Vol. 89

Wednesday,

No. 167

August 28, 2024

Book 1 of 2 Books

Pages 68769–68984

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.federalregister.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.govinfo.gov, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$860 plus postage, or \$929, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

Proclamation 10793 of August 23, 2024

The President

Overdose Awareness Week, 2024

By the President of the United States of America**A Proclamation**

During Overdose Awareness Week, we mourn those who have lost their lives to overdose deaths. We acknowledge the devastating toll the opioid epidemic has taken on individuals, families, and communities across America. We reflect on the progress we have made so far in reducing the number of annual overdose deaths and protecting American lives—and how much more there is to do. And we reaffirm our commitment to doing more to disrupt the supply of fentanyl and other synthetic opioids and support those who suffer with substance use disorder and their families in all of our communities.

My Administration made beating the opioid epidemic a key priority in my Unity Agenda for the Nation, calling for Republicans and Democrats to work together to stop fentanyl from flowing into our communities, hold those who brought it here accountable, and deliver life-saving medication and care across America.

We are working to tackle this crisis through a comprehensive approach, including by expanding access to evidence-based prevention, treatment, harm reduction, and recovery support services as well as reducing the supply of illicit drugs. We have expanded access to life-saving treatments, like medications to treat opioid use disorder, and have increased the number of health care providers who can prescribe these medications by 15 times. In February 2024, the Department of Health and Human Services issued a rule to comprehensively update the regulations in governing Opioid Treatment Programs for the first time in 20 years—removing barriers to the treatment of substance use disorder and expanding access to care. My Administration has made historic investments in the State Opioid Response and Tribal Opioid Response programs to improve prevention; expand treatment; and deliver free, life-saving medications across America. Already, this program has delivered nearly 10 million kits of opioid overdose reversal medications, such as naloxone.

We also continue to fight the stigmatization that surrounds substance use and accidental overdose so that people feel comfortable reaching out for help when they need it. Naloxone is now available over-the-counter for people to purchase at their local grocery stores and pharmacies. We also launched the White House Challenge to Save Lives from Overdose and several awareness campaigns, raising awareness and securing commitments from local governments and cross-sector organizations to increase training on and access to opioid overdose reversal medications in schools, worksites, transit systems, and other places where overdose may occur in our communities. My Fiscal Year 2025 Budget requests \$22 billion to expand substance use treatment and help more Americans achieve and stay in recovery.

Under my Administration, Federal law enforcement agents are keeping more deadly drugs out of our communities than ever before. We are seizing deadly drugs at our borders so that illicit drugs never reach our neighborhoods. Officials have stopped more illicit fentanyl at ports of entry over the last 2 fiscal years than in the previous 5 fiscal years combined. The Department of Justice has prosecuted leaders of the world's largest and

most powerful drug cartel along with thousands of drug traffickers. The Department of the Treasury has sanctioned more than 300 people and organizations involved in the global illicit drug trade. I have also deployed cutting-edge drug detection technology across our southwest border, and I continue to call on the Congress to strengthen border security, increase penalties on those who bring deadly drugs into our communities, and close loopholes that drug traffickers exploit. And in July 2024, I issued a National Security Memorandum that calls on all relevant Federal departments and agencies to work collaboratively to do even more than they are already doing to stop the supply of illicit fentanyl and other synthetic opioids into our country.

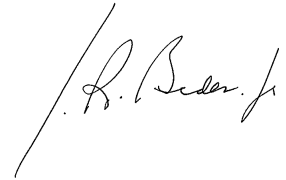

I am also committed to working with partners across the globe to address this crisis. Last year, I negotiated the re-launch of counternarcotics cooperation between the United States and the People's Republic of China—which has led to increased law enforcement coordination, increased efforts to tackle illicit financing of drug cartels, and increased regulation of certain precursor chemicals. I have increased counternarcotics cooperation with other key foreign governments; launched the Global Coalition to Address Synthetic Drug Threats, which brings together more than 150 countries in the fight against drug trafficking cartels; put in place new initiatives between the United States, Mexico, and Canada targeting the supply of illicit drugs; and made countering fentanyl and other synthetic opioids a key priority of the G7.

Now for the first time in 5 years, the number of overdose deaths in the United States has started to decline. But even one death is one too many, and far too many Americans continue to lose loved ones to fentanyl.

Today I grieve with all the families and friends who have lost someone to an overdose. This is a time to act. And this is a time to stand together—for all those we have lost and all the lives we can still save.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim August 25 through August 31, 2024, as Overdose Awareness Week. I call upon citizens, government agencies, civil society organizations, health care providers, and research institutions to raise awareness of substance use disorder so that our Nation can combat stigmatization, promote treatment, celebrate recovery, and strengthen our collective efforts to prevent overdose deaths. August 31 also marks Overdose Awareness Day, on which we honor and remember those who have lost their lives to the overdose epidemic.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of August, in the year of our Lord two thousand twenty-four, and of the Independence of the United States of America the two hundred and forty-ninth.

A handwritten signature in black ink, appearing to read "J. R. Biden, Jr.", written in a cursive style.

Presidential Documents

Proclamation 10794 of August 23, 2024

Women's Equality Day, 2024

By the President of the United States of America

A Proclamation

One hundred and four years ago, American women won the right to vote with the ratification of the 19th Amendment, bringing us closer to living up to our Nation's most fundamental values of dignity, fairness, freedom, and equality. On Women's Equality Day, we recognize the courage of generations of visionaries who fought tirelessly for the sacred cause of women's suffrage and all those who continue to work toward a more equitable future for women and girls in America.

The 19th Amendment marked a critical milestone in our Nation's history, but it did not guarantee the right to vote for all. For many women of color, that right would not be secured until decades later when the Voting Rights Act was passed in 1965. Today, our Nation is still facing relentless assaults on the sacred right to vote freely and fairly and to have every vote count. At the same time, women's fundamental rights are under attack, which undermines our democracy and our freedoms. These challenges serve as a critical reminder that our work as a Nation is never done—realizing the full promise of the 19th Amendment is as important today as ever before.

My Administration is committed to upholding the vision of suffragists, who understood that equality at the ballot box was a critical step to advancing rights and opportunities for American women. Over the past three and a half years, Vice President Harris and I have leveraged the full force of the Federal Government to protect those rights and remove barriers that prevent women and girls from reaching their full potential. We are defending reproductive freedom, delivering the highest women's prime-age labor force participation and the narrowest gender pay gap on record, making historic investments in the care economy, fighting to end violence against women, increasing access to educational opportunity, and promoting women's representation, leadership, and human rights here at home and around the globe.

Guaranteeing women access to affordable, quality health care has also been a top priority for my Administration. That is why we have been working to address the maternal health crisis, with Vice President Kamala Harris announcing our Blueprint for Addressing the Maternal Health Crisis. Furthermore, in addition to issuing an Executive Order directing the most comprehensive set of executive actions to expand research on women's health, last year the First Lady and I were proud to launch the first-ever White House Initiative on Women's Health Research, and the Advanced Research Projects Agency for Health has dedicated \$100 million to solve challenges in women's health. As part of the Biden Cancer Moonshot, we are taking significant actions to save and improve the lives of the millions of American women facing cancer. During my first year in office, we expanded coverage under the Affordable Care Act, which requires insurers to pay for cancer screenings and primary care visits, including those that will detect cancer early when outcomes are best. Furthermore, I have taken action to safeguard access to reproductive care—and the Vice President and I will keep calling on the Congress to restore *Roe v. Wade* as the law of the land. Americans

show time and again that they agree that health care decisions should be made by a woman with the help of her doctor, not politicians—and we will continue fighting to ensure that women can access the health care they need in every State.

To be the strongest economy in the world, we cannot leave women—who make up half our workforce—behind. Through our American Rescue Plan, my Administration made the biggest investment in child care ever, helping over 225,000 child care programs that serve 10 million children across the country keep their doors open and enabling parents, especially mothers, to enter or remain in the workforce. We have taken steps to advance pay equity and transparency for Federal employees and contractors, eliminating practices that allow pay discrimination to follow workers from job to job and helping workers better negotiate and reduce pay inequities. We are also ensuring that women have access to the millions of good-paying jobs created by the Bipartisan Infrastructure Law, the CHIPS and Science Act, and the Inflation Reduction Act.

Women and girls deserve to live free from violence and fear. Next month marks 30 years since the Congress passed the Violence Against Women Act (VAWA)—a historic law that I championed and wrote. VAWA gave our Government more comprehensive tools to prevent and prosecute sexual assault, provide support for survivors, and save countless women's lives. Today, this law, which I reauthorized in 2022, has record funding levels and grant programs. In addition, my Administration is working to address online harassment and abuse, including image-based sexual abuse generated by artificial intelligence. And we restored and strengthened vital protections under Title IX for students who have experienced campus sexual assault and other forms of sex discrimination in schools and universities.

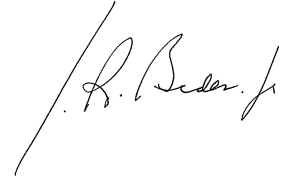

Since I took office, I have been proud to serve alongside the first woman ever elected as Vice President, Kamala Harris, and to have appointed women to the highest levels of my Administration, including a record number of female Cabinet Secretaries. I established the White House Gender Policy Council to advance the rights of women and girls at home and abroad. My Administration released the first-ever National Strategy on Gender Equity and Equality. And during Women's History Month this year, I signed an Executive Order to increase the representation of women's history in the National Park System and to help honor the legacy and contributions of women and girls to our country.

My Administration will continue to fight for every American's sacred right to vote—carrying on the legacy of the suffragists we celebrate today. I continue to call on the Congress to pass the John Lewis Voting Rights Advancement Act and the Freedom to Vote Act to restore and expand access to the ballot and prevent voter suppression—because every American's voice deserves to be heard.

We are making tremendous progress, but more must be done to ensure equal rights and opportunity for women and girls. I urge the Congress to recognize the ratification of the Equal Rights Amendment and affirm the fundamental truth that all Americans should have equal rights and protections under the law. This Women's Equality Day, let us recommit to building a country and a world where our daughters have the same opportunities as our sons. Because when women thrive, we all thrive.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim August 26, 2024, as Women's Equality Day. I call upon the people of the United States to celebrate and continue to build on our country's progress toward gender equality and to defend and strengthen the right to vote.

IN WITNESS WHEREOF, I have hereunto set my hand this twenty-third day of August, in the year of our Lord two thousand twenty-four, and of the Independence of the United States of America the two hundred and forty-ninth.

A handwritten signature in black ink, appearing to read "J. R. Biden Jr.", written in a cursive style.

Rules and Regulations

Federal Register

Vol. 89, No. 167

Wednesday, August 28, 2024

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

[Docket No. FAA-2024-0732; Airspace Docket No. 24-ASW-5]

RIN 2120-AA66

Establishment of Class E Airspace; Utopia, TX

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This action establishes Class E airspace at Utopia, TX. The FAA is taking this action to support new public instrument procedures.

DATES: Effective date 0901 UTC, October 31, 2024. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order JO 7400.11 and publication of conforming amendments.

ADDRESSES: A copy of the Notice of Proposed Rulemaking (NPRM), all comments received, this final rule, and all background material may be viewed online at www.regulations.gov using the FAA Docket number. Electronic retrieval help and guidelines are available on the website. It is available 24 hours each day, 365 days each year.

FAA Order JO 7400.11H, Airspace Designations and Reporting Points, and subsequent amendments can be viewed online at www.faa.gov/air_traffic/publications/. You may also contact the Rules and Regulations Group, Office of Policy, Federal Aviation Administration, 800 Independence Avenue SW, Washington DC 20591; telephone: (202) 267-8783.

FOR FURTHER INFORMATION CONTACT: Raul Garza Jr., Federal Aviation Administration, Operations Support Group, Central Service Center, 10101 Hillwood Parkway, Fort Worth, TX 76177; telephone (817) 222-5874.

SUPPLEMENTARY INFORMATION:

Authority for This Rulemaking

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority. This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes Class E airspace extending upward from 700 feet above the surface at Brushy Creek Ranch Airport, Utopia, TX, to support instrument flight rule operations at this airport.

History

The FAA published an NPRM for Docket No. FAA 2024-0732 in the **Federal Register** (89 FR 34172; April 30, 2024), proposing to establish the Class E airspace at Utopia, TX. Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal to the FAA. No comments were received.

Differences From the NPRM

An FAA database review noted that the incorrect airport name was used in the NPRM. This Final Rule replaces the incorrect airport name with the correct airport name,; Brushy Creek Ranch Airport. This action does not change the airspace dimensions or operating requirements.

Incorporation by Reference

Class E airspace designations are published in paragraph 6005 of FAA Order JO 7400.11, Airspace Designations and Reporting Points, which is incorporated by reference in 14 CFR 71.1 on an annual basis. This document amends the current version of that order, FAA Order JO 7400.11H, dated August 11, 2023 and effective September 15, 2023. FAA Order JO 7400.11H is publicly available as listed in the **ADDRESSES** section of this document. These amendments will be published in the next update to FAA Order JO 7400.11.

FAA Order JO 7400.11H lists Class A, B, C, D, and E airspace areas, air traffic service routes, and reporting points.

The Rule

This action amends 14 CFR part 71 by establishing Class E airspace upward from 700 feet above the surface within a 10-mile radius of Brushy Creek Ranch Airport, Utopia, TX.

This action supports new public instrument procedures.

Regulatory Notices and Analyses

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore: (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Environmental Review

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1F, "Environmental Impacts: Policies and Procedures," paragraph 5-6.5.a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

Lists of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

■ 1. The authority citation for 14 CFR part 71 continues to read as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p.389.

§ 71.1 [Amended]

■ 2. The incorporation by reference in 14 CFR 71.1 of FAA Order JO 7400.11H, Airspace Designations and Reporting Points, dated August 11, 2023, and effective September 15, 2023, is amended as follows:

Paragraph 6005 Class E Airspace Areas Extending Upward From 700 Feet or More Above the Surface of the Earth.

* * * * *

ASW TX E5 Utopia, TX [Establish]

Brushy Creek Ranch Airport, TX
(Lat 29°42'49" N, long 99°32'44" W)

That airspace extending upward from 700 feet above the surface within a 10-mile radius of the Brushy Creek Ranch Airport.

BILLING CODE 4710–25–P

DEPARTMENT OF STATE

22 CFR Part 150

[Public Notice: 12475]

RIN 1400–AF85

Diplomatic Agent-Level Immunity

AGENCY: Department of State.

ACTION: Final rule.

SUMMARY: The Vienna Convention on Diplomatic Relations defines “diplomatic agent” and the level of immunity enjoyed by a diplomatic agent. However, because some other individuals who are not themselves “diplomatic agents” as defined in the VCDR also enjoy what is known as “diplomatic agent-level immunity,” the Department of State is promulgating this regulation to clearly and correctly define which foreign persons enjoy diplomatic agent-level immunity within the United States and clarify that the determination of who enjoys diplomatic agent-level immunity and lesser status-based immunity, which is both legal and factual in nature, is made by the Department of State.

DATES: This rule is effective on August 28, 2024.

FOR FURTHER INFORMATION CONTACT: Clifton M. Johnson, Diplomatic Law and Litigation, Office of the Legal Adviser, Department of State, Washington, DC 20520, (202) 647–1075, or johnsoncm5@state.gov (for information regarding this

final rule); Office of Foreign Missions, Department of State, Washington, DC 20520, or OFM-Policy@state.gov (for information regarding diplomatic status and immunities in specific instances).

SUPPLEMENTARY INFORMATION: Pursuant to Article II of the Constitution which provides the President with the right to receive ambassadors and other public ministers, the Secretary of State’s role to execute the foreign policy of the United States, specific provisions of the U.S. Code discussed below, and well established case law as noted below, the U.S. Department of State is uniquely positioned as the sole United States government agency that accepts the accreditation of foreign diplomats, and is authorized to determine and certify the diplomatic status of a foreign individual and the immunity enjoyed by that individual.

This regulation defines who enjoys diplomatic agent-level immunity and clarifies the comprehensive scope of diplomatic agents’ immunity for the non-exclusive purpose of facilitating judicial and administrative proceedings in the United States. The regulation also clarifies that the determination of who enjoys diplomatic agent-level immunity and lesser status-based immunity is one that requires application of law to facts and is made by the Department of State—not any other federal agency or by any foreign mission in the United States. Individuals enjoying diplomatic agent-level immunity are not subject to the criminal jurisdiction of the United States, and are immune from the civil or administrative jurisdiction of the United States, with limited exceptions. Such immunity is enjoyed by diplomatic agents at bilateral diplomatic missions pursuant to the Vienna Convention on Diplomatic Relations (VCDR, 23 U.S.T. 3227; see Articles 29 and 31 in particular); certain senior officials of the United Nations pursuant to Article V, Section 19 of the Convention on Privileges and Immunities of the United Nations of 1970 (21 U.S.T. 1418) (“UN Convention”); diplomatic staff at Permanent Missions of Member States to the United Nations pursuant to Article V, Section 15 of the United Nations Headquarters Agreement of 1947 (1947 U.S.T. 529) and Article IV, Section 11 of the UN Convention; consular officers assigned to consulates of countries with which the United States has an enhanced immunities agreement that “enhances” their immunity to diplomatic agent-level; certain senior officials of and representatives to some international organizations (see, e.g., Agreement on Privileges and Immunities of the

Organization of American States (26 U.S.T. 1025) and Agreement on the Status of the North Atlantic Treaty Organization, National Representative and International Staff (33 U.S.T. 1272)); and others. Lesser forms of status-based immunity include administrative and technical staff immunity as set forth in the VCDR, which is generally coextensive with diplomatic-agent level immunity with the exception of civil immunity which is more limited (for official acts only); consular officer immunity as set forth in the Vienna Convention on Consular Relations (VCCR, 21 U.S.T. 77), which entails immunity for official acts and personal inviolability from arrest absent a warrant for grave crimes; and consular employee immunity as set forth in the VCCR, which entails immunity for official acts.

Accordingly, the intent of the regulation is to strengthen the ability of law enforcement, the courts, foreign governments, and the public to recognize and rely upon authoritative determinations by the United States of the diplomatic status and corresponding level of status-based immunity enjoyed by foreign individuals. It is meant to discourage reliance on outdated or incomplete documentation of diplomatic status or assertions by persons other than Department of State officials that may lead to inaccurate understandings of who enjoys immunity and the scope of that immunity, and to direct interested parties to instead consult with the Department of State for such information. By doing so, the regulation will help ensure that individuals entitled to immunity will be treated accordingly and reduce the risk that individuals who erroneously or misleadingly assert such status are accorded immunity to which they are not entitled. The regulation is necessary to ensure the Secretary of State can continue to meet international and domestic legal obligations to respect the immunities accredited foreign diplomats enjoy. Specifically, the VCDR and various bilateral treaties enhancing immunities of individuals other than diplomatic agents establish immunities that the United States is obligated to respect under international law. Additionally, the Diplomatic Relations Act of 1978 (22 U.S.C. 254c(c)) establishes immunities for members of foreign missions and their families for foreign States not party to the VCDR. The Secretary and the Department of State are uniquely positioned to fulfill those responsibilities in this manner.

The Department of State has legal authority to promulgate this regulation. Article II, Section 3 of the United States

Constitution directs the President to “receive Ambassadors and other public Ministers.” 22 U.S.C. 2656 grants the Secretary of State authority to perform duties relative to matters respecting foreign affairs, including duties regarding applications and requests from foreign public ministers or other foreigners. Pursuant to this statutory authority, as well as Article 9 of the VCDR and Article 23 of the VCCR, the Department accepts accreditation of members of foreign diplomatic or consular missions at its discretion. Additionally, Article 10 of the VCDR and Article 24 of the VCCR provide that the Ministry of Foreign Affairs specifically, or the authority designated by that ministry (per the VCCR) or such other ministry as may be agreed (per the VCDR), shall be notified of the appointment of members of a diplomatic or consular mission. Under the VCDR, the Department of State has the broad discretion to classify diplomats. See *Abdulaziz v. Metro. Dade Cty.*, 741 F.2d 1328, 1330 (11th Cir. 1984). Additionally, pursuant to 22 U.S.C. 2656 and the United Nations Headquarters Agreement of 1947, the Department of State also accords privileges and immunities to foreign individuals accredited to the United Nations.

With respect to determining the status-based immunity that accredited foreign individuals and their family members enjoy, the Diplomatic Relations Act of 1978 (22 U.S.C. 254c(a)) authorizes the President to, “on the basis of reciprocity and under such terms and conditions as he may determine, specify privileges and immunities for members of the mission, their families and the diplomatic couriers of any sending state which result in more favorable or less favorable treatment than is provided under the Vienna Convention.” The President has delegated authority to prescribe regulations for that purpose to the Secretary of State through Executive Order 12101 (43 FR 54195), amended by Executive Order 12608 (52 FR 34617). The Diplomatic Relations Act of 1978, as amended (22 U.S.C. 254c(b)) also authorizes the Secretary of State, on the basis of reciprocity and under such terms and conditions as the Secretary may determine, with the concurrence of the Attorney General, to specify privileges and immunities for a consular post, the members of a consular post, and their families which result in more favorable or less favorable treatment than is provided in the VCCR. The Secretary’s determinations of the scope of the status-based immunity of foreign

individuals in that regard are made pursuant to international agreements with foreign governments that the Department of State negotiates, concludes, and interprets pursuant to 22 U.S.C. 254c(b), as well as the President’s Article II authority to speak as the sole organ of the government with respect to agreements regarding diplomatic relations, delegated to the Secretary. See 22 U.S.C. 2656; *United States v. Belmont*, 301 U.S. 324, 330 (1937). By according diplomatic agent-level immunity to foreign individuals, the Department of State is able to “contribute to the development of friendly relations among nations” and “to ensure the efficient performance of the functions of the diplomatic missions.” See *Hellenic Lines, Ltd. v. Moore*, 345 F.2d 978, 980 (D.C. Cir. 1965), citing the VCDR, preamble.

As the above authorities illustrate, the Department of State is authorized to and responsible for determining whether someone enjoys diplomatic agent-level immunity or other status-based immunity, consistent with the concurrence requirements of 22 U.S.C. 254c(b), as applicable. 22 U.S.C. 2651a authorizes the Secretary “to promulgate such rules and regulations as may be necessary to carry out the functions of the Secretary of State and the Department of State.” Clarifying that the Department of State is responsible for indicating which foreign individuals enjoy diplomatic agent-level immunity or lesser status-based immunity will reduce the risk of conflicting determinations of the diplomatic status and corresponding immunity foreign individuals and their family members may enjoy.

Courts have long held that the Department of State’s certification is “conclusive and dispositive evidence” of a diplomat’s entitlement to status-based immunity. See *United States v. Al-Hamdi*, 356 F.3d 564, 573 (4th Cir. 2004) (“[W]e hold that the State Department’s certification . . . is conclusive evidence as to the diplomatic status of an individual.”); *Abdulaziz v. Metro. Dade Cty.*, 741 F.2d 1328, 1339 (11th Cir. 1984) (“[O]nce the United States Department of State has regularly certified a visitor to this country as having diplomatic status, the courts are bound to accept that determination.”); *Muthana v. Pompeo*, 985 F.3d 893, 906–09 (D.C. Cir. 2021); *Carrera v. Carrera*, 174 F.2d 496, 497 (D.C. Cir. 1949) (“It is enough that an ambassador has requested immunity, that the State Department has recognized that the person for whom it was requested is entitled to it, and that

the Department's recognition has been communicated to the court.").

Regulatory Analysis

Administrative Procedure Act

This rulemaking is published as a final rule since it relates to a foreign affairs function of the United States and is exempt from notice-and-comment rulemaking. 5 U.S.C. 553(a)(1). Because this rulemaking is exempt from 5 U.S.C. 553, the provisions of 5 U.S.C. 553(d) are not applicable and this rule is effective immediately.

Regulatory Flexibility Act/Executive Order 13272: Small Business

Since this rule is exempt from notice and comment rulemaking, it is also exempt from the provisions of the Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.*

Congressional Review Act

This rulemaking does not constitute a major rule, as defined by 5 U.S.C. 804, for purposes of congressional review of agency rulemaking.

The Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1532, generally requires agencies to prepare a statement before proposing any rule that may result in an annual expenditure of \$100 million or more by State, local, or tribal governments, or by the private sector. This rule will not result in any such expenditure nor would it significantly or uniquely affect small governments.

Executive Orders 12372 and 13132: Federalism and Executive Order 13175, Impact on Tribes

This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Nor will the regulations have federalism implications warranting the application of Executive Orders 12372 and 13132. This rule will not have tribal implications, will not impose costs on Indian tribal governments, and will not pre-empt tribal law. Accordingly, the requirements of Executive Order 13175 do not apply to this rulemaking.

Executive Orders 12866, 13563, and 14094: Regulatory Review

This rule has been drafted in accordance with the principles of Executive Orders 12866 (as amended by Executive Order 14094) and 13563. This rule has been determined to be a

significant rulemaking under section 3 of Executive Order 12866, but not significant under section 3(f)(1). The benefits of the rule are qualitative, in that the rule provides clarity for foreign governments and their personnel, and secondarily for domestic officials and the public, on which individuals are entitled to diplomatic agent-level immunity and the scope of that immunity. Individuals enjoying diplomatic agent-level immunity are not subject to the criminal jurisdiction of the United States, and are immune from the civil or administrative jurisdiction of the United States, with limited exceptions. There are no costs to the rulemaking as the United States is already required to accord immunity to certain foreign individuals pursuant to its obligations under international law, including the VCDR. The rule does not expand or otherwise change the categories or number of individuals who enjoy diplomatic agent-level immunity. The promulgation of this rule will not increase the number of individuals accorded diplomatic agent-level immunity, as the rule will not affect the long-standing standards by which the Department determines a foreign individual's status and corresponding immunity. This rule will help ensure that law enforcement, the courts, foreign governments, and the public are aware of the need to consult the Department of State to understand foreign individuals' diplomatic status and corresponding immunity, which is relevant for, among other purposes, understanding whether their family members born in the United States were born subject to the jurisdiction of the United States under the Fourteenth Amendment of the U.S. Constitution. The rule would reduce the risk of erroneous determinations detrimental to the foreign relations of the United States. This rule also clarifies that the Department itself, in accordance with international and domestic law and taking into account the comprehensive information available to it related to diplomatic status, identifies the diplomatic status and corresponding immunities of foreign persons. In the absence of this rule, there is continued risk of immunity being extended or not extended erroneously, which can result in, *inter alia*, the inappropriate exercise of criminal jurisdiction over accredited diplomats; the inaccurate determination of lawful permanent residence status; and erroneous decisions on whether an individual was born in the United States subject to the jurisdiction of the Fourteenth Amendment. Therefore, the Department believes that the qualitative

benefits of this rulemaking are manifest, and there are few costs.

Executive Order 12988: Civil Justice Reform

This rule has been reviewed in light of sections 3(a) and 3(b)(2) of Executive Order 12988 to eliminate ambiguity, minimize litigation, establish clear legal standards, and reduce burden.

The Paperwork Reduction Act of 1995

Under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), Federal agencies must obtain approval from OMB for each collection of information they conduct, sponsor, or require through regulation. This rule neither establishes nor modifies any collection of information subject to the Paperwork Reduction Act.

List of Subjects in 22 CFR Part 150

Foreign officials; Immunity.

For the reasons set forth above the State Department amends title 22, chapter I by adding part 150 to subpart P to read as follows:

PART 150—DIPLOMATIC AGENT-LEVEL IMMUNITY

Sec.

- 150.1 Diplomatic Agent-Level Immunity.
- 150.2 Determination by the Department of State.
- 150.3 Severability.

Authority: 22 U.S.C. 2651a, 2656; 22 U.S.C. 254c; Vienna Convention on Diplomatic Relations, Done at Vienna April 18, 1961, 23 U.S.T. 3227; Vienna Convention on Consular Relations, Done at Vienna April 24, 1963, 21 U.S.T. 77; Convention on the Privileges and Immunities of the United Nations, 21 U.S.T. 1418.

§ 150.1 Diplomatic Agent-Level Immunity.

Diplomatic Agent-Level Immunity refers to the complete immunity from the criminal jurisdiction of the United States and to comprehensive immunity from the civil and administrative jurisdiction of the United States, and is enjoyed by:

(a) Foreign individuals accredited to the United States as "diplomatic agents" under the Vienna Convention on Diplomatic Relations, and the family members forming part of their households;

(b) Foreign individuals accredited to the United States as administrative and technical staff or service staff of diplomatic missions, or as consular officers of consular missions, and the family members forming part of their households, representing a foreign government with which the United States has an international agreement for the enhancement of immunity of

those individuals to diplomatic agent-level immunity; and

(c) Certain other foreign officials and representatives as determined by the Department of State.

§ 150.2 Determination by the Department of State.

The question of whether any particular person enjoys diplomatic agent-level immunity and is therefore not subject to the jurisdiction of the United States, or whether they enjoy lesser status-based immunity, on any particular date entails both factual and legal analysis, and is determined by the Department of State, in accordance with relevant international and domestic law.

§ 150.3 Severability.

The provisions of this part are separate and severable from one another. If any provision is stayed or determined to be invalid, it is the Department of State’s intention that the remaining provisions shall continue in effect.

Kevin E. Bryant,

Deputy Director, Office of Directives Management, U.S. Department of State.

ACTION: Final rule; correction.

SUMMARY: We, the Office of Surface Mining Reclamation and Enforcement (OSMRE), published a document in the *Federal Register* on March 18, 2024, approving in part, and not approving in part, amendments to the West Virginia regulatory program (the West Virginia program) under the Surface Mining

Control and Reclamation Act of 1977 (SMCRA or the Act).

DATES: This correction is effective August 28, 2024.

FOR FURTHER INFORMATION CONTACT: Mr. Michael Castle, Acting Director, Charleston Field Office, Telephone: (859) 260–3900. Email: *osm-chfo@osmre.gov*.

SUPPLEMENTARY INFORMATION: In the final rule published Monday, March 18, 2024, in FR Doc. 2024–05682, on page 19273, column 2, a revision to 30 CFR 948.12 (State statutory, regulatory, and proposed program amendment provisions not approved) that revised paragraph (k) will be corrected to instead add that provision as new paragraph (l). Additionally, we are revising paragraph (k) to reinstate the deferral as it existed in the CFR prior to the publication of the *Federal Register* document. *See also* 89 FR 2133 (Jan. 12, 2024). We are also adding paragraph 38–2–12.5.d of West Virginia’s regulations to the table at 30 CFR 948.15 (Approval of West Virginia regulatory program amendments). We had approved its deletion from West Virginia’s regulations in the March 18, 2024, *Federal Register*, but it was omitted from the table.

Federal Register Correction

§ 948.12 [Corrected]

■ 1. Effective April 17, 2024, in FR Doc. 2024–05682 at 89 FR 19262 in the issue of March 18, 2024, on page 19273, in the second column, amendatory instruction 2 is corrected to read: “Section 948.12 is amended by adding paragraph (l) to read as follows:”

■ 2. On page 19273, in the second and third columns, § 948.12 is corrected to read:

* * * * *

(k) We are not approving the following portions of provisions of the proposed program amendment that West Virginia submitted on May 15, 2017:

(1) We are deferring our decision on the deletion of provisions from W.Va. Code 22–3–11(g)(2) regarding the development of a long-range planning process for the selection and prioritization of sites to be reclaimed. We defer our decision until we make a determination on West Virginia’s related amendment docketed as WV–128–FOR,

which relates to the complete and accurate listing of all outstanding reclamation obligations (including water treatment on active permits in the State.

(2) [Reserved]

(1) We are not approving the following provisions of the proposed West Virginia program amendments dated May 2, 2018:

(1) At W.Va. Code 22–3–9, revisions substituting notice by newspaper with notice in a form and manner determined by the Secretary which may be electronic.

(2) At W.Va. Code 22–3–20, revisions substituting notice by newspaper with notice in a form and manner determined by the Secretary which may be electronic.

(3) At CSR 38–2–2.37, the removal of the definition “completion of reclamation”.

(4) At CSR 38–2–12.2.d., the elimination to the existing prohibition on bond release for any site specific bonding (*i.e.*, open-acre bonding) until all coal extraction is completed and the disturbed area is completely backfilled and regraded.

(5) At CSR 38–2–12.2.e., to restructure and revise existing approved language in this section and move it to CSR 38–2–12.2.a.4.

(6) At CSR 38–2–12.2.f., to move, unchanged, this existing language to CSR 38–2–12.2.d.

(7) At CSR 38–2–12.2.g., to move, unchanged, this existing language to CSR 38–2–12.2.f.

(8) At CSR 38–2–12.2.h., to renumber existing CSR 38–2–12.2.h to 12.2.i. and to insert it as a new CSR 38–2–12.2.h.

(9) At CSR 38–2–12.4.c., to eliminate an existing 180 day window for initiating reclamation operations to reclaim the site in accordance with the approved reclamation plan or modification thereof.

(10) At CSR 38–2–12.5., to delete subsection 12.5 of the West Virginia regulations, which directs WVDEP’s collection, analysis and reporting on sites where bond has been forfeited including, in particular, data relating to the water quality of water being discharged from forfeited sites.

§ 948.15 [Corrected]

■ 3. On page 19273, in the table, § 948.15 is corrected to read as follows:

* * * * *

Original amendment submission dates	Date of publication of final rule	Citation/description of approved provisions

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 100

[Docket No. USCG–2024–0753]

Special Local Regulation; Olympia Harbor Days Tugboat Races, Budd Inlet, WA

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a special local regulation for the Olympia Harbor Days Tugboat Races from 12 until 3 p.m. on September 1, 2024, to ensure the safety of life on the navigable waters of Budd Inlet during the event. During the enforcement period, no person or vessel may enter the regulated area without permission from the on-scene patrol craft.

DATES: The regulations in 33 CFR 100.1309 will be enforced from noon until 3 p.m. on September 1, 2024.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email Lieutenant Anthony Pinto, Waterways Management Division, U.S. Coast Guard Sector Puget Sound at 205–217–6051 or *SectorPugetSoundWWM@uscg.mil*.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce special local regulation in 33 CFR 100.1309 for the Olympia Harbor Days Tugboat Races in Budd Inlet, WA, from noon until 3 p.m.

on September 1, 2024. This action is necessary to ensure the safety of life on the navigable waterways of Budd Inlet during this event. The regulation for the marine events within the Thirteenth Coast Guard District, § 100.1309(a), specifies the location of the regulated area for the Olympia Harbor Days Tugboat Races, which encompasses approximately 2 nautical miles of the navigable waters in Budd Inlet, WA. During the enforcement period, as specified in § 100.1309(c), all persons or vessels who desire to enter the regulated race area while it is enforced must obtain permission from the on-scene patrol craft on VHF Ch 13.

In addition to this notice of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners, marine information broadcasts, local radio stations and area newspapers. If the Captain of the Port determines that the regulated area does not need to be enforced for the full duration stated in this notice, a Broadcast Notice to Mariners will be issued to grant general permission to enter the regulated area.

Dated: August 20, 2024.

Mark A. McDonnell,
Captain, U.S. Coast Guard, Commander,
Sector Puget Sound.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2024–0752]

Safety Zones; Annual Fireworks Displays Within the Puget Sound

AGENCY: Coast Guard, DHS.

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce the safety zone regulation for the Mukilteo Lighthouse Festival to provide for the safety of life on navigable waters on the Possession Sound, Seattle, Washington during an annual fireworks display. This safety zone will consist of all navigable waters within a 450-yard radius surrounding the event’s launch site. Our regulation for safety zones within the Captain of the Port Puget Sound (COTP) Area of Responsibility identifies the specific location for this launch site and the corresponding safety zone for the event.

DATES: The regulations in 33 CFR 165.1332 will be enforced from 7 through 10 p.m. for the safety zone identified in the table of § 165.1332, for the Mukilteo Lighthouse Festival event, on September 7, 2024.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email Mr. Jeffrey Zappen, Sector Puget Sound Waterways Management, U.S. Coast Guard; telephone 206–217–6076, or email *SectorPugetSoundWWM@uscg.mil*.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the regulations in 33 CFR 165.1332 for the safety zone identified in the table of § 165.1332, for the Mukilteo Lighthouse Festival on the Possession Sound, from 7 through 10 p.m. on September 7, 2024. This action is being taken to provide for the safety of life on navigable waterways during this 1-day event at the following location:

Event name (typically)	Event location	Latitude	Longitude
Mukilteo Lighthouse Festival	Possession Sound	47°56.900' N	122°18.600' W

The special requirements listed in § 165.1332(b) related to fireworks barges and fireworks launch sites shall apply and be implemented during the specified enforcement period of this safety zone.

During the specified enforcement period, no vessel operator may enter, transit, moor, or anchor within this safety zone unless authorized by the COTP or their designated representative(s). The Coast Guard may be assisted by other Federal, State, or

local law enforcement agencies in enforcing this regulation.

All vessel operators who desire to enter the safety zone must obtain permission from the COTP or their designated representative(s) by contacting either the on-scene patrol craft on VHF Ch. 13 or Ch 16, or calling Coast Guard Sector Puget Sound’s Joint Harbor Operations Center telephone 206–217–6002.

In addition to the notification of enforcement in the **Federal Register**, the

Coast Guard plans to provide notification of this enforcement period via the Local Notice to Mariners, marine information broadcasts, and local radio stations and area newspapers.

Dated: August 21, 2024.

Mark A. McDonnell,
Captain, U.S. Coast Guard, Captain of the Port, Sector Puget Sound.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 174**

[EPA-HQ-OPP-2019-0627; FRL-12149-01-OCSPP]

Pseudomonas Chlororaphis IPD072Aa Protein; Exemption From the Requirement of a Tolerance**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Final rule.

SUMMARY: This regulation establishes an exemption from the requirement of a tolerance for residues of *Pseudomonas chlororaphis* IPD072Aa protein in or on maize (hereafter IPD072Aa protein) when used as a Plant-Incorporated Protectant (PIP) in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop. Pioneer Hi-Bred International, Inc., submitted a petition to EPA under the Federal Food, Drug, and Cosmetic Act (FFDCA), requesting an exemption from the requirement of a tolerance. This regulation eliminates the need to establish a maximum permissible level for residues of IPD072Aa protein.

DATES: This regulation is effective August 28, 2024. Objections and requests for hearings must be received on or before October 28, 2024, and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2019-0627, is available at <https://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room and for the OPP Docket is (202) 566-1744. Please review the visitor instructions and additional information about the docket available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: Madison Le, Biopesticides and Pollution Prevention Division (7511M), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; main telephone number: (202) 564-5754; email address: BPPDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:**I. General Information***A. Does this action apply to me?*

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of 40 CFR part 174 through the Office of the Federal Register's e-CFR site at <https://www.ecfr.gov/current/title-40/chapter-I/subchapter-E/part-174>.

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a, any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA-HQ-OPP-2019-0627 in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before October 28, 2024. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA-HQ-OPP-2019-0627, by one of the following methods:

- **Federal eRulemaking Portal:** <https://www.regulations.gov>. Follow the

online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.

- **Mail:** OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001.

- **Hand Delivery:** To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at <https://www.epa.gov/dockets/where-send-comments-epa-dockets>.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

II. Background and Statutory Findings

In the **Federal Register** of April 15, 2020 (85 FR 20910) (FRL-10006-540), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide tolerance petition (PP 9F8785) by Pioneer Hi-Bred International, Inc., 7100 NW 62nd Avenue, P.O. Box 1000, Johnston, Iowa 50131. The petition requested that 40 CFR part 174 be amended by establishing an exemption from the requirement of a tolerance for residues of IPD072Aa protein in corn. That document referenced a summary of the petition prepared by the petitioner Corteva Agriscience, which is available in the docket, <https://www.regulations.gov>. There were no comments received in response to the notice of filing.

III. Final Rule*A. EPA's Safety Determination*

Section 408(c)(2)(A)(i) of FFDCA allows EPA to establish an exemption from the requirement for a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the exemption is "safe." Section 408(c)(2)(A)(ii) of FFDCA defines "safe" to mean that "there is a reasonable certainty that no harm will result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information." This includes exposure through drinking water and in residential settings but does not include occupational exposure. Pursuant to FFDCA section 408(c)(2)(B), in establishing or maintaining in effect an exemption from the requirement of a tolerance, EPA must take into account the factors set forth in FFDCA section 408(b)(2)(C), which require EPA to give

special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to “ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue. . . .” Additionally, FFDCA section 408(b)(2)(D) requires that the Agency consider “available information concerning the cumulative effects of a particular pesticide’s residues” and “other substances that have a common mechanism of toxicity.”

EPA evaluated the available toxicity and exposure data on IPD072Aa protein and considered its validity, completeness, and reliability, as well as the relationship of this information to human risk. EPA has also considered available information concerning the variability of the sensitivities of major identifiable subgroups of consumers, including infants and children. A summary of the data upon which EPA relied and its risk assessment based on those data can be found within the document entitled “Human Health Risk Assessment and Review of Product Characterization of the Insecticidal Plant-Incorporated Protectants, *Pseudomonas chlororaphis* IPD072Aa protein and DvSSJ1 dsRNA Complementary to the DvSSJ1 Gene Sequence from *Diabrotica virgifera virgifera*, and the Genetic Material Necessary (vector PHP74643), for their Production in Event DP23211 Maize (OECD Unique ID DP-Ø23211-2), and Establishment of a Permanent Tolerance Exemption. Data were provided in support of a FIFRA Section 3 Seed Increase Registration.” (hereafter Human Health Risk Assessment). This document, as well as other relevant information, is available in the docket for this action EPA-HQ-OPP-2019-0627.

IPD072Aa is a modified protein derived from the bacterium *Pseudomonas chlororaphis* and is active against coleopteran pests of corn. The Agency used a “weight of evidence” approach and determined that, IPD072Aa protein represents a negligible risk to humans or livestock that consume IPD072Aa maize products. The most likely exposure to the IPD072Aa protein is dietary through consumption of food products made from corn containing the protein. Oral exposure from ingestion of drinking water is unlikely because the IPD072Aa protein is present at very low levels within the plant cells and the amounts likely to enter the water column from leaves, pollen or plant detritus are low. Additionally, proteases and nucleases found in water and the environment

would likely degrade the biological material containing the active ingredients and treatment process for municipal water plants are likely to remove IPD072Aa residues. Although there may be dietary exposure to residues of IPD072Aa protein, such exposure presents no concern for adverse effects. Submitted data show that the IPD072Aa protein is not toxic via the oral route of exposure and bioinformatics analysis did not indicate a toxigenic potential *in silico*. Likewise, the potential for allergenicity is low because: (1) The bacterium source of IPD072Aa protein, *Pseudomonas chlororaphis*, is not considered to be a source of allergenic proteins; (2) bioinformatic analysis indicates no similarity between IPD072Aa protein and known allergens; (3) IPD072Aa protein degrades rapidly when exposed to simulated gastric fluid and completely digested in simulated intestinal fluid or exposed to heat via food cooking; and (4) IPD072Aa protein is not glycosylated, which further reduces its allergenicity potential. Glycosylation is an enzymatic post-translational process in which carbohydrates (glycans) link to proteins, creating structures which could lead to an immune response in humans.

Non-dietary non-occupational or residential exposure via pulmonary or ocular exposure is not likely since IPD072Aa protein is contained within plant cells, and corn pollen is not respirable nor is it present in commercial corn products. Exposure via the skin is somewhat more likely via the contact with corn products which might have been processed in a way that disrupts cellular structure. However, naturally occurring proteases are likely to degrade proteins in contact with the skin and, as described above, the IPD072Aa protein has little or no potential toxicity or allergenicity. Thus, adverse effects are not expected due to non-occupational and residential exposure to IPD072Aa. These findings are discussed in more detail in the Human Health Risk Assessment.

Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider “available information” concerning the cumulative effects of a particular pesticide’s residues and “other substances that have a common mechanism of toxicity.” No risk of cumulative toxicity or effects from IPD072Aa protein has been identified as no toxicity or allergenicity has been shown for this protein in the submitted studies. Therefore, EPA has concluded that IPD072Aa protein does not have a

common mechanism of toxicity with other substances.

Although FFDCA section 408(b)(2)(C) provides for an additional tenfold margin of safety for infants and children in the case of threshold effects, EPA has determined that there are no such effects due to the lack of toxicity of IPD072Aa protein. As a result, an additional margin of safety for the protection of infants and children is unnecessary.

Based upon its evaluation described above and in the Human Health Risk Assessment, EPA concludes that there is a reasonable certainty that no harm will result to the U.S. population, including infants and children, from aggregate exposure to residues of IPD072Aa protein. Therefore, an exemption from the requirement of a tolerance is established for residues of IPD072Aa protein in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop when used as a plant-incorporated protectant in corn.

B. Analytical Enforcement Methodology

EPA has determined that an analytical method is not required for enforcement purposes since the Agency is establishing an exemption from the requirement of a tolerance without any numerical limitation. Nonetheless, a protocol was submitted for a lateral flow test strip kit to be used for the detection of IPD072Aa protein in corn grain samples. The submitted protocol adequately describes the methodology.

IV. Statutory and Executive Order Reviews

This action establishes a tolerance under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled “Regulatory Planning and Review” (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled “Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355, May 22, 2001), or Executive Order 13045, entitled “Protection of Children from Environmental Health Risks and Safety Risks” (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*, nor does it require any special considerations under Executive Order 12898, entitled “Federal Actions to Address

Environmental Justice in Minority Populations and Low-Income Populations” (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerance in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal governments, on the relationship between the National Government and the States or Tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled “Federalism” (64 FR 43255, August 10, 1999), and Executive Order 13175, entitled “Consultation and Coordination with Indian Tribal Governments” (65 FR 67249, November 9, 2000), do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

V. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 174

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides and pests, Reporting and recordkeeping requirements.

Dated: August 19, 2024.

Edward Messina,

Director, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 174—PROCEDURES AND REQUIREMENTS FOR PLANT-INCORPORATED PROTECTANTS

■ 1. The authority citation for part 174 continues to read as follows:

Authority: 7 U.S.C. 136–136y; 21 U.S.C. 321(q), 346a and 371.

■ 2. Add § 174.548 to subpart W to read as follows:

§ 174.548 *Pseudomonas chlororaphis* IPD072Aa protein; exemption from the requirement of a tolerance.

Residues of *Pseudomonas chlororaphis* IPD072Aa in or on the food and feed commodities of corn: corn, field; corn, sweet; and corn, pop are exempt from the requirement when used as a plant-incorporated protectant in corn.

[FR Doc. 2024–19046 Filed 8–27–24; 8:45 am]

BILLING CODE 6560–50–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 648

[Docket No. 231215–0305; RTID 0648–XE241]

Fisheries of the Northeastern United States; Scup Fishery; Adjustment to the 2024 Winter II Quota

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; in-season adjustment.

SUMMARY: NMFS adjusts the 2024 Winter II commercial scup quota and per-trip Federal landing limit. This action is necessary to comply with regulations implementing Framework Adjustment 3 to the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan that established the rollover of unused commercial scup quota from the Winter I to the Winter II period. This notification informs the public of the quota and trip limit changes.

DATES: Effective October 1, 2024, through December 31, 2024.

FOR FURTHER INFORMATION CONTACT:

Laura Deighan, Fishery Management Specialist, (978) 281–9184; or Laura.Deighan@noaa.gov.

SUPPLEMENTARY INFORMATION: NMFS published a final rule for Framework Adjustment 3 to the Summer Flounder, Scup, and Black Sea Bass Fishery Management Plan in the **Federal Register** on November 3, 2003 (68 FR 62250), implementing a process to increase the Winter II (October 1 through December 31) commercial scup quota by the amount of the Winter I (January 1 through April 30) under-harvest and to adjust the Winter II possession limits consistent with the amount of the quota increase, based on the possession limits established through the annual specifications-setting process.

For 2024, the initial Winter II quota is 3,370,790 pounds (lb; 1,528,965 kilograms (kg)). The best available landings information through August 12, 2024, indicates that 1,703,229 lb (772,572 kg) remain of the 9,539,294 lb (4,326,951 kg) Winter I quota. Consistent with Framework 3, the full amount of unused 2024 Winter I quota is being transferred to Winter II, resulting in a revised 2024 Winter II quota 5,074,019 lb (2,301,536 kg). Because the amount transferred is between 1.5 and 2 million lb (680,389 and 907,184 kg), the Federal per-trip possession limit will increase from 12,000 lb (5,443 kg) to 16,500 lb (7,484 kg), as outlined in the final rule that established the possession limit and quota rollover procedures for this year, published on December 21, 2023 (88 FR 88266). The new possession limit will be effective October 1 through December 31, 2024. The Winter II possession limit will revert to 12,000 lb (5,443 kg) at the start of the next fishing year, which begins January 1, 2025.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR 648.122(d), which was issued pursuant to section 304(b), and is exempted from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be contrary to the public interest. This action transfers unused quota from the Winter I Period to the Winter II Period to make it accessible to the commercial scup fishery and increase fishing opportunities. If the implementation of this in-season action is delayed to solicit prior public comment, the objective of the fishery

management plan to achieve the optimum yield from the fishery could be compromised. Deteriorating weather conditions during the latter part of the fishing year may reduce fishing effort, and could also prevent the annual quota from being fully harvested. If this action is delayed, it would reduce the amount of time vessels have to realize the benefits of this quota increase, which would result in negative economic impacts on vessels permitted to fish in this fishery. Moreover, the rollover

process being applied here is routine and formulaic and was the subject of notice and comment rulemaking, and the range of potential trip limit changes were outlined in the final 2024 scup specifications that were published on December 21, 2023, which were developed through public notice and comment. The benefit of soliciting additional public comment on this formulaic adjustment would not outweigh the benefits of making this additional quota available to the fishery

as quickly as possible. Based on these considerations, there is good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delayed effectiveness period for the reasons stated above.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 22, 2024.

Lindsay Fullenkamp,
Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510-22-P

Proposed Rules

Federal Register

Vol. 89, No. 167

Wednesday, August 28, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

NUCLEAR REGULATORY COMMISSION

10 CFR Parts 50 and 52

[NRC-2024-0140]

Draft Regulatory Guides: Criteria for Power Systems for Nuclear Power Plants and Criteria for the Protection of Class 1E Power Systems and Equipment for Nuclear Power Plants

AGENCY: Nuclear Regulatory Commission

ACTION: Draft guides; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is issuing for public comment two related draft Regulatory Guides (DGs) namely DG-1420, "Criteria for Power Systems for Nuclear Power Plants," and DG-1354, "Criteria for the Protection of Class 1E Power Systems and Equipment for Nuclear Power Plants." DG-1420 is proposed Revision 4 to Regulatory Guide (RG) 1.32 of the same name and DG-1354 is newly proposed Revision 0 of RG 1.238. DG-1420 describes an approach that is acceptable to the NRC staff to meet regulatory requirements for the design, operation, and testing of electric power systems in nuclear power plants. DG-1354 describes an approach that is acceptable to the NRC staff for use in complying with NRC regulations that address the protection of Class 1E power systems and equipment at nuclear power plants.

DATES: Submit comments by September 27, 2024. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received on or before this date.

ADDRESSES: You may submit comments by any of the following methods; however, the NRC encourages electronic comment submission through the Federal rulemaking website.

- *Federal rulemaking website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2024-0140. Address

questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301-415-0624; email: Stacy.Schumann@nrc.gov. For technical questions, contact the individuals listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *Mail comments to:* Office of Administration, Mail Stop: TWFN-7-A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see "Obtaining Information and Submitting Comments" in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT:

Michael Eudy, Office of Nuclear Regulatory Research, telephone: 301-415-3104; email: Michael.Eudy@nrc.gov, Mohammad Sadollah, Office of Nuclear Regulatory Research, telephone: 301-415-6804; email: Mohammad.Sadollah@nrc.gov, and Sheila Ray, Office of Nuclear Reactor Regulation, telephone 301-415-365; email: Sheila.Ray@nrc.gov. All are staff of the U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC-2024-0140 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal rulemaking website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2024-0140.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, at 301-415-4737, or by email to PDR.Resource@nrc.gov. The ADAMS accession number for each document

referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to PDR.Resource@nrc.gov or call 1-800-397-4209 or 301-415-4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (<https://www.regulations.gov>). Please include Docket ID NRC-2024-0140 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <https://www.regulations.gov> as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Additional Information

The NRC is issuing for public comment two DGs in the NRC's "Regulatory Guide" series namely DG-1354 and DG-1420. This series was developed to describe methods that are acceptable to the NRC staff for implementing specific parts of the agency's regulations, to explain techniques that the staff uses in evaluating specific issues or postulated events, and to describe information that the staff needs in its review of applications for permits and licenses.

The DG, entitled "Criteria for Power Systems for Nuclear Power Plants," is temporarily identified by its task

number, DG-1420 (ADAMS Accession No. ML24158A060) and the DG, entitled, “Criteria for the Protection of Class 1E Power Systems and Equipment for Nuclear Power Plants,” is temporarily identified by its task number, DG-1354 (ADAMS Accession No. ML24158A041).

DG-1420 describes an approach that is acceptable to the NRC staff to meet regulatory requirements for the design, operation, and testing of electric power systems in nuclear power plants. DG-1420 endorses, with exceptions and clarifications, the Institute of Electrical and Electronics Engineers (IEEE) Standard (Std.) 308 2020, “IEEE Standard Criteria for Class 1E Power Systems for Nuclear Power Generating Stations.” In addition, DG-1420 includes the guidance provisions of RG 1.41, Revision 0, “Preoperational Testing of Redundant On-Site Electric Power Systems to Verify Proper Load Group Assignments,” which describes methods acceptable to the NRC for independence among redundant, onsite power sources and their load groups as part of the initial preoperational testing program and after major modifications or repairs. The staff plans to withdraw RG 1.41 if DG-1420 is finalized as RG 1.32, Revision 4.

DG-1354 describes an approach that is acceptable to the staff of the NRC for use in complying with NRC regulations that address the protection of Class 1E power systems and equipment at nuclear power plants. DG-1354 endorses, with exceptions, additions and clarifications, IEEE Std. 741-2022, “IEEE Standard for Criteria for the Protection of Class 1E Power Systems and Equipment for Nuclear Power Generating Stations.”

The staff is also issuing for public comment the draft regulatory analyses (ADAMS Accession Nos. ML24158A062 and ML24158A042). The staff developed these regulatory analyses to assess the value of issuing or revising the RGs as well as alternative courses of action.

As noted in the **Federal Register** on December 9, 2022 (87 FR 75671), this document is being published in the “Proposed Rules” section of the **Federal Register** to comply with publication requirements under chapter I of title 1 of the *Code of Federal Regulations* (CFR).

III. Backfitting, Forward Fitting, and Issue Finality

If finalized, DG-1420 and DG-1354, would not constitute backfitting as defined in 10 CFR 50.109, “Backfitting,” and as described in NRC Management Directive (MD) 8.4, “Management of

Backfitting, Forward Fitting, Issue Finality, and Information Requests”; affect issue finality of any approval issued under 10 CFR part 52, “Licenses, Certificates, and Approvals for Nuclear Power Plants”; or constitute forward fitting as defined in MD 8.4, because, as explained in these DGs, licensees would not be required to comply with the positions set forth in these DGs.

IV. Submitting Suggestions for Improvement of Regulatory Guides

A member of the public may, at any time, submit suggestions to the NRC for improvement of existing RGs or for the development of new RGs. Suggestions can be submitted on the NRC’s public website at <https://www.nrc.gov/reading-rm/doc-collections/reg-guides/contactus.html>. Suggestions will be considered in future updates and enhancements to the “Regulatory Guide” series.

Dated: August 21, 2024.

For the Nuclear Regulatory Commission.

Meraj Rahimi,

Chief, Regulatory Guide and Programs Management Branch, Division of Engineering, Office of Nuclear Regulatory Research.

BILLING CODE 7590-01-P

DEPARTMENT OF ENERGY

10 CFR Part 431

[EERE-2017-BT-STD-0007]

RIN 1904-AD82

Energy Conservation Program: Energy Conservation Standards for Commercial Refrigerators, Freezers, and Refrigerator-Freezers

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notification of data availability and request for comment.

SUMMARY: On October 10, 2023, the U.S. Department of Energy (“DOE”) published a notice of proposed rulemaking (“NOPR”), in which DOE proposed new and amended energy conservation standards for commercial refrigerators, freezers, and refrigerator-freezers. In this notification of data availability (“NODA”), DOE is providing updated analytical results that reflect updates to the analysis that DOE is considering based on feedback received in response to the October 10, 2023, NOPR. DOE requests comments, data, and information regarding the updated analyses.

DATES: DOE will accept comments, data, and information regarding this NODA no later than September 27, 2024.

ADDRESSES: Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at www.regulations.gov under docket number EERE-2017-BT-STD-0007. Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE-2017-BT-STD-0007, by any of the following methods:

(1) *Email:* CRE2017STD0007@ee.doe.gov. Include the docket number EERE-2017-BT-STD-0007 in the subject line of the message.

(2) *Postal Mail:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, Mailstop EE-5B, 1000 Independence Avenue SW, Washington, DC 20585-0121. Telephone: (202) 287-1445. If possible, please submit all items on a compact disc (“CD”), in which case it is not necessary to include printed copies.

(3) *Hand Delivery/Courier:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, 950 L’Enfant Plaza SW, 6th Floor, Washington, DC 20024. Telephone: (202) 287-1445. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimiles (“faxes”) will be accepted. For detailed instructions on submitting comments and additional information on this process, see section IV of this document.

Docket: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at www.regulations.gov. All documents in the docket are listed in the www.regulations.gov index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

The docket web page can be found at www.regulations.gov/docket/EERE-2017-BT-STD-0007. The docket web page contains instructions on how to access all documents, including public comments, in the docket. See section IV of this document for information on how to submit comments through www.regulations.gov.

FOR FURTHER INFORMATION CONTACT:

Mr. Jeremy Dommel, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, EE-5B, 1000

Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–9870. Email: ApplianceStandardsQuestions@ee.doe.gov.

Ms. Kristin Koernig, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (202) 586–4798. Email: Kristin.Koernig@hq.doe.gov.

For further information on how to submit a comment or review other public comments and the docket, contact the Appliance and Equipment Standards Program staff at (202) 287–1445 or by email: ApplianceStandardsQuestions@ee.doe.gov.

I. Introduction

EPCA authorizes DOE to regulate the energy efficiency of a number of consumer equipment and certain industrial equipment. (42 U.S.C. 6291–6317, as codified) Title III, Part C of EPCA,¹ added by Public Law 95–619, Title IV, section 441(a), established the Energy Conservation Program for Certain Industrial Equipment, which sets forth a variety of provisions designed to improve energy efficiency. (42 U.S.C. 6311–6317) This equipment includes commercial refrigerators, freezers, or refrigerator-freezers (“CRE”), the subject of this document. (42 U.S.C. 6311(1)(E))

DOE defines a “commercial refrigerator, freezer, or refrigerator-freezer,” consistent with EPCA’s definition at 42 U.S.C. 6311(9) and codified at title 10 Code of Federal Regulations (“CFR”) 431.62, as refrigeration equipment that is not a consumer product (as defined in 10 CFR 430.2); is not designed and marketed exclusively for medical, scientific, or research purposes; operates at a chilled, frozen, combination chilled and frozen, or variable temperature; displays or stores merchandise and other perishable materials horizontally, semi-vertically, or vertically; has transparent or solid doors, sliding or hinged doors, a combination of hinged, sliding, transparent, or solid doors, or no doors; is designed for pull-down temperature applications or holding temperature applications; and is connected to a self-contained condensing unit or to a remote condensing unit.

On March 28, 2014, DOE published a final rule in the **Federal Register** that prescribed the current energy conservation standards for CRE manufactured on and after March 27, 2017 (“March 2014 Final Rule”). 79 FR 17725. DOE initiated a rulemaking to consider amending energy conservation standards for CRE by publishing a request for information in the **Federal Register** on July 16, 2021. 86 FR 37708. DOE subsequently published a notification of the availability of a preliminary technical support document for CRE in the **Federal Register** on June 28, 2022 (“June 2022 Preliminary Analysis”). 87 FR 38296. In the June 2022 Preliminary Analysis, DOE sought comment on the analytical framework, models, and tools that DOE used to evaluate potential standards for CRE, the results of preliminary analyses performed, and the potential energy conservation standard levels derived from these analyses, which DOE

¹ For editorial reasons, upon codification in the U.S. Code, part C was redesignated part A–1.

presented in the accompanying Preliminary Technical Support Document (“TSD”) (“June 2022 Preliminary TSD”).² *Id.* DOE held a public meeting related to the June 2022 Preliminary Analysis on August 8, 2022.

On October 10, 2023, DOE published in the **Federal Register** a NOPR to establish and amend energy conservation standards for CRE (“October 2023 NOPR”). 88 FR 70196. DOE also sought comment on the analytical framework, models, and tools that DOE used to evaluate the proposed standards for CRE, the results of the NOPR analyses performed, and the proposed new and amended energy conservation standard levels derived from these analyses, which DOE presented in the accompanying NOPR TSD (“October 2023 NOPR TSD”).³ *Id.* DOE held a public meeting related to the October 2023 NOPR on November 7, 2023 (hereafter, the “November 2023 Public Meeting”).

DOE is currently considering comments and feedback received in response to the October 2023 NOPR and November 2023 Public Meeting. DOE has also conducted revised analysis with regard to some of the topics on which it received feedback, as discussed throughout this document. Based on this feedback and DOE’s additional analysis, DOE is considering updates to certain inputs to the analysis and certain analytical approaches as presented in the October 2023 NOPR. DOE is publishing this NODA to show how such updates would affect the analytical results in comparison to the results presented in the October 2023 NOPR.

This document provides a high-level summary of the analytical updates that DOE is considering. DOE is also publishing a separate support document (“NODA support document”) and its engineering spreadsheet (“NODA engineering spreadsheet”), available in the docket for this proposed rulemaking, that provide greater details and a full set of analytical results that include updates as compared to the analysis conducted for the October 2023 NOPR. DOE is requesting comments, data, and information regarding the updated analysis. DOE also welcomes feedback and public input on the methodological and analytical approaches used in this updated analysis.

² The June 2022 Preliminary TSD is available in the docket for this rulemaking at www.regulations.gov/document/EERE-2017-BT-STD-0007-0013.

³ The October 2023 NOPR TSD is available in the docket for this proposed rulemaking at www.regulations.gov/document/EERE-2017-BT-STD-0007-0051.

DOE notes that, in this document, DOE is not summarizing or responding to any specific comments received in response to the October 2023 NOPR and November 2023 Public Meeting. DOE is continuing to consider all of the stakeholder comments received in response to the October 2023 NOPR and November 2023 Public Meeting in further development of the rulemaking. Based on consideration of all of the public comments received, including any additional comments received in response to this NODA, DOE may adopt energy efficiency levels that are either higher or lower than the standards proposed in the October 2023 NOPR.

II. Discussion

A. Engineering Analysis

The purpose of the engineering analysis is to establish the relationship between the efficiency and cost of the equipment. For each equipment class, DOE estimates the baseline cost (*i.e.*, the cost of minimally compliant equipment), as well as the incremental cost for equipment at efficiency levels above the baseline. The output of the engineering analysis is a set of cost-efficiency “curves” that are used in downstream analyses (*i.e.*, the life-cycle cost (“LCC”) and payback period (“PBP”) analyses, the manufacturer impact analysis (“MIA”), and the national impact analysis (“NIA”).

1. Representative Units

In performing the engineering analysis for CRE, DOE selected representative units for each primary equipment class to serve as analysis points in the development of cost-efficiency curves. In the October 2023 NOPR, DOE presented results for a single representative unit at a specific capacity for each CRE equipment class. 88 FR 70196, 70225. In this NODA, DOE made one change to its approach for selecting representative units for the engineering analysis from the October 2023 NOPR.

DOE analyzed additional representative capacities for certain

equipment classes in consideration of recent updates to future refrigerant requirements and safety standards in this NODA. In the October 2023 NOPR, DOE stated that it expects that the use of R-290 generally will improve efficiency as compared with the refrigerants currently in use (*e.g.*, R-404A) because R-290 has a higher refrigeration-cycle efficiency than the current refrigerants. 88 FR 70196, 70227. Therefore, R-290 impacts the baseline energy use, compared to a baseline using current refrigerants, on which each efficiency level is built for the standards analysis. In the October 2023 NOPR, DOE’s engineering analysis assumed that manufacturers would convert all self-contained CRE models to propane (designated as R-290) in accordance with the applicable refrigerant global warming potential (“GWP”) limits and compliance dates previously proposed by the Environmental Protection Agency (“EPA”).⁴ 88 FR 70196, 70227. The October 2023 NOPR analysis also assumed that all self-contained CRE would have a refrigerant charge (*i.e.*, the amount of refrigerant in the CRE refrigeration system) no greater than the maximum allowable R-290 charge size specified by Underwriters Laboratories (“UL”) 60335-2-89 (corresponding to 304g for units with closed cases and 494 g for units with open cases). *Id.*

Since publishing the October 2023 NOPR, DOE has performed additional analysis as described below—as well as received additional feedback from CRE manufacturers—indicating that larger CRE units, which contain more refrigerant than smaller units, would require more R-290 refrigerant than the

⁴ EPA published its *Technology Transitions Restrictions on the Use of Certain HFCs* NOPR on December, 15, 2022 (“December 2022 EPA NOPR”). 88 FR 70196. Since the October 2023 NOPR, EPA published a *Technology Transitions Restrictions on the Use of Certain HFCs* Final Rule on October, 24, 2023 (the “October 2023 EPA Final Rule”). 88 FR 73098. For CRE, the refrigerant GWP limits published in the October 2023 EPA Final Rule are consistent with the proposal in the December 2022 EPA NOPR.

maximum allowable charge size specified by UL 60335-2-89. For such equipment, manufacturers will likely instead need to implement other low-GWP refrigerant options to comply with the GWP limits in the October 2023 EPA Final Rule. DOE has identified R-454C and R-455A as alternatives that are mildly flammable (designated “A2L”) refrigerants currently available and could be used for units with cooling capacities greater than would be achievable using an allowable R-290 charge size.

In recognition of this, DOE analyzed two different representative capacities for the following 7 equipment classes: VOP.SC.M, SVO.SC.M, HZO.SC.L, SOC.SC.M,⁵ VCT.SC.M, VCT.SC.L, and VCS.SC.L.⁶ For each of these 7 classes, DOE would assume the use of an A2L refrigerant for the large capacity and R-290 for the non-large capacity. DOE requests comment on this analytical approach of assuming use of an A2L refrigerant for the large capacity equipment classes.

Table II.1 presents the 7 equipment classes for which DOE analyzed two representative capacities. This NODA presents analytical results of this approach under consideration for each of these 7 equipment classes.

BILLING CODE 6450-01-P

⁵ DOE notes that, for the SOC.SC.M equipment class, DOE is considering a smaller representative capacity, as compared to the representative capacity proposed in the October 2023 NOPR, that would assume the use of R-290. For the large representative capacity in the SOC.SC.M equipment class (*i.e.*, the same representative capacity as the October 2023 NOPR), DOE is considering an A2L refrigerant, consistent with the approach in this NODA.

⁶ The equipment classes are designated by equipment family, condensing unit configuration, and operating temperature. Equipment Families: VOP—Vertical Open; SVO—Semi-Vertical Open; HZO—Horizontal Open; VCT—Vertical Closed Transparent; HCT—Horizontal Closed Transparent; VCS—Vertical Closed Solid; HCS—Horizontal Closed Solid; SOC—Service Over Counter; CB—Chef Base; PD—Pull Down. Condensing Unit Configurations: RC—Remote Condensing; SC—Self Contained. Operating Temperatures: H—High Temperature; M—Medium Temperature; L—Low Temperature; I—Ice Cream Temperature.

Table II.1 Approach Under Consideration for Equipment Classes with Two Representative Capacities

Condensing Unit Configuration	Equipment Family	Operating Temperature (°F)	Equipment Class Designation	Volume (“V”) [ft ³] or TDA [ft ²] Range	Representative Capacity [ft ³] or [ft ²]
Self-Contained (SC)	Vertical Open (VOP)	≥ 32	VOP.SC.M	TDA ≤ 17	14.93*
				TDA > 17	29.86
	Semivertical Open (SVO)	≥ 32	SVO.SC.M	TDA ≤ 15	12.8*
				TDA > 15	25.6
	Horizontal Open (HZO)	< 32	HZO.SC.L	TDA ≤ 35	12*
				TDA > 35	50
	Service Over Counter (SOC)	≥ 32	SOC.SC.M	TDA ≤ 40	20
				TDA > 40	51*
	Vertical Closed Transparent (VCT)	≥ 32	VCT.SC.M	V ≤ 100	49*
				V > 100	150
		< 32	VCT.SC.L	V ≤ 70	49*
				V > 70	73.5
	Vertical Closed Solid (VCS)	< 32	VCS.SC.L	V ≤ 100	49*
				V > 100	150

* These representative volumes or TDAs were analyzed in the October 2023 NOPR.

BILLING CODE 6450-01-C

In support of this NODA, DOE investigated currently available compressor performance data of compressors using R-404A, R-454C, and R-455A to compare performance for compressors applicable to CRE in the larger volume or TDA range of each equipment class presented in table II.1. This investigation indicates that compressors using R-454C and R-455A have performance similar to compressors with refrigerants already in use (e.g., R-404A) in larger equipment, which is consistent with the findings from other investigations conducted by a compressor manufacturer.⁷ Accordingly, for the large representative units considered for these 7 equipment classes, DOE is presenting in this NODA an updated analysis that reflects the use of A2L compressors, based on performance data of R-404A compressors as a proxy to calculate the

efficiency of this equipment. Using this approach, the baseline energy use for the large representative capacities in these 7 classes is set equal to the current standard.

Based on feedback to the October 2023 NOPR and in support of this NODA, DOE did not find compressor cost data to indicate that the price of an A2L compressor would be different than the price of an R-290 compressor at the same cooling capacity. As a result, DOE assumes the same cost for an A2L compressor as an R-290 compressor of the same compressor capacity in this NODA. DOE requests comment on any information or cost data that may indicate that the price of an A2L compressor would be different than the price of an R-290 compressor at the same cooling capacity.

2. Baseline Energy Use Estimates

As discussed previously, in the October 2023 NOPR, DOE assumed that manufacturers would convert self-contained CRE models to R-290. The

use of R-290 is generally expected to provide higher efficiency performance at the baseline level (compared to current refrigerants), such that the baseline efficiency levels defined in the October 2023 NOPR for each class generally reflected a lower energy use than the currently applicable DOE standards for CRE. 88 FR 70196, 70227-70228. In the October 2023 NOPR, DOE’s analysis considered that these efficiency improvements, equipment costs, and manufacturer investments required to comply with the December 2022 EPA NOPR would be in effect prior to the time of compliance for the October 2023 NOPR proposed amended DOE CRE standards for all CRE equipment classes and sizes. 88 FR 70196, 70228. Therefore, in the October 2023 NOPR, DOE noted that the October 2023 NOPR analysis did not consider benefits and costs resulting from the December 2022 EPA NOPR. 88 FR 70196, 70208. DOE clarifies that DOE has not double counted any energy savings from the October 2023 EPA

⁷ See p. 15 of <https://e360hub.copeland.com/presentations/preparing-for-emerging-refrigerants-and-carb-compliance>.

Final Rule in this NODA nor in the October 2023 NOPR.

In the October 2023 NOPR, DOE initially determined the energy use associated with the defined baseline efficiency levels for each equipment class by maximizing the single-speed compressor efficiency achievable for each respective equipment class based on the CRE compressors available at the time of the analysis from two commonly-used compressor manufacturers. *Id.* at 88 FR 70228.

In this NODA, DOE updated its analysis of R-290 compressor performance to reflect the average

compressor efficiency from the database of CRE compressors it has collected, instead of the maximum compressor efficiency as considered in the October 2023 NOPR. After the publication of the October 2023 NOPR, DOE was able to incorporate into this NODA compressor performance data from an additional compressor manufacturer that was not available to DOE for the October 2023 NOPR. Based on this updated approach, on average, the medium-temperature compressor energy savings presented in this NODA are less than the compressor energy savings in the October 2023 NOPR and the low-temperature

compressor energy savings presented in this NODA are greater than the compressor energy savings in the October 2023 NOPR. Table II.2 presents the updated baseline energy use associated with each equipment class, expressed as a reduction in energy compared to the currently applicable standard, for both the R-290 and A2L (if applicable) representative units for each class. As discussed in the previous section, for the large representative capacities (which assume the use of A2L refrigerants), the baseline energy use is set equal to the current standard.

Table II.2 Baseline Energy Use Expressed as Reduction in Energy Use Below Current Applicable Standard

Equipment Class	Baseline energy use reduction below DOE Standard – R-290 (%)	Baseline energy use reduction below DOE Standard – A2L (%)
VOP.SC.M	1.3	0.0
SVO.SC.M	9.7	0.0
HZO.SC.M	14.7	NA*
HZO.SC.L	2.6	0.0
VCT.SC.M	15.1	0.0
VCT.SC.L	5.5	0.0
VCS.SC.M	19.9	NA*
VCS.SC.L	6.1	0.0
HCT.SC.M	0.0	NA*
HCT.SC.L	0.0	NA*
HCS.SC.M	12.6	NA*
HCS.SC.L	0.0	NA*
SOC.SC.M	11.0	0.0
VCT.SC.I	0.0	NA*
HCT.SC.I	0.0	NA*
VCS.SC.I	6.9	NA*

*NA indicates that this class did not contain a second, large representative capacity in this NODA.

3. Baseline Design Components

Based on feedback in response to the October 2023 NOPR and November 2023 Public Meeting and additional test and teardown data conducted since the October 2023 NOPR, DOE is updating certain design specifications and components assumed to be used in models at the baseline efficiency level in this NODA. These updates include the insulation R-Value (changing from 8 per inch to 6.5 per inch, which is more representative of current baseline equipment); insulation thickness (changing to be consistent with the thickness analyzed in the March 2014 Final Rule, which remain applicable to

current equipment);⁸ baseline fan motor assumptions (considering electronically commutated motors (“ECM”) for evaporator and condenser fan motors for most classes); and use of electronic controls (to assume the use of electronic controls at the baseline for all equipment classes). Additional details regarding all design specification and component updates are provided in section 2 of the NODA support document.

These changes result in adjustments to equipment cost at the baseline level,

⁸ See table 5A.2.2 Baseline Specifications in the 2014 Final Rule TSD at www.regulations.gov/document/EERE-2010-BT-STD-0003-0102.

as well as to the magnitude of efficiency improvement provided by higher efficiency design options whose performance depends on the heat load.

4. Higher Efficiency Level Design Options

In consideration of feedback received in response to the October 2023 NOPR, DOE has removed evaporator fan control and microchannel condensers from consideration as design options and revised the variable speed compressor coefficients, as described in the following sections.

a. Evaporator Fan Control

As stated in section 3.3.7.3 of the October 2023 NOPR TSD, evaporator fan motor controls can be programmed such that the evaporator fan motor runs at a 100 percent duty cycle to circulate cold air at all times and to prevent frost build up on the evaporator coil. As a design option, evaporator fan control refers to operating the evaporator fan at an evaporator fan duty cycle less than 100 percent. This design option operates the evaporator fan at an evaporator fan duty cycle that matches the compressor duty cycle, plus some additional operating time to accomplish defrosts and stir cycles.

In the October 2023 NOPR, DOE analyzed the evaporator fan control design option for self-contained, closed CRE. 88 FR 70196, 70222. Feedback received in response to the October 2023 NOPR suggests that the use of evaporator fan controls could reduce air distribution and temperature uniformity in the refrigerated compartment, potentially leading to higher temperatures that would exceed established tolerances for food safety (e.g., as established by National Sanitation Foundation (“NSF”) 7). DOE notes that NSF 7 requirements do not preclude CRE from using evaporator fan controls and that some self-contained, closed CRE may be able to use evaporator fan controls and still comply with NSF 7 requirements. However, recognizing current uncertainty as to whether such food safety requirements could be maintained in certain applications of self-contained, closed CRE with the use of evaporator fan controls, DOE has tentatively screened out evaporator fan control as a design option for CRE. As a result, this NODA presents an updated engineering analysis that does not include evaporator fan control as a design option.

b. Microchannel Condensers

In the October 2023 NOPR, DOE considered microchannel condensers as a design option for self-contained CRE, having observed the use of microchannel condensers in other commercial refrigeration equipment such as automatic commercial ice makers (“ACIMs”), including ACIMs that use R–290. *Id.* DOE is not, however, aware of microchannel condensers in use for CRE and has not observed microchannel condensers in any of the equipment in the teardown analysis. Even though DOE tentatively determined in the October 2023 NOPR that microchannel condensers would be technically feasible for use in CRE,

feedback from commenters in response to the October 2023 NOPR suggests that there is current uncertainty as to the practicability to manufacturer, install, or service this technology on the scale necessary to serve the CRE market at the time of the effective date of any new or amended standards. Recognizing this uncertainty, DOE has tentatively screened out microchannel condensers as a design option. As a result, this NODA presents an updated engineering analysis that does not include microchannel condensers as a design option.

c. Variable-Speed Compressors

In the October 2023 NOPR, DOE incorporated the performance data for variable-speed R–290 compressors currently available on the market into DOE’s engineering spreadsheet. *Id.* at 88 FR 70219. Since publication of the October 2023 NOPR, DOE has observed that some compressor manufacturers have updated their variable-speed compressor coefficients. To take into account these updates, and to maintain a methodology consistent with that used for single-speed compressors, DOE made updates to its engineering analysis to assume the average efficiency of the current market for variable-speed compressors, selecting the lower-efficiency compressor if only two compressor brands are available at a specific cooling capacity, in this NODA. DOE also adjusted the calculation for the difference in evaporator and condenser temperatures when switching from single-speed to variable-speed compressors to instead use a static temperature difference of +3 °F for the evaporator and –5 °F for the condenser. Implementing these updates results in an energy use reduction from implementing variable-speed R–290 compressors ranging from approximately 2.5 to 19.2 percent, depending on the representative capacity of each equipment class. DOE notes that variable-speed compressors operate more efficiently at lower speeds than single-speed compressors do at full-speed. Therefore, variable-speed compressors have greater energy savings potential as further explained in section 3.3.4.3 of the October 2023 NOPR. Comparatively, in the October 2023 NOPR, DOE estimated approximately 0.5 to 25 percent energy consumption reduction when implementing variable-speed R–290 compressors.⁹ *Id.*

⁹ See section 5.5.3.1 of the October 2023 NOPR TSD.

5. Compressor Energy Use Adjustment

Since publication of the October 2023 NOPR, DOE has reviewed the Air-Conditioning, Heating, and Refrigeration Institute (“AHRI”) January 2017 white paper, *Tolerances and Uncertainties in Performance Data of Refrigerant Compressors*, which is referenced by the AHRI 540 compressor performance rating standard (“AHRI 540”).¹⁰ Based on this review, DOE applied a 5 percent increase in energy use for all compressors to account for the performance prediction uncertainty as a result of curve-fitted compressor performance maps in this NODA. See the NODA engineering spreadsheet for further details.

6. Revised Cost Analysis

As DOE typically does during the course of a rulemaking, DOE considered updates to core case costs and certain design option costs to reflect current material prices and production factors that are relevant to the CRE industry.

As part of this update, DOE has reviewed current Krypton gas prices and has observed that the cost differential between triple-pane doors with Argon gas and triple pane doors with Krypton gas has increased significantly¹¹ compared to the cost differential used in the October 2023 NOPR analysis. See chapter 5 of the October 2023 NOPR TSD. This NODA presents updated costs for triple-pane doors with Krypton gas.

In the October 2023 NOPR, DOE assumed an industry average manufacturer markup of 1.40 for all equipment classes. 88 FR 70196, 70247. Based on stakeholder comments in response to the October 2023 NOPR and market share weights, DOE updated the industry average manufacturer markup to 1.38 for all equipment classes and uses this updated value as the basis for the results presented in this NODA.

7. Equipment With Features That Affect Energy Use

In the October 2023 NOPR, DOE proposed less stringent energy conservation standards for equipment of certain classes that have unique features such as forced-air evaporators or certain special door configurations (e.g., roll-in, roll-through, and pass-through). *Id.* at 88 FR 70230. The approach in the October 2023 NOPR involved use of feature-specific multipliers greater than 1.0 that would be applied to the proposed

¹⁰ For the AHRI white paper see www.ahrinet.org/system/files/2023-06/compressors-white-paper.pdf.

¹¹ The cost differential between Argon gas fill and Krypton gas fill for triple-pane doors is approximately seven times greater at the time of this NODA as compared to the October 2023 NOPR.

energy conservation standard for an eligible class to provide less-stringent standards for a feature of that eligible class. *Id.* at 88 FR 70231. More details can be found in tables IV.7 and IV.8 of the October 2023 NOPR.

As an alternative to the feature-specific multiplier approach, DOE is also tentatively considering a simplified multiplier approach to the eligible equipment classes discussed in the October 2023 NOPR, evaluating the use of a single multiplier for all evaluated equipment classes and feature groupings, including pass-through, sliding door, sliding-door pass-through, roll-in, roll-through, forced-air evaporator, and drawers. To select a single multiplier representative of the range of features analyzed, DOE used a shipment-weighted average of the eligible equipment class average multiplier values for each feature. DOE applied this multiplier to the energy use at each efficiency level for each eligible class, which implies that the difference in energy use of each feature compared to CRE without such feature is proportional to the equipment's energy use prior to the addition of each feature. The result of this single multiplier analysis yields a multiplier of 1.07.

DOE notes that EPCA, as codified, contains what is known as an “anti-backsliding” provision, which prevents the Secretary from prescribing any amended standard that either increases the maximum allowable energy use or decreases the minimum required energy efficiency of a covered product. (42 U.S.C. 6316(e)(1); 42 U.S.C. 6295(o)(1)) Therefore, any multipliers that may be applied to eligible CRE equipment classes in any future DOE actions for this proposed rulemaking may be

limited or adjusted due to the anti-backsliding provision. In this NODA, application of the multiplier to the energy use of each efficiency level of a given class is adjusted accordingly, if needed, to avoid backsliding against the current standard.

Based on consideration of all of the public comments received, including any additional comments received in response to this NODA, DOE may adopt the multiplier approach proposed in the October 2023 NOPR, a revised approach with higher or lower multipliers than proposed in the October 2023 NOPR, an approach with additional or fewer multipliers, or a simpler approach in which a single multiplier would be used for any eligible feature for application to specific eligible classes as presented in this NODA.

B. Energy Use Analysis

The purpose of the energy use analysis is to determine the annual energy consumption of CRE at different efficiencies in representative U.S. commercial buildings and to assess the energy savings potential of increased CRE efficiency. The energy use analysis estimates the range of energy use of CRE in the field (*i.e.*, as they are actually used by consumers). The energy use analysis provides the basis for other analyses DOE performs, particularly assessments of the energy savings and the savings in consumer operating costs that could result from adoption of amended or new standards.

In the October 2023 NOPR, DOE calculated the energy consumption of the equipment as part of the engineering analysis. *Id.* at 88 FR 70196, 70237. In this NODA, DOE adjusted the annual energy consumption to account for the field operation of occupancy sensors.

Specifically, DOE was informed that some purchasers may choose to deactivate CRE occupancy sensors, thereby forgoing energy savings associated with this design option. Accordingly, DOE updated its energy use analysis for CRE at efficiency levels with occupancy sensors so that the benefit of an occupancy sensor is applied to only 75 percent of purchasers of this feature. The remaining 25 percent would incur the increased equipment cost but not the associated energy savings.¹² The analysis presented in this NODA reflects this change under consideration. DOE requests comments, data, and information on the fraction of CRE that may not have the occupancy sensors activated.

Life-Cycle Cost and Payback Period Analysis

For this NODA, DOE conducted an LCC and PBP analysis using the same general methodology described in the October 2023 NOPR. *See Id.* at 88 FR 70237–70238. Table II.3 summarizes the approach and data DOE used to derive inputs to the LCC and PBP calculations. The following sections discuss updates to the source of method for deriving those inputs—as compared to the October 2023 NOPR—that DOE considered and implemented in this NODA analysis for review and comment. Inputs that utilized the same approach or data source as the October 2023 NOPR are not discussed in this NODA.

BILLING CODE 6450-01-P

¹² DOE selected 25 percent as a reasonable estimation of the fraction of CRE purchasers that may choose to deactivate their occupancy sensors despite purchasing this feature.

Table II.3 Summary of Inputs and Methods for the LCC and PBP Analysis*

Inputs	Source/Method
Equipment Cost	Derived by multiplying MPCs by manufacturer and retailer markups and sales tax, as appropriate. Apply price learning between present (2023) and compliance year (2028) for LED lighting (1.1% average yearly decline) and variable-speed compressor electronics (6.3% average yearly decline), using historical data to derive a price scaling index to project equipment costs for those components.
Installation Cost	Assumed not to change with efficiency level for a given equipment class; therefore, not considered in the LCC and PBP analyses.
Annual Energy Use	Obtained from energy use analysis. Based on the CRE test procedure for each equipment class at each considered efficiency level.
Energy Prices	Electricity: Edison Electric Institute Typical Bills and Average Rates reports. Variability: Regional energy prices across nine census divisions.
Energy Price Trends	Based on <i>AEO2023</i> ¹³ price projections.
Repair and Maintenance Costs	Material costs derived from the engineering analysis and labor costs derived from RS Means 2023. Considered replacement of LED lighting, evaporators, condensers, compressors, and night curtains; assumed LED lighting repair frequency decreases due to the presence of occupancy sensor when in use by purchaser (see section II.B).**
Equipment Lifetime	Average: 10 years for large buildings and 20 years for small buildings. DOE defined small buildings as those less than or equal to 5,000 ft ² , while large buildings are defined as those greater than 5,000 ft ²
Discount Rates	Approach involves identifying all possible debt or asset classes that might be used to purchase the considered equipment or might be affected indirectly. Primary data source was the Federal Reserve Board's Survey of Consumer Finances.
Compliance Year	2028

* References for the data sources mentioned in this table are provided in the sections following this table. Energy price trends, equipment lifetimes, and discount rates are not used for the PBP calculation.

** For the 25% of purchasers assumed to not utilize the occupancy sensors, the LED lighting repair frequency remains the same as for CRE without occupancy sensors.

BILLING CODE 6450-01-C

1. Energy Prices

Because marginal electricity price more accurately captures the incremental savings associated with a change in energy use from higher efficiency, it provides a better representation of incremental change in consumer costs than average electricity prices. Therefore, DOE applied average electricity prices for the energy use of the equipment purchased in the no-new-standards case, and marginal electricity prices for the incremental change in energy use associated with the other efficiency levels considered in the October 2023 NOPR. *Id.* at 88 FR 70239.

To derive electricity prices for this NODA analysis, DOE followed the same methodology as in the October 2023 NOPR. However, in this NODA, DOE updated the price data for current

¹³ For further information, see the "Assumptions to *AEO2023*" report that sets forth the major assumptions used to generate the projections in the *AEO2023*. Available at www.eia.gov/outlooks/aeo/assumptions/ (last accessed April 15, 2024).

electricity prices (from 2022 to 2023). In particular, DOE developed electricity prices in 2023 for each census division using data from Edison Electric Institute ("EII") "Typical Bills and Average Rates" reports.

To estimate energy prices in future years, DOE followed the same approach as in the October 2023 NOPR, *i.e.*, DOE multiplied the 2023 electricity prices by the projection of annual average price changes for each of the nine census divisions from the reference case in *AEO2023*, which has an end year of 2050.¹⁴

2. Repair and Maintenance Costs

Repair costs are associated with repairing or replacing components that have failed in an appliance or equipment; maintenance costs are associated with maintaining the operation of the equipment. Typically, small incremental increases in equipment efficiency entail no, or only minor, changes in repair and

¹⁴ EIA. *Annual Energy Outlook 2023*. Available at www.eia.gov/outlooks/aeo/ (last accessed April 15, 2024).

maintenance costs compared to baseline efficiency equipment.

In the October 2023 NOPR, DOE calculated repair costs by considering the typical failure rate of refrigeration system components (compressor, lighting, and evaporator and condenser fan motors), component manufacturer production costs ("MPCs") and associated markups, and the labor cost of repairs, which is assumed to be performed by private vendors. *Id.* at 88 FR 70239. DOE considered the following specific CRE components and associated failure probabilities during typical CRE lifetime in its repair cost approach: compressor (25 percent), evaporator fan motor (50 percent), condenser fan motor (25 percent), and LED lighting (100 percent), with the presence of occupancy sensors decreasing LED lighting repair frequency by half. *Id.*

In this NODA, DOE also considered repair and replacement costs associated with night curtains and has incorporated such costs into this NODA analysis. Specifically, DOE was informed that night curtains are likely to

be replaced before the end of the lifetime of CRE. DOE contacted retailers and manufacturers of night curtains of similar cost to the ones contained in the engineering analysis; these manufacturers and sellers stated that the lifetime varies according to user care. One manufacturer reported a recent replacement from a unit that lasted 10 years. In light of these reports, DOE selected 5 years as a reasonable estimate for the average lifetime of all night curtains. As a result, depending on the lifetime associated with each CRE, night curtains may be replaced once or several times during the CRE lifetime. Furthermore, DOE assumed a half-hour night curtain replacement labor duration at the same labor rates (according to RSMMeans 2023) as other CRE components assumed to be replaced during the CRE lifetime (e.g., compressors) in the LCC analysis. DOE assigned these labor rates according to each purchaser's Census division to account for national labor cost variability.

3. Residual Value for Refurbished CRE

To model the phenomenon of CRE sold for refurbishment, DOE utilized a residual value for such equipment in the LCC in the October 2023 NOPR. The residual value represents the remaining dollar value of surviving CRE at the average age of refurbishment. In the October 2023 NOPR, DOE estimated that refurbishments would occur at 5 years for small-size food-service buildings (e.g., restaurants) and 10 years for small-size food-sales and other commercial buildings. To account for the value of CRE with remaining life to the consumer, the LCC model applies this residual value as a "credit" at the end of the CRE lifetime and discounts it back to the start of the analysis period. This credit was applied to a fraction of self-contained CRE, totaling about 10 percent of all CRE in the LCC sample. *Id.* at 88 FR 70240.

Since the publication of the October 2023 NOPR, DOE made adjustments to its refurbishment assumptions based on the premise that if the refurbishment market offers a favorable economic opportunity, it could be utilized by all businesses, not just businesses in small-size buildings. Accordingly, for this NODA, DOE still applies a credit to about 10 percent of all CRE in the sample; however the credit may apply to any self-contained equipment,

regardless of building size.¹⁵ DOE has no reason to expect that businesses occupying larger size buildings would have a different refurbishment schedule than those occupying small-size buildings, and as such DOE retained the same assumptions as in the October 2023 NOPR regarding the average CRE lifetimes at the time of refurbishment, occurring after 5 years for food-service buildings (e.g., restaurants) and after 10 years for food-sales, and other building types (e.g., grocery stores). See *id.*

4. Energy Efficiency Distribution in the No-New-Standards Case

To accurately estimate the share of consumers that would be affected by a potential energy conservation standard at a particular efficiency level, DOE's LCC analysis considers the projected distribution (market shares) of equipment efficiencies under the no-new-standards case (i.e., the case without amended or new energy conservation standards) in the compliance year. This approach reflects the fact that some consumers may purchase equipment with efficiencies greater than the baseline levels in the absence of new or amended standards.

To estimate the energy efficiency distribution of CRE for 2028 in the October 2023 NOPR, DOE used test data, feedback from manufacturer interviews, surveys, and the "Single Compartment Commercial Refrigeration Equipment" data from DOE's CCD, accessed in March 2024.¹⁶ *Id.* In this NODA, DOE presents the following updates to its LCC analysis, which are incorporated into this NODA analysis: (1) using CCD data retrieved on April 15, 2024 in place of CCD data used in the October 2023 NOPR that was retrieved on February 21, 2023, (2) deriving distributions for the new self-contained (large) capacities from CCD, and (3) grouping some self-contained (non-large) categories that had few observations in the CCD.

To create a robust sample for the energy efficiency distribution used in the LCC analysis, DOE separated the analyzed CRE equipment classes into 27

separate groups for this NODA analysis. DOE notes that the analysis for the October 2023 NOPR was based on 21 separate groups; DOE is considering adding new groups to account for equipment classes with two representative capacities (discussed in section II.A.1 of this document), and some self-contained equipment classes were grouped together if there were few model counts in the CCD. For the equipment classes that DOE relied on CCD model count data to formulate the efficiency distributions, this approach was used to allow equipment classes with a limited sample to share the efficiency distribution of a group of similar classes with a larger sample in the CCD. DOE compared energy use data from the CCD with energy use equations from the engineering analysis to derive model counts at each efficiency level. For the 7 self-contained equipment classes with large representative capacities, model counts for each representative unit were taken from subsets of the CCD, filtered by the appropriate volume or TDA. Equipment classes whose efficiency distributions were derived from aggregated data from manufacturer interviews, surveys, and test data were assigned their own groups (these 9 classes are the same ones from the October 2023 NOPR.) The estimated market shares for the no-new-standards case for CRE and the corresponding groupings are shown in table II.4.

In advance of the October 2023 NOPR, DOE conducted manufacturer interviews and collected shipments data for several equipment classes. The equipment classes for which DOE collected shipments data account for 75 percent of total shipments and are marked with an asterisk in table II.4.¹⁷ For the remainder of the equipment classes for which DOE was not able to collect representative shipments data from manufacturers due to low sample sizes, DOE utilized the CCD database to estimate the no-new-standards-case efficiency distribution; this is the same approach used in the October 2023 NOPR. See *Id.*

BILLING CODE 6450-01-P

¹⁵ Due to the installation complexity of remote condensing CRE, DOE assumed that such equipment are not likely to be refurbished.

¹⁶ U.S. Department of Energy. Compliance Certification Database ("CCD") for Refrigeration Equipment—Commercial, Single Compartment. Available at www.regulations.doe.gov/certification-data/ (last accessed April 15, 2024).

¹⁷ For some of these classes, such as chef bases or griddle stands and high-temperature refrigerators, DOE also developed the efficiency distributions based on DOE's test data, data submitted by manufacturers, ENERGY STAR certified data, and data from DOE's CCD.

Table II.4 No-New-Standards Case Efficiency Distributions in 2028

* The distributions for these equipment classes were derived from aggregated data from the Trade Associations Survey, test data, and manufacturer interview data.

** As seen in the table, certain equipment classes have large percentages of shipments at both baseline and at max tech; these distributions are due to variability in equipment design across the market.

BILLING CODE 6450-01-C

The LCC Monte Carlo simulations draw from the efficiency distributions and randomly assign an efficiency to the CRE purchased by each sample consumer in the no-new-standards case.

The resulting percent shares within the sample match the market shares in the efficiency distributions.

C. Shipments Analysis

DOE uses projections of annual equipment shipments to calculate the national impacts of potential amended or new energy conservation standards

on energy use, net present value (“NPV”), and future manufacturer cashflows.¹⁸ The shipments model takes an accounting approach, tracking market shares of each equipment class and the vintage of units in the stock. Stock accounting uses equipment shipments as inputs to estimate the age distribution of in-service equipment stocks for all years. The age distribution of in-service equipment stocks is a key input to calculations of both the NES and NPV because operating costs for any year depend on the age distribution of the stock.

For the shipments analysis conducted for this NODA, DOE followed the same approach as the October 2023 NOPR, with the exception of CRE that may be subject to refurbishment, as discussed in the following paragraph.

To account for a potential increase in refurbished CRE as a result of increased prices from CRE standards, in the October 2023 NOPR, DOE assumed a price elasticity effect for a fraction of CRE shipments, which was limited to small-sized buildings. *Id.* at 88 FR 70242. In this NODA, DOE modified its price elasticity approach based on the premise that if the refurbishment market offers a favorable economic opportunity, it could be utilized by all businesses. Accordingly, for this NODA, the price elasticity effect¹⁹ applies to all self-

contained units, regardless of the building size where those units are installed. DOE assumed that remote condensing CRE are generally not refurbished as they are less likely to be removed from service when being part of a separate condensing system. DOE notes that the price elasticity effect, and a resulting reduction in CRE shipments, is dependent on the price difference between the price consumers pay in the no-new-standards case and the standards case. DOE also acknowledges that, while a CRE refurbishment market may well exist and its magnitude may have recently increased due to supply chain and equipment price increases, this phenomenon applies to the CRE market overall, and is not a result of energy efficiency standards on CRE. With regard to self-contained units, DOE estimates that their market share is approximately 87 percent of the overall new (*i.e.*, not refurbished) CRE market.

D. National Impact Analysis

The NIA assesses the national energy savings (“NES”) and the NPV from a national perspective of total consumer costs and savings that would be expected to result from new or amended standards at specific efficiency levels.²⁰ (“Consumer” in this context refers to consumers of the equipment being regulated.) DOE calculates the NES and NPV for the potential standard levels considered based on projections of annual equipment shipments, along with the annual energy consumption and total installed cost data from the energy use and LCC analyses. For the

scaling methodology used in the October 2023 NOPR.

²⁰ The NIA accounts for impacts in the United States and U.S. territories.

October 2023 NOPR, DOE projected the energy savings, operating cost savings, equipment costs, and NPV of consumer benefits over the lifetime of CRE sold from 2028 through 2057. *Id.* at 88 FR 70243.

DOE evaluates the impacts of new or amended standards by comparing a case without such standards with standards-case projections. The no-new-standards case characterizes energy use and consumer costs for each equipment class in the absence of new or amended energy conservation standards. For this projection, DOE considers historical trends in efficiency and various forces that are likely to affect the mix of efficiencies over time. DOE compares the no-new-standards case with projections characterizing the market for each equipment class if DOE adopted new or amended standards at specific energy efficiency levels for that class. For the standards cases, DOE considers how a given standard would likely affect the market shares of equipment with efficiencies greater than the standard.

Table II.5 summarizes the inputs and methods DOE used for the NIA for this NODA. DOE made updates to some of the key inputs to the NIA analysis compared to the NIA analysis performed in the October 2023 NOPR. In particular, the NIA for this NODA includes slightly updated shipments (see section II.D of this document), slightly updated efficiency distribution (see section II.C of this document), updated annual energy consumption per unit (see section II.A of this document) and updated total installed costs per unit (see section II.A.6 of this document).

¹⁸ DOE uses data on manufacturer shipments as a proxy for national sales, as aggregate data on sales are lacking. In general, one would expect a close correspondence between shipments and sales.

¹⁹ DOE applied an elasticity constant of -0.5 to shipments for self-contained CRE and scaled this constant down to -0.15 over a period of 20 years from the current year of calculations, holding it constant at that rate for the remainder of the analysis period. This is the same constant and

Table II.5 Summary of Inputs and Methods for the National Impact Analysis

Inputs	Method
Shipments	Annual shipments from shipments model.
Compliance Date of Standard	2028
Efficiency Trends	N/A (No efficiency trends were applied)
Annual Energy Consumption per Unit	Annual weighted-average values are a function of energy use at each EL.
Total Installed Cost per Unit	Annual weighted-average values are a function of cost at each EL. Incorporates projection of future equipment prices.
Annual Energy Cost per Unit	Annual weighted-average values as a function of the annual energy consumption per unit and energy prices.
Repair and Maintenance Cost per Unit	Annual, weighted-average values from the LCC model.
Energy Price Trends	Prices from LCC analysis and <i>AEO2023</i> projections (to 2050) and extrapolation after 2050.
Energy Site-to-Primary and FFC Conversion	Time-series conversion factors based on <i>AEO2023</i> .
Discount Rate	3 percent and 7 percent
Present Year	2024

1. Sensitivity Analysis for Equipment With Unique Energy Use Characteristics

As discussed in section II.A.7 of this document, to account for CRE with certain features (*e.g.*, pass-through, sliding door, sliding-door pass-through, roll-in, roll-through, forced-air evaporator, and drawers), DOE applied

a single multiplier of 1.07 to the energy use of CRE with such features.

To evaluate the impact of CRE with these unique energy use characteristics in the NIA, DOE conducted a sensitivity analysis in this NODA and estimated the NES and NPV for all CRE, applying a 1.07 energy use multiplier to CRE with these features. Given a lack of market

data regarding CRE with these unique energy use characteristics, DOE relied on CCD model counts to estimate their market share. Table II.6 presents the estimated market share of CRE with unique energy use characteristics compared to their corresponding equipment class.

Table II.6 Market Shares of Equipment with Unique Features

Corresponding Equipment Class	Market Share
VCT.RC.M	0.5%
VCT.SC.M (Non-Large)	4.6%
VCT.SC.L (Non-Large)	0.4%
VCS.SC.M	6.4%
VCS.SC.L (Non-Large)	3.9%
HCS.SC.L	8.5%

To model this sensitivity, DOE assumed that the efficiency distribution of the equipment with unique features is the same as that of the overall equipment class. DOE assumed an increased energy consumption for the affected equipment by a factor of 7 percent. DOE modelled another sensitivity with the assumption that 5 percent of equipment in the specified equipment classes will have unique features instead of the market shares shown in table II.6. The results of these sensitivity analyses are shown in the

accompanying NODA support document.

E. Manufacturer Impact Analysis

DOE uses the Government Regulatory Impact Model (“GRIM”) to quantify the changes in cash flow due to new or amended standards that result in a higher or lower industry value. The GRIM uses a standard, annual, discounted cash-flow analysis that incorporates manufacturer costs, manufacturer markups, shipments, and industry financial information as inputs.

The GRIM models changes in costs, distribution of shipments, investments, and manufacturer margins that could result from a new or amended energy conservation standard. The GRIM spreadsheet uses the inputs to arrive at a series of annual cash flows, beginning in 2024 (the base year of the analysis) and continuing 30 years after the analyzed 2028 compliance year. For this NODA analysis, DOE calculated industry net present value (“INPV”) by summing the stream of annual discounted cash flows during the

analysis period. Consistent with the October 2023 NOPR, DOE used a real discount rate of 10.0 percent for the CRE industry. *Id.* at 88 FR 70246. Key inputs to the GRIM (*i.e.*, MPCs, shipments projections, conversion costs, refrigerant transition expenses, and manufacturer markup scenarios) are discussed in the following sections.

1. Manufacturer Production Costs

The changes in the MPCs of covered equipment can affect the revenues, gross margins, and cash flow of the industry. See section II.A of this document for details on the NODA updated engineering analysis.

2. Shipments Projections

The GRIM estimates manufacturer revenues based on total unit shipment projections and the distribution of those shipments by efficiency level. Consistent with the October 2023 NOPR, the GRIM uses the NIA's annual shipment projections derived from the shipments analysis. *Id.* at 88 FR 70196, 70242–70243. See section II.D of this document for details on the NODA updated shipments analysis.

3. Product and Capital Conversion Costs

DOE made certain refinements to the product conversion cost analysis in the October 2023 NOPR, which are incorporated into the analysis conducted for this NODA. 88 FR 70196, 70246–70247. Specifically, for this NODA analysis, DOE incorporated the most recent Department of Labor's Bureau of Labor Statistics ("BLS") wage data²¹ into its product conversion cost estimates and refreshed its equipment database to include up-to-date model listings from its CCD²² and California Energy Commission's Modernized Appliance Efficiency Database System for covered CRE.²³ Furthermore, to account for the potential increase in testing and certification costs associated with new safety standards (*i.e.*, UL 60335–2–89), which go into effect September 29, 2024, DOE doubled product conversion costs associated with UL testing and certification. For this NODA, DOE updated its capital conversion cost estimates from the

October 2023 NOPR to 2023\$ and manufacturer counts based on its refreshed model database but otherwise maintained its capital conversion cost methodology from the October 2023 NOPR. *Id.*

4. Refrigerant Transition Investments

As discussed in section II.A.1 of this document, the October 2023 EPA Final Rule restricts the use of hydrofluorocarbons ("HFCs") in specific sectors or subsectors, including use in certain CRE analyzed in this NODA. Consistent with the October 2023 NOPR, DOE accounted for the costs associated with redesigning CRE to make use of low-GWP refrigerants and retrofitting production facilities to accommodate flammable refrigerants in the GRIM in the no-new-standards case and standards cases. DOE considered the October 2023 EPA Final Rule and the expenses associated with the refrigerant transition in the analytical baseline of this analysis since manufacturers would need to comply with the October 2023 EPA Final Rule regardless of whether or not DOE amended or established standards for CRE. *Id.* at 88 FR 70247. Although refrigerant transition costs associated with the October 2023 EPA Final Rule are not attributed to this rulemaking, DOE accounted for these refrigerant transition costs in the no-new-standards case and standards cases to better reflect industry finances and cash flow over the analysis period.

In this NODA, DOE made refinements to its research and development ("R&D") refrigerant transition estimate to account for increased testing costs associated with third-party laboratories, as well as adjustments to the timeline of when manufacturers would need to make investments related to the refrigerant transition to align with the revised compliance dates for CRE in the October 2023 EPA Final Rule. *See Id.* at 88 FR 70284. Accordingly, for this NODA, DOE assumed that the transition to low-GWP refrigerants would require industry to invest approximately \$14.6 million in R&D and \$19.0 million in capital expenditures from 2024 (the NODA reference year) to 2026. Consistent with the October 2023 NOPR, DOE notes that its refrigerant transition estimates of \$14.6 million in R&D and \$19.0 million capital expenditures reflect an estimate of *future* investments industry would incur to comply with Federal or State refrigerant regulations. DOE acknowledges that manufacturers have already invested a significant amount of time and capital into transitioning CRE to low-GWP refrigerants.

5. Manufacturer Markup Scenarios

This NODA analysis used the same manufacturer markup scenarios as the October 2023 NOPR. *See Id.* at 88 FR 70247–70248.

F. Emissions Analysis, and Monetizing Emissions Impacts

For this NODA pertaining to CRE, DOE conducted the emissions analyses using the same methodology and data sources as in the October 2023 NOPR. *See Id.* at 88 FR 70251–70257. However, DOE updated its social cost of greenhouse gases ("GHG") ("SC–GHG") estimates, discussed as follows.

To monetize the benefits of reducing GHG emissions, the October 2023 NOPR used the interim SC–GHG estimates presented in the *Technical Support Document: Social Cost of Carbon, Methane, and Nitrous Oxide Interim Estimates Under Executive Order 13990* published in February 2021 by the Interagency Working Group on the Social Cost of Greenhouse Gases ("IWG"). As a member of the IWG involved in the development of the February 2021 SC–GHG TSD, DOE agreed that the interim SC–GHG estimates represented the most appropriate estimate of the SC–GHG until revised estimates were developed reflecting the latest, peer-reviewed science. *See Id.* at 88 FR 70253–70255 for discussion of the development and details of the IWG SC–GHG estimates. The IWG has continued working on updating the interim estimates but has not published final estimates.

Accordingly, in the regulatory analysis of its December 2023 Final Rule, "Standards of Performance for New, Reconstructed, and Modified Sources and Emissions Guidelines for Existing Sources: Oil and Natural Gas Sector Climate Review," EPA estimated climate benefits using a new, updated set of SC–GHG estimates ("2023 SC–GHG estimates"). EPA documented the methodology underlying the new estimates in the regulatory impact analysis ("RIA") for the December 2023 Final Rule and in greater detail in a technical report entitled *Report on the Social Cost of Greenhouse Gases: Estimates Incorporating Recent Scientific Advances* that was presented as Supplementary Material to the RIA.²⁴ The 2023 SC–GHG estimates "incorporate recent research addressing recommendations of the Natural

Academies of Science, Engineering, and Medicine (“National Academies”), responses to public comments on an earlier sensitivity analysis using draft SC–GHG estimates included in the EPA’s December 2022 proposal in the oil and natural gas sector standards of performance rulemaking, and comments from a 2023 external peer review of the accompanying technical report.”²⁵

On December 22, 2023, the IWG issued a memorandum directing that “agencies should use their professional judgment to determine which estimates of the SC–GHG reflect the best available evidence, are most appropriate for particular analytical contexts, and best facilitate sound decision-making” consistent with OMB Circular No. A–4 and applicable law.²⁶

DOE has been extensively involved in the IWG process and related work on the SC–GHGs for over a decade. This involvement includes DOE’s role as the federal technical monitor for the seminal 2017 report on the SC–GHG issued by the National Academies, which provided extensive recommendations on how to strengthen and update the SC–GHG estimates.²⁷ DOE has also participated in the IWG’s work since 2021. DOE technical experts involved in this work reviewed the 2023 SC–GHG methodology and report in light of the National Academies’ recommendations and DOE’s understanding of the state of the science.

Based on this review, DOE has preliminarily determined that the updated 2023 SC–GHG estimates, including the approach to discounting, represent a significant improvement in estimating the SC–GHG through incorporating the most recent advancements in the scientific literature and by addressing recommendations on prior methodologies. In particular, the 2023 SC–GHG estimates implement the key recommendations of the National Academies, and the 2023 SC–GHG estimates incorporate the extensive scientific findings and methodological advances that have occurred since the last IWG updates in 2013, 2015, and 2016.

The 2023 SC–GHG estimates have also been peer-reviewed. As indicated

by their statements, the peer reviewers strongly supported the new methodology, calling it “a huge advance,” “a real step change” and “an important improvement” in estimating the SC–GHG, and noting that it addressed the National Academies’ and others’ recommendations and “generally represents well the emerging consensus in the literature.”

The most significant improvements in the 2023 SC–GHG estimates carry out recommendations made by the National Academies. In its report, the National Academies’ principal recommendation was to develop and use “a new framework that would strengthen the scientific basis, provide greater transparency, and improve characterization of the uncertainties of the estimates.”²⁸ The IWG’s estimates since 2010 have relied on averaging the values produced by three integrated assessment models, each of which generates a set of SC–GHG emissions estimates based on the inputs and assumptions built into that particular model.²⁹ The National Academies recommended an entirely new approach that would “unbundle” this process and instead use a framework in which each step of the SC–GHG calculation is developed as one of four separate but integrated “modules”: the socioeconomic module, the climate module, the damages module, and the discounting module. The report provided detailed recommendations on developing and using these modules, including how to address discounting, socioeconomic projections, climate modeling, and uncertainty.

DOE preliminarily concludes that the 2023 SC–GHG estimates are consistent with the National Academies’ 2017 recommendations and represent major scientific advancements over the IWG’s approach. In addition, DOE supports the incorporation of more recent scientific findings and data throughout the development of each of the 2023 SC–GHG modules and the underlying components of those modules.

Thus, in accordance with the IWG memo, and having reviewed the 2023 SC–GHG methodologies and updates, DOE has preliminarily determined that the updated 2023 SC–GHG estimates reflect the best available scientific and analytical evidence and methodologies,

are accordingly the most appropriate for DOE analyses, and best facilitate sound decision-making by substantially improving the transparency of the estimates and representations of uncertainty inherent in such estimates. DOE welcomes comment on this preliminary determination.³⁰ In a final rulemaking, DOE will determine what role, if any, these estimates will play in any final decision adopting new and amended energy conservation standards for CRE.

For this NODA, DOE used these updated 2023 SC–GHG values to monetize the climate benefits of the emissions reductions associated at each efficiency level (“EL”) for CRE. These results are shown in the accompanying NODA support document in table 6.7 through table 6.15. Using these the 2023 SC–GHG estimates provides a better-informed range of potential climate benefits associated with the proposed new and amended standards. The EPA technical report presents SC–GHG values for emissions years through 2080; therefore, DOE did not monetize the climate benefits of GHG emissions reductions occurring after 2080. DOE expects additional climate impacts to accrue from GHG emissions changes post 2080, but due to a lack of readily available SC–GHG estimates for emissions years beyond 2080 and the relatively small emission effects expected from those years, DOE has not monetized these additional impacts in this analysis. The overall climate benefits are generally greater when using the higher, updated 2023 SC–GHG estimates, compared to the climate benefits using the older IWG SC–GHG estimates, which were used in the October 2023 NOPR. To facilitate a comparison, DOE also performed a sensitivity analysis using the IWG’s 2021 interim SC–GHG estimates. The results are shown in the accompanying NODA support document.³¹ In setting energy efficiency standards for CRE in any subsequent final rule, DOE will, as in the NOPR, consider whether the standards result in positive net benefits under either SC–GHG calculation methodology, as well as in the absence

of the estimated, monetized climate benefits.

For this NODA, DOE monetized NO_x and SO₂ using the same methodology and data sources as described in chapter 14 of the October 2023 NOPR TSD.

III. Analytical Results

A. Compliance Period

EPCA requires that amended standards would apply to CRE on or after a date that is 3 years after the final rule is published in the **Federal Register** or, if the Secretary determines that 3 years is inadequate, not later than 5 years after the final rule is published in the **Federal Register**. (See 42 U.S.C. 6313(c)(6)(C)) Consistent with the October 2023 NOPR, DOE assumed new and amended standards would apply to CRE manufactured 3 years after the date on which any new and amended standards are published. Currently, DOE anticipates publication of a final rule in the second half of 2024. Therefore, for purposes of its analysis, DOE used 2028 as the first full year of compliance with any new or amended standards for CRE.

Extending the compliance lead-in period from 3 years to a date between 3 to 5 years after a final rule is published in the **Federal Register** would delay the compliance year analyzed in this NODA from 2028 to 2029 or 2030. With regard to the LCC analysis and the NIA, a longer compliance period after publication of a final rule is not expected to result in significant changes to the results of the LCC and the NIA.

Although a number of inputs to the LCC analysis and NIA are time-dependent (*e.g.*, electricity prices, shipments drivers such as floorspace projections, and costs of certain design options that experience price learning, such as light-emitting diode (“LED”) lighting, and electronic components of variable speed compressors), these inputs would not result in significant changes to the results of the LCC and NIA for a 5-year compliance date (2030) compared to a 3-year compliance date (2028).

For the LCC, the relative changes in inputs that are time-dependent are small over a two-year delay. Commercial electricity prices averaged on a national

level are forecast by *AEO 2023* to decrease by 1 percent from 2028 to 2030, but expected to exceed 2028 prices again in 2033 and beyond. Equipment costs for higher efficiency levels using LED lighting and variable-speed compressors are expected to decrease up to 0.8 percent from 2028 to 2030 due to the cost reduction associated with price learning.³² These variations in LCC inputs have only minor effects on the relative comparison of efficiency levels and, as a consequence, would lead only to a slight increase in life-cycle cost savings associated with higher efficiency equipment. Therefore, there are no negative impacts for consumers by a 2-year delay of the compliance year. Furthermore, the efficiency distribution of purchasers does not change over time in the no-new-standards scenario, meaning that a delay of 2 years would not change the percentage of purchasers impacted by a new standard.

Regarding the NIA results, time-dependent inputs (*e.g.*, equipment costs and electricity prices) will cause small variations to the undiscounted NPV. For example, a 2030 compliance date will result in a slight increase in NPV for CRE with design options that experience price learning because their future prices are expected to decrease over time. A delayed compliance date will result in a minor increase in energy savings primarily due to an overall increasing shipments trend in future years. Regarding MIA results, extending the compliance lead-in would allow manufacturers more flexibility to spread out investments over a longer period. Considered in isolation, extending the compliance lead-in could lessen reductions in annual free cash flow over the conversion period in the standards case because the same investments could be spread out over 4 or 5 years instead of 3 years. Because INPV is the sum of discounted annual cash flows over the analysis period, standards case INPV would be similarly impacted by a longer compliance period. Holding other factors constant, the projected change in INPV at more stringent levels would look less negative (or more positive) with a 4 or 5 year compliance

period compared to a 3-year compliance period.

B. Life-Cycle Cost and Payback Period

In this NODA, DOE analyzed the economic impacts on CRE consumers by looking at the effects that potential new and amended standards at each EL would have on the LCC and PBP. DOE also examined the impacts of potential standards on selected consumer subgroups. These analyses are discussed in the following sections.

In general, higher-efficiency equipment affect consumers in two ways: (1) purchase price increases and (2) annual operating costs decrease. Inputs used for calculating the LCC and PBP include total installed costs (*i.e.*, equipment price plus installation costs), and operating costs (*i.e.*, annual energy use, energy prices, energy price trends, repair costs, and maintenance costs). The LCC calculation also uses equipment lifetime and a discount rate. Chapter 8 of the October 2023 NOPR TSD provides detailed information on the LCC and PBP analyses.

Table III.1 through table III.66 show the LCC and PBP results based on the updated analysis for the ELs considered for each equipment class in this NODA. In the first of each pair of tables, the simple payback is measured relative to the baseline equipment. In the second table, impacts are measured relative to the efficiency distribution in the no-new-standards case in the compliance year (see section II.C.4 of this document). Because some consumers purchase equipment with higher efficiency in the no-new-standards case, the average savings are less than the difference between the average LCC of the baseline equipment and the average LCC at each EL. The savings refer only to consumers who are affected by a standard at a given EL. Those who already purchase equipment with efficiency at or above a given EL are not affected. Consumers for whom the LCC increases at a given EL experience a net cost.

BILLING CODE 6450-01-C

4. Consumer Subgroup Analysis

In the consumer subgroup analysis in this NODA, DOE estimated the impact of the considered ELs on small businesses. As in the October 2023 NOPR, DOE applies small business-specific discount rates, which are

mostly higher than those in the full consumer sample. For this NODA, DOE also applied small business-specific energy prices, which are generally higher than those in the full consumer sample. Table III.67 compares the average LCC savings and PBP at each efficiency level for the consumer

subgroups with similar metrics for the entire consumer sample for CRE. In most cases, the average LCC savings and PBP for small businesses at the considered efficiency levels are not substantially different from the average for all consumers.

5. Rebuttable Presumption Payback

EPCA establishes a rebuttable presumption that an energy conservation standard is economically justified if the increased purchase cost for equipment that meets the standard is less than three times the value of the

first-year energy savings resulting from the standard. (42 U.S.C. 6316(e)(1); 42 U.S.C. 6295(o)(2)(B)(iii)) In calculating a rebuttable presumption payback period for each of the considered ELs in this NODA, DOE used discrete values and, as required by EPCA, based the energy use calculation on the DOE test

procedure for CRE. In contrast, the PBPs presented in section III.B of this document were calculated using distributions that reflect the range of energy use in the field.

Table III. presents the rebuttable-presumption payback periods for the considered ELs for CRE.

BILLING CODE 6450-01-C*B. Economic Impacts on Manufacturers*

Table III.69 shows the efficiency level grouping analyzed in the GRIM in this NODA. The MIA does not present results by equipment class and efficiency level because redesign and investments for one equipment class may impact multiple equipment classes because different equipment classes can share the same architecture, tooling, and production lines. Therefore, the MIA presents results based on a

representative combination of efficiency levels for remote-condensing units, self-contained condensing units (non-large), and self-contained condensing units (large). The accompanying NODA support document shows the analyzed design options and energy use equations for each considered efficiency level.

1. Industry Cashflow Analysis Results

Table III.70 through table III.72 present the GRIM results for the updated CRE analysis discussed in this

NODA for the CRE remote-condensing units, the CRE self-contained condensing units (non-large), and the CRE self-contained condensing units (large). The methodology and assumptions used in the MIA did not change from the October 2023 NOPR except for the analytical changes described in prior sections of this document. Details of the MIA inputs and methodology are available in chapter 12 of the October 2023 NOPR TSD.

BILLING CODE 6450-01-C

2. Direct Impacts on Employment

For the direct employment analysis, DOE revised the methodology used to estimate the lower bound impacts to domestic production employment in the October 2023 NOPR, which was incorporated into the analysis conducted for this NODA. DOE maintained the same estimate of U.S. labor percentage of 77 percent from the

October 2023 NOPR for this NODA. See at *Id.* 88 FR 70196, 70282–70283.

Using the GRIM, DOE estimated that in the absence of new and amended energy conservation standards, there would be 1,966 domestic production and non-production workers for CRE remote-condensing units in 2028, 9,613 domestic production and non-production workers for CRE self-contained condensing units (non-large)

in 2028, and 928 production and non-production workers for CRE self-contained condensing units (large) in 2028. Table III.73 through table III.75 show the range of impacts of energy conservation standards on U.S. manufacturing employment in the CRE industry for remote-condensing units, self-contained condensing units (non-large), and self-contained condensing units (large).

Table III.73 Direct Employment Impacts for Domestic CRE Manufacturers in 2028 –Remote-Condensing Units

	No-New-Standards Case	Efficiency Level Group				
		1	2	3	4	5
Direct Employment in 2028 (Production Workers + Non-Production Workers)	1,966	1,966	1,966	1,966	1,429 to 1,967	1,079 to 2,113
Potential Changes in Direct Employment in 2028*	-	-	-	-	(537) to 1	(887) to 147

*Numbers may not sum exactly due to rounding. Parentheses indicate negative numbers.

Table III.74 Direct Employment Impacts for Domestic CRE Manufacturers in 2028**Self-Contained Condensing Units (Non-Large)**

	No-New-Standards Case	Efficiency Level Group				
		1	2	3	4	5
Direct Employment in 2028 (Production Workers + Non-Production Workers)	9,613	9,606 to 9,613	9,523 to 9,613	5,585 to 9,513	5,582 to 9,509	4,615 to 9,271
Potential Changes in Direct Employment in 2028*	-	(7) to 0	(90) to 0	(4,028) to (100)	(4,031) to (104)	(4,998) to (342)

*Numbers may not sum exactly due to rounding. Parentheses indicate negative numbers.

Table III.75 Direct Employment Impacts for Domestic CRE Manufacturers in 2028 – Self-Contained Condensing Units (Large)

	No-New-Standards Case	Efficiency Level Group				
		1	2	3	4	5
Direct Employment in 2028 (Production Workers + Non-Production Workers)	928	926 to 928	317 to 911	671 to 922	316 to 921	313 to 842
Potential Changes in Direct Employment in 2028*	-	(2) to 0	(611) to (17)	(257) to (6)	(612) to (7)	(615) to (86)

*Numbers may not sum exactly due to rounding. Parentheses indicate negative numbers.

The upper bound estimate corresponds to a potential change in the number of domestic production workers that would result from new and amended energy conservation standards if manufacturers continue to produce the same scope of covered equipment within the United States after the analyzed compliance date. Most of the design options analyzed in the engineering analysis require manufacturers to purchase more-efficient components from suppliers. These components do not require significant additional labor to assemble or significant production line updates. For this NODA, DOE modeled an incremental increase in labor content associated with implementing improved door designs (*i.e.*, moving to double-pane, triple-pane, or vacuum-insulated glass door designs).

The lower bound estimate conservatively assumes that some domestic manufacturing either is eliminated or moves abroad at more stringent efficiency levels. For levels that require capital investment and higher per-unit labor content, DOE assumed that some manufacturing could move abroad as relocating production to lower-labor cost countries could become increasingly attractive.

The employment impacts discussed in this section are independent of the employment impacts from the broader U.S. economy.

C. National Impact Analysis

This section presents DOE's estimates of the NES and the NPV of consumer benefits that would result from each of the ELs considered as potential amended standards.

1. National Energy Savings

To estimate the energy savings attributable to potential new and amended standards for CRE, DOE compared their energy consumption under the no-new-standards case to their anticipated energy consumption at each EL in this NODA. The savings are measured over the entire lifetime of equipment purchased in the 30-year period that begins in the year of anticipated compliance with new and amended standards 2028–2057. Table III.76 presents DOE's projections of the national energy savings for each EL for CRE. The savings were calculated using the approach described in section II.E of this document.

2. Net Present Value of Consumer Costs and Benefits

DOE estimated the cumulative NPV of the total costs and savings for

consumers that would result from the ELs considered for CRE. In accordance with OMB’s guidelines on regulatory analysis,³³ DOE calculated NPV using both a 7-percent and a 3-percent real discount rate. Table III.77 and table

III.78 show the consumer NPV results at 3 percent and 7 percent discount rates with impacts counted over the lifetime of equipment purchased during the period 2028–2057.

BILLING CODE 6450-01-C

D. Need of the Nation To Conserve Energy

Enhanced energy efficiency, where economically justified, improves the Nation’s energy security, strengthens the economy, and reduces the environmental impacts (costs) of energy production. Reduced electricity demand due to energy conservation standards is also likely to reduce the cost of maintaining the reliability of the

electricity system, particularly during peak-load periods.

Energy conservation resulting from potential energy conservation standards for CRE is expected to yield environmental benefits in the form of reduced emissions of certain air pollutants and greenhouse gases. DOE also estimated monetary benefits likely to result from the reduced emissions that DOE estimated for each of the considered ELs for CRE. Chapter 6 of the accompanying NODA support

document provides DOE’s estimate of cumulative emissions reductions and associated monetized benefits expected to result at each EL.

IV. Public Participation

DOE requests comment on the updated analysis for CRE presented in the NODA. As noted in the October 2023 NOPR, DOE may adopt energy efficiency levels that are either higher or lower than the proposed standards in

the October 2023 NOPR. *Id.* at 88 FR 70196, 70203.

DOE will accept comments, data, and information regarding this NODA no later than the date provided in the **DATES** section at the beginning of this document. Interested parties may submit comments, data, and other information using any of the methods described in the **ADDRESSES** section at the beginning of this document.

Submitting comments via www.regulations.gov. The *www.regulations.gov* web page will require you to provide your name and contact information. Your contact information will be viewable to DOE Building Technologies staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). If your comment is not processed properly because of technical difficulties, DOE will use this information to contact you. If DOE cannot read your comment due to technical difficulties and cannot contact you for clarification, DOE may not be able to consider your comment.

However, your contact information will be publicly viewable if you include it in the comment itself or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. Otherwise, persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit to *www.regulations.gov* information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as Confidential Business Information (“CBI”). Comments submitted through *www.regulations.gov* cannot be claimed as CBI. Comments received through the website will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section.

DOE processes submissions made through *www.regulations.gov* before posting. Normally, comments will be posted within a few days of being submitted. However, if large volumes of comments are being processed simultaneously, your comment may not be viewable for up to several weeks. Please keep the comment tracking number that *www.regulations.gov*

provides after you have successfully uploaded your comment.

Submitting comments via email, hand delivery/courier, or postal mail.

Comments and documents submitted via email, hand delivery/courier, or postal mail also will be posted to *www.regulations.gov*. If you do not want your personal contact information to be publicly viewable, do not include it in your comment or any accompanying documents. Instead, provide your contact information in a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via postal mail or hand delivery/courier, please provide all items on a CD, if feasible, in which case it is not necessary to submit printed copies. No telefacsimiles (“faxes”) will be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, that are written in English, and that are free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

Campaign form letters. Please submit campaign form letters by the originating organization in batches of between 50 to 500 form letters per PDF or as one form letter with a list of supporters’ names compiled into one or more PDFs. This reduces comment processing and posting time.

Confidential Business Information. Pursuant to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt by law from public disclosure should submit via email two well-marked copies: one copy of the document marked “confidential” including all the information believed to be confidential, and one copy of the document marked “non-confidential” with the information believed to be confidential deleted. DOE will make its own determination about the confidential status of the information and treat it according to its determination.

It is DOE’s policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except

information deemed to be exempt from public disclosure).

V. Approval of the Office of the Secretary

The Secretary of Energy has approved publication of this notification of data availability and request for comment.

Signing Authority

This document of the Department of Energy was signed on August 17, 2024, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on August 21, 2024.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2024–19072 Filed 8–27–24; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 27

[Docket No. FAA–2024–0875; Notice No. 27–24–01–SC]

Special Conditions: Skyrise, Robinson Helicopter Company Model R66 Helicopter; Interaction of Systems and Structures

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed special conditions.

SUMMARY: This action proposes special conditions for the Robinson Helicopter Company (Robinson) Model R66 helicopter. This helicopter, as modified by Skyrise, will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for normal category helicopters. This design feature is a novel control input and fly-by-wire (FBW) system. The applicable airworthiness regulations do not contain

adequate or appropriate safety standards for this design feature. These proposed special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

DATES: Send comments on or before October 15, 2024.

ADDRESSES: Send comments identified by Docket No. FAA-2024-0875 using any of the following methods:

Federal eRegulations Portal: Go to www.regulations.gov and follow the online instructions for sending your comments electronically.

Mail: Send comments to Docket Operations, M-30, U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12-140, West Building Ground Floor, Washington, DC, 20590-0001.

Hand Delivery or Courier: Take comments to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

Fax: Fax comments to Docket Operations at 202-493-2251.

Docket: Background documents or comments received may be read at www.regulations.gov at any time. Follow the online instructions for accessing the docket or go to Docket Operations in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Daniel Moore, Airframe Section, AIR-622, Technical Policy Branch, Policy and Standards Division, Aircraft Certification Service, Federal Aviation Administration, 901 Locust, Kansas City, MO 64106; telephone (303) 342-1066; email Daniel.E.Moore@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites interested people to take part in this rulemaking by sending written comments, data, or views. The most helpful comments reference a specific portion of the proposed special conditions, explain the reason for any recommended change, and include supporting data.

The FAA will consider all comments received by the closing date for comments, and will consider comments filed late if it is possible to do so without incurring delay. The FAA may change these special conditions based on the comments received.

Privacy

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in title 14, Code of Federal Regulations (14 CFR) 11.35, the FAA will post all comments received without change to www.regulations.gov, including any personal information you provide. The FAA will also post a report summarizing each substantive verbal contact received about these special conditions.

Confidential Business Information

Confidential Business Information (CBI) is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to these special conditions contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to these special conditions, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential under the FOIA, and the indicated comments will not be placed in the public docket of these proposed special conditions. Send submissions containing CBI to the individual listed in the For Further Information Contact section above. Comments the FAA receives, which are not specifically designated as CBI, will be placed in the public docket for these proposed special conditions.

Background

On April 10, 2023, Skyryse applied for a supplemental type certificate for removal of the mechanical control system and installation of a computer controlled flight control system in the Model R66 helicopter. The Robinson Model R66 helicopter, currently approved under Type Certificate No. R00015LA, is a single engine normal category rotorcraft. The maximum take-off weight is 2,700 pounds, with a maximum seating capacity of five passengers.

Type Certification Basis

Under the provisions of 14 CFR 21.101, Skyryse must show that the Robinson Model R66 helicopter, as changed, continues to meet the applicable provisions of the regulations listed in Type Certificate No. R00015LA or the applicable regulations in effect on

the date of application for the change, except for earlier amendments as agreed upon by the FAA.

If the Administrator finds that the applicable airworthiness regulations do not contain adequate or appropriate safety standards for the Robinson Model R66 helicopter because of a novel or unusual design feature, special conditions are prescribed under the provisions of § 21.16.

Special conditions are initially applicable to the model for which they are issued. Should the applicant apply for a supplemental type certificate to modify any other model included on the same type certificate to incorporate the same novel or unusual design feature, these special conditions would also apply to the other model under § 21.101.

In addition to the applicable airworthiness regulations and special conditions, the Robinson Model R66 helicopter must comply with the fuel-vent and exhaust-emission requirements of 14 CFR part 34, and the noise-certification requirements of 14 CFR part 36.

The FAA issues special conditions, as defined in 14 CFR 11.19, in accordance with § 11.38, and they become part of the type certification basis under § 21.101.

Novel or Unusual Design Feature

The Robinson Model R66 helicopter will incorporate the following novel or unusual design feature:

Novel control input and FBW system.

Discussion

Skyryse is proposing to install an FBW flight control system (FCS) intended to replace the current hydraulically boosted mechanical primary FCS, on a Robinson Model R66 helicopter. FBW systems are new to part 27 rotorcraft and as such, the rotorcraft FCS will now contain control functions that affect the static strength of rotorcraft structure.

These proposed special conditions would give the applicant an option to offset the structural factor of safety based on the probability of system failure. These proposed special conditions apply to systems that can induce loads on the airframe or change the response of the rotorcraft to maneuvers or to control inputs, as a result of failure. Some potential examples include part 27 rotorcraft equipped with FBW or fly-by-light FCSs, autopilots, stability augmentation systems, load alleviation systems, flutter control systems, fuel management systems, and other systems that either directly or as a result of failure or

malfunction affect structural performance.

The FAA has issued special conditions for the interaction of systems and structures to other aircraft in the past (parts 23, 25, and 29). Active flight control systems are capable of providing automatic responses to inputs from sources other than the pilots. These automatic systems may become inoperative or may operate in a degraded mode, which could impact the loads envelope and rotorcraft static strength.

Therefore, it is necessary to determine the structural factors of safety and operating margins such that the joint probability of structural failures due to application of loads during system malfunctions is not greater than that found in rotorcraft equipped with earlier technology control systems. To achieve this objective, it is necessary to define the failure conditions with their associated frequency of occurrence in order to determine the structural factors of safety and operating margins that will ensure an acceptable level of safety.

The proposed special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

Applicability

As discussed above, these proposed special conditions are applicable to the model for which they are issued. Should the applicant apply for a supplemental type certificate to modify any other model included on the same type certificate to incorporate the same novel or unusual design feature, these special conditions would apply to the other model as well.

Conclusion

This action affects only a certain novel or unusual design feature on one model of helicopter. It is not a rule of general applicability and affects only the applicant who applied to the FAA for approval of these features on the helicopter.

List of Subjects in 14 CFR Part 27

Aircraft, Aviation safety, Reporting and recordkeeping requirements.

Authority Citation

The authority citation for these special conditions is as follows:

Authority: 49 U.S.C. 106(f), 106(g), 40113, 44701, 44702, and 44704.

The Proposed Special Conditions

Accordingly, the Federal Aviation Administration (FAA) proposes the

following special conditions as part of the type certification basis for Robinson Model R66 helicopters, as modified by Skyryse.

Interaction of Systems and Structures

For rotorcraft equipped with systems that affect structural performance, either directly or as a result of a failure or malfunction, the influence of these systems and their failure conditions must be taken into account when showing compliance with the requirements of subparts C and D of part 27 of title 14 of the Code of Federal Regulations (14 CFR).

The following criteria must be used for showing compliance with these special conditions:

(a) The criteria defined herein only address the direct structural consequences of the system responses and performance. They cannot be considered in isolation but should be included in the overall safety evaluation of the rotorcraft. These criteria may, in some instances, duplicate standards already established for this evaluation. These criteria are only applicable to structures whose failure could prevent continued safe flight and landing. Specific criteria that define acceptable limits on handling characteristics or stability requirements, when operating in the system degraded or inoperative mode, are not provided in these special conditions.

(b) Depending upon the specific characteristics of the rotorcraft, additional studies may be required that go beyond the criteria provided in these special conditions in order to demonstrate the capability of the rotorcraft to meet other realistic conditions such as alternative gust or maneuver descriptions for a rotorcraft equipped with a load alleviation system.

(c) The following definitions are applicable to these special conditions.

(1) *Structural performance*: Capability of the rotorcraft to meet the structural requirements of 14 CFR part 27.

(2) *Flight limitations*: Limitations that can be applied to the rotorcraft flight conditions following an in-flight occurrence and that are included in the flight manual (e.g., speed limitations, avoidance of severe weather conditions, etc.).

(3) *Operational limitations*: Limitations, including flight limitations that can be applied to the rotorcraft operating conditions before dispatch (e.g., fuel, payload, and master minimum equipment list limitations).

(4) *Failure condition*: The term failure condition is the same as that used in § 27.1309; however, these special

conditions apply only to system failure conditions that affect the structural performance of the rotorcraft (e.g., system failure conditions that induce loads, change the response of the rotorcraft to inputs such as gusts or pilot actions, or lower flutter margins).

Effects of Systems on Structures

(a) *General*. The following criteria will be used in determining the influence of a system and its failure conditions on the rotorcraft structure.

(b) *System fully operative*. With the system fully operative, the following apply:

(1) Limit loads must be derived in all normal operating configurations of the system from all the limit conditions specified in subpart C (or used in lieu of those specified in subpart C), taking into account any special behavior of such a system or associated functions or any effect on the structural performance of the rotorcraft that may occur up to the limit loads. In particular, any significant nonlinearity (rate of displacement of control surface, thresholds, or any other system nonlinearities) must be accounted for in a realistic or conservative way when deriving limit loads from limit conditions.

(2) The rotorcraft must meet the strength requirements of part 27 (static strength, residual strength), using the specified factors to derive ultimate loads from the limit loads defined above. The effect of nonlinearities must be investigated beyond limit conditions to ensure the behavior of the system presents no anomaly compared to the behavior below limit conditions. However, conditions beyond limit conditions need not be considered when it can be shown that the rotorcraft has design features that will not allow it to exceed those limit conditions.

(3) The rotorcraft must meet the flutter requirements of § 27.629.

(c) *System in the failure condition*. For any system failure condition not shown to be extremely improbable, the following apply:

(1) At the time of occurrence. Starting from 1-g level flight conditions, a realistic scenario, including pilot corrective actions, must be established to determine the loads occurring at the time of failure and immediately after the failure.

(i) For static strength substantiation, these loads multiplied by an appropriate factor of safety that is related to the probability of occurrence of the failure, are ultimate loads to be considered for design. The factor of safety is defined in Figure 1.

Figure 1. Factor of safety at the time of occurrence.

(ii) For residual strength substantiation, the rotorcraft must be able to withstand two thirds of the ultimate loads defined in paragraph (c)(1)(i) of these special conditions.

(iii) Freedom from flutter and divergence must be shown under any condition of operation including:

(A) Airspeeds up to $1.11 V_{NE}$ (power on and power off).

(B) Main rotor speeds from $0.95 \times$ the minimum permitted speed up to $1.05 \times$ the maximum permitted speed (power on and power off).

(C) The critical combinations of weight, center of gravity position, load factor, altitude, speed, and power condition.

(iv) For failure conditions that result in excursions beyond operating limitations, freedom from flutter and

divergence must be shown to increased speeds, so that the margins intended by paragraph (c)(1)(iii) of these special conditions are maintained.

(v) Failures of the system that result in forced structural vibrations (oscillatory failures) must not produce loads that could result in detrimental deformation of primary structure.

(2) For the continuation of the flight. For the rotorcraft in the system failed state, and considering any appropriate reconfiguration and flight limitations, the following apply:

(i) The loads derived from the following conditions (or used in lieu of the following conditions) at speeds up to V_{NE} (power on and power off) (or the speed limitation prescribed for the remainder of the flight) and at the minimum and maximum main rotor

speeds (if applicable) must be determined:

(A) the limit symmetrical maneuvering conditions specified in §§ 27.337 and § 27.339;

(B) the limit gust conditions specified in § 27.341;

(C) the limit yaw maneuvering conditions specified in § 27.351;

(D) the limit unsymmetrical conditions specified in § 27.427; and

(E) the limit ground loading conditions specified in § 27.473.

(ii) For static strength substantiation, each part of the structure must be able to withstand the loads in paragraph (c)(2)(i) of these special conditions multiplied by a factor of safety depending on the probability of being in this failure state. The factor of safety is defined in Figure 2.

Figure 2. Factor of safety for continuation of flight.

$$Q_j = (T_j)(P_j)$$

Where:

Q_j = Probability of being in failure condition j

T_j = Average time spent in failure condition j (in hours)

P_j = Probability of occurrence of failure mode j (per hour)

Note: If P_j is greater than 10^{-3} per flight hour, then a 1.5 factor of safety must be applied to all limit load conditions specified in subpart C.

(iii) For residual strength substantiation, the rotorcraft must be able to withstand two thirds of the ultimate loads defined in paragraph (c)(2)(ii) of these special conditions.

(iv) If the loads induced by the failure condition have a significant effect on fatigue or damage tolerance, then their effects must be taken into account.

(v) Freedom from flutter and divergence must also be shown up to 1.11 V_{NE} (power on and power off), including any probable system failure condition combined with any damage required or selected for investigation by either § 27.571(e) or § 27.573(d).

(3) Consideration of certain failure conditions may be required by other sections of 14 CFR part 27 regardless of calculated system reliability. Where analysis shows the probability of these failure conditions to be extremely improbable, criteria other than those specified in this paragraph may be used for structural substantiation to show continued safe flight and landing.

(d) *Failure indications.* For system failure detection and indication, the following apply:

(1) The system must be checked for failure conditions, not shown to be extremely improbable, that degrade the structural capability below the level required by part 27 or that significantly reduce the reliability of the remaining operational portion of the system. As far as reasonably practicable, the flight crew must be made aware of these failures before flight. Certain elements of the control system, such as mechanical and hydraulic components, may use special periodic inspections, and electronic components may use daily checks, in lieu of detection and indication systems to achieve the objective of this requirement. These other means of detecting failures before flight are considered certification maintenance requirements and must be limited to components that are not readily detectable by normal detection and indication systems, and where service history shows that inspections will provide an adequate level of safety.

(2) The existence of any failure condition, not shown to be extremely

improbable, during flight that could significantly affect the structural capability of the rotorcraft and for which the associated reduction in airworthiness can be minimized by suitable flight limitations, must be signaled to the flight crew. For example, failure conditions that result in a factor of safety between the rotorcraft strength and the loads of subpart C below 1.25, or flutter and divergence margins below 1.11 V_{NE} (power on and power off), must be signaled to the crew during flight.

(e) *Dispatch with known failure conditions.* If the rotorcraft is to be dispatched in a known system failure condition that affects structural performance, or that affects the reliability of the remaining operational portion of the system to maintain structural performance, then the provisions of these special conditions must be met, including the provisions of paragraph (b) for the dispatched condition and paragraph (c) for subsequent failures. Expected operational limitations may be taken into account in establishing P_j as the probability of failure occurrence for determining the safety margin in Figure 1. Flight limitations and expected operational limitations may be taken into account in establishing Q_j as the combined probability of being in the dispatched failure condition and the subsequent failure condition for the safety margins in Figure 2. These limitations must be such that the probability of being in this combined failure state and then subsequently encountering limit load conditions is extremely improbable. No reduction in these safety margins is allowed if the subsequent system failure rate is greater than 10^{-3} per flight hour.

Issued in Kansas City, Missouri, on August 22, 2024.

Patrick R. Mullen,

Manager, Technical Policy Branch, Policy and Standards Division, Aircraft Certification Service.

[FR Doc. 2024–19329 Filed 8–27–24; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2024–2009; Project Identifier AD–2023–01286–R]

RIN 2120–AA64

Airworthiness Directives; MD Helicopters, LLC, Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for certain MD Helicopters, LLC, Model 369 (Army YO–6A), 369A (Army OH–6A), 369D, 369E, 369F, 369FF, 369H, 369HE, 369HM, 369HS, 500N, and 600N helicopters. This proposed AD was prompted by multiple reports of cracked tail rotor (T/R) pedal support brackets. This proposed AD would require repetitively inspecting certain part-numbered T/R pedal support brackets and depending on the results, replacing the T/R pedal support bracket or refinishing any exposed areas. This proposed AD would also prohibit installing certain part-numbered T/R pedal support brackets. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 15, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to [regulations.gov](https://www.regulations.gov). Follow the instructions for submitting comments.

- *Fax:* (202) 493–2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at [regulations.gov](https://www.regulations.gov) under Docket No. FAA–2024–2009; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, any comments received, and other information. The street address for Docket Operations is listed above.

Material Incorporated by Reference:

- For MD Helicopters material identified in this AD, contact MD Helicopters, LLC, 4555 East McDowell Road, Mesa, AZ 85215-9734; phone: (480) 346-6300; email: info@mdhelicopters.com; website: mdhelicopters.com/contact/.

- You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110.

FOR FURTHER INFORMATION CONTACT: Eduardo Orozco-Duran, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: (562) 627-5264; email: Eduardo.Orozco-Duran@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2024-2009; Project Identifier AD-2023-01286-R" at the beginning of your comments. The most helpful comments reference a specific portion of the proposal, explain the reason for any recommended change, and include supporting data. The FAA will consider all comments received by the closing date and may amend this proposal because of those comments.

Except for Confidential Business Information (CBI) as described in the following paragraph, and other information as described in 14 CFR 11.35, the FAA will post all comments received, without change, to regulations.gov, including any personal information you provide. The agency will also post a report summarizing each substantive verbal contact received about this NPRM.

Confidential Business Information

CBI is commercial or financial information that is both customarily and actually treated as private by its owner. Under the Freedom of Information Act (FOIA) (5 U.S.C. 552), CBI is exempt from public disclosure. If your comments responsive to this NPRM contain commercial or financial information that is customarily treated as private, that you actually treat as private, and that is relevant or responsive to this NPRM, it is important that you clearly designate the submitted comments as CBI. Please mark each page of your submission containing CBI as "PROPIN." The FAA will treat such marked submissions as confidential

under the FOIA, and they will not be placed in the public docket of this NPRM. Submissions containing CBI should be sent to Eduardo Orozco-Duran, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: (562) 627-5264; email: Eduardo.Orozco-Duran@faa.gov. Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

The FAA received a report of a forced emergency landing involving an MD Helicopters, LLC, Model 369D helicopter in Canada in 2022 that was caused by a cracked magnesium cast T/R pedal support bracket having part number (P/N) 369A7505-8. There have been 16 other reports of cracked magnesium cast T/R pedal support brackets having P/Ns 369A7505-7, 369A7505-8, 369A7505-14, or 369A7505-15 discovered during maintenance in the last 30 years. Material deficiencies associated with magnesium cast parts, as well as fatigue damage and successive in-flight loading have been determined to cause the parts to fail. Additionally, magnesium cast parts are susceptible to corrosion where insufficient protective coatings have shown to wear and deteriorate. All reported failures of this part have been the magnesium cast 369A7505 configuration. The aluminum cast T/R pedal support bracket P/N 369N2640 have no reported failures but are still subject to the inspection requirements of this AD. The natural corrosion advantages of aluminum, as well as the coating requirements of its anodization offer greater mitigation of the risks of corrosion in comparison to the magnesium cast part. Although superior to the magnesium cast part, the alternate aluminum cast part could still be prone to these material deficiencies of cast parts.

This proposed AD would require repetitively inspecting magnesium cast T/R pedal support brackets having P/N 369A7505-7, 369A7505-8, 369A7505-14, or 369A7505-15, and aluminum cast T/R pedal support brackets having P/N 369N2640-1 or 369N2640-2. These T/R pedal support brackets may be installed on MD Helicopters, LLC, Model 369 (Army YOH-6A), 369A (Army OH-6A), 369D, 369E, 369F, 369FF, 369H, 369HE, 369HM, 369HS, 500N, and 600N helicopters. This proposed AD would also prohibit installing magnesium cast T/R pedal support bracket P/N 369A7505-7, 369A7505-8, 369A7505-14, or 369A7505-15 on any helicopter. This condition, if not addressed, could

result in failure of the T/R pedal support bracket, reduced controllability of the helicopter, and subsequent loss of control of the helicopter.

FAA's Determination

The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop on other products of these same type designs.

Material Incorporated by Reference Under 1 CFR Part 51

The FAA reviewed MD Helicopters Service Bulletin SB369D-231R2 for Model 369D helicopters, SB369E-131R2 for Model 369E helicopters, SB369F-122R2 for Model 369F and 369FF helicopters, SB369H-265R2 for Model 369H, 369HE, 369HM, and 369HS helicopters, SB500N-068R2 for Model 500N helicopters, and SB600N-082R2 for Model 600N helicopters, each dated November 1, 2023 (co-published as one document). For magnesium cast T/R pedal support brackets P/N 369A7505-7, 369A7505-8, 369A7505-14, and 369A7505-15, this material specifies procedures for visually inspecting each T/R pedal support bracket for a crack and corrosion and depending on the results, replacing the bracket with an aluminum cast T/R pedal support bracket having P/N 369N2640-1 or 369N2640-2, or refinishing any exposed areas. For magnesium cast T/R pedal support brackets P/N 369A7505-7, 369A7505-8, 369A7505-14, and 369A7505-15, this material also specifies procedures for fluorescent penetrant inspecting, eddy current inspecting, or dye penetrant inspecting each T/R pedal support bracket for a crack and depending on the results, replacing the bracket with an aluminum cast T/R pedal support bracket having P/N 369N2640-1 or 369N2640-2, or refinishing any exposed areas. For the purposes of this proposed AD, MD Helicopters, LLC, Model 369 (Army YOH-6A) and 369A (Army OH-6A) helicopters would use MD Helicopters Service Bulletin SB369D-231R2, dated November 1, 2023, to accomplish certain actions required by this proposed AD.

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in the material already described except as discussed under "Differences Between

this Proposed AD and the Referenced Material.”

Differences Between This Proposed AD and the Referenced Material

The related material applies to magnesium cast T/R pedal support brackets having P/N 369A7505-7, 369A7505-8, 369A7505-14, or 369A7505-15, whereas this proposed AD would apply to those part-numbered magnesium cast T/R pedal support brackets and aluminum cast T/R pedal support brackets having P/N 369N2640-1 or 369N2640-2. This proposed AD would prohibit installing magnesium cast T/R pedal support brackets having P/N 369A7505-7, 369A7505-8, 369A7505-14, or 369A7505-15, whereas the related material does not.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 353 helicopters of U.S. registry. Labor rates are estimated at \$85 per work-hour. Based on these numbers, the FAA estimates the following costs to comply with this proposed AD.

Visually inspecting the T/R pedal support brackets (up to two T/R pedal support brackets per helicopter) would take approximately 0.5 work-hour for an estimated cost of up to \$43 per helicopter and \$15,179 for the U.S. fleet per inspection cycle. Non-destructive inspection of the T/R pedal support brackets would take approximately 2 work-hours for an estimated cost of up to \$170 per helicopter and \$60,010 for the U.S. fleet per inspection cycle.

If required, replacing a T/R pedal support bracket would take approximately 8 work-hours and parts would cost approximately \$2,075 for an estimated cost of \$2,755 per T/R pedal support bracket. Refinishing any exposed areas could vary significantly from helicopter to helicopter. The FAA has no data to determine the costs to accomplish this action or the number of helicopters that may require this action.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing

regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
- (2) Would not affect intrastate aviation in Alaska, and
- (3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

MD Helicopters, LLC: Docket No. FAA-2024-2009; Project Identifier AD-2023-01286-R.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 15, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to MD Helicopters, LLC, Model 369 (Army YOH-6A), 369A (Army OH-6A), 369D, 369E, 369F, 369FF, 369H, 369HE, 369HM, 369HS, 500N, and 600N

helicopters, certificated in any category, with a tail rotor (T/R) pedal support bracket part number (P/N) 369A7505-7, 369A7505-8, 369A7505-14, 369A7505-15, 369N2640-1, or 369N2640-2, installed.

(d) Subject

Joint Aircraft System Component (JASC) Code: 6720, tail rotor control system.

(e) Unsafe Condition

This AD was prompted by multiple reports of cracked T/R pedal support brackets. The FAA is issuing this AD to detect a cracked T/R pedal support bracket. The unsafe condition, if not addressed, could result in failure of the T/R pedal support bracket, reduced controllability of the helicopter, and subsequent loss of control of the helicopter.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Required Actions

(1) Within 25 hours time-in-service (TIS) and thereafter at intervals not to exceed 100 hours TIS, using a 10X power magnification glass, mirror, and flashlight, visually inspect each T/R pedal support bracket for cracks and corrosion by following the Accomplishment Instructions, paragraph 2.A.(2), of MD Helicopters Service Bulletin SB369D-231R2, SB369E-131R2, SB369F-122R2, SB369H-265R2, SB500N-068R2, or SB600N-082R2, each dated November 1, 2023 (collectively referred to as “the service bulletins”), as applicable to your helicopter model; you may use a borescope as specified in the note in paragraph 2.A.(2) of the service bulletins. For the purposes of this AD, for MD Helicopters, LLC, Model 369 (Army YOH-6A) and 369A (Army OH-6A) helicopters, use MD Helicopters Service Bulletin SB369D-231R2, dated November 1, 2023, to accomplish the actions required by this AD.

(i) If there is a crack or any corrosion as a result of the inspections required by the introductory text of paragraph (g)(1) of this AD, before further flight, remove the T/R pedal support bracket from service and replace it with an airworthy T/R pedal support bracket P/N 369N2640-1 or 369N2640-2.

(ii) If there is not a crack and there is no corrosion as a result of the inspections required by the introductory text of paragraph (g)(1) of this AD, before further flight, refinish any exposed areas.

(2) Within 50 hours TIS and thereafter at intervals not to exceed 300 hours TIS, eddy current, dye penetrant, or fluorescent penetrant inspect each T/R pedal support bracket for a crack by following the Accomplishment Instructions, paragraph 2.B.(2), of the service bulletins, as applicable to your helicopter model. The inspections required by this paragraph must be performed by a Level II or Level III inspector certified in the FAA-acceptable standards for nondestructive inspection personnel.

Note 1 to the introductory text of paragraph (g)(2): Advisory Circular 65-31B contains examples of FAA-acceptable Level II and Level III qualification standards criteria

for inspection personnel doing nondestructive test inspections.

(i) If there is a crack as a result of the actions required by the introductory text of paragraph (g)(2) of this AD, before further flight, remove the T/R pedal support bracket from service and replace it with an airworthy T/R pedal support bracket P/N 369N2640-1 or 369N2640-2.

(ii) If there is not a crack as a result of the actions required by the introductory text of paragraph (g)(2) of this AD, before further flight, refinish any exposed areas.

(3) As of the effective date of this AD, do not install magnesium cast T/R pedal support bracket P/N 369A7505-7, 369A7505-8, 369A7505-14, or 369A7505-15 on any helicopter.

(h) Alternative Methods of Compliance (AMOCs)

(1) The Manager, Western Certification Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the manager of the Western Certification Branch, send it to the attention of the person identified in paragraph (i) of this AD. Information may be emailed to AMOC@faa.gov.

(2) Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office.

(i) Additional Information

(1) For more information about this AD, contact Eduardo Orozco-Duran, Aviation Safety Engineer, FAA, 3960 Paramount Boulevard, Lakewood, CA 90712; phone: (562) 627-5264; email: Eduardo.Orozco-Duran@faa.gov.

(2) For advisory circular material identified in this AD that is not incorporated by reference, go to faa.gov/regulations_policies/advisory_circulars/index.cfm/go/document.information/documentID/1023552.

(j) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless the AD specifies otherwise.

(i) MD Helicopters Service Bulletin SB369D-231R2, dated November 1, 2023.

(ii) MD Helicopters Service Bulletin SB369E-131R2, dated November 1, 2023.

(iii) MD Helicopters Service Bulletin SB369F-122R2, dated November 1, 2023.

(iv) MD Helicopters Service Bulletin SB369H-265R2, dated November 1, 2023.

(v) MD Helicopters Service Bulletin SB500N-068R2, dated November 1, 2023.

(vi) MD Helicopters Service Bulletin SB600N-082R2, dated November 1, 2023.

Note 2 to paragraph (j)(2): The service bulletins identified in paragraphs (j)(2)(i) through (vi) of this AD are co-published as one document.

(3) For MD Helicopters material identified in this AD, contact MD Helicopters, LLC, 4555 East McDowell Road, Mesa, AZ 85215-9734; phone: (480) 346-6300; email: info@mdhelicopters.com; website: mdhelicopters.com/contact/.

(4) You may view this material at the FAA, Office of the Regional Counsel, Southwest Region, 10101 Hillwood Pkwy., Room 6N-321, Fort Worth, TX 76177. For information on the availability of this material at the FAA, call (817) 222-5110.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov.

Issued on July 31, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2024-2133; Project Identifier MCAI-2024-00243-T]

RIN 2120-AA64

Airworthiness Directives; Embraer S.A. (Type Certificate Previously Held by Yaborá Indústria Aeronáutica S.A.; Embraer S.A.; Empresa Brasileira de Aeronáutica S.A. (EMBRAER)) Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: The FAA proposes to adopt a new airworthiness directive (AD) for all Embraer S.A. Model EMB-135ER, -135KE, -135KL, and -135LR airplanes; and Model EMB-145, -145EP, -145ER, -145LR, -145MP, -145MR, and -145XR airplanes. This proposed AD was prompted by a structural assessment that indicated certain central fuselage longitudinal splices are subjected to fatigue damage on multiple sites due to loose fasteners, which may reduce the structural residual strength below the required levels. This proposed AD would require performing repetitive inspections of certain upper central fuselage longitudinal splices and reporting the inspection results, as specified in an Agência Nacional de Aviação Civil (ANAC) AD, which is proposed for incorporation by reference (IBR). This proposed AD would also require performing corrective actions if

necessary. The FAA is proposing this AD to address the unsafe condition on these products.

DATES: The FAA must receive comments on this proposed AD by October 15, 2024.

ADDRESSES: You may send comments, using the procedures found in 14 CFR 11.43 and 11.45, by any of the following methods:

- *Federal eRulemaking Portal:* Go to regulations.gov. Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE, Washington, DC 20590.

- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

AD Docket: You may examine the AD docket at regulations.gov under Docket No. FAA-2024-2133; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this NPRM, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The street address for Docket Operations is listed above.

Any commentary that the FAA receives which is not specifically designated as CBI will be placed in the public docket for this rulemaking.

Background

ANAC, which is the aviation authority for Brazil, has issued ANAC

AD 2024–04–03R01, effective May 31, 2024 (ANAC AD 2024–04–03R01) (also referred to as the MCAI), to correct an unsafe condition for all Embraer S.A. Model EMB–135ER, –135KE, –135KL, and –135LR airplanes; and Model EMB–145, –145EP, –145ER, –145EU, –145LR, –145LU, –145MK, –145MP, –145MR, and –145XR airplanes. Model EMB–145EU, –145LU, and –145MK airplanes are not certificated by the FAA and are not included on the U.S. type certificate data sheet; this proposed AD therefore does not include those airplanes in the applicability. The MCAI states that a structural assessment indicated that certain central fuselage longitudinal splices are subjected to fatigue damage on multiple sites due to working (*i.e.*, loose) fasteners, which could reduce structural residual strength below the required levels. This fatigue damage may be undetected by current maintenance tasks and could result in reduced structural integrity of the airplane.

The FAA is proposing this AD to address the unsafe condition on these products.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2024–2133.

Material Incorporated by Reference Under 1 CFR Part 51

ANAC AD 2024–04–03R01 specifies an initial and repetitive external detailed inspection of the upper central fuselage II, III, and IV longitudinal splices to identify loose fasteners, contacting the manufacturer if any discrepancy is found, and reporting the inspection results. Discrepancies include loose fasteners, missing rivets, and any crack, crease, bend, nick, scratch, gouge, dent, abrasion, or structural deformation found in the skin attachments or fasteners. This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

FAA’s Determination

This product has been approved by the aviation authority of another

country and is approved for operation in the United States. Pursuant to the FAA’s bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA is issuing this NPRM after determining that the unsafe condition described previously is likely to exist or develop in other products of the same type design.

Proposed AD Requirements in This NPRM

This proposed AD would require accomplishing the actions specified in ANAC AD 2024–04–03R01 described previously, except for any differences identified as exceptions in the regulatory text of this proposed AD.

Explanation of Required Compliance Information

In the FAA’s ongoing efforts to improve the efficiency of the AD process, the FAA developed a process to use some civil aviation authority (CAA) ADs as the primary source of information for compliance with requirements for corresponding FAA ADs. The FAA has been coordinating this process with manufacturers and CAAs. As a result, the FAA proposes to incorporate ANAC AD 2024–04–03R01 by reference in the FAA final rule. This proposed AD would, therefore, require compliance with ANAC AD 2024–04–03R01 in its entirety through that incorporation, except for any differences identified as exceptions in the regulatory text of this proposed AD. Material required by ANAC AD 2024–04–03R01 for compliance will be available at *regulations.gov* under Docket No. FAA–2024–2133 after the FAA final rule is published.

Costs of Compliance

The FAA estimates that this AD, if adopted as proposed, would affect 309 airplanes of U.S. registry. The FAA estimates the following costs to comply with this proposed AD:

ESTIMATED COSTS FOR REQUIRED ACTIONS

Labor cost	Parts cost	Cost per product	Cost on U.S. operators
4 work-hours × \$85 per hour = \$340 per inspection cycle.	\$0	\$340 per inspection cycle	\$105,060 per inspection cycle.

The FAA has received no definitive data on which to base the cost estimates

for the corrective actions specified in this proposed AD.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to

respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a currently valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to take approximately 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. All responses to this collection of information are mandatory. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to: Information Collection Clearance Officer, Federal Aviation Administration, 10101 Hillwood Parkway, Fort Worth, TX 76177–1524.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

The FAA determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

(1) Is not a "significant regulatory action" under Executive Order 12866,

(2) Would not affect intrastate aviation in Alaska, and

(3) Would not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by adding the following new airworthiness directive:

Embraer S.A. (Type Certificate Previously Held by Yaborã Indústria Aeronáutica S.A.; Embraer S.A.; Empresa Brasileira de Aeronáutica S.A. (EMBRAER));
Docket No. FAA–2024–2133; Project Identifier MCAI–2024–00243–T.

(a) Comments Due Date

The FAA must receive comments on this airworthiness directive (AD) by October 15, 2024.

(b) Affected ADs

None.

(c) Applicability

This AD applies to all Embraer S.A. (Type Certificate previously held by Yaborã Indústria Aeronáutica S.A.; Embraer S.A.; Empresa Brasileira de Aeronáutica S.A. (EMBRAER)) airplanes specified in paragraphs (c)(1) and (2) of this AD, certificated in any category.

(1) Model EMB–135ER, –135KE, –135KL, and –135LR airplanes.

(2) Model EMB–145, –145EP, –145ER, –145LR, –145MP, –145MR, and –145XR airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 53, Fuselage.

(e) Unsafe Condition

This AD was prompted by a structural assessment that indicated certain central fuselage longitudinal splices are subjected to fatigue damage on multiple sites due to loose fasteners, which may reduce the structural residual strength below the required levels. The FAA is issuing this AD to address undetected fatigue damage on certain central fuselage longitudinal splices. The unsafe

condition, if not addressed, could result in reduced structural integrity of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Requirements

Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, Agência Nacional de Aviação Civil (ANAC) AD 2024–04–03R01, effective May 31, 2024 (ANAC AD 2024–04–03R01).

(h) Exceptions to ANAC AD 2024–04–03R01

(1) Where ANAC AD 2024–04–03R01 refers to its effective date, this AD requires using the effective date of this AD.

(2) Where paragraphs (b)(1) and (2) of ANAC AD 2024–04–03R01 specify the initial compliance time for the external detailed inspection, for this AD, the initial compliance time for doing the external detailed inspection is prior to the accumulation of 44,000 total flight cycles, or within 500 flight cycles after the effective date of this AD, whichever occurs later.

(3) Where paragraph (b)(3) of ANAC AD 2024–04–03R01 specifies "If any discrepancies are found, contact Embraer," this AD requires replacing that text with "If any cracking is detected during an inspection required by paragraph (g) of this AD, repair the discrepancy (including cracking) before further flight using a method approved by the Manager, International Validation Branch, FAA; or ANAC; or Embraer's ANAC Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature."

(4) Paragraph (d) of ANAC AD 2024–04–03R01 specifies to report inspection results to ANAC and Embraer within a certain compliance time. For this AD, report inspection results after each inspection required by paragraph (g) of this AD at the applicable times specified in paragraph (h)(4)(i) or (ii) of this AD.

(i) If the inspection was done on or after the effective date of this AD: Submit the report within 30 days after the inspection.

(ii) If the inspection was done before the effective date of this AD: Submit the report within 30 days after the effective date of this AD.

(5) This AD does not adopt paragraph (e) of ANAC AD 2024–04–03R01.

(i) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the manager of the International Validation Branch, mail it to the address identified in paragraph (j) of this AD. Information may be emailed to: AMOC@faa.gov. Before using any

approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or ANAC; or ANAC's authorized Designee. If approved by the ANAC Designee, the approval must include the Designee's authorized signature.

(j) Additional Information

For more information about this AD, contact Hassan Ibrahim, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; phone: 206-231-3653; email: Hassan.M.Ibrahim@faa.gov.

(k) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the material listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this material as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(i) Agência Nacional de Aviação Civil (ANAC) AD 2024-04-03R01, effective May 31, 2024.

(ii) [Reserved]

(3) For ANAC material identified in this AD, contact ANAC, Aeronautical Products Certification Branch (GGCP), Rua Dr. Orlando Feirabend Filho, 230—Centro Empresarial Aquarius—Torre B—Andares 14 a 18, Parque Residencial Aquarius, CEP 12.246-190—São José dos Campos—SP, Brazil; telephone 55 (12) 3203-6600; email pac@anac.gov.br; website anac.gov.br/en/. You may find this ANAC AD on the ANAC website at sistemas.anac.gov.br/certificacao/DA/DAE.asp.

(4) You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th Street, Des Moines, WA. For information on the availability of this material at the FAA, call 206-231-3195.

(5) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit www.archives.gov/federal-register/cfr/ibr-locations or email fr.inspection@nara.gov.

Issued on August 22, 2024.

Victor Wicklund,

Deputy Director, Compliance & Airworthiness Division, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG-2024-0205]

RIN 1625-AA11

Regulated Navigation Area; Port of Miami, Miami, FL

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Coast Guard is proposing to establish a regulated navigation area for certain waters surrounding the Port of Miami. This action is necessary to provide for the safety of life and promote national security by enhancing the protection of increased high-risk vessel traffic and reducing the navigational hazards of the mariners who operate throughout the port. This rulemaking would establish a slow speed zone throughout Fisherman's Channel and the Main Ship Channel for vessels less than 50 meters in length. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must be received by the Coast Guard on or before September 27, 2024.

ADDRESSES: You may submit comments identified by docket number USCG-2024-0205 using the Federal Decision-Making Portal at <https://www.regulations.gov>. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: If you have questions about this proposed rulemaking, call or email LT Stephanie Miranda, District 7 Dpw, U.S. Coast Guard; telephone (571) 610-4432, email Stephanie.LP.Miranda@uscg.mil.

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
 COTP Captain of the Port
 DHS Department of Homeland Security
 FR Federal Register
 LNG Liquefied Natural Gas
 NAVCEN Coast Guard Navigation Center
 NPRM Notice of proposed rulemaking
 PAWSA Port and Waterways Safety Assessment
 RNA Regulated Navigation Area
 § Section
 U.S.C. United States Code

II. Background, Purpose, and Legal Basis

The Captain of the Port (COTP) Miami has determined that there has been an increase in navigational risk associated to the Port of Miami as the port continues to expand and vessel traffic increase. On May 10th and 11th of 2023, Coast Guard Navigation Center (NAVCEN) and Sector Miami held a Ports and Waterways Safety Assessment (PAWSA) with key stakeholders of the Port of Miami. As a result, the workshop identified hazards associated to the port with the largest concern for navigational safety being the high speed of vessels and wake created by increased vessel traffic. Over the last few years, a growing number of near misses prompts concern for the safety of life as vessel traffic volume and vessel speeds have increased. On June 25, 2023, around 3:30 a.m. a recreational vessel, traveling at a high rate of speed through the Main ship channel, collided with a crossing vehicle ferry, killing one and seriously injuring a second. The incident not only resulted in the loss of life but in the disruption of 30,000 cruise ship passengers and critical cargo movements in the Port of Miami for over 12 hours. Additionally, on February 12, 2024 a recreational vessel collided with an inspected charter vessel in a critical point of Fisherman's Channel. This incident resulted in 13 injuries with one person in critical condition. This regulated navigation area will reduce the navigational risk associated with one of the world's largest ports, reduce the loss of life, and mitigate the chance of disruption to port operations.

In addition, the Port of Miami is expanding its cruise ship terminals and will soon be the largest cruise ship port in the World, moving tens of thousands of passengers every day. With this, the Port of Miami also experienced an increase in Liquefied Natural Gas (LNG) powered cruise ships and cargo vessels resulting in an increase of hazardous bunkering operations within the port. The existing national security risk associated with the Port of Miami is already high and this expansion only increased that risk. The establishment of an RNA reducing the speed of vessels will aid law enforcement officials in monitoring vessel traffic, as vessels not complying with slow speed zones will quickly draw attention, giving law enforcement officials more time to assess the situation and take appropriate action to protect vessels within the port and port facilities.

This rulemaking would establish a slow speed restriction on vessels less than 50 meters within the Port of

Miami. The purpose of this rulemaking is protecting the public, port, law enforcement officials and the waterways of the United States from potential subversive acts and navigational hazards associated with the high vessel traffic volume experienced within the Port of Miami. The Coast Guard is proposing this rulemaking under authority in 46 U.S.C. 70034.

III. Discussion of Proposed Rule

The Coast Guard's is proposing to establish a permanent regulated navigation area that would require vessels 50 meters or less to transit the regulated area at a slow speed that creates minimum wake to reduce damage and the navigational hazards associated with the Port of Miami shipping channels around Dodge Island. This regulated navigation area covers the waters of Fisherman's Channel, the Main ship channel, and Moley channel surrounding Dodge Island and Biscayne Bay Causeway Island.

IV. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This NPRM has not been designated a "significant regulatory action," under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, the NPRM has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size and location of the regulated navigation area. The regulated navigation area will only affect vessels entering and passing within the Main ship channel, Fisherman's channel and Meloy channel. Vessels may continue to operate within the regulated navigation area with the only restriction being the requirement to operate at slow speeds and not create an excessive wake. Moreover, upon activating the regulated navigation area, the Coast Guard will notify the local maritime community through various means including, Local Notice to Mariners and Broadcast Notice to Mariners issued on VHF-FM marine radio channel 16.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term "small entities" comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the regulated navigation area may be small entities, for the reasons stated in section IV. A above, this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rulemaking would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the proposed rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and

have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have Tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the potential effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this proposed rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves a regulated navigation area requiring vessels 50 meters or less to transit the regulated area at a slow speed that creates minimum wake. Normally such actions are categorically excluded from further review under paragraph L[60a] of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A preliminary Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble. We seek any comments or information that may lead to the discovery of a

significant environmental impact from this proposed rule.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

V. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at <https://www.regulations.gov>. To do so, go to <https://www.regulations.gov>, type USCG–2024–0205 in the search box and click “Search.” Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If you cannot submit your material by using <https://www.regulations.gov>, call or email the person in the **FOR FURTHER INFORMATION CONTACT** section of this proposed rule for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select “Supporting & Related Material” in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the <https://www.regulations.gov> Frequently Asked Questions web page. Also, if you click on the Dockets tab and then the proposed rule, you should see a “Subscribe” option for email alerts. The option will notify you when comments are posted, or a final rule is published.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to <https://www.regulations.gov> will

include any personal information you have provided. For more about privacy and submissions to the docket in response to this document, see DHS’s eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard is proposing to amend 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.792 to read as follows:

§ 165.792 Regulated navigation area; Port of Miami, Miami, Florida.

(a) *Location.* The following area is a regulated navigation area (RNA): All waters of the Port of Miami, from Fisherman’s Channel Daybeacon 16 at 25°46.40’ N, 080°10.84’ W proceeding southeasterly through Fisherman’s Channel south of Dodge Island to Miami Main Channel Light 15 at 25°45.86’ N, 080°08.24’ W in Government Cut, thence northwesterly through the Main ship channel north of Dodge Island to Biscayne Bay Light 50 at 25°46.90’ N, 080°10.88’ W. Additionally, the Meloy channel from Miami Main Channel Lighted Buoy 16 at 25°46.04’ N, 080°08.41’ W proceeding northwesterly to the MacArthur Causeway bridge.

(b) *Definitions.* As used in this section, slow speed means the speed at which a vessel proceeds when it is fully off plane, completely settled in the water and not creating excessive wake. Due to the different speeds at which vessels of different sizes and configurations may travel while in compliance with this definition, no specific speed is assigned to slow speed. A vessel is not proceeding at slow speed if it is:

- (1) On plane;
- (2) In the process of coming up on or coming off plane; or
- (3) Creating an excessive wake.

(c) *Regulations.* Vessels less than 50 meters entering and transiting through the regulated navigation area shall proceed at a slow speed. Nothing in this section alleviates vessels or operators from complying with all State and local laws in the area including manatee slow

speed zones. Nor should anything in this section be construed as conflicting with the requirement to operate at safe speed under the Inland Navigation Rules, (33 CFR chapter I, subchapter E).

(d) *Enforcement.* The Coast Guard may be assisted in the patrol and enforcement of the Regulated Navigation Area by other Federal, State, and local agencies.

Dated: August 17, 2024.

Douglas M. Schofield,

Rear Admiral, U.S. Coast Guard, Commander, Seventh Coast Guard District.

BILLING CODE 9110–04–P

CORPORATION FOR NATIONAL AND COMMUNITY SERVICE

45 CFR Part 2522

RIN 3045–AA84

AmeriCorps State and National Updates

AGENCY: Corporation for National and Community Service.

ACTION: Proposed rule.

SUMMARY: The Corporation for National and Community Service (operating as AmeriCorps) is requesting public comment on a proposal to revise AmeriCorps State and National program regulations on the number of terms for which AmeriCorps will fund living allowances and other benefits for members. The proposal would provide that AmeriCorps funding may be used for living allowances and other benefits for members for as long as it takes the members to either earn the aggregate value of two Segal Education Awards or four terms, whichever is longer.

DATES: Written comments must be submitted by September 27, 2024.

ADDRESSES: Please send your comments electronically through the Federal government’s one-stop rulemaking website at www.regulations.gov. Alternatively, you may send your comments to Elizabeth Appel, Associate General Counsel, at eappel@cns.gov or by mail to AmeriCorps (ATTN: Elizabeth Appel), 250 E Street SW, Washington, DC 20525.

FOR FURTHER INFORMATION CONTACT: Jennifer Bastress Tahmasebi, Deputy Director, AmeriCorps State and National at JBastressTahmasebi@americorps.gov, (202) 606–6667; or Elizabeth Appel, Associate General Counsel, at EAppel@americorps.gov, (202) 967–5070.

SUPPLEMENTARY INFORMATION:

I. Overview of Proposed Rule (§ 2522.235)

II. Regulatory Analyses

- A. Executive Orders 12866 and 13563
- B. Regulatory Flexibility Act
- C. Unfunded Mandates Reform Act of 1995
- D. Paperwork Reduction Act
- E. Executive Order 13132, Federalism
- F. Takings (Executive Order 12630)
- G. Civil Justice Reform (Executive Order 12988)
- H. Consultation With Indian Tribes (Executive Order 13175)
- I. Clarity of This Regulation

I. Overview of Proposed Rule (§ 2522.235)

AmeriCorps recently revised AmeriCorps State and National program regulations to, among other changes, remove the four-term limit on AmeriCorps State and National members' service. *See* 89 FR 46024 (May 28, 2024). That revision, which becomes effective October 1, 2024, allows members to serve as many terms as necessary to earn the value of two full-time education awards,¹ regardless of whether those terms are served on a full-time, part-time, or reduced part-time basis. To align with the existing limit to education awards funded by AmeriCorps, that final rule also clarified that AmeriCorps will fund benefits (*e.g.*, living allowance, financial benefits during an extended term of disaster-related service, childcare, and health care) only up to the number of terms needed to attain those education awards.

Full-time, part-time, and reduced part-time terms of service have different hour requirements and accordingly each take a different number of terms to reach the aggregate value of the two full-time education awards. *See* 45 CFR 2522.220. For example, a member serving a full-time term of service earns the value of one education award with each term of service, so full-time ASN members earn the aggregate value of two full-time education awards in two terms (which equates to two years for full-time members). A member serving a reduced part-time term of service earns 39 percent of the value of one education award (*see* 45 CFR 2525.100(b)), so reduced part-time ASN members earn the aggregate value of two full-time education awards in about five terms (which equates to five or more years for reduced part-time members).

Since publication of the final rule, several members of the public have contacted AmeriCorps to point out the negative effect this will have on grantees for whom members typically serve four full-time terms. With the prior four-term

limit, those members could earn the aggregate value of two full-time education awards in two years and continue serving two more years to reach the four-term limit of receiving AmeriCorps living allowance and benefits. Under the final rule, those full-time members can no longer continue to serve (receiving AmeriCorps living allowance and benefits) those two years beyond the initial two years it took to earn the aggregate value of two full-time education awards. The members of the public noted a particularly negative effect on grantees in remote and rural locations who have a smaller pool of individuals willing to serve. These grantees rely on the willingness of their AmeriCorps members to serve full-time for four years.

Based on this input, AmeriCorps is proposing to add flexibility to the rule so that grantees and members who rely on the current state of being able to receive AmeriCorps funding for living allowances and benefits for up to four terms would continue to be able to receive that funding for four terms. The proposal also retains the final rule provision that allows AmeriCorps funding for the number of terms it takes to earn the aggregate value of two full-time education awards. Thus, members who serve less than full-time will continue to be funded for however many terms it takes to earn the aggregate value of two education awards.

The proposed change, which appears at § 2522.235, would provide that AmeriCorps will fund living allowances and other benefits only for the number of terms needed to attain the aggregate value of two full-time education awards or for four terms, whichever term duration is longer. Programs may continue to fund benefits from non-AmeriCorps resources, if they choose, for members who serve beyond that time. These term limits only apply to AmeriCorps State and National terms.

AmeriCorps is seeking comment on this proposal for a period of 30 days, which is shorter than the usual 60 days provided, because if this rulemaking is finalized, it will relieve a burden and may take effect on October 1, 2024, the same effective date as the other regulatory changes that were finalized in the May 28, 2024, rule.

II. Regulatory Analyses

A. Executive Orders 12866 and 13563

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits

(including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The Office of Information and Regulatory Affairs in the Office of Management and Budget has determined that this proposed rule is not a significant regulatory action.

B. Regulatory Flexibility Act

As required by the Regulatory Flexibility Act of 1980 (5 U.S.C. 601 *et seq.*), AmeriCorps certifies that this rulemaking, if adopted, will not have a significant economic impact on a substantial number of small entities. Most AmeriCorps State and National grantees are State Commissions and organizations that do not meet the definition of a small entity. Therefore, AmeriCorps has not performed the initial regulatory flexibility analysis that is required under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) for rules that are expected to have such results.

C. Unfunded Mandates Reform Act of 1995

For purposes of title II of the Unfunded Mandates Reform Act of 1995, 2 U.S.C. 1531–1538, as well as Executive Order 12875, this regulatory action does not contain any Federal mandate that may result in increased expenditures in Federal, State, local, or Tribal Governments in the aggregate, or impose an annual burden exceeding \$100 million on the private sector.

D. Paperwork Reduction Act

Under the PRA, an agency may not conduct or sponsor a collection of information unless the collections of information display valid control numbers. This proposed rule does not include any information collection.

E. Executive Order 13132, Federalism

Executive Order 13132, Federalism, prohibits an agency from publishing any rule that has federalism implications if the rule imposes substantial direct compliance costs on State and local Governments and is not required by statute, or the rule preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. This rulemaking does not have any federalism implications, as described above.

¹ Separate regulations at 45 CFR 2525.50 limit participants to receiving no more than the value of two full-time education awards.

F. Takings (Executive Order 12630)

This proposed rule does not affect a taking of private property or otherwise have taking implications under Executive Order 12630 because this proposed rule does not affect individual property rights protected by the Fifth Amendment or involve a compensable “taking.” A takings implication assessment is not required.

G. Civil Justice Reform (Executive Order 12988)

This proposed rule complies with the requirements of Executive Order 12988. Specifically, this rulemaking: (a) meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and (b) meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

H. Consultation With Indian Tribes (Executive Order 13175)

AmeriCorps recognizes the inherent sovereignty of Indian tribes and their right to self-governance. We have evaluated this rulemaking under our consultation policy and the criteria in Executive Order 13175 and determined that this proposed rule does not impose substantial direct effects on federally recognized Tribes.

I. Clarity of This Regulation

We are required by Executive Orders 12866 (section 1(b)(12)), and 12988 (section 3(b)(1)(B)), and 13563 (section 1(a)), and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each proposed rule we publish must: (a) be logically organized; (b) use the active voice to address readers directly; (c) use clear language rather than jargon; (d) be divided into short sections and sentences; and (e) use lists and tables wherever possible. If you feel that we have not met these requirements, please send us comments by one of the methods listed in the **ADDRESSES** section. To help us revise the rule, your comments should be as specific as possible.

List of Subjects in 45 CFR Part 2522

Grant programs—social programs, Reporting and recordkeeping requirements, Volunteers.

For the reasons stated in the preamble, under the authority of 42 U.S.C. 12651c(c), the Corporation for National and Community Service proposes to amend chapter XXV, title 45 of the Code of Federal Regulations as follows:

PART 2522—AMERICORPS PARTICIPANTS, PROGRAMS, AND APPLICANTS

■ 1. The authority for part 2522 continues to read as follows:

Authority: 42 U.S.C. 12571–12595; 12651b-12651d; E.O. 13331, 69 FR 9911, Sec. 1612, Pub. L. 111–13.

■ 2. Revise § 2522.235 to read as follows:

§ 2522.235 Is there a limit on the number of terms an individual may serve in an AmeriCorps State and National program?

The number of terms an individual may serve in an AmeriCorps State and National program is not limited, but the limitations in paragraphs (a) and (b) of this section apply.

(a) An individual may attain only the aggregate value of two full-time education awards.

(b) AmeriCorps will fund the benefits described in §§ 2522.240 through 2522.250 only for the number of terms needed to attain the aggregate value of two full-time education awards or for four terms, whichever is longer. Grantees may choose to fund benefits for any additional terms.

Andrea Grill,

Acting General Counsel.

BILLING CODE 6050–28–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****46 CFR Part 401**

[Docket No. USCG–2024–0406]

RIN 1625–AC94

Great Lakes Pilotage Rates—2025 Annual Review

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking; extension of the comment period.

SUMMARY: In accordance with the statutory provisions enacted by the Great Lakes Pilotage Act of 1960, on August 5, 2024, the Coast Guard published a notice of proposed rulemaking the Coast Guard is proposing new pilotage rates for 2025. The Coast Guard is extending the comment period of the Great Lakes Pilotage Rates—2025 Annual Review notice of proposed rulemaking for 15 days. The extension is intended to keep the comment window open until after the Great Lakes Pilotage Advisory

Committee meeting on September 6, 2024. Participation in this meeting will allow stakeholders to better understand the issues at play and to submit more informed public comments.

DATES: The comment period for the notice of proposed rulemaking published on August 5, 2024, 89 FR 63334, is extended. Comments and related material must be received by the Coast Guard on or before September 25, 2024.

ADDRESSES: You may submit comments identified by docket number USCG–2024–0406 using the Federal Decision Making Portal at www.regulations.gov. See the “Public Participation and Request for Comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

FOR FURTHER INFORMATION CONTACT: For information about this document, call or email Mr. Brian Rogers, Commandant, Office of Waterways and Ocean Policy—Great Lakes Pilotage Division (CG–WWM–2), Coast Guard; telephone 410–360–9260, email Brian.Rogers@uscg.mil.

SUPPLEMENTARY INFORMATION:**Public Participation and Request for Comments**

The U.S. Coast Guard views public participation as essential to establishing equitable pilotage rates in the Great Lakes. The Coast Guard will consider all information and material received during the comment period. If you submit a comment, please include the docket number for this request for information, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Methods for submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at www.regulations.gov. To do so, go to www.regulations.gov, type USCG–2024–0406 in the search box, and click “Search.” Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If your material cannot be submitted using www.regulations.gov, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

Viewing material in docket. To view documents mentioned in this document as being available in the docket, find the docket as described in the previous paragraph, and then select “Supporting & Related Material” in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the <https://www.regulations.gov>

Frequently Asked Questions web page. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

Personal information. We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

Background and Discussion

The proposed rule was published on August 5, 2024, with a comment period that ended on September 4, 2024 (89 FR 63334). In the rule, the Coast Guard proposed new pilotage rates for the 2025 season.

On September 6, 2024, the Great Lakes Pilotage Advisory Committee (GLPAC) will meet in Massena, New York, to discuss matters relating to Great Lakes Pilotage, including review of proposed Great Lakes Pilotage regulations and policies. The meeting is open to the public (89 FR 60440). In

order to allow interested parties to participate in the GLPAC meeting before drafting and submitting their public comments, the Coast Guard is extending the comment period 15 business days. The new comment period now closes on September 25, 2024.

This document is issued under the authority of 46 U.S.C. 70124.

Dated: August 20, 2024.

W.R. Arguin,

Rear Admiral, U.S. Coast Guard, Assistant Commandant for Prevention Policy.

Notices

Federal Register

Vol. 89, No. 167

Wednesday, August 28, 2024

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

AGENCY FOR INTERNATIONAL DEVELOPMENT

Proposed Revision of AID 114–2 Anti-Harassment Intake Summary Sheet

AGENCY: Agency for International Development.

ACTION: Notice of information collection; request for comment.

SUMMARY: The United States Agency for International Development (USAID), in accordance with the Paperwork Reduction Act (PRA) of 1995, as amended, invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment on the AID 114–2 Anti-Harassment Program Intake Summary Sheet, prior to the submission of the information collection request (ICR) to OMB for approval.

DATES: All comments should be submitted within 60 calendar days from the date of this publication.

ADDRESSES: Interested persons are invited to submit written comments by email to OCRharassment@usaid.gov.

Please reference the AID 114–2 Anti-Harassment Program Intake Summary Sheet in the subject line of your comments. All comments received are part of the public record. No comments will be posted to <https://www.regulations.gov> for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personally Identifiable Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. You may submit attachments to electronic comments in

Microsoft Word, Excel, or Adobe PDF file formats.

FOR FURTHER INFORMATION CONTACT:

9Tanya Shorter, Lead Anti-Harassment Program Specialist, USAID, Office of Civil Rights, telephone 771–202–3478 or email at OCRharassment@usaid.gov.

SUPPLEMENTARY INFORMATION: The purpose of the AID 114–2 form is to document basic information regarding allegations of harassment to include the following: Information about involved individuals, including the individual alleged to be harassed, the alleged harasser, and witnesses or others with knowledge of the incident(s); (1) full name, (2) contact information, (3) position title, (4) hiring mechanism, and (5) office/work location; (6) Description of the alleged harassment, including the date(s) the alleged harassment occurred and whether the alleged harassment is alleged to be based on a protected EEO category (race, color, national origin, sex (including pregnancy, gender identity, sexual orientation, or transgender status), age (40 or older), religion, genetic information (including family medical history), physical or mental disability, or retaliation); (7) Whether the supervisor and/or other management official took any steps in response to the alleged harassment; and (8) Any other useful, preliminary information.

Type of Information Collection: AID 114–2 Anti-Harassment Program Intake Summary Sheet.

Type of Request: Notice for public comment.

Originating Office: USAID's Office of Civil Rights.

Respondents: General public and other federal agencies.

Respondent's obligation to respond: Voluntary.

Estimated number of respondents: 400.

Average time per response: 15 minutes for respondents.

Frequency of response: Once.

Total estimated burden: 100.

Total estimated burden cost: None.

We are soliciting general public and other federal agencies comments to permit USAID to:

- Evaluate whether the proposed information collection is necessary for the proper functions of USAID.
- Enhance the quality, utility, and clarity of the information to be collected.

- Minimize the reporting burden on those who are to respond.

Stephen Shih,

Director, Office of Civil Rights, U.S. Agency for International Development.

[FR Doc. 2024–19314 Filed 8–27–24; 8:45 am]

BILLING CODE 6116–01–P

AGENCY FOR INTERNATIONAL DEVELOPMENT

60-Day Notice of Proposed Information Collection—USAID Acquisition Regulation

AGENCY: Agency for International Development.

ACTION: Notice of proposed information collection.

SUMMARY: The U.S. Agency for International Development (USAID) seeks Office of Management and Budget (OMB) approval to continue the information collection described below. In accordance with the Paperwork Reduction Act of 1995, USAID requests public comment on this collection from all interested individuals and organizations.

DATES: Submit comments on or before October 28, 2024.

ADDRESSES: You may submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov> by following the instructions for submitting comments.

FOR FURTHER INFORMATION CONTACT: Ms. Nicole Thompson, at (202)286–4696 or via email at policymailbox@usaid.gov.

SUPPLEMENTARY INFORMATION:

Instructions

All comments must be in writing and submitted through the method(s) specified in the **ADDRESSES** section above. All submissions must include the information collection title(s). Please include your name, title, organization, telephone number, and email address in the text of the message. Please note that comments submitted in response to this Notice are public record. We recommend that you do not submit detailed personal information, Confidential Business Information, or any information that is otherwise protected from disclosure by statute.

Purpose

The U.S. Agency for International Development (USAID) is authorized to make contracts with any corporation, international organization, or other body of persons in or outside of the United States in furtherance of the purposes and within limitations of the Foreign Assistance Act (FAA). As part of this authority, USAID requests certain information from contractors using contract clauses in the USAID Acquisition Regulation (AIDAR). USAID has an existing Information Collection under OMB No: OMB 0412–0520. This information collection includes the following offeror or contractor reporting requirements, identified by the AIDAR section number, as specified in the AIDAR 701.106: 752.219–8, 752.245–70, 752.245–71(c)(2), 752.247–70(c), 752.7001, 752.7002(j), 752.7003, 752.7004 and 752.7032. Other information collection requirements under the AIDAR exist under separate OMB approvals.

The pre-award requirements are based on a need for prudent management in the determination that an offeror either has or can obtain the ability to competently manage development assistance programs using public funds. The requirements for information collection during the post-award period are based on the need to prudently administer public funds. USAID most recently renewed this approval effective July 15, 2021 (86 FR 31693). This current renewal makes no revisions to existing clauses or underlying forms and updates burden estimates.

Comments are requested concerning:

- Whether the collections of information are necessary for the proper performance of the functions of the Agency, including whether the information shall have practical utility;
- the accuracy of the burden estimates;
- ways to enhance the quality, utility, and clarity of the information collected;
- ways to minimize the burden of the collection of information on the respondents, including through the use of automated collection techniques or other forms of information technology.

USAID will only address comments that explain why the proposed collection would be inappropriate, ineffective, or unacceptable without a change. Comments that are insubstantial or outside the scope of the notice of request for public comment may not be considered.

Overview of Information Collections

OMB No: 0412–0520.

Form: AID 1420–17, Contractor Employee Biographical Data Sheet (AIDAR 752.7001).

Title of Information Collection: USAID Acquisition Regulation (AIDAR 701.106).

Type of Review: Extension, without change, of a currently approved collection.

Respondents: USAID contractors.

Estimated Number of Annual

Responses: 75,010.

Estimated Number of Annual Burden Hours: 97,208.

USAID estimates that approximately 11,052 respondents will submit 75,010 submissions per year across each of the items covered in this information collection. The amount of time estimated to complete each response varies by item.

Jami J. Rodgers,

Senior Procurement Executive.

[FR Doc. 2024–19342 Filed 8–27–24; 8:45 am]

BILLING CODE 6116–01–P

AGENCY FOR INTERNATIONAL DEVELOPMENT

Request for Information (RFI) Regarding Sanctions and USAID Programs

AGENCY: Agency for International Development.

ACTION: Notice of request for information.

SUMMARY: The U.S. Agency for International Development (USAID) is considering updating its sanctions-related provisions and contract clauses for assistance and acquisition awards. A primary factor under review is whether to expand reporting requirements to enhance USAID's monitoring of recipients' and contractors' activities involving sanctioned jurisdictions or sanctioned individuals and entities subject to the sanctions programs administered by the U.S. Department of the Treasury's Office of Foreign Assets Control (OFAC). This reporting would facilitate the assessment of whether the U.S. Government is ensuring the efficient delivery of humanitarian and development assistance internationally to the most vulnerable people, while achieving U.S. national security objectives by minimizing benefits to sanctioned individuals and entities. This RFI supports this effort by soliciting feedback from the general public, which will be considered during the process of analyzing whether changes are required, as well as any subsequent drafting of new or revised award terms.

DATES: Interested persons and organizations are invited to submit comments October 28, 2024.

FOR FURTHER INFORMATION CONTACT:

Jasen Andersen, USAID/M/OAA/P, 202–286–3116, or policymailbox@usaid.gov for clarification of content or information pertaining to this RFI. All communications regarding this notice must cite the docket number.

Instructions: Comments regarding this RFI must be submitted via the Federal eRulemaking Portal at <https://www.regulations.gov>. Response to this RFI is voluntary. Any information obtained from this RFI is intended to be used by USAID on a non-attribution basis for drafting updated award provisions and contract clauses. USAID will not respond to individual submissions or provide any responses to comments received.

SUPPLEMENTARY INFORMATION:

A. Background

The U.S. Government has taken steps, in line with its foreign policy and national security goals, to modernize and adapt its sanctions policy and operational framework and to ensure that economic sanctions do not impede the delivery of critical humanitarian and development assistance. The Department of the Treasury's *sanctions review process* highlighted the need to mitigate unintended humanitarian impacts of sanctions, particularly related to the provision of life-saving and other humanitarian or development assistance to civilian populations in sanctioned jurisdictions, as well as those living under sanctioned group influence or control or alongside sanctioned individuals in nondifferentiable populations. Recognizing that sanctioned individuals and entities may attempt to access humanitarian and development assistance as a means to advance or support their own interests, the U.S. Government has also taken steps to ensure that it continues to deny benefits to sanctioned individuals and entities, while supporting the delivery of legitimate humanitarian assistance.

On December 9, 2022, the United Nations Security Council (UNSC) adopted Resolution No. 2664 to carve out certain humanitarian-related activities from UNSC asset freeze sanctions regimes, thereby allowing the flow of funds, financial assets, economic resources, and goods/services to ensure timely delivery of humanitarian aid or support activities that support basic human needs (*UNSCR 2664*). On December 21, 2022, OFAC made corresponding amendments to its regulations in multiple sanctions programs to facilitate humanitarian-related activities and certain development assistance by adding,

amending, or updating general licenses (GLs) authorizing the official business of the U.S. Government and the official business of certain international organizations and entities (87 FR 78470). OFAC's GLs can be found in Subpart E of each sanctions program in 31 CFR subtitle B, chapter V or on OFAC's website.

The U.S. Government, including USAID and its interagency partners, continue to monitor and assess whether and to what extent the U.S. Government is (1) facilitating the delivery of humanitarian and development assistance, and (2) preventing unanticipated and undesirable benefits to sanctioned individuals and entities.

USAID is considering whether and how to update provisions and contract clauses for USAID assistance and acquisition awards to include a new reporting mechanism for all humanitarian assistance and development work overseas conducted under a USAID award. This approach would (i) require USAID awardees to report on certain incidents involving sanctioned individuals and entities (e.g., payments or diversions) that take place under the awards; (ii) re-emphasize requirements for maintaining relevant records relating to transactions subject to OFAC's sanctions programs, including transactions conducted pursuant to GLs; (iii) emphasize that USAID recipients and contractors must exercise reasonable due diligence to minimize the accrual of any impermissible benefits (in the form of payments or diversions) to any sanctioned individuals or entities; and (iv) provide data to USAID to inform impact assessments and for use in dialogue with the U.S. Government interagency, as well as the UNSC. Some illustrative examples of proposed reporting requirements for USAID recipients and contractors include:

- Reporting itemized details regarding payments of funds under the award in the form of taxes, tolls, and fees to, or for the benefit of, sanctioned individuals or entities. For each payment, the awardee will make best efforts to include details about the amount paid, the approximate date and location of the payment, the name of the individual or entity receiving the payment, a description of how such payment facilitated the assistance activities, and remedial steps, if any, taken to address the issue.

- Reporting itemized details regarding diversions of funds, supplies, or services under the award by sanctioned individuals or entities. For each diversion, the awardee will make best efforts to include details about the

circumstances of the diversion, the name of the individual or entity causing the diversion, estimated value diverted, the approximate date and location of the diversion, description and intended destination, and remedial steps, if any, taken to address the issue.

For USAID's assistance awards, updates could take the form of revisions to the mandatory standard provisions M12, M14, and M5 ("Preventing Transactions with, or the Provision of Resources or Support to, Sanctioned Groups and Individuals") found in *ADS 303maa*, *ADS 303mab*, *ADS 303mat*, respectively. For USAID's acquisition awards, a new Agency-specific clause may be required, such as to supplement *FAR 52.225-13* ("Restrictions on Certain Foreign Purchases"). Additional updates may be required to *22 CFR 228* and/or *ADS 310*.

B. Request for Information

This RFI is intended to solicit feedback on the following:

(1) Considerations USAID should take into account when updating the sanctions-related provisions and contract clauses for its assistance and acquisition awards.

(2) Types of information and details that recipients and contractors can report under their award for activities that are subject to OFAC's sanctions, regarding (a) payments of funds to, or for the benefit of, sanctioned individuals or entities; and (b) diversions of funds, supplies, or services by sanctioned individuals or entities.

(3) Constraints that recipients and contractors may face in reporting information regarding (a) payments of funds to, or for the benefit of, sanctioned individuals or entities; and (b) diversions of funds, supplies, or services by sanctioned individuals or entities. Where possible, include specific examples.

(4) Estimates of the burden on individual recipients and contractors in complying with any reporting requirement.

(5) Considerations USAID should consider regarding the flowdown of requirements to subrecipients and subcontractors.

(6) Recommendations on ways USAID can obtain data from recipients and contractors in order to assess the impact of GLs on the delivery of legitimate humanitarian assistance and other development activities to the most vulnerable people, while achieving U.S. national security objectives, including how USAID can collect such information on an aggregated basis from recipients and contractors.

(7) Recommendations on the frequency and method of reporting.

Responses to this RFI are not limited to the items in the above list. Commenters may provide feedback on other factors they deem relevant to USAID's updating of sanctions-related award provisions and contract clauses.

Jami J. Rodgers,

Chief Acquisition Officer.

[FR Doc. 2024-19357 Filed 8-27-24; 8:45 am]

BILLING CODE 6116-01-P

DEPARTMENT OF AGRICULTURE

Food Safety and Inspection Service

[FSIS-2024-0020]

National Advisory Committee on Microbiological Criteria for Foods: Public Meeting

AGENCY: Food Safety and Inspection Service (FSIS), Department of Agriculture (USDA).

ACTION: Notice of public meeting.

SUMMARY: This notice is announcing that the National Advisory Committee on Microbiological Criteria for Foods (NACMCF) will hold a public meeting of the full Committee and Subcommittees from September 24, 2024, to September 26, 2024. The Committee will provide updates on FSIS' Genomics charge and the U.S. Food and Drug Administration's (FDA's) *Cronobacter spp.* in Powdered Infant Formula charge.

DATES: The full Committee will hold an in-person and virtual public meeting on Tuesday, September 24, 2024, from 10:00 a.m. to 12:00 p.m. and on Thursday, September 26, 2024, from 4:00 p.m. to 5:00 p.m. The Subcommittees on Genomics and on *Cronobacter spp.* in Powdered Infant Formula will hold concurrent Subcommittee meetings on Wednesday, September 25, 2024, from 1:00 p.m. to 5 p.m. The Subcommittee meetings are open to members of the public by virtual attendance only. Attendance to all meetings is free but pre-registration by Wednesday, September 18, 2024, is requested.

Persons interested in providing oral comments at the Tuesday, September 24, 2024, public meeting of the full Committee should indicate so when registering. Oral comments will be limited to three minutes per speaker. FSIS will do its best to accommodate all registered persons who request to provide oral comments at the public meeting.

The deadline to submit written comments is Wednesday, September 18, 2024.

ADDRESSES: The meetings will be held in the USDA Whitten Building, 1400 Independence Ave. SW, Washington, DC 20250. In-person attendees will be escorted to the meeting room upon arrival. Virtual attendees will be provided details on how to access the full Committee and Subcommittee meetings upon registration.

In-person attendees must show valid photo identification and will be required to pass through the security screening systems and escorted to the respective conference rooms. Please allow adequate time for this process.

Attendees must pre-register at <https://events.intellor.com/?do=register&t=7&p=509550> to receive a join link, dial-in number, access code, and unique Attendee ID for the public meeting.

An American Sign Language interpreter will be present online during the public meeting and attendees will also have the option to turn on closed captions.

For more information on the NACMCF charges, visit: <https://www.fsis.usda.gov/policy/advisory-committees/national-advisory-committee-microbiological-criteria-foods-nacmcf>.

Written comments may be submitted by one of the following methods:

Federal eRulemaking Portal: This website provides the ability to type short comments directly into the comment field on the web page or attach a file for lengthier comments. Go to <https://www.regulations.gov>. Follow the on-line instructions at that site for submitting comments.

Mail: Send to Docket Clerk, U.S. Department of Agriculture, Food Safety and Inspection Service, 1400 Independence Avenue SW, Mailstop 3758, Washington, DC 20250-3700.

Hand- or Courier-Delivered Submittals: Deliver to 1400 Independence Avenue SW, Jamie L. Whitten Building, Room 350-E, Washington, DC 20250-3700.

Instructions: All items submitted by mail or electronic mail must include the agency name and docket number FSIS-2024-0020. Comments made in response to the docket will be made available for public inspection and posted without change, including any personal information, to <https://www.regulations.gov>.

Docket: For access to background documents or comments received, call 202-720-5046 to schedule a time to visit the FSIS Docket Room at 1400 Independence Avenue SW, Washington, DC 20250.

Agenda: The Committee meeting will discuss updates on FSIS' Genomics charge and the U.S. Food and Drug Administration's (FDA's) Cronobacter spp. in Powdered Infant Formula charge. FSIS will finalize an agenda on or before the meeting date and post it on the FSIS web page at <https://www.fsis.usda.gov/wps/portal/fsis/newsroom/meetings>. Please note that the meeting agenda is subject to change; thus, sessions could end earlier or later than anticipated. Please plan accordingly if you would like to attend this meeting or participate in the oral public comment period.

The official transcripts of the September 24-26, 2024, public meetings, when they become available, will be posted on FSIS' website at <https://www.fsis.usda.gov/wps/portal/fsis/topics/data-collectionand-reports/nacmcf/meetings/nacmcfmeetings>.

FOR FURTHER INFORMATION CONTACT: Kristal Southern, USDA, FSIS, Office of Public Health Science, 1400 Independence Avenue SW, Room 1128, Washington, DC 20250; Phone: 202-937-4162; Email: NACMCF@usda.gov.

SUPPLEMENTARY INFORMATION:

Background

The NACMCF was established in 1988, in response to a recommendation of the National Academy of Sciences for an interagency approach to microbiological criteria for foods, and in response to a recommendation of the U.S. House of Representatives Committee on Appropriations, as expressed in the Rural Development, Agriculture, and Related Agencies Appropriation Bill for fiscal year 1988. The NACMCF provides impartial scientific advice and recommendations to the Secretary of Agriculture and the Secretary of Health and Human Services on public health issues relative to the safety and wholesomeness of the U.S. food supply, including the development of microbiological criteria and review and evaluation of epidemiological and risk assessment data and methodologies for assessing microbiological hazards in foods. The Committee also provides scientific advice and recommendations to the Departments of Commerce and Defense. The Committee reports to the Secretary of Agriculture through the Under Secretary for Food Safety, the Committee's Chair, and to the Secretary of Health and Human Services through the Assistant Secretary for Health, the Committee's Vice-Chair. Currently, Dr. Emilio Esteban, Under Secretary for Food Safety, USDA, is the Committee Chair; Dr. Donald Prater, Acting Director of the Food and Drug Administration's

Center for Food Safety and Applied Nutrition (CFSAN), is the Vice-Chair; and Dr. Kristal Southern, USDA FSIS, is the Director of the NACMCF Executive Secretariat and Designated Federal Officer.

The NACMCF charter is available for viewing at <https://www.fsis.usda.gov/policy/advisory-committees/national-advisory-committee-microbiological-criteria-foods-nacmcf>.

NACMCF documents and comments posted on the FSIS website are electronic conversions from a variety of source formats. In some cases, document conversion may result in character translation or formatting errors. The original document is the official, legal copy. To meet the electronic and information technology accessibility standards in Section 508 of the Rehabilitation Act, NACMCF may add alternate text descriptors for non-text elements (graphs, charts, tables, multimedia, etc.). These modifications only affect the internet copies of the documents. Copyrighted documents will not be posted on FSIS' website but will be available for inspection in the FSIS Docket Room.

Additional Public Notification

Public awareness of all segments of rulemaking and policy development is important. Consequently, FSIS will announce this **Federal Register** publication online through the FSIS web page located at: <https://www.fsis.usda.gov/federal-register>. FSIS also will make copies of this publication available through the FSIS *Constituent Update*, which is used to provide information regarding FSIS policies, procedures, regulations, **Federal Register** notices, FSIS public meetings, and other types of information that could affect or would be of interest to our constituents and stakeholders. The *Constituent Update* is available on the FSIS web page. Through the web page, FSIS can provide information to a much broader, more diverse audience. In addition, FSIS offers an email subscription service which provides automatic and customized access to selected food safety news and information. This service is available at: <https://www.fsis.usda.gov/subscribe>. Options range from recalls to export information, regulations, directives, and notices. Customers can add or delete subscriptions themselves and have the option to password protect their accounts.

USDA Non-Discrimination Statement

In accordance with Federal civil rights law and USDA civil rights regulations and policies, USDA, its

Mission Areas, agencies, staff offices, employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Program information may be made available in languages other than English. Persons with disabilities who require alternative means of communication to obtain program information (e.g., Braille, large print, audiotope, American Sign Language) should contact the responsible Mission Area, agency, or staff office; the USDA TARGET Center at (202) 720-2600 (voice and TTY); or the Federal Relay Service at (800) 877-8339.

To file a program discrimination complaint, a complainant should complete a Form AD-3027, *USDA Program Discrimination Complaint Form*, which can be obtained online at <https://www.usda.gov/forms/electronic-forms>, from any USDA office, by calling (866) 632-9992, or by writing a letter addressed to USDA. The letter must contain the complainant's name, address, telephone number, and a written description of the alleged discriminatory action in sufficient detail to inform the Assistant Secretary for Civil Rights (ASCR) about the nature and date of an alleged civil rights violation. The completed AD-3027 form or letter must be submitted to USDA by:

(1) *Mail*: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue SW, Washington, DC 20250-9410;

(2) *Fax*: (833) 256-1665 or (202) 690-7442; or

(3) *Email*: program.intake@usda.gov.

USDA is an equal opportunity provider, employer, and lender. Equal opportunity practices in accordance with USDA's policies will be followed in all member appointments to the committee. To ensure that the recommendations of the committee consider the needs of the diverse groups served by USDA, membership shall include, to the extent practicable, individuals with demonstrated ability to represent the many communities, identities, races, ethnicities, backgrounds, abilities, cultures, and

beliefs of the American people, including underserved communities.

Cikena Reid,

Committee Management Officer.

BILLING CODE 3410-DM-P

CHEMICAL SAFETY AND HAZARD INVESTIGATION BOARD

Sunshine Act Meetings

TIME AND DATE:

Thursday, October 24, 2024, 2 p.m. ET (2 hours).

Thursday, January 23, 2025, 2 p.m. ET (2 hours).

Thursday, April 24, 2025, 2 p.m. ET (2 hours).

Thursday, July 24, 2025, 2 p.m. ET (2 hours).

PLACE: The meetings will be held virtually via ZOOM. Links are below and will be available at: www.csb.gov.

October 24, 2024: <https://www.zoomgov.com/j/1603513639>

January 23, 2025: <https://www.zoomgov.com/j/1613281492>

April 24, 2025: <https://www.zoomgov.com/j/1600374067>

July 24, 2025: <https://www.zoomgov.com/j/1609072832>

STATUS: Open to the public.

MATTERS TO BE CONSIDERED: The Chemical Safety and Hazard Investigation Board (CSB) will convene public meetings on October 24, 2024; January 23, 2025; April 24, 2025; and, July 24, 2025, at 2 p.m. ET. These meetings serve to fulfill the CSB's requirement to hold a minimum of four public meetings for Fiscal Year 2025 pursuant to 40 CFR 1600.5(c). The Board will review the CSB's progress in meeting its mission and as appropriate highlight safety products newly released through investigations and safety recommendations.

CONTACT PERSON FOR MORE INFORMATION: Hillary Cohen, Communications Manager, at public@csb.gov or (202) 446-8094. Further information about these public meetings can be found on the CSB website at: www.csb.gov.

Additional Information

Background

The CSB is an independent Federal agency charged with investigating incidents and hazards that result, or may result, in the catastrophic release of extremely hazardous substances. The agency's Board Members are appointed by the President and confirmed by the Senate. CSB investigations look into all aspects of chemical accidents and

hazards, including physical causes such as equipment failure as well as inadequacies in regulations, industry standards, and safety management systems.

Public Participation

The meetings are free and open to the public. These meetings will only be available via ZOOM. Close captions (CC) will be provided. At the close of each meeting, there will be an opportunity for public comment. To submit public comments for the record please email the agency at public@csb.gov.

Dated: August 23, 2024.

Tamara Qureshi,

Assistant General Counsel, Chemical Safety and Hazard Investigation Board.

BILLING CODE 6350-01-P

DEPARTMENT OF COMMERCE

Economic Development Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Application Materials for EDA Investment Assistance

AGENCY: Economic Development Administration, Department of Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before October 28, 2024.

ADDRESSES: Interested persons are invited to submit written comments to Bernadette Grafton, Program Analyst, Performance, Research and National Technical Assistance Division, Economic Development Administration, U.S. Department of Commerce, via email at bgrafton1@eda.gov. You may also submit comments to PRAComments@doc.gov. Please

reference OMB Control Number 0610–0094 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT:

Requests for additional information or specific questions related to collection activities should be directed to Bernadette Grafton, Program Analyst, Performance, Research and National Technical Assistance Division, Economic Development Administration, U.S. Department of Commerce, via phone at (202) 482–2917 or via email at bgrafton1@eda.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

The Economic Development Administration (EDA) leads the Federal economic development agenda by promoting innovation and competitiveness, preparing American regions for growth and success in the worldwide economy. Guided by the basic principle that sustainable economic development should be locally-driven, EDA works directly with communities and regions to help them build the capacity for economic development based on local business conditions and needs. The Public Works and Economic Development Act of 1965 (PWEDA) (42 U.S.C. 3121 *et seq.*) is EDA's organic authority and is the primary legal authority under which EDA awards financial assistance. Under PWEDA, EDA provides financial assistance to both rural and urban distressed communities by fostering entrepreneurship, innovation, and productivity through investments in infrastructure development, capacity building, and business development in order to attract private capital investments and new and better jobs to regions experiencing economic distress. Further information on EDA programs and financial assistance opportunities can be found at www.eda.gov.

EDA must collect specific information from financial assistance applicants to evaluate whether proposed projects satisfy eligibility and programmatic requirements contained in PWEDA, EDA regulations at 13 CFR chapter III, and applicable Notices of Funding Opportunity (NOFOs). The purpose of this notice is to seek comments from the public and other Federal agencies regarding EDA's proposed extension of the application materials under this information collection: Forms ED–900 (General Application (GA) for EDA Programs), ED–900B (Beneficiary Information Form), ED–900C (EDA Application Supplement for

Construction Programs), ED–900D (Requirements for Design and Engineering Assistance), ED–900E (Calculation of Estimated Relocation and Land Acquisition Expenses), and ED–900F (Additional EDA Assurances for Revolving Loan Fund Investments).

II. Method of Collection

EDA collects information from financial assistance applicants electronically through *Grants.gov*, or, in very rare instances, via email or paper submission.

III. Data

OMB Control Number: 0610–0094.

Form Number(s): ED–900, ED–900B, ED–900C, ED–900D, ED–900E, ED–900F. *Type of Review:* Extension of a currently approved information collection.

Affected Public: Entities eligible for EDA financial assistance, including not-for-profit entities; Federal, State, local, and Tribal governments; and businesses or other for-profit organizations.

Estimated Number of Respondents: For construction projects, 977 estimated respondents, and for non-construction projects, 1,663 estimated respondents, for a total of 2,640 estimated respondents.

Estimated Time per Response: For construction projects, 43.0 estimated hours per response, and for non-construction projects, 17.1 estimated hours per response.

Estimated Total Annual Burden Hours: For construction projects, 42,011 estimated annual burden hours, and for non-construction projects, 28,437 estimated annual burden hours, for a total of 70,448 estimated total annual burden hours.

Estimated Total Annual Cost to Public: \$4,065,554.

Respondent's Obligation: Mandatory. *Legal Authority:* The Public Works and Economic Development Act of 1965 (42 U.S.C. 3121 *et seq.*).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated

collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary of Economic Affairs, Commerce Department.

[FR Doc. 2024–19321 Filed 8–27–24; 8:45 am]

BILLING CODE 3510–34–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Materials and Equipment Technical Advisory Committee; Notice of Partially Closed Meeting

The Materials and Equipment Technical Advisory Committee will meet on September 12, 2024, 10:00 a.m.–3:30 p.m., Eastern Daylight Time, in the Herbert C. Hoover Building, Room 3884, 1401 Constitution Avenue NW, Washington, DC (enter through Main Entrance on 14th Street between Constitution and Pennsylvania Avenues). The Committee advises and assists the Secretary of Commerce (Secretary) and other Federal officials and agencies with respect to actions designed to carry out the policy set forth in Section 1752(1)(A) of the Export Control Reform Act. The purpose of the meeting is to have Committee members and U.S. Government representatives mutually review updated technical data and policy-driving information that has been gathered.

Agenda

Open Session

1. Opening Remarks and Introduction by BIS Senior Management.
2. Report from working groups.
3. Public comments and Proposals.

Closed Session

4. Discussion of matters determined to be exempt from the open meeting and public participation requirements found in sections 1009(a)(1) and 1009(a)(3) of

the Federal Advisory Committee Act (FACA) (5 U.S.C. 1001–1014). The exemption is authorized by section 1009(d) of the FACA, which permits the closure of advisory committee meetings, or portions thereof, if the head of the agency to which the advisory committee reports determines such meetings may be closed to the public in accordance with subsection (c) of the Government in the Sunshine Act (5 U.S.C. 552b(c)). In this case, the applicable provisions of 5 U.S.C. 552b(c) are subsection 552b(c)(4), which permits closure to protect trade secrets and commercial or financial information that is privileged or confidential, and subsection 552b(c)(9)(B), which permits closure to protect information that would be likely to significantly frustrate implementation of a proposed agency action were it to be disclosed prematurely. The closed session of the meeting will involve committee discussions and guidance regarding U.S. Government strategies and policies.

The open session will be accessible via teleconference. To join the conference, submit inquiries to Ms. Yvette Springer at Yvette.Springer@bis.doc.gov.

A limited number of seats will be available for members of the public to attend the open session in person. Reservations are not accepted.

Special Accommodations: Individuals requiring special accommodations to access the public meeting should contact Ms. Yvette Springer no later than Wednesday, September 11, 2024, so that appropriate arrangements can be made.

To the extent that time permits, members of the public may present oral statements to the Committee. The public may submit written statements at any time before or after the meeting. However, to facilitate distribution of materials to the Committee members, the Committee suggests that members of the public forward their materials prior to the meeting to Ms. Springer via email. Material submitted by the public will be made public and therefore should not contain confidential information. Meeting materials from the public session will be accessible via the Technical Advisory Committee (TAC) site at <https://tac.bis.gov>, within 30-days after the meeting.

The Deputy Assistant Secretary for Administration, performing the non-exclusive functions and duties of the Chief Financial Officer and Assistant Secretary for Administration, with the concurrence of the delegate of the General Counsel, formally determined on May 6, 2024, pursuant to 5 U.S.C.

1009(d)), that the portion of the meeting dealing with pre-decisional changes to the Commerce Control List and the U.S. export control policies shall be exempt from the provisions relating to public meetings found in 5 U.S.C. 1009(a)(1) and 1009(a)(3). The remaining portions of the meeting will be open to the public.

Meeting cancellation: If the meeting is cancelled, a cancellation notice will be posted on the TAC website at <https://tac.bis.doc.gov>.

For more information, contact Ms. Springer.

Yvette Springer,

Committee Liaison Officer.

BILLING CODE 3510–JT–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Request for Investigation Under Section 232 of the Trade Expansion Act

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on April 19, 2024, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: Bureau of Industry and Security, Commerce.

Title: Request for Investigation under Section 232 of the Trade Expansion Act.

OMB Control Number: 0694–0120.

Form Number(s): None.

Type of Request: Regular submission, extension of a current information collection.

Number of Respondents: 800.

Average Hours per Response: 15 hours.

Burden Hours: 12,000.

Needs and Uses: Upon request, BIS will initiate an investigation to

determine the effects of imports of specific commodities on the national security and will make the findings known to the President for possible adjustments to imports through tariffs. The findings are made publicly available and are reported to Congress. The purpose of this collection is to account for the public burden associated with the surveys distributed to determine the impact on national security.

These surveys are designed to gather information so that BIS can evaluate the impact of foreign imports of strategic commodities on the national security of the United States. Each Section 232 study is for a specific commodity or technology that is required for national security reasons (e.g., precision bearings, microprocessors, machine tools, etc). These surveys attempt to determine the size of the domestic U.S. industry, how the domestic U.S. industry has been affected by foreign imports, demand for the commodity during peacetime, demand during wartime, the ability of the U.S. domestic industry to meet a surge in demand during wartime, and the potential impact on U.S. national security if wartime demand cannot be met by domestic U.S. suppliers.

Affected Public: Business or other for-profit organizations.

Frequency: On Occasion.

Respondent's Obligation: Mandatory.

Legal Authority: Section 232 of the Trade Expansion Act.

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function and entering either the title of the collection or the OMB Control Number 0694–0120.

Sheleen Dumas,

Departmental PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–19302 Filed 8–27–24; 8:45 am]

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE**Bureau of Industry and Security****Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Chemical Weapons Convention Provisions of the Export Administration Regulations**

AGENCY: Bureau of Industry and Security, Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before October 28, 2024.

ADDRESSES: Interested persons are invited to submit comments by email to Mark Crace, IC Liaison, Bureau of Industry and Security, at mark.crace@bis.doc.gov or to PRAcomments@doc.gov. Please reference OMB Control Number 0694–0117 in the subject line of your comments. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Mark Crace, IC Liaison, Bureau of Industry and Security, phone 202–714–8178 or by email at mark.crace@bis.doc.gov.

SUPPLEMENTARY INFORMATION:**I. Abstract**

The Chemical Weapons Convention (CWC) is a multilateral arms control treaty that seeks to achieve an international ban on chemical weapons (CW). The CWC prohibits, the use, development, production, acquisition, stockpiling, retention, and direct or indirect transfer of chemical weapons. This collection implements the following export provision of the treaty in the Export Administration Regulations:

Schedule 1 notification and report: Under Part VI of the CWC Verification

Annex, the United States is required to notify the Organization for the Prohibition of Chemical Weapons (OPCW), the international organization created to implement the CWC, at least 30 days before any transfer (export/import) of Schedule 1 chemicals to another State Party. The United States is also required to submit annual reports to the OPCW on all transfers of Schedule 1 Chemicals.

Schedule 3 End-Use Certificates: Under Part VIII of the CWC Verification Annex, the United States is required to obtain End-Use Certificates for exports of Schedule 3 chemicals to States not Party to the CWC to ensure the exported chemicals are only used for the purposes not prohibited under the Convention.

II. Method of Collection

Electronically or on paper.

III. Data

OMB Control Number: 0694–0117.
Form Number(s): None.

Type of Review: Regular submission, extension of a current information collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 72.

Estimated Time per Response: 30 minutes.

Estimated Total Annual Burden Hours: 36 hours.

Estimated Total Annual Cost to Public: 0.

Respondent's Obligation: Mandatory.
Legal Authority: CWC Implementation Act (Pub. L. 105–277, Division I), Executive Order 13128, DOC's CWC Regulation (15 CFR 710, *et seq.*).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request

to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–33–P

DEPARTMENT OF COMMERCE**Bureau of Industry and Security****Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Miscellaneous Short Supply Activities**

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on April 19, 2024, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: Bureau of Industry and Security, Commerce.

Title: Miscellaneous Short Supply Activities.

OMB Control Number: 0694–0102.
Form Number(s): None.

Type of Request: Regular submission, extension of a current information collection.

Number of Respondents: 2.

Average Hours per Response: 100.5 hours.

Burden Hours: 201.

Needs and Uses: This information collection comprises two rarely used short supply activities: "Registration of U.S. Agricultural Commodities for Exemption from Short Supply

Limitations on Export (USAG)”, and “Petitions for the Imposition of Monitoring or Controls on Recyclable Metallic Materials; Public Hearings (Petitions).” Under provisions of sections 754.6 and 754.7 of the Export Administration Regulations (EAR), agricultural commodities of U.S. origin purchased by or for use in a foreign country and stored in the United States for export at a later date may voluntarily be registered with the Bureau of Industry and Security for exemption from any quantitative limitations on export that may subsequently be imposed under the EAR for reasons of short supply.

Affected Public: Business or other for-profit organizations.

Frequency: On Occasion.

Respondent’s Obligation: Voluntary.

Legal Authority: 754.6 and 754.7 of the Export Administration Regulations (EAR).

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website www.reginfo.gov/public/do/PRAMain. SUPPLEMENTARY INFORMATION:

Background

On June 6, 2024, Commerce published the *Preliminary Results* and invited comments from interested parties.¹ No interested party submitted comments on the *Preliminary Results*. Accordingly, the final results remain unchanged from the *Preliminary Results* and, thus, there is no decision memorandum accompanying this notice. On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.² The deadline for these final results is now no later than October 11, 2024. Commerce conducted this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended (the Act).

Scope of the Order 3

The merchandise covered by the *Order* is CTL plate from France. For a complete description of the scope of the *Order*, see the *Preliminary Results*.

Final Results of Review

For these final results, we determine that the following estimated weighted-average dumping margin exists for the period May 1, 2022, through April 30, 2023:

Producer/exporter	Weighted-average dumping margin (percent)
Dillinger France S.A	0.00

¹ See *Certain Carbon and Alloy Steel Cut-to-Length Plate from France: Preliminary Results and Rescission, in Part, of the Antidumping Administrative Review; 2022–23*, 89 FR 48368 (June 6, 2024) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum.

² See Memorandum, “Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,” dated July 22, 2024.

³ See *Certain Carbon and Alloy Steel Cut-To-Length Plate from Austria, Belgium, France, the Federal Republic of Germany, Italy, Japan, the Republic of Korea, and Taiwan: Amended Final Affirmative Antidumping Determinations for France, the Federal Republic of Germany, the Republic of Korea, and Taiwan, and Antidumping Duty Orders*, 82 FR 24096 (May 25, 2017) (*Order*).

Disclosure

Normally, Commerce will disclose to the parties in a proceeding the calculations performed in connection with the final results of review within five days of any public announcement or, if there is no public announcement, within five days of the date of publication of the notice of final results in the **Federal Register**, in accordance with 19 CFR 351.224(b). However, because we have made no changes from the *Preliminary Results*, there are no new calculations to disclose.

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b)(1), Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with the final results of this review. Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Commerce calculated a weighted-average dumping margin for Dillinger France S.A. (Dillinger) of zero percent in this review. Accordingly, we intend to instruct CBP to liquidate the appropriate entries without regard to antidumping duties. For entries of subject merchandise during the POR produced by Dillinger for which Dillinger did not know its merchandise was destined for the United States, we will instruct CBP to liquidate unreviewed entries at the all-others rate established in the less-than-fair-value (LTFV) investigation (*i.e.*, 6.15 percent),⁴ if there is no rate for the intermediate company(ies) involved in the transaction.⁵

Cash Deposit Requirements

The following cash deposit requirements will be effective upon publication in the **Federal Register** of these final results of administrative review for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) the cash deposit rate for the company listed

⁴ See *Order*, 82 FR at 24096.

⁵ See *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties*, 68 FR 23954 (May 6, 2003).

above will be equal to the weighted-average dumping margin established in these final results of this administrative review; (2) for previously investigated or reviewed companies not covered in this review, the cash deposit rate will continue to be the company-specific rate published for the most recently completed segment of this proceeding in which the company participated; (3) if the exporter is not a firm covered in this review, or the LTFV investigation, but the producer is, then the cash deposit rate will be the cash deposit rate established for the most recently completed segment for the producer of the subject merchandise; and (4) the cash deposit rate for all other producers and exporters will continue to be 6.15 percent, the all-others rate established in the LTFV investigation.⁶ These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

Administrative Protective Order (APO)

This notice serves as the only reminder to parties subject to an APO of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a sanctionable violation.

Notification to Interested Parties

We are issuing and publishing this notice in accordance with sections 751(a)(1) and 777(i) of the Act, and 19 CFR 351.221(b)(5).

Dated: August 21, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

International Trade Administration

[C-570-118]

Wood Mouldings and Millwork Products From the People's Republic of China: Final Results and Partial Rescission of Countervailing Duty Administrative Review; 2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that countervailable subsidies were provided to producers and exporters of wood mouldings and millwork products (millwork products) from the People's Republic of China (China) during the period of review (POR) from January 1, 2022, through December 31, 2022. Commerce is also rescinding the review with respect to one company that had no reviewable entries during the POR.

DATES: Applicable August 28, 2024.

FOR FURTHER INFORMATION CONTACT: Bob Palmer or Brandon James, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-9068 or (202) 482-7472, respectively.

SUPPLEMENTARY INFORMATION:

Background

On March 5, 2024, Commerce published the *Preliminary Results*.¹ For a detailed description of the events that occurred subsequent to the *Preliminary Results*, see the Issues and Decision Memorandum.² On July 1, 2024, in accordance with section 751(a)(3)(A) of

¹ See *Wood Mouldings and Millwork Products from the Peoples Republic of China: Preliminary Results and Partial Rescission of Countervailing Duty Administrative Review; 2022*, 89 FR 15816 (March 5, 2024) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum (PDM).

² See Memorandum, "Issues and Decision Memorandum for the Final Results of the Countervailing Duty Administrative Review Wood Mouldings and Millwork Products from the People's Republic of China; 2022," dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

the Tariff Act of 1930, as amended (the Act), Commerce extended the deadline for issuing the final results until July 26, 2024.³ On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.⁴

Scope of the Order⁵

The merchandise subject to the *Order* is wood mouldings and millwork products (WMMP) from China, which are primarily classifiable under subheadings 4409.10.0500, 4409.10.1020, 4409.10.1040, 4409.10.1060, 4409.10.1080, 4409.10.4010, 4409.10.4090, 4409.10.4500, 4409.10.5000, 4409.10.9020, 4409.10.9040, 4409.22.0590, 4409.22.1000, 4409.22.4000, 4409.22.5000, 4409.22.5020, 4409.22.5040, 4409.22.5060, 4409.22.5090, 4409.22.9000, 4409.22.9020, 4409.22.9030, 4409.22.9045, 4409.22.9060, 4409.22.9090, 4409.29.0665, 4409.29.1100, 4409.29.4100, 4409.29.5100, 4409.29.9100, 4412.99.5115, 4412.99.9500, 4418.91.9095, and 4421.91.9780 of the of the Harmonized Tariff Schedule of the United States (HTSUS). WMMP may also enter under HTSUS numbers 4409.10.6000, 4409.10.6500, 4409.22.6000, 4409.22.6500, 4409.29.6100, 4409.29.6600, 4412.41.0000, 4412.42.0000, 4412.49.0000, 4412.91.5115, 4412.92.5215, 4412.99.9700, 4418.20.4000, 4418.20.8030, 4418.20.8060, 4418.91.9195, 4418.99.9095, 4418.99.9195, 4421.91.9880, 4421.99.9780, and 4421.99.9880. While the HTSUS subheading and ASTM specification are provided for convenience and for customs purposes, the written description of the subject merchandise is dispositive. A full description of the scope of the *Order* is contained in the Issues and Decision Memorandum.

Rescission of Administrative Review, In Part

In the *Preliminary Results*, Commerce stated that we intended to further examine the rescission of this administrative review with respect to three companies, Anji Huaxin Bamboo

³ See Memorandum, "Extension of Deadline for the Final Results of Countervailing Duty Administrative Review; 2022," dated July 1, 2024.

⁴ See Memorandum, "Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings," dated July 22, 2024.

⁵ See *Wood Mouldings and Millwork Products from the People's Republic of China: Countervailing Duty Order*, 86 FR 9484 (February 16, 2021) (*Order*).

⁶ See *Order*, 82 FR at 24096.

& Wood Products Co., Ltd. (Anji Huaxin), Composite Technology International, Limited (CTIL), and Homebuild Industries Co., Ltd. (Homebuild). Anji Huaxin and CTIL submitted comments claiming that they had entries of subject merchandise during the POR in response to our stated intent to rescind the administrative review with respect to these two companies in the absence of evidence of suspended entries during the POR.⁶ Homebuild submitted a certification of no shipments during the POR and, after seeking confirmation with U.S. Customs and Border Protection (CBP), we placed CBP's response on the record.⁷ For the final results, we find that Anji Huaxin and Homebuild had reviewable entries of subject merchandise during the POR and, accordingly, are not rescinding this review with respect to these two companies. However, we find that CTIL had no reviewable entries of subject merchandise during the POR. As a result, we are rescinding this review, pursuant to 19 CFR 351.213(d)(3), with respect to this company.

For further information regarding this determination, see "Final Rescission of Administrative Review, In Part" section in the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised by interested parties in briefs are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is provided in Appendix I of this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at <https://access.trade.gov>. In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at <https://access.trade.gov/public/FRNoticesListLayout.aspx>.

Changes Since the Preliminary Results

Based on our review of the record and comments received from interested parties regarding our *Preliminary Results*, we made certain revisions to the countervailable subsidy rate calculations for Fujian Jinquan Trade Co., Ltd. (Jinquan) and Fujian Yinfeng

Imp & Exp Trading Co., Ltd. (Yinfeng).⁸ As a result of the changes to Jinquan and Yinfeng's program rates, the final rate for the 20 non-selected companies under review also changed.⁹ These changes are explained in the Issues and Decision Memorandum.

Methodology

Commerce conducted this review in accordance with section 751(a)(1)(A) of the Act. For each of the subsidy programs found countervailable, we find that there is a subsidy, *i.e.*, a government-provided financial contribution that gives rise to a benefit to the recipient, and that the subsidy is specific.¹⁰ The Issues and Decision Memorandum contains a full description of the methodology underlying Commerce's conclusions, including any determination that relied upon the use of adverse facts available pursuant to sections 776(a) and (b) of the Act.

Companies Not Selected for Individual Review

The statute and Commerce's regulations do not address the establishment of a rate to be applied to companies not selected for individual examination when Commerce limits its examination in an administrative review pursuant to section 777A(c)(2) of the Act. Generally, Commerce looks to section 705(c)(5) of the Act, which provides instructions for determining the all-others rate in an investigation, for guidance when calculating the rate for companies which were not selected for individual examination in an administrative review. Under section 705(c)(5)(A) of the Act, the all-others rate is normally an amount equal to the weighted average of the countervailable subsidy rates established for exporters and producers individually investigated, excluding any zero or *de minimis* countervailable subsidy rates, and any rates determined entirely on the basis of facts available.

As stated above, there are 20 companies for which a review was requested and not rescinded, and which were not selected as mandatory respondents or found to be cross-owned with a mandatory respondent. For these non-selected companies, because the rates calculated for mandatory

respondents Jinquan and Yinfeng were above *de minimis* and not based entirely on facts available, we applied a final subsidy rate based on a weighted average of the rates calculated for the two mandatory respondents using the publicly ranged sales data they submitted on the record. This methodology is consistent with our practice for establishing an all-others subsidy rate pursuant to section 705(c)(5)(A) of the Act. For a list of the non-selected companies, see Appendix II to this notice.

Final Results of Review

We find the countervailable subsidy rates for the mandatory and non-selected respondents under review for the period of January 1, 2022, through December 31, 2022, to be as follows:

Producer/exporter	Subsidy rate (percent <i>ad valorem</i>)
Fujian Jinquan Trade Co., Ltd. ¹¹	21.21
Fujian Yinfeng Imp & Exp Trading Co., Ltd. ¹²	3.11
Non-Selected Companies Under Review ¹³	14.38

Disclosure

We intend to disclose the calculations performed in connection with the final results of review to parties in this proceeding within five days of the date of publication of this notice in the **Federal Register**, in accordance with 19 CFR 351.224(b).

Assessment Rates

Pursuant to section 751(a)(2)(C) of the Act and 19 CFR 351.212(b), Commerce has determined, and CBP shall assess, countervailing duties on all appropriate entries of subject merchandise in accordance with the final results of this review, for the above-listed companies at the applicable *ad valorem* assessment rates listed for the POR (*i.e.*, January 1, 2022, to December 31, 2022). For CTIL, for which this review is rescinded, Commerce will instruct CBP to assess countervailing duties on all appropriate entries at a rate equal to the cash deposit of estimated countervailing duties required at the time of entry, or withdrawal from warehouse, for consumption, during the period January 1, 2022, through December 31, 2022, in

¹¹ Jinquan is cross-owned with Fujian Province Youxi County Baiyuan Wood Machining Co., Ltd.

¹² The following companies are cross-owned with Yinfeng: Fujian Province Youxi City Mangrove Wood Machining Co., Ltd.; and Fujian Province Youxi City Mangrove Wood Machining Co., Ltd. Youxi Xicheng Branch, Fujian Province.

¹³ See Appendix II.

⁶ See *Preliminary Results* PDM at 4–6; see also Memorandum, "Notice of Intent to Rescind Review, In Part," dated September 14, 2023.

⁷ See Memorandum, "Entry Documents Requested," dated February 14, 2024.

⁸ See Memoranda, "Final Results Calculations for Fujian Jinquan Trade Co., Ltd.," and "Final Results Calculations for Fujian Yinfeng Imp & Exp Trading Co., Ltd.," dated concurrently with this notice.

⁹ The 20 non-selected companies under review are listed in Appendix II of this notice.

¹⁰ See sections 771(5)(B) and (D) of the Act regarding financial contribution; section 771(5)(E) of the Act regarding benefit; and section 771(5A) of the Act regarding specificity.

accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue assessment instructions to CBP for these companies no earlier than 35 days after the publication of the preliminary results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.*, within 90 days of publication).

Cash Deposit Requirements

In accordance with section 751(a)(1) of the Act, Commerce intends to instruct CBP to collect cash deposits of estimated countervailing duties in the amounts shown for the POR for each of the respective companies listed above on shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results of this administrative review. For all non-reviewed firms subject to the *Order*, we will instruct CBP to continue to collect cash deposits of estimated countervailing duties at the most recent company-specific or all-others rate applicable to the company, as appropriate. These cash deposit requirements, effective upon publication of the final results of review, shall remain in effect until further notice.

Administrative Protective Order (APO)

This notice also serves as a reminder to parties subject to an APO of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

We are issuing and publishing these final results of administrative review and notice in accordance with sections 751(a)(1) and 777(i) of the Act, and 19 CFR 351.221(b)(5).

Dated: August 15, 2024.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

Ferrosilicon From the Russian Federation: Preliminary Affirmative Critical Circumstances Determinations

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) preliminarily determines that critical circumstances exist, with respect to imports of ferrosilicon in the antidumping duty (AD) and countervailing duty (CVD) investigations of ferrosilicon from the Russian Federation (Russia). The AD period of investigation is July 1, 2023, through December 31, 2023, and the CVD period of investigation is January 1, 2023, through December 31, 2023.

DATES: Applicable August 28, 2024.

FOR FURTHER INFORMATION CONTACT: Mark Hoadley AD/CVD Operations, Office VII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482-3148.

SUPPLEMENTARY INFORMATION:

Background

These preliminary determinations are made in accordance with sections 703(e) and 733(e) of the Tariff Act of 1930, as amended (the Act). Commerce published the notices of initiation of these AD and CVD investigations on April 24, 2024.¹ On August 9, 2024, CC Metals and Alloys, LLC and Ferroglobe USA, INC. (collectively, the petitioners) filed timely allegations, pursuant to sections 703(e)(1) and 733(e)(1) of the Act and 19 CFR 351.206, that critical circumstances exist with respect to ferrosilicon from Russia.² On August 19,

¹ See *Ferrosilicon from Brazil, Kazakhstan, Malaysia, and the Russian Federation: Initiation of Countervailing Duty Investigations*, 89 FR 31133 (April 24, 2024) (*CVD Initiation Notice*); see also *Ferrosilicon from Brazil, Kazakhstan, Malaysia, and the Russian Federation: Initiation of Less-Than-Fair-Value Investigations*, 89 FR 31137 (April 24, 2024) (*AD Initiation Notice*).

² See Petitioners' Letter, "Petitioners' Critical Circumstances Allegation," dated August 9, 2024 (*AD Critical Circumstances Allegation*); also see Petitioners' Letter, "Petitioners' Critical Circumstances Allegation," dated August 9, 2024 (*CVD Critical Circumstances Allegation*).

2024, the Government of Russia (GOR) submitted comments in response to the petitioners' CVD critical circumstances allegation.³ Commerce published its preliminary AD and CVD determinations on June 28, 2024.⁴ In the *CVD Preliminary Determination*, we applied adverse facts available (AFA) to the mandatory respondent, Russian Ferro Alloys Inc./RFA International LP (RFA) and determined an all-others rate based on the rate for RFA.⁵ In the *AD Preliminary Determination*, we assigned the Russia-wide entity an AFA rate as no individual producers/exporters participated in the investigation.⁶

In accordance with sections 703(e)(1) and 733(e)(1) of the Act and 19 CFR 351.206(c)(1) and (2)(ii), because the petitioners submitted the critical circumstances allegations more than 30 days before the scheduled date of the final determinations, Commerce will make preliminary findings as to whether there is a reasonable basis to believe or suspect that critical circumstances exist and will issue preliminary critical circumstances determinations within 30 days after the allegations are filed.

Critical Circumstances Allegations

The petitioners allege that imports of ferrosilicon from Russia were massive over a relatively short period, and provided monthly import data comparing a base period of January 2024 through March 2024, to a comparison period of April 2024 through June 2024.⁷ The petitioners allegation of massive imports utilizes base and comparison periods established in accordance with 19 CFR 351.206(i) and reflects an increase from 0 to 5,744.922 metric tons, which is "massive" under 19 CFR 351.206(h)(2) and under sections 703(e)(1)(b) and 733(e)(1)(b) of the Act.⁸ For the CVD investigation, the petitioners also allege that there is a reasonable basis to believe that there are subsidies in this investigation which are inconsistent with the World Trade

Organization Agreement on Subsidies and Countervailing Measures (SCM Agreement).⁹ For the AD investigation, the petitioners also allege that there is reason to believe there is history of dumping and material injury by reason of dumped imports in the United States or elsewhere of ferrosilicon and a reason to believe importers knew or should have known that Russian producers and/or exporters were selling ferrosilicon at less than fair value (LTFV) and that material injury was likely.¹⁰

Analysis

CVD Allegation: Alleged Countervailable Subsidies Are Inconsistent With the SCM Agreement

Section 703(e)(1) of the Act provides that Commerce will determine that critical circumstances exist in CVD investigations if there is a reasonable basis to believe or suspect that the alleged countervailable subsidy is inconsistent with the SCM Agreement.¹¹

To determine whether an alleged countervailable subsidy is inconsistent with the SCM Agreement, in accordance with section 703(e)(1)(A) of the Act, Commerce considered the evidence currently on the record of this investigation. As determined in the *CVD Preliminary Determination*, we found, based on AFA, that the non-cooperating mandatory respondent RFA used the Import Substitution Loans program. Record evidence indicates that this program is contingent on the use of domestic over imported goods, rendering it inconsistent with Article 3 of the SCM Agreement.¹² Therefore, Commerce preliminarily determines, for purposes of this critical circumstances' determination, that there are subsidies in this investigation that are inconsistent with the SCM Agreement.

AD Allegation: History of Dumping and Material Injury by Reason of Dumped Imports in the United States or Elsewhere of the Subject Merchandise

In determining whether there is a history of dumping pursuant to section 733(e)(1)(A)(i) of the Act, Commerce generally considers current or previous

AD orders on subject merchandise from the country in question in the United States and current orders in any other country with regard to imports of subject merchandise.¹³ On May 4, 2021, Egypt imposed an antidumping duty order on imports of ferrosilicon from Russia.¹⁴ This third-country antidumping duty order remains in effect and constitutes evidence of a history of dumping and material injury by reason of LTFV sales.¹⁵

AD Allegation: The Importer Knew or Should Have Known That the Exporter Was Selling at Less Than Fair Value and That There Was Likely To Be Material Injury

In determining whether importers knew or should have known that exporters were selling subject merchandise at LTFV and that there was likely to be material injury by reason of such sales, pursuant to section 733(e)(1)(A)(ii), Commerce must rely on the facts before it at the time the determination is made. Commerce generally bases its decision with respect to knowledge on the margins calculated in the preliminary determination and the U.S. International Trade Commission's (ITC) preliminary injury determination.¹⁶

Commerce normally considers margins of 25 percent or more for export price sales and 15 percent or more for constructed export price sales sufficient to impute importer knowledge of sales at LTFV.¹⁷ In this investigation, we preliminarily assigned a dumping margin of 283.27 percent to the Russia-wide entity, which exceeds the minimum margin required to impute

⁹ See section 771(8)(A) of the Act.

¹⁰ See section 733(e)(1) of the Act.

¹¹ Commerce limits its critical circumstances findings to those subsidies contingent upon export performance or use of domestic over imported goods (*i.e.*, those prohibited under Article 3 of the SCM Agreement). See, e.g., *Final Affirmative Countervailing Duty Determination and Final Negative Critical Circumstances Determination: Carbon and Certain Alloy Steel Wire from Germany*, 67 FR 55808, 55809–10 (August 30, 2002).

¹² See Checklist, "Enforcement and Compliance, Countervailing Duty Investigation Initiation Checklist," dated April 17, 2024, at 8–9.

knowledge of dumping to U.S. importers.¹⁸

In assessing importers' knowledge of likely material injury, Commerce relies on a preliminary affirmative determination by the ITC to impute the requisite knowledge to U.S. importers.¹⁹ Thus, Commerce finds that U.S. importers knew or should have known that imports of ferrosilicon from Russia were being sold at LTFV and were likely to cause injury, which is sufficient to satisfy the first requirement for an affirmative critical circumstances determination.

Massive Imports

In determining whether there have been "massive imports" over a "relatively short period," pursuant to sections 703(e)(1)(B) and 733(e)(1)(B) of the Act and 19 CFR 351.206(h), Commerce normally compares the import volumes of the subject merchandise for at least three months immediately preceding the filing of the petition (*i.e.*, the "base period") to a comparable period of at least three months following the filing of the petition (*i.e.*, the "comparison period"). Imports normally will be considered massive when imports during the comparison period have increased by 15 percent or more compared to imports during the base period.²⁰ The regulations also provide, however, that if Commerce finds that importers, or exporters or producers, had reason to believe, at some time prior to the beginning of the proceeding, that a proceeding was likely, Commerce may consider a period of not less than three months from that earlier time.²¹ In this case, Commerce compared the import volumes of subject merchandise, as provided by the petitioners,²² for the three months immediately preceding and three months following the filing of the petition, ending with the month prior to the *AD Preliminary Determination* and the *CVD Preliminary Determination*.

Because the petitions were filed on March 28, 2024, to determine whether there was a massive surge in imports for the cooperating mandatory respondent, Commerce compared the total volume of shipments during the period January 2024 through March 2024 with the volume of shipments during the

following three-month period of April 2024 through June 2024. Based on this analysis, we preliminarily determine that there was a massive surge in imports from RFA and "all other" producers/exporters from Russia (for CVD) and for the Russia-wide entity (for AD).

Conclusion

For the CVD investigation, based on the criteria and findings discussed above, we preliminarily determine that critical circumstances exist with respect to imports of ferrosilicon from Russia produced or exported by RFA and all other producers/exporters. For the AD investigation, based on the criteria and findings discussed above, we preliminarily determine that critical circumstances exist with respect to all imports of ferrosilicon from Russia produced or exported by the Russia-wide entity.

Final Critical Circumstances Determinations

We will make final critical circumstances determinations concerning critical circumstances in the final AD and CVD determinations, which are currently due no later than September 11, 2024.

Public Comment

Interested parties are invited to comment on these preliminary critical circumstances determinations no later than five days after the date on which this notice is published in the **Federal Register**. Given that the final determinations for the AD and CVD investigations are due no later than September 11, 2024, Commerce will allow two days for parties to submit rebuttal comments.

We request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.²³ Further, we request that interested parties limit their executive summary of each issue to no more than 450 words, not including citations. We intend to use the executive summaries as the basis of the comment summaries included in the issues and decision memoranda that will accompany the final determinations in these investigations. We request that interested parties include footnotes for relevant citations in the executive summary of each issue. Note that Commerce has amended certain of its

requirements pertaining to the service of documents in 19 CFR 351.303(f).²⁴

Suspension of Liquidation

In accordance with section 703(e)(2)(A) of the Act, for all entries, we will direct U.S. Customs and Border Protection (CBP) to suspend liquidation of any unliquidated entries of subject merchandise from Russia entered, or withdrawn from warehouse for consumption, on or after March 30, 2024, which is 90 days prior to the date of publication of the *AD Preliminary Determination* and *CVD Preliminary Determination* in the **Federal Register**. For such entries, CBP shall require a cash deposit equal to the estimated weighted-average dumping margin established in the *AD Preliminary Determination* and *CVD Preliminary Determination*. This suspension of liquidation will remain in effect until further notice.

U.S. International Trade Commission Notification

In accordance with sections 703(f) and 733(f) of the Act, we will notify the ITC of these preliminary determinations of critical circumstances.

Notification to Interested Parties

This determination is issued and published pursuant to sections 703(f), 733(f), and 777(i) of the Act and 19 CFR 351.206.

Dated: August 22, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on May 16, 2024 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Institute of Standards and Technology (NIST), Commerce.

Title: Safety and Health Information Collection.

OMB Control Number: 0693–0080.

Form Number(s): NIST–426, NIST–985, NIST–986.

Type of Request: Regular.

Number of Respondents: 999.

Average Hours per Response: 10 minutes.

Burden Hours: 168.

Needs and Uses: The National Institute of Standards and Technology (NIST) is a unique federal campus which hosts daily a range of non-federal individuals. Non-federal individuals may include NIST Associates, volunteers, students, and visitors. In order to provide these individuals with proper health care and health documentation, NIST is pursuing renewal of approval of three health unit forms.

Affected Public: Some Associates, volunteers, and visitors to NIST.

Frequency: As needed.

Respondent's Obligation: Voluntary.

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Public Meeting of the Ocean Exploration Advisory Board

AGENCY: Office of Oceanic and Atmospheric Research (OAR), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce (DOC).

ACTION: Notice of public meeting.

SUMMARY: This notice sets forth the schedule and proposed agenda for a meeting of the Ocean Exploration Advisory Board (OEAB). OEAB members will discuss and provide advice on the Federal ocean exploration program, with a particular emphasis on the topics identified in the section on Matters to Be Considered.

DATES: The announced meeting is scheduled for Tuesday, Sept. 17, 2024 from 1:00 p.m.–2:00 p.m. (EDT).

ADDRESSES: This will be a virtual meeting. Information about how to observe virtually will be posted to the OEAB website at <https://oeab.noaa.gov/>.

FOR FURTHER INFORMATION CONTACT: Mr. David Turner, Designated Federal Officer, Ocean Exploration Advisory Board, National Oceanic and Atmospheric Administration, David.Turner@NOAA.gov or (859) 327–9661.

SUPPLEMENTARY INFORMATION: NOAA established the OEAB under the Federal Advisory Committee Act (FACA) and legislation that gives the agency statutory authority to operate an ocean

exploration program and to coordinate a national program of ocean exploration. The OEAB advises NOAA leadership on strategic planning, exploration priorities, competitive ocean exploration grant programs, and other matters as the NOAA Administrator requests.

OEAB members represent government agencies, the private sector, academic institutions, and not-for-profit institutions involved in all facets of ocean exploration—from advanced technology to public engagement.

In addition to advising NOAA leadership, NOAA expects the OEAB to help to define and develop a national program of ocean exploration—a network of stakeholders and partnerships advancing national priorities for ocean exploration.

One of the OEAB's authorized duties is to annually review the quality and effectiveness of the programs' proposal review processes.

Matters To Be Considered: The OEAB will be briefed on the status of the NOAA Ocean Exploration's competitive grants programs; have an opportunity to inquire about them in detail; and provide recommendations. The program's annual competitive grant awards include funding for interdisciplinary and innovative ocean exploration related projects, in addition to grant awards for education and outreach efforts.

The agenda and other meeting materials will be made available on the OEAB website at <https://oeab.noaa.gov/>.

Status: The meeting will be open to the public via remote access. Please check the agenda on the OEAB website to confirm the public comment period schedule.

The OEAB expects that public statements at its meetings will not be repetitive of previously submitted verbal or written statements. In general, each individual or group making a verbal presentation will be limited to three minutes. The Designated Federal Officer must receive written comments by Sept. 9, 2024, to provide sufficient time for OEAB review. Written comments received after Sept. 9, 2024, will be distributed to the OEAB but may not be reviewed prior to the meeting date. Comments should be submitted to Designated Federal Officer David.Turner@NOAA.gov.

Special Accommodations: Requests for sign language interpretation or other auxiliary aids should be directed to the

Designated Federal Officer by Sept. 9, 2024.

David Holst,

*Chief Financial and Administrative Officer,
Office of Oceanic and Atmospheric Research,
National Oceanic and Atmospheric
Administration.*

BILLING CODE 3510-KA-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; North Pacific Observer Program Safety and Security Survey

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on April 10, 2024 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic and Atmospheric Administration, Commerce.

Title: North Pacific Observer Program Safety and Security Survey.

OMB Control Number: 0648-0759.

Form Number(s): None.

Type of Request: Regular submission. Extension and revision of a current information collection.

Number of Respondents: 280.

Average Hours per Response: .17 hours (10 minutes per respondent).

Total Annual Burden Hours: 47.

Needs and Uses: This request is for an extension and revision of an existing information collection. The revision to the survey instrument will allow the survey participants to specify to whom they reported unwanted behavior. NMFS certified observers are a vital part of fisheries management. Observers deploy to collect fisheries data in the field; observers often deploy to vessels and work alongside fishers for weeks and months at a time. The work environment observers find themselves

in can be challenging, especially if the observer finds themselves a target for victim type violations such as sexual harassment, intimidation, or even assault. The NOAA Fisheries Office of Law Enforcement has primary jurisdiction to investigate violations of the Magnuson Stevens Act. The Office of Law Enforcement prioritizes investigations initiated from reports made by observers involving assault, sexual harassment, hostile work environment, intimidation, and other behaviors that may affect observers individually. However, it is difficult for a person to disclose if they have been a victim of a crime, and if law enforcement does not receive reports of unwanted behavior then they cannot initiate an investigation. The true number of observers who have experienced victim type crimes is unknown, and the reasons why they do not report is also unclear. More information is needed to understand how many observers per year experience victim type crimes, and why they chose not to report to the Office of Law Enforcement.

The Office of Law Enforcement, Alaska Division, is conducting a survey of observer who deploy under the North Pacific Observer Program to determine the true number of observers who experienced victimizing behavior during their deployments, and what factors prevented them from reporting. Twenty questions, describing varying levels of behavior that may violate the Magnuson Act, will determine if an observer has experienced the behavior, if they reported the behavior, and to whom the report was made. The survey will assess the specific impediments to disclosure. This survey will launch on an annual basis. The results of the survey will provide the Office of Law Enforcement a better understanding of how often observers are victimized, which will enable them to reallocate resources as needed, conduct more training for observers to ensure they know how to report, conduct training to ensure people understand what constitutes a victim crime, and to increase awareness of potential victimizations. Additionally, the survey results will help law enforcement understand the barriers to disclosure, so enforcement may begin to address these impediments so they no longer prevent observers from disclosure.

Affected Public: Federal Government, Individuals, and Households.

Frequency: On Occasion.

Respondent's Obligation: Voluntary.

Legal Authority: Magnuson Stevens Act.

North Pacific Fishery Management Council; Public Meeting

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of hybrid public meeting.

SUMMARY: The North Pacific Fishery Management Council (Council) Partial Coverage Fishery Monitoring Advisory Committee (PCFMAC) will meet September 16, 2024.

DATES: The meetings will be held on Monday, September 16, 2024, from 8:30 a.m. to 4 p.m., Alaska Time.

ADDRESSES: For members attending in Seattle, the in-person component of the meeting will be held at the Alaska Fishery Science Center in Room 2079, 7600 Sand Point Way NE, Building 4, Seattle, WA 98115. If you plan to attend in-person, you need to notify Sara Cleaver (sara.cleaver@noaa.gov) at least 2 days prior to the meeting (or 2 weeks prior if you are a foreign national). You will also need a valid U.S. Identification Card. For members attending in Anchorage, the in-person component of the meeting will be held at the North Pacific Fishery Management Council office, 1007 W 3rd Ave., Suite 400, Anchorage, AK 99501. If you are attending virtually, join the meeting online through the link at [https://](https://meetings.npfmc.org/Meeting/Details/3057)

meetings.npfmc.org/Meeting/Details/3057.

Council address: North Pacific Fishery Management Council, 1007 W 3rd Ave., Anchorage, Suite 400, AK 99501–2252; telephone: (907) 271–2809.

Instructions for attending the meeting are given under **SUPPLEMENTARY INFORMATION**, below.

FOR FURTHER INFORMATION CONTACT: Sara Cleaver, Council staff; telephone: (907) 271–2809; email: sara.cleaver@noaa.gov. For technical support, please contact Council administrative staff, email: npfmc.admin@noaa.gov.

SUPPLEMENTARY INFORMATION:

Agenda

Monday, September 16, 2024

The September 2024 PCFMAC agenda will include: (a) updates since the last PCFMAC meeting; (b) the 2025 Observer Annual report; (c) future scheduling, and (d) other business. The agenda is subject to change, and the latest version will be posted at <https://meetings.npfmc.org/Meeting/Details/3057> prior to the meeting, along with meeting materials.

Connection Information

You can attend the meeting online using a computer, tablet, or smartphone, or by phone only. Connection information will be posted online at: posted at <https://meetings.npfmc.org/Meeting/Details/3057>. If you are attending the meeting in-person, please note that all attendees will be required to wear a mask.

Public Comment

Public comment letters will be accepted and should be submitted electronically to posted at <https://meetings.npfmc.org/Meeting/Details/3057>.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Atlantic Highly Migratory Species Permit Family of Forms

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public’s reporting burden. Public comments were previously requested via the **Federal Register** on March 14, 2024, during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic and Atmospheric Administration, Commerce.

Title: Atlantic Highly Migratory Species Permit Family of Forms.

OMB Control Number: 0648–0327.

Form Number(s): None.

Type of Request: Regular submission. Request for revision and extension of a current information collection.

Number of Respondents: 33,050.

Average Hours per Response: Application for Renewal of Atlantic HMS Permit, 10 minutes; Initial Application for an Atlantic HMS Permit, 35 minutes; one-time application for the IMO/LR number, 30 minutes.

Total Annual Burden Hours: 8,325.

Needs and Uses: This request is for the revision and extension of a current information collection, which includes both vessel and dealer permits.

Under the provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*), NMFS is responsible for management of the Nation’s marine fisheries. In addition, NMFS must comply with the United States’ obligations under the Atlantic Tunas Convention Act of 1975 (ATCA; 16 U.S.C. 971 *et seq.*).] Atlantic highly migratory species (HMS) fisheries are managed under the 2006 Consolidated HMS Fishery Management Plan (FMP) and its amendments pursuant to the Magnuson-Stevens Act and consistent

with ATCA. HMS implementing regulations are at 50 CFR part 635. NMFS issues permits to fishing vessels and dealers in order to collect information necessary to comply with domestic and international obligations, secure compliance with regulations, and disseminate necessary information. Regulations at § 635.4 require that vessels participating in commercial and recreational fisheries for Atlantic HMS and dealers purchasing Atlantic HMS from a vessel obtain a Federal permit issued by NMFS.

This action addresses the renewal of permit applications currently approved under PRA 0648–0327. Vessel permits include Atlantic Tunas (except HMS limited access permits, including longline permits, and the HMS Caribbean Smallboat Permit, which are approved under PRA 0648–0205), HMS Charter/Headboat, HMS Angling, and Swordfish General Commercial permits. This action also includes the one-time requirement for commercial vessels greater than 20 meters in length to obtain an International Maritime Organization/Lloyd's Registry (IMO/LR) number.

This action is also being revised to include a new requirement for all HMS vessel permit applications to be submitted online starting in 2025, and the one-time requirement for all permit applicants to set up an account on the HMS permits website. The latter was implemented to make the program compatible with current federal data security requirements, and will make it easier for permit holders with multiple vessel permits to manage their permits by linking them all within a single account. Finally, the action is revised to remove the ability to submit an

application for an Atlantic Tunas Purse Seine category permit, as the Atlantic Tunas Purse Seine category was discontinued as part of Amendment 13 to the 2006 Consolidated HMS Fishery Management Plan after years of inactivity in the bluefin tuna fishery. More information on that action can be found in the Amendment 13 final rule (87 FR 59966, October 3, 2022).

The burden estimates in this renewal are also being updated to reflect increases in the total number of permits issued each year, and a \$1 increase in the price of HMS vessel permits to \$27 per permit, due to increased costs associated with maintaining and executing the program.

Affected Public: Individuals or households; Business or other for-profit organizations.

Frequency: Annually for HMS permits; Once for a vessel IMO/LR number.

Respondent's Obligation: Mandatory.
Legal Authority: Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1801 *et seq.*), and the Atlantic Tunas Convention Act of 1975 (16 U.S.C. 971 *et seq.*).

This information collection request may be viewed at www.reginfo.gov. Follow the instructions to view the Department of Commerce collections currently under review by OMB.

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold: See Attached Annex*

(viii) *Date Report Delivered to Congress: February 27, 2023*

*As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Australia—Advanced Anti-Radiation Guided Missiles-Extended Range (AARGM-ER)

The Government of Australia has requested to buy up to sixty-three (63) Advanced Anti-Radiation Guided Missiles-Extended Range (AARGM-ERs); and up to twenty (20) AARGM-ER Captive Air Training Missiles (CATMs). Also included are AGM-88G Advanced Anti-Radiation Guided Missile-Extended Range Dummy Air Training Missiles (AARGM-ER DATMs), containers, component parts and support equipment; Repair of Repairables; software (Classified and Unclassified); publications (Classified and Unclassified); training (Classified and Unclassified); transportation; U.S. Government and Contractor engineering support; and other related elements of logistical and program support. The estimated total cost is \$506 million.

This proposed sale will support the foreign policy and national security objectives of the United States. Australia is one of our most important allies in the Western Pacific. The strategic location of this political and economic power contributes significantly to ensuring peace and economic stability in the region. It is vital to the U.S. national interest to assist our ally in developing and maintaining a strong and ready self-defense capability.

The proposed sale will improve Australia's capability to meet current and future threats by suppressing and destroying land or sea-based radar emitters associated with enemy air defenses. This capability denies the

adversary the use of its air defense systems, thereby improving the survivability of Australia's tactical aircraft. Australia will have no difficulty absorbing this equipment into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The prime U.S. contractor will be the Javelin Joint Venture between Lockheed Martin in Orlando, FL and Raytheon Missiles and Defense in Tucson, AZ. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require U.S. Government personnel and U.S. Contractor representatives to visit Australia on a temporary basis in conjunction with program technical oversight and support requirements, including program and technical reviews.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 23-118

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

(vii) *Sensitivity of Technology:*

1. The AGM-88G Advanced Anti-Radiation Guided Missile-Extended Range (AARGM-ER) weapon system is an air-to-ground missile intended for Suppression of Enemy Air Defenses (SEAD) and Destruction of Enemy Air Defenses (DEAD) missions. The AARGM-ER provides suppression or destruction of enemy RADAR and denies the enemy the use of air defense systems, thereby improving the survivability of our tactical aircraft. The AGM-88G AARGM-ER Captive Air Training Missiles (CATM) is used by pilots when training for SEAD/DEAD missions.

2. The highest level of classification of defense articles, components, and services included in this potential sale is SECRET.

3. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

4. A determination has been made that Australia can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

5. All defense articles and services listed in this transmittal have been authorized for release and export to Australia.

(i) *Purchaser:* Government of Spain
(ii) *Sec. 36(b)(1), AECA Transmittal
No.:* 18-19
Date: June 26, 2018
Implementing Agency: Navy
(iii) *Description:* On June 26, 2018,
Congress was notified by Congressional
certification transmittal number 18-19,
of the possible sale, under Section
36(b)(1) of the Arms Export Control Act,
of five (5) AEGIS Weapons Systems
(AWS) MK7, six (6) shipsets Digital
Signal Processing, five (5) shipsets AWS

Computing Infrastructure MARK 1 MOD
0, five (5) shipsets Operational
Readiness Test Systems (ORTS), five (5)
shipsets MK 99 MOD 14 Fire Control
System, five (5) shipsets MK 41 Baseline
VII Vertical Launching Systems (VLS),
two (2) All-Up-Round MK 54 Mod 0
lightweight torpedoes, twenty (20)
Standard Missile 2 (SM-2) Block IIIB
missiles and MK 13 canisters with AN/
DKT-71 warhead compatible telemeter.
Also included was one (1) S4 AWS
computer program, five (5) shipsets
Ultra High Frequency (UHF) Satellite
Communications (SATCOM), five (5)
shipsets AN/SRQ-4 radio terminal sets,
five (5) shipsets ordnance handling
equipment, five (5) shipsets Selective
Availability Anti-Spoofing Modules

(SAASM), five (5) shipsets aviation
handling and support equipment, five
(5) shipsets AN/SLQ-24E Torpedo
countermeasures systems, five (5)
shipsets LM04 Thru-Hull XBT Launcher
and test canisters, one (1) shipset MK 36
MOD 6 Decoy Launching System, five
(5) shipsets Link Level COMSEC (LLC)
7M for LINK 22, five (5) shipsets
Maintenance Assist Module (MAM)
cabinets, five (5) shipsets technical
documentation, five (5) shipsets
installation support material, special
purpose test equipment, system
engineering, technical services, on-site
vendor assistance, spare parts, systems
training, foreign liaison office and
staging services necessary to support
ship construction and delivery, spare

and repair parts, tools and test equipment, support equipment, repair and return support, personnel training and training equipment, publications and technical documentation, U.S. Government and contractor engineering and logistics support services, and other related elements of logistic and program support. The estimated total cost was \$860.4 million. Major Defense Equipment (MDE) constituted \$324.4 million of this total.

On June 15, 2020, Congress was notified by Congressional certification transmittal number 20–0G of an additional MDE sale of thirty (30) All-Up-Round MK 54 Lightweight Torpedoes (LWT). The following non-MDE items were also be included: MK 54 LWT expendables; MK 54 turnaround kits; MK 54 containers; one (1) MK–695 Torpedo Systems Test Set (TSTS); support equipment including fire control modification platforms and spare parts; torpedo spare parts; training; publications; software; U.S. Government and contractor engineering, technical, and logistics support services and other related elements of logistics and program support. The addition of these items resulted in a net increase in MDE cost of \$45 million, resulting in a revised MDE cost of \$369.4 million. The total estimated case value increased to \$940.4 million.

On June 8, 2022, Congress was notified by Congressional certification transmittal number 22–0G of the MDE replacement of the previously notified two (2) All Up Round MK 54 Mod 0 LWTs with two (2) Exercise MK 54 Mod 0 LWTs. Also included was additional Engineering Technical Assistance for redesign of Radar Signal Processing Group configuration and updates to

International Aegis Fire Control Loop design; shipsets of SAASM units and associated spares; COMSEC equipment for use between test sites; and removal of one (1) shipset MK 36 Mod 6 Decoy Launching System. The MDE total value remained \$369.4 million; however, the non-MDE estimated value increased from \$571 million to \$810.6 million. The total estimated case value increased to \$1.18 billion.

This transmittal notifies the MDE inclusion of up to an additional sixty-two (62) SM–2 Block IIIB missiles in tactical and telemetered configurations. Also included are MK 13 canisters; spare parts and associated containers; personal training and training equipment; publications and technical data; U.S. Government and contractor technical assistance; and other related elements of logistics and program support. The addition of these items will result in a net increase in MDE value of \$260 million, resulting in a revised MDE value of \$629.4 million. The non-MDE estimated value will increase from \$810.6 million to \$850.6 million. The total estimated case value will increase by \$300 million to \$1.48 billion.

(iv) *Significance*: The proposed articles and services will support Spain’s capability to commission its new F–110 frigates with the AEGIS Weapon System (AWS).

(v) *Justification*: This proposed sale will support the foreign policy and national security of the United States by improving the security of a NATO ally which is an important force for political stability and economic progress in Europe. It is vital to the U.S. national interest to assist Spain in developing

and maintaining a strong and ready self-defense capability.

(vi) *Sensitivity of Technology*: The Sensitivity of Technology Statement contained in the original notification applies to items reported here.

(vii) *Date Report Delivered to Congress*: February 27, 2023

Transmittal No. 23-08

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(i) *Prospective Purchaser:* The Government of the Netherlands

(ii) *Total Estimated Value:*

Major Defense Equipment *	\$520 million
Other	\$150 million
TOTAL	\$670 million

(iii) *Description and Quantity or Quantities of Articles or Services under Consideration for Purchase:*

Major Defense Equipment (MDE):

Twenty (20) M142 High Mobility Artillery Rocket System (HIMARS) Launchers

Thirty-nine (39) M30A2 Guided Multiple Launch Rocket System (GMLRS) Alternative Warhead (AW) Missile Pods with Insensitive Munitions Propulsion System (IMPS)

Thirty-eight (38) M31A2 GMLRS Unitary (GMLRS-U) High Explosive (HE) Missile Pods with IMPS Eighty (80) M57 Army Tactical Missile System (ATACMS) Missile Pods

Seventeen (17) M1152A1 High Mobility Multipurpose Wheeled Vehicles (HMMWVs)

Non-MDE:

Also included are M28A2 Reduced Range Practice Rocket (RRPR) pods; radios with similar "SINGARS"

capability, including vehicular dual long-range radio systems w/GPS; single radio, long range vehicular system w/GPS; High Frequency/VHF radios; M1084A2 cargo trucks, Family of Medium Tactical Vehicles (FMTVs) Resupply Vehicles (RSVs); M1089A2 wrecker truck, FMTVs; M1095 5-ton trailer FMTVs; Simple Key Loaders (SKLs), AN/PYQ-10; Defense Advanced Global Positioning System Receivers (DAGRs); machine gun mounts; battle management systems, Vehicle Integration Kits, ruggedized laptops, and training equipment publications for HIMARS and munitions; camouflage screen and support systems; support equipment; communications equipment; spare and repair parts; test sets; training and training equipment; publications; systems integration support; technical data; Stockpile Reliability, Quality Assurance and Technical Assistance teams; U.S. Government and contractor technical, engineering, and logistics support services; and other related elements of logistical and program support.

(iv) *Military Department*: Army (NE-B-YAX)

(v) *Prior Related Cases, if any*: NE-B-PBM

(vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid*: None known at this time

(vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold*: See Attached Annex

(viii) *Date Report Delivered to Congress*: February 16, 2023

* As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

The Netherlands—M142 High Mobility Artillery Rocket System (HIMARS)

The Government of the Netherlands has requested to buy twenty (20) M142 High Mobility Artillery Rocket System (HIMARS) launchers; thirty-nine (39) M30A2 Guided Multiple Launch Rocket System (GMLRS) Alternative Warhead (AW) Missile Pods with Insensitive Munitions Propulsion System (IMPS); thirty-eight (38) M31A2 GMLRS Unitary (GMLRS-U) High Explosive (HE) Missile Pods with IMPS; eighty (80) M57 Army Tactical Missile System (ATACMS) Missile Pods; and seventeen (17) M1152A1 High Mobility Multipurpose Wheeled Vehicles (HMMWVs). Also included are M28A2 Reduced Range Practice Rocket (RRPR)

pod; radios with similar “SINGARS” capability, including vehicular dual long-range radio systems w/GPS; single radio, long range vehicular system w/GPS; High Frequency/VHF radios; M1084A2 cargo trucks, Family of Medium Tactical Vehicles (FMTVs) Resupply Vehicles (RSVs); M1089A2 wrecker truck, FMTVs; M1095 5-ton trailer FMTVs; Simple Key Loaders (SKLs), AN/PYQ-10; Defense Advanced Global Positioning System Receivers (DAGRs); machine gun mounts; battle management systems, Vehicle Integration Kits, ruggedized laptops, and training equipment publications for HIMARS and munitions; camouflage screen and support systems; support equipment; communications equipment; spare and repair parts; test sets; training and training equipment; publications; systems integration support; technical data; Stockpile Reliability, Quality Assurance and Technical Assistance teams; U.S. Government and contractor technical, engineering, and logistics support services; and other related elements of logistical and program support. The total estimated cost is \$670 million.

This proposed sale will support the foreign policy and national security objectives of the United States by helping to improve the security of a NATO ally that is an important force for political stability and economic progress in Europe.

The proposed sale will improve the Netherlands’ military goals of updating capability while further enhancing interoperability with the United States and other allies. The Netherlands intends to use these defense articles and services to modernize its armed forces and expand its capability to strengthen its homeland defense and deter regional threats. The Netherlands will have no difficulty absorbing this equipment into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be Lockheed Martin, Grand Prairie, TX. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require U.S. Government or contractor representatives to travel to the Netherlands for program management reviews to support the program. Travel is expected to occur approximately twice per year as needed to support equipment fielding and training.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 23–08

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act, as amended

(vii) *Sensitivity of Technology*

1. The M142 High Mobility Artillery Rocket System (HIMARS) is a C-130 transportable wheeled launcher mounted on a 5-ton Family of Medium Tactical Vehicles truck chassis. HIMARS is the modern Army-fielded version of the Multiple Launch Rocket System (MLRS) M270 launcher and can fire all of the MLRS Family of Munitions (FOM) including Guided Multiple Launch Rocket System (GMLRS) variants and the Army Tactical Missile System (ATACMS). Utilizing the MLRS FOM, the HIMARS can engage targets between 15 and 300 kilometers with GPS-aided precision accuracy.

2. The Guided Multiple Launch Rocket System (GMLRS) M31A2 Unitary is the Army’s primary munition for units fielding the M142 HIMARS and M270A1 Multiple Launcher Rocket System (MLRS) Launchers. The M31 Unitary is a solid propellant artillery rocket that uses Global Positioning System/Precise Positioning Service (GPS/PPS)-aided inertial guidance to accurately and quickly deliver a single high-explosive blast fragmentation warhead to targets at ranges from 15–70 kilometers. The rockets are fired from a launch pod container that also serves as the storage and transportation container for the rockets. Each rocket pod holds six (6) total rockets.

3. The M30A2 GMLRS Alternative Warhead shares a greater than 90% commonality with the M31A1 Unitary. The primary difference between the GMLRS-U and GMLRS-AW is the replacement of the Unitary’s high explosive warhead with a 200-pound fragmentation warhead of pre-formed tungsten penetrators which is optimized for effectiveness against large area and imprecisely located targets. The munitions otherwise share a common motor, GPS/PPS-aided inertial guidance and control system, fuzing mechanism, multi-option height of burst capability, and effective range of 15–70km.

4. The M57 Army Tactical Missile System (ATACMS)—Unitary is a conventional, semi-ballistic missile that utilizes a 500-pound high explosive warhead. It has an effective range of between 70 and 300 kilometers and has increased lethality and accuracy over previous versions of the ATACMS due to a GPS/Precise Positioning System (PPS) aided navigation system.

5. The highest level of classification of defense articles, components, and

services included in this potential sale is SECRET.

6. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

7. A determination has been made that the Netherlands can provide substantially the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

8. All defense articles and services listed in this transmittal have been authorized for release and export to the Government of the Netherlands.

I. Transmittal

BILLING CODE 6001-FR-C

Transmittal No. 23-0E

REPORT OF ENHANCEMENT OR UPGRADE OF SENSITIVITY OF TECHNOLOGY OR CAPABILITY (SEC. 36(B)(5)(C), AECA)

(i) *Purchaser:* Government of Finland
 (ii) *Sec. 36(b)(1), AECA Transmittal No.:* 17-77

Date: February 5, 2018

Military Department: Navy

(iii) *Description:* On February 5, 2018, Congress was notified by Congressional certification transmittal number 17-77 of the possible sale, under Section 36(b)(1) of the Arms Export Control Act, of sixty-eight (68) Evolved SEASPARROW Missiles (ESSM) and one (1) ESSM inert operational missile. Also included were seventeen (17) MK25 quad pack canisters, eight (8) MK783 shipping containers, spare and repair parts, support and test equipment, publications and technical documentation, training, U.S. Government/Contractor engineering, technical and logistics support services and technical assistance, and other related elements of logistical support. The estimated total cost was \$112.7 million. Major Defense Equipment (MDE) constituted \$92.6 million of this total.

This transmittal notifies the inclusion of the following MDE items: eighty-four (84) RIM-162J Evolved SEASPARROW Missiles (ESSM), Block 2; to replace the previously notified sixty-eight (68) ESSMs. Also included are MK25 quad pack canisters and MK852 shipping containers. The addition of these items

will result in a net increase in MDE value of \$81.4 million, resulting in a revised MDE value of \$174 million. The non-MDE estimated value will increase from \$20.1 million to \$28.9 million. The total estimated case value will increase by \$90.2 million to \$202.9 million.

(iv) *Significance:* The inclusion of this MDE represents an increase in capability over the Block 1 ESSMs previously notified. Finland intends to use the missiles on its new Squadron 2020 class Corvette ships. The missiles will provide enhanced capabilities in effective defense of critical sea lanes and improve Finland's capability to meet current and future enemy anti-ship weapon threats. Finland previously requested ESSM Block 1s, but cancelled the procurement to await the Block 2s.

(v) *Justification:* This proposed sale will support the foreign policy and national security of the United States by improving the security of a trusted partner which is an important force for political stability and economic progress in Europe. It is vital to the U.S. national interest to assist Finland in developing and maintaining a strong and ready self-defense capability.

(vi) *Sensitivity of Technology:* The RIM-162J ESSM Block 2 is an upgrade to the Block 1, which is a kinematic upgrade to the RIM-7P SEASPARROW Missile that leverages U.S. guidance technology. ESSM Block 1 is a medium-range, semi-active homing missile that makes flight corrections via radar and midcourse data uplinks. The guidance system is semi-active on continuous wave or interrupted continuous wave illumination. The missile provides

reliable ship self-defense capability against agile, high-speed, low-altitude anti-ship cruise missiles (ASCMs) and low velocity air threats (LVATs) such as helicopters and high-speed, maneuverable surface threats. The ESSM Block 2 utilizes the same propulsion section and increases the diameter of the guidance section to 10-inches. The new guidance section utilizes a dual seeker head that employs semi-active and active guidance.

The highest level of classification of defense articles, components, and services included in this potential sale is SECRET.

(vii) *Date Report Delivered to Congress:* February 27, 2023

**Uniform Formulary Beneficiary
Advisory Panel; Notice of Federal
Advisory Committee Meetings**

AGENCY: Under Secretary of Defense for Personnel and Readiness, Department of Defense (DoD).

ACTION: Notice of Federal advisory committee meetings.

SUMMARY: The DoD is publishing this notice to announce the following Federal Advisory Committee meetings

of the Uniform Formulary Beneficiary Advisory Panel (UFBAP) will take place.

DATES: Open to the public, Wednesday, September 25th, 2024, 10:00 a.m.–1:00 p.m. Eastern Standard Time (EST).
Wednesday, December 18th, 2024, 10:00 a.m.–1:00 p.m. EST.

ADDRESSES: The meetings will be held telephonically or via conference call. The phone number for the remote access is CONUS: 1-888-831-4306; OCONUS: 1-210-234-8694; PARTICIPANT CODE: 9136304.

These numbers and the dial-in instructions will also be posted on the UFBAP website at: <https://www.health.mil/Military-Health-Topics/>

*Access-Cost-Quality-and-Safety/
Pharmacy-Operations/BAP.*

FOR FURTHER INFORMATION CONTACT: Designated Federal Official (DFO) Captain Tiffany F. Cline, USN, 703-681-2890 (voice), dha.ncr.j-6.mbx.baprequests@health.mil (email). Mailing address is 7700 Arlington Boulevard, Suite 5101, Falls Church, VA 22042-5101. Website: <https://www.health.mil/Military-Health-Topics/Access-Cost-Quality-and-Safety/Pharmacy-Operations/BAP>. The most up-to-date changes to the meeting agendas can be found on the website.

SUPPLEMENTARY INFORMATION: These meetings are being held under the provisions of chapter 10 of title 5, United States Code (U.S.C.) (commonly

known as the “Federal Advisory Committee Act” or “FACA”) and 41 Code of Federal Regulations (CFR) 102–3.140 and 102–3.150.

Purpose of the Meetings: The UFBAP will review and comment on recommendations made by the Pharmacy and Therapeutics Committee to the Director, Defense Health Agency regarding the Uniform Formulary.

Agenda: Both the September 25, 2024 and the December 18, 2024 meetings will follow the same agenda.

1. 10:00 a.m.–10:10 a.m. Sign in for UFBAP members
2. 10:10 a.m.–10:40 a.m. Welcome and Opening Remarks
 - a. Welcome, Opening Remarks, and Introduction of UFBAP Members by CAPT Tiffany F. Cline, DFO, UFBAP
 - b. Public Written Comments by CAPT Tiffany F. Cline, DFO, UFBAP
 - c. Opening Remarks by Dr. Pamela Schweitzer, UFBAP Chair
 - d. Introductory Remarks by Dr. Edward Vonberg, Chief, Formulary Management Branch

b. Closing Remarks by DFO, UFBAP
Meeting Accessibility: Pursuant to 5 U.S.C. 1009(a)(1) and 41 CFR 102–3.140 through 102–3.165, and subject to the availability of phone lines, the meetings are open to the public. Telephone lines are limited and available to the first 220 people dialing in. There will be 220 lines total: 200 domestic and 20 international, including leader lines.

Written Statements: Pursuant to 41 CFR 102–3.105(j) and 102–3.140(c), and 5 U.S.C. 1009(a)(3), interested persons or organizations may submit written statements to the UFBAP about its mission and/or the agenda to be addressed in the public meetings. Written statements should be submitted to the UFBAP’s DFO. The DFO’s contact information can be found in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Written comments or statements must be received by the UFBAP’s DFO at least five (5) calendar days prior to a meeting so they may be made available to the UFBAP for its consideration prior to a meeting. Written comments received are releasable to the public. The DFO will review all submitted written statements and provide copies to UFBAP.

Dated: August 21, 2024.

 (vi) *Sales Commission, Fee, etc., Paid, Offered, or Agreed to be Paid:* None.
 (vii) *Sensitivity of Technology Contained in the Defense Article or Defense Services Proposed to be Sold:* None.
 (viii) *Date Report Delivered to Congress:* February 14, 2023.

* As defined in Section 47(6) of the Arms Export Control Act.

Policy Justification

Kuwait—Medical Information System for Kuwait Military Medical Command (KMMC)

The Government of Kuwait has requested to buy planning, integration, implementation, and maintenance of a Medical Information System for its KMMC that consists of: Health Information Systems Information Technology (IT) hardware and software, IT infrastructure, implementation of life-cycle management practices, training, maintenance, support and warranty services, along with U.S. Government and contractor engineering, technical and logistics support services; and other related elements of logistical and program support. The estimated total cost is \$250 million.

This proposed sale will support the foreign policy and national security objectives of the United States by helping to improve the infrastructure of a Major Non-NATO ally that has been and continues to be an important force for political stability and economic progress in the Middle East.

This proposed sale will improve Kuwait's capability to provide greater health security for its KMMC infrastructure. Kuwait will use the enhanced capability to strengthen its medical services management. Kuwait will have no difficulty absorbing this infrastructure, support, and associated services into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be the Cerner Corporation, Kansas City, Missouri. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require the assignment of as many as fifteen (15) additional U.S. Government or U.S. contractor representatives to Kuwait for a duration of up to seven (7) years to provide

systems planning, implementation, management, and oversight.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

BILLING CODE 6001–FR–P

DEPARTMENT OF EDUCATION

Annual Notice of Interest Rates for Fixed-Rate Federal Student Loans Made Under the William D. Ford Federal Direct Loan Program

AGENCY: Federal Student Aid, Department of Education.

ACTION: Notice.

SUMMARY: The Chief Operating Officer for Federal Student Aid announces the interest rates for Federal Direct Stafford/Ford Loans (Direct Subsidized Loans), Federal Direct Unsubsidized Stafford/Ford Loans (Direct Unsubsidized Loans), and Federal Direct PLUS Loans (Direct PLUS Loans) made under the William D. Ford Federal Direct Loan (Direct Loan) Program, Assistance Listing Number 84.268, with first disbursement dates on or after July 1, 2024, and before July 1, 2025.

FOR FURTHER INFORMATION CONTACT: Travis Sturlaugson, U.S. Department of Education, 830 First Street NE, Washington, DC 20202. Telephone: 202–377–4174 or by email: travis.sturlaugson@ed.gov.

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7–1–1.

SUPPLEMENTARY INFORMATION: Direct Subsidized Loans, Direct Unsubsidized Loans, Direct PLUS Loans, and Direct Consolidation Loans (collectively referred to as “Direct Loans”) may have either fixed or variable interest rates, depending on when the loan was first disbursed or, in the case of a Direct Consolidation Loan, when the application for the loan was received. Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed on or after July 1, 2006, and Direct Consolidation Loans for which the application was received on or after February 1, 1999, have fixed interest rates that apply for the life of the loan. Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed before July 1, 2006, and Direct Consolidation Loans

for which the application was received before February 1, 1999, have variable interest rates that are determined annually and are in effect during the period from July 1 of one year through June 30 of the following year.

This notice announces the fixed interest rates for Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans with first disbursement dates on or after July 1, 2024, and before July 1, 2025, and provides interest rate information for other fixed-rate Direct Loans. Interest rate information for variable-rate Direct Loans is announced in a separate **Federal Register** notice.

Fixed-Rate Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans First Disbursed on or After July 1, 2013

Section 455(b) of the Higher Education Act of 1965, as amended (HEA) (20 U.S.C. 1087e(b)), includes formulas for determining the interest rates for all Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed on or after July 1, 2013. The interest rate for these loans is a fixed rate that is determined annually for all loans first disbursed during any 12-month period beginning on July 1 and ending on June 30. The rate is equal to the high yield of the 10-year Treasury notes auctioned at the final auction held before June 1 of that 12-month period, plus a statutory add-on percentage that varies depending on the loan type and, for Direct Unsubsidized Loans, whether the loan was made to an undergraduate or graduate student. The calculated interest rate may not exceed a maximum rate specified in the HEA. If the interest rate formula results in a rate that exceeds the statutory maximum rate, the rate is the statutory maximum rate. Loans first disbursed during different 12-month periods that begin on July 1 and end on June 30 may have different interest rates, but the rate determined for any loan is a fixed interest rate for the life of the loan.

On May 8, 2024, the United States Treasury Department held a 10-year Treasury note auction that resulted in a high yield of 4.483 percent, rounded to 4.48 percent.

Chart 1 shows the fixed interest rates for Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed on or after July 1, 2024, and before July 1, 2025.

CHART 1—DIRECT SUBSIDIZED LOANS, DIRECT UNSUBSIDIZED LOANS, AND DIRECT PLUS LOANS FIRST DISBURSED ON OR AFTER 07/01/2024 AND BEFORE 07/01/2025

Loan type	Borrower type	10-year treasury note high yield 05/8/2024 (%)	Add-on (%)	Maximum rate (%)	Fixed interest rate (%)
Direct Subsidized Loans; Direct Unsubsidized Loans.	Undergraduate students	4.48	2.05	8.25	6.53
Direct Unsubsidized Loans ¹	Graduate and professional students	4.48	3.60	9.50	8.08
Direct PLUS Loans	Parents of dependent undergraduate students; Graduate and professional students.	4.48	4.60	10.50	9.08

For reference, Chart 2 compares the fixed interest rates for Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed during the period July 1, 2024, through June 30, 2025, with the fixed interest rates for loans first disbursed during each previous 12-month period from July 1, 2013, through June 30, 2024.

CHART 2—DIRECT SUBSIDIZED LOANS, DIRECT UNSUBSIDIZED LOANS, AND DIRECT PLUS LOANS FIRST DISBURSED ON OR AFTER 07/01/2013 AND BEFORE 07/01/2025

Fixed-Rate Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans First Disbursed on or After July 1, 2006, and Before July 2, 2013 Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed on or after July 1, 2006, and before July 1, 2013, have fixed interest rates that are specified in section 455(b) of the HEA (20 U.S.C. 1087e(b)). Chart 3 shows the interest rates for these loans.

CHART 3—DIRECT SUBSIDIZED LOANS, DIRECT UNSUBSIDIZED LOANS, AND DIRECT PLUS LOANS FIRST DISBURSED ON OR AFTER 07/01/2006 AND BEFORE 07/01/2013

Loan type	Borrower type	First disbursed on/after	First disbursed before	Interest rate (%)
Subsidized	Undergraduate students	07/01/2011	07/01/2013	3.40
Subsidized	Undergraduate students	07/01/2010	07/01/2011	4.50
Subsidized	Undergraduate students	07/01/2009	07/01/2010	5.60
Subsidized	Undergraduate students	07/01/2008	07/01/2009	6.00
Subsidized	Undergraduate students	07/01/2006	07/01/2008	6.80
Subsidized	Graduate or professional students	07/01/2006	² 07/01/2012	6.80
Unsubsidized	Undergraduate and graduate or professional students	07/01/2006	07/01/2013	6.80
PLUS	Graduate or professional students and parents of dependent undergraduate students.	07/01/2006	07/01/2013	7.90

¹ Graduate and professional students are not eligible to receive Direct Subsidized Loans.

² Effective for loan periods beginning on or after July 1, 2012, graduate and professional students are

no longer eligible to receive Direct Subsidized Loans.

Fixed-Rate Direct Consolidation Loans

Section 455(b) of the HEA specifies that all Direct Consolidation Loans for which the application was received on or after February 1, 1999, have a fixed interest rate that is equal to the weighted average of the interest rates on

the loans consolidated, rounded to the nearest higher one-eighth of one percent. For Direct Consolidation Loans for which the application was received on or after February 1, 1999, and before July 1, 2013, the interest rate may not exceed 8.25 percent. However, under

section 455(b) of the HEA, the 8.25 percent interest rate cap does not apply to Direct Consolidation Loans made based on applications received on or after July 1, 2013. Chart 4 shows the interest rates for fixed-rate Direct Consolidation Loans.

CHART 4—DIRECT CONSOLIDATION LOANS MADE BASED ON APPLICATIONS RECEIVED ON OR AFTER 02/01/1999

Application received	Interest rate (%)	Maximum interest rate (%)
On/after 07/01/2013	Weighted average of the interest rates on the loans consolidated, rounded to the nearest higher one-eighth of one percent.	None
On/after 02/01/1999 and before 07/01/2013	(same as above)	8.25

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Annual Notice of Interest Rates for Variable-Rate Federal Student Loans Made Under the William D. Ford Federal Direct Loan Program

AGENCY: Federal Student Aid, Department of Education.

ACTION: Notice.

SUMMARY: The Chief Operating Officer for Federal Student Aid announces the interest rates for Federal Direct Stafford/Ford Loans (Direct Subsidized Loans), Federal Direct Unsubsidized Stafford/Ford Loans (Direct Unsubsidized Loans), and Federal Direct PLUS Loans (Direct PLUS Loan), Assistance Listing Number 84.268, with first disbursement dates before July 1, 2006, and for Federal Direct Consolidation Loans (Direct Consolidation Loans) for which the application was received before February 1, 1999. The rates announced in this notice are in effect for the period July 1, 2024, through June 30, 2025.

FOR FURTHER INFORMATION CONTACT: Travis Sturlaugson, U.S. Department of Education, 830 First Street NE, Washington, DC 20202. Telephone: 202-377-4174 or by email: travis.sturlaugson@ed.gov.

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7-1-1.

SUPPLEMENTARY INFORMATION: Direct Subsidized Loans, Direct Unsubsidized Loans, Direct PLUS Loans, and Direct Consolidation Loans (collectively referred to as “Direct Loans”) may have either fixed or variable interest rates, depending on when the loan was first disbursed or, in the case of a Direct Consolidation Loan, when the application for the loan was received. Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed before July 1,

2006, and Direct Consolidation Loans for which the application was received before February 1, 1999, have variable interest rates. For these loans, a new rate is determined annually and is in effect during the period from July 1 of one year through June 30 of the following year.

Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans first disbursed on or after July 1, 2006, and Direct Consolidation Loans for which the application was received on or after February 1, 1999, have fixed interest rates that apply for the life of the loan.

This notice announces the interest rates for variable-rate Direct Loans that will apply during the period from July 1, 2024, through June 30, 2025. Interest rate information for fixed-rate Direct Loans is announced in a separate notice published in the **Federal Register**.

Interest rates for variable-rate Direct Loans are determined in accordance with formulas specified in section 455(b) of the Higher Education Act of 1965, as amended (HEA) (20 U.S.C. 1087e(b)). The formulas vary depending on loan type and when the loan was first disbursed or, for certain Direct Consolidation Loans, when the application for the loan was received. The HEA specifies a maximum interest rate for these loan types. If the interest rate formula results in a rate that exceeds the statutory maximum rate, the rate is the statutory maximum rate.

Variable-Rate Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans

For Direct Subsidized Loans and Direct Unsubsidized Loans with first disbursement dates before July 1, 2006, and for Direct PLUS Loans with first disbursement dates on or after July 1, 1998, and before July 1, 2006, the interest rate is equal to the lesser of—

(1) The bond equivalent rate of 91-day Treasury bills auctioned at the final auction held before the June 1 immediately preceding the 12-month period to which the interest rate applies, plus a statutory add-on percentage; or

(2) 8.25 percent (for Direct Subsidized Loans and Direct Unsubsidized Loans) or 9.00 percent (for Direct PLUS Loans).

For Direct Subsidized Loans and Direct Unsubsidized Loans with first disbursement dates on or after July 1, 1995, and before July 1, 2006, the statutory add-on percentage varies depending on whether the loan is in an in-school, grace, or deferment status, or in any other status. For all other loans, the statutory add-on percentage is the same during any status.

The bond equivalent rate of 91-day Treasury bills auctioned on May 28, 2024, is 5.40 percent.

For Direct PLUS Loans with first disbursement dates before July 1, 1998, the interest rate is equal to the lesser of—

(1) The weekly average 1-year constant maturity Treasury yield, as published by the Board of Governors of the Federal Reserve System, for the last calendar week ending on or before the June 26 preceding the 12-month period to which the interest rate applies, plus a statutory add-on percentage; or

(2) 9.00 percent.

The weekly average of the one-year constant maturity Treasury yield, as published by the Board of Governors of the Federal Reserve System, for the last calendar week ending on or before June 26, 2024, is 5.10 percent.

Variable-Rate Direct Consolidation Loans

A Direct Consolidation Loan may have up to three components, depending on the types of loans that were repaid by the consolidation loan and when the application for the consolidation loan was received. The three components are called Direct Subsidized Consolidation Loans, Direct Unsubsidized Consolidation Loans, and

(only for Direct Consolidation Loans made based on applications received before July 1, 2006) Direct PLUS Consolidation Loans. In most cases the interest rates for variable-rate Direct Subsidized Consolidation Loans, Direct Unsubsidized Consolidation Loans, and Direct PLUS Consolidation Loans are determined in accordance with the same formulas that apply to Direct Subsidized Loans, Direct Unsubsidized Loans, and Direct PLUS Loans, respectively.

Interest Rate Charts

Charts 1 and 2 show the interest rate formulas used to determine the interest rates for all variable-rate Direct Loans and the rates that are in effect during the 12-month period from July 1, 2024, through June 30, 2025.

Chart 1 shows the interest rates for loans with rates based on the 91-day Treasury bill rate. Chart 2 shows the interest rates for loans with rates based on the weekly average of the one-year constant maturity Treasury yield.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2024–SCC–0080]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Evaluation of the REL Southeast Early Literacy Toolkit

AGENCY: Institute of Education Sciences (IES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a new information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before September 27, 2024.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link www.reginfo.gov/public/do/PRAMain to access the site. Find this information collection request (ICR) by selecting “Department of Education” under “Currently Under Review,” then check the “Only Show ICR for Public Comment” checkbox. Reginfo.gov provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the “View Information Collection (IC) List” link. Supporting statements and other supporting documentation may be found by clicking on the “View Supporting Statement and Other Documents” link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Janelle Sands, 202–245–6786.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Evaluation of the REL Southeast Early Literacy Toolkit.
OMB Control Number: 1850–NEW.
Type of Review: A new ICR.
Respondents/Affected Public: Individuals and Households.
Total Estimated Number of Annual Responses: 1,330.

Total Estimated Number of Annual Burden Hours: 322.

Abstract: The U.S. Department of Education is supporting the development and evaluation of a toolkit that will support the implementation of effectively differentiated reading instruction for students in grades K–3. This toolkit is based on evidence-based recommendation in the Assisting Students Struggling with Reading: Response to Intervention (RTI) and Multi-Tier Intervention in the Primary Grades practice guide. The evaluation will rigorously test the efficacy of the toolkit in improving explicit instruction, classroom management, and use of student data as well as student learning outcomes in grades K–3 English language arts. The evaluation will use a blocked randomized control trial design in which districts are blocks and schools are randomly assigned to receive the toolkit or not. The evaluation will be conducted in 20 Florida schools during the 2025/26 school year.

The evaluation will focus on measuring the toolkit’s impact on three teacher-level outcomes: explicit instruction, classroom management, and data use to inform instruction during small group time. The evaluation also will examine the impact of the toolkit on students’ foundational reading skills.

In addition to collecting data to measure teacher and student outcomes, the evaluation team will collect data to document the implementation of the toolkit in treatment schools and the service contrast between treatment and control schools, and to describe the characteristics of participating schools, teachers, and students at baseline.

The evaluation will produce a publicly available report that summarizes evaluation findings. The

findings from the evaluation will inform further refinement of the toolkit, to be released to the public after the evaluation.

Dated: August 22, 2024.

Juliana Pearson,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

BILLING CODE 4000-01-P

DEPARTMENT OF EDUCATION

Annual Notice of Interest Rates for Variable-Rate Federal Student Loans Made Under the Federal Family Education Loan Program Prior to July 1, 2010

AGENCY: Federal Student Aid, Department of Education.

ACTION: Notice.

SUMMARY: The Chief Operating Officer for Federal Student Aid announces the interest rates for loans made under the Federal Family Education Loan (FFEL) Program, Assistance Listing Number 84.032, that have variable interest rates. The rates announced in this notice are in effect for the period July 1, 2024, through June 30, 2025.

FOR FURTHER INFORMATION CONTACT: Travis Sturlaugson, U.S. Department of Education, 830 First Street NE, Washington, DC 20202. Telephone: 202-377-4174. Email: travis.sturlaugson@ed.gov.

If you are deaf, hard of hearing, or have a speech disability and wish to access telecommunications relay services, please dial 7-1-1.

SUPPLEMENTARY INFORMATION: Section 427A of the Higher Education Act of 1965, as amended (HEA) (20 U.S.C. 1077a), provides formulas for determining the interest rates charged to borrowers on loans made under the FFEL Program, including Federal Subsidized and Unsubsidized Stafford Loans (Stafford Loans), Federal PLUS Loans (PLUS Loans), Federal Consolidation Loans (Consolidation Loans), and Federal Supplemental Loans for Students (SLS Loans). No new loans have been made under the FFEL Program since June 30, 2010.

The FFEL Program includes loans with variable interest rates that change each year and loans with fixed interest

rates that remain the same for the life of the loan. For loans with a variable interest rate, the specific interest rate formula that applies to a particular loan depends on the date of the first disbursement of the loan or, in the case of a Consolidation Loan, the date the application for the loan was received. If a loan has a variable interest rate, a new rate is determined annually and is in effect during the period from July 1 of one year through June 30 of the following year.

This notice announces the interest rates for variable-rate FFEL Program loans that will be in effect during the period from July 1, 2024, through June 30, 2025. Interest rates for fixed-rate FFEL Program loans may be found in a **Federal Register** notice published on September 15, 2015 (80 FR 55342).

For the majority of variable-rate FFEL Program loans, the annual interest rate is equal to the lesser of—

(1) The bond equivalent rate of the 91-day Treasury bills auctioned at the final auction held before June 1 of each year, plus a statutory add-on percentage; or

(2) A statutorily established maximum interest rate.

The bond equivalent rate of the 91-day Treasury bills auctioned on May 28, 2024, is 5.40 percent.

For PLUS Loans first disbursed before July 1, 1998, and for all SLS Loans, the annual interest rate is equal to the lesser of—

(1) The weekly average of the one-year constant maturity Treasury yield, as published by the Board of Governors of the Federal Reserve System, for the last calendar week ending on or before June 26 of each year, plus a statutory add-on percentage; or

(2) A statutorily established maximum interest rate.

The weekly average of the one-year constant maturity Treasury yield, as published by the Board of Governors of the Federal Reserve System, for the last calendar week ending on or before June 26, 2024, is 5.10 percent.

For Consolidation Loans that have a variable interest rate, the annual interest rate for the portion of a Consolidation Loan that repaid loans other than loans made under the Health Education Assistance Loans (HEAL) Program is equal to—

(1) The bond equivalent rate of the 91-day Treasury bill auctioned at the final auction held before June 1 of each year, plus a statutory add-on percentage; or

(2) A statutorily established maximum interest rate.

If a Consolidation Loan (whether a variable-rate loan or a fixed-rate loan) repaid loans made under the HEAL Program, the interest rate on the portion of the Consolidation Loan that repaid HEAL loans is a variable rate that is equal to the average of the bond equivalent rates of the 91-day Treasury bills auctioned for the quarter ending June 30, plus a statutory add-on percentage. For the portion of a Consolidation Loan that repaid HEAL loans, there is no maximum interest rate.

The average of the bond equivalent rates of the 91-day Treasury bills auctioned for the quarter ending on June 30, 2024, is 5.39 percent.

The statutory add-on percentages and maximum interest rates vary depending on loan type and when the loan was first disbursed. In addition, the add-on percentage for certain Stafford Loans is different depending on whether the loan is in an in-school, grace, or deferment status, or in any other status. If the interest rate calculated in accordance with the applicable formula exceeds the statutory maximum interest rate, the statutory maximum rate applies.

Charts 1 through 4 show the interest rate formulas that are used to determine the interest rates for all variable-rate FFEL Program loans and the interest rates that are in effect during the 12-month period from July 1, 2024, through June 30, 2025. Unless otherwise indicated, the cohorts shown in each chart include all borrowers, regardless of prior borrowing.

Chart 1 shows the interest rates for loans with rates based on the 91-day Treasury bill, with the exception of “converted” variable-rate Federal Stafford Loans and certain Federal Consolidation Loans.

Chart 2 shows the interest rates for loans with rates based on the weekly average of the one-year constant maturity Treasury yield.

Chart 3 shows the interest rates for “converted” variable-rate Federal Stafford Loans. These are loans that originally had varying fixed interest rates.

Finally, Chart 4 shows the interest rates for variable-rate Federal Consolidation Loans, and for the portion of any Federal Consolidation Loan that repaid loans made under the HEAL Program.

CHART 1—SUBSIDIZED FEDERAL STAFFORD LOANS, UNSUBSIDIZED FEDERAL STAFFORD LOANS, AND FEDERAL PLUS LOANS

[Interest rate based on 91-day Treasury bill]

Loan type	Cohort	91-day T-bill rate 05/28/24 (%)	Add-on (%)		Maximum rate (%)	Interest rate 07/01/24 through 06/30/25 (%)	
			1.70 (in-school, grace, deferment).	2.30 (any other status)		7.10 (in-school, grace, deferment).	7.70 (any other status).
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on/after 07/01/98 and before 07/01/06.	5.40	1.70 (in-school, grace, deferment).	2.30 (any other status)	8.25	7.10 (in-school, grace, deferment).	7.70 (any other status).
PLUS	First disbursed on/after 07/01/98 and before 07/01/06.	5.40	3.10		9.00	8.50.	
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on/after 07/01/95 and before 07/01/98.	5.40	2.50 (in-school, grace, deferment).	3.10 (any other status)	8.25	7.90 (in-school, grace, deferment).	8.25 (any other status).
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on/after 07/01/94 and before 07/01/95, for a period of enrollment that included or began on or after 07/01/94.	5.40	3.10		8.25	8.25.	
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on/after 10/01/92 and before 07/01/94; and First disbursed on/after 07/01/94, for a period of enrollment ending before 07/01/94 (new borrowers).	5.40	3.10		9.00	8.50.	

CHART 2—FEDERAL PLUS LOANS AND SLS LOANS

[Interest rate based on weekly average of one-year constant maturity treasury yield]

Loan type	Cohort	Weekly average of 1-year constant maturity Treasury yield for last calendar week ending on or before 06/26/24 (%)	Add-on (%)	Maximum rate (%)	Interest rate 07/01/24 through 06/30/25 (%)
PLUS	First disbursed on/after 07/01/94 and before 07/01/98	5.10	3.10	9.00	8.20
PLUS	First disbursed on/after 10/01/92 and before 07/01/94	5.10	3.10	10.00	8.20
SLS	First disbursed on/after 10/01/92, for a period of enrollment beginning before 07/01/94.	5.10	3.10	11.00	8.20
PLUS SLS ...	First disbursed before 10/01/92	5.10	3.25	12.00	8.35

CHART 3—"CONVERTED" VARIABLE-RATE SUBSIDIZED AND UNSUBSIDIZED FEDERAL STAFFORD LOANS
[Interest rate based on 91-day treasury bill]

Loan type	Cohort	Original fixed interest rate (later converted to variable rate) (%)	91-day T-bill rate 05/28/24 (%)	Add-on (%)	Maximum rate (%)	Interest rate 07/01/24 through 06/30/25 (%)
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on or after 07/23/92 and before 07/01/94 (prior borrowers).	8.00, increasing to 10.00.	5.40	3.10	10.00	8.50
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on or after 07/23/92 and before 07/01/94 (prior borrowers).	9.00	5.40	3.10	9.00	8.50
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on or after 07/23/92 and before 07/01/94 (prior borrowers).	8.00	5.40	3.10	8.00	8.00
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on or after 07/23/92 and before 07/01/94 (prior borrowers).	7.00	5.40	3.10	7.00	7.00
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on or after 07/23/92 and before 10/01/92 (new borrowers).	8.00, increasing to 10.00.	5.40	3.25	10.00	8.65
Subsidized Stafford, Unsubsidized Stafford.	First disbursed on or after 07/01/88 and before 07/23/92.	8.00, increasing to 10.00.	5.40	3.25	10.00	8.65

CHART 4—FEDERAL CONSOLIDATION LOANS

Consolidation loan component	Cohort	91-day T-bill rate 05/28/24 (%)	Average of the bond equivalent rates of the 91-day T-bills auctioned for the quarter ending 06/30/24 (%)	Add-on (%)	Maximum rate (%)	Interest rate 07/01/24 through 06/30/25 (%)
Portion of loan that repaid loans other than HEAL loans.	Application received on/ after 11/13/97 and before 10/01/98.	5.40	N/A	3.10	8.25	8.25
Portion of the loan that repaid HEAL loans.	Application received on/ after 11/13/97.	N/A	5.39	3.00	None	8.39

BILLING CODE 4000-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 7242-060]

STS Hydropower, LLC; Notice of Availability of Environmental Assessment

In accordance with the National Environmental Policy Act of 1969 and the Federal Energy Regulatory Commission's (Commission or FERC) regulations, 18 CFR part 380, Commission staff reviewed STS Hydropower, LLC's (licensee) application for surrender of license for the Kanaka Hydroelectric Project No. 7242 and have prepared an Environmental Assessment (EA) for the proposed surrender. Following a wildfire that destroyed many of the project features, the licensee proposes to remove mechanical and electrical

equipment, remove the powerhouse building, seal the penstock, and regrade disturbed areas. The project dam would remain in place. The project is located on Sucker Run Creek, in Butte County, California. The project does not occupy federal lands.

The EA contains Commission staff's analysis of the potential environmental effects of the proposed surrender, alternatives to the proposed action, and concludes that the proposed surrender, with appropriate environmental protective measures, would not constitute a major federal action that would significantly affect the quality of the human environment.

The EA may be viewed on the Commission's website at <http://www.ferc.gov> using the "elibrary" link. Enter the docket number (P-7242) in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll-free at 1-866-208-3676, or for TTY, (202) 502-8659.

You may also register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filings and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

All comments must be filed by September 23, 2024.

The Commission strongly encourages electronic filing. Please file comments using the Commission's eFiling system at <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. For assistance, please contact FERC Online Support. In lieu of electronic filing, you may submit a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852. The first page of any filing should include docket number P-7242-060.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available

information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502-6595 or OPP@ferc.gov.

For further information, contact Diana Shannon at 202-502-6136 or diana.shannon@ferc.gov.

Dated: August 22, 2024.

Debbie-Anne A. Reese,
Acting Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. PF24-4-000]

DeLa Express LLC; Notice of Scoping Period Requesting Comments on Environmental Issues for the Planned Dela Express Project, and Notice of Public Scoping Sessions

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental document that will discuss the environmental impacts of the DeLa Express Project involving construction and operation of facilities by DeLa Express LLC (DeLa Express) in Reeves, Loving, Andrews, Ward, Winkler, Ector, Midland, Upton, Glasscock, Sterling, Coke, Runnels, Coleman, Brown, Mills, Hamilton, Coryell, McLennan, Falls, Bell, Robertson, Milam, Brazos, Grimes, Montgomery, Walker, San Jacinto, Liberty, Hardin, Jefferson, and Orange Counties, Texas and Calcasieu Parish, Louisiana. The Commission will use this environmental document in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies regarding the project. As part of the National Environmental Policy Act (NEPA) review process, the Commission takes into account concerns the public may have about proposals and the environmental impacts that could result from its action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. This gathering of public input is referred to as "scoping." The main goal of the scoping process is to focus the analysis in the environmental document on the

important environmental issues. Additional information about the Commission's NEPA process is described below in the *NEPA Process and Environmental Document* section of this notice.

By this notice, the Commission requests public comments on the scope of issues to address in the environmental document. To ensure that your comments are timely and properly recorded, please submit your comments so that the Commission receives them in Washington, DC on or before 5:00 p.m. Eastern Time on September 23, 2024. Comments may be submitted in written or oral form. Further details on how to submit comments are provided in the *Public Participation* section of this notice.

Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the environmental document. Commission staff will consider all written or oral comments during the preparation of the environmental document.

If you submitted comments on this project to the Commission *before* the opening of this docket on April 2, 2024, you will need to file those comments in Docket No. PF24-4-000 to ensure they are considered.

This notice is being sent to the Commission's current environmental mailing list, as described in the Environmental Mailing List section of this notice. State and local government representatives should notify their constituents of this planned project and encourage them to comment on their areas of concern.

If you are a landowner receiving this notice, a pipeline company representative may contact you about the acquisition of an easement to construct, operate, and maintain the planned facilities. The company would seek to negotiate a mutually acceptable easement agreement. You are not required to enter into an agreement. However, if the Commission approves the project, the Natural Gas Act conveys the right of eminent domain to the company. Therefore, if you and the company do not reach an easement agreement, the pipeline company could initiate condemnation proceedings in court. In such instances, compensation would be determined by a judge in accordance with state law. The Commission does not subsequently grant, exercise, or oversee the exercise of that eminent domain authority. The courts have exclusive authority to

handle eminent domain cases; the Commission has no jurisdiction over these matters.

A fact sheet prepared by the FERC entitled “An Interstate Natural Gas Facility On My Land? What Do I Need To Know?” addresses typically asked questions, including the use of eminent domain and how to participate in the Commission’s proceedings. This fact sheet along with other landowner topics of interest are available for viewing on the FERC website (www.ferc.gov) under the Natural Gas, Landowner Topics link.

Public Participation

There are four methods you can use to submit your comments to the Commission. Please carefully follow these instructions so that your comments are properly recorded. The Commission encourages electronic filing of comments and has staff available to

assist you at (866) 208–3676 or FercOnlineSupport@ferc.gov.

(1) You can file your comments electronically using the *eComment* feature, which is located on the Commission’s website (www.ferc.gov) under the link to FERC Online. Using *eComment* is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the *eFiling* feature, which is located on the Commission’s website (www.ferc.gov) under the link to FERC Online. With *eFiling*, you can provide comments in a variety of formats by attaching them as a file with your submission. New *eFiling* users must first create an account by clicking on “*eRegister*.” You will be asked to select the type of filing you are making; a comment on a

particular project is considered a “Comment on a Filing”; or

(3) You can file a paper copy of your comments by mailing them to the Commission. Be sure to reference the project docket number (PF24–4–000) on your letter. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

(4) In lieu of sending written comments, the Commission invites you to attend one of the public scoping sessions its staff will conduct in the project area, scheduled as follows:

Date and time	Location
Monday, September 9, 2024, 4:30–6:30 p.m.	Harvest Event Center, 9775 Highway 146 N, Liberty, TX 77575.
Tuesday, September 10, 2024, 4:30–6:30 p.m. ..	Ward 7 Recreation Center, 1615 Horridge Street, Vinton, LA 70668.
Wednesday, September 11, 2024, 4:30–6:30 p.m.	Cleveland Civic Center, 210 Peach Avenue, Cleveland, TX 77327.
Thursday, September 12, 2024, 4:30–6:30 p.m	Huntsville Public Library, 1219 13th Street, Huntsville, TX 77340.
Tuesday, September 10, 2024, 4:30–6:30 p.m. ..	Ballinger Community Center, 200 Crosson Avenue, Ballinger, TX 76821.
Wednesday, September 11, 2024, 4:30–6:30 p.m.	Sterling County Senior Citizens Center, 410 Stadium Street, Sterling City, TX 76951.
Thursday, September 12, 2024, 4:30–6:30 p.m	Lawndale Community Center, 9201 Rainbow Drive, Odessa, TX 79765.
Monday, September 16, 2024, 4:30–6:30 p.m. ...	Kurten Community Center, 13055 E. State Highway 21, Kurten, TX 77862.
Tuesday, September 17, 2024, 4:30–6:30 p.m. ..	Westhalia Parish Hall, 114 County Road 3000, Lott, TX 76656.
Wednesday, September 18, 2024, 4:30–6:30 p.m.	Windmill Hill Venue, 1808 Bridge Street, Gatesville, TX 76528.
Thursday, September 19, 2024, 4:30–6:30 p.m	Adams Street Community Center, 511 E Adams Street, Brownwood, TX 76801.

The primary goal of these scoping sessions is to have you identify the specific environmental issues and concerns that should be considered in the environmental document. Individual oral comments will be taken on a one-on-one basis with a court reporter. This format is designed to receive the maximum amount of oral comments in a convenient way during the timeframe allotted.

Each scoping session is scheduled from 4:30 p.m. to 6:30 p.m. Central. You may arrive at any time after 4:30 p.m. There will not be a formal presentation by Commission staff when the session opens. If you wish to speak, the Commission staff will hand out numbers in the order of your arrival. Comments will be taken until 6:30 p.m. However, if no additional numbers have been handed out and all individuals who wish to provide comments have had an opportunity to do so, staff may conclude the session at 6:00 p.m. Please see appendix 1 for additional

information on the session format and conduct.¹

Your scoping comments will be recorded by a court reporter (with FERC staff or representative present) and become part of the public record for this proceeding. Transcripts will be publicly available on FERC’s *eLibrary* system (see the last page of this notice for instructions on using *eLibrary*). If a significant number of people are interested in providing oral comments in the one-on-one settings, a time limit of 5 minutes may be implemented for each commentor.

It is important to note that the Commission provides equal consideration to all comments received, whether filed in written form or provided orally at a scoping session.

¹ The appendices referenced in this notice will not appear in the **Federal Register**. Copies of the appendices were sent to all those receiving this notice in the mail and are available at www.ferc.gov using the link called “*eLibrary*”. For instructions on connecting to *eLibrary*, refer to the last page of this notice. For assistance, contact FERC at FercOnlineSupport@ferc.gov or call toll free, (866) 208–3676 or TTY (202) 502–8659.

Although there will not be a formal presentation, Commission staff will be available throughout the scoping session to answer your questions about the environmental review process. Representatives from DeLa Express will also be present to answer project-specific questions.

Additionally, the Commission offers a free service called *eSubscription*, which makes it easy to stay informed of all issuances and submittals regarding the dockets/projects to which you subscribe. These instant email notifications are the fastest way to receive notification and provide a link to the document files which can reduce the amount of time you spend researching proceedings. Go to <https://www.ferc.gov/ferc-online/overview> to register for *eSubscription*.

The Commission’s Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and

others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202)502-6595 or OPP@ferc.gov.

Summary of the Planned Project

DeLa Express plans to construct and operate an approximately 645.5-mile-long, 42-inch-diameter natural gas transportation mainline pipeline originating in Winkler County, Texas to a termination point in Calcasieu Parish, Louisiana. The Project would also consist of six lateral pipelines (totaling 139 miles). The DeLa Express Project would provide about 2 billion cubic feet per day of natural gas transportation from the Permian Basin in West Texas to Gulf Coast markets between Jefferson County, Texas and Cameron Parish, Louisiana. The Project is specifically designed to ease future supply and demand market constraints and increase U.S. consumers' access to natural gas and natural gas liquids. The Project will enable DeLa Express to transport liquids-rich natural gas from Permian receipt points with metering, dew point control, and heavy liquids removal to the Lake Charles, Louisiana area.

The DeLa Express Project would include construction of the following facilities:

- 645.5 miles of 42-inch-diameter mainline pipeline from Compressor Station 1 in Winkler County, Texas to a gas plant in Calcasieu Parish, Louisiana;
- six pipeline laterals, including the:
 - Field Gas Transport Lateral—a 60.0-mile, 42-inch-diameter pipeline in Reeves, Loving, and Winkler Counties. DeLa Express would also construct a 35.5-mile non-jurisdictional liquids line adjacent to the Field Gas Transport Lateral.
 - Red Bluff Lateral—an 8.3-mile, 24-inch-diameter pipeline in Reeves County, Texas;
 - China Draw Lateral—a 6.7-mile, 30-inch-diameter pipeline in Reeves County, Texas;
 - Lea Lateral—a 5.9-mile, 30-inch-diameter pipeline in Loving County, Texas;
 - Pecos Lateral—a 33.8-mile, 30-inch-diameter pipeline in Winkler and Ward Counties, Texas. DeLa Express would also construct a non-jurisdictional liquids line adjacent to the full length of the Pecos Lateral.
 - Andrews Lateral—a 24.3-mile, 30-inch-diameter pipeline in Winkler and Andrews Counties, Texas. DeLa Express would also construct a non-

jurisdictional liquids line adjacent to the full length of the Andrews Lateral.

- six new electric-driven compressor stations, including one each in Winkler, Glasscock, Coleman, Coryell, Brazos, and Liberty Counties, Texas;
- three new dew point control sites² in Loving, Ward, and Andrews Counties, Texas;
- one new stabilization plant collocated with the compressor station in Winkler County, Texas;
- a total of 42 mainline and 5 lateral valve sites;
- multiple meter stations collocated at other aboveground facilities; and,
- pig launcher/receiver sites, including 10 collocated within other aboveground facilities and 4 standalone sites.

The general location of the project facilities is shown in appendix 2.

Land Requirements for Construction

Construction of the planned facilities would disturb about 12,940 acres of land for the aboveground facilities and the pipelines. Following construction, DeLa Express would maintain about 5,459 acres for permanent operation of the project's facilities; the remaining acreage would be restored. About 83 percent of the planned pipeline route parallels existing pipeline, utility, or road rights-of-way.

NEPA Process and the Environmental Document

Any environmental document issued by Commission staff will discuss impacts that could occur as a result of the construction and operation of the planned project under the relevant general resource areas:

- geology and soils;
- water resources and wetlands;
- vegetation and wildlife;
- threatened and endangered species;
- cultural resources;
- land use;
- socioeconomic;
- environmental justice;
- air quality and noise; and
- reliability and safety.

Commission staff have already identified several issues that deserve attention based on a preliminary review of available draft reports and monthly updates provided by DeLa Express. This preliminary list of issues may change based on your comments and our analysis of final reports provided with the application for the Project:

- cumulative impacts associated with multiple adjacent pipeline easements;

- wetland and waterbody impacts;
- specialty crops and agricultural land use;
- environmental justice concerns;
- pipeline safety;
- noise and air impacts associated with compressor stations;
- impacts on existing buried utility lines;
- post-construction vegetation restoration;
- federal and state land impacts; and
- federally and state listed species.

Commission staff will also evaluate reasonable alternatives to the planned project or portions of the project and make recommendations on how to lessen or avoid impacts on the various resource areas. Your comments will help Commission staff identify and focus on the issues that might have an effect on the human environment and potentially eliminate others from further study and discussion in the environmental document.

Although no formal application has been filed, Commission staff have already initiated a NEPA review under the Commission's pre-filing process. The purpose of the pre-filing process is to encourage early involvement of interested stakeholders and to identify and resolve issues before the Commission receives an application. As part of the pre-filing review, Commission staff will contact federal and state agencies to discuss their involvement in the scoping process and the preparation of the environmental document.

If a formal application is filed, Commission staff will then determine whether to prepare an Environmental Assessment (EA) or an Environmental Impact Statement (EIS). The EA or the EIS will present Commission staff's independent analysis of the environmental issues. If Commission staff prepares an EA, a *Notice of Schedule for the Preparation of an Environmental Assessment* will be issued. The EA may be issued for an allotted public comment period. The Commission would consider timely comments on the EA before making its determination on the proposed project. If Commission staff prepares an EIS, a *Notice of Intent to Prepare an EIS/ Notice of Schedule* will be issued once an application is filed, which will open an additional public comment period. Staff will then prepare a draft EIS that will be issued for public comment. Commission staff will consider all timely comments received during the comment period on the draft EIS, and revise the document, as necessary, before issuing a final EIS. Any EA or draft and final EIS will be available in

²Dew point control facilities are used to remove heavy liquids that condense as wet gas cools in a pipeline.

electronic format in the public record through eLibrary³ and the Commission's natural gas environmental documents web page (<https://www.ferc.gov/industries-data/natural-gas/environmental-environmental-documents>). If eSubscribed, you will receive instant email notification when the environmental document is issued.

With this notice, the Commission is asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues related to this project to formally cooperate in the preparation of the environmental document.⁴ Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the *Public Participation* section of this notice. Currently, no agencies have expressed their intention to participate as a cooperating agency in the preparation of the environmental document to satisfy their NEPA responsibilities related to this project.

Consultation Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, the Commission is using this notice to initiate consultation with the applicable State Historic Preservation Office(s), and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.⁵ The environmental document for this project will document our findings on the impacts on historic properties and summarize the status of consultations under section 106.

Environmental Mailing List

The environmental mailing list includes federal, state, and local government representatives and agencies; elected officials; environmental justice stakeholders and public interest groups; Native American Tribes; other interested parties; and local libraries and newspapers. This list

³ For instructions on connecting to eLibrary, refer to the last page of this notice.

⁴ The Council on Environmental Quality regulations addressing cooperating agency responsibilities are at Title 40, Code of Federal Regulations, part 1501.8.

⁵ The Advisory Council on Historic Preservation regulations are at Title 36, Code of Federal Regulations, part 800. Those regulations define historic properties as any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places.

also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project and includes a mailing address with their comments. Commission staff will update the environmental mailing list as the analysis proceeds to ensure that Commission notices related to this environmental review are sent to all individuals, organizations, and government entities interested in and/or potentially affected by the planned project.

If you need to make changes to your name/address, or if you would like to remove your name from the mailing list, please complete one of the following steps:

(1) Send an email to GasProjectAddressChange@ferc.gov stating your request. You must include the docket number PF24-4-000 in your request. If you are requesting a change to your address, please be sure to include your name and the correct address. If you are requesting to delete your address from the mailing list, please include your name and address as it appeared on this notice. *This email address is unable to accept comments.*

OR

(2) Return the attached "Mailing List Update Form" (appendix 3).

Becoming an Intervenor

Once DeLa Express files its application with the Commission, you may want to become an "intervenor" which is an official party to the Commission's proceeding. Only intervenors have the right to seek rehearing of the Commission's decision and be heard by the courts if they choose to appeal the Commission's final ruling. An intervenor formally participates in the proceeding by filing a request to intervene pursuant to Rule 214 of the Commission's Rules of Practice and Procedures (18 CFR 385.214). Motions to intervene are more fully described at <https://www.ferc.gov/how-intervene>. Please note that the Commission will not accept requests for intervenor status at this time. You must wait until the Commission receives a formal application for the project, after which the Commission will issue a public notice that establishes an intervention deadline.

Additional Information

Additional information about the project is available from the Commission's Office of External Affairs,

at (866) 208-FERC, or on the FERC website (www.ferc.gov) using the eLibrary link. Click on the eLibrary link, click on "General Search" and enter the docket number in the "Docket Number" field. Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FercOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

Public sessions or site visits will be posted on the Commission's calendar located at <https://www.ferc.gov/news-events/events> along with other related information.

Debbie-Anne A. Reese,

Acting Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: RP24-985-000.

Applicants: El Paso Natural Gas Company, L.L.C.

Description: § 4(d) Rate Filing; FT-2 Form of Service Agreement Update to be effective 9/20/2024.

Filed Date: 8/21/24.

Accession Number: 20240821-5106.

Comment Date: 5 p.m. ET 9/3/24.

Docket Numbers: RP24-986-000.

Applicants: Southeast Supply Header, LLC.

Description: § 4(d) Rate Filing; Negotiated Rates—Southern Co to be effective 10/1/2024.

Filed Date: 8/22/24.

Accession Number: 20240822-5004.

Comment Date: 5 p.m. ET 9/3/24.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

The filings are accessible in the Commission's eLibrary system (<https://elibrary.ferc.gov/idmws/search/fercgensearch.asp>) by querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: <http://www.ferc.gov/docs-filing/efiling/filing-req.pdf>. For other information, call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502-6595 or OPP@ferc.gov.

Dated: August 22, 2024.

Debbie-Anne A. Reese,
Acting Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ID-10142-000]

Conner, Penelope M.; Notice of Filing

Take notice that on August 21, 2024, Penelope M. Conner submitted for filing, application for authority to hold interlocking positions, pursuant to section 305(b) of the Federal Power Act, 16 U.S.C. 825d (b) and Part 45.8 of the Federal Energy Regulatory Commission's (Commission) Rules of Practice and Procedure, 18 CFR part 45.8.

Any person desiring to intervene or to protest this filing must file in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211, 385.214). Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a notice of intervention or motion to intervene, as appropriate. Such notices, motions, or protests must be filed on or before the comment date. On or before the

comment date, it is not necessary to serve motions to intervene or protests on persons other than the Applicant.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (<http://www.ferc.gov>). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at 202-502-6652 (toll free at 1-866-208-3676) or email at ferconlinesupport@ferc.gov, or the Public Reference Room at (202) 502-8371, TTY (202) 502-8659. Email the Public Reference Room at public.referenceroom@ferc.gov.

The Commission strongly encourages electronic filings of comments, protests and interventions in lieu of paper using the "eFiling" link at <http://www.ferc.gov>. Persons unable to file electronically may mail similar pleadings to the Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426. Hand delivered submissions in docketed proceedings should be delivered to Health and Human Services, 12225 Wilkins Avenue, Rockville, Maryland 20852.

Comment Date: 5:00 p.m. Eastern Time on September 11, 2024.

Dated: August 22, 2024.

Debbie-Anne A. Reese,
Acting Secretary.

 BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. PF24–5–000]

Gulfstream LNG Development, LLC; Notice of Scoping Period Requesting Comments on Environmental Issues for the Planned Gulfstream LNG Project and Notice of Public Scoping Sessions

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental document that will discuss the environmental impacts of the Gulfstream LNG Project involving construction and operation of facilities by Gulfstream LNG Development, LLC (Gulfstream LNG) in Plaquemines Parish, Louisiana. The Commission will use this environmental document in its decision-making process to determine whether the project is in the public interest.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies regarding the project. As part of the National Environmental Policy Act (NEPA) review process, the Commission takes into account concerns the public may have about proposals and the environmental impacts that could result from its action whenever it considers the issuance of an authorization. This gathering of public input is referred to as “scoping.” The main goal of the scoping process is to focus the analysis in the environmental document on the important environmental issues. Additional information about the Commission’s NEPA process is described below in the *NEPA Process and Environmental Document* section of this notice.

By this notice, the Commission requests public comments on the scope of issues to address in the environmental document. To ensure that your comments are timely and properly recorded, please submit your comments so that the Commission receives them in Washington, DC on or before 5:00 p.m. Eastern Time on September 23, 2024. Comments may be submitted in written or oral form. Further details on how to submit

comments are provided in the *Public Participation* section of this notice.

Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. Your input will help the Commission staff determine what issues they need to evaluate in the environmental document. Commission staff will consider all written and oral comments during the preparation of the environmental document.

If you submitted comments on this project to the Commission *before* the opening of this docket on April 17, 2024, you will need to file those comments in Docket No. PF24–5–000 to ensure they are considered.

This notice is being sent to the Commission’s current environmental mailing list for this project. State and local government representatives should notify their constituents of this planned project and encourage them to comment on their areas of concern.

A fact sheet prepared by the FERC entitled “An Interstate Natural Gas Facility On My Land? What Do I Need To Know?” addresses typically asked

questions, including the use of eminent domain and how to participate in the Commission’s proceedings. This fact sheet along with other landowner topics of interest are available for viewing on the FERC website (www.ferc.gov) under the Natural Gas, Landowner Topics link.

Public Participation

There are four methods you can use to submit your comments to the Commission. Please carefully follow these instructions so that your comments are properly recorded. The Commission encourages electronic filing of comments and has staff available to assist you at (866) 208–3676 or FercOnlineSupport@ferc.gov.

(1) You can file your comments electronically using the *eComment* feature, which is located on the Commission’s website (www.ferc.gov) under the link to FERC Online. Using *eComment* is an easy method for submitting brief, text-only comments on a project;

(2) You can file your comments electronically by using the *eFiling* feature, which is located on the Commission’s website (www.ferc.gov)

under the link to FERC Online. With *eFiling*, you can provide comments in a variety of formats by attaching them as a file with your submission. New *eFiling* users must first create an account by clicking on “*eRegister*.” You will be asked to select the type of filing you are making; a comment on a particular project is considered a “*Comment on a Filing*”;

(3) You can file a paper copy of your comments by mailing them to the Commission. Be sure to reference the project docket number (PF24–5–000) on your letter. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426.

Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852; or

(4) In lieu of sending written comments, the Commission invites you to attend one of the public scoping sessions¹ its staff will conduct in the project area, scheduled as follows:

Date and time	Location
Tuesday, September 10, 2024, 4:00–6:00 p.m. Central Time.	Port Sulphur Branch Library, 138 Civic Dr., Port Sulphur, LA 70083, (504) 564–3681.
Wednesday, September 11, 2024, 4:00–6:00 p.m. Central Time.	Percy Griffin Community Center, 15577 Hwy. 15, Braithwaite, LA 70040, 504–279–5720.

The primary goal of these scoping sessions is to have you identify the specific environmental issues and concerns that should be considered in the environmental document. Individual oral comments will be taken on a one-on-one basis with a court reporter. This format is designed to receive the maximum amount of oral comments in a convenient way during the timeframe allotted.

Each scoping session is scheduled from 4:00 p.m. to 6:00 p.m. Central Time. You may arrive at any time after the scheduled start time. There will not be a formal presentation by Commission staff when the session opens. If you wish to speak, the Commission staff will hand out numbers in the order of your arrival. Comments will be taken until 6:00 p.m. Central Time. Please see appendix 1 for additional information on the session format and conduct.²

Your scoping comments will be recorded by a court reporter (with FERC staff or representative present) and become part of the public record for this proceeding. Transcripts will be publicly available on FERC’s *eLibrary* system (see the last page of this notice for instructions on using *eLibrary*). If a significant number of people are interested in providing oral comments in the one-on-one settings, a time limit of 5 minutes may be implemented for each commentor.

It is important to note that the Commission provides equal consideration to all comments received, whether filed in written form or provided orally at a scoping session. Although there will not be a formal presentation, Commission staff will be available throughout the scoping session to answer your questions about the environmental review process. Representatives from Gulfstream LNG

will also be present to answer project-specific questions.

Additionally, the Commission offers a free service called *eSubscription*, which makes it easy to stay informed of all issuances and submittals regarding the dockets/projects to which you subscribe. These instant email notifications are the fastest way to receive notification and provide a link to the document files which can reduce the amount of time you spend researching proceedings. Go to <https://www.ferc.gov/ferc-online/overview> to register for *eSubscription*.

The Commission’s Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission

¹ Public scoping sessions are hosted by Commission staff and are in no way sponsored by the Plaquemines Parish Government.

² The appendices referenced in this notice will not appear in the **Federal Register**. Copies of the appendices were sent to all those receiving this notice in the mail and are available at www.ferc.gov using the link called “*eLibrary*.” For instructions on

connecting to *eLibrary*, refer to the last page of this notice. For assistance, contact FERC at FercOnlineSupport@ferc.gov or call toll free, (866) 208–3676 or TTY (202) 502–8659.

processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502-6595 or OPP@ferc.gov.

Summary of the Planned Project

Gulfstream LNG plans to construct and operate a liquefied natural gas (LNG) terminal facility for export, domestic sales, and storage along the Mississippi River in Plaquemines Parish, Louisiana. The project would consist of three mid-scale liquefaction trains capable of producing up to 4 million tons per annum of LNG combined; gas processing facilities; two marine loading docks; one LNG storage tank; flares; and other support and ancillary facilities. Feed gas would be sourced from an existing, on-site, 26-inch-diameter intrastate natural gas pipeline owned by High Point Gas Transmission, LLC.

The general location of the project facilities is shown in appendix 2.

Land Requirements for Construction

Construction of the planned facilities would disturb about 260 acres of land. Following construction, Gulfstream LNG would maintain about 185 acres for permanent operation of the project's facilities; the remaining acreage would be restored and revert to former uses.

NEPA Process and the Environmental Document

Any environmental document issued by Commission staff will discuss impacts that could occur as a result of the construction and operation of the project under the relevant general resource areas:

- geology and soils;
- water resources and wetlands;
- vegetation and wildlife;
- threatened and endangered species;
- cultural resources;
- land use;
- socioeconomics and environmental justice;
- air quality and noise; and
- reliability and safety.

Commission staff have already identified several issues that deserve attention based on a preliminary review of the planned facilities and the environmental information provided by Gulfstream LNG. This preliminary list of issues may change based on your comments and our analysis:

- socioeconomics and environmental justice
- air quality and noise; and
- wetlands.

Commission staff will also evaluate reasonable alternatives to the planned

project or portions of the project and make recommendations on how to lessen or avoid impacts on the various resource areas. Your comments will help Commission staff identify and focus on the issues that might have an effect on the human environment and potentially eliminate others from further study and discussion in the environmental document.

Although no formal application has been filed, Commission staff have already initiated a NEPA review under the Commission's pre-filing process. The purpose of the pre-filing process is to encourage early involvement of interested stakeholders and to identify and resolve issues before the Commission receives an application. As part of the pre-filing review, Commission staff will contact federal and state agencies to discuss their involvement in the scoping process and the preparation of the environmental document.

If a formal application is filed, Commission staff will then determine whether to prepare an Environmental Assessment (EA) or an Environmental Impact Statement (EIS). The EA or the EIS will present Commission staff's independent analysis of the environmental issues. If Commission staff prepares an EA, a *Notice of Schedule for the Preparation of an Environmental Assessment* will be issued. The EA may be issued for an allotted public comment period. The Commission would consider timely comments on the EA before making its determination on the proposed project. If Commission staff prepares an EIS, a *Notice of Intent to Prepare an EIS/Notice of Schedule* will be issued once an application is filed, which will open an additional public comment period. Staff will then prepare a draft EIS that will be issued for public comment. Commission staff will consider all timely comments received during the comment period on the draft EIS, and revise the document, as necessary, before issuing a final EIS. Any EA or draft and final EIS will be available in electronic format in the public record through eLibrary³ and the Commission's natural gas environmental documents web page (<https://www.ferc.gov/industries-data/natural-gas/environment/environmental-documents>). If eSubscribed, you will receive instant email notification when the environmental document is issued.

With this notice, the Commission is asking agencies with jurisdiction by law

³ For instructions on connecting to eLibrary, refer to the last page of this notice.

and/or special expertise with respect to the environmental issues related to this project to formally cooperate in the preparation of the environmental document.⁴ Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the *Public Participation* section of this notice. Currently, the U.S. Department of Energy, U.S. Coast Guard, U.S. Department of Transportation, and National Marine Fisheries Service have expressed their intention to participate as cooperating agencies in the preparation of the environmental document to satisfy their NEPA responsibilities related to this project.

Consultation Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation's implementing regulations for section 106 of the National Historic Preservation Act, the Commission is using this notice to initiate consultation with the Louisiana State Historic Preservation Office, and to solicit its views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.⁵ The environmental document for this project will document our findings on the impacts on historic properties and summarize the status of consultations under section 106.

Environmental Mailing List

The environmental mailing list includes federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American Tribes; other interested parties; and local libraries and newspapers. This list also includes all affected landowners (as defined in the Commission's regulations) whose property may be used temporarily for project purposes, who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project and includes a mailing address with their comments. Commission staff will update the environmental mailing list as the analysis proceeds to ensure that

⁴ The Council on Environmental Quality regulations addressing cooperating agency responsibilities are at Title 40, Code of Federal Regulations, Part 1501.8.

⁵ The Advisory Council on Historic Preservation regulations are at title 36, Code of Federal Regulations, part 800. Those regulations define historic properties as any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places.

Commission notices related to this environmental review are sent to all individuals, organizations, and government entities interested in and/or potentially affected by the planned project.

If you need to make changes to your name/address, or if you would like to remove your name from the mailing list, please complete one of the following steps:

(1) Send an email to GasProjectAddressChange@ferc.gov stating your request. You must include the docket number PF24–5–000 in your request. If you are requesting a change to your address, please be sure to include your name and the correct address. If you are requesting to delete your address from the mailing list, please include your name and address as it appeared on this notice. *This email address is unable to accept comments.*

OR

(2) Return the attached “Mailing List Update Form” (appendix 3).

Becoming an Intervenor

Once Gulfstream LNG files its application with the Commission, you may want to become an “intervenor” which is an official party to the Commission’s proceeding. Only intervenors have the right to seek rehearing of the Commission’s decision and be heard by the courts if they choose to appeal the Commission’s final ruling. An intervenor formally participates in the proceeding by filing a request to intervene pursuant to Rule 214 of the Commission’s Rules of Practice and Procedures (18 CFR 385.214). Motions to intervene are more fully described at <https://www.ferc.gov/how-intervene>. Please note that the Commission will not accept requests for intervenor status at this time. You must wait until the Commission receives a formal application for the project, after which the Commission will issue a public notice that establishes an intervention deadline.

Additional Information

Additional information about the project is available from the Commission’s Office of External Affairs, at (866) 208–FERC, or on the FERC website (www.ferc.gov) using the eLibrary link. Click on the eLibrary link, click on “General Search” and enter the docket number in the “Docket Number” field. Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FercOnlineSupport@ferc.gov or toll free at (866) 208–3676, or for TTY, contact (202) 502–8659. The eLibrary link also provides access to the texts of all formal

documents issued by the Commission, such as orders, notices, and rulemakings.

Public sessions or site visits will be posted on the Commission’s calendar located at <https://www.ferc.gov/news-events/events> along with other related information.

Dated: August 22, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2023–0606; FRL–11581–04–OCSPP]

Public Engagement Webinars; Pre-Prioritization and Consideration of Existing Chemical Substances for Future Prioritization Under the Toxic Substances Control Act (TSCA)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA or Agency) is announcing the scheduling of two virtual public meetings to provide information regarding existing chemical pre-prioritization and prioritization activities under the Toxic Substances Control Act (TSCA). Prioritization is the initial step in the process of evaluating existing chemicals under TSCA and implementing regulations. The purpose of prioritization is to designate a chemical substance as being either high priority for immediate further risk evaluation, or low priority, for which risk evaluation is not warranted at the time. The webinars will take place on two separate days, but the content presented at each meeting will be identical. EPA will explain the prioritization process and provide an overview of information that may be used to inform the considerations that ultimately support a High- or Low-Priority Substance designation, such as information on conditions of use and health effects resulting from exposure to the chemicals of interest. In addition, the list of candidate chemical substances currently being considered for future prioritization actions will be presented for stakeholders to comment on the data and scientific research available that may be used to help EPA determine which chemical substances may undergo prioritization in the near term. EPA is committed to engaging with the public to identify potentially

relevant information on chemical substances being considered for future prioritization actions during pre-prioritization timeframes.

DATES:

Webinars: Monday, September 30, 2024, (2 p.m.–4 p.m. ET), and Tuesday, October 1, 2024 (10 a.m.–12 p.m. ET).

Registration: You must register on or before September 25, 2024, to receive the webcast meeting link and audio teleconference information before the meeting, and to make oral comments during the meeting.

Special accommodations: Submit requests for special accommodations on or before September 13, 2024, to allow EPA time to process the request before the meeting.

Oral comments: To provide an oral comment during the webinar, register on or before September 25, 2024.

Written comments: Following the public webinars, written comments may be submitted during a 30-day public comment period that will open following the second public webinar on October 1, 2024.

ADDRESSES:

Webinar: Register online for each webinar as follows:

- For the webinar on Monday, September 30, 2024, register at: <https://usepa.zoomgov.com/meeting/register/vJltduuqzgvH1QTU561mR9PaHoG91WhfnA>;
- For the webinar on Tuesday, October 1, 2024, register at: <https://usepa.zoomgov.com/meeting/register/vJlSfCrrzMqHJshuXmH7qTusPv-IURNA4M>.

Special Accommodations: Please submit these requests to the person listed under **FOR FURTHER INFORMATION CONTACT**.

Oral comments: Register with the person listed under **FOR FURTHER INFORMATION CONTACT**.

Written comments: Submit written comments, identified by docket identification (ID) number EPA–HQ–OPPT–2023–0606, online at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

Sarah Soliman, Office of Pollution Prevention and Toxics (7201M), Office of Chemical Safety and Pollution Prevention (OCSPP), Environmental

Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 748-0251 email address: soliman.sarah@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action is directed to the public in general and may be of interest to entities that may manufacture (including import) a chemical substance regulated under TSCA (e.g., entities identified under North American Industrial Classification System (NAICS) codes 325 and 324110). The action may also be of interest to chemical processors, distributors in commerce, users, non-profit organizations in the environmental and public health sectors, state and local government agencies, and members of the public. Since other entities may also be interested, the Agency has not attempted to describe all the specific entities and corresponding NAICS codes for entities that may be interested in or affected by this action.

B. What is the Agency's authority for taking this action?

TSCA section 6, 15 U.S.C. 2605, requires EPA to evaluate existing chemicals via a three-stage process. The three stages of EPA's process for existing chemicals are prioritization, risk evaluation, and risk management. See also the implementing procedural regulations at 40 CFR part 702. For more information about the TSCA risk evaluation process for existing chemicals, go to <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca>.

C. What action is the agency taking?

EPA is announcing the scheduling of two virtual public meetings to provide information regarding existing chemical pre-prioritization and prioritization activities under TSCA. Prioritization is the initial step in the process of evaluating existing chemicals under TSCA and implementing regulations. The purpose of prioritization is to designate a chemical substance as being either high priority for immediate further risk evaluation, or low priority, for which risk evaluation is not warranted at the time. The webinars will take place on two separate days, but the content presented at each meeting will be identical. EPA will explain the prioritization process and provide an overview of information that may be used to inform the considerations that ultimately support a High- or Low-Priority Substance designation, such as

information on conditions of use and health effects resulting from exposure to the chemicals of interest. In addition, the list of candidate chemical substances currently being considered for future prioritization actions will be presented for stakeholders to comment on the data and scientific research available that may be used to help EPA determine which chemical substances may undergo prioritization in the near term.

D. Why is the Agency taking this action?

EPA is committed to engaging with the public to identify potentially relevant information on chemical substances being considered for future prioritization actions during pre-prioritization timeframes. This action is intended to increase transparency in the TSCA prioritization process by encouraging public engagement in earlier activities.

EPA values broad external input, which is critical to the prioritization process. EPA is committed to developing a sustainable program where information is continually collected by the Agency on chemicals of interest so that prioritization occurs on an annual basis to replace High-Priority Substances for which EPA has completed risk evaluations. Information provided during and following these public meetings will inform EPA's determination regarding whether chemical substances have sufficient information to support either a High- or Low Priority Substance designation during prioritization or a risk evaluation, should a chemical substance be designated as a High-Priority Substance during prioritization.

E. What is the purpose of the pre-prioritization and prioritization phases?

Pre-prioritization represents the Agency's commitment to fostering a transparent collaborative effort with the public by allowing stakeholders to engage with EPA on its list of potential prioritization candidates; learn about the type of information EPA seeks to support the proposed and final designations as either High- or Low-Priority Substances; and how stakeholders can provide that information.

Prioritization is the initial step in the process of evaluating existing chemicals under TSCA section 6(b) and implementing regulations at 40 CFR part 702. The purpose of prioritization is to designate a chemical substance as either high priority for immediate further risk evaluation, or low priority, for which risk evaluation is not warranted at the time.

To identify candidates for the prioritization process, TSCA requires that at least 50 percent of all chemical substances on which risk evaluations are being conducted by the Administrator are drawn from the TSCA Work Plan for Chemical Assessments: 2014 Update available at: <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/tsca-work-plan-chemical-assessments-2014-update>, until that list has been exhausted. EPA also gives preference to chemical substances from the TSCA Work Plan chemicals with the following characteristics:

- Persistence and bioaccumulation scores of three; and
- Known human carcinogens, and high acute or chronic toxicity.

Aside from these statutory directions, EPA has discretion to determine which chemical substances will undergo prioritization.

II. Virtual Public Meetings

A. What is the planned agenda for the meetings?

EPA is announcing its intention to hold virtual public meetings on September 30 and October 1, 2024, to seek individual input from the public on the proposed efforts regarding pre-prioritization and the consideration of existing chemical substances for future prioritization actions under the TSCA. The virtual public meetings will take place on two separate days, but the content presented at each meeting will be identical. EPA intends to explain the prioritization process and provide an overview of information that may be used to inform the considerations that ultimately support a High- or Low-Priority Substance designation, such as information on conditions of use and health effects resulting from exposure to the chemicals of interest. In addition, the Agency intends to share the list of candidate chemical substances currently being considered for future prioritization actions, along with relevant information available to EPA, and intends to open a comment period to provide an opportunity for stakeholders to comment on the data and scientific research available that may be used to help EPA determine which chemical substances may undergo prioritization in the near term.

Following EPA's presentation during the public webinars, interested persons will have opportunities to provide feedback and/or potentially relevant information regarding the prioritization efforts, with priority given to those who registered for oral comments. Instructions on registering for the public

meetings and contacting EPA to communicate an interest in providing an oral comment are detailed in this document.

B. How can I participate the virtual public meetings?

The public meetings are virtual and will be accessible via webcast. To receive a virtual meeting link via email, use the public virtual meeting respective registration links provided under **ADDRESSES**, and be sure to register by the deadline under **DATES**. A virtual meeting link will be sent via email to persons who register. EPA will make every effort to present the information and allow for as many entities as possible to provide a brief oral comment within the allotted time on the day of the webinar, but please plan for the webinars to run either ahead of or behind schedule.

Following EPA's presentation during the public webinars, interested persons will have opportunities to provide comments and/or potentially relevant information regarding upcoming prioritization efforts. You will also have the opportunity to provide written comments to the docket after the public meetings. Instructions on registering to attend or present at the public meetings, and to submit written comments following the virtual public meetings are detailed under **DATES** and **ADDRESSES**.

Each individual or group wishing to make brief oral comments during the virtual public meetings should first register for the public meetings, and then also email their request to make oral comments with their name, affiliation, and contact information, to the person listed under **FOR FURTHER INFORMATION CONTACT**. Interested persons who have registered to provide a comment during the public meeting will each have approximately three minutes to do so. EPA also encourages you to submit a written copy of their oral comments to the docket.

Written statements and supporting information submitted to the docket during the comment period will be considered with the same weight as oral comments and supporting information presented at the public meeting.

C. How can I access the materials shared at the meeting?

After the conclusion of the webinar on October 1, 2024, the material presented at the webinars, including the EPA presentation, the list of candidate chemical substances currently being considered for future prioritization actions, and related supporting information about those chemicals will

be added to the docket, along with other materials provided by participants or that may become available. In addition, after the meetings, EPA intends to prepare meeting minutes summarizing the individual comments received at the meetings, which will be added to the docket as soon as they are available.

D. What should I consider as I prepare my comments for EPA?

1. *Submitting CBI.* Do not submit CBI information to EPA through <https://www.regulations.gov> or email. If you wish to include CBI in your comment, please follow the applicable instructions at <https://www.epa.gov/dockets/commenting-epa-dockets#rules> and clearly mark the part or all of the information that you claim to be CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2 and/or 40 CFR part 703, as applicable.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see Tips for Effective Comments at <https://www.epa.gov/dockets/commenting-epa-dockets#tips>.

3. *Multimedia submissions.* Multimedia submissions (audio, video, etc.) must be accompanied by a written comment. The written comment is considered the official comment and should include discussion of all points you wish to make. The EPA will generally not consider comments or comment contents located outside of the primary submission (*i.e.*, on the web, cloud, or other file sharing systems).

Please note that any updates made to any aspect of the webinar will be communicated with a document being added to the docket. While EPA expects the webinar to go forward as set forth above, please monitor our website, <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/us-epa-webinar-next-round-chemicals-substances-being>, or see the person listed under **FOR FURTHER INFORMATION CONTACT** to determine if there are any updates. EPA does not intend to publish update announcements in this action.

Authority: 15 U.S.C. 2601 *et seq.*

Dated: August 22, 2024.

Michal Freedhoff,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[FRL-12180-01-OW]

Clean Water Act; Contractor Access to Confidential Business Information

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of intended transfer of confidential business information to contractor and its subcontractors.

SUMMARY: The Environmental Protection Agency (EPA) intends to transfer confidential business information (CBI) collected from numerous industries under a newly awarded blanket purchase agreement (BPA), effective July 19, 2024, to ICF International, LLC (ICF) and its subcontractors. In addition, the EPA intends to transfer CBI collected from the meat and poultry products (MPP) industry to ICF and its subcontractors under a task order on a different contract, effective July 3, 2024. Transfer of this information is necessary for ICF to assist the Office of Water in the preparation of effluent guidelines and standards and with its effluent guidelines planning and review activities. Much of the information being transferred was or will be collected under the authority of section 308 of the Clean Water Act (CWA). Interested persons may submit comments on this intended transfer of information to the address noted below.

DATES: Comments on the transfer of data are due September 5, 2024.

ADDRESSES: Comments may be sent to M. Ahmar Siddiqui, Document Control Officer, Engineering and Analysis Division (4303T), U.S. EPA, 1200 Pennsylvania Ave. NW, Washington, DC 20460, or via email at siddiqui.ahmar@epa.gov.

FOR FURTHER INFORMATION CONTACT: M. Ahmar Siddiqui, Document Control Officer, at (202) 566-1044, or via email at siddiqui.ahmar@epa.gov.

SUPPLEMENTARY INFORMATION: The EPA has transferred CBI to various contractors and subcontractors over the history of the effluent guidelines program under 40 CFR 2.302(h). The EPA determined that this transfer was necessary to enable the contractors and subcontractors to perform their work in supporting EPA in planning, developing, and reviewing effluent guidelines and standards for certain industries.

In this document, pursuant to 40 CFR 2.302(h)(2), the EPA is giving notice that, effective July 19, 2024, it has entered into a new BPA with ICF, BPA number 68HERC24A0011, located in

Reston, Virginia. The purpose of this BPA is to secure economic and environmental assessment support for the EPA in its development, review, implementation, and defense of water-related initiatives for a variety of industries. To obtain assistance in responding to this BPA, ICF has entered into contracts with the following subcontractors and consultants: Cognistic LLC (located in Pittsburgh, Pennsylvania), Dr. Dennis Guignet (located in Blowing Rock, North Carolina), Dr. Robert Johnston (located in Millville, Massachusetts), Dr. David Andrew Keiser (located in Pelham, Massachusetts), Dr. Klaus Moeltner (located in Blacksburg, Virginia), Ebony Marketing Systems (located in New York, New York), Elena Besedin Consulting (located in Middletown, Rhode Island), Great Lakes Environmental Center (located in Traverse City, Michigan), Hawk Consulting LLC (located in Oak Island, North Carolina), Hellerworx, Inc. (located in Chevy Chase, Maryland), Innovate! Inc. (located in Alexandria, Virginia), Research Triangle Institute (located in Research Triangle Park, North Carolina), Resources for the Future (located in Washington, District of Columbia), Shadbegian Economic Consulting (located in Worcester, Massachusetts), Dr. Raghavan Srinivasan (located in Temple, Texas), and Texas A&M AgriLife Research (located in College Station, Texas).

In addition to the BPA, the EPA is giving notice that it will be transferring CBI to ICF, located in Reston, VA, under contract number 68HERC23D0003. The purpose of this transfer is to support economic and environmental analysis support for the EPA in its development of effluent guidelines and standards for the MPP industry. To support this contract, ICF has entered into contracts with the following subcontractors and consultants: Neptune and Company (located in Lakewood, Colorado), Avanti Corporation (located in Alexandria, Virginia), Cadmus (located in Waltham, Massachusetts), Gibb Epidemiology Consulting (located in Washington, District of Columbia), Great Lakes Environmental Center (located in Traverse City, Michigan), Inotiv (located in Morrisville, North Carolina), Mote Marine Laboratory (located in Sarasota, Florida), Pradeep Rajan, LLC (located in Chapel Hill, North Carolina), Soller Environmental (located in Berkeley, California), Vireo Advisers, LLC (located in Boston, Massachusetts), Dr. Alexandria Boehm (located in Stanford, California), Dr. Erica McKenzie (located in Philadelphia, Pennsylvania), Dr. Kara

Nelson (located in Berkeley, California), Dr. Ian Pepper (located in Tucson, Arizona), and Dr. Jill Stewart (located in Carrboro, North Carolina).

All EPA contractor, subcontractor, and consultant personnel are bound by the requirements and sanctions contained in their contracts with the EPA and in the EPA's confidentiality regulations found at 40 CFR part 2, subpart B. ICF will adhere to EPA-approved security plans which describe procedures to protect CBI. ICF will apply the procedures in these plans to CBI previously gathered by the EPA and to CBI that may be gathered in the future. The security plans specify that contractor personnel are required to sign non-disclosure agreements and are briefed on appropriate security procedures before they are permitted access to CBI. No person is automatically granted access to CBI: a need to know must exist.

The information that will be transferred to ICF consists of information previously collected by the EPA to support the development and review of effluent limitations guidelines and standards under the CWA and that the EPA had transferred to ICF under a previous contract with them. In particular, information, including CBI, collected for the planning, development, and review of effluent limitations guidelines and standards for the following industries may be transferred to ICF under the new contract: airport deicing; aquaculture; centralized waste treatment; coal bed methane; concentrated animal feeding operations; coal mining; construction and development; drinking water treatment; industrial container and drum cleaning; industrial laundries; industrial waste combustors; iron and steel manufacturing; landfills; meat and poultry products; metal finishing; metal products and machinery; nonferrous metals manufacturing; oil and gas extraction (including coalbed methane); ore mining and dressing; organic chemicals, plastics, and synthetic fibers; pesticide chemicals; petroleum refining; pharmaceutical manufacturing; pulp, paper, and paperboard manufacturing; shale gas extraction; steam electric power generation; textile mills; timber products processing; tobacco; transportation equipment cleaning; and other industrial categories that the EPA has reviewed or may review as part of its CWA required annual review activities.

The EPA also intends to transfer to ICF all information listed in this document, of the type described above (including CBI) that may be collected in the future under the authority of section

308 of the CWA or voluntarily submitted (e.g., in comments in response to a **Federal Register** notice), as is necessary to enable ICF to carry out the work required by its BPA and contract to support EPA's effluent guidelines planning and review process and the development of effluent limitations guidelines and standards.

Deborah Nagle,

Director, Office of Science and Technology, Office of Water.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2023-0430; FRL-11382-02-OCSPP]

Pesticides; Final Guidance and Test Method for Antimicrobial Product Efficacy Claims Against Planktonic *Legionella pneumophila* in Cooling Tower Water; Notice of Availability

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Environmental Protection Agency (EPA or Agency) is announcing the availability of the final guidance and test method for adding efficacy claims to antimicrobial products for use in cooling tower water to reduce the level of planktonic *Legionella pneumophila* (*L. pneumophila*). The method and guidance describe quantitative efficacy testing of antimicrobial products to support claims for the reduction of planktonic *L. pneumophila* in water within cooling tower systems and how to prepare an application for registration. The guidance does not address adherent or sessile bacteria that attach to a surface (e.g., biofilm) of the cooling tower system or any other microorganism other than *L. pneumophila* which may be found in the water of cooling tower systems.

DATES: The guidance is effective on August 28, 2024.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA-HQ-OPP-2023-0430, is available online at <https://www.regulations.gov>. Additional information about dockets generally, along with instructions for visiting the docket in-person, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT:

About the method: Lisa S. Smith, Microbiology Laboratory Branch (7503M), Biological and Economic Analysis Division, Office of Pesticide

Programs, Environmental Protection Agency, Environmental Science Center, 701 Mapes Road, Ft. Meade, MD 20755-5350; telephone number: (410) 305-2637; email address: smith.lisas@epa.gov.

About the guidance: César E. Cordero, Efficacy Branch (7510M), Antimicrobials Division, Office of Pesticide Programs, Environmental Protection Agency, William Jefferson Clinton East Building, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: (202) 564-3716; email address: cordero.cesar@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action is directed to the public in general; although this action may be of particular interest to those persons who are or may be required to conduct efficacy testing of chemical substances under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Since other entities may also be interested, the Agency has not attempted to describe all the specific entities that may be affected by this action. If you have any questions regarding the applicability of this action to a particular entity, consult the appropriate person listed under **FOR FURTHER INFORMATION CONTACT**.

B. What is the Agency's authority for taking this action?

EPA is issuing this guidance and test method document pursuant to its authority under the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 7 U.S.C. 136 *et seq.*

C. What action is the Agency taking?

EPA is announcing the availability of the final guidance and test method for adding efficacy claims to antimicrobial products for use in cooling tower water to reduce the level of planktonic *Legionella pneumophila* (*L. pneumophila*). The final method and guidance documents describe quantitative efficacy testing for antimicrobial products to support planktonic *L. pneumophila* reduction claims in cooling tower systems' water and how to prepare an application for registration. The guidance and method do not address any use sites outside of water in cooling tower systems or efficacy against *L. pneumophila* bacteria that can be found inside cells of other organisms (e.g., protozoa), attached to a surface or associated with biofilms.

D. Does this guidance document impose binding requirements?

As guidance, these documents are not binding on the Agency or any outside parties, and the Agency may depart from these documents where circumstances warrant and without prior notice. While EPA has made every effort to ensure the accuracy of the discussion in the guidance, the obligations of EPA and the regulated community are determined by statutes, regulations, or other legally binding documents. In the event of a conflict between the discussion in the guidance documents and any statute, regulation, or other legally binding document, the guidance documents will not be controlling.

II. Background

EPA developed the guidance and test method in response to requests from stakeholders that asked EPA to develop a test method, guidance, and an associated registration process to support adding claims to antimicrobial products intended to control planktonic *L. pneumophila* in cooling tower water. Stakeholders and the public have significant interest in the availability of antimicrobial products with these claims, particularly industrial, institutional and health care settings where large cooling tower systems are often used.

In October 2023, EPA announced the availability and sought public comments on the draft guidance and test method (88 FR 67749, October 2, 2023 (FRL-11382-01-OCSP)). The Agency received 41 comments regarding clarifications and revisions to the draft guidance and test method. After considering the public comments, EPA is releasing the final guidance and test method documents, as well as a response to comments document.

Authority: 7 U.S.C. 136 *et seq.*

Dated: August 22, 2024.

Michal Freedhoff,

Assistant Administrator, Office of Chemical Safety and Pollution Prevention.

BILLING CODE 6560-50-P

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OAR-2024-0014; FRL-12216-01-OAR]

Clean Air Act Advisory Committee (CAAAC): Notice of Meeting

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of meeting.

SUMMARY: Pursuant to the Federal Advisory Committee Act (FACA), the Environmental Protection Agency (EPA) is announcing a public meeting of the Clean Air Act Advisory Committee (CAAAC). The EPA renewed the CAAAC charter on October 31, 2022, to provide independent advice and counsel to EPA on economic, environmental, technical, scientific and enforcement policy issues associated with implementation of the Clean Air Act of 1990.

DATES: The CAAAC will hold its next hybrid (in-person and virtual) public meeting on Tuesday, September 17, 2024, from 1:00 p.m. to 4:00 p.m. (EST) and Wednesday, September 18, 2024, from 9:00 a.m. to 12:00 p.m. (EST). Members of the public may register to listen to the meeting or provide comments, by emailing caaac@epa.gov by 5:00 p.m. (EST) September 16, 2024.

FOR FURTHER INFORMATION CONTACT:

Lorraine Reddick, Designated Federal Officer, Clean Air Act Advisory Committee (6103A), Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460; telephone number: 202-564-1293; email address: reddick.lorraine@epa.gov. Additional information about this meeting, the CAAAC, and its subcommittees and workgroups can be found on the CAAAC website: <http://www.epa.gov/caaac>.

SUPPLEMENTARY INFORMATION: Pursuant to 5 U.S.C. App. 2 section 10(a)(2), notice is hereby given that the Clean Air Act Advisory Committee will hold its next hybrid (in-person and virtual) public meeting on Tuesday, September 17, 2024, from 1:00 p.m. to 4:00 p.m. (EST) and Wednesday, September 18, 2024, from 9:00 a.m. to 12:00 p.m. (EST).

The committee agenda and any documents prepared for the meeting will be publicly available on the CAAAC website at <http://www.epa.gov/caaac> prior to the meeting. Thereafter, these documents, together with CAAAC meeting minutes, will be available on the CAAAC website or by contacting the Office of Air and Radiation Docket and requesting information under docket EPA-HQ-OAR-2024-0014. The docket office can be reached by email at: a-and-r-Docket@epa.gov or FAX: 202-566-9744.

For information on access or services for individuals with disabilities, please contact Lorraine Reddick at reddick.lorraine@epa.gov, preferably at least 7 days prior to the meeting to give

EPA as much time as possible to process your request.

Lorraine Reddick,

Designated Federal Officer, Office of Air Policy and Program Support.

[FR Doc. 2024–19326 Filed 8–27–24; 8:45 am]

BILLING CODE 6560–50–P

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2024–0057; FRL–11683–07–OCSPP]

Certain New Chemicals; Receipt and Status Information for July 2024

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA is required under the Toxic Substances Control Act (TSCA), as amended by the Frank R. Lautenberg Chemical Safety for the 21st Century Act, to make information publicly available and to publish information in the **Federal Register** pertaining to submissions under TSCA Section 5, including notice of receipt of a Premanufacture notice (PMN), Significant New Use Notice (SNUN) or Microbial Commercial Activity Notice (MCAN), including an amended notice or test information; an exemption application (Biotech exemption); an application for a test marketing exemption (TME), both pending and/or concluded; a notice of commencement (NOC) of manufacture (including import) for new chemical substances; and a periodic status report on new chemical substances that are currently under EPA review or have recently concluded review. This document covers the period from 7/01/2024 to 7/31/2024.

DATES: Comments identified by the specific case number provided in this document must be received on or before September 27, 2024.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA–HQ–OPPT–2024–0057, through the *Federal eRulemaking Portal* at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

FOR FURTHER INFORMATION CONTACT: For technical information contact: Jim

Rahai, Project Management and Operations Division (MC 7407M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; telephone number: (202) 564–8593; email address: rahai.jim@epa.gov. For general information contact: The TSCA–Hotline, ABVI–Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. What action is the Agency taking?

This document provides the receipt and status reports for the period from 7/01/2024 to 7/31/2024. The Agency is providing notice of receipt of PMNs, SNUNs, and MCANs (including amended notices and test information); an exemption application under 40 CFR part 725 (Biotech exemption); TMEs, both pending and/or concluded; NOCs to manufacture a new chemical substance; and a periodic status report on new chemical substances that are currently under EPA review or have recently concluded review.

EPA is also providing information on its website about cases reviewed under the amended TSCA, including the section 5 PMN/SNUN/MCAN and exemption notices received, the date of receipt, the final EPA determination on the notice, and the effective date of EPA's determination for PMN/SNUN/MCAN notices on its website at: <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/status-pre-manufacture-notices>. This information is updated on a weekly basis.

B. What is the Agency's authority for taking this action?

Under the Toxic Substances Control Act (TSCA), 15 U.S.C. 2601 *et seq.*, a chemical substance may be either an “existing” chemical substance or a “new” chemical substance. Any chemical substance that is not on EPA's TSCA Inventory of Chemical Substances (TSCA Inventory) is classified as a “new chemical substance,” while a chemical substance that is listed on the TSCA Inventory is classified as an “existing chemical substance.” (See TSCA section 3(11).) For more information about the TSCA Inventory please go to: <https://www.epa.gov/tsca-inventory>.

Any person who intends to manufacture (including import) a new chemical substance for a non-exempt commercial purpose, or to manufacture or process a chemical substance in a

non-exempt manner for a use that EPA has determined is a significant new use, is required by TSCA section 5 to provide EPA with a PMN, MCAN, or SNUN, as appropriate, before initiating the activity. EPA will review the notice, make a risk determination on the chemical substance or significant new use, and take appropriate action as described in TSCA section 5(a)(3).

TSCA section 5(h)(1) authorizes EPA to allow persons, upon application and under appropriate restrictions, to manufacture or process a new chemical substance, or a chemical substance subject to a significant new use rule (SNUR) issued under TSCA section 5(a)(2), for “test marketing” purposes, upon a showing that the manufacture, processing, distribution in commerce, use, and disposal of the chemical will not present an unreasonable risk of injury to health or the environment. This is referred to as a test marketing exemption, or TME. For more information about the requirements applicable to a new chemical go to: <https://www.epa.gov/chemicals-under-tsca>.

Under TSCA sections 5 and 8 and EPA regulations, EPA is required to publish in the **Federal Register** certain information, including notice of receipt of a PMN/SNUN/MCAN (including amended notices and test information); an exemption application under 40 CFR part 725 (biotech exemption); an application for a TME, both pending and concluded; NOCs to manufacture a new chemical substance; and a periodic status report on the new chemical substances that are currently under EPA review or have recently concluded review.

C. Does this action apply to me?

This action provides information that is directed to the public in general.

D. Does this action have any incremental economic impacts or paperwork burdens?

No.

E. What should I consider as I prepare my comments for EPA?

1. *Submitting confidential business information (CBI).* Do not submit this information to EPA through [regulations.gov](https://www.regulations.gov) or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD–ROM that you mail to EPA, mark the outside of the disk or CD–ROM as CBI and then identify electronically within the disk or CD–ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that

includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2.

2. *Tips for preparing your comments.* When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets>.

II. Status Reports

In the past, EPA has published individual notices reflecting the status of TSCA section 5 filings received, pending or concluded. In 1995, the Agency modified its approach and streamlined the information published in the **Federal Register** after providing notice of such changes to the public and an opportunity to comment (see the **Federal Register** of May 12, 1995 (60 FR 25798) (FRL-4942-7)). Since the passage of the Lautenberg amendments to TSCA in 2016, public interest in information on the status of section 5 cases under EPA review and, in particular, the final determination of such cases, has increased. In an effort to

be responsive to the regulated community, the users of this information, and the general public, to comply with the requirements of TSCA, to conserve EPA resources and to streamline the process and make it more timely, EPA is providing information on its website about cases reviewed under the amended TSCA, including the section 5 PMN/SNUN/MCAN and exemption notices received, the date of receipt, the final EPA determination on the notice, and the effective date of EPA's determination for PMN/SNUN/MCAN notices on its website at: <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/status-pre-manufacture-notices>. This information is updated on a weekly basis.

III. Receipt Reports

For the PMN/SNUN/MCANs that have passed an initial screening by EPA during this period, Table I provides the following information (to the extent that such information is not subject to a CBI claim) on the notices screened by EPA during this period: The EPA case number assigned to the notice that indicates whether the submission is an initial submission, or an amendment, a

notation of which version was received, the date the notice was received by EPA, the submitting manufacturer (*i.e.*, domestic producer or importer), the potential uses identified by the manufacturer in the notice, and the chemical substance identity.

As used in each of the tables in this unit, (S) indicates that the information in the table is the specific information provided by the submitter, and (G) indicates that this information in the table is generic information because the specific information provided by the submitter was claimed as CBI. Submissions which are initial submissions will not have a letter following the case number. Submissions which are amendments to previous submissions will have a case number followed by the letter "A" (*e.g.* P-18-1234A). The version column designates submissions in sequence as "1", "2", "3", etc. Note that in some cases, an initial submission is not numbered as version 1; this is because earlier version(s) were rejected as incomplete or invalid submissions. Note also that future versions of the following tables may adjust slightly as the Agency works to automate population of the data in the tables.

TABLE I—PMN/SNUN/MCANs APPROVED * FROM 7/01/2024 TO 7/31/2024

Case No.	Version	Received date	Manufacturer	Use	Chemical substance
P-20-0031	1	07/17/2024	CBI	(G) Intermediate	(G) Perfluorinated substituted 1,3-oxathiolane dioxide.
P-20-0033	1	07/17/2024	CBI	(G) Intermediate	(G) Perfluorinated vinyl haloalkane sulfonate salt.
P-20-0034	1	07/17/2024	CBI	(G) Intermediate	(G) Perfluorinated vinyl haloalkane sulfonyl halide.
P-23-0014	1	07/22/2024	CBI	(G) [Polyalkyl-methylenepolyhydro-polycyclic]alkyl acetate.
P-23-0177A	3	07/19/2024	Colonial Chemical, Inc	(G) Corrosion inhibitor	(G) fatty acids, vegetable oil, reaction products with diethylenetriamine.
P-24-0027A	6	07/08/2024	Mikros Biochem	(S) Surfactant for cleaners	(S) Fatty acids, C8-14, 2,3-diester with rel-(2R, 3S)-2,3,4-trihydroxybutyl Beta-D-mannopyranoside acetate.
P-24-0079A	4	07/12/2024	CBI	(G) Fuel Additive	(G) Alkylated succinimide.
P-24-0079A	5	07/19/2024	CBI	(G) Fuel Additive	(G) Alkylated succinimide.
P-24-0104A	5	07/17/2024	CBI	(G) Plastic Additive	(G) carbomonocycle alkylamide, 3,5-bis(1,1-dialkyl)-4-hydroxy-N-[2,5-dioxo-3-(polyalkylene)-1-heteromonocyclic]-.
P-24-0109A	3	07/09/2024	CBI	(G) Electrolyte salt	(G) Lithium dihalo (oxalato)borate(1-).
P-24-0109A	4	07/10/2024	CBI	(G) Electrolyte salt	(G) Lithium dihalo (oxalato)borate(1-).
P-24-0130A	3	07/12/2024	CBI	(S) Sulfur Scavenger	(G) poly(alkoxy)alkanol.
P-24-0161A	3	06/27/2024	Cargill, Incorporated	(S) Feedstock for production of biofuel.	(S) Fats and glyceridic oils, camelina sativa. Extractives and their physically modified derivatives. It consists primarily of the glycerides of the fatty acids docosenoic, eicosenoic, linoleic, linolenic, oleic, palmitic and stearic. (Camelina sativa).
P-24-0161A	4	07/08/2024	Cargill, Incorporated	(S) Feedstock for production of biofuel.	(S) Fats and glyceridic oils, camelina sativa. Extractives and their physically modified derivatives. It consists primarily of the glycerides of the fatty acids docosenoic, eicosenoic, linoleic, linolenic, oleic, palmitic and stearic. (Camelina sativa).

TABLE I—PMN/SNUN/MCANS APPROVED * FROM 7/01/2024 TO 7/31/2024—Continued

Case No.	Version	Received date	Manufacturer	Use	Chemical substance
P-24-0162A	3	07/25/2024	Proton Power, Inc	(S) Increases strength of epoxy, plastics, moulding compounds, strength, modulus, tear resistance for polyurethane foam; Improves the rutting behavior of asphalt; Improves the capacity and thermal and electrical conductivity for batteries, strength of body armor and helmets, drying time and antifouling for paints.	(S) single and multilayer turbostratic graphene.
P-24-0164A	2	07/09/2024	Huntsman International, LLC.	(S) Intermediate in the production of a catalyst.	(S) 2-Propanamine, N,N'-(oxydi-2,1-ethanediyl)bis-
P-24-0171A	2	07/17/2024	CBI	(G) Making of air pollutants control parts in automobiles.	(G) Metal and rare earth metal zirconium oxide.
P-24-0172A	2	07/17/2024	CBI	(G) Manufacturing of air pollutants control parts.	(G) Metal and rare earth metal zirconium oxide.
P-24-0173	1	07/12/2024	CBI	(G) For making air pollutant control parts in automobiles.	(G) Rare earth doped zirconium oxide
P-24-0174	1	07/12/2024	CBI	(G) Making air pollutants control parts in automobiles.	(G) Rare earth doped zirconium oxide.
P-24-0175	1	07/12/2024	CBI	(G) Air pollutants control parts in automobiles.	(G) Rare earth doped zirconium oxide.
P-24-0176	1	07/12/2024	CBI	(G) Making of air pollutants control parts in automobiles.	(G) Rare earth doped zirconium oxide.
P-24-0177	1	07/12/2024	CBI	(G) Air pollutants control parts in automobiles.	(G) Rare earth doped zirconium oxide.
P-24-0178	1	07/15/2024	Advancion	(G) Paints and coatings, home and personal care, metal working fluids, electronics.	(S) 2-Butanol, 3-amino-3-methyl.
P-24-0183	1	07/25/2024	HPC Holdings, Inc	(G) Chemical intermediate	(S) 1-Butanone, 4,4,4-trifluoro-3-hydroxy-1-(2-naphthalenyl)-3-(trifluoromethyl)-.
SN-24-0007A	2	07/22/2024	CBI	(G) Additive for plastic, Intermediate.	(G) Inorganic acid, metal salt, compd. with substituted aromatic heterocycle.

In Table II of this unit, EPA provides the following information (to the extent that such information is not claimed as CBI) on the NOCs that have passed an initial screening by EPA during this period: The EPA case number assigned

to the NOC including whether the submission was an initial or amended submission, the date the NOC was received by EPA, the date of commencement provided by the submitter in the NOC, a notation of the

type of amendment (e.g., amendment to generic name, specific name, technical contact information, etc.) and chemical substance identity.

TABLE II—NOCs APPROVED * FROM 7/01/2024 TO 7/31/2024

Case No.	Received date	Commencement date	If amendment, type of amendment	Chemical substance
P-18-0172	07/17/2024	08/28/2019	N	(S) Calcium, carbonate 2-ethylhexanoate neodecanoate propionate complexes.
P-22-0005A	07/22/2024	07/12/2024	N	(S) Formic acid, compd. with 2-methyl-1,5-pentanediamine (2:1).
P-22-0083	07/16/2024	07/04/2024	N	(S) Oils, sandalwood, santalene synthase-modified Rhodobacter sphaeroides-fermented, from D-Glucose, oxidized.
P-22-0192	06/27/2024	06/20/2024	N	(G) Sulfonium, tricarbo-cyclic-, polyfluoro-heteroatom-substituted polycarbocyclicalkanesulfonate (1:1).
P-23-0124	06/27/2024	06/20/2024	N	(G) Sulfonium, tricarbo-cyclic-, 2-heteroatom-substituted-(halocarbo-cyclic)carboxylate (1:1).
P-23-0126	07/15/2024	07/08/2024	N	(G) Alken-1-ol.
P-23-0135	07/15/2024	07/08/2024	N	(G) Alken-1-ol, 1-acetate.
P-23-0172	06/27/2024	06/20/2024	N	(G) Sulfonium, tricarbo-cyclic-, alkylcarbomocyclic-polyfluoro-heteropolycyclic-alkyl sulfonate (1:1), polymer with alkylaryl and carbomonocyclic alkylalkanoate, di-Me 2,2'-(1,2-diazenediyl)bis(2-alkylalkanoate)-initiated.

In Table III of this unit, EPA provides the following information (to the extent such information is not subject to a CBI claim) on the test information that has

been received during this time period: The EPA case number assigned to the test information; the date the test information was received by EPA, the

type of test information submitted, and chemical substance identity.

TABLE III—TEST INFORMATION RECEIVED FROM 7/01/2024 TO 7/31/2024

Case No.	Received date	Type of test information	Chemical substance
L-23-0173	07/09/2024	Algal Toxicity (OECD Test Guideline 201)	(G) Cis-alkenoic acid.

TABLE III—TEST INFORMATION RECEIVED FROM 7/01/2024 TO 7/31/2024—Continued

Case No.	Received date	Type of test information	Chemical substance
P-14-0712	07/10/2024	Polychlorinated Dibenzodioxins and Polychlorinated dibenzofurans Testing.	(S) Waste plastics, pyrolyzed, C5-55 fraction.
P-18-0124	07/08/2024	90-Day Inhalation Toxicity (OECD Test Guideline 413).	(S) Lithium nickel potassium oxide.
P-21-0202, P-23-0104	07/23/2024	Determination of Dissociation Constant (Conductometric Method; OECD Guideline 112 OPPTS 830.7370).	(G) Sulfonium, carbomonocycle bis[(trihaloalkyl)carbomonocycle], substituted carbomonocyclic ester; (G) Sulfonium, carbomonocycle bis[(trihaloalkyl)carbomonocycle], disubstituted carbomonocyclic ester.
P-24-0154	07/12/2024	Melting Point/Melting Range (OECD Test Guideline 102); Boiling Point/Boiling Range (OECD Test Guideline 103); Storage Stability (OECD Test Guideline 113); Combined Repeated Dose Toxicity with the Reproduction/Development Toxicity Screening Test (OECD Test Guideline 422); Particle Size, Fiber Length, Diameter Distribution (OECD Test Guideline 110); Density/Relative Density/Bulk Density (OECD Test Guideline 109); In Vitro Skin Irritation Testing; Primary Skin Irritation Testing in Rabbits.	(G) Polyphenyl, ethoxy-polyfluoro-alkyl-
P-24-0154	07/12/2024	Acute Oral Toxicity (OECD Test Guideline 423); Acute Eye Irritation (OECD Test Guideline 405); Bovine Corneal Opacity and Permeability Test Method for Identifying i) Chemicals Inducing Serious Eye Damage and ii) Chemicals Not Requiring Classification for Eye Irritation or Serious Eye Damage (OECD Test Guideline 437); In Vitro Mammalian Chromosome Aberration Test (OECD Test Guideline 473); Skin Sensitization (OECD Test Guideline 429); Flammability Testing; Bacterial Reverse Mutation Test (OECD Test Guideline 471).	(G) Polyphenyl, ethoxy-polyfluoro-alkyl-

If you are interested in information that is not included in these tables, you may contact EPA’s technical information contact or general information contact as described under **FOR FURTHER INFORMATION CONTACT** to access additional non-CBI information that may be available.

BILLING CODE 6560-50-P

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of filing of the following agreement under the Shipping Act of 1984. Interested parties may submit comments, relevant information, or documents regarding the agreement to the Secretary by email at *Secretary@fmc.gov*, or by mail, Federal Maritime Commission, 800 North Capitol Street, Washington, DC 20573. Comments will

be most helpful to the Commission if received within 12 days of the date this notice appears in the **Federal Register**, and the Commission requests that comments be submitted within 7 days on agreements that request expedited review. Copies of agreement are available through the Commission’s website (*www.fmc.gov*) or by contacting the Office of Agreements at (202)–523–5793 or *tradeanalysis@fmc.gov*.

Agreement No.: 001941–005.

Agreement Name: Baltimore Marine Terminal Association.

Parties: Balterm LLC; Mid-Atlantic Terminal, LLC; Ports America Baltimore, Inc.; Ports America Chesapeake, LLC; SSA Atlantic, LLC.

Filing Party: Michael J. Collins; Law Offices of Michael J. Collins, PC.

Synopsis: There are three modifications. First, Ports America Baltimore, Inc. (“PAB”) was inadvertently omitted from the 2018 filing (it was included in the 2017 Agreement). The amendment corrects this mistake. PAB has been a member continuously included on the BMTA tariff, notwithstanding the error in 2018 that deleted PAB. Second, SSA Atlantic, LLC (“SSA”) acquired Ceres Terminals Corporation (“Ceres”) and is the

surviving entity. Third, Ceres has been removed as a member, and SSA has been substituted as a member of the BMTA. SSA has updated its FMC–1.

Proposed Effective Date: 10/03/2024.

Location: <https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/2109>.

Dated: August 23, 2024.

Alanna Beck,

Federal Register Alternate Liaison Officer.

BILLING CODE 6730-02-P

FEDERAL RESERVE SYSTEM

Change in Bank Control Notices; Acquisitions of Shares of a Bank or Bank Holding Company

The notificants listed below have applied under the Change in Bank Control Act (Act) (12 U.S.C. 1817(j)) and § 225.41 of the Board’s Regulation Y (12 CFR 225.41) to acquire shares of a bank or bank holding company. The factors that are considered in acting on the applications are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at <https://www.federalreserve.gov/foia/request.htm>. Interested persons may express their views in writing on the standards enumerated in paragraph 7 of the Act.

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not include any information such as confidential information that would not be appropriate for public disclosure.

Comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington DC 20551-0001, not later than September 12, 2024.

A. Federal Reserve Bank of New York (Ivan Hurwitz, Head of Bank Applications) 33 Liberty Street, New York, NY 10045-0001. Comments can also be sent electronically to Comments.applications@ny.frb.org:

1. *Liberty Strategic Capital (CEN) Holdings, LLC; Liberty 77 Fund L.P.; Liberty 77 Fund International L.P.; Liberty 77 Capital GenPar L.P.; Liberty 77 Capital UGP L.L.C.; Liberty 77 Capital L.P., as the investment manager of Liberty Strategic Capital (CEN) Holdings, LLC; Liberty 77 Capital Partners L.P., the general partner of Liberty 77 Capital L.P.; Liberty Capital L.L.C., the general partner of Liberty 77 Capital Partners L.P.; STM Partners LLC, which indirectly controls Liberty Strategic Capital (CEN) Holdings, LLC, and Liberty 77 Capital L.P.; The Steven T. Mnuchin Revocable Trust, Steven T. Mnuchin, as trustee, the President of STM Partners LLC, and managing partner of Liberty 77 Capital L.P., all of Washington, DC; The Steven Mnuchin Dynasty Trust I, Riverside, Connecticut; and The Steven Mnuchin 2007 Family Trust, Washington, Connecticut; each individually and to become members of the Liberty Control Group, a group acting in concert, to acquire voting shares of New York Community*

Bancorp, Inc., and thereby indirectly acquire voting shares of Flagstar Bank, National Association, both of Hicksville, New York. In addition, Charles Dowling, Riverside, Connecticut, as trustee of The Steven Mnuchin Dynasty Trust I, and Alan Mnuchin, Washington, Connecticut, as trustee of The Steven Mnuchin 2007 Family Trust, to acquire control of voting shares of New York Community Bancorp, Inc., as members of the Liberty Control Group.

Board of Governors of the Federal Reserve System.

Erin Cayce,

Assistant Secretary of the Board.

BILLING CODE P

FEDERAL RESERVE SYSTEM

Notice of Proposals To Engage in or To Acquire Companies Engaged in Permissible Nonbanking Activities

The companies listed in this notice have given notice under section 4 of the Bank Holding Company Act (12 U.S.C. 1843) (BHC Act) and Regulation Y, (12 CFR part 225) to engage de novo, or to acquire or control voting securities or assets of a company, including the companies listed below, that engages either directly or through a subsidiary or other company, in a nonbanking activity that is listed in § 225.28 of Regulation Y (12 CFR 225.28) or that the Board has determined by Order to be closely related to banking and permissible for bank holding companies. Unless otherwise noted, these activities will be conducted throughout the United States.

The public portions of the applications listed below, as well as other related filings required by the Board, if any, are available for immediate inspection at the Federal Reserve Bank(s) indicated below and at the offices of the Board of Governors. This information may also be obtained on an expedited basis, upon request, by contacting the appropriate Federal Reserve Bank and from the Board's Freedom of Information Office at <https://www.federalreserve.gov/foia/request.htm>. Interested persons may express their views in writing on the question whether the proposal complies with the standards of section 4 of the BHC Act.

Comments received are subject to public disclosure. In general, comments received will be made available without change and will not be modified to remove personal or business information including confidential, contact, or other identifying information. Comments should not

include any information such as confidential information that would not be appropriate for public disclosure.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors, Ann E. Misback, Secretary of the Board, 20th Street and Constitution Avenue NW, Washington DC 20551-0001, not later than September 12, 2024.

A. Federal Reserve Bank of Kansas City (Jeffrey Imgarten, Assistant Vice President) 1 Memorial Drive, Kansas City, Missouri, 64198-0001. Comments can also be sent electronically to KCApplicationComments@kc.frb.org:

1. *Antelope Bancshares, Inc., Elgin, Nebraska; to engage in extending credit and servicing loans pursuant to section 225.28(b)(1) of the Board's Regulation Y.*

BILLING CODE P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Supplemental Evidence and Data Request on Medical Therapies for Locally Advanced Gastric Adenocarcinoma

AGENCY: Agency for Healthcare Research and Quality (AHRQ), HHS. **ACTION:** Request for Supplemental Evidence and Data Submission **SUMMARY:** The Agency for Healthcare Research and Quality (AHRQ) is seeking scientific information submissions from the public. Scientific information is being solicited to inform our review on *Medical Therapies for Locally Advanced Gastric Adenocarcinoma*, which is currently being conducted by the AHRQ's Evidence-based Practice

Centers (EPC) Program. Access to published and unpublished pertinent scientific information will improve the quality of this review.

DATES: *Submission Deadline* on or before September 27, 2024.

ADDRESSES:

Email submissions: epc@ahrq.hhs.gov.

Print submissions:

Mailing Address: Center for Evidence and Practice Improvement, Agency for Healthcare Research and Quality, ATTN: EPC SEADs Coordinator, 5600 Fishers Lane, Mail Stop 06E53A, Rockville, MD 20857

Shipping Address (FedEx, UPS, etc.):

Center for Evidence and Practice Improvement, Agency for Healthcare Research and Quality, ATTN: EPC SEADs Coordinator, 5600 Fishers Lane, Mail Stop 06E77D, Rockville, MD 20857

FOR FURTHER INFORMATION CONTACT:

Kelly Carper, Telephone: 301-427-1656 or Email: epc@ahrq.hhs.gov.

SUPPLEMENTARY INFORMATION: The Agency for Healthcare Research and Quality has commissioned the Evidence-based Practice Centers (EPC) Program to complete a review of the evidence for *Medical Therapies for Locally Advanced Gastric Adenocarcinoma*. AHRQ is conducting this review pursuant to Section 902 of the Public Health Service Act, 42 U.S.C. 299a.

The EPC Program is dedicated to identifying as many studies as possible that are relevant to the questions for each of its reviews. In order to do so, we are supplementing the usual manual and electronic database searches of the literature by requesting information from the public (e.g., details of studies conducted). We are looking for studies that report on *Medical Therapies for Locally Advanced Gastric Adenocarcinoma*. The entire research protocol is available online at: <https://effectivehealthcare.ahrq.gov/products/gastric-cancers/protocol>.

This is to notify the public that the EPC Program would find the following information on *Medical Therapies for Locally Advanced Gastric Adenocarcinoma* helpful:

- A list of completed studies that your organization has sponsored for this topic. In the list, please *indicate whether results are available on ClinicalTrials.gov along with the ClinicalTrials.gov trial number.*

- *For completed studies that do not have results on ClinicalTrials.gov*, a summary, including the following elements, if relevant: study number, study period, design, methodology,

indication and diagnosis, proper use instructions, inclusion and exclusion criteria, primary and secondary outcomes, baseline characteristics, number of patients screened/eligible/enrolled/lost to follow-up/withdrawn/analyzed, effectiveness/efficacy, and safety results.

- *A list of ongoing studies that your organization has sponsored for this topic.* In the list, please provide the *ClinicalTrials.gov* trial number or, if the trial is not registered, the protocol for the study including, if relevant, a study number, the study period, design, methodology, indication and diagnosis, proper use instructions, inclusion and exclusion criteria, and primary and secondary outcomes.

- Description of whether the above studies constitute *ALL Phase II and above clinical trials* sponsored by your organization for this topic and an index outlining the relevant information in each submitted file.

Your contribution is very beneficial to the Program. Materials submitted must be publicly available or able to be made public. Materials that are considered confidential; marketing materials; study types not included in the review; or information on topics not included in the review cannot be used by the EPC Program. This is a voluntary request for information, and all costs for complying with this request must be borne by the submitter.

The draft of this review will be posted on AHRQ's EPC Program website and available for public comment for a period of 4 weeks. If you would like to be notified when the draft is posted, please sign up for the email list at: <https://effectivehealthcare.ahrq.gov/email-updates>.

The review will answer the following questions. This information is provided as background. AHRQ is not requesting that the public provide answers to these questions.

Key Questions (KQ)

KQ1: What is the comparative effectiveness and comparative harms of medical therapies for management of non-metastatic, locally advanced gastric adenocarcinoma?

KQ2: Do treatment effectiveness and harms vary by cancer stage, histology (e.g. intestinal, diffuse, signet ring cell), biomarkers (e.g. microsatellite instability-high [MSI-H] or mismatch repair-deficient [MMR-deficient], claudin, human epidermal growth factor receptor 2 [HER-2], programmed death-ligand 1 [PDL1], Epstein-Barr virus [EBV]), or genetic predisposition (e.g. cadherin-1 [CDH1])?

KQ3: Do treatment effectiveness and harms vary by age, functional status (e.g. Karnofsky score, Eastern Cooperative Oncology Group [ECOG] Performance Status score), medical comorbidities or conditions that increase risk of toxicity with specific therapy (e.g. existing neuropathy, prior radiation therapy, history of autoimmune disease)?

PICOTS (POPULATION, INTERVENTIONS, COMPARATORS, OUTCOMES, TIMING, AND SETTING)

PICOTS	Inclusion	Exclusion
Population	All KQs: Adults (18 years or older) with primary, non-recurrent, non-metastatic locally advanced gastric adenocarcinoma stage T2N0 or higher. KQ1: Subgroups of interest may include patients who previously received endoscopic therapy or surgery, patients who are non-surgical candidates, and patients with initially unresectable disease. KQ2: Subgroups of interest may include patients with gastroesophageal junction (GEJ) cancer.	Recurrent cancer, metastatic cancer, early stage (T1aN0 and T1bN0), stage 4 cancer, GEJ cancer patients treated in a predominantly esophageal cancer cohort with an esophageal treatment paradigm, gastrointestinal stromal tumors (GIST), neuroendocrine tumors, gastric lymphoma, MALToma, other rare gastric cancers.
Interventions	All KQs. Cancer-directed medical therapies administered either alone or in any combination, and may be neoadjuvant, adjuvant, or perioperative (neoadjuvant and adjuvant) and in any sequence: <ul style="list-style-type: none"> • Chemotherapy including but not limited to: Fluoropyrimidine-based therapy: FOLFOX, XELOX, FLOT, SOX, ECF. • Radiation including but not limited to external beam radiation, intra-operative electron radiation. • Chemoradiation • HIPEC • Immunotherapy (e.g., ipilimumab, nivolumab) • Targeted therapy (e.g., anti-HER2 monoclonal antibodies). 	<ul style="list-style-type: none"> • Surgical management exclusively. • Intervention is not well specified (e.g., study reports intervention as “adjuvant chemotherapy” without describing the regimen). • Palliative interventions.
Comparators	All KQs <ul style="list-style-type: none"> • Any comparator • No comparator (for biomarker-targeted interventions) 	N/A.
Outcomes	All KQs <ul style="list-style-type: none"> • Overall survival • Progression-free survival • Nutritional assessment • Quality of life, using validated scales • Direct moderate-severe treatment adverse events (grade 3, 4, 5). • Direct mild treatment adverse events (grade 1, 2) • Indirect adverse events from treatment (e.g., long-term opioid use for pain management). 	N/A.
Timing	All KQs: Any follow-up duration for grade 3–5 or indirect adverse events and quality of life; minimum of 1 year for grade 1–2 adverse events; minimum of 3 months for remaining outcomes.	N/A.
Setting	All KQs: <ul style="list-style-type: none"> • Countries rated as very high on the 2024 Human Development Index (if study is multinational, at least one study center is in a country rated very high). 	N/A.
Study Design and Other Criteria.	All KQs: <ul style="list-style-type: none"> • Randomized controlled trials • Non-randomized studies of interventions (experimental or observational) with a concurrent comparator and well-controlled for confounding (at minimum account for age, stage, functional status, and comorbidities). • Single-arm studies (for biomarker-targeted interventions) • Published in English-language • Published in 2006 or later 	Case reports, case series, commentaries, cross-sectional studies, reviews, qualitative studies.

Abbreviations: ECF = epirubicin, cisplatin, fluorouracil; FLOT = fluorouracil, leucovorin, oxaliplatin and docetaxel; FOLFOX = leucovorin, fluorouracil, and oxaliplatin; HER2 = human epidermal growth factor receptor 2; HIPEC = hyperthermic intraperitoneal chemotherapy; KQ = key question; SOX = tegafur, gimeracil, oteracil, and oxaliplatin; XELOX = capecitabine and oxaliplatin.

Marquita Cullom,
Associate Director.

[FR Doc. 2024-19344 Filed 8-27-24; 8:45 am]

BILLING CODE 4160-90-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Disease Control and Prevention

Notice of Award of a Single Source Cooperative Agreement To Fund California Department of Public Health; Chicago Department of Public Health; Delaware Department of Health and Social Services; Florida Department of Health; Georgia Department of Public Health; Houston Department of Health and Human Services; Illinois Department of Public Health; Indiana State Department of Health; Los Angeles County Department of Public Health; Michigan Department of Health and Human Services; Mississippi State Department of Health; New Jersey Department of Health and Senior Services; New York City Department of Health and Mental Hygiene; New York State Department of Health; North Carolina Department of Health and Human Services; Oregon Health Authority; Pennsylvania Department of Health; Philadelphia Department of Public Health; Puerto Rico Department of Health; San Francisco Department of Public Health; Texas Department of State Health Services; Virginia Department of Health; and Washington State Department of Health

AGENCY: Centers for Disease Control and Prevention (CDC), Department of Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Disease Control and Prevention (CDC), located within the Department of Health and Human Services (HHS), announces 23 separate awards to fund the California Department of Public Health; Chicago Department of Public Health; Delaware Department of Health and Social Services; Florida Department of Health; Georgia Department of Public Health; Houston Department of Health and

Human Services; Illinois Department of Public Health; Indiana State Department of Health; Los Angeles County Department of Public Health; Michigan Department of Health and Human Services; Mississippi State Department of Health; New Jersey Department of Health and Senior Services; New York City Department of Health and Mental Hygiene; New York State Department of Health; North Carolina Department of Health and Human Services; Oregon Health Authority; Pennsylvania Department of Health; Philadelphia Department of Public Health; Puerto Rico Department of Health; San Francisco Department of Public Health; Texas Department of State Health Services; Virginia Department of Health; and Washington State Department of Health.

The total amount of awards is approximately \$16,305,555 in Federal Fiscal Year (FFY) 2025, with an expected total funding of approximately \$81,527,775 for the five-year period of performance, subject to availability of funds. The awards will support implementation of the Medical Monitoring Project (MMP), an ongoing public health surveillance program funded since 2005 and designed to learn more about the experiences and needs of adults aged 18 or older living with HIV (PWH) in the United States.

DATES: The period for these awards will be June 1, 2025, through May 31, 2030.

FOR FURTHER INFORMATION CONTACT: Jason Crow, National Center for HIV, Viral Hepatitis, STD and TB Prevention, Centers for Disease Control and Prevention, 1600 Clifton Road, MS H24-5, Atlanta, GA 30333, Telephone: (404) 639-6395, E-Mail: jcrow@cdc.gov.

SUPPLEMENTARY INFORMATION: The single source award will support the collection of comprehensive clinical and behavioral information from persons carefully sampled to represent everyone diagnosed with HIV in the U.S. The data are collected through in-person or telephone interviews with participants and a two-year medical chart abstraction for all persons who have been in care. MMP produces nationally representative data on important sociodemographic, behavioral, and clinical characteristics among PWH in the U.S. MMP reports essential data on barriers to care and viral suppression, including social determinants of health and indicators of quality of life among PWH that are used to plan and monitor state and local HIV programs, inform national HIV clinical guidelines and assess national progress towards meeting the goals of the National HIV/AIDS Strategy for the United States

2022-2025, the Ending the HIV Epidemic in the United States (EHE) initiative, the HIV Care Continuum, and CDC's High-Impact Prevention (HIP) approach.

The 23 previously listed state, local and territorial health departments are in a unique position to conduct this work as (1) they are the only entities with legal authority to mandate the collection of public health surveillance data in their jurisdictions, (2) they can continue monitoring and reporting MMP data without lapse and (3) their selection can ensure adherence to the project's established scientific sampling strategy that ensures the national representativeness of MMP data.

Summary of the Award

Recipient: California Department of Public Health; Chicago Department of Public Health; Delaware Department of Health and Social Services; Florida Department of Health; Georgia Department of Public Health; Houston Department of Health and Human Services; Illinois Department of Public Health; Indiana State Department of Health; Los Angeles County Department of Public Health; Michigan Department of Health and Human Services; Mississippi State Department of Health; New Jersey Department of Health and Senior Services; New York City Department of Health and Mental Hygiene; New York State Department of Health; North Carolina Department of Health and Human Services; Oregon Health Authority; Pennsylvania Department of Health; Philadelphia Department of Public Health; Puerto Rico Department of Health; San Francisco Department of Public Health; Texas Department of State Health Services; Virginia Department of Health; and Washington State Department of Health.

Purpose of the Award: The purpose of these awards is to support implementation of NOFO PS25-0008 Medical Monitoring Project (MMP), an ongoing public health surveillance program funded since 2005 and designed to learn more about the experiences and needs of adults aged 18 or older living with HIV (PWH) in the United States.

Amount of Award: The total amount of awards is approximately \$16,305,556 in Federal Fiscal Year (FFY) 2025, with an expected total funding of approximately \$81,527,780 for the five-year period of performance, subject to availability of funds. The below table lists proposed FFY 2025 award amounts per recipient, subject to availability of funds.

Recipient name	Proposed FY25 awards (subject to availability of funding)
California Department of Public Health	\$955,472
Chicago Department of Public Health	687,266
Delaware Health and Social Services	390,713
Florida Department of Health	1,034,315
Georgia Department of Public Health	817,044
Houston Health Department	738,464
Illinois Department of Public Health	516,350
Indiana State Department of Health	514,626
Los Angeles County Department of Public Health	874,378
Michigan Department of Health and Human Services	688,444
Mississippi State Department of Health	489,198
New Jersey Department of Health and Senior Services	898,374
New York City Department of Health and Mental Hygiene	1,306,704
New York State Department of Health	594,625
North Carolina Department of Health and Human Services	687,023
Oregon Health Authority	794,810
Pennsylvania Department of Health	524,656
Philadelphia Department of Public Health	579,853
Puerto Rico Department of Health	431,047
San Francisco Department of Public Health	643,882
Texas Department of State Health Services	735,652
Virginia Department of Health	664,068
Washington State Department of Health	738,592

Period of Performance: June 1, 2025, through May 31, 2030.

Authority: This program is authorized under Section 318 of the Public Health Service Act (42 U.S.C. 247c, as amended).

Dated: August 21, 2024.

Terrance Perry,

Acting Director, Office of Grants Services, Centers for Disease Control and Prevention.

[FR Doc. 2024-19298 Filed 8-27-24; 8:45 am]

BILLING CODE 4163-18-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Administration for Children and Families

Proposed Information Collection Activity; Title IV-E Programs Quarterly Financial Report (0970-0510)

AGENCY: Children’s Bureau, Administration on Children, Youth and Families, Administration for Children and Families, Department of Health and Human Services.

ACTION: Request for public comments.

SUMMARY: The Administration for Children and Families (ACF) Children’s

Bureau plans to submit revisions to an approved generic information collection (GenIC) under the umbrella generic: Generic Clearance for Financial Reports used for ACF Non-Discretionary Grant Programs (0970-0510). This request revises form CB-496, the Title IV-E Programs Quarterly Financial Report, used by title IV-E agencies to submit financial claims for the title IV-E entitlement grant programs.

DATES: *Comments due within 14 days of publication.* In compliance with the requirements of the Paperwork Reduction Act of 1995, ACF is soliciting public comment on the specific aspects of the information collection described above and below.

ADDRESSES: Copies of the proposed collection of information can be obtained and comments may be forwarded by emailing *infocollection@acf.hhs.gov*. All requests should be identified by the title of the information collection.

SUPPLEMENTARY INFORMATION:

Description: ACF programs require detailed financial information from their grantees that allows ACF to monitor various specialized cost categories within each program, to closely manage

program activities, and to have sufficient financial information to enable periodic thorough and detailed audits. Generic Clearance for Financial Reports used for ACF Non-Discretionary Grant Programs allows ACF programs to efficiently develop and receive approval for financial reports that are tailored to specific funding recipients and the associated needs of the program. For more information about the umbrella generic, see: https://www.reginfo.gov/public/do/PRAViewDocument?ref_nbr=202108-0970-002

This specific GenIC collects quarterly cost and caseload data for five title IV-E programs (*i.e.*, foster care, adoption assistance, guardianship assistance, prevention services, and kinship navigator). The requested changes include removing reporting items no longer needed, and the addition or revision of reporting lines and instructions required due to recent changes in program regulations, policy guidance, and other operational changes for which further information will enhance the administration of the program.

Respondents: Title IV-E agencies

ANNUAL BURDEN ESTIMATES

Title of information collection	Number of respondents	Annual frequency of responses	Hourly burden per response	Annual hourly burden
Form CB-496	67	4	23	6154

Comments: The Department specifically requests comments on (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Consideration will be given to comments and suggestions submitted within 14 days of this publication.

Authority: 42 U.S.C. 671(a)(6), 42 U.S.C. 671(a)(7), 42 U.S.C. 673(a)(8)(B) and 42 U.S.C. 674(a) and (b)

Mary C. Jones,

ACF/OPRE Certifying Officer.

[FR Doc. 2024-19253 Filed 8-27-24; 8:45 am]

BILLING CODE 4184-73-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2024-N-0008]

Patient Engagement Advisory Committee; Notice of Meeting—Patient-Centered Informed Consent in Clinical Study

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) announces a forthcoming public advisory committee meeting of the Patient Engagement Advisory Committee (the Committee). The general function of the Committee is to provide advice and recommendations to the Agency on FDA's regulatory issues. The meeting will be open to the public.

DATES: The meeting will be held on October 30, 2024, from 10 a.m. to 5 p.m. Eastern Time.

ADDRESSES: All meeting participants will be heard, viewed, captioned, and recorded for this advisory committee meeting via an online teleconferencing and/or video conferencing platform.

Answers to commonly asked questions about FDA advisory committee meetings may be accessed at: <https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm408555.htm>.

FOR FURTHER INFORMATION CONTACT:

Letise Williams, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 5407, Silver Spring, MD 20993-0002, Letise.Williams@fda.hhs.gov, 301-796-8398, or FDA Advisory Committee Information Line, 1-800-741-8138 (301-443-0572 in the Washington, DC area). A notice in the **Federal Register** about last-minute modifications that impact a previously announced advisory committee meeting cannot always be published quickly enough to provide timely notice. Therefore, you should always check the Agency's website at <https://www.fda.gov/AdvisoryCommittees/default.htm> and scroll down to the appropriate advisory committee meeting link, or call the advisory committee information line to learn about possible modifications before the meeting.

SUPPLEMENTARY INFORMATION:

Agenda: The meeting presentations will be heard, viewed, captioned, and recorded through an online teleconferencing and/or video conferencing platform. On October 30, 2024, the Committee will discuss and make recommendations on "Patient-Centered Informed Consent in Clinical Study of FDA-Regulated Medical Products." The individuals who volunteer to participate in clinical research play an integral role in advancing scientific knowledge and supporting the development of potentially life-saving therapies for patients in need. Informed consent is a key element in clinical studies and can be one of a patient's first interactions with the clinical community. Too often, however, informed consent forms are lengthy and difficult for potential research participants to understand. FDA has worked to improve informed consent over the years, including several recent activities such as developing a draft guidance in identifying key information in informed consent.

The Committee will provide recommendations on the informed consent process and the areas of focus of the informed consent. The Committee will also provide recommendations on factors to consider when communicating informed consent to clinical study participants to increase the likelihood of participants understanding the key elements of research.

FDA intends to make background material available to the public no later than 2 business days before the meeting. If FDA is unable to post the background material on its website prior to the

meeting, the background material will be made publicly available on FDA's website at the time of the advisory committee meeting, and the background material will be posted on FDA's website after the meeting. Background material and the link to the online teleconference and/or video conference meeting will be available at <https://www.fda.gov/AdvisoryCommittees/Calendar/default.htm>. Scroll down and select the appropriate advisory committee meeting link. The meeting will include slide presentations with audio and video components to allow the presentation of materials in a manner that most closely resembles an in-person advisory committee meeting.

Procedure: Interested persons may present data, information, or views, orally or in writing, on issues pending before the Committee. Written submissions may be made to the contact person (see **FOR FURTHER INFORMATION CONTACT**) on or before October 3, 2024. Oral presentations from the public will be scheduled between approximately 2 p.m. and 3 p.m. Eastern Time. Those individuals interested in making formal oral presentations should notify the contact person (see **FOR FURTHER INFORMATION CONTACT**) and submit a brief statement of the general nature of the evidence or arguments they wish to present, the names and addresses of proposed participants, and an indication of the approximate time requested to make their presentation on or before September 25, 2024. Time allotted for each presentation may be limited. If the number of registrants requesting to speak is greater than can be reasonably accommodated during the scheduled open public hearing session, FDA may conduct a lottery to determine the speakers for the scheduled open public hearing session. If the number of registrants requesting to speak during the open public hearing is greater than can be reasonably accommodated during the scheduled open hearing portion of the advisory committee meeting, FDA may conduct a lottery to determine the speakers who will be invited to participate. The contact person will notify interested persons regarding their request to speak by September 26, 2024.

Virtual Breakout Session: Individuals interested in participating in the virtual breakout scenario discussions will need to sign up to participate on or before October 16, 2024. The signup sheet, as well as additional information pertaining to the virtual scenario discussions, will be available at <https://www.fdalive.com/peac>. Everyone who signs up in advance and provides a valid email address will receive an

email at least 2 days prior to the meeting with information on how to access the virtual platform that will host the virtual breakout scenario discussions. Please note due to limited technology capacity, participation in the virtual breakout scenario discussions will be limited to 150 participants. Once capacity reaches 150 participants, the breakout session will be closed to additional participants. Additional information regarding the virtual breakout scenario discussions will be provided at <https://www.fdalive.com/peac>.

For press inquiries, please contact the Office of Media Affairs at fdaoma@fda.hhs.gov or 301-796-4540.

FDA welcomes the attendance of the public at its advisory committee meetings and will make every effort to accommodate persons with disabilities. If you require accommodations due to a disability, please contact AnnMarie Williams at Annmarie.Williams@fda.hhs.gov, or 240-507-6496 at least 7 days in advance of the meeting.

FDA is committed to the orderly conduct of its advisory committee meetings. Please visit our website at <https://www.fda.gov/AdvisoryCommittees/AboutAdvisoryCommittees/ucm111462.htm> for procedures on public conduct during advisory committee meetings.

Notice of this meeting is given under the Federal Advisory Committee Act (5 U.S.C. 1001 *et seq.*). This meeting notice also serves as notice that, pursuant to 21 CFR 10.19, the requirements in 21 CFR 14.22(b), (f), and (g) relating to the location of advisory committee meetings are hereby waived to allow for this meeting to take place using an online meeting platform. This waiver is in the interest of allowing greater transparency and opportunities for public participation, in addition to convenience for advisory committee members, speakers, and guest speakers. The conditions for issuance of a waiver under 21 CFR 10.19 are met.

Dated: August 23, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2020-N-0026]

Issuance of Priority Review Voucher; Rare Pediatric Disease Product; LIVMARLI (maralixibat)

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the issuance of a priority review voucher to the sponsor of a rare pediatric disease product application. The Federal Food, Drug, and Cosmetic Act (FD&C Act) authorizes FDA to award priority review vouchers to sponsors of approved rare pediatric disease product applications that meet certain criteria. FDA is required to publish notice of the award of the priority review voucher. FDA has determined that LIVMARLI (maralixibat), approved on September 29, 2021, manufactured by Mirum Pharmaceuticals, Inc., meets the criteria for a priority review voucher.

FOR FURTHER INFORMATION CONTACT: Cathryn Lee, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993-0002, 301-796-1394, Cathryn.Lee@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: FDA is announcing the issuance of a priority review voucher to the sponsor of an approved rare pediatric disease product application. Under section 529 of the FD&C Act (21 U.S.C. 360ff), FDA will award priority review vouchers to sponsors of approved rare pediatric disease product applications that meet certain criteria. FDA has determined that LIVMARLI (maralixibat), manufactured by Mirum Pharmaceuticals, Inc., meets the criteria for a priority review voucher. LIVMARLI (maralixibat) oral solution is indicated for the treatment of cholestatic pruritus in patients with Alagille syndrome (ALGS) 1 year of age and older.

For further information about the Rare Pediatric Disease Priority Review Voucher Program and for a link to the full text of section 529 of the FD&C Act, go to <https://www.fda.gov/ForIndustry/DevelopingProductsforRareDiseases/Conditions/RarePediatricDiseasePriorityVoucherProgram/default.htm>. For further information about LIVMARLI (maralixibat), go to the "Drugs@FDA" website at <https://>

www.accessdata.fda.gov/scripts/cder/daf/.

Dated: August 23, 2024.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2024-P-0805]

Determination That FENTANYL CITRATE Injections, Equivalent to 2.5 Milligram Base/50 Milliliter and Equivalent to 5 Milligram Base/100 Milliliter, Were Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) has determined that FENTANYL CITRATE Injections, equivalent to 2.5 milligram (mg) base/50 milliliter (mL) (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), were not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) for FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), if all other legal and regulatory requirements are met.

FOR FURTHER INFORMATION CONTACT: Swati Rawani, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6221, Silver Spring, MD 20993-0002, 240-402-9917, Swati.Rawani@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: Section 505(j) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)) allows the submission of an ANDA to market a generic version of a previously approved drug product. To obtain approval, the ANDA applicant must show, among other things, that the generic drug product: (1) has the same active ingredient(s), dosage form, route of administration, strength, conditions of use, and (with certain exceptions) labeling as the listed drug, which is a version of the drug that was previously approved; and (2) is bioequivalent to the listed drug. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain

approval of a new drug application (NDA).

Section 505(j)(7) of the FD&C Act requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the “Approved Drug Products With Therapeutic Equivalence Evaluations,” which is known generally as the “Orange Book.” Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug’s NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

A person may petition the Agency to determine, or the Agency may determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (§ 314.161 (21 CFR 314.161)). FDA may not approve an ANDA that does not refer to a listed drug.

FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), are the subject of NDA 215870, held by Exela Pharma Sciences, LLC, and initially approved on February 8, 2023. FENTANYL CITRATE is indicated in adult and pediatric patients ages 2 years and older for use as an opioid analgesic supplement in general anesthesia, for administration with a neuroleptic for the induction of anesthesia and as an adjunct in the maintenance of general anesthesia, and for use as an anesthetic agent with oxygen in selected high-risk patients, such as those undergoing open heart surgery or certain complicated neurological or orthopedic procedures.

Exela Pharma Sciences, LLC, has never marketed FENTANYL Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL). In a letter dated May 5, 2023, Exela Pharma Sciences, LLC, notified FDA that FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), were being discontinued, and FDA moved these drug products to the “Discontinued Drug Product List” section of the Orange Book. In previous instances (see, e.g., 72 FR 9763 (March 5, 2007) and 61 FR 25497 (May 21, 1996)), the Agency has determined that, for purposes of §§ 314.161 and 314.162, never marketing an approved drug product is equivalent to withdrawing the drug from sale.

Hyman, Phelps & McNamara, P.C., submitted a citizen petition dated February 13, 2024 (Docket No. FDA–2024–P–0805), under 21 CFR 10.30, requesting that the Agency determine whether FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), were withdrawn from sale for reasons of safety or effectiveness.

After considering the citizen petition and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), were not withdrawn for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that these drug products were withdrawn for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal of FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), from sale. We have reviewed the available evidence and determined that these drug products were not withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), in the “Discontinued Drug Product List” section of the Orange Book. The “Discontinued Drug Product List” delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to FENTANYL CITRATE Injections, EQ 2.5 mg base/50 mL (EQ 0.05 mg base/mL) and EQ 5 mg base/100 mL (EQ 0.05 mg base/mL), may be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for these drug products should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: August 23, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Substance Abuse and Mental Health Services Administration

Meetings of the Substance Abuse and Mental Health Services Administration's Tribal Technical Advisory Committee (TTAC), and Joint Meeting of the TTAC and Indian Health Service (IHS) National Tribal Advisory Committee on Behavioral Health (NTAC)

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Notice.

SUMMARY: Notice is hereby given for the meetings on September 17, 2024, of the Substance Abuse and Mental Health Services Administration's Tribal Technical Advisory Committee (TTAC); and on September 18, 2024, a joint meeting with the TTAC and Indian Health Service (IHS) National Tribal Advisory Committee on Behavioral Health (NTAC). Both meetings are open to the public and will be held in person and virtually. Agenda with call-in information will be posted on the SAMHSA website prior to the meeting at: <https://www.samhsa.gov/about-us/advisory-councils/meetings>. The TTAC meeting will include, but not be limited to, remarks from the Assistant Secretary for Mental Health and Substance Use; updates on SAMHSA priorities; follow up on topics related to the previous TTAC meetings; and council discussions. The joint meeting of the SAMHSA TTAC and IHS NTAC will include discussion on improving behavioral health for American Indian and Alaska Natives.

DATES:

September 17, 2024, 10:00 a.m. to 5:30 p.m. (PT) (TTAC).

September 18, 2024, 9:00 a.m. to 5:00 p.m. (PT) (SAMHSA TTAC/IHS NTAC).

ADDRESSES: Silver Reef Casino Resort, 4876 Haxton Way, Ferndale, WA 98248.

FOR FURTHER INFORMATION CONTACT:

Karen Hearod, CAPT, USPHS, Director, Office of Tribal Affairs Policy, 5600 Fishers Lane, Rockville, Maryland 20857 (mail); telephone: (202) 868-9931; email: karen.hearod@samhsa.hhs.gov

SUPPLEMENTARY INFORMATION: SAMHSA

TTAC provides a venue wherein Tribal leadership and SAMHSA staff can exchange information about public health issues, identify urgent mental health and substance abuse needs, and discuss collaborative approaches to addressing these behavioral health issues and needs.

TTAC meetings are exclusively between federal officials and elected officials of Tribal governments (or their designated employees) to exchange views, information, or advice related to the management or implementation of SAMHSA programs. The public may attend but are not allowed to participate in the meeting.

To obtain the call-in number, access code, and/or web access link; or request special accommodations for persons with disabilities, please register on-line at: <https://snacregister.samhsa.gov>, or communicate with Karen Heard.

Meeting information and a roster of TTAC members may be obtained either by accessing the SAMHSA Council's website at: <https://www.samhsa.gov/about-us/advisory-councils/>, or by contacting Karen Heard.

Authority: Executive Order No. 13175.

Dated: August 20, 2024.

Carlos Castillo,

Committee Management Officer, SAMHSA.

BILLING CODE 4162-20-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2024-0286]

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625-0020

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: without change. 1625-0020, Security Zones, Regulated Navigation Areas, and Safety Zones; without change. Our ICR describes the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before October 28, 2024.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG-2024-0286] to the Coast Guard using the Federal eRulemaking Portal at <https://www.regulations.gov>. See the "Public participation and

request for comments" portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG-6P), Attn: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, STOP 7710, Washington, DC 20593-7710.

FOR FURTHER INFORMATION CONTACT: A.L. Craig, Office of Privacy Management, telephone 202-475-3528, fax 202-372-8405, or email hqs-dg-m-cg-61-pii@uscg.mil for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. 3501 *et seq.*, chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology.

In response to your comments, we may revise this ICR or decide not to seek an extension of approval for the Collection. We will consider all comments and material received during the comment period.

We encourage you to respond to this request by submitting comments and related materials. Comments must contain the OMB Control Number of the ICR and the docket number of this request, USCG-2024-0286, and must be received by October 28, 2024.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov>. If your material cannot be submitted using <https://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

Information Collection Request

Title: Security Zones, Regulated Navigation Areas, and Safety Zones.

OMB Control Number: 1625-0020.

Summary: The Coast Guard collects this information only when someone seeks a security zone, regulated navigation area, or safety zone. It uses the information to assess the need to establish one of these areas.

Need: Sections 70034 and 70051 of 46 U.S. Code, and parts 6 and 165 of 33 CFR give the Coast Guard Captain of the Port (COTP) the authority to designate security zones in the U.S. for as long as the COTP deems necessary to prevent damage or injury. Section 70001 of 46 U.S. Code authorizes the Coast Guard to prescribe rules to control vessel traffic in areas he or she deems hazardous because of reduced visibility, adverse weather, or vessel congestion. Section 70011 of 46 U.S. Code authorizes the Coast Guard to establish rules to allow the designation of safety zones where access is limited to authorized persons, vehicles, or vessels to protect the public from hazardous situations.

Forms: None.

Respondents: Federal, State, and local government agencies, owners and operators of vessels and facilities.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 928 hours to 485 hours a year, due to a decrease in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: August 23, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG–2024–0287]

Information Collection Request to Office of Management and Budget; OMB Control Number: 1625–0022

AGENCY: Coast Guard, DHS.

ACTION: Sixty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995, the U.S. Coast Guard intends to submit an Information Collection Request (ICR) to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625–0022, Application for Tonnage Measurement of Vessels; without change.

Our ICR describes the information we seek to collect from the public. Before submitting this ICR to OIRA, the Coast Guard is inviting comments as described below.

DATES: Comments must reach the Coast Guard on or before October 28, 2024.

ADDRESSES: You may submit comments identified by Coast Guard docket number [USCG–2024–0287] to the Coast Guard using the Federal eRulemaking Portal at <https://www.regulations.gov>. See the “Public participation and request for comments” portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG–6P), Attn: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, STOP 7710, Washington, DC 20593–7710.

FOR FURTHER INFORMATION CONTACT: A.L. Craig, Office of Privacy Management, telephone 202–475–3528, fax 202–372–8405, or email hqs-dg-m-cg-61-pii@uscg.mil for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request For Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. 3501 *et seq.*, chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection’s purpose, the Collection’s likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology.

In response to your comments, we may revise this ICR or decide not to seek an extension of approval for the Collection. We will consider all comments and material received during the comment period.

We encourage you to respond to this request by submitting comments and related materials. Comments must contain the OMB Control Number of the ICR and the docket number of this request, USCG–2024–0287, and must be received by October 28, 2024.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov>. If your material cannot be submitted using <https://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website’s instructions. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive. Additionally, if you go to the online docket and sign

up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS’s eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

Information Collection Request

Title: Application for Tonnage Measurement of Vessels.

OMB Control Number: 1625–0022.

Summary: The information is used by the Coast Guard to determine a vessel’s tonnage. Tonnage in turn helps to determine licensing, inspection, safety requirements, and operating fees.

Need: Under 46 U.S.C. 14104 certain vessels must be measured for tonnage. Coast Guard regulations for this measurement are contained in 46 CFR part 69.

Forms: • CG–5397, Application for Simplified Measurement.

Respondents: Owners of vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 15,094 hours to 38,157 hours a year, due to an increase in the estimated annual number of respondents.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: August 23, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

Information Collection Request

Title: Plan Approval and Records for Subdivision and Stability Regulations—Title 46 CFR Subchapter S.

OMB Control Number: 1625–0064.

Summary: The regulations require owners, operators, or masters of certain inspected vessels to obtain and/or post various documents as part of the Coast Guard commercial vessel safety program.

Need: 46 U.S.C. 3306 authorizes the Coast Guard to prescribe regulations for the safety of certain vessels. 46 CFR Subchapter S contains the Coast Guard regulations regarding subdivision and stability.

Forms: None.

Respondents: Owners, operators, and masters of vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has increased from 7,193 hours to 8,288 hours a year, due to an increase in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. chapter 35, as amended.

Dated: August 23, 2024.

Coast Guard

[Docket No. USCG–2024–0340]

Collection of Information Under Review by Office of Management and Budget; OMB Control Number 1625–0097

AGENCY: Coast Guard, DHS.

ACTION: Thirty-day notice requesting comments.

SUMMARY: In compliance with the Paperwork Reduction Act of 1995 the U.S. Coast Guard is forwarding an Information Collection Request (ICR), abstracted below, to the Office of Management and Budget (OMB), Office of Information and Regulatory Affairs (OIRA), requesting an extension of its approval for the following collection of information: 1625–0097, Plan Approval and Records for Marine Engineering Systems; without change. Our ICR describes the information we seek to collect from the public. Review and comments by OIRA ensure we only impose paperwork burdens commensurate with our performance of duties.

DATES: You may submit comments to the Coast Guard and OIRA on or before September 27, 2024.

ADDRESSES: Comments to the Coast Guard should be submitted using the Federal eRulemaking Portal at <https://www.regulations.gov>. Search for docket number [USCG–2024–0340]. Written comments and recommendations to OIRA for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>.

Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

A copy of the ICR is available through the docket on the internet at <https://www.regulations.gov>. Additionally, copies are available from: Commandant (CG-6P), Attn: Paperwork Reduction Act Manager, U.S. Coast Guard, 2703 Martin Luther King Jr. Ave. SE, STOP 7710, Washington, DC 20593-7710.

FOR FURTHER INFORMATION CONTACT: A.L. Craig, Office of Privacy Management, telephone 202-475-3528, fax 202-372-8405, or email hqs-dg-m-cg-61-pii@uscg.mil for questions on these documents.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. 3501 *et seq.*, chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, USCG-2024-0340, and must be received by September 27, 2024.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov>. If your material cannot be submitted using <https://www.regulations.gov>, contact the person

in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the <https://www.reginfo.gov>, comment-submission web page. OIRA posts its decisions on ICRs online at <https://www.reginfo.gov/public/do/PRAMain> after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625-0097.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 48905 June 10, 2024) required by 44 U.S.C. 3506(c)(2). That notice elicited no comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Plan Approval and Records for Marine Engineering Systems—46 CFR Subchapter F.

OMB Control Number: 1625-0097.

Summary: This collection of information requires an owner or builder of a commercial vessel to submit to the U.S. Coast Guard for review and approval, plans pertaining to marine engineering systems to ensure that the vessel will meet regulatory standards.

Need: Under 46 U.S.C. 3306, the Coast Guard is authorized to prescribe vessel safety regulations including those related to marine engineering systems. Title 46 CFR Subchapter F prescribes those requirements. The rules provide the specifications, standards and requirements for strength and adequacy of design, construction, installation, inspection, and choice of materials for machinery, boilers, pressure vessels, safety valves, and piping systems upon which safety of life is dependent.

Forms: None.

Respondents: Owners and operators of commercial vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 5,793 hours to 2,404 hours a year, due to a decrease in the estimated annual number of responses.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.*, chapter 35, as amended.

Dated: August 23, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

[Docket No. USCG-2024-0732]

Certificate of Alternative Compliance for the CHARYBDIS

AGENCY: Coast Guard, DHS.

ACTION: Notification of issuance of a Certificate of Alternative Compliance.

SUMMARY: The Coast Guard announces that the Chief of the Prevention Division, Fifth Coast Guard District, has issued a certificate of alternative compliance from the International Regulations for Preventing Collisions at Sea, 1972 (72 COLREGS), for the CHARYBDIS, O.N. 1346442. We are issuing this notice because its publication is required by statute. Due to the unique construction of this vessel CHARYBDIS cannot fully comply with the light, shape, or sound signal provisions of the 72 COLREGS without interfering with the vessel's design and construction. This notification of issuance of a certificate of alternative compliance promotes the Coast Guard's marine safety mission.

DATES: The Certificate of Alternative Compliance was issued on August 21, 2024.

FOR FURTHER INFORMATION CONTACT: For information or questions about this notice call or email Mr. Julio A. Martinez, Marine Safety Specialist, Prevention Division, Fifth Coast Guard District, U.S. Coast Guard; telephone (757) 398-6689, email julio.a.martinez@uscg.mil.

SUPPLEMENTARY INFORMATION: The United States is signatory to the International Maritime Organization's International Regulations for Preventing Collisions at Sea, 1972 (72 COLREGS),

as amended. The special construction or purpose of some vessels makes them unable to comply with the light, shape, or sound signal provisions of the 72 COLREGS. Under statutory law, however, specified 72 COLREGS provisions are not applicable to a vessel of special construction or purpose if the Coast Guard determines that the vessel cannot comply fully with those requirements without interfering with the special function of the vessel.¹

The owner, builder, operator, or agent of a special construction or purpose vessel may apply to the Coast Guard District Office in which the vessel is being built or operated for a determination that compliance with alternative requirements is justified,² and the Chief of the Prevention Division would then issue the applicant a certificate of alternative compliance (COAC) if he or she determines that the vessel cannot comply fully with 72 COLREGS light, shape, and sound signal provisions without interference with the vessel's special function.³ If the Coast Guard issues a COAC, it must publish notice of this action in the **Federal Register**.⁴

The Chief of the Prevention Division, Fifth Coast Guard District, certifies that the CHARYBDIS, O.N. 1346442, is a vessel of special construction or purpose, and that, with respect to the horizontal positioning of the Aft Masthead Light, and the horizontal sector of the Restricted in Ability to Maneuver (RAM) and Not Under Command (NUC) all-around lights, it is not possible to comply fully with the requirements of the provisions enumerated in the 72 COLREGS, without interfering with the normal operation, construction, or design of the vessel. The Chief of the Prevention Division, Fifth Coast Guard District, further finds and certifies that the Aft Masthead Light carried at a horizontal distance of 23 feet-⁷/₈ inches abaft the Forward Masthead Light, and the installation of two separate sets of all-around RAM/NUC lights, one on the port side and one on the starboard side, each 88 feet-⁷/₁₆ inches athwartship the fore and aft centerline is in the closest possible compliance with the applicable provisions of the 72 COLREGS.⁵

This notice is issued under authority of 33 U.S.C. 1605(c) and 33 CFR 81.18.

Dated: August 21, 2024.

Matthew J. Meskun,

Captain, U.S. Coast Guard, Chief, Prevention Division, Fifth Coast Guard District.

SUPPLEMENTARY INFORMATION:

Public Participation and Request for Comments

This notice relies on the authority of the Paperwork Reduction Act of 1995; 44 U.S.C. 3501 *et seq.*, chapter 35, as amended. An ICR is an application to OIRA seeking the approval, extension, or renewal of a Coast Guard collection of information (Collection). The ICR contains information describing the Collection's purpose, the Collection's likely burden on the affected public, an explanation of the necessity of the Collection, and other important information describing the Collection. There is one ICR for each Collection.

The Coast Guard invites comments on whether this ICR should be granted based on the Collection being necessary for the proper performance of Departmental functions. In particular, the Coast Guard would appreciate comments addressing: (1) the practical utility of the Collection; (2) the accuracy of the estimated burden of the Collection; (3) ways to enhance the quality, utility, and clarity of information subject to the Collection; and (4) ways to minimize the burden of the Collection on respondents, including the use of automated collection techniques or other forms of information technology. These comments will help OIRA determine whether to approve the ICR referred to in this Notice.

We encourage you to respond to this request by submitting comments and related materials. Comments to Coast Guard or OIRA must contain the OMB Control Number of the ICR. They must also contain the docket number of this request, USCG-2024-0382, and must be received by September 27, 2024.

Submitting Comments

We encourage you to submit comments through the Federal eRulemaking Portal at <https://www.regulations.gov>. If your material cannot be submitted using <https://www.regulations.gov>, contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions. Documents mentioned in this notice, and all public comments, are in our online docket at <https://www.regulations.gov> and can be viewed by following that website's instructions. We review all comments received, but we may choose not to post off-topical, inappropriate, or duplicate

comments that we receive. Additionally, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted.

We accept anonymous comments. Comments we post to <https://www.regulations.gov> will include any personal information you have provided. For more about privacy and submissions to the Coast Guard in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020). For more about privacy and submissions to OIRA in response to this document, see the <https://www.reginfo.gov>, comment-submission web page. OIRA posts its decisions on ICRs online at <https://www.reginfo.gov/public/do/PRAMain> after the comment period for each ICR. An OMB Notice of Action on each ICR will become available via a hyperlink in the OMB Control Number: 1625-0045.

Previous Request for Comments

This request provides a 30-day comment period required by OIRA. The Coast Guard published the 60-day notice (89 FR 48904, June 10, 2024) required by 44 U.S.C. 3506(c)(2). That notice elicited no comments. Accordingly, no changes have been made to the Collection.

Information Collection Request

Title: Adequacy Certification for Reception Facilities and Advance Notice—33 CFR part 158.

OMB Control Number: 1625-0045.

Summary: This information helps ensure that waterfront facilities are in compliance with reception facility standards. Advance notice information from vessels ensure effective management of reception facilities.

Need: Section 1905 of Title 33 U.S.C. gives the Coast Guard the authority to certify the adequacy of reception facilities in ports. Reception facilities are needed to receive waste from ships which may not discharge at sea. Under the regulations in 33 CFR part 158 there are discharge limitations for oil and oily waste, noxious liquid substances, plastics and other garbage.

Forms:

- CG-5401, Certificate of Adequacy for Reception Facility
- CG-5401A, Application for a Reception Facility Certificate of Adequacy (COA) for Oil, Form A
- CG-5401B, Application for a Reception Facility Certificate of Adequacy (COA) for Noxious Liquid Substance (NLS) Residues and Mixtures Containing NLS Residues, Form B
- CG-5401C, Application for a Reception Facility Certificate of Adequacy for Garbage, Form C

- CG-5401D, Application for a Reception Facility Certificate of Adequacy for Ozone Depletion Substances and Exhaust Gas Cleaning System Residue, Form D
- CG-5401X, Certificate of Adequacy (COA) Application

Why is the Coast Guard proposing a new form: The Coast Guard is adding a new optional form CG-5401X to streamline the application process. The new form may be used when a facility is applying for more than one COA type (*i.e.*, MARPOL Annex category). The COA types are—Oil Residue (Annex I), Noxious Liquid Substances (Annex II), Garbage (Annex V), Ozone Depleting Substances (Annex VI) and Exhaust Gas Cleaning Systems (Annex VI).

Respondents: Owners and operators of reception facilities, and owners and operators of vessels.

Frequency: On occasion.

Hour Burden Estimate: The estimated burden has decreased from 4,167 hours to 3,963 hours a year, due to the estimated decrease in time to complete a COA application.

Authority: The Paperwork Reduction Act of 1995; 44 U.S.C. *et seq.*, chapter 35, as amended.

Dated: August 23, 2024.

Kathleen Claffie,

Chief, Office of Privacy Management, U.S. Coast Guard.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

[Docket ID FEMA-2014-0022]

Technical Mapping Advisory Council; Meeting

AGENCY: Federal Emergency Management Agency, Department of Homeland Security.

ACTION: Notice of Open Federal advisory committee meeting.

SUMMARY: The Federal Emergency Management Agency (FEMA) Technical Mapping Advisory Council (TMAC) will hold a virtual meeting on Tuesday, November 19, 2024. The meeting will be open to the public via a Microsoft Teams Video Communications link. **DATES:** The TMAC will meet on Tuesday, November 19, 2024, from 8:00 a.m. to 5:00 p.m. Eastern Time (ET). Please note that the meeting will close early if the TMAC has completed its business.

ADDRESSES: The meeting will be held virtually using the following Microsoft Teams Video Communications link

(<https://tinyurl.com/44k78fd5>).

Members of the public who wish to attend the virtual meeting must register in advance by sending an email to FEMA-TMAC@fema.dhs.gov (Attn: Brian Koper) by 5:00 p.m. ET on Thursday, November 14, 2024.

To facilitate public participation, members of the public are invited to provide written comments on the issues to be considered by the TMAC, as listed in the **SUPPLEMENTARY INFORMATION** caption below. Associated meeting materials will be available upon request on Friday, November 15, 2024. To receive a copy of any relevant materials, please send the request to: FEMA-TMAC@fema.dhs.gov (Attn: Brian Koper). Written comments to be considered by the committee at the time of the meeting must be submitted and received by Thursday, November 14, 2024, 5:00 p.m. ET identified by Docket ID FEMA-2014-0022, and submitted by the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Email:* Address the email to FEMA-TMAC@fema.dhs.gov. Include the docket number in the subject line of the message. Include name and contact information in the body of the email.

Instructions: All submissions received must include the words “Federal Emergency Management Agency” and the docket number for this action. Comments received will be posted without alteration at <http://www.regulations.gov>, including any personal information provided. You may wish to review the Privacy and Security Notice via a link on the homepage of <http://www.regulations.gov>.

Docket: For docket access to read background documents or comments received by the TMAC, go to <http://www.regulations.gov> and search for the Docket ID FEMA-2014-0022.

A public comment period will be held on Tuesday, November 19, 2024, from 3:30 p.m. to 4:00 p.m. ET. The public comment period will not exceed 30 minutes. Please note that the public comment period may end before the time indicated, following the last call for comments. Contact the individual listed below to register as a speaker by Thursday, November 14, 2024, 5:00 p.m. ET. Please be prepared to submit a written version of your public comment by Monday, November 18, 2024, 5:00 p.m. ET.

FEMA is committed to ensuring all participants have equal access regardless of disability status. If you require reasonable accommodation to fully participate due to a disability,

please contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** caption as soon as possible.

FOR FURTHER INFORMATION CONTACT: Brian Koper, Designated Federal Officer for the TMAC, FEMA, 400 C St. SW, Washington, DC 20472, telephone 202-646-3085, and email brian.koper@fema.dhs.gov. The TMAC website is: <https://www.fema.gov/flood-maps/guidance-partners/technical-mapping-advisory-council>.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the *Federal Advisory Committee Act*, Public Law 117-286, 5 U.S.C. ch. 10.

In accordance with the *Biggert-Waters Flood Insurance Reform Act of 2012*, the TMAC makes recommendations to the FEMA Administrator on: (1) how to improve, in a cost-effective manner, the (a) accuracy, general quality, ease of use, and distribution and dissemination of flood insurance rate maps and risk data; and (b) performance metrics and milestones required to effectively and efficiently map flood risk areas in the United States; (2) mapping standards and guidelines for (a) flood insurance rate maps, and (b) data accuracy, data quality, data currency, and data eligibility; (3) how to maintain, on an ongoing basis, flood insurance rate maps and flood risk identification; (4) procedures for delegating mapping activities to State and local mapping partners; and (5) (a) methods for improving interagency and intergovernmental coordination on flood mapping and flood risk determination, and (b) a funding strategy to leverage and coordinate budgets and expenditures across Federal agencies. Furthermore, the TMAC is required to submit an annual report to the FEMA Administrator that contains: (1) a description of the activities of the Council; (2) an evaluation of the status and performance of flood insurance rate maps and mapping activities to revise and update Flood Insurance Rate Maps; and (3) a summary of recommendations made by the Council to the FEMA Administrator.

Agenda: The purpose of this meeting is for the TMAC members to discuss and vote on the content of the 2024 TMAC Annual Report. Any related materials will be available upon request prior to the meeting to provide the public with an opportunity to review the materials. The full agenda and related meeting materials will be available upon request by Friday, November 15, 2024. To receive a copy of any relevant materials, please send the request to: *FEMA-*

TMAC@fema.dhs.gov (Attn: Brian Koper).

Nicholas A. Shufro,

Assistant Administrator (Acting), Risk Analysis, Planning & Information Directorate Resilience, FEMA.

BILLING CODE 9110-12-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-7080-N-38]

30-Day Notice of Proposed Information Collection: Paperwork Reduction Act Submission—Proposed Information Collection Revision for Housing Opportunities for Persons With AIDS (HOPWA) Program, OMB Control No.: 2506-0133

AGENCY: Office of Policy Development and Research, Chief Data Officer, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* September 27, 2024.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *OIRA_submission@omb.eop.gov* or *www.reginfo.gov/public/do/PRAMain*. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

Interested persons are also invited to submit comments regarding this proposal and comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Clearance Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410-5000; email *PaperworkReductionActOffice@hud.gov*.

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 7th Street SW, Room 8210, Washington, DC 20410;

email *Colette.Pollard@hud.gov* or telephone (202) 402-3400. This is not a toll-free number. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit <https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs>.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The *Federal Register* notice that solicited public comment on the information collection for a period of 60 days was published on May 21, 2024 at 89 FR 44698.

A. Overview of Information Collection

Title of Information Collection: Housing Opportunities for Persons with AIDS (HOPWA): Grant Reporting, Recordkeeping, and Closeout.

OMB Approval Number: 2506-0133.

Type of Request: Revision of currently approved collection.

Form Number: HUD-4153, HUD-4154, HUD-4155, SF-425, HOPWA closeout certification (HUD-4158).

Description of the need for the information and proposed use:

The current Paperwork Reduction Act approval under OMB Control No. 2506-0133 covers reporting, record keeping, and application requirements for both the HOPWA formula and competitive grant programs. The competitive grant program includes new competitive grants and renewal/replacement grants. This revision applies to reporting and closeout requirements for all HOPWA grantees.

This submission requests to add additional data elements to form HUD-4155, remove forms that are no longer needed, remove pre-award information that will be covered with a child submission through the HUD generic information collection request under OMB Control Number 2501-0044, adjust language in form HUD-4154, update form HUD-4153 to reflect published Notices of Funding Opportunity (NOFOs), and add grant closeout to the paperwork collection package with a new HOPWA grant closeout form.

The addition of information collection for grant closeout will apply to all HOPWA grantees. The use of a new HOPWA grant closeout certification form, the SF425, and all other relevant

reports to the grant project will ensure grantees are able to close active grants when the project is complete by determining that all applicable administrative actions and all required work of the grant have been completed by the grantee.

HUD systematically reviews and conducts data analysis in order to prepare national and individual grantee performance profiles that are not only used to measure program performance against benchmark goals and objectives, but also to communicate the program’s achievement and contributions towards

Departmental strategic goals. HUD plans to continue using the data elements in this submission for these purposes.

Respondents: HOPWA competitive and renewal grant applicants, and all HOPWA formula, competitive, and renewal grantees.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
Consolidated APR/CAPER data elements (HUD-4155)	258.00	1.00	258.00	40.00	10,320.00	\$28.73	\$296,493.60
HUD-4154, HIV Housing Care Continuum Model Report (new competitive SPNS grant only)	40.00	1.00	40.00	20.00	800.00	28.73	22,984.00
HUD-4153, SPNS Grant Model Report (new competitive SPNS grant only)	40.00	1.00	40.00	40.00	1,600.00	28.73	45,968.00
Recordkeeping for Competitive, PSH, and Formula Grantees	258.00	1.00	258.00	60.00	15,480.00	28.73	444,740.40
Grant Amendments (budget change, extension, or early termination)	30.00	1.00	30.00	6.00	180.00	28.73	5,171.40
Grant Closeout (closeout certification HUD-XXXX, SF425, and all financial, performance, and other reports required as a condition of the grant)	258.00	1.00	200.00	12.00	2,400.00	28.73	68,952.00
Total	884.00	826.00	30,780.00	884,309.40

HOPWA grantees and applicants may be required to respond to more than one piece of information collection. All annualized costs reflect staff time spent on tasks in the table. The hourly rate of \$28.73 is based on a GS-9 for Rest of United States. 10,320 hours * \$28.73 = \$296,493.

The estimated costs under this OMB approval number in this request is lower than previous approval. This accounts for the removal of forms HUD-40110-C/D, and removal of pre-award information. Updates on the chart also include the addition of grant closeout, increases for a larger number of new competitive SPNS grants, and higher hourly wage.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

- (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- (2) The accuracy of the agency’s estimate of the burden of the proposed collection of information;
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) Ways to minimize the burden of the collection of information on those who are to respond; including through

the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

(5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

HUD encourages interested parties to submit comment in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. 3507.

Colette Pollard,

Department Reports Management Officer, Office of Policy Development and Research, Chief Data Officer.

BILLING CODE 4210-67-P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[245A2100DD/AAKC001030/AOA501010.999900; OMB Control Number 1076-0120]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Bureau of Indian Education Adult Education Program

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Bureau of Indian Education (BIE) are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before September 27, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection request (ICR) should be sent within 30 days of publication of this notice to the Office of Information and Regulatory Affairs (OIRA) through https://www.reginfo.gov/public/do/PRA/icrPublicCommentRequest?ref_nbr=202405-1076-007 or by visiting <https://www.reginfo.gov/public/do/PRAMain> and selecting “Currently under Review—Open for Public Comments” and then scrolling down to the “Department of the Interior.”

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Steven Mullen, Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs, U.S. Department of the Interior, 1001 Indian School Road NW, Suite 229, Albuquerque, New Mexico 87104; comments@bia.gov; (202) 924-2650. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. You may also view the ICR at <https://www.reginfo.gov/public/Forward?SearchTarget=PRA&textfield=1076-0120>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on June 21, 2024 (89 FR 52076). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of

information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The BIE is seeking renewal of the approval for the information collection conducted under 25 CFR part 46 to manage program resources and for fiscal accountability and appropriate direct services documentation. This information includes an annual report form.

Title of Collection: Bureau of Indian Education Adult Education Program.

OMB Control Number: 1076-0120.

Form Number: BIA 62123.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Individuals (Tribal Adult Education Program Administrators).

Total Estimated Number of Annual Respondents: 70 per year, on average.

Total Estimated Number of Annual Responses: 70 per year, on average.

Estimated Completion Time per Response: 4 hours.

Total Estimated Number of Annual Burden Hours: 280 hours.

Respondent's Obligation: Required to Obtain a Benefit.

Frequency of Collection: Once per year.

Total Estimated Annual Nonhour Burden Cost: \$200.

Authority

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Steven Mullen,

Information Collection Clearance Officer, Office of Regulatory Affairs and Collaborative Action—Indian Affairs.

Please provide a copy of your comments to Federal Consulting Group, Attention: Lucy Adams, 1849 C St. NW MS 4320, Washington, DC 20240-0001, or via email to Luciana_adams@ios.doi.gov. Please reference OMB Control Number 1090-0008 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Federal Consulting Group, Attention: Lucy Adams, 1849 C St. NW MS 4320, Washington, DC 20240-0001, or via email to Luciana_adams@ios.doi.gov or by telephone at 202-513-7679. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to

comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on June 6, 2024 (89 FR 48440). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: The Office of Management and Budget regulation at 5 CFR 1320, which implements the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), requires that interested members of the public and affected agencies have an opportunity to comment on information collection and recordkeeping activities [see 5 CFR 1320.8(d)]. The Office of Employee

Development, Federal Consulting Group has submitted a request to Office of Management and Budget to renew its approval of this collection of information for three years.

This information collection activity provides a means to consistently assess, benchmark, and improve customer satisfaction with Federal government agency websites within the Executive Branch. The Federal Consulting Group of the Department of the Interior serves as the executive agent for this assessment to federal agencies.

The Website Satisfaction Surveys will be completed subject to the Privacy Act of 1974, Public Law 93-579, December 31, 1974 (5 U.S.C. 522a). The agency information collection will be used solely for the purpose of the survey. The contractor will not be authorized to release any agency information upon completion of the survey without first obtaining permission from the Federal Consulting Group and the participating agency. In no case shall any new system of records containing privacy information be developed by the Federal Consulting Group, participating agencies, or the contractor collecting the data. In addition, participating Federal agencies may only provide information used to randomly selected respondents from among established systems of records provided for such routine uses.

There is no other agency or organization able to provide the information accessible through the surveying approach used in this information collection. Further, the information will enable Federal agencies to determine customer satisfaction metrics with discrimination capability across variables. Thus, this information collection will assist Federal agencies in making the best use of resources in a targeted manner to improve service to the public.

This survey asks no questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, or other matters that are commonly considered private.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it is operating under a currently valid Office of Management and Budget control number. The Office of Management and Budget control number for this collection is 1090-0008. The control number will be displayed on the surveys used. For expeditious administration of the surveys, the expiration date will not be displayed on the individual instruments. Response to the surveys is voluntary.

Title of Collection: Website Satisfaction Surveys.

OMB Control Number: 1090-0008.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Individuals, Business, and State, Local, or Tribal Governments who have utilized Federal Government services.

Estimated Completion Time per Response: Participation by Federal agencies will vary as new websites are added or deleted. However, based on our experience from the previous three-year approval period, the number of surveys has been very consistent with little change and estimate for the next three years are as follows:

Average Expected Annual Number of Customer Satisfaction Surveys: 250 with 5,000 respondents per survey.

Total Estimated Number of Annual Responses: 1,250,000 Responses.

Total Estimated Number of Annual Burden Hours: 60,764 hours.

Respondent's Obligation: Voluntary.
Frequency of Collection: Once per survey.

Total Estimated Annual Non hour Burden Cost: None.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Jessica Reed,

Director, Federal Consulting Group.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[L14400000 PN0000 HQ350000 212; OMB Control No. 1004-0153]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Conveyance of Federally-Owned Mineral Interests

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Land Management (BLM) proposes to renew an information collection.

DATES: Interested persons are invited to submit comments on or before September 27, 2024.

ADDRESSES: Written comments and recommendations for this information collection request (ICR) should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Jeff Holdren by email at jholdren@blm.gov, or by telephone at (703) 360-9739. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the PRA (44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we invite the public and other Federal agencies to comment on new, proposed, revised and continuing collections of information. This helps the BLM assess impacts of its information collection requirements and minimize the public’s reporting burden. It also helps the public understand BLM information collection requirements and ensure requested data are provided in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on April 15, 2024 (89 FR 26183).

As part of our continuing effort to reduce paperwork and respondent burdens, we are again inviting the public and other Federal agencies to comment on the proposed ICR described below. The BLM is especially interested in public comment addressing the following:

- (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility.
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used.
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) How might the agency minimize the burden of the collection of

information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments submitted in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Section 209(b) of the Federal Land Policy and Management Act (43 U.S.C. 1719) authorizes the Secretary of the Interior to convey Federally-owned mineral interests to non-Federal owners of the surface estate. The respondents in this information collection are non-Federal owners of surface estates who apply for underlying Federally-owned mineral interests. This information collection enables the BLM to determine if the applicants are eligible to receive title to the Federally-owned mineral interests beneath their lands. OMB’s approval for the information collections approved under OMB control number 1004-0153 is currently scheduled to expire on December 31, 2024. This request is for OMB to renew this OMB control number for an additional three (3) years.

Title of Collection: Conveyance of Federally-Owned Mineral Interests (43 CFR part 2720).

OMB Control Number: 1004-0153.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Owners of surface estates (*i.e.*, individuals, businesses, or state, local, or tribal governments) that want to obtain underlying Federally-owned mineral estates.

Total Estimated Number of Annual Respondents: 5.

Total Estimated Number of Annual Responses: 5.

Estimated Completion Time per Response: 1 hour.

Total Estimated Number of Annual Burden Hours: 5.

Respondent’s Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion.

Total Estimated Annual Nonhour Burden Cost: \$250.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin King,

Information Collection Clearance Officer.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLHQ310000.L13100000.PP0000; OMB Control No. 1004-0137]

Agency Information Collection Activities; Onshore Oil and Gas Operations and Production

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Bureau of Land Management (BLM) proposes to renew an information collection.

DATES: Interested persons are invited to submit comments on or before October 28, 2024.

ADDRESSES: Send your written comments on this information collection request (ICR) by mail to Darrin King, Information Collection Clearance Officer, U.S. Department of the Interior, Bureau of Land Management, Attention PRA Office, 440 W 200 S #500, Salt Lake City, UT 84101; or by email to BLM_HQ_PRA_Comments@blm.gov. Please reference Office of Management and Budget (OMB) Control Number 1004-0137 in the subject line of your comments. Please note that the electronic submission of comments is recommended.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Amanda Fox by email at afox@blm.gov, or by telephone at (907) 538-2300. Individuals who are hearing or speech impaired may call the Federal Relay Service at 1-800-877-8339 for TTY assistance. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA, 44 U.S.C.

3501 *et seq.*) and 5 CFR 1320.8(d)(1), all information collections require approval under the PRA. We may not conduct or sponsor, and you are not required to respond to a collection of information unless it displays a currently valid OMB control number.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are especially interested in public comment addressing the following:

- (1) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) How might the agency minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Under the below listed Federal and Indian mineral leasing statutes authorize the BLM to grant and manage onshore oil and gas leases on Federal and Indian (except Osage Tribe) lands:

- Chapter 3A, Subchapter I of the Mineral Leasing Act, 30 U.S.C. 181–196;

- Chapter 3A, Subchapter IV of the Mineral Leasing Act, 30 U.S.C. 223–236b;

- The Mineral Leasing Act for Acquired Lands, 30 U.S.C. 351–360;

- The Federal Oil and Gas Royalty Management Act, 30 U.S.C. 1701–1759; and

- The Federal Land Policy and Management Act, 43 U.S.C. 1701–1787.

In order to fulfill its responsibilities under these statutes, the BLM needs to perform the information collection (IC) activities set forth in the regulations at 43 CFR part 3170, and in onshore oil and gas orders promulgated in accordance with 43 CFR 3164.1. This OMB control number is currently scheduled to expire January 31, 2025. The BLM plans to request that OMB renew OMB this control number for an additional three (3) years.

Title of Collection: Onshore Oil and Gas Operations and Production (43 CFR part 3170).

OMB Control Number: 1004–0137.

Form Numbers: BLM Form 3160–005.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Oil and gas operators on public lands and some Indian lands.

Total Estimated Number of Annual Respondents: 864.

Total Estimated Number of Annual Responses: 102,439.

Estimated Completion Time per Response: Varies depending on activity.

Total Estimated Number of Annual Burden Hours: 257,392.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion; One-time; and Monthly.

Total Estimated Annual Non-hour Burden Cost: None.

An agency may not conduct or sponsor and, notwithstanding any other provision of law, a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Darrin A. King,

Information Collection Clearance Officer.

Direct Sale of Public Lands in Barstow, San Bernardino County, California

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of realty action.

SUMMARY: The Bureau of Land Management (BLM) is proposing a non-competitive (direct) sale of public lands near Barstow, San Bernardino County, California, to Burlington Northern Santa Fe (BNSF), LLC, a Delaware Corporation, under the provisions of the Federal Land Policy and Management Act of 1976 (FLPMA), as amended, and BLM land sale regulations. The purpose of the non-competitive land sale to BNSF is to support development of the Barstow International Gateway project, which would facilitate the transfer of goods between different modes of transportation throughout the United States, including rail, truck, and ocean carriers. The sale will be for no less than the appraised fair market value (FMV) of \$98,000.

DATES: Interested parties may submit written comments no later than October 15, 2024. The land will not be offered for sale until after October 28, 2024.

ADDRESSES: Written comments regarding the proposed sale should be submitted to BLM, Barstow Field Office, ATTN: Tim McCain, Realty Specialist, 2601 Barstow Road, Barstow, California 92311, or via email to tmccain@blm.gov.

FOR FURTHER INFORMATION CONTACT: Tim McCain, Realty Specialist, BLM Barstow Field Office, phone: 951–972–7849, email: tmccain@blm.gov. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The public lands are located approximately one-half mile west of the city of Barstow in San Bernardino County, California, and are legally described below.

San Bernardino Meridian, California

T. 9 N., R. 3 W.,
Sec. 23, N $\frac{1}{2}$ SW $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$,
N $\frac{1}{2}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$, and
S $\frac{1}{2}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$;

Sec. 26, NW $\frac{1}{4}$ NE $\frac{1}{4}$ NE $\frac{1}{4}$ and N $\frac{1}{2}$ SW $\frac{1}{4}$ NE $\frac{1}{4}$ NE $\frac{1}{4}$.

The areas described aggregate 30 acres, according to the official plat of the survey on file with the BLM.

The proposed sale of the parcels described above is in conformance with the land use plan as the parcels have been designated as Development Focus Areas available for disposal in the California Desert Conservation Area Plan of 1980, as amended by the Desert Renewable Energy Conservation Plan of 2016. Conveyance of any mineral interests pursuant to section 209 of FLPMA have been analyzed as a part of this transaction, and the authorized officer determined that all mineral interests will be reserved to the United States. The land sale meets the criteria for a direct sale under 43 CFR 2711.3–3(a) and is consistent with Section 203(a)(3) of FLPMA, which states: “Disposal of such tract will serve important public objectives, including but not limited to expansion of communities and economic development.”

Publication of this notice in the **Federal Register** will segregate the above-described lands from appropriation under the public land laws, including the mining laws, except the sale provisions of FLPMA, pursuant to the requirements of 43 CFR 2711.1–2(d). All parcels are subject to valid existing rights. Parcels may also be subject to mining claims, rights-of-way, or other land use applications received prior to publication of this notice if processing the application would have no adverse effect on the marketability of title or the federally approved FMV of a parcel. Encumbrances of record, appearing in the BLM public files for the parcels proposed for sale, are available for review during business hours 9 a.m. to 5 p.m. Pacific Time, Monday through Friday, at the BLM Barstow Field Office (see **ADDRESSES**). Subject to limitations prescribed by law and regulation, prior to patent issuance, a holder of any right-of-way within the parcels may be given the opportunity to amend the right-of-way for conversion to a new term, including perpetuity, if applicable, or to an easement. Until completion of the sale, the BLM will no longer accept land use applications affecting the identified public lands, except applications for the amendment of previously filed right-of-way applications or existing authorizations to increase the term of the grants in accordance with 43 CFR 2807.15 and 2886.15. Conveyance of the identified public land would be subject to valid existing rights of record and the

following terms, conditions, and reservations:

1. A reservation of a right-of-way for ditches and canals constructed by authority of the United States, Act of August 30, 1890 (43 U.S.C. 945).

2. A reservation of all minerals to the United States, and the right to prospect for, mine, and remove the minerals under applicable law and any regulations that the Secretary of the Interior may prescribe, including all necessary access and exit rights, pursuant to 43 CFR 2720.0–6.

3. An appropriate indemnification clause protecting the United States from claims arising out of the purchaser’s use, occupancy, or operations on the conveyed lands.

4. Additional terms and conditions that the authorized officer deems appropriate.

The segregation will terminate upon issuance of a patent, publication in the **Federal Register** of a termination of the segregation, or 2 years after the date of publication of this notice in the **Federal Register**, unless extended by the BLM State Director in accordance with 43 CFR 2711.1–2(d) prior to the termination date. Detailed information concerning the proposed land sale including the Environmental Assessment, maps, appraisal report, environmental site assessment, and mineral potential report are available for review at the BLM Barstow Field Office listed in the **ADDRESSES** section earlier.

In addition to publication in the **Federal Register**, the BLM will also publish this notice in the Los Angeles Times, Daily Press, High Desert Star, and the San Bernardino Sun news sources once a week for 3 consecutive weeks.

Interested parties may submit substantive written comments regarding the proposed sale and environmental assessment DOI–BLM–CA–D080–2024–0012–EA via the BLM National NEPA Register at <https://eplanning.blm.gov/eplanning-ui/project/2033900/510> or by mail to the realty specialist at the above address on or before October 15, 2024. Adverse comments regarding the proposed sale will be reviewed by the BLM California State Director or other authorized official of the Department of the Interior, who may sustain, vacate, or modify this realty action in whole or in part. In the absence of timely objections, this realty action will become the final determination of the Department of the Interior.

Before including your address, phone number, email address, or other personal identifying information in your comment, be advised that your entire comment—including your personal

identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold from public review your personal identifying information, we cannot guarantee that we will be able to do so.

(Authority: 43 CFR subpart 2711)

Joseph Stout,

State Director, California Bureau of Land Management.

BILLING CODE 4331–15–P

DEPARTMENT OF THE INTERIOR

Bureau of Ocean Energy Management

[OMB Control Number 1010–NEW; Docket ID: BOEM–2024–0007]

Agency Information Collection Activities; Submission to the Office of Management and Budget; Cook Inlet Recreation and Tourism Survey

AGENCY: Bureau of Ocean Energy Management, Interior.

ACTION: Notice of information collection; request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, the Bureau of Ocean Energy Management (BOEM) proposes a new information collection request (ICR) to gather information regarding outdoor recreation and tourism in the Cook Inlet Outer Continental Shelf (OCS) Planning Area and adjacent coastal areas.

DATES: Comments must be received by the Office of Management and Budget (OMB) desk officer no later than September 27, 2024.

ADDRESSES: Submit your written comments on this ICR to the OMB’s desk officer for the Department of the Interior at www.reginfo.gov/public/do/PRAMain. From the www.reginfo.gov/public/do/PRAMain landing page, find this information collection by selecting “Currently under Review—Open for Public Comments” or by using the search function. Please provide a copy of your comments by parcel delivery service or U.S. mail to the BOEM Information Collection Clearance Officer, Anna Atkinson, Bureau of Ocean Energy Management, 45600 Woodland Road, Sterling, Virginia 20166; or by email to anna.atkinson@boem.gov. Please reference OMB Control Number 1010–NEW in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: Anna Atkinson by email at anna.atkinson@boem.gov, or by telephone at 703–787–1025. Individuals

in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside of the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995, BOEM provides the general public and Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps BOEM assess the impact of the information collection requirements and minimize the public's reporting burden. It also helps the public understand BOEM's information collection requirements and provide the requested data in the desired format.

Title of Collection: Cook Inlet Recreation and Tourism Survey.

Abstract: Natural resource-based recreation in the marine and coastal environments of Cook Inlet, Alaska, offers numerous economic, cultural, environmental, health, educational, and quality-of-life benefits. Recreation and tourism play a vital role in supporting local economies, preserving cultural heritage, promoting environmental stewardship, and improving the well-being of both residents and visitors. The OCS Lands Act charges BOEM with managing the energy and mineral resources of the OCS, while protecting marine and coastal environments that support human lives and society. Additionally, to ensure the scientific integrity of its National Environmental Policy Act (NEPA) assessments, BOEM requires reliable data and information to evaluate the extent to which its activities adversely affect the human environment (40 CFR 1502.23). As defined in 40 CFR 1508.1, the effects on the human environment evaluated in NEPA assessments include social and economic impacts, as well as ecological, aesthetic, historic, cultural, and health effects.

BOEM intends to conduct a research study of outdoor recreation and tourism in the Cook Inlet OCS Planning Area and adjacent coastal areas (*i.e.*, the study area). BOEM seeks updated baseline information on the nature, distribution, and seasonality of outdoor recreation and tourism in the study area, and the relative preferences and values for these activities. BOEM would use this information to determine how stakeholders and the recreational and tourism economy may be affected by

potential future oil, gas, renewable energy, and other energy exploration and development activities. This study would help BOEM identify any appropriate mitigation strategies to address potential adverse effects of its activities on recreation and tourism in the study area. Altogether, the study would enable BOEM to develop more rigorous and thorough environmental analyses during any NEPA processes related to future Cook Inlet OCS energy and mineral activities.

Specifically, this information collection would involve primary data collection (following ICR approval by OMB) to elicit information on: (a) activities and attributes contributing to the value of recreational experiences; (b) expenditures related to recreational activities; and (c) how these things differ across the region and different user groups (*e.g.*, residents and visitors). The primary research would provide meaningful insight regarding the influence of energy development on recreation and tourism (*e.g.*, by comparing areas in the Upper Cook Inlet with existing energy infrastructure to other areas in Cook Inlet without any energy infrastructure). The study also would document user attitudes regarding how recreation and tourism may be affected by different energy development-related activities (*e.g.*, noise, space use conflicts, aesthetic effects of infrastructure, and vessel traffic).

The study's primary research design would include four components: focus groups, cognitive interviews, onsite intercept surveys, and written surveys. The focus groups and cognitive interviews would be used to develop and pretest a draft written survey, first in a group setting (focus groups) and then in a one-on-one interview setting (cognitive interviews). The onsite survey would include a small number of questions to determine eligibility for recruitment to the written survey. It will be pretested onsite while investigators are in the field for the focus groups. The final onsite and written surveys would be administered at approximately two dozen sites in the study area during the primary recreation season from May to October. Potential respondents would be approached as they arrive to a site and invited to fill out the survey.

1. **Focus Groups**—To inform survey development, BOEM would conduct focus groups with recreationists in the study area. The recreationists would identify their preferred coastal- and marine-related recreation sites; why they choose their preferred sites; the differences they perceive between sites near existing energy infrastructure (in

portions of the Upper Cook Inlet) to sites that are not near any energy infrastructure, and the recreational quality of those sites; what they like about their recreational experiences around Cook Inlet; what they do not like about the Cook Inlet sites they avoid; how offshore energy exploration and development activities may affect their recreation site choice and experience; and other related issues.

2. **Cognitive Interviews**—The findings of the focus groups would be used to develop a draft written survey instrument. BOEM would then conduct 25 cognitive interviews to test and refine the survey. Specifically, the interviews would test if the survey is working as expected. Factors relevant to that determination include evaluating if questions are easily understood, whether respondents misunderstand the questions in any way, whether response categories are exhaustive and mutually exclusive, and other similar issues.

3. **Onsite Intercept Surveys**—A short in-person survey to be conducted with recreationists as they arrive at a site. The questions will determine eligibility for recruitment to the written survey, including whether they are participating in recreation activities. The onsite interview will also include selected demographic questions for comparison with respondents to the written survey and evaluation of nonresponse. Surveys would be administered at a range of sites, including public lands, visitor centers, seaports, airports, and marinas. Because the surveys would be administered between May and September, a potential respondent may be intercepted on more than one occasion. If a respondent clarifies that they have already taken the survey, they would not be asked to take it again.

4. **Written Surveys**—The written survey would cover topics such as recreational destinations, frequency of use in the past 12 months, recreation trip-related expenditures, preferences for recreation site attributes, attitudes about offshore energy projects and impacts of the projects on recreation, and respondent demographics.

OMB Control Number: OMB Control Number 1010–NEW.

Type of Review: New.

Respondents/Affected Public: Participants in the focus groups and cognitive interviews would be members of the public who have engaged in coastal or marine recreation in the study area in the past year. Respondents to the onsite and written surveys would be members of the public engaged in coastal or marine recreational activities in the study area. Members of the public

would consist of a mixture of local, State, and out-of-State residents.

Total Estimated Number of Annual Responses: 2,095: 40 focus group participants, 25 cognitive interview participants, 30 pretest onsite surveys, 1,500 completed onsite surveys, and 500 completed written surveys. The focus group questions would be semi-structured and open-ended. Onsite and written survey questions would be primarily discrete choice and closed-ended with minimal open-ended questions.

Estimated Completion Time per Response: 90 minutes per focus group participant, 45 minutes per cognitive interview participant, 1 minute for the onsite survey, and 12 minutes per written survey participant. (BOEM anticipates that the survey would comprise approximately 30 questions with each question taking about 20–30 seconds to complete on average.)

Total Estimated Number of Annual Burden Hours: 205 hours: 60 hours for focus groups, 18.75 hours for cognitive interviews, 30 minutes for the pretest onsite surveys, 25 hours for the onsite survey, and 100 hours for the written survey.

Respondent's Obligation: Voluntary.
Frequency of Collection: One time.

Total Estimated Annual Non-hour Burden Cost: There is no non-hour cost burden associated with this collection.

A **Federal Register** notice with a 60-day public comment period on this proposed ICR was published on February 9, 2024 (89 FR 9175). One comment was received on February 18, 2024. The commentor recommended prohibiting oil and gas leasing and commercial tourism. While the comment is recognized, it does not change the purpose of or need for the proposed study, nor does it affect the cost or hour burden.

BOEM is again soliciting comments on this proposed ICR. BOEM is especially interested in public comment addressing the following issues: (1) is the collection necessary to the proper functions of BOEM; (2) what can BOEM do to ensure this information will be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might BOEM enhance the quality, utility, and clarity of the information to be collected; and (5) how might BOEM minimize the burden of this collection on the respondents, including minimizing the burden through the use of information technology?

Comments that you submit in response to this notice are a matter of public record and will be available for public review on www.reginfo.gov.

BOEM will include or summarize each comment in its ICR to OMB for approval of this information collection. You should be aware that your entire comment—including your address, phone number, email address, or other personally identifiable information included in your comment—may be made publicly available at any time.

For BOEM to consider withholding from disclosure your personally identifiable information, you must identify, in a cover letter, any information contained in your comment that, if released, would constitute a clearly unwarranted invasion of your personal privacy. You must also briefly describe any possible harmful consequences of the disclosure of information, such as embarrassment, injury, or other harm.

Even if BOEM withholds your personally identifiable information in the context of this ICR, your comment is subject to the Freedom of Information Act (FOIA). Your information will only be withheld if a determination is made that one of the FOIA exemptions to disclosure applies. Such a determination will be made in accordance with the Department of the Interior's (DOI) FOIA implementing regulations (43 CFR part 2) and applicable law.

BOEM will make available for public inspection all comments in their entirety (except privileged or confidential information) submitted by organizations and businesses, or by individuals identifying themselves as representatives of organizations or businesses. BOEM protects privileged and confidential information in accordance with FOIA and DOI's implementing regulations.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Karen Thundiyl,

Chief, Office of Regulatory Affairs, Bureau of Ocean Energy Management.

Submission to the Office of Management and Budget for Review and Approval; Surface and Underground Mining Permit Applications—Minimum Requirements for Information on Environmental Resources

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.
ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before October 28, 2024.

ADDRESSES: Send your comments on this information collection request (ICR) by mail to Mark Gehlhar, Office of Surface Mining Reclamation and Enforcement, 1849 C Street NW, Room 1544-MIB, Washington, DC 20240, or by email to mgehlhar@osmre.gov. Please reference OMB Control Number 1029-0035 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Mark Gehlhar by email at mgehlhar@osmre.gov, or by telephone at 202-208-2716. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection

requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed ICR that is described below. We are especially interested in public comment addressing the following issues: (1) is the collection necessary to the proper functions of the agency; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the agency enhance the quality, utility, and clarity of the information to be collected; and (5) how might the agency minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Applicants for surface and underground coal mining permits are required to provide adequate descriptions of the environmental resources that may be affected by proposed mining activities. The information will be used by the regulatory authority to determine if the applicant can comply with environmental protection performance standards.

Title of Collection: Surface and Underground Mining Permit Applications—Minimum Requirements for Information on Environmental Resources.

OMB Control Number: 1029–0035.
Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Businesses and State governments.

Total Estimated Number of Annual Respondents: 149.

Total Estimated Number of Annual Responses: 1,225.

Estimated Completion Time per Response: Varies from 1 hour to 415 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 108,855.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: One time.

Total Estimated Annual Nonhour Burden Cost: \$0.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

We are soliciting comments on the proposed ICR that is described below. We are especially interested in public comment addressing the following issues: (1) is the collection necessary to the proper functions of the agency; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the agency enhance the quality, utility, and clarity of the information to be collected; and (5) how might the agency minimize the burden of this collection on the respondents, including through the use of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: 30 CFR 874.16 requires that every successful bidder for an AML contract must be eligible under 30 CFR 773.15(b)(1) at the time of contract award to receive a permit or conditional permit to conduct surface coal mining operations. Further, the regulation requires the eligibility to be confirmed by OSMRE's automated Applicant/Violator System (AVS) and the contractor must be eligible under the

regulations implementing Section 510(c) of the Surface Mining Control and Reclamation Act to receive permits to conduct mining operations. This form provides a tool for OSMRE and the States/Indian tribes to help them prevent persons with outstanding violations from conducting further mining or AML reclamation activities in the State.

Title of Collection: Contractor Eligibility and the Abandoned Mine Land Contractor Information Form.

OMB Control Number: 1029–0119.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Businesses and State governments.

Total Estimated Number of Annual Respondents: 188.

Total Estimated Number of Annual Responses: 188.

Estimated Completion Time per Response: Varies from 30 minutes to 1 hour, depending on activity.

Total Estimated Number of Annual Burden Hours: 96.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: One time.

Total Estimated Annual Nonhour Burden Cost: \$0.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Mark J. Gehlhar,

*Information Collection Clearance Officer,
Office of Surface Mining Reclamation and
Enforcement.*

BILLING CODE 4310–05–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Smart Televisions, DN 3769*; the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing pursuant to the Commission's Rules of Practice and Procedure.

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW, Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at <https://edis.usitc.gov>. For help accessing EDIS, please email EDIS3Help@usitc.gov.

General information concerning the Commission may also be obtained by accessing its internet server at United States International Trade Commission (USITC) at <https://www.usitc.gov>. The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at <https://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to § 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of Maxell, Ltd. on August 22, 2024. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain smart televisions. The complaint names as respondents: TCL Electronics Holdings Ltd. (f/k/a TCL Multimedia Technology Holdings, Ltd.) of Hong Kong; TCL Industries Holdings Co., Ltd. of China; T.C.L. Industries Holdings (H.K.) Limited of Hong Kong; TTE Technology, Inc. (d/b/a TCL North America) of Corona, CA; TTE Corporation of Hong Kong; TCL King Electrical Appliances (Huizhou) Co. Ltd. of China; Manufacturas Avanzadas S.A. de C.V. of Mexico; TCL Smart Device (Vietnam) Co., Ltd. of Vietnam; Shenzhen TCL New Technology Co., Ltd. of China; TCL Optoelectronics Technology (Huizhou) Co., Ltd. of China; TCL Overseas Marketing Ltd. of Hong Kong; and TCL Technology Group Corporation (f/k/a TCL Corp.) of China. The complainant requests that the Commission issue a limited exclusion order, cease and desist orders, and impose a bond upon respondents' alleged infringing articles during the 60-day Presidential review period pursuant to 19 U.S.C. 1337(j).

Proposed respondents, other interested parties, members of the public, and interested government agencies are invited to file comments on any public interest issues raised by the

complaint or § 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

(i) explain how the articles potentially subject to the requested remedial orders are used in the United States;

(ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;

(iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;

(iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and

(v) explain how the requested remedial orders would impact United States consumers.

Written submissions on the public interest must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation. Any written submissions on other issues must also be filed by no later than the close of business, eight calendar days after publication of this notice in the **Federal Register**. Complainant may file replies to any written submissions no later than three calendar days after the date on which any initial submissions were due, notwithstanding § 201.14(a) of the Commission's Rules of Practice and Procedure. No other submissions will be accepted, unless requested by the Commission. Any submissions and replies filed in response to this Notice are limited to five (5) pages in length, inclusive of attachments.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above. Submissions should refer to the docket number ("Docket No. 3769") in a prominent place on the cover page and/or the first page. (*See*

Handbook for Electronic Filing Procedures, Electronic Filing Procedures¹). Please note the Secretary's Office will accept only electronic filings during this time. Filings must be made through the Commission's Electronic Document Information System (EDIS, <https://edis.usitc.gov>.) No in-person paper-based filings or paper copies of any electronic filings will be accepted until further notice. Persons with questions regarding filing should contact the Secretary at EDIS3Help@usitc.gov.

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why the Commission should grant such treatment. See 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All information, including confidential business information and documents for which confidential treatment is properly sought, submitted to the Commission for purposes of this Investigation may be disclosed to and used: (i) by the Commission, its employees and Offices, and contract personnel (a) for developing or maintaining the records of this or a related proceeding, or (b) in internal investigations, audits, reviews, and evaluations relating to the programs, personnel, and operations of the Commission including under 5 U.S.C. Appendix 3; or (ii) by U.S. government employees and contract personnel,² solely for cybersecurity purposes. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.³

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of §§ 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: August 22, 2024.

Lisa Barton,

Secretary to the Commission.

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701-TA-591 and 731-TA-1399 (Review)]

Common Alloy Aluminum Sheet From China

Determinations

On the basis of the record¹ developed in the subject five-year reviews, the United States International Trade Commission ("Commission") determines, pursuant to the Tariff Act of 1930 ("the Act"), that revocation of the countervailing and antidumping duty orders on common alloy aluminum sheet from China would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.²

Background

The Commission instituted these reviews on January 2, 2024 (89 FR 96) and determined on April 8, 2024 that it would conduct expedited reviews (89 FR 43873, May 20, 2024).

The Commission made these determinations pursuant to section 751(c) of the Act (19 U.S.C. 1675(c)). It completed and filed its determinations in these reviews on August 23, 2024. The views of the Commission are contained in USITC Publication 5538 (August 2024), entitled *Common Alloy Aluminum Sheet from China: Investigation Nos. 701-TA-591 and 731-TA-1399 (Review)*.

By order of the Commission.

Issued: August 23, 2024.

Lisa Barton,

Secretary to the Commission.

[FR Doc. 2024-19365 Filed 8-27-24; 8:45 am]

BILLING CODE 7020-02-P

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

FBI Criminal Justice Information Services Division User Fee Schedule

AGENCY: Federal Bureau of Investigation (FBI), Justice.

ACTION: Notice.

SUMMARY: The FBI is authorized to establish and collect fees for providing fingerprint-based and name-based criminal history record information (CHRI) checks submitted by authorized

¹ The record is defined in § 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

² Chair Amy A. Karpel not participating.

users for noncriminal justice purposes including employment and licensing. A portion of the fee is intended to reimburse the FBI for the cost of providing fingerprint-based and name-based CHRI checks ("cost reimbursement portion" of the fee). The FBI is also authorized to charge an additional amount to defray expenses for the automation of fingerprint identification and criminal justice information services and associated costs ("automation portion" of the fee). This notice provides the revised fee schedule.

DATES: This revised fee schedule is effective January 1, 2025.

FOR FURTHER INFORMATION CONTACT: Ms. Cynthia D. Harris, Chief, Financial Management Unit, Resources Management Section, Criminal Justice Information Services (CJIS) Division, FBI, 1000 Custer Hollow Road, Module D-3, Clarksburg, WV 26306. Telephone number 304-625-4152.

SUPPLEMENTARY INFORMATION: Pursuant to the authority in Public Law 101-515, as amended and codified at 34 United States Code (U.S.C.) section 41104, the FBI has established user fees for authorized agencies requesting noncriminal justice fingerprint-based and name-based CHRI checks. These noncriminal justice, fingerprint-based CHRI checks are performed for noncriminal justice, non-law enforcement employment and licensing purposes, and for certain employees of private sector contractors with classified government contracts. The noncriminal justice, name-based CHRI checks are biographic checks of the biometric system limited to those agencies authorized via 5 U.S.C. 9101, Security Clearance Information Act of 1985.

In accordance with the requirements of Title 28, Code of Federal Regulations (CFR), section 20.31(e), the FBI periodically reviews the process of providing fingerprint-based and name-based CHRI checks to determine the proper fee amounts which should be collected, and the FBI publishes any resulting fee adjustments in the **Federal Register**.

A fee study was conducted in keeping with 28 CFR 20.31(e)(2) and employed the methodology detailed in **Federal Register** notices 75 FR 18751 and 83 FR 48335. The fee study results recommended a decrease in the fingerprint-based and name-based CHRI checks from the current user fees published in the **Federal Register** on August 4, 2022 (87 FR 47794), which have been in effect since October 1, 2022. The FBI reviewed the results of the independently conducted User Fee

Study, compared the recommendations to the current fee schedule, and determined the revised fee recommendation amounts for both the cost reimbursement portion and automation portion of the fee were reasonable and in consonance with the underlying legal authorities.

Pursuant to the recommendations of the study, the fees for fingerprint-based CHRI checks will be decreased and the fee for name-based CHRI checks will also decrease for federal agencies specifically authorized by statute, *e.g.*, pursuant to 5 U.S.C. 9101, Security Clearance Information Act of 1985.

The following tables detail the fee amounts for authorized users requesting fingerprint-based and name-based CHRI checks for noncriminal justice purposes, including the difference from the fee schedule currently in effect.

FINGERPRINT-BASED CHRI CHECKS

Service	Fee currently in effect	Fee currently in effect for CBSPs ¹	Change in fee amount	Revised fee	Revised fee for CBSPs
Fingerprint-based Submission	\$13.25	\$11.25	(\$1.25)	\$12.00	² \$10.00
Fingerprint-based Volunteer Submission ³	11.25	9.25	(1.25)	10.00	⁴ 8.00

¹ Centralized Billing Service Providers, see 75 FR 18753.

² Cost Recovery = \$3; Automation = \$7.

³ Volunteers providing care for children, the elderly, or individuals with disabilities. See *e.g.*, 75 FR 18752, 83 FR 48335.

⁴ Cost Recovery = \$3; Automation = \$5.

NAME-BASED CHRI CHECKS

Service	Fee currently in effect	Change in fee amount	Revised fee
Name-based Submission	\$2.00	(\$1.00)	\$1.00

Dated: August 14, 2024.

Christopher A. Wray,
Director.

BILLING CODE 4410-02-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Toxic Substances Control Act

On August 22, 2024, the Department of Justice lodged a proposed consent decree with the United States District Court for the Southern District of New York in the lawsuit entitled *United States v. Legacy Builders/Developers Corp.*, Civil Action No. 24 Civ. 6367.

In this action, the United States seeks injunctive relief from Legacy Builders/Developers Corp. in connection with the defendant's unlawful work practices during renovations governed the Renovation, Repair, and Painting Rule, 40 CFR part 745, subpart E, promulgated under the Toxic Substances Control Act ("TSCA"). The proposed consent decree resolves the United States' claims, requires Legacy Builders/Developers Corp. to pay \$168,000, and imposes injunctive relief.

The publication of this notice opens a period for public comment on the consent decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to

United States v. Legacy Builders/Developers Corp., D.J. Ref. No. 90-5-1-1-12249. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

To submit comments:	Send them to:
By email	<i>pubcomment-ees.enrd@usdoj.gov.</i>
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Any comments submitted in writing may be filed by the United States in whole or in part on the public court docket without notice to the commenter.

During the public comment period, the consent decree may be examined and downloaded at this Justice Department website: <http://www.justice.gov/enrd/consent-decrees>. If you require assistance accessing the consent decree, you may request assistance by email or by mail to the addresses provided above for submitting comments.

Eric D. Albert,

Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410-15-P

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Comprehensive Environmental Response, Compensation, And Liability Act (CERCLA)

On August 22, 2024, the Department of Justice lodged a proposed consent decree with the United States District Court for the Middle District of Louisiana in the lawsuit entitled *United States v. Clean Harbors, Inc. et al.*, Civil Action No. 24-688.

The proposed consent decree resolves claims alleged against Clean Harbors, Inc., Clean Harbors Baton Rouge, LLC, and Baton Rouge Disposal, LLC, under sections 106 and 107(a) of the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA"), 42 U.S.C. 9606 and 9607(a), for hazardous waste cleanup and response costs incurred by the United States at the Devil's Swamp Lake Superfund Site ("Site"), located in East Baton Rouge Parish, Louisiana. The proposed consent decree requires the Defendants to perform a cleanup of hazardous waste estimated to cost \$3,191,000, to pay the United States \$2,047,313.63 for costs incurred in responding to the contamination at the Site, and to pay the United States all future costs expended for that purpose.

The publication of this notice opens a period for public comment on the consent decree. Comments should be

addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States v. Clean Harbors, Inc. et al.*, D.J. Ref. No. 90–11–3–12390. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By email	<i>pubcomment-ees.enrd@usdoj.gov.</i>
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044–7611.

Any comments submitted in writing may be filed in whole or in part on the public court docket without notice to the commenter.

During the public comment period, the consent decree may be examined and downloaded at this Justice Department website: <http://www.justice.gov/enrd/consent-decrees>. If you require assistance accessing the Consent Decree, you may request assistance by email or by mail to the addresses provided above for submitting comments.

Thomas Carroll,

BILLING CODE 4410–15–P

DEPARTMENT OF JUSTICE

Office of Justice Programs

[OJP (OJJDP) Docket No. 1830]

Meeting of the Coordinating Council on Juvenile Justice and Delinquency Prevention

AGENCY: Coordinating Council on Juvenile Justice and Delinquency Prevention.

ACTION: Notice of meeting.

SUMMARY: The Coordinating Council on Juvenile Justice and Delinquency Prevention announces its next meeting.

DATES: Thursday, September 19, 2024, at 1:00 p.m.–4:00 p.m. ET.

ADDRESSES: The meeting will take place at the Department of Justice, 810 7th St. NW, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Visit the website for the Coordinating Council at www.juvenilecouncil.gov or contact Shauntice McCorkle, Meeting Planner,

by telephone (202) 706–1283, email at Shauntice.McCorkle@usdoj.gov; or Julie Herr, Designated Federal Official (DFO), OJJDP, by telephone at (202) 598–6885, email at Julie.Herr@usdoj.gov. Please note that the above phone numbers are not toll free.

SUPPLEMENTARY INFORMATION: The Coordinating Council on Juvenile Justice and Delinquency Prevention (“Council”), established by statute in the Juvenile and Delinquency Prevention Act of 1974 section 206(a) (34 U.S.C. 11116(a)), will meet to carry out its advisory functions. Information regarding this meeting will be available on the Council’s web page at www.juvenilecouncil.gov. This meeting will be open to the public for in-person attendance or via online video conference. Prior registration is required (see below). In addition, meeting documents will be viewable via this website including meeting announcements, agendas, minutes, and reports.

Although designated agency representatives may attend in lieu of members, the Council’s formal membership consists of the following secretaries and/or agency officials; Attorney General (Chair), Administrator of the Office of Juvenile Justice and Delinquency Prevention (Vice Chair), Secretary of Health and Human Services, Assistant Secretary for Mental Health and Substance Use, Secretary of the Interior, Secretary of Labor, Secretary of Education, Secretary of Housing and Urban Development, Director of the Office of National Drug Control Policy, Chief Executive Officer of AmeriCorps, and the Director of the U.S. Immigration and Customs Enforcement. Up to ten additional members are appointed by the President of the United States, the Speaker of the U.S. House of Representatives, the U.S. Senate Majority Leader, and the Chairman of the Committee on Indian Affairs of the Senate. Further agencies that take part in Council activities include the Departments of Agriculture and Defense, and the Consumer Financial Protection Bureau.

Council meeting agendas are available on www.juvenilecouncil.gov. Agendas will generally include: (a) Opening remarks and introductions; (b) Presentations of agency work or other topical areas of interest; and (c) Subcommittee reports and discussion of Council priorities.

All members of the public who wish to attend must register in advance. To attend *virtually*, please register at the WebEx registration site, by no later than Tuesday, September 17, 2024. Those

who prefer to attend *in person* must register at www.juvenilecouncil.gov. Should issues arise with online registration, or to register via email, please contact Shauntice McCorkle, Meeting Planner (see above for contact information). If submitting registrations by email, attendees should include all of the following: Name, Title, Organization/Affiliation, Full Address, Phone Number, and Email.

Interested parties may submit written comments and questions in advance to Shauntice McCorkle, Meeting Planner (contact information above). All comments and questions should be submitted no later than 5:00 p.m. ET on Friday, September 13, 2024.

The Council will limit public statements if they are found to be duplicative. Written questions submitted by public attendees may also be considered by the Council, time permitting.

Julie Herr,

Designated Federal Official, Office of Juvenile Justice and Delinquency Prevention.

BILLING CODE 4410–18–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Shipyard Employment Standards

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Occupational Safety & Health Administration (OSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before September 27, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Nicole Bouchet by telephone at 202–

693–0213, or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: The standard for shackles and hooks (29 CFR 1915.113(b)(1)) requires that all hooks for which no applicable manufacturer's recommendations are available be tested and that the employer retain a certification record. The standard on portable air receivers (29 CFR 1915.172(d)) requires that portable, unfired pressure vessels be examined quarterly and subjected to a yearly hydrostatic pressure test and that a certification record be maintained. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on June 18, 2024 (89 FR 51551).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–OSHA.

Title of Collection: Shipyard Employment Standards.

OMB Control Number: 1218–0220.

Affected Public: Private Sector—Businesses or other for-profits.

Total Estimated Number of Respondents: 4,674.

Total Estimated Number of Responses: 24,637.

Total Estimated Annual Time Burden: 9,538 hours.

Total Estimated Annual Other Costs Burden: \$0.

(Authority: 44 U.S.C. 3507(a)(1)(D))

Nicole Bouchet,

Senior Paperwork Reduction Act Analyst.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Cotton Dust Standard

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Occupational Safety & Health Administration (OSHA)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before September 27, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Nicole Bouchet by telephone at 202–693–0213, or by email at DOL_PRA_PUBLIC@dol.gov.

SUPPLEMENTARY INFORMATION: The purpose of the cotton dust standard and its information collection requirements is to provide protection for employees from the adverse health effects associated with occupational exposure to cotton dust. Employers must monitor employee exposure, reduce employee exposure to within permissible exposure limits, provide employees with medical examinations and training, and establish and maintain employee exposure monitoring and medical records. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on May 15, 2024 (89 FR 42509).

Comments are invited on: (1) whether the collection of information is

necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility and clarity of the information collection; and (4) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. See 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

NATIONAL ARCHIVES AND RECORDS ADMINISTRATION

[NARA–2024–053]

Senior Executive Service (SES) Performance Review Board; Members

AGENCY: National Archives and Records Administration.

ACTION: Notice; SES Performance Review Board.

SUMMARY: Notice is hereby given of the appointment of members of the National Archives and Records Administration (NARA) Performance Review Board (PRB). The members of the PRB for the National Archives and Records Administration are: William J. Bosanko, Deputy Archivist; Valorie F. Findlater, Chief Human Capital Officer, and Colleen Murphy, Chief Financial Officer and Acting Chief, Management and Administration. These appointments supersede all previous appointments.

DATES: This appointment is effective on August 28, 2024.

FOR FURTHER INFORMATION CONTACT: Valorie Findlater, Office of Human Capital, at valorie.findlater@nara.gov, or by telephone at (301) 837-3754.

SUPPLEMENTARY INFORMATION: The authority for this notice is 5 U.S.C. 4314(c), which also requires each agency to establish, in accordance with regulations prescribed by the Office of Personnel Management, one or more SES Performance Review Boards. The Board shall review the initial appraisal of a senior executive's performance by the supervisor and recommend final action to the appointing authority regarding matters related to senior executive performance.

Colleen J. Shogan,

Archivist of the United States.

[FR Doc. 2024-19249 Filed 8-27-24; 8:45 am]

BILLING CODE 7515-01-P

NATIONAL SCIENCE FOUNDATION

Request for Information (RFI) on Science Research Goals/Objectives Affecting Proposed U.S. Antarctic Science Monitoring and Reliable Telecommunications (SMART) Cable and Route Design

AGENCY: National Science Foundation.

ACTION: Request for information.

SUMMARY: The National Science Foundation (NSF) requests input from the full range of institutions and organizations across all relevant sectors—industry, academia, non-profits, government, venture capital, and others—to inform the development of a proposed subsea telecommunications cable capable of being equipped with sensors to support science research that would connect the largest U.S. research facility in Antarctica, McMurdo Station, with either the South Island of New Zealand or Southeast Australia. The proposed

cable is expected to host the point science sensor concept promoted by the UN IOC/UNESCO Joint Task Force on Science Monitoring And Reliable Telecommunications (<https://www.smartcables.org/>) (“SMART”) Cables. NSF requests information regarding the proposed McMurdo SMART Cable project including the cable route that maximizes science output and science sensor and technologies to be considered in designing the project. NSF will provide project information and updates at https://www.nsf.gov/geo/opp/ail/subsea_cable.

DATES: Interested persons or organizations are invited to submit responses to this notice on or before 11:59 p.m. (EDT) on November 5, 2024.

ADDRESSES: Options for Responses to this notice are as follows:

- **Electronic On-line Submission:** <https://www.surveymonkey.com/r/subseacable>.
- **Email:** AntarcticSubseaCable-RFI@nsf.gov. Email submissions should be machine-readable and not be copy-protected. Submissions should include “RFI Response: Antarctic SMART Cable” in the subject line of the message.
- **Letter Mail:** U.S. National Science Foundation, Geosciences Directorate, Office of Polar Programs, 2415 Eisenhower Ave., Suite W7251, Alexandria, VA 22314.

Attn: Patrick D. Smith, Antarctic SMART Cable RFI Response.

- **Telephone:** Antarctic Infrastructure and Logistics Section, (703) 292-8032.

The preferred method of response is the Electronic On-line Submission.

FOR FURTHER INFORMATION CONTACT: Patrick D. Smith, Technology Development Manager for Polar Research Support, National Science Foundation, Geosciences Directorate, Office of Polar Programs, 2415 Eisenhower Ave., Suite W7251, Alexandria, VA 22314; telephone (703) 292-7455.

SUPPLEMENTARY INFORMATION:

Introduction

Over 500 subsea fiber optic telecommunications cables, including both installed and planned cables, cover nearly all ocean regions including multiple high Arctic cables. NSF is investigating the implementation of a modern subsea fiber optic telecommunications cable connecting the largest U.S. Antarctic Program (<https://www.usap.gov/>) research facility, McMurdo Station (77°50'47" S, 166°40'06" E) (<https://www.usap.gov/videoclipsandmaps/mcm>

[webcam.cfm?t=1](https://www.usap.gov/videoclipsandmaps/mcm)), with either New Zealand or Australia. Although the main scope of the installation is to provide advanced high-speed, low delay telecommunications, this cable will contain additional point sensors (e.g., SMART—Science Monitoring And Reliable Telecommunications) and/or distributed sensing infrastructure, enabling for the first time myriad investigations across a broad range of scientific disciplines.

The NSF Directorates for Geosciences (GEO), Computer and Information Science and Engineering (CISE), and Technology, Innovation, and Partnerships (TIP) have identified the potential subsea cable as an opportunity for transformational changes in the conduct of science, vast improvements in telecommunications capability supporting Antarctica, and innovative public-private partnerships linking science and technology.

Additionally, the cable would have the ability to accommodate additional, multiple forms of distributed fiber optic sensing that are advancing rapidly in technology maturity (e.g., Distributed Acoustic Sensing, Distributed Temperature Sensing, State of Polarization, etc.). Preliminary cable routes have been established using standard subsea cable industry best practices that avoid areas posing high geophysical risk, as well as initial feedback from the scientific community via a virtual workshop in 2021, producing a broad corridor where opportunities exist to adjust the final route to best align with Earth science areas of high science research interest.

Further, science research supported by the cable sensors is of societal relevance on a global scale for a number of reasons, such as (1) filling significant knowledge gaps of key global ocean processes and trends for improved understanding and monitoring climate change, including ocean heat transport, CO₂ sequestration, and sea level rise; (2) regional seismic monitoring and early warning of potential tsunami seismic events; (3) global measurements of geophysical Earth structure; and (4) developing the technological capabilities to enhance other global telecommunications infrastructure for scientific research and human benefit.

Science Workshop

In late June 2021, the NSF Directorate for Geosciences, Office of Polar Programs (GEO/OPP) (<https://www.nsf.gov/div/index.jsp?div=OPP>) and Directorate for Computer Information Science and Engineering, Office of Advanced Cyberinfrastructure (CISE/OAC) (<https://new.nsf.gov/cise/>

oac), jointly funded a research community-led science workshop (<https://www.pgc.umn.edu/workshops/antarctic-cable/>) to review the scientific benefits of a sensor-enabled subsea fiber cable. The Workshop endorsed the cable concept and noted that existing technology and cable systems make it feasible. The Workshop concluded that the proposed activity would benefit Antarctic science research by both increasing telecommunications capacity and including new science sensors in the cable design.

The Workshop's Executive Summary captured four primary findings:

Finding 1: Existing and future Antarctic research would be significantly enhanced if bandwidth limitations were eliminated through the availability of a modern submarine cable system.

Finding 2: A new submarine cable could be constructed with embedded instrumentation (a Scientific Monitoring And Reliable Telecommunications, or SMART, cable) that would itself enable meaningful new research and understanding of the region.

Finding 3: Robust bandwidth for interpersonal connectivity for scientists and staff, if thoughtfully approached, could be transformative for research and work functions, participation in Antarctic science, education, engagement, and community wellbeing.

Finding 4: Construction of a new SMART cable that provides essentially unlimited bandwidth to McMurdo is feasible and could also serve as the platform to extend connectivity to deep-field research sites as well as critical research programs at Amundsen-Scott South Pole Station. This level of connectivity can transform the science and research platforms for future generations.

Feasibility Study

In response to the 2021 Science Workshop, NSF contracted a comprehensive preliminary concept/feasibility study (known as a Desktop Study, or DTS <https://gbs1.com/desktop-studies/>), incorporating the unique attributes of implementing a sensor-enabled cable to Antarctica. The public version of the McMurdo Cable DTS (https://www.nsf.gov/geo/opp/documents/NSF_PublicReleaseDTS_Final.pdf) was released in October 2023. NSF also provided a summary and news release (https://www.nsf.gov/news/news_summ.jsp?cntn_id=308774&org=OPP).

The DTS addresses two proposed routes for comparison: (1) McMurdo Station to Sydney, Australia and (2) McMurdo Station to Invercargill, New

Zealand. It includes brief assessments of optional extensions from the main cable routes to Macquarie Island for potential interconnection to the Australian research station located there and to nearby international research stations located in the Western Ross Sea/Terra Nova Bay area. More details on the proposed routes including landing sites and relevant diagrams can be found in section 2 of the DTS.

The study Executive Summary summarizes the key study results in a comparison of the two routes considered.

Both routes were considered technically feasible with the following observations:

(1) The NZ route is 1,500 km shorter and thus considerably more economical.

(2) The Australian route has additional geophysical risk to the cable arising from a crossing of the seismically active Macquarie Ridge Complex to the north of Macquarie Island.

(3) The New Zealand route covers more regions of science interest as indicated by science researcher input to the study. Seismologist interests obtained during the study proposed cable branching units located at 60° S and 50° S for future sea bottom seismometer instruments tapping the cable's power and communications.

(4) The risk from ice scour appears reasonable based upon detailed near-shore bathymetry—the Antarctic SMART Cable landing risk mitigation uses standard subsea cable landing techniques called Horizontal Directional Drilling (HDD). Bathymetry and iceberg keel depth studies pertaining to the cable route transit across the Ross Sea continental shelf yield a similar low risk assessment.

(5) Environmental assessments and permitting will be a significant component of future work, as is the case with all subsea cable projects, and will include the Antarctic Treaty Committee on Environmental Protection protocols. Coordination with the Committee for the Conservation of Antarctic Marine Living Resources (CCAMLR) will be needed as the proposed cable route transits the CCAMLR governed Marine Protected Areas in the Ross Sea region.

Subsea Cable Industry Considerations

A subsea cable installation represents a substantial economic investment. As such, modern subsea telecommunications cables are designed with a 25-year or greater lifetime and thus are designed for high reliability and low maintenance. The introduction of SMART sensors into commercial subsea telecommunications cables is a

new phenomenon, with the Government of Portugal-sponsored Atlantic CAM cable (<https://www.infraestruturasdeportugal.pt/pt-pt/ip-e-asn-assinam-contrato-para-construcao-de-novo-anel-cam>) and the TAMTAM cable connecting New Caledonia and Vanuatu (<https://www.soest.hawaii.edu/soestwp/announce/news/contract-signed-vanuatu-new-caledonia/>) being the first examples. The introduction of sensors into a standard telecommunications cable meeting scientific requirements and inherent cable design life/reliability requirements represents both a new market opportunity and a new technical frontier for industry that will influence the design and adoption of SMART sensors. Point sensors also complement and enhance commercially available cable sensing technologies such as distributed fiber sensing.

Information Requested

Through this notice, NSF seeks information from the public to evolve the development of the Antarctic SMART Cable. NSF requests information regarding the subsea cable route that both minimizes the risk to the cable and maximizes science research potential, the range of potential science sensors to include, as well as their geographic distribution, the locations of powered cable branching units for future sensor cable build-out or undersea observatory-style point sensor arrays, concepts for the incorporation of existing or promising distributed fiber sensing techniques, and suggested paths to catalyze the necessary technology to develop such a cable system. Additionally, NSF seeks information relevant to partnership opportunities with the public (U.S., international) and private (academia, for-profit and non-profit) sectors that will facilitate the conceptualization, development, deployment and sustainment of the cable system and related scientific infrastructure.

The information requested here will be used to inform the proposed Antarctic SMART Cable project via the NSF Major Research Equipment Facilities and Construction (MREFC) program that funds the development of facility infrastructure. MREFC projects

are funded via a separate appropriation intended for large capital-intensive investments, distinct from the NSF appropriations funding research and related activities.

Responses submitted via Email and Letter Mail are requested to follow the Electronic On-line Submission data capture questions and format for ease in analyzing responses. These responses may address one or as many topics as desired from the enumerated list provided in this RFI, noting the corresponding number of the topic(s) to which the response pertains. Written submissions must be type-written and not exceed 3 pages (exclusive of cover page and accompanying graphics) in 11-point or larger font, single spacing and with a page number provided on each page.

Comments containing references, studies, research, and other empirical data that are not widely published or widely available should include copies or electronic links of the referenced materials; these materials, as well as a list of references, do not count toward the 3-page limit. No business proprietary information, copyrighted information, or personally identifiable information (aside from optional information requested below) should be submitted in response to this RFI. Comments submitted in response to this RFI will be used internally at NSF and may be shared with other Federal agencies and NSF contractors assigned to process the responses.

Responders are asked to answer one or more of the following questions in responses to the RFI. There are no known risks to participating, and participation is voluntary. Unless provided by you, no identifying information will be collected; therefore, all responses will remain confidential, anonymous, and reported in the aggregate. While there is no sensitive content, you may skip a question at any time.

Demographic Questions

1. In which sector do you currently work?

- (a) Academia
- (b) Private or publicly traded company
- (c) Government agency/public sector
- (d) Non-governmental organization/non-profit
- (e) Venture capital/private equity
- (f) Other (Please specify)

2. Please select up to three (3) areas of expertise/interest:

- (a) Physical Oceanography
- (b) Cryosphere
- (c) Biochemistry
- (d) Science Education
- (e) Geodesy
- (f) Hydrology
- (g) Climate Change Research
- (h) Marine Geology/Geophysics
- (i) Natural Hazards
- (j) Solid Earth Geophysics
- (k) Subsea Fiber Optic Cable Systems
- (l) Sensor/Instrumentation Development
- (m) Data Management
- (n) Distributed Fiber Sensing
- (o) Other (Please specify)

3. For how long have you been working in your current field(s)?

- (a) Less than five years
- (b) Five to less than ten years
- (c) Ten to less than twenty years
- (d) Twenty years or more
- (e) Prefer not to answer

SMART Cables and Antarctic SMART Cable Science Objectives

4. How familiar are you with the overall SMART Cable concept?

- Very familiar
- Familiar
- Somewhat familiar
- Not very familiar
- Not at all familiar

5. Prior to the NSF Federal Register Notice and this Electronic On-Line Submission, how familiar were you with the nascent Antarctic SMART Cable project?

- Very familiar
- Familiar
- Somewhat familiar
- Not very familiar
- Not at all familiar

6. Which of the following major research areas do you see the observational capability of the cable supporting? Select all that apply.

- Climate Change Research
- Acoustic Monitoring
- Long-Term Global Ocean Observations (general)
- Seismology Research
- Earthquake/Tsunami Monitoring
- Sea Level Research
- Deep Ocean Circulation Research
- Southern Ocean Research
- Other (Please specify)
- None of the above

7. If you selected "NONE OF THE ABOVE" in the previous question, please elaborate here:

Current and Future Sensors

The initial SMART Cable sensor concept incorporates three basic measurements: Ocean Bottom Pressure, Ocean Bottom Temperature, and Seismic Ground Motion (seismic acceleration and/or velocity). At the

time of the release of this survey, the supplier for the two commercial SMART Cable systems under development is finalizing their sensor and vendor selection process, but future systems—like the Antarctic SMART Cable—may have some limited flexibility in the types of sensors which

can be incorporated. The following questions explore the range of potential sensor capabilities under consideration for inclusion in the Antarctic SMART Cable.

8. How important is it for the sensor to measure each of the following?

BILLING CODE 7555-01-P

Table: Responses for Question 8

Seismic Parameters	Very Important	Important	Somewhat Important	Not Very Important	Not Important at All	Don't Know
Acceleration Response	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Other (Please Specify)						

BILLING CODE 7555-01-C

15. In the previous question, for any selections you indicated were “important” or “very important,” please explain why you feel these sensor types should be included on the cable:

16. In question #14, for any selections you indicated were “not very important” or “not important at all,” please explain why you feel these sensor types are not needed:

17. In your view, how do SMART and distributed fiber sensing (*i.e.*, DAS and DTS) complement one another?

18. What new scientific discoveries or breakthroughs do you anticipate as a direct result of having access to the long-term measurement data collected by the cable’s sensors?

New Sensor Technologies

To catalyze rapid sensor development and increase their Technology

Readiness Levels (TRLs) for inclusion in the Antarctic SMART Cable, a range of organizational approaches may be necessary.

19. Should NSF facilitate further development for SMART Cable sensors? If so, how (*i.e.*, research labs/institutions/industry/partnerships, etc.)? Yes No Don't know

20. If you'd like, please use this space to elaborate on your answer to question 19.

Location of the SMART Cable, Sensors, and Future Cable Expansion

For some segments of the cable, it may be possible to shift the cable’s path slightly in some locations to accommodate additional science or enable long-term monitoring of specific

scientific targets. Further, depending upon the final technological solution(s) for how sensor units will be incorporated into the cable, there may be opportunities to select the locations of some of the sensor modules. Finally, the cable may be able to include one or more Branching Units (BUs). A BU can be used for multiple purposes, such as adding another cable branch, attaching a localized device, or providing an entry point for including a localized network of sensors focused on a specific area or areas.

BILLING CODE 7555-01-P

BILLING CODE 7555-01-C

Figure Caption: Potential routes for the Antarctica SMART Cable system based on the 2023 Desktop Study (https://www.nsf.gov/geo/opp/documents/NSF_Public%20Release%20DTS_Final.pdf). Thick white dashed lines represent primary McMurdo Trunk and three proposed cable segments with optional landings at (a)

Macquarie Island, (b) Invercargill, New Zealand, and (c) Sydney, Australia. Proposed Cable Landing Stations are marked by white circles. Vulnerable Marine Ecosystem (VME) areas near McMurdo Station are shaded dark gray. The dark gray zone around trunk and cable options shows buffer zones where Branching Unit (BU) stubs could extend. Tectonic plate boundaries (AU: Indo-Australian

Plate; AN: Antarctic Plate; PA: Pacific Plate) are denoted by thin black lines.

21. Referring to the above Figure and noting the region of potential cable locations, would you shift the position of the proposed cable route within the buffer zone (dark gray area in the figure)? If so, where? Note that cable path shifts will be minimal without additional engineering evaluations for deployment feasibility and cable safety.

Yes
No
Don't know

22. If you'd like, please use this space to elaborate on your answer to question 21.

23. How valuable would it be to your research to be able to select the specific locations of the SMART sensor modules along the cable?

Very valuable
Valuable
Somewhat valuable
Not very valuable
Not valuable at all

24. How important is it to include one or more Branching Units?

Very important
Important
Somewhat important
Not very important
Not important at all

25. In terms of current and future research, in your view what are potential uses for Branching Units?

26. Referring again to the above Figure and noting the corridor available around the trunk lines to deploy stubs from Branching Units (dark gray shaded areas surrounding the white dotted lines), would you place additional BUs?

Yes
No
Don't Know

27. If you'd like, please use this space to elaborate on your answers to question 26. If you answered yes, please indicate where and why.

28. What potential do you see for the cable to enable the vision of the networked ocean as a relay platform for an "internet of Underwater Things", such as subsea gliders, submersible float sensors, ROVs and similar submersible autonomous instrumentation systems?

Partnerships and the Project

The Whitepaper (<https://goosoocean.org/news/un-ocean-decade-challenge-7-white-paper-a-roadmap-for-the-observing-system-we-need/>) addressing Challenge 7 ("Expand the Global Ocean Observing System") from the UN IOC/UNESCO Decade of Ocean Science for Sustainable Development (2021–2030) ("Ocean Decade 2030") program indicates that significant investments will be needed to meet the challenges for global ocean observation goals while current investments and mechanisms are inadequate. There is a clear call for multi-sector engagements such as public-private partnerships and

international collaborations for a "new economic thinking" to provide the resources needed.

29. What private and/or public sector groups (e.g., academic, non-profit, industry, etc.) do you think may have an active interest in partnership activities with NSF for aspects of the cable system development?

Contribution of the Antarctic SMART Cable To Resolve Global Challenges

30. Beyond the potential direct benefits to support science in the Antarctic and the region covered directly by the Antarctic SMART Cable, there may be broader benefits to developing the Antarctic SMART Cable. In your view, what are the global, national, and societal benefits of this cable?

Future Science Workshop

31. A successor science workshop is being considered for 2025 to build upon and extend the work of the June 2021 workshop and this Electronic On-Line Submission. How interested would you be in attending virtually or in-person, provided full or partial travel expenses could be provided?

Future Science Workshop Participation	Very Interested	Interested	Somewhat Interested	Not Very Interested	Not Interested at All
Attending Virtually	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
Attending In-person	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Final Thoughts

32. If there is anything else you'd like to share or elaborate upon regarding the topics mentioned here, please provide them here.

33. Please complete the form below to indicate your interest in future participation in this project. This is completely voluntary, and your responses collected will be included in the analysis regardless of your response below.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC-2023-0199 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to <https://www.regulations.gov> and search for Docket ID NRC-2023-0199.

- *NRC’s Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at <https://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1-800-397-4209, at 301-415-4737, or by email to PDR.Resource@nrc.gov. The supporting statement and burden spreadsheet are available in ADAMS under Accession Nos. ML24204A067 and ML24024A068.

- *NRC’s PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to PDR.Resource@nrc.gov or call 1-800-397-4209 or 301-415-4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

- *NRC’s Clearance Officer:* A copy of the collection of information and related instructions may be obtained without charge by contacting the NRC’s Clearance Officer, David Cullison, Office of the Chief Information Officer, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001; telephone: 301-415-2084; email: Infocollects.Resource@nrc.gov.

B. Submitting Comments

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to <https://www.reginfo.gov/public/do/PRAMain>. Find this particular information collection by selecting “Currently under Review—

Open for Public Comments” or by using the search function.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. All comment submissions are posted at <https://www.regulations.gov> and entered into ADAMS. Comment submissions are not routinely edited to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the OMB, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that comment submissions are not routinely edited to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Background

Under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the NRC recently submitted a request for renewal of an existing collection of information to OMB for review entitled, “U.S. NRC Acquisition Regulation.” The NRC hereby informs potential respondents that an agency may not conduct or sponsor, and that a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

The NRC published a **Federal Register** notice with a 60-day comment period on this information collection on April 2, 2024, 89 FR 22756.

1. *The title of the information collection:* U.S. NRC Acquisition Regulation.

2. *OMB approval number:* 3150-0169.

3. *Type of submission:* Extension.

4. *The form number, if applicable:* Not applicable.

5. *How often the collection is required or requested:* Monthly, once (at time of award), and on occasion (when changes occur).

6. *Who will be required or asked to respond:* Contractors and bidders.

7. *The estimated number of annual responses:* 6,258 (6,112 reporting responses + 146 recordkeepers).

8. *The estimated number of annual respondents:* 428.

9. *The estimated number of hours needed annually to comply with the information collection requirement or request:* 17,412 (14,834 reporting + 2,578 recordkeeping).

10. *Abstract:* The mandatory requirements of the Nuclear Regulatory

Commission Acquisition Regulation (NRCAR) implement and supplement the government-wide Federal Acquisition Regulation (FAR) and ensure that the regulations governing the procurement of goods and services with the NRC satisfy the needs of the agency. This includes reports and recordkeeping requirements for certain contractors or offerors to submit a monthly progress report that summarizes work performed during the previous month, and/or retain records of equipment, payroll, inspection and quality control records, as applicable. Because of differing statutory authorities among Federal agencies, the FAR permits agencies to issue a regulation to implement FAR policies and procedures internally to satisfy the specific need of the agency. The NRCAR includes policies, procedures, solicitation provisions and contract clauses needed to ensure effective and efficient evaluation, negotiation, and administration of agency acquisitions. Certain reports, such as reports of contractor organizational conflicts of interest or changes in key personnel are collected from contractors on as needed basis as changes occur whether at the time award or throughout the life of the contract. Some reports are required to be submitted monthly such as the Financial Status report and Technical Progress report. There are also some reports that bidders are required to submit upon request, such as responses to pre-award questions that demonstrate their ability to meet minimum standards set forth in the FAR.

Dated: August 23, 2024.

For the Nuclear Regulatory Commission.

David Cullison,

NRC Clearance Officer, Office of the Chief Information Officer.

New Postal Products

AGENCY: Postal Regulatory Commission.
ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission’s consideration concerning a negotiated service agreement. This

notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 30, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (<http://www.prc.gov>). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.¹

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s),

applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s):* MC2024-533 and CP2024-541; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 309 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* August 30, 2024.

2. *Docket No(s):* MC2024-534 and CP2024-542; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 310 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Alireza Motameni; *Comments Due:* August 30, 2024.

3. *Docket No(s):* MC2024-535 and CP2024-543; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 311 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Christopher C. Mohr; *Comments Due:* August 30, 2024.

4. *Docket No(s):* MC2024-546 and CP2024-554; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 245 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Christopher C. Mohr; *Comments Due:* August 30, 2024.

5. *Docket No(s):* MC2024-547 and CP2024-555; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 246 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39

U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Christopher C. Mohr; *Comments Due:* August 30, 2024.

6. *Docket No(s):* MC2024-548 and CP2024-556; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 313 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Gregory S. Stanton; *Comments Due:* August 30, 2024.

7. *Docket No(s):* MC2024-549 and CP2024-557; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 314 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Gregory S. Stanton; *Comments Due:* August 30, 2024.

8. *Docket No(s):* MC2024-550 and CP2024-558; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 315 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Kenneth R. Moeller; *Comments Due:* August 30, 2024.

9. *Docket No(s):* MC2024-551 and CP2024-559; *Filing Title:* USPS Request to Add Priority Mail & USPS Ground Advantage Contract 316 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* August 22, 2024; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Kenneth R. Moeller; *Comments Due:* August 30, 2024.

This Notice will be published in the **Federal Register**.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 35306; File No. 812–15489]

AB Private Credit Investors, LLC and AB Private Lending Fund

August 23, 2024.

AGENCY: Securities and Exchange Commission (“Commission”).

ACTION: Notice.

Notice of an application under section 6(c) of the Investment Company Act of 1940 (the “Act”) for an exemption from sections 18(a)(2), 18(c), 18(i) and section 61(a) of the Act.

SUMMARY OF APPLICATION: Applicants request an order to permit certain registered closed-end investment companies that have elected to be regulated as business development companies to issue multiple classes of shares with varying sales loads and asset-based service and/or distribution fees.

APPLICANTS: AB Private Credit Investors, LLC and AB Private Lending Fund.

FILING DATES: The application was filed on July 24, 2023, and amended on October 31, 2023, and August 7, 2024.

HEARING OR NOTIFICATION OF HEARING: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC’s Secretary at Secretarys-Office@sec.gov and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests

should be received by the Commission by 5:30 p.m. on September 17, 2024, and should be accompanied by proof of service on the Applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer’s interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission’s Secretary.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov*. The Applicants: Mark Manley, AB Private Credit Investors LLC, 405 Colorado Street, Suite 1500, Austin, Texas 78701.

FOR FURTHER INFORMATION CONTACT: Chris Chase, Senior Counsel, or Lisa Reid Ragen, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel’s Office).

SUPPLEMENTARY INFORMATION: For Applicants’ representations, legal analysis, and condition, please refer to Applicants’ second amended and restated application, dated August 7, 2024, which may be obtained via the Commission’s website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC’s EDGAR system. The SEC’s EDGAR system may be searched at <https://www.sec.gov/edgar/searchedgar/legacy/companysearch.html>. You may also call the SEC’s Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Vanessa A. Countryman,
Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100803; File No. SR-CboeEDGA–2024–034]

Self-Regulatory Organizations; Cboe EDGA Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt New Market Data Reports

August 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b–4 thereunder,² notice is hereby given that on August

15, 2024, Cboe EDGA Exchange, Inc. (the “Exchange” or “EDGA”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange filed the proposal as a “non-controversial” proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act³ and Rule 19b–4(f)(6) thereunder.⁴ The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization’s Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGA Exchange, Inc. (the “Exchange” or “EDGA”) proposes to adopt new market data reports. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange’s website (http://markets.cboe.com/us/equities/regulation/rule_filings/edga/), at the Exchange’s Office of the Secretary, and at the Commission’s Public Reference Room.

II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 13.8 (EDGA Book Feeds) to adopt the Cboe Timestamping Service, which is a market data service comprised of two distinct market data reports. The Cboe Timestamping Service will provide timestamp information for orders and cancels for market participants. More specifically, the Cboe Timestamping Service reports will provide various timestamps relating to the message lifecycle throughout the

exchange system. The first report—the Missed Liquidity Report—will cover order messages and the second report—Cancels Report—will cover cancel messages. The proposed reports are optional products that will be available to all Members and Members may opt to choose both reports, one report, or neither report. Corresponding fees will be assessed based on the number of reports selected.⁵

The Exchange notes that the data included in the proposed reports will be based only on the data of the market participant that opts to subscribe to the reports (“Recipient Member”) and will not include information related to any Member other than the Recipient Member. The Exchange will restrict all other market participants from receiving another market participant’s data. Additionally, neither report includes real-time market data. Rather, the reports will contain historical data from the prior trading day and will be available after the end of the trading day, generally on a T+1 basis.

Currently, the Exchange provides real-time prices and analytics in the marketplace. The Exchange proposes to introduce the Missed Liquidity and Cancel Reports in response to Member demand for additional data concerning the timeliness of their incoming orders, cancel messages and executions against resting orders. Members have frequently requested from the Exchange’s trading operations personnel information concerning the timeliness of their incoming orders, cancel messages and efficacy of their attempts to execute against resting liquidity on the Exchange’s Book. The Exchange believes the additional data points outlined below may help Members gain a better understanding about their interactions with the Exchange. The Exchange believes these reports will provide Members with an opportunity to learn more about better opportunities to access liquidity and receive better execution rates and improve order cancel success. The proposed reports will also increase transparency and democratize information so that all Members that subscribe to either or both reports have access to the same information on an equal basis.

The proposed Missed Liquidity Report will provide time details for executions of orders that rest on the book where the Member receiving the report attempted to execute against that resting order within an Exchange-

⁵ The Exchange plans to submit a separate filing with the Commission pursuant to Section 19(b)(1) to propose fees for the Missed Liquidity Report and Cancels Report.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b–4.

³ 15 U.S.C. 78s(b)(3)(A)(iii).

⁴ 17 CFR 240.19b–4(f)(6).

determined amount of time (not to exceed 1 millisecond) after receipt of the first attempt to execute against the resting order and within an Exchange-determined amount of time (not to exceed 100 microseconds) before receipt of the first attempt to execute against the resting order.⁶ For example, if a Member sends in a marketable order, but an order resting on the Exchange order book was subsequently executed, the Missed Liquidity Report can assist the Member in determining by how much time that order missed an execution.⁷

The Cancels Report will provide liquidity response time details for orders that rest on the book where the Member receiving the report attempted to cancel that resting order or any other resting order within an Exchange-determined amount of time (not to exceed 1 millisecond) after receipt of the order that executed against the resting order and within an Exchange-determined amount of time (not to exceed 100 microseconds) before receipt of the order that executed against the resting order.⁸ For example, if a market participant sends in a cancel message, but an order resting on the Exchange order book was executed prior to the system processing the cancel message, the Cancel report can assist the market participant in determining by how much time that order missed being canceled instead of executing.⁹

Both the Missed Liquidity Report and Cancels Report will include the

following data elements for orders¹⁰ and cancel messages,¹¹, respectively: (1) Recipient Member Firm ID; (2) Symbol; (3) Execution ID;¹² (3) Exchange System Timestamps for orders and cancels;¹³ (4) Matching Unit number;¹⁴ (5) Queued;¹⁵ (6) Port Type;¹⁶ and (7) Aggressor Order Type.¹⁷ No specific information about resting orders on the Exchange book will be provided.

Market participants generally would use liquidity accessing orders if there is a high probability that it will execute an order resting on the Exchange order book. As noted above, the Missed Liquidity Report helps subscribing market participants to better understand by how much time they missed executing against certain resting orders. The Exchange therefore believes this report will provide greater visibility into what was missed in trading so market participants can better determine whether they want to invest in the technology to mitigate the misses. It may also allow for them to optimize their models and trading patterns to yield better execution results. Similarly, the Cancels Report will provide information that helps subscribing market participants determine how best to improve success rates with respect to canceling their orders, which reduces exposure and manages risk.

¹⁰ The Missed Liquidity Report will only include trade events which are triggered by an order that removed liquidity on entry and will exclude trade events resulting from: elected stop orders, orders routed and executed at away venues, and peg order movements, and auctions.

¹¹ Includes individual order cancellations, mass cancels, and purge orders messages that are sent via Financial Information Exchange ("FIX") protocol or Binary Order Entry (BOE) protocol by a subscriber.

¹² The Execution ID is a unique reference number assigned by the Exchange for each trade.

¹³ Includes Network Discovery Time (which is a network hardware switch timestamp taken at the network capture point); Order Handler NIC Timestamp (which is a hardware timestamp that represents when a BOE order handler server NIC observed the message); Order Handler Received Timestamp (which is software timestamp that represents when the FIX or BOE order handler has begun processing the order after the socket read); Order Handler Send Timestamp (which represents when the FIX or BOE order handler has finished processing the order and begun sending to the matching engine); Matching Engine NIC Timestamp (which is a hardware timestamp that represents when the target matching engine server NIC observed the message); and Matching Engine Transaction Timestamp (which is a software timestamp that represents when the matching engine has started processing an event).

¹⁴ Represents the matching unit number.

¹⁵ Flag to indicate whether a message was delayed due to message in flight limits (*i.e.*, a limit on the total number of messages in flight between an order handler and a matching engine).

¹⁶ Refers to the port type used by the session to send the applicable message.

¹⁷ Indicates whether the order type of the response order that executed against the resting order was a new order or modify message.

The Exchange notes the data information contained within the proposed Missed Opportunities Report and Cancels Report are similar to data provided in reports that currently are, or historically have been, offered by other exchanges.¹⁸

Implementation

The Exchange will announce via Exchange Notice the implementation date of the proposed rule change, which shall occur no later than 60 days after the operative date of this rule filing.

2. Statutory Basis

The Exchange believes that the proposed Cboe One Options Feed [sic] is consistent with Section 6(b) of the Act,¹⁹ in general, and furthers the objectives of Section 6(b)(5) of the Act,²⁰ in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and to protect investors and the public interest, and that it is not designed to permit unfair discrimination among customers, brokers, or dealers. The Exchange also believes this proposal is consistent with Section 6(b)(5) of the Act because it protects investors and the public interest and promotes just and equitable principles of trade by providing investors with new options for receiving market data as requested by market participants and Section 6(b)(8) of the Act, which requires that the rules of an exchange not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.²¹ This proposal is in keeping with those principles in that it promotes increased transparency through the dissemination of the optional Missed Liquidity and Cancels

¹⁸ The proposed Report is based on a similar report previously provided by the NASDAQ Stock Market LLC ("NASDAQ") for equity securities called the Missed Opportunity—Latency report as part of its NASDAQ Trader Insights offering. See Securities Exchange Act Release No. 78886 (September 20, 2016), 81 FR 66113 (September 26, 2016) (SR-NASDAQ-2016-101) (Order Granting Approval of Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, To Add NASDAQ Rule 7046 (Nasdaq Trading Insights)) ("NASDAQ Approval Order"). The report is also similar to a report currently provided by MIAX Emerald, LLC ("MIAX Emerald") and its affiliates, called the Liquidity Taker Event Report. See *e.g.*, MIAX Emerald Rule 531. See also Securities Exchange Act Release No. 91356 (March 18, 2021), 86 FR 15759 (March 24, 2021) (SR-EMERALD-2021-09).

¹⁹ 15 U.S.C. 78f.

²⁰ 15 U.S.C. 78f(b)(5).

²¹ 15 U.S.C. 78f(b)(8).

⁶ The Exchange will announce the Exchange-determined timeframes with reasonable advance notice via Exchange Notice.

⁷ For example, Participant A submits an order that is posted to the Exchange's Book. Participant B at some point thereafter enters a marketable order to execute against Participant A's resting order. Within 500 microseconds of Participant B's submission, Participant C, also sends a marketable order to execute against Participant A's resting order. Because Participant B's order is received by the Exchange before Participant C's order, Participant B's order executes against Participant A's resting order. The proposed Report would provide Participant C (the Recipient Member of the report) the data points necessary for that firm to calculate by how much time they missed executing against Participant A's resting order.

⁸ The Exchange will announce the Exchange-determined timeframes with reasonable advance notice via Exchange Notice.

⁹ For example, Participant A submits an order that is posted to the Exchange's Book and Participant B at some point thereafter submits a marketable order to execute against Participant A's resting order. Within 500 microseconds of submission of Participant B's order, Participant A sends a cancel message to cancel its resting order. Because Participant B's order is processed at the Matching Engine by the Exchange before Participant A's cancel message, Participant B's order executes against Participant A's resting order. The proposed Report would provide Participant A the data points necessary for that firm to calculate by how much time they missed canceling its resting order.

Report to those interested in paying to receive either or both of these reports.

The Exchange also believes this proposal is consistent with Section 6(b)(5) of the Act because it protects investors and the public interest and promotes just and equitable principles of trade by providing investors with new options for receiving market data as requested by potential purchasers. The proposed rule change would benefit investors by facilitating their prompt access to the value-added information that is included in the proposed reports. The reports will allow Members to access information regarding their trading activity that they may utilize to evaluate their own trading behavior and order interactions. It also promotes just and equitable principles of trade because it would provide latency information in a systematized way and standardized format to any Member that chooses to subscribe to the proposed reports. As discussed, the proposed reports are also not real-time market data products, but rather provide only historical trading data for the previous trading day, generally on a T+1 basis. In addition, the data in the reports regarding incoming orders that failed to execute or incoming cancels that failed to cancel would be specific to the Recipient Member's messages. As noted above, no specific information about the resting orders on the Exchange book will be provided and any information relating to another Member would be anonymized.

In adopting Regulation NMS, the Commission granted self-regulatory organizations ("SROs") and broker dealers increased authority and flexibility to offer new and unique market data to consumers of such data. It was believed that this authority would expand the amount of data available to users and consumers of such data and also spur innovation and competition for the provision of market data. The Exchange believes that the proposed reports are the sort of market data product that the Commission envisioned when it adopted Regulation NMS.

The Commission concluded that Regulation NMS—by deregulating the market in proprietary data—would itself further the Act's goals of facilitating efficiency and competition:

"[E]fficiency is promoted when broker-dealers who do not need the data beyond the prices, sizes, market center identifications of the NBBO and consolidated last sale information are not required to receive (and pay for) such data. The Commission also believes that efficiency is promoted when broker-dealers may choose to

receive (and pay for) additional market data based on their own internal analysis of the need for such data."²²

By removing "unnecessary regulatory restrictions" on the ability of exchanges to sell their own data, Regulation NMS advanced the goals of the Act and the principles reflected in its legislative history. This proposed Cboe Timestamping Service (*i.e.*, the Missed Liquidity and Cancels Reports) provides investors with new options for receiving market data, which was a primary goal of the market data amendments adopted by Regulation NMS.²³

The proposed reports are designed for Members that are interested in gaining insight into latency in connection with their respective (1) orders that failed to execute against an order resting on the Exchange order book and/or (2) cancel messages that failed to cancel resting orders. The Exchange believes that providing this optional data to interested market participants for a fee is consistent with facilitating transactions in securities, removing impediments to and perfecting the mechanism of a free and open market and a national market system, and, in general, protecting investors and the public interest because it provides additional information and insight to subscribing market participants regarding their trading activity on the Exchange. More specifically, the proposed reports provide greater visibility into exactly what was missed in trading so market participants may optimize their models and trading patterns to yield better execution results by identifying by how much time an order that may have been marketable missed executing and by how much time a cancel message missed canceling.

As mentioned above, other exchanges currently offer, or have previously offered, similar trading related reports that have been reviewed and approved by the Commission.²⁴ For example, MIAX Emerald currently offers the Liquidity Taker Event Report and Nasdaq historically provided the Missed Opportunity—Latency report as part of its NASDAQ Trader Insights offering.²⁵

²² See Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496 (June 29, 2005) ("Regulation NMS Adopting Release").

²³ See Regulation NMS Adopting Release, *supra*, at 37503.

²⁴ *Supra* Note 18.

²⁵ The Exchange notes that like Nasdaq's Missed Opportunity—Latency report, the proposed reports cover equity securities, whereas the MIAX Emerald Liquidity Taker Event Report covers options trading. The Exchange believes this difference is of no consequence as each of these reports are intended to serve the same purpose—providing firms with an opportunity to learn more about when they may have better opportunities to access

MIAX Emerald's Liquidity Taker Event Report and Nasdaq's prior Missed Opportunity—Latency report, like the proposed Missed Liquidity Report, identify by how much time an order missed executing against a resting order. Also, like the MIAX Emerald and Nasdaq's analogous reports, the Exchange's proposed reports are provided on a T+1 basis and include data specific to one Member, and only that Member would receive the report. The proposed reports, like the reports of MIAX Emerald and Nasdaq, restrict all other market participants, including the Recipient Member, from receiving another market participant's data. In addition, the proposed reports, like the MIAX Emerald and Nasdaq reports, are each intended to provide the Recipient Member with the time duration by which the order entered by the Recipient Member missed an execution or similarly, missed canceling an order before it could execute.²⁶ The proposed reports, along with the MIAX Emerald Liquidity Taker Event Report and/or Nasdaq Missed Opportunities—Latency reports, each include the following information:

- Recipient Member identifier
- Symbol
- Execution ID
- Order reference number (unique reference number assigned to a new order at the time of receipt)
- Exchange System Timestamps for incoming orders and cancels, including timestamps to determine the time difference between the time the first response that executes against the resting order was received by the Exchange and the time of each response sent by the Recipient Member, regardless of whether it executed or not

liquidity and to receive better execution rates or cancel success.

²⁶ Although not clearly defined, the Exchange believes that MIAX Emerald's Liquidity Taker Event Report also provides information relating to cancel messages. Particularly, MIAX Emerald Liquidity Taker Event Report provides, among other things, data relating to the "type of each response submitted by the Recipient Member." See MIAX Emerald Rule 5.31(a)(iii)(C). MIAX Emerald's technical specifications outline the various types of available liquidity messages including, Simple Mass Quote Cancel Request and Mass Liquidity Cancel Request. See MIAX Express Interface for Quoting and Trading Options, MEI Interface Specification, Section 4.1 (Liquidity Messages), available at: [MIAX Express Interface_MEI_v2.2a.pdf \(miaxglobal.com\)](https://www.miaxglobal.com). The Exchange also believes that providing the same data points for cancel messages as the data provided for orders messages is of no materials consequence as the Cancels Report is intended to serve a similar purpose as the proposed Missed Liquidity Report—providing Members additional information to better understand the efficacy of their incoming orders and cancel messages.

- The order type of the response that executes against the resting order

The proposed reports include the following information that are/were not included in either the MIAX Emerald Liquidity Taker Event Report and/or Nasdaq Missed Opportunities—Latency Report:

- Matching Unit Number. This information is specific to the Exchange's matching unit architecture
- Queued. This information indicates whether or not a message was delayed due to message in flight limits, which limits are specific to the Exchange only
- The port type

Lastly, the proposed reports do not include the following information that is/was included in both the MIAX Emerald Liquidity Taker Event Report and Nasdaq Missed Opportunities—Latency Report:

- Side (buy or sell). This information is already available via OPRA or the Exchange's proprietary data feeds
- Displayed price and size. This information is already available via OPRA or the Exchange's proprietary data feeds
- The time a resting order was received by the Exchange. The Exchange does not believe information relating to the time a resting order was received is as relevant as the above-described data that will be included nor is it necessary with respect to the goal of the proposed reports which is to better understand by how much time a particular order missed executing against an order resting on the Book or a cancel message missed canceling against an order resting on the Book.

As illustrated above, the proposed reports are substantially similar to the MIAX Emerald Liquidity Taker Event Report and Nasdaq's former Missed Opportunities—Latency Report and includes a number of the same data elements designed to assist Members in better understanding their trading activity on the Exchange and augment their trading strategies to improve their execution opportunities.

In approving Nasdaq's Missed Opportunity—Latency report, the Commission noted that the report "would increase transparency, particularly for Members who may not have the expertise to generate the same information."²⁷ The Exchange's

proposed reports would achieve the same goal for Members seeking to better understand the efficacy of their incoming orders and cancel messages. Further, the proposed reports promote just and equitable principles of trade because it will increase transparency and democratize information so that all firms may elect to subscribe to either, or both, reports even though some firms may not have the appropriate resources to generate a similar report themselves.

The Exchange proposes to provide the reports on a voluntary basis and no Member will be required to subscribe to either report. The Exchange notes that there is no rule or regulation that requires the Exchange to produce, or that a Member elect to receive, either report. It is entirely a business decision of each Member to subscribe to one, both, or neither report. The Exchange proposes to offer the reports as a convenience to Members to provide them with additional information regarding trading activity on the Exchange on a delayed basis after the close of regular trading hours. A Member that chooses to subscribe to the reports may discontinue receiving either report at any time if that Member determines that the information contained in the Report is no longer useful.

In summary, the proposed reports will help to protect a free and open market by providing additional historical data (offered on an optional basis) to the marketplace and by providing investors with greater choices. Additionally, the proposal would not permit unfair discrimination because the proposed reports will be available to all Exchange Members.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Rather, the Exchange believes that the proposed Report will enhance competition by providing a new option for receiving market data to Members. The proposed Report will also further enhance competition between exchanges by allowing the Exchange to expand its product offerings to include reports similar to a report that is currently offered by other exchanges.²⁸

Additionally, the Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the

purposes of the Act. Market participants are not required to purchase either proposed report, and the Exchange is not required to make either report available to investors. Rather, the Exchange is voluntarily making these reports available, as requested by Members, and Members may choose to receive (and pay for) this data based on their own business needs. Potential purchasers may request the data at any time if they believe it to be valuable or may decline to purchase such data.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not:

- A. significantly affect the protection of investors or the public interest;
- B. impose any significant burden on competition; and

- C. become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act²⁹ and Rule 19b-4(f)(6)³⁰ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-

²⁷ See Securities Exchange Act Release No. 78886 (September 20, 2016), 81 FR 66113 (September 26, 2016) (SR-NASDAQ-2016-101) (Order Granting Approval of Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, To Add NASDAQ Rule 7046 (Nasdaq Trading Insights)) ("NASDAQ Approval Order").

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt New Market Data Reports

August 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 15, 2024, Cboe EDGX Exchange, Inc. (the "Exchange" or "EDGX") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Exchange filed the proposal as a "non-controversial" proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act³ and Rule 19b-4(f)(6) thereunder.⁴ The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the "Exchange" or "EDGX") proposes to adopt new market data reports. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (http://markets.cboe.com/us/options/regulation/rule_filings/edgx/), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ 15 U.S.C. 78s(b)(3)(A)(iii).

⁴ 17 CFR 240.19b-4(f)(6).

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Rule 13.8 (EDGX Book Feeds) to adopt the Cboe Timestamping Service, which is a market data service comprised of two distinct market data reports. The Cboe Timestamping Service will provide timestamp information for orders and cancels for market participants. More specifically, the Cboe Timestamping Service reports will provide various timestamps relating to the message lifecycle throughout the exchange system. The first report—the Missed Liquidity Report—will cover order messages and the second report—Cancels Report—will cover cancel messages. The proposed reports are optional products that will be available to all Members and Members may opt to choose both reports, one report, or neither report. Corresponding fees will be assessed based on the number of reports selected.⁵

The Exchange notes that the data included in the proposed reports will be based only on the data of the market participant that opts to subscribe to the reports ("Recipient Member") and will not include information related to any Member other than the Recipient Member. The Exchange will restrict all other market participants from receiving another market participant's data. Additionally, neither report includes real-time market data. Rather, the reports will contain historical data from the prior trading day and will be available after the end of the trading day, generally on a T+1 basis.

Currently, the Exchange provides real-time prices and analytics in the marketplace. The Exchange proposes to introduce the Missed Liquidity and Cancel Reports in response to Member demand for additional data concerning the timeliness of their incoming orders, cancel messages and executions against resting orders. Members have frequently requested from the Exchange's trading operations personnel information concerning the timeliness of their incoming orders, cancel messages and efficacy of their attempts to execute against resting liquidity on the Exchange's Book. The Exchange believes the additional data points outlined below may help Members gain a better understanding about their

⁵ The Exchange plans to submit a separate filing with the Commission pursuant to Section 19(b)(1) to propose fees for the Missed Liquidity Report and Cancels Report.

³¹ 17 CFR 200.30-3(a)(12).

interactions with the Exchange. The Exchange believes these reports will provide Members with an opportunity to learn more about better opportunities to access liquidity and receive better execution rates and improve order cancel success. The proposed reports will also increase transparency and democratize information so that all Members that subscribe to either or both reports have access to the same information on an equal basis.

The proposed Missed Liquidity Report will provide time details for executions of orders that rest on the book where the Member receiving the report attempted to execute against that resting order within an Exchange-determined amount of time (not to exceed 1 millisecond) after receipt of the first attempt to execute against the resting order and within an Exchange-determined amount of time (not to exceed 100 microseconds) before receipt of the first attempt to execute against the resting order.⁶ For example, if a Member sends in a marketable order, but an order resting on the Exchange order book was subsequently executed, the Missed Liquidity Report can assist the Member in determining by how much time that order missed an execution.⁷

The Cancels Report will provide liquidity response time details for orders that rest on the book where the Member receiving the report attempted to cancel that resting order or any other resting order within an Exchange-determined amount of time (not to exceed 1 millisecond) after receipt of the order that executed against the resting order and within an Exchange-determined amount of time (not to exceed 100 microseconds) before receipt of the order that executed against the resting order.⁸ For example, if a market participant sends in a cancel message, but an order resting on the Exchange order book was executed prior to the system processing the cancel message, the Cancel report can assist the market

participant in determining by how much time that order missed being canceled instead of executing.⁹

Both the Missed Liquidity Report and Cancels Report will include the following data elements for orders¹⁰ and cancel messages,¹¹ respectively: (1) Recipient Member Firm ID; (2) Symbol; (3) Execution ID;¹² (3) Exchange System Timestamps for orders and cancels;¹³ (4) Matching Unit number;¹⁴ (5) Queued;¹⁵ (6) Port Type;¹⁶ and (7) Aggressor Order Type.¹⁷ No specific information about resting orders on the Exchange book will be provided.

Market participants generally would use liquidity accessing orders if there is a high probability that it will execute an order resting on the Exchange order book. As noted above, the Missed Liquidity Report helps subscribing market participants to better understand by how much time they missed

⁹ For example, Participant A submits an order that is posted to the Exchange's Book and Participant B at some point thereafter submits a marketable order to execute against Participant A's resting order. Within 500 microseconds of submission of Participant B's order, Participant A sends a cancel message to cancel its resting order. Because Participant B's order is processed at the Matching Engine by the Exchange before Participant A's cancel message, Participant B's order executes against Participant A's resting order. The proposed Report would provide Participant A the data points necessary for that firm to calculate by how much time they missed canceling its resting order.

¹⁰ The Missed Liquidity Report will only include trade events which are triggered by an order that removed liquidity on entry and will exclude trade events resulting from: elected stop orders, orders routed and executed at away venues, and peg order movements, and auctions.

¹¹ Includes individual order cancellations, mass cancels, and purge orders messages that are sent via Financial Information Exchange ("FIX") protocol or Binary Order Entry (BOE) protocol by a subscriber.

¹² The Execution ID is a unique reference number assigned by the Exchange for each trade.

¹³ Includes Network Discovery Time (which is a network hardware switch timestamp taken at the network capture point); Order Handler NIC Timestamp (which is a hardware timestamp that represents when a BOE order handler server NIC observed the message); Order Handler Received Timestamp (which is software timestamp that represents when the FIX or BOE order handler has begun processing the order after the socket read); Order Handler Send Timestamp (which represents when the FIX or BOE order handler has finished processing the order and begun sending to the matching engine); Matching Engine NIC Timestamp (which is a hardware timestamp that represents when the target matching engine server NIC observed the message); and Matching Engine Transaction Timestamp (which is a software timestamp that represents when the matching engine has started processing an event).

¹⁴ Represents the matching unit number.

¹⁵ Flag to indicate whether a message was delayed due to message in flight limits (*i.e.*, a limit on the total number of messages in flight between an order handler and a matching engine).

¹⁶ Refers to the port type used by the session to send the applicable message.

¹⁷ Indicates whether the order type of the response order that executed against the resting order was a new order or modify message.

executing against certain resting orders. The Exchange therefore believes this report will provide greater visibility into what was missed in trading so market participants can better determine whether they want to invest in the technology to mitigate the misses. It may also allow for them to optimize their models and trading patterns to yield better execution results. Similarly, the Cancels Report will provide information that helps subscribing market participants determine how best to improve success rates with respect to canceling their orders, which reduces exposure and manages risk.

The Exchange notes the data information contained within the proposed Missed Opportunities Report and Cancels Report are similar to data provided in reports that currently are, or historically have been, offered by other exchanges.¹⁸

Implementation

The Exchange will announce via Exchange Notice the implementation date of the proposed rule change, which shall occur no later than 60 days after the operative date of this rule filing.

2. Statutory Basis

The Exchange believes that the proposed Cboe One Options Feed [sic] is consistent with Section 6(b) of the Act,¹⁹ in general, and furthers the objectives of Section 6(b)(5) of the Act,²⁰ in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and to protect investors and the public interest, and that it is not designed to permit unfair discrimination among customers, brokers, or dealers. The Exchange also believes this proposal is consistent with Section 6(b)(5) of the Act because it protects investors and the public interest and promotes just and equitable

¹⁸ The proposed Report is based on a similar report previously provided by the NASDAQ Stock Market LLC ("NASDAQ") for equity securities called the Missed Opportunity—Latency report as part of its NASDAQ Trader Insights offering. See Securities Exchange Act Release No. 78886 (September 20, 2016), 81 FR 66113 (September 26, 2016) (SR-NASDAQ-2016-101) (Order Granting Approval of Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, To Add NASDAQ Rule 7046 (Nasdaq Trading Insights)) ("NASDAQ Approval Order"). The report is also similar to a report currently provided by MIAx Emerald, LLC ("MIAx Emerald") and its affiliates, called the Liquidity Taker Event Report. See *e.g.*, MIAx Emerald Rule 531. See also Securities Exchange Act Release No. 91356 (March 18, 2021), 86 FR 15759 (March 24, 2021) (SR-EMERALD-2021-09).

¹⁹ 15 U.S.C. 78f.

²⁰ 15 U.S.C. 78f(b)(5).

⁶ The Exchange will announce the Exchange-determined timeframes with reasonable advance notice via Exchange Notice.

⁷ For example, Participant A submits an order that is posted to the Exchange's Book. Participant B at some point thereafter enters a marketable order to execute against Participant A's resting order. Within 500 microseconds of Participant B's submission, Participant C, also sends a marketable order to execute against Participant A's resting order. Because Participant B's order is received by the Exchange before Participant C's order, Participant B's order executes against Participant A's resting order. The proposed Report would provide Participant C (the Recipient Member of the report) the data points necessary for that firm to calculate by how much time they missed executing against Participant A's resting order.

⁸ The Exchange will announce the Exchange-determined timeframes with reasonable advance notice via Exchange Notice.

principles of trade by providing investors with new options for receiving market data as requested by market participants and Section 6(b)(8) of the Act, which requires that the rules of an exchange not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.²¹ This proposal is in keeping with those principles in that it promotes increased transparency through the dissemination of the optional Missed Liquidity and Cancels Report to those interested in paying to receive either or both of these reports.

The Exchange also believes this proposal is consistent with Section 6(b)(5) of the Act because it protects investors and the public interest and promotes just and equitable principles of trade by providing investors with new options for receiving market data as requested by potential purchasers. The proposed rule change would benefit investors by facilitating their prompt access to the value-added information that is included in the proposed reports. The reports will allow Members to access information regarding their trading activity that they may utilize to evaluate their own trading behavior and order interactions. It also promotes just and equitable principles of trade because it would provide latency information in a systematized way and standardized format to any Member that chooses to subscribe to the proposed reports. As discussed, the proposed reports are also not real-time market data products, but rather provide only historical trading data for the previous trading day, generally on a T+1 basis. In addition, the data in the reports regarding incoming orders that failed to execute or incoming cancels that failed to cancel would be specific to the Recipient Member's messages. As noted above, no specific information about the resting orders on the Exchange book will be provided and any information relating to another Member would be anonymized.

In adopting Regulation NMS, the Commission granted self-regulatory organizations ("SROs") and broker dealers increased authority and flexibility to offer new and unique market data to consumers of such data. It was believed that this authority would expand the amount of data available to users and consumers of such data and also spur innovation and competition for the provision of market data. The Exchange believes that the proposed reports are the sort of market data product that the Commission

envisioned when it adopted Regulation NMS.

The Commission concluded that Regulation NMS—by deregulating the market in proprietary data—would itself further the Act's goals of facilitating efficiency and competition:

"[E]fficiency is promoted when broker-dealers who do not need the data beyond the prices, sizes, market center identifications of the NBBO and consolidated last sale information are not required to receive (and pay for) such data. The Commission also believes that efficiency is promoted when broker-dealers may choose to receive (and pay for) additional market data based on their own internal analysis of the need for such data."²²

By removing "unnecessary regulatory restrictions" on the ability of exchanges to sell their own data, Regulation NMS advanced the goals of the Act and the principles reflected in its legislative history. This proposed Cboe Timestamping Service (*i.e.*, the Missed Liquidity and Cancels Reports) provides investors with new options for receiving market data, which was a primary goal of the market data amendments adopted by Regulation NMS.²³

The proposed reports are designed for Members that are interested in gaining insight into latency in connection with their respective (1) orders that failed to execute against an order resting on the Exchange order book and/or (2) cancel messages that failed to cancel resting orders. The Exchange believes that providing this optional data to interested market participants for a fee is consistent with facilitating transactions in securities, removing impediments to and perfecting the mechanism of a free and open market and a national market system, and, in general, protecting investors and the public interest because it provides additional information and insight to subscribing market participants regarding their trading activity on the Exchange. More specifically, the proposed reports provide greater visibility into exactly what was missed in trading so market participants may optimize their models and trading patterns to yield better execution results by identifying by how much time an order that may have been marketable missed executing and by how much time a cancel message missed canceling.

As mentioned above, other exchanges currently offer, or have previously

offered, similar trading related reports that have been reviewed and approved by the Commission.²⁴ For example, MIAX Emerald currently offers the Liquidity Taker Event Report and Nasdaq historically provided the Missed Opportunity—Latency report as part of its NASDAQ Trader Insights offering.²⁵ MIAX Emerald's Liquidity Taker Event Report and Nasdaq's prior Missed Opportunity—Latency report, like the proposed Missed Liquidity Report, identify by how much time an order missed executing against a resting order. Also, like the MIAX Emerald and Nasdaq's analogous reports, the Exchange's proposed reports are provided on a T+1 basis and include data specific to one Member, and only that Member would receive the report. The proposed reports, like the reports of MIAX Emerald and Nasdaq, restrict all other market participants, including the Recipient Member, from receiving another market participant's data. In addition, the proposed reports, like the MIAX Emerald and Nasdaq reports, are each intended to provide the Recipient Member with the time duration by which the order entered by the Recipient Member missed an execution or similarly, missed canceling an order before it could execute.²⁶ The proposed reports, along with the MIAX Emerald Liquidity Taker Event Report and/or Nasdaq Missed Opportunities—Latency reports, each include the following information:

- Recipient Member identifier

²⁴ Supra Note 18.

²⁵ The Exchange notes that like Nasdaq's Missed Opportunity—Latency report, the proposed reports cover equity securities, whereas the MIAX Emerald Liquidity Taker Event Report covers options trading. The Exchange believes this difference is of no consequence as each of these reports are intended to serve the same purpose—providing firms with an opportunity to learn more about when they may have better opportunities to access liquidity and to receive better execution rates or cancel success.

²⁶ Although not clearly defined, the Exchange believes that MIAX Emerald's Liquidity Taker Event Report also provides information relating to cancel messages. Particularly, MIAX Emerald Liquidity Taker Event Report provides, among other things, data relating to the "type of each response submitted by the Recipient Member." See MIAX Emerald Rule 5.31(a)(iii)(C). MIAX Emerald's technical specifications outline the various types of available liquidity messages including, Simple Mass Quote Cancel Request and Mass Liquidity Cancel Request See MIAX Express Interface for Quoting and Trading Options, MEI Interface Specification, Section 4.1 (Liquidity Messages), available at: [MIAX_Express_Interface_MEI_v2.2a.pdf](https://www.miaxglobal.com/v2.2a.pdf) ([miaxglobal.com](https://www.miaxglobal.com)). The Exchange also believes that providing the same data points for cancel messages as the data provided for orders messages is of no materials consequence as the Cancels Report is intended to serve a similar purpose as the proposed Missed Liquidity Report—providing Members additional information to better understand the efficacy of their incoming orders and cancel messages.

²² See Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496 (June 29, 2005) ("Regulation NMS Adopting Release").

²³ See Regulation NMS Adopting Release, *supra*, at 37503.

²¹ 15 U.S.C. 78f(b)(8).

- Symbol
- Execution ID
- Order reference number (unique reference number assigned to a new order at the time of receipt)
- Exchange System Timestamps for incoming orders and cancels, including timestamps to determine the time difference between the time the first response that executes against the resting order was received by the Exchange and the time of each response sent by the Recipient Member, regardless of whether it executed or not
- The order type of the response that executes against the resting order

The proposed reports include the following information that are/were not included in either the MIAX Emerald Liquidity Taker Event Report and/or Nasdaq Missed Opportunities—Latency Report:

- Matching Unit Number. This information is specific to the Exchange's matching unit architecture
- Queued. This information indicates whether or not a message was delayed due to message in flight limits, which limits are specific to the Exchange only
- The port type

Lastly, the proposed reports do not include the following information that is/was included in both the MIAX Emerald Liquidity Taker Event Report and Nasdaq Missed Opportunities—Latency Report:

- Side (buy or sell). This information is already available via OPRA or the Exchange's proprietary data feeds
- Displayed price and size. This information is already available via OPRA or the Exchange's proprietary data feeds
- The time a resting order was received by the Exchange. The Exchange does not believe information relating to the time a resting order was received is as relevant as the above-described data that will be included nor is it necessary with respect to the goal of the proposed reports which is to better understand by how much time a particular order missed executing against an order resting on the Book or a cancel message missed canceling against an order resting on the Book.

As illustrated above, the proposed reports are substantially similar to the MIAX Emerald Liquidity Taker Event Report and Nasdaq's former Missed Opportunities- Latency Report and includes a number of the same data elements designed to assist Members in better understanding their trading activity on the Exchange and augment

their trading strategies to improve their execution opportunities.

In approving Nasdaq's Missed Opportunity—Latency report, the Commission noted that the report "would increase transparency, particularly for Members who may not have the expertise to generate the same information."²⁷ The Exchange's proposed reports would achieve the same goal for Members seeking to better understand the efficacy of their incoming orders and cancel messages. Further, the proposed reports promote just and equitable principles of trade because it will increase transparency and democratize information so that all firms may elect to subscribe to either, or both, reports even though some firms may not have the appropriate resources to generate a similar report themselves.

The Exchange proposes to provide the reports on a voluntary basis and no Member will be required to subscribe to either report. The Exchange notes that there is no rule or regulation that requires the Exchange to produce, or that a Member elect to receive, either report. It is entirely a business decision of each Member to subscribe to one, both, or neither report. The Exchange proposes to offer the reports as a convenience to Members to provide them with additional information regarding trading activity on the Exchange on a delayed basis after the close of regular trading hours. A Member that chooses to subscribe to the reports may discontinue receiving either report at any time if that Member determines that the information contained in the Report is no longer useful.

In summary, the proposed reports will help to protect a free and open market by providing additional historical data (offered on an optional basis) to the marketplace and by providing investors with greater choices. Additionally, the proposal would not permit unfair discrimination because the proposed reports will be available to all Exchange Members.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Rather, the Exchange believes that the proposed

Report will enhance competition by providing a new option for receiving market data to Members. The proposed Report will also further enhance competition between exchanges by allowing the Exchange to expand its product offerings to include reports similar to a report that is currently offered by other exchanges.²⁸

Additionally, the Exchange believes the proposed rule change does not impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. Market participants are not required to purchase either proposed report, and the Exchange is not required to make either report available to investors. Rather, the Exchange is voluntarily making these reports available, as requested by Members, and Members may choose to receive (and pay for) this data based on their own business needs. Potential purchasers may request the data at any time if they believe it to be valuable or may decline to purchase such data.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not:

A. significantly affect the protection of investors or the public interest;

B. impose any significant burden on competition; and

C. become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act²⁹ and Rule 19b-4(f)(6)³⁰ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule

²⁷ See Securities Exchange Act Release No. 78886 (September 20, 2016), 81 FR 66113 (September 26, 2016) (SR-NASDAQ-2016-101) (Order Granting Approval of Proposed Rule Change, as Modified by Amendment Nos. 1 and 2, To Add NASDAQ Rule 7046 (Nasdaq Trading Insights)) ("NASDAQ Approval Order").

²⁸ See e.g., MIAX Emerald Rule 531.

²⁹ 15 U.S.C. 78s(b)(3)(A).

³⁰ 17 CFR 240.19b-4(f)(6).

change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-CboeEDGX-2024-053 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-CboeEDGX-2024-053. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-CboeEDGX-2024-053 and should be submitted on or before September 18, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³¹

Vanessa A. Countryman,
Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-100804; File No. SR-MEMX-2024-32]

Self-Regulatory Organizations; MEMX LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fee Schedule Concerning Options Transaction Fees

August 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 9, 2024, MEMX LLC ("MEMX" or the "Exchange") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing with the Commission a proposed rule change to amend the Exchange's fee schedule applicable to Members³ pursuant to Exchange Rules 15.1(a) and (c). Specifically, the Exchange proposes to amend the Options Fee Schedule to (i) increase the transaction rebate for executions of contracts where the underlying security of the applicable option is not in the Penny Interval program ("Non-Penny options")⁴ which add liquidity to the MEMX Options Book⁵ and which are made in the Customer capacity ("Customer");⁶ and

³¹ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Exchange Rule 1.5(p).

⁴ MEMX Options provides Fee Code "N" for transactions in Non-Penny options. Fee Codes are provided by the Exchange on the monthly invoices provided to Options Members.

⁵ MEMX Options provides Fee Code "D" for transactions which add liquidity to the MEMX Options Book.

⁶ Customer capacity applies to any order for the account of a Priority Customer. "Priority Customer" means any person or entity that is neither a broker or dealer in securities nor a Professional. See Rule 16.1 of the MEMX Rulebook. MEMX Options provides fee qualifier "c" for Customer transactions.

(ii) increase the transaction fee for executions of contracts where the underlying security of the applicable option is a Non-Penny option which remove liquidity from the MEMX Options Book⁷ and which are not made in the Customer capacity ("Non-Customer"),⁸ each as further described below. The Exchange proposes to implement the changes to the Options Fee Schedule pursuant to this proposal immediately. The text of the proposed rule change is provided in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The purpose of the proposed rule change is to amend the Options Fee Schedule to (i) increase the transaction rebate for executions of contracts where the underlying security of the applicable option is not in the Penny Interval program ("Non-Penny options")⁹ which add liquidity to the MEMX Options Book¹⁰ and which are made in the Customer capacity ("Customer");¹¹ and

⁷ MEMX Options provides Fee Code "R" for transactions that remove liquidity from the MEMX Options Book.

⁸ Non-Customer capacity applies to any transaction that is not a Customer order. Each of market maker transactions, professional transactions, firm transactions, away market maker transactions, and broker-dealer transactions shall be referred to as "Non-Customer" transactions. MEMX Options provides fee qualifier "m" for market maker transactions, fee qualifier "p" for professional transactions, fee qualifier "f" for firm transactions, fee qualifier "a" for away market maker transactions, and fee qualifier "b" for broker-dealer transactions. Fee qualifiers are provided by the Exchange on the monthly invoices provided to Options Members.

⁹ MEMX Options provides Fee Code "N" for transactions in Non-Penny options. Fee Codes are provided by the Exchange on the monthly invoices provided to Options Members.

¹⁰ MEMX Options provides Fee Code "D" for transactions which add liquidity to the MEMX Options Book.

¹¹ Customer capacity applies to any order for the account of a Priority Customer. "Priority Customer"

(ii) increase the transaction fee for executions of contracts where the underlying security of the applicable option is a Non-Penny option which remove liquidity from the MEMX Options Book¹² and which are not made in the Customer capacity (“Non-Customer”),¹³ each as further described below.¹⁴

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The Exchange is one of only 17 options venues to which market participants may direct their order flow. Based on publicly available information, no single options exchange has more than 17.16% of the market share and currently the Exchange represents only approximately 3.34% of the market share.¹⁵ In such a low-concentrated and highly competitive market, no single options exchange, including the Exchange, possesses significant pricing power in the execution of option order flow. The Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow, discontinue, or reduce use of certain categories of products in response to fee changes. Accordingly competitive forces constrain the Exchange’s transaction fees, and market participants can readily trade on competing venues if they deem pricing levels at those other venues to be more favorable. The Exchange’s Fee Schedule sets forth standard rebates and rates applied per contract.

means any person or entity that is neither a broker or dealer in securities nor a Professional. See Rule 16.1 of the MEMX Rulebook. MEMX Options provides fee qualifier “c” for Customer transactions.

¹² MEMX Options provides Fee Code “R” for transactions that remove liquidity from the MEMX Options Book.

¹³ Non-Customer capacity applies to any transaction that is not a Customer order. Each of market maker transactions, professional transactions, firm transactions, away market maker transactions, and broker-dealer transactions shall be referred to as “Non-Customer” transactions. MEMX Options provides fee qualifier “m” for market maker transactions, fee qualifier “p” for professional transactions, fee qualifier “f” for firm transactions, fee qualifier “a” for away market maker transactions, and fee qualifier “b” for broker-dealer transactions. Fee qualifiers are provided by the Exchange on the monthly invoices provided to Options Members.

¹⁴ The Exchange initially filed the proposed Fee Schedule changes on July 30, 2024 (SR-MEMX-2024-29). On August 9, 2024, the Exchange withdrew that filing and submitted this proposal.

¹⁵ Market share percentage calculated as of July 30, 2024. The Exchange receives and processes data made available through the consolidated data feeds (*i.e.*, OPRA).

Increased Transaction Rebate for Executions Non-Penny Options in the Customer Capacity Which Add Liquidity to the MEMX Options Book

Currently, the Exchange provides a standard transaction rebate of \$1.04 per contract on Non-Penny options (as defined above) in the Customer capacity which add liquidity to the MEMX Options Book. Now, the Exchange proposes to amend the standard transaction rebate on such contracts from \$1.04 per contract to \$1.15 per contract. The purpose of increasing the rebate is to incentivize Members to execute additional contracts in Non-Penny names in the Customer capacity which add liquidity. The Exchange’s proposal is designed to encourage the execution of additional contracts on the Exchange in order to enhance volume, deepen liquidity and promote price discovery on the MEMX Options platform. The Exchange believes that the increased rebate is in line with the rebates provided by other national securities exchanges.¹⁶

Increased Transaction Fee for Executions of Non-Penny Options in the Non-Customer Capacity Which Remove Liquidity to the MEMX Options Book

Currently, the Exchange assesses a standard transaction fee of \$1.10 per contract on Non-Penny options (as defined above) in non-Customer capacities which remove liquidity from the MEMX Options Book. Now, the Exchange proposes to amend the standard transaction fee on such contracts from \$1.10 per contract to \$1.21 per contract. The purpose of increasing the fee is for business and competitive reasons. The Exchange believes that the increased fee is in line with or below the fees charged by other national securities exchanges and remains commensurate with the market quality benefits that such discounted fee is intended to achieve.¹⁷ The Exchange believes that increasing the fee would generate additional revenue to offset costs associated with the operation of the MEMX Options platform. Furthermore, the increased fee would facilitate the provision of the increased rebate described above, which the Exchange believes will improve market quality and incentivize additional liquidity in Non-Penny symbols on the Exchange.

2. Statutory Basis

The Exchange believes that its proposal to amend its Options Fee Schedule is consistent with the

provisions of Section 6 of the Act,¹⁸ in general, and with Sections 6(b)(4) and 6(b)(5) of the Act,¹⁹ in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among Options Members and other persons using its facilities. The Exchange also believes the proposal furthers the objectives of Section 6(b)(5) of the Act in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

MEMX Options operates in a highly fragmented and competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient, and the Exchange represents only a small percentage of the overall market. The Commission and the courts have repeatedly expressed their preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and also recognized that current regulation of the market system “has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.”²⁰

Accordingly, competitive forces constrain the Exchange’s transaction fees and rebates, and market participants can readily trade on competing venues if they deem pricing levels at those other venues to be more favorable. The Exchange believes the proposal reflects a reasonable and competitive pricing structure which the Exchange believes would promote price discovery and enhance liquidity and market quality on the Exchange to the benefit of all Members and market participants.

The Exchange believes that the proposed change to increase the rebate for executions on Non-Penny options in the Customer capacity that add liquidity to the Exchange to \$1.15 per contract is reasonable and equitable because it is designed to incentivize Members to submit additional liquidity-adding

¹⁸ 15 U.S.C. 78f.

¹⁹ 15 U.S.C. 78f(b)(4) and (5).

²⁰ Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

¹⁶ See *infra* note 16.

¹⁷ See *infra* note 17.

orders in Non-Penny options to the Exchange in the Customer capacity, which would enhance liquidity on the Exchange and promote price discovery and price formation, and would be applicable to all Members. The Exchange further believes the proposed increased rebate is appropriate because it is comparable to, and competitive with, the rebates provided by other exchanges for executions in the Customer capacity in Non-Penny options which add liquidity.²¹

The Exchange believes that the proposed change to increase the fee for executions on Non-Penny options in non-Customer capacities that remove liquidity from the Exchange to \$1.21 per contract is equitable because such fee would continue to be charged uniformly to all executions of such contracts for all Members. The Exchange further believes the proposed increased fee is reasonable and appropriate because it is comparable to, and competitive with, the fees charged by other exchanges for executions in the non-Customer capacity in Non-Penny options which remove liquidity.²²

Further, the Exchange believes it is reasonable, equitable, and not unfairly discriminatory for Members to receive a higher rebate for executions of contracts in Non-Penny options in the Customer capacity which add liquidity to the Exchange, as compared to the rebate provided for executions of contracts in Non-Penny options in non-Customer capacities (*i.e.*, Market Maker, Professional, Firm, Away Market Maker, or Broker-Dealer capacities) which add liquidity to the Exchange. The Exchange

²¹ See, *e.g.*, note 10 of the Nasdaq Options Market trading fee schedule on its public website (available at: <https://listingcenter.nasdaq.com/rulebook/nasdaq/rules/nasdaq-options-7>) which reflects a \$1.15 per contract Rebate to Add Liquidity in Non-Penny Symbols as Customer for Nasdaq Options Market participants who meet certain volume requirements on the Nasdaq Options Market. As MEMX Options is a comparatively new market, the Exchange believes that by providing an increased rebate for Customer executions which add liquidity in Non-Penny options without requiring Members to achieve specific volume requirements, such increased rebate will incentivize additional order flow to the Exchange.

²² See, *e.g.*, the Nasdaq Options Market trading fee schedule on its public website (available at: <https://listingcenter.nasdaq.com/rulebook/nasdaq/rules/nasdaq-options-7>) which reflects a standard fee of \$1.25 per contract for executions in Non-Penny options in the Market Maker, Broker-Dealer, and Firm capacities that remove liquidity. The Exchange notes that this standard fee does not apply to executions in Non-Penny options in the Professional capacity for which the Nasdaq Options Market charges a fee of \$0.85 per contract. See also the Nasdaq BX options trading fee schedule (available at: <https://listingcenter.nasdaq.com/rulebook/bx/rules/bx-options-7>) which reflects a standard fee of \$1.25 per contract for executions in Non-Penny options that remove liquidity for all non-Customer capacities, including Professionals.

also believes it is reasonable, equitable, and not unfairly discriminatory for Members to pay a higher fee for executions of contracts in Non-Penny options in non-Customer capacities which remove liquidity from the Exchange, as compared to the fee for executions of contracts in Non-Penny options in Customer capacities which remove liquidity from the Exchange. The securities markets generally, and the Exchange in particular, have historically aimed to improve markets for investors and develop various features within the market structure for the benefit of public customers (*i.e.*, the Customer capacity on the Exchange) who are not professionals.²³ As such, the Exchange believes the proposed fees and rebates for non-Customer transactions are appropriate and not unfairly discriminatory. The Exchange believes it promotes the best interests of investors to charge lower transaction costs and provide higher rebates for Customers, who are not Professionals, and that the Exchange's proposed fee structure provides right-sized incentives which will continue to attract Customer order flow to the Exchange.

For the reasons discussed above, the Exchange submits that its proposed changes to the Options Transaction Fee Schedule satisfy the requirements of Sections 6(b)(4) and 6(b)(5) of the Act²⁴ in that they provide for the equitable allocation of reasonable dues, fees and other charges among its Members and

²³ The Exchange notes that, since the inception of MEMX Options, it has historically imposed different, and higher, transaction fees for executions in the non-Customer capacity than for executions in the Customer capacity. Similarly, since the inception of MEMX Options, the Exchange has historically provided different, and lower, rebates for executions in the non-Customer capacity than in the Customer capacity. See Securities Exchange Act Release No. 34-98533 (September 26, 2023), 88 FR 67846 (October 2, 2023) (adopting a \$1.10 per contract fee for non-Customers (Market Makers, Professionals, Firms, Away Market Makers, and Broker-Dealers) to remove liquidity in Non-Penny options as compared to a \$0.85 per contract fee for Customers to remove liquidity in Non-Penny options, and a \$0.80 per contract rebate for non-Customers to add liquidity in Non-Penny options as compared to a \$1.04 per contract rebate for Customers to add liquidity in Non-Penny options. The Exchange notes that similar fee structures are common at other options exchanges. See, *e.g.*, the Cboe BZX Options fee schedule on its public website (available at: https://www.cboe.com/us/options/membership/fee_schedule/bzx/), which reflects a higher \$1.15 fee for Professional, Firm, Broker-Dealer, JBO, Market Maker, and Away Market Maker executions which remove liquidity in Non-Penny options and a lower \$0.85 fee for Customer executions which remove liquidity in Non-Penny options. The Cboe BZX Options fee schedule also reflects lower rebates ranging from \$0.30 to \$0.88 for non-Customer executions which add liquidity in non-Penny options and a higher \$1.05 rebate for Customer executions which add liquidity in Non-Penny options.

²⁴ 15 U.S.C. 78f(b)(4) and (5).

other persons using its facilities and are not designed to unfairly discriminate between customers, issuers, brokers, or dealers. As described more fully below in the Exchange's statement regarding burden on competition, the Exchange believes that its transaction pricing is subject to significant competitive forces, and that the proposed fees and rebates described herein are appropriate to address such forces.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposal will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. As a relatively new entrant in the already highly competitive environment for options trading, the Exchange believes that the proposed changes would encourage the submission of additional order flow to the Exchange, thereby promoting market depth, execution incentives and enhanced execution opportunities, as well as price discovery and transparency for all Members. Further, MEMX Options' proposed modified transaction rebates and modified transaction fees are comparable to the transaction fees and rebates assessed by other options exchanges.²⁵ As a result, the Exchange believes that the proposal furthers the Commission's goal in adopting Regulation NMS of fostering competition among orders, which promotes "more efficient pricing of individual stocks for all types of orders, large and small."²⁶

Intramarket Competition

The Exchange does not believe that the proposed rule change will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act because the proposed fees and rebates apply equally to all Options Members. The proposed pricing structure is intended to encourage participants to trade on MEMX Options by providing rebates that are comparable to those offered by other exchanges as well as providing competitive fees. The Exchange believes that the proposed rebates and fees will help to encourage Options Members to send orders to the Exchange to the benefit of all Exchange participants. As the proposed fees and rebates are equally applicable to all market participants, the Exchange does not believe there is any burden on intramarket competition.

²⁵ See *supra* notes 16 and 17.

²⁶ See *supra* note 15.

Intermarket Competition

The Exchange does not believe that the proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. To the contrary, the Exchange believes that the proposed pricing structure will increase competition and is intended to encourage market participants to trade on the exchange by providing rebates and assessing fees that are comparable to those offered by other exchanges, which the Exchange believes will help to encourage Members to send orders to the Exchange to the benefit of all Exchange participants. As the proposed rates are equally applicable to all market participants, the Exchange does not believe there is any burden on intramarket competition.

Additionally, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system “has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.”²⁷ The fact that this market is competitive has also long been recognized by the courts. In *NetCoalition v. SEC*, the D.C. Circuit stated as follows: “[n]o one disputes that competition for order flow is ‘fierce.’ . . . As the SEC explained, ‘[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution’; [and] ‘no exchange can afford to take its market share percentages for granted’ because ‘no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers’”²⁸ Accordingly, the Exchange does not believe its proposed pricing changes impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act²⁹ and Rule 19b-4(f)(2)³⁰ thereunder.

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-MEMX-2024-32 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090. All submissions should refer to file number SR-MEMX-2024-32. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission’s internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule

change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission’s Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-MEMX-2024-32 and should be submitted on or before September 18, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³¹

Vanessa A. Countryman,
Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-100807; File No. SR-SAPPHIRE-2024-19]

Self-Regulatory Organizations; MIAX Sapphire, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Adopt Transaction Fees and Rebates

August 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (“Act”),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 8, 2024, MIAX Sapphire, LLC (“MIAX Sapphire” or “Exchange”) filed with the Securities and Exchange Commission (“Commission”) the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Sapphire Options Exchange Fee Schedule (the "Fee Schedule").

While changes to the Fee Schedule pursuant to this proposal are effective upon filing, the Exchange has designated these changes to be operative on August 12, 2024.

The text of the proposed rule change is available on the Exchange's website at <https://www.miaxglobal.com/markets/us-options/miax-sapphire/rule-filings>, at MIAX Sapphire's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend Section (1) of the Fee Schedule to adopt Section (1) (a) as "Electronic Transactions," and Section (1) (a) (i) as "Transaction Rebates/Fees" to adopt certain fees and rebates applicable to transactions on the Exchange. The Exchange also proposes to adopt Section (1) (a) (iv) of the Fee Schedule as "C2C and cC2C Fees" to adopt certain fees and rebates applicable to C2C³ and cC2C Orders.⁴ The Exchange also proposes to adopt Section (1) (a) (v) of the Fee Schedule as "Complex Stock-Option Order Fees" to adopt certain fees for stock-option orders.

³ A Customer Cross Order is comprised of a Priority Customer Order to buy and a Priority Customer Order to sell at the same price and for the same quantity. See Exchange Rule 516(i).

⁴ A Complex Customer Cross or "cC2C" Order is comprised of one Priority Customer complex order to buy and one Priority Customer complex order to sell at the same price and for the same quantity. Trading of cC2C Orders is governed by Rule 515(g)(3). See Exchange Rule 518(b)(4).

Proposal To Adopt Transaction Fees and Rebates

The Exchange proposes to adopt Section (1) (a) (i) of the Fee Schedule as "Transaction Rebates/Fees" to adopt certain fees and rebates applicable to transactions on the Exchange. The Exchange proposes to adopt one table entitled "Simple" for transaction rebates and fees for transactions that occur in the Exchange's Simple Order Book;⁵ and to adopt another table entitled "Complex" for transactions that occur in the Exchange's Strategy Book.⁶

Under the Exchange's proposal transactions will be assessed a per contract fee (or provided a credit) dependent upon the origin of the initiating party, the origin of the contra party, and whether the transaction provides liquidity ("Maker") or removes liquidity ("Taker"). Additionally, the Exchange proposes to segregate rebates and fees by class (Penny or Non-Penny) and to also separately account for transactions in SPDR S&P 500 ETF ("SPY"), Invesco QQQ Trust ("QQQ"), and iShares Russell 2000 Index Fund ("IWM") as these are highly liquid symbols and are commonly treated separately by options exchanges.⁷

Simple Market Fees and Rebates

Specifically, for Priority Customer⁸ transactions in the Simple Order Book the Exchange proposes to provide a Maker Rebate of (\$0.30) and a Taker Rebate of (\$0.19) for transactions in SPY, QQQ, or IWM; a Maker Rebate of (\$0.28) and a Taker Rebate of (\$0.48) for transactions in Penny Classes (excluding SPY, QQQ, and IWM); and a Maker Rebate of (\$0.65) and a Taker Rebate of (\$0.92) for transactions in Non-Penny Classes.

⁵ The "Simple Order Book" is the Exchange's regular electronic book of orders and quotes. See Exchange Rule 100.

⁶ The "Strategy Book" is the Exchange's electronic book of complex orders. See Exchange Rule 100.

⁷ See BOX Options Exchange Fee Schedule, Section IV, A, available online at <https://boxoptions.com/resources/fee-schedule/>. See also Nasdaq BX, Options 7, Pricing Schedule, Section 2, BX Options Market-Fees Rebates (1), footnote 1 and 4.

⁸ The term "Priority Customer" means a person or entity that (i) is not a broker or dealer in securities, and (ii) does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). See Exchange Rule 100.

For Market Maker⁹ and Non Priority Customer/Non Market Maker¹⁰ transactions in the Simple Order Book the Exchange proposes to assess a Maker Fee of \$0.20 and a Taker Fee of \$0.50 for transactions in SPY, QQQ, or IWM; a Maker Fee of \$0.50 and a Taker Fee of \$0.50 for transactions in Penny Classes (excluding SPY, QQQ, and IWM); and a Maker Fee of \$0.95 and a Taker Fee of \$0.94 for transactions in Non-Penny Classes.

For Non Priority Customer/Non Market Maker transactions in the Simple Order Book the Exchange proposes to assess a Maker Fee of \$0.20 and a Taker Fee of \$0.50 for transactions in SPY, QQQ, or IWM; a Maker Fee of \$0.50 and a Taker Fee of \$0.50 for transactions in Penny Classes (excluding SPY, QQQ, and IWM); and a Maker Fee of \$0.95 and a Taker Fee of \$0.94 for transactions in Non-Penny Classes.

Additionally, the Exchange proposes to add a note to the table that states, "Priority Customer simple orders contra to Priority Customer simple orders are neither charged nor rebated."

Complex Market Fees and Rebates

For Priority Customer transactions that occur in the Strategy Book the Exchange proposes to provide a Maker Rebate of (\$0.36) and a Taker Rebate of (\$0.25) for transactions in SPY, QQQ, or IWM; a Maker Rebate of (\$0.34) and a Taker Rebate of (\$0.54) for transactions in Penny Classes (excluding SPY, QQQ, and IWM); and a Maker Rebate of (\$0.71) and a Taker Rebate of (\$0.98) for transactions in Non-Penny Classes.

For Market Maker transactions in the Strategy Book the Exchange proposes to assess a Maker Fee of \$0.20 and a Taker Fee of \$0.50 for transactions in SPY, QQQ, or IWM; a Maker Fee of \$0.50 and a Taker Fee of \$0.50 for transactions in Penny Classes (excluding SPY, QQQ, and IWM); and a Maker Fee of \$0.95 and a Taker Fee of \$0.94 for transactions in Non-Penny Classes.

For Non Priority Customer/Non Market Maker transactions in the Strategy Book the Exchange proposes to assess a Maker Fee of \$0.20 and a Taker Fee of \$0.50 for transactions in SPY, QQQ, or IWM; a Maker Fee of \$0.50 and a Taker Fee of \$0.50 for transactions in Penny Classes (excluding SPY, QQQ, and IWM); and a Maker Fee of \$0.95 and a Taker Fee of \$0.94 for transactions in Non-Penny Classes.

⁹ The term "Market Makers" means a Member registered with the Exchange for the purposes of making markets in options contracts traded on the Exchange and that is vested with the rights and responsibilities specified in Chapter VI of MIAX Sapphire Rules. See Exchange Rule 100.

¹⁰ For the purposes of this filing, the origins comprising Non Priority Customer and Non Market Maker are all origins other than Priority Customer and Market Maker.

and IWM); and a Maker Fee of \$0.95 and a Taker Fee of \$0.94 for transactions in Non-Penny Classes.

The Exchange proposes to adopt the following notes to the Complex table. Note (1) to the Complex table that will provide, “Priority Customer complex orders contra to Priority Customer complex orders are neither charged nor rebated.” Note (2) to the Complex table will provide that, “Fees and Rebates are per contract leg.” Finally, note (3) to the Complex table will provide, “a per contract surcharge of \$0.12 will be assessed for trading against a Priority Customer complex order in all classes and will apply to all origins except Priority Customer when trading against a Priority Customer on the Strategy Book.”

Proposal To Adopt C2C and cC2C Order Fees and Rebates

The Exchange proposes to adopt Section 1) a) iv) to the Fee Schedule as “C2C and cC2C Fees” to establish fees and rebates applicable to C2C and cC2C Orders.

Types of market participants	C2C and cC2C order per contract fee/rebate
Priority Customer	\$0.00

Customer to Customer Cross Orders are comprised entirely of Priority Customer orders, therefore the Exchange assesses a \$0.00 per contract transaction fee and provides a \$0.00 rebate to such orders, pursuant to Section 1) a) i) of the Fee Schedule. However, the Exchange desires to clarify and make explicit that C2C Orders are assessed a \$0.00 per contract transaction fee and are paid a \$0.00 per contract rebate. The Exchange is also proposing to assess cC2C Orders a \$0.00 per contract transaction fee and to pay a \$0.00 per contract rebate. The Exchange also proposes to adopt certain explanatory text relating to the C2C and cC2C Fees table. The text provides that all fees and rebates are per contract per leg. Also, a C2C Order is comprised of a Priority Customer Order to buy and a Priority Customer Order to sell at the same price and for the same quantity. A cC2C Order is comprised of one Priority Customer complex order to buy and one Priority Customer complex order to sell at the same price and for the same quantity.

Proposal To Adopt Complex Stock-Option Order Fees

The Exchange proposes to adopt Section (1) (a) (v) of the Fee Schedule as “Complex Stock-Option Order Fees” to adopt certain fees for stock-option orders.

The Exchange proposes to adopt a stock handling fee applicable to stock-option orders executed against other stock-option orders in the complex order book, which the Exchange must route to an outside venue. Specifically, the Exchange proposes to adopt a stock handling fee of \$0.0010 per share for the stock leg of stock-option orders executed against other stock-option orders in the complex order book, which are routed to an outside venue. This stock handling fee to be assessed by the Exchange will cover all fees charged by the outside venue that prints the trade, and it is also intended to compensate the Exchange for matching these stock-option orders against other stock-option orders on the complex order book. A maximum of \$50 per order, per day, will be assessed under this fee. The cap is intended to give market participants assurance that they will not pay more than the capped amount for the execution of the stock leg of their stock-option orders. The Exchange believes that by limiting this fee to a maximum of \$50 per order, per day, the Exchange addresses the possibility that a GTC order could be executed over multiple days. For example, if such an order was partially-executed on a Monday, and then the remainder was fully-executed on a Tuesday, the total maximum fee charged to the market participant would be \$100 (\$50 per day). In addition to the Exchange’s fee, the Exchange will also pass through to the Member any fees assessed by the routing broker-dealer utilized by the Exchange with respect to the execution of the stock leg of any such order (with such fees to be passed through at cost). For example, the Exchange anticipates that the routing broker-dealer will bill the Exchange for Section 31 fees and FINRA Trading Activity Fees with respect to the execution of the stock leg of any such order. The Exchange will pass such fees through to the Member, at cost (that is, without any additional mark-up).

2. Statutory Basis

The Exchange believes that its proposal to amend its Fee Schedule is consistent with Section 6(b) of the Act ¹¹ in general, and furthers the objectives of Section 6(b)(4) of the Act ¹² in particular, in that it is an equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities. The Exchange also believes the proposal furthers the objectives of

Section 6(b)(5) of the Act ¹³ in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest and is not designed to permit unfair discrimination between customers, issuers, brokers and dealers.

The proposed changes are reasonable in several respects. As a threshold matter, the Exchange is subject to significant competitive forces in the market for options securities transaction services that constrain its pricing determinations in that market. The fact that this market is competitive has long been recognized by the courts. In *NetCoalition v. Securities and Exchange Commission*, the D.C. Circuit stated as follows” “[n]o one disputes that competition for order flow is ‘fierce.’ . . . As the SEC explained, [i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution”; [and] ‘no exchange can afford to take its market share percentages for granted’ because ‘no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers’ . . .” ¹⁴

The Commission and the courts have repeatedly expressed their preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, while adopting a series of steps to improve the current market model, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system “has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.” ¹⁵

The Exchange is a new entrant to the market and will be one of eighteen options exchanges to which market participants may direct their order flow. Within this environment, market participants can freely shift their order flow among exchanges in response to changes in their respective pricing schedules. As such, this proposal

¹³ 15 U.S.C. 78f(b)(5).

¹² 15 U.S.C. 78f(b)(4).

represents a reasonable attempt by the Exchange to attract liquidity.

Transaction Fees and Rebates (Simple Market)

The Exchange believes the proposed fee structure is equitable and not unfairly discriminatory because all similarly situated market participants are subject to the same fee and rebate structure for order transactions in the Simple Market. The Exchange's proposal to offer Maker and Taker Rebates to Priority Customers is reasonable because the Exchange desires to attract Priority Customers to the Exchange. Priority Customers are being paid Maker Rebates and Taker Rebates in all classes, as compared to other origins which are not rebated at all, as Priority Customer activity enhances liquidity on the Exchange for the benefit of all market participants by providing more trading opportunities, which attracts market makers. An increase in the activity of these market participants in turn facilitates tighter spreads, which may cause an additional corresponding increase in order flow from other market participants.

The Exchange believes its Maker Rebate of (\$0.30) in SPY, QQQ, and IWM; its Maker Rebate of (\$0.28) in Penny Classes (excluding SPY, QQQ, and IWM); and its Maker Rebate of (\$0.65) in Non-Penny classes is reasonable as it is in line with current rebates provided by at least one other competing options exchange.¹⁶ Further, the Exchange believes its Taker Rebate of (\$0.19) in SPY, QQQ, and IWM; its Taker Rebate of (\$0.48) in Penny Classes (excluding SPY, QQQ, and IWM); and its Taker Rebate of (\$0.92) in Non-Penny classes is reasonable as it is designed to attract Priority Customer order flow to the Exchange for the aforementioned mentioned reasons. Additionally, other competing exchanges similarly provide Taker Rebates to Priority Customer Orders in Penny and Non-Penny Classes that exceed the Maker Rebate.¹⁷

The Exchange believes its Market Maker and Non Priority Customer/Non Market Maker Maker/Taker Fees to be reasonable as the Exchange proposes to assess a \$0.20 Maker Fee and a \$0.50

Taker Fee for orders in SPY, QQQ, and IWM. The Exchange believes this fee structure will encourage Market Makers, Non Priority Customers, and Non Market Makers to submit orders in SPY, QQQ, and IWM. Additionally, the Exchange believes its Market Maker and Non Priority Customer/Non Market Maker Maker Fee of \$0.50 and its Taker Fee of \$0.50 in Penny Classes (excluding SPY, QQQ, and IWM) is reasonable as at least one other competing options exchange assesses a similar fee for Market Maker and Non Priority Customer/Non Market Maker orders in Penny Symbols.¹⁸ The Exchange believes that its Market Maker and Non Priority Customer/Non Market Maker Taker Fee of \$0.50 is reasonable as it is equal to its Maker Fee, which is a common pricing strategy used by at least one other options exchange.¹⁹ Finally, the Exchange believes that its Market Maker and Non Priority Customer/Non Market Maker Maker Fee of \$0.95 and its Taker Fee of \$0.94 is reasonable as it is competitively priced in regard to the Maker and Taker Fees of other options exchanges for transactions in Non-Penny Classes.²⁰

Additionally, the Exchange believes its proposal regarding Maker/Taker Fees for the Simple Market is equitable and not unfairly discriminatory. The Exchange will uniformly apply the proposed fees and rebates to each origin in accordance to the Simple table.

Transaction Fees and Rebates (Complex Market)

The Exchange believes the proposed fee structure is equitable and not unfairly discriminatory because all similarly situated market participants are subject to the same fee and rebate structure for complex order transactions in the Complex Market. The Exchange's proposal to offer Maker and Taker Rebates to Priority Customers is reasonable because the Exchange desires to attract Priority Customers to the Exchange. Priority Customers are being paid Maker Rebates and Taker Rebates in all classes, as compared to other origins which are not rebated at all, as

¹⁶ See Nasdaq MRX Options 7, Section 3, Fees and Rebates for Regular Orders and all Crossing Orders, Table 1, Penny Symbols, which provides for a \$0.50 Maker Fee for Market Maker and Professional orders.

¹⁷ See BOX Options Fee Schedule, Section A, which assesses a \$0.50 Maker Fee and a \$0.50 Taker Fee for Market Maker and Professional Customer or Broker Dealer orders that trade contra to a Public Customer.

²⁰ See Nasdaq MRX Options 7, Section 3, Fees and Rebates for Regular Orders and all Crossing Orders, Table 1, Non-Penny Symbols, which provides for a \$1.25 Maker Fee and a \$1.10 Taker Fee for Market Maker, Firm Proprietary/Broker Dealer, and Professional Customer orders.

Priority Customer activity enhances liquidity on the Exchange for the benefit of all market participants by providing more trading opportunities, which attracts market makers. Additionally, the Exchange believes that its Priority Customer Maker Rebate of (\$0.36) and Taker Rebate of (\$0.25) in SPY, QQQ, and IWM; its (\$0.34) Maker Rebate and (\$0.54) Taker Rebate in Penny Classes (excluding SPY, QQQ, and IWM); and its (\$0.71) Maker Rebate and (\$0.98) Taker Rebate in Non-Penny Classes is reasonable as it is designed to attract Priority Customer complex order flow to the Exchange.

The Exchange believes its Market Maker and Non Priority Customer/Non Market Maker Maker/Taker Fees to be reasonable as the Exchange proposes to assess a \$0.20 Maker Fee and a \$0.50 Taker Fee for orders in SPY, QQQ, and IWM. The Exchange believes this fee structure will encourage Market Makers, Non Priority Customers, and Non Market Makers to submit orders in SPY, QQQ, and IWM. Additionally, the Exchange believes its Market Maker and Non Priority Customer/Non Market Maker Maker Fee of \$0.50 and its Taker Fee of \$0.50 in Penny Classes (excluding SPY, QQQ, and IWM) is reasonable as it provides a standard fee for both Maker and Taker activity. Finally, the Exchange believes its Market Maker and Non Priority Customer/Non Market Maker Maker Fee of \$0.95 and its Taker Fee of \$0.94 in Non-Penny Classes is reasonable as at least one other exchange charges a similar Maker Fee²¹ and Taker Fee.²²

Complex Market per Contract Surcharge

The Exchange's proposal to establish and assess a surcharge of \$0.12 per contract for all origins (excluding Priority Customer) that add or remove liquidity in Penny Classes (including SPY, QQQ, and IWM) and non-Penny Classes when trading against a Priority Customer on the Strategy Book. The Exchange believes this surcharge is consistent with Section 6(b)(4) of the Act²³ because it applies equally to all participants (with the exception of Priority Customers). This surcharge is similar in structure and amount to one applied on the NYSE American Options Exchange ("NYSE American"),²⁴ and

²¹ See Nasdaq MRX, Options 7, Section 4, Complex Order Fees, which assesses an \$0.85 fee per contract in Non-Penny Symbols.

²² See Nasdaq ISE, Options 7, Section 4, Complex Order Fees and Rebates, which assesses a \$1.15 Taker Fee for Market Makers and Firm Proprietary/Broker Dealer orders in Non-Penny Symbols.

²³ 15 U.S.C. 78f(b)(4).

²⁴ See NYSE American Options Exchange Fee Schedule, Section I. Options Transaction Fees and

¹⁶ See Nasdaq BX Options 7, Section 2, BX Options Market-Fees and Rebates, which provides a (\$0.30) rebate to Customer orders in Penny Symbols and a (\$1.10) rebate to Customer orders in Non-Penny Symbols.

¹⁷ See Nasdaq MRX Options 7, Section 3, Fees and Rebates for Regular Orders and all Crossing Orders, which provides for a \$0.00 Maker Fee/Rebate and a (\$0.44) Taker Rebate to Priority Customer orders in Penny Symbols; and provides for a \$0.00 Maker Fee/Rebate and a (\$1.10) Taker rebate for Priority Customer orders in Non-Penny Symbols.

identical to the surcharge assessed and applied on the Exchange's affiliate exchanges, Miami International Securities, LLC ("MIAX Options"),²⁵ and MIAX Emerald, LLC ("MIAX Emerald").²⁶ The Exchange believes that this surcharge is fair and equitable because it is in line with the amount of surcharges assessed on other options exchanges when trading against Priority Customer complex orders.²⁷

C2C and cC2C Order Fees and Rebates

The Exchange believes that adding the C2C fee to the Fee Schedule is reasonable since it is clarifying the Exchange's existing practice and by adding such C2C Order fee to the Fee Schedule the Exchange believes that it will make it more transparent as to how the Exchange assesses such fee and avoid any confusion as to how such fee is assessed for simple (C2C) and complex (cC2C) orders. The Exchange believes that the proposed transaction fee for cC2C Orders is reasonable because the proposed amount is identical to the fee assessed for C2C transactions, which is currently \$0.00. The proposed fees would be charged to all Priority Customers alike and the Exchange believes that assessing a \$0.00 fee to Priority Customers is equitable and not unfairly discriminatory. By assessing a \$0.00 fee to Priority Customer orders, the C2C and cC2C transaction fees will not discourage the sending of Priority Customer orders.

Complex Stock-Option Order Fees

The Exchange believes that the proposed stock handling fee for stock-option orders is consistent with Section 6(b)(4) of the Act in that it is reasonable, equitable and not unfairly discriminatory. The Exchange believes the proposed stock handling fee for stock-option orders is reasonable and equitable as the proposed fee will cover the costs of developing and maintaining the systems that allow for the matching and processing of the stock legs of stock-option orders executed in the complex order book, as well as all fees charged by the outside venue that prints the trade. The Exchange also believes it is reasonable and equitable to pass through to the Member any fees

Credits, footnote 5, which similarly assesses a complex surcharge of \$0.12 for any Non-Customer Complex Order that executes against a Customer Complex Order.

²⁵ See MIAX Options Fee Schedule, Section 1(a)i), available online at <https://www.miaxglobal.com/markets/us-options/miax-options/fees>.

²⁶ See MIAX Emerald Options Fee Schedule, Section 1(a)i) available online at <https://www.miaxglobal.com/markets/us-options/emerald-options/fees>.

²⁷ See *supra* note 24, 25, and 26.

assessed by the routing broker-dealer utilized by the Exchange with respect to the execution of the stock leg of any such order (with such fees to be passed through at cost). The Exchange notes that another exchange has a comparable fee for the handling of the stock leg of stock-option orders. Specifically, Nasdaq ISE ("ISE") charges a stock handling fee of \$0.0010 per share which is capped at \$50 per order.²⁸ The Exchange also believes that its proposal is consistent with Section 6(b)(5) of the Act²⁹ because it will be uniformly applied to all Members that execute stock-option orders in the Strategy Book on the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The proposal does not impose an undue burden on intra-market competition as its fees will be applied uniformly to each respective origin in accordance to either the Simple Market or Complex Market table. The Exchange believes its proposal will encourage Members³⁰ to submit Priority Customer Orders³¹ to the Exchange which will increase liquidity and benefit all market participants by providing more trading opportunities and tighter spreads. Accordingly, the Exchange believes that the proposed changes will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act because it will continue to encourage order flow, which provides greater volume and liquidity, benefiting all market participants by providing more trading opportunities and tighter spreads.

Additionally, the Exchange does not believe its Maker/Taker Fees for Market Makers and Non Priority Customers/ Non Market Makers will impose a burden on competition as the fees will be applied in a uniform manner to

²⁸ See Nasdaq ISE, Options 7, Pricing Schedule, Section 4, Complex Order Fees and Rebates, Note 12; see also Securities Exchange Act Release No. 74117 (January 22, 2015), 80 FR 4600 (January 28, 2015) (SR-ISE-2015-03).

²⁹ 15 U.S.C. 78f(b)(5).

³⁰ The term "Member" means an individual or organization that is registered with the Exchange pursuant to Chapter II of MIAX Sapphire Rules for purposes of trading on the Exchange as an "Electronic Exchange Member" or "Market Maker." Members are deemed "members" under the Exchange Act. See Exchange Rule 100.

³¹ The term "Priority Customer Order" means an order for the account of a Priority Customer. See Exchange Rule 100.

similarly situated participants in accordance to either the Simple or Complex table.

Inter-Market Competition

The proposal does not impose an undue burden on inter-market competition. The Exchange believes its proposal remains competitive with other options markets and will offer market participants with another choice on where to route their orders for execution. The Exchange notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive. With the addition of MIAX Sapphire, there are currently 18 registered options exchanges competing for order flow. For the month of July 2024, based on publicly-available information, and excluding index-based options, no single exchange (MIAX Sapphire excluded) exceeded approximately 13–14% of the market share of executed volume of multiply-listed equity and exchange-traded fund ("ETF") options.³² Therefore, no exchange possesses significant pricing power in the execution of multiply-listed equity and ETF options order flow. In such an environment, the Exchange must propose transaction fees and rebates to be competitive with other exchanges and to attract order flow. The Exchange believes that the Exchange's proposal reflects this competitive environment, to the extent this is achieved, all of the Exchange's market participants should benefit from the quality of the Exchange's market.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,³³ and Rule 19b-4(f)(2)³⁴ thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors,

³² See the "Market Share" section of the Exchange's website, available at <https://www.miaxglobal.com/>.

³³ 15 U.S.C. 78s(b)(3)(A)(ii).

³⁴ 17 CFR 240.19b-4(f)(2).

or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-SAPPHIRE-2024-19 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.

All submissions should refer to file number SR-SAPPHIRE-2024-19. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR-SAPPHIRE-2024-19 and should be

submitted on or before September 18, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³⁵

Vanessa A. Countryman,
Secretary.

[FR Doc. 2024-19264 Filed 8-27-24; 8:45 am]

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-100806; File No. SR-SAPPHIRE-2024-18]

Self-Regulatory Organizations; MIAX Sapphire LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Establish a Fee Schedule for the Exchange's Proprietary Market Data Feeds: (i) MIAX Sapphire Top of Market ("ToM") Data Feed; (ii) MIAX Sapphire Complex Top of Market ("cToM") Data Feed; and (iii) MIAX Sapphire Liquidity Feed ("SLF")

August 22, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on August 8, 2024, MIAX Sapphire, LLC ("MIAX Sapphire" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend the MIAX Sapphire Options Exchange Fee Schedule (the "Fee Schedule") to establish fees for the Exchange's proprietary market data feeds: (i) MIAX Sapphire Top of Market ("ToM") data feed; (ii) MIAX Sapphire Complex Top of Market ("cToM") data feed; and (iii) MIAX Sapphire Liquidity Feed ("SLF").

While changes to the Fee Schedule pursuant to this proposal are effective upon filing, the Exchange has designated these changes to be operative on August 12, 2024.

The text of the proposed rule change is available on the Exchange's website at <https://www.miaxglobal.com/markets/>

³⁵ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

[us-options/all-options-exchanges/rule-filings](https://www.miaxglobal.com/markets/us-options/all-options-exchanges/rule-filings), at MIAX Sapphire's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

MIAX Sapphire plans to commence electronic operations on August 12, 2024.³ On July 19, 2024, the Exchange filed a proposal to establish the ToM, cToM and SLF data feeds (collectively, the "market data feeds").⁴ The Exchange now proposes to amend the Fee Schedule to establish fees for each of these market data feeds.⁵ The Exchange also proposes to waive such fees during an Initial Waiver Period,⁶ which would run for over six full calendar months from the effective date of the proposed fees to incentivize market participants to subscribe and make the Exchange's proprietary market data more widely available.

The ToM data feed contains top of book quotations based on options

³ See Securities Exchange Act Release No. 100539 (July 15, 2024) (File No. 10-240) (In the Matter of the Application of MIAX Sapphire, LLC for Registration as a National Securities Exchange; Findings, Opinion, and Order of the Commission).

⁴ See Securities Exchange Act Release No. 100588 (July 25, 2024), 89 FR 61554 (July 31, 2024) (SR-SAPPHIRE-2024-01).

⁵ The Exchange established the Definitions section of the Fee Schedule in a separate rule filing. See SR-SAPPHIRE-2024-13 (not yet noticed by the Commission at the time of this filing). Certain capitalized terms used throughout this filing refer are included in the Definitions section of the Fee Schedule, previously adopted.

⁶ The term "Initial Waiver Period" means, for each applicable fee, the period of time from the initial effective date of the MIAX Sapphire Fee Schedule plus an additional six (6) full calendar months after the completion of the partial month of the Exchange launch. See the Definitions section of the Fee Schedule.

orders⁷ and quotes⁸ resting on the Exchange's Simple Order Book⁹ as well as administrative messages, such as other real-time Exchange System¹⁰ functions.¹¹ The cToM data feed includes the same types of information as ToM, but for Complex Orders¹² on the Exchange's Strategy Book.¹³ This information includes the Exchange's best bid and offer for a complex strategy,¹⁴ with aggregate size, based on displayable orders in the complex strategy. The cToM data feed also provides subscribers with the following information: (i) the identification of the complex strategies currently trading on the Exchange; (ii) complex strategy last sale information; and (iii) the status of securities underlying the complex strategy (e.g., halted, open, or resumed). ToM subscribers are not required to subscribe to cToM, and cToM subscribers are not required to subscribe to ToM.

The Exchange notes that there is no requirement that any Member¹⁵ or market participant subscribe to either the ToM or cToM data feeds. Instead, a

⁷ The term "order" means a firm commitment to buy or sell option contracts. See Exchange Rule 100.

⁸ The term "quote" or "quotation" The term "quote" or "quotation" means a bid or offer entered by a Market Maker as a firm order that updates the Market Maker's previous bid or offer, if any. When the term order is used in the Exchange's Rules and a bid or offer is entered by the Market Maker in the option series to which such Market Maker is registered, such order shall, as applicable, constitute a quote or quotation for purposes of the Exchange's Rules. See Exchange Rule 100.

⁹ The "Simple Order Book" is the Exchange's regular electronic book of orders and quotes. See Exchange Rule 100.

¹⁰ The term "System" means the automated trading system used by the Exchange for the trading of securities. See Exchange Rule 100.

¹¹ See MIAX Sapphire Options Exchange User Manual, Version 1.0.0, Section 5.06, dated December 11, 2023, available at https://www.miaxglobal.com/miax_sapphire_user_manual.pdf (last visited July 24, 2024).

¹² In sum, a "Complex Order" is "any order involving the concurrent purchase and/or sale of two or more different options in the same underlying security (the 'legs' or 'components' of the complex order), for the same account" See Exchange Rule 518(a).

¹³ The "Strategy Book" is the Exchange's electronic book of complex orders. See Exchange Rule 100.

¹⁴ The term "complex strategy" means a particular combination of components and their ratios to one another. New complex strategies can be created as the result of the receipt of a complex order or by the Exchange for a complex strategy that is not currently in the System. The Exchange may limit the number of new complex strategies that may be in the System at a particular time and will communicate this limitation to Members via Regulatory Circular. See Exchange Rule 518(a).

¹⁵ The term "Member" means an individual or organization that is registered with the Exchange pursuant to Chapter II of these Rules for purposes of trading on the Exchange as an "Electronic Exchange Member" or "Market Maker." Members are deemed "members" under the Exchange Act. See Exchange Rule 100.

Member may choose to maintain subscriptions to ToM or cToM based on their trading strategies and individual business decisions. Moreover, persons (including broker-dealers) who subscribe to any exchange proprietary data feed must also have equivalent access to consolidated Options Information¹⁶ from the Options Price Reporting Authority ("OPRA") for the same classes or series of options that are included in the proprietary data feed (including for exclusively listed products), and proprietary data feeds cannot be used to meet that particular requirement. The proposed fees described below would not apply differently based upon the size or type of firm, but rather based upon the type of subscription a firm has to ToM or cToM and their use thereof, which are based upon factors deemed relevant by each firm.

The SLF data feed provides market participants with a direct data feed that allows subscribers to receive real-time updates of options orders, products traded on MIAX Sapphire, MIAX Sapphire System status, and MIAX Sapphire underlying trading status. When an order is received or an order state changes, published order information will be transmitted over SLF, including time stamp, action, product ID, order ID, order side, order type, order price, original order size, open order size, time in force, origin, open or close, and route instruction. For complex orders, complex strategy definition notification and complex order notice are also included. Subscribers to the SLF will get a list of all options symbols and strategies that will be traded and sourced on that feed at the start of every session.

Each of the proposed fees are described below. Again, the Exchange proposes to not charge the proposed fees during the Initial Waiver Period. Even though the Exchange proposes to waive these particular fees during the Initial Waiver Period, the Exchange believes

¹⁶ The term "consolidated Options Information" means "consolidated Last Sale Reports combined with either consolidated Quotation Information or the BBO furnished by OPRA . . ." Access to consolidated Options Information is deemed "equivalent" if both kinds of information are equally accessible on the same terminal or work station. See Limited Liability Company Agreement of Options Price Reporting Authority, LLC ("OPRA Plan"), Section 5.2(c)(iii). The Exchange notes that this requirement under the OPRA Plan is also reiterated under the Cboe Global Markets Global Data Agreement and Cboe Global Markets North American Data Policies, which subscribers to any exchange proprietary product must sign and are subject to, respectively. Additionally, the Exchange's Data Order Form (used for requesting the Exchange's market data products) requires confirmation that the requesting market participant receives data from OPRA.

that it is appropriate to provide market participants with the overall structure of the fees by outlining the structure and amounts in the Fee Schedule so that there is general awareness that the Exchange intends to assess such fees upon expiration of the defined term of the Initial Waiver Period.

ToM

The Exchange proposes to charge a monthly fee of \$1,200 to Internal Distributors¹⁷ and \$2,000 to External Distributors for the ToM data feed after the expiration of the Initial Waiver Period. The proposed fees are intended to cover the Exchange's costs with compiling and producing the ToM data feed described in the Exchange's cost analysis detailed below. The Exchange proposes to assess Internal Distributors fees that are less than the fees assessed for External Distributors because External Distributors may monetize their receipt of the ToM data feed by charging their customers fees for receipt of the Exchange's data. Internal Distributors do not have the same ability. The Exchange does not propose to charge any additional fees based on a Distributor's use of the ToM data feed (e.g., displayed versus non-displayed use), redistribution fees, or individual per user fees.

cToM

The Exchange proposes to charge a monthly fee of \$1,200 to Internal Distributors and \$2,000 to External Distributors for the cToM data feed after the expiration of the Initial Waiver Period. The proposed fees are intended to cover the Exchange's costs with compiling and producing the cToM data feed described in the Exchange's cost analysis detailed below. The Exchange proposes to assess Internal Distributors fees that are less than the fees assessed for External Distributors because External Distributors may monetize their receipt of the cToM data feed by charging their customers fees for receipt of the Exchange's data. Internal Distributors do not have the same ability. The Exchange does not propose to charge any additional fees based on a Distributor's use of the cToM data feed (e.g., displayed versus non-displayed use), redistribution fees, or individual per user fees.

¹⁷ A "Distributor" of MIAX Sapphire data is any entity that receives a feed or file of data either directly from MIAX Sapphire or indirectly through another entity and then distributes it either internally (within that entity) or externally (outside that entity). All Distributors are required to execute an Exchange Data Agreement. See Fee Schedule, proposed Section 6(a).

SLF

The Exchange proposes to charge a monthly fee of \$3,000 to Internal Distributors and \$3,500 to External Distributors for the SLF data feed after the expiration of the Initial Waiver Period. The proposed fees are intended to cover the Exchange's costs with compiling and producing the SLF data feed described in the Exchange's Cost Analysis detailed below. The Exchange proposes to assess Internal Distributors fees that are less than the fees assessed for External Distributors because External Distributors may monetize their receipt of the SLF data feed by charging their customers fees for receipt of the Exchange's data. Internal Distributors do not have the same ability. The Exchange does not propose to charge any additional fees based on a Distributor's use of the SLF data feed (e.g., displayed versus non-displayed use), redistribution fees, or individual per user fees.

* * * * *

The Exchange proposes that each Distributor would be charged for each month it is credentialed to receive ToM, cToM, and/or SLF in the Exchange's production environment. Fees for each of the market data feeds will be reduced for new Distributors who subscribe to a market data feed mid-month for the first month they subscribe following the expiration of the Initial Waiver Period, as described above. New Distributors who subscribe mid-month for each market data feed would be assessed a pro-rata percentage of the applicable Distribution fee based on the percentage of the number of trading days remaining in the affected calendar month as of the date on which they have been first credentialed to receive each of the market data feeds in the production environment, divided by the total number of trading days in the affected calendar month.

The Exchange believes the proposed fees will allow the Exchange to offset the expenses the Exchange has and will continue to incur associated with compiling and disseminating the market data feeds. Further, the Exchange believes it provided sufficient transparency in the Cost Analysis provided below, which provides a basis for how the Exchange determined to charge such fees.

The Exchange issued an alert publicly announcing the proposed fees on July 23, 2024.¹⁸

¹⁸ See Fee Change Alert, MIAx Sapphire Options Exchange—Summary of Proposed Non-Transaction Fees (July 23, 2024), available at <https://www.miaxglobal.com/alert/2024/07/23/miax>

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6(b)¹⁹ of the Act in general, and furthers the objectives of Section 6(b)(4)²⁰ of the Act, in particular, in that it is designed to provide for the equitable allocation of reasonable dues, fees and other charges among its Members and other persons using its facilities. Additionally, the Exchange believes that the proposed fees are consistent with the objectives of Section 6(b)(5)²¹ of the Act in that they are designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to a free and open market and national market system, and, in general, to protect investors and the public interest, and, particularly, are not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In 2019, Commission staff published guidance suggesting the types of information that self-regulatory organizations ("SROs") may use to demonstrate that their fee filings comply with the standards of the Exchange Act (the "Staff Guidance").²² While the Exchange understands that the Staff Guidance does not create new legal obligations on SROs, the Staff Guidance is consistent with the Exchange's view about the type and level of transparency that exchanges should meet to demonstrate compliance with their existing obligations when they seek to charge new fees. The Staff Guidance provides that in assessing the reasonableness of a fee, the Staff would consider whether the fee is constrained by significant competitive forces. To determine whether a proposed fee is constrained by significant competitive forces, the Staff Guidance further provides that the Staff would consider whether the evidence provided by an SRO in a fee filing proposal demonstrates (i) that there are reasonable substitutes for the product or service that is the subject of a proposed fee; (ii) that "platform" competition constrains the fee; and/or (iii) that the revenue and cost analysis provided by the SRO otherwise demonstrates that

sapphire-options-exchange-summary-proposed-non-transaction-fees?nav=all.

²⁰ 15 U.S.C. 78f(b)(4).

²¹ 15 U.S.C. 78f(b)(5).

²² See Staff Guidance on SRO Rule Filings Relating to Fees (May 21, 2019), available at <https://www.sec.gov/tm/staff-guidance-sro-rule-filings-fees>.

the proposed fee would not result in the SRO taking supra-competitive profits.²³ The Exchange provides sufficient evidence below to support the findings that the proposed fees are reasonable because the projected revenue and cost analysis contained herein demonstrates that the proposed fees would not result in the Exchange taking supra-competitive profits.

Cost Analysis

In general, the Exchange believes that exchanges, in setting fees of all types, should meet very high standards of transparency to demonstrate why each new fee or fee increase meets the requirements of the Act that fees be reasonable, equitably allocated, not unfairly discriminatory, and not create an undue burden on competition among Members and markets. The Exchange believes this high standard is especially important when an exchange imposes various fees for market participants to access an exchange's market data. The Exchange believes that it is important to demonstrate that these fees are based on its costs and reasonable business needs. Accordingly, the Exchange included a cost analysis below in connection with the proposed market data fees and the costs associated with compiling and providing the ToM, cToM, and SLF feeds (the "Cost Analysis").

Accordingly, in proposing to charge fees for market data, the Exchange is especially diligent in assessing those fees in a transparent way against its own aggregate costs of providing the related service, and in carefully and transparently assessing the impact on Members—both generally and in relation to other Members—to ensure the fees will not create a financial burden on any participant and will not have an undue impact in particular on smaller Members and competition among Members in general. The Exchange does not believe it needs to otherwise address questions about market competition in the context of this filing because the proposed fees are consistent with the Act based on the Exchange's Cost Analysis. The Exchange also believes that this level of diligence and transparency is called for by the requirements of Section 19(b)(1) under the Act,²⁴ and Rule 19b-4 thereunder,²⁵ with respect to the types of information SROs should provide when filing fee changes, and Section 6(b) of the Act,²⁶ which requires, among other things, that exchange fees be reasonable and

²³ *Id.*

²⁴ 15 U.S.C. 78s(b)(1).

²⁵ 17 CFR 240.19b-4.

²⁶ 15 U.S.C. 78f(b).

equitably allocated,²⁷ not designed to permit unfair discrimination,²⁸ and that they do not impose a burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.²⁹ This proposal addresses those requirements, and the analysis and data in this section are designed to clearly and comprehensively show how they are met.

The Exchange's affiliates³⁰ previously completed a study of their aggregate costs to produce market data and provide connectivity and port services, defined above as its Cost Analysis.³¹ Personnel began to plan for and develop the Exchange beginning in early 2023, and costs included in this Cost Analysis are related to the development and buildout of the Exchange since that time. During the Exchange's development and buildout that occurred throughout 2023 and continues to today, the Exchange routinely studied its aggregate costs to produce and disseminate Exchange market data, which were used to determine the proposed pricing for the market data feeds as part of the Exchange's Cost Analysis. The Cost Analysis required a detailed analysis of the Exchange's aggregate baseline costs, including a determination and allocation of costs for core services provided by the Exchange—transaction execution, market data, membership services, physical connectivity, and port access (which provide order entry, cancellation and modification functionality, risk functionality, the ability to receive drop copies, and other functionality). The Exchange separately divided its costs between those costs necessary to deliver each of these core services, including infrastructure, software, human resources (*i.e.*, personnel), and certain general and administrative expenses ("cost drivers").

As an initial step, the Exchange determined the total cost for the

Exchange and its affiliated markets for each cost driver as part of the Exchange's 2024 budget review process. The 2024 budget review is a company-wide process that occurs over the course of many months, includes meetings among senior management, department heads, and the Finance Team. Each department head is required to send a "bottom up" budget to the Finance Team allocating costs at the profit and loss account and vendor levels for the Exchange and its affiliated markets based on a number of factors, including server counts, additional hardware and software utilization, current or anticipated functional or non-functional development projects, capacity needs, end-of-life or end-of-service intervals, number of members, market model (*e.g.*, price time or pro-rata, simple only or simple and complex markets, auction functionality, etc.), which may impact message traffic, individual system architectures that impact platform size,³² storage needs, dedicated infrastructure versus shared infrastructure allocated per platform based on the resources required to support each platform, number of available connections, and employees allocated time. All of these factors result in different allocation percentages among the Exchange and its affiliated markets, *i.e.*, the different percentages of the overall cost driver allocated to the Exchange and its affiliated markets will cause the dollar amount of the overall cost allocated among the Exchange and its affiliated markets to also differ. Because the Exchange's parent company currently owns and operates five (upon launch of MIAX Sapphire) separate and distinct marketplaces, the Exchange must determine the costs associated with each actual market—as opposed to the Exchange's parent company simply concluding that all cost drivers are the same at each individual marketplace and dividing total cost by five (5) (evenly for each marketplace). Rather, the Exchange's parent company determines an accurate cost for each marketplace, which results in different allocations and amounts across exchanges for the same cost drivers, due to the unique factors of each marketplace as described above. This allocation methodology also ensures that no cost would be allocated twice or double-counted between the Exchange and its affiliated markets. The Finance Team then consolidates the budget and

sends it to senior management, including the Chief Financial Officer and Chief Executive Officer, for review and approval. Next, the budget is presented to the Board of Directors and the Finance and Audit Committees for each exchange for their approval. The above steps encompass the first step of the cost allocation process.

The next step involves determining what portion of the cost allocated to the Exchange pursuant to the above methodology is to be allocated to each core service, *e.g.*, market data, connectivity, ports, and transaction services. The Exchange and its affiliated markets adopted an allocation methodology with thoughtful and consistently applied principles to guide how much of a particular cost amount allocated to the Exchange should be allocated within the Exchange to each core service. This is the final step in the cost allocation process and is applied to each of the cost drivers set forth below. For instance, fixed costs that are not driven by client activity (*e.g.*, message rates), such as data center costs, were allocated more heavily to the provision of physical connectivity (for example, 62% of the data center total expense amount is allocated to all provisions of connectivity), with smaller allocations to ToM, cToM and SLF (2.0% combined), and the remainder to the provision of ports, transaction execution, and membership services (36%). This next level of the allocation methodology at the individual exchange level also took into account factors similar to those set forth under the first step of the allocation methodology process described above, to determine the appropriate allocation to connectivity or market data versus allocations for other services. This allocation methodology was developed through an assessment of costs with senior management intimately familiar with each area of the Exchange's operations. After adopting this allocation methodology, the Exchange then applied an allocation of each cost driver to each core service, resulting in the cost allocations described below. Each of the below cost allocations is unique to the Exchange and represents a percentage of overall cost that was allocated to the Exchange pursuant to the initial allocation described above.

By allocating segmented costs to each core service, the Exchange was able to estimate by core service the potential margin it might earn based on different fee models. The Exchange notes that it has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, connectivity and port service fees,

²⁷ 15 U.S.C. 78f(b)(4).

²⁸ 15 U.S.C. 78f(b)(5).

²⁹ 15 U.S.C. 78f(b)(8).

³⁰ The affiliated markets include Miami International Securities Exchange, LLC ("MIAX"); separately, the options and equities markets of MIAX PEARL, LLC ("MIAX Pearl"); and MIAX Emerald, LLC ("MIAX Emerald").

³¹ See Securities Exchange Act Release Nos. 100041 (April 26, 2024), 89 FR 35868 (May 2, 2024) (SR-MIAX-2024-25); 100319 (June 12, 2024), 89 FR 51562 (June 18, 2024) (SR-PEARL-2024-25); 100042 (April 26, 2024), 89 FR 35879 (May 2, 2024) (SR-EMERALD-2024-15). The Exchange frequently updates its Cost Analysis as strategic initiatives change, costs increase or decrease, and market participant needs and trading activity (once live trading begins) changes. The Exchange's most recent Cost Analysis was conducted ahead of this filing.

³² For example, MIAX Sapphire maintains 8 matching engines, MIAX maintains 24 matching engines, MIAX Pearl Options maintains 12 matching engines, MIAX Pearl Equities maintains 24 matching engines, and MIAX Emerald maintains 12 matching engines.

membership fees, regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue. The Exchange also notes that as a general matter each of these sources of revenue is based on services that are interdependent. For instance, the Exchange’s system for executing transactions is dependent on physical hardware and connectivity; only Members and parties that they sponsor to participate directly on the Exchange may submit orders to the Exchange; some Members (but not all) consume market data from the Exchange in order to trade on the Exchange; and, the Exchange consumes market data from external sources in order to comply with regulatory obligations. Accordingly, given this interdependence, the allocation of costs to each service or revenue source required judgment of the Exchange and was weighted based on estimates of the Exchange that the Exchange believes are reasonable, as set forth below. While there is no standardized and generally accepted

methodology for the allocation of an exchange’s costs, the Exchange’s methodology is the result of an extensive review and analysis and will be consistently applied going forward for any other cost-justified potential fee proposals. In the absence of the Commission attempting to specify a methodology for the allocation of exchanges’ interdependent costs, the Exchange will continue to be left with its best efforts to attempt to conduct such an allocation in a thoughtful and reasonable manner.

Through the Exchange’s extensive Cost Analysis, the Exchange analyzed nearly every expense item in the Exchange’s general expense ledger to determine whether each such expense relates to the provision of the market data feeds, and, if such expense did so relate, what portion (or percentage) of such expense actually supports the provision of the market data feeds, and thus bears a relationship that is, “in nature and closeness,” directly related to the market data feeds. In turn, the Exchange allocated certain costs more to

physical connectivity and others to ports, while certain costs were only allocated to such services at a very low percentage or not at all, using consistent allocation methodologies as described above. Based on this analysis, the Exchange estimates that the aggregate monthly cost to provide ToM, cToM, and SLF data feeds is \$59,161 (the Exchange divided the annual cost for each of ToM, cToM, and SLF by 12 months, then added all three numbers together), as further detailed below.

Costs Related To Offering ToM, cToM, and SLF Data Feeds³³

The following chart details the individual line-item (annual) costs considered by the Exchange to be related to offering the ToM, cToM, and SLF data feeds to its Members and other customers, as well as the percentage of the Exchange’s overall costs that such costs represent for such area (e.g., as set forth below, the Exchange allocated approximately 6.2% of its overall Human Resources cost to offering ToM, cToM, and SLF data feeds).

Cost drivers	Allocated annual cost ^a	Allocated monthly cost ^b	% of all
Human Resources	\$631,203	\$52,600	6.2
Connectivity (external fees, cabling, switches, etc.)	511	43	2.0
Internet Services and External Market Data	0.00	0.00	0.0
Data Center	12,298	1,025	2.0
Hardware and Software Maintenance & Licenses	9,933	828	2.0
Depreciation	13,656	1,138	1.1
Allocated Shared Expenses	42,326	3,527	1.5
Total	709,927	59,161	4.6

^a The Annual Cost includes figures rounded to the nearest dollar.

^b The Monthly Cost was determined by dividing the Annual Cost for each line item by twelve (12) months and rounding up or down to the nearest dollar.

Below are additional details regarding each of the line-item costs considered by the Exchange to be related to offering the market data feeds.

Human Resources

The Exchange notes that it and its affiliated markets anticipate that by year-end 2024, there will be 289 employees (excluding employees at non-options/equities exchange subsidiaries of Miami International Holdings, Inc. (“MIH”), the holding company of the Exchange and its

affiliated markets), and each department leader has direct knowledge of the time spent by each employee with respect to the various tasks necessary to operate the Exchange. Specifically, twice a year, and as needed with additional new hires and new project initiatives, in consultation with employees as needed, managers and department heads assign a percentage of time to every employee and then allocate that time amongst the Exchange and its affiliated markets to determine each market’s individual

Human Resources expense. Then, managers and department heads assign a percentage of each employee’s time allocated to the Exchange into buckets including network connectivity, ports, market data, and other exchange services. This process ensures that every employee is 100% allocated, ensuring there is no double counting between the Exchange and its affiliated markets.

For personnel costs (Human Resources), the Exchange calculated an allocation of employee time for employees whose functions include

³³ The Exchange notes that in recent non-transaction fee filings by the Exchange’s affiliated markets, those exchanges included a comparison and explanation where certain cost driver allocations and expense amounts materially differed for the same cost driver among the affiliated markets. See, e.g., Securities Exchange Act Release No. 100041 (April 26, 2024), 89 FR 35868 (May 2, 2024) (SR–MIAX–2024–25). The Exchange believes a similar comparison and explanation is not appropriate here because the Exchange has yet

to commence operations and the allocations provided herein may change over time as the Exchange matures and its operations adjust based on its trading volumes and number of market data subscribers. In contrast, MIAX and MIAX Emerald are more mature markets with a steady market data subscriber base and a clearer estimation of their costs associated with producing and disseminating their market data feeds. Further, as a new exchange, MIAX Sapphire proposes to waive the fees for the market data feeds for a specified period of time in

order to build market share, which in turn, should attract more market data subscribers. If the Exchange does not attract as many market data subscribers as currently projected for the Cost Analysis, the Exchange may need to reduce its market data fees or waive the fees for a longer period of time. Accordingly, the Exchange believes it is reasonable to not provide a similar comparison of cost driver allocations until the Exchange has time to build its subscriber base for the market data feeds.

providing and maintaining the market data feeds and performance thereof (primarily the Exchange's network infrastructure team, which spends a portion of their time performing functions necessary to provide market data). As described more fully above, the Exchange's parent company allocates costs to the Exchange and its affiliated markets and then a portion of the Human Resources costs allocated to the Exchange is then allocated to the market data feeds. From that portion allocated to the Exchange that applied to the market data feeds, the Exchange then allocated a weighted average of 7.3% of each employee's time from the above group to the market data feeds (which excludes an allocation for the recently hired Head of Data Services for the Exchange and its affiliates).

The Exchange also allocated Human Resources costs to provide the market data feeds to a limited subset of personnel with ancillary functions related to establishing and maintaining such market data feeds (such as information security, sales, membership, and finance personnel). The Exchange allocated cost on an employee-by-employee basis (*i.e.*, only including those personnel who support functions related to providing market data feeds) and then applied a smaller allocation to such employees' time to the market data feeds (4.9%, which includes an allocation for the Head of Data Services). This other group of personnel with a smaller allocation of Human Resources costs also have a direct nexus to providing the market data feeds, whether it is a sales person selling a market data feed, finance personnel billing for market data feeds or providing budget analysis, or information security ensuring that such market data feeds are secure and adequately defended from an outside intrusion.

The estimates of Human Resources cost were therefore determined by consulting with such department leaders, determining which employees are involved in tasks related to providing market data feeds, and confirming that the proposed allocations were reasonable based on an understanding of the percentage of time such employees devote to those tasks. This includes personnel from the Exchange departments that are predominately involved in providing the market data feeds: Business Systems Development, Trading Systems Development, Systems Operations and Network Monitoring, Network and Data Center Operations, Listings, Trading Operations, and Project Management. Again, the Exchange allocated 7.3% of

each of their employee's time assigned to the Exchange for the market data feeds, as stated above. Employees from these departments perform numerous functions to support the market data feeds, such as the configuration and maintenance of the hardware necessary to support the market data feeds. This hardware includes servers, routers, switches, firewalls, and monitoring devices. These employees also perform software upgrades, vulnerability assessments, remediation and patch installs, equipment configuration and hardening, as well as performance and capacity management. These employees also engage in research and development analysis for equipment and software supporting the market data feeds and design, and support the development and on-going maintenance of internally-developed applications as well as data capture and analysis, and Member and internal Exchange reports related to network and system performance. The above list of employee functions is not exhaustive of all the functions performed by Exchange employees to support the market data feeds, but illustrates the breadth of functions those employees perform in support of the above cost and time allocations.

Lastly, the Exchange notes that senior level executives' time was only allocated to the market data feeds related Human Resources costs to the extent that they are involved in overseeing tasks related to providing market data. The Human Resources cost was calculated using a blended rate of compensation reflecting salary, equity and bonus compensation, benefits, payroll taxes, and 401(k) matching contributions.

Connectivity (External Fees, Cabling, Switches, etc.)

The Connectivity cost driver includes cabling and switches required to generate and disseminate the market data feeds and operate the Exchange. The Connectivity cost driver is more narrowly focused on technology used to complete Member subscriptions to the market data feeds and the servers used at the Exchange's primary and back-up data centers specifically for the market data feeds. Further, as certain servers are only partially utilized to generate and disseminate the market data feeds, only the percentage of such servers devoted to generating and disseminating the market data feeds was included (*i.e.*, the capacity of such servers allocated to the ToM, cToM, and SLF data feeds).³⁴

³⁴ The Exchange understands that the Investors Exchange, Inc. ("IEX") and MEMX LLC ("MEMX")

Internet Services and External Market Data

The next cost driver consists of internet services and external market data. Internet services includes third-party service providers that provide the internet, fiber and bandwidth connections between the Exchange's networks, primary and secondary data centers, and office locations in Princeton and Miami. External market data includes fees paid to third parties, including other exchanges, to receive market data. The Exchange did not allocate any costs associated with internet services or external market data to the ToM, cToM or SLF data feeds.

Data Center

Data Center costs includes an allocation of the costs the Exchange incurs to provide the market data feeds in the third-party data centers where the Exchange maintains its equipment (such as dedicated space, security services, cooling and power). The Exchange does not own the primary data center or the secondary data center, but instead leases space in data centers operated by third parties. As the Data Center costs are primarily for space, power, and cooling of servers, the Exchange allocated 2.0% to the applicable Data Center costs to the market data feeds. The Exchange believes it is reasonable to apply the same proportionate percentage of Data Center costs to that of the Connectivity cost driver.

Hardware and Software Maintenance and Licenses

Hardware and Software Maintenance and Licenses includes hardware and software licenses used to operate and monitor physical assets necessary to offer the market data feeds. Because the hardware and software license fees are correlated to the servers used by the Exchange, the Exchange again applied an allocation of 2.0% of its costs for Hardware and Software Maintenance and Licenses to the market data feeds.

both allocated a percentage of their servers to the production and dissemination of market data to support market data fee proposals in 2022 and 2023. See Securities Exchange Act Release Nos. 94630 (April 7, 2022), 87 FR 21945, at page 21949 (April 13, 2022) (SR-IEX-2022-02) and 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR-MEMX-2023-04). The Exchange does not have insight into either IEX's or MEMX's technology infrastructure or what their determinations were based on. However, the Exchange reviewed its own technology infrastructure and believes based on its design, it is more appropriate for the Exchange to allocate a portion of its Connectivity cost driver to market data based on a percentage of overall cost, not on a per server basis.

Depreciation

All physical assets, software, and hardware used to provide the market data feeds, which also includes assets used for testing and monitoring of Exchange infrastructure to provide market data, were valued at cost, and depreciated or leased over periods ranging from three to five years. Thus, the depreciation cost primarily relates to servers necessary to operate the Exchange, some of which are owned by the Exchange and some of which are leased by the Exchange in order to allow efficient periodic technology refreshes. The vast majority of the software the Exchange uses for its operations to generate and disseminate the market data feeds has been developed in-house over an extended period. This software development also requires quality assurance and thorough testing to ensure the software works as intended. The Exchange also included in the Depreciation cost driver certain budgeted improvements that the Exchange intends to capitalize and depreciate with respect to the market data feeds in the near-term. As with the other allocated costs in the Exchange's updated Cost Analysis, the Depreciation cost was therefore narrowly tailored to depreciation related to the market data feeds. As noted above, the Exchange allocated 1.1% of its allocated depreciation costs to providing the market data feeds.

Allocated Shared Expenses

Finally, as with other exchange products and services, a portion of general shared expenses was allocated to the provision of the market data feeds. These general shared costs are integral to exchange operations, including its ability to provide the market data feeds. Costs included in general shared expenses include office space and office expenses (*e.g.*, occupancy and overhead expenses), utilities, recruiting and training, marketing and advertising costs, professional fees for legal, tax and accounting services (including external and internal audit expenses), and telecommunications. Similarly, the cost of paying directors to serve on the Exchange's Board of Directors is also included in the Exchange's general shared expense cost driver.³⁵ These

³⁵ The Exchange notes that MEMX allocated a precise amount of 10% of the overall cost for directors in a similar non-transaction fee filing. *See* Securities Exchange Act Release No. 97130 (March 13, 2023), 88 FR 16491 (March 17, 2023) (SR-MEMX-2023-04). The Exchange does not calculate its expenses at that granular a level. Instead, director costs are included as part of the overall general allocation.

general shared expenses are incurred by the Exchange's parent company, MIH, as a direct result of operating the Exchange and its affiliated markets.

The Exchange employed a process to determine a reasonable percentage to allocate general shared expenses to the market data feeds pursuant to its multi-layered allocation process. First, general expenses were allocated among the Exchange and affiliated markets as described above. Then, the general shared expense assigned to the Exchange was allocated across core services of the Exchange, including market data. Then, these costs were further allocated to sub-categories within the final categories, *i.e.*, ToM, cToM, and SLF, as sub-categories of market data. In determining the percentage of general shared expenses allocated to market data that ultimately apply to the market data feeds, the Exchange looked at the percentage allocations of each of the cost drivers and determined a reasonable allocation percentage. The Exchange also held meetings with senior management, department heads, and the Finance Team to determine the proper amount of the shared general expense to allocate to the market data feeds. The Exchange, therefore, believes it is reasonable to assign an allocation, in the range of allocations for other cost drivers, while continuing to ensure that this expense is only allocated once. Again, the general shared expenses are incurred by the Exchange's parent company as a result of operating the Exchange and its affiliated markets and it is therefore reasonable to allocate a percentage of those expenses to the Exchange and ultimately to specific product offerings such as ToM, cToM and SLF.

Again, a portion of all shared expenses were allocated to the Exchange (and its affiliated markets) which, in turn, allocated a portion of that overall allocation to all market data products offered by the Exchange. The Exchange believes this allocation percentage is reasonable because, while the overall dollar amount may be higher than other cost drivers, the 1.5% is based on and in line with the percentage allocations of each of the Exchange's other cost drivers. The percentage allocated to the market data feeds also reflects its importance to the Exchange's strategy and necessity towards the nature of the Exchange's overall operations, which is to provide a resilient, highly deterministic trading system that relies on faster market data feeds than the Exchange's competitors to maintain premium performance. This allocation reflects the Exchange's focus on providing and maintaining high

performance market data services, of which ToM, cToM, and SLF are main contributors.

* * * * *

Approximate Cost for ToM, cToM, and SLF per Month

After determining the approximate allocated monthly cost related to the market data feeds combined, the total monthly cost for the market data feeds of \$59,161 was divided by the total number of projected subscribers³⁶ to ToM, cToM and SLF that the Exchange anticipates will maintain market data subscriptions following the expiration of the waiver periods for each respective market data feed (29 Internal Distributors + 4 External Distributors = 33 total Distributors), to arrive at a cost of approximately \$1,793 per month per subscription (rounded to the nearest dollar). Due to the nature of this particular cost, this allocation methodology results in an allocation among the Exchange and its affiliated markets based on set quantifiable criteria, *i.e.*, projected number of ToM, cToM, and SLF subscribers.

Cost Analysis—Additional Discussion

In conducting its Cost Analysis, the Exchange did not allocate any of its expenses in full to any core service (including market data) and did not double-count any expenses. Instead, as described above, the Exchange allocated applicable cost drivers across its core services and used the same Cost Analysis to form the basis of this proposal. For instance, in calculating the Human Resources expenses to be allocated to market data based upon the above described methodology, the Exchange allocated a higher percentage of dedicated network infrastructure personnel (7.3%) due to their focus on functions necessary to provide market data. The remaining 92.7% of the Human Resources expense was then allocated to connectivity services, port services, transaction services, and membership services. The Exchange did not allocate any other Human Resources expense for providing market data to any other employee group, outside of a smaller allocation of 4.9% for costs associated with certain specified personnel who work closely with and support network infrastructure personnel.

In total, the Exchange allocated 6.2% of its personnel costs (Human Resources) to providing the market data

³⁶ The methodology used by the Exchange to project the number of subscribers for each of the market data feeds under the Initial Waiver Period expires can be found under the section titled "Projected Revenue", below.

feeds. In turn, the Exchange allocated the remaining 93.8% of its Human Resources expense to membership services, transaction services, connectivity services, and port services. Thus, again, the Exchange's allocations of cost across core services were based on real costs of operating the Exchange and were not double-counted across the core services or their associated revenue streams.

As another example, the Exchange allocated depreciation expense to all core services, including market data, but in different amounts. The Exchange believes it is reasonable to allocate the identified portion of such expense because such expense includes the actual cost of the computer equipment, such as dedicated servers, computers, laptops, monitors, information security appliances and storage, and network switching infrastructure equipment, including switches and taps that were purchased to operate and support the network. Without this equipment, the Exchange would not be able to operate the network and provide the market data feeds to its Members and their customers. However, the Exchange did not allocate all of the depreciation and amortization expense toward the cost of providing the market data feeds, but instead allocated approximately 1.1% of the Exchange's overall depreciation and amortization expense to the market data feeds combined. The Exchange allocated the remaining depreciation and amortization expense (98.9%) toward the cost of providing transaction services, membership services, connectivity services, and port services.

The Exchange notes that its revenue estimates are based on projections across all potential revenue streams and will only be realized to the extent such revenue streams actually produce the revenue estimated. The revenue estimates are based upon the Exchange's projected number of Internal and External Distributors for each of the ToM, cToM, and SLF data feeds upon the expiration of the fee waiver periods for each market data feed and then annualized. The Exchange does not yet know whether such expectations will be realized. For instance, in order to generate the revenue expected from the market data feeds, the Exchange will have to be successful in attracting customers to a new exchange and then successfully retain those customers that wish to maintain subscriptions to the market data feeds or obtain new customers that will purchase such services. Similarly, the Exchange will have to be successful in retaining a positive net capture on transaction fees

in order to realize the anticipated revenue from transaction pricing.

The Exchange notes that the Cost Analysis is based on the Exchange's 2024 fiscal year of operations and projections, which will only be for part of the year. It is possible, however, that actual costs may be higher or lower. The proposed fee waivers for the market data feeds mean that the Exchange will receive no revenue from market data distribution in 2024. To the extent the Exchange sees growth in use of market data services in 2025, following the expiration of the Initial Waiver Period, it will begin to receive revenue to offset future cost increases. However, if use of market data services is static or decreases, the Exchange might not realize the revenue that it anticipates or needs in order to cover applicable costs. Accordingly, the Exchange is committing to conduct a one-year review after implementation of these fees and expiration of the fee waivers. The Exchange expects that it may propose to adjust fees at that time, to increase fees in the event that revenues fail to cover costs and a reasonable mark-up of such costs. Similarly, the Exchange may propose to decrease fees in the event that revenue materially exceeds our current projections. In addition, the Exchange will periodically conduct a review to inform its decision making on whether a fee change is appropriate (*e.g.*, to monitor for costs increasing/decreasing or subscribers increasing/decreasing, etc. in ways that suggest the then-current fees are becoming dislocated from the prior cost-based analysis) and would propose to increase fees in the event that revenues fail to cover its costs and a reasonable mark-up, or decrease fees in the event that revenue or the mark-up materially exceeds our current projections. In the event that the Exchange determines to propose a fee change, the results of a timely review, including an updated cost estimate, will be included in the rule filing proposing the fee change. More generally, the Exchange believes that it is appropriate for an exchange to refresh and update information about its relevant costs and revenues in seeking any future changes to fees, and the Exchange commits to do so.

Projected Revenue³⁷

The proposed fees will allow the Exchange to cover certain costs incurred by the Exchange associated with creating, generating, and disseminating

the market data feeds and the fact that the Exchange will need to fund future expenditures (increased costs, improvements, etc.). The Exchange routinely works to improve the performance of the network's hardware and software. The costs associated with maintaining and enhancing a state-of-the-art exchange network is a significant expense for the Exchange, and thus the Exchange believes that it is reasonable and appropriate to help offset those costs by establishing fees for market data subscribers. Subscribers to the ToM, cToM and SLF data feeds expect the Exchange to provide this level of support so they continue to receive the performance they expect. This differentiates the Exchange from its competitors. As detailed above, the Exchange has five primary sources of revenue that it can potentially use to fund its operations: transaction fees, connectivity service fees, membership and regulatory fees, and market data fees. Accordingly, the Exchange must cover its expenses from these five primary sources of revenue.

The Exchange's Cost Analysis estimates the annual cost to provide the market data feeds will equal \$709,927. Based on projected ToM, cToM and SLF subscribers once the waiver periods expire for the market data feeds, the Exchange projects to generate annual revenue of approximately \$726,000 for the market data feeds combined. The Exchange believes this represents a modest profit of 2.2% when compared to the cost of providing the market data feeds on an annualized basis once the waiver periods expire, which the Exchange believes is fair and reasonable after taking into account the costs related to creating, generating, and disseminating the market data feeds and the fact that the Exchange will need to fund future expenditures (increased costs, improvements, etc.). To determine the projected number of Distributors for each of the market data feeds, the Exchange reviewed its anticipated Distributor population from July 2024 based on Distributor on-boarding documents the Exchange received that showed interest in the market data products in the month preceding when the Exchange filed its proposal to implement the proposed fees, and assumed a 5% attrition rate. The 5% attrition rate was based on surveying the current Distributor population when socializing the proposed fee structure with market participants.

Based on the above discussion, the Exchange believes that even if the Exchange earns the above revenue or incrementally more or less, the proposed fees are fair and reasonable

³⁷ For purposes of calculating projected annualized revenue for the market data feeds, the Exchange used projected monthly revenues for the market data feeds once the Initial Waiver Period expires.

because they will not result in pricing that deviates from that of other exchanges or a supra-competitive profit, when comparing the total expense of the Exchange associated with providing the market data feeds versus the total projected revenue of the Exchange associated with the market data feeds.

The Exchange's affiliated markets, MIAX and MIAX Emerald, charge similar or higher rates for their respective ToM, cToM and MOR data feeds.³⁸ The Exchange's proposed fees for its market data feeds are also comparable to, or lower than, the fees for similar products charged by competing options exchanges. For example, for Internal Distributors of ToM and cToM, the Exchange proposes a lower fee than the fees charged by Nasdaq ISE, LLC ("ISE") for ISE's Top Quote Feed³⁹ and NYSE Arca, Inc. ("Arca") for Arca's Top Datafeed⁴⁰ and Complex Order Book data feed.⁴¹ Nasdaq PHLX LLC ("PHLX") assesses the same fees for the PHLX Orders data feed as proposed by the Exchange for the SLF data feed.⁴²

Accordingly, the Exchange believes that comparable and competitive pricing are key factors in determining whether a proposed fee meets the requirements

³⁸ See MIAX Fee Schedule, Sections 6(a) and c); and MIAX Emerald Fee Schedule, Sections 6(a) and (c).

³⁹ See ISE Options 7: Pricing Schedule, Section 10, Market Data, Section H. Nasdaq ISE Top Quote Feed, available at <https://listingcenter.nasdaq.com/rulebook/ise/rules/ISE%20Options%207> (last visited June 13, 2024) (assessing Professional internal and external distributors \$3,000 per month, plus \$20 per month per controlled device).

⁴⁰ See NYSE Proprietary Market Data Pricing Guide, Section 6.3, NYSE Arca Options (dated May 4, 2022), available at: https://www.nyse.com/publicdocs/nyse/data/NYSE_Market_Data_Pricing.pdf (last visited June 13, 2024). Fees for the NYSE Arca Options Top Datafeed, which is the comparable product to ToM, are \$3,000 per month for access (internal use) and an additional \$2,000 per month for redistribution (external distribution), compared to the Exchange's proposed fees of \$1,200 and \$2,000 for Internal and External Distributors, respectively. In addition, for its NYSE Arca Options Top Datafeed, NYSE Arca charges for three different categories of non-display usage, and user fees, both of which the Exchange does not propose to charge, causing the overall cost of NYSE Arca Options Top Datafeed to far exceed the Exchange's proposed rates.

⁴¹ See NYSE Proprietary Market Data Pricing Guide, Section 6.4, NYSE Arca Options Complex Order Book (dated May 4, 2022), available at: https://www.nyse.com/publicdocs/nyse/data/NYSE_Market_Data_Pricing.pdf (last visited June 13, 2024) (assessing an access fee of \$1,500 per month, plus a \$1,000 redistribution fee, \$1,000 non-display fee, and \$20 fee per professional user).

⁴² See PHLX Options 7: Pricing Schedule, Section 10, Proprietary Data Feed Fees, PHLX Orders, available at <https://listingcenter.nasdaq.com/rulebook/phlx/rules/Phlx%20Options%207> (last visited June 13, 2024) (assessing internal distributors \$3,000 per month and external distributors \$3,500 per month for the PHLX Orders data feed).

of the Act, regardless of whether that same fee across the Exchange's affiliated markets leads to slightly different profit margins due to factors outside of the Exchange's control (*i.e.*, more subscribers to ToM, cToM, and/or SLF).

The Exchange also reiterates that it proposes to waive the fees for the market data feeds for a defined period of time. The Exchange is owned by a holding company that is the parent company of five exchange markets and, therefore, the Exchange and its affiliated markets must allocate shared costs across all of those markets accordingly, pursuant to the above-described allocation methodology. In contrast, IEX, which currently operates only one exchange, in its recent non-transaction fee filing allocated the entire amount of that same cost to a single exchange. This can result in lower profit margins for the non-transaction fees proposed by IEX because the single allocated cost does not experience the efficiencies and synergies that result from sharing costs across multiple platforms.⁴³ The Exchange and its affiliated markets often share a single cost, which results in cost efficiencies that can cause a broader gap between the allocated cost amount and projected revenue, even though the fee levels being proposed are lower or competitive with competing markets (as described above). To the extent that the application of a cost-based standard results in Commission Staff making determinations as to the appropriateness of certain profit margins, the Commission Staff should consider whether the proposed fee level is comparable to, or competitive with, the same fee charged by competing exchanges and how different cost allocation methodologies (such as across multiple markets) may result in different profit margins for comparable fee levels. If Commission Staff is making determinations as to appropriate profit margins, the Exchange believes that the Commission should be clear to all market participants as to what they have determined is an appropriate profit margin and should apply such determinations consistently and, in the case of certain legacy exchanges,

⁴³ The Exchange acknowledges that IEX included in its proposal to adopt market data fees after offering market data for free an analysis of what its projected revenue would be if all of its existing customers continued to subscribe versus what its projected revenue would be if a limited number of customers subscribed due to the new fees. See Securities Exchange Act Release No. 94630 (April 7, 2022), 87 FR 21945 (April 13, 2022) (SR-IEX-2022-02). MEMX did not include a similar analysis in either of its recent non-transaction fee proposals. See, *e.g.*, *supra* notes 34 and 35. The Exchange does not believe a similar analysis would be useful here because it is part of a holding company that operates five different markets.

retroactively, if such standards are to avoid having a discriminatory effect.

Further, the proposal reflects the Exchange's efforts to control its costs, which the Exchange does on an ongoing basis as a matter of good business practice. A potential profit margin should not be judged alone based on its size, but is also indicative of costs management and whether the ultimate fee reflects the value of the services provided. For example, a profit margin on one exchange should not be deemed excessive where that exchange has been successful in controlling its costs, but not excessive where on another exchange where that exchange is charging comparable fees but has a lower profit margin due to higher costs. Doing so could have the perverse effect of not incentivizing cost control where higher costs alone are used to justify fees increases.

Accordingly, while the Exchange is supportive of transparency around costs and potential margins (applied across all exchanges), as well as periodic review of revenues and applicable costs (as discussed below), the Exchange does not believe that these estimates should form the sole basis of whether or not a proposed fee is reasonable or can be adopted. Instead, the Exchange believes that the information should be used solely to confirm that an Exchange is not earning—or seeking to earn—supra-competitive profits, the standard set forth in the Staff Guidance. The Exchange believes the Cost Analysis and related projections in this filing demonstrate this fact.

Reasonableness

Overall. With regard to reasonableness, the Exchange understands that the Commission has traditionally taken a market-based approach to examine whether the exchange making the fee proposal was subject to significant competitive forces in setting the terms of the proposal. The Exchange understands that in general the analysis considers whether the exchange has demonstrated in its filing that (i) there are reasonable substitutes for the product or service; (ii) "platform" competition constrains the ability to set the fee; and/or (iii) revenue and cost analysis shows the fee would not result in the exchange taking supra-competitive profits. If the exchange demonstrates that the fee is subject to significant competitive forces, the Exchange understands that in general the analysis will next consider whether there is any substantial countervailing basis to suggest the fee's terms fail to meet one or more standards under the Exchange Act. The Exchange further

understands that if the filing fails to demonstrate that the fee is constrained by competitive forces, the exchange must provide a substantial basis, other than competition, to show that it is consistent with the Exchange Act, which may include production of relevant revenue and cost data pertaining to the product or service.

The Exchange has not determined its proposed overall market data fees based on assumptions about market competition, instead relying upon a cost-plus model to determine a reasonable fee structure that is informed by the Exchange's understanding of different uses of the products by different types of participants. In this context, the Exchange believes the proposed fees overall are fair and reasonable as a form of cost recovery plus the possibility of a reasonable return for the Exchange's aggregate costs of offering the market data feeds. The Exchange believes the proposed fees are reasonable because they are designed to generate annual revenue to recoup some or all of Exchange's annual costs of providing the market data feeds with a reasonable mark-up. As discussed above, the Exchange estimates this fee filing will result in annual revenue of approximately \$726,000 once the fee waivers expire for the market data feeds, representing a potential mark-up of just 2.2% over the cost of providing the market data feeds. Accordingly, the Exchange believes that this fee methodology is reasonable because it allows the Exchange to recoup all of its expenses for providing the market data feeds (with any additional revenue representing no more than what the Exchange believes to be a reasonable rate of return). The Exchange also believes that the proposed fees are reasonable because they are generally less than the fees charged by competing options exchanges for comparable market data products, notwithstanding that the competing exchanges may have different system architectures that may result in different cost structures for the provision of market data.

The Exchange believes the proposed fees for the market data products are reasonable when compared to fees for comparable products, compared to which the Exchange's proposed fees are generally lower, as well as other comparable data feeds priced significantly higher than the Exchange's proposed fees for the market data feeds.

Internal Distribution Fees. The Exchange believes it is reasonable to charge Internal Distribution fees because such data assists Internal Distributors in their profit-generating activities. The Exchange also believes that the

proposed monthly Internal Distribution fees for ToM, cToM, and SLF are reasonable as they are similar to the amounts charged by at least one other exchange of comparable size for comparable data products, and lower than the fees charged by other exchanges for comparable data products.⁴⁴

External Distribution Fees. The Exchange believes that it is reasonable to charge External Distribution fees for the market data feeds because vendors receive enumeration from redistributing the data in their business products provided to their customers. The Exchange believes that charging External Distribution fees is reasonable because the vendors that would be charged such fees profit by re-transmitting the Exchange's market data to their customers. These fees would be charged only once per month to each vendor account that redistributes any ToM, cToM, or SLF data feeds, regardless of the number of customers to which that vendor redistributes the data.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the market data feeds are reasonable.

Equitable Allocation and Not Unfairly Discriminatory

Overall. The Exchange believes that its proposed fees are reasonable, equitable, and not unfairly discriminatory because they are designed to align the proposed fees with services provided. The Exchange believes the proposed fees for the market data feeds are allocated fairly and equitably among the various categories of users of the feeds, and any differences among categories of users are justified and appropriate.

The Exchange believes that the proposed fees are equitably allocated because they will apply uniformly to all data recipients that choose to subscribe to the market data feeds. Any subscriber or vendor that chooses to subscribe to the market data feeds is subject to the same Fee Schedule, regardless of what type of business they operate, and the decision to subscribe to one or more of the ToM, cToM or SLF data feeds is based on objective differences in usage of each market data feed among different Members, which are still ultimately in the control of any particular Member. The Exchange believes the proposed pricing of the market data feeds is equitably allocated because it is based, in part, upon the amount of information contained in

each data feed, which may have additional value to market participants.

Internal Distribution Fees. The Exchange believes the proposed monthly fees for Internal Distribution of the market data feeds are equitably allocated and not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the market data feeds for internal distribution, regardless of what type of business they operate.

External Distribution Fees. The Exchange believes the proposed monthly fees for External Distribution of the market data feeds are equitably allocated and not unfairly discriminatory because they would be charged on an equal basis to all data recipients that receive the market data feeds that choose to redistribute the feeds externally, regardless of what business they operate. The Exchange also believes that the proposed monthly fees for External Distribution are equitably allocated when compared to lower proposed fees for Internal Distribution because data recipients that are externally distributing ToM, cToM, and/or SLF data feeds are able to monetize such distribution and spread such costs amongst multiple third party data recipients, whereas the Internal Distribution fee is applicable to use by a single data recipient (and its affiliates).

The Exchange believes that it is reasonable, equitable and not unfairly discriminatory to assess Internal Distributors fees that are less than the fees assessed for External Distributors for subscriptions to the ToM, cToM and SLF data feeds because Internal Distributors have limited, restricted usage rights to the market data, as compared to External Distributors, which have more expansive usage rights. All Members and non-Members that decide to receive any market data feed of the Exchange (or its affiliates, MIAx, MIAx Pearl and MIAx Emerald), must first execute, among other things, the MIAx Exchange Group Data Agreement (the "Exchange Data Agreement").⁴⁵ Pursuant to the Exchange Data Agreement, Internal Distributors are restricted to the "internal use" of any market data they receive. This means that Internal Distributors may only distribute the Exchange's market data to the recipient's officers and employees and its affiliates.⁴⁶ External Distributors may distribute the Exchange's market data to

⁴⁵ See Exchange Data Agreement, available at <https://www.miaxglobal.com/markets/us-options/all-options/market-data-vendor-agreements>.

⁴⁶ See *id.*

⁴⁴ See *supra* notes 41 and 42.

persons who are not officers, employees or affiliates of the External Distributor,⁴⁷ and may charge their own fees for the redistribution of such market data. External Distributors may monetize their receipt of the ToM, cToM and SLF data feeds by charging their customers fees for receipt of the Exchange's market data. Internal Distributors do not have the same ability to monetize the Exchange's market data feeds. Accordingly, the Exchange believes it is fair, reasonable and not unfairly discriminatory to assess External Distributors a higher fee for the Exchange's market data feeds as External Distributors have greater usage rights to commercialize such market data and can adjust their own fee structures if necessary.

The Exchange also utilizes more resources to support External Distributors versus Internal Distributors, as External Distributors have reporting and monitoring obligations that Internal Distributors do not have, thus requiring additional time and effort of Exchange staff. For example, External Distributors have monthly reporting requirements under the Exchange's Market Data Policies.⁴⁸ Exchange staff must then, in turn, process and review information reported by External Distributors to ensure the External Distributors are redistributing market data in compliance with the Exchange Data Agreement and Market Data Policies.

The Exchange believes the proposed market data fees are equitable and not unfairly discriminatory because the fee level results in a reasonable and equitable allocation of fees amongst subscribers for similar services, depending on whether the subscriber is an Internal or External Distributor. Moreover, the decision as to whether or not to purchase market data is entirely optional to all market participants. Potential purchasers are not required to purchase the market data, and the Exchange is not required to make the market data available. Purchasers may request the data at any time or may decline to purchase such data. The allocation of fees among users is fair and reasonable because, if market participants decide not to subscribe to the data feed, firms can discontinue their use of any of the market data feeds.

For all of the foregoing reasons, the Exchange believes that the proposed fees are equitably allocated and not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) of the Act,⁴⁹ the Exchange does not believe that the proposed rule change would impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intra-Market Competition

The Exchange does not believe that the proposed fees place certain market participants at a relative disadvantage to other market participants because, as noted above, the proposed fees are associated with usage of the data feed by each market participant based on whether the market participant internally or externally distributes the Exchange data, which are still ultimately in the control of any particular Member, and such fees do not impose a barrier to entry to smaller participants. Accordingly, the proposed fees do not favor certain categories of market participants in a manner that would impose a burden on competition; rather, the allocation of the proposed fees reflects the types of data consumed by various market participants and their usage thereof.

Inter-Market Competition

The Exchange does not believe the proposed fees place an undue burden on competition on other exchanges that is not necessary or appropriate. In particular, market participants are not forced to subscribe to any of the market data feeds. Additionally, other exchanges have similar market data fees with comparable rates in place for their participants.⁵⁰ The proposed fees are based on actual costs and are designed to enable the Exchange to recoup its applicable costs with the possibility of a reasonable profit on its investment as described in the Purpose and Statutory Basis sections. Competing exchanges are free to adopt comparable fee structures subject to the Commission's rule filing process. Allowing the Exchange, or any new market entrant, to waive fees (as the Exchange proposes here for all three of its market data feeds) for a period of time to allow it to become established encourages market entry and thereby ultimately promotes competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act,⁵¹ and Rule 19b-4(f)(2)⁵² thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments:

- Use the Commission's internet comment form (<https://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include file number SR-SAPPHIRE-2024-18 on the subject line.

Paper Comments:

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549-1090.
- All submissions should refer to file number SR-SAPPHIRE-2024-18. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (<https://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public

⁴⁷ See *id.*

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration # 20568 and # 20569;
TEXAS Disaster Number TX-20023]

Presidential Declaration of a Major Disaster for Public Assistance Only for the State of Texas

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: This is a Notice of the Presidential declaration of a major disaster for Public Assistance Only for the State of Texas (FEMA-4798-DR), dated 08/21/2024.

Incident: Hurricane Beryl.

Incident Period: 07/05/2024 through 07/09/2024.

DATES: Issued on 08/21/2024.

Physical Loan Application Deadline Date: 10/21/2024.

Economic Injury (EIDL) Loan Application Deadline Date: 05/21/2025.

ADDRESSES: Visit the MySBA Loan Portal at <https://lending.sba.gov> to apply for a disaster assistance loan.

FOR FURTHER INFORMATION CONTACT: Alan Escobar, Office of Disaster Recovery & Resilience, U.S. Small Business Administration, 409 3rd Street SW, Suite 6050, Washington, DC 20416, (202) 205-6734.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the President's major disaster declaration on 08/21/2024, Private Non-Profit organizations that provide essential

services of a governmental nature may file disaster loan applications online using the MySBA Loan Portal <https://lending.sba.gov> or other locally announced locations. Please contact the SBA disaster assistance customer service center by email at disastercustomerservice@sba.gov or by phone at 1-800-659-2955 for further assistance.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties:

Austin, Brazoria, Colorado, Harris, Jasper, Liberty, Matagorda, Montgomery, San Jacinto, Wharton. The Interest Rates are:

	Percent
<i>For Physical Damage:</i>	
Non-Profit Organizations with Credit Available Elsewhere ...	3.250
Non-Profit Organizations without Credit Available Elsewhere	3.250
<i>For Economic Injury:</i>	
Non-Profit Organizations without Credit Available Elsewhere	3.250

The number assigned to this disaster for physical damage is 205688 and for economic injury is 205690.

DEPARTMENT OF STATE

[Public Notice 12510]

30-Day Notice of Proposed Information Collection: DS–156E, Nonimmigrant Treaty Trader/Investor Application

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995, we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments up to September 27, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to Anabel Moreno-Mendez, Visa Services, Department of State, 600 19th St. NW, Washington, DC 20006, who may be reached at 202–485–7611 or PRA_BurdenComments@state.gov.

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* DS–156E, Nonimmigrant Treaty Trader/Investor Application.

- *OMB Control Number:* 1405–0101.
- *Type of Request:* Extension and Revision of a Currently Approved Collection.
- *Originating Office:* CA/VO.
- *Form Number:* DS–156E.
- *Respondents:* Nonimmigrant Treaty Traders/Investors applying for E visas.
- *Estimated Number of Respondents:* 43,000.
- *Estimated Number of Responses:* 43,000.
- *Average Time per Response:* 4 hours.
- *Total Estimated Burden Time:* 172,000 hours.
- *Frequency:* Once Per Application.
- *Obligation to Respond:* Required to Obtain or Retain a Benefit.

We are soliciting public comments to permit the Department to:

- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
- Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
- Enhance the quality, utility, and clarity of the information to be collected.
- Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of Proposed Collection

Under section 101(a)(15)(E) of the Immigration and Nationality Act (INA) (8 U.S.C. 1101(a)(15)(E)), noncitizens of certain countries may qualify for a nonimmigrant visa to carry out activities as a treaty trader, treaty investor, or other treaty worker in specialty occupation. Such individuals must be nationals of countries with a qualifying Treaty of Friendship, Commerce, and Navigation or its equivalent with the United States, or that is accorded such privileges by specific legislation. The Department uses the DS–156E to elicit information necessary to determine a foreign national’s qualification for a nonimmigrant visa under these provisions. Only certain applicants seeking E nonimmigrant treaty trader/investor visas to the United States will complete Form DS–156E.

Methodology

After completing Form DS–160, Online Nonimmigrant Visa Application, applicants can access the DS–156E online, print a copy of the form, and then submit it in person, via email, or via mail, depending on the procedures at the relevant consulate or embassy.

Julie M. Stuff,

Deputy Assistant Secretary, Bureau of Consular Affairs, Department of State.

DEPARTMENT OF STATE

[Public Notice:12509]

Notice of Department of State Sanctions Actions Pursuant to Executive Order Regarding Blocking Property With Respect to Specified Harmful Foreign Activities of the Government of the Russian Federation

SUMMARY: The U.S. Department of State’s Office of Economic Sanctions Policy and Implementation (SPI) is publishing the name of one person who has been removed from the List of Specially Designated Nationals and Blocked Persons (SDN List) maintained by the Office of Foreign Assets Control (OFAC) and is consequently no longer subject to the prohibitions imposed pursuant to Executive Order 14024 of April 15, 2021, “Blocking Property With Respect To Specified Harmful Foreign Activities of the Government of the Russian Federation.”

DATES: The action described in this notice was effective on July 8, 2024.

FOR FURTHER INFORMATION CONTACT: Aaron P. Forsberg, Director, Office of Economic Sanctions Policy and Implementation, Bureau of Economic and Business Affairs, Department of State, Washington, DC 20520, tel.: (202) 647 7677, email: ForsbergAP@state.gov.

SUPPLEMENTARY INFORMATION:

Electronic Availability

The SDN List and additional information concerning OFAC sanctions programs are available from OFAC’s website at <http://www.treasury.gov/ofac>.

Notice of Department of State Action

On July 8, 2024, pursuant to a decision by the Department of State, OFAC removed from the SDN List the person listed below, who was subject to prohibitions imposed pursuant to E.O. 14024.

Entity:

1. PANFEROV, Alexey Valeryevich (Cyrillic: ПАНФЕРОВ, Алексей Валерьевич),
 Russia; DOB 30 Sep 1970; nationality Russia; Gender Male; Passport 761897623
 (Russia) (individual) [RUSSIA-EO14024] (Linked To: SOVCOMBANK OPEN
 JOINT STOCK COMPANY)

Amy E. Holman,

*Principal Deputy Assistant Secretary, Bureau
 of Economic and Business Affairs,
 Department of State.*

BILLING CODE 4710–07–P

SURFACE TRANSPORTATION BOARD

[Docket Nos. FD 36798; and AB 284 (Sub-
 No. 5X)]

**Waterloo Railroad, LLC—Change of
 Operator Exemption With Interchange
 Commitment—Union Pacific Railroad
 Company; and Iowa Northern Railway
 Company—Discontinuance of Service
 Exemption—in Black Hawk County,
 Iowa**

On July 25, 2024, in Docket No. FD 36798, Waterloo Railroad, LLC (WTRL), filed a verified notice for a change in operator exemption. Under this exemption, WTRL would lease and operate approximately 6.9 miles of rail line owned by Union Pacific Railroad Company (UP), between milepost 325.1 and milepost 332.0, along with connecting ancillary trackage (yard and side tracks), in Black Hawk County, Iowa (the Line). In doing so, WTRL would replace the Line's current lessee and operator, Iowa Northern Railway Company (IANR). On August 7, 2024, in Docket No. AB 284 (Sub-No. 5X), IANR filed a petition for exemption to discontinue its operations on the Line.¹

As discussed below, WTRL's notice of exemption will be issued, and IANR's petition for exemption will be denied as moot.

*WTRL's Notice of Exemption, Docket
 No. FD 36798*

Under 49 CFR 1011.7(a)(2)(x)(A), the Director of the Office of Proceedings (Director) is delegated the authority to

¹ These proceedings are not consolidated but are being addressed in the same decision for administrative convenience.

determine whether to issue notices of exemption under 49 U.S.C. 10502 for lease and operation transactions under 49 U.S.C. 10901. However, the Board reserves to itself the consideration and disposition of all matters involving issues of general transportation importance. 49 CFR 1011.2(a)(6). Accordingly, the Board will revoke the delegation to the Director with respect to issuance of the pending notice of exemption for a change in operator on the Line. The Board determines that this notice of exemption should be issued and does so here.

Notice

WTRL, a noncarrier, has filed a verified notice of exemption pursuant to 49 CFR 1150.31 to lease and operate approximately 6.9 miles of rail line owned by UP, between milepost 325.1 and milepost 332.0, along with connecting ancillary trackage (yard and side tracks), in Black Hawk County, Iowa. The Line, known as the Waterloo Industrial Line, is currently operated by IANR, pursuant to a lease with UP. *See Iowa N. Ry.—Lease Exemption with Interchange Commitment—Rail Line of Union Pac. R.R.*, FD 36277 (STB served March 20, 2019).

According to the verified notice, WTRL will replace IANR as the operator of the Line. Upon WTRL's assumption of operations, IANR will have no common carrier obligation on the Line.

Although IANR stated in its July 26 Reply that it “could not consent to the change in operator filing,” (IANR Reply 1, July 26, 2024, FD 36798; *see also* IANR Pet. 6, Aug. 7, 2024, AB 284 (Sub-No. 5X); IANR Reply 2, Aug. 14, 2024, FD 36798), IANR subsequently filed a petition in Docket No. AB 284 (Sub-No. 5X), itself seeking Board authorization to discontinue its operations on the Line. Prior to that submission, IANR acknowledged termination of its lease with UP and stated it is working “cooperatively and expeditiously” with WTRL and UP to coordinate the transfer

of operations to WTRL. (*See* IANR Reply 1, July 26, 2024, FD 36798; IANR Reply 2, July 31, 2024, FD 36798.) While IANR states that the “steps necessary for a smooth transition of operations have not been completed,” (IANR Pet. 6, Aug. 7, 2024, AB 284 (Sub-No. 5X)), it offers no support for this assertion nor any indication as to what such steps entail. Nor does IANR, in requesting expedited consideration of its petition, indicate that the standard 14-day period between publication of a change in operator notice and its effectiveness,² which the Board will apply here, would be insufficient.

This transaction is related to a concurrently filed verified notice of exemption in *OPSEU Pension Plan Trust Fund, Jaguar Transport Holdings, LLC, and Jaguar Rail Holdings, LLC—Continuance in Control Exemption—Waterloo Railroad, LLC*, Docket No. FD 36797, in which OPSEU Pension Plan Trust Fund, Jaguar Transport Holdings, LLC, and Jaguar Rail Holdings, LLC, seek to continue in control of WTRL upon WTRL's becoming a Class III rail carrier.

WTRL certifies that the draft lease agreement between WTRL and UP contains an interchange commitment that affects interchange with third-party connecting carriers.³ WTRL has provided additional information regarding the interchange commitment as required by 49 CFR 1150.33(h).

WTRL certifies that its projected annual revenues as a result of this transaction will not result in it becoming a Class II or Class I rail carrier and that its projected annual revenues will not exceed \$5 million.

Under 49 CFR 1150.32(b), a change of operator requires that notice be given to shippers. The verified notice indicates

² *See* 49 CFR 1150.32(b).

³ A copy of the draft lease agreement was submitted under seal with the verified notice. *See* 49 CFR 1150.33(h)(1). WTRL states that it will submit a copy of the executed agreement when it is fully executed.

that WTRL provided notice of the transaction and interchange commitment to shippers on the Line.

The earliest this transaction may be consummated is September 6, 2024, the effective date of the exemption.

If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(d) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed no later than August 30, 2024 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36798, must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423-0001. In addition, a copy of each pleading must be served on WTRL's representative, William A. Mullins, Mullins Law Group PLLC, 2001 L Street NW, Suite 720, Washington, DC 20036.

According to WTRL, this action is categorically excluded from environmental review under 49 CFR 1105.6(c) and from historic preservation reporting requirement under 49 CFR 1105.8(b).

Decisions of the Board are available at www.stb.gov.

IANR's Petition for Exemption, Docket No. AB 284 (Sub-No. 5X)

IANR filed its petition under 49 U.S.C. 10502 for exemption from the prior approval requirements of 49 U.S.C. 10903 to discontinue its lease operations over the Line. IANR states that the proposed discontinuance of service would allow IANR "to effectuate an orderly transfer of rail operations from IANR to WTRL." (IANR Pet. 2, Aug. 7, 2024, AB 284 (Sub-No. 5X).) IANR requests expedited consideration of its petition. (*Id.* at 6.)

Because the change of operator exemption issued here in Docket No. FD 36798 effectively discontinues IANR's common carrier obligation on the Line, IANR's petition to discontinue its operations on the Line will be denied as moot, effective concurrently with effectiveness of the change in operator exemption.

It is ordered:

1. The delegation of authority to the Director under 49 CFR 1011.7(a)(2)(x)(A) to determine whether to issue a notice of exemption in this proceeding is revoked.

2. WTRL's notice of exemption is issued and is effective September 6, 2024.

3. IANR's petition for exemption is denied as moot, effective on September 6, 2024.

4. This decision will be published in the **Federal Register**.

5. This decision is effective on its service date.

Decided: August 22, 2024.

By the Board, Board Members Fuchs, Hedlund, Primus, and Schultz. Board Member Fuchs concurred with a separate expression.

BOARD MEMBER FUCHS, concurring:

While I agree with the today's decision and find sufficient indication that IANR consents to exiting the Line,¹ I write separately to suggest that the Board consider revising its change-in-operator exemption regulations to explicitly require a verified notice to indicate that the exiting carrier consents to the transaction. The notice of exemption process is built for speed and typically involves little to no opposition or controversy,² and the process allows simultaneous entry and exit licensing to facilitate efficient changes in operators. Consistent with this purpose, the Board—in case law—has rightly required an indication that the exiting carrier consents to the change-in-operator notice. *See SMS Rail Serv., Inc.—Change in Operator Exemption Including Acquisition by Lease—Salem Branch Line in Salem and Gloucester Counties, N.J.*, FD 36529, slip op. at 2, 2 n.4 (STB served July 15, 2022) (notice of change-in-operator exemption under 49 CFR 1150.41 discontinuing operating authority for a carrier that consented, but not for a second carrier that was unreachable and thus had not consented). However, the Board's regulations contain no explicit requirement. Here, when IANR contested the transaction, the case soon generated an atypical amount of litigation for a notice of exemption proceeding, and the controversy showed the potential for further complications if a carrier were to never consent to exiting. Forcing a carrier off a line is no simple, permissive matter, and—in stand-alone exit licensing proceedings brought by a third party where the subject carrier does not consent (*i.e.*, a

¹ I also agree that IANR has not demonstrated that the standard 14-day period before the change-in-operator exemption becomes effective is insufficient to permit the "orderly transfer of operations from IANR to WTRL." (IANR Pet. 2, Aug. 7, 2024, AB 284 (Sub-No. 5X).)

² *Class Exemption for the Acquisition and Operation of Rail Lines under 49 U.S.C. 10901*, EP 392 (Sub-No. 1), slip op. at 3 (STB served Jan. 15, 1986) (stating that the exemption process "is designed to meet the need for expeditious handling of a large number of requests that are rarely opposed," and "to reduce regulatory delay and costs").

typical "adverse" discontinuance or abandonment case)—the Board has rightly rejected the use of exemptions. *Wisconsin Dept. of Transp.—Aban. Exemption*, FD 31303, slip op. at 4 (ICC served Dec. 5, 1988) (holding that the exemption authority could not be used to force abandonment or discontinuance where the carrier opposes this action).³ Revising the change-in-operator regulations⁴ to explicitly include a consent requirement would promote the purpose of the regulations, provide needed clarity for parties, and mitigate potential inconsistencies across exit licensing proceedings.

Eden Besera,
Clearance Clerk.

BILLING CODE 4915-01-P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36797]

OPSEU Pension Plan Trust Fund, Jaguar Transport Holdings, LLC, and Jaguar Rail Holdings, LLC—Continuance in Control Exemption—Waterloo Railroad, LLC

OPSEU Pension Plan Trust Fund (OPTrust), Jaguar Transport Holdings, LLC (JTH), and Jaguar Rail Holdings, LLC (JRH), and collectively with OPTrust and JTH, Jaguar, each a noncarrier, have filed a verified notice of exemption under 49 CFR 1180.2(d)(2) to continue in control of Waterloo Railroad, LLC (WTRL), upon WTRL's becoming a Class III rail carrier. WTRL is a directly controlled holding of JRH. OPTrust indirectly controls JTH, which directly controls JRH. Jaguar collectively controls nine Class III rail carriers. (*See* Notice 4.)

This transaction is related to a concurrently filed verified notice of exemption in *Waterloo Railroad, LLC—Change of Operator Exemption with Interchange Commitment—Union Pacific Railroad Company*, Docket No. FD 36798, in which WTRL seeks Board approval to lease and operate

³ If, in a future proceeding, the Board were to conclude that it does not have adverse discontinuance or abandonment authority, the agency would have an independent reason to require consent in this type of proceeding.

⁴ I note that the agency's decision promulgating the applicable regulations appears to focus on the agency's entry licensing statute, and not the exit licensing statute for discontinuances and abandonments, even though a change in operator involves an exit. *See Class Exemption*, EP 392 (Sub-No. 1), slip op. at 10 (adopting final rule by citing to 49 U.S.C. 10901 [acquisition and operation] but not § 10903 [abandonments]). The Board should address this apparent omission in any future rulemaking.

approximately 6.9 miles of rail line owned by Union Pacific Railroad Company, extending between milepost 325.1 and milepost 332.0, in Black Hawk County, Iowa (the Line), replacing the Line's current operator, Iowa Northern Railway Company.

Jaguar represents that: (1) WTRL does not connect with any railroads in Jaguar's corporate family; (2) the transaction is not part of a series of anticipated transactions that would connect WTRL with the rail lines of any other carrier in Jaguar's corporate family; and (3) the transaction does not involve a Class I carrier. Therefore, the transaction is exempt from the prior approval requirements of 49 U.S.C. 11323. See 49 CFR 1180.2(d)(2).

Under 49 U.S.C. 10502(g), the Board may not use its exemption authority to relieve a rail carrier of its statutory obligation to protect the interests of its employees. However, 49 U.S.C. 11326(c) does not provide for labor protection for transactions under 49 U.S.C. 11324 and 11325 that involve only Class III rail carriers. Accordingly, because this transaction involves Class III rail carriers only, the Board may not impose labor protective conditions here.

The earliest this transaction may be consummated is September 6, 2024, the effective date of the exemption. If the verified notice contains false or misleading information, the exemption is void ab initio. Petitions to revoke the exemption under 49 U.S.C. 10502(g) may be filed at any time. The filing of a petition to revoke will not automatically stay the effectiveness of the exemption. Petitions for stay must be filed by August 30, 2024 (at least seven days before the exemption becomes effective).

All pleadings, referring to Docket No. FD 36797, must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423-0001. In addition, a copy of each pleading must be served on Jaguar's representative, William A. Mullins, Mullins Law Group PLLC, 2001 L Street NW, Suite 720, Washington, DC 20036.

Board decisions and notices are available at www.stb.gov.

Decided: August 23, 2024.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Eden Besera,
Clearance Clerk.

[FR Doc. 2024-19364 Filed 8-27-24; 8:45 am]

BILLING CODE 4915-01-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Intent of Waiver With Respect to Land; Youngstown Regional Airport, Youngstown, Ohio

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice.

SUMMARY: The FAA is considering a proposal to change approximately 36.1875 acres of airport land from aeronautical use to non-aeronautical use and to authorize the sale of airport property located at Youngstown Regional Airport, Youngstown, Ohio. The property is located in the northwest corner of the airport, outside the airfield fence and is separated from the airport by Ridge Road. The aforementioned land is proposed to be sold for warehousing/storage facilities and is not needed for aeronautical use.

DATES: Comments must be received on or before September 27, 2024.

ADDRESSES: All requisite and supporting documentation will be made available for review by appointment at the FAA Detroit Airports District Office, Marlon Pena, Program Manager, 11677 S Wayne Rd., Romulus, MI 48174. Telephone: (734) 229-2900/Fax: (734) 229-2950.

Written comments on the Sponsor's request may be submitted using any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>, and follow the instructions for sending your comments electronically.
- *Mail:* Marlon Pena, Program Manager, Federal Aviation Administration, Detroit Airports District Office, 11677 S Wayne Rd., Romulus, MI 48174-1412.
- *Hand Delivery:* Deliver to mail address above between 8 a.m. and 5 p.m. Monday through Friday, excluding Federal holidays.
- *FAX:* (734) 229-2950.

FOR FURTHER INFORMATION CONTACT: Marlon Pena, Program Manager, Federal Aviation Administration, Detroit Airports District Office, 11677 S Wayne Rd., Romulus, MI 48174. Telephone Number: (734) 229-2900/Fax: (734) 229-2950.

SUPPLEMENTARY INFORMATION: In accordance with section 47107(h) of Title 49, United States Code, this notice is required to be published in the **Federal Register** 30 days before modifying the land-use assurance that requires the property to be used for an aeronautical purpose.

The subject property is mostly wooded undeveloped land that was

federally conveyed as part of a larger parcel under the Federal Property and Administrative Services Act of 1949, as amended, and the Surplus Property Act of 1944, as amended. The airport sponsor proposes to sell the land, at fair market value, to a private party to be developed as warehousing/storage facilities.

The disposition of proceeds from the sale of the airport property will be in accordance with FAA's Policy and Procedures Concerning the Use of Airport Revenue, published in the **Federal Register** on February 16, 1999 (64 FR 7696).

This notice announces that the FAA is considering the release of the subject airport property at the Youngstown Regional Airport, Youngstown, Ohio, from federal land covenants, subject to a reservation for continuing right of flight as well as restrictions on the released property as required in FAA Order 5190.6B section 22.16. Approval does not constitute a commitment by the FAA to financially assist in the disposal of the subject airport property nor a determination of eligibility for grant-in-aid funding from the FAA.

Legal Description

Vienna Township, Trumbull County, State of Ohio

Known as being part of Section No. 44 in said Vienna Township (Township 4, Range 2) and being further bounded and described as follows:

Beginning at a 5/8-inch iron pin found on the westerly Right-of-Way line of Ridge Road (County Road 159/Right-of-Way varies/Plat Volume 47, Page 92) said point being a northeasterly corner of lands of Antique Tractor Club of Trumbull County, Inc. (Instrument No. 200807220018111);

Thence South 89°18'00" West along the northerly line of said lands of Antique Tractor Club of Trumbull County, Inc. a distance of 1633.23 feet to a 5/8-inch iron pin found at the southeasterly corner of lands of A&N Land Company, LLC (Instrument No. 201901070000302);

Thence North 01°28'55" West along the easterly line of said lands of A&N Land Company, LLC a distance of 1157.30 feet to a 5/8-inch iron pin set;

Thence North 89°17'40" East through the lands of the Grantor and passing over a southerly corner of lands of the United States of America (Deed Volume 1051, Pages 80 and 95) a distance of 756.12 feet to a 5/8-inch iron pin set on the said westerly Right-of-Way line of Ridge Road;

Thence South 54°32'04" East along said westerly line of Ridge Road a

distance of 645.46 feet to a 5/8-inch iron pin set at a point of curvature;

Thence continuing along said westerly line of Ridge Road along a curve to the right having an arc distance of 834.88 feet a radius of 904.93 feet a delta angle of 52°51'39" and a chord which bears South 28°06'15" East a distance of 805.59 feet to a 5/8-inch iron pin set;

Thence South 01°40'25" East continuing along said westerly line of Ridge Road a distance of 61.19 feet to the POINT OF BEGINNING and containing 1,576,325.47 square feet or 36.1875 acres of land, more or less.

Issued in Romulus, Michigan, on August 22, 2024.

Stephanie R. Swann,

Deputy Manager, Detroit Airports District Office, FAA, Great Lakes Region.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. 2024–1497]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Certification of Repair Stations, Part 145 of Title 14, CFR

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on May 28, 2024. The collection involves applying for a repair station certificate, requesting amendments to the certificate, developing required programs and manuals, and maintaining employee qualification and training records. Additionally, repair stations located outside of the United States must apply to renew their FAA air agency certificate every two years. The information to be collected will be used to ensure applicants and certificate holders of FAA-issued repair station certificates use appropriate facilities and equipment, have sufficient processes and procedures, and use qualified personnel with appropriate training to

perform maintenance, preventive maintenance, or alterations of aircraft, airframes, aircraft engines, propellers, appliances, or component parts. The title of this collection is being revised to better reflect the purpose of the information collected.

DATES: Written comments should be submitted by September 27, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this particular information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT:

Henry Trammel by email at: henry.trammel@faa.gov phone: 202–267–1675.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA’s performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information.

OMB Control Number: 2120–0682.

Title: Certification of Repair Stations, Part 145 of Title 14, CFR 145.

Form Numbers: FAA Form 8310–3.

Type of Review: Renewal of an information collection.

Background: The **Federal Register** Notice with a 60-day comment period soliciting comments on the following collection of information was published on May 28, 2024 (89 FR 46293). Title 14 CFR, part 145, describes how to obtain a repair station certificate and contains the rules a certificated repair station must follow related to its performance of maintenance, preventive maintenance, or alterations of an aircraft, airframe, aircraft engine, propeller, appliance, or component part to which part 43 applies. The regulation requires repair station certificate holders and applicants to apply for a repair station certificate, including providing various application attachments, develop required programs and manuals, make certifications regarding hazardous materials training of employees, recommend repairman applicants employed by the repair station, and maintain employee qualification and training records. All certificate holders and applicants must

develop a repair station manual, quality control manual, and training program, and request amendments to the certificate when necessary. Some certificate holders and applicants must develop a capability list, or a manual required by a bilateral agreement, or a hazardous materials training program. Repair stations located outside of the United States must apply to renew their FAA air agency certificate every two years. Additionally, the holder of an expired, surrendered, suspended, or revoked certificate must return it to the FAA. Requests for an initial certificate or a certificate amendment are made on FAA Form 8310–3, Application for Repair Station Certificate and/or Rating, and must be submitted to the responsible Flight Standards Office along with all required application attachments. The estimated burden per response and total annual burden is revised from the 60-day notice due to additional analysis being performed by the FAA. The title of this collection is being revised from “Certification of Repair Stations, Part 145 of Title 14, CFR” to “Certification and Operation of Repair Stations, 14 CFR part 145” to better reflect the purpose of the information collected.

Respondents: 5,000 applicants and holders of FAA-issued part 145 air agency certificates.

Frequency: On occasion, or every 2 years for renewal applicants.

Estimated Average Burden per Response: 65 Hours annually for Reporting, 40 Hours for Recordkeeping.

Estimated Total Annual Burden: 240,869 Hours.

Issued in Washington, DC, on August 22, 2024.

Henry H. Trammel,

Aviation Safety Inspector, Office of Safety Standards, Aircraft Maintenance Division, Repair Station Section.

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

[Docket No. FMCSA–2024–0109]

Agency Information Collection Activities; Approval of a New Information Collection Request: FMCSA Registration System (FRS)

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), Department of Transportation (DOT).

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FMCSA announces its plan to submit the Information Collection Request (ICR) described below to the Office of Management and Budget (OMB) for review and approval. FMCSA is replacing its Unified Registration System (URS), with a new, online registration system, which will be named the “FMCSA Registration System” (FRS). The new system will allow all persons required to register under the Agency’s commercial or safety jurisdiction to do so online.

DATES: Comments on this notice must be received on or before September 27, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be submitted within 30 days of publication of this notice to www.reginfo.gov/public/do/PRAMain. Find this information collection by selecting “Currently under 30-day Review—Open for Public Comments” or by using the search function.

FOR FURTHER INFORMATION CONTACT: Mr. Jeffrey Secrist, Office of Registration, Chief, Registration Division, DOT, FMCSA, West Building, 6th Floor, 1200 New Jersey Avenue SE, Washington, DC 20590; (202) 385–2367; jeff.secrist@dot.gov.

SUPPLEMENTARY INFORMATION:

Title: FMCSA Registration System.
OMB Control Number: 2126–00XX.
Type of Request: New ICR.

Respondents: Motor carriers, freight forwarders, brokers, and other entities regulated by the Agency.

Estimated Number of Respondents: 764,582.

Estimated Time per Response: Varies.

Expiration Date: This is a new ICR.

Frequency of Response: Annually.

Estimated Total Annual Burden: 583,306 Hours.

This new ICR will apply to: new registrants applying for safety and/or operating authority registration for the first time from FMCSA; existing registrants (*i.e.*, entities that already have a USDOT number and/or operating authority) that are subject to FMCSA’s registration and certification regulations that wish to apply for additional authorities; Mexico-domiciled carriers that wish to operate beyond the U.S. municipalities on the U.S.-Mexico border and their commercial zones; registrants seeking to process name changes, address changes, and reinstatements of operating authority for motor carriers, freight forwarders, and brokers; registrants which are requesting

to voluntarily suspend their safety and/or operating authority registration with FMCSA; and motor carriers, brokers and freight forwarders that must designate an agent on whom service of notices in proceedings before the Secretary may be made. It will also apply to designated agents and those entities providing proof of financial responsibility requirements, such as insurance companies and bond agents. Four comments were received in response to the 60-day **Federal Register** notice. This 30-day FR notice corrects the number of respondents stated in the 60-day FR, and hence the estimated burden hours calculated and stated in the 60-day FR, after FMCSA realized the most current data was not applied.

Background

FMCSA registers for-hire motor carriers of regulated commodities and of passengers, under 49 United States Code (U.S.C.) 13902(a); surface freight forwarders, under 49 U.S.C. 13903; property brokers, under 49 U.S.C. 13904; certain Mexico-domiciled motor carriers, under 49 U.S.C. 13902(c), and cargo tank motor vehicle manufacturers, assemblers, repairers, inspectors, testers, and design certifying engineers under 49 U.S.C. 5121a, 49 CFR 1.87, and 49 CFR part 107, subpart F. These motor carriers may conduct transportation services in the United States only if they are registered with FMCSA. Each registration is effective from the date specified and remains in effect for such period as the Secretary of Transportation (Secretary) determines by regulations.

Motor carriers, freight forwarders, and property brokers are required to request a name or address change and to request reinstatement of a revoked operating authority. Procedures for changing the name or business form of a motor carrier, freight forwarder, or property broker (§ 365.413T) require that motor carriers, forwarders, and brokers must submit the required information to FMCSA’s Office of Registration requesting the change.

Subsection (d) of 49 U.S.C. 13905 also provides that on application of the registrant, the Secretary may amend or revoke a registration, and hence the registrant’s operating authority. These registrants may apply to voluntarily revoke their operating authority or parts thereof. If the registrant fails to maintain evidence of the required level of insurance coverage on file with FMCSA, its operating authority will be revoked involuntarily. Although the effect of both types of revocation is the same, some registrants prefer to request voluntary revocation. For various

business reasons, a registrant may request revocation of part, but not all, of its operating authority.

Registered motor carriers, brokers, and freight forwarders must designate an agent on whom service of notices in proceedings before the Secretary may be made (49 U.S.C. 13303). Registered motor carriers must also designate an agent for every State in which they operate and traverse in the United States during such operations, on whom process issued by a court may be served in actions brought against the registered motor carrier (49 U.S.C. 13304, § 366.4T). Every broker shall make a designation for each State in which its offices are located or in which contracts are written (49 U.S.C. 13304, § 366.4T). Regulations governing the designation of process agents are found at 49 CFR part 366.

FMCSA requests information to identify the applicant, the nature and scope of its proposed operations, safety-related details, and information regarding the drivers and vehicles it plans to use in U.S. operations. FMCSA and the States use registration information collected to track motor carriers, freight forwarders, brokers, and other entities they regulate. Registering motor carriers is essential to being able to identify carriers so that their safety performance can be tracked and evaluated. The data makes it possible to link individual trucks to the responsible motor carrier, thus implementing the mandate under 49 U.S.C. 31136(a)(1); that is, ensuring that commercial motor vehicles are maintained and operated safely. In general, registration information collected informs prioritization of the Agency’s activities and aids in assessing and statistically analyzing the safety outcomes of those activities.

The final rule titled “Unified Registration System,” (78 FR 52608) dated August 23, 2013, implemented statutory provisions for an online registration system for entities that are subject to FMCSA’s licensing, registration, and certification regulations. When developing URS, FMCSA planned that the OP–1 series of forms (except for OP–1(MX)) would ultimately be folded into one overarching form (MCSA–1), which would be used by all motor carriers seeking authority.

FMCSA began a phased rollout of URS in 2015. The first phase, which became effective on December 12, 2015, impacted only first-time applicants seeking an FMCSA-issued registration. FMCSA had planned subsequent rollout phases for existing registrants; however, there were substantial delays, and

subsequent phases have not been rolled out to date. On January 17, 2017, FMCSA issued a final rule titled “Unified Registration System; Suspension of Effectiveness,” which indefinitely suspended URS effectiveness dates for existing registrants only (82 FR 5292).

Pursuant to this final rule, FMCSA was accepting forms OP–1, OP–1(P), OP–1(FF), and OP–1(NNA) for existing registrants wishing to apply for additional authorities. Separately, FMCSA requires Form OP–1(MX) for Mexico-domiciled carriers that wish to operate beyond the U.S. municipalities on the U.S.-Mexico border and their commercial zones. Forms in the OP–1 series request information to identify the applicant, the nature and scope of its proposed operations, a narrative description of the applicant’s safety policies and procedures, and information regarding the drivers and vehicles it plans to use in U.S. operations. The OP–1 series also requests information on the applicant’s familiarity with relevant safety requirements, the applicant’s willingness to comply with those requirements during its operations, and the applicant’s willingness to meet any specific statutory and regulatory requirements applicable to its proposed operations. Information collected through these forms aids FMCSA in determining the type of operation a company may run, the cargo it may carry, and the resulting level of insurance coverage the applicant will be required to obtain and maintain to continue its operating authority.

In addition, FMCSA accepted Form MCS–150 (Motor Carrier Identification Report, Application for USDOT Number), Form MCS–150B (Combined Motor Carrier Identification Report and Hazardous Materials Permit Application), and MCS–150C (Intermodal Equipment Provider

Identification Report, Application for USDOT Number). Title 49, U.S.C. 504(b)(2) provides the Secretary with authority to require carriers, lessors, associations, or classes of these entities to file annual, periodic, and special reports containing answers to questions asked by the Secretary. Existing registrants use the MCS–150 or MCS–150B to update their information in the Motor Carrier Management Information System, while applicants filing for the first time were required to file on-line using URS. Form MCS–150 or MCS–150B is also used for Mexico-domiciled carriers that seek authority to operate beyond the United States municipalities on the United States-Mexico border and their commercial zones.

Registered motor carriers, brokers, and freight forwarders must designate an agent on whom service of notices in proceedings before the Secretary may be made through filing the Form BOC–3, Designation of Agents for Service of Process. Registered motor carriers must designate an agent for every State in which they operate and traverse in the United States during such operations, on whom process issued by a court may be served in actions brought against the registered motor carrier (49 U.S.C. 13304, § 366.4T). Every broker must also make a designation for each State in which its offices are located or in which contracts are written (49 U.S.C. 13304, § 366.4T).

New Collection: As described above, only first-time applicants seeking an FMCSA-issued registration must apply for authority via URS, while existing registrants used several forms to update their information, apply for additional authorities, and designate process agents. Under the new FRS, all forms described above will be integrated into the online system through a series of questions that will be asked, using smart logic. The only exception will be the Form OP–2, Application for Mexican

Certificate of Registration for Foreign Motor Carriers and Foreign Motor Private Carriers under 49 U.S.C. 13902. Information collection activities associated with the Form OP–2 are covered under a different ICR, titled “Application for Certificate of Registration for Foreign Motor Carriers and Foreign Motor Private Carriers,” OMB Control No. 2126–0019, which will continue in effect.

This new ICR impacts several currently approved collections of information, listed below. However, until the new FRS is completed, FMCSA cannot estimate the burden, in hours or expense, that FRS users will be required to endure in comparison to the burdens associated for the approved collections listed below. FMCSA is developing FRS in such a way as to save users as much time as possible. However, FMCSA expects that, at worst, the time and effort required to complete an application, update, or process agent designation in FRS will be the same as it is to complete in the URS or using a paper form. Thus, for purposes of this new collection, FMCSA assumes the same time and cost burdens as were previously listed in the approved collections. In the future, during routine renewals and/or revisions for this new collection, and as FMCSA gathers information on average time per transaction in FRS, FMCSA expects to be able to refine these estimates.

It is expected that FMCSA will eliminate the following collections, along with all associated forms, as users will instead use the FRS to collect the information previously submitted using the listed forms. However, until FMCSA completes a regulatory change to remove reference to these forms from regulation, registrants may continue to use these forms to request the appropriate registration action.

Information collection approval number	Information collection title	Associated forms	New FRS series of questions using smart logic for each information collection (IC)
2126–0051	FMCSA Registration/Updates	MCSA–1	IC–1
2126–0016	Licensing Applications for Motor Carriers Operating Authority	OP–1 series	IC–2
2126–0013	Motor Carrier Identification Report	MCS–150, MCS–150B and MCS–150C	IC–3
2126–0060	Motor Carrier Records Change Form	MCSA–5889	IC–4
2126–0018	Request for Revocation of Authority Granted	OCE–46	IC–5
2126–0015	Designation of Agents, Motor Carriers, Brokers, and Freight Forwarders.	BOC–3	IC–6

Efforts to address fraudulent information from appearing on

registration records. FMCSA has seen a significant increase in the occurrence of

fraudulent activity where erroneous information about a registered entity is

being used, resulting in cargo and monetary theft in the motor carrier industry. Examples of fraudulent activity include identity theft, hijacking FMCSA motor carrier accounts, selling of motor carrier numbers, personal identification numbers, and fraudulent or fake initial registrations. The current legacy registration system lacks the ability to validate identity before registration processing, which is leading to fraudulent registrations and theft. A portion of the recent fraudulent activities also includes foreign actors. In response, FMCSA has significantly increased efforts to combat external fraud and understand the scope of the issue.

As part of the new FRS, FMCSA plans to verify individuals' identities by establishing a secure and reliable process that utilizes an identity-proofing solution. This will improve the overall resilience of the Agency's digital ecosystems, promote user confidence, and ensure that only verified entities register with FMCSA and gain access to their data. FMCSA will develop measures to verify and secure individuals' identities in the digital space through an identity-proofing solution that supports omni-channel onboarding. This means customers may use different channels such as remotely using a smartphone, tablet, or personal computer, or alternatively, in-person assistance via agents, to verify their identity. The identity-proofing solution will interface with existing FMCSA applications using either application programming interfaces (APIs) or lightweight connectors, which do not require extensive development resources for FMCSA. Based on FMCSA's research, the contracted verification system has a user-friendly interface and experience that allows for seamless interaction during the identity-proofing process—promoting ease of use for both administrators and customers.

To complete the verification process, an applicant must: (1) transmit a photo of a valid state-issued Driver's License or other acceptable forms of identification and (2) use their personal mobile device for facial recognition verification. The contracted vendor will validate the customer's form of identification, confirm the identity of the individual, and compare the results with data in their existing databases. Customers who are unable or unwilling to verify their identity using digital means (*e.g.*, mobile phone or computer), may go in-person to one of the sanctioned support centers and undergo the process of identity verification with the assistance of an agent. FMCSA will determine the number of support

centers available. The contractor will send the results of the verification to FMCSA allowing the customer to move forward with the FMCSA registration process. Once the verification process is complete, the contractor will delete any collected personal-identifiable information (PII) and only share the transaction result with FMCSA. The result will not include any PII.

FMCSA will begin with identity proofing, verifying the identity of all new applicants, as well as the approximately 800,000 existing registrants within a designated timeframe. Later, the Agency will initiate a process for verifying the business which is being registered by the individual. FMCSA estimates that the government conducts approximately 3.5 million transactions annually for motor carrier registration and compliance-related purposes that would require identity proofing.

The current information collection supports the DOT Strategic Goal of Safety. It streamlines registration processes and ensures that FMCSA can more efficiently track motor carriers, freight forwarders, brokers, and other entities regulated by the Agency.

On April 19, 2024, FMCSA published a 60-day **Federal Register** notice (89 FR 28841) with a 60-day public comment period to announce its intention to submit this new ICR to OMB for its review and approval. FMCSA received four comments from the public. A property management company commented with concerns about sole proprietorships which are not always required to register with the Secretary of State in some states. Another individual commented on the urgency of fraudulent activity as it relates to cargo theft and efforts to enforce existing laws. Both comments are not applicable to this ICR, but FMCSA will consider them in a related rulemaking action and in its development of the FRS.

One comment was submitted by the firms of Seaton & Husk, L.P. and Clark Hill PLC on behalf of a coalition of transportation, logistics, and security organizations. These stakeholders expressed concern that the FRS proposal was premature and could not be artificially separated from currently pending proposals to amend motor carrier, broker, and forwarder registration requirements relating to safety fitness and prevention of fraud. The stakeholders commended FMCSA for recognizing that closer scrutiny of registration applications is necessary to prevent supply chain fraud ranging from identity theft to stolen loads. However, the commenters stated the FRS questionnaire alone would not be nearly

enough unless backed up by hands-on vetting and verification of applicants before operating authority is granted. The commenters request that implementation of the new application be postponed because: (1) the Agency's acknowledgement during its May 29, 2024, listening session that additional rulemaking would be required to vet existing carriers and intermediaries, regardless of commodity or size of equipment; (2) pending rulemakings which are intended to address the need for vetting all new applicants for safety; (3) the absence of clarity on the FMCSA's role in identifying, policing, and prosecuting supply chain fraud; and (4) pending congressional initiatives and the unaddressed possibility of inter-agency coordination to address supply chain fraud with the full implementation of government resources.

FMCSA reviewed the comments submitted by the coalition and finds the comments are not applicable to requesting OMB review and approval of this ICR, which will impact several currently approved information collections. Under FRS, these forms will be integrated into the online system through a series of questions that will be asked, using smart logic. None of the coalition's comments relate to either the currently approved forms or the idea of consolidating them into one, online system. FMCSA will consider the coalition's comments as they relate to other, ongoing actions.

One comment was received from the American Trucking Associations (ATA) and ATA's Moving and Storage Conference (MSC). ATA supports FMCSA's transition to a modernized online registration system, as well as its efforts to bolster the safety, security, and efficiency of its existing carrier registration system. ATA provided recommendations and considerations to further strengthen the system against fraudulent activities, including: (1) streamline access and use for legitimate carriers without undue regulatory hurdles; (2) enhance identity verification and security measures; (3) improve data quality and accessibility; (4) operating authority and USDOT number issuance; (5) establish thresholds for entry; (6) FMCSA Registration System implementation; and (7) create an ecosystem of fraud prevention beyond registration system. ATA called for FMCSA to dedicate resources to better understanding and identifying sources of fraud, their prevalence, and the extent to which fraudulent practices are committed by individuals acting within legitimate organizations (*i.e.*, brokers, freight

forwarders, third parties, and intermediaries involved in the application process). ATA expressed FMCSA must commit to a culture of continuous improvement and comprehensive prevention efforts beyond the scope of an updated registration system to ensure long-term success and registration satisfaction.

FMCSA reviewed the comments submitted by ATA and MSC and finds the recommendations and considerations listed above are not applicable to requesting OMB review and approval of this ICR. However, FMCSA will consider these comments as it takes advantage of the new, enhanced technology and system design, adds fraud prevention and security measures, simplifies a complex application process, and improves data quality and safety.

Public Comments Invited

You are asked to comment on any aspect of this information collection, including: (1) whether the proposed collection is necessary for the performance of FMCSA's functions; (2) the accuracy of the estimated burden; (3) ways for FMCSA to enhance the quality, usefulness, and clarity of the collected information; and (4) ways that the burden could be minimized without reducing the quality of the collected information.

Issued under the authority of 49 CFR 1.87.

BILLING CODE 4910-EX-P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900-NEW]

Agency Information Collection Activity Under OMB Review: VHA Fraud, Waste and Abuse Complaint Form

AGENCY: Veterans Health Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995, this notice announces that the Veterans Health Administration (VHA), Department of Veterans Affairs (VA), will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden, and it includes the actual data collection instrument.

DATES: Comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice by clicking on the following link www.reginfo.gov/public/do/PRAMain, select "Currently under Review—Open for Public Comments," then search the list for the information collection by Title or "OMB Control No. 2900-NEW." **FOR FURTHER INFORMATION CONTACT:** VA PRA information: Maribel Aponte, 202-461-8900, vacopaperworkreduact@va.gov.

SUPPLEMENTARY INFORMATION:

Title: VHA Fraud, Waste and Abuse Complaint Form (VA Form 10-390).
OMB Control Number: 2900-NEW.
<https://www.reginfo.gov/public/do/PRAsearch>.

Type of Review: New collection.

Abstract: The Secretary of VA has broad authority under Title 38 United States Code, section 501, to protect Veterans and their family members from

fraud and enforce compliance with federal laws and regulations. The VA is an active participant in the cross-government Veteran Scam and Fraud Evasion (VSAFE) campaign and Task Force, and this information collection supports the goals for the reporting and resolution of potential fraud issues.

The purpose of this information collection is to receive and process complaints related to fraud, waste and abuse in VA health care programs. An individual can file a complaint with the VA Office of Integrity and Compliance (OIC) using the Department's regular mail (letter), email, hotline telephone line, fax or, in the future, by filing a web-based complaint. The new VA Form 10-390 can be used by individuals to capture information for a fraud, waste or abuse complaint. The form may be submitted anonymously, and there is no requirement to complete all the fields. All complaints are entered into the Compliance Inquiry Reporting & Tracking System (CIRTS), which is used by VA OIC Staff to record and track complaints as they are processed by VA.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register** Notice with a 60-day comment period soliciting comments on this collection of information was published at 89 FR 51948, June 20, 2024.

Affected Public: Individuals or Households.

Estimated Annual Burden: 283 hours.

Estimated Average Burden per Respondent: 10 minutes.

Frequency of Response: On occasion.

Estimated Number of Respondents: 1,700.

Authority: 44 U.S.C. 3501 *et seq.*

Maribel Aponte,

VA PRA Clearance Officer, Office of Enterprise and Integration, Data Governance Analytics, Department of Veterans Affairs.

Medicare and Medicaid Programs and the Children’s Health Insurance Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2025 Rates; Quality Programs Requirements; and Other Policy Changes**AGENCY:** Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).**ACTION:** Final rule.

SUMMARY: This final rule revises the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals; makes changes relating to Medicare graduate medical education (GME) for teaching hospitals; updates the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs); and makes other policy-related changes.

DATES: With the exception of instruction 2 (§ 405.1845), instruction 29 (§ 482.42(e)) and instruction 31 (§ 485.640(d)), this final rule is effective October 1, 2024. The regulation at § 405.1845 is effective January 1, 2025. The regulations at §§ 482.42(e) and 485.640(d) are effective on November 1, 2024.

SUPPLEMENTARY INFORMATION:**Tables Available on the CMS Website**

The IPPS tables for this fiscal year (FY) 2025 final rule are available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled “FY 2025 IPPS Final Rule Home Page” or “Acute Inpatient—Files for Download.” The LTCH PPS tables for this FY 2025 final rule are available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html> under the list item for Regulation Number CMS–1808–F. For further details on the contents of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this FY 2025 IPPS/LTCH PPS final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS websites, as previously identified, should contact Michael Treitel, *DAC@cms.hhs.gov*.

I. Executive Summary and Background**A. Executive Summary****1. Purpose and Legal Authority**

This FY 2025 IPPS/LTCH PPS final rule makes payment and policy changes under the Medicare inpatient prospective payment system (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). This final rule also makes policy changes to

programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs. In this FY 2025 final rule, we are finalizing our proposal to continue policies to address wage index disparities impacting low wage index hospitals. We are also finalizing our proposed changes relating to Medicare graduate medical education (GME) for teaching hospitals and new technology add-on payments.

We are finalizing our proposal of a separate IPPS payment for establishing and maintaining access to essential medicines.

In the Hospital Value-Based Purchasing (VBP) Program, we are finalizing our proposal to modify scoring of the Person and Community Engagement Domain for the FY 2027 through FY 2029 program years to only score six unchanged dimensions of the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey measure, and we are finalizing our proposal to adopt the updated HCAHPS Survey measure in the Hospital VBP Program beginning with the FY 2030 program year after the updated measure has been publicly reported under the Hospital Inpatient Quality Reporting (IQR) Program for 1 year. We are also finalizing our proposal to modify scoring on the HCAHPS Survey measure beginning with the FY 2030 program year to incorporate the updated HCAHPS Survey measure into nine survey dimensions. Lastly, we provide previously and newly established performance standards for the FY 2027 through FY 2030 program years for the Hospital VBP Program.

In the Hospital IQR Program, we are finalizing our proposals to add seven new measures, with modifications to our proposal to adopt the Patient Safety Structural measure, modify two existing measures including the HCAHPS Survey measure, and remove five measures. We are also finalizing our proposed changes to the validation process for the Hospital IQR Program data. We are finalizing the proposed reporting and submission requirements for electronic clinical quality measures (eCQMs) with modifications.

In the PPS-Exempt Cancer Hospital Quality Reporting Program (PCHQR), we are finalizing the adoption of the Patient Safety Structural measure with modification beginning with the CY 2025 reporting period/FY 2027 program year. We are also finalizing our proposed changes to the HCAHPS Survey measure and our proposal to move up the start date for publicly displaying hospital performance on the Hospital Commitment to Health Equity measure.

In the LTCH Quality Reporting Program (QRP), we are finalizing our proposals to add four assessment items to the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set (LCDS) and modify one assessment item on the LCDS beginning with the FY 2028 LTCH QRP. Additionally, we are finalizing our proposal to extend the admission assessment window for the LCDS beginning with the FY 2028 LTCH QRP. Finally, we summarize the feedback we received on our requests for information on future measure concepts for the LTCH QRP and a future LTCH Star Rating system.

In the Medicare Promoting Interoperability Program, we are finalizing our proposal to separate the Antimicrobial Use and Resistance (AUR) Surveillance measure into two measures, an Antimicrobial Use (AU) Surveillance measure and an Antimicrobial Resistance (AR) Surveillance measure, beginning with the electronic health record (EHR) reporting period in CY 2025. We are also finalizing the following proposals to: increase the performance-based scoring threshold from 60 points to 70 points for the EHR reporting period in CY 2025 and from 70 points to 80 points beginning with the EHR reporting period in CY 2026; adopt two new eCQMs and modify one eCQM, in alignment with the Hospital IQR Program; and change the reporting and submission requirements for eCQMs with modifications, in alignment with the Hospital IQR Program.

We proposed the creation and testing of a new mandatory alternative payment model called the Transforming Episode Accountability Model (TEAM). The intent of TEAM is to improve beneficiary care through financial accountability for episodes categories that begin with one of the following procedures: coronary artery bypass graft surgery (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries. We anticipated that TEAM would benefit Medicare beneficiaries through improving the coordination of items and services paid for through Medicare fee-for-service (FFS) payments, encouraging provider investment in health care infrastructure and redesigned care processes, and incentivizing higher value care across the inpatient and post-acute care settings for the episode. We proposed to

test TEAM for a 5-year model performance period, beginning January 1, 2026, and ending December 31, 2030. Under the Quality Payment Program (QPP), we anticipated that TEAM would be an Advanced Alternative Payment Model (APM) for Track 2 and Track 3 and a Merit-based Incentive Payment System (MIPS) APM for all participation tracks. We are finalizing some policies as proposed and we are finalizing others with modification. There are also certain proposed policies that we are not finalizing, and we will instead go through future rulemaking to promulgate new policies before the model start date.

We are also finalizing the proposal requiring respiratory illness reporting for hospitals and critical access hospitals as a condition of participation following the expiration of the COVID-19 public health emergency requirements.

Under various statutory authorities, we either discuss continued program implementation or make changes to the Medicare IPPS, the LTCH PPS, other related payment methodologies and programs for FY 2025 and subsequent fiscal years, and other policies and provisions included in this rule. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).

- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals; and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.

- Sections 123(a) and (c) of the Balanced Budget Refinement Act of 1999 (BBRA) (Public Law (Pub. L.) 106-113) and section 307(b)(1) of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106-554) (as codified under section 1886(m)(1) of the

Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of LTCHs described in section 1886(d)(1)(B)(iv) of the Act.

- Section 1814(l)(4) of the Act requires downward adjustments to the applicable percentage increase, beginning with FY 2015, for CAHs that do not successfully demonstrate meaningful use of certified electronic health record technology (CEHRT) for an EHR reporting period for a payment adjustment year.

- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. Hospitals paid under the IPPS with approved GME programs are paid for the indirect costs of training residents in accordance with section 1886(d)(5)(B) of the Act.

- Section 1886(d)(5)(F) of the Act provides for additional Medicare IPPS payments to subsection (d) hospitals that serve a significantly disproportionate number of low-income patients. These payments are known as the Medicare disproportionate share hospital (DSH) adjustment. Section 1886(d)(5)(F) of the Act specifies the methods under which a hospital may qualify for the DSH payment adjustment.

- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase that would otherwise apply to the standardized amount applicable to a subsection (d) hospital for discharges occurring in a fiscal year if the hospital does not submit data on measures in a form and manner, and at a time, specified by the Secretary.

- Section 1886(b)(3)(B)(ix) of the Act, which requires downward adjustments to the applicable percentage increase, beginning with FY 2015 (and beginning with FY 2022 for subsection (d) Puerto Rico hospitals), for eligible hospitals that do not successfully demonstrate meaningful use of CEHRT for an EHR reporting period for a payment adjustment year.

- Section 1866(k) of the Act, which provides for the establishment of a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as “PPS-exempt cancer hospitals.”

- Section 1886(n) of the Act, which establishes the requirements for an eligible hospital to be treated as a

meaningful EHR user of CEHRT for an EHR reporting period for a payment adjustment year or, for purposes of subsection (b)(3)(B)(ix) of the Act, for a fiscal year.

- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program, under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year.

- Section 1886(p) of the Act, which establishes a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.

- Section 1886(q) of the Act, as amended by section 15002 of the 21st Century Cures Act, which establishes the Hospital Readmissions Reduction Program. Under the program, payments for discharges from an applicable hospital as defined under section 1886(d) of the Act will be reduced to account for certain excess readmissions. Section 15002 of the 21st Century Cures Act directs the Secretary to compare hospitals with respect to the number of their Medicare-Medicaid dual-eligible beneficiaries in determining the extent of excess readmissions.

- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital (DSH) payments under section 1886(d)(5)(F) of the Act and for an additional uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act requires that, for fiscal year 2014 and each subsequent fiscal year, subsection (d) hospitals that would otherwise receive a DSH payment made under section 1886(d)(5)(F) of the Act will receive two separate payments: (1) 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act if subsection (r) did not apply (“the empirically justified amount”), and (2) an additional payment for the DSH hospital’s proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under section 1886(d)(5)(F) of the Act, in the absence of section 1886(r) of the Act; (2) 1 minus the percent change in the percent of individuals who are uninsured; and (3) the hospital’s uncompensated care amount relative to the uncompensated

care amount of all DSH hospitals expressed as a percentage.

- Section 1886(m)(5) of the Act, which requires the Secretary to reduce by 2 percentage points the annual update to the standard Federal rate for discharges for a long-term care hospital (LTCH) during the rate year for LTCHs that do not submit data on quality measures in the form, manner, and at a time, specified by the Secretary.

- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67) and amended by section 51005(a) of the Bipartisan Budget Act of 2018 (Pub. L. 115–123), which provided for the establishment of site neutral payment rate criteria under the LTCH PPS, with implementation beginning in FY 2016. Section 51005(b) of the Bipartisan Budget Act of 2018 amended section 1886(m)(6)(B) by adding new clause (iv), which specifies that the IPPS comparable amount defined in clause (ii)(I) shall be reduced by 4.6 percent for FYs 2018 through 2026.

- Section 1899B of the Act, which provides for the establishment of standardized data reporting for certain post-acute care providers, including LTCHs.

- Section 1115A of the Act authorizes the testing of innovative payment and service delivery models that preserve or enhance the quality of care furnished to Medicare, Medicaid, and Children’s Health Insurance Program (CHIP) beneficiaries while reducing program expenditures.

- Sections 1866 and 1902 of the Act, which requires providers of services seeking to participate in the Medicare or Medicaid program, or both, to enter into an agreement with the Secretary or the state Medicaid agency, as appropriate. Hospitals (all hospitals to which the requirements of 42 CFR part 482 apply, including short-term acute care hospitals, LTC hospitals, rehabilitation hospitals, psychiatric hospitals, cancer hospitals, and children’s hospitals) and critical access hospitals (CAHs) seeking to be Medicare and Medicaid providers of services under 42 CFR part 485, subpart F, must be certified as meeting Federal participation requirements (conditions of participation (CoPs) and conditions for coverage (CfCs)). Section 1861(e) of the Act provides the patient health and safety protections established by the Secretary for hospital CoPs. Section 1820(e) of the Act provides similar authority for CAHs.

2. Summary of the Major Provisions

The following is a summary of the major provisions in this final rule. In

general, these major provisions are being finalized as part of the annual update to the payment policies and payment rates, consistent with the applicable statutory provisions. A general summary of the changes in this final rule is presented in section I.D. of the preamble of this final rule.

a. Continuation of the Low Wage Index Hospital Policy

To help mitigate growing wage index disparities between high wage and low wage hospitals, in the FY 2020 IPPS/LTCH PPS rule (84 FR 42326 through 42332), we adopted a policy to increase the wage index values for certain hospitals with low wage index values (the low wage index hospital policy). This policy was adopted in a budget neutral manner through an adjustment applied to the standardized amounts for all hospitals. We indicated our intention that this policy would be effective for at least 4 years, beginning in FY 2020, in order to allow employee compensation increases implemented by these hospitals sufficient time to be reflected in the wage index calculation. As discussed in section III.G.5. of the preamble of this final rule, while we are using the FY 2021 cost report data for the FY 2025 wage index, we are unable to comprehensively evaluate the effect, if any, the low wage index hospital policy had on hospitals' wage increases during the years the COVID-19 public health emergency (PHE) was in effect. We believe it is necessary to wait until we have useable data from fiscal years after the PHE before reaching any conclusions about the efficacy of the policy. Therefore, after consideration of public comments, we are finalizing our proposal that the low wage index hospital policy and the related budget neutrality adjustment would be effective for at least 3 more years, beginning in FY 2025.

b. Separate IPPS Payment for Establishing and Maintaining Access to Essential Medicines

As discussed in section V.J. of the preamble of this final rule, the Biden-Harris administration has made it a priority to strengthen the resilience of medical supply chains and support reliable access to products for public health, including through prevention and mitigation of medical product shortages. As a first step in this initiative, we proposed to establish a separate payment for small, independent hospitals for the IPPS shares of the additional resource costs to voluntarily establish and maintain a 6-month buffer stock of one or more of 86 essential medicines, either directly or

through contractual arrangements with a pharmaceutical manufacturer, distributor, or intermediary. For the purposes of this policy, eligibility is limited to small, independent hospitals as hospitals with 100 beds or fewer that are not part of a chain organization. We are finalizing our proposal to make this separate payment in a non-budget neutral manner under section 1886(d)(5)(I) of the Act. We are also finalizing our proposal that the payment adjustments would commence for cost reporting periods beginning on or after October 1, 2024.

c. DSH Payment Adjustment, Additional Payment for Uncompensated Care, and Supplemental Payment

Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, Medicare disproportionate share hospitals (DSHs) receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of the amount that would have been paid as Medicare DSH payments under section 1886(d)(5)(F) of the Act if subsection (r) did not apply, is paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH that has uncompensated care will receive an additional payment based on its share of the total amount of uncompensated care for all Medicare DSHs for a given time period. This additional payment is known as the uncompensated care payment.

In this final rule, we are finalizing the proposed update to our estimates of the three factors used to determine uncompensated care payments for FY 2025. We also proposed to continue to use uninsured estimates produced by CMS' Office of the Actuary (OACT) as part of the development of the National Health Expenditure Accounts (NHEA) in conjunction with more recently available data in the calculation of Factor 2, and we are finalizing this approach. Consistent with the regulation at § 412.106(g)(1)(iii)(C)(11), which was adopted in the FY 2023 IPPS/LTCH PPS final rule, for FY 2025, we will use the 3 most recent years of audited data on uncompensated care costs from Worksheet S-10 of the FY 2019, FY 2020, and FY 2021 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals.

Beginning with FY 2023 (87 FR 49047 through 49051), we also established a supplemental payment for IHS and

Tribal hospitals and hospitals located in Puerto Rico. In section IV.D. of the preamble of this final rule, we summarized the ongoing methodology for supplemental payments.

In this final rule, we are finalizing our proposal to calculate the per-discharge amount for interim uncompensated care payments for FY 2025 and subsequent fiscal years with modification.

Specifically, for FY 2025, we will calculate the per-discharge amount for interim uncompensated care payments using the average of the most recent 2 years of discharge data. In light of the commenters' concerns regarding a trend of decreasing discharge volume and possible overestimation of discharges in recent years, we believe that, on balance, omitting FY 2021 data from the calculation of interim uncompensated care payments is likely to more accurately estimate FY 2025 discharges. Therefore, we are finalizing our proposal with modification. We are modifying the text of § 412.106(i)(1) to state that for FY 2025, interim uncompensated care payments will be calculated based on an average of the most recent 2 years of available historical discharge data, and, consistent with the proposed rule,, interim uncompensated care payments for FY 2026 and subsequent fiscal years will be calculated based on an average of the most recent 3 years of available historical discharge data.

d. Adoption of the Patient Safety Structural Measure in the Hospital IQR Program and PCHQR Program

The Patient Safety Structural measure is an attestation-based measure that assesses whether hospitals have a structure and culture that prioritizes safety as demonstrated by the following five domains: (1) leadership commitment to eliminating preventable harm; (2) strategic planning and organizational policy; (3) culture of safety and learning health system; (4) accountability and transparency; and (5) patient and family engagement. Hospitals will attest to whether they engage in specific evidence-based best practices within each of these domains to achieve a score from zero to five out of five points. We proposed that hospitals would be required to report this measure beginning with the CY 2025 reporting period/FY 2027 program year for the PCHQR Program and for the CY 2025 reporting period/FY 2027 payment determination for the Hospital IQR Program. We are finalizing this proposal, with a modification to one of the domains.

e. Updated Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) Survey Measure in the Hospital IQR Program, Hospital VBP Program, and PCHQR Program

The updated version of the HCAHPS Survey measure aligns with the National Quality Strategy goal to bring patient voices to the forefront by incorporating feedback from patients and caregivers. We proposed that the updated HCAHPS Survey measure would be adopted for the Hospital IQR and PCHQR Programs beginning with the CY 2025 reporting period/FY 2027 payment determination and the CY 2025 reporting period/FY 2027 program year, respectively. For the Hospital VBP Program, we proposed to modify scoring on the Person and Community Engagement Domain for the FY 2027 through FY 2029 program years to only score the six dimensions of the HCAHPS Survey measure that would remain unchanged from the current version of the survey. We proposed to adopt the updated HCAHPS Survey measure beginning with the FY 2030 program year, which would result in nine HCAHPS Survey measure dimensions for the Person and Community Engagement Domain. We also proposed to modify scoring of the Person and Community Engagement Domain beginning with the FY 2030 program year to account for the proposed updates to the HCAHPS Survey measure. We are finalizing all of these proposals.

f. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which value-based incentive payments are made in a fiscal year to hospitals based on their performance on measures established for a performance period for such fiscal year. We proposed to modify scoring on the Person and Community Engagement Domain for the FY 2027 through FY 2029 program years while the updated HCAHPS Survey measure would be publicly reported under the Hospital IQR Program. In addition, we proposed to adopt the updated HCAHPS Survey measure beginning with the FY 2030 program year and modify scoring beginning with the FY 2030 program year to account for the updated HCAHPS Survey measure. We are finalizing these proposals.

g. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, subsection (d) hospitals are required to report data on measures

selected by the Secretary for a fiscal year in order to receive the full annual percentage increase. In the FY 2025 IPPS/LTCH PPS proposed rule, we proposed several changes to the Hospital IQR Program. We proposed the adoption of seven new measures: (1) Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (2) Age Friendly Hospital measure beginning with the CY 2025 reporting period/FY 2027 payment determination; (3) Catheter-Associated Urinary Tract Infection (CAUTI) Standardized Infection Ratio Stratified for Oncology Locations beginning with the CY 2026 reporting period/FY 2028 payment determination; (4) Central Line-Associated Bloodstream Infection (CLABSI) Standardized Infection Ratio Stratified for Oncology Locations beginning with the CY 2026 reporting period/FY 2028 payment determination; (5) Hospital Harm—Falls with Injury eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; (6) Hospital Harm—Postoperative Respiratory Failure eCQM beginning with the CY 2026 reporting period/FY 2028 payment determination; and (7) Thirty-day Risk-Standardized Death Rate among Surgical Inpatients with Complications (Failure-to-Rescue) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 2027 payment determination. We also proposed refinements to two measures currently in the Hospital IQR Program measure set: (1) Global Malnutrition Composite Score (GMCS) eCQM, beginning with the CY 2026 reporting period/FY 2028 payment determination; and (2) the HCAHPS Survey beginning with the CY 2025 reporting period/FY 2027 payment determination. In addition, we proposed the removal of five measures: (1) Death Among Surgical Inpatients with Serious Treatable Complications (CMS PSI 04) measure beginning with the July 1, 2023–June 30, 2025 reporting period/FY 27 payment determination; (2) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Acute Myocardial Infarction (AMI) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (3) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Heart Failure (HF) measure beginning with the July 1, 2021–June 30, 2024 reporting period/FY 2026 payment determination; (4) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Pneumonia (PN) measure beginning with July 1, 2021–

June 30, 2024 reporting period/FY 2026 payment determination, and (5) Hospital-level, Risk-Standardized Payment Associated with a 30-Day Episode-of-Care for Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) measure beginning with the April 1, 2021–March 31, 2024 reporting period/FY 2026 payment determination. We are finalizing all of these proposals as proposed with the exception of the Patient Safety Structural measure, which we are finalizing with modifications.

Lastly, we proposed to modify eCQM data reporting and submission requirements by proposing a progressive increase in the number of mandatory eCQMs a hospital would be required to report on beginning with the CY 2026 reporting period/FY 2028 payment determination. We also proposed two changes to current policies related to validation of hospital data: (1) to implement eCQM validation scoring based on the accuracy of eCQM data beginning with the validation of CY 2025 eCQM data affecting the FY 2028 payment determination; and (2) modification of the data validation reconsideration request requirements to make medical records submission optional for reconsideration requests beginning with CY 2023 discharges/FY 2026 payment determination. We are finalizing all of these proposals as proposed with the exception of the proposed progressive increase in the number of mandatory eCQMs, which we are finalizing with modifications.

h. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

Section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year. In the FY 2025 IPPS/LTCH PPS proposed rule, we proposed the following:

- To adopt the Patient Safety Structural measure beginning with the CY 2025 reporting period/FY 2027 program year.
- To modify the HCAHPS Survey measure beginning with the CY 2025 reporting period/FY 2027 program year.
- To move up the start date for publicly displaying hospital performance on the Hospital Commitment to Health Equity measure from July 2026 to January 2026 or as soon as feasible thereafter.

We are finalizing all of these proposals as proposed with the

exception of the Patient Safety Structural measure, which we are finalizing with modifications.

i. Long-Term Care Hospital Quality Reporting Program (LTCH QRP)

We proposed and are finalizing the following changes to the LTCH QRP: (1) add four assessment items to the LCDS beginning with the FY 2028 LTCH QRP; (2) modify one item on the LCDS beginning with the FY 2028 LTCH QRP; and (3) extend the admission assessment window for the LCDS from 3 days to 4 days beginning with the FY 2028 LTCH QRP. We also summarize the feedback we received on requests for information in the proposed rule on future measure concepts for the LTCH QRP and a future LTCH Star Rating system.

j. Medicare Promoting Interoperability Program

In section X.F. of the preamble of the proposed rule, we proposed several changes to the Medicare Promoting Interoperability Program. Specifically, we proposed: (1) to separate the Antimicrobial Use and Resistance (AUR) Surveillance measure into two measures, an Antimicrobial Use (AU) Surveillance measure and an Antimicrobial Resistance (AR) Surveillance measure, beginning with the EHR reporting period in CY 2025; to add a new exclusion for eligible hospitals or critical access hospitals (CAHs) that do not have a data source containing the minimal discrete data elements that are required for AU or AR Surveillance reporting; to modify the existing exclusions for the AUR Surveillance measure to apply to the proposed AU Surveillance and AR Surveillance measures, respectively; and to treat the AU Surveillance and AR Surveillance measures as new measures with respect to active engagement beginning with the EHR reporting period in CY 2025; (2) to increase the performance-based scoring threshold for eligible hospitals and CAHs reporting under the Medicare Promoting Interoperability Program from 60 points to 80 points beginning with the EHR reporting period in CY 2025; (3) to adopt two new eCQMs that hospitals can select as one of their three self-selected eCQMs beginning with the CY 2026 reporting period: the Hospital Harm—Falls with Injury eCQM and the Hospital Harm—Postoperative Respiratory Failure eCQM; (4) beginning with the CY 2026 reporting period, to modify one eCQM, the Global Malnutrition Composite Score eCQM; and (5) to modify eCQM data reporting and submission requirements by

proposing a progressive increase in the number of mandatory eCQMs eligible hospitals and CAHs would be required to report on beginning with the CY 2026 reporting period. We are finalizing all proposals as proposed, with the exception of our proposals to increase the performance-based scoring threshold for eligible hospitals and CAHs, and to progressively increase the number of mandatory eCQMs required for reporting, which we are finalizing with modification. We are finalizing, with modification, an increase to the performance-based scoring threshold for eligible hospitals and CAHs from 60 points to 70 points for the EHR reporting period in CY 2025 and from 70 points to 80 points beginning with the EHR reporting period in CY 2026, and finalizing, with modification, the regulatory text accordingly. We are also finalizing, with modification, our proposal to increase the eCQM reporting requirements in the Medicare Promoting Interoperability Program for the CY 2026, CY 2027, CY 2028, and subsequent years' reporting periods. Specifically, eligible hospitals and CAHs will be required to report a total of eight eCQMs for the CY 2026 reporting period, a total of nine eCQMs for the CY 2027 reporting period, and a total of eleven eCQMs beginning with the CY 2028 reporting period.

k. Proposed Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)

In the proposed rule, we included a proposal to implement section 4122 of the CAA, 2023. Section 4122(a) of the CAA, 2023, amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of additional residency positions (also referred to as slots) to hospitals. After consideration of public comments, we are finalizing this proposal, with minor modifications. We refer readers to section V.F.2. of the preamble of this final rule for a summary of the provisions of section 4122 of the CAA, 2023 that we are implementing in this final rule.

l. Extension of the Medicare-Dependent, Small Rural Hospital (MDH) Program and the Temporary Changes to the Low-Volume Hospital Payment Adjustment

The Consolidated Appropriations Act, 2024 (CAA, 2024) (Pub. L. 118–42), enacted on March 9, 2024, extended the MDH program and the temporary changes to the low-volume hospital qualifying criteria and payment adjustment under the IPPS for a portion

of FY 2025. Specifically, section 306 of the CAA, 2024, further extended the modified definition of low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals under section 1886(d)(12) of the Act through December 31, 2024. Section 307 of the CAA, 2024, extended the MDH program under section 1886(d)(5)(G) of the Act through December 31, 2024. Prior to enactment of the CAA, 2024, the low-volume hospital qualifying criteria and payment adjustment were set revert to the statutory requirements that were in effect prior to FY 2011 at the end of FY 2024 and beginning October 1, 2024, the MDH program would have no longer been in effect.

We recognize the importance of these extensions with respect to the goal of advancing health equity by addressing the health disparities that underlie the health system is one of CMS' strategic pillars¹ and a Biden-Harris Administration priority.² These provisions are projected to increase payments to IPPS hospitals by approximately \$137 million in FY 2025.

m. Transforming Episode Accountability Model (TEAM)

As discussed in section X.A. of the preamble of this final rule, we are finalizing the Transforming Episode Accountability Model (TEAM). TEAM will be a 5-year mandatory model tested under the authority of section 1115A of the Act, beginning on January 1, 2026, and ending on December 31, 2030. The intent of TEAM is to improve beneficiary care through financial accountability for episode categories that begin with one of the following procedures: coronary artery bypass graft surgery (CABG), lower extremity joint replacement (LEJR), major bowel procedure, surgical hip/femur fracture treatment (SHFFT), and spinal fusion. TEAM will test whether financial accountability for these episode categories reduces Medicare expenditures while preserving or enhancing the quality of care for Medicare beneficiaries.

Under Traditional Medicare, Medicare makes separate payments to providers and suppliers for the items and services furnished to a beneficiary over the course of an episode of care. Because providers and suppliers are paid for each individual item or service delivered, providers may not be incentivized to invest in quality improvement and care coordination

¹ <https://www.cms.gov/about-cms/what-we-do/cms-strategic-plan>.

² <https://www.whitehouse.gov/priorities/>.

activities. As a result, care may be fragmented, unnecessary, or duplicative. By holding hospitals accountable for all items and services provided during an episode, providers would be better incentivized to coordinate patient care, avoid duplicative or unnecessary services, and improve the beneficiary care experience during care transitions.

Under TEAM, all acute care hospitals, with limited exceptions, located within the mandatory Core-Based Statistical Areas (CBSAs) that CMS selected for model implementation will be required to participate in TEAM. CMS will allow a one-time opportunity for hospitals that participate until the last day of the last performance period in the BPCI Advanced model or the last day of the last performance year of the CJR model, that are not located in a mandatory CBSA selected for TEAM participation to voluntarily opt into TEAM.³ TEAM will have a 1-year glide path opportunity for all TEAM participants and a 3-year glide path opportunity for TEAM participants that are safety net hospitals, which will allow TEAM participants to ease into full financial risk. Episodes will include non-excluded Medicare Parts A and B items and services and would begin with an anchor hospitalization or anchor procedure and will end 30 days after hospital discharge. The following episode categories, when furnished by a TEAM participant, will initiate an episode in TEAM: lower extremity joint replacement, surgical hip femur fracture treatment, spinal fusion, coronary artery bypass graft, and major bowel procedure.

TEAM participants will continue to bill Medicare FFS as usual but will receive target prices for episodes prior to each performance year. Target prices will be based on 3 years of baseline data, prospectively trended forward to the relevant performance year, and calculated at the level of MS-DRG/HCPCS episode type and region. Target prices will also include a discount factor, normalization factor, retrospective trend adjustment factor, and beneficiary and provider level risk-adjustment. Performance in the model will be assessed by comparing TEAM participants' actual Medicare FFS spending during a performance year to their reconciliation target price as well as by performance on three quality measures. TEAM participants will earn a payment from CMS, subject to a

quality performance adjustment, if their spending is below the reconciliation target price. TEAM participants will owe CMS a repayment amount, subject to a quality performance adjustment, if their spending is above the reconciliation target price. In section X.A. of the preamble of this final rule some policies as proposed, and we are finalizing others with modification. There are also certain proposed policies that we are not finalizing, and we will instead go through rulemaking in the future to promulgate new policies before the model start date.

n. Maternity Care Request for Information (RFI)

In alignment with the Biden-Harris Administration's commitment to addressing the maternal health crisis, this RFI sought to gather information on differences between hospital resources required to provide inpatient pregnancy and childbirth services to Medicare patients as compared to non-Medicare patients. To the extent that the resources required differ between patient populations, we also wanted to gather information on the extent to which non-Medicare payers, or other commercial insurers may be using the IPPS as a basis for determining their payment rates for inpatient pregnancy and childbirth services and the effect, if any, that the use of the IPPS as a basis for determining payment by those payers may have on maternal health outcomes. We summarize the comments received in section X.C. of the preamble of this final rule.

o. Conditions of Participation Requirements for Hospitals and Critical Access Hospitals To Report Acute Respiratory Illnesses

In section X.F. of the preamble of the proposed rule, we proposed to update the hospital and CAH infection prevention and control and antibiotic stewardship programs conditions of participation (CoPs) to extend a limited subset of the current COVID-19 and influenza data reporting requirements. These proposed reporting requirements ensure that hospitals and CAHs have appropriate insight related to evolving infection control needs. Specifically, we proposed to replace the COVID-19 and Seasonal Influenza reporting standards for hospitals and CAHs with a new standard addressing acute respiratory illnesses to require that, beginning on October 1, 2024, hospitals and CAHs would have to electronically report information about COVID-19, influenza, and RSV. We also proposed that outside

of a public health emergency (PHE), hospitals and CAHs would have to report these data on a weekly basis. In section X.F. of the preamble of this final rule, we are finalizing these proposals with revisions.

p. Changes to the Severity Level Designation for Z Codes Describing Inadequate Housing and Housing Instability

As discussed in section II.C. of the preamble of this final rule, we are finalizing the proposed change to the severity level designation for the social determinants of health (SDOH) diagnosis codes describing inadequate housing and housing instability from non-complication or comorbidity (NonCC) to complication or comorbidity (CC) for FY 2025. Consistent with our annual updates to account for changes in resource consumption, treatment patterns, and the clinical characteristics of patients, we recognize inadequate housing and housing instability as indicators of increased resource utilization in the acute inpatient hospital setting.

Consistent with the Administration's goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President's January 20, 2021 Executive Order 13985 on "Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,"^[1] we also continue to be interested in receiving feedback on how we might further foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

3. Summary of Costs, Transfers, Savings, and Benefits

The following table provides a summary of the costs, transfers, savings, and benefits associated with the major provisions described in section I.A.2. of the preamble of this final rule.

BILLING CODE 4120-01-P

^[1] Available at 86 FR 7009 (January 25, 2021) (<https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government>).

³ For the BPCI Advanced model, the last day of the last performance period is December 31, 2025. For the CJR model, the last day of the last performance year is December 31, 2024.

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Continuation of the Low Wage Index Hospital Policy	We are finalizing our proposal to continue the low wage index hospital policy and the related budget neutrality adjustment for at least 3 years beginning in FY 2025.
Separate IPPS Payment for Establishing and Maintaining Access to Essential Medicines	We are finalizing our proposal to make an IPPS payment adjustment for the additional resource costs that small, independent hospitals incur in establishing and maintaining access to a 6-month buffer stock of one or more essential medicine(s) beginning in FY 2025. This payment adjustment will not be budget neutral. We estimated that approximately 500 hospitals would qualify under our policy. We estimate that the cost to those hospitals to establish buffer stocks of essential medicines would, in aggregate summed across all 500 hospitals, be approximately \$2.8 million. Under this provision, Medicare will pay its share of those costs (approximately 11 percent of that amount, or \$0.3 million).
Uncompensated Care Payments	For FY 2025, we are finalizing the proposed updates to our estimates of the three factors used to determine uncompensated care payments. We are continuing to use uninsured estimates produced by OACT as part of the development of the NHEA in the calculation of Factor 2. As provided in the regulation at § 412.106(g)(1)(iii)(C)(11), for FY 2025, we are using the 3 most recent years of audited data on uncompensated care costs from Worksheet S-10 of the FY 2019, FY 2020, and FY 2021 cost reports to calculate Factor 3 in the uncompensated care payment methodology for all eligible hospitals.
Update to the IPPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this final rule, acute care hospitals are estimated to experience an increase of approximately \$3.2 billion in FY 2025, primarily driven by the changes in FY 2025 operating payments and capital payments and the expiration of the temporary changes in the low-volume hospital program and the expiration of the MDH program on January 1, 2025.
Update to the LTCH PPS Payment Rates and Other Payment Policies	As discussed in Appendix A of this final rule, based on the best available data for the 331 LTCHs in our database, we estimated that the changes to the payment rates and factors that we presented in the preamble of and Addendum of this final rule, which reflect the update to the LTCH PPS standard Federal payment rate for FY 2025, would result in an estimated increase in payments in FY 2025 of approximately \$58 million.
Distribution of Additional Residency Positions Under the Provisions of Section 4122 of Subtitle C of the Consolidated Appropriations Act, 2023 (CAA, 2023)	Section 4122(a) of the CAA, 2023 amended section 1886(h) of the Act by adding a new paragraph 1886(h)(10) requiring the distribution of additional residency positions (also referred to as slots) to hospitals. We refer readers to section V.J.2. of the preamble of this final rule for a summary of the provisions of section 4122 of the CAA, 2023 that we are implementing in this final rule. We estimate that the provisions we present in the preamble of this final rule to implement section 4122 of the CAA, 2023 will result in an estimated cost of approximately \$10 million for FY 2026.
Updates to the Hospital VBP Program	We estimated that there will be no net financial impact to the Hospital VBP Program for the FY 2025 program year in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given year must be equal to the total amount of base operating MS-DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating MS-DRG payment amount reductions for the FY 2025 program year and, therefore, the estimated amount available for value-based incentive payments for FY 2025 discharges is approximately \$1.67 billion.
Changes to the Hospital IQR Program	Across 3,050 IPPS hospitals, we estimate that our changes for the Hospital IQR Program will result in a total information collection burden increase of 40,160 hours at a cost increase of \$1,282,329 associated with our policies across a 4-year period from the CY 2025 reporting period/FY 2027 payment determination through the CY 2028 reporting period/FY 2030 payment determination.

Provision Description	Description of Costs, Transfers, Savings, and Benefits
Changes to the PCHQR Program	Across 11 PCHs, we estimated that our changes for the PCHQR Program will result in a total information collection burden increase of 166 hours at a cost increase of \$4,047 beginning with the CY 2025 reporting period/FY 2027 program year.
Changes to the LTCH QRP	Across 330 LTCHs, we estimated that our proposed changes for the LTCH QRP would result in a total information collection burden increase of 2,177 hours associated with our policies and updated burden estimates and a total cost increase of approximately \$138,231.88 for the FY 2028 LTCH QRP.
Changes to the Medicare Promoting Interoperability Program	Across 4,550 eligible hospitals and CAHs, we estimated that our changes for the Medicare Promoting Interoperability Program will result in an increase of 5,038 hours at a cost increase of \$262,581 to the information collection burden for the EHR reporting period in CY 2028 and subsequent years.
Transforming Episode Accountability Model (TEAM)	We estimated that testing TEAM will result in saving the Medicare program \$481 million across the 5 performance years.
CoP Requirements for Hospitals and CAHs to Report Acute Respiratory Illnesses	Across 6,384 hospitals and CAHs, we estimate that our changes will result in 248,976 hours and a total cost of \$19,420,128 for the weekly reporting, which is \$3,042 per facility yearly. We estimate for PHE reporting, if declared by the Secretary, low to high hours range 1,005,480 to 3,495,240 and total cost ranging from \$ 78,427,440 to \$ 272,628,720 depending on the frequency of reporting required.
Changes for the Add-On Payments for New Services and Technologies	We are changing the April 1 cutoff to October 1 for determining whether a technology would be within its 2- to 3-year newness period. Under the assumption that all of the FY 2025 new technology add-on payment applications that have been FDA-approved or -cleared or have a documented delay in market availability between October 1, 2023 and March 30, 2024 (as discussed in section II.E.5. and section II.E.6. of the preamble of this final rule), and that are first approved for new technology add-on payments in FY 2025, would continue to meet the specified criteria for new technology add-on payments for FY 2026 and FY 2027, based on information from the applicants at the time of this final rule, this change will increase IPPS spending by approximately \$459 million in FY 2027. Also, we will no longer consider a hold status to be an inactive status for the purposes of eligibility for the new technology add-on payment. We note that the cost impact of this provision is not estimable. We expect that some applicants who were ineligible in FY 2025 may apply for new technology add-on payments for FY 2026. Finally, for certain gene therapies indicated for and used in the treatment of sickle cell disease, we are temporarily increasing the new technology add-on payment percentage to 75 percent. We estimate that for the two gene therapy technologies that are approved for new technology add-on payments in this final rule that are indicated and used specifically for the treatment of SCD (as discussed in section II.E.5. of the preamble of this final rule), these changes to the calculation of the inpatient new technology add-on payment will increase IPPS spending by approximately \$38 million in FY 2025.

BILLING CODE 4120-01-C

B. Background Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Act sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these “subsection (d) hospitals.” Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for an additional Medicare payment beginning on October 1, 2013, that considers the amount of uncompensated care furnished by the hospital relative to all other qualifying hospitals.

If the hospital is training residents in an approved residency program(s), it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments.

In general, to qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment. In addition, certain transformative new devices and certain antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway by demonstrating that, absent an add-on payment, they would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments and, beginning in FY 2023 for IHS and Tribal hospitals and hospitals located in Puerto Rico, the new supplemental payment.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. SCHs are the sole source of care in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as an isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs.

With the recent enactment of section 307 of the CAA, 2024, under current law, the Medicare-dependent, small rural hospital (MDH) program is effective through December 31, 2024. For discharges occurring on or after October 1, 2007, but before January 1, 2025, an MDH receives the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the

Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. MDHs are a major source of care for Medicare beneficiaries in their areas. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area (or, as amended by the Bipartisan Budget Act of 2018, a hospital located in a State with no rural area that meets certain statutory criteria), has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). As section 307 of the CAA, 2024, extended the MDH program through the first quarter of FY 2025 only, beginning on January 1, 2025, the MDH program will no longer be in effect absent a change in law. Because the MDH program is not authorized by statute beyond December 31, 2024, beginning January 1, 2025, all hospitals that previously qualified for MDH status under section 1886(d)(5)(G) of the Act will no longer have MDH status and will be paid based on the IPPS Federal rate.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services in accordance with a prospective payment system established by the Secretary. The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR part 412, subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Inpatient rehabilitation facility (IRF) hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children's hospitals; cancer hospitals; extended neoplastic disease care hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin

Islands, Guam, the Northern Mariana Islands, and American Samoa). Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children’s Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for IRF hospitals and units, LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are included along with the IPPS annual update in this document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children’s hospitals, cancer hospitals, hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa), and RNHCIs continue to be paid solely under a reasonable cost-based system, subject to a rate-of-increase ceiling on inpatient operating costs. Similarly, extended neoplastic disease care hospitals are paid on a reasonable cost basis, subject to a rate-of-increase ceiling on inpatient operating costs.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act, effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS was established under the authority of sections 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). Section 1206(a) of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) established the site neutral payment rate under the LTCH PPS, which made the LTCH PPS a dual rate payment system beginning in FY 2016. Under this statute, effective for LTCH’s cost reporting periods beginning in FY 2016 cost reporting period, LTCHs are generally paid for discharges at the site neutral payment rate unless the discharge meets the patient criteria for payment at the LTCH PPS standard Federal payment rate. The existing regulations governing payment under

the LTCH PPS are located in 42 CFR part 412, subpart O. Beginning October 1, 2009, we issue the annual updates to the LTCH PPS in the same documents that update the IPPS.

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v) of the Act and existing regulations under 42 CFR part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital’s number of residents in that period and the hospital’s costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR part 413. Section 1886(d)(5)(B) of the Act provides that prospective payment hospitals that have residents in an approved GME program receive an additional payment for each Medicare discharge to reflect the higher patient care costs of teaching hospitals relative to non-teaching hospitals. The additional payment is based on the indirect medical education (IME) adjustment factor, which is calculated using a hospital’s ratio of residents to beds and a multiplier, which is set by Congress. Section 1886(d)(5)(B)(ii)(XII) of the Act provides that, for discharges occurring during FY 2008 and fiscal years thereafter, the IME formula multiplier is 1.35. The regulations regarding the indirect medical education (IME) adjustment are located at 42 CFR 412.105.

C. Summary of Provisions of Recent Legislation That Are Implemented in This Final Rule

1. The Consolidated Appropriations Act, 2023 (CAA 2023; Pub. L. 117–328)

Section 4122 of the CAA, 2023, amended section 1886(h) of the Act by adding a new section 1886(h)(10) of the Act requiring the distribution of additional residency positions (also

referred to as slots) to hospitals. Section 1886(h)(10)(A) of the Act requires that for FY 2026, the Secretary shall initiate an application round to distribute 200 residency positions. At least 100 of the positions made available under section 1886(h)(10)(A) of the Act shall be distributed for psychiatry or psychiatry subspecialty residency training programs. The Secretary is required, subject to certain provisions in the law, to increase the otherwise applicable resident limit for each qualifying hospital that submits a timely application by the number of positions that may be approved by the Secretary for that hospital. The Secretary is required to notify hospitals of the number of positions distributed to them by January 31, 2026, and the increase is effective beginning July 1, 2026.

In determining the qualifying hospitals for which an increase is provided, section 1886(h)(10)(B)(i) of the Act requires the Secretary to take into account the “demonstrated likelihood” of the hospital filling the positions made available within the first 5 training years beginning after the date the increase would be effective, as determined by the Secretary.

Section 1886(h)(10)(B)(ii) of the Act requires a minimum distribution for certain categories of hospitals. Specifically, the Secretary is required to distribute at least 10 percent of the aggregate number of total residency positions available to each of four categories of hospitals. Stated briefly, and discussed in greater detail later in this final rule, the categories are as follows: (1) hospitals located in rural areas or that are treated as being located in a rural area (pursuant to sections 1886(d)(2)(D) and 1886(d)(8)(E) of the Act); (2) hospitals in which the reference resident level of the hospital is greater than the otherwise applicable resident limit; (3) hospitals in States with new medical schools or additional locations and branches of existing medical schools; and (4) hospitals that serve areas designated as Health Professional Shortage Areas (HPSAs). Section 1886(h)(10)(F)(iii) of the Act defines a qualifying hospital as a hospital in one of these four categories.

Section 1886(h)(10)(B)(iii) of the Act further requires that each qualifying hospital that submits a timely application receive at least 1 (or a fraction of 1) of the residency positions made available under section 1886(h)(10) of the Act before any qualifying hospital receives more than 1 residency position.

Section 1886(h)(10)(C) of the Act places certain limitations on the distribution of the residency positions.

First, a hospital may not receive more than 10 additional full-time equivalent (FTE) residency positions. Second, no increase in the otherwise applicable resident limit of a hospital may be made unless the hospital agrees to increase the total number of FTE residency positions under the approved medical residency training program of the hospital by the number of positions made available to that hospital. Third, if a hospital that receives an increase to its otherwise applicable resident limit under section 1886(h)(10) of the Act is eligible for an increase to its otherwise applicable resident limit under 42 CFR 413.79(e)(3) (or any successor regulation), that hospital must ensure that residency positions received under section 1886(h)(10) of the Act are used to expand an existing residency training program and not for participation in a new residency training program.

2. The Consolidated Appropriations Act, 2024 (CAA, 2024; Pub. L. 118–42)

Section 306 of the CAA, 2024, extended through the first 3 months of FY 2025 the modified definition of a low-volume hospital and the methodology for calculating the payment adjustment for low-volume hospitals in effect for FYs 2019 through 2024. Specifically, under section 1886(d)(12)(C)(i) of the Act, as amended, for FYs 2019 through 2024 and the portion of FY 2025 occurring before January 1, 2025, a subsection (d) hospital qualifies as a low-volume hospital if it is more than 15 road miles from another subsection (d) hospital and has less than 3,800 total discharges during the fiscal year. Under section 1886(d)(12)(D) of the Act, as amended, for discharges occurring in FYs 2019 through December 31, 2024, the Secretary determines the applicable percentage increase using a continuous, linear sliding scale ranging from an additional 25 percent payment adjustment for low-volume hospitals with 500 or fewer discharges to a zero percent additional payment for low-volume hospitals with more than 3,800 discharges in the fiscal year.

Section 307 of the CAA, 2024, amended sections 1886(d)(5)(G)(i) and 1886(d)(5)(G)(ii)(II) of the Act to provide for an extension of the MDH program through the first 3 months of FY 2025 (that is, through December 31, 2024).

D. Issuance of a Notice of Proposed Rulemaking and Summary of the Proposed Provisions

The FY 2025 IPPS/LTCH PPS proposed rule appeared in the May 2, 2024, **Federal Register** (89 FR 35934). In this proposed rule, we set forth

proposed payment and policy changes to the Medicare IPPS for FY 2025 operating costs and capital-related costs of acute care hospitals and certain hospitals and hospital units that are excluded from IPPS. In addition, we set forth proposed changes to the payment rates, factors, and other payment and policy-related changes to programs associated with payment rate policies under the LTCH PPS for FY 2025.

The following is a general summary of the changes that we proposed to make:

1. Proposed Changes to MS–DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we included the following:

- Proposed changes to MS–DRG classifications based on our yearly review for FY 2025.
- Proposed recalibration of the MS–DRG relative weights.
- A discussion of the proposed FY 2025 status of new technologies approved for add-on payments for FY 2024, a presentation of our evaluation and analysis of the FY 2025 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) Public Law 108–173, obtained in a town hall meeting for applications not submitted under an alternative pathway), and a discussion of the proposed status of FY 2025 new technology applicants under the alternative pathways for certain medical devices and certain antimicrobial products.

- A proposed change to the April 1 cutoff to October 1 for determining whether a technology would be within its 2- to 3-year newness period when considering eligibility for new technology add-on payments, beginning in FY 2026, effective for those technologies that are approved for new technology add-on payments starting in FY 2025 or a subsequent year (as discussed in II.E.8. of the preamble of the proposed rule).

- A proposal that, beginning with new technology add-on payment applications for FY 2026, we will no longer consider a hold status to be an inactive status for the purposes of eligibility for the new technology add-on payment (as discussed in section II.E.9. of the preamble of the proposed rule).

- A proposal that, subject to our review of the new technology add-on payment eligibility criteria, for certain gene therapies approved for new

technology add-on payments in the FY 2025 IPPS/LTCH final rule that are indicated and used specifically for the treatment of sickle cell disease (SCD), effective with discharges on or after October 1, 2024, and concluding at the end of the 2- to 3-year newness period for such therapy, we would temporarily increase the new technology add-on payment percentage to 75 percent (as discussed in section II.E.10. of the preamble of the proposed rule).

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble of the proposed rule, we proposed revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed include, but are not limited to, the following:

- Proposed changes in core-based statistical areas (CBSAs) as a result of new OMB labor market area delineations and proposed policies related to the proposed changes in CBSAs.
- The proposed FY 2025 wage index update using wage data from cost reporting periods beginning in FY 2019.
- Calculation, analysis, and implementation of the proposed occupational mix adjustment to the wage index for acute care hospitals for FY 2025 based on the 2022 Occupational Mix Survey.
- Proposed application of the rural, imputed and frontier State floors, and continuation of the low wage index hospital policy.
- Proposed revisions to the wage index for acute care hospitals, based on hospital redesignations and reclassifications under sections 1886(d)(8)(B), (d)(8)(E), and (d)(10) of the Act.
- Proposed adjustment to the wage index for acute care hospitals for FY 2025 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- Proposed labor-related share for the FY 2025 wage index.

3. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) for FY 2025

In section IV. of the preamble of this proposed rule, we discuss the following:

- Proposed calculation of Factor 1 and Factor 2 of the uncompensated care payment methodology.
- Proposed methodological approach for determining Factor 3 of the uncompensated care payment for FY 2025, which is the same methodology that was used for FY 2024.

- Proposed methodological approach for determining the amount of interim uncompensated care payments using the average of the most recent 3 years of discharge data.

4. Other Decisions and Proposed Changes to the IPPS for Operating Costs

In section V. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR parts 412 and 413, including the following:

- Proposed inpatient hospital update for FY 2025.

- Proposed updated national and regional case-mix values and discharges for purposes of determining RRC status and clarification of the qualification under the discharge criterion for osteopathic hospitals.

- Proposed implementation of the statutory extension of the temporary changes to the low-volume hospital payment adjustment through December 31, 2024, the statutory expiration beginning January 1, 2025, and the proposed payment adjustments for low-volume hospitals for FY 2025.

- Proposed implementation of the statutory extension of the MDH program through December 31, 2024, and the statutory expiration beginning January 1, 2025.

- A proposal to implement a provision of the Consolidated Appropriations Act relating to payments to hospitals for GME and IME costs, proposed direct graduate medical education (DGME) and IME policy modifications to the criteria for new residency programs; technical fixes to the DGME regulations; and a notice of closure of two teaching hospitals and opportunities to apply for available slots and a reminder of CBSA changes and application to GME policies.

- Proposed nursing and allied health education program Medicare Advantage (MA) add-on rates and direct GME MA percent reductions for CY 2023.

- Proposed update to the payment adjustment for certain clinical trial and expanded access use immunotherapy cases.

- Proposed separate IPPS payment for establishing and maintaining access to essential medicines.

- Proposed update to the estimate of the financial impacts for the FY 2025 Hospital Readmissions Reduction Program.

- Proposed modifications to the scoring of the Person and Community Engagement Domain in the Hospital VBP Program.

++ For the FY 2027 through FY 2029 program years to only score on six

unchanged dimensions of the HCAHPS Survey.

++ Beginning with the FY 2030 program year to account for the proposed updated HCAHPS Survey.

- Updating the proposed estimate of the financial impacts for the FY 2025 Hospital-Acquired Conditions Reduction Program.

- Discussion of and proposed changes relating to the implementation of the Rural Community Hospital Demonstration Program in FY 2025.

5. Proposed FY 2025 Policy Governing the IPPS for Capital-Related Costs

In section VI. of the preamble of the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2025.

6. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VII. of the preamble of the proposed rule, we discussed the following:

- Proposed changes to payments to certain excluded hospitals for FY 2025.

- Proposed continued implementation of the Frontier Community Health Integration Project (FCHIP) Demonstration.

7. Proposed Changes to the LTCH PPS

In section VIII. of the preamble of the proposed rule, we proposed to rebase and revise the LTCH market basket to reflect a 2022 base year, which includes a proposed update to the LTCH PPS labor-related share. In section VIII. of the preamble of the proposed rule, we set forth proposed changes to the LTCH PPS Federal payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2025. We also proposed a technical clarification to the regulations for hospitals seeking to be classified as an LTCH.

8. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of the proposed rule, we addressed the following:

- Solicitation of comment on adopting measures across the hospital quality reporting and value-based purchasing programs which capture more forms of unplanned post-acute care and encourage hospitals to improve discharge processes.

- Proposed changes to the requirements for the Hospital IQR Program.

- Proposed changes to the requirements for the PCHQR Program.

- Proposed adoption of the Patient Safety Structural measure in the Hospital IQR Program and the PCHQR Program.

- Proposed updated HCAHPS Survey measure in the Hospital IQR Program, PCHQR Program, and Hospital VBP Program.

- Proposed changes to the requirements for the LTCH QRP, and requests for information on future measure concepts for the LTCH QRP and a star rating system for the LTCH QRP.

- Proposed changes to requirements pertaining to eligible hospitals and CAHs participating in the Medicare Promoting Interoperability Program.

9. Other Proposals and Comment Solicitations Included in the Proposed Rule

Section X. of the preamble of the proposed rule includes the following:

- Proposed implementation of TEAM that would test whether an episode-based pricing methodology linked with accountability for quality measure performance for select acute care hospitals reduces Medicare program expenditures while preserving or improving the quality of care for Medicare beneficiaries.

- Proposed changes to permit a Provider Reimbursement Review Board (PRRB) member to serve up to 3 consecutive terms (9 consecutive years total), and up to 4 consecutive terms (12 consecutive years total) in cases where a PRRB Member who, in their second or third consecutive term, is designated as Chairperson, to continue serving as Chairperson in the fourth consecutive term.

- Solicitation of comments to gather information on differences between hospital resources required to provide inpatient pregnancy and childbirth services to Medicare patients as compared to non-Medicare patients.

- Solicitation of comments to gather information on potential solutions that can be implemented through the hospital CoPs to address well-documented concerns regarding maternal morbidity, mortality, disparities, and maternity care access in the United States. See the calendar year (CY) 2025 Outpatient Prospective Payment System (OPPS) proposed rule (89 FR XXXXX) for more information about this RFI.

- Proposal to remove the exclusion of Puerto Rico from the Payment Error Rate Measurement (PERM) program found at 42 CFR 431.954(b)(3).

- Proposal for a new hospital CoP to replace the COVID-19 and Seasonal Influenza reporting standards for

hospitals and CAHs that were created during PHE.

10. Other Provisions of the Proposed Rule

Section XI.A. of the preamble of the proposed rule includes our discussion of the MedPAC Recommendations.

Section XI.B. of the preamble of the proposed rule includes a descriptive listing of the public use files associated with this proposed rule.

Section XII. of the preamble of the proposed rule includes the collection of information requirements for entities based on our proposals.

Section XIII. of the preamble of the proposed rule includes information regarding our responses to public comments.

11. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In sections II. and III. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2025 prospective payment rates for operating costs and capital-related costs for acute care hospitals. We proposed to establish the threshold amounts for outlier cases. In addition, in section IV. of the Addendum of the proposed rule, we addressed the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2025 for certain hospitals excluded from the IPPS.

12. Determining Prospective Payment Rates for LTCHs

In section V. of the Addendum of the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2025 LTCH PPS standard Federal payment rate and other factors used to determine LTCH PPS payments under both the LTCH PPS standard Federal payment rate and the site neutral payment rate in FY 2025. We proposed to establish the adjustments for the wage index (including proposed changes to the LTCH PPS labor market area delineations based on the new OMB delineations), labor-related share, the cost-of-living adjustment, and high-cost outliers, including the applicable fixed-loss amounts and the LTCH cost-to-charge ratios (CCRs) for both payment rates.

13. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact the proposed changes would have on

affected acute care hospitals, CAHs, LTCHs and other entities.

14. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2025 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs and MDHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The LTCH PPS standard Federal payment rate and the site neutral payment rate for hospital inpatient services provided for LTCH PPS discharges.

15. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2024 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and capital-related costs for hospitals under the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2024 report or to obtain a copy of the report, contact MedPAC at (202) 220-3700 or visit MedPAC's website at <https://www.medpac.gov>.

E. Public Comments Received in Response to the FY 2025 IPPS/LTCH PPS Proposed Rule

We received approximately 6,180 timely pieces of correspondence containing multiple comments on the proposed rule that appeared in the May 2, 2024 **Federal Register** (89 FR 39534) titled "Medicare and Medicaid Programs and the Children's Health Insurance Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Policy Changes and Fiscal Year 2025 Rates; Quality Programs Requirements; and Other Policy Changes" (hereinafter referred to as the

FY 2025 IPPS/LTCH PPS proposed rule). We note that some of these public comments were outside of the scope of the proposed rule. These out-of-scope public comments are not addressed with policy responses in this final rule. Summaries of the public comments that are within the scope of the proposed rule and our responses to those public comments are set forth in the various sections of this final rule under the appropriate heading.

II. Changes to Medicare Severity Diagnosis-Related Group (MS-DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. Adoption of the MS-DRGs and MS-DRG Reclassifications

For information on the adoption of the MS-DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

For general information about the MS-DRG system, including yearly reviews and changes to the MS-DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/rate year (RY) 2010 LTCH PPS final rule (74 FR 43764 through 43766) and the FYs 2011 through 2023 IPPS/LTCH PPS final rules (75 FR 50053 through 50055; 76 FR 51485 through 51487; 77 FR 53273; 78 FR 50512; 79 FR 49871; 80 FR 49342; 81 FR 56787 through 56872; 82 FR

38010 through 38085; 83 FR 41158 through 41258; 84 FR 42058 through 42165; 85 FR 58445 through 58596; 86 FR 44795 through 44961; and 87 FR 48800 through 48891, respectively).

For discussion regarding our previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case mix, we refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48799 through 48800).

Comment: Several commenters requested that CMS make a positive adjustment to the standardized amount to restore the full amount of the documentation and coding recoupment adjustments, which they asserted is required under section 7(B)(2) and (4) of the TMA [Transitional Medical Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Commenters stated that the statute is explicit that CMS may not carry forward any documentation and coding adjustments applied in fiscal years 2010 through 2017 into IPPS rates after FY 2023. Commenters contended that CMS, by its own admission, has restored only 2.9588 percentage points of a total 3.9 percentage point reduction. By not fully restoring the total reductions, commenters believe that CMS is improperly extending payment adjustments beyond the FY 2023 statutory limit.

Response: As of FY 2023, CMS completed the statutory requirements of section 7(b)(1)(B) of Public Law 110–90 as amended by section 631 of the American Taxpayer Relief Act of 2012 (ATRA, Pub. L. 112–240), section 404 of the Medicare Access and CHIP Reauthorization Act of 2015 (MACRA), and section 15005 of the 21st Century Cures Act (Pub. L. 114–255). As we discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44794 through 44795), the FY 2021 IPPS/LTCH PPS final rule (85 FR 58444 through 58445) and in prior rules, we believe section 414 of the MACRA and section 15005 of the 21st Century Cures Act set forth the levels of positive adjustments for FYs 2018 through 2023. We are not convinced that the adjustments prescribed by MACRA were predicated on a specific adjustment level estimated or implemented by CMS in previous rulemaking. We see no evidence that Congress enacted these adjustments with the intent that CMS would make an additional +0.7 percentage point adjustment in FY 2018 to compensate for the higher than expected final ATRA adjustment made in FY 2017, nor are we

persuaded that it would be appropriate to use the Secretary's exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to adjust payments in FY 2025 to restore any additional amount of the original 3.9 percentage point reduction, given Congress' directive regarding prescriptive adjustment levels under section 414 of the MACRA and section 15005 of the 21st Century Cures Act. Accordingly, in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38009), we implemented the required +0.4588 percentage point adjustment to the standardized amount for FY 2018. In the FY 2019 IPPS/LTCH PPS final rule (FY 2019 final rule) (83 FR 41157), the FY 2020 IPPS/LTCH PPS final rule (FY 2020 final rule) (84 FR 42057), the FY 2021 IPPS/LTCH PPS final rule (FY 2021 final rule) (85 FR 58444 and 58445), the FY 2022 IPPS/LTCH PPS final rule (FY 2022 final rule) (86 FR 44794 and 44795), and the FY 2023 IPPS/LTCH PPS final rule (FY 2023 final rule) (87 FR 48800), consistent with the requirements of section 414 of the MACRA, we implemented 0.5 percentage point positive adjustments to the standardized amount for FY 2019, FY 2020, FY 2021, FY 2022 and FY 2023, respectively. As discussed in the FY 2023 final rule, the finalized 0.5 percentage point positive adjustment for FY 2023 is the final adjustment prescribed by section 414 of the MACRA.

C. Changes to Specific MS-DRG Classifications

1. Discussion of Changes to Coding System and Basis for FY 2025 MS-DRG Updates

a. Conversion of MS-DRGs to the International Classification of Diseases, 10th Revision (ICD-10)

As of October 1, 2015, providers use the International Classification of Diseases, 10th Revision (ICD-10) coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS-DRG system instead of the ICD-9-CM coding system, which was used through September 30, 2015. The ICD-10 coding system includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD-10-PCS) for inpatient hospital procedure coding, as well as the ICD-10-CM and ICD-10-PCS Official Guidelines for Coding and Reporting. For a detailed discussion of the conversion of the MS-DRGs to ICD-

10, we refer readers to the FY 2017 IPPS/LTCH PPS final rule (81 FR 56787 through 56789).

b. Basis for FY 2025 MS-DRG Updates

As discussed in the FY 2023 IPPS/LTCH PPS proposed rule (87 FR 28127) and final rule (87 FR 48800 through 48801), beginning with FY 2024 MS-DRG classification change requests, we changed the deadline to request changes to the MS-DRGs to October 20 of each year to allow for additional time for the review and consideration of any proposed updates. We also described the new process for submitting requested changes to the MS-DRGs via a new electronic application intake system, Medicare Electronic Application Request Information System™ (MEARIS™), accessed at <https://mearis.cms.gov>. We stated that effective with FY 2024 MS-DRG classification change requests, CMS will only accept requests submitted via MEARIS™ and will no longer consider requests sent via email. Additionally, we noted that within MEARIS™, we have built in several resources to support users, including a “Resources” section available at <https://mearis.cms.gov/public/resources> with technical support available under “Useful Links” at the bottom of the MEARIS™ site. Questions regarding the MEARIS™ system can be submitted to CMS using the form available under “Contact”, also at the bottom of the MEARIS™ site. Accordingly, interested parties had to submit MS-DRG classification change requests for FY 2025 by October 20, 2023.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the request for MS-DRG classification changes to CMS. The aforementioned burden is subject to the Paperwork Reduction Act (PRA) of 1995 and approved under OMB control number 0938-1431, and has an expiration date of 09/30/2025.

As noted previously, interested parties had to submit MS-DRG classification change requests for FY 2025 by October 20, 2023. As we have discussed in prior rulemaking, we may not be able to fully consider all of the requests that we receive for the upcoming fiscal year. We have found that, with the implementation of ICD-10, some types of requested changes to the MS-DRG classifications require more extensive research to identify and analyze all of the data that are relevant to evaluating the potential change. In the proposed rule, we noted those topics for which further research and analysis

are required, and which we will continue to consider in connection with future rulemaking as summarized in the discussion that follows.

As discussed in the proposed rule, we received four requests to modify the GROUPER logic in a number of cardiac MS-DRGs under Major Diagnostic Category (MDC) 05 (Diseases and Disorders of the Circulatory System). Specifically, we received requests to:

- Modify the GROUPER logic of new MS-DRG 212 (Concomitant Aortic and Mitral Valve Procedures) to be defined by cases reporting procedure codes describing a single open mitral or aortic valve replacement/repair (MVR or AVR) procedure, plus an open coronary artery bypass graft procedure (CABG) or open surgical ablation or cardiac catheterization procedure plus a second concomitant procedure.

- Modify the GROUPER logic of new MS-DRG 212 by redefining the procedure code list that describes the performance of a cardiac catheterization by either removing the ICD-10-PCS codes that describe plain radiography of coronary artery codes from the logic list or adding ICD-10-PCS procedure codes that involve computed tomography (CT) or magnetic resonance imaging (MRI) scanning using contrast to the list. This requestor also suggested that CMS add ICD-10-PCS procedure codes that describe endovascular valve replacement or repair procedures into the GROUPER logic of MS-DRG 212.

- Modify the GROUPER logic of new MS-DRGs 323, 324, and 325 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC, without MCC, and without Intraluminal Device, respectively). In two separate but related requests, the requestors suggested that we add procedure codes that describe additional percutaneous coronary intervention (PCI) procedures such as percutaneous coronary rotational, laser, and orbital atherectomy to the GROUPER logic of new MS-DRGs 323, 324, and 325.

In the proposed rule, we stated that we appreciated the submissions and related analyses provided by the requestors for our consideration as we reviewed MS-DRG classification change requests for FY 2025; however, we also noted the complexity of the GROUPER logic for these MS-DRGs in connection with these requests requires more extensive analyses to identify and evaluate all of the data relevant to assessing these potential modifications. Specifically, we noted the list of procedure codes that describe the performance of a cardiac catheterization is in the definition of multiple MS-DRGs in MDC 05. Analyzing the impact

of revising this list would necessitate evaluating the impact across numerous other MS-DRGs in MDC 05 that also include this list in their definition, in addition to new MS-DRG 212. Secondly, as discussed further in section II.C.4.c. of the preamble of the proposed rule, we stated that our analysis continues to indicate that, when performed, open cardiac valve replacement and supplement procedures are clinically different from endovascular cardiac valve replacement and supplement procedures in terms of technical complexity and hospital resource use. Lastly, as we have stated in prior rule making (88 FR 58708), atherectomy is distinct from coronary lithotripsy in that each of these procedures are defined by clinically distinct definitions and objectives. Additional analysis to assess for unintended consequences across the classification is needed as we have made a distinction between the root operations used to describe atherectomy (Extirpation) and the root operation used to describe lithotripsy (Fragmentation) in evaluating other requests in rulemaking. We stated we will need to consider the application of these two root operations in other scenarios where we have also specifically stated that Extirpation is not the same as Fragmentation and do not warrant similar MS-DRG assignment (85 FR 58572 through 58573). Furthermore, as MS-DRG 212 and MS-DRGs 323, 324, and 325 recently became effective on October 1, 2023 (FY 2024), we stated additional time is needed to review and evaluate extensive modifications to the structure of these MS-DRGs.

Comment: Commenters stated that they appreciated CMS' decision to await further data before analyzing the impact of the requested changes to MS-DRG 212 and MS-DRGs 323, 324, and 325, and agreed that any changes to these MS-DRGs should be carefully reviewed, as they stated these changes could have a significant impact on the remaining MS-DRGs in MDC 05. While thanking CMS for the continued consideration of appropriate MS-DRG assignment for concomitant open cardiac procedures, many commenters reiterated the request to modify the GROUPER logic of new MS-DRG 212. Some commenters stated it would be more impactful if cases reporting a single valve procedure, a coronary artery bypass grafting (CABG) procedure, and a procedure code describing surgical ablation were assigned to MS-DRG 212 (Concomitant Aortic and Mitral Valve Procedures). Other commenters stated that they

believe that the logic of MS-DRG 212 should be modified to recognize an open aortic valve repair or replacement procedure or a mitral valve repair or replacement procedure when performed with any of the other concomitant procedures currently listed in the logic for MS-DRG 212. Another commenter suggested that MS-DRG 212 be defined by cases reporting either a mitral valve repair or replacement (MVR) procedure or an aortic valve repair or replacement (AVR) procedure, plus two other concomitant cardiac procedures such as surgical ablation, coronary artery bypass graft surgery, pulmonary valve replacement, or tricuspid valve replacement. This commenter stated that they performed their own analysis of recent MedPAR data, and stated they found that cases for beneficiaries who are not treated for their atrial fibrillation (AF) during open MVR or AVR (or CABG) procedures (currently assigned to MS-DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, and without CC/MCC, respectively)) may have as much as \$7,000 in incremental hospital index costs and 1.6 extra hospital stay days compared to similar non-AF patients during their open MVR or AVR procedures.

Some commenters were not supportive of the suggestion to assign cases reporting a single AVR or MVR procedure and another concomitant procedure to MS-DRG 212. These commenters stated that assigning cases reporting a single AVR or MVR procedure and another concomitant procedure to MS-DRG 212 would have a significant negative impact on the remaining MS-DRGs, notably MS-DRG 216. Other commenters suggested that CMS consider moving the aortic and mitral valve procedure codes with the root operations of "Creation", "Release", "Restriction" and "Supplement," that are currently listed under the Concomitant Procedures list in the GROUPER logic for MS-DRG 212 in the ICD-10 MS-DRG Definitions Manual Version 41.1 to the appropriate logic list of aortic valve or mitral valve procedures. This commenter stated that procedure codes with these other root operations also represent types of valvular repairs and should be included on the aortic valve procedures and mitral valve procedures logic lists rather than the "Concomitant Procedure" logic list. A few commenters urged CMS to devise a broader, more inclusive, supplemental payment mechanism to facilitate incremental payment when

two major procedures are performed during the same hospital admission.

In regard to the request to modify the GROUPER logic of new MS-DRGs 323, 324, and 325 (Coronary Intravascular Lithotripsy with Intraluminal Device with MCC, without MCC, and without Intraluminal Device, respectively), some commenters stated they agreed with CMS' assessment that atherectomy and coronary lithotripsy are mechanistically and clinically distinct. A commenter specifically noted that this distinction is supported by scientific literature and applauded CMS for demonstrating consistency on these questions and awareness of their impact across MDC 05. Other commenters stated they were disappointed that CMS did not propose to modify MS-DRGs 323, 324, and 325 to add procedure codes describing complex PCI procedures, including percutaneous coronary atherectomy procedures for FY 2025. A commenter stated that they offer a broad portfolio of products across the percutaneous coronary intervention space and believe they can provide additional input and data for consideration that would be helpful to CMS in evaluating potential modifications to the GROUPER logic to include orbital atherectomy procedures in the newly created MS-DRGs. Another commenter noted that the pipeline for additional technologies in the atherectomy family is expanding and recommended that CMS undertake an analysis of all ICD-10-PCS codes for atherectomy. A commenter questioned if Extirpation was the appropriate root operation to describe rotational and orbital atherectomy, as in their view, the procedures themselves are not removing calcified material. This commenter stated that in prior rulemaking CMS has stated procedures such as rotational and orbital atherectomy are reported with the root operation Extirpation because both techniques cut up the calcified material into small particles that are removed from the blood stream by the normal hemofiltration process and noted that in lithotripsy procedures, which are reported with the root operation Fragmentation, the normal hemofiltration process also removes the fragmented calcified material from the blood stream and suggested that CMS reconsider the root operation of atherectomy procedures as Fragmentation rather than Extirpation.

Response: We thank the commenters for sharing their feedback on these requests. As discussed in the proposed rule, we have found that with the implementation of ICD-10, some types of requested changes to the MS-DRG classifications require more extensive research to identify and analyze the

relevant data for evaluating a potential change. The comments received in response to our proposed rule discussion of the requests to modify the GROUPER logic of new MS-DRG 212, specifically, illustrate the complexity of the analysis and evaluation required to address these requests. Notably, many commenters believe that a modification to the logic of MS-DRG 212 may be warranted but differ greatly in the solution they believe would best address the concerns noted. We appreciate the public comments we received on these requests and will take these suggestions under consideration as we continue to monitor for impacts in MDC 05 and across the MS-DRGs to avoid unintended consequences or missed opportunities in most appropriately capturing the resource utilization and clinical coherence for these subsets of procedures. We note that we would address any proposed modifications to the existing logic in future rulemaking.

As discussed in the proposed rule, as we continue the analysis of the claims data with respect to MS-DRGs in MDC 05, we welcome public comments and feedback on other factors that should be considered in the potential restructuring of these MS-DRGs. Feedback and other suggestions may be directed to MEARIS™ at: <https://mearis.cms.gov/public/home>. Interested parties should submit any MS-DRG classification change requests, including any comments and suggestions for FY 2026 consideration by October 20, 2024 via MEARIS™ at: <https://mearis.cms.gov/public/home>.

As we did for the FY 2024 IPPS/LTCH PPS proposed rule, for the FY 2025 IPPS/LTCH PPS proposed rule we provided a test version of the ICD-10 MS-DRG GROUPER Software, Version 42, so that the public can better analyze and understand the impact of the proposals included in the proposed rule. We noted that this test software reflected the proposed GROUPER logic for FY 2025. Therefore, it included the new diagnosis and procedure codes that are effective for FY 2025 as reflected in Table 6A.—New Diagnosis Codes—FY 2025 and Table 6B.—New Procedure Codes—FY 2025 that were associated with the proposed rule, and does not include the diagnosis codes that are invalid beginning in FY 2025 as reflected in Table 6C.—Invalid Diagnosis Codes—FY 2025, and Table 6D.—Invalid Procedure Codes—FY 2025 associated with the proposed rule. Those tables were not published in the Addendum to the proposed rule, but are available on the CMS website at: [*for-Service-Payment/ AcuteInpatientPPS/index.html* as described in section VI. of the Addendum to the proposed rule. Because the diagnosis codes no longer valid for FY 2025 are not reflected in the test software, we made available a supplemental file in Table 6P.1a and 6P.1b that includes the mapped Version 42 FY 2025 ICD-10-CM and ICD-10-PCS codes and the deleted Version 41 FY 2024 ICD-10-CM codes and V41.1 ICD-10-PCS codes that should be used for testing purposes with users' available claims data. Therefore, users had access to the test software allowing them to build case examples that reflect the proposals that were included in the proposed rule. In addition, users were able to view the draft version of the ICD-10 MS-DRG Definitions Manual, Version 42.](https://www.cms.gov/Medicare/Medicare-Fee-</p>
</div>
<div data-bbox=)

Comment: A commenter expressed its appreciation that we provided a test version of the ICD-10 MS-DRG GROUPER Software, Version 42, however, the commenter stated that this version essentially only allows for a case-by-case analysis and a minimal batch analysis. The commenter stated that it would be more beneficial to have a Batch z/OS version of the test GROUPER so that it could be better utilized for broader and more meaningful analysis purposes. The commenter requested that availability of a Batch z/OS version of the test GROUPER be made publicly available for all future rulemaking.

Response: We appreciate the commenter's feedback and will take the suggestion into consideration.

We noted in the proposed rule that in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58764), as discussed in the CY 2024 Outpatient Prospective Payment System and Ambulatory Surgical Center (OPPS/ASC) proposed rule (CY 2024 OPPS/ASC proposed rule) (88 FR 49552, July 31, 2023), we stated that, consistent with the process that is used for updates to the "Integrated" Outpatient Code Editor (I/OCE) and other Medicare claims editing systems, we proposed to address any future revisions to the IPPS Medicare Code Editor (MCE), including any additions or deletions of claims edits, as well as the addition or deletion of ICD-10 diagnosis and procedure codes to the applicable MCE edit code lists, outside of the annual IPPS rulemakings. As discussed in the CY 2024 OPPS/ASC proposed rule, we proposed to remove discussion of the IPPS MCE from the annual IPPS rulemakings, beginning with the FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the

Medicare administrative contractors (MACs). We encouraged readers to review the discussion in the CY 2024 OPPTS/ASC proposed rule and submit comments in response to the proposal by the applicable deadline by following the instructions provided in that proposed rule.

As also discussed in the proposed rule, in the CY 2024 OPPTS/ASC final rule (88 FR 82121 through 82124), after consideration of the public comments we received, we finalized the proposal to remove discussion of the MCE from the annual IPPS rulemakings, beginning with FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the MACs. We also stated that, beginning with FY 2025, in association with the annual proposed rule, we are making available a draft version of the Definitions of Medicare Code Edits (MCE) Manual to provide the public with an opportunity to review any changes that will become effective October 1 for the upcoming fiscal year. In addition, as a result of new and modified code updates approved after the annual spring ICD-10 Coordination and Maintenance Committee meeting, any further changes to the MCE will be reflected in the finalized Definitions of Medicare Code Edits (MCE) Manual, made available in association with the annual final rule. As such, we made available the draft FY 2025 ICD-10 MCE Version 42 Manual file on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>.

We noted in the proposed rule that the MCE manual is comprised of two chapters: *Chapter 1: Edit code lists* provides a listing of each edit, an explanation of each edit, and as applicable, the diagnosis and/or procedure codes for each edit, and *Chapter 2: Code list changes* summarizes the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software. We also stated that the public may submit any questions, comments, concerns, or recommendations regarding the MCE to the CMS mailbox at MSDRGClassificationChange@cms.hhs.gov for our review and consideration.

Comment: Several commenters requested that CMS reconsider including updates to the MCE as part of the IPPS rulemaking process. A commenter stated that it recognized the importance of the MCE and expressed concern with the removal of MCE proposals from IPPS rulemaking. The

commenter stated that identifying key considerations and mitigating unintended consequences are a key benefit of public review and consideration of stakeholder comments. The commenter stated that the proposed process is not transparent on key areas such as when the manual will be updated, effective dates, or the ability to provide feedback with timely responses. Other commenters stated that the MCE and related proposals include essential topics that warrant thorough review and consideration specific to inpatient hospital admissions and operational processes. The commenters asserted that these topics are vital to coding, clinical documentation, and revenue cycle professionals to ensure awareness and understanding ahead of implementation and historically allowed the opportunity for comment as applicable. According to the commenters, MCE change updates managed outside the IPPS rulemaking process create a strong potential for missed opportunities for pertinent public review and comment. The commenters stated these missed opportunities will create the potential for unintended consequences and administrative burdens for hospital teams. The commenters also stated that a historical review of IPPS comments in response to MCE proposals includes feedback on unacceptable principal diagnoses, age edits, and especially comments that affected the proposal and final implementation of CMS's unspecified code edit implemented in FY 2022.

The commenters stated that the draft version of the Definitions of Medicare Code Edits (MCE) Manual file made available in association with the proposed rule is a helpful reference, however revisions should be explicitly stated as proposed revisions or additions for consideration. According to the commenters, as currently written, the changes are not listed as proposals within the manual and are implied as changes that have already been decided and will be effective with the upcoming fiscal year. Another commenter expressed appreciation that CMS stated it will make available a draft version of the Definitions of Medicare Code Edits (MCE) Manual file in association with the annual proposed rule to provide the public with an opportunity to review any changes that will become effective October 1 for the upcoming fiscal year. However, the commenter also stated that it is difficult to identify the changes in the draft version of the MCE Manual and recommended that CMS provide a list of the draft MCE changes each year (including any additions or deletions of

diagnosis or procedure codes or MCE edits).

Response: We appreciate the commenters' feedback. As stated in the CY 2024 OPPTS/ASC final rule (88 FR 82121 through 82124), in the preamble of the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35949), and previously described in the preamble of this final rule, after consideration of the public comments we received, we finalized the proposal to remove discussion of the MCE from the annual IPPS rulemakings, beginning with FY 2025 rulemaking. In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35949), we stated that beginning with FY 2025, in association with the annual proposed rule, we are making available a draft version of the Definitions of Medicare Code Edits (MCE) Manual to provide the public with an opportunity to review any changes that will become effective October 1 for the upcoming fiscal year.

We noted in the proposed rule, and as previously described in this final rule, that the MCE manual is comprised of two chapters: *Chapter 1: Edit code lists* provides a listing of each edit, an explanation of each edit, and as applicable, the diagnosis and/or procedure codes for each edit, and *Chapter 2: Code list changes* summarizes the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software. We believe that *Chapter 2: Code list changes* in the MCE manual is clear as it lists the specific edit, followed by the list of codes that were added or deleted. The draft version of the Definitions of Medicare Code Edits (MCE) Manual will continue to be made publicly available in association with the annual proposed rulemaking, and it is referred to as a "draft version". However, the *Chapter 2: Code list changes* are not "draft" MCE changes. Rather, consistent with our established process to assign MS-DRGs to new diagnosis codes and new procedure codes, for which we examine the MS-DRG assignment for the predecessor code to determine the most appropriate MS-DRG assignment, we have historically used, and will continue to use, a similar process in the assignment of new diagnosis codes and new procedure codes to the edit codes lists under the MCE. Specifically, we review the predecessor code to determine if there are edits under the MCE for which the predecessor code is listed to determine which edit lists may be appropriate for the newly created codes.

As discussed in prior rulemaking (88 FR 58764), as a result of new and modified code updates approved after the annual spring ICD-10 Coordination

and Maintenance Committee meeting, we routinely make changes to the MCE without discussion in IPPS rulemaking. In the past, in both the IPPS proposed and final rules, we have only provided the list of changes to the MCE that were brought to our attention after the prior year's final rule. We historically have not listed all of the changes we have made to the MCE because of the new and modified codes approved after the annual spring ICD-10 Coordination and Maintenance Committee meeting. We stated that these changes are, and would still be, approved too late in the rulemaking schedule for inclusion in the proposed rule. Furthermore, although in the past our MCE policies have been described in our proposed and final rules, we have not provided the detail of each new or modified diagnosis and procedure code edit in the final rule.

Therefore, although we published, and will continue to publish, the edit code list changes in the "draft version" of the MCE manual, because discussion of the MCE has been removed from IPPS rulemakings, beginning with FY 2025 rulemaking as previously described, the edit code lists that appear in the "draft version" of the MCE manual in association with the proposed rule are considered final at the time of the development of the proposed rule. While the public may continue to submit any questions, comments, concerns, or recommendations regarding the MCE to the CMS mailbox at MSDRGClassificationChange@cms.hhs.gov for our review and consideration, we will continue to make available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software> the changes to the edit code lists for both the draft version (at the time of the development of the proposed rule) and finalized version of the Definitions of Medicare Code Edits (MCE) file, in association with the annual IPPS proposed and final rules.

Comment: Some commenters encouraged CMS to delay, revisit, and provide details of specific code changes and the deactivation of edits. The commenters also stated that the edits are an additional quality assurance mechanism to ensure appropriate ICD-10-CM/PCS assignment for accurate and timely claims submission. The commenters further stated that the edits help to prevent added administrative burden associated with unnecessary claims rework and resubmission.

Response: We thank the commenters for their feedback. We believe that the FY 2025 MCE updates reflect our

established process as previously described in this final rule, as well as address concerns related to claims processing discussed in prior rulemaking (88 FR 58768). We will continue to monitor these updates and consider issuing additional provider guidance to ensure accurate claims submission and processing.

Comment: Similar to the discussion in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58789), a commenter requested that CMS implement an edit for claims that group to MS-DRG 014 (Allogeneic Bone Marrow Transplant), that would reject claims when an inpatient type of bill 11X claim is received without charges mapped to revenue code 0815, which is intended to capture the costs of donor search and cell acquisition activities for allogeneic hematopoietic stem cell transplants. The commenter stated that mandatory reporting of the revenue code on inpatient claims would have several benefits, including increasing the accuracy of claims reporting by transplant centers, ensuring the accuracy of CMS's budget neutrality calculations, and helping to ensure that CMS does not inappropriately generate outlier payment on MS-DRG 014 claims (given that CMS removes costs associated with revenue code 0815 from its outlier calculation). The commenter stated it would also mirror the edit established under the outpatient code editor.

Response: We appreciate the commenter's feedback. As stated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58789), we may consider provider education materials regarding the reporting of Allogeneic Stem Cell Acquisition/Donor Services in the future. We continue to believe that the suggested claims processing edit is not necessary at this time and expect providers to appropriately report charges associated with revenue code 0815.

Comment: A commenter stated it supported the removal of the vascular dementia codes from the Unacceptable Principal Diagnosis edit code list and that doing so will reduce administrative challenges with billing for services, improve the clinical accuracy of medical records and encourage appropriate care for this set of patients.

Response: We appreciate the commenter's support.

In summary, we thank the commenters for their views and feedback. Because we finalized the proposal to remove discussion of the MCE from the annual IPPS rulemakings beginning with FY 2025 rulemaking, the public may submit any future questions, comments, concerns, or

recommendations regarding the MCE to the CMS mailbox at MSDRGClassificationChange@cms.hhs.gov for our review and consideration.

In association with the proposed rule, we made available the test version of the ICD-10 MS-DRG GROUPER Software, Version 42, the draft version of the ICD-10 MS-DRG Definitions Manual, Version 42, the draft version of the Definitions of Medicare Code Edits Manual, Version 42, and the supplemental mapping files in Table 6P.1a and 6P.1b of the FY 2024 and FY 2025 ICD-10-CM diagnosis and ICD-10-PCS procedure codes which are available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software>.

Following are the changes that we proposed to the MS-DRGs for FY 2025. We invited public comments on each of the MS-DRG classification proposed changes, as well as our proposals to maintain certain existing MS-DRG classifications discussed in the proposed rule. In some cases, we proposed changes to the MS-DRG classifications based on our analysis of claims data and clinical appropriateness. In other cases, we proposed to maintain the existing MS-DRG classifications based on our analysis of claims data and clinical appropriateness. As discussed in the FY 2025 IPPS/LTCH PPS proposed rule, our MS-DRG analysis was based on ICD-10 claims data from the September 2023 update of the FY 2023 MedPAR file, which contains hospital bills received from October 1, 2022, through September 30, 2023. In our discussion of the proposed MS-DRG reclassification changes, we referred to these claims data as the "September 2023 update of the FY 2023 MedPAR file."

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modifications to the MS-DRGs for particular circumstances brought to our attention, we consider whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients represented in the MS-DRG. We evaluate patient care costs using average costs and lengths of stay and rely on clinical factors to determine whether patients are clinically distinct or similar to other patients represented in the MS-DRG. In evaluating resource costs, we consider both the absolute and percentage differences in average costs between the cases we select for review and the

remainder of cases in the MS–DRG. We also consider variation in costs within these groups; that is, whether observed average differences are consistent across patients or attributable to cases that are extreme in terms of costs or length of stay, or both. Further, we consider the number of patients who will have a given set of characteristics and generally prefer not to create a new MS–DRG unless it would include a substantial number of cases.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS–DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS–DRGs. We noted that in our analysis of MS–DRG classification requests for FY 2021 that were received by November 1, 2019, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups. We also noted that the application of the NonCC subgroup criteria going forward may result in modifications to certain MS–DRGs that are currently split into three severity levels and result in MS–DRGs that are split into two severity levels. We stated that any proposed modifications to the MS–DRGs would be addressed in future rulemaking consistent with our annual process and reflected in Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay for the applicable fiscal year.

In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798), we finalized a delay in applying this technical criterion to existing MS–DRGs until FY 2023 or future rulemaking, in light of the public health emergency (PHE). Interested parties recommended that a complete analysis of the MS–DRG changes to be proposed for future rulemaking in connection with the expanded three-way severity split criteria be conducted and made available to enable the public an opportunity to review and consider the redistribution of cases, the impact to the relative weights, payment rates, and hospital case mix to allow meaningful comment prior to implementation.

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48803), we also finalized a delay in application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split in light of the ongoing PHE and until such time additional analyses can be performed to assess impacts, as discussed in response to public comments in the FY 2022 and FY 2023 IPPS/LTCH PPS final rules.

In association with our discussion of application of the NonCC subgroup criteria in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26673 through 26676), we provided an alternate test version of the ICD–10 MS–DRG GROUPER Software, Version 41.A, reflecting the proposed GROUPER logic for FY 2024 as modified by the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split, available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software>. Therefore, users had access to the alternate test software allowing them to build case examples that reflect the proposals included in the proposed rule with application of the NonCC subgroup criteria. We also provided additional files including an alternate Table 5—Alternate List of Medicare Severity Diagnosis Related Groups (MS–DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay, an alternate Length of Stay (LOS) Statistics file, an alternate Case Mix Index (CMI) file, and an alternate After Outliers Removed and Before Outliers Removed (AOR_BOR) file. The files are available in association with the FY 2024 IPPS/LTCH PPS proposed rule on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. We stated that the alternate test software and additional files were made available so that the public could better analyze and understand the impact on the proposals included in the proposed rule if the NonCC subgroup criteria were to be applied to existing MS–DRGs with a three-way severity level split. We refer readers to the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26673 through 26676) for further discussion of the alternate test software and additional files that were made available.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58655 through 58661), we finalized to delay the application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2024. We stated that we would continue to review and

consider the feedback we had received in response to the additional information we made available in association with the FY 2024 IPPS/LTCH PPS proposed rule for our development of the FY 2025 proposed rule.

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35950), we noted that the IPPS Payment Impact File made available in connection with our annual IPPS rulemakings includes information used to categorize hospitals by various geographic and special payment consideration groups, including geographic location (urban or rural), teaching hospital status (that is, whether or not a hospital has GME residency programs and receives an IME adjustment), DSH hospital status (that is, whether or not a hospital receives Medicare DSH payments), special payment groups (that is, SCHs, MDHs, and RRCs) and other categories reflected in the impact analysis generally shown in Appendix A of the annual IPPS rulemakings. The IPPS Payment Impact File associated with the FY 2024 IPPS/LTCH PPS final rule can be found on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2024-ipp-pps-final-rule-home-page#Data>.

We proposed to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2025, as we continue to consider the public comments received in response to the FY 2024 rulemaking. In addition, we encouraged interested parties to review the impacts and other information made available with the alternate test software (V41.A) and other additional files provided in connection with the FY 2024 IPPS/LTCH PPS proposed rule, as previously discussed, and stated that we continue to welcome feedback for consideration for future rulemaking.

Comment: Numerous commenters supported the proposal to continue to delay application of the NonCC subgroup criteria to existing MS–DRGs with a three-way severity level split for FY 2025.

Response: We thank the commenters for their support.

Comment: Several commenters expressed appreciation that CMS provided the meaningful data analysis and availability of the version 41.A alternate test GROUPER in association with the FY 2024 proposed rule, however, the commenters stated that the ability to utilize an updated alternate test software and a current batch GROUPER along with additional

streamlined data by hospital type is needed. According to the commenters, updated test software and an available batch GROUPER would allow hospitals to further analyze the operational and monetary impact of this type of proposed change more thoroughly and over a longer time span.

Response: We appreciate the commenters' feedback. As we noted in the proposed rule, the IPPS Payment Impact File made available in connection with our annual IPPS rulemakings includes information used to categorize hospitals by various geographic and special payment consideration groups and other categories reflected in the impact analysis generally shown in Appendix A of the annual IPPS rulemakings. We will consider the commenters' request to provide updated test software and a batch GROUPER for future rulemaking.

Comment: A commenter who agreed with the proposal to delay application of the NonCC subgroup criteria stated that CMS did not provide any new information from, or analysis of, the FY 2023 MedPAR file as it related to base, deleted, or new MS-DRGs related to the application of the NonCC subgroup criteria. The commenter stated that new data should have been included with the proposed rule to continue efforts to view the impact of the policy.

Response: We appreciate the commenter's support and feedback. In response to the commenter's request that we provide the potential impacts using the FY 2023 claims data, we are making it available in Table 6P.4 on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> in association with this final rule.

We note that we did not propose to apply the NonCC subgroup criteria to existing MS-DRGs with a three-way severity level split for FY 2025. Moreover, as noted, we are continuing to consider comments received in response to FY 2024 rulemaking.

Comment: A commenter stated it utilized the files provided by CMS to analyze the impact of application of the

NonCC subgroup criteria based on its own hospital volumes. The commenter reported that while it found some positive impacts to the relative weight of the MS-DRGs impacted when applying the NonCC subgroup criteria, they continue to have concerns regarding the variations in claims data from year-to-year that may be used in the proposed MS-DRG restructuring. The commenter stated it agreed with comments in prior years from various professional organizations that have noted the variability in claims data and, thus, case mix variations from year-to-year.

Response: We appreciate the commenter's feedback.

Comment: A few commenters expressed concern that application of the NonCC subgroup criteria to existing MS-DRGs with a three-way severity level split will reduce the impact of CCs. The commenters noted from prior year's analyses findings that there are a number of MS-DRGs that would potentially be consolidated to reflect the two-way severity split for "with MCC" and "without MCC" and there were not any that reflected a "with CC/MCC" and "without CC/MCC" severity level split. The commenters stated that the impact of CCs would decrease as a result of the application of the expanded criteria, meaning that conditions designated as CC would increasingly need to be MCCs in order to impact case complexity and severity.

Response: We thank the commenters for their feedback. We disagree that application of the NonCC subgroup criteria specifically reduces the impact of CCs. Rather, we believe that application of the criteria combines the subset of cases that may or may not report a CC into one MS-DRG grouping that reflects the average costs and length of stay for that subset. Because the IPPS MS-DRGs are a system of averages, the cases reporting a CC continue to impact the average costs and average length of stay within the subgroup. We note that in the majority of the MS-DRGs where we previously assessed the impact of application of the NonCC subgroup

criteria to existing MS-DRGs with a three-way severity level split and provided the potential MS-DRG changes, the volume of cases in the CC subgroup was significantly greater than those in the NonCC subgroup, thus contributing more to the overall average costs and average length of stay of the "potential" new MS-DRG structure. We also note that providers have the ability to identify the subset of cases reporting a CC within the existing "with MCC" and "without MCC" MS-DRGs construct within their respective facilities.

After consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to delay the application of the NonCC subgroup criteria to existing MS-DRGs with a three-way severity level split for FY 2025 as we continue to consider the public comments received in response to the FY 2024 rulemaking. We also continue to encourage interested parties to review the impacts and other information made available with the alternate test software (V41.A) and other additional files provided in connection with the FY 2024 IPPS/LTCH PPS proposed rule, as previously discussed. We continue to welcome feedback for consideration for future rulemaking that may be directed to MEARIS™ at <https://mearis.cms.gov/public/home>.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661), we continue to apply the criteria to create subgroups, including application of the NonCC subgroup criteria, in our annual analysis of MS-DRG classification requests, consistent with our approach since FY 2021 when we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. Accordingly, in our analysis of the MS-DRG classification requests for FY 2025 that we received by October 20, 2023, as well as any additional analyses that were conducted in connection with those requests, we applied these criteria to each of the MCC, CC, and NonCC subgroups, as described in the following table.

Criteria Number	Three-Way Split 123 (MCC vs CC vs NonCC)	Two-Way Split 1_23 MCC vs (CC+NonCC)	Two-Way Split 12_3 (MCC+CC) vs NonCC
1. At least 500 cases in the MCC/CC/NonCC group	500+ cases for MCC group; and 500+ cases for CC group; and 500+ cases for NonCC group	500+ cases for MCC group; and 500+ cases for (CC+NonCC) group	500+ cases for (MCC+CC) group; and 500+ cases for NonCC group
2. At least 5% of the patients are in the MCC/CC/NonCC group	5%+ cases for MCC group; and 5%+ cases for CC group; and 5%+ cases for NonCC group	5%+ cases for MCC group; and 5%+ cases for (CC+NonCC) group	5%+ cases for (MCC+CC) group; and 5%+ cases for NonCC group
3. There is at least a 20% difference in average cost between subgroups	20%+ difference in average cost between MCC group and CC group; and 20%+ difference in average cost between CC group and NonCC group	20%+ difference in average cost between MCC group and (CC+NonCC) group	20%+ difference in average cost between (MCC+CC) group and NonCC group
4. There is at least a \$2,000 difference in average cost between subgroups	\$2,000+ difference in average cost between MCC group and CC group; and \$2,000+ difference in average cost between CC group and NonCC group	\$2,000+ difference in average cost between MCC group and (CC+ NonCC) group	\$2,000+ difference in average cost between (MCC+ CC) group and NonCC group
5. The R2 of the split groups is greater than or equal to 3	$R2 \geq 3.0$ for the three-way split within the base MS-DRG	$R2 \geq 3.0$ for the two-way 1_23 split within the base MS-DRG	$R2 \geq 3.0$ for the two-way 12_3 split within the base MS-DRG

In general, once the decision has been made to propose to make further modifications to the MS-DRGs as described previously, such as creating a new base MS-DRG, or in our evaluation of a specific MS-DRG classification request to split (or subdivide) an existing base MS-DRG into severity levels, all five criteria must be met for the base MS-DRG to be split (or subdivided) by a CC subgroup. We note that in our analysis of requests to create a new MS-DRG, we typically evaluate the most recent year of MedPAR claims data available. For example, we stated earlier that for the FY 2025 IPPS/LTCH PPS proposed rule, our MS-DRG analysis was based on ICD-10 claims data from the September 2023 update of the FY 2023 MedPAR file. However, in our evaluation of requests to split an existing base MS-DRG into severity levels, as noted in prior rulemaking (80 FR 49368), we typically analyze the most recent two years of data. This analysis includes two years of MedPAR claims data to compare the data results from one year to the next to avoid making determinations about whether additional severity levels are warranted based on an isolated year's data fluctuation and also, to validate that the established severity levels within a base MS-DRG are supported. The first step in our process of evaluating if the creation of a new CC subgroup within a base MS-DRG is warranted is to determine if all the criteria is satisfied for a three-way split. In applying the criteria for a three-way split, a base MS-DRG is initially subdivided into the three subgroups: MCC, CC, and NonCC. Each

subgroup is then analyzed in relation to the other two subgroups using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria fail, the next step is to determine if the criteria are satisfied for a two-way split. In applying the criteria for a two-way split, a base MS-DRG is initially subdivided into two subgroups: "with MCC" and "without MCC" (1_23) or "with CC/MCC" and "without CC/MCC" (12_3). Each subgroup is then analyzed in relation to the other using the volume (Criteria 1 and 2), average cost (Criteria 3 and 4), and reduction in variance (Criteria 5). If the criteria for both of the two-way splits fail, then a split (or CC subgroup) would generally not be warranted for that base MS-DRG. If the three-way split fails on any one of the five criteria and all five criteria for both two-way splits (1_23 and 12_3) are met, we would apply the two-way split with the highest R2 value. We note that if the request to split (or subdivide) an existing base MS-DRG into severity levels specifies the request is for either one of the two-way splits (1_23 or 12_3), in response to the specific request, we will evaluate the criteria for both of the two-way splits; however, we do not also evaluate the criteria for a three-way split.

Comment: A commenter recommended that CMS consider patient risk adjustment as a criterion for creating CC and MCC subgroups, including the impact of multiple comorbidities. According to the commenter, published literature suggests that as comorbidity status

increases, patient risk of clinical events increase, as well as potential resource use. For example, the commenter stated that studies suggest that in patients with one presenting risk factor/comorbidity (either hypertension, congenital heart disease, previous stroke, or diabetes), compared to patients without these risks, that the risk of future stroke was 1.96 greater.⁴ According to the commenter, the authors also found patients with 2 or more of these risk factors to have an increased risk of future stroke at 2.87 greater the risk of patients without risk factors and stated that these results suggest the cumulative effect of multiple CCs can dramatically impact a patient's risk and resource use in the absence of an MCC. The commenter suggested that CMS should consider the impact of multiple CCs (heart failure, AF, etc.) as a criterion when grouping an inpatient procedure to an MCC grouping in the absence of MCC.

Response: We appreciate the commenter's input and will take it under consideration as we continue to consider feedback associated with application of the NonCC subgroup criteria.

We are making the FY 2025 ICD-10 MS-DRG GROUPER and Medicare Code Editor (MCE) Software Version 42, the ICD-10 MS-DRG Definitions Manual files Version 42 and the Definitions of Medicare Code Edits Manual Version 42 available to the public on our CMS

⁴ Zhang Y, et al. Association of total pre-existing comorbidities with stroke risk: a large-scale community-based cohort study from China. *BMC Public Health*. 2021; 21(1):1910.

2. Pre-MDC MS–DRG 018 Chimeric Antigen Receptor (CAR) T-Cell and Other Immunotherapies

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35951 through 35952), we discussed a request we received to revise the title of Pre-MDC MS–DRG 018 (Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies) in connection with an ICD–10–PCS procedure code request that was submitted via MEARIS™ by the December 1, 2023 deadline for consideration as an agenda topic to be discussed at the March 19–20, 2024 ICD–10 Coordination and Maintenance Committee meeting. The procedure code request involves the application of an autologous genetically engineered cell-based gene therapy, prademagene zamikeracel (PZ), that is indicated in the treatment of recessive dystrophic epidermolysis bullosa (RDEB), an extremely rare genetic disease of the skin that leads to large chronic wounds. The proposal was presented and discussed at the March 19–20, 2024, ICD–10 Coordination and Maintenance Committee meeting. We refer the reader to the CMS website at <https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-10-coordination-maintenance-committee-materials> for additional detailed information regarding the request, including a recording of the discussion and the related meeting materials. Public comments in response to the code proposal were due by April 19, 2024. The requestor suggested that if finalized, a new procedure code to identify the application of PZ should be assigned to Pre-MDC MS–DRG 018 and that the title for Pre-MDC MS–DRG 018 be revised to reflect “Chimeric Antigen Receptor (CAR) T and Other Autologous Gene and Cell Therapies”.

Because the diagnosis and procedure code proposals that are presented at the March ICD–10–CM Coordination and Maintenance Committee meeting for an October 1 implementation (upcoming FY) are not finalized in time to include in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes in association with the proposed rule, as we have noted in prior rulemaking, we use our established process to examine the MS–DRG assignment for the predecessor codes to determine the most appropriate MS–DRG assignment. Specifically, we review the predecessor code and MS–DRG assignment most closely associated with the new

procedure code, and in the absence of claims data, we consider other factors that may be relevant to the MS–DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have noted in prior rulemaking that this process does not automatically result in the new procedure code being assigned to the same MS–DRG or to have the same designation (O.R. versus Non-O.R.) as the predecessor code. Under this established process, the MS–DRG assignment for the upcoming fiscal year for any new diagnosis or procedure codes finalized after the March meeting would be reflected in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with the final rule for that fiscal year. Accordingly, we stated that the MS–DRG assignment for any new procedure codes describing PZ, if finalized following the March meeting, would be reflected in Table 6B.—New Procedure Codes associated with the final rule for FY 2025. As noted in prior rulemaking (87 FR 28135), the codes that are finalized after the March meeting are specifically identified with a footnote in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes that are made publicly available in association with the final rule on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. The public may provide feedback on these finalized assignments, which is then taken into consideration for the following fiscal year.

We note that the proposal to create new procedure codes that describe the application of PZ as discussed at the March 19–20, 2024, ICD–10 Coordination and Maintenance Committee meeting was approved and finalized as reflected in the FY 2025 ICD–10–PCS Code Update files that were made publicly available on the CMS website on June 5, 2024 at <https://www.cms.gov/medicare/coding-billing/icd-10-codes/2025-icd-10-pcs>.

We stated in the proposed rule that we did not agree with the request to revise the title for Pre-MDC MS–DRG 018 for FY 2025 as requested because the logic for Pre-MDC MS–DRG 018 is intended to include other immunotherapies and is not restricted to CAR T-cell and autologous gene and cell therapies. As discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806), we finalized our proposal to revise the title of Pre-MDC MS–DRG 018 to include “Other Immunotherapies” to better reflect the

cases reporting the administration of non-CAR T-cell therapies and other immunotherapies that would also be assigned to this MS–DRG, in addition to CAR T-cell therapies. We noted that the term “Other Immunotherapies” is intended to encompass the group of therapies that are currently available and being utilized today (for which codes have been created for reporting in response to industry requests or are being considered for implementation), and to enable appropriate MS–DRG assignment for any future therapies that may also fit into this category and are not specifically identified as a CAR T-cell product, that may become available (for example receive marketing authorization or a newly established procedure code in the ICD–10–PCS classification).

In the proposed rule we also noted that, as discussed in prior rulemaking, this category of therapies continues to evolve, and we are in the process of carefully considering the feedback we have previously received about ways in which we can continue to appropriately reflect resource utilization while maintaining clinical coherence and stability in the relative weights under the IPPS MS–DRGs. We stated we will continue to examine these complex issues in connection with future rulemaking and acknowledged that there may be distinctions to account for as we continue to gain more experience in the use of these therapies and have additional claims data to analyze.

Therefore, we did not propose to revise the title for Pre-MDC MS–DRG 018 to reflect “Chimeric Antigen Receptor (CAR) T and Other Autologous Gene and Cell Therapies” and proposed to maintain the existing title to Pre-MDC MS–DRG 018, “Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies” for FY 2025.

Comment: Commenters expressed support for the proposal to maintain the existing title to Pre-MDC MS–DRG 018, “Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies” for FY 2025.

Response: We thank the commenters for their support.

Comment: A commenter stated that application of PZ (prademagene zamikeracel) seems to differ significantly in terms of clinical coherence and resource utilization from other therapies currently mapped to MS–DRG 018, specifically in that it requires an operating room and subsequent post-surgical care. According to the commenter, although CMS did not specifically propose to map cases reporting the application of PZ to Pre-MDC MS–DRG 018 for FY

2025, PZ does not appear to be a match for the technologies currently included in Pre-MDC MS-DRG 018 since it is not an immunotherapy and would be the only surgical episode of care in the MS-DRG. The commenter requested that CMS not finalize the mapping for application of PZ to Pre-MDC MS-DRG 018 due to differences in resource use.

Another commenter stated that if CMS were to continue to assign new, higher volume, lower cost therapies to MS-DRG 018, it could potentially distort the relative weight of the MS-DRG, resulting in inadequate payment for CAR T-cell therapies. This commenter also recommended that CMS not map cases reporting application of PZ to Pre-MDC MS-DRG 018 due to clinical resource differences with other therapies currently mapped to Pre-MDC MS-DRG 018. The commenter further stated that given the important role CAR T-cell therapies play, and will continue to play for cancer patients, CMS should clarify its methodology for the inclusion of new procedure codes within Pre-MDC MS-DRG 018 and consider the resource costs and needs of potential new therapies to this MS-DRG so as not to limit access to current therapies. Other commenters recommended that CMS provide transparency in the assignment of therapies to Pre-MDC MS-DRG 018 to ensure accurate, predictable, and appropriate payment, including consideration of comparable resource use to existing therapies currently mapped to Pre-MDC MS-DRG 018.

Another commenter requested that CMS map the new procedure codes describing application of PZ to Pre-MDC MS-DRG 018, given the clinical characteristics and resource intensity of the gene and cellular therapy. According to the commenter, administration of both autologous CAR T-cell therapies and PZ is initiated through the collection of a sample of the patient's own cells. The commenter stated the cells are then modified as part of a complex and resource intensive process requiring the insertion of a new gene into the patient's own cells before administering them back to the patient. Specifically, the commenter stated that the keratinocyte cells (that is, the most prominent cells in the epidermis) of patients diagnosed with RDEB are collected via a "punch" biopsy procedure and transduced with a functional COL7A1 transgene using a retroviral vector, which is intended to result in adequate expression and secretion of the type VII collagen protein critical to anchoring the epidermis and facilitating wound healing. The commenter stated the

transduced cells are then expanded, matured, and processed into sheets through an approximate 25-day process before they can be delivered to the hospital site and applied to the patient. The commenter stated that this process mirrors the CAR T-cell therapy development and administration process, where cells are harvested from the patient's blood, the patient's T-cells are isolated through a leukapheresis procedure, and the T-cells then are transduced with a CAR-encoding viral vector and expanded over an approximate month-long period before being returned to the treatment center for administration to the patient. The commenter also stated that the application of PZ shares other similarities with the technologies currently assigned to Pre-MDC MS-DRG 018, including the need for an interdisciplinary team of health care personnel, and an extended length of stay following treatment. According to the commenter, from a resource perspective, like other therapies currently assigned to Pre-MDC MS-DRG 018, the main driver of resource utilization for an inpatient stay is the administration of the technology.

Response: We appreciate the commenters' feedback. In response to the commenters who requested that CMS not finalize the mapping for application of PZ to Pre-MDC MS-DRG 018 due to the belief that there are differences in resource use when compared to other therapies currently mapped to Pre-MDC MS-DRG 018, we note that the commenters did not indicate whether they believed the differences in resource use for application of PZ are higher or lower in comparison to the other therapies currently mapped to Pre-MDC MS-DRG 018, nor did the commenters offer any alternative MS-DRG suggestions for CMS's consideration. We acknowledge that application of PZ requires use of an operating room and the administration of other therapies currently assigned to Pre-MDC MS-DRG 018 do not. We also note that consistent with our established process for assigning new diagnosis or new procedure codes to MDCs, MS-DRGs, and the associated attributes (severity level and O.R. status), we examined the MDCs, MS-DRG assignment and O.R. status of the predecessor procedure codes to inform our assignments and designations. As discussed in prior rulemaking and previously in the preamble of this final rule, we review the predecessor code and MS-DRG assignment most closely associated with the new diagnosis or procedure code, and in the absence of

claims data, we consider other factors that may be relevant to the MS-DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We have previously noted that this process does not automatically result in the new diagnosis or procedure code being assigned to the same MS-DRG or to have the same designation as the predecessor code. In our evaluation of MS-DRG classification requests under the IPPS MS-DRGs, consideration is also given to the similarities and differences in resource utilization among patients in each MS-DRG and we strive to ensure that resource utilization is relatively consistent across patients in each MS-DRG. However, some variation in resource intensity will remain among the patients in each MS-DRG because the definition of the MS-DRG is not so specific that every patient is identical, rather the average pattern of resource intensity of a group of patients in an MS-DRG can be predicted.

We note that historically, in the development of the DRGs, the initial step in the determination of the DRG had been the assignment of the appropriate MDC based on the principal diagnosis, however, beginning with the eighth version of the GROUPE (CMS 8.0), the initial step in DRG assignment was based on the procedure being performed, thus the creation of the Pre-MDC DRGs, where the patient is assigned to these DRGs independent of the MDC of the principal diagnosis. Therefore, while the existing therapies (that is, CAR T-cell and non-CAR T-cell) currently mapped to Pre-MDC MS-DRG 018 may be indicated in the treatment of patients with cancer, the logic for case assignment to Pre-MDC MS-DRG 018 does not preclude the assignment of other therapies indicated in the treatment of patients that do not have a diagnosis of cancer. In our review of the MS-DRG assignment for application of PZ, we recognized that this technology is defined as an investigational genetically engineered autologous cell therapy. We also note that similar to the discussions in prior rulemaking with respect to the difficulty in predicting what the associated costs will be in the future for CAR T-cell and other immunotherapies that remain under development (87 FR 48806), it is also difficult to predict what the associated costs will be in the future for cell and gene therapies that remain under development or in clinical trials.

We further note that, in response to the President's Executive Order 14087, "Lowering Prescription Drug Costs for Americans", a Cell and Gene Therapy

(CGT) Access Model was developed, which could help inform future inpatient payment policy for cell and gene therapies more generally. For additional information on the CGT Access Model, we refer the reader to the CMS website at <https://www.cms.gov/priorities/innovation/innovation-models/cgt>.

Until such time additional data becomes available, we believe it is appropriate to map cases reporting the application of PZ to Pre-MDC MS-DRG 018 for FY 2025 based on the information currently available indicating similar utilization of resources for other cases currently mapped to MS-DRG 018 with regard to patients' severity of illness, treatment difficulty, and complexity of service.

In response to concerns that the assignment of new, higher volume, lower cost therapies to MS-DRG 018 could potentially distort the relative weight of the MS-DRG resulting in inadequate payment for CAR T-cell therapies, we note that in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48807), we addressed similar comments and also noted that we provided detailed summaries and responses to these same or similar comments in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44798 through 44806). We also refer the reader to the discussion in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36018 through 36020), and in section II.D.2.b. of this final rule, regarding the proposed and finalized relative weight methodology for cases mapping to Pre-MDC MS-DRG 018 effective October 1, 2024, for FY 2025.

After consideration of the public comments we received, we are finalizing our proposal to maintain the existing title to Pre-MDC MS-DRG 018, "Chimeric Antigen Receptor (CAR) T-cell and Other Immunotherapies" for FY 2025. We are also finalizing the assignment of the eight procedure codes describing the use of PZ to Pre-MDC MS-DRG 018 as reflected in Table 6B.—New Procedure Codes, in association with this final rule and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>.

3. MDC 01 (Diseases and Disorders of the Nervous System)

a. Logic for MS-DRGs 023 Through 027

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58661 through 58667), we discussed a request to reassign cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain from

MS-DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) to MS-DRG 021 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with CC) or reassign all cases currently assigned to MS-DRG 023 that involve a craniectomy or a craniotomy with the insertion of device implant and create a new MS-DRG for these cases.

We stated the requestor acknowledged that the relatively low volume of cases that only involve the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain in the claims data was likely not sufficient to warrant the creation of a new MS-DRG. The requestor further stated given the limited options within the existing MS-DRG structure that fit from both a cost and clinical cohesiveness perspective, they believed that MS DRG 021 was the most logical fit in terms of average costs and clinical coherence for reassignment even though, according to the requestor, the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain is technically more complex and involves a higher level of training, extreme precision and sophisticated technology than performing a craniectomy for hemorrhage.

We noted that while our data findings demonstrated the average costs are higher for the cases with a principal diagnosis of epilepsy with a neurostimulator generator inserted into the skull and insertion of a neurostimulator lead into brain when compared to all cases in MS-DRG 023, these cases represented a small percentage of the total number of cases reported in this MS-DRG. We stated that while we appreciated the requestor's concerns regarding the differential in average costs for cases describing the insertion of a neurostimulator generator into the skull in combination with the insertion of a neurostimulator lead into the brain when compared to all cases in their assigned MS-DRG, we believed additional time was needed to evaluate these cases as part of our ongoing examination of the case logic to the MS-DRGs for craniotomy and endovascular procedures, which are MS-DRG 023, MS-DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC), and MS-DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively).

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48808 through 48820), in connection with our analysis of cases reporting laser interstitial thermal therapy (LITT) procedures performed on the brain or brain stem in MDC 01, we stated we have started to examine the logic for case assignment to MS-DRGs 023 through 027 to determine where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to those MS-DRGs. We stated that specifically, we were in the process of evaluating procedures that are performed using an open craniotomy (where it is necessary to surgically remove a portion of the skull) versus a percutaneous burr hole (where a hole approximately the size of a pencil is drilled) to obtain access to the brain in the performance of a procedure. We stated we were also reviewing the indications for these procedures, for example, malignant neoplasms versus epilepsy to consider if there may be merit in considering restructuring the current MS-DRGs to better recognize the clinical distinctions of these patient populations in the MS-DRGs.

As part of this evaluation, as discussed in the FY 2024 IPPS/LTCH PPS final rule, we have begun to analyze the ICD-10 coded claims data to determine if the patients' diagnoses, the objective of the procedure performed, the specific anatomical site where the procedure is performed or the surgical approach used (for example, open, percutaneous, percutaneous endoscopic, among others) demonstrates a greater severity of illness and/or increased treatment difficulty as we consider restructuring MS-DRGs 023 through 027, including how to better align the clinical indications with the performance of specific intracranial procedures. We referred the reader to Tables 6P.2b through 6P.2f associated with the FY 2024 IPPS/LTCH PPS proposed rule (available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>) for data analysis findings of cases assigned to MS-DRGs 023 through 027 from the September 2022 update of the FY 2022 MedPAR file as we continue to look for patterns of complexity and resource intensity.

In summary, we stated that while we agreed that neurostimulator cases can have average costs that are higher than the average costs of all cases in their respective MS-DRGs, in our analysis of this issue, it was difficult to detect

patterns of complexity and resource intensity. Therefore, for the reasons discussed, we finalized our proposal to maintain the current assignment of cases describing a neurostimulator generator inserted into the skull with the insertion of a neurostimulator lead into the brain for FY 2024.

In the FY 2024 IPPS/LTCH PPS final rule, we stated we continue to believe that additional time is needed to evaluate these cases as part of our ongoing examination of the case logic for MS-DRGs 023 through 027. As part of our ongoing, comprehensive analysis of the MS-DRGs under ICD-10, we stated we would continue to explore mechanisms to ensure clinical coherence between these cases and the other cases with which they may potentially be grouped. We stated that the data analysis as displayed in Tables 6P.2b through 6P.2f associated with the FY 2024 IPPS/LTCH PPS proposed rule was displayed to provide the public an opportunity to review our examination of the procedures by their approach (open versus percutaneous), clinical indications, and procedures that involve the insertion or implantation of a device and to reflect on what factors should be considered in the potential restructuring of these MS-DRGs. We welcomed further feedback on how CMS should define technical complexity, what factors should be considered in the analysis, and whether there are other data not included in Tables 6P.2b through 6P.2f that CMS should analyze. We also stated we are interested in receiving feedback on where further refinements could potentially be made to better account for differences in the technical complexity and resource utilization among the procedures that are currently assigned to these MS-DRGs.

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35952 through 35953), we discussed two comments we received by the October 20, 2023 deadline in response to this discussion in the FY 2024 IPPS/LTCH PPS final rule. A commenter recommended that CMS not use surgical approach (for example, open versus percutaneous) as a factor to reclassify MS-DRGs 023 through 027. The commenter stated whether the opening is created via a drill into the skull percutaneously or through a larger incision in the skull for a craniotomy, both approaches involve the risk of intracranial bleeding, infection, and brain swelling. The commenter further stated they do not support a consideration of the reassignment of the ICD-10-PCS procedure codes describing LITT, currently assigned to MS-DRGs 025

through 027, based on the diagnosis being treated. The commenter stated that the LITT procedure requires the same steps, time, and clinical resources when performed for brain cancer or epilepsy. In the commenter's view, differences in the disease causing the tumors or lesions do not affect the resources used for performing the procedure or the post-operative care for the patient. Lastly, the commenter stated they support the current structure of MS-DRGs 023 and 024 based on an acute complicated principal diagnosis, or chemotherapy implant, or epilepsy with neurostimulator. The commenter stated these diagnoses represent severe complex conditions that require immediate and urgent intervention.

Another commenter stated that the current logic for MS-DRGs 023 through 027 is sufficient and supports the clinical and resource similarities of the procedures reflected in these MS-DRGs. The commenter performed its own analysis and stated they found that realignment based on surgical approach or root operation could create significant new inequities. The commenter recommended that CMS maintain the current logic for MS-DRGs 025 through 027, as making changes could be disruptive to hospitals and create challenges for Medicare beneficiary access to life-saving technologies. The commenter stated they strongly believe that maintaining the current structure provides payment stability and integrity of these procedures over time.

In this final rule, we summarize the additional comments we received in response to this discussion in the FY 2025 IPPS/LTCH PPS proposed rule.

Comment: Commenters stated they support CMS' decision to continue to monitor the case logic for MS-DRGs 023 through 027 to determine if future changes are warranted. A commenter specifically stated in their review, they were unable to detect misalignment in patterns of complexity or resource intensity within MS-DRGs 023 through 027 and noted the procedures are well-established. Another commenter stated they appreciate CMS reviewing the craniotomy MS-DRGs and stated that CMS should ensure that MS-DRG assignments fully reflect all costs for very resource-intensive craniotomy procedures. This commenter also recommended that CMS expand its review of the craniotomy MS-DRGs to include MS-DRGs 020, 021, and 022 (Intracranial Vascular Procedures with Principal Diagnosis Hemorrhage with MCC, with CC, and without CC/MCC, respectively) and stated that the payments for these MS-DRGs have been

highly variable in recent years, notably being proposed to reduce by more than 7 percent for FY 2025, and may fail to adequately reflect the resources associated with care for patients with diagnoses such as aneurysms. The commenter encouraged CMS to examine these MS-DRGs with the goal of providing more stable payments for hospitals that furnish intensive craniotomy procedures and to mitigate the financial impact of large payment declines. Several other commenters expressed caution, however, and stated that CMS should allow providers more time to identify which diagnoses support this procedure code and as such do not agree with moving it to MS-DRG 021.

Response: We thank the commenters and appreciate the commenters' support and feedback. CMS will continue to monitor and analyze the claims data with respect to MS-DRGs 023 through 027 and we will take the recommendation to also review MS-DRGs 020, 021, and 022 into consideration as we further examine the logic for case assignment to the craniotomy MS-DRGs. We note that we did not propose or finalize a change to the GROUPER logic of MS-DRGs 020, 021, and 022 in FY 2024 IPPS/LTCH PPS rulemaking, nor did we propose a change to the GROUPER logic of these MS-DRGs in the FY 2025 IPPS/LTCH PPS proposed rule, therefore, the difference in the relative weights reflected in Table 5—List of Medicare Severity Diagnosis Related Groups (MS-DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay associated with FY 2025 proposed rule for MS-DRGs 020, 021, and 022 can be attributed to changes in the underlying data.

In response to the comments suggesting that CMS allow more time, it is unclear which diagnosis code and which procedure code the commenters were referring to as CMS did not propose to move any codes to MS-DRG 021 in the FY 2025 IPPS/LTCH PPS proposed rule, and the commenters did not specifically identify any ICD-10 codes for CMS to consider.

CMS appreciates the comments submitted in response to the request for feedback in the FY 2024 IPPS/LTCH PPS final rule, as well as the comments submitted in response to the discussion in the FY 2025 IPPS/LTCH PPS proposed rule. As we continue analysis of the claims data with respect to MS-DRGs 023 through 027, we continue to seek public comments and feedback on other factors that should be considered in the potential restructuring of these MS-DRGs. As stated in prior

rulemaking, we recognize the logic for MS-DRGs 023 through 027 has grown more complex over the years and believe there is opportunity for further refinement. We refer the reader to the ICD-10 MS-DRG Definitions Manual, Version 42 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic for MS-DRGs 023 through 027 for FY 2025. Feedback and other suggestions may continue to be directed to MEARIS™, discussed in section I.C.1.b. of the preamble of this final rule at: <https://mearis.cms.gov/public/home>.

b. Intraoperative Radiation Therapy (IORT)

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35953 through 35956), we received a request to add ICD-10-PCS procedure codes D0Y0CZZ (Intraoperative radiation therapy (IORT) of brain) and D0Y1CZZ (Intraoperative radiation therapy (IORT) of brain stem), to the Chemotherapy Implant logic list in MS-DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator). According to the requestor, intraoperative radiation therapy (IORT) for the brain is always performed as part of the surgery to remove a brain tumor during the same operative episode. The requestor stated that once maximal safe tumor resection is achieved, the tumor cavity is examined for active egress of cerebrospinal fluid or bleeding. Next, intraoperative measurements are made using neuro-navigation or intraoperative imaging such as magnetic resonance imaging (MRI) or computed tomography (CT) to ensure safe distance to organs or tissues at risk, aid in appropriate dose calculation, and selection of proper applicator size. The applicator is then implanted into the tumor cavity and the radiation dose is delivered. The requestor stated that delivery time can be up to 40 minutes and upon completion of the treatment, the source is removed, and the cavity is re-inspected for active egress of cerebrospinal fluid and bleeding.

As discussed in the proposed rule, the requestor stated that currently the ICD-10-PCS procedure codes for excision of a brain tumor, 00B00ZZ (Excision of

brain, open approach) and 00B70ZZ (Excision of cerebral hemisphere, open approach) map to both sets of craniotomy MS-DRGs. Specifically, MS-DRG 023 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator) and MS-DRG 024 (Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC), and MS-DRGs 025, 026, and 027 (Craniotomy and Endovascular Intracranial Procedures with MCC, with CC, and without CC/MCC, respectively). However, the requestor also stated that the procedure codes describing IORT (D0Y0CZZ or D0Y1CZZ) are not listed in the GROUPER logic and do not affect MS-DRG assignment. Therefore, cases reporting a procedure code describing excision of a brain tumor (00B00ZZ or 00B70ZZ) with IORT currently map to MS-DRGs 025, 026, and 027. The requestor suggested that cases reporting a procedure code describing excision of a brain tumor (00B00ZZ or 00B70ZZ) with IORT (D0Y0CZZ or D0Y1CZZ) should map to MS-DRG 023 because of the higher costs associated with the addition of IORT to the excision of brain tumor surgery. According to the requestor, MS-DRG 023 includes complicated craniotomy cases involving the placement of radiological sources and chemotherapy implants. The requestor stated that because IORT involves a full course of radiation therapy delivered directly to the tumor bed via an applicator that is implanted into the tumor cavity during the same surgical session and is clinically similar to two other procedures listed in the Chemotherapy Implant logic list, it should also be included in the Chemotherapy Implant logic list. Specifically, the requestor stated procedure code 00H004Z (Insertion of radioactive element, cesium-131 collagen implant into brain, open approach) and procedure code 3E0Q305 (Introduction of other antineoplastic into cranial cavity and brain, percutaneous approach) also involve the delivery of either radiation or chemotherapy directly after tumor resection. According to the requestor, the resources involved in placing the delivery device are similar for all three procedures and the distinction is that the procedures described by codes 00H004Z and 3E0Q305 involve the insertion of devices that deliver radiation or chemotherapy over a period

of time, whereas IORT delivers the entire dose of radiation during the operative session. As such, the requestor asserted that IORT is clinically aligned with the other procedures from a therapeutic and resource utilization perspective.

We noted in the proposed rule that the requestor performed its own analysis using the FY 2022 MedPAR file that was made available in association with the FY 2024 IPPS/LTCH PPS final rule and stated it found fewer than 11 cases reporting IORT in MS-DRGs 025, 026, and 027, with the majority of those cases mapping to MS-DRG 025. According to the requestor, the volume of claims reporting IORT is anticipated to increase as appropriate use of the technology is adopted.

We also noted in the proposed rule that the requestor is correct that currently, the logic for case assignment to MS-DRG 023 includes a Chemotherapy Implant logic list and the procedure codes that identify IORT (D0Y0CZZ and D0Y1CZZ) are not listed in the GROUPER logic and do not affect MS-DRG assignment as the procedures are designated as non-O.R. procedures. The requestor is also correct that cases reporting a procedure code describing excision of a brain tumor (00B00ZZ or 00B70ZZ) with IORT currently map to MS-DRGs 025, 026, and 027. We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic.

As discussed in the proposed rule, we analyzed claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRGs 023, 024, 025, 026, and 027 and for cases reporting excision of brain tumor and IORT. We identified claims reporting excision of brain tumor with procedure code 00B00ZZ or 00B70ZZ and identified claims reporting IORT with procedure code D0Y0CZZ or D0Y1CZZ. The findings from our analysis are shown in the following table. We note that there were no cases found to report IORT of brain (D0Y0CZZ) or brain stem (D0Y1CZZ) with excision of brain (00B00ZZ) or excision of cerebral hemisphere (00B70ZZ).

BILLING CODE 4120-01-P

MS-DRG		Number of cases	Average Length of Stay	Average Costs
23	All cases	11,439	10.3	\$48,762
	Cases reporting excision of brain (00B00ZZ)	98	11.6	\$61,938
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	242	10.7	\$58,498
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0.0	\$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
All other cases	11,099	10.3	\$48,433	
24	All cases	4,641	5.1	\$33,784
	Cases reporting excision of brain (00B00ZZ)	6	5.7	\$32,308
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	7	9.3	\$34,707
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0.0	\$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
All other cases	4,628	5.1	\$33,785	
25	All cases	21,118	8.8	\$37,822
	Cases reporting excision of brain (00B00ZZ)	1,676	8.8	\$38,410
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	3,968	7.9	\$33,904
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0.0	\$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0

26	All cases	5,882	4.5	\$27,231
	Cases reporting excision of brain (00B00ZZ)	188	4.8	\$26,093
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	418	4.2	\$23,867
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0	\$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
All other cases	5,276	4.5	\$27,538	
27	All cases	7,232	2	\$22,136
	Cases reporting excision of brain (00B00ZZ)	161	2.9	\$20,695
	Cases reporting excision of cerebral hemisphere (00B70ZZ)	323	2.5	\$21,039
	Cases reporting excision of brain (00B00ZZ) with IORT of brain (D0Y0CZZ)	0	0	\$0
	Cases reporting excision of brain (00B00ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain (D0Y0CZZ)	0	0	\$0
	Cases reporting excision of cerebral hemisphere (00B70ZZ) with IORT of brain stem (D0Y1CZZ)	0	0	\$0
All other cases	6,748	2.0	\$22,223	

BILLING CODE 4120-01-C

As the data show, there were no cases found to report the use of IORT in the

performance of a brain tumor excision; therefore, we are unable to evaluate whether the use of IORT directly

impacts resource utilization. For this reason, we proposed to maintain the current structure of MS-DRGs 023, 024,

025, 026, and 027 for FY 2025. We stated that we would continue to monitor the claims data in consideration of any future modifications to the MS-DRGs for which IORT may be reported.

Comment: Commenters supported the proposal to maintain the current structure of MS-DRGs 023, 024, 025, 026, and 027 for FY 2025.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current structure of MS-DRGs 023, 024, 025, 026, and 027 for FY 2025.

4. MDC 05 (Diseases and Disorders of the Circulatory System)

a. Concomitant Left Atrial Appendage Closure and Cardiac Ablation

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35956 through 35959), we received a request to create a new MS-DRG to better accommodate the costs of concomitant left atrial appendage closure and cardiac ablation for atrial fibrillation in MDC 05 (Diseases and Disorders of the Circulatory System). Atrial fibrillation (AF) is an irregular and often rapid heart rate that occurs when the two upper chambers of the heart experience chaotic electrical signals. AF presents as either paroxysmal (lasting < 7 days), persistent (lasting > 7 day, but less than 1 year), or long standing persistent (chronic)(lasting > 1 year) based on time duration and can increase the risk for stroke, heart failure, and mortality. Management of AF has two primary goals: optimizing cardiac output through rhythm or rate control and decreasing the risk of cerebral and

systemic thromboembolism. Among patients with AF, thrombus in the left atrial appendage (LAA) is a primary source for thromboembolism. Left Atrial Appendage Closure (LAAC) is a surgical or minimally invasive procedure to seal off the LAA to reduce the risk of embolic stroke.

According to the requestor, the manufacturer of the WATCHMAN™ Left Atrial Appendage Closure (LAAC) device, patients who are indicated for a LAAC device can also have symptomatic AF. For these patients, performing a cardiac ablation and LAAC procedure at the same time is ideal. Cardiac ablation is a procedure that works by burning or freezing tissue on the inside of the heart to disrupt faulty electrical signals causing the arrhythmia, which can help the heart maintain a normal heart rhythm. In the proposed rule, we noted the requestor highlighted a recent study (Piccini et al. Left atrial appendage occlusion with the WATCHMAN™ FLX and concomitant catheter ablation procedures. Heart Rhythm Society Meeting 2023, May 19, 2023; New Orleans, LA.). According to the requestor, the results of this study indicate that when LAAC is performed concomitantly with cardiac ablation, the outcomes are comparable to patients who have undergone these procedures separately.

As discussed in the proposed rule, the requestor identified the following potential procedure code combination that would comprise a concomitant left atrial appendage closure and cardiac ablation procedure: ICD-10-PCS procedure code 02L73DK (Occlusion of left atrial appendage with intraluminal device, percutaneous approach), that

identifies the WATCHMAN™ device, in combination with 02583ZZ (Destruction of conduction mechanism, percutaneous approach). We noted in the proposed rule that the requestor performed its own analysis of this procedure code combination and stated that it found the average costs of cases reporting concomitant left atrial appendage closure and cardiac ablation procedures were consistently higher compared to the average costs of other cases within their respective MS-DRG, which it asserted could limit beneficiary access to these procedures. The requestor asserted that improved Medicare payment for providers who perform these procedures concomitantly would help Medicare patients to gain better access to these lifesaving and quality-improving services and decrease the risk of future readmissions and the need for future procedures.

We reviewed this request and in the proposed rule noted concerns regarding making proposed MS-DRG changes based on a specific, single technology (the WATCHMAN™ Left Atrial Appendage Closure (LAAC) device) identified by only one unique procedure code versus considering proposed changes based on a group of related procedure codes that can be reported to describe the same type or class of technology, which is more consistent with the intent of the MS-DRGs. Therefore, in reviewing this request, in the proposed rule we stated we identified eight additional ICD-10-PCS procedure codes that describe LAAC procedures and included these codes in our analysis. The nine codes we identified are listed in the following table.

ICD-10-PCS Code	Description
02L70CK	Occlusion of left atrial appendage with extraluminal device, open approach
02L70DK	Occlusion of left atrial appendage with intraluminal device, open approach
02L70ZK	Occlusion of left atrial appendage, open approach
02L73CK	Occlusion of left atrial appendage with extraluminal device, percutaneous approach
02L73DK	Occlusion of left atrial Appendage with intraluminal device, percutaneous approach
02L73ZK	Occlusion of left atrial appendage, percutaneous approach
02L74CK	Occlusion of left atrial appendage with extraluminal device, percutaneous endoscopic approach
02L74DK	Occlusion of left atrial appendage with intraluminal device, percutaneous endoscopic approach
02L74ZK	Occlusion of left atrial appendage, percutaneous endoscopic approach

Similarly, as noted previously, the requestor identified code 02583ZZ (Destruction of conduction mechanism, percutaneous approach) to describe cardiac ablation. In our review of the

ICD-10-PCS classification, in the proposed rule we stated we identified 26 additional ICD-10-PCS codes that describe cardiac ablation that we also examined. The 27 codes we included in

our analysis are listed in the following table.

ICD-10-PCS Code	Description
02540ZZ	Destruction of coronary vein, open approach
02543ZZ	Destruction of coronary vein, percutaneous approach
02544ZZ	Destruction of coronary vein, percutaneous endoscopic approach
02550ZZ	Destruction of atrial septum, open approach
02553ZZ	Destruction of atrial septum, percutaneous approach
02554ZZ	Destruction of atrial septum, percutaneous endoscopic approach
02560ZZ	Destruction of right atrium, open approach
02563ZZ	Destruction of right atrium, percutaneous approach
02564ZZ	Destruction of right atrium, percutaneous endoscopic approach
02570ZK	Destruction of left atrial appendage, open approach
02570ZZ	Destruction of left atrium, open approach
02573ZK	Destruction of left atrial appendage, percutaneous approach
02573ZZ	Destruction of left atrium, percutaneous approach
02574ZK	Destruction of left atrial appendage, percutaneous endoscopic approach
02574ZZ	Destruction of left atrium, percutaneous endoscopic approach
02580ZZ	Destruction of conduction mechanism, open approach
02583ZZ	Destruction of conduction mechanism, percutaneous approach
02584ZZ	Destruction of conduction mechanism, percutaneous endoscopic approach
02590ZZ	Destruction of chordae tendineae, open approach
02593ZZ	Destruction of chordae tendineae, percutaneous approach
02594ZZ	Destruction of chordae tendineae, percutaneous endoscopic approach
025S0ZZ	Destruction of right pulmonary vein, open approach
025S3ZZ	Destruction of right pulmonary vein, percutaneous approach
025S4ZZ	Destruction of right pulmonary vein, percutaneous endoscopic approach
025T0ZZ	Destruction of left pulmonary vein, open approach
025T3ZZ	Destruction of left pulmonary vein, percutaneous approach
025T4ZZ	Destruction of left pulmonary vein, percutaneous endoscopic approach

In the ICD-10 MS-DRGs Definitions Manual Version 41.1, for concomitant left atrial appendage closure and cardiac ablation procedures, the GROUPER logic assigns MS-DRGs 273 and 274 (Percutaneous and Other Intracardiac Procedures with and without MCC,

respectively) depending on the presence of any additional MCC secondary diagnoses. We stated in the proposed rule that we examined claims data from the September 2023 update of the FY 2023 MedPAR file for all cases in MS-DRGs 273 and 274 and compared the

results to cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation. Our findings are shown in the following table.

MS-DRGs 273 and 274: All Cases and Cases Reporting Concomitant Left Atrial Appendage Closure and Cardiac Ablation				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
273	All cases	7,250	5.4	\$35,197
	Cases with a procedure code LAAC and a procedure code for cardiac ablation	80	5.8	\$70,447
274	All Cases	47,801	1.4	\$29,209
	Cases with a procedure code LAAC and a procedure code for cardiac ablation	781	1.5	\$66,277

As shown in the table, in MS-DRG 273, we identified a total of 7,250 cases with an average length of stay of 5.4 days and average costs of \$35,197. Of those 7,250 cases, there were 80 cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 273 (\$70,447 compared to \$35,197) and a slightly longer average length of stay (5.8 days compared to 5.4 days). In MS-DRG 274, we identified a total of 47,801 cases with an average

length of stay of 1.4 days and average costs of \$29,209. Of those 47,801 cases, there were 781 cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 274 (\$66,277 compared to \$29,209) and a slightly longer average length of stay (1.5 days compared to 1.4 days).

In the proposed rule we stated we reviewed these data and noted, clinically, the management of AF by performing concomitant left atrial

appendage closure and cardiac ablation can improve symptoms, prevent stroke, and reduce the risk of bleeding compared with oral anticoagulants. We stated the data analysis clearly shows that cases reporting concomitant left atrial appendage closure and cardiac ablation procedures have higher average costs and slightly longer lengths of stay compared to all the cases in their assigned MS-DRG. For these reasons, we proposed to create a new MS-DRG for cases reporting a LAAC procedure and a cardiac ablation procedure.

As discussed in the proposed rule, to compare and analyze the impact of our suggested modifications, we ran a simulation using the claims data from the September 2023 update of the FY

2023 MedPAR file. The following table illustrates our findings for all 1,723 cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation.

We stated we believed the resulting proposed MS-DRG assignment is more clinically homogeneous, coherent and better reflects hospital resource use.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Concomitant Left Atrial Appendage Closure and Cardiac Ablation	1,723	3.1	\$54,629

We applied the criteria to create subgroups in a base MS-DRG as discussed in section II.C.1.b. of the FY 2025 IPPS/LTCH PPS proposed rule. As

shown in the table that follows, a three-way split of the proposed new MS-DRGs failed the criterion that there be at least 500 cases for each subgroup due

to low volume. Specifically, for the “with MCC” split, there were only 268 cases in the subgroup.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	268	6.9	\$60,667
With CC	772	2.9	\$47,479
Without CC/MCC	683	1.7	\$60,340

We noted that we then applied the criteria for a two-way split for the “with CC/MCC” and “without CC/MCC”

subgroups and found that the criterion that there be at least a 20% difference in average cost between subgroups

could not be met. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	1,040	3.9	\$50,877
Without CC/MCC	683	1.7	\$60,340

We also applied the criteria for a two-way split for the “with MCC” and “without MCC” subgroups and found that the criterion that there be at least

500 or more cases in each subgroup similarly could not be met. The criterion that there be at least a 20% difference in average costs between the subgroups

also was not met. The following table illustrates our findings.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
With MCC	268	6.9	\$60,667
Without MCC	1,455	2.3	\$53,516

Therefore, for FY 2025, we did not propose to subdivide the proposed new MS-DRG for cases reporting procedure codes describing concomitant left atrial appendage closure and cardiac ablation into severity levels.

In summary, for FY 2025, taking into consideration that it clinically requires greater resources to perform concomitant left atrial appendage closure and cardiac ablation procedures, we proposed to create a new base MS-DRG for cases reporting a LAAC procedure and a cardiac ablation procedure in MDC 05. The proposed new MS-DRG is proposed new MS-DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation). We also proposed to include the nine ICD-10-PCS procedure codes that describe LAAC procedures and the 27 ICD-10-PCS procedure codes that

describe cardiac ablation listed previously in the logic for assignment of cases reporting a LAAC procedure and a cardiac ablation procedure for the proposed new MS-DRG.

Comment: Many commenters expressed support for the proposal to create new base MS-DRG 317 for cases reporting a LAAC procedure and a cardiac ablation procedure in MDC 05. Commenters stated the creation of MS-DRG 317 is timely and will ensure more patients have access to needed care during a single hospital stay, reducing the need for additional admissions. Other commenters agreed that some patients with AF undergoing ablation are also candidates for LAAC procedures and stated combining the procedures is feasible, efficacious, and simple to employ. Several commenters stated that the proposal is a significant

step forward to support better disease management for some of the most comorbid patients and likely will reduce downstream healthcare costs. A few commenters specifically stated they appreciate CMS’ continued evaluation and acknowledgement of the increased resources required for patients requiring multiple procedures during a single inpatient hospitalization. While supporting the proposal to create MS-DRG 317, some commenters suggested that CMS devise a broader, more inclusive, supplemental payment mechanism to facilitate incremental payment when two major procedures are performed during the same hospital admission.

Response: We appreciate the commenters’ support and the feedback regarding payment when two major

procedures are performed during the same hospital admission.

Comment: Another commenter recommended that CMS delay creation of proposed new MS-DRG 317 for concomitant LAAC and cardiac ablation. While expressing support for proposals that will improve patient outcomes and increase efficiencies in the health care system, the commenter stated they believe it is premature for CMS to develop a new MS-DRG at this time. The commenter expressed concern that the evidence to support the safety, effectiveness, and workflow of these two procedures when performed concomitantly has not been well established and suggested that the results of two ongoing randomized control trials (RCTs) focusing on LAAC and ablation should be considered before CMS moves forward to develop a new MS-DRG.

Response: We thank the commenter for their feedback. In response to the suggestion that CMS delay implementation of proposed new MS-DRG 317 for concomitant LAAC and cardiac ablation, we reviewed the commenters' concern and do not agree that a delay is necessary or appropriate. As stated earlier, the data analysis clearly shows that cases reporting concomitant LAAC and cardiac ablation procedures have higher average costs and slightly longer lengths of stay compared to all the cases in their assigned MS-DRG. For these reasons, we proposed to create a new MS-DRG for cases reporting a LAAC procedure and a cardiac ablation procedure. We will continue to monitor the claims data and perform additional analysis if any evidence is presented to us regarding the clinical efficacy of concomitant left atrial appendage closure and cardiac ablation procedures. We would address any modifications to the logic in future rulemaking.

Comment: Other commenters noted a difference in case volume between the table CMS stated reflected the cases reporting procedure codes describing concomitant LAAC and cardiac ablation in MS-DRGs 273 and 274 and the table which CMS stated illustrated the findings for all cases reporting procedure codes describing concomitant LAAC and cardiac ablation found in the claims data from the September 2023 update of the FY 2023 MedPAR file. Specifically, the commenters noted that 861 cases reporting procedure codes describing concomitant LAAC and cardiac ablation were found in MS-DRGs 273 and 274, while 1,723 cases reporting procedure codes describing

concomitant LAAC and cardiac ablation were found in the simulation using the claims data from the September 2023 update of the FY 2023 MedPAR file. The commenters stated it is unclear from the tables and data associated with the proposed rule where the additional 862 cases are currently assigned. These commenters performed their own analysis of the supplemental After Outliers Removed (AOR)/Before Outliers Removed (BOR) file available in association with the FY 2025 IPPS/LTCH PPS proposed rule on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> and recommended that CMS consider that cases reporting procedure codes describing concomitant LAAC and cardiac ablation group to other MS-DRGs, and should be incorporated into the analysis based on volume differences they noted in the AOR/BOR file.

Response: We thank the commenters for their feedback.

In response to suggestion that CMS provide insight regarding the difference in case volume between the table which we stated reflects our examination of the claims data from the September 2023 update of the FY 2023 MedPAR file for all cases in MS-DRGs 273 and 274, compared to the results for cases reporting procedure codes describing concomitant LAAC and cardiac ablation in those MS-DRGs, and the table which we stated illustrated our findings for all 1,723 cases reporting procedure codes describing concomitant LAAC and cardiac ablation, we note that as stated in the proposed rule, for concomitant LAAC and cardiac ablation procedures, the GROUPER logic assigns MS-DRGs 273 or 274 (Percutaneous and Other Intracardiac Procedures with or without MCC, respectively) depending on the presence of any additional MCC secondary diagnoses. Therefore, we focused our examination of claims data from the September 2023 update of the FY 2023 MedPAR file for all cases in MS-DRGs 273 and 274 and compared the results to cases reporting procedure codes describing concomitant LAAC and cardiac ablation.

While not explicitly stated, assignment to MS-DRGs 273 or 274 is also dependent on the absence of other procedure codes that could affect MS-DRG assignment on the claim. If other procedure codes that could affect MS-DRG assignment are also reported on the claim along with procedure codes describing concomitant left atrial appendage closure and ablation, the

MS-DRG assignment can vary depending on the procedure codes reported.

As discussed in section II.C.14. of the preamble of the proposed rule and this final rule, in our proposal to revise the surgical hierarchy for the MS-DRGs in MDC 05, we proposed to sequence proposed new MS-DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation) above MS-DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC) and below MS-DRGs 231, 232, 233, 234, 235, and 236 (Coronary Bypass with or without PTCA, with or without Cardiac Catheterization or Open Ablation, with and without MCC, respectively). Under this proposal, if procedure codes describing concomitant LAAC and cardiac ablation are reported, the GROUPER logic would assign new MS-DRG 317 in the absence of other procedure codes that could affect MS-DRG assignment to an MS-DRG that would be sequenced higher in the surgical hierarchy than MS-DRG 317 in MDC 05. The table which we stated illustrated our findings for all 1,723 cases reporting procedure codes describing concomitant LAAC and cardiac ablation includes cases that are anticipated to potentially shift or be redistributed as a result of the proposal to 1) create a new base MS-DRG 317 and 2) the proposal to sequence the new MS-DRG above MS-DRG 275 and below MS-DRGs 231, 232, 233, 234, 235, and 236 in MDC 05.

To illustrate these shifts for this final rule, we again analyzed the September 2023 update of the FY 2023 MedPAR file for cases reporting procedure codes describing concomitant LAAC and cardiac ablation. We then examined the redistribution of cases that is anticipated to occur as a result of the proposal to create a new base MS-DRG 317 by processing the claims data from the September 2023 update of the FY 2023 MedPAR file through the ICD-10 MS-DRG GROUPER Version 41 and then processing the same claims data through the ICD-10 MS-DRG GROUPER Version 42 for comparison. The number of cases from this comparison that result in different MS-DRG assignments is the number of the cases that are anticipated to potentially shift or be redistributed. Our findings are shown in the following table.

BILLING CODE 4120-01-P

Version 41 MS-DRG	Description	Version 42 MS-DRG	Description	Counts
228	Other cardiothoracic procedures with MCC	317	Concomitant left atrial appendage closure and cardiac ablation	166
229	Other cardiothoracic procedures without MCC			627
242	Permanent cardiac pacemaker implant with MCC			9
243	Permanent cardiac pacemaker implant with CC			12
244	Permanent cardiac pacemaker implant without CC/MCC			7
245	AICD generator procedures			2
267	Endovascular cardiac valve replacement and supplement procedures without MCC			3
268	Aortic and heart assist procedures except pulsation balloon with MCC			3
269	Aortic and heart assist procedures except pulsation balloon without MCC			3
270	Other major cardiovascular procedures with MCC			5
271	Other major cardiovascular procedures with CC			10
272	Other major cardiovascular procedures without CC/MCC			7
273	Percutaneous and other intracardiac procedures with MCC			80
274	Percutaneous and other intracardiac procedures without MCC			780
275	Cardiac defibrillator implant with cardiac catheterization and MCC			2
276	Cardiac defibrillator implant with MCC			2
277	Cardiac defibrillator implant without MCC			3
319	Other endovascular cardiac valve procedures with MCC			1
320	Other endovascular cardiac valve procedures without MCC			1

As stated in the proposed rule and reflected in the previous table, we found 1,723 cases reporting procedure codes describing concomitant LAAC and cardiac ablation that are anticipated to potentially shift or be redistributed into MS-DRG 317. The largest number of

cases moving into new MS-DRG 317 are moving out of MS-DRGs 274, 229, 228 and 273. In response to the suggestion that CMS incorporate other MS-DRGs into our analysis, we examined the claims data from the September 2023 update of the FY 2023 MedPAR file to

identify the average length of stay and average costs for all cases in MS-DRGs 228, 229, 242, 243, 244, 245, 267, 268, 269, 270, 271, 272, 273, 274, 275, 276, 277, 319, and 320. Our findings are shown in the following table.

MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
228	Other cardiothoracic procedures with MCC	4,391	8.7	\$44,565
229	Other cardiothoracic procedures without MCC	5,712	3.3	\$28,987
242	Permanent cardiac pacemaker implant with MCC	14,716	6.5	\$29,485
243	Permanent cardiac pacemaker implant with CC	18,738	3.5	\$20,153
244	Permanent cardiac pacemaker implant without CC/MCC	9,137	2.5	\$16,294
245	AICD generator procedures	745	6.3	\$44,228
267	Endovascular cardiac valve replacement and supplement procedures without MCC	36,665	1.5	\$43,058
268	Aortic and heart assist procedures except pulsation balloon with MCC	2,598	9	\$59,383
269	Aortic and heart assist procedures except pulsation balloon without MCC	10,693	2	\$38,120
270	Other major cardiovascular procedures with MCC	15,594	9.4	\$44,343
271	Other major cardiovascular procedures with CC	11,559	5.2	\$30,837
272	Other major cardiovascular procedures without CC/MCC	3,706	2.3	\$22,884
273	Percutaneous and other intracardiac procedures with MCC	7,250	5.4	\$35,197
274	Percutaneous and other intracardiac procedures without MCC	47,801	1.4	\$29,209
275	Cardiac defibrillator implant with cardiac catheterization and MCC	3,358	10.3	\$63,181
276	Cardiac defibrillator implant with MCC	3,264	8.2	\$54,993
277	Cardiac defibrillator implant without MCC	3,840	4.2	\$42,111
319	Other endovascular cardiac valve procedures with MCC	1,033	10.1	\$38,581
320	Other endovascular cardiac valve procedures without MCC	385	3.2	\$20,914

BILLING CODE 4120-01-C

In reviewing the data analysis performed, the 1,723 cases anticipated to potentially shift or be redistributed into MS-DRG 317 have higher average costs when compared to all the cases in MS-DRGs 228, 229, 273, and 274 (\$54,629 versus \$44,565, \$28,987, \$35,197, and \$29,209, respectively). The 1,723 cases anticipated to potentially shift or be redistributed into MS-DRG 317 have an average length of stay that is shorter than the average length of stay for all the cases in MS-DRGs 228, 229, and 273 (3.1 days versus 8.7 days, 3.3 days, and 5.4 days, respectively) and a longer average length of stay when compared to all the cases in MS-DRG 274 (3.1 days versus 1.4 days). We note that the 1,723 cases anticipated to potentially shift or be redistributed into MS-DRG 317 have lower average costs when compared to all the cases in MS-DRGs 275, 268, and 276 (\$54,629 versus \$63,181, \$59,383, and \$54,993, respectively), however only seven cases reported procedure codes describing concomitant left atrial appendage closure and cardiac ablation in these MS-DRGs. We also note that the 1,723 cases anticipated to potentially shift or be redistributed into MS-DRG 317 have a longer average length of stay when compared to all the cases in MS-DRGs

244, 272, 269, and 267 (3.1 days versus 2.5 days, 2.3 days, 2 days, and 1.5 days, respectively), however only 20 cases reported procedure codes describing concomitant left atrial appendage closure and cardiac ablation in these MS-DRGs. We reviewed these data and believed the proposal to create new base MS-DRG 317 for cases reporting procedure codes describing concomitant LAAC and cardiac ablation in MDC 05 and the proposed revision to the surgical hierarchy leads to a grouping that is more coherent and better reflects the clinical severity and resource use involved in these cases.

Comment: In reviewing the list of nine ICD-10-PCS procedure codes that describe LAAC procedures that were proposed to be included in the logic for assignment of cases reporting procedure codes describing concomitant LAAC and cardiac ablation for the proposed new MS-DRG, a commenter noted these nine codes are designated as non-O.R. procedures affecting the MS-DRG. The commenter also noted that codes 02570ZK (Destruction of left atrial appendage, open approach), 02573ZK (Destruction of left atrial appendage, percutaneous approach), and 02574ZK (Destruction of left atrial appendage, percutaneous endoscopic approach) included in the list of 27 ICD-10-PCS

procedure codes that describe cardiac ablation proposed to be included in the logic for assignment to the proposed new MS-DRG, are also designated as non-O.R. procedures affecting the MS-DRG. The commenter stated that LAAC procedures and cardiac ablation procedures performed by an open or percutaneous endoscopic approach should be designated as operating room procedures to account for the resource utilization required to perform them as these procedures require the use of specialized equipment or devices.

Response: We thank the commenter for their feedback.

We agree that in the ICD-10 MS-DRGs Definitions Manual Version 41.1, the nine ICD-10-PCS procedure codes that describe LAAC procedures are recognized as non-O.R. procedures affecting the MS-DRGs to which they are assigned. We refer the reader to Section II.C.10 in the proposed rule and this final rule for the complete discussion of the designations each ICD-10-PCS code has under the IPPS MS-DRGs that determine whether and in what way the presence of that procedure code on a claim impacts the MS-DRG assignment. In the FY 2022 IPPS/LTCH PPS final rule (86 FR 44898 through 44899) we reviewed these nine ICD-10-PCS procedure codes that

describe LAAC procedures and stated we believe the current designation of LAAC procedures as non-O.R. procedures that affect the assignment for MS-DRGs 273 and 274 is clinically appropriate to account for the subset of patients undergoing left atrial appendage closure specifically. We further stated that we believed that circumstances in which a patient is admitted for a principal diagnosis outside of MDC 05 and a left atrial appendage closure is performed as the only surgical procedure in the same

admission are infrequent, and if they do occur, the LAAC procedure would not be a significant contributing factor in the increased intensity of resources needed for facilities to manage these complex cases.

We continue to believe that circumstances in which a patient is admitted for a principal diagnosis outside of MDC 05 and LAAC is performed as the only surgical procedure in the same admission are infrequent, and that the current designation of LAAC procedures as non-

O.R. procedures that affect the assignment for MS-DRGs 273 and 274, and now MS-DRG 317, is clinically appropriate to account for the subset of patients undergoing left atrial appendage closure specifically.

Similarly, we agree that in the ICD-10 MS-DRGs Definitions Manual Version 41.1, procedure codes 02570ZK, 02573ZK, and 02574ZK are recognized as non-O.R. procedures affecting the MS-DRGs as reflected in the following table, specifically.

ICD-10-PCS Code	Description	MDC	MS-DRG
02570ZK	Destruction of left atrial appendage, open approach	05	212
		05	233-234
		05	250-251
02573ZK	Destruction of left atrial appendage, percutaneous approach	05	273-274
02574ZK	Destruction of left atrial appendage, percutaneous endoscopic approach	05	273-274

We believe that circumstances in which a patient is admitted for a principal diagnosis outside of MDC 05 and a cardiac ablation is performed as the only surgical procedure in the same admission are infrequent, and that the current designation of 02570ZK, 02573ZK, and 02574ZK as non-O.R. procedures that affect the assignment for the MS-DRGs reflected in the previous table, and now MS-DRG 317, is clinically appropriate to account for the subset of patients undergoing cardiac ablation specifically.

Comment: A commenter suggested that ICD-10-PCS codes 02590ZZ (Destruction of chordae tendineae, open approach), 02593ZZ (Destruction of chordae tendineae, percutaneous approach), and 02594ZZ (Destruction of chordae tendineae, percutaneous endoscopic approach) describing ablation of the chordae tendineae be removed from the list of cardiac ablation procedures for MS-DRG 317 as the chordae tendineae would not be ablated in relation to cardiac ablation procedures, and instead they would be ablated in relation to cardiac valve repair or replacement procedures.

Response: We appreciate the feedback from the commenter.

As noted previously, atrial fibrillation (AF) is an irregular and often rapid heart rate that occurs when the two upper chambers of the heart experience chaotic electrical signals. Cardiac ablation is a procedure that is performed to correct a disturbance in the conduction system of the heart by damaging small areas of tissue using radiofrequency energy or freezing so that the damaged tissue can no longer generate or conduct electrical impulses.

We agree that ablation of the chordae tendineae, which are the strong, fibrous connections between the valve leaflets and the papillary muscles, is not performed to stop abnormal electrical pathways as the cardiac conduction system does not pass through the chordae tendineae.

We examined claims data from the September 2023 update of the FY 2023 MedPAR file to evaluate the frequency with which ablation of the chordae tendineae is reported with left atrial appendage closure, and found one case reporting procedure codes 02590ZZ (Destruction of chordae tendineae, open approach) and 02L70ZK (Occlusion of left atrial appendage, open approach) in MS-DRG 219 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC) with a length of stay of 7 days and costs of \$28,989.

We note that assignment of this one case to MS-DRG 219 indicates that other procedure code(s) assigned to the GROUPER logic of MS-DRG 219 were reported in addition to procedure codes 02590ZZ and 02L70ZK to drive assignment to this MS-DRG. We reviewed these data and because our analysis identified only one case reporting ablation of the chordae tendineae and left atrial appendage closure, and recognizing that ablation of the chordae tendineae is not performed to stop abnormal electrical pathways, we agree that procedure codes 02590ZZ, 02593ZZ, and 02594ZZ should be removed from the list of 27 ICD-10-PCS procedure codes that describe cardiac ablation listed previously in the proposed logic for assignment of cases

reporting a LAAC procedure and a cardiac ablation procedure for the proposed new MS-DRG.

Comment: Many commenters noted that procedure code 02583ZF (Destruction of conduction mechanism using irreversible electroporation, percutaneous approach) to identify irreversible electroporation for cardiac ablation was finalized effective April 1, 2024 as reflected in the FY 2024 ICD-10-PCS Code Update files that were made publicly available on the CMS website at <https://www.cms.gov/Medicare/Coding/ICD10> on December 19, 2023. The new procedure code is also reflected in Table 6B.—New Procedure Codes, in association with the proposed rule and available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS>, including the MS-DRG assignments for the new code for FY 2025.

These commenters noted that cardiac ablation procedures performed with the PulseSelect™ Pulsed Field Ablation (PFA) System for the treatment of paroxysmal (PAF) or persistent (PsAF) atrial fibrillation can also be performed concomitantly with left atrial appendage closure and recommended that procedure code 02583ZF also be assigned to new MS-DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation) in MDC 05. However, another commenter noted that there is limited data on combining the new pulse field ablation modality with LAAC and suggested that CMS continue to evaluate evidence on the safety and efficacy of using this new modality in concomitant procedures

before assigning procedure code 02583ZF to new MS–DRG 317.

Response: We thank the commenters for their feedback.

We note that irreversible electroporation for cardiac ablation, also referred to as pulsed field ablation, delivers electrical pulses that result in destruction of selected cardiac tissue by irreversibly increasing the porosity of the cell membranes, inducing cell death, and can be used as a treatment for paroxysmal and persistent atrial fibrillation. As a procedure code that also describes the performance of cardiac ablation, we agree that procedure code 02583ZF should be added to the list of ICD–10–PCS procedure codes that describe cardiac ablation listed previously in the proposed logic for assignment of cases reporting a LAAC procedure and a cardiac ablation procedure for the proposed new MS–DRG. In response to

the suggestion that CMS continue to evaluate evidence on the safety and efficacy of using this new modality in concomitant procedures before assigning procedure code 02583ZF to new MS–DRG 317, we note that procedure code 02583ZF describes a procedure that is clinically coherent with the other procedure codes proposed for assignment to MS–DRG 317, so it is reasonable that cases reporting procedure code 02583ZF and a procedure code describing LAAC group to the same MS–DRG.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to create new MS–DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation) in MDC 05, with modification, effective October 1, 2024, for FY 2025. Specifically, we are modifying the proposed list of ICD–10–PCS procedure codes that describe

cardiac ablation in the Version 42 GROUPER logic of new MS–DRG 317 by removing ICD–10–PCS codes 02590ZZ (Destruction of chordae tendineae, open approach), 02593ZZ (Destruction of chordae tendineae, percutaneous approach), and 02594ZZ (Destruction of chordae tendineae, percutaneous endoscopic approach) and adding ICD–10–PCS procedure code 02583ZF (Destruction of conduction mechanism using irreversible electroporation, percutaneous approach), as discussed previously.

The 25 ICD–10–PCS procedure codes that describe cardiac ablation that we are finalizing in the logic for assignment of cases reporting a LAAC procedure and a cardiac ablation procedure for FY 2025 are listed in the following table. This assignment is reflected in the final Version 42 GROUPER logic.

ICD-10-PCS Code	Description
02540ZZ	Destruction of coronary vein, open approach
02543ZZ	Destruction of coronary vein, percutaneous approach
02544ZZ	Destruction of coronary vein, percutaneous endoscopic approach
02550ZZ	Destruction of atrial septum, open approach
02553ZZ	Destruction of atrial septum, percutaneous approach
02554ZZ	Destruction of atrial septum, percutaneous endoscopic approach
02560ZZ	Destruction of right atrium, open approach
02563ZZ	Destruction of right atrium, percutaneous approach
02564ZZ	Destruction of right atrium, percutaneous endoscopic approach
02570ZK	Destruction of left atrial appendage, open approach
02570ZZ	Destruction of left atrium, open approach
02573ZK	Destruction of left atrial appendage, percutaneous approach
02573ZZ	Destruction of left atrium, percutaneous approach
02574ZK	Destruction of left atrial appendage, percutaneous endoscopic approach
02574ZZ	Destruction of left atrium, percutaneous endoscopic approach
02580ZZ	Destruction of conduction mechanism, open approach
02583ZZ	Destruction of conduction mechanism, percutaneous approach
02584ZZ	Destruction of conduction mechanism, percutaneous endoscopic approach
025S0ZZ	Destruction of right pulmonary vein, open approach
025S3ZZ	Destruction of right pulmonary vein, percutaneous approach
025S4ZZ	Destruction of right pulmonary vein, percutaneous endoscopic approach
025T0ZZ	Destruction of left pulmonary vein, open approach
025T3ZZ	Destruction of left pulmonary vein, percutaneous approach
025T4ZZ	Destruction of left pulmonary vein, percutaneous endoscopic approach
02583ZF	Destruction of conduction mechanism using irreversible electroporation, percutaneous approach

Table 6B.—New Procedure Codes, associated with this final rule reflects the modification to the MS–DRG assignments for procedure code 02583ZF for FY 2025. We refer the reader to section II.C.13. of the preamble of this final rule for further information regarding the table.

Lastly, we are finalizing the inclusion of the nine ICD–10–PCS procedure codes that describe LAAC procedures listed previously in the logic for

assignment of cases reporting a LAAC procedure and a cardiac ablation procedure for new MS–DRG 317, without modification, for FY 2025. We refer the reader to section II.C.15. of the preamble of this final rule for the discussion of the surgical hierarchy and the complete list of our proposed modifications to the surgical hierarchy as well as our finalization of those proposals.

b. Neuromodulation Device Implant for Heart Failure (Barostim™ Baroreflex Activation Therapy)

The BAROSTIM™ system is the first neuromodulation device system designed to trigger the body's main cardiovascular reflex to target symptoms of heart failure. The system consists of an implantable pulse generator (IPG) that is implanted subcutaneously in the upper chest below the clavicle, a stimulation lead that is sutured to either

the right or left carotid sinus to activate the baroreceptors in the wall of the carotid artery, and a wireless programmer system that is used to non-invasively program and adjust BAROSTIM™ therapy via telemetry. The BAROSTIM™ system is indicated for the improvement of symptoms of heart failure in a subset of patients with symptomatic New York Heart Association (NYHA) Class III or Class II (who had a recent history of Class III) heart failure, with a low left ventricular ejection fraction, who also do not benefit from guideline directed pharmacologic therapy or qualify for Cardiac Resynchronization Therapy (CRT). The BAROSTIM™ system was approved for new technology add-on payments for FY 2021 (85 FR 58716 through 58717) and FY 2022 (86 FR 44974). The new technology add-on payment was subsequently discontinued effective FY 2023 (87 FR 48916).

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 48837 through 48843), we discussed a request we received to reassign the ICD-10-PCS procedure codes that describe the implantation of the BAROSTIM™ system from MS-DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without MCC respectively) to MS-DRGs 222, 223, 224, 225, 226, and 227 (Cardiac Defibrillator Implant with and without Cardiac Catheterization with and without AMI/HF/Shock with and without MCC, respectively). The requestor stated that the subset of patients that have an indication for the implantation of a BAROSTIM™ system also have indications for the implantation of Implantable Cardioverter Defibrillators (ICD), Cardiac Resynchronization Therapy Defibrillators (CRT-D) and/or Cardiac Contractility Modulation (CCM) devices, all of which also require the permanent implantation of a programmable, electrical pulse generator and at least one electrical lead. The requestor further stated that the average resource utilization required to implant the BAROSTIM™ system demonstrates a significant disparity compared to all procedures within MS-DRGs 252, 253, and 254.

In the FY 2023 IPPS/LTCH PPS final rule, we stated that the results of the claims analysis demonstrated we did not have sufficient claims data on which to base and evaluate any proposed changes to the current MS-DRG assignment. We also expressed concern in equating the implantation of a BAROSTIM™ system to the placement of ICD, CRT-D, and CCM devices as these devices all differ in terms of

technical complexity and anatomical placement of the electrical lead(s). We noted there is no intravascular component or vascular puncture involved when implanting a BAROSTIM™ system. In contrast, the placement of ICD, CRT-D, and CCM devices generally involve a lead being affixed to the myocardium, being threaded through the coronary sinus or crossing a heart valve and are procedures that involve a greater level of complexity than affixing the stimulator lead to either the right or left carotid sinus when implanting a BAROSTIM™ system. We stated that we believed that as the number of cases reporting procedure codes describing the implantation of neuromodulation devices for heart failure increases, a better view of the associated costs and lengths of stay on average will be reflected in the data for purposes of assessing any reassignment of these cases. Therefore, after consideration of the public comments we received, and for the reasons stated earlier, we finalized our proposal to maintain the assignment of cases reporting procedure codes that describe the implantation of a neuromodulation device in MS-DRGs 252, 253, and 254 for FY 2023.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58712 through 58720), we discussed a request we received to add ICD-10-CM diagnosis code R57.0 (Cardiogenic shock) to the list of “secondary diagnoses” that grouped to MS-DRGs 222 and 223 (Cardiac Defibrillator Implant with Cardiac Catheterization with Acute Myocardial Infarction (AMI), Heart Failure (HF), or Shock with and without MCC, respectively). During our review of the issue, we noted that the results of our claims analysis showed that in procedures involving a cardiac defibrillator implant, the average costs and length of stay were generally similar without regard to the presence of diagnosis codes describing AMI, HF, or shock. We stated we believed that it may no longer be necessary to subdivide MS-DRGs 222, 223, 224, 225, 226, and 227 based on the diagnosis codes reported. After consideration of the public comments we received, and for the reasons stated in the rule, we finalized our proposal to delete MS-DRGs 222, 223, 224, 225, 226, and 227. We also finalized our proposal to create new MS-DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC), new MS-DRG 276 (Cardiac Defibrillator Implant with MCC) and new MS-DRG 277 (Cardiac Defibrillator Implant without MCC) in MDC 05 for FY 2024.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35959 through 35962), we received a similar request to again review the MS-DRG assignment of the ICD-10-PCS procedure codes that describe the implantation of the BAROSTIM™ system. Specifically, the requestor recommended that CMS consider reassigning the ICD-10-PCS procedure codes that describe the implantation of the BAROSTIM™ system from MS-DRGs 252, 253, and 254 (Other Vascular Procedures with MCC, with CC, and without MCC respectively) to MS-DRGs 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC), MS-DRG 276, and 277 (Cardiac Defibrillator Implant with MCC and without MCC respectively); or to other more clinically coherent MS-DRGs for implantable device procedures indicated for Class III heart failure patients. The requestor stated in their analysis the number of claims reporting procedure codes that describe the implantation of the BAROSTIM™ system has been consistently growing over the past few years. The requestor acknowledged that the implantation of the BAROSTIM™ system is predominantly performed in the outpatient setting but noted that a significant number of severely sick patients with multiple comorbidities (such as chronic kidney disease, end stage renal disease (ESRD), chronic obstructive pulmonary disease (COPD), and AF) are treated in an inpatient setting. The requestor stated in their experience, hospitals that have performed BAROSTIM™ procedures have stopped allowing patients to receive the device in the inpatient setting due to the high losses for each Medicare claim. The requestor asserted it is critically important to allow very sick and fragile patients access to the BAROSTIM™ procedure in an inpatient setting and stated these patients should not be denied access by hospitals due to the perceived gross underpayment of the current MS-DRG.

In the proposed rule we noted that the requestor stated the BAROSTIM™ procedure is not clinically coherent with other procedures assigned to MS-DRGs 252, 253, and 254 (Other Vascular Procedures) as the majority of the ICD-10-PCS codes assigned to MS-DRGs 252, 253, and 254 describe procedures to identify, diagnose, clear and restructure veins and arteries, excluding those that require implantable devices. Furthermore, the requestor stated the costs of the implantable medical devices used for the BAROSTIM™ system (that is, the electrical pulse generator and electrical lead) alone far exceed the

average costs of other cases assigned to MS-DRGs 252, 253, and 254.

The following ICD-10-PCS procedure codes uniquely identify the implantation of the BAROSTIM™ system: 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HK3MZ (Insertion of stimulator lead

into right internal carotid artery, percutaneous approach) or 03HL3MZ (Insertion of stimulator lead into left internal carotid artery, percutaneous approach).

We stated in the proposed rule that to analyze this request, we first examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRGs 252, 253, and 254 to identify

cases reporting procedure codes describing the implantation of the BAROSTIM™ system with or without a procedure code describing the performance of a cardiac catheterization as MS-DRG 275 is defined by the performance of cardiac catheterization and a secondary diagnosis of MCC. Our findings are shown in the following table.

MS-DRGs 252-254: All Cases and Cases Reporting Procedures Describing the Implantation of a BAROSTIM™ System				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
252	All cases	18,964	8	\$30,456
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	1	9	\$110,928
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	12	7.8	\$66,291
253	All cases	15,551	5.2	\$22,870
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0	0	\$0
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	7	4	\$52,788
254	All cases	5,973	2.3	\$15,778
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ with cardiac catheterization	0	0	\$0
	Cases with diagnosis of heart failure with 0JH60MZ and 03HL3MZ or 03HK3MZ without cardiac catheterization	3	1.3	\$29,740

As shown in the table, in MS-DRG 252, we identified a total of 18,964 cases with an average length of stay of 8 days and average costs of \$30,456. Of those 18,964 cases, there was one case reporting procedure codes describing the implantation of the BAROSTIM™ system with a procedure code describing the performance of a cardiac catheterization with costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 252 (\$110,928 compared to \$30,456) and a longer length of stay (9 days compared to 8 days). There were 12 cases reporting procedure codes describing the implantation of the BAROSTIM™ system without a procedure code describing the performance of a cardiac catheterization, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 252 (\$66,291 compared to \$30,456) and a slighter shorter average length of stay (7.8 days compared to 8 days). In MS-

DRG 253, we identified a total of 15,551 cases with an average length of stay of 5.2 days and average costs of \$22,870. Of those 15,551 cases, there were seven cases reporting procedure codes describing the implantation of the BAROSTIM™ system without a procedure code describing the performance of a cardiac catheterization, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 253 (\$52,788 compared to \$22,870) and a shorter average length of stay (4 days compared to 5.2 days). We found zero cases in MS-DRG 253 reporting procedure codes describing the implantation of a BAROSTIM™ system with a procedure code describing the performance of a cardiac catheterization. In MS-DRG 254, we identified a total of 5,973 cases with an average length of stay of 2.3 days and average costs of \$15,778. Of those 5,973 cases, there were three cases reporting

procedure codes describing the implantation of the BAROSTIM™ system without a procedure code describing the performance of a cardiac catheterization, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 254 (\$29,740 compared to \$15,778) and a shorter average length of stay (1.3 days compared to 2.3 days). We found zero cases in MS-DRG 254 reporting procedure codes describing the implantation of a BAROSTIM™ system with a procedure code describing the performance of a cardiac catheterization.

As stated in the proposed rule, we then examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRGs 275, 276, and 277. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
275	3,358	10.3	\$63,181
276	3,264	8.2	\$54,993
277	3,840	4.2	\$42,111

As the table shows, for MS-DRG 275, there were a total of 3,358 cases with an average length of stay of 10.3 days and average costs of \$63,181. For MS-DRG 276, there were a total of 3,264 cases with an average length of stay of 8.2 days and average costs of \$54,993. For MS-DRG 277, there were a total of 3,840 cases with an average length of stay of 4.2 days and average costs of \$42,111.

In exploring mechanisms to address this request, in the proposed rule we noted in total, there were only 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system in MS-DRGs 252, 253, and 254 (13, 7, and 3, respectively). We stated we reviewed these data, and stated while we recognize that the average costs of the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ are greater when compared to the average costs of all cases in MS-DRGs 252, 253, and 254, the number of cases continued to be too small to warrant the creation of a new MS-DRG for these cases.

In the proposed rule we further noted, that of the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system identified in MS-DRGs 252, 253, and 254, only one case reported the performance of cardiac catheterization. As discussed in the FY 2024 IPPS/LTCH PPS final rule, when reviewing the consumption of hospital resources for the cases reporting a cardiac defibrillator implant with cardiac catheterization during a hospital stay, the claims data clearly showed that the cases reporting secondary diagnoses designated as MCCs were more resource intensive as compared to other cases reporting cardiac defibrillator implant. Therefore, we finalized the creation of MS-DRG 275 for cases reporting a cardiac defibrillator implant with cardiac catheterization and a secondary diagnosis designated as an MCC. In the proposed rule we stated that of the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system, there was only one case reporting a procedure code describing the performance of cardiac catheterization and a secondary diagnosis designated as an MCC, and we noted that there may have been other factors contributing to the higher costs of this one case. We stated that the results of the claims analysis demonstrated we did not have sufficient

claims data on which to base and propose a change to the current MS-DRG assignment of cases reporting procedure codes describing the implantation of a BAROSTIM™ system from MS-DRGs 252, 253, and 254 to MS-DRG 275.

As stated in the proposed rule, further analysis of the claims data demonstrated that the 23 cases reporting procedure codes describing the implantation of a BAROSTIM™ system had an average length of stay of 5.8 days and average costs of \$59,355, as compared to the 3,264 cases in MS-DRG 276 that had an average length of stay of 8.2 days and average costs of \$54,993. We stated that while the cases reporting procedure codes describing the implantation of a BAROSTIM™ system had average costs that were \$4,362 higher than the average costs of all cases in MS-DRG 276, as noted, there were only a total of 23 cases, and there may have been other factors contributing to the higher costs. In the proposed rule we noted, however, if we were to reassign all cases reporting procedure codes describing the implantation of a BAROSTIM™ system to MS-DRG 276, even if there is not a MCC present, the cases would receive higher payment and the reassignment could better account for the differences in resource utilization of these cases than in their respective MS-DRG.

In the proposed rule we stated we reviewed the clinical issues and the claims data, and while we continue to note that there is no intravascular component or vascular puncture involved when implanting a BAROSTIM™ system, and that the implantation of a BAROSTIM™ system is distinguishable from the placement of ICD, CRT-D, and CCM devices, as these devices all differ in terms of technical complexity and anatomical placement of the electrical lead(s), as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48837 through 48843), we agreed that ICD, CRT-D, and CCM devices and the BAROSTIM™ system are clinically coherent in that they share an indication of heart failure, a major cause of morbidity and mortality in the United States, and that these cases demonstrate comparable resource utilization. Based on our review of the clinical issues and the claims data, and to better account for the resources required, we proposed to reassign the cases reporting procedure codes describing the

implantation of a BAROSTIM™ system to MS-DRG 276, even if there is no MCC reported, to better reflect the clinical severity and resource use involved in these cases.

Therefore, for FY 2025, we proposed to reassign all cases with one of the following ICD-10-PCS code combinations capturing cases reporting procedure codes describing the implantation of a BAROSTIM™ system, to MS-DRG 276, even if there is no MCC reported:

- 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HK3MZ (Insertion of stimulator lead into right internal carotid artery, percutaneous approach); and
- 0JH60MZ (Insertion of stimulator generator into chest subcutaneous tissue and fascia, open approach) in combination with 03HL3MZ (Insertion of stimulator lead into left internal carotid artery, percutaneous approach).

We also proposed to change the title of MS-DRG 276 from “Cardiac Defibrillator Implant with MCC” to “Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator” to reflect the proposed modifications to MS-DRG assignments. We refer the reader to section II.C.15. of the preamble of this final rule for the discussion of the surgical hierarchy and the complete list of our proposed modifications to the surgical hierarchy as well as our finalization of those proposals.

Comment: Commenters expressed overwhelming support for the proposal to reassign cases reporting a procedure code combination describing the implantation of a BAROSTIM™ system to MS-DRG 276, even if there is no MCC reported. Commenters also expressed support for the proposal to change the title of MS-DRG 276 from “Cardiac Defibrillator Implant with MCC” to “Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator” to reflect the proposed modifications to MS-DRG assignments. Many commenters stated this reassignment would ensure continued access of this very important therapy to eligible Medicare patients. A commenter specifically stated that assignment to MS-DRG 276 is appropriate on a clinical basis and would also better account for the differences in resource

utilization of these cases as compared to their current assignments.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to reassign cases reporting one of the previously listed ICD-10-PCS code combinations describing the implantation of a BAROSTIM™ system to MS-DRG 276, even if there is no MCC reported, without modification, effective October 1, 2024, for FY 2025. We are also finalizing the change to the title of MS-DRG 276 from "Cardiac Defibrillator Implant with MCC" to "Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator" to reflect the modifications to MS-DRG assignments.

c. Endovascular Cardiac Valve Procedures

The human heart contains four major valves—the aortic, mitral, pulmonary, and tricuspid valves. These valves function to keep blood flowing through the heart. When conditions such as stenosis or insufficiency/regurgitation occur in one or more of these valves, valvular heart disease may result. Intervention options, including surgical aortic valve replacement or transcatheter aortic valve replacement can be performed to treat diseased or damaged aortic heart valves. Surgical aortic valve replacement (SAVR) is a traditional, open-chest surgery where an incision is made to access the heart. The damaged valve is replaced, and the chest is surgically closed. Since SAVR is a major surgery that involves an incision, recovery time tends to be longer. Transcatheter aortic valve replacement (TAVR) is a minimally invasive procedure that involves a catheter being inserted into an artery, without an incision for most cases, and then guided to the heart. The catheter delivers the new valve without the need for the chest or heart to be surgically opened. Since TAVR is a non-surgical procedure, it is generally associated with a much shorter recovery time.

In the FY 2015 IPPS/LTCH PPS final rule (79 FR 49892 through 49893), we discussed a request we received to create a new MS-DRG that would only include the various types of cardiac valve replacements performed by an endovascular or transcatheter technique. We reviewed the claims data and stated the data analysis showed that cardiac valve replacements performed by an endovascular or transcatheter technique had a shorter average length of stay and higher average costs in comparison to all of the cases in their assigned MS-

DRGs, which were MS-DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, and without CC/MCC, respectively). In the FY 2015 IPPS/LTCH PPS final rule we stated that patients receiving endovascular cardiac valve replacements were significantly different from those patients who undergo an open chest cardiac valve replacement and noted that patients receiving endovascular cardiac valve replacements are not eligible for open chest cardiac valve procedures because of a variety of health constraints, which we stated highlights the fact that peri-operative complications and post-operative morbidity have significantly different profiles for open chest procedures compared with endovascular interventions. We further noted that separately grouping these endovascular valve replacement procedures provides greater clinical cohesion for this subset of high-risk patients. Therefore, we finalized our proposal to create MS-DRGs 266 and 267 (Endovascular Cardiac Valve Replacement, with MCC and without MCC, respectively) for FY 2015.

In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42080 through 42089), we discussed a request we received to modify the MS-DRG assignment for transcatheter mitral valve repair (TMVR) with implant procedures. We reviewed the claims data and stated based on our data analysis, transcatheter cardiac valve repair procedures and transcatheter (endovascular) cardiac valve replacement procedures are more clinically coherent in that they describe endovascular cardiac valve interventions with implants and were similar in terms of average length of stay and average costs to cases in MS-DRGs 266 and 267 when compared to other procedures in their current MS-DRG assignment. For the reasons described in the rule and after consideration of the public comments we received, we finalized our proposal to modify the structure of MS-DRGs 266 and 267 by reassigning the procedure codes that describe transcatheter cardiac valve repair (supplement) procedures, to revise the title of MS-DRG 266 from "Endovascular Cardiac Valve Replacement with MCC" to "Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC" and to revise the title of MS-DRG 267 from "Endovascular Cardiac Valve Replacement without MCC" to "Endovascular Cardiac Valve

Replacement and Supplement Procedures without MCC", to reflect the finalized restructuring.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35962 through 35966), we received a request to delete MS-DRGs 266 and 267 and to move the cases reporting transcatheter aortic valve replacement or repair (supplement) procedures currently assigned to those MS-DRGs into MS-DRGs 216, 217, 218, 219, 220, and 221. The requestor asserted that under the current IPPS payment methodology, TAVR procedures are not profitable to hospitals and when patients are clinically eligible for both a TAVR and SAVR procedures, factors beyond clinical appropriateness can drive treatment decisions. According to the requestor (the manufacturer of the SAPIENT™ family of transcatheter heart valves) sharing a single set of MS-DRGs would eliminate the current disincentives hospitals face and create financial neutrality between the two lifesaving treatment options. The requestor stated the current disincentives are increasingly problematic because they contribute to treatment disparities among certain racial, socioeconomic, and geographic groups.

As discussed in the proposed rule, the requestor noted that currently surgical cardiac valve replacement and supplement procedures, such as SAVR, are assigned to MS-DRGs 216, 217, 218, 219, 220, and 221, and endovascular cardiac valve replacement and supplement procedures, such as TAVR, are assigned to MS-DRGs 266 and 267. The requestor stated that both sets of MS-DRGs address valve disease and include valve repair or replacement procedures for any of the four heart valves. According to the requestor, while the sets of MS-DRGs involve clinically similar cases their payment rates differ which may be unintentionally influencing clinical decision-making by incentivizing hospitals to choose more invasive SAVR procedures over less-invasive TAVR procedures.

As mentioned earlier, the requestor recommended that CMS delete MS-DRGs 266 and 267 and move the cases reporting transcatheter aortic valve replacement or repair (supplement) procedures currently assigned to those MS-DRGs into MS-DRGs 216, 217, 218, 219, 220, and 221. We stated in the proposed rule that the requestor performed its own analysis and stated that the models of this suggested solution indicated the change would result in moderate differences in per case payments by case type and would

not increase overall Medicare spending. The requestor noted that while their requested solution would potentially decrease payment to cases currently assigned to MS-DRGs 216, 217, 218, 219, 220, and 221, while at the same time increasing the payment to cases reporting endovascular cardiac valve replacement and supplement procedures, the results of their claim analysis demonstrated that the net difference in total payments across all cases would increase by approximately \$6.5 million. The requestor stated that they anticipate that their proposed solution could increase Medicare patients' access to innovative endovascular cardiac valve procedures by establishing payment neutrality between SAVR and TAVR procedures.

As discussed in the proposed rule, we reviewed this request and noted the requestor was correct that in Version 41.1 cases reporting procedure codes that describe endovascular cardiac valve replacement and supplement procedures, including TAVR, group to MS-DRGs 266 and 267. We stated that the requestor was also correct that cases

reporting procedure codes that describe surgical cardiac valve replacement and supplement procedures, including SAVR, group to MS-DRGs 216, 217, 218, 219, 220, and 221. We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic for MS-DRGs 216, 217, 218, 219, 220, 221, 266, and 267.

As discussed in the proposed rule, to begin our analysis, we identified the ICD-10-PCS procedure codes that describe endovascular (transcatheter) cardiac valve replacement and supplement procedures and the ICD-10-PCS procedure codes that describe surgical cardiac valve replacement and supplement procedures. We also identified the ICD-10-PCS codes that describe cardiac catheterization, as MS-DRGs 216, 217, and 218 (Cardiac Valve and Other Major Cardiothoracic Procedures with Cardiac Catheterization

with MCC, with CC, and without CC/MCC, respectively) are defined by the performance of cardiac catheterization. We refer the reader to Table 6P.2a, Table 6P.2b, and Table 6P.2c, respectively, associated with the proposed rule and this final rule (available at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>) for the lists of the ICD-10-PCS procedure codes that we identified that describe endovascular cardiac valve replacement and supplement procedures, surgical cardiac valve replacement and supplement procedures, and cardiac catheterization procedures.

As discussed in the proposed rule, we then examined the claims data from the September 2023 update of the FY 2023 MedPAR file for all cases in MS-DRGs 216, 217, 218, 219, 220, and 221 and compared the results to cases reporting surgical cardiac valve replacement and supplement procedures in MS-DRG 216, 217, 218, 219, 220, and 221. The following table shows our findings:

MS-DRGs 216-221: All Cases and Cases Reporting Surgical Cardiac Valve Replacement and Supplement Procedures				
	MS-DRG	Number of Cases	Average Length of Stay	Average Costs
216	All cases	5,033	13.9	\$84,176
	Surgical cardiac valve replacement and supplement procedures	2,973	16.8	\$87,497
217	All cases	1,635	7.2	\$58,381
	Surgical cardiac valve replacement and supplement procedures	867	9.5	\$56,829
218	All cases	275	3.4	\$54,624
	Surgical cardiac valve replacement and supplement procedures	60	6.7	\$45,096
219	All cases	12,458	10.5	\$67,228
	Surgical cardiac valve replacement and supplement procedures	9,780	10.3	\$64,954
220	All cases	9,829	6.3	\$47,242
	Surgical cardiac valve replacement and supplement procedures	7,841	6.4	\$46,245
221	All cases	1,242	3.8	\$41,539
	Surgical cardiac valve replacement and supplement procedures	627	4.9	\$39,081

As shown in the table, in MS-DRG 216, we identified a total of 5,033 cases with an average length of stay of 13.9 days and average costs of \$84,176. Of those 5,033 cases, there were 2,973 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 216 (\$87,497 compared to \$84,176) and a longer average length of stay (16.8 days compared to 13.9 days). In MS-DRG 217, we identified a total of 1,635 cases with an average length of stay of 7.2

days and average costs of \$58,381. Of those 1,635 cases, there were 867 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS-DRG 217 (\$56,829 compared to \$58,381) and a longer average length of stay (9.5 days compared to 7.2 days). In MS-DRG 218, we identified a total of 275 cases with an average length of stay of 3.4 days and average costs of \$54,624. Of those 275 cases, there were 60 cases reporting surgical cardiac valve replacement and

supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS-DRG 218 (\$45,096 compared to \$54,624) and a longer average length of stay (6.7 days compared to 3.4 days). In MS-DRG 219, we identified a total of 12,458 cases with an average length of stay of 10.5 days and average costs of \$67,228. Of those 12,458 cases, there were 9,780 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023 MedPAR file for MS-DRG 219 (\$64,954

compared to \$67,228), and a slightly shorter average length of stay (10.3 days compared to 10.5 days). In MS-DRG 220, we identified a total of 9,829 cases with an average length of stay of 6.3 days and average costs of \$47,242. Of those 9,829 cases, there were 7,841 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the FY 2023

MedPAR file for MS-DRG 220 (\$46,245 compared to \$47,242) and a slightly longer average length of stay (6.4 days compared to 6.3 days). In MS-DRG 221, we identified a total of 1,242 cases with an average length of stay of 3.8 days and average costs of \$41,539. Of those 1,242 cases, there were 627 cases reporting surgical cardiac valve replacement and supplement procedures, with average costs lower than the average costs in the

FY 2023 MedPAR file for MS-DRG 221 (\$39,081 compared to \$41,539) and a longer average length of stay (4.9 days compared to 3.8 days).

Next, as discussed in the proposed rule, we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRGs 266 and 267. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
266	19,936	4.7	\$54,188
267	36,665	1.5	\$43,058

As noted in the proposed rule, because there is a two-way split within MS-DRGs 266 and 267 and there is a three-way split within MS-DRGs 216, 217, and 218, and MS-DRGs 219, 220, and 221 (Cardiac Valve and Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC, with CC, and without CC/MCC, respectively),

we also analyzed the cases reporting a code describing an endovascular cardiac valve replacement and supplement procedure with a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a complication or comorbidity (CC) or a major

complication or comorbidity (MCC). We also analyzed the cases reporting a code describing an endovascular cardiac valve replacement and supplement procedure without a procedure code describing the performance of a cardiac catheterization for the presence or absence of a secondary diagnosis designated as a CC or an MCC.

MS-DRG		Number of Cases	Average Length of Stay	Average Costs
266	Endovascular cardiac valve replacement and supplement procedures with cardiac catheterization with MCC	5,443	7.9	\$63,128
	Endovascular cardiac valve replacement and supplement procedures without cardiac catheterization with MCC	14,493	3.5	\$50,831
267	Endovascular cardiac valve replacement and supplement procedures with cardiac catheterization with CC	4,761	2	\$42,163
	Endovascular cardiac valve replacement and supplement procedures without cardiac catheterization with CC	22,996	1.5	\$43,637
	Endovascular cardiac valve replacement and supplement procedures with cardiac catheterization without CC/MCC	1,386	1.3	\$39,709
	Endovascular cardiac valve replacement and supplement procedures without cardiac catheterization without CC/MCC	7,522	1.2	\$42,472

As shown in the table, the data analysis performed indicates that the 5,443 cases in MS-DRG 266 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have an average length of stay that is shorter than the average length of stay (7.9 days versus 16.8 days) and lower average costs (\$63,128 versus \$87,497)

when compared to the cases in MS-DRG 216 reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC. The 4,761 cases in MS-DRG 267 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary

diagnosis code designated as a CC have an average length of stay that is shorter than the average length of stay (2 days versus 9.5 days) and lower average costs (\$42,163 versus \$56,829) when compared to the cases in MS-DRG 217 reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an CC. The 1,386 cases in MS-DRG 267 reporting

endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have an average length of stay that is shorter than the average length of stay (1.3 days versus 6.7 days) and lower average costs (\$39,709 versus \$45,096) when compared to the cases in MS-DRG 218 reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization, without a secondary diagnosis code designated as a CC or MCC.

The 14,493 cases in MS-DRG 266 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC have an average length of stay that is shorter than the average length of stay (3.5 days versus 10.3 days) and lower average costs (\$50,831 versus \$64,954) when compared to the cases in MS-DRG 219 reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an MCC. The 22,996 cases in MS-DRG 267 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as a CC have an average length of stay that is shorter than the average length of stay (1.5 days versus 6.4 days) and lower average costs (\$43,637 versus \$46,245) when compared to the cases in MS-DRG 220 reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and with a secondary diagnosis code designated as an CC. The 7,522 cases in MS-DRG 267 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization, and without a secondary diagnosis code designated as a CC or MCC have an average length of stay that is shorter than the average length of stay (1.2 days versus 4.9 days) and higher average costs (\$42,472 versus \$39,081) when compared to the cases in MS-DRG 221 reporting surgical cardiac valve replacement and supplement

procedures without a procedure code describing the performance of a cardiac catheterization, without a secondary diagnosis code designated as a CC or MCC.

We stated in the proposed rule that this data analysis shows the cases in MS-DRG 266 and 267 reporting endovascular cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a CC or a MCC have average costs lower than the average costs of cases reporting surgical cardiac valve replacement and supplement procedures with a procedure code describing the performance of a cardiac catheterization in the FY 2023 MedPAR file for MS-DRGs 216, 217, and 218 respectively, and the average lengths of stay are shorter. Similarly, the cases in MS-DRG 266 and 267 reporting endovascular cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization when distributed based on the presence or absence of a secondary diagnosis designated as a CC or a MCC generally have average costs lower than the average costs of cases reporting surgical cardiac valve replacement and supplement procedures without a procedure code describing the performance of a cardiac catheterization in the FY 2023 MedPAR file for MS-DRGs 219, 220, and 221 respectively, and the average lengths of stay are shorter.

We stated in the proposed rule that for patients with an indication for cardiac valve replacement, clinical and anatomic factors must be considered when decision-making between procedures such as TAVR and SAVR. We noted that SAVR is not a treatment option for patients with extreme surgical risk (that is, high probability of death or serious irreversible complication), severe atheromatous plaques of the ascending aorta such that aortic cross-clamping is not feasible, or with other conditions that would make operation through sternotomy or thoracotomy prohibitively hazardous. We stated that we agreed that the endovascular or transcatheter technique presents a viable option for high-risk patients who are not candidates for the traditional open surgical approach, however we also noted that TAVR is not indicated for every patient. TAVR is contraindicated in patients who cannot tolerate an anticoagulation/antiplatelet regimen, or who have active bacterial endocarditis or other active infections,

or who have significant annuloplasty ring dehiscence.

In the proposed rule, we stated we had concern with the assertion that clinicians perform more invasive surgical procedures, such as SAVR procedures, only to increase payment to their facility where minimally invasive TAVR procedures are also viable option. The choice of SAVR versus TAVR should not be based on potential facility payment. Instead, the decision on the procedural approach to be utilized should be based upon an individualized risk-benefit assessment that includes reviewing factors such as the patient's age, surgical risk, frailty, valve morphology, and presence of concomitant valve disease or coronary artery disease. As we have stated in prior rulemaking (83 FR 41201), it is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that involves increased costs. Conversely, it is not appropriate for facilities to recommend a specific type of therapy or treatment strictly because it may involve higher payment to the facility.

Also, we stated we had concern with the requestor's assertion that sharing a single set of MS-DRGs could eliminate any perceived disincentives hospitals may face and create financial neutrality between the two lifesaving treatment options. In the proposed rule, we noted that the data analysis shows that cases reporting surgical cardiac valve replacement and supplement procedures have higher costs and longer lengths of stay. We stated that if clinical decision-making is being driven by financial motivations, as suggested by the requestor, in circumstances where the decision on which approach is best (for example, TAVR or SAVR) is left to the providers' discretion, it is unclear how reducing payment for surgical cardiac valve replacement and supplement procedures would eliminate possible disincentives, or not have the opposite effect, and instead incentivize endovascular cardiac valve replacement and supplement procedures.

As discussed in the proposed rule, the MS-DRGs are a classification system intended to group together diagnoses and procedures with similar clinical characteristics and utilization of resources and are not intended to be utilized as a tool to incentivize the performance of certain procedures. When performed, surgical cardiac valve replacement and supplement procedures are clinically different from endovascular cardiac valve replacement and supplement procedures in terms of technical complexity and hospital

resource use. In the FY 2015 IPPS/LTCH PPS final rule, we stated that separately grouping endovascular valve replacement procedures provides greater clinical cohesion for this subset of high-risk patients. In the FY 2025 IPPS/LTCH PPS proposed rule, we stated our claims analysis demonstrates that this continues to be substantiated by the difference in average costs and average lengths of stay demonstrated by the two cohorts. We stated we continue to believe that endovascular cardiac valve replacement and supplement procedures are clinically coherent in their currently assigned MS-DRGs. Therefore, we proposed to maintain the structure of MS-DRGs 266 and 267 for FY 2025.

Comment: Many commenters expressed support for the proposal to maintain the structure of MS-DRGs 266 and 267 for FY 2025. A commenter stated it is unclear why the requestor would imply that there is any type of bias in patient selection of surgical cardiac valve replacement and repair procedures over endovascular cardiac valve replacement and supplement procedures, and stated in their experience, the decision to perform endovascular or surgical cardiac valve replacement and supplement procedures is typically made by the heart team based on the patient's individualized risk-benefit and associated factors such as the patient's age, surgical risk, frailty, valve morphology, and presence of concomitant valve disease or coronary artery disease. A commenter specifically stated while they firmly believe that procedures such as TAVR should be paid at a rate that makes them efficacious for hospitals to perform, given the analysis provided by CMS, the requested MS-DRG modification may not be the best path to this end. Another commenter stated they agreed with CMS that although both types of cardiac valve interventions treat the same type of disease, the work and resource utilization associated with the procedures is significantly different and noted that surgical cardiac replacement or repair procedures typically require more resources such as increased operating room time, additional supportive staff for the procedure and longer lengths of stay. Another commenter stated in addition to the important points that CMS made in the proposed rule regarding the lack of cost coherence between TAVR and SAVR procedures, in their own analysis, the impact of moving TAVR cases into MS-DRGs 216, 217, 218, 219, 220, and 221 (Cardiac Valve & Other Major

Cardiothoracic Procedure with and without Cardiac Catheterization, with MCC, with CC, and without CC/MCC, respectively) would cause a 12 percent decrease in average costs and a 9 percent decrease in relative weight in MS-DRGs 216, 217, 218, 219, 220, and 221.

Response: We appreciate the commenters' support and feedback.

Comment: A commenter (the requestor) disagreed with the proposal to maintain the structure of MS-DRGs 266 and 267 and stated appropriate payment under the IPPS is critical to improving access to TAVR procedures for all eligible patients and ensuring timely access to valve replacement therapies. This commenter stated they continue to maintain that incentives for valve replacement procedures strongly favor SAVR over TAVR due to the payment differential between the two procedures. While acknowledging that SAVR cases have increased clinical labor and indirect costs, the commenter again asserted that merging the procedures into a single set of MS-DRGs would establish better financial neutrality between the procedure options by creating more similarity between TAVR and SAVR contribution margins as hospitals measure per-case profitability. Lastly, the commenter noted in their own analysis, payment rates for MS-DRGs 266 and 267 have declined approximately 6 percent from 2022 to 2025, while the payments rates for MS-DRGs 216, 217, 218, 219, 220, and 221 have increased by 8 percent in the same time frame and stated that the years of declining TAVR payment rates while SAVR payment rates increased do influence hospital decisions about whether to expand their structural heart programs to include TAVR procedures, particularly in hospitals located in geographic areas with low wage indexes.

Response: We appreciate the commenter's feedback. With respect to changes in payment rates in the referenced MS-DRGs, each year we calculate the relative weights by dividing the average cost for cases within each MS-DRG by the average cost for cases across all MS-DRGs. We believe any weight changes observed by the commenter over time to be appropriately driven by the underlying data in the years since CMS began using the ICD-10 data in calculating the relative weights. We also note that over the past five years, there have been changes to the hierarchy and structure of certain MS-DRGs in MDC 05. It is to be expected that when MS-DRGs are restructured, such as when procedure codes are reassigned or the hierarchy

within an MDC is revised, resulting in a different case-mix within the MS-DRGs, the relative weights of the MS-DRGs will change as a result. Therefore, the data appear to reflect that the differences in the relative weights reflected in Table 5—List of Medicare Severity Diagnosis Related Groups (MS-DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay associated with the final rule for each applicable fiscal year can be attributed to the fact that the finalization of these proposals resulted in a different case-mix within the MS-DRGs, which is then being reflected in the relative weights. We refer readers to section II.D.2. of the preamble of this final rule for a discussion of the relative weight calculations.

As stated in prior rulemaking (88 FR 58730), the MS-DRGs were developed as a patient classification scheme consisting of patients who are similar clinically and with regard to their consumption of hospital resources. While all patients are unique, groups of patients have diagnostic and therapeutic attributes in common that determine their level of resource intensity. Similar resource intensity means that the resources used are relatively consistent across the patients in each MS-DRG. When performed, surgical cardiac valve replacement and supplement procedures are clinically different from endovascular cardiac valve replacement and supplement procedures in terms of technical complexity and hospital resource use. We continue to believe that endovascular cardiac valve replacement and supplement procedures are clinically coherent in their currently assigned MS-DRGs.

As stated earlier, the MS-DRGs are not intended to be utilized as a tool to incentivize the performance of certain procedures. As we have stated in prior rulemaking, we rely on providers to assess the needs of their patients and provide the most appropriate treatment. It is not appropriate for facilities to deny treatment to beneficiaries needing a specific type of therapy or treatment that potentially involves increased costs (86 FR 44847). It would also not be appropriate to consider modifications to the MS-DRG assignment of cases reporting the performance of a specific procedure solely as an incentive for providers to perform one procedure over another.

Therefore, after consideration of the public comments we received, and for the reasons stated earlier, we are finalizing our proposal to maintain the structure of MS-DRGs 266 and 267, without modification, for FY 2025.

d. MS-DRG Logic for MS-DRG 215

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35966 through 35968), we discussed a request we received to review the Grouper logic for MS-DRG 215 (Other Heart Assist System Implant) in MDC 05 (Diseases and Disorders of the Circulatory System). The requestor stated that when the procedure code describing the revision of malfunctioning devices within the heart via an open approach is assigned, the encounter groups to MS-DRG 215. The requestor stated that, in their observation, ICD-10-PCS code 02WA0JZ (Revision of synthetic substitute in heart, open approach) can only be assigned if a more specific anatomical site is not documented in the operative note. The requestor further stated they interpreted this to mean that an ICD-10-PCS procedure code describing the open revision of a synthetic substitute in the heart can only apply to the ventricular wall or left atrial appendage and excludes the atrial or ventricular septum or any valve to qualify for MS-DRG 215 and recommended that CMS consider the expansion of the open revision of heart structures to include the atrial or ventricular septum and heart valves.

In the proposed rule we stated that to begin our analysis, we reviewed the Grouper logic. We stated that the requestor is correct that ICD-10-PCS

procedure code 02WA0JZ is currently one of the listed procedure codes in the Grouper logic for MS-DRG 215. While the requestor stated that when procedures codes describing the revisions of malfunctioning devices within the heart via an open approach are assigned, the encounter groups to MS-DRG 215, we stated we wished to clarify that the revision codes listed in the Grouper logic for MS-DRG 215 specifically describe procedures to correct, to the extent possible, a portion of a malfunctioning heart assist device or the position of a displaced heart assist device. Further, we stated it was unclear what was meant by the requestor's statement that ICD-10-PCS code 02WA0JZ can only be assigned if more specific anatomical site is not documented in the operative note, as ICD-10-PCS code 02WA0JZ is used to describe the open revision of artificial heart systems. We noted that total artificial hearts are pulsating bi-ventricular devices that are implanted into the chest to replace a patient's left and right ventricles and can provide a bridge to heart transplantation for patients who have no other reasonable medical or surgical treatment options. We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/>

acute-inpatient-pps/ms-drg-classifications-and-software) for complete documentation of the Grouper logic for MS-DRG 215. We encouraged the requestor and any providers that have cases involving heart assist devices for which they need ICD-10 coding assistance and clarification on the usage of the codes, to submit their questions to the American Hospital Association's Central Office on ICD-10 at <https://www.codingclinicadvisor.com/>.

As previously noted, as discussed in the proposed rule, the requestor recommended that we consider expansion of the open revision of heart structures to include the atrial or ventricular septum and heart valves. The requestor did not provide a specific list of procedure codes involving the open revision of heart structures. While not explicitly stated, we stated we understood this request to be for our consideration of the reassignment of the procedure codes describing the open revision of devices in the heart valves, atrial septum, or ventricular septum to MS-DRG 215, therefore, we stated we reviewed the ICD-10-PCS classification and identified the following 18 procedure codes. These 18 codes are all assigned to MS-DRGs 228 and 229 (Other Cardiothoracic Procedures with and without MCC, respectively) in MDC 05 in Version 41.1.

ICD-10-PCS Code	Description
02W50JZ	Revision of synthetic substitute in atrial septum, open approach
02WF07Z	Revision of autologous tissue substitute in aortic valve, open approach
02WF08Z	Revision of zooplasmic tissue in aortic valve, open approach
02WF0JZ	Revision of synthetic substitute in aortic valve, open approach
02WF0KZ	Revision of nonautologous tissue substitute in aortic valve, open approach
02WG07Z	Revision of autologous tissue substitute in mitral valve, open approach
02WG08Z	Revision of zooplasmic tissue in mitral valve, open approach
02WG0JZ	Revision of synthetic substitute in mitral valve, open approach
02WG0KZ	Revision of nonautologous tissue substitute in mitral valve, open approach
02WH07Z	Revision of autologous tissue substitute in pulmonary valve, open approach
02WH08Z	Revision of zooplasmic tissue in pulmonary valve, open approach
02WH0JZ	Revision of synthetic substitute in pulmonary valve, open approach
02WH0KZ	Revision of nonautologous tissue substitute in pulmonary valve, open approach
02WJ07Z	Revision of autologous tissue substitute in tricuspid valve, open approach
02WJ08Z	Revision of zooplasmic tissue in tricuspid valve, open approach
02WJ0JZ	Revision of synthetic substitute in tricuspid valve, open approach
02WJ0KZ	Revision of nonautologous tissue substitute in tricuspid valve, open approach
02WM0JZ	Revision of synthetic substitute in ventricular septum, open approach

Next, in the proposed rule we stated we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRG 228 and 229

to identify cases reporting one of the 18 codes listed previously that describe the open revision of devices in the heart valves, atrial septum, or ventricular

septum. Our findings are shown in the following table:

MS-DRGs 228 – 229: All Cases and Cases Reporting Open Revision of Devices in the Heart Valves, Atrial Septum, or Ventricular Septum				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
228	All cases	4,391	8.7	\$44,565
	Cases with a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum	12	15.7	\$51,549
229	All Cases	5,712	3.3	\$28,987
	Cases with a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum	1	1	\$11,322

As shown in the table, in MS-DRG 228, we identified a total of 4,391 cases with an average length of stay of 8.7 days and average costs of \$44,565. Of those 4,391 cases, there were 12 cases reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 228 (\$51,549

compared to \$44,565) and a longer average length of stay (15.7 days compared to 8.7 days). In MS-DRG 229, we identified a total of 5,712 cases with an average length of stay of 3.3 days and average costs of \$28,987. Of those 5,712 cases, there was one case reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum with costs lower than the average costs

in the FY 2023 MedPAR file for MS-DRG 229 (\$11,322 compared to \$28,987) and a shorter length of stay (1 day compared to 3.3 days).

We stated we then examined claims data from the September 2023 update of the FY 2023 MedPAR for MS-DRG 215. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
215	3,668	9.2	\$91,021

In the proposed rule we stated our analysis indicates that the cases assigned to MS-DRG 215 have much higher average costs than the cases reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum currently assigned to MS-DRGs 228 and 229. Instead, the average costs and average length of stay for case reporting a procedure code describing the open revision of devices in the heart valves, atrial septum, or ventricular septum appear to be generally more aligned with the average costs and average length of stay for all cases in MS-DRGs 228 and 229, where they are currently assigned.

In addition, based on our review of the clinical considerations, we stated we did not believe the procedure codes describing the open revision of devices in the heart valves, atrial septum, or ventricular septum are clinically coherent with the procedure codes currently assigned to MS-DRG 215. We noted that heart assist devices, such as ventricular assist devices and artificial heart systems, provide circulatory support by taking over most of the workload of the left ventricle. Blood enters the pump through an inflow conduit connected to the left ventricle and is ejected through an outflow conduit into the body's arterial system. Heart assist devices can provide temporary left, right, or biventricular support for patients whose hearts have

failed and can also be used as a bridge for patients who are awaiting a heart transplant. In the proposed rule we stated that devices placed in the heart valves, atrial septum, or ventricular septum do not serve the same purpose as heart assist devices and we stated we did not believe the procedure codes describing the revision of these devices should be assigned to MS-DRG 215. Further, we stated that the various indications for devices placed in the heart valves, atrial septum or ventricular septum are not aligned with the indications for heart assist devices. We stated we believe that patients with indications for heart assist devices tend to be more severely ill and these inpatient admissions are associated with greater resource utilization. Therefore, for the reasons stated previously, we proposed to maintain the Grouper logic for MS-DRG 215 for FY 2025.

Comment: Many commenters agreed with CMS' proposal to maintain the Grouper logic for MS-DRG 215 for FY 2025. A commenter stated that they agreed with CMS that, in general, most patients with indications for heart assist devices tend to be more severely ill and will require greater resource utilization than patients that are admitted for open revision of devices related to heart valves, atrial septum, or ventricular septum.

Response: We appreciate the commenters' support.

Therefore, after consideration of the public comments we received, we are finalizing our proposal to maintain the Grouper logic for MS-DRG 215 for FY 2025, without modification.

5. MDC 06 (Diseases and Disorders of the Digestive System): Excision of Intestinal Body Parts

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35968 through 35969), we identified a replication issue from the ICD-9 based MS-DRGs to the ICD-10 based MS-DRGs regarding the assignment of eight ICD-10-PCS codes that describe the excision of intestinal body parts by open, percutaneous, or percutaneous endoscopic approach. Under the Version 32 ICD-9 based MS-DRGs, ICD-9-CM procedure code 45.33 (Local excision of lesion or tissue of small intestine, except duodenum) was designated as an O.R. procedure and was assigned to MDC 06 (Diseases and Disorders of the Digestive System) in MS-DRGs 347, 348, and 349 (Anal and Stomal Procedures with MCC, with CC, and without CC/MCC, respectively).

In the proposed rule, we noted that there are eight ICD-10-PCS code translations that provide more detailed and specific information for ICD-9-CM code 45.33 that also currently group to MS-DRGs 347, 348, and 349 in the ICD-10 MS-DRGs Version 41.1. These eight procedure codes are shown in the following table:

ICD-10-PCS Code	Description
0DB83ZZ	Excision of small intestine, percutaneous approach
0DBA3ZZ	Excision of jejunum, percutaneous approach
0DBA4ZZ	Excision of jejunum, percutaneous endoscopic approach
0DBB3ZZ	Excision of ileum, percutaneous approach
0DBB4ZZ	Excision of ileum, percutaneous endoscopic approach
0DBC0ZZ	Excision of ileocecal valve, open approach
0DBC3ZZ	Excision of ileocecal valve, percutaneous approach
0DBC4ZZ	Excision of ileocecal valve, percutaneous endoscopic approach

In the proposed rule we stated we noted during our review of this issue that under ICD-9-CM, procedure code 45.33 did not differentiate the specific type of approach used to perform the procedure. This is in contrast to the eight comparable ICD-10-PCS code translations listed in the previous table

that do differentiate among various approaches (open, percutaneous, and percutaneous endoscopic). We also noted that there are four additional ICD-10-PCS code translations that provide more detailed and specific information for ICD-9-CM code 45.33, however these four codes currently group to MS-

DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively), and not MS-DRGs 347, 348, and 349, in the ICD-10 MS-DRGs Version 41.1. These four procedure codes are shown in the following table:

ICD-10-PCS Code	Description
0DB80ZZ	Excision of small intestine, open approach
0DB84ZZ	Excision of small intestine, percutaneous endoscopic approach
0DBA0ZZ	Excision of jejunum, open approach
0DBB0ZZ	Excision of ileum, open approach

We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for

complete documentation of the GROUPER logic for MS-DRGs 329, 330, 331, 347, 348, and 349.

Next, as discussed in the proposed rule we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRG 347, 348, and

349 to identify cases reporting one of the eight codes listed previously that describe excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach. Our findings are shown in the following table:

MS-DRGs 347 – 349: All Cases and Cases Reporting One of Eight Procedure Codes Describing Excision of an Intestinal Body Part by Open, Percutaneous, or Percutaneous Endoscopic Approach				
	MS-DRG	Number of Cases	Average Length of Stay	Average Costs
347	All cases	752	7.6	\$21,462
	Cases with 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, or 0DBC4ZZ	66	8.5	\$27,081
348	All cases	1,580	4.2	\$12,020
	Cases with 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, or 0DBC4ZZ	192	4.9	\$17,063
349	All Cases	644	2.2	\$9,095
	Cases with 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, or 0DBC4ZZ	117	3	\$14,612

As shown in the table, in MS-DRG 347, we identified a total of 752 cases with an average length of stay of 7.6 days and average costs of \$21,462. Of those 752 cases, there were 66 cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, with average costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 347 (\$27,081 compared

to \$21,462) and a longer average length of stay (8.5 days compared to 7.6 days). In MS-DRG 348, we identified a total of 1,580 cases with an average length of stay of 4.2 days and average costs of \$12,020. Of those 1,580 cases, there were 192 cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, with average costs higher than the average costs in

the FY 2023 MedPAR file for MS-DRG 348 (\$17,063 compared to \$12,020) and a longer average length of stay (4.9 days compared to 4.2 days). In MS-DRG 349, we identified a total of 644 cases with an average length of stay of 2.2 days and average costs of \$9,095. Of those 644 cases, there were 117 cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, with average

costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 349 (\$14,612 compared to \$9,095), and a

longer average length of stay (3 days compared to 2.2 days).

We stated we then examined claims data from the September 2023 update of

the FY 2023 MedPAR for MS-DRGs 329, 330, and 331. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
329	28,706	12.5	\$38,468
330	37,642	6.3	\$20,852
331	18,004	3.3	\$14,796

While the average costs for all cases in MS-DRGs 329, 330, and 331 are higher than the average costs of the cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach, we stated the data suggest that overall, cases reporting one of eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach may be more appropriately aligned with the average costs of the cases in MS-DRGs 329, 330, and 331 in comparison to MS-DRGs 347, 348, and 349, even though the average lengths of stay are shorter.

In the proposed rule we stated we reviewed this grouping issue, and our analysis indicates that the eight procedure codes describing the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach were initially assigned to the list of procedures in the GROUPER logic for MS-DRGs 347, 348, and 349 as a result of replication in the transition from ICD-9 to ICD-10 based MS-DRGs. We also noted that procedure codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ do not describe procedures on a stoma, which is an artificial opening on the abdomen that can be connected to either the digestive or urinary system to allow waste to be diverted out of the body, or the anus. We stated we supported the reassignment of codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ for clinical coherence and that we believe these eight procedure codes should be appropriately grouped along with the four other procedure codes that describe excision of intestinal body parts by an open, or percutaneous endoscopic approach currently assigned to MS-DRGs 329, 330, and 331.

Accordingly, because the procedures described by the eight procedure codes that describe excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach are not clinically consistent with procedures on the anus or stoma, and it

is clinically appropriate to reassign these procedures to be consistent with the four other procedure codes that describe excision of intestinal body parts by an open, or percutaneous endoscopic approach in MS-DRGs 329, 330, and 331, we proposed the reassignment of procedure codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ from MS-DRGs 347, 348, and 349 (Anal and Stomal Procedures with MCC, with CC, and without CC/MCC, respectively) to MS-DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 06, effective FY 2025.

Comment: Commenters supported the proposal to reassign the eight procedure codes that describe the excision of intestinal body parts by an open, percutaneous, or percutaneous endoscopic approach from MS-DRGs 347, 348, and 349 to MS-DRGs 329, 330, and 331. A commenter thanked CMS for this review and stated that they agreed that the proposed reassignment would correct an error that was made during the transition from the ICD-9 based MS-DRGs to the ICD-10 based MS-DRGs. Other commenters stated that these procedure codes do not belong in the MS-DRGs they are currently assigned to, and that reassignment will appropriately group these procedures based on the body part involved.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal to reassign procedure codes 0DB83ZZ, 0DBA3ZZ, 0DBA4ZZ, 0DBB3ZZ, 0DBB4ZZ, 0DBC0ZZ, 0DBC3ZZ, and 0DBC4ZZ from MS-DRGs 347, 348, and 349 (Anal and Stomal Procedures with MCC, with CC, and without CC/MCC, respectively) to MS-DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 06, without modification, effective October 1, 2024, for FY 2025.

6. MDC 08 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. MS-DRG Logic for MS-DRGs 456, 457, and 458

In the proposed rule we discussed an inconsistency in the GROUPER logic for MS-DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) related to ICD-10-CM diagnosis codes describing deforming dorsopathies. The logic for case assignment to MS-DRGs 456, 457, and 458 as displayed in the ICD-10 MS-DRG Definitions Manual Version 41.1 (which is available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software>) is comprised of four logic lists. The first logic list is entitled "Spinal Fusion Except Cervical" and is defined by a list of procedure codes designated as O.R. procedures that describe spinal fusion procedures of the thoracic, thoracolumbar, lumbar, lumbosacral, sacrococcygeal, coccygeal, and sacroiliac joint. The second logic list is entitled "Spinal Curvature/Malignancy/Infection" and is defined by a list of diagnosis codes describing spinal curvature, spinal malignancy, and spinal infection that are used to define the logic for case assignment when any one of the listed diagnosis codes is reported as the principal diagnosis. The third logic list is entitled "OR Secondary Diagnosis" and is defined by a list of diagnosis codes describing curvature of the spine that are used to define the logic for case assignment when any one of the listed codes is reported as a secondary diagnosis. The fourth logic list is entitled "Extensive Fusions" and is defined by a list of procedure codes designated as O.R. procedures that describe extensive spinal fusion procedures. We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1, (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/>)

acute-inpatient-pps/ms-drg-classifications-and-software) for complete documentation of the

GROUPE logic for MS-DRGs 456, 457, and 458.
 In the second logic list entitled “Spinal Curvature/Malignancy/

Infection” there are a subset of six diagnosis codes describing other specified deforming dorsopathies as shown in the following table.

ICD-10-CM Code	Description
M43.8X4	Other specified deforming dorsopathies, thoracic region
M43.8X5	Other specified deforming dorsopathies, thoracolumbar region
M43.8X6	Other specified deforming dorsopathies, lumbar region
M43.8X7	Other specified deforming dorsopathies, lumbosacral region
M43.8X8	Other specified deforming dorsopathies, sacral and sacrococcygeal region
M43.8X9	Other specified deforming dorsopathies, site unspecified

In the third logic list entitled “OR Secondary Diagnosis” there are currently 14 diagnosis codes listed, one

of which is diagnosis code M43.8X9 (Other specified deforming

dorsopathies, site unspecified) as shown in the following table.

OR Secondary Diagnosis Codes	
ICD-10-CM Code	Description
M40.10	Other secondary kyphosis, site unspecified
M40.14	Other secondary kyphosis, thoracic region
M40.15	Other secondary kyphosis, thoracolumbar region
M41.40	Neuromuscular scoliosis, site unspecified
M41.44	Neuromuscular scoliosis, thoracic region
M41.45	Neuromuscular scoliosis, thoracolumbar region
M41.46	Neuromuscular scoliosis, lumbar region
M41.47	Neuromuscular scoliosis, lumbosacral region
M41.50	Other secondary scoliosis, site unspecified
M41.54	Other secondary scoliosis, thoracic region
M41.55	Other secondary scoliosis, thoracolumbar region
M41.56	Other secondary scoliosis, lumbar region
M41.57	Other secondary scoliosis, lumbosacral region
M43.8X9	Other specified deforming dorsopathies, site unspecified

In the proposed rule we stated that we recognized that the five diagnosis codes describing deforming dorsopathies of specific anatomic sites that are listed in the second logic list entitled “Spinal Curvature/Malignancy/Infection” are not listed in the third logic list entitled “OR Secondary Diagnosis”, rather, only diagnosis code M43.8X9 (Other specified deforming dorsopathies, site unspecified) appears in both logic lists. Therefore, we considered if it was clinically appropriate to add the five diagnosis codes describing deforming dorsopathies of specific anatomic sites that are listed in the second logic list entitled “Spinal Curvature/Malignancy/Infection” to the third logic list entitled “OR Secondary Diagnosis”.

A deforming dorsopathy is characterized by abnormal bending or flexion in the vertebral column. All spinal deformities involve problems with curve or rotation of the spine, regardless of site specificity. In the proposed rule we stated our belief that

the five diagnosis codes describing deforming dorsopathies of specific anatomic sites are clinically aligned with the diagnosis codes currently included in the “OR Secondary Diagnosis” logic list. Therefore, for clinical consistency we proposed to add diagnosis codes M43.8X4, M43.8X5, M43.8X6, M43.8X7, and M43.8X8 to the “OR Secondary Diagnosis” logic list for MS-DRGs 456, 457, and 458, effective October 1, 2024, for FY 2025.

Comment: Commenters supported the proposal to add diagnosis codes M43.8X4, M43.8X5, M43.8X6, M43.8X7, and M43.8X8 to the “OR Secondary Diagnosis” logic list for MS-DRGs 456, 457, and 458.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to add diagnosis codes M43.8X4, M43.8X5, M43.8X6, M43.8X7, and M43.8X8 to the “OR Secondary Diagnosis” logic list for MS-

DRGs 456, 457, and 458 effective October 1, 2024, for FY 2025.

b. Interbody Spinal Fusion Procedures

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35971 through 35985), we discussed a request we received to reassign cases reporting spinal fusion procedures using an aprevo™ customized interbody fusion device from the lower severity MS-DRG 455 (Combined Anterior and Posterior Spinal Fusion without CC/MCC) to the higher severity MS-DRG 453 (Combined Anterior and Posterior Spinal Fusion with MCC), from the lower severity MS-DRG 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions without CC/MCC) to the higher severity level MS-DRG 456 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC) when a diagnosis of malalignment is reported, and from MS-DRGs 459 and 460 (Spinal Fusion

Except Cervical with MCC and without MCC, respectively) to MS-DRG 456. We referred the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic.

In the proposed rule we noted that this topic has been discussed previously in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26726 through 26729) and final rule (88 FR 58731 through 58735, as corrected in the FY 2024 final rule correction notice at 88 FR 77211). We also noted that the aprevo™ Intervertebral Body Fusion Device technology was approved for new technology add-on payments for FY 2022 (86 FR 45127 through 45133). We further noted that, as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49468 through 49469), CMS finalized the continuation of the new technology add-on payments for this technology for FY 2023. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58802), we finalized the continuation of new technology add-on payments for the transforaminal lumbar interbody fusion (TLIF) indication for aprevo™ for FY 2024, and the discontinuation of the new technology add-on payments for the anterior lumbar interbody fusion

(ALIF) and lateral lumbar interbody fusion (LLIF) indications for FY 2024. We referred the reader to section II.E. for discussion of the FY 2025 status of technologies receiving new technology add-on payments for FY 2024, including the status for the aprevo™ technology.

Additionally, in the proposed rule we noted that in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26726 through 26729) and final rule (88 FR 58731 through 58735), effective October 1, 2021 (FY 2022), we implemented 12 new ICD-10-PCS procedure codes to identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device. We noted that the manufacturer expressed concerns that there may be unintentional miscoded claims from providers with whom they do not have an explicit relationship and that following the submission of the request for the FY 2024 MS-DRG classification change for cases reporting the performance of a spinal fusion procedure utilizing an aprevo™ customized interbody spinal fusion device, it submitted a code proposal requesting a revision to the title of the procedure codes that were finalized effective FY 2022. We also noted that, as discussed in the FY 2024 IPPS/LTCH PPS final rule, a proposal to revise the code title for the procedure codes that identify and describe spinal fusion procedures using the aprevo™

customized interbody fusion device was presented and discussed as an Addenda item at the March 7-8, 2023 ICD-10 Coordination and Maintenance Committee meeting and subsequently finalized.

As discussed in the proposed rule, the code title changes for the 12 ICD-10-PCS procedure codes to identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device were reflected in the FY 2024 ICD-10-PCS Code Update files available via the CMS website at: <https://www.cms.gov/medicare/coding-billing/icd-10-codes/2024-icd-10-pcs>, as well as in Table 6F.—Revised Procedure Code Titles—FY 2024 associated with the FY 2024 IPPS/LTCH PPS final rule and available via the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. We noted that only the code titles were revised and the code numbers themselves did not change.

Accordingly, effective with discharges on and after October 1, 2023 (FY 2024), the 12 ICD-10-PCS procedure codes to identify and describe spinal fusion procedures using the aprevo™ customized interbody fusion device with their revised code titles are as follows:

BILLING CODE 4120-01-P

ICD-10-PCS Code	Description
XRGA0R7	Fusion of thoracolumbar vertebral joint using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGA3R7	Fusion of thoracolumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGA4R7	Fusion of thoracolumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGB0R7	Fusion of lumbar vertebral joint using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGB3R7	Fusion of lumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGB4R7	Fusion of lumbar vertebral joint using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGC0R7	Fusion of 2 or more lumbar vertebral joints using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGC3R7	Fusion of 2 or more lumbar vertebral joints using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGC4R7	Fusion of 2 or more lumbar vertebral joints using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7
XRGD0R7	Fusion of lumbosacral joint using custom-made anatomically designed interbody fusion device, open approach, new technology group 7
XRGD3R7	Fusion of lumbosacral joint using custom-made anatomically designed interbody fusion device, percutaneous approach, new technology group 7
XRGD4R7	Fusion of lumbosacral joint using custom-made anatomically designed interbody fusion device, percutaneous endoscopic approach, new technology group 7

BILLING CODE 4120-01-C

As stated in the proposed rule, as part of our analysis of the manufacturer’s request to reassess cases involving the aprevo™ device as discussed in the FY 2024 proposed and final rules, we presented findings from our analysis of claims data from the September 2022 update of the FY 2022 MedPAR file for MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 and cases reporting any one of the 12 original procedure codes describing utilization of an aprevo™ customized interbody spinal fusion device. We stated that while we agreed that the findings from our analysis appeared to indicate that cases reporting the performance of a procedure using an aprevo™ customized interbody spinal fusion device reflected a higher consumption of resources, due to the

concerns expressed with respect to suspected inaccuracies of the coding and therefore, reliability of the claims data, we would continue to monitor the claims data for resolution of the potential coding issues identified by the requestor (the manufacturer). We also stated that we continued to believe additional review of claims data was warranted and would be informative as we continued to consider cases involving this technology for future rulemaking. Specifically, we stated we believed it would be premature to propose any MS–DRG modifications for spinal fusion procedures using an aprevo™ customized interbody spinal fusion device for FY 2024 and finalized our proposal to maintain the structure of MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460, without modification, for

FY 2024 (88 FR 58734 through 58735). As discussed further in the FY 2024 final rule correction, in response to the manufacturer’s comment expressing concern about the reliability of the Medicare claims data in the MedPAR file used for purposes of CMS’s claims data analysis, as compared to the manufacturer’s analysis of its own customer claims data, we stated that in order for us to consider using non-MedPAR data, the non-MedPAR data must be independently validated, meaning when an entity submits non-MedPAR data, we must be able to independently review the medical records and verify that a particular procedure was performed for each of the cases that purportedly involved the procedure. We noted that, in this particular circumstance, where external

data for cases reporting the use of an aprevo™ spinal fusion device was provided, we did not have access to the medical records to conduct an independent review; therefore, we were not able to validate or confirm the non-MedPAR data submitted by the commenter for consideration in FY 2024. However, we also noted that our work in this area was ongoing, and we would continue to examine the data and consider these issues as we develop potential future rulemaking proposals. We referred readers to the FY 2024

IPPS/LTCH PPS correction notice (88 FR 77211) for further discussion.

In the proposed rule, we noted that the manufacturer provided us with a list of the providers with which it indicated it has an explicit relationship, to assist in our ongoing review of its request for reassignment of cases reporting spinal fusion procedures using an aprevo™ interbody fusion device from the lower severity spinal fusion MS-DRGs to the higher severity level spinal fusion MS-DRGs.

As stated in the proposed rule, to continue our analysis of cases reporting

spinal fusion procedures using an aprevo™ customized interbody fusion device, we first analyzed claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRGs 453, 454, 455, 456, 457, 458, 459, and 460, and cases reporting any one of the previously listed procedure codes describing the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.⁵ Our findings are shown in the following tables.

BILLING CODE 4120-01-P

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	4,066	9.5	\$80,420
MS-DRG 453 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	26	9.8	\$99,162
MS-DRG 454 All cases	20,425	4.3	\$54,983
MS-DRG 454 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	129	4.9	\$71,527
MS-DRG 455 All cases	17,000	2.6	\$41,015
MS-DRG 455 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	87	2.6	\$54,922
MS-DRG 456 All cases	1,475	12.6	\$76,060
MS-DRG 456 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	2	8.5	\$69,009
MS-DRG 457 All cases	3,730	6.1	\$52,179
MS-DRG 457 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	11	5	\$47,221
MS-DRG 458 All cases	1,260	3.1	\$39,260
MS-DRG 458 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	6	3	\$53,140
MS-DRG 459 All cases	3,152	9.6	\$53,192
MS-DRG 459 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	1	22	\$288,499
MS-DRG 460 All cases	28,698	3.4	\$32,586
MS-DRG 460 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	64	2.4	\$53,513

⁵ As noted earlier in the discussion, the code titles were updated but the code numbers themselves did not change.

Summary Data for MS-DRGs 453, 454 and 455			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 453, 454, and 455 All cases	41,491	4.1	\$51,753
MS-DRGs 453, 454, and 455 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	242	4.6	\$68,526

Summary Data for MS-DRGs 456, 457 and 458			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 456, 457, and 458 All cases	6,465	7.0	\$55,110
MS-DRGs 456, 457, and 458 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	19	4.7	\$51,384

Summary Data for MS-DRGs 459 and 460			
MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRGs 459 and 460 All cases	31,850	4.0	\$34,625
MS-DRGs 459 and 460 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	65	2.7	\$57,128

BILLING CODE 4120-01-C

We identified the majority of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS-DRGs 453, 454, and 455 with a total of 242 cases (26 + 129 + 87 = 242) with an average length of stay of 4.6 days and average costs of \$68,526. The 26 cases found in MS-DRG 453 appear to have a comparable average length of stay (9.8 days versus 9.5 days) and higher average costs (\$99,162 versus \$80,420) compared to all the cases in MS-DRG 453, with a difference in average costs of \$18,742 for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device. The 129 cases found in MS-DRG 454 appear to have a comparable average length of stay (4.9 days versus 4.3 days) and higher average costs (\$71,527 versus \$54,983) compared to all the cases in MS-DRG 454, with a difference in average costs of \$16,544 for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody

fusion device. The 87 cases found in MS-DRG 455 have an identical average length of stay of 2.6 days in comparison to all the cases in MS-DRG 455, however, the difference in average costs is \$13,907 (\$54,922 – \$41,015 = \$13,907) for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.

For MS-DRGs 456, 457, and 458, we found a total of 19 cases (2 + 11 + 6 = 19) reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device with an average length of stay of 4.7 days and average costs of \$51,384. The 2 cases found in MS-DRG 456 have a shorter average length of stay (8.5 days versus 12.6 days) and lower average costs (\$69,009 versus \$76,060) compared to all the cases in MS-DRG 456. The 11 cases found in MS-DRG 457 also have a shorter average length of stay (5.0 days versus 6.1 days) and lower average costs (\$47,221 versus \$52,179). For MS-DRG 458, we found 6 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody

fusion device with a comparable average length of stay (3.0 days versus 3.1 days) and higher average costs (\$53,140 versus \$39,260) compared to the average costs of all the cases in MS-DRG 458, with a difference in average costs of \$13,880 (\$53,140 – \$39,260 = \$13,880) for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.

For MS-DRGs 459 and 460, we found a total of 65 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device with an average length of stay of 2.7 days and average costs of \$57,128. The single case found in MS-DRG 459 had a longer length of stay (22 days versus 9.6 days) and higher costs (\$288,499 versus \$53,192) compared to the average costs of all the cases in MS-DRG 459. For MS-DRG 460, the 64 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device had a shorter average length of stay (2.4 days versus 3.4 days) and higher average cost (\$53,513 versus \$32,586), compared to

all the cases in MS–DRG 460, with a difference in average costs of \$20,927 (\$53,513 – \$32,586 = \$20,927) for the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device.

As discussed in the FY 2024 final rule, the manufacturer expressed concern that there may be unintentional miscoded claims from providers with whom they do not have an explicit relationship and, as previously discussed, subsequently provided the list of providers with which it indicated it has an explicit relationship to assist in our ongoing review. We noted in the proposed rule that in connection with the list of providers submitted, the manufacturer also resubmitted claims data from the Standard Analytical File (SAF) that included FY 2022 claims and the first two quarters (discharges beginning October 1, 2022 through March 31, 2023) of FY 2023 from these providers. We stated that the list of providers the manufacturer submitted to us was considered applicable for the dates of service in connection with the resubmitted claims data. The manufacturer stated that the list of providers with which it has an explicit relationship is subject to change on a weekly basis as additional providers begin to use the technology. The manufacturer also clarified that the external customer data it had previously

referenced in connection with the FY 2024 rulemaking that was received directly from the providers with which it has an explicit relationship is Medicare data. As stated in the proposed rule, we reviewed the September update of the FY 2022 MedPAR file and compared it against the claims data file with the list of providers submitted by the manufacturer for FY 2022. We noted that with this updated analysis of the September update of the FY 2022 MedPAR claims data, we were able to confirm that the majority of the cases for the providers with which the manufacturer indicated it has an explicit relationship matched the claims data in our FY 2022 MedPAR file. However, we also stated that we identified 3 claims that appeared in the manufacturer's file that were not found in our FY 2022 MedPAR file and could not be validated. Next, we reviewed the September update of the FY 2023 MedPAR file and compared it against the claims data file with the list of providers submitted by the manufacturer for the first two quarters of FY 2023. We stated we were able to confirm that the majority of the cases for the providers with which the manufacturer indicated it has an explicit relationship matched the claims data in our FY 2023 MedPAR file. However, we also stated that we identified 2 claims that appeared in the

manufacturer's file that were not found in our FY 2023 MedPAR file and could not be validated.

As discussed in the proposed rule, in our analysis of the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460 from the September update of the FY 2023 MedPAR file, we also reviewed the findings for cases identified based on the list of providers with which the manufacturer indicated it has an explicit relationship and cases based on other providers, (that is, those providers not included on the manufacturer's list), and compared those to the findings from all the cases we identified in the September update of the FY 2023 MedPAR file reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS–DRGs 453, 454, 455, 456, 457, 458, 459, and 460. The findings from our analysis are shown in the following table. We noted that there were no cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device based on the list of providers submitted by the manufacturer in MS–DRG 456.

BILLING CODE 4120–01–P

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	4,066	9.5	\$80,420
MS-DRG 453 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	26	9.8	\$99,162
MS-DRG 453 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	10	10.5	\$118,863
MS-DRG 453 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	16	9.4	\$86,849
MS-DRG 454 All cases	20,425	4.3	\$54,983
MS-DRG 454 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	129	4.9	\$71,527
MS-DRG 454 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	48	6.3	\$81,680
MS-DRG 454 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	81	4.1	\$65,510
MS-DRG 455 All cases	17,000	2.6	\$41,015
MS-DRG 455 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	87	2.6	\$54,922
MS-DRG 455 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	14	2.5	\$61,637
MS-DRG 455 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	73	2.6	\$53,634
MS-DRG 456 All cases	1,475	12.6	\$76,060

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 456 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	2	8.5	\$69,009

MS-DRG 457 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	2	4.5	\$53,113
MS-DRG 457 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	9	5.1	\$45,912
MS-DRG 458 All cases	1,260	3.1	\$39,260
MS-DRG 458 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	6	3	\$53,140
MS-DRG 458 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	3	3.33	\$52,760
MS-DRG 458 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	3	2.7	\$53,520
MS-DRG 459 All cases	3,152	9.6	\$53,192
MS-DRG 459 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	1	22	\$288,499
MS-DRG 459 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	1	22	\$288,499
MS-DRG 460 All cases	28,698	3.4	\$32,586
MS-DRG 460 Cases reporting a custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file	64	2.4	\$53,513
MS-DRG 460 Cases reporting a custom-made anatomically designed interbody fusion device based on the manufacturer provider list	13	2.6	\$62,829
MS-DRG 460 Cases reporting a custom-made anatomically designed interbody fusion device based on other providers	51	2.3	\$51,138

BILLING CODE 4120-01-C

For MS-DRG 453, the data show that of the 26 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody

fusion device from the FY 2023 MedPAR file, 10 cases were reported based on the manufacturer's provider list, and 16 cases were reported based on other providers. The average length of stay is longer (10.5 days versus 9.4

days), and the average costs are higher (\$118,863 versus \$86,849) for the 10 cases reported based on the manufacturer's provider list compared to the 16 cases that were reported based on other providers. For MS-DRG 454,

the data show that of the 129 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 48 cases were reported based on the manufacturer's provider list, and 81 cases were reported based on other providers. The average length of stay is longer (6.3 days versus 4.1 days), and the average costs are higher (\$81,680 versus \$65,510) for the 48 cases reported based on the manufacturer's provider list compared to the 81 cases that were reported based on other providers. For MS-DRG 455, the data show that of the 87 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 14 cases were reported based on the manufacturer's provider list, and 73 cases were reported based on other providers. The average length of stay is shorter (2.5 days versus 2.6 days), and the average costs are higher (\$61,637 versus \$53,634) for the 14 cases reported based on the manufacturer's provider list compared to the 73 cases that were reported based on other providers.

For MS-DRG 456, the data show that of the 2 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, there were no cases reported based on the manufacturer's provider list and the 2 cases reported were based on other providers. For MS-DRG 457, the data show that of the 11 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 2 cases were reported based on the manufacturer's provider list, and 9 cases were reported based on other providers. The average length of stay is shorter (4.5 days versus 5.1 days), and the average costs are higher (\$53,113 versus \$45,912) for the 2 cases reported based on the manufacturer's provider list compared to the 9 cases that were reported based on other providers. For MS-DRG 458, the data show that of the 6 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 3 cases were reported based on the manufacturer's provider list, and 3 cases were reported based on other providers. The average length of stay is longer (3.3 days versus

2.7 days), and the average costs are lower (\$52,760 versus \$53,520) for the 3 cases reported based on the manufacturer's provider list compared to the 3 cases that were reported for other providers.

For MS-DRG 459, the data show that the single case found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file was based on the manufacturer's provider list. There were no cases reported based on other providers. For MS-DRG 460, the data show that of the 64 cases found to report the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the FY 2023 MedPAR file, 13 cases were reported based on the manufacturer's provider list, and 51 cases were reported based on other providers. The average length of stay is comparable (2.6 days versus 2.3 days), and the average costs are higher (\$62,829 versus \$51,138) for the 13 cases reported based on the manufacturer's provider list compared to the 51 cases that were reported from other providers.

As discussed in the proposed rule, we considered these data findings with regard to the concerns expressed by the manufacturer that there may be unintentional miscoded claims reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from providers with whom the manufacturer does not have an explicit relationship. Based on our review and analysis of the claims data, we stated that we are unable to confirm that the claims from these providers with whom the manufacturer indicated that it does not have an explicit relationship are miscoded.

In the proposed rule we noted that, while a newly established ICD-10 code may be associated with an application for new technology add-on payment, such codes are not generally established to be product specific. We stated that, if, after consulting the official coding guidelines, a provider determines that an ICD-10 code associated with a new technology add-on payment describes the technology that they are billing, the hospital may report the code and be eligible to receive the associated add-on payment. We noted that providers are responsible for ensuring that they are billing correctly for the services they render. In addition, as we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), coding advice is issued independently from payment policy. We

also noted that, historically, we have not provided coding advice in rulemaking with respect to policy (82 FR 38045). We stated that as one of the Cooperating Parties for ICD-10, we collaborate with the American Hospital Association (AHA) through the *Coding Clinic for ICD-10-CM and ICD-10-PCS* to promote proper coding. We recommended that an entity seeking coding guidance submit any questions pertaining to correct coding to the AHA.

Accordingly, after review of the list of providers and associated claims data submitted by the manufacturer, and our analysis of the MedPAR data, we stated we believed these MedPAR data are appropriate for our FY 2025 analysis. Therefore, in assessing the request for reassignment of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the lower severity MS-DRG 455 to the higher severity MS-DRG 453, from the lower severity MS-DRG 458 to the higher severity level MS-DRG 456 when a diagnosis of malalignment is reported, and cases from MS-DRGs 459 and 460 to MS-DRG 456 for FY 2025, we considered all the claims data reporting the performance of a spinal fusion procedure, including those spinal fusion procedures using an aprevo™ custom-made anatomically designed interbody fusion device as identified in the September update of the FY 2023 MedPAR file for these MS-DRGs. Consequently, our analysis also included claims based on the list of providers submitted by the manufacturer as well as other providers.

We stated in the proposed rule that, based on the findings from our analysis and clinical review, we do not believe the requested reassignments are supported. Specifically, we stated it would not be appropriate to propose to reassign the 87 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the lower severity level MS-DRG 455 (without CC/MCC) with an average length of stay of 2.6 days and average costs of \$54,922 to the higher severity level MS-DRG 453 (with MCC) with an average length of stay of 9.5 days and average costs of \$80,420. We noted that if we were to propose to reassign the 87 cases from the lower severity MS-DRG 455 to the higher severity MS-DRG 453, the MS-DRGs would no longer be clinically coherent with regard to severity of illness of the patients, and the cases would reflect a difference in resource utilization, as demonstrated by the difference in average costs of approximately \$25,498

(\$80,420 – \$54,922 = \$25,498), as well as a difference in average length of stay (2.6 days versus 9.5 days) compared to all the cases in MS–DRG 453. Similarly, we stated it would not be appropriate to propose to reassign the 6 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from the lower severity level MS–DRG 458 (without CC/MCC) with an average length of stay of 3.0 days and average costs of \$53,140 to the higher severity level MS–DRG 456 (with MCC) with an average length of stay of 12.6 days and average costs of \$76,060. We stated that if we were to propose to reassign the 6 cases from the lower severity MS–DRG 458 to the higher severity MS–DRG 456, the MS–DRGs would no longer be clinically coherent with regard to severity of illness of the patients and the cases would reflect a difference in resource utilization, as demonstrated by the difference in average costs of approximately \$22,920 (\$76,060 – \$53,140 = \$22,920) as well as a difference in average length of stay (3.0 days versus 12.6 days) compared to all the cases in MS–DRG 456. Finally, we stated it would not be appropriate nor consistent with the definition of the MS–DRGs to propose to reassign the 65 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device from MS–DRGs 459 and 460 with an average length of stay of 2.7 days and average costs of \$57,128 to MS–DRG 456. In addition to the cases reflecting a difference in resource utilization as demonstrated by the difference in average costs of approximately \$18,932 (\$76,060 – \$57,128 = \$18,932) as well as having a shorter average length of stay (2.7 days versus 12.6 days), we noted that the logic for case assignment to MS–DRGs 456, 457, and 458 is specifically defined by principal diagnosis logic. As such, cases grouping to this set of MS–DRGs require a principal diagnosis of spinal curvature, malignancy, or infection, or an extensive fusion procedure. We stated that it would not be clinically appropriate to propose to reassign cases from MS–DRGs 459 and 460 that do not have a principal diagnosis of spinal curvature, malignancy, or infection, or an extensive fusion procedure, and are not consistent with the logic for case assignment to MS–DRG 456.

As discussed in the proposed rule, in light of the higher average costs of the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically

designed interbody fusion device in MS–DRGs 453, 454, 455, 458, and 460, we further reviewed the claims data for cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in these MS–DRGs and identified a wide range in the average length of stay and average costs. For example, in MS–DRG 453, the average length of stay for the 26 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 3.0 days to 27 days and the average costs ranged from \$28,054 to \$177,919. In MS–DRG 454, the average length of stay for the 129 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 16 days and the average costs ranged from \$10,242 to \$316,780. In MS–DRG 455, the average length of stay for the 87 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 9.0 days and the average costs ranged from \$7,961 to \$216,200. In MS–DRG 456, the length of stay for the 2 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device were 8.0 days and 9.0 days, respectively, with costs of \$107,457 and \$30,560, respectively. In MS–DRG 457, the average length of stay for the 11 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 17 days and the average costs ranged from \$25,955 to \$89,176. In MS–DRG 458, the average length of stay for the 6 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 5.0 days and the average costs ranged from \$33,165 to \$78,720. In MS–DRG 459, the length of stay for the single case reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device was 22 days with a cost of \$288,499, indicating it is an outlier. In MS–DRG 460, the average length of stay for the 64 cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device ranged from 1.0 day to 8.0 days and the average costs ranged from \$8,981 to \$325,104.

As discussed in the proposed rule, in our analysis of the claims data for MS–DRGs 453, 454, and 455, we also identified a number of cases for which additional spinal fusion procedures were performed, beyond the logic for case assignment to the respective MS–DRG. For example, the logic for case assignment to MS–DRGs 453, 454, and 455 requires at least one anterior column fusion and one posterior column fusion (that is, combined anterior and posterior fusion). We noted that the aprevo™ custom-made anatomically designed interbody fusion device is used in the performance of an anterior column fusion. We stated that findings from our analysis of MS–DRG 453 show that of the 26 cases reporting a combined anterior and posterior fusion (including an aprevo™ custom-made anatomically designed interbody fusion device), 24 cases also reported another spinal fusion procedure. We categorized these cases as “multiple level fusions” where another procedure code describing a spinal fusion procedure was reported in addition to the combined anterior and posterior fusion procedure codes. We stated that findings from our analysis of MS–DRG 454 show that of the 129 cases reporting a combined anterior and posterior fusion (including an aprevo™ custom-made anatomically designed interbody fusion device), 100 cases also reported another spinal fusion procedure. Lastly, we stated that findings from our analysis of MS–DRG 455 show that of the 87 cases reporting a combined anterior and posterior fusion (including an aprevo™ custom-made anatomically designed interbody fusion device), 51 cases also reported another spinal fusion procedure.

We noted in the proposed rule that while the findings from our analysis indicate a wide range in the average length of stay and average costs for cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device, we believed the increase in resource utilization for certain cases may be partially attributable to the performance of multiple level fusion procedures and, specifically for MS–DRGs 453 and 454, the reporting of secondary diagnosis MCC and CC conditions. We noted that our analysis of the data for MS–DRGs 453 and 454 show that the cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device also reported multiple MCC and CC conditions, which we believe may be an additional

contributing factor to the increase in resource utilization for these cases, combined with the reported performance of multiple level fusions.

As discussed in the proposed rule, in our analysis of the data for MS-DRGs 453, 454, and 455 and cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device, we also identified other procedures that were reported, some of which are designated as operating room (O.R.) procedures, that we believed may be another contributing factor to the increase in resource utilization and complexity for these cases. (We noted that because a discectomy is frequently performed in connection with a spinal fusion procedure, we did not consider these procedures as contributing factors to consumption of resources in these

spinal fusion cases). We provided a list of the top 5 MCC and CC conditions, as well as the top 5 O.R. procedures (excluding discectomy) reported in MS-DRGs 453, 454, and 455 that we believed may be contributing factors to the increase in resource utilization and complexity for these cases as shown in the tables that follow. We noted that the logic for case assignment to MS-DRG 453 includes the reporting of at least one secondary diagnosis MCC condition (“with MCC”) and cases that group to this MS-DRG may also report secondary diagnosis CC conditions. We provided the frequency data for both the top 5 secondary diagnosis MCC conditions and the top 5 secondary diagnosis CC conditions, in addition to the top 5 O.R. procedures (excluding discectomy) that were reported for spinal fusion cases with an aprevo™ custom-made

anatomically designed interbody fusion device in MS-DRG 453. We noted that because the logic for case assignment to MS-DRG 454 includes the reporting of at least one secondary diagnosis CC condition (“with CC”) we provided the top 5 secondary diagnosis CC conditions and the top 5 O.R. procedures (excluding discectomy) that were reported for spinal fusion cases with an aprevo™ custom-made anatomically designed interbody fusion device in MS-DRG 454. We noted that the logic for case assignment to MS-DRG 455 is “without CC/MCC” and does not include any secondary diagnosis MCC or CC conditions, therefore, we only provided a table with the top 5 O.R. procedures (excluding discectomy) reported for that MS-DRG in addition to a spinal fusion procedure.

BILLING CODE 4120-01-P

MS-DRG 453 Top 5 Secondary Diagnosis MCC Conditions Reported		
ICD-10-CM Code	Description	Frequency
J95.2	Acute pulmonary insufficiency following nonthoracic surgery	5
G92.8	Other toxic encephalopathy	5
R57.1	Hypovolemic shock	4
J18.9	Pneumonia, unspecified organism	4
J81.0	Acute pulmonary edema	2

MS-DRG 453 Top 5 Secondary Diagnosis CC Conditions Reported		
ICD-10-CM Code	Description	Frequency
D6.2	Acute posthemorrhagic anemia	17
E87.4	Mixed disorder of acid-base balance	4
N17.9	Acute kidney failure, unspecified	3
E87.1	Hypo-osmolality and hyponatremia	3
K56.7	Ileus, unspecified	3

MS-DRG 453 Top 5 Operating Room Procedures Reported		
ICD-10-PCS Code	Description	Frequency
01NB0ZZ	Release lumbar nerve, open approach	2,011
00NY0ZZ	Release lumbar spinal cord, open approach	754
01NR0ZZ	Release sacral nerve, open approach	538
0QP004Z	Removal of internal fixation from lumbar vertebra, open approach	379
00NW0ZZ	Release cervical spinal cord, open approach	380

MS-DRG 454 Top 5 Secondary Diagnosis CC Conditions Reported

0QP004Z	Removal of internal fixation device from lumbar vertebra, open approach	2,398
01NR0ZZ	Release sacral nerve, open approach	3,098

MS-DRG 455 Top 5 Operating Room Procedures Reported

ICD-10-PCS Code	Description	Frequency
0QP004Z	Removal of internal fixation device from lumbar vertebra, open approach	1,184
0SP004Z	Removal of internal fixation device from lumbar vertebral joint, open approach	756
01NR0ZZ	Release sacral nerve, open approach	2,143
00NY0ZZ	Release lumbar spinal cord, open approach	3,192
01NB0ZZ	Release lumbar nerve, open approach	10,405

BILLING CODE 4120-01-C

As previously summarized, our analysis of the claims data for cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device demonstrated a low volume of cases and higher average costs in comparison to all the cases in their respective MS-DRGs (that is, in MS-DRGs 453, 454, 455, 458, 459, and 460). Therefore, as stated in the proposed rule, we expanded our analysis to include all spinal fusion cases in MS-DRGs 453, 454, 455, 456, 457, 458, 459, and 460 to identify and further examine the cases reporting multiple level fusions versus single level fusions, multiple MCCs or CCs, and other O.R. procedures as we believed that clinically, all of these factors may contribute to increases in

resource utilization, severity of illness and technical complexity.

As stated in the proposed rule, we began our expanded analysis with MS-DRGs 453, 454, and 455. Based on the findings for a subset of the cases (that is, the subset of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device) in these MS-DRGs as previously discussed, and our review of the logic for case assignment to these MS-DRGs, we developed three categories of spinal fusion procedures to further examine. The first category was for the single level combined anterior and posterior fusions except cervical, the second category was for the multiple level combined anterior and posterior fusions except cervical and the third

category was for the combined anterior and posterior cervical spinal fusions. We refer the reader to Table 6P.2d for the list of procedure codes we identified to categorize the single level combined anterior and posterior fusions except cervical, Table 6P.2e for the list of procedure codes we identified to categorize the multiple level combined anterior and posterior fusions except cervical, and Table 6P.2f for the list of procedure codes we identified to categorize the combined anterior and posterior cervical spinal fusions in association with the proposed rule and available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>.

Findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 453 All cases	4,066	9.5	\$80,420
MS-DRG 453 Cases with single level combined anterior and posterior fusion except cervical	791	6.4	\$47,031
MS-DRG 453 Cases with multiple level combined anterior and posterior fusion except cervical	2,664	9.6	\$91,358
MS-DRG 453 Cases with combined anterior and posterior cervical fusion	587	12.5	\$75,077
MS-DRG 454 All cases	20,425	4.3	\$54,983
MS-DRG 454 Cases with single level combined anterior and posterior fusion except cervical	6,481	3.4	\$38,107
MS-DRG 454 Cases with multiple level combined anterior and posterior fusion except cervical	12,498	4.8	\$64,065
MS-DRG 454 Cases with combined anterior and posterior cervical fusion	1,391	5.1	\$52,274
MS-DRG 455 All cases	17,000	2.6	\$41,015
MS-DRG 455 Cases with single level combined anterior and posterior fusion except cervical	8,787	2.3	\$33,010
MS-DRG 455 Cases with multiple level combined anterior and posterior fusion except cervical	7,855	3.0	\$50,097
MS-DRG 455 Cases with combined anterior and posterior cervical fusion	345	2.9	\$37,515

The data show that across MS-DRGs 453, 454, and 455, cases reporting multiple level combined anterior and posterior fusion procedures have a comparable average length of stay (9.6 days versus 9.5 days, 4.8 days versus 4.3 days, and 3.0 days versus 2.6 days, respectively) and higher average costs (\$91,358 versus \$80,420, \$64,065 versus \$54,983, and \$50,097 versus \$41,015) compared to all the cases in MS-DRGs 453, 454, and 455, respectively. The data also show that across MS-DRGs 453, 454, and 455, cases reporting multiple level combined anterior and posterior fusion procedures have a longer average length of stay (9.6 days versus 6.4 days, 4.8 days versus 3.4 days, and 3.0 days versus 2.3 days, respectively) and higher average costs (\$91,358 versus \$47,031, \$64,065 versus \$38,107, and \$50,097 versus \$33,010, respectively) compared to cases reporting a single level combined anterior and posterior fusion. For cases reporting a combined anterior and posterior cervical fusion across MS-DRGs 453 and 454, the data show a longer average length of stay (12.5 days versus 9.5 days, and 5.1 days versus 4.3 days, respectively) compared to all the cases in MS-DRGs 453 and 454 and a

comparable average length of stay (2.9 days versus 2.6 days) for cases reporting a combined anterior and posterior cervical fusion in MS-DRG 455. The data also show that across MS-DRGs 453, 454, and 455, cases reporting a combined anterior and posterior cervical fusion have higher average costs (\$75,077 versus \$47,031, \$52,274 versus \$38,107, and \$37,515 versus \$33,010, respectively) compared to the single level combined anterior and posterior fusion cases.

The data also reflect that in applying the logic that was developed for the three categories of spinal fusion in MS-DRGs 453, 454, and 455 (single level combined anterior and posterior fusion except cervical, multiple level combined anterior and posterior fusion except cervical, and combined anterior and posterior cervical fusion), there is a small redistribution of cases from the current MS-DRGs 453, 454, and 455 to other spinal fusion MS-DRGs because the logic for case assignment to MS-DRGs 453, 454, and 455 is currently satisfied with any one procedure code from the anterior spinal fusion logic list and any one procedure code from the posterior spinal fusion logic list, however, the logic lists that were

developed for our analysis using the three categories of spinal fusion are comprised of specific procedure code combinations to satisfy the criteria for case assignment to any one of the three categories developed. For example, based on our analysis of MS-DRG 453 using the September update of the FY 2023 MedPAR file, the total number of cases found in MS-DRG 453 is 4,066 and with application of the logic for each of the three categories, the total number of cases in MS-DRG 453 is 4,042 (791 + 2,664 + 587 = 4,042), a difference of 24 cases. Using the September update of the FY 2023 MedPAR file, the total number of cases found in MS-DRG 454 is 20,425 and with application of the logic for each of the three categories, the total number of cases in MS-DRG 454 is 20,370 (6,481 + 12,498 + 1,391 = 20,370), a difference of 55 cases. Lastly, using the September update of the FY 2023 MedPAR file, the total number of cases found in MS-DRG 455 is 17,000 and with application of the logic for each of the three categories, the total number of cases in MS-DRG 455 is 16,987 (9,763 + 6,879 + 345 = 16,987), a difference of 13 cases. Overall, a total of 92 cases are redistributed from MS-DRGs 453, 454,

and 455 to other spinal fusion MS-DRGs.

We stated in the proposed rule that the findings from our analysis of MS-DRGs 453, 454, and 455 are consistent with the expectation that clinically, the greater the number of spinal fusion procedures performed during a single procedure (for example, intervertebral levels fused), the greater the consumption of resources expended. We also stated we believed the use of interbody fusion cages, other types of spinal instrumentation, operating room time, comorbidities, pharmaceuticals, and length of stay may all be contributing factors to resource utilization for spinal fusion procedures. In addition, it is expected that as a result of potential changes to the logic for case assignment to a MS-DRG, there

will be a redistribution of cases among the MS-DRGs.

We stated in the proposed rule that, based on our review and analysis of the spinal fusion cases in MS-DRGs 453, 454, and 455, we believe new MS-DRGs are warranted to differentiate between multiple level combined anterior and posterior spinal fusions except cervical, single level combined anterior and posterior spinal fusions except cervical, and combined anterior and posterior cervical spinal fusions, to more appropriately reflect utilization of resources for these procedures, including those performed with an aprevo™ custom-made anatomically designed interbody fusion device. We noted that the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed

interbody fusion device as identified by any one of the 12 previously listed procedure codes would not be reported for a cervical spinal fusion procedure as reflected in Table 6P.2f associated with the proposed rule and this final rule and available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>.

To compare and analyze the impact of our suggested modifications, we noted that we ran simulations using claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 23,017 cases reporting procedure codes describing multiple level combined anterior and posterior spinal fusions.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	23,017	4.7	\$62,457

We stated we applied the criteria to create subgroups in a base MS-DRG as discussed in section II.C.1.b. of the

preamble of the proposed rule and this final rule. We noted that, as shown in the table that follows, a three-way split

of the proposed new base MS-DRG was met. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,664	9.6	\$91,358
With CC	12,498	4.8	\$64,065
Without CC/MCC	7,855	3.0	\$50,097

For the proposed new MS-DRGs, there is (1) at least 500 or more cases in the MCC group, the CC subgroup, and in the without CC/MCC subgroup; (2) at least 5 percent of the cases are in the MCC subgroup, the CC subgroup, and in the without CC/MCC subgroup; (3) at least a 20 percent difference in average costs between the MCC subgroup and the CC subgroup and between the CC group and NonCC subgroup; (4) at least a \$2,000 difference in average costs between the MCC subgroup and the

with CC subgroup and between the CC subgroup and NonCC subgroup; and (5) at least a 3-percent reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS-DRG in capturing differences in expected cost between the proposed MS-DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system.

As a result, for FY 2025, we proposed to create new MS-DRG 426 (Multiple

Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC), new MS-DRG 427 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC), and new MS-DRG 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC). The following table reflects a simulation of the proposed new MS-DRGs.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG 426	2,664	9.6	\$91,358
Proposed new MS-DRG 427	12,498	4.8	\$64,065
Proposed new MS-DRG 428	7,855	3.0	\$50,097

The next step in our analysis of the impact of our suggested modifications to

MS-DRGs 453, 454, and 455 was to review the cases reporting single

combined anterior and posterior cervical fusions. The following table

illustrates our findings for all 16,059 cases reporting procedure codes

describing single level combined anterior and posterior spinal fusions.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	16,059	2.9	\$35,758

We stated we applied the criteria to create subgroups in a base MS-DRG as discussed in section II.C.1.b. of the preamble of the proposed rule and this final rule. We noted that, as shown in

the table that follows, a three-way split of this proposed new base MS-DRG failed to meet the criterion that at least 5% or more of the cases are in the MCC subgroup. It also failed to meet the

criterion that there be at least a 20% difference in average costs between the CC and NonCC (without CC/MCC) subgroup. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	791	6.4	\$47,031
With CC	6,481	3.4	\$38,107
Without CC/MCC	8,787	2.3	\$33,010

As discussed in section II.C.1.b. of the preamble of the proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way

split. We therefore applied the criteria for a two-way split for the “with MCC and without MCC” subgroups. We noted that, as shown in the table that follows, a two-way split of this base MS-DRG

failed to meet the criterion that there be at least 5% or more of the cases in the with MCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	791	6.4	\$47,031
Without MCC	15,268	2.8	\$35,174

We then applied the criteria for a two-way split for the “with CC/MCC and without CC/MCC” subgroups. As shown

in the table that follows, a two-way split of this base MS-DRG failed to meet the criterion that there be at least a 20%

difference in average costs between the “with CC/MCC and without CC/MCC” subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With CC/MCC	7,272	3.7	\$39,078
Without CC/MCC	8,787	2.3	\$33,010

We noted that because the criteria for both of the two-way splits failed a split (or CC subgroup) is not warranted for the proposed new base MS-DRG. As a

result, for FY 2025, we proposed to create new base MS-DRG 402 (Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical). The

following table reflects a simulation of the proposed new base MS-DRG.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed MS-DRG 402	16,059	2.9	\$35,758

For the final step in our analysis of the impact of our suggested modifications to MS-DRGs 453, 454, and 455 we reviewed the cases reporting

combined anterior and posterior cervical fusions. The following table illustrates our findings for all 2,323 cases reporting procedure codes

describing combined anterior and posterior cervical spinal fusions.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	2,323	6.6	\$55,844

We stated we applied the criteria to create subgroups in a base MS-DRG as discussed in section II.C.1.b. of the preamble of the proposed rule and this

final rule. We noted that, as shown in the table that follows, a three-way split of this proposed new base MS-DRG failed to meet the criterion that that

there be at least 500 cases in the NonCC subgroup.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	587	12.5	\$75,077
With CC	1,391	5.1	\$52,274
Without CC/MCC	345	2.9	\$37,515

As discussed in section II.C.1.b. of the preamble of the proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the “with MCC and without MCC” subgroups. We note that, as shown in the table that follows, a two-way split of this proposed new base MS-DRG was met. For the

proposed MS-DRGs, there is at least (1) 500 or more cases in the MCC group and in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group and in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a \$2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent

reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS-DRG in capturing differences in expected cost between the proposed MS-DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system. The following table illustrates our findings for the suggested MS-DRGs with a two-way severity level split.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	587	12.5	\$75,077
Without MCC	1,736	4.6	\$49,341

Accordingly, because the criteria for the two-way split were met, we stated we believed a split (or CC subgroup) is warranted for the proposed new base MS-DRG. As a result, for FY 2025, we

proposed to create new MS-DRG 429 (Combined Anterior and Posterior Cervical Spinal Fusion with MCC) and new MS-DRG 430 (Combined Anterior and Posterior Cervical Spinal Fusion

without MCC). The following table reflects a simulation of the proposed new MS-DRGs.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG 429	587	12.5	\$75,077
Proposed new MS-DRG 430	1,736	4.7	\$49,341

We then analyzed the cases reporting spinal fusion procedures in MS-DRGs 456, 457, and 458. As previously described, the logic for case assignment to MS-DRGs 456, 457, and 458 is defined by principal diagnosis logic and extensive fusion procedures. Cases reporting a principal diagnosis of spinal curvature, malignancy, or infection or an extensive fusion procedure will group to these MS-DRGs. We referred the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1

available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software> for complete documentation of the GROUPER logic for MS-DRGs 456, 457, and 458.

As also previously described, in our initial analysis of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device, the 13 cases we found in

MS-DRGs 456 and 457 (2 + 11 = 13, respectively) appeared to be grouping appropriately, however, the average costs for the 6 cases found in MS-DRG 458 showed a difference of approximately \$13,880. Because of the low volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in the “without CC/MCC” MS-DRG 458, and the low volume of cases reporting the performance of a

spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS-DRGs 456, 457, and 458 overall (2

+ 11 + 6 = 19), for this expanded review of the claims data, we shared the results of our analysis in association with cases reporting extensive fusion procedures in

MS-DRGs 456, 457, and 458. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 456 All cases	1,475	12.6	\$76,060
MS-DRG 456 Cases reporting an extensive fusion	332	11.5	\$89,773
MS-DRG 457 All cases	3,730	6.1	\$52,179
MS-DRG 457 Cases reporting an extensive fusion	171	6.6	\$75,588
MS-DRG 458 All cases	1,260	3.1	\$39,260
MS-DRG 458 Cases reporting an extensive fusion	146	3.8	\$48,035

The data show that the 332 cases reporting an extensive fusion procedure in MS-DRG 456 have a shorter average length of stay (11.5 days versus 12.6 days) and higher average costs (\$89,773 versus \$76,060) compared to all the cases in MS-DRG 456. For MS-DRG 457, the data show that the 171 cases reporting an extensive fusion have a comparable average length of stay (6.6 days versus 6.1 days) and higher average costs (\$75,588 versus \$52,179) compared to all the cases in MS-DRG 457. Lastly, for MS-DRG 458, the data show that the 146 cases reporting an extensive fusion procedure have a comparable average length of stay (3.8 days versus 3.1 days) and higher average costs (\$48,035 versus \$39,260) compared to all the cases in MS-DRG 458.

In the proposed rule we stated we believe that over time, the volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS-DRGs 456, 457, and 458 may increase and we could consider further in the context of the cases reporting an extensive fusion procedure. However,

due to the logic for case assignment to these MS-DRGs also being defined by diagnosis code logic, additional analysis would be needed prior to considering any modification to the current structure of these MS-DRGs. We stated that as we continue to evaluate how we may refine these spinal fusion MS-DRGs, we are also seeking public comments and feedback on other factors that should be considered in the potential restructuring of MS-DRGs 456, 457, and 458. Thus, for FY 2025, we proposed to maintain the current structure of MS-DRGs 456, 457, and 458, without modification. Feedback and other suggestions for future rulemaking may be submitted by October 20, 2024 and directed to MEARIS™ at <https://mearis.cms.gov/public/home>.

Next, we performed an expanded analysis for spinal fusion cases reported in MS-DRGs 459 and 460. We noted that cases grouping to MS-DRG 459 have at least one secondary diagnosis MCC condition reported (“with MCC”) and because MS-DRG 460 is “without MCC”, cases grouping to this MS-DRG may include the reporting of at least one secondary diagnosis CC condition (in

addition to cases that may not report a CC (for example, NonCC)). Based on the findings for a subset of the cases (that is, the subset of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device) in these MS-DRGs as previously discussed, and our review of the logic for case assignment to these MS-DRGs, we developed two categories of spinal fusion procedures to further examine. The first category was for the single level spinal fusions except cervical, and the second category was for the multiple level spinal fusions except cervical. We refer the reader to Table 6P.2g for the list of procedure codes we identified to categorize the single level spinal fusions except cervical and Table 6P.2h for the list of procedure codes we identified to categorize the multiple level spinal fusions except cervical in association with the proposed rule and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. Findings from our analysis are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 459 All cases	3,152	9.6	\$53,192
MS-DRG 459 Cases reporting single level spinal fusion except cervical	1,098	8.9	\$46,031
MS-DRG 459 Cases reporting multiple level spinal fusion except cervical	2,069	10.1	\$57,209
MS-DRG 460 All cases	28,698	3.4	\$32,586
MS-DRG 460 Cases reporting single level spinal fusion except cervical	14,058	3.0	\$28,110
MS-DRG 460 Cases reporting multiple level spinal fusion except cervical	14,677	3.9	\$36,932

The data show that the 2,069 cases reporting a multiple level spinal fusion except cervical in MS-DRG 459 have a longer average length of stay (10.1 days versus 9.6 days) and higher average costs (\$57,209 versus \$53,192) when compared to all the cases in MS-DRG 459. The data also show that the 2,069 cases reporting a multiple level spinal fusion except cervical in MS-DRG 459 have a longer average length of stay (10.1 days versus 8.9 days) and higher average costs (\$57,209 versus \$46,031) when compared to the 1,098 cases reporting a single level spinal fusion except cervical in MS-DRG 459. For MS-DRG 460, the data show that the 14,677 cases reporting a multiple level

spinal fusion except cervical have a comparable average length of stay (3.9 days versus 3.4 days) and higher average costs (\$36,932 versus \$32,586) when compared to all the cases in MS-DRG 460. The data also show that the 14,677 cases reporting a multiple level spinal fusion except cervical have a comparable average length of stay (3.9 days versus 3.0 days) and higher average costs (\$36,932 versus \$28,110) when compared to the 14,058 cases reporting a single level spinal fusion except cervical in MS-DRG 460.

In the proposed rule we stated that based on our review and analysis of the spinal fusion cases in MS-DRGs 459 and 460, we believe new MS-DRGs are

warranted to differentiate between multiple level spinal fusions except cervical and single level spinal fusions except cervical to more appropriately reflect utilization of resources for these procedures, including those performed with an aprevo™ custom-made anatomically designed interbody fusion device.

To compare and analyze the impact of our suggested modifications, we ran simulations using claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 16,746 cases reporting procedure codes describing multiple level spinal fusions except cervical.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX	16,746	4.6	\$39,438

We stated we applied the criteria to create subgroups in a base MS-DRG as discussed in section II.C.1.b. of the preamble of the proposed rule and this

final rule. We noted that, as shown in the table that follows, a three-way split of this proposed new base MS-DRG failed to meet the criterion that there be

at least a 20% difference in average costs between the CC and NonCC (without CC/MCC) subgroup. The following table illustrates our findings.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,069	10.1	\$57,209
With CC	8,695	4.6	\$38,574
Without CC/MCC	5,982	2.8	\$34,546

As discussed in section II.C.1.b. of the preamble of the proposed rule and this final rule, if the criteria for a three-way split fail, the next step is to determine if the criteria are satisfied for a two-way split. We therefore applied the criteria for a two-way split for the “with MCC and without MCC” subgroups. We noted that, as shown in the table that follows, a two-way split of this proposed new base MS-DRG was met. For the

proposed MS-DRGs, there is at least (1) 500 or more cases in the MCC group and in the without MCC subgroup; (2) 5 percent or more of the cases in the MCC group and in the without MCC subgroup; (3) a 20 percent difference in average costs between the MCC group and the without MCC group; (4) a \$2,000 difference in average costs between the MCC group and the without MCC group; and (5) a 3-percent

reduction in cost variance, indicating that the proposed severity level splits increase the explanatory power of the base MS-DRG in capturing differences in expected cost between the proposed MS-DRG severity level splits by at least 3 percent and thus improve the overall accuracy of the IPPS payment system. The following table illustrates our findings for the suggested MS-DRGs with a two-way severity level split.

Proposed New MS-DRGs	Number of Cases	Average Length of Stay	Average Costs
With MCC	2,069	10.1	\$57,209
Without MCC	14,677	3.9	\$36,932

As a result, for FY 2025, we proposed to create new MS-DRGs 447 (Multiple Level Spinal Fusion Except Cervical with MCC) and new MS-DRG 448 (Multiple Level Spinal Fusion Except Cervical without MCC). We also proposed to revise the title for existing

MS-DRGs 459 and 460 to “Single Level Spinal Fusion Except Cervical with MCC and without MCC”, respectively. In the proposed rule we stated that this proposal would better differentiate the resource utilization, severity of illness and technical complexity between

single level and multiple level spinal fusions that do not include cervical spinal fusions in the logic for case assignment. The following table reflects a simulation of the proposed new MS-DRGs.

Proposed New MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG 447	2,069	10.1	\$57,209
Proposed new MS-DRG 448	14,677	3.9	\$36,932

In conclusion, we proposed to delete MS-DRGs 453, 454, and 455 and proposed to create 8 new MS-DRGs. We proposed to create new MS-DRG 426 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC), MS-DRG 427 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC), MS-DRG 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC), MS-DRG 402 (Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical), MS-DRG 429 (Combined Anterior and Posterior Cervical Spinal Fusion with MCC), MS-DRG 430 (Combined Anterior and Posterior Cervical Spinal Fusion without MCC), MS-DRG 447 (Multiple Level Spinal Fusion Except Cervical with MCC) and MS-DRG 448 (Multiple Level Spinal Fusion Except Cervical without MCC) for FY 2025. We proposed the logic for case assignment to these proposed new MS-DRGs as displayed in Table 6P.2d, Table 6P.2e, Table 6P.2f, Table 6P.2g, and Table 6P.2h in association with the proposed rule and available via the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. We also proposed to revise the title for MS-DRGs 459 and 460 to “Single Level Spinal Fusion Except Cervical with MCC and without MCC”, respectively. Lastly, as discussed in section II.C.14 of the preamble of the proposed rule, we proposed conforming changes to the surgical hierarchy for MDC 08.

Comment: Commenters supported the proposed restructuring for the spinal fusion MS-DRGs for FY 2025. A commenter stated that the existing MS-DRGs have not kept pace with the rapid advancements in spine fusion technology and techniques, leading to significant financial strain on hospitals. According to the commenter, the cost differences associated with performing a one-level lumbar fusion compared to a multi-level fusion are substantial, not only in terms of the surgical time and complexity but also in postoperative care and rehabilitation. The commenter stated that the proposal represents a much-needed advancement in the payment structure for hospitals supporting these complex surgeries and acknowledges the varied complexity

and resources required for these distinct types of surgeries. The commenter also stated that the proposal ensures a comprehensive approach that addresses the full spectrum of spinal fusion procedures. In addition, the commenter stated that this refined categorization will enable hospitals to receive more appropriate payment, reflecting the specific nature of each procedure and the level of care provided to patients with diverse spinal conditions. The commenter also stated that by aligning MS-DRGs more closely with the actual costs incurred, the new structure will allow hospitals to allocate resources more effectively and continue investing in high-quality patient care. Lastly, the commenter stated that the proposed changes recognize the variations in patient populations, including the different needs and recovery trajectories of those undergoing non-cervical versus cervical spine fusion surgeries.

Another commenter stated that currently, MS-DRGs 453 through 455 do not adequately differentiate between the complexity and relative resource use associated with multiple level procedures. The commenter stated that this adjustment will lead to more accurate payment, resource allocation, and further aligns with the clinical accuracy and medical advancements of these procedures.

A commenter stated it supported the proposed changes as it would create further specificity in coding. Another commenter also expressed appreciation for CMS’s efforts to update the spinal fusion MS-DRGs to better reflect current clinical practice delineating single versus multiple level procedures with the detailed analysis that outlined the proposed changes. This commenter stated they plan to monitor the impact of the proposed revisions, if finalized, for both its customers and patients.

Response: We thank the commenters for their support.

Comment: A commenter stated it reviewed the proposed spinal fusion MS-DRG changes and while it found that most of the redistribution appears appropriate, they have concerns about the proposed MS-DRG 402 (Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical) because the ability to capture the impact of a CC or MCC is not reflected. The commenter performed its own analysis and stated

that the single level combined anterior and posterior fusion cases have longer lengths of stay and higher average costs when a CC or MCC is present. According to the commenter, its analysis showed that the proposed MS-DRG 402 does not adequately reflect the resource consumption for patients with significant comorbid conditions. The commenter recommended that MS-DRG 402 not be finalized as a single MS-DRG and instead suggested it be established as a three-way split MS-DRG (with MCC, with CC and without CC/MCC, respectively).

Response: We appreciate the commenter’s analysis. As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35981), we applied the criteria to create subgroups for the proposed new base MS-DRG. The criteria for a three-way split and both two-way splits failed, therefore, only a proposed new base MS-DRG was supported.

Comment: Several commenters stated they supported CMS’s review of the spinal fusion MS-DRGs to consider potential logic revisions. The commenters expressed appreciation and support for the distinction that new, revised and expanded spinal fusion MS-DRGs can provide for data analysis, notably in instances where multiple and single-level anatomically different spinal level location procedures are performed during the same operative episode. However, the commenters stated that it is essential to address and consider the logic for all the spinal fusion MS-DRGs to maintain the stability of reporting and to ensure capture of the technical complexity and medical severity indications for these procedures. The commenters requested that CMS consider delaying the proposal and provide additional insight and rationale as to why MS-DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) and MS-DRGs 471, 472, and 473 (Cervical Spinal Fusion with MCC, with CC, and without CC/MCC, respectively), were not incorporated into the analysis for FY 2025.

Response: We appreciate the commenters’ support. We note that in the preamble of the FY 2025 IPPS/LTCH

PPS proposed rule (89 FR 35971 through 35985) and in this final rule, as part of our ongoing analysis of the manufacturer's request to reassign cases involving the aprevo™ device, we presented findings from our analysis of claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRGs 456, 457, and 458, and cases reporting any one of the procedure codes describing the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device. We stated that based on our findings, the 13 cases we found in MS-DRGs 456 and 457 (2 + 11 = 13, respectively) appeared to be grouping appropriately, however, the average costs for the 6 cases found in MS-DRG 458 showed a difference of approximately \$13,880. We also stated that, because of the low volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in the "without CC/MCC" MS-DRG 458, and the low volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS-DRGs 456, 457, and 458 overall (2 + 11 + 6 = 19), for the expanded review of the claims data, we were sharing the results of our analysis in association with cases reporting extensive fusion procedures in MS-DRGs 456, 457, and 458. We further stated that we believed over time, that the volume of cases reporting the performance of a spinal fusion procedure using an aprevo™ custom-made anatomically designed interbody fusion device in MS-DRGs 456, 457, and 458 may increase and we could consider further in the context of the cases reporting an extensive fusion procedure. However, we also noted that due to the logic for case assignment to these MS-DRGs being defined by diagnosis code logic, additional analysis would be needed prior to considering any modification to the current structure of these MS-DRGs. We stated that as we continue to evaluate how we may refine these spinal fusion MS-DRGs, we are also seeking public comments and feedback on other factors that should be considered in the potential restructuring of MS-DRGs 456, 457, and 458. Thus, for FY 2025, we proposed to maintain the current structure of MS-DRGs 456, 457, and 458, without modification. We noted that feedback and other suggestions for future rulemaking may be submitted by October 20, 2024 and directed to

MEARIS™ at <https://mearis.cms.gov/public/home>.

With respect to the commenters' concerns that we excluded analysis of MS-DRGs 471, 472, and 473 for FY 2025, we note that the MS-DRG request under consideration for ongoing review was related to assignment of cases reporting procedures involving use of the aprevo™ custom-made anatomically designed interbody spinal fusion device technology that is used in the performance of a spinal fusion procedure and specifically indicated for treatment of the anterior column of the thoracolumbar, lumbar, or lumbosacral vertebra. The procedure codes describing a custom-made anatomically designed interbody fusion device are not listed in the logic for case assignment to MS-DRGs 471, 472, and 473 because the logic for those MS-DRGs is specifically indicated for the cervical vertebrae. While not specifically discussed in the proposed rule, the manufacturer of the aprevo™ custom-made interbody spinal fusion device technology received a second Breakthrough Device designation for its technology in September 2023 that is indicated specifically for the treatment of patients with cervical spine disease. We anticipate, similar to the approach utilized for the treatment of patients with lumbar spine disease, that it is possible the manufacturer may request a unique procedure code(s) to describe the use of the technology for the cervical spine with the potential of applying for a new technology add-on payment and subsequent MS-DRG classification changes. For these reasons, we believe additional time is necessary as we consider how we may refine the cervical spinal fusion MS-DRGs. We are also seeking feedback on factors that should be considered in the potential restructuring of MS-DRGs 471, 472, and 473 for future rulemaking. For example, are there other patient-specific spinal fusion technologies currently in development or in use and indicated for cervical spine disease that should also be evaluated and considered. Feedback and other suggestions for future rulemaking may be submitted by October 20, 2024 and directed to MEARIS™ at <https://mearis.cms.gov/public/home>.

Comment: A few commenters who appreciated CMS's attempts to recognize the differences in complexity between single level and multiple level spinal fusion procedures stated their belief that additional time is needed for hospitals to assess the impact of the proposed changes. According to the commenters, the proposed changes may have a negative impact on community

hospitals, which they stated tend to treat less-complex cases.

A couple commenters stated that CMS has previously given two years notice to hospitals about potential changes and provided the example of CMS's request for public comments and feedback on potential restructuring for MS-DRGs 023 through 027, as discussed in FY 2024 and FY 2025 rulemaking. Another commenter stated that the proposed restructuring of the spinal fusion MS-DRGs is a major revision, and without any warning to hospitals. However, this commenter also stated that regardless of the outcome for the proposed reorganization of the spinal fusion MS-DRGs, CMS should address the resource utilization disparity related to the use of the aprevo™ custom-made anatomically designed spine fusion devices. According to the commenter, failure to implement this issue for FY2025 will create a financial disincentive for hospitals to utilize this innovative technology, thus eliminating access for patients. The commenter recommended CMS reassign cases reporting a custom-made anatomically designed interbody fusion device to MS-DRGs that address the higher resource utilization and to ensure continued access to the technology. This same commenter also stated its belief that the proposal should undergo a comprehensive review by a spine group to identify and mitigate any unintended consequences.

Response: We appreciate the commenters' feedback. As discussed in prior rulemaking (86 FR 44878), the MS-DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. It is generally expected that as a result of the annual MS-DRG reclassifications that are finalized, the experience of different categories of hospitals may differ based on the population of patients they treat and the services offered by the facility.

With respect to the commenter's concern that hospitals had no warning regarding the proposed restructuring for a subset of the spinal fusion MS-DRGs, we note that in addition to proposing these changes in the FY 2025 IPPS/LTCH PPS proposed rule, we discussed this topic in the FY 2024 IPPS/LTCH PPS rulemaking, including noting that our work in this area was ongoing, and that we would continue to examine the data and consider these issues as we develop potential future rulemaking proposals. Providers have had the opportunity to consider how spinal fusion cases (including cases reporting

the use of a custom-made anatomically designed interbody fusion device) are reported in the claims data for their respective facilities and grouped under the IPPS MS-DRGs, as well as to submit requested changes to the classifications for these MS-DRGs for CMS's consideration. We further note that, as stated in the preamble of the annual IPPS rulemakings, section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually to account for changes in resource consumption. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. We include these changes as part of our annual IPPS rulemaking, which provides the public, including any particular interested parties, the opportunity to review and comment on these proposals.

Comment: A few commenters who expressed appreciation for CMS's efforts to update the spinal fusion MS-DRGs to better reflect current clinical practice and facility costs more accurately stated they need more information about the potential impact of the proposed designations and the opportunity to study the proposed changes further. These commenters recommended that CMS not conduct this restructuring while also considering the spinal fusion episode accountability model under the Transforming Episode Accountability Model (TEAM).

Response: We appreciate the commenters' feedback. We refer the reader to section X.A.3.b. of the preamble of this final rule for further discussion of how the proposed restructuring of the spinal fusion MS-DRGs may be considered in connection with the spinal fusion episode category under TEAM.

Comment: A few commenters who expressed support for potential changes to the logic for case assignment to the spinal fusion MS-DRGs stated they reviewed data provided by CMS with the AOR/BOR (After Outliers Removed/ Before Outliers Removed) version 41 and version 42 files, and Table 5—Proposed List of Medicare Severity Diagnosis Related Groups (MS-DRGs), Relative Weighting Factors, and Geometric and Arithmetic Mean Length of Stay that was made available in association with the proposed rule. The commenters stated it was unclear if the current proposed spinal fusion MS-DRGs better reflect resource consumption based on its findings of a minimal change in the case mix index between version 41 (4.6504) and version 42 (4.6454). The commenters suggested

further analysis of all the spinal fusion MS-DRGs should be considered.

A commenter stated that the version 42 AOR table showed more spinal fusion cases in comparison to the total spinal fusion cases included in the rule discussion. The commenter questioned if there was duplication of the same patients being counted based on the logic lists for the proposal and stated it was not clear how duplications may have been handled in the data if there was both a multiple level fusion and single level fusion reported on the same case.

Response: It is not entirely clear how the commenters performed the case-mix index calculations, however, based on the data table provided by the commenters, we believe the commenters used the case counts from the AOR file and relative weights to calculate a case-weighted average relative weight for the spinal fusion MS-DRGs and are referring to that as a case-mix index. We note that under the proposed restructuring, the same population of cases among the spinal fusion MS-DRGs is being redistributed, therefore, we would not expect a significant shift in the case-mix index.

With respect to the differences in case counts between the version 42 AOR table in comparison to the number of cases included in the rule discussion for the proposed spinal fusion MS-DRGs, we note that, as stated in the proposed rule, our MS-DRG analysis was based on ICD-10 claims data from the September 2023 update of the FY 2023 MedPAR file, which contains hospital bills received from October 1, 2022, through September 30, 2023. In comparison, as also stated in the proposed rule, the FY 2023 MedPAR file used in developing the proposed MS-DRG relative weights for FY 2025 included discharges occurring on October 1, 2022, through September 30, 2023, based on bills received by CMS through December 31, 2023.

Comment: A commenter noted that the titles of the ICD-10-PCS procedure codes that were created to report spinal fusion procedures using the aprevo™ customized interbody fusion device were revised, effective October 1, 2023, as a result of the manufacturer's concerns that some claims may have been unintentionally miscoded. The commenter stated that per the materials from the March 2023 ICD-10 Coordination and Maintenance Committee meeting, the manufacturer requested the title revision to help minimize misinterpretation of the term "customizable." The commenter remarked that CMS was unable to confirm that claims reporting any one of

the codes created that describe use of the aprevo™ device had in fact been miscoded, and as discussed in the proposed rule, while a newly established ICD-10 code may be associated with an application for a new technology add-on payment, such codes are not generally established to be product specific. The commenter added that CMS further stated that if, after consulting the official coding guidelines, a provider determines that an ICD-10 code associated with a new technology add-on payment describes the technology that they are billing, the hospital may report the code and be eligible to receive the associated add-on payment. The commenter stated that some ICD-10-PCS codes are intended to be product specific, as the code title(s) often represent a manufacturer's specific technology, particularly in the New Technology section. The commenter added that the Coding Clinic for ICD-10-CM/PCS Editorial Advisory Board has determined that some ICD-10-PCS codes are only intended for a specific product and should not be used for other devices or substances.

The commenter stated that in the case of the aprevo™ device, it is not clear why the titles of the associated procedure codes were revised to more clearly describe this specific device and address the manufacturer's concerns regarding miscoding, if it was appropriate to assign the codes for spinal fusion procedures using devices other than the aprevo™ device. The commenter further stated that absence of clarity regarding device specific codes may have an unintended effect on the use of new technology due to concerns regarding lack of payment, which they stated may have a negative impact on clinical outcomes.

Response: We appreciate the commenter's feedback. With respect to the commenter's remarks about revisions made to the code title for the procedure codes describing spinal fusion procedures with an aprevo™ interbody fusion device, we note that we addressed this issue when we were made aware of it and believe the code title is now appropriate. It was brought to our attention that the term "customizable" as reflected in the original code title was leading to confusion with devices that utilize expandable cages and are "customized" to fit during the procedure. In response to the manufacturer's concerns regarding potential miscoded claims and its request to revise the original code descriptor to help minimize misinterpretation of the term "customizable" by providers' coding personnel, we presented and received

public support to finalize the proposed revision to the code titles. The intent was not to specifically limit the reporting of the code, since, as stated in the proposed rule, while a newly established ICD-10 code may be associated with an application for a new technology add-on payment, such codes are not generally established to be product specific.

We note that historically, our approach to proposing and finalizing new procedure codes through the ICD-10 Coordination and Maintenance Committee meeting process was largely built on the fact that the procedure classification system was designed to report the procedure performed, not the device or other specific technology used. However, we also note that with the implementation of the new technology add-on payment policy, aspects of that approach to creating new procedure codes have become more complex. While we have strived to maintain consistency with that historical approach, we also recognize the responsibility to balance and support the requirements of the new technology add-on payment policy, which have continued to evolve since its inception.

The commenter is correct that certain ICD-10-PCS codes located in the New Technology section of the ICD-10-PCS procedure classification, also known as "Section X", are product specific. For example, a procedure code request for the administration of a therapeutic agent, regardless of it being related to a new technology add-on payment application, is often presented as a proposal through the ICD-10 Coordination and Maintenance Committee meeting process, and subsequently finalized (following review and consideration of the public comments) with the generic name of the agent in the code description (title). Oftentimes, there is a clinical need and several benefits to capture a certain level of specificity for purposes of data collection, such as tracking a particular patient population, or assessing clinical outcomes. We note that following the finalization of a new procedure code that is classified within the new technology section (Section X) of ICD-10-PCS, we discuss the disposition of that code after a 3-year period during a future ICD-10 Coordination and Maintenance Committee meeting, which also generally aligns with the expiration of a product's eligibility for an add-on payment under the new technology add-on payment policy. We also take this opportunity to point out that a procedure, service, or technology is not required to submit a new technology

add-on payment application for consideration of a Section X code. As discussed in prior rulemaking (80 FR 49434 through 49435), when the ICD-10-PCS New Technology section was under development, we established that the purpose of the New Technology section is to also provide a mechanism to capture services that would not normally be coded and reported in the inpatient setting.

We appreciate the commenter's feedback on this topic and will continue to consider how to better address coding proposals in connection with new technologies for future discussion at the ICD-10 Coordination and Maintenance Committee meeting.

Comment: A commenter (the manufacturer of the aprevo™ custom-made anatomically designed interbody fusion device) stated that while CMS partially addressed the request to assign spinal fusion procedures reporting the use of a custom-made anatomically designed interbody fusion device to appropriate MS-DRGs that more closely align with the increase in resource utilization, the analysis under the proposed restructuring did not specifically reflect data related to the resource utilization for custom-made anatomically designed devices under the single level versus multiple level MS-DRG construct.

The commenter provided a comprehensive list detailing the sequence of events related to prior rulemaking discussions involving custom-made anatomically designed interbody fusion devices including its approved eligibility for new technology add-on payments, revisions to the procedure code title to change the description from "customizable" to "custom-made anatomically designed" interbody fusion device, and prior data analysis findings. The commenter also provided extensive clinical background on custom-made anatomically designed interbody fusion devices and reiterated the designation as an FDA Breakthrough technology. Additionally, the commenter stated that published clinical data has shown that custom-made anatomically designed interbody fusion devices improve care by delivering more precise patient specific alignment,⁶⁷ which they stated has been proven to reduce the risk of revision surgery.

In response to publication of the FY 2025 IPPS/LTCH PPS proposed rule, the commenter stated its belief that 1.) CMS contradicted its position on the original description of the procedure codes by

making the statement in the FY 2025 IPPS/LTCH PPS proposed rule that a newly established ICD-10 code may be associated with an application for new technology add-on payment and such codes are not generally established to be product specific and 2.) CMS acknowledged that the description used in the original ICD-10 code inadvertently described several types of technologies, and this likely contributed to the miscoded claims. According to the commenter, because CMS decided to consider resource utilization disparities for *all* cases reporting the use of a custom-made anatomically designed interbody spinal fusion device in its analysis for FY 2025 (that is, they stated CMS did not limit its analysis to cases associated only with the list of providers provided by the manufacturer), the commenter's original requested reassignments are no longer supported by data and therefore, the commenter stated revised reassignments are appropriate to request.

The commenter stated that CMS sought to find an alternative explanation for the resource incoherence demonstrated across the cases reporting any one of the 12 procedure codes describing a spinal fusion procedure with a custom-made anatomically designed interbody spinal fusion device and that the expanded analysis was unrelated to the original request because it did not provide data related to the use of custom-made anatomically designed devices under the proposed single level versus multiple level MS-DRG construct. The commenter further stated that the absence of this specific data (single level versus multiple level) in the proposed rule necessitated the submission of a revised request under the proposed new structure and the findings from its analysis for CMS's review and consideration.

The commenter provided prior examples of MS-DRG classification requests comparing length of stay differences and low claims volume to demonstrate instances for which CMS reassigned cases from a lower severity level MS-DRG to a higher severity level MS-DRG, including the proposal regarding the Neurostimulation Device Implant for Heart Failure (Barostim™ Baroreflex Activation Therapy), as discussed in the preamble of the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35959 through 35962) and in section I.I.C.4.b. of the preamble of this final rule.

The commenter also remarked on CMS's discussion of the data analysis presented in the proposed rule regarding the wide range in average costs for claims reporting the use of a

⁶ Smith, et al. Global Spine J. 2023 Nov 21.

⁷ Sadrameli S, et al. ISASS 2024.

custom-made anatomically designed interbody fusion device. The commenter stated it engaged a contractor to assess the distribution of costs and length of stay for all spinal fusion cases and cases reporting the use of a custom-made anatomically designed interbody fusion device using FY 2023 Q1–Q4 inpatient standard analytical file (SAF) data. According to the commenter, the findings from its analysis demonstrate that cases reporting the use of a custom-

made anatomically designed interbody fusion device consistently show higher average costs in comparison to the average costs of all spinal fusion cases in their respective MS–DRG, which they stated are an indication that the higher costs are not an artifact of a few cases. The commenter conducted additional analyses using the FY 2023 MedPAR data with the logic lists from the tables provided in association with the proposed rule and stated that its

findings demonstrate disparities in resource utilization for cases reporting use of a custom-made anatomically designed interbody fusion device among the proposed multiple level and single level spinal fusion MS–DRGs. Specifically, the commenter stated cases reporting the use of a custom-made anatomically designed interbody fusion device under the proposed MS–DRG structure should be reassigned as shown in the table that follows.

Cases in Proposed MS-DRG	Requested MS-DRG Reassignment
402 - Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical	428 - Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC
428 - Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC	427 - Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC
427 - Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC	426 - Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC
460 - Single Level Spinal fusion except cervical without MCC	447 - Multiple Level Spinal Fusion Except Cervical with MCC
448 - Multiple Level Spinal Fusion Except Cervical without MCC	447 - Multiple Level Spinal Fusion Except Cervical with MCC

According to the commenter, findings from its analysis under the proposed MS–DRG structure support the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from the lower severity proposed MS–DRGs to the higher severity level proposed MS–DRGs because the resource utilization of cases reporting the use of a custom-made anatomically designed interbody fusion device align more

closely with the resource utilization of cases in the requested MS–DRG. The commenter stated that the requested reassignments are consistent with other MS–DRG classifications CMS has previously finalized and therefore, the precedent exists. The commenter also provided an alternative recommendation for CMS’s consideration based on the current, existing spinal fusion MS–DRGs, with minor modifications from its initial FY 2024 request for the reassignment of

cases reporting a custom-made anatomically designed interbody fusion device. Specifically, the commenter provided its analysis under the existing MS–DRGs and indicated that cases reporting the use of a custom-made anatomically designed interbody fusion device under the existing MS–DRG structure should be considered for reassignment as shown in the table that follows, if the proposed structure is not finalized.

Cases in Existing MS-DRG	Requested MS-DRG Reassignment
454 - Combined Anterior and Posterior Spinal Fusion with CC	453 - Combined Anterior and Posterior Spinal Fusion with MCC
455 - Combined Anterior and Posterior Spinal Fusion without CC/MCC	454 - Combined Anterior and Posterior Spinal Fusion with CC
458 - Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions without CC/MCC	457 - Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with CC
460 - Spinal Fusion Except Cervical without MCC	459 - Spinal Fusion Except Cervical with MCC

Based on the findings from its analyses under the proposed and

current MS–DRG structure for spinal fusions, the commenter asserted that

reassignment of cases reporting the use of a custom-made anatomically

designed interbody fusion device is supported by compelling data that demonstrates a resource utilization disparity for cases reporting the technology. The commenter stated that without appropriate payment, Medicare beneficiaries will lose access to the technology, and stated they deserve continued access to the technology because it improves patient care. The commenter urged CMS to finalize the reassignment of these cases for FY 2025.

Some commenters stated that the new technology add-on payment for custom-made anatomically designed interbody spinal fusion devices is ending on September 30, 2024, and if CMS decides to move forward with the proposed MS-DRG changes without the reassignment of the procedure codes describing the custom-made anatomically designed technology to more appropriate MS-DRGs, it would create a financial disincentive for hospitals and eliminate access to the breakthrough technology for patients. The commenters reiterated prior concerns raised in public comments by spine surgeons that were discussed in the FY 2024 rulemaking and stated that without adequate payment, hospitals will not authorize use of the technology.

A few commenters suggested that if CMS is going to finalize the proposed restructuring, consideration be given to deleting MS-DRGs 459 and 460 and creating new MS-DRGs for single level spinal fusion except cervical with MCC and without MCC because they stated the proposed revisions would significantly change the types of cases classified to these MS-DRGs.

Response: We appreciate the commenters' feedback. In response to the commenter's statement that CMS contradicted its position on the original description of the procedure codes, we note that the manufacturer contacted

CMS about its concerns. CMS' actions were to provide clarity to all parties in light of concerns that the manufacturer raised. As a general matter, CMS aims to provide clarity when possible, and we recognized there could be impacts to coding, data collection, and payment, and therefore we took the opportunity to revise the code title in this case. Specifically, as stated above, in response to the manufacturer's concerns regarding potential miscoded claims and its request to revise the original code descriptor to help minimize misinterpretation of the term "customizable" by providers' coding personnel, we presented and received public support to finalize the proposed revision to the code titles. We wish to clarify that CMS did not specifically acknowledge that the description used in the original ICD-10 code inadvertently described several types of technologies, and that this likely contributed to the miscoded claims. As discussed in the proposed rule and previously in this final rule, we provided clarification that finalization of the revised code title was not intended to specifically limit the reporting of the code, since a newly established ICD-10 code that may be associated with an application for a new technology add-on payment is generally not established to be product specific.

We disagree with the commenter's assertion that CMS contradicted its prior position on length of stay differences with respect to clinical coherence. We note that in the examples provided by the commenter of MS-DRG classification requests comparing length of stay differences and low claims volume to demonstrate instances for which CMS reassigned cases from a lower severity level MS-DRG to a higher severity level MS-DRG, the topics were discussed and considered in more than

one rulemaking cycle prior to finalizing the reassignment of cases from the lower severity level to the higher severity level and length of stay was still a factor under consideration. We also note that because of the lag in claims data used in our analysis of MS-DRG classification requests, depending on the specific procedures and technology under consideration, it is not uncommon to delay a decision and continue to monitor the data until additional analysis can be performed.

In this case, CMS performed additional analyses to examine if other factors could be identified as contributing to the increased resource utilization for cases reporting any one of the 12 procedure codes describing a spinal fusion procedure with a custom-made anatomically designed interbody spinal fusion device. We disagree that the expanded analysis was unrelated to the original request because it did not specifically provide data related to the use of custom-made anatomically designed devices under the proposed single level versus multiple level MS-DRG construct, however, we appreciate the commenter's submission of suggested alternative reassignments under the proposed new structure and optional consideration under the existing structure.

In response to the commenter's request to reassign cases reporting the use of a custom-made anatomically designed interbody fusion device under the proposed restructuring for the spinal fusion MS-DRGs, we analyzed claims data from the September update of the FY 2023 MedPAR file for proposed MS-DRGs 402, 426, 427, 428, 447, 448, 459 and 460 and cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device. Our findings are shown in the following table.

MS-DRG	Number of Cases	Average Length of Stay	Average Costs
MS-DRG 402 All cases	16,059	2.9	\$35,758
MS-DRG 402 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	66	2.7	\$46,410
MS-DRG 426 All cases	2,664	9.6	\$91,358
MS-DRG 426 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	24	10.2	\$103,956
MS-DRG 427 All cases	12,498	4.8	\$64,065
MS-DRG 427 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	101	5.3	\$76,827
MS-DRG 428 All cases	7,855	3	\$50,097
MS-DRG 428 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	51	3.1	\$64,036
MS-DRG 447 All cases	2,069	10.1	\$57,209
MS-DRG 447 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	1	22.0	\$288,499
MS-DRG 448 All cases	14,677	3.9	\$36,932
MS-DRG 448 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	26	2.9	\$62,831
MS-DRG 459 All cases	3,152	9.6	\$53,192
MS-DRG 459 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	0	0	\$0
MS-DRG 460 All cases	28,698	3.4	\$32,586
MS-DRG 460 Cases reporting spinal fusion using a custom-made anatomically designed interbody fusion device	38	2.1	\$47,138

The findings show that the 307 cases reporting a spinal fusion procedure using a custom-made anatomically designed interbody fusion device in MS-DRGs 402, 426, 427, 428, 447, 448, 459 and 460 have higher average costs in comparison to the average costs of all the cases in their respective proposed MS-DRG. We note, as shown in the table, that there were zero cases found to report the use of a custom-made anatomically designed interbody fusion device in proposed revised MS-DRG 459. For proposed MS-DRGs 402 and 428, the findings show that the cases reporting the use of a custom-made anatomically designed interbody fusion

device have a comparable average length of stay compared to all the cases in their respective proposed MS-DRG. The findings also show that for proposed MS-DRGs 426 and 427, the cases reporting the use of a custom-made anatomically designed interbody fusion device have a longer average length of stay compared to all the cases in their respective proposed MS-DRG. For proposed MS-DRG 447, we note that the single case reporting the use of a custom-made anatomically designed interbody fusion device is an outlier. For proposed MS-DRG 448 and proposed revised MS-DRG 460, cases reporting the use of a custom-made

anatomically designed interbody fusion device have a shorter average length of stay compared to all the cases in their respective proposed MS-DRG.

We reviewed the requested reassignment for the 66 cases from proposed MS-DRG 402 to proposed MS-DRG 428 and note that the logic for case assignment to proposed MS-DRG 428 is comprised of cases reporting a multiple level combined anterior and posterior fusion (except cervical) without a CC/MCC and the logic for case assignment for proposed MS-DRG 402 is comprised of cases reporting a single level combined anterior and posterior fusion (except cervical) that may also

have an MCC or CC reported since it is a proposed base MS-DRG that is not subdivided by severity. The proposed logic for case assignment to each of these proposed MS-DRGs includes the procedure codes describing the use of a custom-made anatomically designed interbody fusion device in the definition of the respective proposed MS-DRG. Therefore, the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 402 to proposed MS-DRG 428 would not be feasible and would not be consistent with the logic of the proposed MS-DRGs which is intended to differentiate a single level combined anterior and posterior fusion from a multiple level combined anterior and posterior spinal fusion.

Next, we reviewed the requested reassignment for the 51 cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 428 (without CC/MCC) to proposed MS-DRG 427 (with CC) and for the 101 cases from proposed MS-DRG 427 (with CC) to proposed MS-DRG 426 (with MCC). We note that because the proposed MS-DRGs are subdivided with a three-way split, it is not feasible to reassign cases reporting the use of a custom-made anatomically designed interbody fusion device as requested at this time. Generally, with a three-way split, the requested reassignment of cases can only be considered for movement from one severity level to the next highest severity level. For example, consideration could be given to reassign cases from the "without CC/MCC" severity level to the "with CC" severity level or from the "with CC" level to the "with MCC" severity level. Because the proposed logic lists for case assignment to each of these proposed MS-DRGs includes the procedure codes describing the use of a custom-made anatomically designed interbody fusion device in the definition of the respective proposed MS-DRG, the GROUPEER software is not able to exclude cases reporting a custom-made anatomically designed interbody fusion device from grouping to proposed MS-DRG 426 ("with MCC") that would otherwise group to proposed MS-DRG 428 ("without CC/MCC").

We then reviewed the requested reassignment for the 38 cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed revised MS-DRG 460 to proposed MS-DRG 447. We note that the logic for case assignment to proposed MS-DRG 447 is comprised of cases reporting a multiple level spinal fusion (except cervical) and the logic for

case assignment for proposed revised MS-DRG 460 is comprised of cases reporting a single level spinal fusion (except cervical). The proposed logic for case assignment to each of these proposed MS-DRGs includes the procedure codes describing the use of a custom-made anatomically designed interbody fusion device in the definition of the respective proposed MS-DRG. Therefore, the reassignment of the 38 cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 460 to proposed MS-DRG 447 would not be feasible and would not be consistent with the logic of the proposed MS-DRGs which is intended to differentiate a single level spinal fusion from a multiple level spinal fusion.

Lastly, we reviewed the requested reassignment for the 26 cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 448 to proposed MS-DRG 447. Based on the logic lists for case assignment and because these MS-DRGs are subdivided by a two-way split that both describe multiple level spinal fusion (except cervical), we determined it would be feasible to reassign cases from the "without MCC" severity level (MS-DRG 448) to the "with MCC" severity level (MS-DRG 447).

As previously described, when MS-DRGs are subdivided with a three-way split, the requested reassignment of cases can only be considered from one severity level to the next highest severity level. In our review of the data for proposed MS-DRGs 426, 427, and 428, we considered the average costs of the 24 cases found in proposed MS-DRG 426 reporting the use of a custom-made anatomically designed interbody fusion device compared to the average cost of all the cases in proposed MS-DRG 426 (\$103,956 versus \$91,358) and the average costs of the 101 cases found in proposed MS-DRG 427 reporting the use of a custom-made anatomically designed interbody fusion device compared to the average cost of all the cases in proposed MS-DRG 427 (\$76,827 versus \$64,065). Although the average length of stay for cases reporting a custom-made anatomically designed interbody fusion device in proposed MS-DRG 427 is shorter in comparison to the average length of stay of all the cases in proposed MS-DRG 426, we believe the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 427 (with CC) to proposed MS-DRG 426 (with MCC) is supported and better

reflects the resource utilization and complexity of cases using the custom-made anatomically designed interbody fusion device technology in a multiple level combined anterior and posterior spinal fusion. We recognize that the 51 cases found in proposed MS-DRG 428 reporting the use of a custom-made anatomically designed interbody fusion device have higher average costs compared to the average cost of all the cases in MS-DRG 428 (\$64,038 versus \$50,097), however, as previously described, we are unable to accommodate two severity level reassignment requests for an MS-DRG subdivided by a three-way split at this time.

We noted earlier in this section of the preamble of this final rule, in our review of the requested reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 448 to proposed MS-DRG 447 that the request was feasible based on the logic of the proposed MS-DRGs that are subdivided with a two-way split. In our review of the data for proposed MS-DRGs 447 and 448, we considered the average costs of the 26 cases found in proposed MS-DRG 448 reporting the use of a custom-made anatomically designed interbody fusion device compared to the average cost of all the cases in proposed MS-DRG 448 (\$62,831 versus \$36,932). We also considered the one case found in proposed MS-DRG 447 reporting the use of a custom-made anatomically designed interbody fusion device to be an outlier with costs of \$288,499 compared to the average costs of all the cases in proposed MS-DRG 447 (\$57,209). We believe the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed MS-DRG 448 (without MCC) to proposed MS-DRG 447 (with MCC) is supported and better reflects the resource utilization and complexity of cases using the custom-made anatomically designed interbody fusion device technology in a multiple level anterior and posterior spinal fusion.

As previously discussed, we determined that the requested reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed revised MS-DRG 460 to proposed MS-DRG 447 would not be feasible based on the logic for case assignment. However, based on the data findings, we believe it is appropriate to consider the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed revised MS-DRG

460 to proposed revised MS-DRG 459. In our review of the data for proposed revised MS-DRGs 459 and 460, we considered the average costs of the 38 cases found in proposed revised MS-DRG 460 reporting the use of a custom-made anatomically designed interbody fusion device compared to the average cost of all the cases in proposed revised MS-DRG 460 (\$47,138 versus \$32,586). While there were no cases found to report the use of a custom-made anatomically designed interbody fusion device in proposed revised MS-DRG 459, we considered the average costs of all the cases in proposed revised MS-DRG 459 (\$53,192). While the average length of stay of the cases reporting a custom-made anatomically designed interbody fusion device are shorter (2.1 days versus 9.6 days), we believe the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed revised MS-DRG 460 (without MCC) to proposed revised MS-DRG 459 (with MCC) is supported and better reflects the resource utilization of cases using the custom-made anatomically designed interbody fusion device technology in a single level spinal fusion. As also previously discussed, a few commenters suggested that if the proposed restructuring was to be finalized, consideration be given to deleting proposed revised MS-DRGs 459 and 460 and creating new MS-DRGs for single level spinal fusion except cervical with MCC and without MCC, respectively, because the proposed revisions would significantly change the types of cases classified to these MS-DRGs. We agree with the commenters that the proposed revisions to the MS-DRG logic change the types of cases that would be classified to proposed revised MS-DRGs 459 and 460. Specifically, because the logic for case assignment to existing MS-DRGs 459 and 460 was proposed to be restructured to better differentiate between single level spinal fusions (except cervical) and multiple level spinal fusions (except cervical), it would not be appropriate to retain the existing MS-DRG numbers 459 and 460 with revised titles. We proposed to create new MS-DRGs 447 and 448 to reflect multiple level spinal fusion procedures (except cervical) therefore, maintaining the existing MS-DRG numbers of 459 and 460 for the single level spinal fusions (except cervical) logic only could potentially result in confusion about the logic for case assignment. If users were to reference MS-DRG numbers 459 and 460 only, in the absence of the full MS-DRG titles,

others may not be aware that the logic for case assignment to these MS-DRGs had changed effective FY 2025. As such, we agree that existing MS-DRG numbers 459 and 460 should be deleted.

We recognize that with the requested reassignments the average length of stay for cases reporting a custom-made anatomically designed interbody fusion device varies from the average length of stay for all the cases in the requested MS-DRGs, and we continue to believe that length of stay is a factor in assessing clinical coherence, however, we also consider the use of a specific technology in the performance of a procedure as a measure of complexity in connection with resource consumption, particularly when that technology is indicated for a specific population. In the case of custom-made anatomically designed interbody fusion devices, the technology is indicated for patients who have complicated spinal anatomy necessitating individualized treatment plans to precisely address spinal alignment needs and reduce the risk of revision surgery.

After consideration of the public comments we received, we are finalizing our proposal to delete MS-DRGs 453, 454, and 455 and to create new MS-DRGs 426, 427, and 428, with modification, for FY 2025. Specifically, we are finalizing our proposal with modification to assign cases reporting the use of a custom-made anatomically designed interbody fusion device with a CC to new MS-DRG 426. Conforming changes to the GROUPER logic are also shown in Table 6P.2e associated with this final rule and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> and also as reflected in the final version of ICD-10 MS-DRG Definitions Manual, version 42, available in association with this final rule and available via the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>. Accordingly, the finalized MS-DRG titles are MS-DRG 426 “Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device”, MS-DRG 427 “Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with CC” and MS-DRG 428 “Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical without CC/MCC” effective October 1, 2024, for FY 2025.

We are also finalizing our proposal to create new MS-DRGs 447 and 448, with modification, for FY 2025. Specifically,

we are finalizing our proposal with modification to assign cases reporting the use of a custom-made anatomically designed interbody fusion device without an MCC to MS-DRG 447. Conforming changes to the GROUPER logic are shown in Table 6P.2h associated with this final rule and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> and also reflected in the final version of ICD-10 MS-DRG Definitions Manual, version 42, available in association with this final rule and available via the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>. Accordingly, the finalized MS-DRG titles are MS-DRG 447 “Multiple Level Anterior and Posterior Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device” and MS-DRG 448 “Multiple Level Anterior and Posterior Spinal Fusion Except Cervical without MCC” effective October 1, 2024, for FY 2025.

As previously discussed, we stated we believe the reassignment of cases reporting the use of a custom-made anatomically designed interbody fusion device from proposed revised MS-DRG 460 (without MCC) to proposed revised MS-DRG 459 (with MCC) is supported and agree with the commenters that the proposed revisions to the MS-DRG logic change the types of cases that would be classified to MS-DRGs 459 and 460. As previously noted, the logic for case assignment to existing MS-DRGs 459 and 460 was proposed to be restructured to better differentiate between single level and multiple level spinal fusions, therefore it would not be appropriate to retain the existing MS-DRG numbers 459 and 460 with revised titles because the cases that group to these MS-DRGs would change. Therefore, for FY 2025, we are deleting MS-DRGs 459 and 460, and finalizing the creation of MS-DRGs 450 and 451. The logic for case assignment to MS-DRGs 450 and 451 is comprised of the logic lists that were initially proposed for revised MS-DRGs 459 and 460, with modification. We are also finalizing the assignment of cases reporting the use of a custom-made anatomically designed interbody fusion device without an MCC to MS-DRG 450. Conforming changes to the GROUPER logic are shown in Table 6P.2g associated with this final rule and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute->

inpatient-pps and also reflected in the final version of ICD-10 MS-DRG Definitions Manual, version 42, available in association with this final rule and available via the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>.

Accordingly, the finalized MS-DRG titles are MS-DRG 450 “Single Level Spinal Fusion Except Cervical with MCC or Custom-Made Anatomically Designed Interbody Fusion Device” and MS-DRG 451 “Single Level Spinal Fusion Except Cervical without MCC” effective October 1, 2024, for FY 2025.

We are also finalizing our proposal to create new MS-DRG 402, and new MS-DRGs 429 and 430, without modification, for FY 2025. Accordingly, we are finalizing the proposed Grouper logic for these MS-DRGs as shown in Table 6P.2d and 6P.2f, respectively, associated with this final rule and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> and as also reflected in the final version of ICD-10 MS-DRG Definitions Manual, version 42, available in association with this final rule and available via the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>. The finalized MS-DRG titles are MS-DRG 402 “Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical”, MS-DRG 429 “Combined Anterior and Posterior Cervical Spinal Fusion with MCC” and MS-DRG 430 “Combined Anterior and Posterior Cervical Spinal Fusion without MCC” effective October 1, 2024, for FY 2025. We will continue to monitor the data for these finalized MS-DRGs and consider if any future modifications may be warranted.

7. MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders): Resection of Right Large Intestine

In the proposed rule, we noted that we identified an inconsistency in the MDC and MS-DRG assignment of procedure codes describing resection of the right large intestine and resection of the left large intestine with an open and percutaneous endoscopic approach. ICD-10-PCS procedure codes 0DTG0ZZ (Resection of left large intestine, open approach) and 0DTG4ZZ (Resection of left large intestine, percutaneous endoscopic approach) are currently assigned to MDC 10 in MS-DRGs 628, 629, and 630 (Other Endocrine, Nutritional and Metabolic O.R.

Procedures with MCC, with CC, and without CC/MCC, respectively). However, the procedure codes that describe resection of the right large intestine with an open or percutaneous endoscopic approach, 0DTF0ZZ (Resection of right large intestine, open approach) and 0DTF4ZZ (Resection of right large intestine, percutaneous endoscopic approach) are not assigned to MDC 10 in MS-DRGs 628, 629, and 630. To ensure clinical alignment and consistency, as well as appropriate MS-DRG assignment, we proposed to add procedure codes 0DTF0ZZ and 0DTF4ZZ to MDC 10 in MS-DRGs 628, 629, and 630 effective October 1, 2024, for FY 2025.

Comment: Commenters supported our proposal to add procedure codes 0DTF0ZZ and 0DTF4ZZ to MDC 10 in MS-DRGs 628, 629, and 630. A commenter also suggested that CMS consider providing an index of ICD-10-PCS codes that are assigned to each MDC in the ICD-10 MS-DRG Definitions Manual in a “reverse look up” format that could be utilized to identify other potential omissions or inaccuracies such as the issues discussed in the proposed rule. The commenter urged CMS to make this information publicly available in a user-friendly format to enable interested parties to review the MDC and MS-DRG assignments more easily for ICD-10-PCS procedure codes.

Response: We thank the commenters for their support. With respect to the commenter’s suggestion that CMS develop a “reverse look up” index of the ICD-10-PCS procedure codes to enable members of the public to more easily review the MDC and MS-DRG assignments of the procedure codes, we appreciate the feedback and will take the suggestion under advisement.

After consideration of the public comments we received, we are finalizing our proposal to add procedure codes 0DTF0ZZ and 0DTF4ZZ to MDC 10 in MS-DRGs 628, 629, and 630 effective October 1, 2024, for FY 2025.

8. MDC 15 (Newborns and Other Neonates With Conditions Originating in Perinatal Period): MS-DRG 795 Normal Newborn

As discussed in the FY 2025 IPHS/LTCH PPS proposed rule (89 FR 35985 through 35991), we received a request to review the Grouper logic that would determine the assignment of cases to MS-DRG 794 (Neonate with Other Significant Problems). The requestor stated that it appears that MS-DRG 794 is the default MS-DRG in MDC 15 (Newborns and Other Neonates with Conditions Originating in Perinatal

Period), as the Grouper logic for MS-DRG 794 displayed in the ICD-10 MS-DRG Version 41.1 Definitions Manual is defined by a “principal or secondary diagnosis of newborn or neonate, with other significant problems, not assigned to DRG 789 through 793 or 795”. The requestor expressed concern that defaulting to MS-DRG 794, instead of MS-DRG 795 (Normal Newborn), for assignment of cases in MDC 15 could contribute to overpayments in healthcare by not aligning the payment amount to the appropriate level of care in newborn cases. The requestor recommended that CMS update the Grouper logic that would determine the assignment of cases to MS-DRGs in MDC 15 to direct all cases that do not have the diagnoses and procedures as specified in the Definitions Manual to instead be grouped to MS-DRG 795.

Specifically, as discussed in the proposed rule, the requestor expressed concern that a newborn encounter coded with a principal diagnosis code from ICD-10-CM category Z38 (Liveborn infants according to place of birth and type of delivery), followed by code P05.19 (Newborn small for gestational age, other), P59.9 (Neonatal jaundice, unspecified), Q38.1 (Ankyloglossia), Q82.5 (Congenital non-neoplastic nevus), or Z23 (Encounter for immunization) is assigned to MS-DRG 794. The requestor stated that they performed a detailed claim level study, and in their clinical assessment, newborn encounters coded with a principal diagnosis code from ICD-10-CM category Z38, followed by diagnosis code P05.19, P59.9, Q38.1, Q82.5, or Z23 in fact clinically describe normal newborn encounters and the case assignment should instead be to MS-DRG 795.

We stated in the proposed rule that our analysis of this grouping issue confirmed that when a principal diagnosis code from MDC 15, such as a diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery), is reported followed by ICD-10-CM code P05.19 (Newborn small for gestational age, other), Q38.1 (Ankyloglossia) or Q82.5 (Congenital non-neoplastic nevus), the case is assigned to MS-DRG 794.

However, as we examined the Grouper logic that would determine an assignment of cases to MS-DRG 795, we noted in the proposed rule that the “only secondary diagnosis” list under MS-DRG 795 already includes ICD-10-CM codes P59.9 (Neonatal jaundice, unspecified) and Z23 (Encounter for immunization). Therefore, when a principal diagnosis code from MDC 15, such as a diagnosis code from category

Z38 (Liveborn infants according to place of birth and type of delivery) is reported, followed by ICD-10-CM code P59.9 or Z23, the case is currently assigned to MS-DRG 795, not MS-DRG 794, as suggested by the requestor. We refer the reader to the ICD-10 MS-DRG Version 41.1 Definitions Manual (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic for MS-DRGs 794 and 795.

Next, we stated in the proposed rule that we reviewed the claims data from the September 2023 update of the FY 2023 MedPAR file; however, we found zero cases across MS-DRGs 794 and 795. We then examined the clinical factors. The description for ICD-10-CM diagnosis code P05.19 is “Newborn small for gestational age, other” and the inclusion term in the ICD-10-CM Tabular List of Diseases for this diagnosis code is “Newborn small for gestational age, 2,500 grams and over.” We noted in the proposed rule that “small-for-gestational age” is diagnosed by assessing the gestational age and the weight of the baby after birth. There is no specific treatment for small-for-gestational-age newborns. Most newborns who are moderately small for gestational age are healthy babies who just happen to be on the smaller side. Unless the newborn is born with an infection or has a genetic disorder, most small-for-gestational-age newborns have no symptoms and catch up in their growth during the first year of life and have a normal adult height. Next, ICD-10-CM diagnosis code Q38.1 describes ankyloglossia, also known as tongue-tie, which is a condition that impairs tongue movement due to a restrictive lingual frenulum. We noted that in infants, tongue-tie is treated by making a small cut to the lingual frenulum to allow the tongue to move more freely. This procedure, called a frenotomy, can be done in a healthcare provider’s office without anesthesia. Newborns generally recover within about a minute of the procedure, and pain relief is usually not indicated. Lastly, ICD-10-CM diagnosis code Q82.5 describes a congenital non-neoplastic nevus. A congenital nevus is

a type of pigmented birthmark that appears at birth or during a baby’s first year. Most congenital nevi do not cause health problems and may only require future monitoring.

In reviewing these three ICD-10-CM codes and the conditions they describe; we stated in the proposed rule that we believe these diagnoses generally do not prolong the inpatient admission of the newborn and newborns with these diagnoses generally receive standard follow-up care after birth. We stated clinically, we agreed with the requestor that newborn encounters coded with a principal diagnosis code from ICD-10-CM category Z38 (Liveborn infants according to place of birth and type of delivery), followed by code P05.19 (Newborn small for gestational age, other), Q38.1 (Ankyloglossia), or Q82.5 (Congenital non-neoplastic nevus) should not map to MS-DRG 794 (Neonate with Other Significant Problems) and should instead be assigned to MS-DRG 795 (Normal Newborn). Therefore, for the reasons discussed, we proposed to reassign diagnosis code P05.19 from the “principal or secondary diagnosis” list under MS-DRG 794 to the “principal diagnosis” list under MS-DRG 795 (Normal Newborn). We also proposed to add diagnosis codes Q38.1 and Q82.5 to the “only secondary diagnosis” list under MS-DRG 795 (Normal Newborn). Under this proposal, cases with a principal diagnosis described by an ICD-10-CM code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes P05.19, Q38.1, or Q82.5 will be assigned to MS-DRG 795.

In response to the recommendation that CMS update the GROUPER logic that would determine an assignment of cases to MS-DRGs in MDC 15, in the proposed rule we stated we agreed with the requestor that the GROUPER logic for MS-DRG 794 is defined by a “principal or secondary diagnosis of newborn or neonate, with other significant problems, not assigned to DRG 789 through 793 or 795”. We acknowledged that MS-DRG 794 utilizes “fall-through” logic, meaning if a diagnosis code is not assigned to any of the other MS-DRGs, then assignment “falls-through” to MS-DRG 794. As discussed in the proposed rule, we have

started to examine the GROUPER logic that would determine the assignment of cases to the MS-DRGs in MDC 15, including MS-DRGs 794 and 795, to determine where further refinements could potentially be made to better account for differences in clinical complexity and resource utilization. However, as we have noted in prior rulemaking (72 FR 47152), we cannot adopt the same approach to refine the newborn MS-DRGs because of the extremely low volume of Medicare patients there are in these MS-DRGs. Additional time is needed to fully and accurately evaluate cases currently grouping to the MS-DRGs in MDC 15 to consider if restructuring the current MS-DRGs would better recognize the clinical distinctions of these patient populations. Any proposed modifications to these MS-DRGs will be addressed in future rulemaking consistent with our annual process.

Comment: Many commenters expressed support for the proposal to reassign diagnosis code P05.19 from the “principal or secondary diagnosis” list under MS-DRG 794 to the “principal diagnosis” list under MS-DRG 795 (Normal Newborn) and the proposal to add diagnosis codes Q38.1 and Q82.5 to the “only secondary diagnosis” list under MS-DRG 795 (Normal Newborn) for FY 2025. Several commenters stated these updates are needed, are very timely, and will better align cases to the appropriate level of care. Other commenters stated they were committed to helping update the GROUPER logic for MS-DRG 794 and expressed their willingness to work with CMS. A commenter specifically stated they applaud CMS’ initiation of an examination of the GROUPER logic that would determine the assignment of cases to the MS-DRGs in MDC 15 to determine where further refinements could potentially be made to better account for differences in clinical complexity and resource utilization.

While indicating their support for the proposal, some commenters provided the following list of diagnoses which they stated also clinically describe normal newborn encounters when reported and therefore case assignment should also be to MS-DRG 795 instead of MS-DRG 794.

ICD-10-CM Diagnosis Code	Description
P08.1	Other heavy for gestational age newborn
P08.21	Post-term newborn
P09.6	Abnormal findings on neonatal screening for neonatal hearing loss
Q55.63	Congenital torsion of penis
Q55.69	Other congenital malformation of penis
Q82.8	Other specified congenital malformations of skin
Z05.1	Observation and evaluation of newborn for suspected infectious condition ruled out
Z05.42	Observation and evaluation of newborn for suspected metabolic condition ruled out
Z28.82	Immunization not carried out because of caregiver refusal
Z71.85	Encounter for immunization safety counseling

Response: We thank the commenters for their support for the proposal as well as for broader efforts to evaluate the assignment of cases to the MS-DRGs in MDC 15. In response to the list of diagnoses which commenters stated also clinically describe normal newborn encounters when reported and therefore assignment should be to MS-DRG 795, we note that the “principal diagnosis” list under MS-DRG 795 already includes ICD-10-CM codes P08.1 (Other heavy for gestational age newborn) and P08.21 (Post-term newborn). Additionally, the “only secondary diagnosis” list under MS-DRG 795 already includes ICD-10-CM codes Q82.8 (Other specified congenital malformations of skin), Z05.1 (Observation and evaluation of newborn for suspected infectious condition ruled out), Z05.42 (Observation and evaluation of newborn for suspected metabolic condition ruled out), and Z28.82 (Immunization not carried out because of caregiver refusal). Therefore, when principal diagnosis code P08.1 or P08.21 is reported, the case is currently assigned to MS-DRG 795, not MS-DRG 794. Similarly, when a principal diagnosis code from MDC 15, such as a diagnosis code from category Z38 (Liveborn infants according to place of birth and type of delivery) is reported, followed by ICD-10-CM code Q82.8, Z05.1, Z05.42, or Z28.82, the case is currently assigned to MS-DRG 795, not MS-DRG 794, as suggested by the commenters. We refer the reader to the ICD-10 MS-DRG Version 42 Definitions Manual (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the

GROUPER logic for MS-DRGs 794 and 795.

We will review the remaining diagnoses suggested by the commenters as we examine the GROUPER logic that would determine the assignment of cases to the MS-DRGs in MDC 15, including MS-DRGs 794 and 795. We note that we would address any proposed modifications to the existing logic in future rulemaking.

Comment: Other commenters disagreed with the proposal. A commenter noted that patients with ankyloglossia can struggle to breastfeed, are at risk of an early transition to formula, can be small for gestational age, and are at risk for malnutrition. Another commenter noted that contrary to statements in the proposed rule, frenotomy or frenectomy procedures are not as simple as once originally thought and can involve rare complications such as bleeding, airway obstruction, damage to surrounding structures, scarring, and oral aversion secondary to damage to the tongue, nerves, or salivary glands and further noted that when undergoing frenotomy without analgesia, researchers found that 18% of infants cried during and 60% cried after the procedure. This commenter stated that their analysis of claims from their facility indicated that of the approximately 1000 cases reporting a secondary diagnosis of ankyloglossia, frenectomy was performed in approximately 60 cases due to issues with breast feeding and 15% of those cases had a length of stay greater than or equal to 4 days.

A commenter disagreed with the proposal to remove ICD-10-CM diagnosis code P05.19 (newborn small for gestation age, other) from the logic for MS-DRG 794 and stated that

newborns that are small for gestational age must undergo hypoglycemia screening, which includes the monitoring of glucose levels at 1, 2, 3, 12, and 24 hours of life and are at increased risk for complications such as neonatal asphyxia, hypothermia, hypoglycemia, hypocalcemia, polycythemia, sepsis, and death. This commenter stated review of the neonatal admissions at their facility supports that these neonates often require longer lengths of stay and utilize increased resources as 5% of approximately 800 cases reporting a secondary diagnosis of P05.19 had a length of stay greater or equal to 4 days. This commenter stated that should diagnosis codes P05.19 and Q38.1 be removed from the logic of MS-DRG 794, a new MS-DRG should be created to capture newborns with minor problems.

Response: We appreciate the commenters' feedback. We considered concerns expressed by the commenters and continue to believe that diagnoses P05.19 and Q38.1 generally do not prolong the inpatient admission of the newborn and newborns with these diagnoses generally receive standard follow-up care after birth. As discussed in the proposed rule, the description for ICD-10-CM diagnosis code P05.19 is “Newborn small for gestational age, other” and the inclusion term in the ICD-10-CM Tabular List of Diseases for this diagnosis code is “Newborn small for gestational age, 2,500 grams and over.” We continue to believe that most newborns who are moderately small for gestational age are healthy babies who just happen to be on the smaller side. We further note that under the proposal to reassign diagnosis code P05.19 from the “principal or secondary diagnosis” list under MS-DRG 794 to the

“principal diagnosis” list under MS–DRG 795, cases reporting other codes from ICD–10–CM subcategory P05.1- (Newborns small for gestation age) describing newborns small for gestation age, 1999 grams or less, will continue to be assigned to MS–DRG 793 (Full Term Neonate with Major Problems). While we agree that newborns can require serial glucose monitoring after birth, blood glucose can be checked with just a few drops of blood, usually taken from the heel of the newborn and does not involve an invasive procedure.

Similarly, in infants with ankyloglossia indicated for frenotomy, the frenotomy is generally a quick, non-invasive procedure that can be done in a healthcare provider’s office without anesthesia. Should the uncommon postprocedural complications noted by the commenter arise when frenotomy is performed in the inpatient setting, those complications should be reported to fully reflect the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the complication. We also note, as discussed in prior rulemaking (86 FR 44878), the MS–DRG system is a system

of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We also provide outlier payments to mitigate extreme loss on individual cases.

We will review the suggestion to create an MS–DRG for newborns with minor problems as we examine the GROUPER logic that would determine the assignment of cases to the MS–DRGs in MDC 15 and would address any proposed modifications to the existing logic in future rulemaking.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to reassign diagnosis code P05.19 from the “principal or secondary diagnosis” list under MS–DRG 794 to the “principal diagnosis” list under MS–DRG 795 (Normal Newborn), without modification, effective October 1, 2024, for FY 2025. We are also finalizing our proposal to add diagnosis codes Q38.1 and Q82.5 to the “only secondary diagnosis” list under MS–DRG 795 (Normal Newborn), without modification, effective October 1, 2024,

for FY 2025. Under these finalizations, cases with a principal diagnosis described by an ICD–10–CM code from category Z38 (Liveborn infants according to place of birth and type of delivery), followed by codes P05.19, Q38.1, or Q82.5 will be assigned to MS–DRG 795.

As noted earlier and discussed in the proposed rule, we have started our examination of the GROUPER logic that would determine an assignment of cases to MS–DRGs in MDC 15. During this review, we stated in the proposed rule we noted the logic for MS–DRG 795 (Normal Newborn) includes five diagnosis codes from ICD–10–CM category Q81 (Epidermolysis bullosa). We refer the reader to the ICD–10 MS–DRG Version 41.1 Definitions Manual (available via on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic for MS–DRG 795. The five diagnosis codes and their current MDC and MS–DRG assignments are listed in the following table.

ICD-10-CM Code	Description	MDC	MS-DRG
Q81.0	Epidermolysis bullosa simplex	09	606 and 607 (Minor Skin Disorders with MCC and without MCC, respectively)
Q81.1	Epidermolysis bullosa letalis		
Q81.2	Epidermolysis bullosa dystrophica		
Q81.8	Other epidermolysis bullosa		
Q81.9	Epidermolysis bullosa, unspecified	15	795 (Normal Newborn)

In the proposed rule we stated we reviewed this grouping issue and noted that epidermolysis bullosa (EB) is a group of genetic (inherited) disorders that causes skin to be fragile, blister, and tear easily in response to minimal friction or trauma. In some cases, blisters form inside the body in places such as the mouth, esophagus, other internal organs, or eyes. When the blisters heal, they can cause painful scarring. In severe cases, the blisters and scars can harm internal organs and tissue enough to be fatal. Patients diagnosed with severe cases of EB have a life expectancy that ranges from infancy to 30 years of age.

We noted in the proposed rule that EB has four primary types: simplex, junctional, dystrophic, and Kindler syndrome, and within each type there are various subtypes, ranging from mild to severe. A skin biopsy can confirm a diagnosis of EB and identify which layers of the skin are affected and determine the type of epidermolysis bullosa. Genetic testing may also be

ordered to diagnose the specific type and subtype of the disease. In caring for patients with EB, adaptations may be necessary in the form of handling, feeding, dressing, managing pain, and treating wounds caused by the blisters and tears. If there is a known diagnosis of EB, but the neonate has no physical signs at birth, there will still need to be specialty consultation in the inpatient setting or referral for outpatient follow-up. We stated we believe the five diagnosis codes from ICD–10–CM category Q81 (Epidermolysis bullosa) describe conditions that require advanced care and resources similar to other conditions already assigned to the logic of MS–DRG 794 and MS–DRGs 595 and 596 (Major Skin Disorders with MCC and without MCC, respectively), even in cases where the type of EB is unspecified.

Therefore, for clinical consistency, we proposed to reassign ICD–10–CM diagnosis codes Q81.0, Q81.1, Q81.2, Q81.8, and Q81.9 from MS–DRGs 606 and 607 in MDC 09 (Diseases and

Disorders of the Skin, Subcutaneous Tissue and Breast) and MS–DRG 795 (Normal Newborn) in MDC 15 to MS–DRGs 595 and 596 in MDC 09 and MS–DRG 794 in MDC 15, effective October 1, 2024, for FY 2025.

Comment: Commenters expressed support for the proposal to reassign ICD–10–CM diagnosis codes Q81.0, Q81.1, Q81.2, Q81.8, and Q81.9 from MS–DRGs 606 and 607 in MDC 09 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) and MS–DRG 795 (Normal Newborn) in MDC 15 to MS–DRGs 595 and 596 in MDC 09 and MS–DRG 794 in MDC 15 for FY 2025.

Response: We appreciate the commenters support.

After consideration of the public comments we received, we are finalizing our proposal to reassign ICD–10–CM diagnosis codes Q81.0, Q81.1, Q81.2, Q81.8, and Q81.9 from MS–DRGs 606 and 607 in MDC 09 (Diseases and Disorders of the Skin, Subcutaneous Tissue and Breast) and MS–DRG 795

(Normal Newborn) in MDC 15 to MS-DRGs 595 and 596 (Major Skin Disorders with MCC and without MCC, respectively) in MDC 09 and MS-DRG 794 (Neonate with Other Significant Problems) in MDC 15, without modification, effective October 1, 2024, for FY 2025.

9. MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms): Acute Leukemia

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35986 through 35991), we identified a replication issue from the ICD-9 based MS-DRGs to the ICD-10 based MS-DRGs regarding the assignment of six ICD-10-CM diagnosis codes that

describe a type of acute leukemia. We noted that under the Version 32 ICD-9-CM based MS-DRGs, the ICD-9-CM diagnosis codes as shown in the following table were assigned to surgical MS-DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), surgical MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively), and medical MS-DRGs 840, 841, and 842 (Lymphoma and Non-Acute Leukemia with MCC, with CC, and without CC/MCC, respectively) in MDC 17 (Myeloproliferative Diseases and

Disorders, Poorly Differentiated Neoplasms). The six ICD-10-PCS code translations also shown in the following table, that provide more detailed and specific information for the ICD-9-CM codes reflected, also currently group to MS-DRGs 820, 821, 822, 823, 824, 825, 840, 841 and 842 in the ICD-10 MS-DRGs Version 41.1. We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for complete documentation of the GROUPER logic for MS-DRGs 820, 821, 822, 823, 824, 825, 840, 841, and 842.

ICD-9-CM Diagnosis Code	Description	ICD-10-CM Diagnosis Code	Description
207.20	Megakaryocytic leukemia, without mention of having achieved remission	C94.20	Acute megakaryoblastic leukemia not having achieved remission
207.21	Megakaryocytic leukemia, in remission	C94.21	Acute megakaryoblastic leukemia, in remission
207.22	Megakaryocytic leukemia, in relapse	C94.22	Acute megakaryoblastic leukemia, in relapse
238.79	Other lymphatic and hematopoietic tissues	C94.40	Acute panmyelosis with myelofibrosis not having achieved remission
238.79	Other lymphatic and hematopoietic tissues	C94.41	Acute panmyelosis with myelofibrosis, in remission
238.79	Other lymphatic and hematopoietic tissues	C94.42	Acute panmyelosis with myelofibrosis, in relapse

In the proposed rule we stated that during our review of this issue, we noted that under ICD-9-CM, the diagnosis codes as reflected in the table did not describe the acuity of the diagnosis (for example, acute versus chronic). This is in contrast to their six comparable ICD-10-CM code translations listed in the previous table that provide more detailed and specific information for the ICD-9-CM diagnosis codes and do specify the acuity of the diagnoses.

We noted in the proposed rule that ICD-10-CM codes C94.20, C94.21, and C94.22 describe acute megakaryoblastic leukemia (AMKL), a rare subtype of acute myeloid leukemia (AML) that affects megakaryocytes, platelet-producing cells that reside in the bone marrow. Similarly, ICD-10-CM codes C94.40, C94.41, and C94.42 describe acute panmyelosis with myelofibrosis

(APMF), a rare form of acute myeloid leukemia characterized by acute panmyeloid proliferation with increased blasts and accompanying fibrosis of the bone marrow that does not meet the criteria for AML with myelodysplasia related changes. As previously mentioned, these six diagnosis codes are assigned to MS-DRGs 820, 821, 822, 823, 824, 825, 840, 841, and 842. In the proposed rule, we noted that GROUPER logic lists for MS-DRGs 820, 821, and 822 includes diagnosis codes describing lymphoma and both acute and non-acute leukemias, however the logic lists for MS-DRGs 823, 824, 825, 840, 841, and 842 contain diagnosis codes describing lymphoma and non-acute leukemias. We stated that in our analysis of this grouping issue, we also noted that cases reporting a chemotherapy principal diagnosis with a secondary diagnosis describing acute

megakaryoblastic leukemia or acute panmyelosis with myelofibrosis are assigned to MS-DRGs 846, 847, and 848 (Chemotherapy without Acute Leukemia as Secondary Diagnosis, with MCC, with CC, and without CC/MCC, respectively) in Version 41.1.

Next, in the proposed rule we stated we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRG 823, 824, 825, 840, 841, and 842 to identify cases reporting one of the six diagnosis codes listed previously that describe acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis. We also examined MS-DRGs 846, 847, and 848 (Chemotherapy without Acute Leukemia as Secondary Diagnosis, with MCC, with CC, and without CC/MCC, respectively). Our findings are shown in the following tables:

MS-DRGs 823, 824, and 825: All Cases and Cases Reporting Diagnosis Codes Describing Acute Megakaryoblastic Leukemia or Acute Panmyelosis with Myelofibrosis				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
823	All cases	2,235	14	\$40,587
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	2	31.5	\$49,600
824	All cases	1,764	6.8	\$19,262
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	\$0
825	All Cases	427	2.9	\$10,959
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	1	6	\$17,293

As shown in the table, in MS-DRG 823, we identified a total of 2,235 cases with an average length of stay of 14 days and average costs of \$40,587. Of those 2,235 cases, there were two cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs higher than the average costs in the FY 2023 MedPAR

file for MS-DRG 823 (\$49,600 compared to \$40,587) and a longer average length of stay (31.5 days compared to 14 days). We found zero cases in MS-DRG 824 reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis. In MS-DRG 825, we identified a total of 427 cases with an average length of stay of 2.9 days and average costs of \$10,959.

Of those 427 cases, there was one case reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with costs higher than the average costs in the FY 2023 MedPAR file for MS-DRG 825 (\$17,293 compared to \$10,959) and a longer length of stay (6 days compared to 2.9 days).

MS-DRGs 840, 841, and 842: All Cases and Cases Reporting Diagnosis Codes Describing Acute Megakaryoblastic Leukemia or Acute Panmyelosis with Myelofibrosis				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
840	All cases	7,747	9.6	\$26,215
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	12	8.7	\$21,357
841	All cases	5,019	5.3	\$13,502
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	6	2.8	\$6,976
842	All Cases	726	3.4	\$9,272
	Cases with C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	\$0

As shown in the table, in MS-DRG 840, we identified a total of 7,747 cases with an average length of stay of 9.6 days and average costs of \$26,215. Of those 7,747 cases, there were 12 cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs lower than the average costs in the FY 2023 MedPAR file for MS-DRG 840 (\$21,357 compared

to \$26,215) and a shorter average length of stay (8.7 days compared to 9.6 days). In MS-DRG 841, we identified a total of 5,019 cases with an average length of stay of 5.3 days and average costs of \$13,502. Of those 5,019 cases, there were six cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs lower than the average

costs in the FY 2023 MedPAR file for MS-DRG 841 (\$6,976 compared to \$13,502) and a shorter average length of stay (2.8 days compared to 5.3 days). We found zero cases in MS-DRG 842 reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis.

MS-DRGs 846, 847, and 848: All Cases and Cases with a Chemotherapy Principal Diagnosis Code and a Secondary Diagnosis Code Describing Acute Megakaryoblastic Leukemia or Acute Panmyelosis with Myelofibrosis				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
846	All cases	2,936	8	\$22,705
	Cases with a chemotherapy principal diagnosis code with a secondary diagnosis code of C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	\$0
847	All cases	7,329	4.4	\$11,250
	Cases with a chemotherapy principal diagnosis code with a secondary diagnosis code of C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	2	5	\$7,569
848	All Cases	113	3.1	\$7,347
	Cases with a chemotherapy principal diagnosis code with a secondary diagnosis code of C94.20, C94.21, C94.22, C94.40, C94.41, or C94.42	0	0	\$0

As shown in the table, in MS-DRG 847, we identified a total of 7,329 cases with an average length of stay of 4.4 days and average costs of \$11,250. Of those 7,329 cases, there were two cases reporting a chemotherapy principal diagnosis code with a secondary diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, with average costs lower than the average costs in the FY 2023 MedPAR file for MS-DRG 840 (\$7,569 compared to \$11,250) and a longer average length of stay (5 days compared to 4.4 days). We found zero cases in MS-DRGs 846 and 848 reporting a diagnosis code that

describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis.

As discussed in the proposed rule, next, we examined the MS-DRGs within MDC 17. Given that the six diagnoses codes describe subtypes of acute myeloid leukemia, we stated that we determined that the cases reporting a principal diagnosis of acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis would more suitably group to medical MS-DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). Similarly, we stated cases reporting a

chemotherapy principal diagnosis with a secondary diagnosis describing acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis would more suitably group to medical MS-DRGs 837, 838, and 839 (Chemotherapy with Acute Leukemia as Secondary Diagnosis, or with High Dose Chemotherapy Agent with MCC, with CC or High Dose Chemotherapy Agent, and without CC/MCC, respectively).

We stated we then examined claims data from the September 2023 update of the FY 2023 MedPAR for MS-DRGs 834, 835, 836, 837, 838, and 839. Our findings are shown in the following table.

MS-DRG	Description	Number of Cases	Average Length of Stay	Average Costs
834	Acute Leukemia without Major O.R. Procedures with MCC	4,094	16.3	\$49,986
835	Acute Leukemia without Major O.R. Procedures with CC	1,682	7.2	\$19,023
836	Acute Leukemia without Major O.R. Procedures without CC/MCC	230	4	\$11,225
837	Chemotherapy with Acute Leukemia as Secondary Diagnosis or with High Dose Chemotherapy Agent with MCC	1,567	15.3	\$43,195
838	Chemotherapy with Acute Leukemia as Secondary Diagnosis with CC or High Dose Chemotherapy Agent	1,131	6.7	\$18,162
839	Chemotherapy with Acute Leukemia as Secondary Diagnosis without CC/MCC	502	4.4	\$12,417

While the average costs for all cases in MS-DRGs 834, 835, 836, 837, 838, and 839 are higher than the average costs of the small number of cases reporting a diagnosis code that describes acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, or reporting a chemotherapy principal diagnosis with a secondary diagnosis describing acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis, and the average lengths of stay are longer, we noted that diagnosis codes C94.20, C94.21, C94.22,

C94.40, C94.41, and C94.42 describe types of acute leukemia. In the proposed rule we stated that for clinical coherence, we believe these six diagnosis codes would be more appropriately grouped along with other ICD-10-CM diagnosis codes that describe types of acute leukemia.

We reviewed this grouping issue, and stated our analysis indicates that the six diagnosis codes describing the acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis were initially assigned to the list of diagnoses

in the GROUPER logic for MS-DRGs 823, 824, 825, 840, 841, and 842 as a result of replication in the transition from ICD-9 to ICD-10 based MS-DRGs. We also noted that diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 do not describe non-acute leukemia diagnoses.

Accordingly, because the six diagnosis codes that describe acute megakaryoblastic leukemia or acute panmyelosis with myelofibrosis are not clinically consistent with non-acute leukemia diagnoses, and it is clinically

appropriate to reassign these diagnosis codes to be consistent with the other diagnosis codes that describe acute leukemias in MS-DRGs 834, 835, 836, 837, 838, and 839, we proposed the reassignment of diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 from MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively), and MS-DRGs 840, 841, and 842 (Lymphoma and Non-Acute Leukemia with MCC, with CC, and without CC/MCC, respectively) to MS-DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and MS-DRGs 837, 838, and 839 (Chemotherapy with Acute Leukemia as Secondary Diagnosis, or with High Dose Chemotherapy Agent with MCC, with CC or High Dose Chemotherapy Agent, and without CC/MCC, respectively) in MDC 17, effective FY 2025. Under this proposal, diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 will continue to be assigned to surgical MS-DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

Comment: Commenters supported our proposal to reassign diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 from MS-DRGs 823, 824, and 825 and MS-DRGs 840, 841, and

842 to MS-DRGs 834, 835, and 836 and MS-DRGs 837, 838, and 839 in MDC 17. *Response:* We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to reassign diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 from MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively), and MS-DRGs 840, 841, and 842 (Lymphoma and Non-Acute Leukemia with MCC, with CC, and without CC/MCC, respectively) to MS-DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and MS-DRGs 837, 838, and 839 (Chemotherapy with Acute Leukemia as Secondary Diagnosis, or with High Dose Chemotherapy Agent with MCC, with CC or High Dose Chemotherapy Agent, and without CC/MCC, respectively) in MDC 17, without modification, effective October 1, 2024, for FY 2025. Under this finalization, diagnosis codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 will continue to be assigned to surgical MS-DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

As discussed in the proposed rule, in our review of the MS-DRGs in MDC 17 for further refinement, we next examined the procedures currently assigned to MS-DRGs 820, 821, and 822

(Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and MS-DRGs 826, 827, and 828 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively). We noted that the logic for case assignment to MS-DRGs 820, 821, 822, 826, 827, and 828 is comprised of a logic list entitled “Operating Room Procedures” which is defined by a list of 4,320 ICD-10-PCS procedure codes, including 90 ICD-10-PCS codes describing bypass procedures from the cerebral ventricle to various body parts. We refer the reader to the ICD-10 MS-DRG Definitions Manual Version 41.1 (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>) for complete documentation of the GROUPER logic for MS-DRGs 820, 821, 822, 826, 827, and 828.

In the proposed rule we stated in our review of the procedures currently assigned to MS-DRGs 820, 821, 822, 826, 827, and 828, we noted 12 ICD-10-PCS procedure codes that describe bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns, such as subgaleal or cisternal shunt placement, that are not included in the logic for MS-DRGs 820, 821, 822, 826, 827, and 828. The 12 procedure codes are listed in the following table.

ICD-10-PCS Code	Description
001607A	Bypass cerebral ventricle to subgaleal space with autologous tissue substitute, open approach
00160JA	Bypass cerebral ventricle to subgaleal space with synthetic substitute, open approach
00160KA	Bypass cerebral ventricle to subgaleal space with nonautologous tissue substitute, open approach
00160ZB	Bypass cerebral ventricle to cerebral cisterns, open approach
001637A	Bypass cerebral ventricle to subgaleal space with autologous tissue substitute, percutaneous approach
00163JA	Bypass cerebral ventricle to subgaleal space with synthetic substitute, percutaneous approach
00163KA	Bypass cerebral ventricle to subgaleal space with nonautologous tissue substitute, percutaneous approach
00163ZB	Bypass cerebral ventricle to cerebral cisterns, percutaneous approach
001647A	Bypass cerebral ventricle to subgaleal space with autologous tissue substitute, percutaneous endoscopic approach
00164JA	Bypass cerebral ventricle to subgaleal space with synthetic substitute, percutaneous endoscopic approach
00164KA	Bypass cerebral ventricle to subgaleal space with nonautologous tissue substitute, percutaneous endoscopic approach
00164ZB	Bypass cerebral ventricle to cerebral cisterns, percutaneous endoscopic approach

We noted in the proposed rule that a subgaleal shunt consists of a shunt tube with one end in the lateral ventricles while the other end is inserted into the subgaleal space of the scalp, while a ventriculo-cisternal shunt diverts the cerebrospinal fluid flow from one of the lateral ventricles, via a ventricular

catheter, to the cisterna magna of the posterior fossa. Both procedures allow for the drainage of excess cerebrospinal fluid. Indications for ventriculosubgaleal or ventriculo-cisternal shunting include acute head trauma, subdural hematoma, hydrocephalus, and leptomenigeal

disease (LMD) in malignancies such as breast cancer, lung cancer, melanoma, acute lymphocytic leukemia (ALL) and non-hodgkin’s lymphoma (NHL).

Recognizing that acute lymphocytic leukemia (ALL) and non-hodgkin’s lymphoma (NHL) are indications for ventriculosubgaleal or ventriculo-

cisternal shunting, in the proposed rule we stated we supported adding the 12 ICD-10-PCS codes identified in the table to MS-DRGs 820, 821, 822, 826, 827, and 828 in MDC 17 for consistency to align with the procedure codes listed in the definition of MS-DRGs 820, 821, 822, 826, 827, and 828 and also to permit proper case assignment when a principal diagnosis from MDC 17 is reported with one of the procedure codes in the table that describes bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns. Therefore, we proposed to add the 12 procedure codes that describe bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns listed previously to MS-DRGs 820, 821, 822, 826, 827, and 828 in MDC 17 for FY 2025.

Comment: Commenters agreed with the proposal to add the 12 procedure codes that describe bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns to MS-DRGs 820, 821, 822, 826, 827, and 828 in MDC 17.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our proposal to add the 12

procedure codes that describe bypass procedures from the cerebral ventricle to the subgaleal space or cerebral cisterns listed previously to MS-DRGs 820, 821, 822, 826, 827, and 828 in MDC 17, without modification, effective October 1, 2024, for FY 2025.

Lastly, as discussed in the proposed rule, in our analysis of the MS-DRGs in MDC 17 for further refinement, we noted that the logic for case assignment to medical MS-DRGs 834, 835, and 836 (Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) as displayed in the ICD-10 MS-DRG Version 41.1 Definitions Manual (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>) is comprised of a logic list entitled "Principal Diagnosis" and is defined by a list of 27 ICD-10-CM diagnosis codes describing various types of acute leukemias. We noted that when any one of the 27 listed diagnosis codes from the "Principal Diagnosis" logic list is reported as a principal diagnosis, without a procedure code designated as an O.R. procedure or without a procedure code designated as a non-O.R. procedure that affects the

MS-DRG, the case results in assignment to MS-DRG 834, 835, or 836 depending on the presence of any additional MCC or CC secondary diagnoses. We noted however, that while not displayed in the ICD-10 MS-DRG Version 41.1

Definitions Manual, when any one of the 27 listed diagnosis codes from the "Principal Diagnosis" logic list is reported as a principal diagnosis, along with a procedure code designated as an O.R. procedure that is not listed in the logic list of MS-DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), the case also results in assignment to medical MS-DRG 834, 835, or 836 depending on the presence of any additional MCC or CC secondary diagnoses.

As medical MS-DRG 834, 835, and 836 contains GROUPER logic that includes ICD-10-PCS procedure codes designated as O.R. procedures, in the proposed rule we stated we examined claims data from the September 2023 update of the FY 2023 MedPAR file for MS-DRG 834, 835, and 836 to identify cases reporting an O.R. procedure. Our findings are shown in the following table:

MS-DRGs 834, 835, and 836: All Cases and Cases Reporting an O.R. Procedure				
MS-DRG		Number of Cases	Average Length of Stay	Average Costs
834	All cases	4,094	16.3	\$49,986
	Cases reporting an O.R. procedure	277	28.2	\$92,246
835	All cases	1,682	7.2	\$19,023
	Cases reporting an O.R. procedure	79	10.4	\$30,771
836	All Cases	230	4	\$11,225
	Cases reporting an O.R. procedure	7	5.9	\$17,950

As shown by the table, in MS-DRG 834, we identified a total of 4,094 cases, with an average length of stay of 16.3 days and average costs of \$49,986. Of those 4,094 cases, there were 277 cases reporting an O.R. procedure, with higher average costs as compared to all cases in MS-DRG 834 (\$92,246 compared to \$49,986), and a longer average length of stay (28.2 days compared to 16.3 days). In MS-DRG 835, we identified a total of 1,682 cases with an average length of stay of 7.2 days and average costs of \$19,023. Of those 1,682 cases, there were 79 cases reporting an O.R. procedure, with higher average costs as compared to all cases in MS-DRG 835 (\$30,771 compared to \$19,023), and a longer average length of stay (10.4 days compared to 7.2 days). In MS-DRG 836, we identified a total of 230 cases with

an average length of stay of 4 days and average costs of \$11,225. Of those 230 cases, there were 7 cases reporting an O.R. procedure, with higher average costs as compared to all cases in MS-DRG 836 (\$17,950 compared to \$11,225), and a longer average length of stay (5.9 days compared to 4 days). We stated that the data analysis shows that the average costs of cases reporting an O.R. procedure are higher than for all cases in their respective MS-DRG.

We stated in the proposed rule that the data analysis clearly shows that cases reporting a principal diagnosis code describing a type of acute leukemia with an ICD-10-PCS procedure code designated as O.R. procedure that is not listed in the logic list of MS-DRGs 820, 821, and 822 have higher average costs and longer lengths of stay compared to all the cases in their assigned MS-DRG.

For these reasons, we proposed to create a new surgical MS-DRG for cases reporting a principal diagnosis code describing a type of acute leukemia with an O.R. procedure.

To compare and analyze the impact of our suggested modifications, as discussed in the proposed rule, we ran a simulation using the claims data from the September 2023 update of the FY 2023 MedPAR file. The following table illustrates our findings for all 367 cases reporting a principal diagnosis code describing a type of acute leukemia with an ICD-10-PCS procedure code designated as O.R. procedure that is not listed in the logic list of MS-DRGs 820, 821, and 822. We stated we believe the resulting proposed MS-DRG assignment, reflecting these modifications, is more clinically

homogeneous, coherent, and better reflects hospital resource use.

Proposed new MS-DRG	Number of Cases	Average Length of Stay	Average Costs
Proposed new MS-DRG XXX Acute Leukemia with Other Procedures	367	23.9	\$76,996

In the proposed rule, we stated we applied the criteria to create subgroups in a base MS-DRG as discussed in section II.C.1.b. of this FY 2025 IPPS/LTCH PPS proposed rule. As shown in the table, we identified a total of 367 cases using the claims data from the September 2023 update of the FY 2023 MedPAR file, so the criterion that there are at least 500 or more cases in each subgroup could not be met. Therefore, for FY 2025, we did not propose to subdivide the proposed new MS DRG for acute leukemia with other procedures into severity levels.

In summary, for FY 2025, we proposed to create a new base surgical MS-DRG for cases reporting a principal diagnosis describing a type of acute leukemia with an ICD-10-PCS procedure code designated as an O.R. procedure that is not listed in the logic list of MS-DRGs 820, 821, and 822 in MDC 17. The proposed new MS-DRG is proposed new MS-DRG 850 (Acute Leukemia with Other Procedures). We proposed to add the 27 ICD-10-CM diagnosis codes describing various types of acute leukemias currently listed in the logic list entitled “Principal Diagnosis” in MS-DRGs 834, 835, and 836 as well as ICD-10-CM codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 discussed earlier in this section to the proposed new MS-DRG 850. We also proposed to add the procedure codes from current MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively) to the proposed new MS-DRG 850. In the proposed rule, we noted that in the current logic list of MS-DRGs 823, 824, and 825 there are 189 procedure codes describing stereotactic radiosurgery of various body parts that are designated as non-O.R. procedures affecting the MS-DRG, therefore, as part of the logic for new MS-DRG 850, we also proposed to designate these 189 codes as non-O.R. procedures affecting the MS-DRG.

In addition, we proposed to revise the titles for MS-DRGs 834, 835, and 836 by deleting the reference to “Major O.R. Procedures” in the title. Specifically, we proposed to revise the titles of medical MS-DRGs 834, 835, and 836 from

“Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC”, respectively to “Acute Leukemia with MCC, with CC, and without CC/MCC”, respectively to better reflect the GROUPER logic that will no longer include ICD-10-PCS procedure codes designated as O.R. procedures. We refer the reader to section II.C.15. of the preamble of this final rule for the discussion of the surgical hierarchy and the complete list of our proposed modifications to the surgical hierarchy as well as our finalization of those proposals.

Comment: Commenters supported the proposal to create new surgical MS-DRG 850 for cases reporting a principal diagnosis code describing a type of acute leukemia with an O.R. procedure in MDC 17. Commenters also supported the proposal to revise the titles of medical MS-DRGs 834, 835, and 836 from “Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC”, respectively to “Acute Leukemia with MCC, with CC, and without CC/MCC”. Several commenters stated they appreciate CMS’ continued analysis and refinement in this MDC and the recognition of the increased resource intensity involved in acute leukemia cases with certain operating room procedures. Another commenter stated they appreciate the agency’s detailed explanation and stated they support the changes as proposed.

Response: We thank the commenters for their support.

Comment: While supporting the creation of a new MS-DRG for cases reporting a principal diagnosis describing a type of acute leukemia with an ICD-10-PCS procedure code designated as O.R. procedure that is not listed in the logic list of MS-DRGs 820, 821, and 822 in MDC 17, a few commenters suggested that CMS reconsider the criteria for determining subgroups with small population MS-DRGs such as proposed new MS-DRG 850. According to these commenters, while the data clearly shows differences in the average costs and average lengths of stay in cases reporting secondary diagnoses designated as MCCs, CCs, and NonCCs, the criterion that there are at

least 500 or more cases in each subgroup could not be met as only 367 cases were identified, therefore, CMS did not propose to subdivide the proposed new MS DRG for acute leukemia with other procedures into severity levels.

Response: We thank the commenters for their support and feedback. With regard to the suggestion that CMS reconsider the criteria for determining subgroups with small population MS-DRGs, we note in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58448), we finalized our proposal to expand our existing criteria to create a new complication or comorbidity (CC) or major complication or comorbidity (MCC) subgroup within a base MS-DRG. Specifically, we finalized the expansion of the criteria to include the NonCC subgroup for a three-way severity level split. We stated we believed that applying these criteria to the NonCC subgroup would better reflect resource stratification as well as promote stability in the relative weights by avoiding low volume counts for the NonCC level MS-DRGs.

As further discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58659 through 58660), the minimum case volume requirements were established to avoid overly fragmenting the MS-DRG classification system. We stated that with smaller volumes, the MS-DRGs will be subject to stochastic (unpredictable) effects. We continue to believe that stability of MS-DRG payment is an important objective and therefore, that a volume criterion is a needed adjunct to cost differentiation. We established a 500-case minimum to support this stability. Additionally, we note that in examining the claims data from the September 2023 update of the FY 2023 MedPAR file to identify cases reporting an O.R. procedure and a principal diagnosis code describing various types of acute leukemias, there were only 7 cases reporting an O.R. procedure with a principal diagnosis code describing various types of acute leukemias, without reporting a secondary diagnosis designated as a CC or an MCC. As stated in the proposed rule (89 FR 36021), we set a threshold of 10 cases as the minimum number of

cases required to compute a reasonable weight for an MS-DRG. Fewer than 10 cases does not provide sufficient data to set accurate and stable cost relative weights.

We also note, as discussed in prior rulemaking (86 FR 44878), the MS-DRG system is a system of averages and it is expected that within the diagnostic related groups, some cases may demonstrate higher than average costs, while other cases may demonstrate lower than average costs. We also provide outlier payments to mitigate extreme loss on individual cases.

We refer the reader to section II.C.1.b. of the preamble of this final rule for related discussion regarding our finalization of the expansion of the criteria to include the NonCC subgroup in the FY 2021 final rule and our finalization of the proposal to continue to delay application of the NonCC subgroup criteria to existing MS-DRGs with a three-way severity level split for FY 2025.

After consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to create new base surgical MS-DRG 850 (Acute Leukemia with Other Procedures) for cases reporting a principal diagnosis describing a type of acute leukemia with an ICD-10-PCS procedure code designated as an O.R. procedure that is not listed in the logic list of MS-DRGs 820, 821, and 822 in MDC 17, without modification, effective October 1, 2024, for FY 2025.

Accordingly for FY 2025, we are finalizing our proposal to add the 27 ICD-10-CM diagnosis codes describing various types of acute leukemias currently listed in the logic list entitled "Principal Diagnosis" in MS-DRGs 834, 835, and 836 as well as ICD-10-CM codes C94.20, C94.21, C94.22, C94.40, C94.41, and C94.42 discussed earlier in this section to new MS-DRG 850. We are finalizing our proposal to add the procedure codes from current MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively) to new MS-DRG 850. In addition, we are also finalizing our proposal to designate the 189 codes describing stereotactic radiosurgery of various body parts as non-O.R. procedures affecting the MS-DRG as part of the logic for new MS-DRG 850 for FY 2025.

Lastly, we are finalizing our proposal to revise the titles for medical MS-DRGs 834, 835, and 836 from "Acute Leukemia without Major O.R. Procedures with MCC, with CC, and without CC/MCC", respectively to "Acute Leukemia with MCC, with CC,

and without CC/MCC", respectively for FY 2025.

10. Review of Procedure Codes in MS-DRGs 981 Through 983 and 987 Through 989

We annually conduct a review of procedures producing assignment to MS-DRGs 981 through 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS-DRGs 987 through 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move cases reporting these procedure codes out of these MS-DRGs into one of the surgical MS-DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC. We use this information to determine which procedure codes and diagnosis codes to examine.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS-DRGs for the MDC in which the diagnosis falls. We also consider whether it would be more appropriate to move the principal diagnosis codes into the MDC to which the procedure is currently assigned.

Based on the results of our review of the claims data from the September 2023 update of the FY 2023 MedPAR file of cases found to group to MS-DRGs 981 through 983 or MS-DRGs 987 through 989, in the proposed rule (89 FR 35991) we stated we did not identify any cases for reassignment and did not propose to move any cases from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into a surgical MS-DRG for the MDC into which the principal diagnosis or procedure is assigned.

In addition to the internal review of procedures producing assignment to MS-DRGs 981 through 983 or MS-DRGs 987 through 989, we also consider requests that we receive to examine cases found to group to MS-DRGs 981 through 983 or MS-DRGs 987 through 989 to determine if it would be appropriate to add procedure codes to one of the surgical MS-DRGs for the MDC into which the principal diagnosis falls or to move the principal diagnosis to the surgical MS-DRGs to which the procedure codes are assigned. As discussed in the proposed rule, we did

not receive any requests suggesting reassignment.

We also review the list of ICD-10-PCS procedures that, when in combination with their principal diagnosis code, result in assignment to MS-DRGs 981 through 983, or 987 through 989, to ascertain whether any of those procedures should be reassigned from one of those two groups of MS-DRGs to the other group of MS-DRGs based on average costs and the length of stay. We look at the data for trends such as shifts in treatment practice or reporting practice that would make the resulting MS-DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS-DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

Additionally, we also consider requests that we receive to examine cases found to group to MS-DRGs 981 through 983 or MS-DRGs 987 through 989 to determine if it would be appropriate for the cases to be reassigned from one of the MS-DRG groups to the other. Based on the results of our review of the claims data from the September 2023 update of the FY 2023 MedPAR file, in the proposed rule we stated we did not identify any cases for reassignment. We also did not receive any requests suggesting reassignment. Therefore, for FY 2025 we did not propose to move any cases reporting procedure codes from MS-DRGs 981 through 983 to MS-DRGs 987 through 989 or vice versa.

Comment: Commenters expressed support for CMS' proposal to not move any cases from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into a surgical MS-DRG for the MDC into which the principal diagnosis or procedure is assigned. Commenters also expressed support for CMS' proposal to not move any cases reporting procedure codes from MS-DRGs 981 through 983 to MS-DRGs 987 through 989 or vice versa.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to not move any cases from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into a surgical MS-DRG for the MDC into which the principal diagnosis or procedure is assigned. We are also finalizing, without modification, our proposal to not move any cases reporting procedure codes

from MS-DRGs 981 through 983 to MS-DRGs 987 through 989 or vice versa.

11. Operating Room (O.R.) and Non-O.R. Procedures

a. Background

Under the IPPS MS-DRGs (and former CMS MS-DRGs), we have a list of procedure codes that are considered operating room (O.R.) procedures. Historically, we developed this list using physician panels that classified each procedure code based on the procedure and its effect on consumption of hospital resources. For example, generally the presence of a surgical procedure which required the use of the operating room would be expected to have a significant effect on the type of hospital resources (for example, operating room, recovery room, and anesthesia) used by a patient, and therefore, these patients were considered surgical. Because the claims data generally available do not precisely indicate whether a patient was taken to the operating room, surgical patients were identified based on the procedures that were performed.

Generally, if the procedure was not expected to require the use of the operating room, the patient would be considered medical (non-O.R.).

Currently, each ICD-10-PCS procedure code has designations that determine whether and in what way the presence of that procedure on a claim impacts the MS-DRG assignment. First, each ICD-10-PCS procedure code is either designated as an O.R. procedure for purposes of MS-DRG assignment (“O.R. procedures”) or is not designated as an O.R. procedure for purposes of MS-DRG assignment (“non-O.R. procedures”). Second, for each procedure that is designated as an O.R. procedure, that O.R. procedure is further classified as either extensive or non-extensive. Third, for each procedure that is designated as a non-O.R. procedure, that non-O.R. procedure is further classified as either affecting the MS-DRG assignment or not affecting the MS-DRG assignment. We refer to these designations that do affect MS-DRG assignment as “non O.R. affecting the MS-DRG.” For new procedure codes that have been finalized through the ICD-10 Coordination and Maintenance Committee meeting process and are proposed to be classified as O.R. procedures or non-O.R. procedures affecting the MS-DRG, we recommend the MS-DRG assignment which is then made available in association with the proposed rule (Table 6B.—New Procedure Codes) and subject to public comment. These proposed assignments

are generally based on the assignment of predecessor codes or the assignment of similar codes. For example, we generally examine the MS-DRG assignment for similar procedures, such as the other approaches for that procedure, to determine the most appropriate MS-DRG assignment for procedures proposed to be newly designated as O.R. procedures. As discussed in section II.C.13 of the preamble of this final rule, we are making Table 6B.—New Procedure Codes—FY 2025 available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps.html>. We also refer readers to the ICD-10 MS-DRG Version 41.1 Definitions Manual at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software.html> for detailed information regarding the designation of procedures as O.R. or non-O.R. (affecting the MS-DRG) in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index.

In the FY 2020 IPPS/LTCH PPS proposed rule, we stated that, given the long period of time that has elapsed since the original O.R. (extensive and non-extensive) and non-O.R. designations were established, the incremental changes that have occurred to these O.R. and non-O.R. procedure code lists, and changes in the way inpatient care is delivered, we plan to conduct a comprehensive, systematic review of the ICD-10-PCS procedure codes. This will be a multiyear project during which we will also review the process for determining when a procedure is considered an operating room procedure. For example, we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is now available in the ICD-10 claims data. We refer readers to the discussion regarding the designation of procedure codes in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38066) where we stated that the determination of when a procedure code should be designated as an O.R. procedure has become a much more complex task. This is, in part, due to the number of various approaches available in the ICD-10-PCS classification, as well as changes in medical practice. While we have typically evaluated procedures on the basis of whether or not they would be performed in an operating room, we believe that there may be other factors to consider with regard to resource utilization,

particularly with the implementation of ICD-10.

We discussed in the FY 2020 IPPS/LTCH PPS proposed rule that as a result of this planned review and potential restructuring, procedures that are currently designated as O.R. procedures may no longer warrant that designation, and conversely, procedures that are currently designated as non-O.R. procedures may warrant an O.R. type of designation. We intend to consider the resources used and how a procedure should affect the MS-DRG assignment. We may also consider the effect of specific surgical approaches to evaluate whether to subdivide specific MS-DRGs based on a specific surgical approach. We stated we plan to utilize our available MedPAR claims data as a basis for this review and the input of our clinical advisors. As part of this comprehensive review of the procedure codes, we also intend to evaluate the MS-DRG assignment of the procedures and the current surgical hierarchy because both of these factor into the process of refining the ICD-10 MS-DRGs to better recognize complexity of service and resource utilization.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58540 through 58541), we provided a summary of the comments we had received in response to our request for feedback on what factors or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD-10-PCS classification system for future consideration. We also stated that in consideration of the PHE, we believed it may be appropriate to allow additional time for the claims data to stabilize prior to selecting the timeframe to analyze for this review.

We stated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58749) that we continue to believe additional time is necessary as we continue to develop our process and methodology. Therefore, we stated we will provide more detail on this analysis and the methodology for conducting this review in future rulemaking. In response to this discussion in the FY 2024 IPPS/LTCH PPS final rule, we received a comment by the October 20, 2023 deadline. As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35992), the commenter acknowledged that there is no easy rule that would allow CMS to designate certain surgeries as “non-O.R.” procedures. The commenter stated that they believed that open procedures should always be designated O.R. procedures and approaches other than open should not be a sole factor in designating a procedure as non-O.R. as some minimally invasive procedures

using a percutaneous endoscopic approach require more training, specialized equipment, time, and resources than traditional open procedures. In addition, the commenter stated that whether a procedure is frequently or generally performed in the outpatient setting should not be used for determination of O.R. vs non-O.R. designation and noted that a surgery that can be performed in the outpatient setting for a clinically stable patient may not be able to be safely performed on a patient who is clinically unstable. The commenter also asserted that for procedures that can be performed in various locations within the hospital, that is, bedside vs operating room, there should be a mechanism to differentiate the setting of the procedure to determine the MS-DRG assignment, as in the commenter's assessment, the ICD-10 classification does not provide a way to indicate the severity of certain conditions, or the complexity of procedures performed.

As discussed in the proposed rule, CMS appreciates the commenter's feedback and recommendations as to factors to consider in evaluating O.R. designations. We stated we agree with the commenter and believe that there may be other factors to consider with regard to resource utilization. As discussed in the FY 2024 IPPS/LTCH PPS final rule, we have signaled in prior rulemaking that the designation of an O.R. procedure encompasses more than the physical location of the hospital room in which the procedure may be performed; in other words, the performance of a procedure in an operating room is not the sole determining factor we will consider as we examine the designation of a procedure in the ICD-10-PCS classification system. We are exploring alternatives on how we may restructure the current O.R. and non-O.R. designations for procedures by leveraging the detail that is available in the ICD-10 claims data.

Comment: Many commenters supported CMS' plan to continue to conduct the comprehensive, systematic review of the ICD-10-PCS codes and to evaluate their current O.R. and non-O.R. designations. These commenters expressed that they were supportive of CMS' decision to continue to develop our process and methodology. Other commenters stated they agreed that the revolution in medical procedures in recent years may render the performance of a procedure in an O.R. a less critical distinction in driving payment policy. A commenter stated that because of technological advances, sophisticated, resource-intensive

procedures are no longer confined to the O.R. setting and noted that in their observation, bi-plane radiology interventional suites and cardiac catheterization labs used for procedures such as mechanical thrombectomy or endovascular coiling for aneurysms can utilize more advanced equipment and supplies than a basic operating room with minimal installed equipment. Several commenters recommended that CMS provide detailed impact files prior to the adoption of changes to the designation of procedure codes in the ICD-10-PCS classification and stated that they look forward to commenting on CMS' data analysis and methodology in the future.

As part of the broader and continuing conversation about the designations of procedures in the ICD-10-PCS classification system, a few commenters recommended that CMS work closely with physician specialty societies and industry stakeholders to identify the most important drivers of complexity and resource use in the hospital setting. A commenter specifically recommended that CMS consider a technical expert panel (TEP) made up of industry stakeholders and experts to review methodologies for determining the designation of procedure codes in the ICD-10-PCS classification system. Another commenter encouraged CMS to consider factors such as:

- whether the procedure involves either the intentional non-transient alteration of structures of the body, or cutting into the body, or both;
- the surgical approach (e.g., open, percutaneous endoscopic or percutaneous approach);
- the requirement of either a surgeon or non-surgeon provider to be present during procedure;
- the complexity of procedures performed in an operating room, or a hybrid operating room, versus procedures performed in an electrophysiology laboratory;
- resource utilization requirements during the performance of the procedure in terms of the need for anesthesia and monitoring, etc.; and
- inpatient versus outpatient status.

Response: We thank the commenters for their support. We also thank commenters for sharing their views and their willingness to provide feedback and recommendations as to what factors to consider in evaluating O.R. versus non-O.R. designations. We agree with commenters and believe that there may be other factors to consider with regard to resource utilization, particularly with the implementation of ICD-10. While CMS has already convened an internal workgroup comprised of clinicians,

consultants, coding specialists and other policy analysts, as well as provided opportunity to provide feedback as to what factors to consider in evaluating O.R. versus non-O.R. designations, we look forward to further input and feedback from interested parties. As discussed in the proposed rule, we are considering the feedback received to date on what factors and/or criteria to consider in determining whether a procedure is designated as an O.R. procedure in the ICD-10-PCS classification system as we continue to develop our process and methodology and will provide more detail on this analysis and the methodology for conducting this comprehensive review in future rulemaking. We encourage the public to continue to submit comments on any other factors to consider in our refinement efforts to recognize and differentiate consumption of resources for the ICD-10 MS-DRGs for consideration.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule, we did not receive any requests regarding changing the designation of specific ICD-10-PCS procedure codes from non-O.R. to O.R. procedures, or to change the designation from O.R. procedures to non-O.R. procedures by the October 20, 2023 deadline. In this section of this final rule, as we did in the proposed rule, we discuss the proposals we made based on our internal review and analysis and we discuss the process that was utilized for evaluating each procedure code. For each procedure, we considered—

- Whether the procedure would typically require the resources of an operating room;
- Whether it is an extensive or a non-extensive procedure; and
- To which MS-DRGs the procedure should be assigned.

We note that many MS-DRGs require the presence of any O.R. procedure. As a result, cases with a principal diagnosis associated with a particular MS-DRG would, by default, be grouped to that MS-DRG. Therefore, we do not list these MS-DRGs in our discussion in this section of this final rule. Instead, we only discuss MS-DRGs that require explicitly adding the relevant procedure codes to the GROUPER logic in order for those procedure codes to affect the MS-DRG assignment as intended.

For procedures that would not typically require the resources of an operating room, we determined if the procedure should affect the MS-DRG assignment. In cases where we proposed to change the designation of procedure codes from non-O.R. procedures to O.R. procedures, we also proposed one or more MS-DRGs with which these

procedures are clinically aligned and to which the procedure code would be assigned.

In addition, cases that contain O.R. procedures will map to MS–DRGs 981, 982, or 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS–DRGs 987, 988, or 989 (Non-Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively) when they do not contain a principal diagnosis that corresponds to one of the MDCs to which that procedure is assigned. These procedures

need not be assigned to MS–DRGs 981 through 989 in order for this to occur. Therefore, we did not specifically address that aspect in summarizing the proposals we made based on our internal review and analysis in the proposed rule and in this section of this final rule.

b. Non-O.R. Procedures to O.R. Procedures

(1) Laparoscopic Biopsy of Intestinal Body Parts

As discussed in the proposed rule (89 FR 35993), during our review, we noted

inconsistencies in how procedures involving laparoscopic excisions of intestinal body parts are designated. Procedure codes describing the laparoscopic excision of intestinal body parts differ by qualifier. ICD–10–PCS procedure codes describing excisions of intestinal body parts with the diagnostic qualifier “X”, are used to report these procedures when performed for diagnostic purposes. We identified the following five related codes:

ICD-10-PCS Code	Description
0DBF4ZX	Excision of right large intestine, percutaneous endoscopic approach, diagnostic
0DBG4ZX	Excision of left large intestine, percutaneous endoscopic approach, diagnostic
0DBL4ZX	Excision of transverse colon, percutaneous endoscopic approach, diagnostic
0DBM4ZX	Excision of descending colon, percutaneous endoscopic approach, diagnostic
0DBN4ZX	Excision of sigmoid colon, percutaneous endoscopic approach, diagnostic

In the proposed rule, we noted the ICD–10–PCS procedure codes describing the laparoscopic excision of intestinal body parts for diagnostic purposes listed previously have been assigned different attributes in terms of designation as an O.R. or non-O.R. procedure when compared to similar procedures describing the laparoscopic excisions of intestinal body parts for nondiagnostic purposes. We noted in the ICD–10 MS–DRGs Version 41, these ICD–10–PCS codes are currently recognized as non-O.R. procedures for purposes of MS–DRG assignment, while similar excision of intestinal body part procedure codes with the same approach but different qualifiers are recognized as O.R. procedures.

As discussed in the proposed rule, upon further review and consideration, we stated we believe that procedure codes 0DBF4ZX, 0DBG4ZX, 0DBL4ZX, 0DBM4ZX and 0DBN4ZX describing a laparoscopic excision of an intestinal body parts for diagnostic purposes warrant designation as an O.R. procedures consistent with other laparoscopic excision procedures performed on the same intestinal body parts for nondiagnostic purposes. We stated we also believe it is clinically appropriate for these procedures to group to the same MS–DRGs as the procedures describing excision procedures performed on the intestinal body parts for nondiagnostic purposes. Therefore, we proposed to add procedure codes 0DBF4ZX, 0DBG4ZX, 0DBL4ZX, 0DBM4ZX and 0DBN4ZX to the FY 2025 ICD–10 MS–DRG Version 42 Definitions Manual in Appendix E—

Operating Room Procedures and Procedure Code/MS–DRG Index as O.R. procedures assigned to MS–DRG 264 (Other Circulatory System O.R. Procedures) in MDC 05 (Diseases and Disorders of the Circulatory System); MS–DRGs 329, 330, and 331 (Major Small and Large Bowel Procedures, with MCC, with CC, and without CC/MCC, respectively) in MDC 06 (Diseases and Disorders of the Digestive System); MS–DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, CC, without CC/MCC, respectively) and MS–DRGs 826, 827, and 828 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms); MS–DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs); and MS–DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

Comment: Commenters supported the proposal to reclassify ICD–10–PCS procedure codes 0DBF4ZX (Excision of right large intestine, percutaneous endoscopic approach, diagnostic), 0DBG4ZX (Excision of left large intestine, percutaneous endoscopic approach, diagnostic), 0DBL4ZX (Excision of transverse colon, percutaneous endoscopic approach,

diagnostic), 0DBM4ZX (Excision of descending colon, percutaneous endoscopic approach, diagnostic), and 0DBN4ZX (Excision of sigmoid colon, percutaneous endoscopic approach, diagnostic) as O.R. procedures for the purposes of MS–DRG assignment for FY 2025. A commenter stated they believed that laparoscopic procedures—whether diagnostic or nondiagnostic—will always be performed in an O.R. The commenter further urged CMS to publish O.R. versus non-O.R. designation data on its website for all ICD–10–PCS codes, not just new codes, so that specialty societies can more easily review and identify possible errors.

Response: We appreciate the commenters’ support and thank the commenter for their feedback. We also appreciate the commenter’s suggestion, however, as stated in the earlier in this section, and as we have signaled in prior rulemaking, the designation of an O.R. procedure encompasses more than the physical location of the hospital room in which the procedure may be performed. In other words, the performance of a procedure in an operating room is not the sole determining factor we consider as we examine the designation of a procedure in the ICD–10–PCS classification system. Additionally, we refer the commenter, and interested specialty societies, to Appendix E of the ICD–10 MS–DRG Version 42 Definitions Manual (which is available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS->

DRG Classifications and Software) for a list of all the ICD-10-PCS procedure codes that affect MS-DRG assignment (that is, procedure codes designated as O.R. procedures or as non-O.R. procedures affecting the MS-DRG), the MDCs and MS-DRGs to which they are assigned, and a description of the surgical categories.

After consideration of the public comments we received, we are finalizing our proposal to change the

designation of procedure codes 0DBF4ZX, 0DBG4ZX, 0DBL4ZX, 0DBM4ZX and 0DBN4ZX from non-O.R. procedures to O.R. procedures, without modification, effective October 1, 2024.

(2) Laparoscopic Biopsy of Gallbladder and Pancreas

As discussed in the proposed rule (89 FR 35994), during our review, we noted inconsistencies in how procedures involving laparoscopic excisions of gallbladder or pancreas are designated.

Procedure codes describing the laparoscopic excision of the gallbladder or pancreas differ by qualifier. The ICD-10-PCS procedure code describing an excision of the gallbladder and the procedure code describing an excision of the pancreas with the diagnostic qualifier “X”, are used to report these procedures when performed for diagnostic purposes. We stated we identified the following two related codes:

ICD-10-PCS Code	Description
0FB44ZX	Excision of gallbladder, percutaneous endoscopic approach, diagnostic
0FBG4ZX	Excision of pancreas, percutaneous endoscopic approach, diagnostic

In the proposed rule, we noted the ICD-10-PCS procedure codes describing the laparoscopic excision of the gallbladder or the pancreas for diagnostic purposes listed previously have been assigned different attributes in terms of designation as an O.R. or a non-O.R. procedure when compared to similar procedures describing the laparoscopic excisions of the gallbladder or the pancreas for nondiagnostic purposes. In the ICD-10 MS-DRGs Version 41, these ICD-10-PCS codes are currently recognized as non-O.R. procedures for purposes of MS-DRG assignment, while similar excision of the gallbladder or the pancreas procedure codes with the same approach but different qualifiers are recognized as O.R. procedures.

As discussed in the proposed rule, upon further review and consideration, we stated we believe that procedure code 0FB44ZX describing a laparoscopic excision of the gallbladder for diagnostic purposes and procedure code 0FBG4ZX describing a laparoscopic excision of the pancreas for diagnostic purposes both warrant designation as an O.R. procedure consistent with other laparoscopic excision procedures performed on the same body parts for nondiagnostic purposes. We stated we also believe it is clinically appropriate for these procedures to group to the same MS-DRGs as the procedures describing excision procedures performed on the gallbladder or pancreas for nondiagnostic purposes. Therefore, we proposed to add procedure code 0FB44ZX to the FY 2025 ICD-10 MS-DRG Version 42 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index as an O.R. procedure assigned to MS-DRGs 411, 412, and 413 (Cholecystectomy with C.D.E., with MCC, with CC, and without CC/MCC,

respectively) and MS-DRGs 417, 418, and 419 (Laparoscopic Cholecystectomy without C.D.E., with MCC, with CC, and without CC/MCC, respectively) in MDC 07 (Diseases and Disorders of the Hepatobiliary System and Pancreas); MS-DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) and MS-DRGs 826, 827, and 828 (Myeloproliferative Disorders or Poorly Differentiated Neoplasms with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms); MS-DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs); and MS-DRGs 957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

We also proposed to add procedure code 0FBG4ZX to the FY 2025 ICD-10 MS-DRG Version 42 Definitions Manual in Appendix E—Operating Room Procedures and Procedure Code/MS-DRG Index as an O.R. procedure assigned to MS-DRGs 405, 406, and 407 (Pancreas, Liver and Shunt Procedures, with MCC, with CC, and without CC/MCC, respectively) in MDC 06 (Diseases and Disorders of the Digestive System); MS-DRGs 628, 629 and 630 (Other Endocrine, Nutritional and Metabolic O.R. Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders); MS-DRGs 907, 908, and 909 (Other O.R. Procedures for Injuries with MCC, with CC, and without CC/MCC, respectively) in MDC 21 (Injuries, Poisonings and Toxic Effects of Drugs); and MS-DRGs

957, 958, and 959 (Other O.R. Procedures for Multiple Significant Trauma with MCC, with CC, and without CC/MCC, respectively) in MDC 24 (Multiple Significant Trauma).

Comment: Commenters supported the proposal to reclassify ICD-10-PCS procedure codes 0FB44ZX (Excision of gallbladder, percutaneous endoscopic approach, diagnostic) and 0FBG4ZX (Excision of pancreas, percutaneous endoscopic approach, diagnostic) as O.R. procedures for the purposes of MS-DRG assignment for FY 2025.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to change the designation of procedure codes 0FB44ZX and 0FBG4ZX from non-O.R. procedures to O.R. procedures, without modification, effective October 1, 2024.

12. Changes to the MS-DRG Diagnosis Codes for FY 2025

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS-DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length-of-stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal

diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (NonCC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. Overview of Comprehensive CC/MCC Analysis

In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159), we described our process for establishing three different levels of CC severity into which we would subdivide the diagnosis codes. The categorization of diagnoses as a MCC, a CC, or a NonCC was accomplished using an iterative approach in which each diagnosis was evaluated to determine the extent to which its presence as a secondary diagnosis resulted in increased hospital resource use. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach. Since the comprehensive analysis was completed for FY 2008, we have evaluated diagnosis codes individually when assigning severity levels to new codes and when receiving requests to change the severity level of specific diagnosis codes.

We noted in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235 through 19246) that with the transition to ICD-10-CM and the significant changes that have occurred to diagnosis codes since the FY 2008 review, we believed it was necessary to conduct a comprehensive analysis once again. Based on this analysis, we proposed changes to the severity level designations for 1,492 ICD-10-CM diagnosis codes and invited public comments on those proposals. As summarized in the FY 2020 IPPS/LTCH PPS final rule, many commenters expressed concern with the proposed severity level designation changes overall and recommended that CMS conduct further analysis prior to finalizing any proposals. After careful consideration of the public comments we received, as discussed further in the FY 2020 IPPS/LTCH PPS final rule, we generally did not finalize our proposed changes to the severity designations for the ICD-10-CM diagnosis codes, other than the changes to the severity level designations for the diagnosis codes in category Z16 (Resistance to antimicrobial drugs) from a NonCC to a CC. We stated that postponing adoption of the proposed comprehensive changes

in the severity level designations would allow further opportunity to provide additional background to the public on the methodology utilized and clinical rationale applied across diagnostic categories to assist the public in its review. We refer readers to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42150 through 42152) for a complete discussion of our response to public comments regarding the proposed severity level designation changes for FY 2020.

As discussed in the FY 2021 IPPS/LTCH PPS proposed rule (85 FR 32550), to provide the public with more information on the CC/MCC comprehensive analysis discussed in the FY 2020 IPPS/LTCH PPS proposed and final rules, CMS hosted a listening session on October 8, 2019. The listening session included a review of this methodology utilized to mathematically measure the impact on resource use. We refer readers to <https://www.cms.gov/Outreach-and-Education/Outreach/OpenDoorForums/Downloads/10082019ListingSessionTranscriptandQandAandAudioFile.zip> for the transcript and audio file of the listening session. We also refer readers to <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software> for the supplementary file containing the mathematical data generated using claims from the FY 2018 MedPAR file describing the impact on resource use of specific ICD-10-CM diagnosis codes when reported as a secondary diagnosis that was made available for the listening session.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), we discussed our plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of nine guiding principles and plan to present the findings and proposals in future rulemaking. The nine guiding principles are as follows:

- Represents end of life/near death or has reached an advanced stage associated with systemic physiologic decompensation and debility.
- Denotes organ system instability or failure.
- Involves a chronic illness with susceptibility to exacerbations or abrupt decline.
- Serves as a marker for advanced disease states across multiple different comorbid conditions.
- Reflects systemic impact.

- Post-operative/post-procedure condition/complication impacting recovery.

- Typically requires higher level of care (that is, intensive monitoring, greater number of caregivers, additional testing, intensive care unit care, extended length of stay).

- Impedes patient cooperation or management of care or both.

- Recent (last 10 years) change in best practice, or in practice guidelines and review of the extent to which these changes have led to concomitant changes in expected resource use.

We refer readers to the FY 2021 IPPS/LTCH PPS final rule for a complete summation of the comments we received for each of the nine guiding principles and our responses to those comments. In the proposed rule we noted that since the FY 2021 IPPS/LTCH PPS final rule we have continued to solicit feedback regarding the nine guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We have encouraged the public to provide a detailed explanation of how applying a suggested concept or principle would ensure that the severity designation appropriately reflects resource use for any diagnosis code when providing feedback or comments. In the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26748 through 26750) we illustrated how the nine guiding principles might be applied in evaluating changes to the severity designations of diagnosis codes in our discussion of our proposed changes to the severity level designation for certain diagnosis codes that describe homelessness. In the proposed rule, we stated that we have not received any additional feedback or comments on the nine guiding principles since the FY 2021 IPPS/LTCH PPS final rule; therefore, in the FY 2025 IPPS/LTCH PPS proposed rule we proposed to finalize the nine guiding principles as listed previously. We stated that under this proposal, our evaluations to determine the extent to which the presence of a diagnosis code as a secondary diagnosis results in increased hospital resource use will include a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of the nine guiding principles.

Comment: Many commenters supported our proposal to finalize the nine guiding principles. Commenters stated they continued to support CMS' consideration of the nine guiding principles in conjunction with its mathematical analysis of the data in

evaluating whether changes to the severity level designations of diagnoses are needed and to ensure the severity designations appropriately reflect resource use based on review of the claims data, as well as consideration of relevant clinical factors (for example, the clinical nature of each of the secondary diagnoses and the severity level of clinically similar diagnoses).

Response: We thank the commenters for their support.

Comments: Other commenters expressed concerns with the guiding principles. These commenters stated that the nine guiding principles appeared to be open to interpretation or differences in clinical opinion and noted a lack of detailed definitions and criteria for applying the guiding principles. Other commenters stated that it was not clear how CMS will apply the guiding principles in conjunction with the mathematical analyses of claims data to make decisions about severity levels. These commenters stated in their observation, CMS had not stated how it will handle conditions that might not fit any guiding principles, such as obstetrical diagnoses, congenital conditions, or potentially social determinants of health, but reflect mathematical data for the impact on resource use that could suggest a need for a change to the severity designation of the code. Several commenters stated they were unclear as to the impact finalizing the guiding principles would have on diagnosis codes that are currently designated as MCCs or CCs when reported as secondary diagnoses. These commenters stated that more information is needed to better understand CMS' process for decision making on the designation of diagnosis severity levels.

Response: We thank the commenters for sharing their concerns.

We note the focus of our analysis is on the appropriate severity level designation of individual ICD-10-CM codes as secondary diagnosis codes and how they relate to inpatient prospective payment and the resource utilization required while the patient is in the hospital. We wish to clarify for commenters that the application of the nine guiding principles is not a departure from our historic approach of considering both mathematical analysis and clinical factors as described in the FY 2008 IPPS/LTCH PPS final rule. In the FY 2008 IPPS/LTCH PPS final rule (72 FR 47153 through 47154), we stated the need for a revised CC list prompted a reexamination of the secondary diagnoses that qualify as a CC and stated our intent was to better distinguish cases that are likely to result in

increased hospital resource use based on secondary diagnoses. We stated that using a combination of mathematical data and the judgment of our medical advisors, we included the condition on the CC list if it could demonstrate that its presence would lead to substantially increased hospital resource use. We stated diagnoses may require increased hospital resource use because of a need for such services as:

- Intensive monitoring (for example, an intensive care unit (ICU) stay).
- Expensive and technically complex services (for example, heart transplant).
- Extensive care requiring a greater number of caregivers (for example, nursing care for a patient with quadriplegia).

In reviewing the diagnosis codes that describe chronic diseases, we stated in the FY 2008 IPPS/LTCH PPS final rule that we made exceptions for diagnosis codes that indicate a chronic disease in which the underlying illness has reached an advanced stage or is associated with systemic physiologic decompensation and debility. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47153 through 47154) for a complete discussion of our approach.

The nine guiding principles were developed to build on the process we described in the FY 2008 IPPS/LTCH PPS final rule and are not intended to turn the analysis into a quantitative exercise, requiring that every diagnosis code satisfy each principle. Instead, as stated in prior rulemaking, the nine guiding principles are intended to provide a framework for assessing relevant clinical factors to help denote if, and to what degree, additional resources are required above and beyond those that are already being utilized to address the principal diagnosis or other secondary diagnoses that might also be present on the claim. In response to the commenter's concerns regarding a lack of detailed definition of each principle, we refer commenters to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), for a complete discussion of our response to similar public comments regarding each of the nine guiding principles.

Comment: Some commenters stated that the guiding principles appeared to be more applicable to MCC conditions, were too strict, and could potentially eliminate CC conditions. A commenter stated that the application of the guiding principles would represent a substantial revision to the definition of a CC, noting MS-DRG Definition Manual Version 41.1 provides the following definition: "A substantial complication or

comorbidity was defined as a condition that because of its presence with a specific principal diagnosis would cause an increase in length of stay by at least one day in at least 75 percent of the patients."

Response: We appreciate the commenters' feedback.

We do not believe the nine guiding principles would be mostly applicable, or only applicable, to MCC conditions. In applying the nine guiding principles in our review of the appropriate severity level designation, the intention is not to require that a diagnosis code satisfy each principle, or a specific number of principles in assessing whether to designate a secondary diagnosis code as a NonCC versus a CC versus an MCC. Rather, the severity level determinations would be based on the consideration of the clinical factors captured by these principles as well as the empirical analysis of the additional resources associated with the secondary diagnosis.

We wish to clarify that the definition of a "substantial complication or comorbidity" from the MS-DRG Definition Manual that the commenter referenced, is the definition of a CC that was used in Version 8 of the DRGs. In FY 2008, for Version 25 of the MS-DRGs, the diagnoses comprising the CC list were completely redefined and instead each CC was categorized as a major CC or a CC (that is, non-major CC) based on relative resource use. As stated previously, we refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our approach.

We note that in addition to the FY 2021 IPPS/LTCH PPS rule, in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44915 through 44926), the FY 2023 IPPS/LTCH PPS final rule (87 FR 48865 through 48872), the FY 2024 IPPS/LTCH PPS final rule (88 FR 58753 through 58759), and in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35997 through 36001), we have illustrated how the guiding principles might be applied in evaluating changes to the severity designations of diagnosis codes. We have also continued to solicit feedback regarding the guiding principles, as well as other possible ways we can incorporate meaningful indicators of clinical severity. We note the commenters did not provide alternative principles for consideration, nor was feedback provided as to other possible ways we can incorporate meaningful indicators of clinical severity.

As discussed in prior rulemaking, our intended approach is for CMS to first use these guiding principles in making an initial clinical assessment of the appropriate severity level designation

for each ICD–10–CM code as a secondary diagnosis. CMS will then use a mathematical analysis of claims data as discussed in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) to determine if the presence of the ICD–10–CM code as a secondary diagnosis appears to, or does not appear to, increase hospital resource consumption. There may be instances in which we would decide that the clinical analysis weighs in favor of proposing to maintain or proposing to change the severity designation of an ICD–10–CM code after application of the nine guiding principles. Any proposed modifications to the severity level designation of ICD–10–CM codes would be addressed in future rulemaking consistent with our annual process.

Therefore, after consideration of the public comments received, and for the reasons discussed, we are finalizing the nine guiding principles as listed previously in this FY 2025 IPPS/LTCH PPS final rule. Accordingly, our evaluations to determine the extent to which the presence of a diagnosis code as a secondary diagnosis results in increased hospital resource use will include a combination of mathematical analysis of claims data as discussed in the FY 2020 IPPS/LTCH PPS proposed rule (84 FR 19235) and the application of the nine guiding principles. We thank commenters for sharing their views and their willingness to support CMS in our efforts to continue a comprehensive CC/MCC analysis.

In the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25175 through 25180), as another interval step in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes, we requested public comments on a potential change to the severity level designations for “unspecified” ICD–10–CM diagnosis codes that we were considering adopting for FY 2022. Specifically, we noted we were considering changing the severity level designation of “unspecified” diagnosis codes to a NonCC where there are other codes available in that code subcategory that further specify the anatomic site. As summarized in the FY 2022 IPPS/LTCH PPS final rule, many commenters expressed concern with the potential severity level designation changes overall and recommended that CMS delay any possible change to the designation of these codes to give hospitals and their physicians time to prepare. After careful consideration of the public comments we received, we maintained the severity level designation of the “unspecified” diagnosis codes currently designated as a CC or MCC where there are other

codes available in that code subcategory that further specify the anatomic site for FY 2022. We refer readers to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44916 through 44926) for a complete discussion of our response to public comments regarding the potential severity level designation changes. Instead, for FY 2022, we finalized a new Medicare Code Editor (MCE) code edit for “unspecified” codes, effective with discharges on and after April 1, 2022. We stated we believe finalizing this new edit would provide additional time for providers to be educated while not affecting the payment the provider is eligible to receive. We refer the reader to section II.D.14.e. of the FY 2022 IPPS/LTCH PPS final rule (86 FR 44940 through 44943) for the complete discussion.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48866), we stated that as the new unspecified edit became effective beginning with discharges on and after April 1, 2022, we believed it was appropriate to not propose to change the designation of any ICD–10–CM diagnosis codes, including the unspecified codes that are subject to the “Unspecified Code” edit, as we continue our comprehensive CC/MCC analysis to allow interested parties the time needed to become acclimated to the new edit.

Comment: A commenter stated that they were pleased that CMS continues to maintain the severity level designation of the “unspecified” diagnosis codes, currently designated as a CC or MCC where there are other codes available in that code subcategory that further specify the anatomic site, that are subject to the “Unspecified Code” edit. The commenter further stated that they agreed that maintaining this status quo will allow time for providers to be educated and adjust to the edit. Another commenter suggested that CMS provide data from the Medicare Code Editor (MCE) that identifies each provider reporting “unspecified” diagnosis codes with designations as a CC or MCC when there are other codes available in that code subcategory that further specify the anatomic site, which can be used to inform providers on the number of “unspecified” diagnosis codes being reported at their facility compared to their peers.

Response: CMS appreciates the commenters’ feedback and recommendations. We will give careful consideration to what additional information may be helpful in assisting to educate providers on the documentation required to report to the highest level of specificity as it relates

to the laterality of the conditions treated in the inpatient setting as we continue to formulate future next steps in our comprehensive review of the severity designations of ICD–10–CM diagnosis codes.

In the FY 2023 IPPS/LTCH proposed rule (87 FR 28177 through 28181), we also requested public comments on how the reporting of diagnosis codes in categories Z55–Z65 might improve our ability to recognize severity of illness, complexity of illness, and/or utilization of resources under the MS–DRGs. Consistent with the Administration’s goal of advancing health equity for all, including members of historically underserved and under-resourced communities, as described in the President’s January 20, 2021 Executive Order 13985 on “Advancing Racial Equity and Support for Underserved Communities Through the Federal Government,”⁸ we stated we were also interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes describing social and economic circumstances to more accurately reflect each health care encounter and improve the reliability and validity of the coded data including in support of efforts to advance health equity.

We noted that social determinants of health (SDOH) are the conditions in the environments where people are born, live, learn, work, play, worship, and age that affect a wide range of health, functioning, and quality-of-life outcomes and risks.⁹ The subset of Z codes that describe the social determinants of health are found in categories Z55–Z65 (Persons with potential health hazards related to socioeconomic and psychosocial circumstances). These codes describe a range of issues related—but not limited—to education and literacy, employment, housing, ability to obtain adequate amounts of food or safe drinking water, and occupational exposure to toxic agents, dust, or radiation.

We received numerous public comments that expressed a variety of views on our comment solicitation, including many comments that were supportive, and others that offered specific suggestions for our consideration in future rulemaking. Many commenters applauded CMS’ efforts to encourage documentation and

⁸ Available at: <https://www.federalregister.gov/documents/2021/01/25/2021-01753/advancing-racial-equity-and-support-for-underserved-communities-through-the-federal-government>.

⁹ Available at: <https://health.gov/healthypeople/priority-areas/social-determinants-health>.

reporting of SDOH diagnosis codes given the impact that social risks can have on health outcomes. These commenters stated that it is critical that physicians, other health care professionals, and facilities recognize the impact SDOH have on the health of their patients. Many commenters also stated that the most immediate and important action CMS could take to increase the use of SDOH Z codes is to finalize the evidence-based “Screening for Social Drivers of Health” and “Screen Positive Rate for Social Drivers of Health” measures proposed to be adopted in the Hospital Inpatient Quality Reporting (IQR) Program. In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49202 through 49220), CMS finalized the “Screening for Social Drivers of Health” and “Screen Positive Rate for Social Drivers of Health” measures in the Hospital Inpatient Quality Reporting (IQR) Program. We refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48867 through 48872) for the complete discussion of the public comments received regarding the request for information on SDOH diagnosis codes.

As discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58755 through 58759), based on our analysis of the impact on resource use for the ICD-10-CM Z codes that describe homelessness and after consideration of public comments, we finalized changes to the severity levels for diagnosis codes Z59.00 (Homelessness, unspecified), Z59.01 (Sheltered homelessness), and Z59.02 (Unsheltered homelessness), from NonCC to CC. We stated our expectation that finalizing the changes would encourage the increased documentation and reporting of the diagnosis codes describing social and economic circumstances and serve as an example for providers that, when they document and report SDOH codes, CMS

can further examine the claims data and consider future changes to the designation of these codes when reported as a secondary diagnosis. We further stated CMS would continue to monitor and evaluate the reporting of the diagnosis codes describing social and economic circumstances.

We refer the reader to the following section of this final rule for discussion of our proposed changes to the severity level designation for the diagnosis codes that describe inadequate housing and housing instability for FY 2025, as well as our finalization of that proposal.

We have updated the Impact on Resource Use Files on the CMS website so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2019 through the FY 2023 MedPAR files. These files are posted on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>. As discussed in prior rulemaking, we also continue to be interested in receiving feedback on how we might further foster the documentation and reporting of the most specific diagnosis codes supported by the available medical record documentation and clinical knowledge of the patient’s health condition to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35997), for new diagnosis codes approved for FY 2025, consistent with our annual process for designating a severity level (MCC, CC, or NonCC) for new diagnosis codes, we first review the predecessor code designation, followed by review and consideration of other factors that may be relevant to the severity level designation, including the severity of

illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis or treatment of the condition. We note that this process does not automatically result in the new diagnosis code having the same designation as the predecessor code. We refer the reader to section II.C.13 of this final rule for the discussion of the finalized changes to the ICD-10-CM and ICD-10-PCS coding systems for FY 2025.

c. Changes to Severity Levels

1. SDOH—Inadequate Housing/Housing Instability

As discussed earlier in this section and in the proposed rule (89 FR 35997 through 35999), in continuation of our examination of the SDOH Z codes, we reviewed the mathematical data on the impact on resource use for the subset of ICD-10-CM Z codes that describe the social determinants of health found in categories Z55–Z65 (Persons with potential health hazards related to socioeconomic and psychosocial circumstances).

As discussed in the proposed rule, the ICD-10-CM SDOH Z codes that describe inadequate housing and housing instability are currently designated as NonCCs when reported as secondary diagnoses. The following table reflects the impact on resource use data generated using claims from the September 2023 update of the FY 2023 MedPAR file. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically evaluate the extent to which the presence of an ICD-10-CM code as a secondary diagnosis resulted in increased hospital resource use, and a more detailed explanation of the columns in the table.

ICD-10-CM Code ^a	Description ^b	Total Count ^c	Cnt1 ^d	C1 ^e	Cnt2 ^f	C2 ^g	Cnt3 ^h	C3 ⁱ
Z59.10	Inadequate housing, unspecified	227	21	2.63	85	1.38	121	2.81
Z59.11	Inadequate housing environmental temperature	74	4	0.51	33	1.02	37	2.64
Z59.12	Inadequate housing utilities	162	12	0.99	80	1.65	70	2.39
Z59.19	Other inadequate housing	987	93	1.85	431	2.82	463	3.07
Z59.811	Housing instability, housed, with risk of homelessness	165	21	1.97	79	2.51	65	3.18
Z59.812	Housing instability, housed, homelessness in past 12 months	141	15	0.76	65	1.77	61	2.33
Z59.819	Housing instability, housed unspecified	1,237	96	0.92	619	2.25	522	2.88

^a This column is the secondary diagnosis code (SDX).

^b This column is the title of the SDX.

^c The total count of discharge claims with the SDX.

^d Count of discharge claims with the SDX but with no other SDX or with all other SDX a NonCC.

^e “C1” impact on resource use of the SDX for discharge claims in “Cnt1”.

^f Count of discharge claims with the SDX and with at least one other SDX that is a CC but none that is an MCC.

^g “C2” impact on resource use of the SDX for discharge claims in “Cnt2”.

^h Count of discharge claims with the SDX and with at least one other SDX that is a MCC.

ⁱ “C3” impact on resource use of the SDX for discharge claims in “Cnt3”.

The table shows that the C1 value is 2.63 for ICD–10–CM diagnosis code Z59.10 and 1.85 for ICD–10–CM diagnosis code Z59.19. A value close to 2.0 in column C1 suggests that the secondary diagnosis is more aligned with a CC than a NonCC. Because the C1 values in the table are generally close to 2, the data suggest that when these two SDOH Z codes are reported as a secondary diagnosis, the resources involved in caring for a patient experiencing inadequate housing support increasing the severity level from a NonCC to a CC. In contrast, the C1 value for ICD–10–CM diagnosis code Z59.11 is 0.51 and is 0.99 for ICD–10–CM diagnosis code Z59.12. A C1 value generally closer to 1 suggests the resources involved in caring for patients experiencing inadequate housing in terms of environmental temperature and utilities are more aligned with a NonCC severity level than a CC or an MCC severity level.

As discussed in the proposed rule, the underlying cause of the inconsistency between the C1 values for inadequate housing, unspecified and other inadequate housing and the two more specific codes that describe the necessities unavailable in the housing environment is unclear. We noted that diagnosis codes Z59.10 (Inadequate housing, unspecified), Z59.11 (Inadequate housing environmental temperature), Z59.12 (Inadequate housing utilities), and Z59.19 (Other

inadequate housing) became effective on April 1, 2023 (FY 2023). In reviewing the historical C1 values for code Z59.1 (Inadequate housing), the predecessor code before the code was expanded to further describe inadequate housing and the basic necessities unavailable in the housing environment, we noted the mathematical data for the impact on resource use generated using claims from the FY 2019, FY 2020, FY 2021, and FY 2022 MedPAR files reflects C1 values for code Z59.1 of 2.09, 1.73, 2.04, and 2.69, respectively. We refer the reader to the Impact on Resource Use Files generated using claims from the FY 2019 through the FY 2022 MedPAR files posted on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>. We stated we believe the lower C1 values for ICD–10–CM codes Z59.11 (Inadequate housing environmental temperature) and Z59.12 (Inadequate housing utilities) reflected in the mathematical data for the impact on resource use generated using claims from the FY 2023 MedPAR file may be attributed to lack of use or knowledge about the newly expanded codes, such that the data may not yet reflect the full impact on resource use for patients experiencing these circumstances.

Similarly, the table shows that the C1 value is 1.97 for ICD–10–CM diagnosis code Z59.811. A value close to 2.0 in

column C1 suggests that the secondary diagnosis is more aligned with a CC than a NonCC. Because the C1 value in the table is generally close to 2, the data suggest that when this SDOH Z code is reported as a secondary diagnosis, the resources involved in caring for a patient experiencing an imminent risk of homelessness support increasing the severity level from a NonCC to a CC. In contrast, the C1 value for ICD–10–CM diagnosis code Z59.812 (Housing instability, housed, homelessness in past 12 months) and (Housing instability, housed unspecified) is 0.76 and is 0.92 for ICD–10–CM diagnosis code Z59.819. A C1 value generally closer to 1 suggests the resources involved in caring for patients experiencing housing instability, with history of homelessness in the past 12 months or housing instability, unspecified are more aligned with a NonCC severity level than a CC or an MCC severity level. We stated in the proposed rule that the underlying cause of the inconsistency between the C1 values for codes describing housing instability is unclear.

In the proposed rule, we noted that diagnosis codes Z59.811, Z59.812, and Z59.819 became effective on October 1, 2021 (FY 2022). In reviewing the historical C1 values for code Z59.8 (Other problems related to housing and economic circumstances), the predecessor code before the code was expanded to further describe the

problems related to housing and economic circumstances, we noted the mathematical data for the impact on resource use generated using claims from the FY 2019 and FY 2020 MedPAR files reflects C1 values for code Z59.8 of 1.92 and 1.63, respectively. There were no data reflected for this code in the Impact on Resource Use File generated using claims from the FY 2021 MedPAR files. The mathematical data for the impact on resource use generated using claims from the FY 2022 MedPAR file reflects C1 values for codes Z59.811, Z59.812, and Z59.819 of 2.44, 3.12, and 2.09, respectively. We stated we were uncertain if the fluctuations in the C1 values from year to year, or FY 2021, in particular, may reflect fluctuations that may be a result of the COVID-19 public health emergency or even reduced hospitalizations of certain conditions. We stated we were also uncertain if the fluctuations may be attributed to lack of use or knowledge about the expanded codes, such that the data on the reporting of codes Z59.812 and Z59.819 may not yet reflect the full impact on resource use for patients experiencing these circumstances.

As discussed in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58550 through 58554), and earlier in this section, following the listening session on October 8, 2019, we reconvened an internal workgroup comprised of clinicians, consultants, coding specialists and other policy analysts to identify guiding principles to apply in evaluating whether changes to the severity level designations of diagnoses are needed and to ensure the severity designations appropriately reflect resource use based on review of the claims data, as well as consideration of relevant clinical factors (for example, the clinical nature of each of the secondary diagnoses and the severity level of clinically similar diagnoses) and improve the overall accuracy of the IPPS payments.

In considering the nine guiding principles identified by the workgroup, as summarized previously, in the proposed rule we noted that, similar to homelessness, inadequate housing and housing instability are circumstances that can impede patient cooperation or management of care, or both. In addition, patients experiencing inadequate housing and housing instability can require a higher level of care by needing an extended length of stay.

Inadequate housing is defined as an occupied housing unit that has moderate or severe physical problems (for example, deficiencies in plumbing, heating, electricity, hallways, and

upkeep).^{10 11} Features of substandard housing have long been identified as contributing to the spread of infectious diseases. Patients living in inadequate housing may be exposed to health and safety risks, such as vermin, mold, water leaks, and inadequate heating or cooling systems.^{12 13} An increasing body of evidence has associated poor housing conditions with morbidity from infectious diseases, chronic illnesses, exposure to toxins, injuries, poor nutrition, and mental disorders.¹⁴

As discussed in the proposed rule, housing instability encompasses a number of challenges, such as having trouble paying rent, overcrowding, moving frequently, or spending the bulk of household income on housing.¹⁵ These experiences may negatively affect physical health and make it harder to access health care. Studies have found moderate evidence to suggest that housing instability is associated with higher prevalence of overweight/obesity, hypertension, diabetes, and cardiovascular disease, worse hypertension and diabetes control, and higher acute health care utilization among those with diabetes and cardiovascular disease.¹⁶

In reviewing the mathematical data for the impact on resource use generated using claims from the FY 2023 MedPAR file for the seven ICD-10-CM codes describing inadequate housing and housing instability comprehensively and reviewing the potential impact these circumstances could have on

patients' clinical course, we noted in the proposed rule that whether the patient is experiencing inadequate housing or housing instability, the patient may have limited or no access to prescription medicines or over-the-counter medicines, including adequate locations to store medications away from the heat or cold, and have difficulties adhering to medication regimens. Experiencing inadequate housing or housing instability may negatively affect a patient's physical health and make it harder to access timely health care.¹² Delays in medical care may increase morbidity and mortality risk among those with underlying, preventable, and treatable medical conditions.¹⁷ In addition, we noted that findings also suggest that patients experiencing inadequate housing or housing instability are associated with higher rates of inpatient admissions for mental, behavioral, and neurodevelopmental disorders, longer hospital stays, and substantial health care costs.¹⁸

Therefore, after considering the impact on resource use data generated using claims from the September 2023 update of the FY 2023 MedPAR file for the seven ICD-10-CM diagnosis codes that describe inadequate housing and housing instability and consideration of the nine guiding principles, we proposed to change the severity level designation for diagnosis codes Z59.10 (Inadequate housing, unspecified), Z59.11 (Inadequate housing environmental temperature), Z59.12 (Inadequate housing utilities), Z59.19 (Other inadequate housing), Z59.811 (Housing instability, housed, with risk of homelessness), Z59.812 (Housing instability, housed, homelessness in past 12 months) and Z59.819 (Housing instability, housed unspecified) from NonCC to CC for FY 2025.

Comment: Commenters expressed overwhelming support for our proposal to change the severity level designation for diagnosis codes Z59.10 (Inadequate housing, unspecified), Z59.11 (Inadequate housing environmental temperature), Z59.12 (Inadequate housing utilities), Z59.19 (Other inadequate housing), Z59.811 (Housing instability, housed, with risk of homelessness), Z59.812 (Housing

instability, housed, homelessness in past 12 months) and Z59.819 (Housing instability, housed unspecified) from NonCC to CC for FY 2025. These commenters stated this proposal acknowledges the significant impact these circumstances can have on patient outcomes and the increased resource allocation required to effectively manage the care of these patients in terms of increased severity of illness, readmissions resulting from lack of follow-up and continued medical treatment and delayed discharges. A commenter stated that changing the severity level of the seven ICD-10-CM diagnosis codes that describe inadequate housing and housing instability is not only appropriate, it is crucial in order to help address the complex needs of these patients. Commenters stated that this change is a critical step toward increasing health care access for underserved and under-resourced communities and in recognizing and addressing broader factors that impact patient health. A commenter specifically stated this proposal is another notable effort on CMS' part to recognize the interconnectedness of health and social needs. Another commenter stated this change will encourage providers to ask more detailed questions of patients to better understand their housing status, improving overall data quality.

Response: We thank the commenters for their support.

Comment: While commending CMS' efforts, many commenters noted an operational concern in that currently only 25 diagnoses are captured on the institutional electronic claim form and 19 diagnoses are captured on the paper bill. Many commenters stated this issue is becoming increasingly critical as Medicare and other payers move to implement new quality measures that emphasize the screening and identification of patient-level, health-related social needs, which will dictate the need for reporting additional codes. Commenters stated that documenting and reporting the social and economic circumstances patients may be experiencing can require a substantial number of SDOH Z codes, which could lead to the crowding out of other diagnosis codes that also need to be captured on the institutional claim form for both payment and quality measures. Commenters suggested that a factor that may be negatively impacting more comprehensive reporting of the diagnosis codes describing social and economic circumstances is the limit on the number of diagnoses that may be reported on an inpatient claim. A commenter stated they performed their

own analysis of the FY 2021 MedPAR file and found that 17 percent of inpatient claims reached the maximum limit of 25 diagnoses that can be reported on the claim. Another commenter stated at their facility approximately one-third of cases have 26 codes or more, with some cases reporting as many as 45 codes. A few commenters suggested that CMS evaluate the potential to expand the number of diagnosis codes that can be submitted, or alternatively, design a separate way to report the Z codes on the claim form, separate and distinct from the fields for the diagnosis codes.

Response: We thank the commenters for their continued feedback on this issue. We note that any proposed changes to the institutional claim form would need to be submitted to the National Uniform Billing Committee (NUBC) for consideration as the NUBC develops and maintains the Uniform Billing (UB) 04 data set and form, not CMS. The NUBC is a Data Content Committee named in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and is composed of a diverse group of interested parties representing providers, health plans, designated standards maintenance organizations, public health organizations, and vendors.

Comment: Another commenter expressed concern that CMS continues to delay the comprehensive analysis of the severity designation of all the diagnosis codes in the ICD-10-CM classification in favor of reviewing the subset of ICD-10-CM Z codes that describe the social determinants of health. The commenter stated in their view, ensuring MS-DRG payment is congruent with what it costs to care for patients should be CMS' primary objective. Many other commenters encouraged CMS to examine other SDOH Z codes that describe circumstances such as lack of adequate food and drinking water, extreme poverty, lack of transportation, and problems related to employment, physical environment, social environment, upbringing, primary support group, literacy, economic circumstances, and psychosocial circumstances to determine the hospital resource utilization related to addressing these factors and to analyze whether these SDOH Z codes should be considered for severity designation changes in future rulemaking as well. A commenter noted that these social needs create substantial barriers to healthcare and good health, both before and after receiving care.

Specifically, many commenters stated that research has found a strong association between food insecurity and chronic conditions and encouraged CMS to examine the severity designation of ICD-10-CM SDOH Z code Z59.41 (Food insecurity). These commenters stated that food insecurity can be an indicator of food deprivation, malnutrition, or lack of access to healthy foods and diet, which could have differing impacts on a patient and could be associated with higher healthcare utilization and costs. A commenter stated that in their observation, many hospitals have built robust programs to address the food needs of inpatients and stated that several hospitals have even begun to provide patients with fresh fruit, vegetables, and other essential groceries to take home upon discharge without payment.

Response: We appreciate the feedback.

We note that as described in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58761), CMS has undertaken interval steps towards a comprehensive CC/MCC analysis. We stated in the FY 2024 IPPS/LTCH PPS final rule, considering the potential impact of implementing a significant number of severity designation changes, and in light of the public health emergency (PHE) that was occurring concurrently from 2020 until 2023, we believe these interval steps were appropriate as we plan to continue a comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles. We refer the reader to the discussion earlier in this section where we discuss the finalization of the nine guiding principles for FY 2025.

In response to comments that CMS examine the severity designation of ICD-10-CM code Z59.41 (Food insecurity), we note that ICD-10-CM code Z59.41 is currently designated as a NonCC when reported as a secondary diagnosis. The following table reflects the impact on resource use data generated using claims from the September 2023 update of the FY 2023 MedPAR file for code Z59.41. We refer readers to the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) for a complete discussion of our historical approach to mathematically evaluate the extent to which the presence of an ICD-10-CM code as a secondary diagnosis resulted in increased hospital resource use, and a more detailed explanation of the columns in the table.

ICD-10-CM Code ^a	Description ^b	Total Count ^c	Cnt1 ^d	C1 ^e	Cnt2 ^f	C2 ^g	Cnt3 ^h	C3 ⁱ
Z59.41	Food insecurity	6,634	548	0.9273	3,043	2.0218	3,043	2.6077

^a This column is the secondary diagnosis code (SDX).

^b This column is the title of the SDX.

^c The total count of discharge claims with the SDX.

^d Count of discharge claims with the SDX but with no other SDX or with all other SDX a NonCC.

^e "C1" impact on resource use of the SDX for discharge claims in "Cnt1".

^f Count of discharge claims with the SDX and with at least one other SDX that is a CC but none that is an MCC.

^g "C2" impact on resource use of the SDX for discharge claims in "Cnt2".

^h Count of discharge claims with the SDX and with at least one other SDX that is a MCC.

ⁱ "C3" impact on resource use of the SDX for discharge claims in "Cnt3".

The table shows that the C1 value is 0.9273 for ICD-10-CM diagnosis code is Z59.41. A C1 value generally closer to 1 suggests the resources involved in caring for patients experiencing food insecurity are more aligned with a NonCC severity level, as the code is currently designated, rather than a CC or an MCC severity level. This contrasts with the conclusions documented in research that has shown that food insecurity empirically can be associated with higher healthcare use and costs, even when accounting for other socioeconomic factors.¹⁹ We note that the table also shows that code Z59.41 was only reported in a total of 6,634 claims in the September 2023 update of the FY 2023 MedPAR file.

The impact on resource use data generated using claims from the September 2023 update of the FY 2023 MedPAR file for code Z59.41 again illustrates that if SDOH Z codes are not consistently reported in inpatient claims data, our methodology utilized to mathematically measure the impact on resource use, as described previously, may not adequately reflect what additional resources were expended by hospitals to address these circumstances. If SDOH Z codes are consistently reported in inpatient claims, the impact on resource use data may more adequately reflect what additional resources were expended to address these SDOH circumstances in terms of requiring clinical evaluation, extended length of hospital stay, increased nursing care or monitoring or both, and comprehensive discharge planning and we can re-examine these severity designations in future rulemaking.

In Table 6P.3b associated with this final rule, we have made available the data generated using claims from the September 2023 update of the FY 2023 MedPAR file describing the impact on resource use when reported as a

secondary diagnosis for the ICD-10-CM codes describing various diagnoses and circumstances that commenters to the FY 2025 IPPS/LTCH proposed rule suggested CMS review to determine if changes to the severity level designations are warranted in future rulemaking. These data are consistent with data historically used to mathematically measure impact on resource use for secondary diagnoses, and the data which we will use in combination with application of the nine guiding principles as we continue the comprehensive CC/MCC analysis. We will examine these suggestions and determine if there are other diagnoses codes, including diagnosis codes that describe SDOH, that should also be considered further and will provide more detail in future rulemaking.

Comment: Some commenters stated there continue to be many challenges for clinicians in documenting SDOH, such as the lack of knowledge surrounding these codes. Many commenters stated there was a lack of standard, nationally accepted definitions of the SDOH Z codes and that ambiguity between Z codes can lead to confusion among clinical staff. A commenter stated that CMS should engage with key stakeholders, including patients and diverse communities to establish a transparent process and timeline for updating Z code terms and definitions.

Other commenters stated that healthcare providers may gravitate towards certain codes, while other, possibly more specific codes, may exist in the classification that could accurately describe similar situations. These commenters stated that this can lead to inconsistent code usage and can limit the ability to see any correlations between these particular conditions and the resulting patient complexity and additional cost of care. A commenter noted that the difference between the seven different codes describing inadequate housing and housing instability requires a nuanced understanding and stated that appropriately documenting the Z codes for inadequate housing and housing

instability will require training of staff to understand the differences. Another commenter suggested that CMS focus on addressing infrastructural, technological, and knowledge gaps to facilitate use of Z codes and stated if CMS does not address these gaps, inequities between well-funded hospitals that can afford to train staff to document and report Z codes as compared to other struggling hospitals who lack the means or know-how will be exacerbated.

A commenter expressed concern and stated that documentation of an SDOH circumstance does not always clearly demonstrate whether or how the SDOH impacts the patient's health. This commenter stated that while SDOH Z codes help with mapping the social factors afflicting a patient, that map does not (and cannot) fully describe the patient's life which can present a challenge for the provider when determining what factors to document, and for the coder, when deciding how to report that documentation using the appropriate SDOH Z code(s).

Many other commenters also expressed concern and stated that while they support the use of Z codes to help identify the complexity of issues impacting patients, information about an individual's social risk and needs has been shown to be sensitive. Commenters stated that expressing certain circumstances, such as housing instability or inadequacy, can be uncomfortable for patients, which could result in underreporting. These commenters also stated they believed the descriptions of ICD-10-CM SDOH Z codes can be stigmatizing, and therefore the descriptions should be changed to be more patient friendly to protect the patient-provider relationship since patients can access their code assignments in after-visit summaries.

Response: We appreciate the feedback. As discussed in section II.C.15 of the preamble of this final rule, the CDC/NCHS has lead responsibility for the diagnosis code classification. In response to the suggestion that transparent process and timeline be established for updating Z code terms

¹⁹ Berkowitz S.A., Seligman H.K., Meigs J.B., Basu S., Food insecurity, healthcare utilization, and high cost: a longitudinal cohort study. *Am. J. Manag. Care.* 2018 Sep;24(9):399-404. PMID: 30222918; PMID: PMC6426124.

and definitions, we note there is an established process as the ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems, as also discussed in section II.C.15 of the preamble of this final rule. The ICD–10 Coordination and Maintenance Committee holds its meetings each spring and fall to update the codes and the applicable payment and reporting systems by October 1 or April 1 of each year. Proposals for updates to the diagnosis codes, including diagnosis codes describing social determinants of health should be directed to nchsicd10cm@cdc.gov for consideration at a future ICD–10 Coordination and Maintenance Committee meeting.

We also note that the ICD–10–CM Official Guidelines for Coding and Reporting have been regularly revised to provide additional guidance as it relates to diagnosis codes describing social determinants of health. We encourage the commenters to review the Official ICD–10–CM Coding Guidelines, which can be found on the CDC website at: <https://www.cdc.gov/nchs/icd/icd-10-cm/files.html>. The American Hospital Association (AHA)'s *Coding Clinic for ICD–10–CM/PCS* publication has provided further clarification on the appropriate documentation and use of Z codes to enable hospitals to incorporate them into their processes. The AHA also offers a range of tools and resources for hospitals, health systems and clinicians to address the social needs of their patients. We believe these updates and resources will help alleviate the concerns expressed by these commenters. As one of the four Cooperating Parties for ICD–10, we will continue to collaborate with the AHA to provide guidance for coding problems or risk factors related to SDOH through the AHA's *Coding Clinic for ICD–10–CM/PCS* publication and to review the ICD–10–CM Coding Guidelines to determine where further clarifications may be made.

Comment: Some commenters recommended that CMS consider payment incentives for documenting and reporting of SDOH Z codes. Several commenters encouraged CMS to explore additional incentives for Z code utilization that do not rely on a code-by-code approach. While applauding CMS proposing to change the severity designation of the seven ICD–10–CM diagnosis codes that describe inadequate housing and housing instability, a commenter stated they also believe it is imperative that CMS continue to take steps towards more fundamental payment and delivery

reforms, such as by directly addressing the social drivers of health under alternative payment models (APM) or the Hospital Value-based Purchasing (HVBP) Health Equity Adjustment (HEA), to hold providers accountable for high value, whole person care.

A few commenters stated that simply changing the severity designation of SDOH Z codes to CCs and marginally increasing payment will be inadequate to meaningfully drive CMS' stated equity mission. These commenters stated CMS' reporting and payment rules should better reflect and compensate hospitals for the multiple health-related social needs that patients experience to truly improve health outcomes and mitigate the current health disparities that exist. A commenter suggested that CMS consider an alternative policy that would provide increased payment for a CC designation only in certain MS–DRGs when certain Z codes are reported. Another commenter stated that they believed that the creation of a new Hierarchical Condition Category (HCC) for SDOH Z codes is needed to foster necessary support for delivering consistent levels of care and could help mitigate the challenges that social risk factors pose to creating effective treatment plans for patients. Some commenters suggested that CMS incentivize the use of patient self-report screening tools that are integrated within electronic health records to support the use of Z codes.

Other commenters noted that currently, if another secondary diagnosis designated as a CC or MCC is documented and reported, there will be no additional payment if the clinician reports a diagnosis code describing inadequate housing and housing instability, potentially minimalizing the practical impact of changing the severity level designation of these codes. These commenters recommended CMS provide increased flexibility in payment to account for multiple CCs or MCCs that may be reported for a given patient who may be experiencing numerous health and social concerns at the same time, stating that it is almost impossible to isolate and address only one need and expect an improved health outcome in their view.

Response: We thank commenters for sharing their views and recommendations. We will take the commenters' feedback into consideration in future policy development.

After consideration of the public comments received, we are finalizing changes to the severity levels for diagnosis codes Z59.10, Z59.11, Z59.12, Z59.19, Z59.811, Z59.812, and Z59.819,

from NonCC to CC for FY 2025, without modification. In addition, these diagnosis codes are reflected in Table 6J.1—Additions to the CC List—FY 2025 associated with this final rule and available at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. We refer the reader to section II.C.12.d of the preamble of the proposed rule and this final rule for further information regarding Table 6J.1.

We hope and expect that this finalization will foster the increased documentation and reporting of the diagnosis codes describing social and economic circumstances and continue to serve as an example for providers that when they document and report Z codes, CMS can further examine the claims data and consider future changes to the designation of these codes when reported as a secondary diagnoses. As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48868), if SDOH Z codes are not consistently reported in inpatient claims data, our methodology utilized to mathematically measure the impact on resource use, as described previously, may not adequately reflect what additional resources were expended by the hospital to address these SDOH circumstances in terms of requiring clinical evaluation, extended length of hospital stay, increased nursing care or monitoring or both, and comprehensive discharge planning. We will continue to monitor SDOH Z code reporting, including reporting based on SDOH screening performed as a result of quality measures in the Hospital Inpatient Quality Reporting program.

Furthermore, we may consider proposing changes for other diagnosis codes, including SDOH codes, in the future based on our analysis of the impact on resource use, per our methodology, as previously described, and consideration of the guiding principles. We continue to be interested in receiving feedback on how we might otherwise foster the documentation and reporting of the diagnosis codes to more accurately reflect each health care encounter and improve the reliability and validity of the coded data.

To inform future rulemaking, feedback and other suggestions may be submitted by October 20, 2024, and directed to MEARIS™ at: <https://mearis.cms.gov/public/home>.

2. Causally Specified Delirium

Additionally, as discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 35999 through 36001), we received a request to change the severity level designations of the ICD–10–CM diagnosis codes that describe causally

specified delirium from CC to MCC when reported as secondary diagnoses. Causally specified delirium is delirium caused by the physiological effects of a medical condition, by the direct physiological effects of a substance or medication, including withdrawal, or by multiple or unknown etiological factors. The requestor noted that ICD–10–CM diagnosis codes G92.8 (Other toxic encephalopathy), G92.9 (Unspecified toxic encephalopathy) and G93.41 (Metabolic encephalopathy) are currently all designated as MCCs. According to the requestor, a diagnosis of delirium implies an underlying acute encephalopathy, and as such, the severity designation of the diagnosis codes that describe causally specified delirium should be on par with the severity designation of the diagnosis codes that describe toxic encephalopathy and metabolic encephalopathy. The requestor stated that toxic encephalopathy, metabolic encephalopathy, and causally specified delirium all describe core symptoms of impairment of level of consciousness and cognitive change caused by a medical condition or substance.

As noted in the proposed rule, the requestor further stated that there is robust literature detailing the impact delirium can have on cognitive decline, rates of functional decline, subsequent dementia diagnosis, institutionalization, care complexity and costs, readmission rates, and mortality. The requestor considered each of the nine guiding principles discussed earlier in this section and noted how each of the principles could be applied in evaluating changes to the severity designations of the diagnosis codes that describe causally specified delirium in their request. Specifically, the requestor stated that delirium is a textbook example that maps to the nine guiding principles for evaluating a potential change in severity designation in that delirium (1) has a bidirectional link with dementia, (2) indexes physiological vulnerability across populations, (3) impacts healthcare systems across levels of care, (4) complicates postoperative recovery, (5) consigns patients to higher levels of care, and for longer, (6) impedes patient engagement in care, (7) has several recent treatment guidelines, (8) indicates neuronal/brain injury, and (9)

represents a common expression of terminal illness.

The requestor identified 37 ICD–10–CM diagnosis codes that describe causally specified delirium. In the proposed rule we stated we agree that these 37 diagnosis codes are all currently designated as CCs. We refer the reader to Appendix G of the ICD–10 MS–DRG Version 41.1 Definitions Manual (available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for the complete list of diagnoses designated as CCs when reported as secondary diagnoses, except when used in conjunction with the principal diagnosis in the corresponding CC Exclusion List in Appendix C.

To evaluate this request, as discussed in the proposed rule, we analyzed the claims data in the September 2023 update of the FY 2023 MedPAR file. The following table shows the analysis for each of the diagnosis codes identified by the requestor that describe causally specified delirium.

BILLING CODE 4120–01–P

ICD-10-CM Code ^a	Description ^b	Total Count ^c	Cnt1 ^d	C1 ^e	Cnt2 ^f	C2 ^g	Cnt3 ^h	C3 ⁱ
F05	Delirium due to known physiological condition	146,281	4,906	1.68	37,811	2.46	103,564	3.38

ⁱ "C3" impact on resource use of the SDX for discharge claims in "Cnt3".

BILLING CODE 4120-01-C

As discussed in the proposed rule, we analyzed these data as described in FY 2008 IPPS final rule (72 FR 47158 through 47161). The table shows that the C1 values of the diagnosis codes that describe causally specified delirium range from a low of 0.35 to a high of 4.00. As stated earlier, a C1 value close to 2.0 suggests the condition is more like a CC than a NonCC but not as significant in resource usage as an MCC. On average, the C1 values of the diagnoses that describe causally specified delirium suggest that these codes are more like a NonCC than a CC. In the proposed rule, we noted diagnosis code F11.221 (Opioid dependence with intoxication delirium) had a C1 value of 4.00, however our analysis reflects that this diagnosis code was reported as a secondary diagnosis in only 42 claims, and only one claim reported F11.221 as a secondary diagnosis with no other secondary diagnosis or with all other secondary diagnoses that are NonCCs.

The C2 findings of the diagnosis codes that describe causally specified delirium range from a low of 0.28 to a high of 3.22 and the C3 findings range from a low of 1.25 to a high of 3.85. We stated that the data are clearly mixed between the C2 and C3 findings, and do not consistently support a change in the severity level. On average, the C2 and C3 findings again suggest that these codes that describe causally specified delirium are more similar to a NonCC.

As discussed in the proposed rule, in considering the nine guiding principles, as summarized previously, we note that delirium is a diagnosis that can impede patient cooperation or management of care or both. Delirium is a confusional state that can manifest as agitation, tremulousness, and hallucinations or even somnolence and decreased arousal. In addition, patients diagnosed with delirium can require a higher level of care by needing intensive monitoring, and a greater number of caregivers. Managing disruptive behavior, particularly agitation and combative

behavior, is a challenging aspect in caring for patients diagnosed with delirium. Prevention and treatment of delirium can include avoiding factors known to cause or aggravate delirium; identifying and treating the underlying acute illness; and where appropriate using low-dose, short-acting pharmacologic agents.

In the proposed rule we stated that after considering the C1, C2, and C3 values of the 37 ICD-10-CM diagnosis codes that describe causally specified delirium and consideration of the nine guiding principles, we believe these 37 codes should not be designated as MCCs. While there is a lack of consistent claims data to support a severity level change from CCs to MCCs, we stated we recognize patients with delirium can utilize increased hospital resources and can be at a higher severity level. Therefore, we proposed to retain the severity designation of the 37 codes listed previously as CCs for FY 2025.

Comment: Some commenters agreed with CMS' proposal to retain the

severity designation of the 37 ICD–10–CM diagnosis codes that describe causally specified delirium as CCs for FY 2025.

Response: We appreciate the commenters’ support of our proposal.

Comment: Many other commenters disagreed with the proposal and urged CMS to change the designation of the 37 ICD–10–CM diagnosis codes that describe causally specified delirium to MCC for FY 2025. Commenters stated that delirium is a complex condition to manage and stated the diagnosis fully satisfies CMS’ nine guiding principles for re-evaluating changes to severity levels. Many commenters noted that the terms “delirium” and “encephalopathy” are often used interchangeably and refer to a shared set of acute neurocognitive conditions that require additional resources to treat. Some commenters stated that all diagnoses of delirium imply an underlying acute encephalopathy, while others stated acute encephalopathy is another name for delirium. A commenter noted that ICD–10–CM diagnosis codes G92.8 (Other toxic encephalopathy), G92.9 (Unspecified toxic encephalopathy) and G93.41 (Metabolic encephalopathy) have a higher severity level designation even though, in their view, the diagnosis codes that describe causally specified delirium provide even greater specificity. The commenter further stated that designating the diagnosis codes that describe causally specified delirium as MCCs is the logical conclusion of understanding the integrated nature of delirium and acute encephalopathy and is justified by a robust body of scientific literature and clinical practice guidelines.

Some commenters stated that practitioners have been inclined to report the ICD–10–CM diagnosis codes that describe toxic or metabolic encephalopathy, that are designated as MCCs, rather than report diagnosis codes that describe delirium, which

they state is the Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition, Text Revision (DSM–5–TR) preferred terminology to describe the syndrome of cognitive and behavioral changes that can occur in response to acute physical illness. Commenters stated that parity in the severity level designation of the codes that describe causally specified delirium with the severity level designation of the codes that describe acute encephalopathy is essential to enhancing awareness of the clinical and economic costs associated with managing delirium and will encourage widespread delirium prevention efforts. Another commenter stated that if parity is not achieved between the codes that describe causally specified delirium and codes that describe toxic or metabolic encephalopathy, clinicians will continue to favor reporting the relatively uninformative diagnoses of toxic or metabolic encephalopathy, thereby directing attention away from delirium guidelines and care pathways. Other commenters suggested that retaining the severity designation of delirium as a CC reinforces the stigma of mental health conditions, promotes the use of non-specific diagnoses that require no more than a cursory evaluation of mental status, directs clinicians away from the use of delirium clinical practice guidelines, stands against the broad consensus recommendation to use the term “delirium” across invested major medical specialty organizations, and discourages efforts to detect and manage delirium.

Several commenters suggested that the mathematical analysis of the FY 2023 MedPAR file provided in the proposed rule is confounded given that delirium is being preferentially coded as toxic or metabolic encephalopathy. A commenter noted that there is robust literature detailing the impact of delirium on care complexity and costs, readmissions, rates of functional

decline, institutionalization, cognitive decline, subsequent dementia diagnosis, and mortality and stated that the evidence suggests that delirium is underdiagnosed or being classified as encephalopathy and is having an impact on the data available for analysis.

Another commenter stated that they believe the September 2023 update of the FY 2023 MedPAR file generally supports the request to change delirium from a CC to an MCC in their review of the analyses for each of the diagnosis codes identified by the requestor that describe causally specified delirium presented in the proposed rule. Specifically, the commenter stated that based on their review of the C1, C2, and C3 values presented for ICD–10–CM code F05 (Delirium due to known physiological condition), which are 1.68, 2.46, and 3.38, respectively, F05 appears to be performing very similarly to many other conditions that are currently designated as MCCs. The commenter further stated that based on their analysis, the weighted average of the C1, C2, and C3 values of the 37 diagnosis codes that describe causally specified delirium are 1.68, 2.47, 3.38, respectively. This commenter stated they also reviewed the updated impact on resource use files provided on the CMS website so that the public can review the mathematical data for the impact on resource use generated using claims from the FY 2023 MedPAR file and stated that many codes currently designated as MCCs have C values similar to the values for causally specified delirium and stated on this basis alone, the severity designation of codes that describe causally specified delirium deserves to be changed from a CC to an MCC. The commenter specifically referenced the mathematical data for the impact on resource use generated using claims from the FY 2023 MedPAR file for the following codes that are designated as MCCs in Version 41.1:

ICD-10-CM Code ^a	Description ^b	Total Count ^c	Cnt1 ^d	C1 ^e	Cnt2 ^f	C2 ^g	Cnt3 ^h	C3 ⁱ
I21.A1	Myocardial infarction type 2	196,719	6,487	1.3296	37,250	2.2642	152,982	3.1808
G92.8	Other toxic encephalopathy	169,559	4,810	1.9340	46,280	2.6277	118,469	3.4668
G93.41	Metabolic encephalopathy	533,311	17,545	1.8706	161,169	2.4593	354,597	3.2801
G93.6	Cerebral edema	59,971	3,036	1.5753	17,160	2.5086	39,775	3.1508

^a This column is the secondary diagnosis code (SDX).

^b This column is the title of the SDX.

^c The total count of discharge claims with the SDX.

^d Count of discharge claims with the SDX but with no other SDX or with all other SDX a NonCC.

^e “C1” impact on resource use of the SDX for discharge claims in “Cnt1”.

^f Count of discharge claims with the SDX and with at least one other SDX that is a CC but none that is an MCC.

^g “C2” impact on resource use of the SDX for discharge claims in “Cnt2”.

^h Count of discharge claims with the SDX and with at least one other SDX that is a MCC.

ⁱ “C3” impact on resource use of the SDX for discharge claims in “Cnt3”.

Response: We appreciate the commenters sharing their concerns regarding the severity level designations of the ICD-10-CM diagnosis codes that describe causally specified delirium and thank the commenters for their feedback. We reviewed the commenters' concerns and while we recognize patients with delirium can utilize increased hospital resources, we continue to believe there is a lack of consistent claims data to support a severity level change of these diagnosis codes from CCs to MCCs for FY 2025.

In response to the analysis of the impact on resource use files performed by the commenter, as stated in prior rulemaking (84 FR 42150), C1, C2, and C3 values are a measure of the ratio of average costs for patients with these conditions to the expected average cost across all cases. We have stated a value close to 1.0 in the C1 field would suggest that the code produces the same expected value as a NonCC diagnosis. That is, average costs for the case are similar to the expected average costs for that subset and the diagnosis is not expected to increase resource usage. A higher value in the C1 (or C2 and C3) field suggests more resource usage is associated with the diagnosis and an increased likelihood that it is more like a CC or major CC than a NonCC. Thus, a value close to 2.0 suggests the condition is more like a CC than a NonCC but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or NonCC.

Accordingly, the C1, C2, and C3 values highlighted by the commenter for the diagnosis codes reflected in the previous table currently designated as MCCs generally suggests that the conditions actually are more like CCs rather than NonCCs or MCCs and suggests the severity designation of the diagnoses designated as MCCs should be changed to CCs. We will consider these codes as we continue our comprehensive CC/MCC analysis, using a combination of mathematical analysis of claims data and the application of nine guiding principles to determine the extent to which presence of each code as a secondary diagnosis results in increased hospital resource use and will provide more detail in future rulemaking.

In response to the commenters that suggested that delirium "fully satisfies CMS' nine guiding principles", as stated earlier, the nine guiding principles are not intended to turn the analysis into a quantitative exercise, requiring that every diagnosis code satisfy each principle. As discussed in prior

rulemaking and earlier in this section, our intended approach is first, CMS will use the guiding principles in making an initial clinical assessment of the appropriate severity level designation for each ICD-10-CM code as a secondary diagnosis. CMS will then use a mathematical analysis of claims data as discussed in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47159) to determine if the presence of the ICD-10-CM code as a secondary diagnosis appears to, or does not appear to, increase hospital resource consumption. There may be instances in which we would decide that the clinical analysis weighs in favor of proposing to maintain or proposing to change the severity designation of an ICD-10-CM code after application of the nine guiding principles. The nine guiding principles are intended to provide a framework for assessing relevant clinical factors to help denote if, and to what degree, additional resources are required above and beyond those that are already being utilized to address the principal diagnosis or other secondary diagnoses that might also be present on the claim.

In response to the suggestion that clinicians favor reporting encephalopathy as opposed to delirium, we note that providers are responsible for ensuring that they are documenting as specifically and accurately as possible for the conditions they are treating and the services they render to correctly reflect the severity of illness and capture how truly sick a patient is when causally specified delirium or encephalopathy are present. In addition, as we noted in the FY 2018 IPPS/LTCH PPS final rule (82 FR 38012), coding advice is issued independently from payment policy. We also note that, historically, we have not provided coding advice in rulemaking with respect to policy (82 FR 38045). As one of the Cooperating Parties for ICD-10, we collaborate with the American Hospital Association (AHA) through the *Coding Clinic for ICD-10-CM and ICD-10-PCS* to promote proper coding. We recommend that an entity seeking coding guidance on reporting causally specified delirium or encephalopathy submit any questions pertaining to correct coding to the AHA.

We consulted with the staff at the Centers for Disease Control's (CDC's) National Center for Health Statistics (NCHS), because NCHS has the lead responsibility for maintaining the ICD-10-CM diagnosis codes. The NCHS' staff acknowledged the terms delirium and encephalopathy are differentiated in the classification, such that coding would usually depend on the specific terms used in the medical record

documentation. NCHS confirmed that they would consider further review of the classification, including review of the Excludes notes, for these two diagnoses. As such, we believe it would be appropriate to maintain the current severity level designations of the ICD-10-CM diagnosis codes that describe causally specified delirium at this time in order to further examine the relevant clinical factors and possible similarities in resource consumption in order to best represent this subset of patients within the MS-DRG classification.

Therefore, after consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal, without modification, to maintain the current severity level designation of the 37 ICD-10-CM diagnosis codes that describe causally specified delirium listed previously as CCs for FY 2025.

d. Additions and Deletions to the Diagnosis Code Severity Levels for FY 2025

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36001), we noted the following tables identify the proposed additions and deletions to the diagnosis code MCC severity levels list and the proposed additions and deletions to the diagnosis code CC severity levels list for FY 2025 and are available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>

Table 6I.1—Proposed Additions to the MCC List—FY 2025;

Table 6J.1—Proposed Additions to the CC List—FY 2025; and

Table 6J.2—Proposed Deletions to the CC List—FY 2025

Comment: Commenters agreed with the proposed additions and deletions to the MCC and CC lists as shown in tables 6I.1, 6J.1, and 6J.2 associated with the proposed rule.

Response: We appreciate the commenters' support.

The following tables associated with this final rule reflect the finalized severity levels under Version 42 of the ICD-10 MS-DRGs for FY 2025 and are available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS>; Table 6I.—Complete MCC List—FY 2025; Table 6I.1—Additions to the MCC List—FY 2025; Table 6I.2—Deletions to the MCC List—FY 2025; Table 6J.—Complete CC List—FY 2025; Table 6J.1—Additions to the CC List—FY 2025; and Table 6J.2—Deletions to the CC List—FY 2025.

e. CC Exclusions List for FY 2025

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) to preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50544) for detailed information regarding revisions that were made to the CC and CC Exclusion Lists under the ICD-9-CM MS-DRGs.

The ICD-10 MS-DRGs Version 41.1 CC Exclusion List is included as Appendix C in the ICD-10 MS-DRG Definitions Manual (available in two formats; text and HTML). The manuals are available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> and includes two lists identified as Part 1 and Part 2. Part 1 is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary

diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Part 2 is the list of diagnosis codes designated as an MCC only for patients discharged alive; otherwise, they are assigned as a NonCC.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36002 through 36006), effective for the April 1, 2024, release of the ICD-10 MS-DRG Definitions Manual, Version 41.1, a new section has been added to Appendix C as follows:

Part 3: Secondary Diagnosis CC/MCC Severity Exclusions in Select MS-DRGs

Part 3 lists diagnosis codes that are designated as a complication or comorbidity (CC) or major complication or comorbidity (MCC) and included in the definition of the logic for the listed MS-DRGs. When reported as a secondary diagnosis and grouped to one of the listed MS-DRGs, the diagnosis is excluded from acting as a CC/MCC for severity in DRG assignment.

The purpose of this new section is to include the list of MS-DRGs subject to what is referred to as suppression logic. In addition to the suppression logic excluding secondary diagnosis CC or MCC conditions that may be included in the definition of the logic for a DRG, it is also based on the presence of other secondary diagnosis logic defined within certain base DRGs. Therefore, if a MS-DRG has secondary diagnosis logic, the suppression is activated regardless of the severity of the secondary diagnosis code(s) for appropriate grouping and MS-DRG assignment.

In the proposed rule we noted that each MS-DRG is defined by a particular set of patient attributes including principal diagnosis, specific secondary diagnoses, procedures, sex, and discharge status. The patient attributes which define each MS-DRG are displayed in a series of headings which indicate the patient characteristics used to define the MS-DRG. These headings indicate how the patient's diagnoses and procedures are used in determining MS-DRG assignment. Following each heading is a complete list of all the ICD-10-CM diagnosis or ICD-10-PCS procedure codes included in the MS-DRG. One of these headings is secondary diagnosis.

- *Secondary diagnosis.* Indicates that a specific set of secondary diagnoses are used in the definition of the MS-DRG. For example, a secondary diagnosis of

acute leukemia with chemotherapy is used to define MS-DRG 839.

The full list of MS-DRGs where suppression occurs is shown in the following table.

MS-DRG 008.
MS-DRG 010.
MS-DRG 019.
*MS-DRGs 082-084.
*MS-DRGs 177-179.
*MS-DRGs 280-282.
*MS-DRGs 283-285.
*MS-DRGs 456-458.
*MS-DRGs 582-583.
MS-DRG 768.
MS-DRG 790.
MS-DRG 791.
MS-DRG 792.
MS-DRG 793.
MS-DRG 794.
*MS-DRGs 796-798.
*MS-DRGs 805-807.
*MS-DRGs 837-839.
MS-DRG 927.
*MS-DRGs 928-929.
MS-DRG 933.
MS-DRG 934.
MS-DRG 935.
MS-DRG 955.
MS-DRG 956.
*MS-DRGs 957-959.
*MS-DRGs 963-965.
*MS-DRGs 974-976.
MS-DRG 977.

* The MS-DRG(s) contain diagnoses that are specifically excluded from acting as a CC/MCC for severity in MS-DRG assignment.

In the proposed rule we stated we believe this additional information about the suppression logic may further assist users of the ICD-10 MS-DRG GROUPER software and related materials.

As noted in the proposed rule, during our review of the MS-DRGs containing secondary diagnosis logic in association with the suppression logic previously discussed, we identified another set of MS-DRGs containing secondary diagnosis logic in the definition of the MS-DRG. Specifically, we identified MS-DRGs 673, 674, and 675 (Other Kidney and Urinary Tract Procedures with MCC, with CC, and without CC/MCC, respectively) in MDC 11 (Diseases and Disorders of the Kidney and Urinary Tract), as displayed in the ICD-10 MS-DRG Version 41.1 Definitions Manual (which is available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) which contains secondary diagnosis logic.

As stated in the proposed rule, of the seven logic lists included in the definition of MS-DRGs 673, 674, and 675, there are three "Or Principal Diagnosis" logic lists and one "With

Secondary Diagnosis” logic list. The first “Or Principal Diagnosis” logic list is comprised of 21 diagnosis codes describing conditions such as chronic kidney disease, kidney failure, and complications related to a vascular dialysis catheter or kidney transplant. The second “Or Principal Diagnosis” logic list is comprised of four diagnosis codes describing diabetes with diabetic chronic kidney disease followed by a “With Secondary Diagnosis” logic list that includes diagnosis codes N18.5 (Chronic kidney disease, stage 5) and N18.6 (End stage renal disease). These logic lists are components of the special logic in MS-DRGs 673, 674, and 675 for certain MDC 11 diagnoses reported with procedure codes for the insertion of tunneled or totally implantable vascular access devices. The third “Or Principal Diagnosis” logic list is comprised of three diagnosis codes describing Type 1 diabetes with different kidney complications as part of the special logic in MS-DRGs 673, 674, and 675 for pancreatic islet cell transplantation

performed in the absence of any other surgical procedure.

Under the Version 41.1 ICD-10 MS-DRGs, diagnosis code N18.5 (Chronic kidney disease, stage 5) is currently designated as a CC and diagnosis code N18.6 (End stage renal disease) is designated as an MCC. As discussed in the proposed rule, in our review of the MS-DRGs containing secondary diagnosis logic in association with the suppression logic, we noted that currently, when some diagnosis codes from the “Or Principal Diagnosis” logic lists in MS-DRGs 673, 674, and 675 are reported as the principal diagnosis and either diagnosis code N18.5 or N18.6 from the “With Secondary Diagnosis” logic list is reported as a secondary diagnosis, some cases are grouping to MS-DRG 673 (Other Kidney and Urinary Tract Procedures with MCC) or to MS-DRG 674 (Other Kidney and Urinary Tract Procedures with CC) in the absence of any other MCC or CC secondary diagnoses being reported.

In our analysis of this issue as discussed in the proposed rule, we

noted diagnosis codes N18.5 and N18.6 are excluded from acting as a CC or MCC, when reported with principal diagnoses from Principal Diagnosis Collection Lists 1379 and 1380, respectively, as reflected in Part 1 of Appendix C in the CC Exclusion List. We refer the reader to Part 1 of Appendix C in the CC Exclusion List as displayed in the ICD-10 MS-DRG Version 41.1 Definitions Manual (which is available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>) for the complete list of principal diagnoses in Principal Diagnosis Collection Lists 1379 and 1380. Specifically, when codes N18.5 or N18.6 are reported as secondary diagnoses, we noted they are considered as NonCCs when the diagnosis codes from the “Or Principal Diagnosis” logic lists in MS-DRGs 673, 674, and 675 reflected in the following table are reported as the principal diagnosis under the CC Exclusion logic.

Principal Diagnoses Codes in the “Or Principal Diagnosis” Logic List for MS-DRGs 673, 674, and 675 currently listed in Principal Diagnosis Collection List 1379 or 1380 in ICD-10 MS-DRG GROUPER Version 41		
Principal Diagnosis ICD-10-CM Code	Description	PDX Collection Number
E09.22	Drug or chemical induced diabetes mellitus with diabetic chronic kidney disease	1379: 294 codes 1380: 295 codes
E10.22	Type 1 diabetes mellitus with diabetic chronic kidney disease	
E11.22	Type 2 diabetes mellitus with diabetic chronic kidney disease	
E13.22	Other specified diabetes mellitus with diabetic chronic kidney disease	
N17.0	Acute kidney failure with tubular necrosis	
N17.1	Acute kidney failure with acute cortical necrosis	
N17.2	Acute kidney failure with medullary necrosis	
N17.8	Other acute kidney failure	
N17.9	Acute kidney failure, unspecified	
N18.5	Chronic kidney disease, stage 5	
N18.6	End stage renal disease	
N19	Unspecified kidney failure	

In the proposed rule, we also noted that currently, a subset of diagnosis codes from the first “Or Principal Diagnosis” logic list in MS-DRGs 673, 674, and 675 are not listed in Principal Diagnosis Collection Lists 1379 or 1380 for diagnosis codes N18.5 and N18.6,

respectively. As a result, when one of the 13 diagnosis codes listed in the following table are reported as the principal diagnosis, and either diagnosis code N18.5 or N18.6 from the “With Secondary Diagnosis” logic list are reported as a secondary diagnosis, the

cases are grouping to MS-DRG 673 (Other Kidney and Urinary Tract Procedures with MCC) or to MS-DRG 674 (Other Kidney and Urinary Tract Procedures with CC) when also reported with a procedure code describing the

insertion of a tunneled or totally implantable vascular access device.

Principal Diagnoses Codes in the “Or Principal Diagnosis” Logic List for MS-DRGs 673, 674, and 675 not listed in Principal Diagnosis Collection List 1379 or 1380 in ICD-10 MS-DRG GROUPER Version 41	
Principal Diagnosis ICD-10-CM Code	Description
E88.3	Tumor lysis syndrome
I12.0	Hypertensive chronic kidney disease with stage 5 chronic kidney disease or end stage renal disease
I13.11	Hypertensive heart and chronic kidney disease without heart failure, with stage 5 chronic kidney disease, or end stage renal disease
R34	Anuria and oliguria
T79.5XXA	Traumatic anuria, initial encounter
T82.41XA	Breakdown (mechanical) of vascular dialysis catheter, initial encounter
T82.42XA	Displacement of vascular dialysis catheter, initial encounter
T82.43XA	Leakage of vascular dialysis catheter, initial encounter
T82.49XA	Other complication of vascular dialysis catheter, initial encounter
T86.11	Kidney transplant rejection
T86.12	Kidney transplant failure
T86.13	Kidney transplant infection
T86.19	Other complication of kidney transplant

We noted in the proposed rule that consistent with how other similar logic lists function in the ICD-10 GROUPER software for case assignment to the “with MCC” or “with CC” MS-DRGs, the logic for case assignment to MS-DRG 673 is intended to require any *other* diagnosis designated as an MCC and reported as a secondary diagnosis for appropriate assignment, and not the diagnoses currently listed in the logic for the definition of the MS-DRG. Likewise, the logic for case assignment to MS-DRG 674 is intended to require any *other* diagnosis designated as a CC and reported as a secondary diagnosis for appropriate assignment.

Therefore, for FY 2025, we proposed to correct the logic for case assignment to MS-DRGs 673, 674, and 675 by adding suppression logic to exclude diagnosis codes N18.5 (Chronic kidney disease, stage 5) and N18.6 (End stage renal disease) from the logic list entitled “With Secondary Diagnosis” from acting as a CC or an MCC, respectively, when reported as a secondary diagnosis with one of the 13 previously listed principal diagnosis codes from the “Or Principal Diagnosis” logic lists in MS-DRGs 673, 674, and 675 for appropriate grouping and MS-DRG assignment. Under this proposal, when diagnosis codes N18.5 or N18.6 are reported as a

secondary diagnosis with one of the 13 previously listed principal diagnosis codes, the GROUPER will assign MS-DRG 675 (Other Kidney and Urinary Tract Procedures without CC/MCC) in the absence of any other MCC or CC secondary diagnoses being reported. In the proposed rule we also noted that the current list of MS-DRGs subject to suppression logic as previously discussed and listed under Version 41.1 includes MS-DRGs that are not subdivided by a two-way severity level split (“with MCC and without MCC” or “with CC/MCC and without CC/MCC”) or a three-way severity level split (with MCC, with CC, and without CC/MCC, respectively), or the listed MS-DRG includes diagnoses that are not currently designated as a CC or MCC. To avoid potential confusion, we proposed to refine how the suppression logic is displayed under Appendix C—Part 3 to not display the MS-DRGs where the suppression logic has no impact on the grouping (meaning the logic list for the affected MS-DRG contains diagnoses that are all designated as NonCCs, or the MS-DRG is not subdivided by a severity level split) as reflected in the draft Version 42 ICD-10 MS-DRG Definitions Manual, which is available in association with the proposed rule at: <https://www.cms.gov/medicare/>

payment/prospective-payment-systems/acute-inpatient-pps.

Comment: Commenters stated they did not agree with the proposed application of the suppression logic within MS-DRGs 673, 674, and 675 when diagnosis codes N18.5 and N18.6 are reported as a secondary diagnosis in conjunction with one of the principal diagnosis codes listed in Part 1 of Appendix C in the CC Exclusion List. The commenters stated that ICD-10-CM codes N18.5 and N18.6 are the highest level of severity for kidney failure with end stage renal disease and stage 5, both of which require dialysis and/or kidney transplant. According to the commenters, the only principal diagnoses that could meet one of the five principles would be I12.0 (Hypertensive chronic kidney disease with stage 5 chronic kidney disease or end stage renal disease) or I13.11 (Hypertensive heart and chronic kidney disease without heart failure, with stage 5 chronic kidney disease or end-stage renal disease) as these two codes actually indicate stage 5 chronic kidney disease or end stage renal disease in the narrative description. The commenters stated their belief that the five conditions established for exclusions were not met for the majority of the diagnoses on the principal diagnosis list

and for that reason should not be subject to suppression logic.

Response: We wish to clarify for the commenters that the suppression logic is not the same as the CC Exclusion List logic under Part 1 of Appendix C—CC Exclusion List in the ICD–10 MS–DRG Definitions Manual. As previously described, Part 1 of Appendix C is the list of all diagnosis codes that are defined as a CC or MCC when reported as a secondary diagnosis. For all diagnosis codes on the list, a link is provided to a collection of diagnosis codes which, when reported as the principal diagnosis, would cause the CC or MCC diagnosis to be considered as a NonCC. Separate from the CC Exclusion List logic, effective for the April 1, 2024, release of the ICD–10 MS–DRG Definitions Manual, Version 41.1, a new section was added to Appendix C for the suppression logic as listed under Part 3 of Appendix C. As previously described, Part 3 lists diagnosis codes that are designated as a CC or MCC and are included in the definition of the logic for the listed MS–DRGs. As such, when reported as a secondary diagnosis, the diagnosis is intended to be excluded from acting as a CC or MCC for severity in DRG assignment. We stated in the proposed rule that, because the logic for case assignment to MS–DRGs 673, 674, and 675 includes diagnosis codes N18.5 and N18.6 in the definition of the “With Secondary Diagnosis” logic list, we were proposing to correct the logic for appropriate grouping, consistent with other secondary diagnosis logic. Therefore, when diagnosis codes N18.5 or N18.6 are reported as a secondary diagnosis with one of the 13 previously listed principal diagnosis codes from the “Or Principal Diagnosis” logic lists in MS–DRGs 673, 674, and 675, for appropriate grouping and consistency they should be excluded from acting as a CC or MCC.

We note that, because the commenters raised concerns regarding the principal diagnoses listed under Part 1 of Appendix C—CC Exclusions List in Principal Diagnosis Collection Lists 1378 and 1379 that currently exclude diagnosis codes N18.5 and N18.6 from acting as a CC or MCC under the CC exclusion logic in accordance with the list of five principles established in 1987, we intend to perform a broad review of the conditions in these lists to determine if any modifications are warranted and to ensure they continue to be clinically appropriate. To inform future rulemaking, feedback and other suggestions may be submitted by October 20, 2024, and directed to MEARIS™ at: <https://mearis.cms.gov/public/home>.

After consideration of the public comments we received, and for the reasons discussed, we are finalizing our proposal to add suppression logic to exclude diagnosis codes N18.5 (Chronic kidney disease, stage 5) and N18.6 (End stage renal disease) from the logic list entitled “With Secondary Diagnosis” from acting as a CC or an MCC, respectively, when reported as a secondary diagnosis with one of the 13 previously listed principal diagnosis codes from the “Or Principal Diagnosis” logic lists in MS–DRGs 673, 674, and 675, without modification, effective October 1, 2024 for FY 2025.

We also note that during our review of the 37 diagnosis codes that describe causally specified delirium as discussed in section II.C.12.c.2. of the preamble of this final rule, we identified diagnosis code F05 (Delirium due to known physiological condition) as a condition that is listed on a subset of the Principal Diagnosis Collection Lists under Part 1 of Appendix C—CC Exclusions List. Specifically, we found diagnosis code F05 listed on Principal Diagnosis Collection List numbers 642, 643, 645, 646, and 647. Diagnosis code F05 is listed on the Unacceptable Principal Diagnosis Code edit code list in the Medicare Code Editor and is not appropriate to report as a principal diagnosis according to the ICD–10–CM Tabular List of Diseases and Injuries instructional note to “Code first the underlying physiological condition, such as: dementia (F03.9-)”. Consistent with the MCE Unacceptable Principal Diagnosis Code edit code list and the instructional note in the ICD–10–CM Tabular List of Diseases and Injuries, we are removing diagnosis code F05 from the previously listed Principal Diagnosis Collection Lists effective October 1, 2024, for FY 2025.

Lastly, we are finalizing our proposal to refine how the suppression logic is displayed under Appendix C—Part 3, without modification, effective October 1, 2024, for FY 2025. Under this finalization, MS–DRGs where the suppression logic has no impact on the grouping (meaning the logic list for the affected MS–DRG contains diagnoses that are all designated as NonCCs, or the MS–DRG is not subdivided by a severity level split) will not be displayed in Appendix C—Part 3 as reflected in the Version 42 ICD–10 MS–DRG Definitions Manual, which is available in association with this final rule at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>.

In the FY 2025 IPPS/LTCH PPS proposed rule, we proposed additional changes to the ICD–10 MS–DRGs

Version 42 CC Exclusion List based on the diagnosis code updates as discussed in section II.C.12. of the proposed rule and set forth in Tables 6G.1, 6G.2, 6H.1, and 6H.2 associated with the proposed rule and available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS>.

We did not receive any public comments opposing the proposed CC Exclusions List, however, during our internal review of the proposed CC Exclusions List we identified some inconsistencies with the 77 new Hodgkin lymphoma diagnosis codes that were proposed to be designated as a CC (based on the predecessor code designation and now finalized as reflected in Table 6A.- New Diagnosis Codes—FY 2025 associated with this final rule). We determined that clinically, all 77 Hodgkin lymphoma diagnosis codes should be excluded from acting as a CC when another Hodgkin lymphoma diagnosis code is reported as the principal diagnosis. Therefore, for FY 2025, we are finalizing, with modification, the CC exclusions for the 77 Hodgkin lymphoma codes after internal review as reflected in Tables 6G.1 and 6G.2 in association with this final rule.

The finalized CC Exclusions List as displayed in Tables 6G.1, 6G.2, 6H.1, 6H.2, and 6K, associated with this final rule reflect the severity levels under V42 of the ICD–10 MS–DRGs. We have developed Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2025; Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2025; Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2025; and Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2025; and Table 6K. Complete List of CC Exclusions—FY 2025.

For Table 6G.1, each secondary diagnosis code finalized for addition to the CC Exclusion List is shown with an asterisk and the principal diagnoses finalized to exclude the secondary diagnosis code are provided in the indented column immediately following it. For Table 6G.2, each of the principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions finalized for addition to the CC Exclusion List that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. For Table 6H.1, each secondary diagnosis code finalized for deletion from the CC Exclusion List is shown with an asterisk followed by the principal diagnosis

codes that currently exclude it. For Table 6H.2, each of the principal diagnosis codes is shown with an asterisk and the finalized deletions to the CC Exclusions List are provided in an indented column immediately following the affected principal diagnosis. Tables 6G.1., 6G.2., 6H.1., and 6H.2. associated with this final rule are available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

13. Changes to the ICD-10-CM and ICD-10-PCS Coding Systems

To identify new, revised, and deleted diagnosis and procedure codes, for FY 2025, we have developed Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this final rule.

These tables are not published in the Addendum to the proposed rule or final rule, but are available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> as described in section VI. of the

Addendum to this final rule. As discussed in section II.C.15. of the preamble of the proposed rule and this final rule, the code titles are adopted as part of the ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee meeting process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36006), we proposed the MDC and MS-DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes. We also stated that the proposed severity level designations for the new diagnosis codes are set forth in Table 6A. and the proposed O.R. status for the new procedure codes are set forth in Table 6B. Consistent with our established process, we examined the MS-DRG assignment and the attributes (severity level and O.R. status) of the predecessor diagnosis or procedure code, as applicable, to inform our proposed assignments and designations.

Specifically, we reviewed the predecessor code and MS-DRG assignment most closely associated with

the new diagnosis or procedure code, and in the absence of claims data, we considered other factors that may be relevant to the MS-DRG assignment, including the severity of illness, treatment difficulty, complexity of service and the resources utilized in the diagnosis and/or treatment of the condition. We noted that this process does not automatically result in the new diagnosis or procedure code being proposed for assignment to the same MS-DRG or to have the same designation as the predecessor code.

In this FY 2025 IPPS/LTCH PPS final rule, we present a summation of the comments we received in response to the proposed assignments, our responses to those comments, and our finalized policies.

Comment: Commenters expressed support for the finalization of three new ICD-10-CM diagnosis codes describing presymptomatic Type 1 diabetes mellitus by stage and three new codes describing hypoglycemia by level, as shown in the following table and reflected in Table 6A.—New Diagnosis Codes—FY 2025 in association with the proposed rule and available at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>.

ICD-10-CM Code	Description
E10.A0	Type 1 diabetes mellitus, presymptomatic, unspecified
E10.A1	Type 1 diabetes mellitus, presymptomatic, Stage 1
E10.A2	Type 1 diabetes mellitus, presymptomatic, Stage 2
E16.A1	Hypoglycemia level 1
E16.A2	Hypoglycemia level 2
E16.A3	Hypoglycemia level 3

The commenters stated these new diagnosis codes are intended to facilitate standardized diabetes and hypoglycemia reporting and enable consistent quantification, tracking, and outcomes measurement. According to the commenters, the more granular presymptomatic diabetes diagnosis codes will help identify early disease progression and support appropriate intervention, including documentation of an individual’s need for a continuous glucose monitor (CGM). The commenters urged CMS to incorporate these finalized diagnosis codes throughout Medicare payment and coverage policies.

Response: We thank the commenters for their support.

Comment: Commenters expressed support for the proposed CC status designation and proposed MS-DRG assignments under MDC 17 and MDC 25 for the diagnosis codes describing lymphoma in remission as reflected in Table 6A.—New Diagnosis Codes—FY 2025 in association with the proposed rule and available at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>. The commenters stated that patients with these diagnoses are generally more complex and resource-intensive, warranting the CC designation. The commenters requested

that we finalize the proposed designation and MS-DRG assignments for FY 2025.

Response: We thank the commenters for their support.

Comment: A couple of commenters requested that CMS designate the following 16 new procedure codes that describe introduction of the AGENT™ Paclitaxel-Coated Balloon Catheter that is indicated to treat coronary in-stent restenosis (ISR) in patients with coronary artery disease as operating room (O.R.) procedures, with assignment to surgical MS-DRGs.

BILLING CODE 4120-01-P

ICD-10-PCS Code	Description
XW0J3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, one artery, percutaneous approach, new technology group 10
XW0J3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, one artery, percutaneous approach, new technology group 10
XW0J3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, one artery, percutaneous approach, new technology group 10
XW0J3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, one artery, percutaneous approach, new technology group 10
XW0K3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0K3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0K3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0K3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0L3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0K3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, two arteries, percutaneous approach, new technology group 10
XW0L3HA	Introduction of paclitaxel-coated balloon technology, one balloon into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3JA	Introduction of paclitaxel-coated balloon technology, two balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0L3KA	Introduction of paclitaxel-coated balloon technology, three balloons into coronary artery, three arteries, percutaneous approach, new technology group 10
XW0M3LA	Introduction of paclitaxel-coated balloon technology, four or more balloons into coronary artery, four or more arteries, percutaneous approach, new technology group 10

BILLING CODE 4120-01-C

Specifically, the commenters requested assignment of the previously listed procedure codes to the following surgical MS-DRGs:

- MS-DRG 250 Percutaneous Cardiovascular Procedures without Intraluminal Device with MCC
- MS-DRG 251 Percutaneous Cardiovascular Procedures without Intraluminal Device without MCC
- MS-DRG 321 Percutaneous Cardiovascular Procedures with Intraluminal Device with MCC or 4+ Arteries/Intraluminal Devices
- MS-DRG 322 Percutaneous Cardiovascular Procedures with Intraluminal Device without MCC
- MS-DRG 323 Coronary Intravascular Lithotripsy with Intraluminal Device with MCC
- MS-DRG 324 Coronary Intravascular Lithotripsy with Intraluminal Device without MCC
- MS-DRG 325 Coronary Intravascular Lithotripsy without Intraluminal Device

The commenters stated that based on the usual surgical hierarchy rules, the reporting of one of the vessel preparation steps (that is, angioplasty, atherectomy, or lithotripsy), or placement of a new stent in connection with the reported use of the AGENT™ Paclitaxel-Coated Balloon Catheter would mean the procedure would map to one of the previously listed surgical MS-DRGs. The commenters also stated their belief that designating the new procedure codes as O.R. procedures with assignment to the previously listed MS-DRGs would reflect the surgical nature and complexity of the procedure and would be appropriate for the time being.

Response: The 16 new procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter were finalized following the March 19, 2024, ICD-10 Coordination and Maintenance Committee meeting and made available via the CMS website on June 5, 2025, at <https://www.cms.gov/medicare/>

payment/prospective-payment-systems/acute-inpatient-pps. The procedure codes are also reflected in Table 6B—New Procedure Codes—FY 2025 associated with this final rule.

Under our established process, we reviewed the predecessor code and MS-DRG assignment most closely associated with the new procedure codes. We note that because the procedure codes describing the use of an AGENT™ Paclitaxel-Coated Balloon Catheter are describing delivery of the paclitaxel to the coronary vessel(s), the predecessor code is 3E073GC (Introduction of other therapeutic substance into coronary artery, percutaneous approach), which is designated as a non-O.R. procedure and does not affect MS-DRG assignment. As discussed at the March 19, 2024, ICD-10 Coordination and Maintenance Committee meeting and in the commenters' feedback, a preparatory step (that is, vessel preparation by either angioplasty, atherectomy, or lithotripsy) is required to be performed first, before

the AGENT™ Paclitaxel-Coated Balloon Catheter is deployed. We note that each type of vessel preparation procedure is designated as an O.R. procedure and maps to one of the previously listed surgical MS-DRGs. We also note that the commenters are correct that based on the surgical hierarchy, the reporting of one of the vessel preparation steps (that is, angioplasty, atherectomy, or lithotripsy), or placement of a new stent in connection with the use of the AGENT™ Paclitaxel-Coated Balloon Catheter would result in assignment to one of the previously listed surgical MS-DRGs. We note that use of the AGENT™ Paclitaxel-Coated Balloon Catheter to deliver the paclitaxel to the coronary vessel(s) cannot occur in the absence of a surgical vessel preparation and therefore, it is the vessel preparation procedure that will determine the surgical MS-DRG assignment to one of the previously listed surgical MS-DRGs. As such, we do not agree with designating the 16 new procedure codes as O.R. procedure codes since the resulting MS-DRG assignment is dependent on the surgical vessel preparation procedure that would be reported when the AGENT™ Paclitaxel-Coated Balloon Catheter is used to deliver the paclitaxel to the coronary vessel(s) and result in assignment to one of the previously listed surgical MS-DRGs regardless. We refer the reader to the ICD-10 MS-DRG Definitions Manual, Version 42 available in association with this final rule on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> for complete documentation of the GROUPER logic for the previously listed surgical MS-DRGs under MDC 05. Accordingly, consistent with our established process and for the reasons discussed, we are designating the 16 new procedure codes describing use of the AGENT™ Paclitaxel-Coated Balloon Catheter as non-O.R. for FY 2025.

Comment: A commenter expressed its appreciation to the ICD-10 Coordination and Maintenance Committee for creating and implementing new ICD-10-CM Z codes to describe Duffy null status. The commenter stated that the new codes were requested to ensure that people who have lower absolute neutrophil count (ANC) due to Duffy phenotype are accurately documented within the medical record and are not considered to have “abnormal” ANC levels.

The commenter indicated that the new codes will be critical for proper payment, accurate documentation, appropriate clinical care and

management, and the ability to conduct research. The commenter also indicated that accurate documentation of the Duffy status will decrease duplicative testing and allow for more precise medication administration, consistent with need.

Response: We thank the commenter for its support.

Comment: Some commenters suggested that ICD-10-PCS procedure code 02583ZF (Destruction of conduction mechanism using irreversible electroporation, percutaneous approach) also be added to proposed new MS-DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation) in MDC 05. A couple commenters stated that pulsed field ablation is becoming the standard of care for atrial fibrillation ablation, and it should be included in the proposed new MS-DRG if patients who have atrial fibrillation are to be effectively, safely, and efficiently managed.

Response: We appreciate the commenters’ feedback. As discussed in section II.C.4.a. of the preamble of this final rule, we are finalizing MS-DRG 317 for FY 2025. Upon review, we believe it is appropriate to add procedure code 02583ZF to the logic for case assignment to MS-DRG 317 as the description of the code describes a type of cardiac ablation and is clinically coherent with the other procedure codes describing cardiac ablation that were proposed and finalized for assignment to MS-DRG 317 effective for FY 2025. We are therefore, finalizing, with modification, the MS-DRG assignments for procedure code 02583ZF as reflected in Table 6B.—New Procedure Codes in association with this final rule.

After consideration of the public comments received, we are finalizing the MDC and MS-DRG assignments for the new diagnosis codes and procedure codes as set forth in Table 6A.—New Diagnosis Codes and Table 6B.—New Procedure Codes associated with this final rule. In addition, the finalized severity level designations for the new diagnosis codes are set forth in Table 6A. and the finalized O.R. status for the new procedure codes are set forth in Table 6B associated with this final rule.

In association with this final rule, we are making the following tables available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>:

- Table 6A.—New Diagnosis Codes—FY 2025;
- Table 6B.—New Procedure Codes—FY 2025;

- Table 6C.—Invalid Diagnosis Codes—FY 2025;
- Table 6D.—Invalid Procedure Codes—FY 2025;
- Table 6E.—Revised Diagnosis Code Titles—FY 2025;
- Table 6F.—Revised Procedure Code Titles—FY 2025;
- Table 6G.1.—Secondary Diagnosis Order Additions to the CC Exclusions List—FY 2025;
- Table 6G.2.—Principal Diagnosis Order Additions to the CC Exclusions List—FY 2025;
- Table 6H.1.—Secondary Diagnosis Order Deletions to the CC Exclusions List—FY 2025;
- Table 6H.2.—Principal Diagnosis Order Deletions to the CC Exclusions List—FY 2025;
- Table 6I.—Complete MCC List—FY 2025;
- Table 6I.1.—Additions to the MCC List—FY 2025;
- Table 6J.1.—Complete CC List—FY 2025;
- Table 6J.1.—Additions to the CC List—FY 2025;
- Table 6J.2.—Deletions to the CC List—FY 2025; and
- Table 6K.—Complete List of CC Exclusions—FY 2025.

14. Changes to the Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS-DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS-DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS-DRG associated with the most resource-intensive surgical class.

A surgical class can be composed of one or more MS-DRGs. For example, in MDC 11, the surgical class “kidney transplant” consists of a single MS-DRG (MS-DRG 652) and the class “major bladder procedures” consists of three MS-DRGs (MS-DRGs 653, 654, and 655).

Consequently, in many cases, the surgical hierarchy has an impact on more than one MS-DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS-DRG by frequency to determine the weighted average resources for each surgical class.

For example, assume surgical class A includes MS-DRGs 001 and 002 and surgical class B includes MS-DRGs 003, 004, and 005. Assume also that the average costs of MS-DRG 001 are higher than that of MS-DRG 003, but the average costs of MS-DRGs 004 and 005 are higher than the average costs of MS-DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS-DRG in the class by frequency (that is, by the number of cases in the MS-DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of “other O.R. procedures” as discussed in this final rule.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS-DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the “other O.R. procedures” surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS-DRG or MS-DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The “other O.R. procedures” class is a group of procedures that are only infrequently related to the diagnoses in the MDC but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical

class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we proposed to make for FY 2025, as discussed in section II.C. of the preamble of the proposed rule and this final rule, we proposed to modify the existing surgical hierarchy for FY 2025 as follows.

As discussed in section II.C.4.a. of the preamble of the proposed rule and this final rule, we proposed to revise the surgical hierarchy for the MDC 05 (Diseases and Disorders of the Circulatory System) MS-DRGs as follows: In the MDC 05 MS-DRGs, we proposed to sequence proposed new MS-DRG 317 (Concomitant Left Atrial Appendage Closure and Cardiac Ablation) above MS-DRG 275 (Cardiac Defibrillator Implant with Cardiac Catheterization and MCC) and below MS-DRGs 231, 232, 233, 234, 235, and 236 (Coronary Bypass with or without PTCA, with or without Cardiac Catheterization or Open Ablation, with and without MCC, respectively). As discussed in section II.C.4.b. of the preamble of the proposed rule and this final rule, we proposed to revise the title for MS-DRG 276 from “Cardiac Defibrillator Implant with MCC” to “Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator”.

As discussed in section II.C.6.b. of the preamble of the proposed rule and this final rule, we proposed to delete MS-DRGs 453, 454, and 455 (Combined Anterior and Posterior Spinal Fusion with MCC, with CC, and without CC/MCC, respectively). Based on the changes we proposed to make for those MS-DRGs in MDC 08 (Diseases and Disorders of the Musculoskeletal System

and Connective Tissue), we proposed to revise the surgical hierarchy for MDC 08 as follows: In MDC 08, we proposed to sequence proposed new MS-DRGs 426, 427, and 428 (Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical with MCC, with CC, and without CC/MCC, respectively) above proposed new MS-DRG 402 (Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical). We proposed to sequence proposed new MS-DRGs 429 and 430 (Combined Anterior and Posterior Cervical Spinal Fusion with MCC and without MCC, respectively) above MS-DRGs 456, 457, and 458 (Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions with MCC, with CC, and without CC/MCC, respectively) and below proposed new MS-DRG 402. We proposed to sequence proposed new MS-DRGs 447 and 448 (Multiple Level Spinal Fusion Except Cervical with MCC and without MCC, respectively) above proposed revised MS-DRGs 459 and 460 (Single Level Spinal Fusion Except Cervical with and without MCC, respectively) and below MS-DRGs 456, 457, and 458.

Lastly, as discussed in section II.C.9. of the preamble of the proposed rule and this final rule, we proposed to revise the surgical hierarchy for the MDC 17 (Myeloproliferative Diseases and Disorders, Poorly Differentiated Neoplasms) MS-DRGs as follows: For the MDC 17 MS-DRGs, we proposed to sequence proposed new MS-DRG 850 (Acute Leukemia with Other Procedures) above MS-DRGs 823, 824, and 825 (Lymphoma and Non-Acute Leukemia with Other Procedures with MCC, with CC, and without CC/MCC, respectively) and below MS-DRGs 820, 821, and 822 (Lymphoma and Leukemia with Major O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

Our proposal for Appendix D MS-DRG Surgical Hierarchy by MDC and MS-DRG of the version of the ICD-10 MS-DRG Definitions Manual Version 42 is illustrated in the following tables.

BILLING CODE 4120-01-P

Proposed Surgical Hierarchy: MDC 05	
MS-DRG 215	Other Heart Assist System Implant
MS-DRG 212	Concomitant Aortic and Mitral Valve Procedures
MS-DRGs 216-221	Cardiac Valve and Other Major Cardiothoracic Procedures
MS-DRGs 231-236	Coronary Bypass
Proposed New MS-DRG 317	Concomitant Left Atrial Appendage Closure and Cardiac Ablation
MS-DRG 275	Cardiac Defibrillator Implant with Cardiac Catheterization and MCC
Proposed New Title MS-DRG 276	Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator
MS-DRG 277	Cardiac Defibrillator Implant without MCC
MS-DRGs 266-267	Endovascular Cardiac Valve Replacement and Supplement Procedures
MS-DRGs 268-269	Aortic and Heart Assist Procedures
MS-DRGs 228-229	Other Cardiothoracic Procedures
MS-DRGs 319-320	Other Endovascular Cardiac Valve Procedures
MS-DRGs 270-272	Other Major Cardiovascular Procedures
MS-DRGs 239-241	Amputation for Circulatory System Disorders Except Upper Limb and Toe
MS-DRGs 242-244	Permanent Cardiac Pacemaker Implant
MS-DRG 245	AICD Generator Procedures
MS-DRG 265	AICD Lead Procedures
MS-DRGs 273-274	Percutaneous and Other Intracardiac Procedures
MS-DRGs 323-325	Coronary Intravascular Lithotripsy
MS-DRGs 321-322	Percutaneous Cardiovascular Procedures with Intraluminal Device
MS-DRGs 250-251	Percutaneous Cardiovascular Procedures without Intraluminal Device
MS-DRGs 278-279	Ultrasound Accelerated and Other Thrombolysis
MS-DRGs 252-254	Other Vascular Procedures
MS-DRGs 255-257	Upper Limb and Toe Amputation for Circulatory System Disorders
MS-DRGs 258-259	Cardiac Pacemaker Device Replacement
MS-DRGs 260-262	Cardiac Pacemaker Revision Except Device Replacement
MS-DRG 263	Vein Ligation and Stripping
MS-DRG 264	Other Circulatory O.R Procedures

Proposed Surgical Hierarchy: MDC 08	
Delete MS-DRGs 453-455	Combined Anterior and Posterior Spinal Fusion
Proposed New MS-DRGs 426-428	Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical
Proposed New MS-DRG 402	Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical
Proposed New MS-DRGs 429-430	Combined Anterior and Posterior Cervical Spinal Fusion
MS-DRGs 456-458	Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions
Proposed New MS-DRGs 447-448	Multiple Level Spinal Fusion Except Cervical
Proposed New Title MS-DRGs 459-460	Single Level Spinal Fusion Except Cervical
MS-DRGs 461-462	Bilateral or Multiple Major Joint Procedures of Lower Extremity
MS-DRGs 463-465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders
MS-DRGs 466-468	Revision of Hip or Knee Replacement
MS-DRGs 521-522	Hip Replacement with Principal Diagnosis of Hip Fracture
MS-DRGs 469-470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity
MS-DRGs 471-473	Cervical Spinal Fusion
MS-DRGs 474-476	Amputation for Musculoskeletal System and Connective Tissue Disorders
MS-DRGs 477-479	Biopsies of Musculoskeletal System and Connective Tissue
MS-DRGs 480-482	Hip and Femur Procedures Except Major Joint
MS-DRG 483	Major Joint or Limb Reattachment Procedures of Upper Extremities
MS-DRGs 485-489	Knee Procedures
MS-DRGs 518-520	Back and Neck Procedures Except Spinal Fusion
MS-DRGs 492-494	Lower Extremity and Humerus Procedures Except Hip, Foot and Femur
MS-DRGs 495-497	Local Excision and Removal of Internal Fixation Devices Except Hip and Femur
MS-DRGs 498-499	Local Excision and Removal of Internal Fixation Devices of Hip and Femur
MS-DRGs 500-502	Soft Tissue Procedures
MS-DRGs 503-505	Foot Procedures
MS-DRG 506	Major Thumb or Joint Procedures
MS-DRGs 507-508	Major Shoulder or Elbow Joint Procedures
MS-DRG 509	Arthroscopy
MS-DRGs 510-512	Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures
MS-DRGs 513-514	Hand or Wrist Procedures, Except Major Thumb or Joint Procedures
MS-DRGs 515-517	Other Musculoskeletal System and Connective Tissue O.R. Procedures

Proposed Surgical Hierarchy: MDC 17	
MS-DRGs 820-822	Lymphoma and Leukemia with Major O.R. Procedures
Proposed New MS-DRG 850	Acute Leukemia with Other Procedures
MS-DRGs 823-825	Lymphoma and Non-Acute Leukemia with Other Procedures
MS-DRGs 826-828	Myeloproliferative disorders or Poorly Differentiated Neoplasms with Major O.R. Procedures
MS-DRGs 829-830	Myeloproliferative disorders or Poorly Differentiated Neoplasms with Other O.R. Procedures

BILLING CODE 4120-01-C

Comment: A few commenters stated that they acknowledged the proposed conforming changes to the surgical hierarchy in association with the proposed MS-DRG classification changes, and acknowledged that the MS-DRG weight impacts the cost analysis, which in turn affects the hierarchy in the GROUPER. Regarding the proposed changes to MDC 08, the commenters stated that it is important to consider that it is not all multiple level spinal fusion procedures that appear to have the greatest impact on the proposed surgical hierarchy sequencing, rather it appears that it is the combined spinal fusion procedures. The commenters specified that the four highest MS-DRG categories listed in the proposed surgical hierarchy table for

MDC 08 reflect combined spinal fusion procedures (MS-DRGs 453, 454, 455, 426, 427, 428, 420, 429, and 430). The commenters also remarked that proposed MS-DRGs 447 and 448, which describe multiple level spinal fusion procedures, are proposed to be sequenced below proposed MS-DRG 402 that describes single level combined anterior and posterior spinal fusion procedures, and below existing MS-DRGs 456, 457, and 458 that include both single level and multiple level spinal fusion procedures. The commenters stated that although they agreed with the proposed surgical hierarchy, the data appear to indicate that it is not only the multiple level spinal fusion procedures that are impacting the length of stay and average

costs among the proposed MS-DRGs since the proposed MS-DRGs describing combined spinal fusion procedures appear to warrant the highest hierarchy regardless of single level or multiple levels. According to the commenters, the discussion in the proposed rule suggested that the number of levels impacts resource utilization, however, the data to differentiate cases where both multiple and single level spinal fusion procedures were performed on the same patient or during the same operative episode did not appear to impact resource utilization based on the data analysis provided.

Response: We appreciate the commenters' feedback and support. We note that while the commenters listed MS-DRGs 453, 454, and 455 among one

of the four categories reflecting combined spinal fusion procedures having the greatest impact in the proposed surgical hierarchy for MDC 08, we believe that since those MS-DRGs were proposed to be deleted, the commenters' intent was for CMS to instead consider the three categories of proposed spinal fusion MS-DRGs (426, 427, and 428; 402; 429 and 430) for which the proposed logic for case assignment was derived from MS-DRGs 453, 454, and 455. Because the proposed logic for case assignment to the three categories of proposed spinal fusion MS-DRGs includes both concepts, (that is, multiple level combined spinal fusion procedures and single level combined spinal fusion procedures), we believe additional review is warranted with respect to the commenters' concerns regarding which aspect may have a greater impact on resource utilization. We intend to consider if the development of evaluation criteria would be useful for future proposed modifications to the surgical hierarchy

for MS-DRGs that have meaningful changes to the clinical logic. In the absence of a specific example, we are unclear why the commenter referenced data to differentiate cases where both multiple and single level spinal fusion procedures were performed on the same patient or during the same operative episode and its impact on resource utilization with respect to the data analysis provided in the proposed rule since, as stated in the proposed rule, the spinal fusion cases (for example, from MS-DRGs 453, 454, and 455) were separated into three categories (single level combined anterior and posterior fusions except cervical, multiple level combined anterior and posterior fusions except cervical, and combined anterior and posterior cervical spinal fusions), according to the proposed logic lists made available in Tables 6P.2d, 6P.2e, and 6P.2f in association with the proposed rule. The data analysis findings presented in the proposed rule show the difference in the number of

cases, average length of stay, and average costs between multiple level and single level combined anterior and posterior spinal fusion cases. In consideration of the proposed logic, it would not be possible for a case to be reflected under both proposed MS-DRG categories at the same time. Therefore, after consideration of the public comments we received, and based on the changes that we are finalizing for FY 2025, as discussed in section II.C. of the preamble of this final rule, we are finalizing our proposals to modify the existing surgical hierarchy, effective with the ICD-10 MS-DRGs Version 42, with modification. As discussed in section II.C.6.b., we are deleting MS-DRGs 459 and 460 and creating new MS-DRGs 450 and 451 (Single Level Spinal Fusion Except Cervical with MCC and without MCC, respectively). The finalized surgical hierarchy for MDC 08 is shown in the following table.

Surgical Hierarchy: MDC 08	
MS-DRGs 426-428	Multiple Level Combined Anterior and Posterior Spinal Fusion Except Cervical
MS-DRG 402	Single Level Combined Anterior and Posterior Spinal Fusion Except Cervical
MS-DRGs 429-430	Combined Anterior and Posterior Cervical Spinal Fusion
MS-DRGs 456-458	Spinal Fusion Except Cervical with Spinal Curvature, Malignancy, Infection or Extensive Fusions
MS-DRGs 447-448	Multiple Level Spinal Fusion Except Cervical
MS-DRGs 450-451	Single Level Spinal Fusion Except Cervical
MS-DRGs 461-462	Bilateral or Multiple Major Joint Procedures of Lower Extremity
MS-DRGs 463-465	Wound Debridement and Skin Graft Except Hand for Musculoskeletal and Connective Tissue Disorders
MS-DRGs 466-468	Revision of Hip or Knee Replacement
MS-DRGs 521-522	Hip Replacement with Principal Diagnosis of Hip Fracture
MS-DRGs 469-470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity
MS-DRGs 471-473	Cervical Spinal Fusion
MS-DRGs 474-476	Amputation for Musculoskeletal System and Connective Tissue Disorders
MS-DRGs 477-479	Biopsies of Musculoskeletal System and Connective Tissue
MS-DRGs 480-482	Hip and Femur Procedures Except Major Joint
MS-DRG 483	Major Joint or Limb Reattachment Procedures of Upper Extremities
MS-DRGs 485-489	Knee Procedures
MS-DRGs 518-520	Back and Neck Procedures Except Spinal Fusion
MS-DRGs 492-494	Lower Extremity and Humerus Procedures Except Hip, Foot and Femur
MS-DRGs 495-497	Local Excision and Removal of Internal Fixation Devices Except Hip and Femur
MS-DRGs 498-499	Local Excision and Removal of Internal Fixation Devices of Hip and Femur
MS-DRGs 500-502	Soft Tissue Procedures
MS-DRGs 503-505	Foot Procedures
MS-DRG 506	Major Thumb or Joint Procedures
MS-DRGs 507-508	Major Shoulder or Elbow Joint Procedures
MS-DRG 509	Arthroscopy
MS-DRGs 510-512	Shoulder, Elbow or Forearm Procedures, Except Major Joint Procedures
MS-DRGs 513-514	Hand or Wrist Procedures, Except Major Thumb or Joint Procedures
MS-DRGs 515-517	Other Musculoskeletal System and Connective Tissue O.R. Procedures

For issues pertaining to the surgical hierarchy, as with other MS-DRG related requests, we encourage

interested parties to submit comments no later than October 20, 2024, via the Medicare Electronic Application

Request Information System™ (MEARIS™) at <https://mearis.cms.gov/public/home>, so that they can be

considered for possible inclusion in the annual proposed rule. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

15. Maintenance of the ICD–10–CM and ICD–10–PCS Coding Systems

In September 1985, the ICD–9–CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the Centers for Disease Control and Prevention's (CDC) National Center for Health Statistics (NCHS) and CMS, charged with maintaining and updating the ICD–9–CM system. The final update to ICD–9–CM codes was made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD–10 Coordination and Maintenance Committee, effective with the March 19–20, 2014 meeting. The ICD–10 Coordination and Maintenance Committee addresses updates to the ICD–10–CM and ICD–10–PCS coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD–9–CM diagnosis and procedure codes by fiscal year can be found on the CMS website at: <https://www.cms.gov/medicare/coding-billing/icd-10-codes/icd-9-cm-diagnosis-procedure-codes-abbreviated-and-full-code-titles>.

The official list of ICD–10–CM and ICD–10–PCS codes can be found on the CMS website at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html>.

The NCHS has lead responsibility for the ICD–10–CM and ICD–9–CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD–10–PCS and ICD–9–CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the previously mentioned process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed during the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2025 at a public meeting held on September 12–13, 2023, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 15, 2023.

The Committee held its Spring 2024 meeting on March 19–20, 2024. The deadline for submitting comments on these code proposals was April 19, 2024. It was announced at this meeting that any new diagnosis and procedure codes for which there was consensus of public support, and for which complete tabular and indexing changes would be made by June 2024 would be included in the October 1, 2024 update to the ICD–10–CM diagnosis and ICD–10–PCS procedure code sets. As discussed in earlier sections of the preamble of this final rule, there are new, revised, and deleted ICD–10–CM diagnosis codes and ICD–10–PCS procedure codes that are captured in Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles, and Table 6F.—Revised Procedure Code Titles for this final rule, which are available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>.

The code titles are adopted as part of the ICD–10 Coordination and Maintenance Committee process. Therefore, although we make the code titles available for the IPPS proposed and final rules, they are not subject to comment in the proposed or final rule. Because of the length of these tables, they are not published in the Addendum to the proposed or final rule. Rather, they are available on the CMS website as discussed in section VI. of the Addendum to the proposed rule and this final rule.

Recordings for the virtual meeting discussions of the procedure codes at the Committee's September 12–13, 2023 meeting and the March 19–20, 2024 meeting can be obtained from the CMS website at: <https://www.cms.gov/Medicare/Coding/ICD10/C-and-M-Meeting-Materials>. The materials for the discussions relating to diagnosis codes at the September 12–13, 2023 meeting and March 19–20, 2024 meeting can be found at: <https://www.cdc.gov/nchs/icd/icd-10-maintenance/meetings.html>. These websites also provide detailed information about the Committee, including information on requesting a new code, participating in a Committee meeting, timeline requirements and meeting dates.

We encourage commenters to submit questions and comments on coding issues involving diagnosis codes via Email to: nchsicd10cm@cdc.gov.

Questions and comments concerning the procedure codes should be submitted via Email to: ICDProcedureCodeRequest@cms.hhs.gov.

As discussed in the proposed rule, CMS implemented 41 new procedure codes including the insertion of a palladium-103 collagen implant into the brain, the excision or resection of intestinal body parts using a laparoscopic hand-assisted approach, the transfer of omentum for pedicled omentoplasty procedures, and the administration of talquetamab into the ICD–10–PCS classification effective with discharges on and after April 1, 2024. The procedure codes are as follows:

BILLING CODE 4120-01-P

Procedure Code	Description	O.R.	MDC	MS-DRG
00H005Z	Insertion of radioactive element, palladium-103 collagen implant into brain, open approach	Y	01 01 21 24	023-024 025-027 907-909 955
02583ZF	Destruction of conduction mechanism using irreversible electroporation, percutaneous approach	Y	05	273-274
07TP4ZG	Resection of spleen, percutaneous endoscopic approach, hand-assisted	Y	05 06 08 16 17 17 21 24	264 356-358 515-517 799-801 820-822 826-828 907-909 957-959
097N0ZZ	Dilation of nasopharynx, open approach	Y	01 03 21 24	040-042 143-145 907-909 957-959
097N7ZZ	Dilation of nasopharynx, via natural or artificial opening	Y	01 03 21 24	040-042 143-145 907-909 957-959
097N8ZZ	Dilation of nasopharynx, via natural or artificial opening endoscopic	Y	01 03 21 24	040-042 143-145 907-909 957-959
0DBF4ZG	Excision of right large intestine, percutaneous endoscopic approach, hand-assisted	Y	05 06 10 17 17 21 24	264 329-331 628-630 820-822 826-828 907-909 957-959
0DBG4ZG	Excision of left large intestine, percutaneous endoscopic approach, hand-assisted	Y	05 06 10 17 17 21 24	264 329-331 628-630 820-822 826-828 907-909 957-959
0DBJ4ZG	Excision of appendix, percutaneous endoscopic approach, hand-assisted	Y	06	397-399
0DBL4ZG	Excision of transverse colon, percutaneous endoscopic approach, hand-assisted	Y	05 06 10 17 17 21 24	264 329-331 628-630 820-822 826-828 907-909 957-959
0DBM4ZG	Excision of descending colon, percutaneous endoscopic approach, hand-assisted	Y	05 06 10 17 17 21 24	264 329-331 628-630 820-822 826-828 907-909 957-959
0DBN4ZG	Excision of sigmoid colon, percutaneous endoscopic approach, hand-assisted	Y	05 06 10 17 17 21 24	264 329-331 628-630 820-822 826-828 907-909 957-959
0DTF4ZG	Resection of right large intestine, percutaneous endoscopic approach, hand-assisted	Y	05 06 10	264 329-331 628-630

			17 17 21 24	820-822 826-828 907-909 957-959
0DTG4ZG	Resection of left large intestine, percutaneous endoscopic approach, hand-assisted	Y	05 06 10 17 17	264 329-331 628-630 820-822 826-828 907-909 957-959
0DTJ4ZG	Resection of appendix, percutaneous endoscopic approach, hand-assisted	Y	05 06 13 21 24	264 397-399 749-750 907-909 957-959
0DTL4ZG	Resection of transverse colon, percutaneous endoscopic approach, hand-assisted	Y	05 06 17 17 21 24	264 329-331 820-822 826-828 907-909 957-959
0DTM4ZG	Resection of descending colon, percutaneous endoscopic approach, hand-assisted	Y	05 06 17 17 21 24	264 329-331 820-822 826-828 907-909 957-959
0DTN4ZG	Resection of sigmoid colon, percutaneous endoscopic approach, hand-assisted	Y	06 11 17 17 21 24	329-331 673-675 820-822 826-828 907-909 957-959
0DXU0ZV	Transfer omentum to thoracic region, open approach	Y	04 21 24	166-168 907-909 957-959
0DXU0ZW	Transfer omentum to abdominal region, open approach	Y	06 21 24	353-355 907-909 957-959
0DXU0ZX	Transfer omentum to pelvic region, open approach	Y	06	350-352
0DXU0ZY	Transfer omentum to inguinal region, open approach	Y	06	350-352
0DXU4ZV	Transfer omentum to thoracic region, percutaneous endoscopic approach	Y	04 21 24	166-168 907-909 957-959
0DXU4ZW	Transfer omentum to abdominal region, percutaneous endoscopic approach	Y	06 21 24	353-355 907-909 957-959
0DXU4ZX	Transfer omentum to pelvic region, percutaneous endoscopic approach	Y	06	350-352
0DXU4ZY	Transfer omentum to inguinal region, percutaneous endoscopic approach	Y	06	350-352
0FB04ZG	Excision of liver, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959
0FB14ZG	Excision of right lobe liver, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959
0FB24ZG	Excision of left lobe liver, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959
0FBG4ZG	Excision of pancreas, percutaneous endoscopic approach, hand-assisted	Y	07 10 21 24	405-407 628-630 907-909 957-959
0FT04ZG	Resection of liver, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959

0FT14ZG	Resection of right lobe liver, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959
0FT24ZG	Resection of left lobe liver, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959
0FT44ZG	Resection of gallbladder, percutaneous endoscopic approach, hand-assisted	Y	06 07 07 17 17 21 24	356-358 411-413 417-419 820-822 826-828 907-909 957-959
0FTG4ZG	Resection of pancreas, percutaneous endoscopic approach, hand-assisted	Y	07 21 24	405-407 907-909 957-959
0TT04ZG	Resection of right kidney, percutaneous endoscopic approach, hand-assisted	Y	11 21 24	656-661 907-909 957-959
0TT14ZG	Resection of left kidney, percutaneous endoscopic approach, hand-assisted	Y	11 21 24	656-661 907-909 957-959
0TT24ZG	Resection of bilateral kidneys, percutaneous endoscopic approach, hand-assisted	Y	11 21 24	656-661 907-909 957-959
3E0L317*	Introduction of other thrombolytic into pleural cavity, percutaneous approach	N		
XW01329*	Introduction of talquetamab antineoplastic into subcutaneous tissue, percutaneous approach, new technology group 9	N		
XX2KXP9*	Monitoring of interstitial fluid volume, sub-epidermal moisture using electrical biocapacitance, external approach, new technology group 9	N		

*As the procedure codes are designated as non-O.R. procedures, there is no assigned MDC or MS-DRG. The ICD-10 MS-DRG assignment is dependent on the reported principal diagnosis, any secondary diagnoses defined as a complication or comorbidity (CC) or major complication or comorbidity (MCC), procedures or services performed, age, sex, and discharge status.

BILLING CODE 4120-01-C

The 41 procedure codes are also reflected in Table 6B—New Procedure Codes in association with the proposed rule and available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS>. As with the other new procedure codes and MS-DRG assignments included in Table 6B in association with the proposed rule, we solicited public comments on the most appropriate MDC, MS-DRG, and operating room status assignments for these codes for FY 2025, as well as any other options for the GROUPER logic. We discuss the comments we received on these assignments in section II.C.13. of this final rule as well as our finalized assignments, including to add new procedure code 02583ZF to the logic for case assignment to new MS-DRG 317 for FY 2025, as reflected in Table 6B.—New Procedure Codes in association with this final rule.

In the proposed rule, we also noted that Change Request (CR) 13458, Transmittal 12384, titled “April 2024

Update to the Medicare Severity—Diagnosis Related Group (MS-DRG) Grouper and Medicare Code Editor (MCE) Version 41.1” was issued on November 30, 2023 (available on the CMS website at: <https://www.cms.gov/regulations-and-guidance/guidance/transmittals/2023-transmittals/r12384cp>) regarding the release of an updated version of the ICD-10 MS-DRG GROUPER and Medicare Code Editor software, Version 41.1, effective with discharges on and after April 1, 2024, reflecting the new procedure codes. The updated software, along with the updated ICD-10 MS-DRG Version 41.1 Definitions Manual and the Definitions of Medicare Code Edits Version 41.1 manual is available at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that

would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of the Medicare Modernization Act (Pub. L. 108-173) included a requirement for updating diagnosis and procedure codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) of Public Law 108-173 amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) until the fiscal year that begins after such date. This requirement improves the recognition of new technologies under the IPPS by providing information on these new technologies at an earlier date. Data will

be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108–173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee meeting were considered for an April 1 update if a strong and convincing case was made by the requestor during the Committee’s public meeting. The request needed to identify the reason why a new code was needed in April for purposes of the new technology process. Meeting participants and those reviewing the Committee meeting materials were provided the opportunity to comment on the expedited request. We refer the reader to the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950) for further discussion of the implementation of this prior April 1 update for purposes of the new technology add-on payment process.

However, as discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 44950 through 44956), we adopted an April 1 implementation date, in addition to the annual October 1 update, beginning with April 1, 2022. We noted that the intent of this April 1 implementation date is to allow flexibility in the ICD–10 code update process. With this new April 1 update, CMS now uses the same process for consideration of all requests for an April 1 implementation date, including for purposes of the new technology add-on payment process (that is, the prior process for consideration of an April 1 implementation date only if a strong and convincing case was made by the requestor during the meeting no longer applies). We are continuing to use several aspects of our existing established process to implement new codes through the April 1 code update, which includes presenting proposals for April 1 consideration at the September ICD–10 Coordination and Maintenance Committee meeting, requesting public comments, reviewing the public comments, finalizing codes, and announcing the new codes with their assignments consistent with the new GROUPER release information. We note that under our established process,

requestors indicate whether they are submitting their code request for consideration for an April 1 implementation date or an October 1 implementation date. The ICD–10 Coordination and Maintenance Committee makes efforts to accommodate the requested implementation date for each request submitted. However, the Committee determines which requests are to be presented for consideration for an April 1 implementation date or an October 1 implementation date. As discussed earlier in this section of the preamble of this final rule, there were code proposals presented for an April 1, 2024 implementation at the September 12–13, 2023 Committee meetings. Following the receipt of public comments, the code proposals were approved and finalized, therefore, there were new codes implemented April 1, 2024.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule, consistent with the process we outlined for the April 1 implementation date, we announced the new codes in November 2023 and provided the updated code files in December 2023 and ICD–10–CM Official Guidelines for Coding and Reporting in January 2024. In the February 05, 2024 **Federal Register** (89 FR 7710), notice for the March 19–20, 2024 ICD–10 Coordination and Maintenance Committee Meeting was published that includes the tentative agenda and identifies which topics are related to a new technology add-on payment application. By February 1, 2024, we made available the updated Version 41.1 ICD–10 MS–DRG GROUPER software and related materials on the CMS web page at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software>.

ICD–9–CM addendum and code title information is published on the CMS website at <https://www.cms.gov/medicare/coding-billing/icd-10-codes/updates-revisions-icd-9-cm-procedure-codes-addendum>. ICD–10–CM and ICD–10–PCS addendum and code title information is published on the CMS website at <https://www.cms.gov/medicare/coding-billing/icd-10-codes>. CMS also sends electronic files containing all ICD–10–CM and ICD–10–PCS coding changes to its Medicare contractors for use in updating their systems and providing education to providers. Information on ICD–10–CM diagnosis codes, along with the Official ICD–10–CM Coding Guidelines, can be found on the CDC website at <https://www.cdc.gov/nchs/icd/icd-10-cm/files.html>. Additionally, information on

new, revised, and deleted ICD–10–CM diagnosis and ICD–10–PCS procedure codes is provided to the AHA for publication in the Coding Clinic for ICD–10. The AHA also distributes coding update information to publishers and software vendors.

In the proposed rule, we noted that for FY 2024, there are currently 74,044 diagnosis codes and 78,638 procedure codes. We also noted that as displayed in Table 6A.—New Diagnosis Codes and in Table 6B.—New Procedure Codes associated with the proposed rule (and available on the CMS website at <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps>), there are 252 new diagnosis codes that had been finalized for FY 2025 at the time of the development of the proposed rule and 41 new procedure codes that were effective with discharges on and after April 1, 2024.

As discussed in section II.C.13 of the preamble of this final rule, we are making Table 6A.—New Diagnosis Codes, Table 6B.—New Procedure Codes, Table 6C.—Invalid Diagnosis Codes, Table 6D.—Invalid Procedure Codes, Table 6E.—Revised Diagnosis Code Titles and Table 6F.—Revised Procedure Code Titles available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> in association with this final rule. As shown in Table 6B.—New Procedure Codes, there were procedure codes discussed at the March 19–20, 2024 ICD–10 Coordination and Maintenance Committee meeting that were not finalized in time to include in the proposed rule and are identified with an asterisk. We refer the reader to Table 6B.—New Procedure Codes associated with this final rule and available on the CMS website at: <https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps> for the detailed list of these 371 new procedure codes finalized for FY 2025.

We also note, as reflected in Table 6C.—Invalid Diagnosis Codes and in Table 6D.—Invalid Procedure Codes, there are a total of 36 diagnosis codes and 61 procedure codes that will become invalid effective October 1, 2024. Based on these code updates, effective October 1, 2024, there are a total of 74,260 ICD–10–CM diagnosis codes and 78,948 ICD–10–PCS procedure codes for FY 2025 as shown in the following table.

FY 2024 ICD-10-CM	74,044 total codes	FY 2024 ICD-10-PCS	78,638 total codes
FY 2025 ICD-10-CM	252 additions	FY 2025 ICD-10-PCS	371 additions
FY 2025 ICD-10-CM	36 deletions	FY 2025 ICD-10-PCS	61 deletions
FY 2025 ICD-10-CM	74,260 total codes	FY 2025 ICD-10-PCS	78,948 total codes

As stated previously, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed at the ICD-10 Coordination and Maintenance Committee meeting. The code titles are adopted as part of the ICD-10 Coordination and Maintenance Committee process. Thus, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

16. Replaced Devices Offered Without Cost or With a Credit

a. Background

In the FY 2008 IPPS final rule with comment period (72 FR 47246 through 47251), we discussed the topic of Medicare payment for devices that are replaced without cost or where credit for a replaced device is furnished to the hospital. We implemented a policy to reduce a hospital’s IPPS payment for certain MS-DRGs where the implantation of a device that subsequently failed or was recalled determined the base MS-DRG assignment. At that time, we specified that we will reduce a hospital’s IPPS payment for those MS-DRGs where the

hospital received a credit for a replaced device equal to 50 percent or more of the cost of the device.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51556 through 51557), we clarified this policy to state that the policy applies if the hospital received a credit equal to 50 percent or more of the cost of the replacement device and issued instructions to hospitals accordingly.

b. Changes for FY 2025

As discussed in section II.C.5. of the preamble of the proposed rule and this final rule, for FY 2025, we proposed to revise the title of MS-DRG 276 from “Cardiac Defibrillator Implant with MCC” to “Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator”.

As stated in the FY 2016 IPPS/LTCH PPS proposed rule (80 FR 24409), we generally map new MS-DRGs onto the list when they are formed from procedures previously assigned to MS-DRGs that are already on the list. Currently, MS-DRG 276 is on the list of MS-DRGs subject to the policy for payment under the IPPS for replaced devices offered without cost or with a credit as shown in the following table.

Therefore, we proposed that if the applicable proposed MS-DRG changes are finalized, we would make conforming changes to the title of MS-DRG 276 as reflected in the table that follows. We also proposed to continue to include the existing MS-DRGs currently subject to the policy.

As discussed in section II.C.5. of the preamble of this final rule, we are finalizing our proposal to revise the title of MS-DRG 276 from “Cardiac Defibrillator Implant with MCC” to “Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator”. We did not receive any public comments opposing our proposal make conforming changes to the title of MS-DRG 276 in the list of MS-DRGs that will be subject to the replaced devices offered without cost or with a credit policy effective October 1, 2024. Additionally, we did not receive any public comments opposing our proposal to continue to include the existing MS-DRGs currently subject to the policy. Therefore, we are finalizing the list of MS-DRGs in the following table that will be subject to the replaced devices offered without cost or with a credit policy effective October 1, 2024.

BILLING CODE 4120-01-P

MDC	MS-DRG	MS-DRG Title
Pre-MDC	001	Heart Transplant or Implant of Heart Assist System with MCC
Pre-MDC	002	Heart Transplant or Implant of Heart Assist System without MCC
01	023	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis with MCC or Chemotherapy Implant or Epilepsy with Neurostimulator
01	024	Craniotomy with Major Device Implant or Acute Complex CNS Principal Diagnosis without MCC
01	025	Craniotomy and Endovascular Intracranial Procedures with MCC
01	026	Craniotomy and Endovascular Intracranial Procedures with CC
01	027	Craniotomy and Endovascular Intracranial Procedures without CC/MCC
01	040	Peripheral, Cranial Nerve and Other Nervous System Procedures with MCC
01	041	Peripheral, Cranial Nerve and Other Nervous System Procedures with CC or Peripheral Neurostimulator
01	042	Peripheral, Cranial Nerve and Other Nervous System Procedures without CC/MCC
03	140	Major Head and Neck Procedures with MCC
03	141	Major Head and Neck Procedures with CC
03	142	Major Head and Neck Procedures without CC/MCC
05	215	Other Heart Assist System Implant
05	216	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with MCC
05	217	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization with CC
05	218	Cardiac Valve and Other Major Cardiothoracic Procedure with Cardiac Catheterization without CC/MCC
05	219	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with MCC
05	220	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization with CC
05	221	Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheterization without CC/MCC
05	242	Permanent Cardiac Pacemaker Implant with MCC

05	243	Permanent Cardiac Pacemaker Implant with CC
05	244	Permanent Cardiac Pacemaker Implant without CC/MCC
05	245	AICD Generator Procedures
05	258	Cardiac Pacemaker Device Replacement with MCC
05	259	Cardiac Pacemaker Device Replacement without MCC
05	260	Cardiac Pacemaker Revision Except Device Replacement with MCC
05	261	Cardiac Pacemaker Revision Except Device Replacement with CC
05	262	Cardiac Pacemaker Revision Except Device Replacement without CC/MCC
05	265	AICD Lead Procedures
05	266	Endovascular Cardiac Valve Replacement and Supplement Procedures with MCC
05	267	Endovascular Cardiac Valve Replacement and Supplement Procedures without MCC
05	268	Aortic and Heart Assist Procedures Except Pulsation Balloon with MCC
05	269	Aortic and Heart Assist Procedures Except Pulsation Balloon without MCC
05	270	Other Major Cardiovascular Procedures with MCC
05	271	Other Major Cardiovascular Procedures with CC
05	272	Other Major Cardiovascular Procedures without CC/MCC
05	275	Cardiac Defibrillator Implant with Cardiac Catheterization and MCC
05	276	Cardiac Defibrillator Implant with MCC or Carotid Sinus Neurostimulator
05	277	Cardiac Defibrillator Implant without MCC
05	319	Other Endovascular Cardiac Valve Procedures with MCC
05	320	Other Endovascular Cardiac Valve Procedures without MCC
08	461	Bilateral or Multiple Major Joint Procedures of Lower Extremity with MCC
08	462	Bilateral or Multiple Major Joint Procedures of Lower Extremity without MCC
08	466	Revision of Hip or Knee Replacement with MCC
08	467	Revision of Hip or Knee Replacement with CC
08	468	Revision of Hip or Knee Replacement without CC/MCC
08	469	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity with MCC or Total Ankle Replacement
08	470	Major Hip and Knee Joint Replacement or Reattachment of Lower Extremity without MCC
08	521	Hip Replacement with Principal Diagnosis of Hip Fracture with MCC
08	522	Hip Replacement with Principal Diagnosis of Hip Fracture without MCC

BILLING CODE 4120-01-C

The final list of MS-DRGs subject to the IPPS policy for replaced devices offered without cost or with a credit will

be issued to providers in the form of a Change Request (CR).

17. Out of Scope Public Comments Received

We received public comments on MS-DRG related issues that were

outside the scope of the proposals included in the FY 2025 IPPS/LTCH PPS proposed rule.

Because we consider these public comments to be outside the scope of the proposed rule, we are not addressing them in this final rule. As stated in section II.C.1.b. of the preamble of this final rule, we encourage individuals with comments about MS-DRG classifications to submit these comments no later than October 20, 2024, via the Medicare Electronic Application Request Information System™ (MEARIS™) at: <https://mearis.cms.gov/public/home>, so that they can be considered for possible inclusion in the annual proposed rule. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

D. Recalibration of the FY 2025 MS-DRG Relative Weights

1. Data Sources for Developing the Relative Weights

Consistent with our established policy, in developing the MS-DRG relative weights for FY 2025, we proposed to use two data sources: claims data and cost report data. The claims data source is the MedPAR file, which includes fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2023 MedPAR data used in this final rule include discharges occurring on October 1, 2022, through September 30, 2023, based on bills received by CMS through March 31, 2024, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS).

The FY 2023 MedPAR file used in calculating the relative weights includes data for approximately 6,916,571 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR “GHO Paid” indicator field on the claim record is equal to “1” or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR “Indirect Medical Education (IME)” payment field, indicating that the claim was an “IME only” claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the March 2024 update of the FY 2023 MedPAR file complies with version 5010 of the X12 HIPAA

Transaction and Code Set Standards, and includes a variable called “claim type.” Claim type “60” indicates that the claim was an inpatient claim paid as fee-for-service. Claim types “61,” “62,” “63,” and “64” relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2025 also excludes claims with claim type values not equal to “60.” The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. In addition, the data exclude Rural Emergency Hospitals (REHs), including hospitals that subsequently became REHs after the period from which the data were taken. We note that the FY 2025 relative weights are based on the ICD-10-CM diagnosis codes and ICD-10-PCS procedure codes from the FY 2023 MedPAR claims data, grouped through the ICD-10 version of the FY 2025 GROUPER (Version 42).

The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the Healthcare Cost Report Information System (HCRIS). In general, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, for this final rule, we used the March 2024 update of the FY 2022 HCRIS for calculating the FY 2025 cost-based relative weights. Consistent with our historical practice, for this FY 2025 final rule, we are providing the version of the HCRIS from which we calculated these 19 cost-to-charge-ratios (CCRs) on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS>. Click on the link on the left side of the screen titled “FY 2025 IPPS Final Rule Home Page” or “Acute Inpatient Files for Download.”

2. Methodology for Calculation of the Relative Weights

a. General

We calculated the FY 2025 relative weights based on 19 CCRs. The methodology we proposed to use to calculate the FY 2025 MS-DRG cost-based relative weights based on claims data in the FY 2023 MedPAR file and data from the FY 2022 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the FY 2025 MS-DRG classifications discussed in sections II.B. and II.C. of the preamble of this final rule.
- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal,

and lung transplants (MS-DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2023 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)

- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS-DRG and before eliminating statistical outliers.

Section 108 of the Further Consolidated Appropriations Act, 2020 provides that, for cost reporting periods beginning on or after October 1, 2020, costs related to hematopoietic stem cell acquisition for the purpose of an allogeneic hematopoietic stem cell transplant shall be paid on a reasonable cost basis. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule for further discussion of the reasonable cost basis payment for cost reporting periods beginning on or after October 1, 2020 (85 FR 58835 through 58842). For FY 2022 and subsequent years, we subtract the hematopoietic stem cell acquisition charges from the total charges on each transplant bill that showed hematopoietic stem cell acquisition charges before computing the average cost for each MS-DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than \$30.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, implantable devices charges, supplies and equipment charges, therapy services charges, operating room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood and blood products charges, anesthesia charges, cardiac catheterization charges, CT scan charges, and MRI charges were also deleted.

- At least 92.6 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14

of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted.

- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS-DRG.

- Effective October 1, 2008, because hospital inpatient claims include a Present on Admission (POA) field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to “Y” for “Yes” for all claims that otherwise have an “N” (No) or a “U” (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a “Y” indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS-DRG). If the particular condition is not present on admission (that is, an “N” indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS-DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS-DRGs prior to the relative weight-setting process, the relative weights of these particular MS-DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower

severity MS-DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to “Y” only for relative weight-setting purposes for all claims that otherwise have an “N” or a “U” in the POA field. This resetting “forced” the more costly HAC claims into the higher severity MS-DRGs as appropriate, and the relative weights calculated for each MS-DRG more closely reflect the true costs of those cases.

In addition, in the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the Bundled Payments for Care Improvement (BPCI) initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to hospitals’ participation within these bundled payment models (77 FR 53341 through 53343). Specifically, because acute care hospitals participating in the BPCI Initiative still receive IPPS payments under section 1886(d) of the Act, we include all applicable data from these subsection (d) hospitals in our IPPS payment modeling and ratesetting calculations as if the hospitals were not participating in those models under the BPCI initiative. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process. For additional information on the BPCI initiative, we refer readers to the CMS’ Center for Medicare and Medicaid Innovation’s website at <https://innovation.cms.gov/initiatives/Bundled-Payments/index.html> and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343).

The participation of hospitals in the BPCI initiative concluded on September 30, 2018. The participation of hospitals in the BPCI Advanced model started on October 1, 2018. The BPCI Advanced model, tested under the authority of section 1115A of the Act, is comprised of a single payment and risk track, which bundles payments for multiple services that beneficiaries receive during a Clinical Episode. Acute care hospitals may participate in BPCI Advanced in one of two capacities: as a model Participant or as a downstream Episode Initiator. Regardless of the capacity in which they participate in the BPCI Advanced model, participating acute care hospitals will continue to receive IPPS payments under section

1886(d) of the Act. Acute care hospitals that are Participants also assume financial and quality performance accountability for Clinical Episodes in the form of a reconciliation payment. For additional information on the BPCI Advanced model, we refer readers to the BPCI Advanced web page on the CMS Center for Medicare and Medicaid Innovation’s website at <https://innovation.cms.gov/initiatives/bpci-advanced>. Consistent with our policy for FY 2024, and consistent with how we have treated hospitals that participated in the BPCI Initiative, for FY 2025, we continue to believe it is appropriate to include all applicable data from the subsection (d) hospitals participating in the BPCI Advanced model in our IPPS payment modeling and ratesetting calculations because, as noted previously, these hospitals are still receiving IPPS payments under section 1886(d) of the Act. Consistent with the FY 2024 IPPS/LTCH PPS final rule, we also proposed to include all applicable data from subsection (d) hospitals participating in the Comprehensive Care for Joint Replacement (CJR) Model in our IPPS payment modeling and ratesetting calculations.

The charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS-DRG for each of the 19 cost groups so that each MS-DRG had 19 standardized charge totals. Statistical outliers were then removed. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2022 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in a supplemental data file, Cost Center HGRIS Lines Supplemental Data File, posted via the internet on the CMS website for this final rule and available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS>. The supplemental data file shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center CCRs. We stated in the proposed rule that if we receive comments about the groupings in this

supplemental data file, we may consider these comments as we finalize our policy. However, we did not receive any comments on the groupings in this table, and therefore, we are finalizing the groupings as proposed.

Consistent with historical practice, we account for rare situations of non-monotonicity in a base MS-DRG and its severity levels, where the mean cost in the higher severity level is less than the mean cost in the lower severity level, in determining the relative weights for the different severity levels. If there are initially non-monotonic relative weights in the same base DRG and its severity levels, then we combine the cases that group to the specific non-monotonic MS-DRGs for purposes of relative weight calculations. For example, if there are two non-monotonic MS-DRGs, combining the cases across those two MS-DRGs results in the same relative weight for both MS-DRGs. The relative weight calculated using the combined cases for those severity levels is monotonic, effectively removing any non-monotonicity with the base DRG and its severity levels. For this FY 2025 final rule, this calculation was applied to address non-monotonicity for cases that grouped to the following: MS-DRG 016 and MS-DRG 017, MS-DRG 095 and MS-DRG 096, MS-DRG 504 and MS-DRG 505, MS-DRG 797 and MS-DRG 798. In the supplemental file titled AOR/BOR File, we include statistics for the affected MS-DRGs both separately and with cases combined.

We invited public comments on our proposals related to recalibration of the proposed FY 2025 relative weights and the changes in relative weights from FY 2024.

We received several comments that we consider to be out of scope. For example, a commenter requested a “device intensive” cost threshold. Because we consider these comments to be out of scope, we are not responding in this final rule.

After consideration of the comments received, we are finalizing our proposals without modifications related to the recalibration of the FY 2025 relative weights. We summarize and respond to comments relating to the methodology for calculating the relative weight for MS-DRG 018 in the next section of this final rule.

b. Relative Weight Calculation for MS-DRG 018

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58451 through 58453), we created MS-DRG 018 for cases that include procedures describing CAR T-cell therapies. We also finalized our proposal to modify our existing relative

weight methodology to ensure that the relative weight for MS-DRG 018 appropriately reflects the relative resources required for providing CAR T-cell therapy outside of a clinical trial, while still accounting for the clinical trial cases in the overall average cost for all MS-DRGs (85 FR 58599 through 58600). Specifically, we stated that clinical trial claims that group to new MS-DRG 018 would not be included when calculating the average cost for MS-DRG 018 that is used to calculate the relative weight for this MS-DRG, so that the relative weight reflects the costs of the CAR T-cell therapy drug. We stated that we identified clinical trial claims as claims that contain ICD-10-CM diagnosis code Z00.6 or contain standardized drug charges of less than \$373,000, which was the average sales price of KYMRIA and YESCARTA, the two CAR T-cell biological products licensed to treat relapsed/refractory large B-cell lymphoma as of the time of the development of the FY 2021 final rule. In addition, we stated that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for new MS-DRG 018 to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will not be included when calculating the average cost for new MS-DRG 018 to the extent such cases can be identified in the historical data.

We also finalized our proposal to calculate an adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS-DRGs and for purposes of budget neutrality and outlier simulations. We calculate this adjustor by dividing the average cost for cases that we identify as clinical trial cases by the average cost for cases that we identify as non-clinical trial cases, with the additional refinements that (a) when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the claim will be included when calculating the average cost for cases not determined to be clinical trial cases to the extent such cases can be identified in the historical data, and (b) when there is expanded access use of immunotherapy, these cases will be included when calculating the average cost for cases determined to be clinical trial cases to the extent such cases can be identified in the historical

data. We stated that to the best of our knowledge, there were no claims in the historical data used in the calculation of this adjustment for cases involving a clinical trial of a different product, and to the extent the historical data contain claims for cases involving expanded access use of immunotherapy we believe those claims would have drug charges less than \$373,000.

In the FY 2021 IPPS/LTCH PPS final rule (85 FR 58842), we also finalized an adjustment to the payment amount for applicable clinical trial and expanded access use immunotherapy cases that group to MS-DRG 018, and indicated that we would provide instructions for identifying these claims in separate guidance. Following the issuance of the FY 2021 IPPS/LTCH PPS final rule, we issued guidance²⁰ stating that providers may enter a Billing Note NTE02 “Expand Acc Use” on the electronic claim 837I or a remark “Expand Acc Use” on a paper claim to notify the MAC of expanded access use of CAR T-cell therapy. In this case, the MAC would add payer-only condition code “ZB” so that Pricer will apply the payment adjustment in calculating payment for the case. In cases when the CAR T-cell therapy product is purchased in the usual manner, but the case involves a clinical trial of a different product, the provider may enter a Billing Note NTE02 “Diff Prod Clin Trial” on the electronic claim 837I or a remark “Diff Prod Clin Trial” on a paper claim. In this case, the MAC would add payer-only condition code “ZC” so that the Pricer will not apply the payment adjustment in calculating payment for the case.

In the FY 2022 IPPS/LTCH PPS final rule, we revised MS-DRG 018 to include cases that report the procedure codes for CAR T-cell and non-CAR T-cell therapies and other immunotherapies (86 FR 44798 through 44806). We also finalized our proposal to continue to use the proxy of standardized drug charges of less than \$373,000 (86 FR 44965) to identify clinical trial claims. We also finalized use of this same proxy for the FY 2023 IPPS/LTCH PPS final rule (87 FR 48894).

Following the issuance of the FY 2023 IPPS/LTCH PPS final rule, we issued guidance²¹ stating where there is expanded access use of immunotherapy, the provider may submit condition code “90” on the claim so that Pricer will apply the payment adjustment in

²⁰ <https://www.cms.gov/files/document/r10571cp.pdf>.

²¹ <https://www.cms.gov/files/document/r11727cp.pdf>.

calculating payment for the case. We stated that MACs would no longer append Condition Code ‘ZB’ to inpatient claims reporting Billing Note NTE02 “Expand Acc Use” on the electronic claim 837I or a remark “Expand Acc Use” on a paper claim, effective for claims for discharges that occur on or after October 1, 2022.

In the FY 2024 IPPS/LTCH PPS final rule, we explained that the MedPAR claims data now includes a field that identifies whether or not the claim includes expanded access use of immunotherapy. We stated that for the FY 2022 MedPAR claims data, this field identifies whether or not the claim includes condition code ZB, and for the FY 2023 MedPAR data and subsequent years, this field will identify whether or not the claim includes condition code 90. We further noted that the MedPAR files now also include a variable that indicates whether the claim includes the payer-only condition code “ZC”, which identifies a case involving the clinical trial of a different product where the CAR T-cell, non-CAR T-cell, or other immunotherapy product is purchased in the usual manner.

Accordingly, and as discussed further in the FY 2024 IPPS/LTCH PPS final rule, we finalized two modifications to our methodology for identifying clinical trial claims and expanded access use claims in MS-DRG 018 (88 FR 58791). First, we finalized to exclude claims with the presence of condition code “90” (or, for FY 2024 ratesetting, which was based on the FY 2022 MedPAR data, the presence of condition code “ZB”) and claims that contain ICD-10-CM diagnosis code Z00.6 without payer-only code “ZC” that group to MS-DRG 018 when calculating the average cost for MS-DRG 018. Second, we finalized to no longer use the proxy of standardized drug charges of less than \$373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS-DRG 018. Accordingly, we finalized that in calculating the relative weight for MS-DRG 018 for FY 2024, only those claims that group to MS-DRG 018 that (1) contain ICD-10-CM diagnosis code Z00.6 and do not include payer-only code “ZC” or (2) contain condition code “ZB” (or, for subsequent fiscal years, condition code “90”) would be excluded from the calculation of the average cost for MS-DRG 018.

Consistent with this, we also finalized modifications to our calculation of the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights

for all MS-DRGs. We refer readers to the FY 2024 IPPS/LTCH PPS final rule for further discussion of these modifications (88 FR 58791).

In the FY 2025 IPPS/LTCH PPS proposed rule, we proposed to continue to use our methodology as modified in the FY 2024 IPPS/LTCH PPS final rule for identifying clinical trial claims and expanded access use claims in MS-DRG 018. First, we exclude claims with the presence of condition code “90” and claims that contain ICD-10-CM diagnosis code Z00.6 without payer-only code “ZC” that group to MS-DRG 018 when calculating the average cost for MS-DRG 018. Second, we no longer use the proxy of standardized drug charges of less than \$373,000 to identify clinical trial claims and expanded access use cases when calculating the average cost for MS-DRG 018.

Accordingly, we proposed that in calculating the relative weight for MS-DRG 018 for FY 2025, only those claims that group to MS-DRG 018 that (1) contain ICD-10-CM diagnosis code Z00.6 and do not include payer-only code “ZC” or (2) contain condition code “90” would be excluded from the calculation of the average cost for MS-DRG 018.

We also proposed to continue to use the methodology as modified in the FY 2024 IPPS/LTCH PPS final rule to calculate the adjustment to account for the CAR T-cell therapy cases identified as clinical trial cases in calculating the national average standardized cost per case that is used to calculate the relative weights for all MS-DRGs:

- Calculate the average cost for cases assigned to MS-DRG 018 that either (a) contain ICD-10-CM diagnosis code Z00.6 and do not contain condition code “ZC” or (b) contain condition code “90”.

- Calculate the average cost for all other cases assigned to MS-DRG 018.

- Calculate an adjustor by dividing the average cost calculated in step 1 by the average cost calculated in step 2.

- Apply the adjustor calculated in step 3 to the cases identified in step 1 as applicable clinical trial or expanded access use cases, then add this adjusted case count to the non-clinical trial case count prior to calculating the average cost across all MS-DRGs.

Under our proposal to continue to apply this methodology, based on the December 2023 update of the FY 2023 MedPAR file used for the proposed rule, we estimated that the average costs of cases assigned to MS-DRG 018 that are identified as clinical trial cases (\$116,831) were 34 percent of the average costs of the cases assigned to MS-DRG 018 that are identified as non-

clinical trial cases (\$342,684).

Accordingly, as we did for FY 2024, we proposed to adjust the transfer-adjusted case count for MS-DRG 018 by applying the proposed adjustor of 0.34 to the applicable clinical trial and expanded access use immunotherapy cases, and to use this adjusted case count for MS-DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of the proposed rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case was adjusted by 0.34. As we did for FY 2024, we applied this same adjustor for the applicable cases that group to MS-DRG 018 for purposes of budget neutrality and outlier simulations. We also proposed to update the value of the adjustor based on more recent data for the final rule.

Comment: A few commenters supported the proposal to continue to exclude CAR T-cell therapy clinical trial cases from the calculation of the relative weight for MS-DRG 018. A commenter stated that the proposal for CAR T-cell therapy payment is largely responsive to previous requests for a permanent reimbursement solution for CAR T-cell therapy in a manner that reflects the cost of care.

Response: We thank commenters for their support and input on the proposed methodology.

Comment: Some commenters expressed concern that CMS no longer uses the \$373,000 threshold to identify clinical trial cases. The commenters stated that a small number of claims are still coded incorrectly, and that this has the potential to reduce the relative weight for MS-DRG 018 due to the presence of lower cost cases that should be flagged as clinical trial cases.

Another commenter expressed concern that CMS’ methodology may not be accurately capturing some cases where the CAR T product is not purchased in the usual manner, such as when the patient receives the product as part of a patient assistance program. This commenter suggested that CMS establish a mechanism for hospitals to report when a product is obtained at no cost for reasons other than participation in a clinical trial or expanded access use. A commenter requested that CMS provide the proportion of cases with drug charges below \$373,000 that do not have a clinical trial or expanded access use code.

Response: As we stated in the FY 2024 IPPS/LTCH PPS final rule, while there continues to be a small percentage of claims that report standardized drug

charges of less than \$373,000 and do not report ICD-10-CM code Z00.6, we do not believe it is necessary to continue the use of the proxy until the number of cases reaches zero. With respect to the commenter's suggestion regarding a mechanism for reporting products obtained at no cost for reasons other than participation in a clinical trial or expanded access use, we may consider this in the future. With respect to the commenter who requested that CMS provide the proportion of cases with drug charges below \$373,000, that proportion is 4%, which is the same percentage as last year. We note that information on obtaining the MedPAR Limited Data Set is available on the CMS website, at <https://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/MEDPARLDSHospitalNational>.

After consideration of the public comments we received, we are finalizing our proposals without modifications regarding the calculation of the relative weight for MS-DRG 018. Applying this finalized methodology, based on the March 2024 update of the FY 2023 MedPAR file used for this final rule, we estimated that the average costs of cases assigned to MS-DRG 018 that are identified as clinical trial cases (\$111,211) were 33 percent of the average costs of the cases assigned to MS-DRG 018 that are identified as non-clinical trial cases (\$334,119). Accordingly, as we did for FY 2024, we are finalizing our proposal to adjust the transfer-adjusted case count for MS-DRG 018 by applying the adjustor of 0.33 to the applicable clinical trial and expanded access use immunotherapy cases, and to use this adjusted case count for MS-DRG 018 in calculating the national average cost per case, which is used in the calculation of the relative weights. Therefore, in calculating the national average cost per case for purposes of this final rule, each case identified as an applicable clinical trial or expanded access use immunotherapy case was adjusted by 0.33. As we did for FY 2024, we are applying this same adjustor for the applicable cases that group to MS-DRG 018 for purposes of budget neutrality and outlier simulations.

d. Cap for Relative Weight Reductions

In the FY 2023 IPPS/LTCH PPS final rule, we finalized a permanent 10-percent cap on the reduction in an MS-DRG's relative weight in a given fiscal year, beginning in FY 2023. We also finalized a budget neutrality adjustment to the standardized amount for all hospitals to ensure that application of the permanent 10-percent cap does not result in an increase or decrease of estimated aggregate payments. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule for further discussion of this policy. In the Addendum to this IPPS/LTCH PPS final rule, we present the budget neutrality adjustment for reclassification and recalibration of the FY 2025 MS-DRG relative weights with application of this cap. We are also making available on the CMS website a supplemental file demonstrating the application of the permanent 10 percent cap for FY 2025. For a further discussion of the budget neutrality adjustment for FY 2025, we refer readers to the Addendum of this final rule.

3. Development of National Average Cost-to-Charge Ratios (CCRs)

We developed the national average CCRs as follows:

Using the FY 2022 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. Then we created CCRs for each provider for each cost center (see the supplemental data file for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. Then we took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The

Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D-3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D-3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS-DRG in each of the 19 cost centers by the corresponding national average CCR, we summed the 19 "costs" across each MS-DRG to produce a total standardized cost for the MS-DRG. The average standardized cost for each MS-DRG was then computed as the total standardized cost for the MS-DRG divided by the transfer-adjusted case count for the MS-DRG. The average cost for each MS-DRG was then divided by the national average standardized cost per case to determine the relative weight. The final FY 2025 cost-based relative weights were then normalized by an adjustment factor of 1.92336 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act. We then applied the permanent 10-percent cap on the reduction in a MS-DRG's relative weight in a given fiscal year; specifically for those MS-DRGs for which the relative weight otherwise would have declined by more than 10 percent from the FY 2024 relative weight, we set the final FY 2025 relative weight equal to 90 percent of the FY 2024 relative weight. The final relative weights for FY 2025 as set forth in Table 5 associated with this final rule and available on the CMS website at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS> reflect the application of this cap.

The 19 national average CCRs for FY 2025 are as follows:

NATIONAL AVERAGE CCRS	
Group	CCR
Routine Days	0.418
Intensive Days	0.36
Drugs and Cellular Therapies	0.178
Supplies & Equipment	0.297
Implantable Devices	0.259
Inhalation Therapy	0.162
Therapy Services	0.265
Anesthesia	0.071
Labor & Delivery	0.381
Operating Room	0.16
Cardiology	0.088
Cardiac Catheterization	0.104
Laboratory	0.102
Radiology	0.127
MRIs	0.067
CT Scans	0.033
Emergency Room	0.153
Blood and Blood Products	0.246
Other Services	0.336

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS-DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a reasonable weight. We proposed to use

that same case threshold in recalibrating the proposed MS-DRG relative weights for FY 2025. Using data from the FY 2023 MedPAR file, there were 8 MS-DRGs that contain fewer than 10 cases. For FY 2025, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS-DRGs, we proposed to

compute relative weights for the low-volume MS-DRGs by adjusting their final FY 2024 relative weights by the percentage change in the average weight of the cases in other MS-DRGs from FY 2024 to FY 2025. The crosswalk table is as follows.

LOW-VOLUME MS-DRGS		
Low-Volume MS-DRG	MS-DRG Title	Crosswalk to MS-DRG
789	Neonates, Died or Transferred to Another Acute Care Facility	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
791	Prematurity with Major Problems	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
792	Prematurity without Major Problems	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
793	Full-Term Neonate with Major Problems	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
794	Neonate with Other Significant Problems	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
795	Normal Newborn	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)
797	Vaginal delivery with sterilization and/or D&C with CC	Final FY 2024 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs)

Comment: A commenter requested that CMS consider if there are mechanisms to reform the role of CCRs in the reimbursement methodology to prevent differential hospital charge practices from skewing reimbursement rates for hospitals—such as either eliminating the role of CCRs or creating a bridge or other CCR for gene and cell therapies that it stated could be used for more accurate rate-setting in the future. Another commenter requested that CMS utilize the “other” CCR for CAR T-cell therapy product charges as a strategy to address charge compression starting in FY 2025 and until CMS proposes an alternative payment solution.

Response: We continue to believe it would not be appropriate to utilize the “other” CCR for CAR T-cell therapy product charges associated with revenue code 0891. Under our cost-based weight methodology, many revenue codes are mapped to each of the 19 cost centers. We believe that relative to those 19 cost centers, cellular therapies are most similar to drugs given that hospitals have generally calibrated their CAR T-cell therapy product charges to the “drugs” cost center CCR. To provide additional clarity, we have renamed the “drugs” cost center to the “drugs and cellular therapies” cost center. We may consider changes to the CCRs used for gene and cellular therapies in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposals without modification.

E. Add-On Payments for New Services and Technologies for FY 2025

1. Background

Effective for discharges beginning on or after October 1, 2001, section 1886(d)(5)(K)(i) of the Act requires the Secretary to establish (after notice and opportunity for public comment) a mechanism to recognize the costs of new medical services and technologies (sometimes collectively referred to in this section as “new technologies”) under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, based on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate. The regulations at 42 CFR 412.87 implement these provisions and § 412.87(b)

specifies three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. In addition, certain transformative new devices and antimicrobial products may qualify under an alternative inpatient new technology add-on payment pathway, as set forth in the regulations at § 412.87(c) and (d).

We note that section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act. Therefore, as discussed in prior rulemaking (72 FR 47307 through 47308), we do not include capital costs in the add-on payments for a new medical service or technology or make

new technology add-on payments under the IPPS for capital-related costs.

In this rule, we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria, as well as other information. For further discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574), the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42300), and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58736 through 58742).

a. New Technology Add-On Payment Criteria

(1) Newness Criterion

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will no longer be considered “new” for purposes of new medical service or technology add-on payments after CMS has recalibrated the MS–DRGs, based on available data, to reflect the cost of the technology. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a medical product receives a new FDA approval or clearance, it may not necessarily be considered “new” for purposes of new technology add-on payments if it is “substantially similar” to another medical product that was approved or cleared by FDA and has been on the market for more than 2 to 3 years. In the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically whether: (1) a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) a product is assigned to the same or a different MS–DRG; and (3) the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of these criteria, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments. For a detailed discussion of the criteria for substantial similarity, we refer readers to the FY 2006 IPPS final rule (70 FR 47351 through 47352) and the FY 2010 IPPS/LTCH PPS final rule (74 FR 43813 through 43814).

(2) Cost Criterion

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for new medical services or technologies, the MS–DRG prospective payment rate otherwise applicable to discharges involving the new medical service or technology must be assessed for adequacy. Under the cost criterion, consistent with the formula specified in section 1886(d)(5)(K)(ii)(I) of the Act, to assess the adequacy of payment for a new technology paid under the applicable MS–DRG prospective payment rate, we evaluate whether the charges of the cases involving a new medical service or technology will exceed a threshold amount that is the lesser of 75 percent of the standardized amount (increased to reflect the difference between cost and charges) or 75 percent of one standard deviation beyond the geometric mean standardized charge for all cases in the MS–DRG to which the new medical service or technology is assigned (or the case-weighted average of all relevant MS–DRGs if the new medical service or technology occurs in many different MS–DRGs). The MS–DRG threshold amounts generally used in evaluating new technology add-on payment applications for FY 2025 are presented in a data file that is available, along with the other data files associated with the FY 2024 IPPS/LTCH PPS final rule and correction notification, on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index>.

We note that, under the policy finalized in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58603 through 58605), beginning with FY 2022, we use the proposed threshold values associated with the proposed rule for that fiscal year to evaluate the cost criterion for all applications for new technology add-on payments and previously approved technologies that may continue to receive new technology add-on payments, if those technologies would be assigned to a proposed new MS–DRG for that same fiscal year.

As finalized in the FY 2019 IPPS/LTCH PPS final rule (83 FR 41275), beginning with FY 2020, we include the thresholds applicable to the next fiscal year (previously included in Table 10 of the annual IPPS/LTCH PPS proposed and final rules) in the data files associated with the prior fiscal year. Accordingly, the final thresholds for applications for new technology add-on payments for FY 2026 are presented in a data file that is available on the CMS website, along with the other data files

associated with this FY 2025 final rule, by clicking on the FY 2025 IPPS Final Rule Home Page at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index>.

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed that applicants should submit a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Specifically, applicants should submit a sample of sufficient size to enable us to undertake an initial validation and analysis of the data. We also discussed in the September 7, 2001 final rule (66 FR 46917) the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR parts 160 and 164, subparts A and E, applies to claims information that providers submit with applications for new medical service or technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for further information on this issue.

(3) Substantial Clinical Improvement Criterion

Under the third criterion at § 412.87(b)(1), a medical service or technology must represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. In the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292), we prospectively codified in our regulations at § 412.87(b) the following aspects of how we evaluate substantial clinical improvement for purposes of new technology add-on payments under the IPPS:

- The totality of the circumstances is considered when making a determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries.
- A determination that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries means—

++ The new medical service or technology offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments;

++ The new medical service or technology offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable, or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods, and there must also be evidence that use of the new medical service or technology to make a diagnosis affects the management of the patient.

++ The use of the new medical service or technology significantly improves clinical outcomes relative to services or technologies previously available as demonstrated by one or more of the following: a reduction in at least one clinically significant adverse event, including a reduction in mortality or a clinically significant complication; a decreased rate of at least one subsequent diagnostic or therapeutic intervention; a decreased number of future hospitalizations or physician visits; a more rapid beneficial resolution of the disease process treatment including, but not limited to, a reduced length of stay or recovery time; an improvement in one or more activities of daily living; an improved quality of life; or, a demonstrated greater medication adherence or compliance; or

++ The totality of the circumstances otherwise demonstrates that the new medical service or technology substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.

- Evidence from the following published or unpublished information sources from within the United States or elsewhere may be sufficient to establish that a new medical service or technology represents an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of Medicare beneficiaries: clinical trials, peer reviewed journal articles; study results; meta-analyses; consensus statements; white papers; patient surveys; case studies; reports; systematic literature reviews; letters from major healthcare associations; editorials and letters to the editor; and public comments. Other appropriate information sources may be considered.

- The medical condition diagnosed or treated by the new medical service or technology may have a low prevalence among Medicare beneficiaries.

- The new medical service or technology may represent an advance that substantially improves, relative to services or technologies previously available, the diagnosis or treatment of

a subpopulation of patients with the medical condition diagnosed or treated by the new medical service or technology.

We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42288 through 42292) for additional discussion of the evaluation of substantial clinical improvement for purposes of new technology add-on payments under the IPPS.

We note, consistent with the discussion in the FY 2003 IPPS final rule (67 FR 50015), that while FDA has regulatory responsibility for decisions related to marketing authorization (for example, approval, clearance, etc.), we do not rely upon FDA criteria in our evaluation of substantial clinical improvement for purposes of determining what services and technologies qualify for new technology add-on payments under Medicare. This criterion does not depend on the standard of safety and effectiveness on which FDA relies but on a demonstration of substantial clinical improvement in the Medicare population.

b. Alternative Inpatient New Technology Add-On Payment Pathway

Beginning with applications for FY 2021 new technology add-on payments, under the regulations at § 412.87(c), a medical device that is part of FDA's Breakthrough Devices Program may qualify for the new technology add-on payment under an alternative pathway. Additionally, under the regulations at § 412.87(d) for certain antimicrobial products, beginning with FY 2021, a drug that is designated by FDA as a Qualified Infectious Disease Product (QIDP), and, beginning with FY 2022, a drug that is approved by FDA under the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD), may also qualify for the new technology add-on payment under an alternative pathway. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through 42297) and the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy. We note that CMS reviews the application based on the information provided by the applicant only under the alternative pathway specified by the applicant at the time of application submission. To receive approval for the new technology add-on payment under that alternative pathway, the technology must have the applicable FDA designation and meet all other requirements in the regulations in § 412.87(c) and (d), as applicable.

(1) Alternative Pathway for Certain Transformative New Devices

For applications received for new technology add-on payments for FY 2021 and subsequent fiscal years, a medical device designated under FDA's Breakthrough Devices Program that has received FDA marketing authorization will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS, and will not need to meet the requirement under § 412.87(b)(1) that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway, a medical device that has received FDA marketing authorization (that is, has been approved or cleared by, or had a De Novo classification request granted by, FDA) as a Breakthrough Device, for the indication covered by the Breakthrough Device designation, will need to meet the requirements of § 412.87(c). We note that in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736), we clarified our policy that a new medical device under this alternative pathway must receive marketing authorization for the indication covered by the Breakthrough Devices Program designation. We refer the reader to the FY 2021 IPPS/LTCH PPS final rule (85 FR 58734 through 58736) for further discussion regarding this clarification.

(2) Alternative Pathway for Certain Antimicrobial Products

For applications received for new technology add-on payments for certain antimicrobial products, beginning with FY 2021, if a technology is designated by FDA as a QIDP and received FDA marketing authorization, and, beginning with FY 2022, if a drug is approved under FDA's LPAD pathway and used for the indication approved under the LPAD pathway, it will be considered not substantially similar to an existing technology for purposes of new technology add-on payments and will not need to meet the requirement that it represent an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. Under this alternative pathway for QIDPs and LPADs, a medical product that has received FDA marketing authorization and is designated by FDA as a QIDP or approved under the LPAD pathway will need to meet the requirements of § 412.87(d). We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42292 through

42297) and FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739) for further discussion on this policy.

We note that, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58737 through 58739), we clarified that a new medical product seeking approval for the new technology add-on payment under the alternative pathway for QIDPs must receive FDA marketing authorization for the indication covered by the QIDP designation. We also finalized our policy to expand our alternative new technology add-on payment pathway for certain antimicrobial products to include products approved under the LPAD pathway and used for the indication approved under the LPAD pathway.

c. Additional Payment for New Medical Service or Technology

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies, while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. As noted previously, we do not include capital costs in the add-on payments for a new medical service or technology or make new technology add-on payments under the IPPS for capital-related costs (72 FR 47307 through 47308).

For discharges occurring before October 1, 2019, under § 412.88, if the costs of the discharge (determined by applying operating cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), CMS made an add-on payment equal to the lesser of: (1) 50 percent of the costs of the new medical service or technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard DRG payment.

Beginning with discharges on or after October 1, 2019, for the reasons discussed in the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300), we finalized an increase in the new technology add-on payment percentage, as reflected at § 412.88(a)(2)(ii). Specifically, for a new technology other than a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG

payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 65 percent of the costs of the new medical service or technology; or (2) 65 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product designated by FDA as a QIDP, beginning with discharges on or after October 1, 2019, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. For a new technology that is a medical product approved under FDA's LPAD pathway, beginning with discharges on or after October 1, 2020, if the costs of a discharge involving a new technology (determined by applying CCRs as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. As set forth in § 412.88(b)(2), unless the discharge qualifies for an outlier payment, the additional Medicare payment will be limited to the full MS-DRG payment plus 65 percent (or 75 percent for certain antimicrobial products (QIDPs and LPADs)) of the estimated costs of the new technology or medical service. We refer the reader to the FY 2020 IPPS/LTCH PPS final rule (84 FR 42297 through 42300) for further discussion on the increase in the new technology add-on payment beginning with discharges on or after October 1, 2019.

As discussed further in section II.E.10. of this final rule, we are finalizing our proposal that for certain gene therapies approved for new technology add-on payments in the FY 2025 IPPS/LTCH PPS final rule that are indicated and used specifically for the treatment of SCD, effective with discharges on or after October 1, 2024 and concluding at the end of the 2- to 3-year newness period for such therapy, if the costs of a discharge (determined by applying CCRs as described in § 412.84(h)) involving the use of such therapy for the treatment of SCD exceed

the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 75 percent of the costs of the new medical service or technology; or (2) 75 percent of the amount by which the costs of the case exceed the standard DRG payment. We note that these payment amounts would only apply to CasgevymTM (exagamglogene autotemcel) and LyfgeniaTM (lovotibeglogene autotemcel), when indicated and used specifically for the treatment of SCD, which CMS has determined in this FY 2025 IPPS/LTCH PPS final rule meet the criteria for approval for new technology add-on payment, as further discussed in section II.E.5. of this final rule.

We note that, consistent with the prospective nature of the IPPS, we finalize the new technology add on payment amount for technologies approved or conditionally approved for new technology add-on payments in the final rule for each fiscal year and do not make mid-year changes to new technology add-on payment amounts. Updated cost information may be submitted and included in rulemaking to be considered for the following fiscal year.

Section 503(d)(2) of the MMA (Pub. L. 108–173) provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of the MMA, add-on payments for new medical services or technologies for FY 2005 and subsequent years have not been subjected to budget neutrality.

d. Evaluation of Eligibility Criteria for New Medical Service or Technology Applications

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulation at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We specified that all applicants for new technology add-on payments must have FDA approval or clearance by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. In the FY 2021 IPPS/LTCH

PPS final rule, to more precisely describe the various types of FDA approvals, clearances and classifications that we consider under our new technology add-on payment policy, we finalized a technical clarification to the regulation to indicate that new technologies must receive FDA marketing authorization (such as pre-market approval (PMA); 510(k) clearance; the granting of a De Novo classification request, or approval of a New Drug Application (NDA)) by July 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Consistent with our longstanding policy, we consider FDA marketing authorization as representing that a product has received FDA approval or clearance when considering eligibility for the new technology add-on payment (85 FR 58742).

Additionally, in the FY 2021 IPPS/LTCH PPS final rule (85 FR 58739 through 58742), we finalized our proposal to provide conditional approval for new technology add-on payment for a technology for which an application is submitted under the alternative pathway for certain antimicrobial products at § 412.87(d) that does not receive FDA marketing authorization by July 1 prior to the particular fiscal year for which the applicant applied for new technology add-on payments, provided that the technology otherwise meets the applicable add-on payment criteria. Under this policy, cases involving eligible antimicrobial products would begin receiving the new technology add-on payment sooner, effective for discharges the quarter after the date of FDA marketing authorization, provided that the technology receives FDA marketing authorization before July 1 of the fiscal year for which the applicant applied for new technology add-on payments.

In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958), we finalized that, beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance or filing to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024

IPPS/LTCH PPS final rule (88 FR 58948 through 58958). We also finalized that, beginning with FY 2025 applications, in order to be eligible for consideration for the new technology add-on payment for the upcoming fiscal year, an applicant for new technology add-on payments must have received FDA approval or clearance by May 1 (rather than July 1) of the year prior to the beginning of the fiscal year for which the application is being considered (except for an application that is submitted under the alternative pathway for certain antimicrobial products), as reflected at §§ 412.87(f)(2) and (f)(3), as amended and redesignated in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958, 88 FR 59331).

e. New Technology Liaisons

Many interested parties (including device/biologic/drug developers or manufacturers, industry consultants, others) engage CMS for coverage, coding, and payment questions or concerns. In order to streamline engagement by centralizing the different innovation pathways within CMS including new technology add-on payments, CMS has established a team of new technology liaisons that can serve as an initial resource for interested parties. This team is available to assist with all of the following:

- Help to point interested parties to or provide information and resources where possible regarding process, requirements, and timelines.
- Coordinate and facilitate opportunities for interested parties to engage with various CMS components.
- Serve as a primary point of contact for interested parties and provide updates on developments where possible or appropriate.

We receive many questions from parties interested in pursuing new technology add-on payments who may not be entirely familiar with working with CMS. While we encourage interested parties to first review our resources available at <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech>, we know that there may be additional questions about the application process. Interested parties with further questions regarding Medicare's coverage, coding, and payment processes, and how they can navigate these processes, whether for new technology add-on payments or otherwise, should review the updated resource guide available at: <https://www.cms.gov/medicare/coding-billing/guide-medical-technology-companies-other-interested-parties>. Parties that would like to further discuss questions

or concerns with CMS should contact the new technology liaison team at MedicareInnovation@cms.hhs.gov.

f. Application Information for New Medical Services or Technologies

Applicants for add-on payments for new medical services or technologies for FY 2026 must submit a formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement (unless the application is under one of the alternative pathways as previously described), along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. CMS will review the application based on the information provided by the applicant under the pathway specified by the applicant at the time of application submission. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS website at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html>.

To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2026, once the application deadline has closed, CMS will post on its website a list of the applications submitted, along with a brief description of each technology as provided by the applicant.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990), we finalized our proposal to publicly post online new technology add-on payment.

Applications, including the completed application forms, certain related materials, and any additional updated application information submitted subsequent to the initial application submission (except certain volume, cost and other information identified by the applicant as confidential), beginning with the application cycle for FY 2024, at the time the proposed rule is published. We also finalized that with the exception of information included in a confidential information section of the application, cost and volume information, and materials identified by the applicant as copyrighted and/or not otherwise releasable to the public, the contents of the application and related materials may be posted publicly, and that we

will not post applications that are withdrawn prior to publication of the proposed rule. We refer the reader to the FY 2023 IPPS/LTCH PPS final rule (87 FR 48986 through 48990) for further information regarding this policy.

We note that the burden associated with this information collection requirement is the time and effort required to collect and submit the data in the formal request for add-on payments for new medical services and technologies to CMS. The aforementioned burden is subject to the PRA and approved under OMB control number 0938–1347 and has an expiration date of December 31, 2026.

2. Public Input Before Publication of a Notice of Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of the MMA, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement. The process for evaluating new medical service and technology applications requires the Secretary to do all of the following:

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries.
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending.
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement.

• Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and technologies for FY 2025 prior to publication of the FY 2025 IPPS/LTCH PPS proposed rule, we published a notice in the **Federal Register** on September 28, 2023 (88 FR 66850) and held a virtual town hall meeting on December 13, 2023. In the announcement notice for the meeting,

we stated that the opinions and presentations provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for the FY 2025 new medical service and technology add-on payment applications before the publication of the FY 2025 IPPS/LTCH PPS proposed rule.

Approximately 130 individuals registered to attend the virtual town hall meeting. We posted the recordings of the virtual town hall on the CMS web page at: <https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech>. We considered each applicant's presentation made at the town hall meeting, as well as written comments received by the December 18, 2023 deadline, in our evaluation of the new technology add-on payment applications for FY 2025 in the development of the FY 2025 IPPS/LTCH PPS proposed rule. In response to the published notice and the December 13, 2023 New Technology Town Hall meeting, we received written comments regarding the applications for FY 2025 new technology add on payments. As explained earlier and in the **Federal Register** notice announcing the New Technology Town Hall meeting (88 FR 66850 through 66853), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion with regard to pending new technology add-on payment applications for FY 2025. Therefore, we did not summarize any written comments in the proposed rule that were unrelated to the substantial clinical improvement criterion. In section II.E.5. of the preamble of the proposed rule, we summarized comments regarding individual applications, or, if applicable, indicated that there were no comments received in response to the New Technology Town Hall meeting notice or New Technology Town Hall meeting, at the end of each discussion of the individual applications.

3. ICD–10–PCS Section “X” Codes for Certain New Medical Services and Technologies

As discussed in the FY 2016 IPPS/LTCH PPS final rule (80 FR 49434), the ICD–10–PCS includes a new section containing the new Section “X” codes, which began being used with discharges occurring on or after October 1, 2015. Decisions regarding changes to ICD–10–PCS Section “X” codes will be handled in the same manner as the decisions for all of the other ICD–10–PCS code

changes. That is, proposals to create, delete, or revise Section “X” codes under the ICD–10–PCS structure will be referred to the ICD–10 Coordination and Maintenance Committee. In addition, several of the new medical services and technologies that have been, or may be, approved for new technology add-on payments may now, and in the future, be assigned a Section “X” code within the structure of the ICD–10–PCS. We posted ICD–10–PCS Guidelines on the CMS website at: <https://www.cms.gov/Medicare/Coding/ICD10>, including guidelines for ICD–10–PCS Section “X” codes. We encourage providers to view the material provided on ICD–10–PCS Section “X” codes.

4. FY 2025 Status of Technologies Receiving New Technology Add-On Payments for FY 2024

In this section of the final rule, we discuss the FY 2025 status of 31 technologies approved for FY 2024 new technology add-on payments, as set forth in the tables that follow. In the proposed rule, we presented our proposals to continue the new technology add-on payments for FY 2025 for those technologies that were approved for the new technology add-on payment for FY 2024, and which would still be considered “new” for purposes of new technology add-on payments for FY 2025. We also presented our proposals to discontinue new technology add-on payments for FY 2025 for those technologies that were approved for the new technology add-on payment for FY 2024, and which would no longer be considered “new” for purposes of new technology add-on payments for FY 2025.

Additionally, we noted that we conditionally approved DefenCath® (taurolidine/heparin) for FY 2024 new technology add-on payments under the alternative pathway for certain antimicrobial products (88 FR 58942 through 58944), subject to the technology receiving FDA marketing authorization by July 1, 2024. DefenCath® (taurolidine/heparin) received FDA marketing authorization on November 15, 2023, and was eligible to receive new technology add-on payments in FY 2024 beginning with discharges on or after January 1, 2024. As DefenCath® (taurolidine/heparin) received FDA marketing authorization prior to July 1, 2024, and was approved for new technology add-on payments in FY 2024, we proposed and are finalizing to continue making new technology add-on payments for DefenCath® for FY 2025.

Our policy is that a medical service or technology may continue to be

considered “new” for purposes of new technology add-on payments within 2 or 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology. Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend new technology add-on payments for an additional year only if the 3-year anniversary date of the product’s entry onto the U.S. market occurs in the latter half of the fiscal year (70 FR 47362).

In the proposed rule, we provided a table listing the technologies for which we proposed to continue making new technology add-on payments for FY 2025 because they were still considered “new” for purposes of new technology add-on payments. This table also presented the newness start date, new technology add-on payment start date, 3-year anniversary date of the product’s entry onto the U.S. market, relevant final rule citations from prior fiscal years, proposed maximum add-on payment amount, and coding assignments for each technology. We referred readers to the cited final rules in the following table for a complete discussion of the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We invited public comments on our proposals to continue new technology add-on payments for FY 2025 for the technologies listed in Table I.E.-01 of the proposed rule.

Comment: We received multiple comments in support of our proposed continuation of new technology add-on payments for FY 2025 for those technologies that were approved for the new technology add-on payment for FY 2024, and which would still be considered “new” for purposes of new technology add-on payments for FY 2025.

Response: We appreciate the support of the commenters.

Comment: A commenter restated a comment it made in response to previous proposed rules that requiring a manufacturer to submit information rebutting a presumption that the date of first availability is the date of FDA marketing authorization adds unnecessary burden and complexity to the new technology add-on payment application and review process. The

commenter further stated that CMS did not appear to have applied this policy consistently and that it has defaulted to the FDA approval date despite other reasons being provided by applicants regarding the first date of commercial availability. The commenter believed that a more efficient and appropriate policy would be for the newness period to begin with the date of the first claim, which it stated is consistent with the definition of newness used in determining the period of eligibility for Transitional Pass-through status in the Hospital Outpatient Prospective Payment System (OPPS).

Response: We thank the commenter for its feedback. As we discussed in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45136), regarding the commenter’s belief that beginning the newness period on the date of first claim would be a more efficient and appropriate policy and is consistent with the definition of newness used in determining the period of eligibility for Transitional Pass-through status in OPPS, we note that “newness” for the purposes of the OPPS pass-through payment is separate and distinct from “newness” for the purposes of the IPPS new technology add-on payment. We note that “newness” for purposes of the OPPS pass-through payment refers to a drug, biological, or device’s eligibility for pass-through payment status. In particular, under § 419.64(a), for a drug or biological’s eligibility for OPPS pass-through payment (subject to certain exceptions), “newness” means that the drug or biological was first payable as an outpatient hospital service after December 31, 1996. Under § 419.66(b), for a device’s eligibility for OPPS pass-through payment, “newness” means that CMS received the applicant’s pass-through application within 3 years from the date of the initial FDA marketing authorization, unless there is a documented, verifiable delay in U.S. market availability after FDA marketing authorization is granted, in which case CMS will consider the pass-through payment application if it is submitted within 3 years from the date of market availability for the device. However, it appears the commenter is referring not to “newness” in terms of eligibility for OPPS pass-through status, but rather to the limited two-to-three-year period of pass-through payment. Under §§ 419.64(c)(2) and 419.66(g), this pass-through payment period begins on the date on which CMS makes its first pass-through payment for a drug, biological, or device.

For new technology add-on payments, as we have discussed in prior rulemaking (77 FR 53348), generally,

our policy is to begin the newness period on the date of FDA approval or clearance or, if later, the date of availability of the technology on the U.S. market. Furthermore, as we have stated in prior rulemaking, the newness period does not necessarily start with the approval date for the medical service or technology. Instead, it begins with availability of the technology on the market, which is when data become available. We have consistently applied this standard, and believe that it is most consistent with the purpose of new technology add-on payments (69 FR 49003), because section 1886(d)(5)(K)(ii)(II) of the Act requires CMS to establish a mechanism to provide for the collection of data with respect to the costs of a new medical service or technology for a period of not less than two years and not more than three years beginning on the date on which an inpatient hospital code is issued for the service or technology. Our regulations at § 412.87(b)(2), 412.87(c)(2), and 412.87(d)(2) further allow new medical services and technologies to be considered new for the first 2 to 3 years after the point at which data begin to become available reflecting the inpatient hospital code assigned to the new service or technology, which is during the period when the costs of the new technology are not yet fully reflected in the DRG weights. The costs of the new medical service or technology, once paid for by Medicare for this 2-year to 3-year period, are accounted for in the MedPAR data that are used to recalibrate the DRG weights on an annual basis. Therefore, it is appropriate to limit the add-on payment window for those technologies to this 2-to 3-year timeframe. For these reasons, we continue to disagree that the appropriate policy would be for the newness period to begin with the date of the first claim.

Comment: The applicant for REZZAYO™ (rezafungin for injection), submitted a comment regarding its newness start date of March 22, 2023, to explain why REZZAYO™ was not available on the US market until July 26, 2023. The applicant explained that the market entry for REZZAYO™ was delayed due to the steps needed to comply with FDA requirements. The applicant stated that REZZAYO™ received FDA approval on March 22, 2023, and that the product was subjected to a post marketing commitment (PMC) protocol. According to the applicant, the PMC stated that the manufacturer would complete necessary qualification and validation studies of the current assay high-performance

liquid chromatography analytical procedure to be used for the gross content and assay of reconstituted solution tests in the drug product specification, and update the relevant sections of Module 3 accordingly. The applicant stated that FDA required this information be submitted to FDA via a Changes Being Effected in 0 Days Supplement (CBE-0). The applicant stated that to meet the requirements of the PMC and prepare the CBE-0 for submission, the manufacturer was unable to use anything more than a nominal amount of existing batches of product due to vial size differentials, which meant the manufacturer needed to manufacture new product for its analyses pursuant to the PMC, and that the applicant had to ensure that new product that met these requirements was created prior to launch. The applicant explained that due to the PMC requirements, REZZAYO™ needed to undergo an additional manufacturing cycle prior to launch, and the changes in vial size required changes to REZZAYO's labeling and packaging. The applicant stated that label and packaging changes alone can take an additional six weeks. The applicant stated that the manufacturer was able to complete the PMC requirements and submitted the CBE-0 on July 19, 2023, and that REZZAYO™ was made available for sale to hospitals following the first sale and shipment to a wholesaler on July 26, 2023, as reflected in the Medicaid Drug Rebate Program database.

Response: We thank the applicant for its comment. As stated previously, while CMS may consider a documented delay in the technology's market availability in determining when the newness period begins, our policy for determining whether to extend new technology add-on payments for an additional year generally applies regardless of the volume of claims for the technology after the beginning of the newness period (83 FR 41280). We do not consider the date of first sale of a product as an indicator of the entry of a product onto the U.S. market. Although the applicant states that REZZAYO™ was made available for sale to hospitals following the first sale and shipment to a wholesaler on July 26, 2023, it is unclear from the information provided if the technology may have first become available on the market between the date of completion of the PMC and submission of the CBE-0 on July 19, 2023, and its first sale on July 26, 2023, as an applicant may commence distribution of a drug product manufactured using a change

proposed in a CBE-0 supplement after FDA receives that supplement.²² Therefore, based on the information provided by the applicant regarding the documented delay in the technology's availability on the U.S. market, and absent additional information from the applicant, we consider the beginning of the newness period to commence on July 19, 2023.

Comment: We received multiple comments in support of our proposed continuation of new technology add-on payments for FY 2025 for the SAINT Neuromodulation System. A couple of commenters described their experiences and timelines for installation, training, and use of the SAINT Neuromodulation System at their hospitals. Commenters also supported modification of the technology's newness date to April 5, 2024, to recognize the delay in commercial availability.

In particular, the applicant for the SAINT Neuromodulation System submitted a comment to provide an update on its launch timeline and the commercial availability of technology in the provider market. The applicant confirmed that the SAINT Neuromodulation System is currently launching in the United States, and requested that CMS assign a newness date of April 5, 2024. The applicant stated that although SAINT received FDA clearance on September 1, 2022, there were significant product development, manufacturing design, and compliance steps that the company needed to complete before the device could become commercially available and be used to treat patients. It stated that initially, it had planned to develop and manufacture its own hardware; however, after much time and effort, it was determined in the second half of 2023 that the best course was to work with third-party manufacturers for the stimulator and neuronavigation hardware. The applicant provided a summary and timeline of all the activities that it completed prior to the device becoming commercially available to treat patients on April 5, 2024. The timeline also included information regarding the installation, training, and use of the SAINT Neuromodulation System at two hospitals after April 5, 2024.

Response: We thank the applicant and commenters for their comments. In the FY 2024 IPPS/LTCH PPS final rule (88 FR 58937 through 58938), we noted that the applicant stated that ICD-10-PCS

code X0Z0X18 (Computer-assisted transcranial magnetic stimulation of prefrontal cortex, new technology group 8) may be used to uniquely describe procedures involving the use of the SAINT Neuromodulation System, effective October 1, 2022. We note that between October 1, 2022 and April 4, 2024 (inclusive), we identified 5 claims reporting this ICD-10-PCS code that were associated with an acute care hospital under the IPPS. Three of those claims were made in FY 2024, and all 3 received new technology add-on payment. Therefore, based on our review of the data, we cannot determine a newness date based on a documented delay in the technology's availability on the U.S. market. We continue to consider the beginning of the newness period to commence on September 1, 2022, the date of FDA marketing authorization for the indication covered by its Breakthrough Device designation.

Comment: The applicant for DefenCath® (taurolidine/heparin), submitted a comment in support of our proposed continuation of new technology add-on payments for FY 2025 for DefenCath® and to update its Wholesale Acquisition Cost (WAC). The applicant noted that DefenCath® received conditional new technology add-on payment approval for FY 2024. The applicant stated that DefenCath® was approved by the FDA on November 15, 2023, via the Limited Population Pathway for Antibacterial and Antifungal Drugs (LPAD pathway), and that as such, hospitals were eligible to receive new technology add-on payments for DefenCath® as of January 1, 2024, which was the first date of the first quarter post FDA approval. The applicant stated that its original application included a WAC price of \$390 per mL to determine reimbursement, which it stated was based upon market conditions at the time of the submission of the application. The applicant explained that after the submission of its application for FY 2024, and following FDA approval of DefenCath®, it performed additional market research and pricing analysis, and decided to launch with a WAC price that is significantly lower than what was originally submitted. The applicant stated that it launched DefenCath® on April 15, 2024, in the inpatient setting with the WAC price of \$249.99 per 3mL vial (\$83.33 per mL), and urged CMS to finalize its proposal to continue making new technology add-on payments in FY 2025 for DefenCath®.

Another commenter also submitted a comment requesting that CMS reassess the new technology add-on payment

²² FDA—Drug Product Distribution After a Complete Response Action to a Changes Being Effected Supplement <https://www.fda.gov/media/107451/download>.

amount for DefenCath[®] based on the WAC price of \$249.99 per 3mL vial, and expressed its concern about the impact DefenCath[®] will have on the Medicare program. The commenter stated that DefenCath[®] was late to the market with a clinical study using a control group which did not represent the current standard of care, and that it does not improve patient care or outcomes beyond the commenter's product, ClearGuard[™] HD Antimicrobial Barrier Caps. The commenter also stated that DefenCath[®] requires additional labor resources to implement. Therefore, the commenter recommended that CMS monitor the value associated with DefenCath[®].

Response: We thank the applicant and commenter for their comments and the updated cost information and recommendations. We have updated the new technology add-on payment amount for DefenCath[®] accordingly.

Although the applicant states that DefenCath[®] was launched on April 15, 2024, we did not receive information regarding a documented delay in market availability, and absent additional information from the applicant, we cannot determine a newness date based on a documented delay in the technology's availability on the U.S. market. Therefore, we continue to consider the beginning of the newness period to commence on November 15, 2023, the date of FDA marketing authorization for the indication covered by its QIDP designation.

DefenCath[®]'s current new technology add-on payment amount is \$17,111.25, based on a WAC of \$1,170 per 3mL vial. As we noted in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58943), on average, patients would receive 9.75 HD treatments per inpatient stay based upon the average length of stay of 13.3

days, which would require 19.5 vials. For FY 2025, the maximum new technology add-on payment amount is \$3,656.10, based on an updated WAC of \$249.99 per 3mL vial, as reflected in Table II.E.-01 in this final rule.

We further note that, as discussed in section II.E.5.d. of this final rule, because ELREXFIO[™] and TALVEY[™] are substantially similar to TECVAYLI[®], we are using a single cost for purposes of determining the new technology add-on payment amount for ELREXFIO[™], TALVEY[™], and TECVAYLI[®] for FY 2025. As discussed in section II.E.5.d. of this final rule, we determined a weighted average of the cost of ELREXFIO[™], TALVEY[™], and TECVAYLI[®] based upon the projected numbers of cases involving each technology to determine the maximum new technology add-on payment. To compute the weighted average cost, we summed the total number of projected cases for each technology provided by the applicants, which equaled 4,376 cases (152 cases for ELREXFIO[™] plus 2,318 cases for TALVEY[™] plus 1,906 cases for TECVAYLI[®]). We then divided the number of projected cases for each of the technologies by the total number of cases, which resulted in the following case weighted percentages: 3.47 percent for ELREXFIO[™], 52.97 percent for TALVEY[™] and 43.56 percent for TECVAYLI[®]. For each technology, we then multiplied the estimated cost per patient by the case-weighted percentage (0.0347 * \$15,112 = \$524.39 for ELREXFIO[™], 0.5297 * \$25,164.44 = \$13,329.60 for TALVEY[™] and 0.4356 * \$13,754.67 = \$5,991.53 for TECVAYLI[®]). This resulted in a case-weighted average cost of \$19,845.52 for the technology.

Under § 412.88(a)(2), we limit new technology add-on payments to the

lesser of 65 percent of the average cost of the technology, or 65 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for a case involving the use of ELREXFIO[™], TALVEY[™], or TECVAYLI[®] is \$12,899.59 for FY 2025, as reflected in Table II.E.-01 of this final rule.

After consideration of the public comments we received, we are finalizing our proposals to continue new technology add-on payments for FY 2025 for the technologies that were approved for new technology add-on payment for FY 2024 and would still be considered "new" for purposes of new technology add-on payments for FY 2025, as listed in the proposed rule and in the following Table II.E.-01 in this section of this final rule.

We note that the following Table II.E.-01 is the same as Table II.E.-01 that was presented in the proposed rule, but Table II.E.-01 in this final rule includes the updated cost information for TECVAYLI[®] and DefenCath[®] and the updated newness start date for REZZAYO[™], as discussed previously. Table II.E.-01 in this final rule also presents the newness start date, new technology add-on payment start date, 3-year anniversary date of the product's entry onto the U.S. market, relevant final rule citations from prior fiscal years, maximum add-on payment amount, and coding assignments for each technology. We refer readers to the final rules cited in the following table for a complete discussion of the new technology add-on payment application, coding, and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

BILLING CODE 4120-01-P

TABLE II.E.-01: CONTINUATION OF TECHNOLOGIES APPROVED FOR FY 2024 NEW TECHNOLOGY ADD-ON PAYMENTS STILL CONSIDERED NEW FOR FY 2025 BECAUSE THE 3-YEAR ANNIVERSARY DATE WILL OCCUR ON OR AFTER APRIL 1, 2025

	Technology	Newness Start Date	NTAP Start Date	3-year Anniversary Date of Entry onto U.S. Market	Previous Final Rule Citations	Maximum NTAP Amount for FY 2025	Coding Used to Identify Cases Eligible for NTAP
1	<i>Thoraflex™ Hybrid Device</i>	04/19/2022	10/1/2022	04/19/2025	87 FR 48974 through 48975 88 FR 58800	\$22,750.00	X2RX0N7 in combination with X2VW0N7

In the proposed rule, we provided Table II.F.-02 listing the technologies

for which we proposed to discontinue making new technology add-on

payments for FY 2025 because they were no longer “new” for purposes of new technology add-on payments. This table also presented the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product’s entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We referred readers to the cited final rules in the following table for a complete discussion of each new technology add-on payment application and the coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

We invited public comments on our proposals to discontinue new technology add-on payments for FY 2025 for the technologies listed in Table II.E.-02 of the proposed rule.

Comment: A commenter urged CMS to prevent new access hurdles from arising with newer treatments by continuing new technology add-on payments that are now in place for low volume inpatient stays until the MS-DRG calculations reflect the cost of the treatment, as the commenter asserted that is what the new technology add-on payment mechanism was intended to do.

Response: As we have stated previously, our policy for determining whether to extend new technology add-on payments for an additional year generally applies regardless of the volume of claims for the technology after the beginning of the newness period. We do not believe that case volume is a relevant consideration for making the determination as to whether a product is considered “new” for purposes of new technology add-on payments. Consistent with the statute and our implementing regulations, a

technology is no longer considered “new” once it is more than 2 to 3 years old, and the costs of the procedures are considered to be included in the relative weights irrespective of how frequently the technology has been used in the Medicare population (83 FR 41280).

Comment: The manufacturer of Intercept® Fibrinogen Complex (IFC), pathogen reduced cryoprecipitated fibrinogen complex (PRCFC), submitted a comment stating that due to manufacturing delays, its new technology add-on payment should be extended an additional year. The commenter explained that the IFC manufacturing process is unusual in that the IFC product must be made at blood centers, and that it has contracted with several blood centers. The commenter stated that each of these contracted blood centers must be licensed through FDA approval of a Biologics License Application (BLA) for manufacturing to ship the IFC product across state lines. The commenter stated that a complaint filed by a manufacturer of a competitive product resulted in FDA placing the BLA reviews of several of its contracted blood centers on hold and that the BLA reviews remain pending. The commenter stated that at the end of the first year of its new technology add-on payment (FY 2022), only three blood centers were authorized to ship IFC across state lines, and that as of June 2024, it was still waiting for FDA clearance of four additional blood center contract manufacturing facilities, which would increase manufacturing capacity by another 100 percent. The commenter stated that therefore, the majority of hospitals in the country did not have access to IFC in FY 2022 and FY 2023. The commenter asserted that its new technology add-on payment should be

extended through FY 2025 given the significant delay in manufacturing due to the delay in BLA approvals and the resulting lack of national IFC availability.

Response: We thank the commenter for its comment. Consistent with the statute and our implementing regulations, a technology is no longer considered as “new” once it is more than 2 to 3 years old, irrespective of how frequently the medical service or technology has been used in the Medicare population (70 FR 47349, 85 FR 58610). As such, once a technology has been available on the U.S. market for more than 2 to 3 years, we consider the costs to be included in the MS-DRG relative weights regardless of whether the technology’s use in the Medicare population has been frequent or infrequent (88 FR 58802).

After consideration of the public comments we received, we are finalizing our proposal to discontinue new technology add-on payments for the technologies as listed in the proposed rule and in the following Table II.E.-02 of this final rule for FY 2025 because they are no longer “new” for purposes of new technology add-on payments. This table also presents the newness start date, new technology add-on payment start date, the 3-year anniversary date of the product’s entry onto the U.S. market, and relevant final rule citations from prior fiscal years. We refer readers to the final rules cited in the following table for a complete discussion of each new technology add-on payment application and the coding and payment amount for these technologies, including the applicable indications and discussion of the newness start date.

BILLING CODE 4120-01-C

5. FY 2025 Applications for New Technology Add-On Payments (Traditional Pathway)

As discussed previously, in the FY 2023 IPPS/LTCH PPS final rule, we finalized our policy to publicly post online applications for new technology add-on payment beginning with FY 2024 applications (87 FR 48986 through 48990). As noted in the FY 2023 IPPS/LTCH PPS final rule, we are continuing to summarize each application in this final rule. However, while we are continuing to provide discussion of the concerns or issues we identified with respect to applications submitted under the traditional pathway, we are providing more succinct information as part of the summaries in the proposed and final rules regarding the applicant's assertions as to how the medical service or technology meets the newness, cost, and substantial clinical improvement criteria. We refer readers to <https://mearis.cms.gov/public/publications/ntap> for the publicly posted FY 2025 new technology add-on payment applications and supporting information (with the exception of certain cost and volume information, and information or materials identified by the applicant as confidential or copyrighted), including tables listing the ICD-10-CM codes, ICD-10-PCS codes, and/or MS-DRGs related to the analyses of the cost criterion for certain technologies for the FY 2025 new technology add-on payment applications.

We received 16 applications for new technology add-on payments for FY 2025 under the new technology add-on payment traditional pathway. As discussed previously, in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958), we finalized that beginning with the new technology add-on payment applications for FY 2025, for technologies that are not already FDA market authorized for the indication that is the subject of the new technology add-on payment application, applicants must have a complete and active FDA market authorization request at the time of new technology add-on payment application submission and must provide documentation of FDA acceptance or filing to CMS at the time of application submission, consistent with the type of FDA marketing authorization application the applicant has submitted to FDA. See § 412.87(e) and further discussion in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58948 through 58958). Of the 16 applications received under the traditional pathway, one applicant was not eligible for consideration for new technology add-

on payment because it did not meet these requirements, and three applicants withdrew their application prior to the issuance of the proposed rule. In accordance with the regulations under § 412.87(f), applicants for FY 2025 new technology add-on payments must have received FDA approval or clearance by May 1 of the year prior to the beginning of the fiscal year for which the application is being considered. Subsequently, prior to the issuance of this final rule, two additional applications were withdrawn for odronextamab (R/R DLBCL indication) and odronextamab (R/R FL indication). We are not including in this final rule the description and discussion of applications that were withdrawn or that are ineligible for consideration for FY 2025. We are addressing the remaining 10 applications. We note that the manufacturer for Casgevy™ (exagamglogene autotemcel) submitted a single application, but for two separate indications, each of which is discussed separately in this section. We are not approving new technology add-on payments for 6 technologies: Casgevy™ (exagamglogene autotemcel) for the indication of transfusion-dependent β -thalassemia, DuraGraft® (FloPatch FP120, Lantidra™ (donislecel-jujn (allogeneic pancreatic islet cellular suspension for hepatic portal vein infusion), AMTAGVI™ (lifileucel), and Quicktome Software Suite, for the reasons discussed in the following sections. For the remaining 5 technologies, we are approving new technology add-on payments for FY 2025 for Casgevy™ (exagamglogene autotemcel) for the indication of sickle cell disease, HEPZATO™ KIT (melphalan for injection/hepatic delivery system), and Lyfgenia™ (lovotibeglogene autotemcel). Because the remaining two technologies, ELREXFIO™ (elranatamab-bcmm) and TALVEY™ (talquetamab-tgvs), are considered substantially similar to TECVAYLI™ (teclistamab-cqyv), which was approved for new technology add-on payments for FY 2024 and is still considered "new" for purposes of new technology add-on payments for FY 2025, these technologies are also eligible for the new technology add-on payment for FY 2025. A discussion of these applications is presented in the following sections.

a. Casgevy™ (exagamglogene autotemcel) First Indication: Sickle Cell Disease (SCD)

Vertex Pharmaceuticals, Inc. submitted an application for new technology add-on payments for Casgevy™ for FY 2025 for use in sickle

cell disease. According to the applicant, Casgevy™ is a one-time, clustered regularly interspaced short palindromic repeats (CRISPR)/CRISPR-associated protein 9 (Cas9) modified autologous cluster of differentiation (CD)34+ hematopoietic stem & progenitor cell (HSPC) cellular therapy approved for the treatment of sickle cell disease (SCD) in patients 12 years and older with recurrent vaso-occlusive crises (VOC). Per the applicant, using a CRISPR/Cas9 gene editing technique, the patient's CD34+ HSPCs are edited *ex vivo* via Cas9, a nuclease enzyme that uses a highly specific guide ribonucleic acid (gRNA), at the critical transcription factor binding site GATA1 in the erythroid specific enhancer region of the B-cell lymphoma/leukemia 11A (BCL11A) gene. According to the applicant, as a result of the editing, GATA1 binding is irreversibly disrupted, and BCL11A expression is reduced, resulting in an increased production of fetal hemoglobin (HbF), and recapitulating a naturally occurring, clinically benign condition called hereditary persistence of fetal hemoglobin (HPFH) that reduces or eliminates SCD symptoms. As stated by the applicant, Casgevy™ infusion induces increased HbF production in SCD patients to ≥ 20 percent, which is known to be associated with fewer SCD complications via addressing the underlying cause of SCD by preventing RBC sickling. We note that the applicant is also seeking new technology add-on payments for Casgevy™ for FY 2025 for use in treating transfusion-dependent beta thalassemia (TDT), as discussed separately later in this section.

Please refer to the online application posting for Casgevy™, available at <https://mearis.cms.gov/public/publications/ntap/NTP2310171VPTU>, for additional detail describing the technology and the disease treated by the technology.

With respect to the newness criterion, according to the applicant, Casgevy™ was granted Biologics License Application (BLA) approval from FDA on December 8, 2023, for treatment of SCD in patients 12 years of age or older with recurrent VOCs. According to the applicant, Casgevy™ became commercially available immediately after FDA approval. Casgevy™ is available in 20 mL vials containing 4 to 13×10^6 CD34+ cells/mL frozen in 1.5 to 20 mL of solution. The minimum dose is 3×10^6 CD34+ cells per kg of body weight, which may be contained within multiple vials.

Effective April 1, 2023, the following ICD-10-PCS codes may be used to uniquely describe procedures involving

the use of Casgevy™: XW133J8 (Transfusion of exagamglogene autotemcel into peripheral vein, percutaneous approach, new technology group 8) and XW143J8 (Transfusion of exagamglogene autotemcel into central vein, percutaneous approach, new technology group 8). The applicant provided a list of ICD–10–CM diagnosis codes that may be used to identify this indication for Casgevy™. Please refer to the online application posting for the complete list of ICD–10–CM codes provided by the applicant. We believe the relevant ICD–10–CM codes to identify the indication of SCD would be: D57.1 (Sickle-cell disease without crisis), D57.20 (Sickle-cell/Hb-C disease without crisis), D57.40 (Sickle-cell thalassemia without crisis), D57.42

(Sickle-cell thalassemia beta zero without crisis), D57.44 (Sickle-cell thalassemia beta plus without crisis), or D57.80 (Other sickle-cell disorders without crisis). In the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36031), we invited public comments on the use of these ICD–10–CM diagnosis codes to identify the indication of SCD for purposes of the new technology add-on payment, if approved. We note that we did not receive any comments on the use of these codes.

As previously discussed, if a technology meets all three of the substantial similarity criteria under the newness criterion, it would be considered substantially similar to an existing technology and would not be considered “new” for the purpose of new technology add-on payments.

With respect to the substantial similarity criteria, the applicant asserted that Casgevy™ is not substantially similar to other currently available technologies, because Casgevy™ is the first approved therapy to use CRISPR gene editing technology and no other approved technology uses the same or a similar mechanism of action; and therefore, the technology meets the newness criterion. The following table summarizes the applicant’s assertions regarding the substantial similarity criteria. Please see the online application posting for Casgevy™ for the applicant’s complete statements in support of its assertion that Casgevy™ is not substantially similar to other currently available technologies.

Substantial Similarity Criteria	Applicant Response	Applicant assertions regarding this criterion
Does the technology use the same or similar mechanism of action to achieve a therapeutic outcome?	No	Casgevy™ is the first technology to use the CRISPR/Cas9 gene editing mechanism of action. No other approved technologies use this mechanism of action, and CRISPR technology has never previously been used in humans outside of clinical trials. Casgevy™ is a one-time treatment that uses ex vivo non-viral CRISPR/Cas9 to precisely edit the erythroid-specific enhancer region of BCL11A in CD34+ HSPCs. The technology consists of the Cas9 nuclease and single guide RNA (sgRNA), which together form a ribonucleoprotein (RNP) complex. The Cas9/sgRNA complex binds DNA at a precise location, and Cas9 cuts the DNA strand, generating a DNA double-stranded break. Naturally occurring DNA repair systems are activated to resolve the double-strand break. These changes in the target DNA sequence suppress the BCL11A gene and reactivate production of HbF. While other therapeutic approaches such as Hydroxyurea impact production of HbF, no other approved technology has been able to reactivate production of endogenous HbF to levels known to eliminate disease complications (for example, VOCs), consistent with individuals with a clinically benign condition called HPFH who experience no or minimal disease complications from SCD when they co-inherit both HPFH and SCD.
Is the technology assigned to the same MS-DRG as existing technologies?	Yes	In the FY 2024 IPPS/LTCH PPS Final Rule, CMS finalized assignment of the ICD-10-PCS codes (XW133J8 and XW143J8) describing the transfusion of Casgevy™ to MS-DRGs 016 and 017. MS-DRGs 016 and 017 are also currently used for autologous stem-cell transplants but not allogeneic stem cell transplants currently used in the treatment of SCD. Allogeneic stem cell transplants are reimbursed on a reasonable cost basis by operation of section 1886(d)(5)(M) of the Social Security Act.
Does new use of the technology involve the treatment of the same/similar type of disease and the same/similar patient population when compared to an existing technology?	Yes	Casgevy™ is the first therapy to use the CRISPR/Cas9 gene editing mechanism of action. There are currently several approved therapies that are used to treat patients living with SCD. However, no other approved single product would act as a stand-alone one-time treatment intended permanently to address the root cause of SCD.

As discussed in the FY 2025 IPPS/LTCH PPS proposed rule (89 FR 36032), we noted that Casgevy™ may have the same or similar mechanism of action to Lyfgenia™, for which we also received an FY 2025 new technology add-on payment application. Casgevy™ and Lyfgenia™ are both gene therapies using modified autologous CD34+ HSPC therapies administered via stem cell transplantation for the treatment of SCD. Lyfgenia™ was approved by FDA for this indication on December 8, 2023. We noted that both technologies are

autologous, ex-vivo modified hematopoietic stem-cell biological products. For these technologies, patients are required to undergo CD34+ HSPC mobilization followed by apheresis to extract CD34+ HSPCs for manufacturing and then myeloablative conditioning using busulfan to deplete the patient’s bone marrow in preparation for the technologies’ modified stem cells to engraft to the bone marrow. Once engraftment occurs for both technologies, the patient’s cells start to produce a different form of

hemoglobin in order to reduce the sickling hemoglobin. We further noted that both technologies appeared to map to the same MS–DRGs, MS–DRGs 016 and 017 (Autologous Bone Marrow Transplant with CC/MCC, and without CC/MCC, respectively), and to treat the same or similar disease (SCD) in the same or similar patient population (patients 12 years of age and older who have a history of VOCs). Accordingly, as it appeared that Casgevy™ and Lyfgenia™ may use the same or similar mechanism of action to achieve a

therapeutic outcome (that is, to reduce the amount of sickling hemoglobin to reduce and prevent VOs associated with SCD), were assigned to the same MS-DRGs, and treated the same or similar patient population and disease, we stated our belief that these technologies may be substantially similar to each other such that they should be considered as a single application for purposes of new technology add-on payments. We noted that if we determined that this technology is substantially similar to Lyfgenia™, we believed the newness period would begin on December 8, 2023, the date both Casgevy™ and Lyfgenia™ received FDA approval for SCD. We stated we were interested in information on how these two technologies may differ from each other with respect to the substantial similarity criteria and newness criterion, to inform our analysis of whether Casgevy™ and Lyfgenia™ are substantially similar to each other, and therefore, should be considered as a single application for purposes of new technology add-on payments.

We invited public comments on whether Casgevy™ meets the newness criterion, including whether Casgevy™ is substantially similar to Lyfgenia™ and whether these technologies should be evaluated as a single technology for purposes of new technology add-on payments.

Comment: The applicant for Casgevy™ submitted a public comment regarding substantial similarity for Lyfgenia™ and Casgevy™. The applicant asserted Casgevy™ represents the first therapy approved to use CRISPR/Cas9 gene editing technology and stated that no other approved technologies use this mechanism of action, and CRISPR/Cas9 technology has never previously been used in humans outside of clinical trials. The applicant stated that Casgevy™ is a one-time treatment that uses ex vivo non-viral CRISPR/Cas9 to precisely edit the erythroid-specific enhancer region of BCL11A in CD34+ HSPCs. The applicant stated that, while other non-gene therapy-based therapeutic approaches impact production of HbF, no other approved technology has been able to reactivate production of endogenous HbF to levels known to eliminate disease complications (for example, VOC), consistent with individuals with a clinically benign condition called hereditary persistence of fetal hemoglobin (HPFH) who experience no or minimal disease complications from SCD when they co-inherit both HPFH and SCD; therefore, it stated Casgevy™ satisfies the

newness criterion. The applicant stated that CMS focused on perceived similarities in treatment journey and categorical product characteristics between Casgevy™ and certain other technologies, but did not acknowledge material differences in the underlying technology which impact the safety and efficacy profile of these products. The applicant further explained that after Casgevy™ infusion, the edited CD34+ cells engraft in the bone marrow and differentiate to erythroid lineage cells with reduced BCL11A expression, and that this reduced BCL11A expression results in an increase in γ -globin expression and HbF protein production in erythroid cells. The applicant stated that in patients with severe SCD, HbF expression reduces intracellular hemoglobin S (HbS) concentration, preventing the red blood cells from sickling and addressing the underlying cause of disease, thereby eliminating VOCs. The applicant stated that, as such, Casgevy™ is not similar to the current standard of care (bone marrow transplant), nor to other technologies used in the treatment of SCD, and that none of these treatments use a mechanism of action that relies on CRISPR gene editing to reduce intracellular HbS concentration in SCD patients. The applicant explained how Lyfgenia™ uses a separate technology, gene replacement therapy, that utilizes a viral-based mechanism to introduce exogenous genetic material into patients' HSPCs, to add functional copies of a modified β A-globin gene into patients' hematopoietic stem cells (HSCs) through transduction of autologous CD34+ cells with B8305 lentiviral vector (LVV). The applicant stated that due to the LVV-based mechanism of action and the semi-random nature of viral integration, there is a potential risk of LVV-mediated insertional oncogenesis after treatment with Lyfgenia™ used in the treatment of SCD, as documented in FDA-approved labeling. The applicant stated that Casgevy™, with its non-viral mechanism of action using CRISPR/Cas9 gene editing, does not employ a viral vector and does not insert a transgene; therefore, insertional oncogenesis cannot occur as a matter of scientific principle. The applicant further stated that Casgevy™ uses a unique underlying technology and manufacturing process and has distinct product characteristics that differentiate it from other technologies used to treat SCD. The applicant asserted in its comments that if CMS were to consider gene replacement therapy and gene editing technologies to be substantially

similar, it could set a precedent based on overgeneralization which could deter further innovation.

Another commenter who is the manufacturer of Lyfgenia™ also submitted a public comment regarding the newness criterion. With respect to mechanism of action, the applicant stated that Lyfgenia™ has a unique mechanism of action that differs from Casgevy™'s because it is a one-time gene therapy that adds functional copies of the β A-T87Q-globin gene into a patient's own HSCs ex-vivo through the transduction of autologous CD34+ cells with a BB305 LVV to durably produce HbA^{T87Q}. The commenter added that HbA^{T87Q} is a modified adult hemoglobin (HbA) specifically designed to be anti-sickling while maintaining the same structure and function as naturally occurring HbA. According to the commenter, Lyfgenia™ consists of an autologous CD34+ cell-enriched population from patients with SCD that contains HSCs transduced with BB305 LVV encoding the β A-T87Q-globin gene, suspended in a cryopreservation solution. The commenter stated the BB305 LVV encodes a single amino acid variant of β -globin gene, β A-T87Q-globin: a human β -globin with a genetically engineered single amino acid change (threonine [Thr; T] to glutamine [Gln; Q] at position 87 (T87Q)). The commenter asserted HbA^{T87Q} is nearly identical to wildtype (or "innate") HbA, which is not prone to sickling. The commenter stated the T87Q substitution introduced in β A-T87Q-globin is designed to physically block or sterically inhibit polymerization of hemoglobin, thus rendering further "anti-sickling" properties to β A-T87Q-globin. According to the commenter, this results in a transgenic, non-immunogenic protein that can be measured in blood allowing for monitoring of the therapeutic protein in vivo and quantification relative to other globin species used to treat SCD. The commenter stated that Lyfgenia™ is not substantially similar to the CRISPR-Cas9 gene editing technique of Casgevy™. The commenter also stated that, as described previously, Lyfgenia™ adds functional copies of a modified β -globin (HBB) gene, β A-T87Q globin gene, into patients' own HSCs to durably produce HbA^{T87Q}, a modified adult HbA specifically designed to be anti-sickling while maintaining the same morphology and function as naturally occurring HbA. According to the commenter, the CRISPR/Cas9 gene editing technique mechanism of action described for Casgevy™ in the proposed rule differs substantially from Lyfgenia™, as is evident by Casgevy™'s

unique editing approach in which GATA1 binding is irreversibly disrupted, and BCL11A expression is reduced, resulting in an increased production of HbF, and recapitulating a naturally occurring, clinically benign condition called HPFH that reduces or eliminates SCD symptoms.

According to the commenter, increasing HbA^{T87Q} versus increasing HbF are fundamentally distinct mechanistic approaches. For individuals without SCD, HbF production is decreased shortly after birth, coinciding with an increase in HbA, and LyfgeniaTM is designed to replicate this natural state by introducing the production of HbA^{T87Q}. The commenter stated HbA^{T87Q} is nearly identical to HbA in several keyways: sequence homology, protein structure, oxygen affinity and oxygen dissociation curves. The commenter stated that HbF has ~50 percent homology to HbA (two β globin chains are replaced with two γ -chains) and has a higher observed oxygen affinity and different oxygen unloading properties than HbA. According to the commenter, from a clinical perspective, current standard of care approaches (for example, the use of hydroxyurea) are available to increase levels of HbF with variable effectiveness, while the mechanism of action LyfgeniaTM affords is unique in increasing a modified HbA. The commenter commented that while both gene therapies are indicated for the treatment of SCD, the mechanistic approach of each is fundamentally and significantly different from the other, and therefore LyfgeniaTM and CasgevyTM are not substantially similar and should not be considered as a single application for the purposes of new technology add-on consideration.

The commenter also described potential risks associated with consideration of the two technologies as a single application. Specifically, the commenter stated that if LyfgeniaTM and CasgevyTM are treated as a single application and paid under a single maximum new technology add-on payment amount, this could potentially undermine CMS's aim to improve timely, meaningful access to SCD gene therapies for Medicare patients. Per the commenter, not only do the two therapies have distinct mechanisms of action but they also differ in the length of follow-up and the features of the population in which they were studied (for example, the commenter stated that the LyfgeniaTM clinical trials did not exclude patients with a history of chronic pain and included some patients with a history of stroke), and patients should have a choice to work

with physicians to decide which therapy is most appropriate, based solely on their specific individual clinical circumstances. The commenter further asserted that given these differences, the finalization of a single new technology add-on payment amount for both therapies could hamper patient access to the most appropriate gene therapy, and potentially create a fiscally problematic and financial loss for IPSS hospitals, given the difference in the wholesale acquisition costs of both therapies, and CMS could potentially over-pay for one product, while under-paying for the other through the use of the historical blended weighted average cost utilizing volume estimates. Therefore, the commenter stated that LyfgeniaTM is not substantially similar to CasgevyTM and should not be considered as a single application with CasgevyTM for the purposes of new technology add-on payments.
