data, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance will persist in the environment for more than six months and the bioaccumulation potential is unknown and that the cation photolysis product has the potential to bioaccumulate and be persistent in the environment. Based on the reactivity of the PMN substance, EPA has identified concerns for photosensitization. Based on data on sulfonium compounds and information provided in the SDS, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, eye corrosion, ocular lethality, neurological effects, and systemic effects for the sulfonium cation of the PMN substance. Based on comparison to analogous substances, EPA has also identified concerns for mutagenicity. Based on analogue data and the OECD QSAR Toolbox, EPA has also identified concerns for thyroid, liver, and reproductive (developmental) toxicity and skin sensitization for the anion. Based on data on a potential incineration product, EPA has identified concerns for local and systemic effects. Based on insufficient information, the PMN substance has unknown toxicity to aquatic organisms. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;

- Use of personal protective equipment where there is a potential for dermal exposure;

- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;

- No modification of the processing or use of the PMN substance in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;

- Use of the PMN substance only for the confidential use stated in the Order;

- No domestic manufacture of the PMN substance (*i.e.*, import only);

- Import of the PMN substance only in solution, or in any form in sealed containers weighing 5 kilograms or less; and

- No exceedance of the confidential annual importation volume listed in the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P-21-199 (40 CFR 721.11850)

Chemical Name: 1,6-Disubstituted hexane (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 7, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a processing aid. Based on comparison to analogous chemical substances, EPA has identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, respiratory and skin sensitization, neurotoxicity, systemic effects, genotoxicity, reproductive, and developmental effects. Based on structural alerts, EPA has also identified concerns for

carcinogenicity. Based on comparison to analogous chemical substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 23 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;

- No release of the PMN substance, or any waste steam containing the PMN substance, into waters of the United States;

- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;

- No disposal of the PMN substance or waste streams containing the PMN substance other than by hazardous waste incineration;

- No use of the PMN substance in a consumer product; and

- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, eye damage, skin irritation, pulmonary effects, skin sensitization, specific target organ toxicity, neurotoxicity, genetic toxicity, reproductive toxicity, developmental toxicity, carcinogenicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-201 (40 CFR 721.11851)

Chemical Name: 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-tetradecyl-, chloride (1:2); 1,3-Propanediaminium, N1-hexadecyl-2-

hydroxy-N1,N1,N3,N3,N3-pentamethyl-, chloride (1:2); 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecyl-, chloride (1:2); 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecen-1-yl-, chloride (1:2).

CASRNs: 1622255-87-1; 63560-76-9; 197862-16-1; and 2748681-38-9.

Effective Date of TSCA Order: April 12, 2022.

Basis for TSCA Order: The PMN states that the use will be as a surfactant in a cationic latex asphalt emulsion formulation. Based on the intended use and structure, EPA has identified concerns for surfactant effects of the lung. Based on comparison to analogous chemical substances, EPA also identified concerns for skin irritation/corrosion, eye irritation/corrosion, mortality, systemic, and neurotoxic, and developmental effects. Based on comparison to analogous cationic (quaternary ammonium) surfactants, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 21 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in consumer products;

- No manufacture, processing, or use of the PMN substance in any manner or method that results in inhalation exposure;

- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 21 ppb;

- Use of personal protective equipment where there is a potential for dermal exposure; and

- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity, acute toxicity, neurotoxicity, specific target organ toxicity, pulmonary

effects, developmental toxicity, skin irritation, skin corrosion, and eye damage testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-206 (40 CFR 721.11852)

Chemical Name: Alkanes, branched and linear (generic).

CASRN: Not available.

Effective Date of TSCA Order: March 25, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be as a component of gasoline. Based on data on analogous mixtures, EPA has identified concerns for skin irritation, neurotoxicity, systemic toxicity, developmental toxicity, portal-of-entry effects via the inhalation route, and carcinogenicity. Based on data on representative constituents of the PMN substance, EPA has also identified concerns for eye irritation, acute toxicity, acute neurotoxicity, reproductive toxicity, portal-of-entry effects via the oral route, aspiration hazard, and genetic toxicity. Based on information provided in the SDS, EPA has also identified concerns for aspiration hazard, flammability, skin irritation, eye irritation, and acute neurotoxicity. Based on the chemical composition, EPA has also identified hydrocarbon pneumonia/aspiration hazard. EPA also assumes respiratory tract irritation is a hazard. Based on comparison to analogous neutral organic substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 3 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance other than for use as a fuel, fuel additive, or regulated blendstock subject to 40 CFR part 79 or 1090, including as a component of gasoline or ethanol base fuel (E85);
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, eye irritation, respiratory depression/irritation, hydrocarbon pneumonia/aspiration hazard, reproductive developmental toxicity, systemic toxicity, genetic toxicity, carcinogenicity, aquatic toxicity, and consumer inhalation exposure at gas stations testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P-22-29 (40 CFR 721.11853), P-22-30 (40 CFR 721.11854), and P-22-31 (40 CFR 721.11855)

Chemical Names: Polyester with 1,4-benzenedicarboxylic acid, 1,4-dimethyl 1,4-benzenedicarboxylate, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[isocyanatobenzene] (generic) (P-22-29), Polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[4-isocyanatobenzene] (generic) (P-22-30), and Polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[isocyanatobenzene] (generic) (P-22-31).

CASRNs: Not available.

Effective Date of TSCA Order: January 6, 2023.

Basis for TSCA Order: The PMNs state that the uses will be as industrial adhesives. Based on comparison to analogous diisocyanates, EPA has identified concerns for irritation to skin, eyes, and respiratory tract, skin and

respiratory sensitization, and pulmonary toxicity for the low molecular weight species present in the PMN substances. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substances in any manner that results in inhalation exposure;
- No use of the PMN substances in consumer products;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, skin irritation, eye irritation, skin sensitization, and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substances. Although the Order does not require these tests, the Order's restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-22-55 (40 CFR 721.11856)

Chemical Name: Aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (generic).

CASRN: Not available.

Effective Date of TSCA Order: October 31, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be as a photoacid generator (PAG) for use in electronics industry. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and in the absence of data, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN

substance will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. Based on the reactivity of the PMN substance, EPA has identified concerns for photosensitization. Based on test data on the PMN substance and information provided in the SDS, EPA has also identified concerns for eye irritation and corrosion, skin and eye corrosion, and corrosion to mucous membranes. Based on data on sulfonium compounds, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, eye corrosion, ocular lethality, neurological effects, and systemic effects for the sulfonium cation of the PMN substance. Based on comparison to analogous substances, EPA has also identified concerns for genetic and acute toxicity, eye irritation and corrosion, and systemic effects. Based on perfluoro analogue data, EPA has also identified concerns for thyroid, liver, and reproductive (developmental) toxicity for the anion of the PMN substance. Based on data on a potential incineration product, EPA identified hazards for local and systemic effects. EPA was unable to estimate the environmental hazard of this substance. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;
- No modification of the processing or use of the PMN substance in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substance only as a photoacid generator;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Import of the PMN substance only in solution, or in any form in sealed containers weighing 5 kilograms or less; and

- No exceedance of the confidential annual importation volume listed in the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P–22–69 (40 CFR 721.11857)

Chemical Name: Fluoroheteroacid, metal salt (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 24, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a component in batteries. Based on submitted test data on the PMN substance, EPA has identified concerns for acute toxicity, skin, respiratory and eye corrosion, skin sensitization, and systemic effects. Based on data on the hydrolysis product, EPA has also identified concerns for systemic, reproductive, and developmental effects. Based on submitted test data on the PMN substance and comparison to analogous chemical substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 380 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified particulate respirator with an APF of at least 50 where there is a potential for inhalation exposure;
- No use of the PMN substance in a consumer product;
- No release of the PMN substance resulting in surface water concentrations that exceed 380 ppb; and

- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, developmental effects, specific target organ toxicity, and chronic fish toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–147 (40 CFR 721.11858)

Chemical Name: Hydrocarbons, C5–10.

CASRN: 2779559–23–6.

Effective Date of TSCA Order: November 2, 2022.

Basis for TSCA Order: The PMN states that the use will be as a feedstock for gasoline for racing fuels. Based on comparison to analogous chemical mixtures and data on the worst case constituents of the PMN substance, EPA has identified concerns for irritation to the skin, eye, and respiratory tract, acute toxicity, developmental and reproductive effects, systemic effects, aspiration hazard, genetic toxicity, and carcinogenicity. Based on data on constituents of the mixture, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 25 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- Import, processing, and use of the PMN substance only as a feedstock for gasoline containing no more than 64% of the PMN substance where the imported gasoline mixture is regulated under applicable EPA regulations for fuels, fuel additives, and regulated blendstocks (40 CFR part 1090), fuel additives, and regulated blendstocks (40

CFR part 1090), registration of fuels and fuel additives (40 CFR part 79).

- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity, skin irritation, eye irritation, reproductive/developmental toxicity, systemic toxicity, genetic toxicity, and carcinogenicity testing may be potentially useful to characterize the health and environmental effects of the PMN substances. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P-22-150 (40 CFR 721.11859), P-22-152 (40 CFR 721.11860), P-22-161 (40 CFR 721.11861), and P-22-177 (40 CFR 721.11862).

Chemical Names: Sulfonium, tricarboxylic-, alpha, alpha, beta, beta-polyhalopolyhydro-heteropolycyclic-5-alkanesulfonate (1:1) (generic) (P-22-150), Sulfonium, tricarboxylic-, 2-heteroatom-substituted-4-alkylcarbomonocyclecarboxylate (1:1) (generic) (P-22-152), Sulfonium, tricarboxylic-, salt with [polyhydro-2-alkyl-5-(polyhalo-2-heteroalkyl)-alkano-1,3-hetropolycyclic]alkyl polyhaloaryl ester (1:1) (generic) (P-22-161), and Sulfonium, tricarboxylic-, alpha, alpha, beta, beta-polyhalopolyhydro-heteropolycyclic-5-alkanesulfonate (1:1) (generic) (P-22-177).

CASRs: Not available.

Effective Date of TSCA Order: February 6, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use of the PMN substances will be for photolithography. Based on the physical/chemical properties of the PMN substances (as described in the New Chemical Program’s PBT category at 64 FR 60194; November 1999) and in the absence of data, the PMN substances are potentially persistent, bioaccumulative, and toxic (PBT)

chemicals. EPA estimates that the PMN substances will persist in the environment for more than six months and have unknown bioaccumulation potential. EPA also estimates that the cation photodegradation products will persist in the environment for more than two months and have bioaccumulation factors over 1000. Based on data on sulfonium compounds, EPA has identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, eye corrosion, ocular lethality, neurological effects, and systemic effects for the sulfonium cations of the PMN substances. Based on the photoreactivity of the PMN substances, EPA has also identified concerns for photosensitization. Based on the reactivity of the PMN substances, EPA has also identified irritation to the skin, eyes, and respiratory tract. Based on comparison to analogous substances, EPA has also identified concerns for mutagenicity. Based on OECD QSAR Toolbox results, EPA has also identified hazards for skin sensitization for P-22-150, P-22-161, and P-22-177, and carcinogenicity for P-22-161 and P-22-177, and skin sensitization and carcinogenicity for the anion of P-22-161. Based on anion analogue data, EPA has also identified concerns for acute toxicity, skin irritation, eye corrosion, GI tract irritation, and systemic, reproductive and developmental effects for P-22-150, P-22-161, and P-22-177. Based on data on a potential incineration by-product, EPA has also identified concerns for local, neurotoxic, and systemic effects. EPA was unable to estimate the environmental hazard of these substances. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of any of the PMN substances beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health and environmental precautionary statements on each label and in the SDS;
- No processing of the PMN substances in any way that generates a

vapor, dust, mist, or aerosol in a non-enclosed process;

- Use of the PMN substances only for the confidential use stated in the Order;
- No domestic manufacture of the PMN substances (*i.e.*, import only);
- Import of the PMN substances only in solution, or in any form in sealed containers weighing 5 kilograms or less; and
- No exceedance of the confidential annual importation volumes listed in the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substances may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

IV. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at <https://www.epa.gov/laws-regulations-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action proposes to establish SNURs for new chemical substances that were the subject of PMNs. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023).

B. Paperwork Reduction Act (PRA)

According to the PRA (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA’s regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related

collection instrument or form, if applicable.

The information collection requirements related to SNURs have already been approved by OMB pursuant to PRA under OMB control number 2070–0038 (EPA ICR No. 1188). This action does not impose any burden requiring additional OMB approval. If an entity were to submit a SNUN to the Agency, the annual burden is estimated to average between 30 and 170 hours per submission. This burden estimate includes the time needed to review instructions, search existing data sources, gather and maintain the data needed, and complete, review, and submit the required SNUN.

EPA always welcomes your feedback on the burden estimates. Send any comments about the accuracy of the burden estimate, and any suggested methods for improving the collection instruments or instruction or minimizing respondent burden, including through the use of automated collection techniques.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). The requirement to submit a SNUN applies to any person (including small or large entities) who intends to engage in any activity described in the final rule as a “significant new use.” Because these uses are “new,” based on all information currently available to EPA, EPA has concluded that no small or large entities presently engage in such activities.

A SNUR requires that any person who intends to engage in such activity in the future must first notify EPA by submitting a SNUN. Although some small entities may decide to pursue a significant new use in the future, EPA cannot presently determine how many, if any, there may be. However, EPA’s experience to date is that, in response to the promulgation of SNURs covering over 1,000 chemicals, the Agency receives only a small number of notices per year. For example, the number of SNUNs received was 16 in Federal fiscal year (FY) FY2018, five in FY2019, seven in FY2020, 13 in FY2021, 11 in FY2022, and 15 in FY2023, and only a fraction of these submissions were from small businesses.

In addition, the Agency currently offers relief to qualifying small businesses by reducing the SNUN submission fee from \$37,000 to \$6,480. This lower fee reduces the total reporting and recordkeeping cost of submitting a SNUN to about \$14,500 per

SNUN submission for qualifying small firms. Therefore, the potential economic impacts of complying with these proposed SNURs are not expected to be significant or adversely impact a substantial number of small entities. In a SNUR that published in the **Federal Register** of June 2, 1997 (62 FR 29684) (FRL–5597–1), the Agency presented its general determination that SNURs are not expected to have a significant economic impact on a substantial number of small entities, which was provided to the Chief Counsel for Advocacy of the Small Business Administration.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million or more in any one year (in 1995 dollars) as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. Based on EPA’s experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by SNURs. In addition, the estimated costs of this action to the private sector do not exceed \$183 million or more in any one year (the 1995 dollars are adjusted to 2023 dollars for inflation using the GDP implicit price deflator). The estimated costs for this action are discussed in Unit I.D.

E. Executive Order 13132: Federalism

This action will not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it is not expected to have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the requirements of Executive Order 13132 do not apply to this action.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action will not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it is not expected to have substantial direct effects on Indian Tribes, significantly or uniquely affect the communities of Indian Tribal governments and does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of Executive Order 13175 do not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it does not concern an environmental health or safety risk. Since this action does not concern human health, EPA’s 2021 Policy on Children’s Health also does not apply. Although the establishment of these SNURs do not address an existing children’s environmental health concern because the chemical uses involved are not ongoing uses, SNURs require that persons notify EPA at least 90 days before commencing manufacture (defined by statute to include import) or processing of any of these chemical substances for an activity that is designated as a significant new use by this rulemaking. This notification allows EPA to assess the conditions of use to identify potential risks and take appropriate actions before the activities commence.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a “significant energy action” as defined in Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act (NTTAA)

This action does not involve any technical standards subject to NTTAA section 12(d) (15 U.S.C. 272 note).

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation’s Commitment to Environmental Justice for All

This action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to the potential for disproportionate impacts on non-white and low-income populations in accordance with Executive Order 12898 (59 FR 7629, February 16, 1994) and Executive Order 14096 (88 FR 25251, April 26, 2023). Although this action does not concern human health or environmental conditions, the premanufacture notifications required by these SNURs allow EPA to assess the conditions of use to identify potential disproportionate risks and take appropriate actions before the activities commence.

List of Subjects in 40 CFR Part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: June 4, 2024.

Mary Elissa Reaves,

Director, Office of Pollution Prevention and Toxics.

Therefore, for the reasons stated in the preamble, EPA proposes to amend 40 CFR chapter I as follows:

PART 721—SIGNIFICANT NEW USES OF CHEMICAL SUBSTANCES

■ 1. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

■ 2. Add §§ 721.11829 through 721.11862 to subpart E to read as follows:

Subpart E—Significant New Uses for Specific Chemical Substances

Sec.

* * * * *

721.11829 Unsaturated dicarboxylic acid polymer with 2-(dialkylamino)alkyl-alkyl-alkanoate, N,N-dialkyl-alkene amide, 2-propenamide and salt of alkyl-substituted alkene sulfonate (generic).

721.11830 Octadecanoic acid, 12-hydroxy-, polymer with aziridine, 2-oxepanone and tetrahydro-2H-pyran-2-one, reaction products with disubstituted heteropolycyclic (generic).

721.11831 Ethyl 4-alkyl-2-oxocycloalkanecarboxylate (generic).

721.11832 Sulfonium, tricarboxylic-, polyfluoropolyhydro-2,2-dicarboxylic-4,7-methano-1,3-benzodioxole-5-alkanesulfonate (1:1) (generic).

721.11833 Sulfonium, tricarboxylic-, 2-[3,5-bis(haloalkyl)phenyl]-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2-alkyl-4,7-alkano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

721.11834 Sulfonium, tricarboxylic-, 2-(4-alkoxyhalocarbomonocyclic)-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

721.11835 Sulfonium, monocarbocyclicbisarylpolyhaloalkyl, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

721.11836 Sulfonium, bis(3,4-polyhalocarbocyclic)aryl-, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

721.11837 Sulfonium, tricarboxylic-, 2-heteroatom-substituted-4-(halocarbocyclic)carboxylate (1:1) (generic).

721.11838 Fatty acids, reaction products with polyamine-polyacid polymer and fatty acid (generic).

721.11839 Poly[oxy(methyl-1,2-ethandiyl)], .alpha.,-(dithiocarboxy)-.omega.-(1-methylethoxy)-, sodium salt (1:1).

721.11840 Poly[oxy(methyl-1,2-ethandiyl)], .alpha.,-(dithiocarboxy)-.omega.-butoxy-, sodium salt (1:1).

721.11841 1,4-Cyclohexanedicarboxylic acid, 1,4-dinonyl ester, branched and linear.

721.11842 1,3-Butadiene, homopolymer, hydrogenated, 2-(ethenyl)ethyl-terminated.

721.11843 Lignin, modified, reaction products with alkylamine by-products, hydrochlorides (generic).

721.11844 Lignin, modified, reaction products with alkylamine by-products (generic).

721.11845 Sulfonium, triphenyl-, salt with fluoroalkyl 5-sulfobicyclo[2.2.1]heptane carboxylate (1:1) (generic).

721.11846 Triazine-trione, tris(isocyanatoalkyl)-, polymer with substituted diisocyanato alkylcarbomonocycle, hydro-hydroxypoly(oxyalkanediy) and hydro-hydroxypoly[oxy(alkyl-alkanediy)], aliphatic alkyl amine-blocked (generic).

721.11847 Lithium metal oxide (generic).

721.11848 Soybean oil, oleic acid-high, epoxidized.

721.11849 Sulfonium, (halocarbomonocycle)diphenyl-, salt with 1-heterosubstituted-2-methylalkyl trihalobenzoate (1:1) (generic).

721.11850 1,6-Disubstituted hexane (generic).

721.11851 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-tetradecyl-, chloride (1:2); 1,3-Propanediaminium, N1-hexadecyl-2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-, chloride (1:2); 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecyl-, chloride (1:2); 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecen-1-yl, chloride (1:2).

721.11852 Alkanes, branched and linear (generic).

721.11853 Polyester with 1,4-benzenedicarboxylic acid, 1,4-dimethyl 1,4-benzenedicarboxylate, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis(isocyanatobenzene) (generic).

721.11854 Polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

721.11855 Polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-

methylenebis(isocyanatobenzene) (generic).

721.11856 Aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (generic).

721.11857 Fluoroheteroacid, metal salt (generic).

721.11858 Hydrocarbons, C5-10.

721.11859 Sulfonium, tricarboxylic-, alpha, alpha, beta, beta-polyhalopolyhydro-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

721.11860 Sulfonium, tricarboxylic-, 2-heteroatom-substituted-4-alkylcarbomonocyclecarboxylate (1:1) (generic).

721.11861 Sulfonium, tricarboxylic-, salt with [polyhydro-2-alkyl-5-(polyhalo-2-heteroalkyl)-alkano-1,3-heteropolycyclic]alkyl polyhaloaryl ester (1:1) (generic).

721.11862 Sulfonium, tricarboxylic-, alpha, alpha, beta, beta-polyhalopolyhydro-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

* * * * *

§ 721.11829 Unsaturated dicarboxylic acid polymer with 2-(dialkylamino)alkyl-alkyl-alkanoate, N,N-dialkyl-alkene amide, 2-propenamide and salt of alkyl-substituted alkene sulfonate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as unsaturated dicarboxylic acid polymer with 2-(dialkylamino)alkyl-alkyl-alkanoate, N,N-dialkyl-alkene amide, 2-propenamide and salt of alkyl-substituted alkene sulfonate (PMN P-20-96) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this

substance may cause: skin corrosion and eye irritation. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to manufacture the substance unless the percentage of the confidential reactant listed in the Order represents 10% or less (by weight) of the substance.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=490.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11830 Octadecanoic acid, 12-hydroxy-, polymer with aziridine, 2-oxepanone and tetrahydro-2H-pyran-2-one, reaction products with disubstituted heteropolycycle (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as octadecanoic acid, 12-hydroxy-, polymer with aziridine, 2-oxepanone and tetrahydro-2H-pyran-2-one, reaction products with disubstituted heteropolycycle (PMN P-21-2) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health

(NIOSH) assigned protection factor (APF) of at least 50 during non-spray applications or 10,000 during spray applications. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=50.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11831 Ethyl 4-alkyl-2-oxocycloalkanecarboxylate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as ethyl 4-alkyl-2-oxocycloalkanecarboxylate (PMN P-21-19) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance when the substance is present at less than 0.5% in formulation.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes

of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(f). It is a significant new use to use the substance other than as a fragrance ingredient for making fragrance oils by blending (mixing) with other fragrance ingredients. It is a significant new use to use the substance at a concentration of 0.5% (by weight) or greater in consumer products.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11832 Sulfonium, tricarboxylic-, polyfluoropolyhydro-2,2-dicarboxylic-4,7-methano-1,3-benzodioxole-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarboxylic-, polyfluoropolyhydro-2,2-dicarboxylic-4,7-methano-1,3-benzodioxole-5-alkanesulfonate (1:1) (PMN P-21-48) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering

control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity.

Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11833 Sulfonium, tricarboxylic-, 2-[3,5-bis(haloalkyl)phenyl]-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2-alkyl-4,7-alkano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarboxylic-, 2-[3,5-bis(haloalkyl)phenyl]-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2-alkyl-4,7-alkano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (PMN P-21-130) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article

used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: eye irritation, acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11834 Sulfonium, tricarboxylic-, 2-(4-alkoxyhalocarbomonocyclic)-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarboxylic-, 2-(4-alkoxyhalocarbomonocyclic)-.alpha., .alpha., .beta., .beta.-polyhalopolyhydro-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1)

(PMN P-21-131) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11835 Sulfonium, monocarbocyclicbisarylpolymethacrylate, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, monocarbocyclicbisarylpolymethacrylate, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (PMN P-21-177) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part

apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11836 Sulfonium, bis(3,4-polyhalocarbocyclic)aryl-, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, bis(3,4-polyhalocarbocyclic)aryl-, .alpha., .alpha., .beta., .beta.-polyhalopolyhydro-2,2-diaryl-4,7-methano-1,3-heteropolycyclic-5-alkanesulfonate (1:1) (PMN P-21-204) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the

substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11837 Sulfonium, tricarbo-cyclic-, 2-heteroatom-substituted-4-(halocarbocyclic)carboxylate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarbo-cyclic-, 2-heteroatom-substituted-4-(halocarbocyclic)carboxylate (1:1) (PMN P-22-12) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: eye irritation, acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized

System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11838 Fatty acids, reaction products with polyamine-polyacid polymer and fatty acid (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as fatty acids, reaction products with polyamine-polyacid polymer and fatty acid (PMN P-21-55) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance when they have been completely reacted (cured).

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (a)(4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), and (5). For purposes of § 721.72(e), the concentration is set at

1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture the substance in a manner that results in an amine value of more than 127 mg KOH/g.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11839 Poly[oxy(methyl-1,2-ethandiyl)], .alpha.-(dithiocarboxy)-.omega.-(1-methylethoxy)-, sodium salt (1:1).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as poly[oxy(methyl-1,2-ethandiyl)], .alpha.-(dithiocarboxy)-.omega.-(1-methylethoxy)-, sodium salt (1:1) (PMN P-21-71; CASRN 2304726-53-0) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (a)(4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For the purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause skin irritation, eye irritation, reproductive toxicity, and

specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80 (f). It is a significant new use to use the substance other than as a floatation aid in sulfide ore mining at mines with valid permits (State, Federal, or Tribal) for operations and waste handling.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=150.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11840 Poly[oxy(methyl-1,2-ethandiyl)], .alpha.-(dithiocarboxy)-.omega.-butoxy-, sodium salt (1:1).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as poly[oxy(methyl-1,2-ethandiyl)], .alpha.-(dithiocarboxy)-.omega.-butoxy-, sodium salt (1:1) (PMN P-21-72; CASRN 2304726-56-3) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (a)(4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a)

through (f), (g)(1), (3), and (5). For the purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause skin irritation, eye irritation, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(f). It is a significant new use to use the substance other than as a floatation aid in sulfide ore mining at mines with valid permits (State, Federal, or Tribal) for operations and waste handling.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=150.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11841 1,4-Cyclohexanedicarboxylic acid, 1,4-dinonyl ester, branched and linear.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,4-cyclohexanedicarboxylic acid, 1,4-dinonyl ester, branched and linear (PMN P-21-73; CASRN 2449089-78-3) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely bound in a PVC article.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes

of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For the purposes of § 721.72(e) the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: reproductive toxicity and specific target organ toxicity. For the purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to process or use the substance other than as a plasticizer in polyvinyl chloride (PVC) articles. It is a significant new use to process the substance for use in a consumer product.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11842 1,3-Butadiene, homopolymer, hydrogenated, 2-(ethenyloxy)ethyl-terminated.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,3-butadiene, homopolymer, hydrogenated, 2-(ethenyloxy)ethyl-terminated (PMN P-21-74; CASRN 2511154-73-5) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative

control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: respiratory sensitization, skin sensitization, germ cell mutagenicity, specific target organ toxicity, and reproductive toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(k) and (o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11843 Lignin, modified, reaction products with alkylamine by-products, hydrochlorides (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as lignin, modified, reaction products with alkylamine by-products, hydrochlorides (PMN P-21-89) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For the purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(ii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure. It is a significant new use to manufacture, process, or use the substance in any manner that results in direct air releases to the environment except during loading or unloading of transport containers.

(iii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=2.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (c), (f) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11844 Lignin, modified, reaction products with alkylamine by-products (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as lignin, modified, reaction products with alkylamine by-products (PMN P-21-90) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For the purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized

System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure. It is a significant new use to manufacture, process, or use the substance in any manner that results in direct air releases to the environment except during loading or unloading of transport containers.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=12.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11845 Sulfonium, triphenyl-, salt with fluoroalkyl 5-sulfobicyclo[2.2.1]heptane carboxylate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, triphenyl-, salt with fluoroalkyl 5-sulfobicyclo[2.2.1]heptane carboxylate (1:1) (PMN P-21-124) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may

cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f) and (t). It is a significant new use to use the substance other than as an onium salt that generates strong or weak acid in lithography process. It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11846 Triazine-trione, tris(isocyanatoalkyl)-, polymer with substituted diisocyanato alkylcarbomonocycle, hydro-hydroxypoly(oxyalkanediyl) and hydro-hydroxypoly[oxy(alkyl-alkanediyl)], aliphatic alkyl amine-blocked (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as triazine-trione, tris(isocyanatoalkyl)-, polymer with substituted diisocyanato alkylcarbomonocycle, hydro-hydroxypoly(oxyalkanediyl) and hydro-hydroxypoly[oxy(alkyl-alkanediyl)], aliphatic alkyl amine-blocked (PMN P-21-137) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as

required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, skin irritation, skin sensitization, serious eye damage, eye irritation, genetic toxicity, reproductive toxicity, specific target organ toxicity, and respiratory irritation. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=15.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11847 Lithium metal oxide (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as lithium metal oxide (PMN P-21-138) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures)

shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000 if the dust control capture and reduction rate is at less than 90% or at least 50 if the dust control capture and reduction rate is at least 90%. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), (g)(1), and (5). For the purposes of § 721.72(e) the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: reproductive toxicity and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f) and (o). It is a significant new use to use the substance other than in the manufacture of batteries.

(iv) *Disposal.* Requirements as specified in § 721.85(a)(1) and (2), (b)(1) and (2), and (c)(1) and (2).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (j) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11848 Soybean oil, oleic acid-high, epoxidized.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as soybean oil, oleic acid-high, epoxidized (PMN P-21-140; CASRN 2410202-82-1) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative

control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 0.1%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, respiratory sensitization, carcinogenicity, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* It is a significant new use to use the substance other than as a chemical intermediate to prepare acrylate-containing oil, which is subsequently polymerized to prepare a viscosity modifier for asphalt. It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11849 Sulfonium, (halocarbo monocycle)diphenyl-, salt with 1-heterosubstituted-2-methylalkyl trihalobenzoate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, (halocarbo monocycle)diphenyl-, salt with 1-heterosubstituted-2-methylalkyl trihalobenzoate (1:1) (PMN P-21-180) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic

processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11850 1,6-Disubstituted hexane (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as 1,6-disubstituted hexane (PMN P-21-199) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the

substance after they have been reacted or destroyed.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, respiratory sensitization, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. For the purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposures.

(iv) *Disposal.* It is a significant new use to dispose of the substance other than by hazardous waste incineration.

(v) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11851 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-tetradecyl-, chloride (1:2); 1,3-Propanediaminium, N1-hexadecyl-2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-, chloride (1:2); 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecyl-, chloride (1:2); 1,3-Propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecen-1-yl, chloride (1:2).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1,3-propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-tetradecyl-, chloride (1:2); 1,3-propanediaminium, N1-hexadecyl-2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-, chloride (1:2); 1,3-propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecyl-, chloride (1:2); 1,3-propanediaminium, 2-hydroxy-N1,N1,N1,N3,N3-pentamethyl-N3-octadecen-1-yl, chloride (1:2) (PMN P-21-201; CASRNs 1622255-87-1; 63560-76-9; 197862-16-1; and 2748681-38-9) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, skin irritation, serious eye damage, eye irritation, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a

significant new use to manufacture, process, or use the substance in any manner or method that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=21.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11852 Alkanes, branched and linear (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkanes, branched and linear (PMN P-21-206) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into a fuel.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b) and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture, process, or use the substance other than as a fuel, fuel additive, or regulated blendstock subject to 40 CFR parts 79 or 1090, including as a component of gasoline or ethanol base fuel (E85).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable

to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11853 Polyester with 1,4-benzenedicarboxylic acid, 1,4-dimethyl 1,4-benzenedicarboxylate, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyester with 1,4-benzenedicarboxylic acid, 1,4-dimethyl 1,4-benzenedicarboxylate, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[isocyanatobenzene] (PMN P-22-29) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, respiratory sensitization, skin sensitization, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11854 Polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[4-isocyanatobenzene] (PMN P-22-30) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, respiratory sensitization, skin sensitization, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a

significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11855 Polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyester with 1,4-benzenedicarboxylic acid, 2,2-dimethyl-1,3-propanediol, dodecanedioic acid, 1,2-ethanediol, aliphatic polyester, 3-hydroxy-2,2-dimethylpropyl 3-hydroxy-2,2-dimethylpropanoate, 1,3-isobenzofurandione and 1,1'-methylenebis[isocyanatobenzene] (PMN P-22-31) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, respiratory sensitization, skin sensitization, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and

Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11856 Aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic sulfonium tricyclo fluoroalkyl sulfonic acid salt (PMN P-22-55) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: skin irritation, acute toxicity, skin corrosion, skin sensitization, eye irritation, serious eye damage, specific target organ toxicity, genetic toxicity, and reproductive (developmental) toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA

Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f) and (t). It is a significant new use to use the substance other than as a photoacid generator. It is a significant new use to import the substance other than in solution, unless in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11857 Fluoroheteroacid, metal salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as fluoroheteroacid, metal salt (PMN P-22-69) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into an article.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, serious eye damage, skin

sensitization, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=380.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11858 Hydrocarbons, C5-10.

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance identified as hydrocarbons, C5-10 (PMN P-22-147; CASRN 2779559-23-6) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been incorporated into gasoline.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a).

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(f). It is a significant new use to import, process, or use the substance other than as a feedstock for gasoline containing no more than 64% of the substance where the imported gasoline mixture is regulated under

applicable EPA regulations for fuels, fuel additives, and regulated blendstocks (40 CFR part 1090), fuel additives, and regulated blendstocks (40 CFR part 1090), registration of fuels and fuel additives (40 CFR part 79).

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11859 Sulfonium, tricarbo-cyclic-, alpha, alpha, beta, beta-polyhalopolyhydro-heteropolycyclic-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarbo-cyclic-, alpha, alpha, beta, beta-polyhalopolyhydro-heteropolycyclic-5-alkanesulfonate (1:1) (PMN P-22-150) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA

Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 9 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11860 Sulfonium, tricarbo-cyclic-, 2-heteroatom-substituted-4-alkylcarbomonocyclecarboxylate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarbo-cyclic-, 2-heteroatom-substituted-4-alkylcarbomonocyclecarboxylate (1:1) (PMN P-22-152) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may

cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 9 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11861 Sulfonium, tricarbo-cyclic-, salt with [polyhydro-2-alkyl-5-(polyhalo-2-heteroalkyl)- alkan-1,3-hetropolycyclic] alkyl polyhaloaryl ester (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarbo-cyclic-, salt with [polyhydro-2-alkyl-5-(polyhalo-2-heteroalkyl)- alkan-1,3-hetropolycyclic]alkyl polyhaloaryl ester (1:1) (PMN P-22-161) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as

required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, carcinogenicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 9 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11862 Sulfonium, tricarbo-cyclic-, alpha, alpha, beta, beta-polyhalopolyhydro-hetropolycyclic-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarbo-cyclic-, alpha, alpha, beta, beta-polyhalopolyhydro-hetropolycyclic-5-alkanesulfonate (1:1) (PMN P-22-177) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not

apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 9 months.

(b) *Specific requirements.* The provisions of subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List May 29, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to https://portalguard.gsa.gov/__layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
